| Q4255 | Reguard, for topical use only, per square centimeter  | Reguard, topical use per sq  | 10/1/2020      |

For all 361 HCT/Ps for which CMS has issued a Q code with an effective date on or after October 1, 2021, as shown in Table 89, we proposed to discontinue the Q code and issue an A code, effective on the same date as the

other products discussed in the proposal (that is, October 1, 2024). We did not propose to require resubmission of a HCPCS Level II coding application for these HCT/Ps because the applications already included a TRG

recommendation letter from the FDA. We also proposed to take a similar approach for all new 361 HCT/Ps in which Q codes are issued before January 1, 2024.

**TABLE 89: HCPCS Level II Q Codes for Skin Substitutes Effective on or after October 1, 2021**

| Code  | Long Descriptor  | Short Descriptor             | Effective Date |
|-------|--|------------------------------|----------------|

#### d. Comments Received on the Proposed Coding Policies

We received public comments on the coding policies that we proposed. Some of the commenters expressed support for our proposed coding policies, while other commenters expressed concerns regarding our proposed coding policies. The coding proposals were one part of our overall proposed approach to refining how we treat skin substitutes furnished in the physician office setting for purposes of coding, coverage, and payment under Medicare. As described more fully in section II.J. of this final rule, we are not finalizing our coverage and payment proposals with respect to these products. Accordingly, we are also not finalizing any of the coding proposals at this time. We are also not summarizing the public comments we received at this time and point interested parties to *regulations.gov* if they would like to review those public comments. We intend to summarize the public comments we received, and respond to those comments, in future rulemaking.

#### IV. Updates to the Quality Payment Program

##### A. CY 2023 Modifications to the Quality Payment Program

###### 1. Executive Summary

###### a. Overview

This section of the final rule outlines changes to the Quality Payment Program starting January 1, 2023, except as otherwise noted for specific provisions. The CY 2023 performance period/2025 MIPS payment year continues to move the Quality Payment Program forward to

focus more on our measurement efforts, refines how clinicians would be able to participate in a more meaningful way through the Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs), and encourages participation in Advanced Alternative Payment Models (APMs).

Authorized by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015), the Quality Payment Program is an incentive program that includes two participation tracks, MIPS and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. The weights of those four performance categories are specified in statute. For CY 2023, those weights are as follows: 30 percent for the quality performance category; 30 percent for the cost performance category; 15 percent for the improvement activities performance category; and 25 percent for the Promoting Interoperability performance category. If an eligible clinician participates in an Advanced APM and achieves Qualifying APM Participant (QP) status, they are excluded from the MIPS reporting requirements and payment adjustment. Those that are qualifying APM participants (QPs) for the year are eligible to receive a 5 percent lump sum incentive payment during the corresponding payment year through CY 2024, or a differential payment update under the PFS for payment years beginning in 2026.

Participation in the Quality Payment Program, defined as clinicians with a

final score greater than 0, including both those who submitted data (engaged) and those who did not submit data, remained consistent at 100 percent in the fifth year (CY 2021 performance period). We saw 100 percent of MIPS eligible clinicians participate in MIPS in 2021 with 698,937 MIPS eligible clinicians participating and receiving a payment adjustment, which was similar to our 2020 participation rates with 933,545 MIPS eligible clinicians receiving a payment adjustment and 933,543 MIPS eligible participants. Therefore, participation rates in MIPS did not meaningfully change in 2021 as compared to 2020. We did see a decrease in the number of eligible clinicians receiving a payment adjustment with 698,937 MIPS eligible clinicians in 2021 compared to 933,545 in 2020. In addition, 86.03 percent of MIPS eligible clinicians received a positive payment adjustment for the 2023 MIPS payment year based on CY 2021 performance period data. We note that due to the Public Health Emergency (PHE) for COVID–19, 196,252 (or about 28 percent of 698,937) MIPS eligible clinicians received reweighting for the CY 2021 performance period/2023 MIPS payment year of one or more MIPS performance categories under the MIPS extreme and uncontrollable circumstances policy.

Please note that results for the CY 2021 performance period/2023 MIPS payment year are subject to change as a result of the targeted review process which began on August 22, 2022 and will conclude on October 21, 2022. For more information on the targeted review process for 2021 please see our targeted review guide at <https://qpp-cm-prod->

[content.s3.amazonaws.com/uploads/2038/2021%20Targeted%20Review%20Guide.pdf](https://content.s3.amazonaws.com/uploads/2038/2021%20Targeted%20Review%20Guide.pdf).

Regarding performance in Advanced APMs, for the 2021 QP Performance Period, 271,276 eligible clinicians earned Qualifying APM Participant (QP) status while another 3,378 eligible clinicians earned partial QP status. We plan to continue developing Quality Payment Program policies that more effectively reward high-quality of care for patients and increase opportunities for Advanced APM participation. We are moving forward with MVPs to allow for a more cohesive participation experience by connecting activities and measures from the 4 MIPS performance categories that are relevant to a specialty, medical condition, or a particular population.

As we make long-term improvements, continue evolving MIPS policies, and plan to begin implementing MVPs in 2023, we remain committed to our program goals. We are aligning with broader CMS initiatives, such as the CMS National Quality Strategy (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/Legacy-Quality-Strategy>), to unify strategic efforts to adopt measures most critical to providing high quality care and accelerate strategic improvements for quality programs and measures. The vision for the CMS National Quality Strategy is to shape a resilient, high-value American health care system to achieve high-quality, safe, equitable, and accessible care for all. This strategy aims to promote the highest quality outcomes and safest care for all individuals. It also focuses on a person-centric approach as individuals journey across the continuum of care and across payer type. The goals of the strategy incorporate lessons learned from the COVID-19 public health emergency (PHE) to inform both short and long-term direction for our health care system as well as support the creation of a more equitable, safe, and outcomes-based health care system for all individuals. The planned implementation of MVPs aligns with many of the objectives and goals the CMS National Quality Strategy will strive to achieve.

#### b. Summary of Major Provisions

##### (1) Major MIPS Provisions

MIPS aims to drive value through the collection, assessment, and public reporting of data that informs and rewards the delivery of high-value care.

We have heard from clinicians that MIPS requirements are confusing,

burdensome, and that it is difficult to choose measures from the several hundred MIPS and QCDR quality measures that are meaningful to their practices and have a direct benefit to patients. We have also heard concerns from interested parties that MIPS does not allow for sufficient differentiation of performance across practices due in part to clinician quality measure selection bias. Interested parties have indicated that these issues detract from the program's ability to effectively measure and compare performance, provide meaningful feedback, and incentivize quality. MVPs are intended to lead to a simplified MIPS clinician experience, improve value, reduce burden, and better inform patient choice in selecting clinicians. We noted that the MVP framework will connect measures and activities across the 4 MIPS performance categories, incorporate a set of administrative claims-based quality measures that focus on population health, provide data and feedback to clinicians, and enhance information provided to patients (86 FR 65391). We intend to focus the future of MIPS on MVP development and implementation.

Additionally, we have heard from patients, clinicians, and other interested parties that they would like more comprehensive and granular reporting from the MIPS program. To that end, in the CY 2022 PFS final rule (86 FR 65396 and 65397), we established voluntary subgroup reporting to help provide patients and clinicians information that is clinically meaningful at a more granular level.

##### (a) MIPS Value Pathways Development

As discussed in the CY 2023 PFS final rule (87 FR 46263), we intend to continue improving the MIPS program through MVPs, promote the use of connected measures and activities, reward clinicians for providing high value care, and help all clinicians improve care and engage patients. We also intend to gather information from interested parties to help guide efforts to advance health equity throughout CMS quality programs. We previously finalized an MVP development process involving the submission of MVPs by interested parties for our consideration (85 FR 84849 through 84850). We believe the MVP development process should also consider feedback from the general public outside of the notice and comment rulemaking process through which MVPs are adopted. Therefore, we are finalizing our proposal to modify the MVP development process such that were CMS to receive a new candidate MVP, evaluate it through the MVP development process and determine it

“ready” for feedback, CMS would post a draft version of the MVP on the Quality Payment Program website (<https://qpp.cms.gov/>) and solicit feedback from interested parties as well as the general public for a 30-day period.

In addition, we previously established a process for soliciting interested party recommendations for potential updates to established MVPs. On an annual basis, beginning in January, interested parties may submit their recommendations for the revision of an established MVP, and that input is accepted on a rolling basis throughout the year. We believe the MVP maintenance process should also consider feedback from the general public outside of the notice and comment rulemaking process through which MVPs are revised. Therefore, we are finalizing our proposal that after we review the submitted recommendations to revise established MVPs, and identify any feasible and appropriate revisions to established MVPs, we would host an annual public facing webinar, open to interested parties and the general public through which they may offer their feedback on potential revisions to the MVPs.

In the CY 2022 PFS final rule (86 FR 65998 through 66031), we finalized seven MVPs that will be available for reporting beginning with the CY 2023 performance period/2025 MIPS payment year.

In the CY 2023 PFS proposed rule (87 FR 46266), we proposed revisions to these seven MVPs based on the proposed removals of certain activities from the improvement activities inventory and the addition of other relevant existing quality measures for MVP participants to select from. We are finalizing the revisions to these seven MVPs. In addition, through this rulemaking cycle, we are finalizing as proposed five additional new MVPs:

- Advancing Cancer Care;
- Optimal Care for Kidney Health;
- Optimal Care for Neurological Conditions;
- Supportive Care for Cognitive-Based Neurological Conditions; and
- Promoting Wellness.

The MVP framework aims to reduce complexity and burden, move towards more meaningful measurement, capture the patient voice, and move to higher value care. As discussed in the proposed rule (87 FR 46264), we are continuing to explore opportunities to advance health equity in accordance with the CMS Framework for Health

Equity 2022–2023,<sup>453</sup> across all CMS programs and policies, including the MVP framework. We are considering how MVPs should evolve to better promote higher value care and APM participation by both primary care and specialist clinicians. We sought public comment, through a request for information (see 87 FR 46264 through 46265), on ways to integrate MVPs into APP reporting and how to best facilitate specialty clinician reporting of quality performance measures (in addition to the APP) that reflect the specialty services provided.

#### (b) Subgroup Reporting

To support clinicians in their transition to subgroup reporting, subgroup reporting will be voluntary for the CY 2023, 2024, and 2025 performance periods/2025, 2026, and 2027 MIPS payment years. Multispecialty groups that choose to report through an MVP will be required to participate as subgroups beginning with CY 2026 performance period/2028 MIPS payment year. As discussed in section IV.A.4.e. of this final rule, we are finalizing the following policies for subgroups:

- *Subgroup description requirement:* A group must submit a description of each subgroup at the time of registration.

- *Limitation of one subgroup per TIN–NPI combination:* An individual eligible clinician, as represented by a TIN/NPI combination may register for no more than one subgroup within a group's TIN.

- *Subgroup determination period:* CMS will apply the low-volume threshold criteria for a subgroup as described under § 414.1318(a)(1) using information from the first segment of the applicable MIPS determination period.

- *Subgroup scores for administrative claims measures and cost measures:* Subgroups are scored on each selected population health measure based on their affiliated group score, if available and that if the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points. We are also finalizing that subgroups are scored on the cost measures included in the MVP that they select, based on their affiliated group score, if available. If the affiliated group score is not available, the measure is excluded from the subgroup's total

measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2)(i) through (v).

- *Scoring for subgroups that register but do not report:* We will not assign a score for subgroups that register but do not submit data for an applicable performance period.

#### (c) Requests for Information (RFI)

The CY 2023 PFS proposed rule contained the following RFIs (87 FR 46256 through 46263):

- Request for Information Regarding QP Determination Calculations at the Individual Eligible Clinician Level

- Request for Information Regarding the Transition from APM Incentive Payments to the Enhanced PFS Conversion Factor Update for QPs

- Request for Information on Continuing to Advance to Digital Quality Measurement and the Use of Fast Healthcare Interoperability Resources (FHIR) in Physician Quality Programs

- Request for Information on Advancing the Trusted Exchange Framework and Common Agreement (TEFCA)

- Request for Information on Risk Indicators Within Complex Patient Bonus Formula to Continue to Align with CMS Approach to Operationalizing Health Equity

We thank commenters for their responses to these requests for information. We may consider this information to inform future rulemaking.

#### (2) Major APM Provisions

##### (a) APM Entity Level Reporting of Promoting Interoperability Performance Category

We are finalizing a policy to introduce a voluntary reporting option for APM Entities to report the promoting interoperability performance category at the APM Entity level beginning with the CY 2023 performance period.

##### (b) Payment Based on Quality Measures

We are finalizing a policy to revise the regulations and to clarify that the criterion for Advanced APMs that payment must be based on quality measures can be met through the use of a single quality measure that meets the criteria specified at § 414.1415(b)(2) and (b)(3). We also proposed conforming changes in the Other Payer Advanced APM regulations.

##### (c) Medical Home Model 50 Eligible Clinician Limit

We are finalizing a policy to apply the 50 eligible clinician limit directly to the

APM Entity participating in the Medical Home Model, and to no longer look to the parent organization for the APM Entity. We explained that we would identify the eligible clinicians in the APM Entity on each of the three QP determination dates (March 31, June 30, and August 31). This policy would become effective in Performance Year 2023. We also proposed conforming changes in the Other Payer Advanced APM regulations which will require that the eligible clinician pursuing the option provide the relevant information.

#### (3) Other MIPS and APM Policies

##### (a) Quality Performance Category

In the CY 2023 PFS proposed rule (87 FR 46276 through 46280), we proposed the following proposals: expand the definition of the term high priority measure to include health equity quality measures; change the CAHPS for MIPS case-mix adjuster for “Asian language survey completion” to use instead “language other than English spoken at home,” “Spanish language spoken at home,” and “Asian language spoken at home” variables; increase the data completeness criteria threshold from 70 percent to 75 percent for the CY 2024 and 2025 performance periods/2026 and 2027 MIPS payment years; and establish a set of 195 quality measures. In the CY 2023 PFS proposed rule (87 FR 46155 through 46157, 46277, and 46280 through 48283), we sought public comment regarding requests for information pertaining to each of the following topics: the addition of questions related to health disparities and price transparency to the CAHPS for MIPS Survey; the development and implementation of health equity quality measures; and the development and implementation of quality measures that address amputation avoidance in diabetic patients.

##### (b) Cost Performance Category

In section IV.A.6.c. of this final rule, we finalized as proposed to update the operational list of care episode and patient condition groups and codes by adding the Medicare Spending Per Beneficiary (MSPB) Clinician cost measure as a care episode group.

##### (c) Improvement Activities Performance Category

We are finalizing as proposed to add four new, modify five existing, and remove six existing improvement activities from the Inventory. The new and modified activities help fill gaps we have identified in the Inventory as well as seek to ensure that activities reflect current clinical practice across the category. All four of the new activities

<sup>453</sup> Centers for Medicare & Medicaid Services. CMS Framework for Health Equity 2022–2032, Available at <https://www.cms.gov/files/document/cms-framework-health-equity.pdf>.

being finalized relate to CMS Six Health Equity Priorities for Reducing Disparities in Health. We also recommended the removal of six activities, both to align with current clinical guidelines and practice as well as to eliminate duplication, so that the Inventory offers flexibility and choice without a potentially burdensome number of activities available.

(d) Promoting Interoperability Performance Category

We are finalizing several changes to the Promoting Interoperability performance category. Specifically, we are finalizing: (1) to require and modify the Electronic Prescribing Objective's Query of Prescription Drug Monitoring Program (PDMP) measure with added exclusions while maintaining the associated points at 10 points; (2) to expand the Query of PDMP measure to include not only Schedule II opioids, but also Schedule III, and IV drugs; (3) to add a new Health Information Exchange (HIE) Objective option, the Enabling Exchange under the Trusted Exchange Framework and Common Agreement (TEFCA) measure (requiring a yes/no response), as an optional alternative to fulfill the objective; (4) to consolidate the current options from three to two levels of active engagement for the Public Health and Clinical Data Exchange Objective and to require the reporting of active engagement for the measures under the objective; (5) to limit a clinician's time at the first level of active engagement to one performance period but delaying the applicability date until performance periods in 2024; (6) to modify the scoring methodology for the Promoting Interoperability performance category; and (7) to continue to reweight the Promoting Interoperability performance category for certain types of non-physician practitioner MIPS eligible clinicians.

(e) Payment Adjustment

We are finalizing as proposed to use the CY 2019 MIPS payment year as the prior period and the rounded mean final score of 75 points from that prior period as the performance threshold for the CY 2025 MIPS payment year.

(f) Scoring

For scoring of the quality performance category, we are finalizing as proposed to score administrative claims measures using benchmarks calculate from data collected during the performance period and clarifying the topped-out measure lifecycle in instances where a measure is suppressed or otherwise has a benchmark removed. We also included

a request for information on which additional risk indicators and data sources we should consider for the complex patient bonus to better assess the social and medical complexity for the patients of MIPS eligible clinicians. Lastly, we are finalizing as proposed to establish a maximum cost improvement score of 1 percentage point out of 100 percentage points available for the cost performance category starting with the CY 2022 performance period/2024 MIPS payment year.

(g) Third Party Intermediaries

We are finalizing our proposal to update the definition of third party intermediary consistent with existing policies and to make other minor technical edits to the regulation text governing third party intermediaries accordingly. We are also finalizing our proposal to revise QCDR measure self-nomination and measure approval requirements, including to delay the QCDR measure testing requirement for traditional MIPS by an additional year, until the CY 2024 performance period/2026 MIPS payment year. We are finalizing our proposal to continue delaying this requirement based on our recognition of the continuing impact of the COVID-19 public health emergency on the ability of QCDRs to test measures. We are finalizing our proposal to revise remedial action and termination policies.

(h) Public Reporting/Physician Compare

In an effort to expand the information available to patients and caregivers when choosing a doctor or clinician, we are finalizing as proposed to publicly report on individual clinician and group profile pages:

- A telehealth indicator, as applicable, and technically feasible, for those clinicians furnishing covered telehealth services.
- Utilization data related to applicable conditions treated and procedures performed by each clinician or group respectively.

Additionally, we sought feedback from interested parties through a request for information, on ways to incorporate health equity into public reporting on Care Compare.

2. Definitions

At § 414.1305, we are finalizing as proposed revisions to the definitions of the following terms:

- Multispecialty group;
- Single specialty group;
- Facility-based group;
- Facility-based MIPS eligible clinician
- High priority measure; and

- Third party intermediary.

These terms and definitions are discussed in detail in the relevant sections of the proposed rule.

7. Transforming MIPS: MVP Strategy

a. MVP Vision Overview

As discussed in the CY 2023 PFS proposed rule (87 FR 46263 and 46264), we are moving to MIPS Value Pathways (MVPs) to improve value, reduce burden, inform patient choice in selecting clinicians, and reduce barriers to participation in Alternative Payment Models (APMs). We intend to promote high value care by connecting performance on cost, quality, and patient experience of care to payment. We believe the MVP framework will move MIPS forward on the path to value by connecting the MIPS performance categories, better informing and empowering patients to make decisions about their healthcare, and by helping clinicians to achieve better outcomes using robust and accessible healthcare data and interoperability. The MVP framework aims to reduce complexity and burden, move towards more meaningful measurement, capture the patient voice, and move to higher value care. We intend for MVPs to drive value and help clinicians and practices prepare to take on and manage financial risk, for example, through Advanced APMs, as they build out their quality infrastructure components and gain experience with cost measurement. We envision that MVPs, in which there is aligned measurement of quality of care and cost, continuous improvement and innovation within the practice, and efficient management and transfers of information, will help clinicians deliver higher value care and remove barriers to APM participation. Combining linked performance measures and activities with more performance measurement standardization and focused reporting of meaningful measures in MVPs will, we believe, produce data that can better assist patients in comparing clinician performance and in selecting clinicians. Such data can also assist clinicians in making care improvements and making appropriate specialist referrals. As more clinicians have applicable MVPs available, the performance data available to patients will expand, and in the future, information on specialists in multispecialty groups will increase in our Compare Tools, enabling patients to make more informed choices for their care. MVPs will be available for voluntary reporting beginning with the CY 2023 MIPS performance period, and we intend for MVPs to become the only method to participate in MIPS in future

years, although we have not yet established the timing for the sunset of traditional MIPS.<sup>454</sup>

We continue to explore opportunities to advance health equity across all CMS programs and specifically the Quality Payment Program via MVPs and updated performance measures (see 87 FR 46264 in the CY 2023 PFS proposed rule). On April 22, 2022, the CMS Office of Minority Health released the *CMS Framework for Health Equity*,<sup>455</sup> which updates the CMS Equity Plan with an enhanced and more comprehensive 10-year approach to further embed health equity across all of CMS programs including Medicare, Medicaid, CHIP, and the Health Insurance Marketplaces®. This *CMS Framework for Health Equity* outlines five priorities: (1) Expand the collection, reporting and analysis of standardized data; (2) Assess causes of disparities within CMS programs, and address inequities in policies and operations to close gaps; (3) Build capacity of health care organizations and the workforce to reduce health and health care disparities; (4) Advance language access, health literacy, and the provision of culturally tailored services; and (5) Increase all forms of accessibility to health care services and coverage.<sup>456</sup> We intend to use this health equity framework across CMS to design, implement, and operationalize policies to support health for all people served by our programs, eliminate avoidable differences in health outcomes experienced by people who are underserved, and provide the care and support that our enrollees need to thrive.

We continue to consider ways that we can advance health equity via the Quality Payment Program. As we implement MVPs, we are considering how best to further the five priorities of the CMS Framework for Health Equity. We intend for both MVPs and APMs to advance health equity and increase the value of health care for all as we leverage improvement activities, quality measure performance data, and public reporting. We anticipate that MVPs and APMs will have greater impact on health equity as participation grows.

In the CY 2023 PFS proposed rule we considered approaches for advancing health equity in MIPS and sought feedback (see 87 FR 46276 through 87 FR 46283). Specifically, see 87 FR 46280 through 46283 and 87 FR 46331

respectively for our request for comment on developing health equity measures in MIPS and MIPS Compare Tool public reporting in the future.

We presented our MVP vision and guiding principles in the CY 2021 PFS final rule (85 FR 84844 through 84845). We intend for MVP implementation to drive value, obtain comparative performance data, and elevate the patient voice while reducing clinician burden. We strive to achieve meaningful performance measurement, burden reduction, scoring equity, and increased value. The MVP framework was discussed in the CY 2020 and the CY 2021 PFS proposed rules (84 FR 40732 through 40734, and 85 FR 50279, respectively) and CY 2021 PFS final rule (85 FR 84844 through 84845). Our MVP framework calls for linking the quality, cost, and improvement activities performance categories, as well as a foundation of required reporting for the Promoting Interoperability performance category and population health claims-based quality performance category measures. We continue to consider how to best implement an MVP portfolio that balances our MVP goals for transformative change and our five MVP guiding principles as discussed in the CY 2021 PFS final rule (85 FR 84845 through 84846) within current CMS and clinician practice capabilities. For more MVP information see the CY 2023 PFS proposed rule at 87 FR 46264 for discussion of initial MVP implementation steps and §§ 414.1305 Definitions, 414.1318 Subgroups, and 414.1365 MIPS Value Pathways for MVP policies regulatory text.

#### b. MVPs and APM Participant Reporting

MVPs and APMs share a goal of meaningful performance measurement and burden reduction, along with objectives of scoring equity and advancing value. In the CY 2023 PFS proposed rule (87 FR 46264 and 46265), we included a request for information regarding MVPs and APM participant reporting. Specifically, we sought ideas for how we could obtain more robust reporting of both primary care and specialty care performance measurement information from APM participants. We also sought feedback on how to best address the challenges commenters previously noted regarding specialist reporting of quality performance data to both the APM and MIPS such as increased reporting burden. We requested policy ideas that would encourage the reporting of specialty services performance information in addition to the APP, for example and to the extent feasible, by extending APP scoring policies for the

cost and improvement activities performance categories outside the APP, by finding a way to roll MVP quality measure performance data into the APP, or by some other method. We also requested feedback on the benefits and disadvantages of the submitted policy ideas and asked how we should best limit burden and complexity. We continue to seek feedback on ways to better align clinician experience between MVPs and APMs, and to ensure that MVP reporting serves as a bridge to APM participation.

As we move forward with MVP implementation, we will continue to seek feedback on the direction of our MVP framework and its intersection with APMs, including ways to better align clinician experience between MVPs and APMs and to ensure that MVP reporting serves as a bridge to APM participation. We envision MVP reporting to complement APP reporting such that it will enhance performance measurement and available information while minimizing additional burden. We thank commenters for their responses to this request for information. We may consider the information we received and use it to inform future rulemaking.

#### 4. MVP Development and Reporting Requirements

##### a. MVP Development

##### (1) Development of New MVPs

As discussed in the CY 2023 PFS proposed rule (87 FR 46265 and 46266), we proposed to modify our MVP development process to include feedback from the general public before the notice and comment rulemaking process. We proposed to evaluate a submitted candidate MVP through the MVP development process, and if we determine it is “ready” for feedback, we would post a draft version of the submitted candidate MVP on the Quality Payment Program website (<https://qpp.cms.gov/>) and solicit feedback for a 30-day period. The general public would have the opportunity to submit feedback on the candidate MVP for CMS’s consideration through an email inbox. We stated that we would review the feedback received, and determine if any changes should be made to the candidate MVP prior to potentially including the MVP in a notice of proposed rulemaking. If we determine changes should be made to the candidate MVP, we would not notify the interested parties who originally submitted the candidate MVP for CMS consideration in advance of the rulemaking process. The following is a summary of the public comments

<sup>454</sup> 42 CFR 414.1365(a)(1).

<sup>455</sup> CMS, *CMS Framework for Health Equity*, available at [https://www.cms.gov/sites/default/files/2022-04/CMS%20Framework%20for%20Health%20Equity\\_2022%2004%2006.pdf](https://www.cms.gov/sites/default/files/2022-04/CMS%20Framework%20for%20Health%20Equity_2022%2004%2006.pdf).

<sup>456</sup> *Ibid.*, at 10–11.

received on the proposed revisions to the process to develop new MVPs and our responses:

*Comment:* Several commenters supported the proposals to modify the MVP development process. Many commenters indicated support of MVP development processes that promote transparency, collaboration, and regard for specialty expertise through the solicitation of feedback from the public prior to an MVP's proposed adoption. Several commenters stated that the proposed changes will improve transparency in the MVP development process and help to ensure MVPs are best aligned with patient care goals. One commenter expressed the belief that interested parties input will help CMS keep pace with progress in personalized medicine and optimize health care for patients. One commenter recommended that CMS communicate the public feedback period widely through available channels to further improve transparency. One commenter recommended a standard annual timeline for release of MVPs to allow third party intermediaries sufficient time to build and test any changes to MVPs reporting requirements. A few commenters requested clarification of how CMS defines when an MVP is ready for feedback.

*Response:* We thank commenters for their suggestions to improve upon our proposed modifications to the process for developing new MVPs. We plan to post a draft version of each candidate MVP on the Quality Payment Program website (<https://qpp.cms.gov/>) and will communicate the opportunity to provide public feedback on the candidate MVP through QPP standard channels, including QPP listserv messaging. In regards to the request to have a standard timeline each year, we adopted the solicitation of feedback on a "rolling basis" to obtain feedback in a timely manner, so that we can receive feedback when an MVP is ready, rather than waiting for a specified public feedback period that begins and ends at the same time each year (85 FR 85855). We will determine if an MVP is "ready" for feedback using the criteria for MVP development, which are described in detail in the CY 2022 PFS final rule (86 FR 65405 through 65410).

*Comment:* One commenter expressed the belief that the proposed revisions to the MVP development and maintenance processes are not adequate or well defined to ensure that the MVPs resonate with specialty practices, and recommended that CMS adopt a process for MVP development and maintenance that is similar to the electronic Clinical Quality Measure (eCQM) annual

timeline. The commenter also expressed the belief that the development and maintenance processes do not sufficiently include input from all relevant specialty societies and recommended that CMS create an informal process to ensure transparency and coordination among the relevant specialty societies during the early development of an MVP.

*Response:* We disagree. We believe our MVP development and maintenance processes in addition to our defined criteria for MVP development (86 FR 65405 through 65410) are adequate and will lead to the development and implementation of MVPs that will lead to better patient care. The MVP development and maintenance processes, as described at <https://qpp.cms.gov/mips/mips-value-pathways/submit-candidate> is structured in a manner to encompass updates that are made to individual measures through annual update measure processes. We believe the MVP development and maintenance processes should be structured in a manner that looks at the MVP holistically to ensure meaningful clinical connections can be made between the measures and improvement activities within the MVP. Since the MVP development and maintenance process already considers the updates made through the elaborate measure maintenance processes, we do not believe it is necessary to also have such an extensive process to develop and maintain MVPs. An elongated process, such as the eCQM annual update would require CMS to delay the implementation of MVPs further, which would by extension delay their availability for reporting by MVP participants. We believe the proposed updates to the MVP development and maintenance processes will allow relevant specialty societies amongst other interested parties ample opportunity to provide input. Providing feedback on draft candidate MVPs ahead of notice and comment rulemaking or updates to implemented MVPs is an opportunity that will be widely available to the public. Overall, we believe our processes are sufficient and allow for an extensive number of opportunities for interested parties to provide feedback to CMS before MVPs are implemented.

*Comment:* A few commenters expressed that CMS should consider a 60-day feedback period in order to maximize interested parties input.

*Response:* While we understand the value of an extended public feedback period, there are unfortunately timeline constraints that prevent us from

extending the feedback period beyond 30 days. Various factors were taken into consideration when determining the length of the feedback period including that an extended period would reduce the time available for the development of MVPs, possibly delay MVP implementation, and would not consider our current rulemaking timeframe. Before we adopt an MVP, we may discuss the candidate MVP with the interested parties that originally submitted the MVP to us, prepare documents defining the MVP for publication, publish the candidate MVPs and seek feedback on it, process and review the feedback received, determine what feedback would be applied to the candidate MVP, revise the MVP if necessary, and follow our rulemaking processes shortly thereafter. If the public feedback period ended in the midst of our rulemaking processes, we would have to wait until the following year to propose the candidate MVPs through notice and comment rulemaking. Moreover, it is not possible to start the public feedback period earlier, as that would cut into the time needed to develop the candidate MVP. We therefore believe that a 30-day period best balances the concerns described above with providing an opportunity for the public to provide feedback on MVP candidates ahead of their potential proposed adoption. If more time is needed, we note that there also would be an opportunity to submit comments during the notice and comment rulemaking process if the candidate MVP is proposed for adoption.

*Comment:* A few commenters expressed concern that CMS stated that it would not notify the parties who originally submitted the candidate MVP in advance of rulemaking if changes are made to the MVP. Commenters stated that, in most cases, the parties who initially submitted the MVP would include the specialties that are most connected to the procedure, condition, or patient population captured by the MVP. Commenters expressed the belief that it is critical that CMS recognizes the clinical content experts who developed the MVP by providing them with the opportunity to review whether the revised candidate MVP makes clinical sense before it is proposed through rulemaking. A few commenters recommended that CMS establish a process for robust outreach to impacted specialty societies during MVP development to ensure a meaningful and productive dialogue.

*Response:* We note that if CMS opts to propose a candidate MVP for adoption, any individuals or entities

that originally submitted the candidate MVP or were involved in its development would have the opportunity to provide feedback on any proposed revisions during the notice and comment rulemaking process. We do not believe we need to further expand our outreach, as we intend on leveraging our public feedback periods as an opportunity for impacted specialty societies to provide input, and would also provide the opportunity to provide public comment on the updates to candidate MVPs or implemented MVPs through notice and comment rulemaking.

After consideration of the public comments, we are finalizing our proposed revisions to the process to develop new MVPs as proposed.

#### (2) MVP Maintenance Process

In the CY 2022 PFS final rule (86 FR 65410), we finalized an annual maintenance process for MVPs that were previously adopted through notice and comment rulemaking. We established a process for soliciting recommendations from interested parties for potential updates to adopted MVPs. As part of this process, beginning in January of the year prior to the performance period, interested parties may submit recommendations to revise an MVP that was previously finalized through rulemaking. Recommendations from interested parties would be accepted on a rolling basis throughout the year. We stated that we would be unable to communicate with interested parties as to whether their recommendations were accepted ahead of rulemaking, and that we would ultimately determine whether updates to an established MVP should be made (86 FR 65410). We stated that we would consult with the interested parties who originally nominated an MVP about any publicly recommended changes to the MVP (86 FR 65410).

In the CY 2023 PFS proposed rule (87 FR 46266), we stated that similar to the proposed revisions to the process for developing new MVPs, (87 FR 46265 and 46266), and for the same reasons, we believe that we should also consider feedback during the MVP maintenance process, from a wide range of interested parties and the general public, prior to proposing changes to an existing MVP through the notice and comment rulemaking process. Therefore, in the CY 2023 PFS proposed rule (87 FR 46266), we proposed to modify the MVP maintenance process such that interested parties and the general public may submit their recommendations for potential revisions to established MVPs on a rolling basis throughout the year.

We would then review the submitted recommendations and determine whether any are potentially feasible and appropriate. We stated that if we identify any submitted recommendations that are potentially feasible and appropriate, we would host a public facing webinar, open to interested parties and the general public through which they may offer their feedback on the potential revisions we have identified. We would publish details related to the timing and registration process for the webinar through our Quality Payment Program Listserv. As proposed, the changes to the MVP maintenance process would enable us to receive a wide range of perspectives on potential revisions to MVPs earlier in the maintenance process, which we believe is important in developing MVPs that are meaningful to clinicians, patients, and the general public. We stated that if we decide to make any revisions to an established MVP based on the recommendations submitted, we would adopt such revisions through notice and comment rulemaking. We requested comments on this proposal.

The following is a summary of the public comments received on the proposed revisions to MVP maintenance process and our responses:

*Comment:* Several commenters supported the proposal to modify the MVP maintenance process to allow the public to submit recommendations for potential revisions to established MVPs.

*Response:* We thank commenters for their support.

*Comment:* A few commenters recommended that CMS share all feedback with the MVP developer and one commenter suggested publishing all feedback in the proposed rule.

*Response:* Through the MVP maintenance process, CMS intends to review all feedback received through the solicitation process, which occurs on a rolling basis throughout the year. Through our review of the feedback received, we will identify any feasible suggestions, which we intend to present and discuss during the MVP maintenance public webinar. We will look into the operational feasibility of publishing feedback we have identified as feasible suggestions ahead of the public webinar. We believe that a public webinar will allow us to gather more timely feedback on potentially feasible and appropriate recommendations, and we do not intend on publishing all feedback received in the proposed rule because we believe publishing all feedback received, regardless of the feedback's relevance to the MVP and whether the suggestion is feasible or not

will likely cause confusion for our readers.

After consideration of the public comments, we are finalizing our proposal to modify the MVP maintenance process as proposed.

#### (3) Revisions to Previously Finalized MVPs

In the CY 2022 PFS final rule (86 FR 65998 through 66031), we finalized seven MVPs that will be available for reporting beginning with the CY 2023 performance period/2025 MIPS payment year. The seven MVPs are as follows: *Advancing Rheumatology Patient Care; Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes; Advancing Care for Heart Disease; Optimizing Chronic Disease Management; Adopting Best Practices and Promoting Patient Safety within Emergency Medicine; Improving Care for Lower Extremity Joint Repair; and Patient Safety and Support of Positive Experiences with Anesthesia*. In the CY 2023 PFS proposed rule (87 FR 46829 through 46842), we proposed modifications to these seven MVPs because of the proposed removals of certain improvement activities from the improvement activities inventory and the addition of other relevant existing quality measures for MVP participants to select from. We refer readers to Appendix 3: MVP Inventory of this final rule for the public comment received, responses, and finalized modifications to the established MVPs.

#### (4) New MVPs

Through our development processes for new MVPs (see 85 FR 84849 through 84856), we aim to gradually develop new MVPs that are relevant and meaningful for all clinicians who participate in MIPS. In the CY 2023 PFS proposed rule, we proposed five new MVPs (87 FR 46813 through 46829):

- Advancing Cancer Care;
- Optimal Care for Kidney Health;
- Optimal Care for Neurological Conditions;
- Supportive Care for Cognitive-Based Neurological Conditions; and
- Promoting Wellness.

We continue to develop MVPs based on needs and priorities, as described in the MVP Needs and Priorities document at [https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20\(MVPs\)%20Development%20Resources.zip](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20(MVPs)%20Development%20Resources.zip). We refer readers to Appendix 3: MVP Inventory, within this final rule where we discuss each proposed new MVP, the public comments received and our responses, and our determinations to finalize these new MVPs.

## b. MVP Reporting Requirements

## (1) Promoting Interoperability

In the CY 2021 PFS final rule (85 FR 84849 through 84854), we finalized that MVPs must include the full set of Promoting Interoperability performance category measures. In the CY 2022 PFS final rule (86 FR 65413), we stated that we do not intend to establish different reporting requirements for Promoting Interoperability measures in MVPs from what is established under traditional MIPS. As described at § 414.1365(c)(4)(i), an MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described at § 414.1375(b).

In the CY 2023 PFS proposed rule (87 FR 46266 through 46267), we referred readers to the changes that we were proposing with regard to the Promoting Interoperability performance category. We stated that we intend for any changes that are finalized for the Promoting Interoperability performance category under traditional MIPS to apply to MVPs. We refer readers to section IV.A.6.c.(4) of this final rule for a discussion of the finalized policies for the Promoting Interoperability performance category that would also apply to MVPs.

## c. Reporting MVPs and Team-Based Care

In the CY 2023 PFS proposed rule (87 FR 46267), we clarified how multispecialty groups who practice in a team-based care manner can report MVPs, but did not propose any policies related to this subject matter. If a multispecialty group identifies an MVP that is relevant to its practice, the group may register through the MVP registration process to report that single MVP (86 FR 65415 through 65418). We encourage a multispecialty group to choose an MVP that includes measures that are attributable to all clinician types that participate in its group, if it intends to report as a multispecialty group within the first few years of its MVP reporting. We believe that reporting data that is directly attributed to all clinicians in the group will better drive quality improvement and lead to improved patient outcomes.

We encourage multispecialty groups to consider adopting subgroup reporting before it becomes mandatory in the CY 2026 performance period. Early adoption will allow clinicians within the subgroups to gain familiarity with reporting at the subgroup level before it becomes mandatory. We refer readers to the CY 2023 PFS proposed rule (87 FR 46267) for the discussion of

multispecialty groups who practice team-based care reporting MVPs.

## d. Scoring MVP Performance

In the CY 2022 PFS final rule, we finalized policies for MVP scoring beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to 86 FR 65419 through 65427 for the details of those final policies. We previously finalized at § 414.1365(d)(2) that, unless otherwise indicated in § 414.1365(d)(2), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP (86 FR 65419 through 65421). We noted that in general, we intend to adopt scoring policies from traditional MIPS for MVP participants unless there is a compelling reason to adopt a different policy to further the goals of the MVP framework (86 FR 65419).

In the CY 2023 PFS proposed rule, we referred readers to our proposed revisions to traditional MIPS scoring policies regarding the determination of benchmarks for administrative claims quality measures (87 FR 46313 and 46314), assigning measure achievement points for topped out quality measures (87 FR 46314 and 46315), improvement scoring for cost measures (87 FR 46315 and 46316), and the changes to the scoring methodology for the Promoting Interoperability performance category for the performance period in CY 2023 (87 FR 46298 through 46308). We are finalizing these proposals as described in sections IV.A.10.d.(1)(b)(i), IV.A.10.d.(1)(b)(ii), IV.A.10.d.(1)(c)(i), and IV.A.10.c.(4)(g) of this final rule, respectively. In the CY 2023 PFS proposed rule (87 FR 46267), we noted that in the event these proposals and any other scoring policies for traditional MIPS are adopted as final policy, they would apply to the measures and activities included in the MVP, unless otherwise indicated.

In the CY 2022 PFS final rule, we finalized the subgroup reporting option for clinicians choosing to report MVPs or the APP (86 FR 65392 through 65394). Subgroup reporting is a new option for clinicians, and, for clarity, we discussed all proposals regarding subgroups, including scoring, in one section of the CY 2023 PFS proposed rule (87 FR 46267 through 46275). We referred readers to 87 FR 46271 through 46272 of the CY 2023 PFS proposed rule for our proposals related to subgroup scoring for administrative claims, cost measures, and subgroups that register but do not report. As described in section IV.A.8.e.(4)(b) and IV.A.8.e.(4)(c) of this final rule, we are finalizing our proposals related to subgroup scoring.

## e. Subgroup Reporting

## (1) Background

In the CY 2022 PFS final rule, we finalized an option for clinicians choosing to report MVPs to report through subgroups beginning with the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). Additionally, we finalized: (1) A timeline for implementing subgroup reporting (86 FR 65396 and 65397); (2) registration requirements, reporting requirements, and scoring policies for clinicians desiring to report MVPs through subgroups (§ 414.1365; 86 FR 65415 through 65426); (3) definitions of subgroup, single specialty group, multispecialty group, and special status (§ 414.1305; 86 FR 65392 through 65401); (4) subgroup eligibility requirements (§ 414.1318; 86 FR 65401); (5) application of low-volume threshold and special status designations for subgroups (§ 414.1318(a)(2); 86 FR 65401 and 65402); and (6) subgroup inclusions and exclusions (§ 414.1318; 86 FR 65402 and 65403).

In the CY 2023 PFS proposed rule, we proposed to: (1) modify the definitions of single specialty group and multispecialty group (87 FR 46268); (2) add subgroup description requirements to the registration process (87 FR 46269); (3) limit the number of subgroups a clinician may participate in to one subgroup per Taxpayer Identification Number (TIN) (87 FR 46269 and 46270); (4) establish the subgroup determination period (87 FR 46270 and 46271); (5) apply new policies for scoring administrative claims measures and cost measures for subgroups (87 FR 46271 and 46272); and (6) not assign a subgroup final score to registered subgroups that do not submit data (87 FR 46272).

## (2) Definitions of a Single Specialty Group and a Multispecialty Group

We previously finalized at § 414.1305 the definitions of a single specialty group as a group that consists of one specialty type and a multispecialty group as a group that consists of two or more specialty types. We also finalized at § 414.1305 the definition of an MVP participant for the purpose of MVP reporting. The definition of MVP Participant established in the CY 2022 PFS final rule (86 FR 65392 through 65394) allows multispecialty groups to participate as a group for MVP reporting only for the CY 2023 performance period/2025 MIPS payment year through the CY 2025 performance period/2027 MIPS payment year. Beginning with the CY 2026 performance period/2028 MIPS

payment year, only single specialty groups may participate as a group for MVP reporting, and multispecialty groups that want to report an MVP will be required to form subgroups for that purpose. We believe that the definitions of single specialty group and multispecialty group allow groups to distinguish their specialty type or types and assess the requirement to participate as a subgroup in MVP reporting beginning with the CY 2026 performance period/2028 MIPS payment year.

In the CY 2022 PFS proposed rule (86 FR 39360), we proposed to identify a group's specialty type or types using data from the Medicare Provider Enrollment, Chain, and Ownership System (PECOS). We received comments expressing concerns that the use of PECOS specialty designations would result in the exclusion of certain clinician types, such as nurse practitioners (NPs) and physician assistants (PAs) (86 FR 65398). We adopted definitions of a single specialty group and a multispecialty group in the CY 2022 PFS final rule but did not finalize PECOS as the data source or specify another data source that we would use to determine a group's specialty type. We noted that we needed additional time to better understand our options to utilize different data sources when making this determination (86 FR 65399).

Having reviewed the available data sources, we noted in the CY 2023 PFS proposed rule our belief that Medicare Part B claims data is the appropriate data source for determining a group's specialty type or types for purposes of MVP reporting (87 FR 46268). Currently, we use PECOS and Medicare Part B claims data to identify clinician specialty for certain purposes. For purposes of public reporting, we rely on PECOS as the primary data source, and for purposes of MIPS eligibility determination, we use both PECOS and claims data. Additionally, we use the information on claims to identify clinician specialty when attributing some of the measures in the cost and quality performance categories.

A clinician's primary specialty designation in PECOS is identified by the clinician in the Medicare enrollment application for physicians and non-physician practitioners. Additionally, there may be instances when a clinician would be allowed to select more than one primary specialty in PECOS.<sup>457</sup> For example, a primary specialty designation of cardiothoracic surgery is

not available in PECOS, and therefore, a cardiothoracic surgeon would have two primary specialty designations, one for cardiac surgery and another for thoracic surgery. In such instances, it would be difficult for CMS to identify a clinician's primary specialty using their PECOS designation. The specialty codes used on Medicare Part B claims<sup>458</sup> are not reported by clinicians but are assigned by the Medicare Administrative Contractors (MACs) and derived from the clinician-reported specialty information in PECOS. In instances where more than one specialty code appears on a claim, we determine primary specialty based on the specialty code used for the plurality of the services billed by the clinician. We analyzed the identification of specialty for clinicians using claims data and PECOS data and found a variance rate of less than one percent between the two data sources. In the CY 2023 PFS proposed rule (87 FR 46268), we stated that given the strong alignment between the data sources and our historical use of claims data to identify a clinician's specialty, we believe that Medicare Part B claims data would be the best data source to use to determine a group's specialty type or types for purposes of participation in MVPs.

We noted that in response to our 2022 PFS proposal to use PECOS data in determining specialty, some commenters recommended that, instead of PECOS, CMS should utilize specialty taxonomy codes which they stated were more detailed than PECOS specialty codes (86 FR 65398). While these commenters were not specific in their request, we understood them to be referring to the provider taxonomy codes used on the application to receive a National Provider Identifier (NPI). We agreed with the commenters that in some instances, the health care provider taxonomy code set may include more specificity than the information found in the specialty codes used on Medicare Part B claims. However, currently we do not use this data for other QPP purposes, and we are uncertain of the extent to which it is maintained by clinicians if their circumstances change. While we considered the use of this data as an alternative, we do not believe it is necessary to introduce a new data source at this point, given that subgroup reporting is voluntary at this time.

For these reasons, we proposed in the CY 2023 PFS proposed rule to modify the definition of a single specialty group at § 414.1305 to state that single

specialty group means a group that consists of one specialty type as determined by CMS using Medicare Part B claims (87 FR 46268). We also proposed to modify the definition of a multispecialty group at § 414.1305 to state that multispecialty group means a group that consists of two or more specialty types as determined by CMS using Medicare Part B claims (*Id.*). We sought public comment on the proposals and requested comment on additional data sources CMS could use to determine a group's specialty type or types.

The following is a summary of the public comments received on the proposed revisions to the definitions of a single specialty group and a multispecialty group and our responses:

**Comment:** A few commenters supported the use of Medicare Part B claims as the data source to determine the specialty composition of a group. One commenter recommended CMS to provide additional guidance for a group practice to identify their specialty composition.

**Response:** We acknowledge the commenter's recommendation for CMS to provide guidance on whether a group is a single specialty or a multispecialty group. There is no existing process in place for CMS to provide feedback on the specialty composition of a group. We will take this recommendation into consideration and may explore available options to provide guidance on the specialty composition of a group.

**Comment:** Many commenters did not support the proposed use of Medicare Part B claims to determine the specialty composition of a group. A few commenters shared their belief that the specialty information indicated on Part B claims is not an accurate representation of the actual care provided by the various clinicians in a multispecialty group. Some commenters expressed concern that the specialty information from Part B claims may not be correct and stated that in the 2020 QPP Experience Report, over 15 percent of MIPS eligible clinicians had more than one specialty identified on their claims.

**Response:** While we acknowledge that there may not always be a perfect match between the information on specialty included on Medicare Part B claims and the clinical focus of an individual clinician, we are also not aware of an alternative data source that would provide a closer match. We understand the commenters' concerns on identifying a single specialty for some clinicians using Medicare Part B claims. As is the case where we currently use Medicare Part B claims to determine

<sup>457</sup> <https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/downloads/cms855i.pdf>.

<sup>458</sup> <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c26pdf.pdf>.

specialty (see 87 FR 46268), we will determine primary specialty based on the specialty code used for the plurality of the services billed by the clinician in instances where a clinician has more than one specialty indicated on their Medicare Part B claims.

*Comment:* A few commenters recommended specialty attestation as part of the subgroup registration process in lieu of the Medicare Part B claims data to identify the specialty composition of a group.

*Response:* We acknowledge the commenter's recommendation to allow specialty attestation as part of the subgroup registration process to accurately attribute the specialty based on the scope of care provided by a clinician. The definition of an MVP participant finalized in the CY 2022 PFS final rule (86 FR 65392 through 65394) allows multispecialty groups to participate as a group for MVP reporting only for the CY 2023 performance period/2025 MIPS payment year through the CY 2025 performance period/2027 MIPS payment year. Beginning with the CY 2026 performance period/2028 MIPS payment year, only single specialty groups may participate as a group for MVP reporting, and multispecialty groups must form subgroups for reporting an MVP. As a result, we believe that groups need to know of their specialty composition and their ability to participate as a group or a subgroup for reporting an MVP ahead of the subgroup registration process to make changes in their administrative workflows accordingly. Additionally, we anticipate that allowing specialty attestation as part of the subgroup registration process would require CMS to implement additional criteria for validating the specialty composition of a group and may cause confusion and add operational complexity.

*Comment:* Several commenters expressed concern that beginning in the CY 2026 performance period/2028 MIPS payment year, only clinicians in single specialty groups may participate as a group for MVP reporting, and multispecialty groups must form subgroups for reporting an MVP. These commenters expressed concern about the administrative burden associated with dividing large groups into smaller groups. Some of the commenters expressed particular concern that the requirements for multispecialty practices to report on MVPs via subgroups would require groups that might have a single clinical focus to divide due to different specialties indicated on their Medicare claims (either closely related physician

specialties (for example, internal medicine and family practice) or clinicians whose clinical focus is not represented in Medicare specialty data (for example, NPs and PAs)). A few commenters requested further guidance for implementing subgroups in anticipation of their future requirement for MVP reporting.

*Response:* As we established in the CY 2022 PFS final rule (86 FR 39360), beginning in the CY 2026 performance period/2028 MIPS payment year, only clinicians in single specialty groups may participate as a group for MVP reporting and multispecialty groups must form subgroups for reporting an MVP. We did not propose any change to that requirement in this proposed rule. We acknowledge the commenters' concerns related to the potential increase in administrative burden that may be caused by this requirement in the future. We note that we have made no proposal to make MVP reporting mandatory during the CY 2026 performance period/2028 MIPS payment year. Under the finalized policy, subgroup reporting is only mandatory for multispecialty groups choosing to participate in MVP reporting. However, we note that it is our intent to sunset traditional MIPS in the future and make MVP reporting mandatory for all MIPS eligible clinicians. We recognize the commenters' concerns related to the potential classification of a group with a single clinical focus as a multispecialty group that would be required to form subgroups. To assist groups in understanding the operational implications of these requirements, we anticipate providing additional guidance as appropriate in the future. We will continue to consider ways in which we can achieve the goals of more focused reporting via subgroups and ensure that these subgroups best represent clinical coherence. Any changes would be proposed via future rulemaking.

After consideration of the public comments, we are finalizing the revised definitions of a single specialty group and a multispecialty group at § 414.1305 as proposed.

### (3) Subgroup Registration Requirements

#### (a) Background

We established at § 414.1365(b) a registration process for clinicians who choose to report MVPs through a subgroup. We refer readers to the CY 2022 PFS final rule (86 FR 65415 through 65418) for additional details on subgroup registration timeline and requirements.

#### (b) Subgroup Description Requirement

In the CY 2022 PFS final rule (86 FR 65399), we defined a subgroup as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician's NPI. We did not propose any criteria for limiting the composition of a subgroup but did solicit comment on criteria that we could consider in the future (86 FR 39362), such as establishing a threshold requiring 75 percent of the eligible clinicians in a group or subgroup to be of the same or a related specialty to form a subgroup.

We believe the comments we received on the request for future consideration of subgroup criteria in the CY 2022 PFS proposed rule reflect the reality that clinicians practice in many ways within a group TIN (86 FR 65399 and 65400). We believe that we may need to establish limits on subgroups in order to further our goals of measuring as many clinicians as possible using the measures that are most relevant to their practice. We are concerned that if we do not establish restrictions or requirements in the future we may not move meaningfully towards that goal. However, given that subgroups will be newly available for the CY 2023 performance period/2025 MIPS payment year and will be voluntary, we do not believe we should yet establish those policies.

To inform our future subgroup policies, we desire to better understand how group TINs form subgroups and how group TINs choose to organize their subgroups. For this reason, in the CY 2023 PFS proposed rule (87 FR 46269), we proposed that as part of the subgroup registration process, in addition to the previously established registration requirements, group TINs must provide a description of each subgroup that is registered. We stated we would identify some key scenarios for subgroups to select from that we expect might reflect a typical subgroup, but also wish to offer an opportunity for group TINs to describe how they constructed their subgroups by providing a narrative in a text-only field, if the options we provide do not correctly describe the subgroup. We explained in the proposed rule that we would not evaluate or approve the narrative description, if submitted. Rather, we intend to collect and review the information to better inform our understanding of subgroups and the different ways groups would choose to form subgroups. We noted that we believe that receiving the information

about the subgroup directly from the group TIN itself would fill a gap in our understanding of the nature of subgroup formation during the transition to MVPs that cannot be filled merely by reviewing PECOS or claims-based group specialty information. We stated that we understand requiring such reporting would create some additional burden, but we believe such burden is modest and worth the effort to inform future development of subgroup policies. Furthermore, we stated that we are attempting to mitigate this burden by permitting subgroups to select from certain common scenarios (for example, clinicians with the same specialty designation, practicing at the same geographic location, or providing care to the same patient population, etc.) for groups to form subgroups, when appropriate, instead of drafting a narrative description.

We noted that we are not intending for these narratives to be lengthy but expect the narratives to be short descriptions of the nature of practice and appropriately reflect the composition of a subgroup. We offered some illustrative examples for the narrative description:

- *Example 1:* This subgroup represents our cardiovascular service line, which includes cardiologists, cardiothoracic surgeons, and other associated professionals.
- *Example 2:* This subgroup represents our west side practice, which uses one electronic health record (EHR) platform and collaborates on patient care across orthopedic surgeons, physical therapists, NPs, and other associated clinicians.

We also noted that we believe that the availability of subgroups will facilitate our efforts to increase health equity. In part, we believe that by creating a smaller group of clinicians to analyze, we can better understand care at the patient and community level. This is important for measuring and improving health equity because subgroup data could be utilized to identify gaps in clinical outcomes, patient characteristics, and specialist care availability on a more targeted level than shown by examining TIN-level data. We stated that we also believe that group practices may share this same interest in improving health equity. For example, a group may have clinicians practicing in different locations and may choose to organize their subgroups to focus on certain underserved populations based on geography or income. We noted that we hope to better inform our understanding of clinicians supporting this goal through narrative descriptions of subgroup organization.

The following is a summary of the public comments received on the proposed addition of the subgroup description requirement to the previously established subgroup registration process and our responses:

*Comment:* Several commenters supported the proposed description requirement as part of the subgroup registration process. The commenters generally appreciated the flexibility for clinicians in a group to choose an appropriate subgroup relevant to their care needs.

*Response:* We thank the commenters for their support. We agree with the commenters that not establishing restrictions on the composition of a subgroup at this time offers flexibility for groups to split into subgroups based on their care needs. We believe that it will also reduce the administrative complexity and burden associated with subgroup reporting that could potentially discourage clinician participation in MVP reporting.

*Comment:* A few commenters did not support the proposed subgroup description requirement at subgroup registration. The commenters expressed concern about the associated burden for a subgroup to submit the narrative description annually, and recommended CMS to consider templates or checkboxes in lieu of the narratives.

*Response:* We acknowledge the commenters' concern on the associated burden to submit a description of the subgroup. As described in the CY 2023 PFS proposed rule (87 FR 46269), we intend to identify some key scenarios for subgroups to select from that we expect might reflect a typical subgroup in lieu of the narrative requirement. We intend to use a workable design, such as checkboxes, drop down menu, etc., for the key scenarios that subgroups could select from. If a subgroup selects an option from the available scenarios that accurately reflects the composition of their subgroup, the subgroup will not need to submit a separate narrative. We recognize the associated burden for subgroups relevant to this proposal and note that the text-only field to submit a narrative for the subgroup description is optional. We expect that a subgroup would need to use the text-only field in instances where none of the available key scenarios describe the construct of their subgroup. We do not intend to provide a template for the narrative requirement as we believe that a template may be too limiting for subgroups that choose to submit a narrative and it would add additional burden for subgroups that do not need to submit a narrative. We believe that the composition of subgroups may

change yearly due to the clinicians joining or leaving a group, and therefore, subgroups should be required to submit a description during the annual subgroup registration process. We will continue to monitor the participation trends for subgroup registration and reporting and will consider appropriate updates to the subgroup description requirements and explore options to alleviate the subgroup registration burden for future performance periods.

After consideration of the public comments, we are finalizing the subgroup description requirement for subgroup registration as proposed.

#### (c) Limitation of One Subgroup per TIN–NPI Combination

In the CY 2022 PFS final rule (86 FR 65414 and 65415), we finalized at § 414.1318(c)(2) that subgroups will have their performance assessed at the subgroup level across all the MIPS performance categories. Additionally, in the CY 2022 PFS proposed rule we did not propose any criteria for the composition of subgroups (86 FR 39362). We must nonetheless place some restrictions on the allocation of a group TIN's clinicians among subgroups to properly score each subgroup. Clinicians in small groups are eligible to register as subgroups and report using Medicare Part B claims. While we establish a subgroup identifier as part of the registration process, this subgroup identifier would not be present on any claims data. If we were to allow a clinician to register under more than one subgroup in a single group TIN, we would be unable to determine to which subgroup a particular claim should be connected. Therefore, we proposed at § 414.1318(a)(3) that an individual eligible clinician, as represented by a TIN–National Provider Identifier (NPI) combination, may register for no more than one subgroup within a group's TIN. We noted that we did not propose any other restrictions or requirements on the composition of subgroups at this time. We also proposed to limit a clinician to a single subgroup per group TIN to overcome current limitations in scoring certain cost and quality measures.

In the CY 2023 PFS proposed rule (87 FR 46271 and 46272), we proposed to evaluate clinicians in subgroups using measures in the cost performance category, and the population health measures and outcomes-based administrative claims measures in the quality performance category, based on their affiliated group's performance. As explained in the proposed rule, we made the proposal due to current technical limitations related to

attribution and risk adjustment of such measures but are working to potentially overcome those limitations in the future. CMS calculates administrative claims measures using Medicare claims data. This does not require any additional reporting by clinicians. If we were to allow a clinician to be a part of more than one subgroup within a single group TIN, however, we would be unable to identify which subgroup the clinician was part of for the purposes of attributing cost measures, population health measures, and outcomes-based administrative claims measures. We will continue to explore the options for allowing an individual clinician (NPI) to participate in multiple subgroups under a group TIN as we are working to potentially overcome challenges with attribution of the claims-based measures to the clinicians in a subgroup.

We recognized that the proposal to limit each TIN–NPI combination to a single subgroup per group TIN would limit how a group may establish its subgroups. We stated that we believe there may be clinicians who work in different capacities within a single group TIN (for example, a clinician who works in a cardiology clinic on Mondays and the primary care clinic Tuesday–Friday) and could be considered to work in multiple subgroups within a single group TIN. For this reason, we noted that we are interested in hearing perspectives from groups on how common this is, and if there are ways that we could match a clinician to a subgroup for measures reported through Medicare Part B claims or calculated using administrative claims.

The following is a summary of the public comments received on the proposal to limit a clinician, as identified by a TIN–NPI combination, to one subgroup within a group's TIN and our responses:

*Comment:* A few commenters supported the proposal limiting a clinician (NPI) participation to only one subgroup per TIN.

*Response:* We thank the commenters for their support.

*Comment:* Several commenters opposed the proposal limiting an individual clinician (NPI) to participate in only one subgroup per TIN. A few commenters shared their belief that clinician participation in multiple subgroups under a TIN would allow clinicians to report on all the measures relevant to their scope of care.

*Response:* We recognize that there may be instances where a clinician may be involved in care delivery in different capacities within the same TIN, and therefore, could reasonably be placed in

more than one applicable subgroup under the TIN. However, as described in the CY 2023 PFS proposed rule (87 FR 46269 through 46272), due to issues that we identified with patient attribution and scoring of administrative claims measures at the subgroup level, we are not able to appropriately match a clinician to a subgroup for attribution and scoring of the administrative claims measures if the clinician is part of multiple subgroups under the TIN. We will continue to explore options to assess these measures at the subgroup level and propose any changes in future rulemaking.

After consideration of the public comments, we are finalizing the proposed policy at § 414.1318(a)(3) that an individual clinician, as represented by a TIN–NPI combination may register for no more than one subgroup within a group's TIN.

#### (d) Subgroup Determination Period

In the CY 2022 PFS final rule, we established the definition of a subgroup at § 414.1305 as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician's NPI (86 FR 65399). We also codified at § 414.1318(a) that, for a MIPS payment year, low-volume threshold criteria and special status for subgroups are determined at the group level in accordance with §§ 414.1305 and 414.1310. We also established at § 414.1365(b) a process for clinicians to register as a subgroup for the purpose of reporting the measures and activities in an MVP (86 FR 65415 through 65418). Previously, we defined a MIPS determination period—the period of activity we review to identify clinicians who are eligible to participate in MIPS—to mean, in relevant part, a 24-month assessment period consisting of: (1) An initial 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period, and that includes a 30-day claims run out; and (2) A second 12-month segment beginning on October 1 of the calendar year preceding the applicable performance period and ending on September 30 of the calendar year in which the applicable performance period occurs (§ 414.1305; 83 FR 59727 through 59730). In order to be eligible to participate in MIPS for the applicable performance year, an individual clinician or a group must meet or exceed the low-volume threshold criteria specified under

§ 414.1305 during the MIPS determination period. An individual eligible clinician or group that is identified as not exceeding the low-volume threshold during the initial 12-month segment will continue to be excluded under § 414.1310(b)(1)(iii) for the applicable year regardless of the results of the second 12-month segment analysis. Additionally, an individual eligible clinician or group for which the unique billing TIN and NPI combination is established during the second 12-month segment of the MIPS determination period will be assessed based solely on the results of such segment.

In the CY 2022 PFS final rule, we did not discuss how CMS would assess the low-volume threshold for individual clinicians and groups for the purpose of subgroup participation. Specifically, we did not discuss whether any special considerations were necessary when applying the MIPS determination period for clinicians participating as subgroups. Currently, we review claims and PECOS data from a MIPS determination period to determine MIPS eligibility for an individual clinician and a group. The initial 12-month segment of the MIPS determination period spans from October 1 of the calendar year 2 years prior to the applicable performance period to September 30 of the calendar year preceding the applicable performance period and includes a 30-day claims run out. Individual clinicians and groups receive their initial eligibility information prior to the applicable performance period but do not know their final eligibility determination until November or December of the applicable performance period.

Using a 2-year MIPS determination period is incompatible with the framework we have established for subgroup participation in MVPs. For example, for the CY 2023 performance period/2025 MIPS payment year, individual clinicians and groups that choose to participate as subgroups would only know their preliminary eligibility at the time of subgroup registration. We noted that we believe that by using the preliminary eligibility information, clinicians and groups could assess their ability to participate as subgroups early in the performance period and we do not wish to limit subgroup participation for groups that are otherwise eligible based on an eligibility assessment that is not made until after registration is completed. Therefore, in the CY 2023 PFS proposed rule (87 FR 46270 and 46271), we proposed to add at § 414.1318(a)(4) that CMS will apply the low-volume

threshold criteria for a subgroup as described under § 414.1318(a)(1) using information from the initial 12-month segment of the applicable MIPS determination period. Under this proposal, an individual eligible clinician or group determined to be MIPS eligible based on the low-volume threshold determination under § 414.1305 during the initial 12-month segment of the MIPS determination period would continue to be eligible for an applicable performance period regardless of the results of the second segment of the low-volume threshold determination. Additionally, we proposed to make conforming changes at § 414.1318(a)(1) to state that, except as provided under paragraph (a)(2) of this section and subject to (a)(4) of this section, for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for a subgroup is determined at the group level in accordance with §§ 414.1305 and 414.1310. We noted that we were not proposing to make any further changes to the application of low-volume threshold and special status as described under § 414.1318(a)(1).

In summary, to form a subgroup under our proposal, we noted that a group would need to be eligible to participate in MIPS as a group and have at least one MIPS eligible clinician in the subgroup who was also a MIPS eligible clinician during the initial 12-month segment of the MIPS determination period. Such an individual eligible clinician or group would continue to be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. A subgroup may thus include an individual clinician who does not exceed the low-volume threshold during the first segment of the MIPS determination period only if the subgroup has at least one MIPS eligible clinician during the first 12-month segment of the MIPS determination period and the affiliated group also meets the low-volume threshold during the first 12-month segment of the MIPS determination period. We noted that we believe this would also allow practices to identify and place clinicians in appropriate subgroups, choose the measures and activities relevant to subgroups, make administrative changes to their workflows and EHR systems, and comprehensively capture clinician performance through subgroups. Using the first segment of the MIPS determination period would also be consistent with the use of the first segment of the MIPS determination

period for virtual groups (see § 414.1315(c)(1)(ii); 83 FR 59743 and 59744).

We sought public comment on these proposals.

The following is a summary of the public comments received for our proposal to apply the low-volume threshold for clinician participation in subgroups using the eligibility from the first 12-month segment of the 24-month MIPS determination period and our responses:

*Comment:* A few commenters supported the proposal to apply the low-volume threshold for clinician participation in subgroups using the initial 12-month segment of the 24-month MIPS determination period.

*Response:* We thank the commenters for their support.

After consideration of the public comments, we are finalizing our proposal to add at § 414.1318(a)(4) that CMS will apply the low-volume threshold criteria for a subgroup as described under § 414.1318(a)(1) using information from the initial 12-month segment of the applicable MIPS determination period. We are also finalizing conforming changes at § 414.1318(a)(1) as proposed.

#### (4) Subgroup Reporting and Scoring

##### (a) Subgroups Reporting the APM Performance Pathway (APP)

We refer readers to section IV.A.5.b of this final rule for our policies related to subgroups reporting the APP.

##### (b) Subgroup Scores for Administrative Claims Measures and Cost Measures

In the CY 2022 PFS final rule, we established at § 414.1318(c)(2) that subgroups will have their performance assessed at the subgroup level across all the MIPS performance categories (86 FR 65414 and 65415). We also established in the quality performance category that subgroups are scored on each selected population health measure that does not have a benchmark or meet the case minimum requirement based on their affiliated group score, if available (86 FR 65421 and 65422). In establishing this policy, we noted our concern about the ability of subgroups to meet the case minimum for an administrative claims measure and our interest in including population health measures in the subgroup's score for the MVP.

In establishing our policies for scoring the cost performance category in MVPs, we noted in the CY 2022 PFS final rule that we had received a comment that expressed concern that multi-specialty groups may take advantage of the option to report at the subgroup level to avoid

being assessed on cost measures (86 FR 65422). We stated that while we intend to monitor subgroup implementation and assess the potential for gaming, we acknowledge the risk of a multi-specialty group forming subgroups in order to avoid being measured in the cost performance category.

As previously established at § 414.1325(a)(2)(i), measures in the cost performance category, as well as population health measures (which are part of the foundational layer of MVPs) and outcomes-based administrative claims measures in the quality performance category, are not reported directly by clinicians. Instead, CMS calculates these measures based on Medicare administrative claims data. Each measure includes an attribution and risk adjustment methodology within the specifications, which are available for review at <https://qpp.cms.gov/>. These measures are created and tested for validity and reliability using Medicare administrative claims data, which includes the identification of the TIN and the clinician's NPI. However, because subgroups are established exclusively for the purpose of participation in the Quality Payment Program, we are unable to identify a subgroup using existing or future claims data, and therefore, it may not be possible to test these measures for validity and reliability for subgroups using claims data. While we believe in general that subgroups can be measured in the same manner as we measure groups, there are complications related to the establishment of subgroups. Subgroups differ from groups in a couple of key ways: First, the creation of a subgroup does not change the nature of the group, so a patient could be attributed to both a group and a subgroup. In addition, a group TIN is not required to allocate all clinicians into subgroups. This affects measures in different ways depending on the attribution methodology of a measure. For example, in the total per capita cost measure, months are attributed to a particular group TIN or TIN-NPI based on specific primary care services. In this measure, costs are assigned to a single group TIN for the purpose of measuring the group TIN and a single TIN-NPI for the purpose of measuring the TIN-NPI. We stated in the CY 2023 PFS proposed rule (87 FR 46271) that we believe we could assign a patient to a single subgroup, as we have also proposed to limit NPIs to a single subgroup per TIN. However, we stated that since we do not have an existing data source for subgroup composition, we are unable to

examine the data to determine if performance on the measure is reliable and valid at the subgroup level.

For these reasons, we proposed in the CY 2023 PFS proposed rule (87 FR 46271 and 46272) to assess subgroups on measures in the cost performance category, and population health measures and outcomes-based administrative claims measures in the quality performance category, based on their affiliated group. We proposed to modify § 414.1365(d)(3)(i)(A)(1) to read that a subgroup is scored on each selected population health measure based on their affiliated group score, if available, and that if the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points. We also proposed to add § 414.1365(d)(3)(i)(B)(1) so that a subgroup is scored on each selected outcomes-based administrative claims measure based on its affiliated group score, if available, and that if the subgroup's affiliated group score is not available, each such measure will receive zero measure achievement points. In addition, we proposed to add § 414.1365(d)(3)(ii)(A) to state that a subgroup is scored on each cost measure included in the MVP that they select and report based on its affiliated group score for each such measure, if available. If the subgroup's affiliated group score is not available for a measure, the measure is excluded from the subgroup's total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2)(i) through (v).

We noted that we are concerned that measuring subgroups based on their affiliated group score for these measures may detract from our efforts to generate more clinically relevant and granular information about clinician performance (87 FR 46271). We stated that for this reason, we intend to pursue potential technical solutions to these issues in the future, to enable us to measure clinicians in subgroups on these measures at the subgroup level. We further stated that even if we address these technical issues, we still would be concerned that clinicians may use the opportunity to form subgroups to avoid being measured on cost as discussed in the public comment we received on our CY 2022 PFS proposal (86 FR 65422). We stated that if we are able to address the technical limitations in the future and evaluate performance at the subgroup level, we would anticipate developing policies similar to our existing policy for population health

measures to use the affiliated group score if we are unable to calculate the measures for the subgroup. This would allow us to focus our measurement at the subgroup level but limit the opportunity of groups to use the formation of subgroups to avoid being measured in the cost performance category. Since we were uncertain if we would be able to address these technical issues, we did not propose a policy in the CY 2023 PFS proposed rule.

We also noted that we believe the registration information we receive from subgroups for CY 2023 performance period/2025 MIPS payment year will help us to learn more about the nature of subgroups and better test our measures (87 FR 46271).

We sought public comment on these proposals.

The following is a summary of the public comments received on our proposals to score subgroups on certain measures based on their affiliated group and our responses:

*Comment:* Several commenters supported our proposal to assess subgroups on measures in the cost performance category, and population health measures and outcomes-based administrative claims measures in the quality performance category, based on their affiliated group score.

*Response:* We thank the commenters for their support.

*Comment:* Many commenters opposed our proposal to assess subgroups on measures in the cost performance category, and population health measures and outcomes-based administrative claims measures in the quality performance category, based on their affiliated group. Many of these commenters expressed concern that measuring subgroups on the basis of the performance of the affiliated group would detract from the intention and focus of subgroup reporting. One commenter suggested that it would be very unlikely that subgroup reporting would be used to avoid assessment in the cost performance category. Many of these commenters suggested an alternative scoring methodology in which measures would be calculated for both the subgroup and affiliated group, and the higher score would be used.

*Response:* We agree with some of the concerns identified by the commenters. As noted in the proposed rule, we are concerned that measuring subgroups based on their affiliated group score for these measures may detract from our efforts to generate more clinically relevant and granular information about clinician performance. However, we believe that the technical issues related to testing and attribution in particular

need to be examined in more detail before we can move forward with measuring clinicians on these measures at the subgroup level. We appreciate the alternative suggestion provided by the commenters but note that we would need additional information to determine if subgroups would be advantaged or disadvantaged by calculating measures based on administrative claims at the subgroup level. Establishing a scoring hierarchy or requiring the scoring of such measures at the subgroup level would not be appropriate until we are able to learn more about the scoring of these measures in subgroups and may determine how to best mitigate the risks that may arise from subgroup scoring of these measures. We will continue to investigate ways to ensure that subgroups are measured at the subgroup level as much as possible while ensuring that measurement is fair and does not allow clinicians to improve performance merely by reporting as part of a subgroup.

After consideration of the comments, we are finalizing our proposal to assess subgroups on measures in the cost performance category, and population health measures and outcomes-based administrative claims measures in the quality performance category, based on their affiliated group by modifying § 414.1365(d)(3)(i)(A)(1) to read that a subgroup is scored on each selected population health measure based on their affiliated group score, if available, and that if the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points; adding § 414.1365(d)(3)(i)(B)(1) so that a subgroup is scored on each selected outcomes-based administrative claims measure based on its affiliated group score, if available, and that if the subgroup's affiliated group score is not available, each such measure will receive zero measure achievement points; and adding § 414.1365(d)(3)(ii)(A) to state that a subgroup is scored on each cost measure included in the MVP that they select and report based on its affiliated group score for each such measure, if available. If the subgroup's affiliated group score is not available for a measure, the measure is excluded from the subgroup's total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2)(i) through (v).

(c) Scoring for Subgroups That Register but Do Not Report

As described in the CY 2022 PFS final rule (86 FR 65415 through 65418), groups interested in participating as subgroups for reporting the measures and activities in an MVP must adhere to the registration process established at § 414.1365(b). To be assessed on their performance at a subgroup level, clinicians participating as subgroups must meet the reporting requirements outlined at § 414.1365(c). We expect subgroups to register with the intent to submit data for the measures and activities in an MVP because they wish to be assessed based on their performance at the subgroup level. We also believe there will be instances where a subgroup would register but not submit data for the applicable performance period or clinicians in a registered subgroup would choose to participate in MIPS via a different reporting option instead of reporting as a subgroup. We considered whether we should assign a score for a subgroup regardless of their submission status. In the CY 2023 PFS proposed rule (87 FR 46272), we stated that at this point in time, we want to encourage groups to explore the subgroup reporting option and not penalize subgroups that do not submit data. During the voluntary years of subgroup reporting, we do not intend to assign a subgroup score in instances when we do not receive any MVP data for clinicians in registered subgroups. However, we expect that MIPS eligible clinicians in registered subgroups would participate in MIPS via another available reporting option as they would be subject to the MIPS payment adjustment under the TIN. Under the existing scoring hierarchy established in the CY 2022 PFS final rule (86 FR 65536 and 65537), a clinician is assigned the highest of the available final scores associated with the clinician's TIN/NPI.

For these reasons, in the CY 2023 PFS proposed rule (87 FR 46272), we proposed at § 414.1318(b)(1) that we will not assign a final score for a subgroup that registers and does not submit data as a subgroup for the applicable performance period. Additionally, we proposed to make conforming changes at § 414.1318(b) to state that, except as provided under § 414.1317(b) and paragraph (b)(1) of this section, each MIPS eligible clinician in the subgroup receives a final score based on the subgroup's combined performance. We noted that we intend to continue monitoring the participation trends for subgroup reporting and reevaluate scoring for registered subgroups that do not submit

data as we move towards mandatory subgroup reporting in the future.

The following is a summary of the public comments received on our proposal to not assign a final score for a subgroup that registers but does not submit data for the applicable performance period and our responses:

*Comment:* A few commenters supported our proposal to not calculate a score for a subgroup that registers but does not report data, stating that groups would be more likely to register as subgroups if they could change that status after it is completed.

*Response:* We thank the commenters for their support.

After consideration of the public comments, we are finalizing our proposal at § 414.1318(b)(1) to not assign a final score for a subgroup that registers and does not submit data as a subgroup for the applicable performance period. We are also finalizing conforming changes at § 414.1318(b) as proposed.

(d) Subgroup Examples

In the CY 2023 PFS proposed rule, we included a series of tables intending to demonstrate how scores would be calculated for clinicians participating in different configurations of groups and subgroups (87 FR 46272 through 46275). We included these examples to better illustrate the interplay of our finalized policies and proposals. We anticipate including similar information in educational material that can be found at <https://qpp.cms.gov/resources/resource-library>.

9. APM Performance Pathway

a. Overview

In the CY 2021 PFS final rule (85 FR 84859 through 84866), we finalized the APM Performance Pathway (APP) at § 414.1367 beginning in performance year 2021, which was designed to provide a predictable and consistent MIPS reporting option to reduce reporting burden and encourage continued APM participation.

b. APP Reporting Options

Under the APP, MIPS eligible clinicians in an APM Entity that participates in a MIPS APM may report to MIPS and be scored (subject to certain limitations) at the individual clinician, group, or APM Entity level (85 FR 84859 through 84866). In that rule, we excluded Virtual Groups from reporting the APP. At that time, the concept of MIPS Value Pathway (MVP) subgroup reporting, through which a subset of MIPS eligible clinicians within a group TIN may report and be scored as a standalone MVP Participant, had

not yet been introduced; however, we note that our subsequent use of the term “subgroup” may have caused confusion in light of its use in MVPs. In the CY 2022 PFS final rule, we codified policies related to subgroups at § 414.1318 ((§§ 414.1318 and 414.1365; 86 FR 65671), by which we meant the reporting of the APP by a subset of MIPS eligible clinicians within an APM Entity. In that rule, we stated that because we already identify the MIPS eligible clinicians who are MIPS APM participants based on Participation Lists for each APM, it is unnecessary to require MIPS APM participants to register as subgroups for purposes of reporting the APP (86 FR 65397 and 65398). We stated that beginning with performance year 2023, we will use Participation Lists to identify the MIPS eligible clinicians within a group TIN that should be included in the subgroup of APM participants for purposes of reporting the APP (86 FR 65398). We also codified at § 414.1318(c)(2) that subgroups would be scored according to the applicable MVP or APP scoring rules. However, under § 414.1367, which governs APP reporting and scoring, no changes were made to reflect the introduction of subgroup-level reporting of the APP.

Recognizing that there is ambiguity in our current rules, we proposed in the CY 2023 PFS proposed rule (87 FR 46275) to modify the text at § 414.1318(c)(2) to remove the reference to subgroup scoring of the APP, and therefore, disallow reporting of the APP by a subset of a group. As discussed in the proposed rule, the change is not intended as a change in policy; it is not our intent to permit MIPS eligible clinicians within an APM entity to be scored at a level in between a group and the individual clinician.

Notwithstanding the foregoing, we stated that we recognize that MIPS eligible clinicians may have an interest in reporting as subgroups in the APP, and as we described later in that section of the proposed rule, we considered as an alternative to the proposed conforming change whether to permit subgroups as a level of reporting the APP, and to modify § 414.1367 accordingly. We noted that we believe there could be scenarios where a group may have an interest in reporting the APP through subgroups. For example, if a large multi-specialty TIN had specialists of different types participating in MIPS APMs, and, therefore, who are eligible for APP scoring, it would be possible that a subgroup within that TIN—perhaps primary care providers working out of a single EHR or practice site—would be interested in reporting the APP using

only the data generated by MIPS eligible clinicians in that subgroup. Additionally, particularly after MVP reporting is more widely performed, we recognized that clinicians using subgroup reporting for MVPs may have an easier time joining APMs and reporting the APP if they are able to maintain their reporting at the same level, thereby strengthening MVPs as a glide path to APM participation.

To permit subgroup reporting of the APP, we noted that we would need to enable a subgroup registration option for APP reporters, which would inevitably introduce additional administrative burden for the subgroups that would report. Aside from needing to register in order to be recognized as a subgroup, all other aspects of APP reporting for subgroups under the alternative proposal would be the same as for other reporting levels as established at § 414.1367. We requested comments on the proposed conforming change and the alternative we considered. In particular, we requested comments on which option would best balance the reporting flexibilities with administrative burdens, with the understanding that it may be necessary to revisit these policies in future rulemaking as MVP and APP policies continue to develop, we sought comment on the proposal.

The following is a summary of the public comments received on the proposed revisions to the regulation text, the alternative we considered, and our responses:

*Comment:* One commenter expressed general support for the alternative proposal to allow subgroup reporting of the APP.

*Response:* We appreciate the commenter taking time to note their support of this alternative policy. We understand that allowing subgroup reporting would create additional flexibility for reporting, particularly among groups that have participants in more than one model or of more than one practice type. Only one commenter indicated a preference for the alternative policy approach, and while we understand that the flexibility that approach offers could be valued by some participants, we do not believe that there is currently any need for the implementation of this policy in the short term. However, as MVPs become more widely available and multispecialty groups begin reporting on more diverse measure sets, there may be more demand for subgroup reporting of the APP in the future.

After consideration of the public comments, we are finalizing the proposed modification to

§ 414.1318(c)(2) to remove the reference to subgroup scoring of the APP policy as proposed. Therefore, we will remove the references to subgroup reporting of the APP in from § 414.1318(c)(2) to conform with current policy. We may revisit this policy in future rulemaking.

#### 10. MIPS Performance Category Scoring

##### a. Quality Performance Category

As discussed in section III.G.4.<sup>459</sup> and elsewhere in the proposed rule (87 FR 46155 through 46157, 46275 through 46276), we sought comment on the potential addition of new Consumer Assessment of Healthcare Providers and Systems (CAHPS) for the Merit-based Incentive Payment System (MIPS) Survey Questions.

In the proposed rule (87 FR 46154 through 46155, 46275 through 46276), we sought feedback on the potential future inclusion of two new measures in the APP measure set: MUC21–136: Screening for Social Drivers of Health and MUC21–134: Screen Positive Rate for Social Drivers of Health. The National Quality Forum (NQF) provided conditional support for these two social determinants of health measures during the 2021–2022 cycle and indicated the measures would be appropriate for consideration in the Shared Savings Program.<sup>460</sup> The measure MUC21–136: Screening for Social Drivers of Health assesses the percentage at which providers screen their adult patients for health-related social needs, which is consistent with the priorities of the agency and program including Meaningful Measures 2.0 priority areas.<sup>461</sup> The measure MUC21–134: Screen Positive Rate for Social Drivers of Health assesses the percentage of patients who screened positive for health-related social needs.

We encouraged readers to review the Social Determinants of Health Measure and Future Measure Development—Request for Information (RFI) discussed at section III.G.4. of the proposed rule. We refer readers to sections XX (Shared Savings Program) and XX (MIPS quality performance category) of this final rule for further discussion of the addition of the Social Determinants of Health measures.

We did not receive any additional comments specific to the potential future incorporation of these measures into the APP.

##### b. Improvement Activities Performance Category

Section 414.1367(c)(3) provides that the improvement activities performance category score for MIPS eligible clinicians, groups, and APM Entities reporting via the APP is calculated in accordance with § 414.1380(b)(3) based on the activities required by the MIPS APM that are included in the MIPS final inventory of improvement activities. We assign scores to each MIPS eligible clinician in the improvement activity performance category for participating in MIPS APMs, and MIPS eligible clinicians must earn 40 points in order to receive full credit in this performance category. On an annual basis, we conduct a review of the governing documentation of all MIPS APMs to determine the Improvement Activities that are required by each such APM, and have in all cases found that each MIPS APM requires participants to engage in such Improvement Activities as would earn participants a performance category score of no less than 40 points, which as discussed previously in the proposed rule is the maximum score for this performance category (§ 414.1380(a)(1)(iii)). The list of required activities for each MIPS APM is compared to the MIPS list of improvement activities and the MIPS APM's participants that report the APP are scored in accordance with MIPS to determine if the APM meets the requirements for awarding full credit (40 points) for Improvement Activities to the participants in the MIPS APM.

We clarified that, even though § 414.1367(c)(3) permits the reporting of additional improvement activities, such reporting would not supersede the automatic award of the maximum score described previously in this section of the proposed rule. Because the reporting of additional improvement activities does not serve any Improvement Activity scoring purpose, we would not use any Improvement Activity performance category submissions for scoring under the APP where the participants were already entitled to full credit for this performance category. This clarification is particularly relevant in instances where an APM Entity is eligible for reweighting of the two remaining performance categories of quality and promoting interoperability. We noted that we understand it is possible that, for example, a data submission from the Application Programming Interface (API) of a TIN or individual within an APM Entity could contain incidental Improvement Activity performance information that was collected automatically, though not

<sup>459</sup> Erroneously cited as section III.J.4 in the proposed rule.

<sup>460</sup> [https://www.qualityforum.org/setting\\_priorities/partnership/map\\_final\\_reports.aspx](https://www.qualityforum.org/setting_priorities/partnership/map_final_reports.aspx).

<sup>461</sup> <https://www.cms.gov/meaningful-measures-20-moving-measure-reduction-modernization>.

for the purpose of a MIPS submission or scoring. We clarified that the submission of Improvement Activity performance information in this type of circumstance would not constitute a submission of data for the purpose of scoring the improvement activities performance category under the APP. Therefore, incidental submissions such as the type in this example would never be the sole basis for an APM Entity to be scored under the APP.

#### c. MIPS Performance Category Measures and Activities

##### (1) Quality Performance Category

###### (a) Background

Section 1848(q)(1)(A)(i) and (ii) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, to provide for a final score for each MIPS eligible clinician. Section 1848(q)(2)(A)(i) of the Act provides that the Secretary must use the quality performance category in determining each MIPS eligible clinician's final score, and section 1848(q)(2)(B)(i) of the Act describes the measures that must be specified under the quality performance category.

We refer readers to §§ 414.1330 through 414.1340 and the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77097 through 77162 and 82 FR 53626 through 53641, respectively), and the CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (83 FR 59754 through 59765, 84 FR 63949 through 62959, 85 FR 84866 through 84877, and 86 FR 65431 through 65445, respectively) for a description of previously established policies and statutory basis for policies regarding the quality performance category.

In the CY 2023 PFS proposed rule (87 FR 46276 through 46280), we proposed to:

- Amend the definition of the term “high priority measure” to include quality measurement pertaining to health equity.
- Replace the “Asian language survey completion” variable with “language other than English spoken at home,” “Spanish language spoken at home,” and “Asian language spoken at home” variables in the case-mix adjustment model for the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey.
- Increase the data completeness criteria threshold to at least 75 percent for CY 2024 and CY 2025 performance

periods/2026 and 2027 MIPS payment years.

- Modify the MIPS quality measure set as described in Appendix 1 of the CY 2023 PFS proposed rule, including through the addition of new measures, updates to specialty sets, the removal of existing measures, and substantive changes to existing measures.

###### (b) Quality Data Submission Criteria

###### (i) Submission Criteria for Quality Measures, Excluding the CAHPS for MIPS Survey Measure

The Meaningful Measures Initiative provides for the identification of high priority areas for quality measurement and quality improvement, which identifies the core quality of care issues that advances our work to improve patient outcomes (83 FR 59719). In order to further identify priority areas for MIPS quality measurement, we defined the term high priority measure at § 414.1305, for years beginning with the CY 2019 performance period/2021 MIPS payment year, as an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure (83 FR 59761). Generally, if an applicable outcome measure is not available, a MIPS eligible clinician must report a high priority measure (§ 414.1335(a)(1)). To incentivize the voluntary adoption of high priority measures, a MIPS eligible clinician may earn bonus points for reporting such a measure (§ 414.1380(b)(1)(v)(A)). As significant and persistent inequities in healthcare outcomes exist in the United States, we are committed to developing innovative solutions that support access to high quality care and promote health equity, including the exploration of solutions to measure health equity within MIPS. Health equity is a priority area across CMS programs, including MIPS.

Thus, in the CY 2023 PFS proposed rule, we proposed to amend the definition of the term high priority measure to include health equity measures. Specifically, starting with the CY 2023 performance period, we proposed to amend the definition of the term high priority measure at § 414.1305 to mean an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, opioid, or health equity-related quality measure (87 FR 46276 and 46277). As noted in the CY 2023 PFS proposed rule, we believe that it is imperative to include quality measures pertaining to health

equity as high priority measures in order to incentivize the adoption of health equity measures by MIPS eligible clinicians (87 FR 46277).

We solicited public comment on the proposal to amend the definition of the term high priority measure to include the recognition of health equity-related quality measures. The following is a summary of the public comments received.

*Comment:* Most commenters supported the proposal to amend the definition of the term high priority measure to include health equity-related measures starting with the CY 2023 performance period.

*Response:* We appreciate the support from commenters.

*Comment:* Many commenters recommended that CMS outline specific guidance indicating what characteristics would classify a measure as health-equity related. Commenters inquired whether measures with outcomes indicating variation among patient populations could be classified as health-equity related, along with measures specifically aimed at addressing equity. A few commenters recommended that health equity-related measures include measures that evaluate social risk factors and demographic data, and track varying degrees of access to care based on social determinants, as measured by factors such as insurance coverage, healthcare benefits, and the types of specialties and settings of care available to a patient.

*Response:* We appreciate commenters' request for additional guidance regarding what classifies a measure as a “health equity-related measure” for the purpose of a high priority designation. We recognize that a health equity-related measure may vary in structure, in which a measure could be structured to directly address health equity or structured to include elements or factors that address an aspect of health equity. We are focusing on a person-centric approach as part of an overarching CMS Quality Strategy, which strives toward creating a care journey that is free from inequity while optimizing opportunities and access for underserved populations. We are identifying measurable interventions to close gaps in quality care and health outcomes. As we consider the inclusion of additional health-equity related measures under MIPS, we note that we have defined the term “health equity” as “the attainment of the highest level of health for all people, where everyone has a fair and just opportunity to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status,

geography, preferred language, and other factors that affect access to care and health outcomes.” We intend to use this definition as we consider potential measures for future use in MIPS.

*Comment:* One commenter recommended that measures which fall under the definition of a high priority measure be validated, tested, and endorsed by the National Quality Forum (NQF).

*Response:* As we have previously stated (83 FR 53636; 84 FR 62954), we request that interested parties consider when submitting a quality measure for possible inclusion whether the measure is “beyond the measure concept phase of development and [has] started testing, at a minimum, with strong encouragement and preference for measures that have completed or are near completion of reliability and validity testing.” While we consider whether or not a measure is fully tested, it is not the only relevant standard. Separately, we note that we opt to participate in the pre-rulemaking process that assesses and evaluates measures from the Measures Under Consideration (MUC) List for the potential implementation of such measures in MIPS under section 1890A of the Act, which may not result in a consensus-base entity (CBE) endorsement (for example, NQF endorsement). Nonetheless, this process provides a comprehensive review of the measures from multi-stakeholder workgroups.

*Comment:* A few commenters suggested that in addition to the proposal to amend the definition of the term high priority measure to include health equity-related measures, CMS should provide technical assistance pertaining to identifying and measuring health care disparities in electronic medical records.

*Response:* We appreciate the feedback from commenters. As we increase the number of health equity-related quality measures under MIPS, we intend to explore approaches to technical assistance. Also, we intend to collaborate with The Office of the National Coordinator for Health Information Technology (ONC), which has efforts focused on the development of standards and capabilities within certified health information technology supporting the capture and sharing of data that can provide insights into health disparities.

After consideration of public comments, and for the reasons stated above and in the CY 2023 PFS proposed rule (87 FR 46276 and 46277), we are finalizing, as proposed, the proposal in § 414.1305 to amend the definition of

the term high priority measure to mean an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, opioid, or health equity-related quality measure.

#### (ii) Submission Criteria for the CAHPS for MIPS Survey Measure

The CAHPS for MIPS Survey measures patients’ experience of care within a group, virtual group, and APM Entity, including Shared Savings Program ACOs. The survey measures ten dimensions of patient experience of care, known as summary survey measures, for which patients may be the best, if not only source of information. The CAHPS for MIPS Survey is optional for all groups, virtual groups, and APM Entities of 2 or more eligible clinicians reporting via traditional MIPS, and is required for Shared Savings Program ACOs reporting via the APM Performance Pathway (APP).

#### (A) CAHPS for MIPS Survey Measure Case-Mix Adjustment Model

Under the CAHPS for MIPS Survey measure, we adjust summary survey measure scores for case-mix to promote meaningful comparison of the performance of MIPS groups despite differences in their patient populations (81 FR 77120). The case-mix adjustment model for CAHPS for MIPS Survey measure includes the following case-mix adjusters as of the CY 2022 performance period: age; education; self-reported general health status; self-reported mental health status; proxy response; Medicaid dual eligibility; eligibility for Medicare’s low-income subsidy; and Asian language survey completion (86 FR 65444 and 65445).

Only a small percentage of CAHPS for MIPS Survey participants who report speaking a language other than English at home actually complete the survey in that language. We believe that collecting information on the language spoken by the participant at home as a case-mix adjuster rather than the language used by the respondent to complete the survey is likely to capture language preference more accurately, as well as response patterns of participants with similar experiences, for a more meaningful comparison of performance between MIPS groups. Furthermore, more accurately capturing preferred language aligns with CMS’s effort to provide culturally and linguistically appropriate services (CLAS), which are intended to advance health equity, improve quality, and help eliminate

health care disparities.<sup>462</sup> Other CMS-administered CAHPS Surveys, such as the Hospital CAHPS Survey, include preferred language variables rather than survey language variables for case-mix adjustment. Furthermore, analysis of CY 2019 performance period measure data for the CAHPS for MIPS Survey found that adding case-mix adjusters for Spanish language spoken at home, Asian language(s) spoken at home, and other language spoken at home has minimal impacts on scoring for most groups, and slightly positively impacts the scores of groups with substantial patient populations who speak a language other than English at home. Therefore, we proposed in the CY 2023 PFS proposed rule to revise the CAHPS for MIPS Survey measure case-mix adjustment model to remove the existing adjuster for Asian language survey completion and to add adjusters for Spanish language spoken at home, Asian language spoken at home, and other language spoken at home (87 FR 46277).

We solicited public comment on the proposal to revise the CAHPS for MIPS Survey measure case-mix adjustment model.

*Comment:* Several commenters supported our proposal to revise the CAHPS for MIPS Survey measure case-mix adjustment model to remove the existing adjuster for Asian language survey completion and to add adjusters for Spanish language spoken at home, Asian language spoken at home, and other language spoken at home. Commenters noted that this change will capture more culturally appropriate data and more accurately capture language preference.

*Response:* We agree that revising the CAHPS for MIPS Survey measure case-mix model to include adjusters for Spanish language spoken at home, Asian language spoken at home, and other language spoken at home on clinician profile pages will capture more culturally appropriate data and more accurately capture language preference, while also providing for a more meaningful comparison of performance between MIPS groups.

*Comment:* One commenter noted that their support is contingent on us providing sufficient data demonstrating that the revised scoring better reflects the quality of care provided. In particular, the commenter requested more detail on how this revision would

<sup>462</sup> Centers for Medicare & Medicaid Services. Achieving Health Equity. Available at <https://www.cms.gov/Outreach-and-Education/MLN/WBT/MLN1857916-OMH-AHE/OMHAHE/ahe/lesson01/09/index.html>.

improve the validity and reliability of the scores.

*Response:* We agree that any revision to the scoring of the CAHPS for MIPS Survey measure should better reflect the quality of care given, and at a minimum, maintain the reliability and validity of the scores. Based on internal analysis of existing CAHPS for MIPS data, this change to the case-mix adjustment model did not have a substantial impact on scores for most groups and had a small positive impact on scores for groups with a large proportion of patients reporting speaking a language other than English at home, which suggests a slight improvement in measurement of patient experience by the survey. Regarding the validity of the measure, we believe that language other than English spoken at home more accurately captures language preference than language of survey completion. Regarding measure reliability, analyses of existing CAHPS for MIPS data showed that across all of the summary survey measures, changes in reliability were extremely small.

After consideration of public comments, and for the reasons stated above and in the CY 2023 PFS proposed rule (87 FR 46277), we are finalizing the proposal to revise the CAHPS for MIPS Survey measure case-mix adjustment model.

#### (aa) Adding Items Related to Health Disparity and Price Transparency to the CAHPS for MIPS Survey Measure

We are interested in gathering information directly from patients related to health disparities and price transparency. In the CY 2023 PFS proposed rule (87 FR 46155 through 46157), we requested information regarding the future consideration of additional and modified questions related to health disparities and price transparency to the CAHPS for MIPS Survey measure. Specifically, we solicited public comment on the following items: (1) the potential future inclusion of health disparities and price transparency questions and whether there are other questions that should be considered for potential future inclusion in the CAHPS for MIPS Survey measure; and (2) the potential for creating a shortened version of the CAHPS for MIPS Survey measure such that it would be more applicable to specialty groups. We thank commenters for their responses regarding this request for information. We may consider the information provided by commenters to inform future rulemaking.

#### (iii) Data Completeness Criteria

In the CY 2017 and CY 2018 Quality Payment Program final rules and the CY 2020 PFS final rule, we noted that we would increase the data completeness criteria threshold over time (81 FR 77121, 82 FR 53632, and 84 FR 62951). For the CY 2017 performance period/2019 MIPS payment year (first year of the implementation of MIPS), the data completeness criteria threshold was established to reflect a threshold of at least 50 percent (81 FR 77125). The data completeness criteria threshold increased from at least 50 percent to at least 60 percent for the CY 2018 performance period/2020 MIPS payment year (81 FR 77125 and 82 FR 53633) and was maintained at a threshold of at least 60 percent for the CY 2019 performance period/2021 MIPS payment year (82 FR 53633 and 53634). For the CY 2020 performance period/2022 MIPS payment year, the data completeness criteria threshold was increased from at least 60 percent to at least 70 percent (84 FR 62952). The data completeness criteria threshold of at least 70 percent was maintained for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years (86 FR 65435 through 65438). We continue to believe that it is important to incrementally increase the data completeness criteria as MIPS eligible clinicians, groups, and virtual groups gain experience with MIPS.

We believe that the incorporation of higher data completeness thresholds in future years ensures a more accurate assessment of a MIPS eligible clinician's performance on quality measures and prevent selection bias to the extent possible (81 FR 77120, 82 FR 53632, 83 FR 59758, and 86 FR 65436). We have encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients (82 FR 53632 and 86 FR 65436). The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group's overall performance for that measure. The data completeness threshold of less than 100 percent is intended to reduce burden and accommodate operational issues that may arise during data collection during the initial years of the program (82 FR 53632 and 86 FR 65436).

We previously noted concerns raised regarding the unintended consequences of accelerating the data completeness thresholds too quickly, which may jeopardize a MIPS eligible clinicians' ability to participate and perform well under MIPS (81 FR 77121, 82 FR 53632,

and 84 FR 62951). We want to ensure that an appropriate, yet achievable, data completeness threshold is applied to all eligible clinicians participating in MIPS. Based on our analysis of data completeness rates from data submission for the CY 2017 performance period (as described in the CY 2020 PFS final rule (84 FR 62951), the average data completeness rates were as follows: for individual eligible clinicians, it was 76.14; for groups, it was 85.27; and for small practices, it was 74.76), we believe that it is feasible for eligible clinicians and groups to achieve a higher data completeness threshold without jeopardizing their ability to participate and perform well under MIPS.

In the CY 2023 PFS proposed rule, we proposed to increase the data completeness criteria from 70 percent to 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years. Specifically, we proposed in § 414.1340(a)(4) that, for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, a MIPS eligible clinician or a group submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs must submit data on at least 75 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer (87 FR 46277 and 46278). Similarly, we proposed in § 414.1340(b)(4), for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, that a MIPS eligible clinician or a group submitting quality measures data on Medicare Part B claims measures would need to submit data on at least 75 percent of the MIPS eligible clinician or group's patients seen during the corresponding performance period to which the measure applies (87 FR 46277 and 46278). As noted in the CY 2023 PFS proposed rule, we believe that increasing the data completeness criteria threshold to 75 percent for the CY 2024 performance period/2026 MIPS payment year and the CY 2025 performance period/2027 MIPS payment year provides MIPS eligible clinicians with ample time prepare for a higher standard as most clinicians already meet or exceed this standard.

We solicited public comment on the proposals to increase the data completeness criteria threshold from at least 70 percent to at least 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years. The following is a summary of the public comments received.

*Comment:* Many commenters supported the proposal to increase the data completeness criteria threshold

from at least 70 percent to at least 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years.

*Response:* We appreciate the support from commenters.

*Comment:* Several commenters opposed the proposal to increase the data completeness criteria threshold from at least 70 percent to at least 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years. Commenters indicated that increasing the data completeness threshold would unnecessarily increase reporting burdens for individual MIPS clinicians, groups, and virtual groups. A few commenters emphasized that some clinicians are still recovering from the ongoing COVID-19 PHE. A few other commenters indicated that clinicians are being held to a higher standard in MIPS compared to other quality programs. One commenter expressed concern that subregulatory guidance is generally not available late in the performance year, which could result in a change in reporting strategy that makes it challenging to satisfy data completeness requirements. One commenter recommended that the data completeness criteria threshold be maintained to at least 75 percent for at least 5 years and not exceed a threshold of at least 80 percent.

*Response:* We disagree with commenters that increasing the data completeness criteria threshold would unnecessarily increase the reporting burden for individual MIPS eligible clinicians, groups, and virtual groups. Individual MIPS eligible clinicians, groups, and virtual groups will have had 4 years of a maintained data completeness criteria threshold of at least 70 percent before transitioning to an increased data completeness criteria threshold of at least 75 percent and will have more than 12 months to prepare for an increased data completeness criteria threshold before such threshold becomes effective for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years.

We recognize that some individual MIPS eligible clinicians, groups, and virtual groups continue to experience the effects from the COVID-19 public health emergency. For this reason, in the CY 2022 PFS final rule (86 FR 65437 through 65438), we maintained the data completeness criteria threshold of at least 70 percent for the CY 2023 performance period/2025 MIPS payment in response to concerns from commenters regarding an increase to the data completeness criteria threshold amidst the COVID-19 public health

emergency. Maintaining the data completeness criteria threshold of at least 70 percent was intended to reduce burden and provide additional time for MIPS eligible clinicians, groups, and virtual groups to adopt the final policy changes and recover fiscally from the pandemic. In establishing data completeness criteria thresholds in advance of an applicable performance period, we believe it is advantageous to delineate the expectations for MIPS eligible clinicians, groups, and virtual groups in order for them prepare for a transition to higher data completeness criteria threshold, particularly the increase in data completeness criteria threshold of at least 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years.

We recognize that other CMS quality programs may have different data completeness criteria thresholds. While the commenter did not specify a CMS quality program or outline specific reporting requirements regarding data completeness that differ from MIPS, we believe that reporting requirements for CMS quality programs such as data completeness criteria, data validation, patient population eligible for a measure, measure specification requirements, case minimum standards, or measure exclusions or exceptions may not be directly comparable. Therefore, we believe that it is not accurate to conclude that the overall reporting burden of a CMS quality program is less than another CMS quality program merely because the former CMS quality program has a lower data completeness criteria threshold than the latter program. We note that reporting requirements may not only differ across CMS quality programs, but reporting requirements may differ by measure within a program. Thus, we believe that the reporting requirements such as the data completeness criteria threshold under other CMS quality programs should not be dispositive when determining the data completeness threshold for MIPS as reporting requirements for other CMS quality programs may not be directly comparable to the reporting requirements established under MIPS.

In response to the comment indicating that subregulatory guidance not being available until late in the performance period and may cause challenges in satisfying data completeness criteria requirements, we note that all reporting requirements for the quality performance category are established through the rulemaking process and published in the applicable calendar year PFS final rule. Although the

commenter did not specify the type of subregulatory guidance that is published late in a performance period potentially impacting a MIPS eligible clinician, group, or virtual group from meeting the data completeness criteria requirements, we note that there are instances in which we publish subregulatory guidance toward the latter part of a performance period such as the list of MIPS quality measures that will be suppressed or truncated for the applicable performance period, which is published before the end of the performance period; and the list of MIPS quality measures impacted by ICD-10 coding changes that become effective October 1 of an applicable performance period, which is published prior to the applicable performance period. We recognize that the publication of MIPS quality measures impacted by ICD-10 coding changes, which would result in truncation or suppression, is in the latter part of a performance period. We note that it is not technically feasible for us to publish such information prior to October 1 of an applicable performance period given that such coding changes are not effective until October 1 of a calendar year. We strive to provide subregulatory guidance as soon as technically feasible.

Furthermore, we believe that it is critical to increase data completeness thresholds over time to more accurately assess a MIPS eligible clinician's performance on quality measures and prevent any selection bias. A data completeness criteria threshold of less than 100 percent reduces burden and accommodates operational issues that may arise during data collection within the initial years of the program. We have previously provided notice to MIPS eligible clinicians in order for them to take the necessary steps to prepare for higher data completeness criteria thresholds in future years (82 FR 53632, 83 FR 59758, and 84 FR 62951). We want to ensure that an appropriate, yet achievable, data completeness criteria threshold is applied to all eligible clinicians participating in MIPS.

*Comment:* Several commenters expressed concern regarding the proposal to increase the data completeness criteria threshold from at least 70 percent to at least 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years due to potential issues with taxpayer identification numbers (TINs), which include more than one site of service. Commenters emphasized that in many cases, specialties may provide services across multiple sites, but not all sites participate in MIPS or use the same registry or EHR that the clinician

chooses to use for MIPS reporting, and such clinician would face challenges if data from these additional sites need to be included to meet the data completeness threshold. Some commenters indicated that the data completeness criteria threshold should not increase until EHR reporting is more widely adopted and integrated across clinicians and settings. A few commenters noted that the proposal would have a disproportionately negative impact on small and rural practices, which are significantly less likely to have an EHR. One commenter raised the concern that clinicians continue to lack access to timely notifications when a patient is included in the denominator of a quality measure. The commenter encouraged CMS to establish a process that will allow practices to verify which patients should be in the denominator of a selected measure on a timely basis, including when clinicians have a scheduled service with regular updates occurring monthly at minimum.

*Response:* We acknowledge the concerns from commenters regarding certain eligible clinicians that may face different systems for capturing and reporting information across sites of services. However, we believe in the importance of incrementally increasing the data completeness criteria threshold, and believe that by finalizing the policy as proposed for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, eligible clinicians who may face this issue will have had sufficient time to address data collection across sites of service where they may practice. We believe that the use of EHRs and eCQMs can reduce burden associated with meeting higher data completeness standards, as collection of eCQM data within the EHR can allow eligible clinicians to report on 100 percent of the eligible population with data in the EHR for a measure. We continue to encourage individual MIPS eligible clinicians, groups, and virtual groups, including small and rural practices, to explore EHR adoption and reporting of eCQMs to reduce burden. However, where individual MIPS eligible clinicians, groups, and virtual groups continue to engage in other means of data collection for MIPS CQMs, including the collection of MIPS CQM data reported by registries and/or Qualified Clinical Data Registries (QCDRs), we believe this incremental increase in the data completeness threshold would not present a substantial burden.

In regard to the comment encouraging CMS to establish a process that will allow practices to verify which patients

should be in the denominator of a selected measure on a timely basis, including when clinicians have a scheduled service with regular updates occurring monthly at minimum, we note that CMS does not collect real-time information from MIPS eligible clinicians regarding patient encounters, and future patient encounters, that would allow for a determination or estimation of whether a patient is in the denominator of a selected measure. We encourage eligible clinicians to work with their health IT vendors, or other intermediaries including registries and QCDRs to explore such functionality.

Also, we recognize that the increase in the data completeness criteria threshold would impact APM Entities such as Medicare Shared Savings Program ACOs that are preparing to transition to reporting MIPS CQMs or CQMs under the APP, and face additional considerations around the aggregation of data across ACO participant sites. We recognize that Medicare Shared Savings Program ACOs are developing workflows and the necessary infrastructure for data aggregation across systems in order to be able to report all-payer for MIPS CQMs and eCQMs. We recognize that an increase in the data completeness criteria threshold would increase the amount of data Medicare Shared Savings Program ACOs are required to aggregate across ACO participants; however, we believe that while Medicare Shared Savings Program ACOs are developing data aggregation approaches, they would be able to target the increased data completeness criteria threshold of at least 75 percent as part of their planning activities.

*Comment:* A few commenters recommended that CMS consider establishing different data completeness thresholds for different types of measures.

*Response:* We disagree with the commenters that there should be differing data completeness thresholds for different types of measures. We believe that not having a consistent data completeness threshold across the MIPS quality measures would create confusion and increase undue burden because individual MIPS eligible clinicians, groups, virtual groups, and APM Entities (Medicare Shared Savings Program ACOs) reporting on multiple measures with varying data completeness thresholds may inadvertently report data at the incorrect data completeness criteria threshold for one or more measures and would experience additional data aggregation complexities in having their EHRs, registries, and/or QCDRs account for

various data completeness criteria thresholds per measure across all sites within a TIN(s).

*Comment:* A few commenters recommended that CMS converse with interested parties and quality measurement experts when establishing the target ceiling for the data completeness criteria threshold and the timeline for achieving such threshold.

*Response:* CMS has adopted and will continue to adopt updates to the data completeness criteria threshold through regulation, which affords the public, including all interested parties and quality measure experts, the opportunity to comment. We appreciate the comments we receive and may consider such information to inform future rulemaking.

*Comment:* One commenter requested that CMS provide the rationale for increasing the data completeness criteria threshold and the data used to inform such decision.

*Response:* We refer the reader to our discussion above and in prior rulemaking regarding our belief that the incorporation of higher data completeness thresholds ensures a more accurate assessment of a MIPS eligible clinician's performance on quality measures and prevents selection bias to the extent possible (81 FR 77120, 82 FR 53632, 83 FR 59758, and 86 FR 65436). As we have previously noted, we want to ensure that an appropriate, yet achievable, data completeness threshold is applied to all eligible clinicians participating in MIPS. Based on our analysis of data completeness rates from data submission for the CY 2017 performance period (as described in the CY 2020 PFS final rule (84 FR 62951), the average data completeness rates were as follows: for individual eligible clinicians, it was 76.14; for groups, it was 85.27; and for small practices, it was 74.76). As MIPS eligible clinicians, groups, and virtual groups have gained experience participating in MIPS, particularly meeting the data completeness criteria threshold over the last 6 years (from CY 2017 performance period to CY 2022 performance period), we believe that such experience has prepared MIPS eligible clinicians, groups, and virtual groups to be able to meet incremental increases in the data completeness criteria threshold. CMS will have maintained the data completeness criteria threshold at 70 percent for four years by CY 2024, and we believe that the signaling of our intent to continue to raise the threshold in the future (see 81 FR 77120, 82 FR 53632, 83 FR 59758, and 86 FR 65436) has provided adequate time for MIPS eligible clinicians, groups, and virtual

groups to transition from a data completeness criteria threshold of at least 70 percent to at least 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years. Therefore, we believe that it is feasible for eligible clinicians, groups, and virtual groups to achieve a higher data completeness threshold of at least 75 percent, for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years without jeopardizing their ability to participate and perform well under MIPS.

*Comment:* One commenter requested for CMS to explain how the achieved percent of data completeness would be validated, given that the denominator is for all payers.

*Response:* All-payer data is required to be reported for MIPS CQMs and eCQMs under MIPS. Each MIPS CQM and eCQM reported must meet the data completeness criteria. In order to access the Quality Payment Program system for data submission, users are required to attest that they agree to the Statement of Truth. The Statement of Truth requires that a user certifies that to the best of their knowledge that all the information that they will be submitting will be true, accurate, and complete. If a user becomes aware that any submitted information is not true, accurate, and complete, the user must correct such information promptly. As part of the Statement of Truth, a user acknowledges their understanding that the knowing omission, misrepresentation, or falsification of any submitted information may be punishable by criminal, civil, or administrative penalties, including fines, civil damages, and/or imprisonment. If it is determined that an individual MIPS eligible clinician, group, or virtual group did not adhere to the terms of the Statement of Truth during an audit, the individual MIPS eligible clinician, group, or virtual group not only violated the terms of the Statement of Truth and may be subject to penalty, but did not meet the reporting requirements under MIPS. As part of our data validation verification process, we conduct audits.

After consideration of public comments, and for the reasons stated above and in the CY 2023 PFS proposed rule (87 FR 46277 and 46278), we are finalizing, as proposed, the proposals in §§ 414.1340(a)(4) and 414.1340(b)(4) as follows:

- For the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, a MIPS eligible clinician or a group submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs must submit data on at least 75 percent of the MIPS eligible

clinician or group's patients that meet the measure's denominator criteria, regardless of payer.

- For the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, that a MIPS eligible clinician or a group submitting quality measures data on Medicare Part B claims measures must submit data on at least 75 percent of the MIPS eligible clinician or group's patients seen during the corresponding performance period to which the measure applies.

#### (c) Selection of MIPS Quality Measures

Section 1848(q)(2)(D)(i) of the Act requires the Secretary, through notice and comment rulemaking, to establish an annual final list of quality measures from which MIPS eligible clinicians may choose for the purpose of assessment under MIPS. Section 1848(q)(2)(D)(i)(II) of the Act requires that the Secretary annually update the list by removing measures from the list, as appropriate; adding to the list, as appropriate, new measures; and determining whether measures that have undergone substantive changes should be included on the updated list.

Previously finalized MIPS quality measures can be found in the CY 2022 PFS final rule (86 FR 65687 through 65968); CY 2021 PFS final rule (85 FR 85045 through 85377); CY 2020 PFS final rule (84 FR 63205 through 63513); CY 2019 PFS final rule (83 FR 60097 through 60285); CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174); and CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). Proposed changes to the MIPS quality measure set, as described in Appendix 1 of the CY 2023 PFS proposed rule, include the following: the addition of new measures; updates to specialty sets; removal of existing measures, and substantive changes to existing measures. For the CY 2023 performance period, we proposed a measure set of 194 MIPS quality measures in the inventory (87 FR 46278 through 46279).

The new MIPS quality measures that we proposed to include in MIPS for the CY 2023 performance period and future years can be found in Table Group A of Appendix 1 of the CY 2023 PFS proposed rule. For the CY 2023 performance period, we proposed 9 new MIPS quality measures, which includes 1 administrative claims measure; 1 composite measure; 5 high priority measures, and 2 patient-reported outcome measures).

In addition to the establishment of new individual MIPS quality measures, we also develop and maintain specialty measure sets to assist MIPS eligible

clinicians with selecting quality measures that are most relevant to their scope of practice. We proposed modifications to existing specialty sets and new specialty sets as described in Table Group B of Appendix 1 of the CY 2023 PFS proposed rule. Specialty sets may include: new measures, previously finalized measures with modifications, previously finalized measures with no modifications, the removal of certain previously finalized quality measures, or the addition of existing MIPS quality measures. Specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 3, 2022, we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 7 of MIPS under the Quality Payment Program.<sup>463</sup> These recommendations were based on the MIPS quality measures finalized in the CY 2021 PFS final rule and the 2021 Measures Under Consideration List; the recommendations include the addition or removal of current MIPS quality measures from existing specialty sets, or the creation of new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and as a result, the recommendations that we agree with were proposed in the CY 2023 PFS proposed rule.

In addition to establishing new individual MIPS quality measures and modifying existing specialty sets and new specialty sets as described in Tables Group A and Group B of Appendix 1 of the CY 2023 PFS proposed rule (87 FR 46458 through 46471; 87 FR 46471 through 46713), we refer readers to Table Group C of Appendix 1 of the CY 2023 PFS proposed rule for a list of quality measures and rationales for measure removal (87 FR 46714 through 46722). We have previously specified certain criteria that will be used when we are considering the removal of a measure (81 FR 77136 and 77137; 83 FR 59763 through 59765; 84 FR 62957 through 62959). For the CY 2023 performance period, we proposed to remove 15 MIPS quality measures and partially remove 2 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use

<sup>463</sup> Message to the Quality Payment Program listserv on January 3, 2022, entitled: "The Centers for Medicare & Medicaid Services (CMS) is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2023 Performance Year of the Merit-based Incentive Payment System (MIPS)."

in MVPs. We refer readers to Table Group DD of Appendix 1 of the CY 2023 PFS proposed rule for further information regarding the proposals to retain such measures for retention for use in relevant MVPs (87 FR 46789 through 46792). Of the 15 MIPS quality measures proposed for removal, the following pertains to such measures: 1 MIPS quality measure is duplicative to a proposed new MIPS quality measure; 4 quality measures are duplicative of current measures; 7 MIPS quality measures that do not align with the Meaningful Measure Initiative (that is, measures that are unable to produce a benchmark or have limited adoption, or are a standard of care); 2 MIPS quality measures that are under the topped out lifecycle; and 1 measure is extremely topped out. We have continuously communicated to interested parties our desire to reduce the number of process measures within the MIPS quality measure set (83 FR 59763 through 59765). We noted our belief that the proposal to remove the quality measures described in Table Group C of the CY 2023 PFS proposed rule would lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to removing measures should occur through an iterative process that includes an annual review of the quality measures to determine whether they meet our removal criteria (87 FR 46714).

Also, we proposed substantive changes to several MIPS quality measures, which can be found in Table Group D of Appendix 1 of the CY 2023 PFS proposed rule (87 FR 46724 through 46788). We have previously established criteria that would apply when we are considering making substantive changes to a quality measure (81 FR 77137, and 86 FR 65441 and 65442). We proposed substantive changes to 75 MIPS quality measures, which includes 2 quality measures proposed to be retained for utilization under MVPs (we refer readers to Table Group DD of Appendix 1 of the proposed rule for such measures that are proposed for retention for use in relevant MVPs). On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive.

Lastly, we proposed substantive changes to CMS Web Interface measures that are available as a collection and submission type for Medicare Shared Savings Program ACOs meeting reporting requirements under the APP. The substantive changes to the CMS Web Interface measures can be found in Table Group E of Appendix 1 of the CY

2023 PFS proposed rule (87 FR 46792 through 46799). Relatedly, in the CY 2023 PFS proposed rule (87 FR 46148 through 46150), we proposed to establish CMS Web Interface benchmark policies for the APP under Medicare Shared Savings Program (at § 425.512) that would be applied retroactively starting with performance year 2022. The CMS Web Interface benchmark policies previously established at § 425.502(b) under the Medicare Shared Savings Program were revised in the CY 2021 PFS final rule, in which the provisions under § 425.502(b) were sunset with performance year 2022 and not applied to the APP under the Medicare Shared Savings Program. For performance year 2021, we stated in the CY 2021 PFS final rule that the CMS Web Interface measure benchmarks developed for the Medicare Shared Savings Program for performance year 2020 would be utilized (85 FR 84724). However, we inadvertently failed to consider the policies that would apply for purposes of establishing benchmarks for the CMS Web Interface measures applicable to the APP starting with performance year 2022, and as a result, benchmark policies for the CMS Web Interface measures were not established for the APP under the Medicare Shared Savings Program. We noted that the absence of benchmark policies for the APP under the Medicare Shared Savings Program impacts MIPS. Section 414.1380(b)(1)(ii)(B) provides that MIPS benchmarks for the CMS Web Interface collection type uses benchmarks from the corresponding reporting year of the Shared Savings Program. Due to the absence of benchmark policies for the APP under the Medicare Shared Savings Program, CMS Web Interface measure benchmarks were not established starting with performance year 2022. As described in the CY 2023 PFS proposed rule (87 FR 46148 through 46150), we proposed to establish CMS Web Interface benchmark policies for the APP under Medicare Shared Savings Program, in which the retroactive adoption of benchmark policies previously established at § 425.502(b) would be applied for performance year CY 2022 (and future performance years as applicable under the Medicare Shared Savings Program). Thus, for the CY 2022 performance period/2024 MIPS payment year (the last year for which the CMS Web Interface is available as a collection and submission type under traditional MIPS for groups, virtual groups, and APM Entities), the CMS Web Interface benchmarks created for the APP under the Medicare Shared

Savings Program would be utilized under MIPS.

In this final rule, we are further elaborating on the impact of the retroactive adoption of benchmark policies previously established at § 425.502(b) for the APP under the Medicare Shared Savings Program would have on MIPS for the CY 2022 performance period/2024 MIPS payment year. In the CY 2023 PFS proposed rule (87 FR 46148 through 46150), we proposed to correct our inadvertent indication that a Medicare Shared Savings Program benchmark would not be created for the Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID#226). In the CY 2022 PFS final rule (86 FR 65262), we noted the CMS Web Interface measure Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID#226) and two other CMS Web Interface measures did not have benchmarks for performance year 2022 and would not be scored. Pursuant to § 414.1380(b)(1)(ii)(B) and absent this correction, the CMS Web Interface measure, Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID#226), would not have a benchmark and would not be scored under MIPS the CY 2022 performance period/2024 MIPS payment year. With the establishment of a benchmark for the CY 2022 performance period/2024 MIPS payment year, the CMS Web Interface measure, Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID#226), will be scored under MIPS.

We believe that the scoring of the CMS Web Interface measure, Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID#226), would likely be beneficial to the overall quality performance category score for a group, virtual group, or APM Entity given that there would be an opportunity to earn more achievement points as an additional CMS Web Interface measure would be scored; and would not result in additional administrative burden given that groups, virtual groups, and APM Entities are already required to report on all CMS Web Interface measures, including CMS Web Interface measures without benchmarks. We refer readers to section III.G.4.c.(2) of this final rule for the discussion regarding the rationale for establishing a benchmark and scoring the CMS Web Interface measure, Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID#226)

for the APP under the Medicare Shared Savings Program.

Lastly, we recognize that some groups, virtual groups, and APM Entities intending to report on the CMS Web Interface measures for the CY 2022 performance period/2024 MIPS payment year may continue to be impacted by the COVID-19 public health emergency or may be affected by other extreme and uncontrollable circumstances (EUC) (such as a Federal Emergency Management Agency (FEMA)-designated major disaster). Groups, virtual groups, and APM Entities may apply for the 2022 MIPS EUC Exception if an EUC affects their ability to collect data for a specific MIPS performance category or categories.<sup>464</sup> The EUC policy provides for the reweighting of one or more performance categories (see § 414.1380(c)(2)).

We solicited public comment on the proposals to modify the quality performance category measure set.

We refer readers to Table Groups A through E of Appendix 1 of this final rule for a summary of public comments received regarding the proposed modifications to the MIPS quality measure set for the CY 2023 performance period and the discussion regarding final decisions. We refer readers to section III.G.4.c.(2) of this final rule regarding the finalized, as proposed, policy that establishes benchmark policies for the APP under the Medicare Shared Savings Program.

After consideration of public comments, and for the reasons stated above (and in the aforementioned Table Groups A through E of Appendix 1 of this final rule) and in the CY 2023 PFS proposed rule (87 FR 46278 and 46279), we are finalizing with modification a measure set of 198 MIPS quality measures in the inventory for the CY 2023 performance period, which includes the following:

- Implementation of 9 new MIPS quality measures: 1 administrative claims measure; 1 composite measure; 5 high priority measures, and 2 patient-reported outcome measures;
- Removal of 11 MIPS quality measures: 1 quality MIPS measure is duplicative to a new quality measure; 4 MIPS quality measures are duplicative to current quality measures; 3 MIPS quality measures do not align with the Meaningful Measures Initiative (that is, measures that are unable to produce a

benchmark or have limited adoption, or are a standard of care); 2 MIPS quality measures are under the topped-out lifecycle; and 1 MIPS quality measure is extremely topped out;

- Partial removal of 2 MIPS quality measures: 2 MIPS quality measures removed from traditional MIPS and retained for use in MVPs; and
- Substantive changes to 76 MIPS quality measures.

#### (i) Screening for Social Drivers of Health Proposed Measure

Established evidence demonstrates that factors beyond the clinical realm are directly associated with patient health outcomes as well as healthcare utilization, costs, and performance in quality-based payment programs.<sup>465</sup> Specifically, social risk factors account for 50 to 70 percent of health outcomes.<sup>467</sup> Indeed, the Physicians Foundation surveyed 8,500 physicians in 2018 and found that almost 90 percent of respondents reported their patients had a serious health problem linked to poverty or other social conditions.<sup>470</sup>

Health-related social needs (HRSNs), which we have previously defined as individual-level, adverse social conditions that negatively impact a person's health or healthcare, are significant risk factors associated with worse health outcomes as well as increased healthcare utilization.<sup>471</sup> In

2017, the CMS Innovation Center launched the Accountable Health Communities (AHC) Model to test the impact of addressing the HRSNs of Medicare and Medicaid beneficiaries.<sup>472</sup> Although there are other models of care that address HRSNs, the AHC Model is one of the first Federal pilots to test whether systematically identifying and addressing core HRSNs—through screening, referral, and community navigation—improves healthcare costs, utilization, and outcomes.<sup>476</sup> Moreover, as described in the CMS Equity Plan for Improving Quality in Medicare, complex interactions among individual need, clinician practice/behavior, and availability of community resources significantly impact healthcare access, quality, and ultimately costs.<sup>477</sup>

Conceptually, HRSNs exist along a continuum with other equity-related terms—such as “social determinants of health” and “social risk factors”—used to describe upstream factors that can adversely affect the health of individuals and communities. Often conflated and even used interchangeably, the variety of terms has created confusion, as well as concern, prompting leaders in the field to adopt “drivers of health” (DOH) instead.<sup>479</sup>

<sup>471</sup> Centers for Medicare & Medicaid Services. (2021). A Guide to Using the Accountable Health Communities Health-Related Social Needs Screening Tool: Promising Practices and Key

Hereafter, we utilize DOH terminology to more holistically capture aforementioned and related concepts, while minimizing potential misinterpretation and/or negative connotation.

We believe that consistently addressing DOH will have two significant benefit for MIPS. First, because DOH disproportionately impact individuals and communities that are disadvantaged and/or underserved by the healthcare system, the promotion of screening for these factors would support clinician practices and health systems in actualizing an expressed commitment to address disparities in care, implementing associated equity measures to track progress, and improving overall health equity.<sup>480</sup>

Second, patient-level DOH data through screening is essential in the long-term to encourage meaningful collaboration among clinicians and community-based organizations, and implement and evaluate related innovations in healthcare and social service delivery.

As a first step towards addressing DOH to close health equity gaps among patients served by MIPS-eligible clinicians, we propose the adoption of an evidence-based DOH measure (we refer readers to Table Group A.3 of Appendix 1 of the CY 2023 PFS proposed rule for the proposed measure information (87 FR 46460 and 46461) that would support identification of specific DOH associated with inadequate healthcare access and adverse health outcomes among patients. We noted that the measure would enable systematic collection of DOH data. This standardized measure would enable clinicians to systematically address DOH affecting individual patients; thereby, improving not only early identification of risk and/or need, but also prompt referral to relevant resources as well as stronger clinical-community linkages. Further, collecting DOH data could promote more focused collaboration between clinicians/health systems and appropriate community-based organizations to guide cross-sector resource allocation and ultimately improved patient outcomes.

The “Screening for Social Drivers of Health” measure assesses the percent of

patients who are 18 years or older screened for food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. Under our Meaningful Measures Framework,<sup>481</sup> the measure addresses the quality priority of “Work with Communities to Promote Best Practices of Healthy Living” through the Meaningful Measures Area of “Equity of Care.” Additionally, pursuant to Meaningful Measures 2.0, this measure addresses the “healthcare equity” priority area and aligns with our commitment to introduce plans to close equity gaps and promote health equity through quality measures, including to “develop and implement measures that reflect social and economic determinants.”<sup>482</sup> The development and proposal of this measure also aligns with the CMS strategic pillar to advance health equity by addressing the health disparities that underlie our health system<sup>483</sup> and the 5 CMS health equity priorities for reducing disparities in health:<sup>484</sup>

Priority 1: Expand the Collection, Reporting, and Analysis of Standardized Data.

- Priority 2: Assess Causes of Disparities Within CMS Programs, and Address Inequities in Policies and Operations to Close Gaps.

- Priority 3: Build Capacity of Health Care Organizations and the Workforce to Reduce Health and Health Care Disparities.

- Priority 4: Advance Language Access, Health Literacy, and the Provision of Culturally Tailored Services.

- Priority 5: Increase All Forms of Accessibility to Health Care Services and Coverage.

We solicited public comment regarding the proposal to include and implement the “Screening for Social Drivers of Health” measure as part of the CY 2023 performance period MIPS

quality measure inventory (87 FR 46279 and 46280). For a summary of the public comments received regarding the proposal, we refer readers to Table Groups A of Appendix 1 of this final rule. After consideration of public comments, and for the reasons stated above and in the CY 2023 PFS proposed rule (87 FR 46279 and 46280), we are finalizing the implementation of the “Screening for Social Drivers of Health” measure as proposed (we refer readers to Table Group A of Appendix 1 of this final rule for the discussion pertaining to this MIPS quality measure).

(d) MIPS Quality Performance Category Health Equity Request for Information

The CY 2023 PFS proposed rule contained a request for information pertaining to health equity within the quality performance category, which focused on aspects of the development and implementation of health equity measures (that is, solicited comment on measure concepts; and implementation challenges and barriers) for the quality performance category as we seek to enhance and increase the number of MIPS quality measures in future years that address and/or incorporate factors pertaining to health equity (87 FR 46280 through 46282).

We thank commenters for their responses regarding this request for information. We may consider the information provided by commenters to inform future rulemaking.

(e) Developing Quality Measures That Address Amputation Avoidance in Diabetic Patients Request for Information

The CY 2023 PFS proposed rule contained a request for information regarding the development of MIPS quality measures that address amputation avoidance in diabetic patients, which focused on the identification of measure concepts around this topic that would lead to improved patient outcomes, and proactive care in an attempt to avoid amputation (87 FR 46282 through 46283).

We thank commenters for their responses regarding this request for information. We may consider the information provided by commenters to inform future rulemaking.

59776, 84 FR 62959 through 62979, 85 FR 84877 through 84881, and 86 FR 65445 through 65461, respectively) for a description of the statutory basis for and existing policies pertaining to the cost performance category.

In the CY 2023 PFS proposed rule (87 FR 46283 and 46284), we proposed to update the operational list of care episode and patient condition groups and codes by adding the Medicare Spending Per Beneficiary (MSPB) Clinician cost measure as a care episode group.

(b) Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

Section 1848(r) of the Act specifies a series of steps and activities for the Secretary to undertake to involve physicians, practitioners, and other interested parties in enhancing the infrastructure for cost measurement, including for purposes of MIPS and APMs. Section 1848(r)(2) of the Act requires the development of care episode and patient condition groups, and classification codes for such groups, and provides for care episode and patient condition groups to account for a target of an estimated one-half of expenditures under Parts A and B (with this target increasing over time as appropriate). Sections 1848(r)(2)(E) through (G) of the Act require the Secretary to post on the CMS website a draft list of care episode and patient condition groups and codes for solicitation of input from interested parties, and subsequently, post an operational list of such groups and codes. Section 1848(r)(2)(H) of the Act requires that not later than November 1 of each year (beginning with 2018), the Secretary shall, through rulemaking, revise the operational list as the Secretary determines may be appropriate, and that these revisions may be based on experience, new information developed under section 1848(n)(9)(A) of the Act, and input from physician specialty societies and other interested parties. For more information about past revisions to the operational list, we refer readers to 84 FR 62968 through 62969 and 86 FR 65452 through 65453. The current operational list is available at the MACRA Feedback page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>. Additionally, as required by section 1848(r)(2)(I) of the Act, information on resource use (or cost) measures currently in use in MIPS, cost measures under development and the time-frame for such development, potential future cost measure topics, a description of

engagement with interested parties, and the percent of expenditures under Medicare Parts A and B that are covered by cost measures must be provided on the website of CMS not later than December 31 of each year.

In prior rulemaking, we have included episode-based measures that focus on specific procedures and conditions in the operational list of care episode and patient condition groups and codes (84 FR 62968 through 62969 and 86 FR 65452 through 65453). Section 1848(r)(2)(D)(ii) of the Act specifies that in establishing the care episode groups, we must take into account the patient's clinical problems at the time items and services are furnished during an episode of care, such as the clinical conditions or diagnoses, whether or not inpatient hospitalization occurs, and the principal procedures or services furnished, as well as other factors we determine appropriate. Section 1848(r)(2)(D)(iii) of the Act specifies that in establishing the patient condition groups, we must take into account the patient's clinical history at the time of a medical visit, such as the patient's combination of chronic conditions, current health status, and recent significant history (such as hospitalization and major surgery during a previous period, such as 3 months), as well as other factors we determine appropriate. Currently, in the operational list there are 21 care episode groups, which served as the basis for the 15 procedural episode-based measures and the 6 acute inpatient medical episode-based measures that have been established for the cost performance category (83 FR 59767 through 59773, 84 FR 62962 through 62968, and 86 FR 65446 through 65453), and 2 patient condition groups, which served as the basis for the 2 chronic condition episode-based measures that have been established for the cost performance category (86 FR 65446 through 65453). Given that population-based measures, such as the MSPB Clinician and total per capita cost measures, focus on a broader range of patient care, CMS and interested parties have considered them to be distinct from episode-based measures. Therefore, we did not include these two population-based measures in the operational list after they were comprehensively re-evaluated in 2019 and revised for use in MIPS beginning with the CY 2020 performance period/CY 2022 MIPS payment year (84 FR 62974 through 62977). This distinction between episode-based measures and population-based measures also reflects development status as episode-based measures were developed specifically

for use in MIPS, while the original versions of the MSPB Clinician and total per capita cost measures were first used in the Value Modifier (VM) program before being adapted for MIPS for the CY 2017 performance period/CY 2019 MIPS payment year (81 FR 77166 through 77168). For additional background on the population-based measures currently in use in MIPS please refer to 84 FR 62969 through 62977.

We proposed to add the MSPB Clinician measure to the operational list as a care episode group. Consistent with section 1848(r)(2)(D)(ii) of the Act, the MSPB Clinician measure takes into account the patient's clinical diagnoses at the time of an inpatient hospitalization and includes the costs of various items and services furnished during an episode of care. The MSPB Clinician measure is constructed using many aspects of the same logic as episode-based measures based on the care episode groups currently on the operational list. Both the MSPB Clinician and the episode-based measures are based on clearly-defined episodes and include the services that are clinically related to the clinician's role in the care being assessed. Further, the MSPB Clinician measure attributes episodes under medical Medicare Severity—Diagnosis Related Groups (MS-DRGs) to clinician groups billing at least 30 percent of evaluation and management (E/M) services during an inpatient stay, which is the same attribution logic as the one used for acute inpatient medical episode-based measures. Therefore, designating the MSPB Clinician measure as a care episode group alongside the episode-based measures would ensure that these similarities are reflected in the operational list. For more information on the MSPB Clinician measure, we referred readers to the CY 2020 PFS final rule (84 FR 62974 through 62977) and to the measure specification documents that are available on the QPP Resource Library at <https://qpp.cms.gov/about/resource-library>.

In the CY 2023 PFS proposed rule (87 FR 46284), we noted that at this time we did not propose to add the total per capita cost measure to the operational list as a care episode group or patient condition group. The measure is not constructed based on episodes of care; rather, it includes all costs after a primary care-type relationship has been identified. It also does not focus on specific patient conditions as it aims to include all patients where this clinician-patient relationship has been identified. More detailed information on the total per capita cost measure is included in

the measure specifications documents available at the Quality Payment Program Resource Library website at <https://qpp.cms.gov/resources/resource-library>.

In the CY 2023 PFS proposed rule (87 FR 46284), we noted that we did not intend for the proposal to detract from the importance of episode-based measures or affect our plans to continue developing episode-based measures for potential use in MIPS. There are 7 episode-based measures under development and 4 anticipated episode-based measures to begin development this year. The operational list as revised to reflect the proposal is available on the MACRA Feedback Page at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>. We sought public comment on the proposal.

The following is a summary of the public comments received on the proposed revisions to the operational list of care episode and patient condition groups and codes and our responses:

**Comment:** Several commenters expressed support for the proposal to add the MSPB Clinician measure to the operational list as a care episode group, stating that they support any changes to cost measures that would improve meaningful and accurate measurement. A couple of commenters expressed concern that this proposal would create further complexity and administrative burden for clinicians, with one commenter suggesting that a delay in implementation of this proposal would allow clinicians to provide their feedback on the MSPB Clinician measure.

**Response:** The proposal was not intended to modify the MSPB Clinician measure itself or change the way in which the measure is attributed to clinicians. We do not believe the proposal would create any additional burden for clinicians or result in any additional complexities for the cost performance category or MIPS in general. We also note that the MSPB Clinician measure has been in use in the MIPS program since 2020 (84 FR 62974 through 62977), and underwent extensive testing and received considerable stakeholder input prior to its implementation in the program. Additionally, since the measure's implementation in the MIPS program, stakeholders have continued to have the opportunity to provide feedback on the measure via the QPP Help Desk for CMS's future consideration. Therefore, we believe that it is not necessary to

delay the finalization of this proposal by a year to gather stakeholder feedback, as suggested by the commenter.

**Comment:** Several commenters expressed concern that designating the MSPB Clinician measure as a care episode group would detract CMS from developing new episode-based cost measures. A few commenters further urged CMS to continue developing new episode-based cost measures. One commenter expressed support for the Emergency Medicine episode-based cost measure that was recently developed, noting that there currently are limited MIPS cost measures for emergency physicians.

**Response:** The development of episode-based cost measures that focus on specific procedures and conditions continues to be one of the CMS's priorities for the cost performance category. Our proposal to add the MSPB Clinician measure to the operational list as a care episode group would have no impact on CMS's plans to continue developing episode-based cost measures for potential inclusion in the MIPS program in future years, as noted in the CY 2023 PFS proposed rule (87 FR 46284). Five episode-based measures (including Depression, Emergency Medicine, Heart Failure, Low Back Pain, and Psychoses and Related Conditions episode-based measures) were developed recently, and five additional episode-based measures (including Chronic Kidney Disease [CKD], End-Stage Renal Disease [ESRD], Kidney Transplant Management, Prostate Cancer, and Rheumatoid Arthritis episode-based measures) are currently under development. Please refer to the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>) for more detail on the episode-based measure development activities.

**Comment:** One commenter requested clarification as to whether the case minimum of the MSPB Clinician measure would change from 35 episodes to 20 episodes, if the proposal is finalized. The commenter did not note concerns about the proposal if the case minimum and measure construction remained the same, but expressed concerns that a lower case minimum would have impact on attribution. Another commenter requested clarification on whether the scoring for the cost performance category would change if the MSPB Clinician measure is added to the operational list as a care episode group. Finally, another commenter urged CMS to share the relevant data on the new MSPB Clinician measure with physicians and

seek their feedback on that data and the measure itself prior to implementing the measure.

**Response:** We did not propose to modify the MSPB Clinician measure's specifications, including the previously established case minimum. Therefore, the measure's 35-episode case minimum that was finalized in the CY 2017 Quality Payment Program final rule (81 FR 77171) and codified under § 414.1350(c)(2) would not change. Additionally, this proposal would not have an impact on the scoring methodology for the cost performance category. We further note that given that the measure is calculated with administrative claims data and does not require data submission from clinicians, the measure does not result in any additional burden for clinicians.

Regarding the comment requesting data on the measure, prior to implementation, CMS gathered extensive feedback from clinicians and other stakeholders on the measure specifications and testing results through many different avenues, as described in the CY 2020 PFS final rule (84 FR 62974 through 62977). Since the measure implementation, clinicians have received data on the MSPB Clinician measure, described in the 2021 MIPS Performance Feedback Patient-Level Data Reports Supplement document available for download at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2036/2021%20MIPS%20Performance%20Feedback%20Patient-Level%20Data%20Reports%20Supplement.pdf>.

After consideration of the public comments we received, we are finalizing our proposal to update the operational list of care episode and patient condition groups and codes by adding the MSPB Clinician cost measure as a care episode group as proposed.

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the general background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 and 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 PFS final rule (83 FR 59776 and 59777), the CY 2020 PFS final rule (84 FR 62980 through 62990), CY 2021 PFS final rule (85 FR 84881 through 84886) and the CY 2022 PFS final rule (86 FR 65462 through 65466). We also refer readers to 42 CFR 414.1305 for the definitions of

improvement activities and attestation, § 414.1320 for standards establishing the performance period, § 414.1325 for the data submission requirements, § 414.1355 for standards related to the improvement activity performance category generally, § 414.1360 for data submission criteria for the improvement activity performance category, and § 414.1380(b)(3) for improvement activities performance category scoring.

We did not propose any changes to the traditional MIPS improvement activities policies for the CY 2023 performance period/2025 MIPS payment year. However, we proposed changes to the improvement activities Inventory for the CY 2023 performance period/2025 MIPS payment year and future years as follows: adding four new improvement activities; modifying five existing improvement activities; and removing six previously adopted improvement activities.

#### (b) Improvement Activities Inventory

##### (i) Annual Call for Activities Background

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial improvement activities Inventory consisting of approximately 95 activities (81 FR 77817 through 77831). We took several steps to ensure the Inventory was inclusive of activities in line with statutory and program requirements. We discussed that we had conducted numerous interviews with highly performing organizations of all sizes and had conducted an environmental scan to identify existing models, activities, or measures that met all or part of the improvement activities performance category, including the patient-centered medical homes, the Transforming Clinical Practice Initiative (TCPI), CAHPS surveys, and AHRQ's Patient Safety Organizations. In addition, we reviewed the CY 2016 PFS final rule with comment period (80 FR 71259) and the comments received in response to the MIPS and APMs RFI in relation to the improvement activities performance category, which sought input on what activities could be classified as clinical practice improvement activities according to the definition under section 1848(q)(2)(C)(v)(III) of the Act.

For the CY 2018 performance period/2020 MIPS payment year, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive improvement activities Inventory for the Quality Payment Program CY 2018 performance period/

2020 MIPS payment year and future years through subregulatory guidance.<sup>485</sup> In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for the CY 2019 performance period/2021 MIPS payment year and for future years, we finalized a formal Annual Call for Activities process for the addition of possible new activities and for possible modifications to current activities in the improvement activities Inventory. This process included the requirement to submit a nomination form similar to the one we utilized for CY 2018 performance period/2020 MIPS payment year (82 FR 53656 through 53659). In order to submit a request for a new activity or a modification to an existing improvement activity, the interested parties must submit a nomination form (OMB control # 0938–1314) available at [www.qpp.cms.gov](http://www.qpp.cms.gov) during the Annual Call for Activities.

##### (ii) Changes to the Improvement Activities Inventory

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would establish improvement activities through notice-and-comment rulemaking. We refer readers to Table H in the Appendix to the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), Tables F and G in the Appendix to the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229), Tables A and B in the Appendix 2 to the CY 2019 PFS final rule (83 FR 60286 through 60303), Tables A, B, and C in the Appendix 2 to the CY 2020 PFS final rule (84 FR 63514 through 63538), Tables A, B, and C in the Appendix 2 to the CY 2021 PFS final rule (85 FR 85370 through 85377), and Tables A, B, and C in the Appendix 2 to the CY 2022 PFS final rule (86 FR 65969 through 65997) for our previously finalized improvement activities Inventories. We also refer readers to the Quality Payment Program website under Explore Measures and Activities at <https://qpp.cms.gov/mips/explore-measures?tab=improvementActivities&py=2020> for a complete list of the current improvement activities. In the CY 2017 Quality Payment Program final rule (81 FR 77539), we codified the definition of improvement activities at § 414.1305 to mean an activity that relevant MIPS eligible clinicians, organizations, and other relevant interested parties identify as improving

clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes.

We proposed to add four new improvement activities, modify five existing improvement activities, and remove six previously adopted improvement activities for the CY 2023 performance period/MIPS payment year and future years. We refer readers to Appendix 2 of the CY 2023 PFS proposed rule (87 FR 46800 through 46812) for more details.

All the new improvement activities that we proposed are responsive to the Administration's goal of advancing health equity for all, as outlined in the President's January 20, 2021, Executive Order 13985, "Advancing Racial Equity and Support for Underserved Communities Through the Federal Government" (<https://www.whitehouse.gov/briefing-room/presidential-actions/2021/01/20/executive-order-advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government/>). Additionally, all the proposed new improvement activities address Priorities for Reducing Disparities in Health, as described in the CMS Framework for Health Equity (<https://www.cms.gov/About-CMS/Agency-Information/OMH/equity-initiatives/framework-for-health-equity>).

The first proposed new improvement activity, IA\_AHE\_XX titled "Use Security Labeling Services Available in Certified Health Information Technology (IT) for Electronic Health Record (EHR) Data to Facilitate Data Segmentation" would promote the adoption of technology certified to the Security tags—summary of care-send and Security tags—summary of care-receive criteria at 45 CFR 170.315(b)(7) and (b)(8) in the ONC Health IT Certification Program (87 FR 46285).<sup>486 487</sup> ONC finalized updated versions of these criteria as part of the ONC 21st Century Cures Act Final Rule (85 FR 25702), which are available for certification by health IT developers. Security tagging allows sharing of certain portions of an EHR while not sharing others, such as sensitive information related to drivers of health. We referred readers to the 2015 Edition final rule (80 FR 62647) for further details. As proposed, the improvement

<sup>486</sup> For more information see: [HealthIT.gov](https://www.healthit.gov). (2020). §.(b)(7) Security tags—summary of care-receive. [https://www.healthit.gov/test-method/data-segmentation-privacy-receive#cures\\_ccg](https://www.healthit.gov/test-method/data-segmentation-privacy-receive#cures_ccg).

<sup>487</sup> For more information see: [HealthIT.gov](https://www.healthit.gov). (2020). §.(b)(8) Security tags—summary of care-send. [https://www.healthit.gov/test-method/data-segmentation-privacy-send#cures\\_ccg](https://www.healthit.gov/test-method/data-segmentation-privacy-send#cures_ccg).

<sup>485</sup> CMS, *Annual Call for Measures and Activities: Fact Sheet*, [https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS\\_Overview-Factsheet.pdf](https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf).

activity would involve clinicians working with their EHR vendors to implement technology meeting the security tags criteria in practice systems and clinic workflows. We noted that we believe that implementing this technology would improve interoperability while protecting patient privacy, thus improving care delivery and patients' care experience (87 FR 46286).<sup>488</sup> We also noted that we believe this activity is likely to improve patient outcomes because protection of patient privacy and increased interoperability helps improve patient care delivery. As proposed, the improvement activity would address the CMS Framework for Health Equity Priority 1, Expand the Collection, Reporting, and Analysis of Standardized Data.<sup>489</sup>

The proposed new improvement activity IA\_AHE\_XX titled "Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients" supports both CMS Framework for Health Equity Priority 1 and Priority 3, Build Capacity of Health Care Organizations and the Workforce to Reduce Health and Health Care Disparities (87 FR 46286). Eligible clinicians would receive improvement activity credit for creating and implementing a plan to improve care for lesbian, gay, bisexual, transgender, and queer (LGBTQ+) patients by understanding and addressing health disparities for this population, which may include analysis of sexual orientation and gender identity (SO/GI) data to identify and address disparities in care. Actions to implement this activity may include identifying target goals for addressing disparities in care, collecting and using patients' pronouns and chosen names, training clinicians and staff on SO/GI terminology (including as supported by certified health IT and ONC's United States Core Data for Interoperability [USCDI] as finalized at 45 CFR 170.213), identifying risk factors or behaviors specific to LGBTQ+ individuals, communicating SO/GI data security and privacy practices with patients, and/or utilizing anatomical inventories when documenting patient health histories. LGBTQ+ individuals face health disparities and challenges navigating

and accessing healthcare.<sup>490 491</sup> We refer readers to the ONC USCDI website at <https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi> for further information. Due to lack of clinician training about providing culturally competent and sensitive care for LGBTQ+ individuals, several studies indicate that LGBTQ+ patients, especially gender minority patients, have high rates of negative healthcare experiences.<sup>492 493 494</sup> This improvement activity would fill a gap in the Inventory, which does not currently include an activity focused on improving care for LGBTQ+ patients. We believe this activity has the potential to improve clinical practice and care delivery because training clinicians about working with LGBTQ+ patients may lead to more positive care experiences and health outcomes (87 FR 46286).<sup>495</sup>

Another proposed new improvement activity, IA\_EPA\_XX titled "Create and Implement a Language Access Plan" directly responds to the CMS Framework for Health Equity Priority 4, Advance Language Access, Health Literacy, and the Provision of Culturally Tailored Services (87 FR 46286). This activity involves eligible clinicians' creating and implementing a language access plan to address communication barriers for individuals with limited

English proficiency. The language access plans should align with standards for communication and language assistance defined in the National Standards for Culturally and Linguistically Appropriate Services (CLAS) in Health and Health Care. We believe that accurate patient-clinician communication, delivered and received in a culturally competent manner, is an essential aspect of improving equity in healthcare and patient outcomes (87 FR 46286).<sup>496 497</sup> The proposed improvement activity would fill a gap in the Inventory, which does not currently include an activity focused on language access. We noted that we believe the proposed improvement activity has the potential to improve clinical practice and care delivery and is likely to result in improved patient outcomes, because research indicates the importance of accurate clinical communication in achieving positive patient outcomes.<sup>498</sup>

The fourth proposed new improvement activity, IA\_ERP\_XX titled "COVID-19 Vaccine Promotion for Practice Staff" supports CMS Framework for Health Equity Priority 3. COVID-19 vaccination rates in the U.S. can be improved significantly, particularly in underserved communities (87 FR 46286).<sup>499</sup> Disparities in COVID-19 vaccination rates have been observed specifically among healthcare workers, with physicians and advanced practiced staff being more likely to be vaccinated than nurses and support staff. Also, it has been reported that Black and younger health care workers have lower vaccination rates than other groups of

<sup>499</sup> Diesel, J., Sterrett, N., Dasgupta, S., Kriss, J.L., Barry, V., Esschert, K.V., Whiteman, A., Cadwell, B.L., Weller, D., Qualters, J.R., Harris, L., Bhatt, A., Williams, C., Fox, L.M., Delman, D.M., Black, C.L., Barbour, K.E., Vanden Esschert, K., & Meaney Delman, D. (2021). COVID-19 vaccination coverage among adults—United States, December 14, 2020–May 22, 2021. *MMWR: Morbidity and Mortality Weekly Report*, 70(25), 922–927. <https://doi.org/10.15585/mmwr.mm7025e1>.

<sup>488</sup> For information about the standards in the certification criteria as well as other standards supporting security tags, see: *HealthIT.gov*. Security tags for sensitive information. <https://www.healthit.gov/isa/security-tags-sensitive-information>.

<sup>489</sup> Centers for Medicare and Medicaid Services. (2022). *CMS framework for health equity*. <https://www.cms.gov/About-CMS/Agency-Information/OMH/equity-initiatives/framework-for-health-equity>.

healthcare workers.<sup>500</sup> The proposed improvement activity would fill a gap in the Inventory, which does not currently include an activity focused on COVID-19 vaccination. We noted that we believe this activity has the potential to improve clinical practice and is likely to result in improved outcomes and public health, as research indicates the importance of vaccination in reducing the severity and spread of COVID-19 (87 FR 46286 through 46287).<sup>501</sup>

We also proposed a number of modifications focused on combining activities where possible and other administrative changes (87 FR 46287). A particularly important proposed modification to an existing activity is focused on Priority 1 of the CMS Framework for Health Equity, Expand the Collection, Reporting, and Analysis of Standardized Data. We proposed to: (1) recategorize the IA\_CC\_14 improvement activity, currently titled “Practice improvements that engage community resources to support patient health goals,” from the Care Coordination subcategory to the Achieving Health Equity subcategory, and (2) re-name and re-focus the improvement activity on obtaining and acting on drivers of health data (87 FR 46287). More specifically, the proposed updated improvement activity with a new ID, IA\_AHE\_XX, would be titled “Practice Improvements that Engage Community Resources to Address Drivers of Health.” We proposed to modify this improvement activity description to include ‘drivers of health’ terminology, which better encompasses both ‘social determinants of health (SDOH)’ and ‘health-related social needs (HSRN)’ concepts (87 FR 46287). We also proposed to update the list of these factors in the description to reflect a more comprehensive array of drivers of health. The proposed modifications build on ongoing efforts to advance health equity in accordance with the Advance Equity Pillar of the CMS Strategic Plan (<https://www.cms.gov/cms-strategic-plan>). We noted that we

believe the proposed modifications will better enable eligible clinicians to not only improve clinical practice by screening for and addressing drivers of health, but to also receive credit for their efforts (87 FR 46287). Furthermore, we anticipated such efforts will be associated with improved clinical outcomes because of the potential impact of social drivers of health and other upstream factors on both healthcare and health status.<sup>502</sup> <sup>503</sup> Finally, the proposed modifications would also more clearly align this activity with available evidence and other CMS work in this area, including the CMS Innovation Center’s Accountable Health Communities (AHC) Model, designed to test how “addressing health-related social needs through enhanced clinical-community linkages can improve health outcomes and reduce costs.”<sup>504</sup>

The following is a brief summary of the public comments received on the proposed revisions to the improvement activities Inventory:

Comments were generally supportive of the proposed revisions to the improvement activities Inventory. We received many comments that were particularly supportive of the proposals’ focus and potential impact on advancing health equity. Feedback was received in support of each of the proposed new activities individually, with a very large number of commenters expressing appreciation for the proposed new activity, Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients. Commenters also supported the proposed new activity, Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data, with one stating that “security labeling for this purpose is essential to the provision of equitable care.” We received one comment regarding the proposed improvement activity titled “COVID-19 Vaccine Achievement for Practice Staff” that suggested we provide an exclusion for staff that have a medical contraindication to the vaccination and

a comment that questioned the use of the phrase “fully vaccinated.”

After consideration of the public comments, we are finalizing all proposals as proposed except for the following: for one proposed new activity, “COVID-19 Vaccine Achievement for Practice Staff,” we have made changes to the activity description in response to the public comments, as follows: Demonstrate that the MIPS eligible clinician’s practice has maintained or achieved a rate of 100 percent of office staff in the MIPS eligible clinician’s practice staying up-to-date with COVID-19 vaccinations in accordance with the Center for Disease Control and Prevention (<https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date.html>). Please note that those who are determined to have a medical contraindication specified by CDC recommendations are excluded from this activity. For one proposed activity modification, IA\_PSPA\_7, Use of QCDR data for ongoing practice assessment and improvements, we are finalizing as proposed with the exception of making one formatting change to the activity description, changing the ‘or’ to ‘OR,’ to make it clear that the requirements of the activity have not increased. We refer readers to Appendix 2 to this final rule for the public comments we received on our proposals and our detailed responses.

#### (4) Promoting Interoperability Performance Category

##### (a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of certified electronic health record technology (CEHRT) as a performance category under the MIPS. We refer to this performance category as the Promoting Interoperability performance category (and in past rulemaking, we referred to it as the advancing care information performance category). For our previously established policies regarding the Promoting Interoperability performance category, we refer readers to § 414.1375 and the CY 2017 Quality Payment Program final rule (81 FR 77199–77245), CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), CY 2019 PFS final rule (83 FR 59785 through 59820), CY 2020 PFS final rule (84 FR 62991 through 63006), CY 2021 PFS final rule (85 FR 84886 through 84895), and CY 2022 PFS final rule (86 FR 65466–65490).

<sup>504</sup> Accountable Health Communities Model | CMS Innovation Center.

(b) Promoting Interoperability Performance Category Performance Period

As finalized in the CY 2021 PFS final rule at § 414.1320(g)(1) (85 FR 84886) (subsequently re-designated as § 414.1320(h)(1) (86 FR 65671)), for the 2024 MIPS payment year, and each subsequent MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Thus, for the CY 2025 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within CY 2023, up to and including the full CY 2023 (January 1, 2023 through December 31, 2023). We did not propose any changes to the Promoting Interoperability performance category performance period that we established under § 414.1320(h)(1).

(c) CEHRT Requirements

The Promoting Interoperability Program and the QPP require the use of CEHRT as defined at 42 CFR 495.4 and 414.1305, respectively. Since 2019, in general, this has consisted of EHR technology (which could include multiple technologies) certified under the Office of the National Coordinator for Health Information Technology (ONC) Health IT Certification Program that meets the 2015 Edition Base EHR definition (as defined at 45 CFR 170.102) and has been certified to certain other 2015 Edition health IT certification criteria as specified in the definition.

The “21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program” final rule (also referred to as the “ONC 21st Century Cures Act final rule”), published in the May 1, 2020 **Federal Register** (85 FR 25642 through 25961), finalized a number of updates to the 2015 Edition of health IT certification criteria (also referred to as the 2015 Edition Cures Update) and introduced new 2015 Edition certification criteria. In connection with these updates, ONC also finalized that health IT developers have 24 months from the publication date of the final rule (until May 2, 2022) to make technology available that is certified to the updated, or new criteria. In response to additional calls for flexibility in response to the public health emergency (PHE) for COVID-19, ONC published an interim final rule with comment period

on November 4, 2020 entitled, “Information Blocking and the ONC Health IT Certification Program: Extension of Compliance Dates and Timeframes in Response to the COVID-19 Public Health Emergency” (hereinafter the “ONC interim final rule”) (85 FR 70064). In this interim final rule, ONC finalized extended compliance dates for certain 2015 Edition certification criteria. Specifically, where the ONC 21st Century Cures Act final rule provided that developers of certified health IT have 24 months from the publication date of the final rule to make technology certified to new or updated criteria available, ONC extended the timeline until December 31, 2022 (and until December 31, 2023 for 45 CFR 170.315(b)(10), “electronic health information ((EHI) export”).

In the CY 2021 PFS final rule (85 FR 84815 through 84825), we finalized that the technology used by health care providers to satisfy the definitions of CEHRT at §§ 495.4 and 414.1305 must be certified under the ONC Health IT Certification Program, in accordance with the updated 2015 Edition certification criteria as finalized in the ONC 21st Century Cures Act final rule (85 FR 25642). We further finalized aligning the transition period during which health care providers participating in the Promoting Interoperability Program or QPP may use technology certified to either the existing or updated 2015 Edition certification criteria, with the December 31, 2022 date established in the ONC interim final rule for health IT developers to make updated certified health IT available. After this date, health care providers will be required to use only certified technology updated to the 2015 Edition Cures Update for an EHR reporting period or performance period in CY 2023. We did not propose any changes to this final policy.

We remind readers that health care providers would not be required to demonstrate that they are using updated technology to meet the CEHRT definitions immediately upon the transition date of December 31, 2022. In accordance with the EHR reporting period and performance period established for the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category, participants are only required to use technology meeting the CEHRT definitions during a self-selected EHR reporting period or performance period of a minimum of any consecutive 90 days in CY 2023, including the final 90 days of 2023 (86 FR 45460 through 45462 and 86 FR 65466, respectively).

The eligible hospital, CAH, or MIPS eligible clinician is not required to demonstrate meaningful use of technology meeting the 2015 Edition Cures Update until the EHR reporting period or performance period they have selected.

(d) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

i. Changes to the Query of Prescription Drug Monitoring Program Measure Under the Electronic Prescribing Objective

(A) Measure Background

We have adopted a Query of Prescription Drug Monitoring Program (PDMP) measure under the Electronic Prescribing objective. For background on this measure, we refer readers to the CY 2019 PFS final rule (83 FR 59800 through 59803) and the CY 2020 PFS final rule (84 FR 62992 through 62994). In the CY 2021 PFS final rule (85 FR 84887 through 84888), we finalized that the Query of PDMP measure will remain optional and eligible for 10 bonus points for the CY 2021 performance period/CY 2023 MIPS payment year. In the CY 2022 PFS final rule (86 FR 65466 through 65467), we finalized that the Query of PDMP measure will remain optional and eligible for 10 bonus points for the CY 2022 performance period/2024 MIPS payment year.

(B) State PDMPs' Progress and Previous Interested Parties' Feedback

In the CY 2020, CY 2021, and CY 2022 PFS final rules (84 FR 62992 through 62994, 85 FR 84887 through 84888 and 86 FR 65467), we described the concerns expressed by interested parties that they believed it was premature for the Promoting Interoperability performance category to require the Query of PDMP measure and score it based on performance. In the CY 2022 PFS proposed rule (86 FR 39410) we discussed our support of efforts to expand the use of PDMPs, describing Federally supported activities aimed at developing a more robust and standardized approach to EHR-PDMP integration, and additional discussions on the feedback we have received from health IT vendors and MIPS eligible clinicians thus far. For more detailed information, we refer readers to the CY 2022 PFS proposed rule (86 FR 39410).

We heard extensive feedback from EHR developers that effectively incorporating the ability to count the number of PDMP queries in the EHR would require more robust measurement specifications. These interested parties stated that EHR

developers may face significant cost burdens if they fully develop numerator and denominator calculations and are then required to change the specification at a later date. Interested parties have stated that the costs of additional development would likely be passed on to health care providers without additional benefit, as this development would be solely for the purpose of calculating the measure, rather than furthering the clinical goal of the measure. While we recognize that a numerator/denominator-based measure remains challenging, we also note (as discussed in more detail later in this section) that the widespread

availability of PDMPs across the country, and recent progress toward solutions for connecting PDMPs with health care provider EHR systems, has made use of PDMPs feasible through a wide variety of approaches.

(C) Current Status of PDMP Adoption

Today, all 50 States and several localities host PDMPs.<sup>505</sup> The final State to establish a PDMP, the State of Missouri, passed legislation to address this issue in 2021, and is currently working to make its PDMP operational. A 2021 American Medical Association report found that physicians and others used State PDMPs more than 910

million times in 2020.<sup>506</sup> An assessment of PDMPs conducted by the PDMP Training and Technical Assistance Center (TTAC) at the Institute for Intergovernmental Research (IIR) found an increase in the number of PDMPs that are integrated with Health Information Exchanges (HIEs), EHRs, and/or Pharmacy Dispensing Systems (PDSs), with 44 PDMPs integrated in 2021 reflecting an increase from 28 PDMPs with at least one type of integration in 2017. We refer readers to Table 90 for the report’s findings on the type of integration and the number of PDMPs that have implemented that type of integration in 2021.

TABLE 90: PDMP Integration – Type and Number of PDMPs\*

| Type of Integration | # of PDMPs |
|---------------------|------------|
| EHR and PDS         | 35         |
| HIE and EHR         | 20         |
| HIE, EHR, and PDS   | 18         |
| EHR only            | 5          |
| HIE only            | 1          |
| PDS only            | 1          |

\* PDMP Policies and Capabilities: Results From 2021 State Assessment, September 2021, chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/https://www.pdmpassist.org/pdf/PDMP%20Policies%20and%20Capabilities%202021%20Assessment%20Results\_20210921.pdf.

Moreover, a number of enhancements to PDMPs are occurring across the country, including enhancements to RxCheck, which is a free, Federally supported interstate exchange hub for PDMP data. RxCheck is connected to 50 out of 54 PDMPs in states and territories and does not require clinicians to pay to have the PDMP data integrated into the EHR.

The goal of the project is to allow any health care provider who is live on the eHealth Exchange to use that existing connection to query a patient’s record on the RxCheck Hub, which routes the query to individual State PDMPs that are also live on RxCheck. This solution enables health care providers to query PDMPs via existing connections to health information exchange networks. Most States use either RxCheck or Prescription Monitoring Program (PMP) InterConnect or both to facilitate the sharing of PDMP information between States, allowing health care providers to

query other States’ PDMP information from within their own State PDMP.<sup>507</sup>

We also note that the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act (Pub. L. 115–271), enacted in 2018, has focused on ways to address the nation’s opioid epidemic. The SUPPORT for Patients and Communities Act included new requirements for PDMP enhancement and integration, to help reduce opioid misuse and overprescribing and promote the effective prevention and treatment of opioid use disorder beginning in October of 2021. Enhanced Federal matching funds were available to States to support related PDMP design, development, and implementation activities during FYs 2019 and 2020.

(D) Changes to the Query of PDMP Measure and Related Policies

(aa) Change to the Query of PDMP Measure Description

The description of the Query of PDMP measure provides that for at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law. In the CY 2023 PFS proposed rule (87 FR 46289), beginning with the performance period in CY 2023, we proposed to require the Query of PDMP measure for MIPS eligible clinicians participating in the Promoting Interoperability performance category. In the CY 2023 PFS proposed rule (87 FR 46291 through 46292), we noted that should we finalize our proposal to require the Query of PDMP measure beginning with CY 2023, we proposed

<sup>505</sup> Prescription Drug Monitoring Program Training and Technical Assistance Center, PDMP Policies and Capabilities: Results From 2021 State Assessment, September 2021, [https://www.pdmpassist.org/pdf/PDMP%](https://www.pdmpassist.org/pdf/PDMP%20Policies%20and%20Capabilities%202021%20Assessment%20Results_20210921.pdf)

[20Policies%20and%20Capabilities%202021%20Assessment%20Results\\_20210921.pdf](https://www.pdmpassist.org/pdf/PDMP%20Policies%20and%20Capabilities%202021%20Assessment%20Results_20210921.pdf).  
<sup>506</sup> American Medical Association, 2021 Overdose Epidemic Report, <https://www.ama-assn.org/system/files/ama-overdose-epidemic-report.pdf>.

<sup>507</sup> GAO–21–22, Prescription Drug Monitoring Programs: Views on Usefulness and Challenges of Programs.

two exclusions beginning with the performance period in CY 2023: (1) Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period, and (2) Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.

We noted in the CY 2023 PFS proposed rule (87 FR 46289) that should we finalize the proposals to require the Query of PDMP measure and the associated exclusions, we believe the inclusion of the phrase “except where prohibited and in accordance with applicable law” in the description of the Query of PDMP measure and in the language of the exclusion would be duplicative and potentially cause confusion. Therefore, we proposed to remove the phrase “except where prohibited in accordance with applicable law” from the measure description should our proposals to require the Query of PDMP measure and the associated exclusions be finalized. In the CY 2023 PFS proposed rule (87 FR 46289), we referred readers to our proposed measure description that would reflect this proposed change and additional proposed policy changes for the Query of PDMP measure.

We invited comment on this proposal, but we did not receive any comments.

(ab) Requiring the Query of PDMP Measure

In the CY 2022 PFS final rule (86 FR 65466 through 65467), we noted that the decision to maintain the Query of PDMP as an optional measure for CY 2022 considered the current efforts to improve the technical foundation for EHR–PDMP integration, the continued implementation of the SUPPORT for Patients and Communities Act, our ongoing review of alternative measure approaches, and concerns from interested parties about the current readiness across States for implementation of the existing measure. We also noted that this measure can play an important role in helping health care providers to improve clinical decision making by utilizing this information to identify potential opioid use disorders, inform the development of care plans, and develop effective interventions (86 FR 65467); maintaining it as an optional measure with bonus points signals to the clinician and vendor community that this is an important measure which can help spur development and innovation to reduce barriers and challenges (86 FR 65467).

We continue to believe that PDMPs play an important role in patient safety by assisting in the identification of patients who have multiple prescriptions for controlled substances or may be misusing or overusing them. Querying the PDMP is important for tracking dispensed controlled substances and improving prescribing practices. Efforts to expand the use of PDMPs and integrate PDMPs with health information technology systems are supported by Federal interested parties including ONC, the Centers for Disease Control and Prevention (CDC), the Department of Justice (DOJ), and the Substance Abuse and Mental Health Services Administration (SAMHSA). The Query of PDMP measure offers a way to reward health care providers who participate in current PDMP initiatives, including those supported by Federal partners.

While work continues to improve standardized approaches to PDMP and EHR interoperability, we believe that it is feasible at this time to require MIPS eligible clinicians to report the current Query of PDMP measure, which requires reporting a “yes/no” response. Given our policies for the Query of PDMP measure that included increasing the eligible bonus points to reward MIPS eligible clinicians that could report the measure, as well as the recent progress in the availability of PDMPs in all 50 States, and solutions which support accessibility of PDMPs to health care providers, we believe MIPS eligible clinicians have had time to grow familiar with what this measure requires of them, even as technical approaches to the use of PDMPs continue to advance. By requiring a “yes/no” response the measure allows MIPS eligible clinicians to use a variety of technical solutions to conduct a query of the PDMP and receive credit for the measure.

Therefore, beginning with the performance period in CY 2023, we proposed to require MIPS eligible clinicians to report the Query of PDMP measure (which requires reporting a “yes/no” response) for the Promoting Interoperability performance category (87 FR 46289). We noted that we would maintain the associated points at 10 points and referred readers to the CY 2023 PFS proposed rule (87 FR 46298 through 46307) and section IV.A.6.c.(4)(d)(i) of this final rule for further discussion of our scoring methodology and concurrent finalized changes. As a result of the proposal, the maximum total points available for the Electronic Prescribing Objective would remain at 20 points for CY 2023.

We solicited public comment on this proposal, and also sought feedback on

ways CMS can ensure coordination and alignment with varying State requirements for PDMPs. Additionally, we invited public comment on what information returned from the PDMP query would be clinically significant. The following is a summary of the comments received.

*Comment:* Several commenters supported our proposal to require the Query of PDMP measure. One commenter thanked CMS for keeping the measure optional until the ecosystem was developed enough to allow widespread use, without adding additional technical burdens. A few commenters supported this proposal stating that this policy will help address and combat the opioid epidemic, and bring awareness to prescribers.

*Response:* We agree that after several years as an optional measure, and given the more widespread use and availability of PDMPs, requiring the Query of PDMP measure is viable at this time. We also appreciate that commenters continue to recognize our efforts towards combatting the opioid epidemic.

*Comment:* Several commenters did not support our proposal to require the Query of PDMP measure. A few commenters stated that our proposal would be administratively burdensome, as well as costly for those MIPS eligible clinicians facing various challenges with EHR–PDMP integration. Other commenters stated that this requirement would be challenging for those MIPS eligible clinicians who lack an integrated PDMP, or for those whose EHR technology remains under development. Another commenter expressed that without standards across state lines, there is wide variation with PDMP implementation and the integration with CEHRT. Some commenters stated that many States and clinicians are continuing to make enhancements to their EHRs, to include RxCheck functionality, and asked that CMS postpone requiring the measure one additional year to further advance and integrate their EHR technology. Another commenter stated that many MIPS eligible clinicians are incapable of interconnecting their EHR with a PDMP, making this measure impossible to complete, especially in a State where such integrated functionality is not practical or possible.

*Response:* We appreciate the concerns raised by the commenters. We agree with the commenters that not all MIPS eligible clinicians have a fully operational statewide PDMP or a fully integrated EHR–PDMP. We recognize that without full integration, it is possible that the actions required to

satisfy the Query of PDMP measure could be time-consuming for clinicians and potentially cause clinical disruption. For these reasons, we are adopting an additional exclusion for the Query of PDMP that will be available only for the CY 2023 performance period/2025 MIPS payment year. As stated in section IV.A.6.c.(4)(d)(iii) of this final rule, the exclusion allows any MIPS eligible clinician for whom querying a PDMP would impose an excessive workflow or cost burden prior to the start of the performance period they select in CY 2023, to exclude the Query of PDMP measure. We expect that this time-limited exclusion will allow MIPS eligible clinicians time to resolve any remaining barriers to reporting the measure.

*Comment:* Several commenters did not support our proposal, stating that there is limited evidence supporting the overall relationship between querying a PDMP and a reduction in opioid-related consequences. One commenter stated that despite the rise in usage and availability of PDMPs, the overall drug-related mortality rates are also rising, leading to an inverse relationship between the measure and the intended outcome.

*Response:* We recognize that the Query of PDMP measure by itself will not resolve the opioid epidemic, but we believe the measure is an important step for MIPS eligible clinicians to gain additional awareness when prescribing Schedule II opioids, and Schedule III and IV drugs to their patients. It will give prescribing clinicians insight into the broader clinical picture and prescribing history of their patient, and ultimately, improve the safety and quality of care.

*Comment:* One commenter expressed concern that patients may suffer harm as the proposal would place undue administrative burden on MIPS eligible

clinicians having to query a PDMP for patients based on medications prescribed, taking away from clinical time. Another commenter stated that the proposed policy could have unintended consequences, as patients requiring the use of opioids would be further stigmatized, leaving them less likely to receive the care they need, and ultimately, denial of care and patient mistreatment.

*Response:* We reiterate that the Query of PDMP measure requires a minimum of one query of a PDMP during the 90-day performance period selected by the clinician. Additionally, our goal is not to alter clinical standards, deviate from clinically appropriate prescribing practices, nor replace clinical time with administrative responsibilities. Rather, we believe that requiring the measure is one step towards increasing overall awareness when prescribing Schedule II opioids and Schedule III and IV drugs. We do not believe that the act of querying a PDMP should have unintended consequences on the patient, or result in the denial of clinically appropriate care or the mistreatment of patients. Instead, we believe that this measure may aid prescribing clinicians in early identification of patients who have multiple prescriptions for controlled substances or may be misusing or overusing them. We view this measure as an important step in ensuring safe prescribing practices, and potentially avoiding unintended consequences from overprescribing.

(ii) Changes to the Query of PDMP Measure To Include Schedules II, III and IV

The Query of PDMP measure was adopted in the CY 2019 PFS final rule (83 FR 59800 through 59803) as one of two measures under the Electronic Prescribing Objective intended to

support HHS initiatives related to the treatment of opioid and substance use disorders by helping health care providers avoid inappropriate prescriptions, improving coordination of prescribing amongst health care providers, and focusing on the advanced use of CEHRT. The measure description for the Query of PDMP measure is as follows: for at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law (83 FR 59800 through 59803).

Under the Controlled Substances Act (CSA),<sup>508</sup> the Drug Enforcement Administration classifies drugs, substances, and certain chemicals used to make drugs into five distinct categories or schedules depending upon the drug's acceptable medical use and the drug's abuse or dependency potential. A drug's abuse rate is a factor used to determine its classification; for example, Schedule I medications have the highest abuse potential while medications in Schedule V have a low abuse potential. We refer readers to Table 91 for information on each Schedule, including abuse potential, medicinal use, if any, and drug examples. For additional information, we refer readers to the listing of drugs and their schedule located at CSA Scheduling at [https://www.deadiversion.usdoj.gov/schedules/orangebook/c\\_cs\\_alpha.pdf](https://www.deadiversion.usdoj.gov/schedules/orangebook/c_cs_alpha.pdf).<sup>509</sup>

<sup>508</sup> Public Law 91–513, tit. II, 84 Stat. 1236, 1242–84 (1970); codified, as amended, at 21 U.S.C. 801 *et seq.*

**TABLE 91: Controlled Substance Schedules, Descriptions, and Examples\***

| Schedule     | Description  | Examples   |
|--------------|--|--|
| Schedule I   | No accepted medical use, are unsafe, and hold a high potential for abuse.  | Heroin and LSD   |
| Schedule II  | Accepted medical use, high potential for abuse, abuse could lead to severe psychological or physical dependence.   | Hydrocodone, methadone, Demerol, OxyContin, Percocet, morphine, codeine, and amphetamine |
| Schedule III | Accepted medical use, less potential for abuse than schedule I or II substances, abuse may lead to moderate or low physical dependence or high psychological dependence.               | Tylenol with Codeine and anabolic steroids   |
| Schedule IV  | Accepted medical use, low potential for abuse relative to schedule III substances, abuse may lead to limited physical or psychological dependence relative to schedule III substances. | Xanax, Klonopin, Valium, and Ativan  |
| Schedule V   | Accepted medical use, low potential for abuse relative to schedule IV substances, abuse may lead to limited physical or psychological dependence relative to schedule IV substances.   | Cough syrups containing codeine  |

\* GAO-21-22, Prescription Drug Monitoring Programs: Views on Usefulness and Challenges of Programs; 21 U.S.C. section 812, and the U.S. Drug Enforcement Administration.

PDMPs are operated at the State level and individual State requirements for reporting and use differ from State to State.<sup>510</sup> Currently, every State collects data on schedules II, III, and IV.<sup>511</sup> Some States collect information about certain non-controlled substances that are potentially subject to abuse or on all prescription drugs.<sup>512</sup> While State laws vary, we note that most State PDMPs require physicians and dispensing pharmacists to review a patient's prescribing information for the past 12 months prior to prescribing or dispensing any Schedule II, III, and IV controlled substances.<sup>513</sup>

PDMPs play an important role in patient safety by assisting in the identification of patients who have multiple prescriptions for controlled substances or may be misusing or overusing them. As stated in the CY 2023 proposed rule (87 FR 46290), we believe that expanding the requirements of the Query of PDMP measure to include Schedule III and IV drugs in addition to Schedule II opioids will further support HHS initiatives related to the treatment of opioid and substance use disorders by expanding the types of drugs included in the Query of PDMP

measure while aligning with the PDMP requirements in a majority of States. We also stated that we believe this expansion to include additional Scheduled drugs would facilitate more informed prescribing practices and improve patient outcomes. Therefore, beginning with the performance period in CY 2023, we proposed to expand the Query of PDMP measure to include Schedule III and IV drugs in addition to Schedule II opioids (87 FR 46290 through 46291).

*Proposed Measure Description:* For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history.

To align with policy for the Query of PDMP measure with regard to Schedule II opioids, we proposed that the query of the PDMP for prescription drug history must occur prior to the electronic transmission of an electronic prescription for a Schedule II opioid or Schedule III or Schedule IV drug (87 FR 46290 and 46291). We also noted that this measure would include all permissible prescriptions and dispensing of Schedule II opioids and Schedule III or IV drugs, no matter the dosage prescribed during an encounter in order for MIPS eligible clinicians to identify multiple health care provider episodes (physician shopping), prescriptions of dangerous combinations of drugs, and controlled substances prescribed in high

quantities. We also noted that multiple prescriptions for Schedule II opioids or Schedule III and IV drugs prescribed on the same date, by the same MIPS eligible clinician would not require multiple queries of the PDMP and only one query would have to be performed for this measure. MIPS eligible clinicians would have flexibility to query the PDMP using data from CEHRT in any manner allowed under State law.

We invited public comment on these proposals, and the following is a summary of the comments received.

*Comment:* Several commenters supported our proposal to include Schedule III and IV drugs in addition to Schedule II opioids in the Query of PDMP measure. Some commenters stated that including Schedule III and IV drugs would balance PDMP engagement with minimizing compliance burden. One commenter stated that limiting the Query of PDMP to Schedule II opioids alone causes additional burden on the MIPS eligible clinician as they would need to focus on one class of drugs versus several, and therefore, this proposal would reduce overall clinician burden. One commenter stated that our proposal to include Schedule III and IV drugs would reduce organizational and developer burden by minimizing the need to build specialty logic reports into their existing EHRs.

*Response:* We agree that the proposal to include Schedule III and IV drugs in addition to Schedule II opioids should reduce burden by eliminating the need

<sup>510</sup> For additional information, we refer readers to <https://www.cdc.gov/drugoverdose/pdf/Leveraging-PDMPs-508.pdf>; <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4605194/>; and <https://www.pdmpassist.org/Policies/Legislative/StatutesAndRegulations>.

<sup>511</sup> <https://www.pdmpassist.org/State>.

<sup>512</sup> GAO report, GAO-21-22 Prescription Drug Monitoring Programs.

<sup>513</sup> <https://www.pdmpassist.org/State>.

to limit the query to only Schedule II opioids.

*Comment:* One commenter asked that CMS provide additional detail regarding which specific drugs would be included in the Query of PDMP measure.

*Response:* We refer readers to Table 83: Controlled Substance Schedule, Descriptions, and Examples in the CY 2023 PFS proposed rule (87 FR 46291), and in Table 91 where we outline the schedule drug classes, along with examples of drugs specific to that schedule (in other words, the schedule is inclusive of, but not limited to, those drugs). Clinicians should be able to determine which specific drugs would be included in the measure by referencing the schedules.

*Comment:* A few commenters did not support our proposal to include Schedule III and IV drugs in the Query of PDMP measure. A few commenters stated their concerns about simultaneously proposing to both require and expand this measure, amidst clinical best practices continuing to be developed with PDMPs in general. One commenter stated that implementing additional proposals such as this may prove costly and burdensome. One commenter did not support our proposal, stating that including Schedules III and IV drugs would not be clinically appropriate, nor would their inclusion achieve CMS's goal of addressing the opioid epidemic.

*Response:* We do not agree that expanding the scope of which scheduled drugs are included in the Query of PDMP measure would lead to additional burden. We believe that expanding the scope would reduce burden because MIPS eligible clinicians would query additional drug options instead of focusing their time and effort on querying one class of drugs, which would minimize the need to create specialty reports within their EHR specific to capturing one class of drugs. We appreciate and understand the comment regarding continued challenges some MIPS eligible clinicians face with EHR-PDMP integration. For the reasons discussed in our response to comments in section IV.A.6.c.(4)(d)(iii), we are adopting an additional exclusion for the Query of PDMP measure that will allow any MIPS eligible clinician for whom querying a PDMP would impose an excessive workflow or cost burden prior to the start of the performance period they select in CY 2023 to exclude the Query of PDMP measure for the CY 2023 performance period/2025 MIPS payment year.

### (iii) Exclusions

In CY 2019 PFS proposed rule, we proposed an exclusion for MIPS eligible clinicians from reporting the Query of PDMP measure beginning with CY 2020 when the measure would have been required by the Promoting Interoperability performance category (83 FR 35922 through 35923). The proposed exclusion was: Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids in accordance with applicable law during the performance period. In the CY 2019 PFS final rule, we finalized the Query of PDMP measure as optional for CY 2019, and thus we did not finalize the proposed exclusion (83 FR 59803). We also stated that we would propose policy for CY 2020 in future rulemaking. To date, we have not adopted any exclusions for this measure because it has remained optional for CY 2020 (84 FR 62992 through 62994), CY 2021 (85 FR 84887 through 84888), and CY 2022 (86 FR 65466 through 65467).

In the CY 2023 PFS proposed rule (87 FR 46289 through 46290), we proposed to require MIPS eligible clinicians to report the Query of PDMP measure for the Promoting Interoperability performance category beginning with the performance period in CY 2023. We noted in the proposed rule that should we finalize our proposal to require the Query of PDMP measure beginning with CY 2023, we believe that an exclusion for the measure would be needed for MIPS eligible clinicians (87 FR 46291 and 46292). Therefore, we stated that we have revisited the exclusion we proposed in the CY 2019 PFS proposed rule (83 FR 35922 through 35923) and proposed a modified version in the CY 2023 PFS proposed rule (87 FR 46291 and 46292). Specifically, we noted that if we were to finalize the proposal to require the Query of PDMP measure, we proposed the following exclusion beginning with the performance period in CY 2023: Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period. In addition, we noted that if we finalize the proposal to require the Query of PDMP measure, we proposed a second exclusion beginning with the performance period in CY 2023: Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period. We adopted this same exclusion previously for the e-Prescribing measure (82 FR 53679). We believe this exclusion is also applicable to the Query of PDMP measure based on similar

feedback we received from prior rulemaking, where fewer than 100 encounters were supported as an appropriate cutoff number (82 FR 53680). We also proposed that if a MIPS eligible clinician claims an exclusion for the Query of PDMP measure, we would redistribute the points associated with the Query of PDMP measure to the e-Prescribing measure under the Electronic Prescribing objective (87 FR 46292).

We invited public comment on these proposals, and the following is a summary of the comments received.

*Comment:* Some commenters supported our proposed exclusions for the Query of PDMP measure. One commenter stated that the proposed exclusions reasonably balance the need to prevent inappropriate prescribing against potential cost and administrative burdens.

*Response:* We thank the commenters for their support.

*Comment:* Some commenters supported our proposed exclusions for the Query of PDMP measure, but urged CMS to consider adding an additional exclusion for those MIPS eligible clinicians who do not have an integrated EHR-PDMP, who are unable to meet the requirements, or who are in the process of advancing their technology. Two commenters asked that CMS consider adopting an exclusion for patients receiving opioids for chronic conditions, chronic treatment plans, long-established illnesses, and certain medical diagnoses. One commenter asked that CMS consider adopting an exclusion that allows the MIPS eligible clinician to decide which patients should trigger a query of the PDMP based on the clinician-patient relationship.

*Response:* We thank the commenters for their feedback. While the Query of PDMP measure requires at least one query of a PDMP, it does not require that MIPS eligible clinicians query the PDMP for all patients, nor are there specifications indicating which disease process or patient type to query. Therefore, we do not agree that we should include a disease, condition, or patient-specific exclusion. As we discussed in our response to comments in section IV.A.6.c.(4)(d)(i) above, we are adopting an additional exclusion for the Query of PDMP measure that will allow any MIPS eligible clinician for whom querying a PDMP would impose an excessive workflow or cost burden prior to the start of the performance period they select in CY 2023 to exclude the Query of PDMP measure for the CY 2023 performance period/2025 MIPS payment year.

After consideration of the public comments, we are finalizing our proposal to require MIPS eligible clinicians to report the Query of PDMP measure (which requires reporting a “yes/no” response) for the Promoting Interoperability performance category, beginning with the CY 2023 performance period. The measure will be worth 10 points, but they will no longer be bonus points because the measure will be required. We are finalizing our proposal to remove the phrase “except where prohibited in accordance with applicable law” from the measure description. We are finalizing our proposal to expand the Query of PDMP measure to include Schedule III and IV drugs in addition to Schedule II opioids. As such, the new measure description will read:

*Measure Description: For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history.*

To align with policy for the Query of PDMP measure with regard to Schedule II opioids, we are finalizing that the query of the PDMP for prescription drug history must occur prior to the electronic transmission of an electronic prescription for a Schedule II opioid or Schedule III or Schedule IV drug. This measure includes all permissible prescriptions and dispensing of Schedule II opioids and Schedule III or IV drugs, no matter the dosage prescribed during an encounter in order for MIPS eligible clinicians to identify multiple health care provider episodes (physician shopping), prescriptions of dangerous combinations of drugs, and controlled substances prescribed in high quantities. We are finalizing that multiple prescriptions for Schedule II opioids or Schedule III and IV drugs prescribed on the same date, by the same MIPS eligible clinician do not require multiple queries of the PDMP and only one query needs to be performed for this measure. MIPS eligible clinicians have flexibility to query the PDMP using data from CEHRT in any manner allowed under State law.

We also are finalizing our proposal to include the following two exclusions for the Query of PDMP measure: (1) Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; (2) Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period. After consideration of the

comments we have received, we are finalizing a third exclusion for the Query of PDMP measure: (3) Any MIPS eligible clinician for whom querying a PDMP would impose an excessive workflow or cost burden prior to the start of the performance period they select in CY 2023. Exclusion (3) is available only for the CY 2023 performance period/2025 MIPS payment year. If a MIPS eligible clinician claims an exclusion for the Query of PDMP measure, we would redistribute the points associated with the Query of PDMP measure to the e-Prescribing measure under the Electronic Prescribing objective.

(e) Health Information Exchange (HIE) Objective: Addition of an Alternative Measure for Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA)

(i) Background on the Health Information Exchange Objective

The Health Information Exchange (HIE) objective and its associated measures for MIPS eligible clinicians hold particular importance because of the role they play within the care continuum. In addition, these measures encourage and leverage interoperability on a broader scale and promote health IT-based care coordination. The Health Information Exchange objective currently includes three measures: Support Electronic Referral Loops by Sending Health Information; Support Electronic Referral Loops by Receiving and Reconciling Health Information; and Health Information Exchange Bi-Directional Exchange. For background on this objective and its associated measures, we refer readers to the CY 2019 PFS final rule (83 FR 59807 through 59812) and the CY 2021 PFS final rule (85 FR 84888 through 84893).

In the CY 2021 PFS final rule (85 FR 84888 through 84893), we finalized the HIE Bi-Directional Exchange measure, under the Health Information Exchange objective. The HIE Bi-Directional Exchange measure is worth 40 points, the maximum number of points of the Health Information Exchange objective, and was finalized as an alternative to reporting on the two existing Health Information Exchange objective measures: The Support Electronic Referral Loops by Sending Health Information measure and the Support Electronic Referral Loops by Receiving and Reconciling Health Information measure. To meet the measure requirements, MIPS eligible clinicians must attest to the following statements:

- Statement 1: I participate in an HIE to enable secure, bi-directional

exchange to occur for every patient encounter, transition or referral and record stored or maintained in the EHR during the performance period in accordance with applicable law and policy;

- Statement 2: The HIE that I participate in is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs, and not engaging in exclusionary behavior when determining exchange partners; and

- Statement 3: I use the functions of CEHRT to support bi-directional exchange with an HIE.

We stated that by enabling bi-directional exchange of information between health care providers and aggregating data across health care providers with disparate systems, HIEs (including a wide range of organizations facilitating health information exchange) can bring together the information needed to create a true longitudinal care record and support improved care coordination by facilitating timely access to robust health information across care settings (CY 2021 PFS proposed rule, 85 FR 50300). We further described how participation in HIEs can amplify health care providers' capacity to share information beyond what a health care provider can achieve through the sending and receiving actions described in the existing measures under the Health Information Exchange objective, for instance, by facilitating information exchange when a health care provider is unaware of another health care provider's need to receive information about a patient (CY 2021 PFS proposed rule, 85 FR 50300). By finalizing this measure for MIPS eligible clinicians, we sought to ensure that health care providers participating in the Promoting Interoperability performance category would be rewarded for connecting to exchange arrangements that can enable this type of robust information sharing.

(ii) Background on TEFCA

Section 4003(b) of the 21st Century Cures Act (Pub. L. 114–255), enacted in 2016, amended section 3001(c) of the Public Health Service Act (42 U.S.C. 300jj–11(c)), and required HHS to take steps to advance interoperability for the purpose of ensuring full network-to-network exchange of health information. Specifically, Congress directed the National Coordinator to “develop or support a trusted exchange framework, including a common agreement among health information networks nationally.” Since the enactment of the 21st Century Cures Act, HHS has pursued development of a Trusted

Exchange Framework and Common Agreement, or TEFCA. ONC's goals for TEFCA are:<sup>514</sup>

- Goal 1: Establish a universal policy and technical floor for nationwide interoperability;
- Goal 2: Simplify connectivity for organizations to securely exchange information to improve patient care, enhance the welfare of populations, and generate health care value; and
- Goal 3: Enable individuals to gather their health care information.

Since we adopted the HIE Bi-Directional Exchange measure, important additional developments have occurred with respect to TEFCA.<sup>515</sup> On January 18, 2022, ONC announced a significant TEFCA milestone by releasing the Trusted Exchange Framework<sup>516</sup> and Common Agreement Version 1.<sup>517</sup> The Trusted Exchange Framework is a set of non-binding principles for health information exchange, and the Common Agreement for Nationwide Health Information Interoperability Version 1 (also referred to as the Common Agreement) is a contract that advances those principles. The Common Agreement and the Qualified Health Information Network (QHIN) Technical Framework Version 1 (QTF),<sup>518</sup> which is incorporated by reference in the Common Agreement, establish the technical infrastructure model and governing approach for different health information networks and their users to securely share clinical information with each other—all under commonly agreed-to terms. The Common Agreement is a legal contract that QHINs<sup>519</sup> can sign with the ONC Recognized Coordinating Entity (RCE),<sup>520</sup> a private-sector entity that

implements the Common Agreement and ensures QHINs comply with its terms.

The technical and policy architecture of how exchange occurs under TEFCA follows a network-of-networks structure, which allows for connections at different levels and is inclusive of many different types of entities at different levels, such as health information networks, care practices, hospitals, public health agencies, and Individual Access Services (IAS)<sup>521</sup> Providers.<sup>522</sup> QHINs connect directly to each other to facilitate nationwide interoperability, and each QHIN can connect Participants, which can connect Subparticipants.<sup>523</sup> Compared to most nationwide exchange today, the Common Agreement also includes an expanded set of Exchange Purposes<sup>524</sup>

initial RCE. The RCE will operationalize and enforce the Common Agreement, oversee QHIN-facilitated network operations, and ensure compliance by participating QHINs. The RCE will also engage interested parties to create a roadmap for expanding interoperability over time.

<sup>521</sup> The Common Agreement defines Individual Access Services (IAS) as “with respect to the Exchange Purposes definition, the services provided utilizing the Connectivity Services, to the extent consistent with Applicable Law, to an Individual with whom the QHIN, Participant, or Subparticipant has a Direct Relationship to satisfy that Individual’s ability to access, inspect, or obtain a copy of that Individual’s Required Information that is then maintained by or for any QHIN, Participant, or Subparticipant.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 7 (Jan. 2022), [https://www.healthit.gov/sites/default/files/page/2022-01/Common\\_Agreement\\_for\\_Nationwide\\_Health\\_Information\\_Interoperability\\_Version\\_1.pdf](https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf).

<sup>522</sup> The Common Agreement defines “IAS Provider” as: “Each QHIN, Participant, and Subparticipant that offers Individual Access Services.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 7 (Jan. 2022), [https://www.healthit.gov/sites/default/files/page/2022-01/Common\\_Agreement\\_for\\_Nationwide\\_Health\\_Information\\_Interoperability\\_Version\\_1.pdf](https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf).

<sup>523</sup> For the Common Agreement definitions of QHIN, Participant, and Subparticipant, see Common Agreement for Nationwide Health Information Interoperability Version 1, at 8–12 (Jan. 2022), [https://www.healthit.gov/sites/default/files/page/2022-01/Common\\_Agreement\\_for\\_Nationwide\\_Health\\_Information\\_Interoperability\\_Version\\_1.pdf](https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf).

<sup>524</sup> Exchange Purpose(s): means the reason, as authorized by [the] Common Agreement including the Exchange Purposes SOP, for a Request, Use, Disclosure, or Response transmitted via QHIN-to-QHIN exchange as one step in the transmission. Authorized Exchange Purposes are: Treatment, Payment, Health Care Operations, Public Health, Government Benefits Determination, Individual Access Services, and any other purpose authorized as an Exchange Purpose by the Exchange Purposes SOP, each to the extent permitted under Applicable Law, under all applicable provisions of [the] Common Agreement, and, if applicable, under the implementation SOP for the applicable Exchange Purpose. See Common Agreement for Nationwide Health Information Interoperability Version 1, at 6 (Jan. 2022), [https://www.healthit.gov/sites/default/files/page/2022-01/Common\\_Agreement\\_for\\_](https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_)

beyond Treatment to include Individual Access Services, Payment, Health Care Operations, Public Health, and Government Benefits Determination—all built upon common technical and policy requirements and to meet key needs of the U.S. health care system. This flexible structure allows interested parties to participate in the way that makes the most sense for them, while also supporting simplified, seamless exchange.

The QTF,<sup>525</sup> which was developed and released by the RCE, describes the functional and technical requirements that a Health Information Network (HIN)<sup>526</sup> must fulfill to serve as a QHIN under the Common Agreement. The QTF specifies the technical underpinnings for QHIN-to-QHIN exchange and certain other responsibilities described in the Common Agreement. The technical and functional requirements described in the QTF enable information exchange modalities, including querying and message delivery across participating entities.

In general, the information to be exchanged within the TEFCA ecosystem allows for the use of Health Level Seven (HL7®) Implementation Guide for Clinical Document Architecture (CDA®) Release 2: Consolidated CDA Templates for Clinical Notes (US Realm) Draft Standard for Trial Use Release 2.1 (C-CDA 2.1) document format, including data defined as part of U.S. Core Data for Interoperability (USCDI), with allowance for flexibility to further expand the content to support a multitude of use cases.<sup>527</sup> The Common Agreement and the QTF do not require HL7® Fast Healthcare Interoperability Resource (FHIR®) based exchange. TEFCA allows for the optional exchange of FHIR content using more traditional, established standards to enable the transport of that content. However, TEFCA can nonetheless be a strong catalyst for network enablement of FHIR maturation. To that end, the RCE released a 3-year FHIR Roadmap for TEFCA Exchange, which lays out a

*Nationwide\_Health\_Information\_Interoperability\_Version\_1.pdf*.

<sup>525</sup> Qualified Health Information Network (QHIN) Technical Framework (QTF) Version 1.0 (Jan. 2022), [https://rce.sequoiaproject.org/wp-content/uploads/2022/01/QTF\\_0122.pdf](https://rce.sequoiaproject.org/wp-content/uploads/2022/01/QTF_0122.pdf).

<sup>526</sup> “Health Information Network” under TEFCA has the meaning assigned to the term “Health Information Network or Health Information Exchange” in the information blocking regulations at 45 CFR 171.102.

<sup>527</sup> User’s Guide to the Trusted Exchange Framework and Common Agreement—TEFCA (Jan. 2022), <https://rce.sequoiaproject.org/wp-content/uploads/2022/01/Common-Agreement-Users-Guide.pdf>.

<sup>514</sup> See <https://www.healthit.gov/buzz-blog/interoperability/321tefca-is-go-for-launch>.

<sup>515</sup> For more information on current developments related to TEFCA, we refer readers to [www.HealthIT.gov/TEFCA](http://www.HealthIT.gov/TEFCA).

<sup>516</sup> Trusted Exchange Framework (Jan. 2022), [https://www.healthit.gov/sites/default/files/page/2022-01/Trusted\\_Exchange\\_Framework\\_0122.pdf](https://www.healthit.gov/sites/default/files/page/2022-01/Trusted_Exchange_Framework_0122.pdf).

<sup>517</sup> Common Agreement for Nationwide Health Information Interoperability Version 1 (Jan. 2022), [https://www.healthit.gov/sites/default/files/page/2022-01/Common\\_Agreement\\_for\\_Nationwide\\_Health\\_Information\\_Interoperability\\_Version\\_1.pdf](https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf).

<sup>518</sup> Qualified Health Information Network (QHIN) Technical Framework (QTF) Version 1.0 (Jan. 2022), [https://rce.sequoiaproject.org/wp-content/uploads/2022/01/QTF\\_0122.pdf](https://rce.sequoiaproject.org/wp-content/uploads/2022/01/QTF_0122.pdf).

<sup>519</sup> The Common Agreement defines a QHIN as “to the extent permitted by applicable SOP(s), a Health Information Network that is a U.S. Entity that has been Designated by the RCE and is a party to the Common Agreement countersigned by the RCE.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 10 (Jan. 2022), [https://www.healthit.gov/sites/default/files/page/2022-01/Common\\_Agreement\\_for\\_Nationwide\\_Health\\_Information\\_Interoperability\\_Version\\_1.pdf](https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf).

<sup>520</sup> In August 2019, ONC awarded a cooperative agreement to The Sequoia Project to serve as the

deliberate strategy to add FHIR-based exchange under TEFCA in the near future.<sup>528</sup>

### (iii) Enabling Exchange Under TEFCA Measure

In 2022, prospective QHINs are anticipated to begin signing the Common Agreement and applying for designation. The RCE will then begin onboarding and designating QHINs to share information. In 2023, HHS expects interested parties across the care continuum to have increasing opportunities to enable exchange under TEFCA. Specifically, this would mean such interested parties would be: (1) signatories to either the Common Agreement or an agreement that meets the flow-down requirements of the Common Agreement (called a Framework Agreement<sup>529</sup> under the Common Agreement); (2) in good standing (that is, not suspended) under that agreement; and (3) enabling secure, bi-directional exchange of information to occur, in production. TEFCA is expected to give individuals and entities easier, more efficient access to more health information. The Common Agreement requires strong privacy and security protections for all entities who elect to participate, including entities not covered by the Health Insurance Portability and Accountability Act (HIPAA).<sup>530</sup>

By connecting to a network that connects to a QHIN or directly to a QHIN, a MIPS eligible clinician can share health information in the same manner as described in the attestation statements previously finalized for the HIE Bi-Directional Exchange measure in the CY 2021 PFS final rule 85 FR 84888 through 84893). By connecting to an entity that connects to a QHIN, or connecting directly to a QHIN, that supports sharing information on patients as part of a Framework Agreement<sup>531</sup>, a MIPS eligible clinician

would be thereby enabling bi-directional exchange with other health care providers as described in Statement 1 of the HIE Bi-Directional Exchange measure. Since participation in a Framework Agreement as a QHIN, Participant, or Sub-participant will be open to all qualifying entities and will not be restricted by use of a single vendor, a connection via a Framework Agreement would also satisfy the requirements of Statement 2 of the HIE Bi-Directional Exchange measure. Finally, as discussed above, the technical requirements for exchanging information by entities through the Common Agreement and Framework Agreements utilize standards included in certified technology referenced under the CEHRT definition (see 42 CFR 414.1305), including the ability to exchange and receive data using the C-CDA standard (see certification criteria at 45 CFR 170.315(b)(1) and (b)(2)), thus health care providers participating in a Framework Agreement can use the functions of CEHRT to support bi-directional exchange with an HIE.

To offer health care providers more opportunities to earn credit for the Health Information Exchange objective, and given the alignment between enabling exchange under TEFCA and the existing HIE Bi-Directional Exchange measure, in the CY 2023 PFS Proposed rule, we proposed to add an additional measure through which a MIPS eligible clinician could earn credit for the Health Information Exchange objective by connecting to an entity that connects to a QHIN or connecting directly to a QHIN. Specifically, we proposed to add the following new measure to the Health Information Exchange objective beginning with the performance period in CY 2023: Enabling Exchange Under TEFCA measure (87 FR 46292 through 46295). We proposed MIPS eligible clinicians would have three reporting options for the Health Information Exchange objective: (1) report on both the Support Electronic Referral Loops by Sending Health Information measure (or the exclusion, if applicable) and the Support Electronic Referral Loops by Receiving and Reconciling Health Information measure (or the exclusion, if applicable); (2) report on the HIE Bi-Directional Exchange measure; or (3)

Agreement, a Participant-Subparticipant Agreement, or a Downstream Subparticipant Agreement, as applicable.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 6 (Jan. 2022) [https://www.healthit.gov/sites/default/files/page/2022-01/Common\\_Agreement\\_for\\_Nationwide\\_Health\\_Information\\_Interoperability\\_Version\\_1.pdf](https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf).

report on the proposed Enabling Exchange Under TEFCA measure.

We proposed the Enabling Exchange Under TEFCA measure would be worth the total amount of points available for the Health Information Exchange objective. Under the current scoring methodology finalized in the CY 2021 PFS final rule, the Health Information Exchange objective is worth a total of 40 points (85 FR 84894). We noted in CY 2023 PFS proposed rule (87 FR 46298 through 46307), the proposed changes to the scoring methodology beginning with the performance period in CY 2023 such that the Health Information Exchange objective would be worth no more than 30 points. Therefore, under the proposal, the proposed Enabling Exchange Under TEFCA measure would be worth 30 points. We proposed this change to the scoring methodology as a result of our proposal in the CY 2023 PFS proposed rule (87 FR 46289 through 46290) to make the Query of PDMP measure required and worth 10 points. However, should we not finalize the Query of PDMP measure proposal, we proposed the Enabling Exchange Under TEFCA measure would be worth 40 points (the current total point value of the Health Information Exchange objective). In no case could more than 40 points, total, be earned for the Health Information Exchange objective.

We noted that we believe the new measure for Enabling Exchange Under TEFCA that we proposed in the CY 2023 PFS proposed rule (87 FR 46292 through 46295) would incentivize MIPS eligible clinicians to exchange information by connecting directly or indirectly to a QHIN and support health information exchange at a national level. We also noted that we believe that fulfillment of this measure is an extremely high value action. The overall TEFCA goal of establishing a universal floor of interoperability across the country aligns with our commitment to promoting and prioritizing interoperability and exchange of healthcare data. Incentivizing health care providers to enable exchange under TEFCA is a critical component to advancing healthcare data exchange nationwide. We proposed a MIPS eligible clinician would report the Enabling Exchange Under TEFCA measure by attestation, and the measure would require a “yes/no” response. A “yes” response would enable a MIPS eligible clinician to earn the proposed 30 points allotted to the Health Information Exchange objective. We proposed that a MIPS eligible clinician would attest to the following:

- Participating as a signatory to a Framework Agreement (as that term is

<sup>528</sup> FHIR® Roadmap for TEFCA Exchange Version 1 (Jan. 2022), [https://rce.sequoiaproject.org/wp-content/uploads/2022/01/FHIR-Roadmap-v1.0\\_updated.pdf](https://rce.sequoiaproject.org/wp-content/uploads/2022/01/FHIR-Roadmap-v1.0_updated.pdf).

<sup>529</sup> The Common Agreement defines “Framework Agreement(s)” as: “any one or combination of the Common Agreement, a Participant-QHIN Agreement, a Participant-Subparticipant Agreement, or a Downstream Subparticipant Agreement, as applicable.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 6 (Jan. 2022) [https://www.healthit.gov/sites/default/files/page/2022-01/Common\\_Agreement\\_for\\_Nationwide\\_Health\\_Information\\_Interoperability\\_Version\\_1.pdf](https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf).

<sup>530</sup> Common Agreement for Nationwide Health Information Interoperability Version 1, at 8–12 (Jan. 2022), [https://www.healthit.gov/sites/default/files/page/2022-01/Common\\_Agreement\\_for\\_Nationwide\\_Health\\_Information\\_Interoperability\\_Version\\_1.pdf](https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf).

<sup>531</sup> The Common Agreement defines “Framework Agreement(s)” as: “any one or combination of the Common Agreement, a Participant-QHIN

defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** and on ONC's website) in good standing (that is, not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy; and

- Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement.

Similar to the HIE Bi-Directional Exchange measure, to successfully attest to this measure, we stated that a MIPS eligible clinician must use the capabilities of CEHRT to support bi-directional exchange under a Framework Agreement, which includes capabilities that support exchanging the clinical data within the Common Clinical Data Set (CCDS) or the United States Core Data for Interoperability (USCDI). This is consistent with the other measures under the Health Information Exchange objective, which point to the use of CEHRT to support the exchange of the clinical data within the CCDS or the USCDI.

We noted in the CY 2023 PFS proposed rule (87 FR 46292 through 46295) that we believe there are numerous certified health IT capabilities that can support bi-directional exchange under a Framework Agreement. For instance, participants may exchange information under a Framework Agreement by using technology certified to the criterion at 45 CFR 170.315(b)(1), "Care coordination—Transitions of care," to transmit C-CDAs across a network. Where supported, participants could also utilize API technology certified to either the criterion at 45 CFR 170.315(g)(8), "Design and performance—Application access—data category request," or (g)(10), "Design and performance—Standardized API for patient and population services," as finalized in the ONC 21st Century Cures Act final rule (85 FR 25742), to enable exchange of data in the CCDS or USCDI from a participant's EHR. Additional certified health IT modules may also support exchange of information under a Framework Agreement for transitions of care, including modules certified to certification criteria at 45 CFR 170.315(g)(7), "Design and performance—Application access—patient selection," and (g)(9), "Design and performance—Application access—all data request," which support

information exchange via API; the certification criterion at 45 CFR 170.315(e)(1), "Patient engagement—View, download, and transmit to 3rd party," which supports patient access to their information; and the certification criterion at 45 CFR 170.315(g)(6), "Design and performance—Consolidated CDA creation performance," which supports creation of a summary of care record. We recognized that entities that will connect directly or indirectly to a QHIN are currently interacting with health care providers using certified health IT in a variety of ways, and, as with the Bi-Directional HIE Exchange measure, noted that we believe that we should allow for substantial flexibility in how health care providers use certified health IT to exchange data under a Framework Agreement.

The Enabling Exchange Under TEFCA measure could offer health care providers an alternative to earn credit for the Health Information Exchange objective. The Enabling Exchange Under TEFCA measure would not require a MIPS eligible clinician to assess whether they participate in a health information exchange that meets the attributes of attestation Statement 2 under the HIE Bi-Directional Exchange measure regarding exchange across a broad network of unaffiliated exchange partners including those using disparate EHRs. These attributes are key to the goals of TEFCA, which aims to offer health care providers a uniform set of expectations around information sharing regardless of which network for information exchange they participate in.

We invited public comment on these proposals, and the following is a summary of the comments received:

*Comment:* Many commenters supported our proposal to add the Enabling Exchange Under TEFCA measure under the Health Information Exchange objective. Several commenters stated that this measure is an important step towards fostering interoperability and nationwide data exchange, aiding to fill information gaps, and to reduce burdens placed on MIPS eligible clinicians. Many commenters supported our proposal sharing that they applaud CMS' efforts to improve information exchange, engage in efforts toward implementation, and prioritize a commitment to advancing healthcare data exchange nationwide. Several commenters supported our proposal stating that this measure will minimize costly and unnecessary administrative burdens on MIPS eligible clinicians and their care teams. Another commenter stated that this measure will build

alignment across vendors, allowing interoperable data exchange across the healthcare continuum. One commenter stated their appreciation for a measure that applies to MIPS eligible clinicians as opposed to capabilities and capacities of their chosen vendor. Some commenters supported our proposal stating that this measure will lend itself to a seamless and coordinated approach to improving care for patients, allowing for a more accurate exchange of health information. A few commenters supported our proposal, emphasizing their appreciation for offering this as an additional option requiring a yes/no response, versus a measure utilizing a numerator-denominator approach.

*Response:* We thank commenters for their feedback and agree that our proposal to add the Enabling Exchange Under TEFCA measure is an important step towards our efforts to improve the exchange of health information, promote interoperability, and offer options that best serve MIPS eligible clinicians individually. We believe the addition of this third measure option will aid in reducing administrative burden on MIPS eligible clinicians by offering an additional option that may work best with their chosen approach to information exchange. We appreciate that commenters support our commitment to advancing healthcare data exchange. Enabling the exchange of health information across the continuum is fundamental to the Promoting Interoperability performance category, so we appreciate that commenters recognize and support these efforts.

*Comment:* Some commenters did not support our proposal to add the Enabling Exchange Under TEFCA measure under the Health Information Exchange objective. One commenter stated that some networks do not yet facilitate the live exchange of production data, therefore CMS should consider postponing this measure as an option, so as not to place additional burden on EHR vendor support staff. Another commenter stated concerns with implementation burden on small or independent practices, limiting rural MIPS eligible clinicians and small practices from participating. This commenter further stated that this measure fails to account for the clinical relevance of the information used at the point of care, as they see no value in querying for data at all times. Lastly, this commenter stated that MIPS eligible clinicians are often unaware of their health system's engagement with TEFCA, placing additional burden on the MIPS eligible clinician having to

defer to others who have this information.

*Response:* We thank commenters for their feedback, but disagree that this measure will create additional burden on MIPS eligible clinicians, and instead believe that we are reducing burden by offering an additional option to satisfy the Health Information Exchange objective. Given this is one of three options to complete the objective, MIPS eligible clinicians can choose the measure option that works best for their practice, with their chosen vendor. We appreciate the commenters' concerns related to clinical relevance of the information exchanged via health information networks, but we disagree because the measure requirements specify that while exchange must be enabled for the specified patients, they do not require data to be exchanged if there is no clinical reason to do so. We believe that this measure offers MIPS eligible clinicians another alternative towards our larger effort to continue to promote interoperability by allowing the exchange of health information with minimal administrative burden on MIPS eligible clinicians and their support staff.

In the CY 2023 PFS proposed rule (87 FR 46295), we requested comment on other ways that TEFCA can advance CMS policy and program objectives, including how TEFCA can support exchange of information required under other measures in the Promoting Interoperability performance category. For instance, we asked how can TEFCA support exchange of information specified under the Public Health and Clinical Data Exchange and the Patient Access to their Health Information objectives. We would like to thank commenters for their feedback in response to our request for information on other ways that TEFCA can advance CMS policy and program objectives. We may consider these suggestions in future rulemaking.

After consideration of the public comments, we are finalizing our proposal to add the following new measure to the Health Information Exchange objective beginning with the performance period in CY 2023: Enabling Exchange Under TEFCA measure. MIPS eligible clinicians will have three reporting options for the Health Information Exchange objective: (1) report on both the Support Electronic Referral Loops by Sending Health Information measure (or the exclusion, if applicable) and the Support Electronic Referral Loops by Receiving and Reconciling Health Information measure (or the exclusion, if applicable); (2) report on the HIE Bi-

Directional Exchange measure; or (3) report on the Enabling Exchange Under TEFCA measure. We finalized our proposal to require the Query of PDMP measure above in section IV.A.6.c.(4)(d)(i) of this final rule; therefore, we are also finalizing our proposal that the Enabling Exchange Under TEFCA measure will be worth 30 points, the total amount of points available for the Health Information Exchange Objective. We are finalizing our proposal that a MIPS eligible clinician will report the Enabling Exchange Under TEFCA measure by attestation, and the measure will require a "yes/no" response; a "yes" response would enable a MIPS eligible clinician to earn the 30 points allotted to the Health Information Exchange Objective. We are finalizing our proposal that a MIPS eligible clinician will attest to the following:

- Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** and on ONC's website) in good standing (that is, not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy; and

- Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement.

(f) Modifications to the Public Health and Clinical Data Exchange Objective

(i) Background

The Promoting Interoperability performance category for MIPS eligible clinicians has been an important mechanism for encouraging healthcare data exchange for public health purposes through the Public Health and Clinical Data Exchange objective. Effective responses to public health events, such as the COVID-19 PHE, require a fast, accurate exchange of data between health care providers and Federal, State, and local public health agencies (PHAs). Health care providers collect these data for patient care, and PHAs need them to protect the public, whether to track an outbreak, initiate contact tracing, find gaps in vaccine coverage, or pinpoint the source of a foodborne outbreak.

There are five measures under the Public Health and Clinical Data Exchange objective: Immunization

Registry Reporting; Syndromic Surveillance Reporting; Electronic Case Reporting; Public Health Registry Reporting; and Clinical Data Registry Reporting. For background on this objective and its associated measures, we refer readers to the CY 2019 PFS final rule (83 FR 59795, 59815 through 59817). In the CY 2022 PFS final rule (86 FR 65469 through 65475), we finalized the requirement for MIPS eligible clinicians to report two of the five measures associated with the Public Health and Clinical Data Exchange objective, beginning with the performance period in CY 2022: Immunization Registry Reporting; and Electronic Case Reporting. These two measures will put PHAs on better footing for future health threats and a long-term COVID-19 pandemic recovery by strengthening two important public health functions: (1) case surveillance; and (2) vaccine uptake. Requiring these measures will enable nationwide automated case reporting for fast public health response; and local and national visibility on immunization uptake so PHAs can tailor vaccine distribution strategies. (See <https://www.cdc.gov/coronavirus/2019-ncov/hcp/electronic-case-reporting.html> <https://www.healthit.gov/topic/safety/safer-guides>.)

(ii) Revisions to Active Engagement

(A) Background

The Promoting Interoperability performance category has been an important mechanism for encouraging data exchange between health care providers and public health agencies through the Public Health and Clinical Data Exchange objective. We believe requiring MIPS eligible clinicians to report on the Immunization Registry Reporting measure and Electronic Case Reporting measure will motivate EHR vendors to implement the necessary capabilities in their products and encourage MIPS eligible clinicians to engage in the reporting activities described in the measures.

Despite these gains, ensuring that the nation's thousands of MIPS eligible clinicians implement and initiate data production for these vital public health capabilities remains an ongoing and important effort. The Promoting Interoperability performance category provides an opportunity to continue strengthening the incentives for MIPS eligible clinicians to engage in these essential reporting activities. Without adequate incentives, it will be difficult to attain the comprehensive data exchange needed to ensure fast,

complete, actionable data in response to future public health threats.

In the EHR Incentive Program Stage 3 final rule (80 FR 62862 through 62864), beginning with the EHR reporting period in 2016, we established a definition for active engagement under the Public Health and Clinical Data Registry Reporting objective (subsequently renamed for MIPS the Public Health and Clinical Data Exchange objective, see 83 FR 59815 through 59817). Active engagement is defined as when an eligible professional (now a MIPS eligible clinician) is in the process of moving towards sending “production data” to a public health agency or clinical data registry, or is sending production data to a public health agency or clinical data registry. We noted that the term “production data” refers to data generated through clinical processes involving patient care and it is used to distinguish between this data and “test data” which may be submitted for the purposes of enrolling in and testing electronic data transfers. We established the following three options for eligible professionals to demonstrate active engagement:

- *Option 1—Completed registration to submit data:* The eligible professional registered to submit data with the PHA or, where applicable, the clinical data registry (CDR) to which the information is being submitted; registration was completed within 60 days after the start of the EHR reporting period; and the eligible professional is awaiting an invitation from the PHA or CDR to begin testing and validation. Eligible professionals that have registered in previous years do not need to submit an additional registration to meet this requirement for each EHR reporting period;

- *Option 2—Testing and validation:* The eligible professional is in the process of testing and validation of the electronic submission of data. The eligible professional must respond to requests from the PHA or, where applicable, the CDR within 30 days; failure to respond twice within an EHR reporting period would result in the eligible professional not meeting the measure; and

- *Option 3—Production:* The eligible professional has completed testing and validation of the electronic submission and is electronically submitting production data to the PHA or CDR.

For more information about the current options for active engagement, we refer readers to the EHR Incentive Program Stage 3 final rule (80 FR 62862 through 62864).

#### (B) Revisions to Options for Active Engagement

The three active engagement options provided flexibility for eligible professionals and MIPS eligible clinicians to meet the measures under the Public Health and Clinical Data Registry Reporting objective/Public Health and Clinical Data Exchange objective in a variety of ways, but they did not provide an incentive to move through the options and get to option 3, production, where there is the ongoing electronic submission of data. Option 1, completed registration to submit data, was an important option in 2016 as many PHAs and CDRs were starting to come online, and thus the provision of this option recognized that many eligible professionals were just beginning to engage in electronic data exchange with PHAs and CDRs. Now, many years have passed, and we believe that MIPS eligible clinicians have had ample time to complete option 1.

Thus, we proposed in the CY 2023 PFS proposed rule (87 FR 46296 through 46297) to consolidate current options 1 and 2 into one option beginning with the performance period in CY 2023, as follows:

- *Proposed Option 1. Pre-production and Validation* (a combination of current option 1, completed registration to submit data, and current option 2, testing and validation). The MIPS eligible clinician must first register to submit data with the PHA or, where applicable, the clinical data registry (CDR) to which the information is being submitted. Registration must be completed within 60 days after the start of the performance period,<sup>532</sup> while awaiting an invitation from the PHA or CDR to begin testing and validation. MIPS eligible clinicians that have registered in previous years do not need to submit an additional registration for subsequent performance periods. Upon completion of the initial registration, the MIPS eligible clinician must begin the process of testing and validation of the electronic submission of data. The MIPS eligible clinician must respond to requests from the PHA or, where applicable, the CDR within 30 days; failure to respond twice within a performance period would result in the MIPS eligible clinician not meeting the measure.

MIPS eligible clinicians could select this option if they have previously completed the initial registration (existing Option 1). They could also select this option if they are currently in

the process of testing and validation (existing Option 2).

- *Proposed Option 2. Validated Data Production* (current option 3, production). The MIPS eligible clinician has completed testing and validation of the electronic submission and is electronically submitting production data to the PHA or CDR.

Under this proposal, a MIPS eligible clinician must demonstrate their level of active engagement at either proposed Option 1 (pre-production and validation) or proposed Option 2 (validated data production) to fulfill each measure.

We invited public comment on these proposals, and the following is a summary of the comments received.

*Comment:* Many commenters supported the proposal to modify the active engagement options under the Public Health and Clinical Data Exchange objective. A few commenters expressed their support for consolidating the active engagement options, stating that the original option 1 (completed registration to submit data) requires very little effort from the clinician to achieve, does little to promote public health reporting, and is often used by clinicians to simply “check the box” and get measure credit. Some commenters supported the proposal because they believe it forces health care providers to truly engage in efforts to achieve a status of validated data production. Other commenters supported CMS’ goal that all health care providers nationwide be actively sending public health data to registries so that future public health threats can be monitored.

*Response:* We believe that it is crucial to have all clinicians actively submitting production data to immunization and electronic case reporting registries. We have consulted with CDC and they believe that immunization and electronic case reporting registries are ready to accept registrations and are able to move clinicians from registration to testing almost immediately. Thus, we believe the proposed option 1—pre-production and validation more accurately reflects the current environment.

*Comment:* Several commenters supported our proposal stating that CMS’ increased emphasis on promoting public health and clinical data by better capturing this data presents a critical opportunity to prevent devastating consequences and misdiagnoses. Other commenters stated that this proposal would enable MIPS eligible clinicians to monitor future public health threats, assess geographic gaps, and ensure

<sup>532</sup> In the CY 2023 PFS proposed rule (87 FR 46296), we inadvertently referred to the EHR reporting period instead of the performance period.

active engagement through adherence to the measure requirements.

*Response:* We agree that this is an opportunity for MIPS eligible clinicians to be more involved and engaged with the data exchange process. We agree that with engagement comes awareness, and the ability to improve existing processes.

*Comment:* Some commenters did not support the proposal to modify the active engagement options under the Public Health and Clinical Data Exchange objective stating that the PHE is still ongoing and many practices/MIPS eligible clinicians have had to re-tool their practices just to function during this challenging time. The commenters requested CMS revisit this proposal after the COVID-19 PHE is over. Another commenter urged CMS to reconsider this proposal and supported the measure as currently structured, with separate options for pre-production and validation. The commenter stated that the separate options for pre-production and validation give practices more time to negotiate and test new and changing technical integration policies that are often needed to bring reporting up to the production stage.

*Response:* We understand the burdens MIPS eligible clinicians presently face due to the COVID-19 PHE. We do not believe that it is important to differentiate between those MIPS eligible clinicians who have registered and those who have begun testing and validation. Based on input from CDC, we understand that in general, many clinicians who register are immediately invited to begin testing and validation.

#### (C) Reporting Requirement for Level of Engagement

MIPS eligible clinicians currently are not required to report their level of active engagement for any of the measures associated with the Public Health and Clinical Data Exchange objective. We believe that this information would be helpful as it would enable HHS to identify registries and PHAs which may be having difficulty onboarding MIPS eligible clinicians and moving them to the Validated Data Production phase. During the recent COVID-19 PHE, we recognized the importance of public health reporting (as discussed further the CY 2023 PFS proposed rule, 87 FR 46295 and 46296), and we believe that knowing the level of active engagement that a MIPS eligible clinician selects would provide information on the types of registries and geographic areas with health care providers in the Pre-production and Validation stage. Our goal is for all health care providers

nationwide to be at the Validated Data Production stage so that data will be actively flowing, and public health threats can be monitored. Therefore, for the Public Health and Clinical Data Exchange objective, in addition to submitting responses for the required measures and any optional measures a MIPS eligible clinician chooses to report, we proposed in the CY 2023 PFS proposed rule (87 FR 46296 through 46297) to require MIPS eligible clinicians to submit their level of active engagement, either Pre-production and Validation or Validated Data Production (as proposed in section IV.A.6.c.(4)(f)(ii)), for each measure they report beginning with the performance period in CY 2023. We noted in the proposed rule that if our proposal to reduce the three current options of active engagement to two options is not finalized, we proposed to require MIPS eligible clinicians to submit one of the three current options of active engagement for each measure they report.

We invited public comment on these proposals, and the following is a summary of the comments received.

*Comment:* Several commenters supported our proposal to require MIPS eligible clinicians to report their level of active engagement for measures in the Public Health and Clinical Data Exchange objective stating they understood CMS' need to capture engagement information.

*Response:* We thank commenters for their support.

*Comment:* A commenter asked for clarification on what to submit if clinicians in a group are at different levels of active engagement.

*Response:* If MIPS eligible clinicians who are choosing to report for MIPS as a group are at different levels of active engagement, the group should consider submitting the level of active engagement that best reflects the composition of the group (for example, the level that reflects the status of the majority of the MIPS eligible clinicians in the group).

*Comment:* Several commenters did not support our proposal to require MIPS eligible clinicians to report their level of active engagement for measures in the Public Health and Clinical Data Exchange objective, stating that this additional reporting requirement is burdensome, especially during the COVID-19 PHE.

*Response:* We do understand that many MIPS eligible clinicians remain affected by the COVID-19 PHE, however, we believe the burden of submitting the level of active engagement is very small, and we

estimate in section V.B.9.g. that it will take 30 seconds to submit the level of active engagement.

#### (D) Changes to the Duration of Active Engagement Options

MIPS eligible clinicians currently are not required to advance from one option of active engagement to the next within a certain period of time. Beginning with the performance period in CY 2023, we proposed in the CY 2023 PFS proposed rule (87 FR 46297) that MIPS eligible clinicians may spend only one performance period at the Pre-production and Validation level of active engagement per measure, and that they must progress to the Validated Data Production level in the next performance period for which they report a particular measure. For example, under this proposal, if a MIPS eligible clinician submits the Immunization Registry Reporting measure for the performance period in CY 2023 at the level of active engagement for proposed Option 1 (Pre-production and Validation), the clinician must submit the Immunization Registry Reporting measure at the level of active engagement for proposed Option 2 (Validated Data Production phase) for the next performance period in CY 2024, or they would fail to satisfy the Public Health and Clinical Data Exchange objective. To use an optional measure as an example to illustrate this proposal, if a MIPS eligible clinician chooses to submit the Syndromic Surveillance Reporting measure for the performance period in CY 2023 at the level of active engagement for proposed Option 1 (Pre-production and Validation) and then chooses to submit the Syndromic Surveillance Reporting measure for a later performance period, the clinician would have to submit the measure at the level of active engagement for proposed Option 2 (Validated Data Production phase) for the next performance period for which they choose to submit the measure. The options for active engagement assume the same PHA or CDR is used by the MIPS eligible clinician. In the event a MIPS eligible clinician chooses to switch between one or more CDRs or PHAs, we proposed they would be permitted to spend one additional performance period at the Pre-production and Validation phase to assist with onboarding to the new CDR or PHA. As electronic transmission of high-quality data is achieved at the Validated Data Production phase, we want all MIPS eligible clinicians to reach this level.

We invited public comment on these proposals, and the following is a summary of the comments received.

*Comment:* One commenter did not support our proposal to limit the amount of time a MIPS eligible clinician may spend in Option 1 (Pre-production and Validation) to one performance period, before progressing to Option 2 (Validated Data Production). This commenter stated that CMS should leave the measure requirements the same for the CY 2023 performance period, allowing MIPS eligible clinicians additional time for testing and validation.

A few commenters asked CMS to consider exclusions for those MIPS eligible clinicians who attempt to move from option 1 to option 2 after one year but are unable to do so due to circumstances outside of their control. Another commenter stated that staffing and resource constraints faced by public health agencies have made it challenging for MIPS eligible clinicians to complete the onboarding, testing, and validation processes necessary to fulfill the requirements. One commenter stated that public health agencies offer a limited amount of time for MIPS eligible clinicians to move from invitation to testing, making this requirement difficult. A few commenters recommended a delay in the effective date for this policy for 6–12 months to account for circumstances such as unexpected staff shortage or backlog (for example, in case a public health agency is unable to accommodate everyone who wants to be on board).

*Response:* We acknowledge commenters' concerns regarding the lack of control MIPS eligible clinicians may have when moving through the levels of active engagement. We recognize that MIPS eligible clinicians' successful progression through the levels of engagement is partially dependent on the readiness, resources and capabilities of the PHAs to which they report. We further recognize that public health capacity remains somewhat variable and constrained—particularly as PHAs continue to direct resources to the COVID–19 PHE response efforts. For these reasons, we are delaying by one year the implementation of the proposed requirement that MIPS eligible clinicians may spend only one performance period at the Pre-production and Validation level of active engagement per measure, such that it will apply beginning with the performance period in CY 2024. We believe that this delay will provide MIPS eligible clinicians the additional time needed and thus believe that it is

not necessary to adopt additional exclusions.

After consideration of the public comments we received, we are finalizing proposed Option 1 (Pre-production and Validation) and proposed Option 2 (Validated Data Production) as proposed. A MIPS eligible clinician must demonstrate their level of active engagement at either Option 1 (Pre-production and Validation) or Option 2 (Validated Data Production) to fulfill each measure beginning with the CY 2023 performance period. We are also finalizing our proposal to require MIPS eligible clinicians to submit their level of active engagement, either Option 1 (Pre-production and Validation) or Option 2 (Validated Data Production), for each measure they report beginning with the performance period in CY 2023. We are also finalizing the proposal that MIPS eligible clinicians may spend only one performance period at the Pre-production and Validation (Option 1) level of active engagement per measure, and that they must progress to the Validated Data Production (Option 2) level in the next performance period for which they report a particular measure. We are finalizing this proposal with a modification that the policy will apply beginning with the CY 2024 performance period. We are also finalizing the proposal that in the event a MIPS eligible clinician chooses to switch between one or more CDRs or PHAs, they will be permitted to spend one additional performance period at the Pre-production and Validation phase to assist with onboarding to the new CDR or PHA.

#### (E) Public Health Reporting and Information Blocking

The ONC 21st Century Cures Act final rule (85 FR 25642) implemented policies related to information blocking as authorized under section 4004 of the 21st Century Cures Act. The 21st Century Cures Act final rule established a regulatory definition of information blocking, under which information blocking is, in general, a practice by a health IT developer of certified health IT, health information network, health information exchange, or health care provider (actors)<sup>533</sup> that, except as required by law or covered by an exception in 45 CFR part 171, subparts B or C, is likely to interfere with (as defined in 45 CFR 171.102) access,

exchange, or use of EHI.<sup>534 535</sup> For a health care provider (as defined in 45 CFR 171.102), information blocking (see 45 CFR 171.103) means a practice (except as required by law or covered by an exception defined in 45 CFR part 171) that is likely to interfere with access, exchange, or use of EHI that the health care provider knows is unreasonable and is likely to interfere with access, exchange, or use of electronic health information.<sup>536 537</sup>

ONC recently released an information blocking frequently asked question (FAQ) (IB.FAQ43.1.2022FEB) that highlights important points about public health reporting and information blocking.<sup>538</sup> Specifically, if an actor is required to comply with another law that relates to the access, exchange, or use of EHI, failure to comply with that law may implicate the information blocking regulations. As an example, where a law requires actors to submit EHI to public health authorities, an actor's failure to submit EHI to public health authorities could be considered an interference under the information blocking regulations. For example, many States legally require reporting of certain diseases and conditions to detect outbreaks and reduce the spread of disease. Should an actor that is required to comply with such a law fail to report, the failure could be an interference with access, exchange, or use of EHI under the information blocking regulations. Practices would be evaluated to determine whether the unique facts and circumstances constitute information blocking, consistent with additional ONC frequently asked questions.<sup>539</sup>

<sup>534</sup> For purposes of the definition of information blocking, for the period before October 6, 2022, electronic health information is defined in 45 CFR 171.103(b). As of that date, electronic health information will be defined as it is in 45 CFR 171.102.

<sup>535</sup> In order for a practice to be considered information blocking, additional requirements at 45 CFR 171.103(a)(2) or (a)(3) apply, depending on the type of actor engaging in the practice.

<sup>536</sup> For other types of actors (health IT developers of certified health IT and health information networks or health information exchanges, as defined in 45 CFR 171.102), the definition of "information blocking" (see 45 CFR 171.103) specifies that the actor "knows, or should know, that such practice is likely to interfere with access, exchange, or use of electronic health information."

<sup>537</sup> The exceptions to the definition of information blocking (practices that are required by law or covered by an exception in 45 CFR part 171, subparts B or C) described in the previous sentence apply to this definition as well.

<sup>538</sup> See <https://www.healthit.gov/curesrule/faq/would-not-complying-another-law-implicate-information-blocking-regulations>.

<sup>539</sup> See <https://www.healthit.gov/curesrule/faq/how-would-any-claim-or-report-information-blocking-be-evaluated>.

<sup>533</sup> Actor is defined in 45 CFR 171.102 as "health care provider, health IT developer of certified health IT, health information network or health information exchange."

(g) Changes to the Scoring Methodology for the Performance Period in CY 2023

Promoting Interoperability performance category for the CY 2023 performance period/2025 MIPS payment year as

revised to reflect the policies finalized in this final rule.

For ease of reference, Table 92 lists the objectives and measures for the

BILLING CODE 4150–28–P

**TABLE 92: Objectives and Measures for the Promoting Interoperability Performance Category for the Performance Period in CY 2023**

| Objective  | Measure   | Numerator  | Denominator   | Exclusion  |
|--|---|--|---|--|
| e-Prescribing: Generate and transmit permissible prescriptions electronically  | e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is queried for a drug formulary and transmitted electronically using CEHRT.   | Number of prescriptions in the denominator generated, queried for a drug formulary, and transmitted electronically using CEHRT.                      | Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period. | Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.   |
| e-Prescribing  | Query of PDMP: For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history*.  | N/A (measure is Y/N)   | N/A (measure is Y/N)  | Any MIPS eligible clinician who: 1. is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; 2. writes fewer than 100 permissible prescriptions during the performance period; or 3. for whom querying a PDMP would impose an excessive workflow or cost burden prior to the start of the performance period they select in CY 2023. |
| Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, | Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or health care provider (1) creates a summary of care using CEHRT; and (2) electronically | Number of transitions of care and referrals in the denominator where the summary of care record was created using CEHRT and exchanged electronically | Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician   | Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period.   |

| Objective   | Measure  | Numerator   | Denominator   | Exclusion   |
|---|--|---|---|---|
| and reconciles summary of care information from other health care providers into their EHR using the functions of CEHRT | exchanges the summary of care record.  |   |   |   |
| Health Information Exchange   | Support Electronic Referral Loops by Receiving and Reconciling Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, medication allergy, and current problem list. | Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses. | Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient. | Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period. |
| Health Information Exchange   | HIE Bi-Directional Exchange: Statement 1: I participate in an HIE to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral and record stored or maintained in the EHR during the performance period in accordance with applicable law and policy. Statement 2: The HIE that I participate in is capable of exchanging information across a   | N/A (measure is Y/N)  | N/A (measure is Y/N)  | N/A   |

| Objective   | Measure   | Numerator   | Denominator   | Exclusion |
|---|---|---|---|-----------|
|   | broad network of unaffiliated exchange partners including those using disparate EHRs, and not engaging in exclusionary behavior when determining exchange partners.<br>Statement 3: I use the functions of CEHRT to support bi-directional exchange with an HIE.  |   |   |           |
| Health Information Exchange                               | Enabling Exchange Under TEFCA* MIPS eligible clinicians would attest to the following:<br><ul style="list-style-type: none"> <li>• Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the <b>Federal Register</b> and on ONC's website) in good standing (i.e. not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy.</li> <li>• Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement.</li> </ul> | N/A (measure is Y/N)                              | N/A (measure is Y/N)                                | N/A       |
| Provider to Patient Exchange: The MIPS eligible clinician | Provide Patients Electronic Access to Their Health  | Number of patients in the denominator (or patient | Number of unique patients seen by the MIPS eligible | N/A       |

| Objective   | Measure  | Numerator  | Denominator                              | Exclusion  |
|---|--|--|--|--|
| provides patients (or patient-authorized representative) with timely electronic access to their health information.   | Information: For at least one unique patient seen by the MIPS eligible clinician: 1. The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and 2. The MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT. | authorized representative) who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the technical specifications of the API in the MIPS eligible clinician's CEHRT. | clinician during the performance period. |  |
| Public Health and Clinical Data Exchange: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice. | Immunization Registry Reporting: The MIPS eligible clinician is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).  | N/A (measure is Yes/No)  | N/A (measure is Yes/No)                  | The MIPS eligible clinician: 1. does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the performance period; OR 2. operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the |

\* Signifies a final policy adopted in the CY 2023 PFS final rule.

#### BILLING CODE 4150–28–C

In the CY 2023 PFS proposed rule, we made various proposals that would affect the scoring of the objectives and measures for the performance period in CY 2023 (87 FR 46298 through 46309).

In proposing to make the Query of PDMP measure required, we noted we would retain the 10 points associated with it, which are allocated as bonus points for the performance period in CY 2022. To accommodate this change if our proposal is finalized, we proposed to reduce the points associated with the Health Information Exchange objective measures from the current 40 points to 30 points beginning with the CY 2023 performance period. (CY 2023 PFS proposed rule, 87 FR 46289 through 46290).

The Public Health and Clinical Data Exchange objective, with its two required measures, is currently worth only 10 points. Despite requiring certain measures to make the objective more effective in promoting public health data electronic exchange, the total number of points did not change between CY 2021 and CY 2022. We

noted that we believe that increasing the point value of the Public Health and Clinical Data Exchange objective would create a more meaningful incentive for MIPS eligible clinicians to engage in the electronic reporting of public health information and recognize the importance of public health systems affirmed by the COVID–19 pandemic. Increasing the point value would make the Public Health and Clinical Data Exchange objective a more central piece of the Promoting Interoperability performance category and better incentivize MIPS eligible clinicians to implement these essential public health data exchange capabilities. Without adequate incentives, there remains a risk that MIPS eligible clinicians will simply not prioritize implementing these capabilities, which are essential to ongoing efforts to address COVID–19 and will be indispensable for responding to future public health threats and emergencies. Increasing the point value would more appropriately incentivize MIPS eligible clinicians to engage in the electronic reporting of

public health information and would align the value of the objective with the objective's importance and the effort necessary to meet the required measures.

Thus, we proposed to increase the points allocated to the Public Health and Clinical Data Exchange objective from 10 to 25 points to better align with the true value of this objective beginning with the CY 2023 performance period. We noted that we believe assigning 25 points to the objective reflects the importance of comprehensive, nationwide health care data exchange between MIPS eligible clinicians and public health agencies. Nationwide health care data exchange would provide immense value to the public by improving the speed and effectiveness of public health responses, as well as to MIPS eligible clinicians, since better public health response reduces pressure on clinicians, which can be overwhelmed in a public health crisis. To balance the increase in the points associated with the Public Health and Clinical Data Exchange objective, we proposed to reduce the points

associated with the Provide Patients Electronic Access to Their Health Information measure from the current 40 points to 25 points beginning with the CY 2023 performance period. We proposed to revise the regulatory text for scoring the Promoting Interoperability performance category at § 414.1380(b)(4)(ii)(B) and (C) to reflect the proposals for scoring the objectives and measures. (CY 2023 PFS proposed rule, 87 FR 46305 through 46306)

We invited public comment on these proposals, and the following is a summary of the comments received:

*Comment:* Several commenters supported our proposals to modify the existing scoring methodology for the Query of PDMP measure, the Health Information Exchange objective measures, the Public Health and Clinical Data Exchange objective, and the Provide Patients Access to their Health Information measure. One commenter stated that these modifications would be less cumbersome, easier to understand, and more effectively highlight important objectives. One commenter stated that they support our proposal to increase the number of points allocated to the Public Health and Clinical Data Exchange Objective, as this shows CMS's recognition of the important efforts that should continue in order to effectively move clinicians and health care organizations toward electronically submitting data to public health agencies.

*Response:* We thank commenters for their support. We appreciate that commenters recognize our efforts towards further reducing administrative burden and highlighting objectives that are integral to the Promoting Interoperability performance category. We agree with commenters that moving MIPS eligible clinicians and health care organizations towards a more interoperable state is an important step towards interoperability.

*Comment:* Some commenters supported our proposal to modify the scoring methodology to reflect our proposal to require the Query of PDMP measure. One commenter stated that the scoring revision will help address the opioid crisis, which has not gone away during the COVID-19 PHE. Another commenter stated that they support changing the scoring methodology from optional bonus points to an assigned 10 points, making the Electronic Prescribing objective worth a total of 20 points.

*Response:* We believe that after offering bonus points for several performance periods and increasing the bonus points from 5 to 10 points in the

CY 2021 PFS final rule (85 FR 84887 and 84888), 10 points reflects the importance of this measure as a tool to help combat the opioid epidemic. Therefore, increasing the number of points allocated to the objective by requiring the Query of PDMP measure (such that the points allocated to the measure would no longer be bonus points) demonstrates our continued commitment to combatting the opioid epidemic.

*Comment:* Some commenters did not support our proposal to modify the scoring methodology for the Query of PDMP measure. One commenter stated that CMS should not finalize this proposal, as they are also not supportive of requiring the Query of PDMP measure. Another commenter stated that with many MIPS eligible clinicians are incapable of interconnecting their EHR technology with PDMP systems, CMS should not require the Query of PDMP measure, and therefore, not finalize converting the 10 bonus points to assigned points.

*Response:* We agree with the commenters that not all MIPS eligible clinicians have a fully operational statewide PDMP or a fully integrated EHR-PDMP. We recognize that without full integration, it is possible that the actions required to satisfy the Query of PDMP measure could be time-consuming for clinicians and potentially cause clinical disruption. For these reasons, we are adopting an additional exclusion for the Query of PDMP that will be available only for the CY 2023 performance period/2025 MIPS payment year, as explained in section IV.A.6.c.(4)(a)(iii), above. We do not agree with commenters that the 10 points should remain as bonus points. As we have previously stated, more MIPS eligible clinicians are able to successfully complete the requirements of the measure versus those who cannot, and as we discussed in section IV.A.6.c.(4)(a)(i) of this final rule we believe it is important to require the Query of PDMP measure.

*Comment:* Some commenters did not support our proposal to reduce the number of points associated with the Health Information Exchange objective measures from the current 40 points to 30 points. One commenter stated that the 10 points for the Query of PDMP measure should not be reassigned from the Health Information Exchange objective, given the current efforts towards supporting information exchange.

*Response:* We thank commenters for their feedback. The Health Information Exchange objective remains fundamental to the Promoting

Interoperability performance category. However, we believe that finalizing an additional reporting option, the Enabling Exchange under TEFCA measure (section IV.A.6.c.(4)(e)(iii)) will reduce the administrative efforts for MIPS eligible clinicians with regard to the Health Information Exchange objective, and the point reduction reflects this. We want to express our commitment to combatting the opioid epidemic, therefore we disagree that the points should not be redistributed to the Query of PDMP measure.

*Comment:* A few commenters supported our proposal to increase the points allocated to the Public Health and Clinical Data Exchange objective. One commenter stated that this represents an important step to improving our nation's public health information infrastructure. Another commenter stated that increasing the points allocated to this objective will better incentivize MIPS eligible clinicians to implement these essential public health data exchange capabilities, bolstering the interoperability and robustness of data exchange between healthcare and public health, and will make the objective a more central piece of the Promoting Interoperability performance category.

*Response:* We thank commenters for their support. As the COVID-19 PHE revealed, public health data is vital in combating PHEs and increasing the points allocated to the objective clearly reflects the importance of this information.

*Comment:* Some commenters do not support our proposal to increase the points allocated to the Public Health and Clinical Data Exchange objective. One commenter urged CMS to continue working with the CDC to ensure public health agencies are capable of receiving data before changing the existing point distribution. This commenter further stated that funding and implementation schedules have an impact on working with public health agencies that are capable of receiving data, and that these barriers should be resolved before any additional changes are made to the point distribution. One commenter stated that an "all or nothing" approach to the Public Health and Clinical Data Exchange objective requirements has a negative impact on MIPS eligible clinicians' success with the Promoting Interoperability performance category.

*Response:* We will continue to work in close collaboration with the CDC. With regard to the "all or nothing" approach, we agree that failure to comply with the objective's requirements could have a potential negative impact on a MIPS eligible

clinician's success. We reiterate that the Public Health and Clinical Data Exchange objective will continue to be an important objective particularly as we may find ourselves having to combat future pandemics. In response to those commenters who have concerns that PHAs are not capable of receiving data, CDC is working with PHAs to ensure that they will be ready to receive data.

After consideration of the public comments, we are finalizing our

proposals to reduce the points associated with the Health Information Exchange objective measures from the current 40 points to 30 points beginning with the CY 2023 performance period, increase the points allocated to the Public Health and Clinical Data Exchange objective from 10 to 25 points, and reduce the number of points associated with the Provide Patients Electronic Access to Their Health Information measure from the current

40 points to 25 points. We note that we are finalizing the proposal to require the Query of PDMP measure, as discussed in section IV.A.6.c.(4)(d)(i) of this final rule, thereby finalizing the point value for the measure at 10 points.

Table 93 reflects the scoring methodology for the Promoting Interoperability performance category for the performance period in CY 2023.

BILLING CODE 4150-28-P

**TABLE 93: Scoring Methodology for the Performance Period in CY 2023**

| Objective                                | Measure  | Maximum Points             | Required/Optional   |
|--|--|----------------------------|---|
| Electronic Prescribing                   | e-Prescribing  | 10 points                  | Required  |
|  | Query of PDMP*   | 10 points*                 | Required  |
| Health Information Exchange              | Support Electronic Referral Loops by Sending Health Information  | 15 points*                 | Required (MIPS eligible clinician's choice of one of the three reporting options) |
|  | Support Electronic Referral Loops by Receiving and Reconciling Health Information  | 15 points*                 |   |
|  | -OR-   |                            |   |
|  | Health Information Exchange Bi-Directional Exchange  | 30 points*                 |   |
|  | -OR-   |                            |   |
|  | Enabling Exchange under TEFCA*   | 30 points*                 |   |
| Provider to Patient Exchange             | Provide Patients Electronic Access to Their Health Information   | 25 points*                 | Required  |
| Public Health and Clinical Data Exchange | Report the following two measures*: <ul style="list-style-type: none"> <li>Immunization Registry Reporting</li> <li>Electronic Case Reporting</li> </ul>   | 25 points*                 | Required  |
|  | Report one of the following measures: <ul style="list-style-type: none"> <li>Public Health Registry Reporting</li> <li>Clinical Data Registry Reporting</li> <li>Syndromic Surveillance Reporting</li> </ul> | 5 points ( <i>bonus</i> )* | Optional  |

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored.

In addition, MIPS eligible clinicians must submit an attestation regarding ONC direct review and actions to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

\*Signifies a final policy adopted in the CY 2023 PFS final rule.

The maximum points available in Table 93 do not include the points that will be redistributed in the event an exclusion is claimed. For ease of

reference, Table 94 shows how points will be redistributed among the objectives and measures for the performance period in CY 2023 in the

event a MIPS eligible clinician claims an exclusion.

**TABLE 94: Exclusion Redistribution for Performance Period in CY 2023**

| Objective                                | Measure   | Redistribution if exclusion is claimed  |
|--|---|---|
| Electronic Prescribing                   | e-Prescribing   | 10 points to HIE objective  |
|  | Query of PDMP*  | 10 points to e-Prescribing measure  |
| Health Information Exchange              | Support Electronic Referral Loops by Sending Health Information   | 15 points to Provide Patients Electronic Access to Their Health Information measure   |
|  | Support Electronic Referral Loops by Receiving and Reconciling Health Information   | 15 points to the Support Electronic Referral Loops by Sending Health Information measure  |
|  | -OR-  |   |
|  | Health Information Exchange Bi-Directional Exchange   | No exclusion  |
|  | -OR-  |   |
|  | Enabling Exchange under TEFCA*  | No exclusion  |
| Provider to Patient Exchange             | Provide Patients Electronic Access to Their Health Information  | No exclusion  |
| Public Health and Clinical Data Exchange | Report the following five measures: <ul style="list-style-type: none"> <li>• Syndromic Surveillance Reporting</li> <li>• Immunization Registry Reporting</li> </ul> | If an exclusion is claimed for both measures, 25 points are redistributed to the Provide Patients Electronic Access to their Health Information measure |

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored.

In addition, MIPS eligible clinicians must submit an attestation regarding ONC direct review and actions to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

\*Signifies a final policy adopted in the CY 2023 PFS final rule.

For ease of reference, Table 95 lists the objectives and measures for the

Promoting Interoperability performance category for the performance period in

CY 2023 and the 2015 Edition certification criteria.

**TABLE 95: Promoting Interoperability Performance Category Objectives and Measures and 2015 Edition Certification Criteria**

| Objective  | Measure   | 2015 Edition (CY 2023 Performance Period)   |

\*The ONC Cures Act final rule made changes to the existing 2015 Edition Health IT Certification Criteria by introducing new criteria, revising and removing existing criteria (85 FR 25667 through 25668). These changes are required beginning with the CY 2023 performance period.

## BILLING CODE 4150-28-C

## (h) Additional Considerations

(i) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

We established a policy at § 414.1380(c)(2)(i)(A)(4)(ii) for the performance periods in CY 2017 through 2022 (2019 through 2024 MIPS payment years) under section 1848(q)(5)(F) of the Act to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNSs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the Promoting Interoperability performance category, but if they choose to report, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act.

As in past years, we intend to use data from prior performance periods to further evaluate the participation of NPs, PAs, CRNAs, and CNSs in the Promoting Interoperability performance category and consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians. We analyzed the data submitted for the CY 2017 performance period for the Promoting Interoperability performance category and discovered that the vast majority of MIPS eligible clinicians submitted data as part of a group. Although we are pleased that MIPS eligible clinicians utilized the option to submit data as a group, it does limit our ability to analyze data at the individual NPI level. For the CY 2017 performance period, approximately 4 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs submitted data individually for MIPS, and more than two-thirds of them did not submit data for the Promoting Interoperability performance category. For the CY 2018 performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually for MIPS, we initially found approximately 34 percent submitted data individually for the Promoting Interoperability performance category. However, after further review and the refinement of our analytics, we found that this percentage was 24 percent, not 34 percent. For the CY 2019

performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually for MIPS, approximately 30 percent submitted data individually for the Promoting Interoperability performance category, a modest increase from 2018. For the CY 2020 performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually for MIPS, approximately 27.5 percent submitted data individually for the Promoting Interoperability performance category, a modest decrease from 2019. For the CY 2021 performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually for MIPS, approximately 21.3 percent submitted data individually for the Promoting Interoperability performance category, a decrease from 2020.

Due to the continued relatively low numbers of NPs, PAs, CRNAs, or CNSs that submitted data individually for the Promoting Interoperability performance category for prior performance periods, we did consider proposing to extend the reweighting policy at § 414.1380(c)(2)(i)(A)(4)(ii) for another year (for the CY 2023 performance period/2025 MIPS payment year, CY 2023 PFS proposed rule, 87 FR 46309 through 46310). However, we noted that we believe that incentivizing more of these types of MIPS eligible clinicians to adopt and use CEHRT and submit data for the Promoting Interoperability performance category is important for increased interoperability and data exchange nationwide. We adopted the reweighting policy beginning with the first year of MIPS (the CY 2017 performance period/2019 MIPS payment year), and we believe that there has been sufficient time for NPs, PAs, CRNAs, and CNSs to adopt and implement CEHRT. At this point in the program's maturity, we are concerned that the reweighting policy itself might be serving as a disincentive to these types of MIPS eligible clinicians adopting and using CEHRT, which would be an unintended consequence. We believe it is possible that these clinician types are now able to submit data individually on the measures for the Promoting Interoperability performance category, but they are choosing not to because they would prefer for the performance category to be reweighted and not to contribute to their final score. Further, we believe that there are sufficient measures applicable and available in the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs. The

measures that may not apply to these clinician types, such as the e-Prescribing measure, have exclusions that can be claimed if applicable. We considered the impact that not extending the policy may have on MIPS eligible clinicians in small practices, but we believe that the policy we established in the CY 2022 PFS final rule at § 414.1380(c)(2)(i)(A)(4)(ii) to automatically assign a weight of zero to the Promoting Interoperability performance category for MIPS eligible clinicians in a small practice will result in very few NPs, PAs, CRNAs, and CNSs being affected. Further, we reminded readers that a MIPS eligible clinician who meets the criteria for a significant hardship may submit a hardship exception application to reweight the Promoting Interoperability performance category based on a significant hardship, such as lack of control over the availability CEHRT and insufficient internet access (81 FR 77240 through 77243, 82 FR 53680 through 53686, 82 FR 53783 through 53785, and 85 FR 84984).

For these reasons, we did not propose to continue the reweighting policy at § 414.1380(c)(2)(i)(A)(4)(ii) to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score for NPs, PAs, CRNAs, or CNSs for the CY 2023 performance period/2025 MIPS payment year. However, we requested public comment on whether we should continue this policy for the CY 2023 performance period/2025 MIPS payment year. We noted particular interest in comments on potential barriers to CEHRT adoption and implementation that may impact one or more of these clinician types, as well as comments on the applicability of the Promoting Interoperability performance category measures to NPs, PAs, CRNAs, or CNSs.

The following is a summary of the public comments received on not continuing the current reweighting policy for NPs, PAs, CRNAs, or CNSs and our responses:

*Comment:* Many commenters supported our decision not to continue the reweighting policy for NPs, PAs, CRNAs, or CNSs starting with the performance period in CY 2023. One commenter stated that it is critical to expand health care provider participation in the Promoting Interoperability performance category so that data from NPs, PAs, CRNAs, or CNSs is included in public health reporting.

*Response:* We agree that data from all MIPS eligible clinician types will make

the information available through public health reporting more robust.

*Comment:* One commenter requested that CMS provide exceptions to small practices and CRNAs in rural areas.

*Response:* We currently do not have a policy to reweight the Promoting Interoperability performance category for MIPS eligible clinicians in rural areas, though we may consider this feedback in future rulemaking. In the CY 2022 PFS final rule (86 FR 65485 through 65487, § 414.1380(c)(2)(i)(C)(9)), we finalized a reweighting policy to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score for MIPS eligible clinicians in small practices.

*Comment:* Several commenters did not support our choice not to continue the reweighting policy for NPs, PAs, CRNAs, or CNSs. A few of these commenters stated that this is very problematic for those clinicians not reporting as a group because it makes them individually responsible for submitting data for the Promoting Interoperability performance category. A couple commenters stated that this was an unnecessary change during the COVID-19 PHE.

*Response:* We appreciate the commenters' concerns but believe that the sharing of electronic health information from all MIPS eligible clinicians through CEHRT will improve patient care. MIPS eligible clinicians who do report as a group may be in small practices and eligible for reweighting under the policy at § 414.1380(c)(2)(i)(C)(9). While we understand that the COVID-19 PHE has caused stress for many MIPS eligible clinicians, we believe the value of the information in CEHRT will help MIPS eligible clinicians deliver higher quality healthcare. To achieve this, the information from all MIPS eligible clinician types needs to be available for electronic sharing.

After consideration of the public comments, we are not continuing the reweighting policy at § 414.1380(c)(2)(i)(A)(4)(ii) to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score for NPs, PAs, CRNAs, or CNSs for the CY 2023 performance period/2025 MIPS payment year.

(ii) Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologists, Qualified Audiologists, Clinical Psychologists, and Registered Dietitians or Nutrition Professionals

In the CY 2019 PFS final rule (83 FR 59819 through 59820), we established that we will apply the same reweighting

policy for the Promoting Interoperability performance category that we adopted previously for NPs, PAs, CNSs, and CRNAs to other types of MIPS eligible clinicians who are non-physician practitioners (physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals) for the CY 2019 performance period. The reweighting policy for physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals is codified at § 414.1380(c)(2)(i)(A)(4)(i). We stated that because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we have little evidence as to whether there are sufficient measures applicable and available to them under the Promoting Interoperability performance category. We extended this policy for the performance periods in CY 2020 (84 FR 63003 through 63004), CY 2021 (85 FR 84895), and CY 2022 (86 FR 65488 through 65489). We analyzed the data from the CY 2019 performance period/2021 MIPS payment year, and approximately 18.4 percent of occupational therapists, 2 percent of physical therapists, and 1 percent of clinical psychologists who submitted data individually for MIPS, submitted data individually for the Promoting Interoperability performance category. For qualified speech-language pathologists, qualified audiologists, and registered dietitians/nutrition professionals, approximately 18.8 percent of those who submitted data individually for MIPS also submitted data individually for the Promoting Interoperability performance category. We analyzed the data from the CY 2020 performance period/2022 MIPS payment year, and approximately 3.3 percent of occupational therapists, 1.4 percent of physical therapists, and 0.6 percent of clinical psychologists who submitted data individually for MIPS, submitted data individually for the Promoting Interoperability performance category. For qualified speech-language pathologists, qualified audiologists, and registered dietitians/nutrition professionals, 0 percent (rounded from 16 total clinicians) of those who submitted data individually for MIPS also submitted data individually for the Promoting Interoperability performance category. We analyzed the data from the CY 2021 performance period/2023 MIPS

payment year, and 0 percent of occupational therapists, 0.3 percent of physical therapists, 0.5 percent of clinical psychologists who submitted data individually for MIPS, submitted data individually for the Promoting Interoperability performance category. For qualified speech-language pathologists, qualified audiologists, and registered dietitians/nutrition professionals, 6.7 (6.66) percent of those who submitted data individually for MIPS also submitted data individually for the Promoting Interoperability performance category.

Based on low participation, it is possible that these clinician types may be finding that there are not sufficient measures that are applicable to them. As with NPs, PAs, CRNAs, and CNSs, however, it is also possible that the reweighting policy itself might be serving as a disincentive to these types of MIPS eligible clinicians adopting and using CEHRT, and that they are choosing not to submit data individually on the measures because they would prefer for the performance category to be reweighted and not to contribute to their final score. Because these clinician types were added to the definition of a MIPS eligible clinician under § 414.1305 more recently than NPs, PAs, CRNAs, and CNSs, we believe it would be appropriate to continue the existing reweighting policy for them for one more year. Therefore, we proposed to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals only for the CY 2023 performance period/2025 MIPS payment year (CY 2023 PFS proposed rule, 87 FR 46310) and to revise § 414.1380(c)(2)(i)(A)(4)(i) to reflect the proposal. We want to continue to encourage these types of MIPS eligible clinicians to adopt and use CEHRT, which would contribute to increased interoperability and data exchange nationwide; therefore, we do not anticipate proposing in future rulemaking to extend the policy for additional years.

We invited comments on this proposal, and the following is a summary of the public comments received on our proposal to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition

professionals for the CY 2023 performance period and our responses:

*Comment:* The majority of commenters supported our proposal to continue the reweighting policy for physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals for the CY 2023 performance period/2025 MIPS payment year.

*Response:* We appreciate the support for this proposal.

*Comment:* Many commenters expressed concern about our statement that we did “not anticipate proposing in future rulemaking to extend the policy for additional years” (87 FR 46310). Some stated that these clinician types were not eligible to participate in the Medicare and Medicaid EHR Incentive Programs and do not have the resources to adopt CEHRT. Other commenters recommended that CMS continue to offer hardship exceptions that would result in the reweighting of the Promoting Interoperability performance category. A few commenters asked that we delay the discontinuation of reweighting until CY 2025 to give these MIPS eligible clinicians more time.

*Response:* We appreciate these concerns and may take this feedback under consideration for future rulemaking. While we do understand that these clinicians were not eligible for EHR incentives, we believe that the value of interoperable electronic health information is great. We will continue to review the number of physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals who submit data for the Promoting Interoperability performance category.

After consideration of the public comments, we are finalizing the proposal to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals only for the CY 2023 performance period/2025 MIPS payment year and the corresponding revisions to § 414.1380(c)(2)(i)(A)(4)(i).

#### (iii) Clinical Social Workers

In the CY 2022 PFS final rule (86 FR 65387 through 65389), we added clinical social workers to the definition of a MIPS eligible clinician under § 414.1305, beginning with the CY 2022

performance period/2024 MIPS payment year. This clinician type was not eligible to participate in the Medicare Promoting Interoperability Program to earn incentive payments for meaningful use of CEHRT or receive reduced Medicare payments for failing to meaningfully use CEHRT. Clinical social workers also were not eligible for Medicaid EHR incentive payments. We stated that clinical social workers may lack experience with the adoption or use of CEHRT, and that we believed there may not be sufficient Promoting Interoperability performance category measures that are applicable and available to them (86 FR 65489). For the CY 2022 performance period/2024 MIPS payment year, we established that we will apply to clinical social workers the same reweighting policy for the Promoting Interoperability performance category that we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians who are non-physician practitioners (86 FR 65489). The reweighting policy for clinical social workers is codified at § 414.1380(c)(2)(i)(A)(4)(iii).

CY 2022 is the first year that clinical social workers are considered MIPS eligible clinicians, and thus we do not yet have any performance period data that we could use to evaluate whether the Promoting Interoperability performance category measures are applicable and available to this type of MIPS eligible clinician. We proposed to continue the existing policy of reweighting the Promoting Interoperability performance category for clinical social workers for the CY 2023 performance period/2025 MIPS payment year and to revise § 414.1380(c)(2)(i)(A)(4)(iii) to reflect the proposal (CY 2023 PFS proposed rule, 87 FR 46310 through 46311). We noted we would evaluate whether the policy should be continued for future years when we have performance period data available.

We invited comment on this proposal, but we did not receive any comments. For the reasons stated in the CY 2023 proposed rule (87 FR 46310 and 46311) and above, we are finalizing the proposal to continue the existing policy of reweighting the Promoting Interoperability performance category for clinical social workers for the CY 2023 performance period/2025 MIPS payment year and the corresponding revisions to § 414.1380(c)(2)(i)(A)(4)(iii).

#### (i) Patient Access to Health Information Measure—Request for Information (RFI)

The CY 2023 PFS proposed rule contained an RFI on a measure of patient access to their health

information (87 FR 46311 through 46312).

We thank commenters for their responses to this request for information. We may consider this information to inform future rulemaking.

#### (5) APM Entity Level Participation for MIPS Eligible Clinicians Participating in MIPS APMs

##### (a) Overview

In the CY 2021 PFS final rule (85 FR 84896), we finalized our policy to terminate the APM scoring standard effective January 1, 2021, and to retain certain APM Entity group reporting policies that were established and finalized for reporting and scoring under MIPS beginning with the CY 2021 MIPS performance period. Therefore, we redesignated, in part, the regulation that describes APM Entity group determinations, from § 414.1370(e) to § 414.1317, and titled that section “APM Entity Groups.”

##### (b) APM Entity Level Reporting of Promoting Interoperability Performance Category

In the CY 2021 PFS final rule (85 FR 84896), we finalized a policy to allow APM Entities to report to traditional MIPS using any available MIPS reporting pathway, including the APM Performance Pathway (APP), traditional MIPS and, in the future, MIPS Value Pathways (MVPs).

We finalized that APM Entities that do not report through the APP will continue to have the cost performance category reweighted to zero percent of their MIPS final score, but will be required to report and be scored on the three remaining MIPS performance categories, including quality, IA, and promoting interoperability. We explained in that rule that the PI performance category would continue to be scored for multi-TIN APM Entities using the promoting interoperability roll-up calculation described at § 414.1317(b)(1) (85 FR 84897).

It has come to our attention through feedback from interested parties that many of the workstream modifications, as well as data aggregation and integration tools that are likely to be used by multi-TIN APM Entities, such as use of the FHIR API or hiring vendors to complete the more complex reporting activities required for reporting APM Entity level eQMs could also be used to collect data and submit for the promoting interoperability performance category at the APM Entity level.

It is also our understanding that it is possible that an APM Entity may

represent only a single practice site or specialty within a larger multi-specialty TIN. We believe that in these circumstances the APM Entity may have both the ability and desire to report on the promoting interoperability performance category at the APM Entity level, thereby excluding data generated by the rest of the larger TIN, in cases where the APM Entity itself performed above average relative to the rest of that TIN.

Therefore, we proposed to introduce a voluntary reporting option for APM Entities to report the promoting interoperability performance category at the APM Entity level beginning with the 2023 performance period. Multi-TIN APM Entities that do not choose this proposed new reporting option would continue to be scored using the roll-up calculation described at § 414.1317(b)(1). We sought comment on this proposal.

We did not receive any comments on this proposal. For the reasons stated previously in this section and in the proposed rule (87 FR 46257), we are finalizing as proposed the voluntary reporting option for APM Entities to report the promoting interoperability performance category at the APM Entity level beginning with the 2023 performance period.

#### e. MIPS Final Score Methodology

##### (1) Performance Category Scores

###### (a) Background

Section 1848(q)(1)(A)(i) and (ii) of the Act provides, in relevant part, that the Secretary shall develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards for a performance period and use such methodology to provide for a composite performance score for each such clinician for each performance period.

For the CY 2023 performance period/2025 MIPS payment year, we intend to continue to build on the scoring methodology we finalized for prior years. We believe that this scoring methodology allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. In the CY 2023 PFS proposed rule (87 FR 46313), we proposed to update our scoring policies consistent with this framework. Specifically, we proposed to—

- Amend the benchmarking policy to score administrative claims measures in the quality performance category using a benchmark calculated from performance period data.

- Clarify the topped out measure policy and update the topped out measure life cycle for scoring topped out measures in the quality performance category.

- Establish a maximum cost improvement score of 1 percentage point out of 100 percentage points available for the cost performance category beginning with the CY 2022 performance period/2024 MIPS payment year.

We refer readers to section IV.A.6.c.(4)(g) of this final rule for a discussion of the changes to the scoring methodology for the Promoting Interoperability performance category. We did not propose changes to scoring policies for the improvement activities performance category.

We refer readers to § 414.1380 for our current policies on scoring.

(b) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We referred readers to § 414.1380(b)(1) for our current policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913). In the CY 2022 PFS final rule we finalized policies to simplify scoring in MIPS as we transition to MVPs and to incentivize the selection of new, potentially high-value measures (86 FR 65496 through 65507).

(i) Scoring Administrative Claims Measures in the Quality Performance Category Using Performance Period Benchmarks

In the 2023 PFS proposed rule (87 FR 46313), we referred readers to the CY 2017, CY 2018, CY 2019, CY 2020, and CY 2021 Quality Payment Program final rules and PFS final rules (81 FR 77277 through 77282, 82 FR 53699 through 53718, 83 FR 59841 through 59842, 84 FR 63014 through 63016, and 85 FR 84901 through 84904, respectively) for our previously established benchmarking policies.

In the CY 2017 Quality Payment Program final rule (81 FR 77276 through 77282), we finalized a rule providing that we will use MIPS eligible clinicians' performance in the baseline

period to set benchmarks for the quality performance category, with the exception of new quality measures, quality measures that lack historical data, or quality measures where we do not have comparable data from the baseline period. In these cases, we explained that we will calculate benchmarks using data submitted during the applicable performance period. We defined the baseline period to be the 12-month CY that is 2 years prior to the performance period for the MIPS payment year. For example, for the CY 2023 performance period/2025 MIPS payment year, the baseline period two performance periods prior would be the CY 2021 performance period (81 FR 77276 and 77277). Additionally, in the CY 2019 PFS final rule (83 FR 59842), we amended § 414.1380(b)(1)(ii) to align our benchmark policy with concurrently made changes to our data submission terminology. These changes removed references to each individual benchmark and instead stated that benchmarks will be based on measure collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

Additionally, in the 2023 PFS proposed rule, we (87 FR 46313) referred readers to the CY 2017 Quality Payment Program final rule and the CY 2021 PFS final rule (81 FR 77130 through 77136 and 85 FR 84871 through 84873 respectively) and § 414.1325(a)(2)(i) for our previously established policies regarding administrative claims measures in the quality performance category.

The policy at § 414.1325 provides that there is no data submission requirement for cost measures or administrative claims measures in the quality performance category as these measures are calculated on behalf of participants by CMS using administrative claims data. In the CY 2017 Quality Payment Program final rule (81 FR 77130), we finalized a policy that clinicians would be scored on applicable administrative claims-based global or population health (henceforth referred to only as population health measures) in addition to the six required submitted measures. Additionally, we established exclusions to the case minimum policy of 20 cases. It was found that the all-cause hospital readmission (ACR) measure was not reliable for cases under 200 and for groups of fewer than ten clinicians. As a result, we established exceptions to the case minimum policy for this measure and others as specified in the MIPS final list of quality measures through rule making

(§ 414.1380(b)(1)(iii)). In the CY 2021 PFS final rule (85 FR 84989 through 84901), we finalized a policy starting in the CY 2021 performance period/2023 MIPS payment year that would allow for performance periods longer than the standard 12-month performance period for administrative claims measures in the cost and quality performance categories as specified through rulemaking.

In the CY 2023 PFS proposed rule (87 FR 46313 and 46314), we proposed that, beginning with the CY 2023 performance period/2025 MIPS payment year, we would score administrative claims measures using benchmarks calculated using performance period benchmarks. We stated that we believe that using a performance period benchmark to score these measures would allow for scores that are more reflective of current performance, while adding no additional burden to clinicians. For the reasons described below, we believe it is more appropriate in certain circumstances to evaluate clinicians against current performance benchmarks. As previously noted, they do not require the submission of data by or on behalf of clinicians and may have a measure-specific performance period to ensure appropriate sample sizes. Additionally, in instances where these measures do not meet the case minimum or benchmark requirements, they are excluded from a MIPS-eligible clinician's quality performance category score.

The use of performance period benchmarks for such measures would help us to improve quality measurement. For example, the Risk-standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) has a 3-year performance period (consecutive 36-month timeframe)<sup>540</sup> that would start on October 1 of the calendar year 3 years prior to the applicable performance year and conclude on September 30 of the calendar year of the applicable performance year, proceeding with a 3-month numerator assessment period (capturing complication outcomes) followed by a 2-month claims run-out period. For the CY 2023 performance period/2025 MIPS payment year, the 3-year (36 consecutive months) performance

period for this measure would span from October 1, 2020 to September 30, 2023 with a 90-day numerator assessment period followed by a 60-day claims run-out period. This means that according to standard scoring policy, the corresponding baseline would include data from October 1, 2018 to September 30, 2021. We believe that comparison to data that precedes that standard 2-year baseline period may limit the usefulness of this measure. By comparing performance to data that was collected 5 years prior, this measure does not account for changes to the healthcare landscape and improvements in care that might have been made in the timeframe.

We noted that we do not believe using performance period benchmarks would increase burden to clinicians. We noted that we believe that clinicians prefer to have historical benchmarks to aid in measure selection and have performance targets. Additionally, population health administrative claims measures in MIPS are not subject to case minimum policies reducing the risk in being scored on these measures.

Accordingly, we proposed to add a paragraph at § 414.1380(b)(1)(ii)(D) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, CMS will calculate a benchmark for an administrative claims-based quality measure using the performance on the measure during the current performance period. We noted that we do not intend this proposal to modify our existing policies regarding case minimums and measures for which no benchmark may be calculated. Specifically, measures would remain subject to case minimum requirements described in paragraph (b)(1)(iii) and benchmark requirements in paragraph (b)(1)(ii)(A) of this section. Measures that cannot have a benchmark calculated or meet case minimum requirements would still be deducted from the eligible clinician's total measure achievement points consistent with paragraph (b)(1)(i)(A)(2)(ii).

We sought public comment on the proposal to score administrative claims measures in the quality performance category using performance period benchmarks.

*Comment:* Many commenters supported our proposal to score administrative claims measures in the quality performance category using performance period benchmarks, agreeing that the use of performance period benchmarks would allow for scores that are more reflective of current performance and national practice. One commenter further noted that, as demonstrated during the COVID-19

PHE, the collection of administrative claims data can often change year to year and historical data is not always representative of the current environment, and by calculating a measure score based on performance period benchmarks, CMS can better compare performance or cost with more representative data. Another commenter noted that same-year scoring is especially helpful for clinicians in tracking their status, as well as measure stewards in maintaining their measures.

*Response:* We agree that using performance period benchmarks would be more reflective of current national practices will help clinicians track their progress over years and measure stewards maintain their measures. Through scoring administrative claims measures using performance period benchmarks, clinicians will be scored in a landscape that considers the most up-to-date guidance, practice, environmental effects. As these measures are calculated by CMS on behalf of the clinicians requiring no data submission, providing scores using performance period benchmarks will allow for the calculation of more representative scores that better track clinician performance and progress over time to aid in the quality improvement process.

*Comment:* A few commenters did not support our proposal to score administrative claims measures using performance period benchmarks based on concerns that using performance period benchmarks would negatively impact clinicians' ability to gauge their performance during the performance period by eliminating their ability to project quality performance category scores. Commenters noted that without historical benchmarks, it would be difficult to estimate scores and determine performance improvement opportunities. One commenter noted that using performance year benchmarks would make it impossible for clinicians to know ahead of time what each measure's performance benchmark is, and therefore, may make it more difficult to improve performance on the measure year after year.

*Response:* Administrative claims measures are calculated on behalf of clinicians and do not require additional submissions to MIPS to be calculated. We believe clinician efforts to estimate their performance on administrative claims with historical benchmarks are of limited use as the calculation of the measure may require data that is not easily accessible to the clinician. Moving from historical benchmarks to performance period benchmarks will not change this. We believe scoring

<sup>540</sup> Section 414.1320(e)(1) provides in relevant part that, beginning with the 2023 MIPS payment year, the performance period for the quality and cost performance categories is the full calendar year that occurs 2 years prior to the applicable MIPS payment year, except as otherwise specified for administrative claims-based measures.

these measures using performance period benchmarks can help clinicians track progress over time by providing scores that are representative of current national trends thus aiding in identifying quality improvement opportunities in clinical practice overall and would not hinder in year to year comparisons.

*Comment:* While some commenters supported our proposal to score administrative claims measures using performance period benchmarks because they agreed the changes to timeframes would likely better represent current clinical care; they also expressed concerns that the proposal did not address their ongoing concerns with using a representative sample of historical data for quality measures of other submission types. In particular, these commenters noted that many of the baseline periods will include data from 2019, 2020, and 2021, all of which are impacted by the COVID-19 pandemic, and urged CMS to avoid using these data for benchmarking purposes. One commenter sought clarity on how much the pandemic impacted the historical information. To account for the impact of COVID-19 PHE on quality measure benchmarks, another commenter suggested that instead of using performance period benchmarks, CMS should instead calculate both historical benchmarks and current period benchmarks, and use the lower benchmark for each quality measure.

*Response:* We understand the concerns about the appropriateness of using data affected by the COVID-19 PHE to calculate historical benchmarks for quality measures. However, in the CY 2022 PFS final rule (86 FR 65494), we described our analysis of 2019 and 2020 data quality performance data, which found this data are suitable for benchmarking purposes. We maintain that this data is sufficiently representative and we will use this data to calculate benchmarks for Medicare Part B claims measures, eQMs, MIPS CQMs, and QCDR measures. For this reason, we did not propose any changes to the calculation of benchmarks of quality measures of other submission types and will continue to provide historical benchmarks for such measures in order to aid clinicians in quality improvement efforts using these performance targets.

After consideration of public comments and for the reasons stated above and in the CY 2023 PFS proposed rule (87 FR 46313 and 46314), we are finalizing our proposals to score administrative claims measures in the quality performance category using

performance period benchmarks as proposed.

(ii) Assigning Measure Achievement Points for Topped Out Measures

Section 1848(q)(3)(B) of the Act requires that, in establishing performance standards with respect to measures and activities, the Secretary consider, among other things, the opportunity for continued improvement. As part of our implementation of section 1848(q)(3)(B) of the Act, we established our topped out measure policy, which is intended to encourage clinicians to focus on areas where clinical improvement is possible by capping the points received for reporting on MIPS measures where meaningful distinctions in clinical performance are no longer measurable. We refer readers to § 414.1380(b)(1)(iv)(B) for our policies regarding the scoring of topped out measures. Under § 414.1380(b)(1)(iv), we identify topped out measures in the benchmarks published for each performance year. Under § 414.1380(b)(1)(iv)(B), beginning with the CY 2019 performance period/2021 MIPS payment year, measure benchmarks (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years will receive a maximum of 7 measure achievement points beginning in the second year the measure is identified as topped out (82 FR 53726 and 53727).

We finalized in the CY 2017 Quality Payment Program final rule (81 FR 77286) that we would define topped out process measures as those with a median performance rate of 95 percent or higher (§ 414.1305). We defined topped out non-process measures using a definition similar to the definition used in the Hospital Value-Based Purchasing (VBP) Program: a measure where the truncated coefficient of variation is less than 0.10 and the 75th and 90th percentiles are within 2 standard errors (81 FR 77286). When a measure is topped out, a large majority of clinicians submitting the measure perform at or very near the top of the distribution; therefore, there is little or no room for the majority of MIPS eligible clinicians who submit the measure to improve. We noted that we understand that each measure we have identified as topped out may offer room for improvement for some MIPS eligible clinicians; however, we believe asking clinicians to submit measures that we have identified as topped out and measures for which the vast majority of MIPS eligible clinicians already excel is an unnecessary burden that does not

add value or improve beneficiary outcomes.

In the CY 2018 Quality Payment Program final rule, we finalized that, beginning in the CY 2019 performance period/2021 MIPS payment year, each measure (excluding measures in the CMS Web Interface) that is identified as topped out for two or more consecutive years can receive no more than 7 points in the second year that it is identified as topped out and beyond (82 FR 53726 through 53727). A measure is identified as topped out for a given performance period by assessing its historical benchmark. Two consecutive historical benchmarks must be labeled as topped out for the 7-point cap to be applied for a given performance period. For example, for the CY 2023 performance period/2025 MIPS payment year, a measure is considered topped out if the historical benchmark calculated from data submitted in the CY 2021 performance period has a median performance of 95 percent or higher in the case of process measures or the truncated coefficient of variation is less than 0.10 and the 75th and 90th percentiles are within two standard errors in the case of non-process measures. If this same measure is identified as topped out again for the CY 2024 performance period/2026 MIPS payment year from data from the historical baseline period from CY 2022, this measure would be labeled as topped out and have the 7-point cap applied until the historical baseline period shows that the measure is no longer topped out or the measure is removed from the program. We noted that we believe this methodology incentivizes MIPS eligible clinicians to begin submitting non-topped out measures without performing below the median score. The methodology also does not impact scoring for those MIPS eligible clinicians that do not perform near the top of the measure, and therefore, have significant room to improve on the measure.

In the CY 2021 PFS final rule (85 FR 84989 through 84901), we finalized a policy at § 414.1380(b)(1)(vii)(A) that consolidated previously established scoring flexibilities regarding the truncation of a quality measure's performance period to 9-months of data from the CY 2018 Quality Payment Program final rule (82 FR 52714 through 53716) and the measure suppression policy established in the CY 2019 PFS final rule (FR 59845 through 59847). The updated scoring flexibilities policy stated that, beginning with the CY 2021 performance period/2023 MIPS payment year, CMS would truncate the performance period or suppress a

quality measure if CMS determined that revised clinical guidelines, measure specifications, or codes impacted a clinician's ability to submit information on the measure or may lead to potentially misleading results (85 FR 84899 through 84901). We stated that, based on the timing of the changes to clinical guidelines, measure specifications or codes, we will assess the measure on 9 months of data, and if 9 consecutive months of data are not available, we will suppress the measure by reducing the total available measure achievement points from the quality performance category by 10 points for each measure submitted that is impacted (85 FR 84899). In the CY 2022 PFS final rule (86 FR 65491 and 65492), the scope of the truncation and suppression policy was expanded to include errors that are outside the control of the clinician, such as an incorrect coding status.

As discussed in the CY 2023 PFS proposed rule (87 FR 46314 and 46315), we clarified the interaction of our topped-out measure policy and our measure truncation and measure suppression policies. First, we noted that not all instances in which a measure lacks a benchmark affect the scoring of the measure equally. For example, when a measure is suppressed in the baseline period for the incorrect inclusion of an inactive status code in the measure specifications, the measure could resume to be scored comparably once the measure specifications are accurate in both the baseline and applicable performance period. Conversely, a measure that was suppressed or had its performance period truncated because it underwent a substantive change could not be comparably scored to past data. In a case like the former, it is not until the suppressed or otherwise affected data is in the baseline period that the topped-out measure lifecycle is affected. A measure that lacks a benchmark for a performance period due to the suppression of data in the measure's baseline period will not have the 7-point cap applied for that performance period. This is because the measure lacks the two topped out historical performance periods necessary for the application of the cap. This does not preclude, however, CMS determining that the measure is topped out for the performance period. In the case of a measure that lacks a baseline period, CMS may base the benchmark on performance during the applicable performance period (see § 414.1380(b)(1)(ii)). Determining the measure was topped out during the

performance period would thus require only that MIPS eligible clinician data for the performance period met the topped-out measure standard. In such a case, the 7-point cap could next be applied as soon as the following year.

Where a measure was suppressed or had its performance period truncated because of a substantive change or a change in clinical guidelines, the topped-out measure resets entirely the year following the change as there is no longer a historical benchmark with which to compare the measure for the purpose of determining whether it is topped out.

#### (c) Cost Performance Category Score

##### (i) Improvement Scoring Methodology

In the CY 2018 Quality Payment Program final rule, we established policies related to measuring improvement in the cost performance category at the measure level, an improvement scoring methodology for the cost performance category, and a formula for calculating the cost performance category score<sup>541</sup> to include achievement and improvement (82 FR 53748 through 53752). These policies were to apply beginning with the CY 2018 performance period/2020 MIPS payment year. We codified these policies under § 414.1380(b)(2)(iii) and (iv) (82 FR 53748 through 53752, 53957). Subsequent to the publication of that final rule, the Bipartisan Budget Act of 2018 (BBA 18) (Pub. L. 115–123, enacted February 9, 2018) was enacted. Section 51003(a)(1)(B) of the BBA 18 modified section 1848(q)(5)(D) of the Act such that the cost performance category score shall not take in to account the improvement of the MIPS eligible clinician for each of the second, third, fourth, and fifth years for which the MIPS applies to payments. In the CY 2019 PFS proposed rule, we stated that we do not believe this statutory change requires us to remove our existing methodology for scoring improvement in the cost performance category (see 82 FR 53749 through 53752), but it does prohibit us from including an improvement component in the cost performance category score for each of the CY 2020 through 2023 MIPS payment years (83 FR 35956). Therefore, we proposed to revise § 414.1380(b)(2)(iv)(E) to provide that the maximum cost improvement score

<sup>541</sup> In the CY 2022 PFS final rule, we changed the term “performance category percentage score” to “performance category score” (86 FR 65490 through 65491). As a result of such terminology change in the CY 2022 PFS final rule, this final rule uses the term “performance category score” in all descriptions of the cost improvement scoring proposal and finalized policy.

for the CY 2020, 2021, 2022, and 2023 MIPS payment years is zero percentage points (83 FR 35956). We stated that under our existing policy (82 FR 53751 through 53752), the maximum cost improvement score for the CY 2020 MIPS payment year is 1 percentage point, but due to the statutory changes and under the proposal, the maximum cost improvement score for the CY 2020 MIPS payment year would be zero percentage points (83 FR 35956). We also proposed at § 414.1380(a)(1)(ii) to modify the performance standards to reflect that the cost performance category score will not take in to account improvement until the CY 2024 MIPS payment year (83 FR 35956). In the CY 2019 PFS final rule, we finalized these proposals as proposed (83 FR 59856).

In prior rulemaking, we inadvertently failed to address what the maximum cost improvement score would be under § 414.1380(b)(2)(iv)(E) beginning with the CY 2022 performance period/2024 MIPS payment year. As we stated previously in the CY 2019 PFS proposed and final rules (83 FR 35956 and 83 FR 59856, respectively), we do not believe the changes made to section 1848(q)(5)(D) of the Act by section 51003(a)(1)(B) of the BBA 18 required us to remove our existing methodology for scoring improvement in the cost performance category. Thus, in the CY 2019 PFS final rule, we maintained the methodology we had previously established under § 414.1380(b)(2)(iii) and (iv), while modifying § 414.1380(b)(2)(iv)(E) to reflect the statutory change made by section 51003(a)(1)(B) of the BBA 18. Section 1848(q)(5)(D) of the Act requires us to take in to account the improvement of the MIPS eligible clinician when scoring the cost performance category for the sixth year of MIPS (the CY 2022 performance period/2024 MIPS payment year) and for subsequent years. In the CY 2023 PFS proposed rule (87 FR 46315 through 46316), we proposed to establish a maximum cost improvement score of 1 percentage point for the cost performance category beginning with the CY 2022 performance period/2024 MIPS payment year. A maximum cost improvement score of 1 percentage point was the policy we established previously, before the amendments made by section 51003(a)(1)(B) of the BBA 18 with respect to the second, third, fourth, and fifth years of MIPS. In the CY 2023 PFS proposed rule (87 FR 46316), we stated that we believe that this policy is still appropriate at this time because although there are many

opportunities for clinicians to actively work on improving their performance on cost measures, such as through more active care management or reductions in certain services, we recognize that many clinicians are still learning about cost measurement under MIPS. We aim to continue to educate clinicians about cost measurement and develop opportunities for robust feedback and measures that better recognize the role of clinicians. Clinicians are navigating and overcoming the obstacles of the COVID-19 public health emergency while having to familiarize themselves with new policies we have adopted for MIPS, such as the establishment of MVPs as a voluntary means for participation starting with the CY 2023 performance period that could become a mandatory means of participation, the opportunity for subgroup participation and reporting, the sunset of the CMS Web Interface as a collection/submission type and transition to other collection and submission types for CMS Web Interface users starting with the CY 2023 performance period, and the implementation of new cost measures. As the CY 2022 performance period/2024 MIPS payment year is the first program year we will be measuring improvement for the cost performance category, we stated that we believe it would be appropriate to begin gradually with a maximum cost improvement score of 1 percentage point—a policy clinicians already would be familiar with from prior rulemaking. In a future year, we may consider and assess the possibility of increasing the maximum cost improvement score.

As we stated in the CY 2023 PFS proposed rule, to the extent that the proposed change constitutes a change to the MIPS scoring or payment methodology for the CY 2024 MIPS payment adjustment after the start of the CY 2022 performance period, we believe that, consistent with section 1871(e)(1)(A)(i) of the Act, it is necessary to comply with the requirement of section 1848(q)(5)(D) of the Act that we take in to account the improvement of the MIPS eligible clinician when scoring the cost performance category for the sixth year of MIPS (the CY 2022 performance period/2024 MIPS payment year) (87 FR 46316). Also, we stated that we believe that, consistent with section 1871(e)(1)(A)(ii) of the Act, it would be contrary to the public interest not to fill the gap in our existing methodology for scoring improvement in the cost performance category for the CY 2022 performance period/2024 MIPS payment year (87 FR 46316). Currently,

the improvement scoring methodology for the cost performance category under § 414.1380(b)(2)(iv)(E) does not include a maximum cost improvement score for the CY 2022 performance period/2024 MIPS payment year. We stated (87 FR 46316) that the proposal would correct this deficiency by establishing a maximum cost improvement score of 1 percentage point beginning with the CY 2022 performance period/2024 MIPS payment year. In addition, we stated that it would be contrary to the public interest not to comply the statutory requirement of section 1848(q)(5)(D) of the Act to take in to account improvement when scoring the cost performance category for the sixth year of MIPS (the CY 2022 performance period/2024 MIPS payment year).

In the CY 2023 PFS proposed rule, we proposed corresponding changes to § 414.1380(b)(2)(iv)(E) to reflect the proposal (87 FR 46316). We solicited public comment on the proposal to establish a maximum cost improvement score of 1 percentage point for the cost performance category starting with the CY 2022 performance period/2024 MIPS payment year. The following is a summary of the public comments received.

*Comment:* Several commenters supported the proposal to establish a maximum cost improvement score of 1 percentage point for the cost performance category starting with the CY 2022 performance period/2024 MIPS payment year to satisfy statutory requirements. Commenters stated that the proposal would clarify improvement scoring policy and appreciated the recognition from CMS that many physicians continue to adapt to cost measurement under MIPS.

*Response:* We appreciate the support from commenters.

*Comment:* One commenter expressed support for the proposal, but encouraged CMS to delay increasing the maximum cost improvement score in future years in order to allow clinicians further flexibility while they become accustomed to the cost measures and continue to navigate practicing throughout the ongoing COVID-19 pandemic.

*Response:* We appreciate the support from the commenter. We recognize that the COVID-19 PHE may have continued to impact some MIPS eligible clinicians, groups, and virtual groups more than others during the CY 2022 performance period/2024 MIPS payment year. We will consider whether to increase the maximum cost improvement score above 1 percentage point in future rulemaking.

*Comment:* One commenter expressed appreciation for the ongoing refinement of the cost performance category, but requested that CMS elaborate on how the maximum cost improvement score of 1 percentage point would be implemented under MIPS.

*Response:* In the CY 2018 Quality Payment Program final rule, we noted that we will calculate a cost improvement score only when data sufficient to measure improvement is available (82 FR 53749 and 53750). We consider sufficient data to be available when a MIPS eligible clinician participates in MIPS using the same identifier in 2 consecutive performance periods and is scored on the same cost measure(s) for 2 consecutive performance periods (82 FR 53749 and 53750) (for example, in the CY 2022 performance period/2024 MIPS payment year and the CY 2023 performance period/2025 MIPS payment year). If the cost improvement score cannot be calculated due to sufficient data not being available, we assign a cost improvement score of zero percentage points (82 FR 53749 and 53750). We quantify improvement in the cost performance category by comparing the number of cost measures with a significant improvement in performance (statistically significant change) and the number of cost measures with a significant decline in performance (statistically significant change) (82 FR 53750 through 53752). To determine whether there was a significant improvement or decline in performance between the two performance periods, we apply a common standard statistical test, a t-test (82 FR 53750 through 53752). To determine the cost improvement score, we subtract the number of cost measures with a significant decline from the number of cost measures with a significant improvement, then divide the result by the number of cost measures for which the MIPS eligible clinician or group was scored for 2 consecutive performance periods, and then multiply the result by the maximum improvement score (82 FR 53750 through 53752). The cost improvement score cannot be lower than zero percentage points (82 FR 53750 through 53752).

Under our proposal, the maximum cost improvement score available in the cost performance category would be 1 percentage point out of 100 percentage points available for the cost performance category score. If a clinician is measured on only one cost measure consistently from one performance period to the next and met the requirements for improvement (statistically significant levels of

change), the clinician would receive one improvement percentage point in the cost performance category score. If a clinician were measured on 2 cost measures consistently, improved significantly on one cost measure, and did not demonstrate significant improvement on the other cost measure (as measured by a t-test), the clinician would receive 0.5 improvement percentage points (82 FR 53751).

We calculate the overall cost performance category score with the assessment of achievement and improvement based on the following formula.

• (Cost Achievement Points/Available Cost Achievement Points) + (Cost Improvement Score) = (Cost Performance Category Score).

In Table 96, we provide an example of cost performance category scores

along with the determination of improvement or decline (82 FR 53752). The example pertains to group-level reporting where a group is measured on both the Total Per Capita Cost measure and the Medicare Spending Per Beneficiary (MSPB) Clinician<sup>542</sup> measure for 2 consecutive performance periods.

**TABLE 96: Example of Assessing Achievement and Improvement in the Cost Performance Category**

| Measure  | Measure Achievement Points Earned by the Group | Total Possible Measure Achievement Points | Significant Improvement from Prior Performance Period | Significant Decline from Prior Performance Period |
|--|--|---|---|---|
| Total Per Capita Cost (TPCC) Measure                       | 8.2  | 10  | Yes   | No  |
| Medicare Spending Per Beneficiary (MSPB) Clinician Measure | 6.4  | 10  | No  | No  |
| <b>Total</b>   | <b>14.6</b>                                    | <b>20</b>                                 | <b>N/A</b>  | <b>N/A</b>  |

In the example, there are 20 total possible measure achievement points and 14.6 measure achievement points earned by the group, and the group improved on one measure but not the other, with both measures being scored in each performance period. The first part of the formula is calculating (Cost Achievement Points/Available Cost Achievement Points) which is 14.6/20, which equals 0.730 and can be represented as 73.0 percent. The cost improvement score will be determined as follows: ((1 measure with significant improvement—zero measures with significant decline)/2 measures) \* 1 percentage point = 0.5 percentage points. Under the formula, the cost performance category score will be (14.6/20 or 73.0 percent) + 0.5 percent = 73.5 percent. To determine how many points the cost performance category contributes to the final score, we will multiply the performance category score (73.5 percent) by the weight of the cost performance category (10 percent of the final score) and by 100 to determine the points to the final score. The group would have 73.5 percent × 10 percent × 100 = 7.35 points for the cost performance category contributed towards the final score.

*Comment:* One commenter did not support the proposal to establish a maximum cost improvement score of 1

percentage point for the cost performance category beginning with the CY 2022 performance period/2024 MIPS payment year. The commenter requested that CMS increase the maximum cost improvement score to at least 5 percentage points due to the cost performance category's significant impact on a clinician's total MIPS final score.

*Response:* The cost performance category composes 10 percent of the MIPS final score.

As individual MIPS eligible clinicians, groups, and virtual groups continue to become acquainted with the cost measures and gain experience in understanding their cost performance, we believe that establishing a maximum cost improvement score of 1 percentage point for the cost performance category is appropriate at this juncture. In a future year, we may consider and assess the possibility of increasing the maximum cost improvement score.

After consideration of public comments, we are finalizing our proposal to establish a maximum cost improvement score of 1 percentage point for the cost performance category starting with the CY 2022 performance period/2024 MIPS payment year as well as the corresponding revisions to § 414.1380(b)(2)(iv)(E).

## (2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for each MIPS eligible clinician, we refer readers to § 414.1380(c) and the discussion in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (81 FR 77319 through 77329, 82 FR 53769 through 53785, 83 FR 59868 through 59878, 84 FR 63020 through 63031, 85 FR 84908 through 84917, 86 FR 65509 through 65527, respectively) on final score calculations, performance category weights, reweighting the performance categories, and the complex patient bonus.

As described in more detail in the following sections, in the CY 2023 PFS proposed rule (87 FR 46316 through 46319), we:

- Proposed that a facility-based MIPS eligible clinician would be eligible to receive the complex patient bonus.
- Requested information on which additional risk indicators and data sources we should consider for use within the complex patient bonus formula to better assess the social and medical complexity for the patients of MIPS eligible clinicians.
- Proposed that virtual groups would be eligible for facility-based measurement.

<sup>542</sup> In the CY 2020 PFS final rule, the name of this cost measure was changed from "Medicare Spending Per Beneficiary (MSPB)" to "Medicare Spending Per Beneficiary (MSPB) Clinician" (84 FR

62974 through 62977). The example outlined in this final rule was previously outlined in the CY 2018 Quality Payment Program final rule (82 FR 53572); however, the name of this cost measure in this final

rule reflects the name change as outlined in the CY 2020 PFS final rule (84 FR 62974 through 62977).

- Proposed changes to the definition of a facility-based MIPS eligible clinician.

(a) Complex Patient Bonus

(i) Background

Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our MIPS scoring methodology. Specifically, it provides that the Secretary, on an ongoing basis, shall, as the Secretary determines appropriate and based on an individual's health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS; and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted under section 2(d) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185, October 6, 2014) and, as appropriate, other information, including information collected before completion of such studies and recommendations. In the CY 2018 Quality Payment Program final rule, under the authority in section 1848(q)(1)(G) of the Act, we established at § 414.1380(c)(3) a complex patient bonus of up to 5 points to be added to the final score for the CY 2020 MIPS payment year (82 FR 53771 through 53776). In subsequent rulemaking, we continued the complex patient bonus at § 414.1380(c)(3) for the CY 2021, 2022, and 2023 MIPS payment years (83 FR 59870, 84 FR 63023, and 85 FR 84910, respectively). Additionally, we finalized for the CY 2022 and 2023 MIPS payment years at § 414.1380(c)(3)(iv) that the complex patient bonus will be calculated under the existing formulas in paragraphs (c)(3)(i) and (ii), and the resulting numerical value will then be multiplied by 2, but cannot exceed 10.0 (85 FR 84911 through 84913 and 86 FR 65510 and 65511, respectively). Finally, beginning with the CY 2022 performance period/2024 MIPS payment year, we revised the complex patient bonus by: (1) limiting the bonus to clinicians who have a median or higher value for at least one of the two risk indicators (Hierarchical Condition Category (HCC) and dual proportion); (2) standardizing the distribution of the two risk indicators so that the policy can target clinicians who have a higher share of socially and/or medically complex patients; and (3) providing one overall complex patient bonus cap at 10

bonus points (86 FR 65511 through 65519). We refer readers to the final rules cited above for additional details on the background, statutory authority, policy rationale, and calculation of the complex patient bonus.

(ii) Eligibility for the Complex Patient Bonus

In the CY 2018 Quality Payment Program final rule, we finalized at § 414.1380(c)(3) a complex patient bonus for MIPS eligible clinicians, groups, APM Entities, and virtual groups that submit data for at least one MIPS performance category during the applicable performance period, which will be added to the final score (82 FR 53771 through 53776). In the CY 2018 Quality Payment Program proposed rule, we proposed that a MIPS eligible clinician, group, virtual group or APM Entity must submit data on at least one measure or activity in a performance category during the performance period to receive the complex patient bonus (82 FR 30138). We stated that under this proposal, MIPS eligible clinicians would not need to meet submission requirements for the quality performance category to receive the bonus (they could instead submit improvement activities or Promoting Interoperability performance category measures only or submit fewer than the required number of measures for the quality performance category). In the CY 2018 Quality Payment Program final rule, we also established facility-based measurement for certain MIPS eligible clinicians under the authority in section 1848(q)(2)(C)(ii) of the Act, which provides that the Secretary may use measures used for a payment system other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories (82 FR 53752 through 53767). We did not address whether facility-based MIPS eligible clinicians would be eligible to receive the complex patient bonus. Under the scoring methodology for facility-based measurement under § 414.1380(e), there are no data submission requirements for individual clinicians to be scored under facility-based measurement (§ 414.1380(e)(4)). In the CY 2023 PFS proposed rule (87 FR 46317), we stated that although individual facility-based MIPS eligible clinicians are not required to submit data for at least one MIPS performance category, and it is possible they may choose not to submit data voluntarily, we believe they should be eligible to receive the complex patient bonus. As with other MIPS eligible clinicians who submit data for the quality performance category, we are

able to score this performance category for facility-based MIPS eligible clinicians based on quality measure data available to us pursuant to the methodology described under § 414.1380(e). Thus, we proposed that beginning with the CY 2023 performance period/2025 MIPS payment year, a facility-based MIPS eligible clinician would be eligible to receive the complex patient bonus, even if they do not submit data for at least one MIPS performance category (87 FR 46317). We proposed corresponding revisions to § 414.1380(c)(3). We sought comments on the proposal.

The following is a summary of the public comments received on the proposal that a facility-based MIPS eligible clinician would be eligible to receive the complex patient bonus, even if they do not submit data for at least one MIPS performance category and our responses:

*Comment:* Many commenters supported our proposal that, beginning with the CY 2023 performance period/2025 MIPS payment year, a facility-based MIPS eligible clinician would be eligible to receive the complex patient bonus, even if the clinician does not submit data for at least one MIPS performance category. A few commenters specifically supported this policy proposal because they stated that policies such as this can help to reduce access to care issues, advance health equity by recognizing physicians who work harder to treat more complex patients, and ultimately improve patient care. One commenter encouraged CMS to continue to identify additional opportunities to reward care that is provided to complex patients.

*Response:* We agree with the noted benefits of the policy and note that CMS continues to identify additional opportunities to reward care that is provided to complex patients. We refer readers to CY 2023 PFS proposed rule in which we have a request for information on risk indicators within the complex patient bonus formula to continue to align with CMS's approach to operationalizing health equity (87 FR 46317 through 46319).

After consideration of public comments, we are finalizing our proposal that beginning with the CY 2023 performance period/2025 MIPS payment year, a facility-based MIPS eligible clinician is eligible to receive the complex patient bonus, even if they do not submit data for at least one MIPS performance category, and the corresponding revisions to at § 414.1380(c)(3).

(iii) Request for Information on Risk Indicators for the Complex Patient Bonus Formula

The CY 2023 PFS proposed rule contained a request for information on risk indicators within the complex patient bonus formula to continue to align with CMS's approach to operationalizing health equity (87 FR 46317 through 46319).

We thank commenters for their responses to this request for information. We may consider this information to inform future rulemaking.

(b) Facility-Based Measurement

(i) Background

Section 1848(q)(2)(C)(ii) of the Act provides that the Secretary may use measures used for a payment system other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53752 through 53767), we established facility-based measurement under the authority in section 1848(q)(2)(C)(ii) of the Act for certain MIPS eligible clinicians. We established facility-based measurement to better align incentives between facilities and the MIPS eligible clinicians who provide services there (82 FR 53753). Scoring under facility-based measurement was available for clinicians beginning with the CY 2019 performance period/2021 MIPS payment year. In the CY 2022 PFS final rule, we finalized at § 414.1380(e)(6)(vi)(B) that for clinicians and groups eligible for facility-based measurement, beginning with the CY 2022 performance period/2024 MIPS payment year, the MIPS quality and cost performance category scores for such clinicians and groups will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission (86 FR 65526 and 65527). For more background on facility-based measurement, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53752 through 53767), the CY 2019 PFS final rule (83 FR 59856 and 59867), the CY 2020 PFS final rule (84 FR 63018 through 63020), and the CY 2022 PFS final rule (86 FR 65526 and 65527).

(A) Eligibility for Facility-Based Measurement

In the CY 2018 Quality Payment Program final rule (82 FR 53756 and 53757), we finalized individual

eligibility criteria for facility-based measurement at § 414.1380(e)(2)(i). We established that a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the place of service (POS) codes used in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) standard transaction as an inpatient hospital or emergency room based on claims for a period prior to the performance period as specified by CMS is eligible as an individual for facility-based measurement. We specified that we would use the definition of professional services provided in section 1848(k)(3)(A) of the Act in applying this standard (82 FR 53756). In the CY 2019 PFS final rule, we added the on-campus outpatient hospital (POS code 22) to the list of sites of service we consider when determining eligibility for facility-based measurement (83 FR 59857 through 59860). Additionally, we required that clinicians bill at least one covered professional service in a site of service identified by the POS codes for inpatient hospital or the emergency room in order to be eligible for facility-based measurement. We codified these standards in § 414.1380(e)(2)(i)(A) and (B). We also finalized that we must be able to attribute a clinician to a particular facility that has a value-based purchasing score under the methodology specified in § 414.1380(e)(5) in order for the clinician to be eligible for facility-based measurement (§ 414.1380(e)(2)(i)(C)).

Separately, in the CY 2018 Quality Payment Program final rule (82 FR 53759), we defined a facility-based group as a group in which 75 percent or more of its eligible clinician NPIs billing under the group's TIN meet the requirements described above.

As we clarified and expanded our definition of a facility-based MIPS eligible clinician, we intended to allow MIPS eligible clinicians participating in virtual groups to be eligible for facility-based measurement using the same standards applicable to individual MIPS eligible clinicians and groups. We intended this because, just like individual clinicians and groups, some virtual groups may predominantly practice within a hospital setting and their MIPS eligible clinicians may otherwise be eligible for facility-based measurement based on the eligibility standards established at § 414.1380(e)(2)(i)(A) through (C) were they to participate in MIPS individually or as a group. However, we did not specify at § 414.1380(e)(2) that virtual groups may be eligible for facility-based measurement. Therefore, we proposed

in the CY 2023 PFS proposed rule to revise § 414.1380(e)(2) to permit facility-based measurement of a virtual group so long as it meets the specified eligibility standards beginning with the CY 2023 performance period/CY 2025 MIPS payment year (87 FR 46319).

Additionally, we also proposed to revise § 414.1380(e)(2) to specify, consistent with our prior discussion of the matter (82 FR 53757), that a MIPS eligible clinician is eligible for facility-based measurement only if CMS determines it eligible to be facility-based. We sought comments on these proposals.

The following is a summary of the public comments received on the proposals regarding eligibility for facility-based measurement and our responses:

*Comment:* A few commenters supported our proposal to permit facility-based measurement of a virtual group so long as it meets the specified eligibility standards beginning with the CY 2023 performance period/2025 MIPS payment year.

*Response:* We thank the commenters for their support.

After consideration of the public comments and for the reasons stated above and in the proposed rule (87 FR 46319), we are finalizing our proposal to revise § 414.1380(e)(2) to permit facility-based measurement of a virtual group beginning with the CY 2023 performance period/2025 MIPS payment year as proposed. Additionally, we are also finalizing our proposal to revise § 414.1380(e)(2) to specify that a MIPS eligible clinician is eligible for facility-based measurement only if CMS determines it eligible to be facility-based as proposed.

(B) Definition of Facility-Based MIPS Eligible Clinician

In the CY 2018 Quality Payment Program final rule, we finalized the definition of a facility-based MIPS eligible clinician at § 414.1305 (82 FR 53578). In the CY 2019 PFS final rule, we finalized additions to the determination of eligibility for facility-based measurement as reflected in the regulation text at § 414.1380(e)(2)(i)(A), (B), and (C) (83 FR 59856 through 59860); however, we inadvertently did not update the definition of a facility-based MIPS eligible clinician at § 414.1305 to reflect these additions. Therefore, we proposed in the CY 2023 PFS proposed rule (87 FR 46320) to revise the facility-based MIPS eligible clinician definition at § 414.1305 to align with the current policies at § 414.1380(e)(2)(i)(A), (B), and (C). We also proposed to revise the terminology within § 414.1380(e) to align with the

terminology used in the definition of a facility-based MIPS eligible clinician at § 414.1305. We sought comments on the proposals.

We did not receive any comments on our proposal to revise the terminology within § 414.1305 to align with the current policies at § 414.1380(e)(2)(i)(A), (B), and (C). We also did not receive any comments on our proposal to revise the terminology within § 414.1380(e) to align with the terminology used in the definition of a facility-based MIPS eligible clinician at § 414.1305 and for the reasons stated above and in the proposed rule (87 FR 46319), we are finalizing the revisions as proposed.

e. MIPS Payment Adjustments

(1) Background

For our previously established policies regarding the final score used to determine MIPS payment adjustments, we refer readers to the CY 2022 PFS final rule (86 FR 65527 through 65537), CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799), and CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343). In the CY 2023 PFS proposed rule (87 FR 46319 through 46323), we proposed to establish the performance threshold for the CY 2025 MIPS payment year using CY 2019 MIPS payment year data. In addition, we included information about our timing for providing MIPS performance feedback to clinicians for the performance period in 2021.

(2) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(iii) of the Act included a special rule for the initial 2 years of MIPS, which required the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act, each of which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018) amended section 1848(q)(6)(D)(iii) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added

a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the CY 2021 through CY 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(iii) of the Act, the Secretary shall increase the performance threshold for each of the third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the Secretary) with respect to the sixth year (the CY 2024 MIPS payment year) to which the MIPS applies.

We applied these special rules for the first 5 years of MIPS to provide for a gradual and incremental transition to the performance we estimated for the sixth year of MIPS (the CY 2024 MIPS payment year). In the CY 2022 PFS final rule, we set the performance threshold at 75 points for the CY 2024 MIPS payment year (86 FR 65532). For further information on the performance threshold policies, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program final rule (82 FR 53787 through 53794), CY 2019 PFS final rule (83 FR 59880 through 59883), CY 2020 PFS final rule (84 FR 63031 through 63037), CY 2021 PFS final rule (85 FR 84919 through 84923), and CY 2022 PFS final rule (86 FR 65527 through 65532). We codified the performance thresholds for each of the first 6 years of MIPS at § 414.1405(b)(4) through (9), as shown in Table 97.

TABLE 97: Performance Thresholds for the CY 2019 MIPS Payment Year through CY 2024 MIPS Payment Year

|  | 2019<br>MIPS<br>Payment<br>Year | 2020<br>MIPS<br>Payment<br>Year | 2021<br>MIPS<br>Payment<br>Year | 2022<br>MIPS<br>Payment<br>Year | 2023<br>MIPS<br>Payment<br>Year | 2024<br>MIPS<br>Payment<br>Year |
|--|---------------------------------|---------------------------------|---------------------------------|---------------------------------|---------------------------------|---------------------------------|
| Performance Threshold  | Year 1<br>3 points              | Year 2<br>15 points             | Year 3<br>30 points             | Year 4<br>45 points             | Year 5<br>60 points             | Year 6<br>75 points             |
| Difference in Performance Threshold<br>(Year n minus (year n-1)) | N/A                             | 12 points                       | 15 points                       | 15 points                       | 15 points                       | 15 points                       |

Beginning with the CY 2024 MIPS payment year, section 1848(q)(6)(D)(i) of the Act requires the performance threshold to be the mean or median (as

selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. That section also

provides that the Secretary may reassess the selection of the mean or median every 3 years. In the CY 2022 PFS final rule (86 FR 65527 through 65532), we

selected the mean as the methodology for determining the performance threshold for each of the CY 2024, 2025, and 2026 MIPS payment years. We intend to reassess and establish the methodology (mean or median) that we will use to determine the performance threshold for each of the next 3 years (CY 2027 MIPS payment year, CY 2028 MIPS payment year, and CY 2029 MIPS payment year) in future rulemaking.

In the CY 2023 PFS proposed rule (87 FR 46320), we stated that while we identified the mean as our methodology

for determining the performance threshold for MIPS payment years CY 2024 through 2026, we have not specified which prior period's mean final score we would use for the CY 2025 MIPS payment year's performance threshold. We stated that from our review of the data available to us, we identified the mean final scores for each of the CY 2019 through 2022 MIPS payment years, as shown in Table 98. We stated that these four values represent the mean final scores for all

MIPS eligible clinicians from prior periods that are available for consideration for the CY 2025 MIPS payment year performance threshold. We stated that the final scores for the CY 2021 performance period/2023 MIPS payment year were not finalized in time for the CY 2023 PFS proposed rule; thus, the mean final score for the CY 2023 MIPS payment year was not listed and considered as a potential performance threshold value for the CY 2025 MIPS payment year.

**TABLE 98: Possible Values for the CY 2025 MIPS Payment Year Performance Threshold**

|             | 2019 MIPS<br>Payment Year | 2020 MIPS<br>Payment Year | 2021 MIPS<br>Payment Year | 2022 MIPS<br>Payment Year |
|-------------|---------------------------|---------------------------|---------------------------|---------------------------|
| <b>Mean</b> | 74.65 Points              | 87 Points                 | 85.63 Points              | 89.47                     |

As shown in Table 98, the mean final scores available for consideration for the CY 2025 MIPS payment year performance threshold cover a range of values from 74.65 points to 89.47 points (rounded to 75 points and 89 points, respectively). In the CY 2023 PFS proposed rule (87 FR 46321), we proposed to use the CY 2019 MIPS payment year as the prior period for the purpose of determining the performance threshold for the CY 2025 MIPS payment year for several reasons. We noted that we expect the mean final score for the CY 2023 performance period/2025 MIPS payment year to be lower than the mean final scores from the CY 2018 through 2020 performance periods/2020 through 2022 MIPS payment years. In the CY 2022 PFS final rule (86 FR 65491 through 65507), we removed transition policies such as quality bonus points that had been established for scoring the quality performance category for the CY 2018 through 2020 performance periods/2020 through 2022 MIPS payment years. Additionally, for the CY 2019 through 2021 performance periods/CY 2021 through 2023 MIPS payment years, we applied certain extreme and uncontrollable circumstances policies described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide due to the COVID-19 Public Health Emergency (PHE), which resulted in the reweighting of some performance categories if data were not submitted for a MIPS eligible clinician. In setting the performance threshold for the CY 2025 MIPS payment year, we stated that we believe we should consider the elimination of those transition policies,

as well as the possibility that the performance categories will not be reweighted for as many MIPS eligible clinicians for the CY 2023 performance period/2025 MIPS payment year. Further, we stated that continuing to use the mean final score from the CY 2019 MIPS payment year to determine the performance threshold for the CY 2025 MIPS payment year would maintain stability in the program. We stated that we believe continuing to use the mean final score from the CY 2019 MIPS payment year would provide predictability to MIPS eligible clinicians during a program year in which they might be affected by those prior policy changes, as well as potentially scored on performance categories that were previously reweighted due to the PHE.

In the CY 2023 PFS proposed rule (87 FR 46321), we stated that the Regulatory Impact Analysis (RIA) estimates that approximately a third of MIPS eligible clinicians who engage in MIPS would receive a negative payment adjustment for the CY 2023 performance period/2025 MIPS payment year if the proposed policies are finalized and the performance threshold is equal to 75 points. However, we stated that we estimated that final scores for many clinicians for the CY 2023 performance period/2025 MIPS payment year would be close to the proposed performance threshold of 75 points; therefore, the actual observed percentage of clinicians receiving negative payment adjustments may slightly differ from the RIA estimates. We referred readers to the alternatives considered in the proposed rule RIA (87 FR 46428). The RIA of this final rule as described in section

VII.E.16. estimates the impact of the policies finalized in this rule, including finalizing the proposed performance threshold of 75 points, and incorporates updated data sources. The estimate that approximately a third of MIPS eligible clinicians would receive a negative payment adjustment remains unchanged. We refer readers to the alternatives considered in the RIA in section VII.F.6. of this final rule where we present the impact of using data from alternative years to determine the performance threshold for the CY 2025 MIPS payment year. We intend to revisit in future rulemaking whether we should use a different prior period to establish the performance threshold for future MIPS payment years.

Under our proposal to use the CY 2019 MIPS payment year as the prior period for the purpose of determining the performance threshold for the CY 2025 MIPS payment year (87 FR 46321), as well as the methodology we established previously at § 414.1405(g), the performance threshold for the CY 2025 MIPS payment year would be the mean of the final scores for all MIPS eligible clinicians for the CY 2019 MIPS payment year, which is 75 points (rounded from 74.65 points). We proposed corresponding changes to § 414.1405(b)(9) to reflect this proposal (87 FR 46321). We requested public comments on this proposal, as well as whether we should use data from alternative years to set the performance threshold for the CY 2025 MIPS payment year, which we considered and discussed in the RIA of the CY 2023 PFS proposed rule (87 FR 46428). The

following is a summary of the comments received and our responses.

**Comment:** Many commenters supported the proposal to use the mean from the CY 2019 MIPS payment year and to set the performance threshold at 75 points for the CY 2025 MIPS payment year. Several commenters stated that maintaining the performance threshold at 75 points is needed due to the challenges of the PHE, which made prioritizing MIPS performance and reporting for clinicians difficult, especially for small practices. A few commenters expressed that sustaining the 75-point performance threshold would motivate eligible clinicians and groups to report for MIPS because the commenters believed there would likely be more funds available for redistribution. One commenter stated that a prospective increase in MIPS reporting would help to close any gaps in data quality due to the observed decline in reporting from the PHE. Another commenter stated that this may be the first time since the PHE that many clinicians will be reporting for MIPS and therefore maintaining the performance threshold at 75 points is appropriate.

**Response:** We agree that setting the performance threshold to the lowest of the available possible values (75 points), using the CY 2019 MIPS payment year final score mean, would alleviate performance burden and promote stability as clinicians handle the demands of the COVID-19 PHE. We appreciate the commenters' observations regarding the expected increase in participation and hope our policies encourage MIPS eligible clinicians to submit data for MIPS.

**Comment:** Several commenters indicated that using data from prior to the PHE is important and would provide stability and predictability for MIPS eligible clinicians, allowing time for recovery from the PHE before increased minimum thresholds are introduced. While supportive of the proposed performance threshold, one commenter stated that data from the CY 2019 through CY 2021 MIPS performance periods would be inappropriate for CMS to use to determine future performance thresholds due to the application of the extreme and uncontrollable circumstances policies for those years, which the commenter believed caused fewer clinicians to submit MIPS data. The commenter asserted that many clinicians who might have received a score below the performance threshold for those years did not submit data due to the automatic extreme and uncontrollable circumstances policy, and therefore, the commenter asserted

that the mean and median values for those years are artificially high. The commenter recommended CMS take action to lessen the impact of a high performance threshold, especially given the removal of transition policies, such as the additional positive adjustment for exceptional performance and bonuses within the quality performance category.

**Response:** We acknowledge the commenter's concern with using the CY 2019 through CY 2021 performance period data and the possible implications of the application of the extreme and uncontrollable circumstances policies under § 414.1380(c)(2)(i)(A)(8) and (c)(2)(i)(C)(3), and § 414.1380(c)(2)(i)(A)(6) and (c)(2)(i)(C)(2). The application of these policies meant that the performance categories could be reweighted for many MIPS eligible clinicians, and we agree that this may have caused some clinicians to not report data for MIPS. As we explained in the CY 2023 PFS proposed rule (87 FR 46321), this was one reason why we proposed to use the mean final score from the CY 2017 MIPS performance period/2019 MIPS payment year. We may take the commenter's concerns into consideration as we continue to reassess yearly which prior period to use to determine the performance threshold.

**Comment:** A few commenters suggested that CMS continue monitoring yearly changes in mean and median final scores as future performance thresholds are determined and requested more detailed information on how different specialties and practices would be impacted by any change in the performance threshold. The commenters also requested that CMS provide the latest performance period data for determining future performance thresholds as early as possible and continue using the lowest available mean or median final score given that the commenters believed that MIPS is a constantly evolving program and scores will likely be lower than the early years.

**Response:** We understand the importance of examining how different specialties are performing in MIPS relative to the established performance threshold. We expect to continue to regularly report the performance period data used to determine the performance threshold value for future years. Information on a prior year's final scores can be found in the corresponding Quality Payment Program Experience Report while specialty-specific information can be found in the Public Use File in the QPP resource library

(<https://qpp.cms.gov/resources/resource-library>).

**Comment:** One commenter suggested CMS develop a strategy for providing support for re-entry into MIPS after the conclusion of the extreme and uncontrollable circumstances policies described under § 414.1380(c)(2)(i) that were applied to MIPS eligible clinicians nationwide due to the COVID-19 PHE. In addition, the commenter recommended CMS require groups to supply sufficient documentation to support their significant hardship application for the Promoting Interoperability performance category and their application for extreme and uncontrollable circumstances for other MIPS performance categories; noting that although automatic extreme and uncontrollable circumstances policies may provide widespread burden relief, they discourage quality improvement at the local and national level.

**Response:** We appreciate the commenter's suggestions to develop a strategy for providing support for re-entry into MIPS and to require groups to provide sufficient documentation of hardship. Although documentation is not required to be submitted with the extreme and uncontrollable circumstance application, we do review clinicians' ability to collect and submit data for each performance category, considering the event circumstances and the length of time the clinicians were impacted. We detail the criteria and circumstances for the extreme and uncontrollable circumstances policies and Promoting Interoperability performance category hardship policies at <https://qpp.cms.gov/mips/exception-applications?py=2022#extremeCircumstancesException-2022>. We will continue to ensure the appropriate education and resources are available to help guide clinicians and practices through the application process and through the resumption of data reporting.

**Comment:** Several commenters did not support the proposal to set the performance threshold to 75 points for the CY 2025 MIPS payment year and asked CMS to explore ways to use its authority to lower the performance threshold starting in the CY 2023 performance period and to extend the \$500 million of funding available under section 1848(q)(6)(F)(iv) of the Act. One commenter requested CMS apply the automatic extreme and uncontrollable circumstances policy for the CY 2022 performance period and conduct targeted outreach and education to assist clinicians and group practices due to the belief that clinicians continue to face challenges stemming from the

impacts of the COVID–19 public health emergency.

*Response:* As previously discussed, the statute requires us to set the performance threshold at the mean or median of a prior period's final scores. The mean final score from the CY 2017 performance period/2019 MIPS payment year is the lowest of the available possible values for setting the performance threshold for the CY 2025 MIPS payment year. As stated in the CY 2023 PFS proposed rule (87 FR 46321), we proposed to use the mean final score from the CY 2017 performance period/2019 MIPS payment year to provide predictability to MIPS eligible clinicians during a program year in which they might be affected by the removal of transition policies for the first time and potentially scored on performance categories that were previously reweighted due to the COVID–19 PHE. We do not have the statutory authority to extend the \$500 million of funding under section 1848(q)(6)(F)(iv) of the Act. To the commenter who suggested that we apply the automatic extreme and uncontrollable circumstances policy for the CY 2022 performance, we note that MIPS eligible clinicians may request reweighting for any or all performance categories due to an extreme and uncontrollable circumstance or public health emergency through the MIPS application based extreme and uncontrollable exception and further guidance on how to apply may be found at <https://qpp.cms.gov/mips/exception-applications?py=2022#extremeCircumstancesException-2022>. We refer readers to § 414.1380(c)(2)(i)(A)(6) and (c)(2)(i)(C)(2) where we detail the extreme and uncontrollable circumstances policies.

*Comment:* Several commenters stated that the proposed performance threshold of 75 points is a significant increase from the previous performance threshold of 30 points for the CY 2019 performance period/2021 MIPS payment, the year prior to the COVID–19 PHE. The commenters urged CMS to reduce the performance threshold to avert more clinicians receiving negative payment adjustments, assist small practices reporting data, foster a better re-entry into MIPS, and encourage more participation by clinicians and/or practices that may not have submitted data due to the automatic and application-based extreme and uncontrollable circumstances policies. A few commenters stated that the 75-point threshold is unfairly punitive and may place disproportionate undue burden on small practices and/or

clinicians who continue to struggle because of the PHE.

*Response:* As noted in the CY 2023 PFS proposed rule (87 FR 46320), section 1848(q)(6)(D)(i) of the Act requires the performance threshold to be the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. We proposed to use the CY 2019 MIPS payment year as the prior period for determining the performance threshold for the CY 2025 MIPS payment year for multiple reasons (87 FR 46321), such as the fact that MIPS eligible clinicians may be scored on performance categories that were reweighted during the COVID–19 PHE and the performance threshold of 75 points offers predictability. The CY 2019 MIPS payment year final score mean is also the lowest final score mean compared to the other prior periods available for the purpose of determining the performance threshold for the CY 2025 MIPS payment year.

We encourage the commenters to look at our estimates of how our finalized policies will affect the payment adjustments, broken down by practice size, for the CY 2025 MIPS payment year in our regulatory impact analysis (see section VII.E.16. of this final rule). As shown in the impact analysis, we expect approximately a third of clinicians who submit data for MIPS will receive a negative payment adjustment, and we do not observe a large discrepancy in payment adjustments between large and small practices as a cumulative result of our policies. The regulatory impact analysis for the CY 2022 performance period (86 FR 65637 through 65647) reported similar results. For these reasons, we believe maintaining the performance threshold at 75 points is reasonable.

*Comment:* A few commenters requested that CMS consider how this threshold may affect new Medicare providers and suggested that CMS allow new clinicians a trial-run after their grace period year, such as providing a mock score (rather than penalizing them) and additional resources on how to improve performance.

*Response:* We appreciate the commenters' suggestions for onboarding new clinicians into the program. As noted, under our existing grace period policy, new Medicare-enrolled eligible clinicians, as defined at § 414.1305, are not to be treated as a MIPS eligible clinician until the subsequent year and the performance period for such subsequent year. During that period, these clinicians have the option to voluntarily report measures and

activities for MIPS prior to being treated as MIPS eligible clinicians. A MIPS payment adjustment factor will not be applied to payments for items and services furnished by an eligible clinician who voluntarily reports on applicable measures and activities under MIPS. We believe that a one-year grace period with the opportunity to voluntarily report provides clinicians with opportunity to receive a score without penalty while still ensuring participation in future years. We will continue to provide resources to support new clinicians in navigating the MIPS program at <https://qpp.cms.gov/>.

*Comment:* A few commenters opposed the proposal to set the performance threshold at 75 points because they believe that the data from the past few years may be unreliable. They stated that only high performers may have chosen to submit data for MIPS and the data may no longer be representative of MIPS eligible clinicians. One commenter questioned whether CMS could remove points that clinicians may have received due to transition policies or the COVID–19 PHE, in previous year's data when evaluating the mean and median final scores from prior years since it may be unrealistic for clinicians to meet the same standard after those policies end. Another commenter recommended using the mean or median final score from the CY 2021 performance period when it becomes available since it may provide a more accurate representation of MIPS eligible clinicians' performance.

*Response:* We acknowledge the commenters' concern that the data from the past several years may not be representative of true performance in MIPS if only a certain portion of MIPS eligible clinicians (specifically MIPS eligible clinicians who expect to receive high final scores) may have submitted data for MIPS. If only MIPS eligible clinicians who expected high final scores submitted data for MIPS, then the expected mean final scores may be higher than when a larger proportion of MIPS eligible clinicians submitted data for MIPS. This was one reason that we proposed to use the data from a year prior to the PHE (the CY 2017 performance period, which corresponds to the CY 2019 MIPS payment year) to set the performance threshold for the CY 2023 MIPS performance period/CY 2025 MIPS payment year. We appreciate the commenters' suggestion to remove points that clinicians may have received due to transition policies or the COVID–19 PHE when calculating the mean or median final scores to set the performance threshold. Section

1848(q)(6)(D)(i) of the Act requires the performance threshold for a year to be the mean or median (as selected by the Secretary) of the composite performance scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. We refer to the composite performance score as the final score as defined under § 414.1305 (81 FR 77319 through 77320). We do not believe that we have discretion under the statute to alter the final scores from a prior period for the purpose of establishing the performance threshold. We plan to consider the CY 2021 performance period data for determining the performance threshold for future rulemaking once it is available for consideration.

*Comment:* Several commenters expressed concern about the reasonableness of the proposed performance threshold due to the lack of specialist-specific measures or MVPs and that some clinicians who may qualify for reweighting of performance categories may only have topped-out measures to report. A few commenters further expressed concern about the magnitude of positive payment adjustments and the impact on clinicians who do not meet the proposed performance threshold, with one commenter expressing concern about other economic pressures like inflation.

*Response:* We understand different specialties sometimes face challenges with not being able to report measures and activities for every performance category. We agree the final scores of these clinicians may be based on fewer categories than they would be for a clinician reporting all 4 performance categories. However, we remind clinicians that even if their final score is based on fewer than 4 performance categories, they still can score anywhere from 0 to 100 points for their final score, just as a clinician reporting all 4 performance categories would, due to our reweighting policies. In this way, we do not believe a performance threshold of 75 points is disadvantageous to clinicians reporting fewer than 4 performance categories. Regarding the commenter's concerns on the specialty measures available, we identify specialty measurement gaps through the annual publication of the CMS Quality Measure Development Plan (MDP) and the MDP Annual Report (<https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measure-development>). In addition, we solicit interested party recommendations for new specialty measure sets and revisions to existing specialty sets on an annual basis. We

urge interested parties to work with their specialty societies to provide recommendations during the specialty measure set solicitation process (for more information please see the QPP resource library at <http://www.qpp.cms.gov>). We are also developing MIPS Value Pathways (MVPs) to provide clinicians with a simplified method to report measures that are relevant to their practice, and we encourage them to report an MVP when one that is relevant to their scope of practice is available. We remind the commenters who were concerned about the magnitude or distribution of the positive payments adjustments that MIPS is a budget neutral program by statute. Generally stated, it is designed to balance the positive payment adjustments of clinicians who score above the performance threshold against the negative payment adjustments of clinicians whose scores are below the performance threshold. Therefore, a larger proportion of clinicians receiving a negative payment adjustment generally would result in larger positive payment adjustments for those above the performance threshold. We encourage the commenters to look at our estimates of how our finalized policies will affect the payment adjustments, broken down by practice size, for the CY 2025 MIPS payment year in our regulatory impact analysis (see section VII.E.16. of this final rule). We present the expected size of the budget neutral pool available for redistribution and the expected maximum positive payment adjustment for clinicians with a final score of 100 for the CY 2023 performance period/2025 MIPS payment year.

*Comment:* A few commenters stated their belief that the proposed 75-point performance threshold may be unachievable for some clinicians, and paired with other impending Medicare payments cuts, clinicians might opt-out of Medicare entirely, thereby creating a gap in access to care for an already stressed system and a vulnerable patient population.

*Response:* We appreciate commenters' concerns that some clinicians may not be able to achieve a 75-point performance threshold and note that we are setting the performance threshold to the lowest of the available possible values by using the CY 2019 MIPS payment year final score mean. The RIA of this final rule as described in section VII.E.16. estimates approximately a third of MIPS eligible clinicians would receive a negative payment adjustment if the proposed policies are finalized after updating the data sources. Because many clinicians' scores are close to the

performance threshold, many of these clinician's payment adjustments are fairly small and many negative adjustments are much lower in magnitude than the statutory maximum negative adjustment of 9 percent. In the RIA of this final rule as described in section VII.E.16. the average positive payment adjustment among MIPS eligible clinicians who submit data for MIPS is 3.71 percent and the average negative payment adjustment among MIPS eligible clinicians who submit data for MIPS is -1.84 percent. Only 8.46 percent of MIPS eligible clinicians receive a final score less than 50 points and therefore a negative payment adjustment of more than -3 percent.

After consideration of public comments, we are finalizing our proposal to use the CY 2019 MIPS payment year as the prior period for the purpose of determining the performance threshold for the CY 2025 MIPS payment year and to set the performance threshold at 75 points, as well as the proposed corresponding changes to § 414.1405(b)(9).

### (3) Example of Adjustment Factors

Figure 4 provides an illustrative example of how various final scores will be converted to a MIPS payment adjustment factor using the statutory formula and based on our finalized policies for the CY 2025 MIPS payment year. In Figure 4, the performance threshold is set at 75 points. The applicable percentage is 9 percent for the CY 2025 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 9 percent for the CY 2025 MIPS payment year) and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the performance threshold of 75 points for the CY 2025 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive the lowest negative applicable percentage (negative 9 percent for the CY 2025 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent. If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be greater than 9 percent. Only those MIPS

eligible clinicians with a final score equal to 75 points (which is the finalized performance threshold for the CY 2025 MIPS payment year) will receive a neutral MIPS payment adjustment. Beginning with the CY 2025 MIPS payment year, the additional MIPS payment adjustment for exceptional performance described in

section 1848(q)(6)(C) of the Act will no longer be available. For this reason, Figure 4 no longer illustrates an additional adjustment factor for MIPS eligible clinicians with final scores at or above the additional performance threshold described in section 1848(q)(6)(D)(ii) of the Act.

**FIGURE 4: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold for the CY 2025 MIPS Payment Year**

**Note:** The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor will be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality (BN) but cannot be higher

than 3.0. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 99 illustrates the changes in payment adjustment based on the final policies from the CY 2022 PFS final rule

(86 FR 65527 through 65536) for the CY 2024 MIPS payment year and the finalized policies for the CY 2025 MIPS payment year, as well as the applicable percent required by section 1848(q)(6)(B) of the Act.

**BILLING CODE 4150-28-P**

**TABLE 99: Illustration of Point System and Associated Adjustments Comparison between the CY 2024 MIPS Payment Year and the CY 2025 MIPS Payment Year**

| 2024 MIPS Payment Year |  | 2025 MIPS Payment Year |   |
|------------------------|--|------------------------|---|
| Final Score Points     | MIPS Adjustment  | Final Score Points     | MIPS Adjustment   |
| 0.0-18.75              | Negative 9%  | 0.0-18.75              | Negative 9%   |
| 18.76-74.99            | Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale   | 18.76-74.99            | Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale  |
| 75.0                   | 0% adjustment  | 75.0                   | 0% adjustment   |
| 75.01-88.99            | Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.  | 75.01-100              | Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. |
| 89.0-100               | Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.<br>PLUS<br>An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 89.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance |                        |   |

**BILLING CODE 4150-28-C****f. Review and Correction of MIPS Final Score****(1) Feedback and Information To Improve Performance**

Under section 1848(q)(12)(A)(i) of the Act, we are at a minimum required to provide MIPS eligible clinicians with timely (such as quarterly) confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that on an annual basis, beginning July

1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories.

As we explained previously, we aim to provide performance feedback on or around July 1 of each year, but due to the PHE and COVID-19, it is possible that we might provide performance feedback later (85 FR 50321). We made performance feedback available for the CY 2019 performance period on August 5, 2020; for the CY 2020 performance period on August 2 and September 27, 2021; and for the CY 2021 performance

period on August 22, 2022. We direct readers to [qpp.cms.gov](https://www.cms.gov/qpp) for more information.

**g. Third Party Intermediaries General Requirements****(1) General Requirements****(a) Background**

Flexible reporting options will provide eligible clinicians with options to accommodate different practices and make measurement meaningful. We believe that allowing eligible clinicians to participate in MIPS through the use of third party intermediaries that will collect or submit data on their behalf, will help us accomplish our goal of implementing a flexible program (82 FR 53806).

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID–19 IFC (85 FR 27594 and 27595), the CY 2021 PFS final rule (85 FR 84926 through 84947), and the CY 2022 PFS final rule (86 FR 65538 through 65550) for our previously established policies regarding third party intermediaries.

In the CY 2023 PFS proposed rule (87 FR 46324), we proposed to update the definition of a third party intermediary at § 414.1305 and to make other minor conforming technical edits to the regulation text governing third party intermediaries set forth in § 414.1400. We also proposed to revise Qualified Clinical Data Registry (QCDR) measure self-nomination and measure approval requirements, including to delay the QCDR measure testing requirement for traditional MIPS by an additional year, until the CY 2024 performance period/2026 MIPS payment year (87 FR 46324 and 46325). We also proposed to revise remedial action and termination of third party intermediaries' policies (87 FR 46325 through 46328). Finally, we included two RFIs on third party intermediary support of MIPS value pathways (MVPs) and national Continuing Medical Education (CME) organizations becoming a new type of third party intermediary (87 FR 46327 through 46329).

#### (b) Definition of a Third Party Intermediary

In the CY 2022 PFS final rule (86 FR 65542 through 65545), we finalized at § 414.1400(a)(1) that MIPS data may be submitted on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or Alternative Payment Model (APM) Entity by any of the following third party intermediaries: QCDR; qualified registry; health IT vendor; or CMS approved survey vendor. In that rule, we added APM Entities to § 414.1400(a)(1), expanding the general participation requirements of third party intermediaries reporting MIPS on behalf of APM Entities (86 FR 65542). We also revised § 414.1400(a)(1) to allow for QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, a recently adopted option for MIPS eligible clinicians reporting MIPS Value Pathways (86 FR 65544 through 65545). One of our strategic goals in developing MIPS included developing a program that is meaningful,

understandable, and flexible for participating MIPS eligible clinicians. We discussed that one way we believe this could be accomplished is through flexible reporting options, including allowing MIPS eligible clinicians the flexibility of using third party intermediaries to collect or submit data on their behalf. In the CY 2019 PFS final rule (83 FR 59894) we finalized at § 414.1305 to define a third party intermediary as an entity that has been approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the quality, improvement activities, and Promoting Interoperability performance categories.

In the CY 2023 PFS proposed rule (87 FR 46324), we proposed to update the definition of a third party intermediary at § 414.1305 to include subgroups and APM Entities and to make minor edits for technical clarity. We proposed the revised definition would state that a third party intermediary means an entity that CMS has approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity for one or more of the quality, improvement activities, and Promoting Interoperability performance categories. We requested comments on the proposal.

The following is a summary of the comments we received on our proposal and our responses.

*Comment:* One commenter opposed the requirement that third party intermediaries be required to support subgroup reporting, expressing concern that frequent transitions among clinicians in practices could be difficult to track year to year for third party intermediaries.

*Response:* We note that while we proposed a change in the definition of third party intermediary to include subgroups, we did not propose a new requirement for third party intermediaries to support subgroup reporting. We previously finalized in the CY 2022 PFS rule (See § 414.1400(a)(1); 86 FR 65544) a requirement that third party intermediaries support subgroup reporting beginning with the CY 2023 performance period. We note that we separately finalized the definition of the term subgroup (86 FR 65398 through 65400), as well as the requirements for subgroup registration (86 FR 65417 and 65418). In the requirements for subgroup registration, we finalized that at the time of registration, a subgroup identifier will be established by CMS. We also clarify that the same subgroup identifier will be used year to year,

unless the composition of the group changes, in which case a new identifier would be issued.

After consideration of the public comments and for the reasons stated above and in the proposed rule (87 FR 46324), we are finalizing our proposal to revise the definition of a third party intermediary as proposed and are revising § 414.1305.

#### (2) Requirements Specific to QCDRs

##### (a) Background

As described at § 414.1305, a QCDR is an entity that demonstrates clinical expertise in medicine and quality measurement development experience and collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients. Section 1848(q)(5)(B)(ii) of the Act provides, that the Secretary shall encourage MIPS eligible professionals to report on applicable measures through the use of certified EHR technology and qualified clinical data registries.

We believe QCDRs and QCDR measures further health equity through the expansion of data collection, reporting, and analysis. QCDR measures data can be used not only to identify gaps in the standard of care, but also to determine solutions to disparate impacts on different populations. We anticipate growth in the number of QCDR measures that address health equity in upcoming performance years. We refer readers to § 414.1400(b)(4), the CY 2017 Quality Payment Program final rule (81 FR 77374 and 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 and 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID–19 IFC (85 FR 27594 and 27595), the CY 2021 PFS final rule (85 FR 84937 through 84944) and the CY 2022 PFS final rule (86 FR 65540 through 65550) for previously finalized standards and criteria for QCDRs and QCDR measure requirements.

##### (b) QCDR Measure Self-Nomination Requirements

As part of QCDR measure self-nomination, § 414.1400(b)(4)(i) and (b)(4)(i)(B) require the nominating QCDR to publicly post the QCDR measure specifications (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted no later than 15 calendar days following CMS approval. We typically notify a QCDR of its measure's approval prior to our posting

of the approved measure specifications. While we require QCDRs to post their approved measure specifications, as their websites are an important source for clinicians, we want to limit the chance of discrepancies between CMS's posting and QCDRs' postings.

To avoid confusion, in the CY 2023 PFS proposed rule we proposed to revise § 414.1400(b)(4)(i)(B) to clarify requirements for publicly posting the approved measure specifications (87 FR 46324 and 46325). Specifically, we proposed to revise the language such that entities must publicly post measure specifications no later than 15 calendar days following CMS's posting of approved QCDR measure specifications on a CMS website and that QCDRs need to confirm that the measure specifications they post align with the measure specifications posted by CMS. We proposed to revise § 414.1400(b)(4)(i)(B) to state that, for a QCDR measure, the entity must submit for CMS approval measure specifications including the Name/title of measure, National Quality Forum (NQF) number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS posting of all approved specifications for a QCDR measure, the entity must publicly post the CMS-approved measure specifications for the QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted. We requested comments on this proposal.

The following is a summary of the comments we received on our proposal and our responses.

*Comment:* A few commenters supported the clarifications outlined in the QCDR measure self-nomination proposal.

*Response:* We thank the commenters for their support.

*Comment:* A few commenters expressed concern regarding the timing of the approved measure specifications posting that CMS requires of QCDRs. One commenter expressed concern that QCDRs are only given 15 calendar days to post their measure specifications following CMS's posting of the approved measure specifications. Given that the timing of the posting often falls around the end of the year and the holidays, the commenter suggested allowing QCDRs 21 calendar days to ensure that their posting follows requirements. One commenter suggested that QCDRs should not be required to

post measure specifications until the PFS final rule has been released and the previous program year has ended.

*Response:* QCDRs are required to post approved measure specifications no later than 15 days following our posting because measure specifications need to be posted by January 1st of the performance period. This provides clinicians who start collecting data for that year with important information on relevant measures as most clinicians view their vendor's website and may not specifically view the CMS posting. Additionally, we believe that 15 days offers sufficient time to post given that QCDRs are notified after their specifications are approved and, therefore, already have the final version of the measure specifications ready.

*Comment:* One commenter stated their belief that QCDRs should not have to publicly post risk adjustment algorithms. The commenter explained that it often creates confusion for those who have not worked directly with the measure development team.

*Response:* If a measure is going to be used as part of a public program such as the Quality Payment Program, those clinicians who are to be measured must have the opportunity to fully review and understand the measure specifications, which include any risk adjustment algorithms included in the measure.

After consideration of the public comments and for the reasons stated above and in the proposed rule (87 FR 46324), we are finalizing our proposal to clarify the requirements for publicly posting the approved measure specifications as proposed and are revising § 414.1400(b)(4)(i)(B).

#### (c) QCDR Measure Approval Criteria

We refer readers to § 414.1400(b)(4)(iii), the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID-19 IFC (85 FR 27594 and 27595), the CY 2021 PFS final rule (85 FR 84937 through 84942), and the CY 2022 PFS final rule (86 FR 65540 through 65542) for previously finalized standards and criteria for QCDRs, specifically QCDR measure requirements.

We refer readers to the CY 2020 PFS final rule where we finalized requirements for QCDR measure testing (84 FR 63065 through 63067). Based on our goal that all measures available in MIPS are reliable and valid, we finalized in the CY 2020 PFS final rule

a requirement for all QCDR measures to be fully developed and tested with complete testing results at the clinician level beginning with the CY 2021 performance period/2023 MIPS payment year (84 FR 63065 through 63067).<sup>543</sup> In consideration of the burden of collecting data as part of QCDR measure testing on clinicians and hospitals on the front lines of the COVID-19 pandemic, in the May 8th COVID-19 IFC and CY 2021 PFS final rule, we delayed the requirement for fully developed and tested QCDR measures by a year, to begin with the CY 2022 performance year (85 FR 27594 and 85 FR 84938 through 84939). Separately, to incorporate feedback from interested parties into the CY 2021 PFS final rule, we finalized an incremental approach to the QCDR measure testing requirements beginning with the CY 2022 performance year. Specifically, we finalized a policy that a QCDR measure must be face valid prior to being self-nominated for the CY 2022 performance year (85 FR 84939). For new QCDR measures to be approved, we must verify they are face valid for the initial performance year and fully tested for any subsequent performance year (85 FR 84939). Thus, a QCDR measure that we approve for the CY 2022 performance year; does not have to be fully tested until the CY 2023 performance year (85 FR 84939).

We recognized concerns expressed by interested parties regarding the burden of full measure testing and the continuing impact of the COVID-19 PHE (86 FR 65540 and 65541). Data collection efforts pose a challenge given the myriad disruptions to the health care system caused by the PHE, including clinicians' need to prioritize care for COVID-19 patients (and deprioritize data collection), and lost data due to the delay and cancellation of elective procedures. In particular, the COVID-19 extreme and uncontrollable circumstances exception decreased the number of groups reporting to MIPS through QCDRs. Without data from clinicians, QCDRs cannot complete their measure assessments, and delaying for one year will reduce the burden placed on QCDRs and clinicians. Despite these challenges, we believe QCDRs will soon be able to work with clinicians on full measure testing. Fully developed and tested measures improve measure reliability and validity thereby increasing clinician usability. Full

<sup>543</sup> We refer readers to the Blueprint for the CMS Measures Management System for additional details and guidance on QCDR measure testing. Available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint>.

measure testing also prevents instances where QCDRs may discover that a measure is not feasible part way through data collection (84 FR 63066). Therefore, we proposed in the CY 2023 PFS proposed rule to revise our QCDR measure approval requirements again by delaying the requirement for a QCDR measure to be fully developed and tested with complete testing results at the clinician level until the CY 2024 performance year (87 FR 46325). As proposed, a QCDR measure approved for the CY 2023 performance year or earlier would not need to be fully developed and tested until the CY 2024 performance year. A new QCDR measure proposed for the CY 2024 performance year would be required to meet face validity. We would require full testing at the clinician level before the QCDR measure can continue in the program beyond the first year. We proposed to amend § 414.1400(b)(4)(iii)(A)(3) to state that beginning with the CY 2022 performance period/2024 MIPS payment year, CMS may approve a QCDR measure only if the QCDR measure meets face validity. Beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR measure approved for a previous performance year must be fully developed and tested, with complete testing results at the clinician level, prior to self-nomination. We requested comments on this proposal.

The following is a summary of the comments we received on our proposal and our responses.

*Comment:* Several commenters supported the proposed delay in the requirement for full measure testing citing the continuing impacts of the PHE. These commenters stated that resources required to complete full measure testing have been challenged by budget cuts, staffing shortages, and lower QCDR participation rates resulting from the PHE and stated that they appreciated the additional time to implement full measure testing.

*Response:* We thank the commenters for their support.

*Comment:* A few commenters suggested that it would be beneficial for CMS to provide clearer guidance for measure testing requirements. They suggested that there was confusion about the guidance for reliability and validity testing thresholds, as well as what it means to be “fully tested at the clinician level.” One commenter suggested that CMS develop a publicized process for evaluating testing measures including how insufficient data is determined, providing feedback to QCDRs, and allowing appeals.

Additionally, a few commenters suggested that it would be helpful for QCDRs to review testing protocols with CMS prior to testing to clarify the amount of thoroughness expected by CMS and to avoid preventable mistakes and expenses.

*Response:* As discussed in the proposed rule (87 FR 46325), we referred readers to the CMS Blueprint for the CMS Measures Management System (available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint>) for tools regarding measure testing guidance. The website provides information on the full measure testing process and specific evaluation criteria. Additionally, the Measure Evaluation Criteria Guidance document (available at <https://mmshub.cms.gov/measure-lifecycle/measure-testing/overview>) provides a detailed outline for evaluating reliability and validity.

We regularly host training and support sessions throughout the year that address issues relevant to QCDRs and QRs. A repository of past webinars is available at <https://qpp.cms.gov/resources/webinars>. It is mandatory for QCDRs to attend the annual QCDR Measure Workgroup as well as the annual QCDR/QR Kickoff where we review all testing requirements. Webinars are followed by a question and answer session where attendees may ask questions and receive feedback from our subject matter experts regarding measure testing. Additionally, QCDRs/QRs can schedule a measure concept preview call where we will preview measure concepts and provide feedback prior to self-nomination.

*Comment:* A few commenters suggested that the delay should apply not only to MIPS, but also to measures included in an MVP to maintain consistency between MIPS and MVPs. They stated their belief that without a comparable delay, the number of quality measures available in MVPs will decrease and thus increase the burden for MVP participants who need more measures to report on which could ultimately lead to an overall reduction in MVP reporting.

*Response:* As we have previously discussed (85 FR 84937 through 84943), precisely because there may be a smaller number of measures available in MVPs, which tend to be focused on specific clinical topics, we believe that those QCDR measures available in MVPs should be of the highest quality and can be relied upon to support quality reporting on behalf of MVP Participants. We also believe that despite the delay for full measure testing for MIPS, there

are some QCDRs that have been testing their measures and those fully tested QCDR measures may be ready to be considered for inclusion within an MVP.

*Comment:* A few commenters expressed concerns about the burden of CMS's measure testing requirements. These commenters stated their belief that the measure testing requirements place a significant burden on physicians and QCDRs and that the cost associated with the requirements will decrease measure development or even force QCDRs to stop all measure development and leave the program entirely. These commenters suggested that the burden of these standards disproportionately affects small QCDRs and specialty-specific measures which will likely play an important role as MVP and sub-group reporting increases. A few commenters suggested changes in CMS's measure testing requirements to reduce these burdens. One suggested allowing QCDR statisticians who are familiar with sample sizes and population to determine the appropriate level of testing (clinician, facility, or group). One commenter suggested that we allow measure stewards to determine their own testing plan to meet CMS's data standards.

*Response:* Over multiple years, we have expressed our intention to improve the quality and reliability of QCDR measures that are available for reporting within the MIPS program. In the CY 2018 Quality Payment Program proposed rule (82 FR 30160), we described our goal and sought comment on having fully tested QCDR measures. In the CY 2019 PFS final rule, we gave notice that we were considering requiring reliability and feasibility testing as an additional criterion for QCDR measures (83 FR 59901 through 59902). Ultimately, in the CY 2020 PFS final rule (84 FR 63065 through 63067), we finalized that beginning with the 2021 performance period, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination. As described in the CY 2020 PFS final rule (84 FR 63066), while we understand the increased time and cost burdens associated with measure testing for the QCDR, we believe the benefits of full measure testing outweigh the burdens. However, in recognition of those burdens and the PHE, the implementation of this policy was delayed by 1 year, until the 2022 performance period, in the May 8th COVID-19 IFC (85 FR 27594 through 27595). Most recently, in the CY 2023 PFS proposed rule, we proposed to

further delay the requirement for a QCDR measure to be fully developed and tested with complete testing results at the clinician level until the CY 2024 performance year (87 FR 46325). Given our longstanding objectives and our efforts to accommodate the disruption placed on the healthcare system caused by the COVID-19 PHE, we believe that interested parties have now had sufficient time and notice to prepare for full measure testing by CY 2024.

Additionally, we believe that implementing full measure testing will help reduce the burden on clinicians rather than increase it. In past performance years, there have been several instances where QCDRs have had issues with a measure mid performance period, and thus could not support the reporting of the impacted QCDR measure. This has forced clinicians to quickly find alternative measures to report to satisfy the quality reporting requirements of the MIPS program. Many of these issues could be avoided if the measures had gone through reliability and feasibility testing.

We note in response to the suggestions for changes in our testing requirements that we believe we offer flexibility in measure testing to demonstrate reliability and validity but require testing at the clinician level because the Quality Payment Program measures clinicians at the individual level in addition to the group and other levels. More broadly, we require uniform testing standards to help ensure that clinicians and groups are able to select from an array of measures that are consistently reliable, feasible, and provide meaningful measurement.

*Comment:* A few commenters expressed concern with the timing of the announcement of the delay for the full measure testing requirement. The commenters noted that the CY 2023 PFS final rule would not be posted until a few months after the self-nomination deadline, so commenters are unclear about whether QCDR measures need to be fully tested for CY 2023. Some commenters suggested that this confusion has led some QCDRs and registries to consider leaving the program and would negatively impact MVPs since QCDR measures must be fully tested prior to inclusion in an MVP. A few commenters asked CMS to release guidance and expectations through another medium regarding full measure testing.

*Response:* We understand the potential for confusion, however, our effort to change the timeline for the full measure testing requirement required proposing the change in the CY 2023

PFS proposed rule. However, we are delaying all QCDR measure decisions until after the publication of the final rule. Additionally, QCDRs that have been fully testing measures will be well prepared and practiced in completing the requirements for self-nomination for the CY 2024 performance period.

*Comment:* A few commenters suggested extending the delay for the measure testing requirement more than one year given that the PHE has led to decreased participation in MIPS and less reported data, which makes it more difficult to establish benchmarks. One commenter recommended that CMS extend the delay until 2 years after the end of the PHE. Other commenters proposed that new measures could have 2 years before full measure testing requirements instead of one.

*Response:* The full measure testing requirement was already delayed due to the PHE in the May 8th COVID-19 IFC (85 FR 27594 through 27595). In the CY 2021 PFS final rule, we finalized further changes, such that QCDR measures must be face valid prior to being self-nominated for the CY 2022 performance year (85 FR 84939) and does not have to be fully tested until the CY 2023 performance year (85 FR 84939). Given previous delays and the implementation of a gradual approach to requiring full measure testing, we believe that QCDRs will have had a reasonable amount of time in advance of the CY 2024 performance period requirement to prepare.

*Comment:* One commenter expressed concern about the delay of the full measure testing requirement and recommended implementing the full measure testing requirement sooner. The commenter noted that the delay in the requirement for MIPS will limit the availability of QCDR measures for inclusion in an MVP given that QCDR measures must be fully tested prior to inclusion in an MVP. Another commenter supported the requirement that all QCDR measures be fully tested before inclusion in an MVP.

*Response:* We have been balancing the need to have fully tested, valid, and reliable measures in the MIPS program with the challenges posed by the PHE and the general time and resources required to fully test QCDR measures. Based on the feedback from interested parties, we proposed delaying the requirement for full measure testing for 1 more year; however, we do not intend to further delay the implementation of this requirement (87 FR 46325). We strongly believe that all measures in a pay-for-performance quality program such as MIPS should be reliable, feasible, valid, and implementable as

they impact performance determinations and thusly, payment adjustments.

After consideration of the public comments and for the reasons stated above and in the proposed rule (87 FR 46325), we are finalizing our proposal to delay QCDR measure approval requirements by delaying the requirement for a QCDR measure to be fully developed and tested with complete testing results at the clinician level until the CY 2024 performance year and are revising § 414.1400(b)(4)(iii)(A)(3) as proposed.

### (3) Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(e), the CY 2017 Quality Payment Program final rule (81 FR 77386 through 77389), the CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), the CY 2021 PFS final rule (85 FR 84947), and the CY 2022 PFS final rule (86 FR 65542 and 65550) for previously finalized policies for remedial action and termination of third party intermediaries.

In the CY 2023 PFS proposed rule (87 FR 46325 and 46326), we proposed a few changes to the regulations relating to remedial actions and terminations set forth in § 414.1400(e). These included one revised and one new requirement for Corrective Action Plans (CAPs), and proposed termination of certain approved QCDRs and Qualified Registries that continue to fail to submit performance data.

Section 414.1400(e)(1) provides that, after providing written notice, CMS may take remedial action if CMS determines that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, has submitted a false certification under paragraph (a)(3) of this section, or has submitted data that are inaccurate, unusable, or otherwise compromised. As described in § 414.1400(e)(1)(i) and (ii), the remedial actions CMS may take against a third party intermediary include requiring the third party intermediary to submit to CMS by a date specified by the agency a corrective action plan (CAP) and publicly disclosing an entity's data error rate on the CMS website until the data error rate falls below 3 percent.

As described in § 414.1400(e)(2), CMS may immediately or with advance notice terminate the ability of a third party intermediary to submit MIPS data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the following reasons: CMS has grounds to impose remedial action;

CMS has not received a CAP within the specified time-period or the CAP is not accepted by CMS; or the third party intermediary fails to correct the deficiencies or data errors by the date specified by CMS.

Therefore, we proposed a technical correction in § 414.1400(e)(3), to include the missing introductory text of, “A data submission that,” which we inadvertently failed to include when finalizing our proposal to revise and redesignate existing language from former § 414.1400(f)(3)(ii) to paragraph (e)(3) in the CY 2022 PFS final rule (86 FR 65550) (87 FR 46325 and 46326). As proposed, the technical correction to the provision at § 414.1400(e)(3) would read, “A data submission that contains data inaccuracies affecting the third party intermediary’s total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.”

The following is a summary of the comments we received on our proposal and our responses.

*Comment:* In the context of determining whether a corrective action plan would be required, one commenter asked whether qualified registries are responsible for reviewing or validating data submitted to them and for additional operational details.

*Response:* Qualified registries are required to have data validation plans. We finalized our policy for the requirements for a data validation audit in the CY 2021 PFS rule (85 FR 84930 through 84937). We direct the reader to that section for a further discussion of the requirements and the rationale. We also direct readers to the self-nomination toolkit for QCDRs and registries that is available at [qpp.cms.gov/resources/resource-library](https://qpp.cms.gov/resources/resource-library) in which we offer more guidance for the data validation audit.

After consideration of the public comments and for the reasons stated above and in the proposed rule (87 FR 46325 and 46326), we are finalizing our proposal to revise § 414.1400(e)(3) to begin “A data submission that” as proposed.

#### (a) Revised Corrective Action Plan (CAP) Requirements

As described in § 414.1400(e)(1)(i), the remedial actions CMS may take against a third party intermediary include requiring the third party intermediary to submit to CMS by a date specified by the agency a corrective action plan (CAP). As finalized in the CY 2021 PFS final rule and specified at §§ 414.1400(e)(1)(i)(A) through (D), unless different or additional

information is specified by CMS, the CAP must address the following issues: (A) the issues that contributed to the non-compliance; (B) the impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program; (C) the corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future; and (D) a detailed timeline for achieving compliance with the applicable requirements.

In the CY 2023 PFS proposed rule, we proposed to revise the scope of affected parties impacted by the second CAP requirement at § 414.1400(e)(1)(i)(B) (87 FR 46326). As finalized in the CY 2021 PFS final rule at § 414.1400(e)(1)(i)(B), we explained that, depending on the circumstances, non-compliance by a third party intermediary may affect an uncertain number of clinicians and groups and has the potential to implicate substantial program dollars. We noted our belief that the information regarding the scope of harms was necessary for the agency to assess the full program impact of the non-compliance, as well as our belief that it was important for the CAP to include this impact information regardless of the clinician’s participation status, because non-compliance may have programmatic implications even if it does not affect payment, such as for data posted on the Physician Compare website (now Care Compare) (85 FR 84947).

We discussed in the CY 2023 PFS proposed rule that we have become aware that in some cases, QCDRs granted licenses to the measures of another QCDR upon which a CAP has been imposed may be directly impacted by the issues that led to the CAP. We proposed to broaden the scope of affected parties under the CAP requirement at § 414.1400(e)(1)(i)(B) to also identify impacts to any QCDRs that were granted licenses to the measures of the affected QCDR, rather than limit the identification of impacts to clinicians only (87 FR 46326). We also proposed a technical correction in § 414.1400(e)(1)(i)(B) to correct the word “voluntary” to “voluntarily.” Accordingly, we proposed to revise the CAP requirement at § 414.1400(e)(1)(i)(B) to require the third party intermediary to address in its CAP the impact to individual clinicians, groups, virtual groups, subgroups, or APM Entities, regardless of whether

they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to participating in the MIPS program, and any QCDRs that were granted licenses to the measures of a QCDR upon which a CAP has been imposed.

We also proposed to add a new CAP requirement to require the third party intermediary to notify the parties identified in proposed § 414.1400(e)(1)(i)(B) of the impact to these parties by submitting a communication plan. We noted that the intent of this proposal is to enable affected parties to better understand and prepare for any operational and other challenges as needed. We noted our belief that having third party intermediaries submit a communication plan as part of their CAP would ensure third party intermediaries directly communicate the situation and its impact to these parties in a timely and consistent manner. Accordingly, we proposed to add § 414.1400(e)(1)(i)(E) to require the third party intermediary to develop a communication plan for communicating the impact to the parties identified in proposed § 414.1400(e)(1)(i)(B). Specifically, as proposed, this would include individual clinicians, groups, virtual groups, subgroups, or APM Entities, regardless of whether they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to participating in the MIPS program, and any QCDRs that were granted licenses to the measures of a QCDR upon which a CAP has been imposed. We requested comments on the proposals.

We did not receive any public comments on our proposals to revise § 414.1400(e)(1)(i)(B). For the reasons stated above and in the PFS proposed rule (87 FR 46326), we are finalizing our proposed revisions to § 414.1400(e)(1)(i)(B) and to add new paragraph (e)(1)(i)(E) as proposed.

#### (b) Termination of Approved QCDRs and Qualified Registries That Have Not Submitted Performance Data

In the CY 2022 PFS final rule, we noted that we had identified a number of QCDRs and qualified registries that had continued to self-nominate to become a third party intermediary for the MIPS program but had not submitted clinician, group, or virtual group data to CMS (86 FR 65545). We further noted as the MIPS program continues to mature, we wished to reduce the number of vendors that self-nominate to become a qualified vendor but do not actively participate in the MIPS program (*Id.*). We also noted that our goal was to decrease the operational

burden on CMS and those vendors that do not submit MIPS data to CMS (86 FR 65546). Accordingly, we finalized requirements for approved QCDRs and qualified registries that have not submitted performance data to submit a participation plan as part of their self-nomination process (*Id.*). We finalized an incremental approach to addressing this issue. First, we established a participation plan requirement, which requires a QCDR or qualified registry that was approved but did not submit data for any of the CY 2019 through 2023 payment years to submit a participation plan in order to be approved for the CY 2023 performance period/2025 MIPS payment year (§ 414.1400(b)(3)(vii)). Second, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan in order for it to be approved for the CY 2024 performance period/2026 MIPS payment year or for a future performance period/payment year (§ 414.1400(b)(3)(viii)).

Even with the participation requirements in place, we noted that we remained concerned about the administrative burden created by QCDRs and qualified registries that submit the required participation plans during the self-nomination process and continue as an approved QCDR or qualified registry yet continue not to submit MIPS data to CMS. Maintaining these vendors that do not actively participate does not provide a benefit to the MIPS program, rather it creates confusion for interested parties by including these vendors in our qualified postings (86 FR 65545).

Our goal is also to decrease the operational burden on CMS and interested parties. CMS would decrease its operational burden by eliminating the need to screen these entities. Removing QCDRs and qualified registries who do not actively participate from our qualified postings would also decrease the administrative burden for clinicians trying to identify an active participating QCDR or qualified registry.

Accordingly, we proposed in the CY 2023 PFS proposed rule that, beginning with the CY 2024 performance period, in the we would terminate those QCDRs and qualified registries that are required to submit participation plans during the applicable self-nomination period under § 414.1400(b)(3)(viii) because they did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period, and continue to not submit MIPS data to CMS for the

applicable performance period (87 FR 46327). For example, if a QCDR or qualified registry is required to submit a participation plan during the self-nomination process for the CY 2024 performance period under § 414.1400(b)(3)(viii) because they did not submit any MIPS data for the CY 2022 and 2023 performance periods, and CMS approves their participation plan, but the QCDR or qualified registry continues to not submit MIPS data for the CY 2024 performance period (CY 2024 performance data is submitted by March 2025), then under our proposed policy, that QCDR or qualified registry would be terminated.

Specifically, we proposed to add a new ground for termination at § 414.1400(e)(5) stating that, beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under § 414.1400(b)(3)(viii), but does not submit MIPS data for the applicable performance period for which they self-nominated under § 414.1400(b)(3)(viii), will be terminated (87 FR 46327). We requested comments on the proposal.

Finally, in conjunction with the proposal to amend the definition of “third party intermediary” to refer to subgroups and APM Entities (87 FR 46327), we proposed a conforming change to § 414.1400(e)(2), which currently stated that CMS may immediately or with advance notice terminate “the ability of a third party intermediary to submit MIPS data on behalf of MIPS eligible clinician, group or virtual group” under certain circumstances. Rather than amend this provision to add references to subgroups and APM Entities, we proposed to revise § 414.1400(e)(2) by removing the previously quoted phrase to read that CMS may immediately or with advance notice “terminate a third party intermediary” under the specified circumstances. We requested comments on this proposal.

The following is a summary of the comments we received on our proposals and our responses.

*Comment:* A few commenters opposed our proposal to terminate QCDRs and qualified registries that do not submit any MIPS data, noting that recent years have been affected by flexibilities in MIPS participation related to the PHE that reduced the likelihood of clinicians using these QCDRs or qualified registries to report data. One commenter recommended that termination not be considered until there is more traction in MVP reporting.

*Response:* While we acknowledge that the PHE has had many effects on how

clinicians have participated in MIPS, we note that our proposal does not include a termination of a QCDR or qualified registry until the CY 2024 performance period, for which data may be submitted in 2025. We believe that there is ample time for a registry or QCDR to gather participants and submit data in the coming years. We also believe that waiting until such time that MVPs are more available would not be appropriate because clinicians need the tools to participate in MVPs when they first become available.

*Comment:* One commenter opposed our proposal to terminate QCDRs and qualified registries that do not report data because they noted that QCDR status allows them access to Medicare claims data and to serve as a vetting tool for their own data.

*Response:* While we hope that QCDRs and qualified registries can be used to support broader quality improvement efforts, we maintain the requirements for QCDRs for the purpose of participation in the Quality Payment Program. As stated in the proposed rule, we believe that having a vendor on a list that does not actively submit data offers confusion to clinicians and other interested parties.

*Comment:* One commenter noted that they did not oppose the proposal but recommended that terminated qualified registries and QCDRs be given the opportunity to reapply for participation in the future.

*Response:* A third party intermediary that has been terminated may apply again in the future.

After consideration of the public comments and for the reasons stated above and in the proposed rule (87 FR 46327), we are finalizing our proposals as proposed to terminate those QCDRs and qualified registries that are required to submit participation plans during the applicable self-nomination period under § 414.1400(b)(3)(viii) because they did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period, and continue to not submit MIPS data to CMS for the applicable performance period and are revising § 414.1400(e)(2).

#### (4) Auditing of Entities Submitting MIPS Data

##### (a) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77389 through 77390), we finalized that third party intermediaries submitting MIPS data must comply with auditing procedures as a condition of qualification and approval to participate in MIPS, including the requirement to make

available to CMS the contact information of each MIPS eligible clinician or group on behalf of whom it submits data (§ 414.1400(f)(1)).

(b) Revisions to the Requirement To Make Contact Information Available

In conjunction with our proposal to revise the definition of a third party intermediary to update the definition of a third party intermediary include subgroups and APM Entities (87 FR 46324), we proposed to revise the requirements codified at § 414.1400(f)(1) to account for third party intermediaries reporting on behalf of subgroups and APM Entities (87 FR 46327). Additionally, we also proposed to update the requirement to apply to third party intermediaries submitting data on behalf of virtual groups. Therefore, we proposed to update § 414.1400(f)(1) to require that the entity must make available to CMS the contact information of each MIPS eligible clinician, group, virtual group, subgroup, or APM Entity on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity phone number, address, and, if available, email. We invited public comment on the proposal.

We did not receive any public comments on these proposals. For the reasons stated above and in the proposed rule (87 FR 46327), we are finalizing the proposed revisions to § 414.1400(f)(1) as proposed.

(5) Requests for Information

(a) Request for Information on Third Party Intermediary Support of MVPs

We requested input on aspects of how third party intermediaries could support MVPs in the CY 2023 PFS proposed rule (87 FR 46327). We requested input on flexibility in measure selection in MVPs for third party intermediaries, barriers/burdens for third party intermediaries in supporting all measures, and whether there were technical resources CMS could provide that would be helpful for these third party intermediaries.

We thank the commenters for their input on these questions and will use the information gathered in consideration for future rulemaking.

(b) Request for Information on National Continuing Medical Education (CME) Accreditation Organizations Submitting Improvement Activities

In the CY 2023 PFS proposed rule (87 FR 46327 and 46328) we sought feedback on the value to clinicians of adding CME accreditation organizations as third party intermediaries. We

requested input on the general value of adding such organizations, as well as input on the criteria we should use in evaluating such organizations. We thank the commenters for their input on these issues and will use the information gathered in consideration for future rulemaking.

h. Public Reporting on the Compare Tools Hosted by HHS

In the CY 2023 PFS proposed rule (87 FR 46329 through 46330), we proposed to add a telehealth indicator to clinician and group profile pages, as technically feasible. Along with the indicator, we proposed to include a statement caveating, in a user-friendly way based on consumer testing, that the clinician or group only provides some, not all, services via telehealth. We proposed using Place of Service (POS) Code 02 (indicating telehealth) on paid physician & ancillary service (that is, carrier) claims, or modifier 95 appended on paid claims to identify telehealth services rendered. To keep the indicator current, we proposed using a 6-month lookback period and refresh the telehealth indicator on clinician profile pages bi-monthly.

Additionally, we proposed to publicly report Medicare procedural utilization data on the Compare tool clinician and group profile pages in a way that is understandable to patients and caregivers, based on user testing, and helps them make healthcare decisions (87 FR 46330 through 46331). Specifically, we proposed to: collapse Healthcare Common Procedure Coding System (HCPCS) codes using the Restructured Berenson-Eggers Type of Service (BETOS) Codes Classification System into procedural categories; use a 12-month lookback period and refresh data bi-monthly, as technically feasible. We also proposed publicly reporting this information no earlier than CY 2023.

For previous discussions on public reporting, we refer readers to the CY 2016 PFS final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through 53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), the CY 2020 PFS final rule (84 FR 63080 through 63083), the CY 2022 PFS final rule (86 FR 65550 through 65554) and the Care Compare: Doctors and Clinicians Initiative Page at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Compare-DAC>. We also note that as finalized at § 414.1305 “Physician Compare” is defined as the

Physician Compare internet website of CMS (or a successor website). As discussed in prior rulemaking, we note the current website is the Compare Tools hosted by the U.S. Department of Health and Human Services (HHS), referred to as “compare tool” throughout the final rule (86 FR 39466).

(1) Telehealth Indicator

Prior to the start of the COVID-19 public health emergency (PHE) in March 2020, Medicare paid for telehealth under limited circumstances, with telemedicine services restricted to rural or health professional shortage areas, established patients, or certain types of health care providers. In response to the ongoing PHE, we expanded Medicare payment for telemedicine services to increase access to care. According to the September 2021 Medicare Telemedicine Snapshot,<sup>544</sup> telehealth services have increased more than 30-fold since the start of the PHE and have been utilized by more than half of the Medicare population. With the increase in patients seeking telehealth due to the ongoing PHE, and CMS finalizing and expanding coverage of certain more permanent Category 1 and time-limited Category 3 telehealth services codes, adding an indicator to clinician and group profile pages would clarify for website users which clinicians offer telehealth services.

The Compare tool includes information on how beneficiaries may access care. Our research suggests that the addition of a telehealth indicator would meet a gap in the current information we provide on access to care and that such an indicator would be well understood by users. Keyword searches from the legacy Physician Compare website showed that, historically, website users search for telehealth information. Additionally, user testing we conducted with Medicare beneficiaries and caregivers showed that users accurately understood the meaning of a telehealth indicator and some even expressed an interest in knowing which services, specifically, might be offered via telehealth. Most users found the telehealth indicator to be important and useful when selecting a clinician. Telehealth is also one of beneficiaries’ primary service requests the Medicare Call Center receives on a monthly basis.

<sup>544</sup> CMS, *Medicare Telemedicine Snapshot: March 2020–Feb. 2021* (2021), <https://www.cms.gov/files/document/medicare-telemedicine-snapshot.pdf>. See also *Medicare Telemedicine Snapshot Data File*, <https://www.cms.gov/files/zip/medicare-telemedicine-snapshot-data-file.zip>.

We also believe that publicly reporting a telehealth indicator on clinician and group profile pages would further CMS's health equity goals. According to the aforementioned Medicare Telemedicine Snapshot, more than half of the Medicare population in almost every racial/ethnic group regardless of sex or Medicare and Medicaid status are utilizing telehealth services. Given the exponential increase in Medicare telehealth usage by Medicare users over the past 2 years, particularly by those in areas with limited healthcare access, and those who cannot physically access a clinician's office, publicly reporting information on which clinicians furnish services via telehealth would aid in more widely applicable health care provider selection across the Medicare and dually eligible Medicare and Medicaid populations, since some beneficiaries have preferences for, or limitations preventing them from seeing a clinician in-person. For these reasons, we proposed adding a telehealth indicator to clinician and group profile pages, as technically feasible. Along with the indicator, we proposed including a statement on the profile page caveating, in a user-friendly way based on consumer testing, that the clinician or group only provides some, not all, services via telehealth.

To develop the indicator that would display on the Compare tool clinician and group profile pages, we proposed to identify clinicians who perform telehealth services using POS Code 02 (indicating telehealth) on paid physician & ancillary service (that is, carrier) claims, or modifier 95 appended on paid claims. To keep the indicator current and address concerns that some telehealth codes are time-limited, we proposed using a 6-month lookback period and refresh the telehealth indicator on clinician profile pages bi-monthly, which is the same cadence in which we update other clinician directory information. Frequently updating the telehealth indicator information would ensure that when a time-limited Category 3 codes expires, a clinician who only bills telehealth services under that code would no longer have a telehealth indicator on their profile page.

We sought comment on all aspects of the proposals to add a telehealth indicator to clinician and group profile pages, as technically feasible, including the proposed approach to identifying clinicians and groups furnishing telehealth services and the proposed 6-month lookback period and bi-monthly data refresh frequency. The following is a summary of the public comments

received on the proposed Telehealth Indicator provisions and our responses:

*Comment:* All comments received on this proposal supported adding a telehealth indicator to clinician profile pages. The commenters noted the importance of the growth in the provision and usage of telehealth services throughout the PHE and that adding a telehealth indicator to profile pages would increase transparency and help patients, especially those who live in rural areas or are unable travel, find clinicians who may meet their needs. Two of the commenters noted the importance of a telehealth indicator for clinician types providing such services, even though some specialties, such as anesthesiology or emergency medicine, may not provide as many other telehealth services as others.

One of the commenters also supported our proposal to add a user-friendly statement, based on consumer testing, alongside the telehealth indicator, that not all services provided may be rendered via telehealth. This commenter also suggested adding an acknowledgment that individual patient access to telehealth services may be restricted due to limitations relating to interstate licensure.

Two commenters specifically supported the proposed approach for identifying clinicians and groups furnishing telehealth services using POS Code 02 (indicating telehealth) or modifier 95 appended on paid physician and ancillary service (that is, carrier) claims. One of these commenters also recommended using newly added POS Code 10. One commenter supported the proposed 6-month lookback period for identifying telehealth services and bi-monthly data refresh frequency for updating profile pages.

*Response:* We appreciate commenters' support and recommendations for the telehealth indicator and process for identifying and updating telehealth service information on clinician profile pages. We agree that knowing whether a clinician offers services via telehealth would be useful to patients and caregivers generally, beyond the PHE, particularly for those who have access to care barriers. We also agree that not all services may be provided via telehealth, sometimes due to interstate licensure restrictions, and will conduct consumer testing of such statements for inclusion on profile pages.

Additionally, we appreciate the suggestion to use the newly available POS Code 10 in addition to the proposed POS Code 02 and modifier 95 appended on paid physician and ancillary service claims to identify

telehealth services. Upon review, we agree with the recommendation. We had proposed to use POS Code 02 to broadly capture the provision of services via telehealth, including in the patient's home. At the time of the proposed rule, we were not aware of a recent update made to POS Code 02 revising the description from "telehealth" to "telehealth provided other than in patient's home" for locations in which telehealth services were furnished. In connection with this change to POS Code 02, newly added POS Code 10, telehealth provided in patient's home, was adopted by Medicare to more specifically identify the provision of telehealth in the patient's home. Since many telehealth visits occur in patients' homes, we believe it is appropriate and consistent with the intent of our proposal to use POS 10 in addition to POS 02 to identify clinicians providing telehealth services.

Regarding the comment that the telehealth indicator may not apply to all specialties, we proposed that the telehealth indicator would only show on profile pages for clinicians in which we identify telehealth services using the appropriate POS codes or modifier 95 on paid physician and ancillary claims (see 87 FR 46329 and 46330). That is, no telehealth indicator will show on a clinician's profile page if we do not identify telehealth services rendered using these criteria.

After consideration of the public comments, as well as coding review and operational updates since the time of the proposed rule, we are finalizing these Telehealth Indicator proposals with several modifications. We proposed publicly reporting a telehealth indicator on clinician and group profile pages, however we are finalizing publicly reporting the indicator on clinician profile pages only. While we recognize that publishing telehealth indicators on both clinician and group profile pages may be helpful to consumers, it is not operationally feasible at this time to publish telehealth indicators on group profile pages with accuracy, given clinician turnover at group practices and resulting data implications. We believe that including the telehealth indicator on clinician profile pages only will provide the most accurate and current information for consumers.

Upon review of the changes to POS 02 to include telehealth furnished in locations other than a patient's home and Medicare's adoption of the newly added POS Code 10 for telehealth services rendered on patients receiving such services from home, we are finalizing use of POS 10 in addition to

using POS Code 02 or modifier 95 appended on paid physician and ancillary service claims.

We are also finalizing our proposals to use a 6-month lookback period and bi-monthly update frequency, as technically feasible.

## (2) Publicly Reporting Utilization Data on Profile Pages

Section 104(a) of MACRA provides that, beginning with 2015, the Secretary shall make publicly available on an annual basis, in an easily understandable format, information with respect to physicians and, as appropriate, other eligible professionals, on items and services furnished to Medicare beneficiaries. The information made available must be similar to the physician and other supplier utilization data we have historically made available and shall include information on the number of services furnished by the physician or other eligible professional under Medicare, which may include information on the most frequent services furnished or groupings of services. Section 104(e) of MACRA requires that we integrate this data into the Compare tool.

To satisfy section 104(e), we implemented a policy of including utilization data in a downloadable format from late 2017 using the most currently available data and that the specific codes to be included were determined using data analysis and reported at the eligible clinician level (80 FR 71130). We also finalized a policy of continuing to include utilization data in the downloadable database (81 FR 77398). This information continues to be available today in the Medicare Provider Data Catalog (PDC) available at <https://data.cms.gov/provider-data/topics/doctors-clinicians>. Separately, we have reported on the Compare tool clinician training information as well as a clinician's primary and secondary specialties.<sup>545</sup>

In the CY 2022 PFS proposed rule, we solicited comments on publicly reporting utilization data on clinician and group profile pages (86 FR 39466 through 39469). We received four responses, none of which directly addressed our Request for Information (RFI) questions. We stated in the CY 2023 PFS proposed rule (87 FR 46330 through 46331) that we believe it would be useful to patients and their

caregivers, when making healthcare decisions, if a subset of procedures performed were publicly reported on clinician profile pages in an understandable and meaningful way. To date, we have gathered utilization data for procedures from physician/supplier Medicare Part B non-institutional claims on certain services and procedures and published it in the public use file (PUF) file entitled "Physician and Other Supplier Data." These data are useful to the healthcare industry, healthcare researchers, and other interested parties who have the expertise to accurately interpret these data and use them in meaningful analyses. However, this information is presented in a technical manner that is not easily accessible or usable by patients, who do not frequently visit [data.cms.gov](https://data.cms.gov) or understand medical procedure coding. Additionally, the amount of information available in the PUF may overwhelm patients and caregivers.

As explained in the proposed rule, we envision that reporting utilization data on patient-facing clinician profile pages would provide two main areas of benefit. The first is to allow for more granular clinician searches. Patients would not only be able to find specific types of clinicians but also those clinicians who have performed specific types of procedures. The second is to provide categories of utilization data in a plain language display that is more usable to patients and their caregivers than what is available in the PDC.

In order to publicly report procedural utilization data in a meaningful way to patients and caregivers, rather than showing thousands of rows of individual HCPCS data, as we do for the research community in the PDC, we proposed to collapse HCPCS codes using the Restructured Berenson-Eggers Type of Service (BETOS) Codes Classification System into procedural categories. Restructured BETOS is a taxonomy that allows for the grouping of health care services codes for Medicare Part B into clinically meaningful categories and subcategories. Additional Restructured BETOS information is available at <https://data.cms.gov/provider-summary-by-type-of-service/provider-service-classifications/restructured-betos-classification-system>.

For example, applying categories would enable us to list that a clinician performs knee arthroplasties, which we could further simplify to knee replacements for understandability instead listing each of nine unique procedure codes indicating the specifics of exactly which bones and implants were utilized. We explained that we

would exclude non-specific procedure codes, such as evaluation and management (E&M) codes for office visits which do not provide context about the care provided and low complexity procedures such as basic wound care or administering a vaccine because these codes encompass many types of care and are not specific enough about the services covered. For procedures in which no Restructured BETOS categories are available, we proposed to utilize procedure code sources used in MIPS, such as the procedure categories already defined for MIPS cost or quality measures.

Prior to publishing this data, we explained that we would conduct user testing with patients and caregivers to determine which procedures are of most importance, as well as how to best display and plain language utilization data on profile pages. User testing would also inform the appropriate context necessary to display utilization data in a meaningful way that ensures it is interpreted accurately. We noted that the utilization data shown on profile pages would only reflect Medicare claims data. Though this would provide information to patients and caregivers about which procedures are covered by Medicare, the utilization data would not include procedures performed for patients who have other types of insurance. For this reason, we noted that we would include a disclaimer on profile pages that the utilization data only represents the care that has been provided to Medicare beneficiaries and does not include those of patients with other forms of insurance.

In summary, we proposed publicly reporting Medicare procedural utilization data on the Compare tool clinician and group profile pages in a way that is understandable to patients and caregivers, based on user testing, and helps them make healthcare decisions. We proposed publicly reporting procedural utilization data no earlier than CY 2023 and using a 12-month lookback period and bi-monthly data refresh frequency, as technically feasible. We sought comment on all aspects of the proposal, including the proposed approaches to identifying the most relevant and understandable procedural categories.

The following is a summary of the public comments received on the proposed Publicly Reporting Utilization Data on Profile Pages provisions and our responses:

**Comment:** Some commenters supported the utilization data proposal, noting that publicly reporting this information promotes greater

<sup>545</sup> CMS, *Physician Compare Report to Congress* 36 (2014), available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/physician-compare-initiative/Downloads/Physician-Compare-Report-to-Congress.pdf>.

transparency and will help patients find the right clinicians for specific procedures.

*Response:* We agree that publicly reporting utilization data on clinician profile pages will promote transparency and help patients find clinicians who can better serve their needs, while also fulfilling sections 104(a) and (e) of the MACRA.

*Comment:* Many commenters opposed publicly reporting utilization data on procedures performed on clinician profile pages. These commenters' concern related to patient understanding of the information, including incorrectly equating higher volume of procedures to higher quality of care and better outcomes, especially for more complex, rare procedures. One of these commenters suggested adding a disclaimer that the volume of procedures performed does not always indicate higher quality of care. Commenters also expressed concern that patients could misinterpret that the clinician only performs the procedures shown on the profile page or not understand the coding data in its entirety. One commenter thought these data may be too confusing for patients to understand even with a disclaimer stating that listed information only includes Medicare data and therefore may not be reflective of the physician's total volume of a specified procedure. Even with these concerns, most emphasized the need for rigorous consumer testing to ensure accurate understanding of the information, if CMS moves forward with finalizing this policy. Another commenter suggested conducting clinician pilot testing.

*Response:* To clarify, we intend to start the reporting of utilization data on patient-facing clinician profile pages on a rolling basis (no sooner than CY 2023) and to expand the reporting of procedure categories over time. When we referred to conducting user testing to determine which "procedures are of most importance" to users (87 FR 46331), we meant that we would prioritize the publication of such procedures as public reporting begins. We appreciate and understand the concern that a higher volume of procedures does not always correlate to better quality of care and successful outcomes. Therefore, we are modifying the criteria that we will use to prioritize the publication of commonly performed procedures to better take this into account. Such procedures will meet one or more of the following criteria: have evidence of a positive relationship between volume and quality in the published peer reviewed clinical research; are affiliated with existing

MIPS measures indicating importance to CMS; represent care that a patient might shop for a clinician to provide; and/or is a U.S. Department of Health and Human Services (HHS) priority. We will not initially prioritize complex, rare procedures.

Regarding concerns that utilization data may confuse or mislead patients, we note that we will not display individual procedure codes on clinician profile pages, rather we will group them using Restructured BETOS categories, as discussed in this section. Furthermore, since the time of the proposed rule, we have started comprehensive user testing of plain language descriptions for several procedure categories as well as for other statements, some of which are based on public comments received, to help patients accurately understand the information, including explanations that: the data do not reflect all procedures the clinicians perform; the information shown only reflects procedures performed on patients with Medicare; and that the utilization data on their own are not the only indicator of quality. Preliminary findings show that patients and caregivers: understand this language; would not select a provider based on this information alone; and find the information helpful but would like the procedure volume to also reflect patients with other insurance if possible. We plan to continue testing including plain language regarding how to interpret the utilization information in the context of quality, rural vs. non-rural locations, and other information available on the profile page. We will explore, based on user testing, adding procedures for patients with other insurance, such as Medicare Advantage (MA) and Medicaid, in the future.

We have never conducted clinician pilot testing of information publicly reported on clinician and group profile pages, since the primary users are patients and caregivers, such as family members of patients looking for a provider. However, we appreciate the suggestion and may consider ways of engaging with clinicians in the future.

*Comment:* Two commenters recommended having a clinician review and correction process that would allow clinicians to update and correct procedural and other information listed on their profiles if needed.

*Response:* Since claims are the data source for identifying procedures performed, we encourage clinicians to first look into any billing errors. However, as with any other questions or concerns regarding the information on clinician and group profile pages on the Compare tool, interested parties may

contact the Quality Payment Program at 1-866-288-8292 or by email at [QPP@cms.hhs.gov](mailto:QPP@cms.hhs.gov). Those who are hard of hearing can dial 711 to be connected to a Telecommunications Relay Service (TRS) Communications Assistant. We also encourage clinicians to ensure their information is current in the Provider Enrollment, Chain, and Ownership System (PECOS) and to visit the Doctors and Clinicians initiative page for more information <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Care-Compare-DAC-Initiative>.

*Comment:* One commenter suggested using longer than a 12-month lookback period, since it may disadvantage clinicians who perform a particular procedure infrequently but have years of practice. The commenter did not suggest a specific length of time to use instead of 12-months.

*Response:* We understand there are a number of reasons a clinician may not have performed a certain procedure within the previous year. However, we believe the 12-month lookback period is appropriate for three main reasons. First, based on preliminary user testing conducted since the time of the proposed rule, early findings show that most patients and caregivers believe 12 months is an appropriate timeframe, since they want to make decisions based on clinicians' recent experience. Second, although the 12-month timeframe would capture some procedures a clinician hasn't performed recently (for instance if there is a seasonality component related to the number of procedures performed), showing procedural experience over a longer timeframe may mislead patients. For example, if we displayed coronary artery bypass graft (CABG) procedures over the last five years on a clinician profile page, it may be less desirable to the patient if most were from three years ago, prior to the PHE. Third, the procedure information in the PUF reflects a calendar year (that is, a 12-month period), which provides operational efficiency in keeping utilization data consistent on both the Compare tool and in the PDC.

With these considerations in mind, and as discussed earlier in this section, we will continue conducting comprehensive and robust user testing of all utilization data, including the lookback period, to ensure appropriate interpretation of the information.

*Comment:* Two commenters expressed concern that BETOS is outdated, has broad categories and, as a result, may lead to errors that mislead patients. Furthermore, one of these commenters stated there is no standard

or systematic way to group procedures by Common Procedural Terminology (CPT) or HCPCS codes beyond the BETOS system. One of these commenters also expressed concern that Restructured BETOS does not contain all procedure codes.

**Response:** In response to the concern that BETOS is outdated, we note that we proposed using Restructured BETOS, not original BETOS (87 FR 46330 and 46331). Restructured BETOS data are updated annually first released in 2020, the most recent of which are from 2021. As stated on the website, available at <https://data.cms.gov/provider-summary-by-type-of-service/provider-service-classifications/restructured-betos-classification-system>, Restructured BETOS provides “information that allows researchers to group Medicare Part B healthcare service codes into clinically meaningful categories and subcategories.” While we did consider the Clinical Classifications Software (CCS) classification system, Restructured BETOS categories represented the most appropriate level of detail to reflect patient and caregiver needs. We are not aware of any other more recent or available sources of this type of categorization and did not receive any recommendations of other sources in response to our proposal. We also did not receive any source suggestions in response to the Utilization Data RFI in the CY 2022 PFS Proposed Rule (86 FR 39468 and 39469).

Regarding the concern about Restructured BETOS not containing all procedures, we acknowledge that while the system classifies many commonly performed procedures, it does not classify all of them. For this reason, we proposed that we would utilize procedure code sources used in MIPS, such as the procedure categories already defined for MIPS cost or quality measures, for procedures in which no Restructured BETOS categories are available (87 FR 46331). For these reasons, we believe Restructured BETOS is the most appropriate procedure code categorization system available at this time. We will also use plain language to describe each category on profile pages in an effort to prevent confusion about which procedures are included and excluded.

**Comment:** One commenter noted that “incident to” billing may limit procedure attribution for certain clinicians, such as nurse practitioners (NPs) and physician assistants (PAs).

**Response:** We agree that if a clinician, such as a NP or PA, bills Medicare incident to a physician, then we would attribute a procedure billed in this way to the physician listed on the claim.

However, we believe such attribution is appropriate, since the billing physician supervised and is accountable for the procedure billed. Additionally, we note that the attribution concern is a non-issue for clinicians who only bill Medicare incident to a supervising physician, since these clinicians would not have a Compare tool profile page upon which we could display utilization data. Only clinicians who bill Medicare directly have Compare tool profile pages.

Moreover, a number of NPs and PAs do bill Medicare directly and therefore, have profile pages. As a result, we expect that some of these types of clinicians may have procedural data available to show on profile pages. Data analyses and consumer testing will evaluate procedural information for a range of clinician types, so we will include this type of information on profile pages, including for non-physician clinicians, as appropriate and technically feasible. We also note that some utilization data for NPs and PAs is already available in the PDC, available at <https://data.cms.gov/provider-data/topics/doctors-clinicians>.

We did not receive any comments on our proposal to exclude non-specific procedure codes, such as evaluation and management (E&M) codes and low-complexity services. We also did not receive comments on our proposal to utilize procedure code sources used in MIPS cost or quality measures for procedures in which no Restructured BETOS categories are available.

After consideration of the public comments and operational updates since the time of the proposed rule, we are finalizing these proposals with one modification. We proposed publicly reporting utilization data on clinician and group profile pages, however we are finalizing publicly reporting this information on clinician profile pages only. While we recognize that publishing utilization data on both clinician and group profile pages may be helpful to consumers, it is not operationally feasible at this time to publish utilization data on group profile pages with accuracy, given clinician turnover at group practices and resulting data implications. We believe that including utilization data on clinician profile pages will provide the most accurate and current information for consumers.

We are finalizing our proposals to publicly report Medicare procedural utilization data on the Compare tool clinician profile pages in a way that is meaningful to patients and caregivers, based on user testing. We are finalizing using Restructured BETOS to categorize

procedures in an understandable way and that, for procedures in which no Restructured BETOS categories are available, we will utilize procedure code sources used in MIPS, such as the procedure categories already defined for MIPS cost or quality measures. We are also finalizing publicly reporting procedural utilization data no earlier than CY 2023 and using a 12-month lookback period and bi-monthly data refresh frequency, as technically feasible. Specifically, prior to each data refresh, we will use the preceding 12 months with a 3-month claims runout period. For example, we would use claims received between January 1, 2023 and March 31, 2024 for dates of service between January 1, 2023 and December 31, 2023 for a spring 2024 data refresh.

To address concerns raised related to patient understanding of publicly reported procedure categories, we are modifying the criteria we will use to prioritize the publication of commonly performed procedures. Priority procedures will meet one or more of the following criteria: have evidence of a positive relationship between volume and quality in the published peer reviewed clinical research; are affiliated with existing MIPS measures indicating importance to CMS; represent care that a patient might shop for a clinician to provide; and/or are an HHS priority. We will not initially prioritize complex, rare procedures. Patients and caregivers have displayed understanding of plain language procedure category descriptions in recent testing. We will continue conducting comprehensive and robust consumer testing to better ensure this information is both interpreted correctly and meaningful to patients and their caregivers when making healthcare decisions.

## 11. Overview of the APM Incentive

### a. Overview

Under the Quality Payment Program, an eligible clinician who is a Qualifying APM Participant (QP) for a performance year earns an APM Incentive Payment, which is made in the corresponding payment year for payment years 2019 through 2024. As provided in our regulation at § 414.1450(d), this payment is made based on the clinician's QP status in the QP Performance Period that is 2 years prior (for example, the 2022 APM Incentive Payment will correspond to the 2020 performance year), and at § 414.1450(b)(1) the APM Incentive Payment is equal to 5 percent of the eligible clinician's estimated aggregate payments for covered professional services in the base period (the year

between the QP performance and payment years).

#### b. APM Incentive Payment Recipient

In the CY 2017 Quality Payment Program final rule (81 FR 77008, 77487), we initially finalized a policy that the APM Incentive Payment is made to the TIN associated with the APM Entity through which an eligible clinician becomes a QP during the QP Performance Period. In the CY 2021 PFS final rule (85 FR 84472, 84949 through 84950), we revised our approach to identifying the TIN or TINs to which we make the APM Incentive Payment at § 414.1450(c) to use a stepwise hierarchy to identify an appropriate payee TIN or TINs.

#### c. Public Notice

As specified in § 414.1450(c)(8), we notify QPs for whom we are unable to identify an appropriate TIN to which to make the APM Incentive Payment through a notice published annually in the **Federal Register**. In that notice, we include information on how the QP can update their information to enable CMS to make the APM Incentive Payment. Under our current policy, the deadline for providing CMS with updated information is the later of November 1 of each payment year or 60 days from the date on which we make the initial round of APM Incentive Payments for such year.

Section 414.1450(d) specifies that we make APM Incentive Payments as soon as practicable following calculation and validation of the APM Incentive Payment amount, but in no event later than 1 year after the incentive payment base period, defined in § 414.1305 as the calendar year prior to the year in which CMS disburses the APM Incentive Payment. Based on our experience and lessons learned in disbursing APM Incentive Payments, we have determined that the November 1 cutoff date for QPs to provide us with updated information does not leave sufficient time for us to process the information provided and make payments within the timeframe established in § 414.1450(d). In addition, we made operational adjustments beginning in the 2021 payment year that allowed us to make the initial round of APM Incentive Payments earlier in the calendar year than was possible in the first 2 payment years. Because we are now able to notify QPs for whom we have not identified a TIN to which to make the APM Incentive Payment through the **Federal Register** notice earlier in the payment year, and because we have found that we need additional time to process the updated information we receive in

response to the notice, we proposed to change the specified cutoff date from November 1 to September 1 of the payment year, or 60 days from the date on which we make the initial round of payments, whichever is later. As is the case under the current policy, after the specified cutoff date, we will no longer accept updated information from QPs or their representatives, and any claims to an APM Incentive Payment for such QPs for the payment year will be forfeited.

As discussed in the proposed rule, we believe this change to the cutoff date for response to the public notice would allow us to disburse APM Incentive Payments more efficiently and effectively, reducing the time within which we make the remaining APM Incentive Payments for the payment year. This change would also improve our ability to make all APM Incentive Payments within the timeframe established under § 414.1450(d), and therefore, affected QPs would not have to wait as long to receive their payments.

We sought comment on the proposal to amend § 414.1450(c)(8) to change the cutoff date for response to the public notice from November 1 to September 1 of each payment year, or 60 days from the date on which we make the initial round of APM Incentive Payments, whichever is later.

We did not receive any comments on the proposed revisions to the public notice provisions. For reasons stated previously in this section and in the proposed rule (87 FR 46332), we are finalizing these revisions to the public notices provisions as proposed.

#### d. Request for Information on Quality Payment Program Incentives Beginning in Performance Year 2023

Section 1833(z)(1) of the Act provides for APM Incentive Payments in each year for eligible clinicians who are QPs with respect to a year from 2019 through 2024. Specifically, for each of the specified payment years, in addition to the amount of payment that would otherwise be made for covered professional services furnished by an eligible clinician who is a QP for such year, there is an additional lump sum APM Incentive Payment equal to 5 percent of the eligible clinician's estimated aggregate payment amounts for such covered professional services for the preceding year. Covered professional services is defined at § 414.1305, with reference to the statutory definition at section 1848(k)(3) of the Act, as services for which payment is made under, or based on, the PFS and which are furnished by an eligible clinician (physician;

practitioner as defined in section 1842(b)(18)(C) of the Act; PT, OT, or speech-language pathologist; or qualified audiologist as defined under section 1861(l)(4)(B) of the Act.

In the CY 2017 Quality Payment Program final rule (81 FR 77445), we established a policy that, beginning with the 2017 QP Performance Period, the QP Performance Period would be the calendar year that is 2 calendar years before the payment year for the APM Incentive Payment. Thus, we established that the first QP Performance Period would begin on January 1, 2017, the first "base year" (established at 81 FR 77481 and 77482) for which we would use claims for professional services to calculate the 5 percent APM Incentive Payment amount would be in 2018, and the first payment year for the APM Incentive Payment would be in 2019 as required by the statute. The QP Performance Period, base year, and payment year continue in this fashion through payment year 2024, which is the final year for which the statute authorizes an APM Incentive Payment.

After performance year 2022, which correlates with payment year 2024, there is no further statutory authority for a 5 percent APM Incentive Payment for eligible clinicians who become QPs for a year. In performance year 2023, which correlates with payment year 2025, the statute does not provide for any type of incentive for eligible clinicians who become QPs. Beginning with performance year 2024, which correlates with payment year 2026, section 1848(d)(1) of the Act provides for the application of two different PFS conversion factors depending on whether the services are furnished by an eligible clinician who is a QP for the year. The PFS conversion factor is the fixed-dollar constant, updated each year in accordance with statute, that is used to convert the RVUs (relative value units) for a service, after application of geographic practice cost indices to adjust for cost variations, into PFS payment amounts. Section 1848(d)(20) of the Act specifies that, beginning in CY 2026 (which is the payment year that correlates with the 2024 QP Performance Period under the Quality Payment Program), the update to the "qualifying APM conversion factor" (hereafter, "QP conversion factor") that applies for eligible clinicians who are QPs with respect to the payment year is 0.75 percent, and the update to the "non-qualifying APM conversion factor" (hereafter, "general conversion factor") that applies for eligible clinicians who are not QPs with respect to the year (as well as other types of

suppliers that are not eligible clinicians under the Quality Payment Program) is 0.25 percent. With the differentially higher 0.75 percent update to the QP conversion factor compounding each year beginning with CY 2026, compared to the 0.25 percent update to the general conversion factor in each year, the two PFS conversion factors will continue to diverge with each year, as illustrated in Figure 5.

Beginning in payment year 2025, the statutory incentive structure under the Quality Payment Program for eligible clinicians who participate in Advanced

APMs stands in contrast to the incentives for MIPS eligible clinicians. Specifically, as described in 87 FR 46333 of the proposed rule, we anticipate that the maximum potential positive payment adjustment that could be applied under MIPS for payment years beginning in 2025 will be at or above 6.9 percent, and the corresponding maximum negative payment adjustment will be 9 percent. While only some MIPS eligible clinicians could earn the maximum positive payment adjustment, there is

nonetheless a significant range of potential positive payment adjustments under MIPS that would exceed the differentially higher QP conversion factor beginning in payment year 2026 and for many years to come. As illustrated in Figure 5, the QP conversion factor, with the compounded differentially higher 0.75 percent update in each year, is not expected to equate to the anticipated maximum available positive payment adjustment under MIPS until after CY 2035.

BILLING CODE 4150-28-P

**FIGURE 5: PFS Conversion Factors vs. Maximum MIPS Payment Adjustments\***

\*This graph depicts the PFS conversion factors that would apply for each year given the annual updates as specified

in current statute, and does not otherwise depict an estimate of PFS payment rates for future years.

**BILLING CODE 4150-28-C**

We note again that the statute does not provide for any financial incentives for eligible clinicians who achieve QP status in QP Performance Period 2023/ payment year 2025. Because section 1848(q)(1)(C)(ii)(I) of the Act explicitly excludes eligible clinicians who are QPs for a year from being considered as MIPS eligible clinicians, eligible clinicians who are QPs for a year are not subject to MIPS for that year, and thus, cannot receive MIPS payment adjustments. As such, eligible clinicians who are determined to be QPs in performance year 2023 will be paid under the PFS in payment year 2025 at the same rate as any other eligible

clinicians who are not subject to MIPS and suppliers that are not subject to the Quality Payment Program at all.

We recognize that the lack of any available financial incentive under the Quality Payment Program for QPs for the 2025 payment year could affect the willingness of some eligible clinicians to participate in Advanced APMs in performance year 2023. Moreover, we recognize that the substantial difference between the QP conversion factor that will apply for QPs beginning in CY 2026 and maximum positive payment adjustment available under MIPS might affect the willingness of eligible clinicians to participate in Advanced

APMs for several years to come. We recognize that there are other factors that affect an eligible clinician's decision whether to participate in an Advanced APM, including the avoidance of MIPS reporting requirements and the availability of shared savings and other incentives within the various Advanced APMs.

However, as explained in the proposed rule (87 FR 46333), we are concerned that the statutory incentive structure under the Quality Payment Program beginning in the 2023 performance year and corresponding 2025 payment year could potentially lead to a drop in Advanced APM

participation, and a corresponding increase in MIPS participation as eligible clinicians may believe their payments would be higher if they receive the MIPS payment adjustment. While it has been CMS's goal to increase MIPS participation, we continue to believe MIPS should be a first step on a glide path towards Advanced APM participation. Furthermore, we are concerned that a significant reduction in Advanced APM participation stemming from changes in financial incentives under the Quality Payment Program could potentially bias the CMS Innovation Center's model tests of voluntary Advanced APMs by leading clinicians who have performed well in Advanced APMs on both cost and quality metrics, to leave participation in the Advanced APM in which they currently participate, or decide not to apply for and participate in Advanced APMs, thereby interfering with the evaluation of current model tests and interfering with potential participation in future models.

We explained in the proposed rule that we also are concerned that a shift of eligible clinicians into MIPS and out of Advanced APMs would be likely to affect the availability and distribution of funds in the budget-neutral MIPS payment pool. The average MIPS final score for MIPS eligible clinicians who were participants in MIPS APMs in 2020 was 96.24 points while the average MIPS final score for all other MIPS eligible clinicians was 84.42 points. Given these statistics, we can reasonably anticipate that eligible clinicians who would shift away from participation in Advanced APMs and into MIPS would increase the relative number of high-performing MIPS eligible clinicians likely to earn a positive MIPS payment adjustment. As a result of more MIPS eligible clinicians earning a positive MIPS payment adjustment, we would expect to see a corresponding reduction in the average and maximum positive MIPS payment adjustment due to the statutory requirement under section 1848(q)(6)(F)(ii) of the Act to maintain budget neutrality in MIPS.

We have considered a range of potential administrative actions within our authority that might address these concerns. For example, we explored options for modifying the Advanced APM criteria or the requirements for current and future Advanced APMs to permit some degree of flexibility for eligible clinicians to choose whether to be considered under either the MIPS or the Advanced APM track of the Quality Payment Program. We have found it difficult to conceive of potential administrative options that would

increase flexibility for eligible clinicians without drastically modifying characteristics of Advanced APMs, including CEHRT use, quality-based payment, and financial risk. After further consideration, we have concluded that it would be more prudent to forego administrative action for the 2023 performance period and 2025 payment year, and instead sought public input that we will consider in identifying potential options for the 2024 performance period and 2026 payment year of the Quality Payment Program (and potentially beyond). Specifically, we sought public comment on whether administrative action is needed beginning in the 2024 performance period and 2026 payment year, and if so, what would be the best approach to address the multi-faceted issues that arise with the end of statutory authority for an APM Incentive Payment for QPs and the transition to the differential QP and general conversion factors beginning in payment year 2026, which correlates to the 2024 performance year.

Taking into account that the current statute: (1) requires us to make QP determinations for eligible clinicians participating in Advanced APMs; (2) defines Advanced APMs as those APMs that require CEHRT use, sets payment based on MIPS-comparable quality measures, and assumption of more than nominal financial risk, as described at § 414.1415; and (3) specifically excludes QPs from being MIPS eligible clinicians, we are seeking input on what, if any, administrative actions eligible clinicians and APM Entities would potentially find helpful to better balance the payment incentives within the Quality Payment Program going forward, while continuing to encourage eligible clinicians and APM Entities to participate in APMs that align with the broader goals of CMS.

We noted that we are particularly interested in public comments in response to the questions asked in the proposed rule, which will help us to gauge options going forward. We also noted that we considered holding a public listening session in the near future to gather additional feedback on these questions and ideas.

We thank commenters for providing feedback on this topic through this RFI and for participation in our public listening session. We will continue monitoring this issue and we will continue to engage with the public on this topic.

## e. Advanced APMs

### (1) Advanced APM Criteria

#### (a) General Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77408), we finalized the criteria that define an Advanced APM based on the requirements set forth in sections 1833(z)(3)(C) and (D) of the Act. An Advanced APM is an APM that:

- Requires its participants to use certified EHR technology (CEHRT) (81 FR 77409 through 77414);
- Provides for payment for covered professional services based on quality measures comparable to measures under the quality performance category under MIPS (81 FR 77414 through 77418); and
- Either requires its participating APM Entities to bear financial risk for monetary losses that are in excess of a nominal amount, or is a Medical Home Model expanded under section 1115A(c) of the Act (81 FR 77418 through 77431). We refer to this criterion as the financial risk criterion.

In this section, we address policies regarding several aspects of the Advanced APM criteria. We provide a clarification around payment based on quality measures and a proposal to modify the period of applicability for the generally applicable nominal amount standard.

#### (b) Payment Based on Quality Measures

In the CY 2017 Quality Payment Program final rule, we finalized the requirement for Advanced APMs that payment be based on quality measures at § 414.1415(b). In the CY 2019 PFS final rule (83 FR 59915 through 59938), we revised § 414.1415(b)(2) to clarify, effective January 1, 2020, that at least one of the quality measures upon which an Advanced APM bases payment must either be finalized on the MIPS final list of measures, as described in § 414.1330; endorsed by a consensus-based entity; or determined by CMS to be evidenced-based, reliable, and valid. We also revised the requirement at § 414.1415(b)(3) that the quality measures upon which an Advanced APM bases payment must include at least one outcome measure (unless there are no available or applicable outcome measures included in the MIPS final quality measures list for the Advanced APM's first QP Performance Period) to provide, effective January 1, 2020, that at least one such outcome measure must either be finalized on the MIPS final list of measures as described in § 414.1330; endorsed by a consensus-based entity; or determined by CMS to be evidenced-based, reliable, and valid.

It has come to our attention that it may not be clear whether the two criteria at § 414.1415(b) require different quality measures. That is, interested parties have questioned whether two separate measures are required with one to meet each criterion, or whether it is sufficient that a single quality measure meets both of the criteria. Therefore, we proposed to revise the regulation at § 414.1415(b)(3) and proposed to add paragraph (b)(4) to clarify that the requirement for Advanced APMs that payment must be based on quality measures as specified at § 414.1415(b)(1) can be met through the use of a single quality measure that meets the criteria under both § 414.1415(b)(2) and (b)(3). Likewise, consistent with our practice of aligning Advanced APM and Other Payer Advanced APM policies to the extent feasible and appropriate, we also proposed to revise § 414.1420(c)(3)(ii) and to add paragraph (c)(4) to clarify that the requirement for Other Payer Advanced APMs that payment must be based on quality measures as specified at § 414.1420(c)(1) can be met through the use of a single quality measure that meets the criteria at § 414.1420(c)(2) and (c)(3). We sought public comment on the proposals. We did not receive any comments on the proposed revisions to payment based on quality measures. For the reasons stated previously in this section and in the proposed rule (87 FR 46335), we are finalizing these revisions to the payment based on quality measures provisions as proposed.

#### (c) Generally Applicable Nominal Amount Standard

In the CY 2017 Quality Payment Program final rule, we finalized the amount of the generally applicable revenue-based nominal amount standard at 8 percent for the first two QP Performance Periods only, and we sought comment on what the revenue-based nominal amount standard should be for the third and subsequent QP Performance Periods. Specifically, we sought comment on setting the revenue-based standard: (1) for 2019 and later at up to 15 percent of revenue; or (2) at 10 percent so long as risk is equal to at least 1.5 percent of expected expenditures for which an APM Entity is responsible under an APM (81 FR 77427).

In the CY 2018 Quality Payment Program final rule, we finalized at § 414.1415(c)(3)(i)(A) our proposal to maintain the generally applicable revenue-based nominal amount standard at 8 percent for the 2019 and 2020 QP Performance Periods. We also specified that the standard is based on the average estimated total Medicare

Parts A and B revenue of all providers and suppliers in participating APM Entities. We stated that we would address the nominal amount standard for QP Performance Periods after 2020 in future rulemaking (82 FR 53838).

In the CY 2019 PFS final rule (83 FR 59922 through 59923), we revised § 414.1415(c)(3)(i)(A) to maintain the generally applicable revenue-based nominal amount standard at 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities for QP Performance Periods 2021 through 2024.

At the same time, we established the generally applicable revenue-based nominal amount standard for Other Payer Advanced APMs at § 414.1420(d)(3)(i) to reflect the same 8 percent standard for QP Performance Periods for years 2021 through 2024, but based on the total combined revenues from the payer to providers and other entities under the payment arrangement.

We proposed to amend § 414.1415(c)(3)(i)(A) to permanently establish the generally applicable revenue-based nominal amount standard at 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities for the QP Performance Period. We proposed this change because the nominal amount standard of 8 percent has worked well and we noted that we are making the change permanent to provide continuity in policy into the future.

We also proposed to amend § 414.1420(d)(3)(i) to permanently establish the generally applicable revenue-based nominal amount standard at 8 percent of the total combined revenues from the payer to providers and other entities under the payment arrangement, consistent with our longstanding practice of aligning Advanced APM policies with Other Payer Advanced APM policies to the extent feasible and appropriate. We proposed to amend these regulations to remove the specified end date of the 2024 QP Performance Period, such that the 8 percent standard would apply for all future performance years beginning with the 2023 QP Performance Period. The proposal would not change the current generally applicable revenue-based nominal amount standard. While we will continue to evaluate the generally applicable revenue-based nominal amount standard going forward and may determine at some point that it would be appropriate to propose to change the generally applicable revenue-based nominal amount standard, we noted that we believe that

the current standard of 8 percent continues to be appropriate at this time for both the Advanced APM and Other Payer Advanced APM financial risk criteria.

We sought public comment on the proposals to amend § 414.1415(c)(3)(i)(A) and § 414.1420(d)(3)(i) to make permanent the 8 percent level of the generally applicable revenue-based nominal amount standard such that it would apply to all future QP Performance Periods beginning January 1, 2023.

The following is a summary of the public comments received on the proposed revisions to Generally applicable nominal amount standard and our responses:

*Comment:* Some commenters suggested that rather than freeze the generally applicable revenue-based nominal amount standard at 8 percent, we should reduce that risk threshold to a figure closer to the financial risk standard used for Medical Home Models. Some commenters indicated that such a change would be likely to induce more participation in these models.

*Response:* We understand that some eligible clinicians and practices may be hesitant to join an Advanced APMs in part because of the financial risk involved. However, section 1833(z)(2)(iii)(II)(cc) of the Act generally requires that, to be an Advanced APM, to the APM require participants to take on more than nominal financial risk. Reducing that financial risk standard to a point where participants are no longer concerned about the financial implications of poor performance under the model is, by definition, nominal. We believe that the 8 percent standard that was set in the initial years of the program should not be increased at present because there are still some geographic regions and specialties that have not yet had the opportunity to join an Advanced APM under the current, relatively low, risk standard, and we continue to believe that maintaining the current standard is appropriate.

*Comment:* Several commenters expressed support for continuing the 8 percent generally applicable revenue-based nominal amount standard for all future years.

*Response:* We thank commenters for their support.

After considering public comments, we are finalizing the policy as proposed.

#### (d) Medical Home Model 50 Eligible Clinician Limit

In the 2017 Quality Payment Program final rule (81 FR 77428), we finalized a policy for the Medical Home Model

nominal financial risk criterion to set a limit of 50 on the number of eligible clinicians in an organization that participates in an Advanced APM through a Medical Home Model.

At that time, we described the way in which we would identify APM Entities that meet this standard as looking for “APM Entities that participate in Medical Home Models and that have 50 or fewer eligible clinicians in the organization through which the entity is owned and operated.” We defined organizational size as measured based on the size of the “parent organization” rather than the size of the APM Entity itself. We recognized that there would be “additional but [ . . . ] achievable” burden to correctly identify parent organizations and their size (81 FR 77428).

In the 2017 Quality Payment Program final rule, we responded to the many comments we had received in opposition to the proposal (81 FR 77429), where commenters expressed opinions that identifying eligible entities in this way was arbitrary, or that it would unfairly discriminate between similarly situated organizations. We finalized the proposal despite these concerns because we believed we could identify organizations that were or were not reasonably capable of taking on the generally applicable level of financial risk by identifying the ultimate size of the parent organization, and in so doing, identify organizations that should be excluded from the Medical Home Model financial risk standard.

After several years of implementation and upon closer analysis of our results under the Medical Home Model standard, we have gained experience about the composition of parent organizations and that there is a wide variation in how practices are organized and proposed a change in our policy. These changes are based on a re-evaluation of two assumptions we used in finalizing the 50 eligible clinician limit, codified at § 414.1415(c)(7), have not borne out in practice.

Our belief that we could easily gather accurate data about the size and composition of “parent organizations” through disclosures from the APM Entities affiliated with them was misplaced. To accurately understand the numerous and varied ways in which a parent organization (itself a complex concept) may enter into contractual relationships with other subsidiary entities that have Taxpayer Identification Numbers (TINs), which otherwise might have no apparent relationship with one another, would require insight and access to private contracts do not have. The

administration of QPP is not the same as the administration of an individual APM and we are not party to the contracts between those private entities. Based on the information about these relationships, we are unable to confidently say that, under the parent organization approach we had finalized, all similarly situated organizations are being treated in the same manner. On the other hand, we believe we have a good understanding of APM Entities and how they will manage financial risk from our time implementing the QPP and various APMs.

Based on this insight and experience implementing the 50 eligible clinician limit for the Medical Home Model financial risk standard, we proposed to amend our methodology for identifying which eligible clinicians are to be included under the 50 eligible clinician limit.

Specifically, we proposed to amend § 414.1415(c)(7) to apply the 50 eligible clinician limit directly to the APM Entity participating in the Medical Home Model, and to no longer look to the parent organization for the APM Entity. We would identify the eligible clinicians in the APM Entity by using the TIN/NPIs on the participation list of the APM Entity on each of the three QP determination dates (March 31, June 30, and August 31). As discussed in the proposed rule, the proposal, if finalized, would become effective beginning in Performance Year 2023. We noted that we believe the change would address the challenges we have faced in implementing this policy, as discussed in the proposed rule.

We also proposed to amend § 414.1420(d)(8) to apply the 50 eligible clinician limit directly to the APM Entity participating in Aligned Other Payer Medical Home Model and Medicaid Medical Home Model, and to no longer look to the parent organization for the APM Entity, consistent with our longstanding practice of aligning Advanced APM policies with Other Payer Advanced APM policies to the extent feasible and appropriate.

In order to continue to achieve our aim of reducing the possibility for an APM Entity to potentially manipulate their numbers of eligible clinicians to inappropriately take advantage of participation in an Advanced APM that is a Medical Home Model, we proposed that the Medical Home Model financial risk and nominal amount standards under § 414.1415(c)(2) and (c)(4) would apply only if the APM Entity remains below the 50 eligible clinician limit on all three QP determination dates during the QP Performance Period. If the

number of eligible clinicians in the APM Entity is above 50 on any of the three QP determination dates, the Medical Home Model financial risk and nominal amount standards will not apply for that APM Entity for the QP Performance Period. Should an APM Entity exceed the 50 eligible clinician limit on any of the three snapshot dates, no eligible clinicians would achieve or retain QP status through that APM Entity for the QP Performance Period and corresponding payment year, regardless of the outcome of QP determinations made at another QP determination date. We proposed to amend the regulation text to say that an APM Entity’s Participation List will be used to determine if the 50 eligible clinician limit requirement has been met three times a year, for each of the three QP determination dates (March 31, June 30, and August 31).

In addition, we proposed to amend § 414.1440(e)(2) to require APM Entities or eligible clinician requesting a QP determination under the All-Payer Combination Option through participation in an Aligned Other Payer Medical Home Model or Medicaid Medical Home Model to supply information and certify that the 50 eligible clinician limit is being met for any Aligned Other Payer Medical Home Model or Medicaid Medical Home Model in which they participate and for the applicable time period in which the APM Entity or eligible clinician QP determination is made under the All-Payer Combination Option, as specified in the proposed revised § 414.1420(d)(8). Note, a practice exceeding the 50 eligible clinician limit under the Medicare Option would not preclude an eligible clinician or APM Entity from seeking a QP determination based on an Aligned Other Payer Medical Home Model or Medicaid Medical Home Model.

We explained that we believe the modification to the methodology used to apply the 50 eligible clinician limit would better identify the eligible clinicians and APM Entities that should be included in QP determinations for participation in Advanced APMs under the Medical Home Model financial risk standard, and therefore continue to encourage movement into value based payment arrangements. The methodology would not attempt the complex task of gathering information on parent organizations, and we believe it would treat similarly situated entities similarly.

We sought public comment on these proposals.

The following is a summary of the public comments received on the

proposed revisions to the Medical Home Model 50 Eligible Clinician Limit and our responses:

*Comment:* Several commenters suggested that we should eliminate the 50 eligible clinician Limit entirely, rather than simply modifying the methodology used to identify clinicians to be counted.

*Response:* While we understand that the 50clinician limit may have the effect of limiting QP status for participants in larger practices under the Medical Home Model standard, we believe that this limitation is necessary to ensure that the benefits of the Medical Home Model financial risk standard are being made available only to those APM Entities and groups for whom a higher degree of risk is a less viable option. Specifically, we believe that a group practice that contains 50 or more eligible clinicians is of a sufficient size to bear the more significant financial risk under the generally applicable financial risk standard, and so should not be receiving the benefits of QP status for participation in an Advanced APM through which they took on a lower amount of risk as permitted for Medical Home Models.

*Comment:* Some commenters supported our proposed methodology to better identify the participants within the APM Entity who are taking on the financial risk under the Medical Home Model financial risk standard and using the size of that practice to determine whether the 50 Eligible Clinician Limit has been exceeded.

*Response:* We thank commenters for their support of this proposal.

After considering public comments, we are finalizing this policy as proposed.

## (2) Qualifying APM Participant Determination

### (a) General Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77448), we finalized our policy at § 414.1425(b) for Qualifying APM Participant (QP) determinations. For the purposes of making QP determinations, an eligible clinician must be present on the Participation List of an APM Entity in an Advanced APM on one of the “snapshot dates” (March 31, June 30, or August 31) for the QP Performance Period. An eligible clinician included on a Participation List on any one of such dates is included in the APM Entity group even if that eligible clinician is not included on that Participation List at one of the prior- or later-listed dates. We perform QP determinations for the eligible clinicians

in an APM entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP snapshot dates of that year. An eligible clinician can be determined to be a QP only if they appear on the Participation List on a snapshot date that we use to identify the APM Entity group and to calculate Threshold Scores and make QP determinations at the APM Entity level based on participation in the Advanced APM. For eligible clinicians who appear on a Participation List with more than one APM Entity, but do not to achieve QP status based on any APM Entity group-level determinations, we make most QP determinations at the individual level as described in § 414.1425(c)(4). Likewise, for eligible clinicians who appear on an Affiliated Practitioner list for an Advanced APM we make QP determinations at the individual level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described in § 414.1425(b)(2).

### (b) Request for Information: Potential Transition to Individual QP Determinations Only

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77440), we discussed our reasons for establishing a policy to calculate Threshold Scores and make most QP determinations at the APM Entity group level, rather than at the individual eligible clinician level. At that time, we believed that this policy promoted administrative simplicity and collaboration among group members instead of imposing barriers or burden. We recognized that while many beneficiaries are attributed to an APM Entity based on the services rendered by one eligible clinician, many of the eligible clinicians participating in the APM Entity play a role in the actual diagnosis, treatment, and management of the many beneficiaries in the APM Entity’s patient population. Each of these individual eligible clinicians can potentially be viewed as being instrumental to providing quality care to the beneficiary in alignment with the objectives of the APM, regardless of whether the specific services they furnish are used for purposes of APM-specific attribution methods. We noted that an APM Entity faces the risks and rewards of participation in an Advanced APM as a single unit and generally is responsible for performance metrics that are aggregated to the level of that APM Entity. The policy is based on the

premise that entire organizations commit to participating in an Advanced APM and focusing on the attendant cost and quality goals as a whole.

Under the current policy at § 414.1425(b), for most eligible clinicians participating in Advanced APMs, QP determinations are made at the APM Entity level. As described in § 414.1435, the Threshold Score for an APM Entity or eligible clinician is calculated in one of two ways, either the payment amount method or patient count method. The threshold score using the payment count method is calculated by dividing: (1) the aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to attributed beneficiaries during the QP Performance Period; by (2) aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to all attribution-eligible beneficiaries during the QP Performance Period. The Threshold Score using the patient count method is calculated by dividing: (1) the number of attributed beneficiaries to whom the APM Entity group furnishes Medicare Part B covered professional services; by (2) the number of attribution-eligible beneficiaries to whom the APM Entity group or eligible clinician furnish Medicare Part B covered professional services. Attributed beneficiaries are generally determined from each Advanced APM Entity’s attributed beneficiary lists generated by each Advanced APM’s specific attribution methodology.

The current policy for QP determinations under the All-Payer Combination Option at § 414.1440(d) establishes a process that is similar to the QP determination participating in Advanced APMs, but accounts for participation in Other Payer Advanced APMs. Under the All-Payer Combination Option, an eligible clinician may request the QP determination be made at the individual or APM Entity level, and an APM Entity may request that the QP determination made at the individual, TIN or APM Entity level. Further, § 414.1440(d) specifies that CMS uses data at the same level for the Medicare and other payer portions of Threshold Score calculations under the All-Payer Combination Option. When QP determinations are made at the eligible clinician or, at the TIN level when all clinicians who have reassigned billing rights to the TIN are included in a single APM Entity; and if the Medicare Threshold Score for the APM Entity group is higher than when calculated for the eligible clinician or TIN, CMS makes QP determinations

using a weighted Medicare Threshold Score that is factored into an All-Payer Combination Option Threshold Score.

We requested public comment on the idea of transitioning away from an APM Entity level QP determination and instead calculating Threshold Scores and making QP determinations at the individual eligible clinician level for all eligible clinicians in Advanced APMs and Other Payer Advanced APMs. We explained that we believe making QP determinations at the individual eligible clinician level may have several benefits over the current policy. First, as explained in the proposed rule, we believe that making all QP determinations at the individual eligible clinician level would substantially reduce the practice of APM Entities removing specialists from their participation lists. Second, the change to make all QP determinations at the individual eligible clinician level would increase the number of eligible clinicians who are determined to be QPs for whom their individual participation would qualify them, but whose APM Entities did not qualify because other eligible clinicians in the APM Entity reduced its Threshold Score. Third, if we were to begin making all QP determinations at the individual eligible clinician level, that approach would eliminate the number of eligible clinicians who become QPs for a year, but whose individual participation in their Advanced APM(s) is well below the Threshold Score. Under our current policy to make most QP determinations at the APM Entity level, many eligible clinicians who would not meet the Threshold Score individually but whose APM Entities met the Threshold Score are able to gain QP status. For at least some of those eligible clinicians, a significant portion of the covered professional services they furnish may occur outside of the Advanced APM. When such eligible clinicians receive QP status, they may receive a financial windfall because their APM Incentive Payments are calculated based on all of the covered professional services they furnish during the base year, not just the services they furnish as part of the APM Entity in the Advanced APM.

We noted that this potential for receiving a financial windfall is possible through the 2022 QP Performance Period (which correlates to payment year 2024), but this will change beginning in the 2023 QP Performance Period (which correlates to payment year 2025) because the current statute does not provide for any APM Incentive Payment for that year. As such, there will be no further potential windfall in the form of the APM Incentive Payment.

However, there could be a similar windfall beginning in CY 2026 (which corresponds to the 2024 QP Performance Period) because eligible clinicians who achieve QP status beginning in that year will be paid under the PFS using the differentially higher QP conversion factor for the year, which will apply to all the covered professional services the eligible clinician furnishes in the year. In addition, beginning in payment year 2025 there are competing incentives under the QPP between the MIPS and APM track which are discussed in detail 87 FR 46332 of the proposed rule.

Because the APM Entity Threshold Scores (using the payment amount and patient count methods) that are used to make APM Entity-level QP determinations are based on an aggregate calculation across all eligible clinicians participating in the APM Entity group, eligible clinicians in the APM Entity group who furnish proportionally fewer services that lead to attribution of patients or payment amounts to the APM Entity are likely to lower the APM Entity's Threshold Score. For example, primary care physicians may furnish proportionally more evaluation and management (office visit) services which are frequently the basis for attribution of patients and payment amounts to the numerator of the APM Entity's Threshold Score; whereas specialist physicians may furnish proportionally more diagnostic tests and surgical procedures which are not usually part of the attribution basis to the APM Entity.

We noted that we have received reports from Advanced APM participants that some APM Entities have taken steps to reduce the number of such eligible clinicians on their Participation Lists. Specifically, to achieve higher QP Threshold Scores, some APM Entities have taken steps to exclude from their APM Entity groups (and consequently from their Participation Lists) eligible clinicians who furnish proportionally fewer services that lead to the attribution of patients or payment amounts for purposes of calculating threshold scores for APM Entity-level QP determinations. There are important reasons that it is not beneficial for an APM Entity to exclude specialists and other eligible clinicians who furnish relatively fewer services that lead to attribution. In both the Medicare Shared Savings Program and in models tested by the Innovation Center that meet the criteria to be Advanced APMs, CMS seeks to promote patient-centered care that is integrated across the continuum of care. The inclusion of specialists in APM Entities

is essential for achieving this goal. For example, a comprehensive network that includes a range of specialists is central to the success of an ACO in the Medicare Shared Savings Program for its intended purpose in patient-centered care that coordinates items and services for Medicare FFS beneficiaries, a key aim of value-based care and practice transformation.<sup>546</sup> The methodology used in beneficiary assignment for the Shared Savings Program is deliberately constructed such that assignment is largely based on primary care, rather than specialty care, which results in specialists contributing proportionately less in terms of payment amounts and patient counts to the ACO's QP numerator.

Similarly, it was not our intent to create a policy wherein eligible clinicians who are seeing most or all of their Medicare patients through an Advanced APM may remain unable to achieve QP status because the APM Entity with which they participate in the Advanced APM includes eligible clinicians who furnish very few services through the Advanced APM. It has always been one of the goals of the APM track of the Quality Payment Program for the availability of QP status to incentivize eligible clinicians to join Advanced APMs. But, as discussed in the proposed rule, under our current policy to make most QP determinations at the APM Entity level, there is the potential that eligible clinicians who are fully engaged in an Advanced APM may still be unable to earn QP status.

We carefully considered our policy to make most QP determinations at the APM Entity level, and believed it was the best approach at the time. However, we did not intend for the policy to create potentially conflicting incentives for APM Entities between the goal for their eligible clinicians to achieve QP status under the Quality Payment Program, and their full participation in an Advanced APM with a group of eligible clinicians that can deliver a full spectrum of care.

Finally, we noted concern that, under our current policy to make most QP determinations at the APM Entity level, some eligible clinicians who furnish relatively fewer of their services through an APM Entity may receive a disproportionate financial benefit because they achieve QP status as a result of the care furnished by other eligible clinicians in the APM Entity, while their APM Incentive Payment is calculated based on all of the covered professional services they furnish

<sup>546</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/about>.

during the base year—both as part of the APM Entity and elsewhere. Our policy to make most QP determinations at the APM Entity level allows these windfall financial rewards because we calculate the Threshold Scores using the aggregate of payment amounts or patient counts for attributed patients based on Medicare Part B covered professional services furnished by all the eligible clinicians in the APM Entity, whether they furnished a few or many of such services. Once an eligible clinician receives QP status for a year, the APM Incentive Payment is calculated based on paid claims for that individual QP's covered professional services across all their TINs in the base year. This can allow an eligible clinician with minimal Advanced APM participation to receive a large APM Incentive Payment, which we do not believe aligns with the intent of the Quality Payment Program. Though, as we note above, QPs for payment year 2025 (QP Performance Period 2023) will not, by statute, receive a financial incentive for achieving such status, beginning in payment 2026 (QP Performance Period 2024) financial incentives once again will apply in the form of the enhanced QP conversion factor, which in turn compounds each year after that, and therefore, increases over time.

We requested input from interested parties on the possibility of discontinuing our policy to calculate Threshold Scores and make most QP determinations at the APM Entity level, and instead to make all QP determinations at the individual eligible clinician level. We noted that we believe this would avoid the potential incentive for APM Entities to limit or exclude specialists and other eligible clinicians who furnish services that are an important part of the health care spectrum, but less likely to be attributed to the APM Entity for purposes of calculating Threshold Scores for QP determinations. While the exclusion from an APM Entity of such specialists and other eligible clinicians can serve to improve the Threshold Scores for an APM Entity, it would not necessarily serve the central goals of many of our Advanced APMs, such as the statutory charge to Medicare Shared Savings Program ACOs to encourage groups of doctors, hospitals, and other health care providers to work together to manage and coordinate care for Medicare fee-for-service beneficiaries through an ACO.

In light of this potential conflict between Advanced APM goals and the existing QP Threshold Score calculation methodology, we considered whether it would be better to make all QP

determinations at the individual eligible clinician level using the unique National Provider Identifier (NPI) associated with an eligible clinician participating in an Advanced APM. Under that approach, we would calculate a Threshold Score for each eligible clinician, identified by their NPI, based on all the covered professional services furnished by that individual eligible clinician, including services billed across all of the TINs to which the individual has reassigned their Medicare billing rights. This Threshold Score calculated at the individual eligible clinician level would provide a more specific measurement of each such eligible clinician's level of participation in one or more Advanced APMs. This methodology to calculate Threshold Scores and make QP determinations at the individual eligible clinician level would ensure that only those eligible clinicians (NPIs) who individually meet or exceed the applicable Threshold Score would receive QP status. At the same time, it would allow APM Entities to make decisions about which eligible clinicians to include on their Participation Lists based on the scope of eligible clinicians needed to furnish services to their patient populations under the Advanced APM, and to include those eligible clinicians who furnish proportionally fewer services that lead to patient attribution to the APM Entity under the current QP determination policy, without potentially affecting the QP status of other eligible clinicians in the APM Entity group. Because APM Entities no longer would have a need to consider how each eligible clinician may affect their aggregate Threshold Score for the APM Entity group, they would be able to include any eligible clinician who they believe can help them meet the patient-centered care goals of the Advanced APM(s) they are participating in. Therefore, we considered whether a change to make QP determinations at the individual eligible clinician level would have a positive health equity impact by ensuring that incentives under the Quality Payment Program would hold ACOs "accountable for the quality, cost, and experience of care of an assigned Medicare fee-for-service (FFS) beneficiary population."<sup>547</sup>

Additionally, an analysis conducted by CMS found that many eligible clinicians do in fact frequently provide covered professional services to beneficiaries attributed to other APM Entities. These types of services and relationships are not necessarily

accounted for or rewarded under the current methodology that makes QP determinations predominantly at the APM Entity level because they are outside the APM Entity participating in the Advanced APM, but would be if QP determinations were made at the individual eligible clinician level because all of the relevant covered professional services furnished by that eligible clinician would be counted in the QP determination. While our initial decision to calculate Threshold Scores and make most QP determinations at the APM Entity level was appropriate and, at the time, preferable to achieve the policy goals as stated in the CY 2017 proposed rule and reiterated above, for the reasons we identify here, we also believe that a change to calculate Threshold Scores and make QP determinations at the individual eligible clinician level may be preferable.

We requested public feedback on whether an individual level QP determination approach is an avenue we should continue exploring in future years to better identify and reward individual eligible clinicians with substantial engagement in Advanced APMs.

We received several comments on this RFI which provided us with meaningful insight into how the changes described could impact participation in Advanced APMs and QPP. We thank commenters for submitting these comments and we will keep them in mind as we continue to consider future changes to QPP.

#### (c) QP Thresholds and Partial QP Thresholds

Section 1833(z)(2) of the Act specifies the thresholds for the level of participation in Advanced APMs required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, has been applicable since payment year 2019. The All-Payer Combination Option, which uses the Medicare Option, as well as an eligible clinician's participation in Other Payer Advanced APMs, is applicable beginning in the payment year 2021. In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77439), we finalized our policy for QP and Partial QP Thresholds for the Medicare Option as codified at § 414.1430(a) and for the All-Payer Combination Option at § 414.1430(b).

In the CY 2022 PFS final rule (86 FR 65557 through 65558), we finalized policies to implement section 114(a) of Subtitle B of Title I of Division CC of the

<sup>547</sup> Ibid.

CAA (referred to herein as section 114(a) of Division CC of the CAA), which amended section 1833(z)(2)(B) of the Act with regard to payment years 2023 and 2024 (which correspond respectively to performance years 2021 and 2022), by freezing for such years the applicable payment amount and patient count thresholds for an eligible clinician to achieve QP status. However, we neglected to fully amend our regulations at § 414.1430(a) and (b) to reflect these changes, and therefore, we proposed conforming changes to § 414.1430(a) and (b) in the proposed rule.

Specifically, section 114(a) of Division CC of the CAA amended section 1833(z)(2)(B) of the Act to continue the QP payment amount thresholds that apply in payment years 2021 and 2022 for payment years 2023 and 2024. Additionally, section 114(a) of Division CC of the CAA amended section 1833(z)(2)(D) of the Act to require that, for payment years 2023 and 2024, the Secretary must use the same percentage criteria for the QP patient count threshold that are applied in payment year 2022. As such, the Medicare Option QP thresholds for payment years 2023 and 2024 (performance years 2021 and 2022) will

remain at 50 percent for the payment amount method and 35 percent for the patient count method. Section 114(b) of Division CC of the CAA amended section 1848(q)(1)(C)(iii) of the Act to extend through payment year 2024 the Partial QP thresholds that are established for payment years 2021 and 2022. Therefore, the Partial QP thresholds for payment years 2023 and 2024 (performance years 2021 and 2022) will remain at 40 percent for the payment amount method and 25 percent for the patient count method. For performance years beginning with 2023 (corresponding to payment years beginning with 2025) the statute prescribes the QP thresholds for the payment amount method, and the QP thresholds we established for the patient count method at § 414.1430 will take effect. Specifically, for performance years beginning with 2023, the Medicare Option QP Thresholds will be 75 percent for the payment amount method and 50 percent for the patient count method. The Partial QP Thresholds under the Medicare Option will be 50 percent for the payment amount method and 35 percent for the patient count method.

Under the All-Payer Combination Option, the QP thresholds for performance years 2021 and 2022 (corresponding to payment years 2023 and 2024) will be 50 percent for the payment amount method and 35 percent for the patient count method. The Partial QP thresholds for performance years 2021 and 2022 (corresponding to payment years 2023 and 2024) will be 40 percent for the payment amount method and 25 percent for the patient count method. The Partial QP thresholds for performance year 2023 and later (corresponding to payment years 2025 and later) will be 50 percent for the payment amount method and 35 percent for the patient count method. In order to become a QP through the All-Payer Combination Option, eligible clinicians must first meet certain threshold percentages under the Medicare Option. For performance years 2021 and later (corresponding to payment year 2023 and later), the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option is 25 percent for the payment amount method or 20 percent under the patient count method.

**BILLING CODE 4150-28-C**

We did not receive any comments on the proposed revisions to the QP Thresholds and Partial QP Thresholds. For the reasons stated previously in this section and in the proposed rule (87 FR 46337), we are finalizing these revisions to the QP Threshold and Partial QP Threshold regulations as proposed.

**V. Finalizing Provisions From Interim Final Rules****A. Finalizing the CY 2022 Methadone Payment Exception for Opioid Treatment Programs****1. Background**

CMS issued an interim final rule with comment period (IFC) regarding the payment rate for methadone under the Medicare OTP benefit for CY 2022, titled “Medicare Program; Opioid Treatment Programs: CY 2022 Methadone Payment Exception” (hereafter referred to as “Methadone IFC”), which appeared in the November 19, 2021 **Federal Register** (86 FR 66031). In the Methadone IFC, we froze the payment rate to Opioid Treatment Programs (OTPs) for methadone in CY 2022 at the CY 2021 rate because we

believed would not have been appropriate to implement a decrease to the payment rate when substance use and overdoses had increased during the Coronavirus Disease 2019 (COVID-19) pandemic. In this final rule, we are responding to the comments received in response to the request for public comments in the Methadone IFC and establishing final policies with respect to payment to OTPs for methadone during CY 2022.

**a. Methadone**

The Food and Drug Administration (FDA) has approved three medications for the treatment of opioid use disorder (OUD): methadone, buprenorphine, and naltrexone. These are referred to as medications for opioid use disorder (MOUD). The combination of MOUD with counseling and behavioral therapies to provide a “whole-patient” approach to OUD care is referred to as medication-assisted treatment (MAT). OTPs are clinically driven and tailored to meet each patient’s needs.<sup>548</sup> MOUD are also used to prevent or reduce

opioid overdose. These medications are safe to use for months, years, or even a lifetime.<sup>549</sup>

As discussed in the CY 2020 PFS final rule (84 FR 62630), when used to treat those with a confirmed diagnosis of OUD, methadone cannot be dispensed by a pharmacy like certain other MOUD treatments (that is buprenorphine, buprenorphine-naloxone combination products, or naltrexone products) and therefore is not covered under Medicare Part D. Methadone is a schedule II controlled substance that is highly regulated because it has a potential for misuse and serious adverse effects if taken by opioid-naïve individuals. Methadone is also used as an analgesic to treat chronic pain. When used for the treatment of OUD, methadone is taken daily and is available in tablet, tablet for suspension, and solution forms and can only be dispensed and administered by an OTP as provided under section 303(g)(1) of the Controlled Substances Act (21 U.S.C. 823(g)(1)) and 42 CFR part 8. In the CY 2020 PFS final rule, we noted that approximately 74 percent of

<sup>548</sup> <https://www.samhsa.gov/medication-assisted-treatment>.

<sup>549</sup> <https://www.samhsa.gov/medication-assisted-treatment>.

patients receiving services from OTPs receive methadone for OUD treatment, with the vast majority of the remaining patients receiving buprenorphine (84 FR 62631).<sup>550</sup> In monitoring utilization of OTP services furnished under the new Medicare benefit, we have observed the percentage of Medicare beneficiaries receiving methadone to be closer to 95 percent.

According to SAMHSA's website, MAT has been shown to improve patient survival and increase retention in treatment.<sup>551</sup> Several studies indicate that retention in MAT is associated with lower mortality rates. One study stated that "Retention in MAT of over one year was associated with a lower mortality rate than that with retention of less than one year. Improved coverage and adherence to MAT and post-treatment follow-up are crucial to reduce the mortality."<sup>552</sup>

#### b. Effects of the COVID-19 Pandemic on the Opioid Crisis

During the development of the final OTP payment rates for CY 2022, CMS became concerned that a reduction in the payment to Opioid Treatment Programs for methadone in CY 2022 would limit access to MOPD for Medicare beneficiaries amidst a worsening opioid crisis further exacerbated by social and economic stressors stemming from the COVID-19 pandemic. In the Methadone IFC, we explained that the United States is now facing a fourth wave of the overdose crisis as a result of rising polysubstance use, such as the co-use of opioids and psychostimulants (for example, methamphetamine, cocaine). Recent CDC estimates of overdose deaths now exceed 96,000 for the 12-month period to March 2021,<sup>553</sup> with overdose death rates surging among Black and Latino Americans.<sup>554</sup> While overdose deaths were already increasing in the months preceding the COVID-19 pandemic, the latest numbers available at the time of the Methadone IFC suggested that overdose deaths had accelerated during the pandemic, particularly among racial

and ethnic health inequities. Public comments received in response to the CY 2022 PFS proposed rule highlighted the recent increases in overdose deaths. One commenter stated that drug overdose deaths have reached historic highs in this country. According to the commenter, these spikes in substance use and overdose deaths reflect a combination of increasingly deadly illicit drug supplies, as well as treatment disruptions, social isolation, and other hardships imposed by the COVID-19 pandemic, but they also reflect the longstanding inadequacy of our medical infrastructure when it comes to preventing and treating substance use disorders (SUD) (for example, alcohol, tobacco, cannabis, opioids). We also noted in the IFC that even before the COVID-19 pandemic began, more than 21 million Americans aged 12 or over in 2019 needed treatment for a SUD in the past year, but only about 4.2 million of them received any treatment or ancillary services for it.<sup>555</sup> The concerns described in these public comments and additional evidence showing an increased rate of overdose deaths and rising disparities in access to treatment for OUD strongly informed the policies in the Methadone IFC.

#### c. Opioid Use Disorders (OUDs) in the Medicare Population

In addition to the adverse effects of the COVID-19 pandemic on the worsening opioid crisis, the rising incidence of OUD among the Medicare population further informed CMS's decision to issue the Methadone IFC. As stated in the Methadone IFC, nearly one million adults aged 65 and older live with a SUD, as reported in 2018 data.<sup>556</sup> According to a Data Highlight published by CMS' Office of Minority Health, Medicare beneficiaries represent a growing proportion of individuals with OUD. Overall, 2.8 percent of Medicare Fee-for-Service (FFS) beneficiaries had an opioid use disorder (OUD) in 2018 out of a total of 38,665,082 Medicare FFS beneficiaries.<sup>557</sup> The problems associated with OUD in the Medicare

population are compounded by chronic pain-associated conditions more common in later life, as well as the increased prevalence of multiple comorbidities and polypharmacy risks that exist among older adults.<sup>558</sup> Before issuing the Methadone IFC, CMS received a public comment in response to the CY 2022 PFS proposed rule that referred to increases in overdose deaths in individuals over age 65, stating that data from the CDC indicates that drug overdose deaths are increasing across all age groups, including those over age 65. Additionally, as we noted in the Methadone IFC (86 FR 66032), a recent Office of Inspector General (OIG) analysis of Medicare data reports that opioid overdoses have resulted in more than 200,000 deaths among Medicare beneficiaries nationwide since 2015. From 2016 to 2019, Medicare Part D saw a steady decline in opioid use, along with an increased use of drugs for treatment of OUD. OIG also noted that COVID-19 poses specific dangers for people using opioids, as respiratory diseases like COVID-19 can increase the risk of fatal overdose among those taking opioids and those with OUD are more likely to contract COVID-19 and suffer complications. With the onset of COVID-19 and the new dangers it poses for beneficiaries taking opioids, the OIG report states that it is imperative that HHS closely monitor opioid use during this unprecedented time. We also noted that during the first 8 months of 2020, about 5,000 Medicare Part D beneficiaries per month had an opioid overdose.<sup>559</sup> For these reasons, we concluded that implementing a reduction in methadone payments to OTPs would not have been appropriate given the growing proportion of the Medicare population diagnosed with OUD who also faced various challenges as a result of the COVID-19 pandemic.

#### 2. Methadone Pricing

As discussed in the Methadone IFC, in the CY 2020 PFS final rule (84 FR 62667), we finalized a policy in § 410.67(d)(2)(i) under which the payment for the drug component of episodes of care will be updated annually using the most recent data available from the applicable pricing mechanism at the time of ratesetting for the applicable calendar year. Under the policy finalized at § 410.67(d)(2)(i)(B),

<sup>559</sup> Opioid Use in Medicare Part D During the Onset of the COVID-19 Pandemic. U.S. Department of Health and Human Services Office of Inspector General. Data Snapshot, OEI-02-20-00400. Published February 2021.

for oral medications, if ASP data are available, the payment amount is 100 percent of ASP, which will be determined based on ASP data that have been calculated consistent with the provisions in 42 CFR part 414, subpart J and voluntarily submitted by drug manufacturers. If ASP data are not available, the payment amount for methadone will be based on the TRICARE rate. We indicated that the payment amount for methadone furnished by OTPs during an episode of care in CY 2021 was \$37.38,<sup>560</sup> which was 100 percent of ASP, as determined based on voluntarily submitted ASP data for the methadone.

We explained that quarterly ASP pricing files are typically posted on the CMS website prior to the beginning of the quarter in which Medicare payments will be effective, which allows drug manufacturers that are required to submit their sales data to review and identify any issues. Due to the timing of CY PFS rulemaking and because ASP drug pricing file data is updated on a quarterly basis, the most recent ASP drug pricing file data available for the CY 2022 PFS final rule was the October 2021 update, which was posted on September 9, 2021.

In the Methadone IFC (86 FR 66033), we noted that in early September 2021, while gathering available manufacturer-reported ASP data for the annual update to the OTP drug pricing for CY 2022, we found that the volume-weighted ASP for oral methadone had decreased by just over 50 percent compared to the rate used for CY 2021, from \$37.38 to \$17.64.<sup>561</sup> This reduction was due to inclusion of newly reported ASP data for methadone tablets, whereas previously the manufacturer-reported ASP data reflected only sales of the methadone oral concentrate. We explained that the ASP is volume-weighted; however, ASP reporting is not required for oral methadone and only a small subset of methadone manufacturers voluntarily submit ASP data. Of the nearly 50 available NDCs for oral methadone preparations with available pricing in the Red Book<sup>®</sup> compendia, voluntarily submitted ASP data was available for only three of these NDCs. We noted that pricing for oral methadone is distinct from most other drug pricing based on ASP

because oral methadone is not separately payable as a drug or biological under Medicare Part B, and manufacturers are not subject to ASP reporting requirements under section 1927(b)(3)(A)(iii) of the Act for those NDCs. Additionally, we noted that we did not, at the time of the Methadone IFC, have utilization data on the different forms of methadone that can be dispensed or administered at OTPs. That is, at that time, we did not have data showing whether OTPs utilize oral methadone concentrate or tablets more often, or if the two formulations are utilized equally. When we researched OTP practice patterns as we were preparing to implement the new benefit for OUD treatment services furnished in OTPs, we received anecdotal reports that several OTPs used the oral concentrate exclusively.

For these reasons, we had questions as to whether the ASP data available at the time of the CY 2022 rulemaking, which reflects voluntarily reported data from only a very small subset of methadone manufacturers, is representative of utilization of the two forms of oral methadone by the Medicare beneficiaries receiving OUD treatment services in OTPs.

We stated that given recent reports regarding the effects of the public health emergency (PHE) for COVID-19 on individuals with SUD, including OUD, and the questions we had related to whether the available ASP data for methadone is reflective of OTP utilization due to the distinct nature of methadone pricing, as described above, we believed it would be in the public's best interest not to implement a significant decrease in the payment rate for methadone furnished by OTPs as part of OUD treatment services without first having an opportunity to review the issue, seek input from the OTP stakeholder community regarding utilization of methadone oral concentrate compared to utilization of methadone tablets, and consider how this information should factor into the determination of the payment rate for methadone furnished by OTPs. We noted that section 1834(w)(2) of the Act allows for flexibility to consider the scope of services furnished, the characteristics of the individuals receiving services, and such other factors as the Secretary determines appropriate, in determining the rates paid to OTPs under Medicare.

Therefore, in the Methadone IFC (86 FR 66031 through 66036), we established a limited exception to the existing methodology for determining the payment amount for the drug component of an episode of care in

order to freeze the payment amount for methadone furnished during an episode of care in CY 2022 at the payment amount that was determined for CY 2021. We also revised the regulation at § 410.67(d)(2)(i)(B), which governs the determination of the payment amount for oral medications, to reflect this exception and to make a conforming change to the reference to 42 CFR part 414, subpart J.

Under this exception, the payment amount for the drug component of the methadone bundle described by HCPCS code G2067 (*Medication assisted treatment, methadone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)*) and the methadone add-on code described by HCPCS code G2078 (*Take-home supply of methadone; up to 7 additional day supply (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure*) was maintained at the CY 2021 rate of \$37.38 for the duration of CY 2022. We applied the annual update to the non-drug component of HCPCS G2067 for CY 2022 as required under § 410.67(d)(4)(iii). We noted that we believed maintaining the payment amount for methadone at the CY 2021 rate during CY 2022 would allow time for CMS to study the issue further and, if appropriate, to develop an alternative payment methodology for methadone that could be proposed through notice-and-comment rulemaking for CY 2023.

We solicited comment on the exception to the payment methodology for the drug component of an episode of care that we were adopting in the Methadone IFC in order to maintain the payment rate for methadone at the CY 2021 payment amount during CY 2022.

We received public comments on the exception to the payment methodology to freeze the payment rate for methadone at the CY 2021 payment amount for the duration of CY 2022. The following is a summary of the comments we received and our responses.

**Comment:** We received several comments from individual commenters, medical associations, and national associations representing OTPs. The majority of commenters expressed support for the exception to the payment methodology for the drug component of an episode of care to maintain the payment rate for methadone at the CY 2021 payment amount for the duration of CY 2022.

<sup>560</sup> <https://www.cms.gov/files/document/otp-billing-and-payment-fact-sheet.pdf>.

<sup>561</sup> The TRICARE rate for the drug portion of its weekly bundled payment for methadone treatment is \$24.04 for 2022, which would also be a decrease from the CY 2021 payment rate under Medicare and cannot be used to set the Medicare payment rate for methadone in CY 2022 under § 410.67(d)(2)(i)(B) because ASP data is available for methadone.

Some commenters reiterated that this payment exception was important during a time of increased opioid-related overdose deaths that have accelerated during the COVID-19 pandemic. In this regard, commenters noted that reducing the payment amount for methadone to providers who specialize in treatment of OUD could impact access to methadone and adequate retention of providers administering these services and other related OUD treatment services. One commenter also cited data showing that a large majority of treatment services furnished in conjunction with methadone are offered through telemedicine, including medication management and psychosocial therapy. The commenter stated that if methadone reimbursement is reduced, beneficiary access to telemedicine may be limited. Additionally, another commenter expressed support for the methadone payment exception adopted in the Methadone IFC, stating that it would provide CMS additional time to consider utilization of different methadone formulations, which may inform alternative reimbursement methodologies that better reflect methadone utilization.

*Response:* We thank the commenters for the support expressed in their comments. We agree that this payment exception was important in order to promote treatment accessibility for MOUD during a worsening opioid crisis and to allow for the additional time needed to evaluate utilization of different forms of methadone for purposes of informing the payment rate for methadone furnished in OTPs for CY 2023 and future years.

*Comment:* Although the majority of commenters expressed support for freezing the payment rates for methadone furnished by OTPs in CY 2022, a few commenters noted concerns that freezing the payment rate for methadone at the CY 2021 level may still result in unanticipated negative outcomes. One commenter indicated that supply chain and other logistical issues have driven up global drug prices alongside widespread inflation, such that an increase in payment rates may be necessary. Another commenter noted that if Medicare reimbursement for methadone falls well below OTPs' costs of acquiring and administering the medication, OTPs may have no choice but to prescribe a much more expensive medication (buprenorphine or naloxone) as part of MOUD. The commenter noted this might increase costs for the Medicare program and taxpayers, while not necessarily improving care due to different clinical

and situational indications for other types of medications utilized in MOUD.

*Response:* We acknowledge and continue to track commenters' concerns about the payment rate for methadone furnished in OTPs. We believe these comments further demonstrate the importance of the payment freeze adopted in the Methadone IFC in order to allow CMS time to investigate methadone payment rates further and to seek feedback from the public in order to inform potential future payment methodologies that better capture costs of furnishing methadone. We took the feedback received in response to the Methadone IFC into consideration in developing and proposing a new methodology for methadone pricing that would stabilize payment to OTPs for methadone and maintain access to OUD treatment services. Under the proposed methodology, which we are finalizing in this final rule, we will base the payment amount for the drug component of HCPCS codes G2067 and G2078 for CY 2023 and subsequent years on the payment amount for methadone in CY 2021 and update this amount annually to account for inflation using the PPI for Pharmaceuticals for Human Use (Prescription). For a detailed discussion of the final policy for methadone pricing for CY 2023 and subsequent years, see section III.F.2. of this final rule.

In the Methadone IFC (86 FR 66033), we also solicited comment on OTP utilization patterns for methadone, particularly, the frequency with which methadone oral concentrate is used compared to methadone tablets in the OTP setting, including any applicable data on this topic. We noted that because the OTP benefit is still fairly new under Medicare, we have not yet had the opportunity to fully understand how changes in the payment rates may affect OTP operations and beneficiary access to treatment. However, we stated our intent to continue to refine our payment policies in order to best meet the needs of Medicare beneficiaries.

We received public comments on OTP utilization patterns for methadone, particularly, the frequency with which methadone oral concentrate is used compared to methadone tablets in the OTP setting. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters provided input on the frequency of utilization for methadone oral concentrate compared to methadone tablets. One commenter reported surveying dozens of OTPs in their region and found that the majority of OTPs utilized oral concentrate exclusively and none utilized

methadone tablets exclusively. The same commenter identified that among OTPs that distributed both formulations of methadone to a single patient, the tablet formulation was preferable in situations in which accommodation of a patient's travel is necessary. Moreover, another commenter reported that almost all of its patients receive oral concentrate because it has shown to lead to better clinical outcomes, thus the oral concentrate is the preferred formulation amongst both practitioners and patients.

*Response:* We thank the commenters for their comments regarding the higher frequency of utilization for methadone oral concentrate compared to methadone tablets. We note that the 2021 payment amount for methadone which we also used for 2022, and which forms the basis for the payment rate for methadone for CY 2023 and subsequent years is based on average sales price data for methadone oral concentrate. We will consider the information on methadone utilization shared by the commenters as we continue to evaluate the drug pricing methodology for methadone going forward.

*Comment:* One commenter noted that the National Association of State Alcohol and Drug Abuse Directors (NASADAD), in conjunction with the State Opioid Treatment Authorities (SOTAs), conducted a survey that was distributed to the 1,800 OTPs throughout the United States. As of December 31, 2021, NASADAD and the SOTAs had collected data from 1,550 OTPs. These data include the number of patients being treated at OTPs as of January 1, 2021, including the number of patients using one of the three FDA-approved medications to treat opioid use disorder (methadone, buprenorphine, and extended-release naltrexone) and the specific forms of the medication being used. The commenter further noted that the data is currently being analyzed by NASADAD staff.

*Response:* We thank the commenter for this information and are looking forward to seeing the survey results.

In the Methadone IFC, we indicated that we would consider the comments received in response to the IFC in deciding how best to determine the payment rate for methadone in CY 2023, including whether we should propose changes in future rulemaking to the structure of OTP coding and payment in order to account for differences in pricing and utilization for the different formulations of methadone. The following is a summary of the comments we received on these issues and our responses.

*Comment:* Several commenters stated that oral concentrate methadone is more costly to provide to patients than methadone tablets. Commenters raised various cost considerations for administering oral concentrate that they believe should be reflected in pricing for methadone. For example, commenters noted that extra effort is required from nurses in administering doses that require more complex technology and precision in measurement to ensure patient safety. Additionally, commenters noted that some states require full-time pharmacists to be present for dosing the oral concentrate formulation. Moreover, commenters stated that supplies used in dispensing the oral concentrate, such as electric pumps and pipettes, and their related software, require maintenance, replacement, acquisition, and storage, which result in additional costs to OTPs.

*Response:* We thank commenters for raising these additional factors that impact the cost of administering methadone oral concentrate as opposed to methadone tablets. We may consider addressing these issues in future rulemaking. However, we note that in section III.F.2 of this final rule, we are finalizing a change to the drug pricing methodology for methadone for CY 2023 and future years to provide that payment amount for methadone will be the payment amount determined for CY 2021 updated by the PPI for Pharmaceuticals for Human Use (Prescription) (WPUSI07003). We believe that this PPI is an appropriate factor by which to adjust the payment rate for methadone to reflect the changes in methadone costs for OTPs over time. We are also revising § 410.67(d)(2)(i)(B)(2) to reflect this new drug pricing methodology for methadone. Please see the discussion in section III.F.2 of this final rule for additional information regarding the final policies for methadone pricing for CY 2023 and future years under the Medicare OTP benefit.

*Comment:* One commenter suggested CMS use the TRICARE rate for oral methadone concentrate reimbursement and create separate payment codes for tablet methadone and oral concentrate methadone.

*Response:* We thank the commenter for this suggestion. The regulation at § 410.67(d)(2)(i)(B)(1) states that if ASP data are not available, the payment amount for methadone will be based on the TRICARE rate. However, when CMS was establishing the methadone payment rate for CY 2022, we found that the TRICARE rate would have also decreased the payment amount for

methadone by \$13.34 compared to the CY 2021 payment rate. Thus, using the TRICARE rate would have still decreased the payment amount for methadone during both the COVID-19 pandemic and a worsening opioid overdose crisis, which may have created access barriers to treatment for beneficiaries. This further demonstrated the need for an interim final rule to freeze methadone payment for CY 2022 at the CY 2021 rate in order to provide the agency more time to reconsider methadone payment methodologies. Please see the discussion in section III.F.2 of this final rule regarding the final policies for methadone pricing for 2023 and future years under the Medicare OTP benefit.

Regarding the comment on creating separate payment codes for tablet methadone and oral concentrate, we thank the commenter for this recommendation. We may consider this recommendation through future rulemaking at such a time that more robust ASP data for the different formulations of methadone is available.

In summary, after consideration of the public comments, we are finalizing without modification the revisions made in the Methadone IFC to the regulation text at § 410.67(d)(2)(i)(B), which governs the determination of the payment amount for oral medications, to reflect this exception for CY 2022 and to make a conforming change to the reference to 42 CFR part 414, subpart J.

#### *B. Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency (CMS-1744-IFC)*

In this final rule, we are responding to public comments and stating our final policies for certain provisions in the IFC titled “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency” (CMS-1744-IFC), which appeared in the April 6, 2020 **Federal Register** (85 FR 19230); hereinafter referred to as the April 6, 2020 IFC).

#### *1. Improving Access to Virtual Communication Services Furnished by Rural Health Clinics (RHC) and Federally Qualified Health Centers (FQHC)*

In the April 6, 2020 IFC (85 FR 19253–19254), we implemented on an interim final basis the expansion of services that can be included in the payment for virtual communications in RHCs and FQHCs. We explained that in order to minimize risks associated with exposure to COVID-19, and to provide the best care possible during the PHE for

the COVID-19 pandemic, we believed that RHCs and FQHC practitioners, like many other health care providers, should explore the use of interactive communications technology in the place of services that would have otherwise been furnished in person and reported and paid under the established methodologies. To that end, we included the following services in the payment of virtual communications: CPT code 99421 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5–10 minutes*); 99422 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11–20 minutes*); and 99423 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes*).

Prior to the COVID-19 PHE, HCPCS code G0071 was set at the average of the national non-facility PFS payment rates for HCPCS code G2012 (communication technology-based services) and HCPCS code G2010 (remote evaluation services), updated annually based on the PFS national non-facility payment rate for these codes. Furthermore, prior to services being furnished under HCPCS code G0071, patient consent was required both prior to the service being furnished and before these services were billed.

Effective for services furnished on or after March 1, 2020 and throughout the PHE for the COVID pandemic, we finalized on an interim final basis the payment rate for HCPCS code G0071 as the average of the PFS national non-facility payment rate for HCPCS code G2012 (communication technology-based services), HCPCS code G2010 (remote evaluation services), CPT code 99421, CPT code 99422, and CPT code 99423. The RHC and FQHC face-to-face requirements do not apply to these services.

Additionally, in order to ensure these services would be available to beneficiaries who otherwise would not have access to clinically appropriate in-person treatment, we placed in our interim final rule a provision stating that all virtual communication services billed by HCPCS code G0071 would be available to new patients not seen by the RHC or FQHC within the previous months. Lastly, CMS changed requirements regarding when patient consent was required for these services, in order to promote timely provision of care. Specifically, we allowed consent to be obtained when the services were furnished instead of prior to the service

being furnished and before the services were billed. Consent could also be acquired by staff under the general supervision of the RHC or FQHC practitioner for the virtual communication codes during the COVID-19 PHE.

As a result of these changes made on an interim final basis, we received several comments related to these policies.

*Comment:* The majority of commenters were supportive of these additional flexibilities granted during the COVID-19 PHE. Commenters stated that use of online digital assessment services would provide additional flexibilities and allow providers to better meet patients' needs and ensure access to care during the pandemic. One commenter noted that the flexibility to bill HCPCS code G0071 for new patients would better help Urban Indian Organizations (UIOs) serve AI/AN communities. The commenter noted that this patient population often faces challenges in accessing medical professionals regularly within a 12-month span since they need to travel longer distances to reach dispersed reservation-based Indian Health Services (IHS) or tribal health services.

*Response:* We appreciate the commenters' support for these policies during the COVID-19 pandemic, especially in regards to positive impacts these flexibilities had on underserved communities, including AI/AN communities.

*Comment:* A few commenters asked that the flexibilities for virtual communication services be extended beyond the COVID-19 PHE in order to continuously allow providers to furnish services in ways that best meet the needs of their patients.

*Response:* We appreciate the commenters' support of this policy during the COVID-19 PHE. We continue to believe that outside of the context of the COVID-19 PHE, our standard policies regarding virtual communication services furnished by RHCs and FQHCs would continue to be appropriate. Therefore, once the COVID-19 PHE ends, we do not intend to further extend these flexibilities. Moreover, sections 1834(m)(7) and (m)(8) of the Act restrict payment for many RHC/FQHC telehealth services to a period that ends on the 151st day after the end of the PHE. We note that we will continue to evaluate the effectiveness of these flexibilities granted during the pandemic in promoting access to timely, quality care for Medicare beneficiaries. In the event that future circumstances warrant additional flexibilities, we will

reconsider these issues in future rulemaking.

*Comment:* A few commenters recommended that CMS increase the payment rate for HCPCS code G0071 in order to help RHCs and FQHCs support the uptake in resource costs needed to expand and maintain updated telehealth systems, which was needed to increase capacity during the pandemic.

*Response:* CMS acknowledges that many providers were required to invest in telecommunication systems in order to continue to provide care during the pandemic amidst rising infection rates that limited in-person visits; however, we believe that the reimbursement is adequate.

*Comment:* A few commenters encouraged CMS to allow FQHCs and RHCs to furnish remote therapeutic monitoring (RTM) and remote patient monitoring (RPM) services in combination to the services reflected in HCPCS code G0071, so that they could monitor patient-generated health data for patients diagnosed with COVID-19.

*Response:* Although out-of-scope for this interim final rule, we would like to thank commenters for this suggestion. We note that for FQHCs and RHCs, RPM and RTM services are not stand-alone billable services. However, when these services are furnished incident to an FQHC or RHC visit, payment is included in the FQHC PPS rate or RHC all-inclusive AIR rate whose costs are reflected in cost reports.

Given the public comments we received, we are finalizing the provisions of the April 6, 2020 IFC without modification. Accordingly, these policies will terminate at the end of the COVID-19 PHE. Therefore, when the COVID-19 PHE ends, CPT codes 99421, 99422 and 99423 will no longer be included in the payment for HCPCS code G0071, virtual communication services will only be available to patients that have been seen in the RHC or FQHC within the previous 12 months, and beneficiary consent for these services must be acquired under direct supervision and prior to the services being furnished.

## 2. Revision of Home Health Agency Shortage Area Requirements for Furnishing Visiting Nursing Services by RHCs and FQHCs

In the April 6, 2020 IFC (85 FR 19254 and 19255), we implemented, on an interim final basis, changes to the requirements for visiting nursing services furnished in the home by RHCs and FQHCs. We refer readers to the April 6, 2020 IFC for a more detailed overview of that policy.

Prior to the COVID-19 PHE, visiting nursing services were only covered if an RHC or FQHC was located in an area designated by the Secretary to have a shortage of HHAs. In addition to this requirement, these services were only paid if rendered to a homebound individual. Other conditions establishing payable visiting nursing services can be found at § 405.2416. However, as a result of the COVID-19 PHE, we believed the need for visiting nursing services furnished by RHCs and FQHCs would increase, as would the need for services in historically underserved communities. To address an increased need for these medically necessary services, on an interim basis for the duration of the COVID-19 PHE, we determined that any area typically served by the RHC, and any area that is included in the FQHCs service area plan, was determined to have a shortage of HHAs with no request for this determination required. However, as an additional requirement, we mandated RHCs and FQHCs to check the HIPAA Eligibility Transaction System (HETS) before providing visiting nursing services to ensure that the patient was not already under a home health plan of care. If a patient was under a home health plan of care, the HHA had to provide optimal care to achieve the goals and outcomes identified in the patient's plan of care, for each patient's medical, nursing, and rehabilitative needs (§ 484.105). RHC and FQHC visiting nursing services could not be covered by Medicare if such services were found to overlap with a 30-day period of home health care.

Finally, we revised, on an interim basis, § 405.2416 to add paragraph (a)(5), to state that during the PHE for the COVID-19 pandemic, an area typically served by the RHC, and an area that is included in the FQHC's service area plan, is determined to have a shortage of HHAs, and no request for this determination is required.

We received a few comments related to this policy.

*Comment:* One commenter expressed support for expanding access to home health services within RHC and FQHC service areas. However, the same commenter was concerned that expanding these services would exacerbate existing shortages of home healthcare professionals since the policy broadened eligible service areas, and consequently the number of patients within these areas needing these services.

*Response:* We appreciate the commenter's general support of this policy and we also want to acknowledge the existing shortage of home healthcare

workers and the PHE's impact on underserved rural and urban communities. We believe this flexibility is important for patient access to nursing services in the home and the potential for HHAs that may be overwhelmed during COVID-19 PHE.

Given the public comments we received, we are finalizing the provisions of the April 6, 2020 IFC without modification. Accordingly, this policy will terminate when the COVID-19 PHE ends and the regulations at 42 CFR 405.2416(a)(5) will be removed in future rulemaking once the PHE has ended. After the COVID-19 PHE ends, visiting nurse services will only be covered if the RHC or FQHC is located in an area designated by the Secretary to have a shortage of HHAs and, and the services meet the other conditions set out at § 405.2416.

*C. Medicare and Medicaid Programs, Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program (CMS-5531-IFC)*

In this final rule, we are also responding to public comments and stating our final policies for certain provisions in the IFC titled "Medicare and Medicaid Programs, Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program" (CMS-5531-IFC), which appeared in the May 8, 2020 **Federal Register** ((85 FR 27550); hereinafter referred to as the May 8, 2020 IFC).

**1. Revision of Bed Count Methodology for Determining Provider-Based RHCs' Exemption From the RHC Payment Limit**

In the May 8, 2020 IFC (85 FR 27569), we implemented a policy on an interim final basis related to calculation of the bed count methodology that determined when a provider-based RHC was exempted from the national RHC per-visit payment limit. We refer readers to the May 8, 2020 IFC for a more detailed overview of that policy (85 FR 27569).

An RHC that is provider-based to a hospital with fewer than 50 beds is excepted from the national RHC per-visit payment limit and is reimbursed based on actual reasonable costs. However, due to the COVID-19 PHE, many hospitals had to increase inpatient bed capacity to address the surge in need for inpatient care. This could have

affected payment for provider-based RHCs if their associated hospital had expanded their number of beds beyond 50, which would have then made them ineligible for the limit exception. CMS did not want to discourage hospitals from increasing bed capacity to meet patient needs and hoped to allow provider-based RHCs to continue to receive payment amounts they would otherwise receive in the absence of the COVID-19 PHE. As a result, on an interim basis, we revised the period of time used to determine the number of beds in a hospital at § 412.105(b) for purposes of determining which provider-based RHCs would be subject to the payment limit. Instead, CMS utilized the number of beds from the cost reporting period prior to the start of the COVID-19 PHE as the official hospital bed count for determining provider-based RHCs exempted from the RHC payment limit. This meant RHCs with provider-based status that were exempt from the national per-visit payment limit in the period prior to the effective date of the COVID-19 PHE (January 27, 2020) would continue to be exempt for the duration of the COVID-19 PHE, as defined at § 400.200.

After the publication of the May 8, 2020 IFC, section 130 of the Consolidated Appropriations Act of 2021 was passed and referred to this IFC's provision under section 1833(f)(3)(B) of the Act as a consideration for the bed count criterion. We note that the criteria in section 1833(f)(3)(B)(i) of the Act specified *a hospital with less than 50 beds*; therefore, beginning April 1, 2021, we applied the bed definition at § 412.105(b) exclusively. As we stated in the CY 2022 PFS final rule (86 FR 65203), we adopted an interim final policy to use the number of beds from the cost reporting period prior to the start of the COVID-19 PHE as the official hospital bed count for application of this policy. As such, RHCs with provider-based status that were excepted from the national statutory payment limit in the period prior to the effective date of the COVID-19 PHE (January 27, 2020) would continue to be excepted from the bed count requirement for the duration of the PHE for the COVID-19 pandemic, as defined at § 400.200, even if the hospital raised its bed count above 50. Once the COVID-19 PHE ends, a hospital will need to lower its bed count to less than 50 beds to maintain the RHC exception. We received one comment related to this policy.

*Comment:* One commenter, representing RHCs and provider-based RHCs, commented on changes in

utilization and settings of care during the pandemic, which may artificially reduce the RHC's all-inclusive rate (AIR). Specifically, the commenter noted that a minimum productivity standard, based on visits per FTE for different types of practitioners, is applied to the AIR rate. The commenter raised that this standard does not include telehealth visits as encounters that would be designated as visits under the minimum productivity standard. The commenter stated that RHCs and provider-based RHCs experienced an uptake in telehealth visits and a drop in in-person visits due to the pandemic, which may artificially lower the minimum productivity standard and AIR rate to RHCs. The commenter further mentioned that RHCs as a whole faced a drop in all visits even after accounting for telehealth visits. As a result of these changes in utilization, the commenter asked for CMS to waive the minimum productivity standard for a period of months after the COVID-19 PHE officially ends to allow time for patients to re-engage with providers.

*Response:* While this comment is out-of-scope since it relates to the methodology for the calculation of the minimum productivity standard instead of the bed-count methodology, we thank the commenter for raising this issue. We note that in the Medicare Benefit Policy Manual, Chapter 13, Section 80.4, "RHC Productivity Standards", RHCs may receive an exception to this productivity standard. The MAC has the discretion to make an exception to the productivity standard based on individual circumstances and CMS issued guidance to this effect in the MLN Matters SE20016, titled *New & Expanded Flexibilities for RHCs & FQHCs during the COVID-19 PHE*.<sup>562</sup>

In this final rule, we are finalizing the provisions of the May 8, 2020 IFC without modification. Accordingly, this policy will terminate when the COVID-19 PHE ends. As such, when Medicare Administrative Contractors (MACs) apply the rate setting process described in § 405.2464(a), they will no longer use the number of beds from the cost reporting period prior to the start of the PHE as the official hospital bed count when determining if a RHC retains its specified provider-based RHC status for purposes of section 1833(f)(3)(B)(i) of the Act. That is, an RHC will retain its specified provider-based status until the hospital which they are affiliated submits a cost report with more than 50 beds. An RHC will no longer retain its

<sup>562</sup> <https://www.cms.gov/files/document/se20016-new-expanded-flexibilities-rhcs-fqhcs-during-covid-19-phe.pdf>.

specified provider-based status nor be eligible for specified status in the future once the hospital which they are affiliated submits a cost report with more than 50 beds.

*E. Origin and Destination Requirements Under the Ambulance Fee Schedule*

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. We have established regulations at § 410.40 that govern Medicare coverage of ambulance services. Under § 410.40(e)(1), Medicare Part B covers ground (land and water) and air ambulance transport services only if they are furnished to a Medicare beneficiary whose medical condition is such that other means of transportation are contraindicated. The beneficiary's condition must require both the ambulance transportation itself and the level of service provided for the billed services to be considered medically necessary.

Under § 410.40 (e)(1), nonemergency transportation by ambulance is appropriate if either the beneficiary is bed-confined, and it is documented that the beneficiary's condition is such that other methods of transportation are contraindicated; or, if his or her medical condition, regardless of bed confinement, is such that transportation by ambulance is medically required. That section further provides that bed confinement is not the sole criterion in determining the medical necessity of ambulance transportation but is one factor that is considered in medical necessity determinations. For a beneficiary to be considered bed-confined, § 410.40 (e)(1) states that all of the following criteria must be met: (1) the beneficiary is unable to get up from bed without assistance, (2) the beneficiary is unable to ambulate, and (3) the beneficiary is unable to sit in a chair or wheelchair.

The origin and destination requirements for coverage of ambulance services are addressed in our regulations at § 410.40(f). As provided in that section, Medicare covers the following ambulance transportation:

- From any point of origin to the nearest hospital, critical access hospital (CAH), or skilled nursing facility (SNF) that is capable of furnishing the required level and type of care for the beneficiary's illness or injury. The hospital or CAH must have available the type of physician or physician specialist needed to treat the beneficiary's condition;

- From a hospital, CAH, or SNF to the beneficiary's home;

- From a SNF to the nearest supplier of medically necessary services not available at the SNF where the beneficiary is a resident, including the return trip; and

- For a beneficiary who is receiving renal dialysis for treatment of ESRD, from the beneficiary's home to the nearest facility that furnishes renal dialysis, including the return trip.

We continue to believe that our current regulatory requirements governing coverage of ambulance services are appropriate under normal circumstances. However, in the context of the PHE for the COVID-19 pandemic, we recognized that providers and suppliers furnishing ground ambulance services and other health care professionals are faced with new challenges regarding potential exposure risks, for Medicare beneficiaries and for members of the community at large. We recognized that this was a particularly emerging situation at the early phase of the PHE for COVID-19 when health care facilities and ground ambulance providers and suppliers were adapting to the COVID-19 pandemic, facing evolving facility capacity limits and service locations, and establishing new safety and health protocols for employees, volunteers, and beneficiaries.

In the interim final rule with comment period (85 FR 19276), on an interim basis, we expanded the list of destinations at § 410.40(f) for which Medicare covers ambulance transportation to include all destinations, from any point of origin, that are equipped to treat the condition of the patient consistent with Emergency Medical Services (EMS) protocols established by State and/or local laws where the services will be furnished. The EMS protocols are recognized operating procedures that all emergency service professionals such as emergency medical technicians (EMTs) and paramedics must follow for patient assessment, treatment, transportation and delivery to definitive care. These protocols are designed by national, State and/or local medical authorities and institutions. Based on these protocols, a patient suspected of having COVID-19 that requires a medically necessary transport may be transported to a testing facility to get tested for COVID-19 instead of a hospital in an effort to prevent possible exposure to other patients and medical staff.

These destinations may include, but are not limited to: any location that is an alternative site determined to be part of a hospital, CAH or SNF, community

mental health centers, FQHCs, RHCs, physicians' offices, urgent care facilities, ambulatory surgery centers (ASCs), any location furnishing dialysis services outside of an ESRD facility when an ESRD facility is not available, and the beneficiary's home. This expanded list of destinations applies to medically necessary emergency and non-emergency ground ambulance transports of beneficiaries during the PHE for the COVID-19 pandemic. Consistent with section 1861(s)(7) of the Act, there must be a medically necessary ground ambulance transport of a patient in order for an ambulance service to be covered.

In the interim final rule with comment period (85 FR 19276), we revised § 410.40 that added a new paragraph (f)(5), to state that during the PHE for the COVID-19 pandemic only, a covered destination includes a ground ambulance transport from any point of origin to a destination that is equipped to treat the condition of the patient consistent with State and local EMS protocols where the services will be furnished. These destinations include, but are not limited to, any location that is an alternative site determined to be part of a hospital, CAH or SNF, community mental health centers, FQHCs, RHCs, physician offices, urgent care facilities, ASCs, any location furnishing dialysis services outside of an ESRD facility when an ESRD facility is not available, and the beneficiary's home. Home may be an appropriate destination for a COVID-19 patient who is discharged from the hospital to home to be under quarantine (as noted above, there must be a medically necessary ground ambulance transport of a patient in order for an ambulance service to be covered).

*Comment:* We received 17 comments in support of the temporary expansion of the list of covered ground ambulance destinations during the PHE for the COVID-19 only. Two commenters stated that this is exceptional and provides welcome relief to ambulance providers and suppliers who are working collaboratively with their local partners to preserve scarce healthcare resources. Another commenter applauded CMS for recognizing that during the duration of crisis it is important to allow ground ambulance organizations to transport patients to destinations other than hospitals, CAHs, and nursing homes. The commenter further stated that in addition to reducing hospital surge and reducing the risk of exposure, covering and reimbursing transports to alternative destinations is also likely to reduce the

overall Medicare costs and coinsurance obligations for these patients.

*Response:* We recognize that providers and suppliers furnishing ground ambulance services during the PHE for the COVID-19 pandemic have been faced with new challenges regarding potential exposure risks, for Medicare beneficiaries and for members of the community at large.

*Comment:* Two commenters questioned if it is a correct interpretation of the temporary expanded list of covered destinations that it would apply to any beneficiary, not only beneficiaries experiencing a COVID-19 related clinical presentation.

*Response:* The expanded list of covered ground ambulance transports during the PHE for the COVID-19 applies to any beneficiary with or without a COVID-19 related clinical presentation.

*Comment:* Two commenters noted that the beneficiary's home is listed as an appropriate alternate destination. The commenters inquired that since a medically necessary ambulance transportation to a beneficiary's home is already a covered destination, does including the beneficiary's home as an appropriate alternate destination mean that a clinically appropriate 'Treatment in Place' determination as contemplated in CMS' Emergency Triage, Treatment and Transport (ET3) payment model, where the beneficiary can be appropriately managed in the home, without ambulance transport, is a covered benefit.

*Response:* Consistent with section 1861(s)(7) of the Act, there must be a medically necessary ground ambulance transport of a patient in order for an ambulance service to be covered, and this interim regulation spoke to certain of those circumstances.

Separately, section 9832 of the American Rescue Plan Act of 2021 provides the Secretary with authority to implement a waiver applicable to ground ambulance services during the PHE for the COVID-19. Effective March 1, 2020 through the end of the PHE for the COVID-19, we are waiving the requirement under sections 1861(s)(7) and 1834(l) of the Act that an ambulance service include the transport of an individual to the extent necessary to allow payment for ground ambulance services furnished in response to a 911 call (or the equivalent in areas without a 911 call system) in cases in which an individual would have been transported to a destination permitted under § 410.40(f) but such transport did not occur as a result of community-wide emergency medical service (EMS) protocols due to the PHE for the

COVID-19. We would refer the reader to the COVID-19 Frequently Asked Questions (FAQs) on Medicare Fee-for-Service (FFS) Billing document for further information at <https://www.cms.gov/files/document/03092020-covid-19-faqs-508.pdf>.

*Comment:* While three commenters supported the temporary revision to expand covered ground ambulance destinations during the PHE for the COVID-19 only, the commenters also recommended that CMS evaluate the effectiveness of this interim expansion and consider developing permanent revisions that can address broader issues. One commenter stated that an appropriate flexibility would provide alternatives to transporting a patient to a hospital emergency department when a lower level of care would meet patient needs safely, more efficiently, and at reduced cost to the beneficiary. The commenter further stated that hospital emergency departments are routinely overburdened, even before the current pandemic, often with patients not in need of emergency care. One commenter stated that given the likelihood that this policy change will result in a better patient care experience, a lower cost of care, and improved efficiencies for fire departments and EMS agencies, suggested CMS to make this change permanent.

*Response:* The CMS Innovation Center currently has an Emergency Triage, Treatment and Transport (ET3) Model which is a voluntary, 5-year payment model that will pay participants to transport to an alternative destination partner or initiate and facilitate treatment in place with a qualified health care partner, either at the scene of the 911 emergency response or via telehealth. We continue to believe that this model is well designed to evaluate the potential benefits described by the commenters in a broader set of circumstances that are not ascribed to a public health emergency. Due to the urgency of establishing the flexibility, we were unable to develop tracking mechanisms for such an analysis. To reduce burden so the focus would be on patient care, we instructed ground ambulance providers and suppliers to report the existing ambulance modifiers instead of developing new modifiers for each for covered destination.

We continue to believe that our current regulatory requirements governing coverage of ambulance services are appropriate under non-PHE circumstances. Therefore, we are finalizing our interim final policy that the expanded list of covered destinations for ground ambulance

transports was for the duration of the PHE for the COVID-19 only. These destinations include, but are not limited to, any location that is an alternative site determined to be part of a hospital, CAH or SNF, community mental health centers, FQHCs, RHCs, physician offices, urgent care facilities, ASCs, any location furnishing dialysis services outside of an ESRD facility when an ESRD facility is not available, and the beneficiary's home.

When the PHE for the COVID-19 ends, our regulations will reflect the long-standing ambulance services coverage for the following destinations: hospital; CAH; rural emergency hospital (REH) (effective with services on or after January 1, 2023); SNF; beneficiary's home; and dialysis facility for an end-stage renal disease (ESRD) patient who requires dialysis. Any future refinements to the list of covered ground ambulance destinations will be addressed in rulemaking with an opportunity for the public to comment.

## VI. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to publish a 60-day notice in the **Federal Register** and solicit public comment before a "collection of information" requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of OMB's implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

In our April 6, 2020 IFC (85 FR 19230), November 19, 2021 IFC (86 FR 66031), and July 29, 2022 proposed rule (87 FR 45860), we solicited public comment on each of the required issues under section 3506(c)(2)(A) of the PRA for the following information collection requirements. The comments received are responded to in the sections below.

**A. Wage Estimates**

To derive average costs, we used data from the U.S. Bureau of Labor Statistics' May 2021 National Occupational Employment and Wage Estimates for all salary estimates ([http://www.bls.gov/oes/current/oes\\_nat.htm](http://www.bls.gov/oes/current/oes_nat.htm)). In this regard,

Table 101 presents BLS' mean hourly wage, our estimated cost of fringe benefits and overhead (calculated at 100 percent of salary), and our adjusted hourly wage. There are many sources of variance in the average cost estimates, both because fringe benefits and overhead costs vary significantly from

employer to employer, and because methods of estimating these costs vary widely from study to study. Therefore, we believe that doubling the hourly wage to estimate the average cost for the purpose of calculating total cost is a reasonably accurate estimation method.

**TABLE 101: National Occupational Employment and Wage Estimates  
(Excluding Physicians)**

| Occupation title                                  | Occupation code | Mean hourly wage (\$/hr) | Fringe benefits and overhead (\$/hr) | Adjusted hourly wage (\$/hr) |
|---|-----------------|--------------------------|--------------------------------------|------------------------------|
| Billing and Posting Clerks                        | 43-3021         | 20.55                    | 20.55                                | 41.10                        |
| Computer System Analysts                          | 15-1211         | 49.14                    | 49.14                                | 98.28                        |
| Licensed Practical and Licensed Vocational Nurses | 29-2061         | 24.93                    | 24.93                                | 49.86                        |
| Medical and Health Services Managers              | 11-9111         | 57.61                    | 57.61                                | 115.22                       |
| Secretaries and Administrative Assistants         | 43-6014         | 19.75                    | 19.75                                | 39.50                        |

In the data from the U.S. Bureau of Labor Statistics' May 2021 National Occupational Employment and Wage Estimates for all salary estimates ([http://www.bls.gov/oes/current/oes\\_nat.htm](http://www.bls.gov/oes/current/oes_nat.htm)), there is no single occupational code that we could use for "Physician" wage data. As shown in Table 102, in order to

estimate the burden for Physicians, we are using a rate of \$259.98/hr which is the average of the mean wage rates for Anesthesiologists; Family Medicine Physicians; General Internal Medicine Physicians; Obstetricians and Gynecologists; Pediatricians, General; Physicians, All Other; Psychiatrists;

Orthopedic Surgeons, Except Pediatric; Pediatric Surgeons; Surgeons, All Other; and Surgeons, Except Ophthalmologists  $[(\$318.44/\text{hr} + \$226.86/\text{hr} + \$232.88/\text{hr} + \$284.82/\text{hr} + \$190.80/\text{hr} + \$222.60/\text{hr} + \$240.16/\text{hr} + \$294.44/\text{hr} + \$279.14/\text{hr} + \$286.34/\text{hr} + \$283.20/\text{hr}) \div 11]$ . In the average

**TABLE 102: National Occupational Employment and Wage Estimates  
(Physicians)**

| Occupation title                      | Occupation code | Mean hourly wage (\$/hr) | Fringe benefits and overhead (\$/hr) | Adjusted hourly wage (\$/hr) |
|---------------------------------------|-----------------|--------------------------|--------------------------------------|------------------------------|
| Anesthesiologists                     | 29-1211         | 159.22                   | 159.22                               | 318.44                       |
| Family Medicine Physicians            | 29-1215         | 113.43                   | 113.43                               | 226.86                       |
| General Internal Medicine Physicians  | 29-1216         | 116.44                   | 116.44                               | 232.88                       |
| Obstetricians and Gynecologists       | 29-1218         | 142.41                   | 142.41                               | 284.82                       |
| Pediatricians, General                | 29-1221         | 95.40                    | 95.40                                | 190.80                       |
| Physicians, All Other                 | 29-1229         | 111.30                   | 111.30                               | 222.60                       |
| Psychiatrists                         | 29-1223         | 120.08                   | 120.08                               | 240.16                       |
| Orthopedic Surgeons, Except Pediatric | 29-1242         | 147.22                   | 147.22                               | 294.44                       |
| Pediatric Surgeons                    | 29-1243         | 139.57                   | 139.57                               | 279.14                       |
| Surgeons, All Other                   | 29-1249         | 143.17                   | 143.17                               | 286.34                       |
| Surgeons                              | 29-1240         | 141.60                   | 141.60                               | 283.20                       |
| Total                                 |                 |                          |                                      | 2,859.69                     |
| Average Physician Wage (2,859.68/11)  |                 |                          |                                      | 259.98                       |

As indicated, we adjusted BLS' hourly wage estimates by a factor of 100 percent to obtain the adjusted hourly wage estimate. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

#### *B. Information Collection Requirements (ICRs)*

The following ICRs are listed in the order of their appearance in sections II., III., IV., and V. of this final rule.

##### **1. ICRs Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs To Provide Refunds With Respect to Discarded Amounts (§ 414.940)**

The following changes will be submitted to OMB for approval under control number 0938-New (CMS–10835).

As discussed in section III.A.7. of this final rule, as a part of implementing section 1847A(h) of the Act, as added by section 90004 of the Infrastructure Act, we recognize the need for establishing a dispute resolution process because of the nature of determining the estimated total allowed charges for a given calendar quarter and the methods by which the estimated refund amount is determined. We are finalizing that each manufacturer has an opportunity to dispute the report, described in section III.A.4. of this final rule, by submitting an error report.

We are finalizing that to assert that there have been one or more errors in the report, a manufacturer must submit a dispute with each asserted error. The dispute must include the following information: (1) Manufacturer name and address; (2) The name, telephone number, and email address of one or more employees or representatives of the manufacturer with whom the Secretary may discuss the claimed errors; (3) For a mathematical calculation error, the specific calculation element(s) that the manufacturer disputes and its proposed corrected calculation; and (4) For any other asserted error, an explanation of the nature of the error, how the error affects the refund calculation, an explanation of how the manufacturer established that an error occurred, the proposed correction to the error, and an explanation of why the Secretary should use the proposed corrected data instead.

As discussed in section VII.E.1. of this final rule, our estimates show a projected 25 billing and payment codes meeting the definition of refundable single-dose container or single-use package drug with 10 percent or more discarded units, which is the applicable percentage specified in section 1847A(h)(3) of the Act. Therefore, we anticipate a similar number of drugs could owe a refund pursuant section 90004 of the Infrastructure Act. Since each of these billing and payment codes is a single source drug code, each code represents 1 manufacturer and we expect disputes from fewer than 10 manufacturers per year.

Consistent with the estimated annual burden per response/recordkeeper for similar error reports utilized to implement the Branded Prescription Drug Fee (76 FR 51310), we estimate the annual time per respondent/recordkeeper to be 40 hours. As we anticipate no more than 10 disputes per year, we estimate a total annual reporting and recordkeeping burden of 400 hours (10 error reports per year × 40 hr per response) at a cost of \$15,800 (\$39.50/hr × 400 hr).

##### **2. ICRs Regarding the Clinical Laboratory Fee Schedule: Data Reporting by Laboratories**

As described in section III.C.5. of this final rule, under the Clinical Laboratory Fee Schedule, “reporting entities” must report to CMS during a “data reporting period” “applicable information” collected during a “data collection period” for their component “applicable laboratories” and we revised the regulations at § 414.504(a)(1) to account for a delay in reporting until January 1, 2023 through March 31, 2023. As stated in section 1834A(h)(2) of the Act chapter 35 of title 44 U.S.C., which includes such provisions as the PRA does not apply to information collected under section 1834A of the Act. Consequently, we are not setting out any requirements or burden for public review and OMB approval as prescribed under the PRA.

##### **3. ICRs Regarding the Medicare Shared Savings Program**

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out burden under the authority of the PRA. Please refer to section VII.E.7. of this final rule for a discussion of the impacts associated with the changes to the Shared Savings Program as described in section III.G. of this final rule.

##### **4. ICRs for Medical Necessity and Documentation Requirements for Nonemergency, Scheduled, Repetitive Ambulance Services (§ 410.40(e)(2)(ii))**

In section III.I. of this final rule, we discuss our clarifications to § 410.40(e)(2)(ii) that reorganize existing language and state that the PCS and additional documentation from the beneficiary's medical record may be used to support a claim that transportation by ground ambulance is required. We are also clarifying that the PCS and additional documentation must provide detailed explanations, that are consistent with the beneficiary's current medical condition, that explains the beneficiary's need for transport by an ambulance. Finally, we are clarifying that coverage includes observation or other services rendered by qualified ambulance personnel. We do not expect that our proposal will yield a change in the information collection requirements or burden that is currently approved by OMB under control number 0938–1380 (CMS–10708) and 0938–0969 (CMS–10417) as this policy does not require providers and suppliers to submit additional information. We are simply clarifying existing policy requirements. We did not receive any comments on our proposed clarifications and are finalizing as-proposed.

##### **5. ICRs for Medicare Provider and Supplier Enrollment Changes (§ 424.518)**

This rule revises § 424.518 as follows:

- Add provider or supplier ownership changes as provider enrollment transactions falling within the scope of § 424.518. (As explained in section III.J. of this final rule, the applicable owner(s) will have to submit fingerprints and be subject to a fingerprint-based criminal background check if the provider or supplier is in the “high” level of categorical screening.)
- State that any screening level adjustment to “high” also applies to all other enrolled and prospective providers and suppliers that have the same legal business name and tax identification number as the provider or supplier that originally triggered the screening level increase.
- Moves SNFs from the “limited” level of categorical screening to the “high” screening level.

These changes will result in an increase in the annual number of providers and suppliers that must submit the fingerprints for a national background check (via FBI Applicant Fingerprint Card FD–258) of all individuals who maintain a 5 percent or

greater direct or indirect ownership interest in the provider or supplier. The burden is currently approved by OMB under control number 1110–0046. We are not scoring the burden under this ICR section since the fingerprint card is not owned by CMS. However, an analysis of the impact of this requirement can be found in the RIA section of this rule.

None of our other Medicare provider enrollment provisions implicate information collection requirements.

#### 6. ICRs for State Options for Implementing Medicaid Provider Enrollment Affiliation Provision

We do not anticipate any information collection burden associated with our revision to § 455.107(b), for the latter merely involves giving the states somewhat greater flexibility in executing the provisions of § 455.107.

#### 7. ICRs Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan (Section 2003 of the SUPPORT Act)

In section III.L. of this final rule, we extended the existing compliance action of sending letters to non-compliant prescribers from the CY 2023 EPCS program implementation year (January 1, 2023 through December 31, 2023) to the CY 2024 year (January 1, 2024 through December 31, 2024). Additionally, effective January 1, 2023, we changed the year from which PDE data is used from the preceding year to the current evaluated year when CMS determines whether a prescriber qualified for an exception based on the number of Part D controlled substance prescriptions (§ 423.160(a)(5)(ii)). We also will determine whether a prescriber qualifies for the emergency or disaster exception (§ 423.160(a)(5)(iii)) based on the prescriber's valid address in PECOS (Medicare Provider Enrollment, Chain, and Ownership System), instead of the NCPDP Pharmacy Database address, and for prescribers who are not enrolled or do not have a valid PECOS address, we will use the address in the National Plan and Provider Enumeration System (NPPES) data. We do not expect that our finalized policies will yield a change in the information collection burdens described in CY 2022 PFS final rule (86 FR 65562 through 65564). We would like to clarify that the data collections discussed in CY 2022 PFS final rule will now be submitted through the standard PRA process under a new PRA package (OMB control number pending, CMS–10834) rather than submitted under OMB control number 0938–1396 (CMS–

10755) as we stated in the CY 2022 PFS final rule (86 FR 65562). The standard PRA process includes the publication of 60- and 30-day **Federal Register** notices that will provide the public with opportunities for public review and comment.

#### 8. ICRs Regarding the Medicare Ground Ambulance Data Collection System (§ 414.626)

Section 1834(l)(17) of the Act requires that the Secretary develop a ground ambulance data collection system that collects cost, revenue, utilization, and other information determined appropriate by the Secretary with respect to providers of services and suppliers of ground ambulance services (ground ambulance organizations). Section 1834(l)(17)(I) of the Act states that the PRA does not apply to the collection of information required under section 1834(l)(17) of the Act. Accordingly, this collection of information section does not set out any burden for the provisions. Please see section VII. of this preamble for a discussion of the estimated impacts.

We did not receive any public comments on our claim that the provision is exempt from the PRA and are finalizing that claim as proposed.

#### 9. The Quality Payment Program (QPP) (42 CFR Part 414 and Section IV. of This Final Rule)

The following QPP-specific ICRs reflect this final rule's policy changes as well as adjustments to the policies that have been finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (83 FR 59452, 84 FR 62568, 85 FR 84472, and 86 FR 64996, respectively) due to revised assumptions based on updated available at the time of the publication of this final rule.

##### a. Background

##### (1) ICRs Associated With MIPS and Advanced APMs

There is a series of ICRs associated with the Quality Payment Program, including for MIPS and Advanced APMs. The following sections describe the changes in the estimated burden for the information collections relevant to the revisions in the policies associated with the CY 2023 PFS final rule and the finalized revisions to our currently approved information requests for MIPS and Advanced APM ICRs. The finalized estimated burden will be submitted to OMB under control number OMB 0938–1314 (CMS–10621). We note that CMS has already received approvals for the

collection of information associated with the CAHPS for MIPS survey under OMB control number 0938–1222 (CMS–10450) and the virtual group election process under OMB control number 0938–1343 (CMS–10652).

##### (2) Summary of Quality Payment Program Changes: MIPS

We have included the change in estimated burden for the CY 2023 performance period/2025 MIPS payment year due to the finalized policies and information collections in this final rule. The finalized policies in this rule impact the burden estimates for the CY 2023 MIPS performance period/2025 MIPS payment year.

The following six MIPS ICRs show changes in burden due to the finalized policies in this rule: (1) Quality performance category data submission by Medicare Part B claims collection type; (2) Quality performance category data submission by QCDR and MIPS CQM collection type; (3) Quality performance category data submission by eCQM collection type; (4) MVP quality performance category submission; (5) MVP registration, and (6) Promoting Interoperability performance category data submission. In aggregate, we estimate the finalized policies will result in a net decrease in burden of 3,708 hours and \$405,213 for the CY 2023 performance period/2025 MIPS payment year. The remaining changes to our currently approved burden estimates are adjustments due to the revised burden assumptions based on the updated data available at the time of publication of this final rule. As discussed in section IV.E.16.a. of this final rule, we are basing our estimates on the newly available CY 2021 MIPS performance period data.

We have added one new ICR, “third party intermediary plan audits,” in section VI.B.9.c. of this rule for third party intermediaries to distinctly capture the burden related to: (1) QCDR and qualified registry targeted audits as established under the conditions for approval at § 414.1400(b)(3)(vi) through (viii); and (2) all the requirements for remedial action and termination at § 414.1400(e). For simplicity, we added this ICR to capture the requirements and burden for third party intermediaries to submit additional requirements for compliance with both the conditions of approval and remedial action and termination criteria under one ICR. We note that the addition of this ICR is not due to policy changes in this rule, but rather it is a change in our approach to representing the currently approved estimated burden for the ICRs related to the third party intermediaries in the CY

2022 PFS final rule. (86 FR 65569 through 65576).

We are not making any changes or adjustments to the following ICRs: Registration for virtual groups; CAHPS survey vendor applications; group registration for CAHPS for MIPS survey; CAHPS for MIPS survey beneficiary participation; subgroups registration; call for Promoting Interoperability measures; nomination of improvement activities and opt-out of performance data display on Compare Tools for voluntary participants. See section VI.B.9. of this final rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The accuracy of our estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted by two primary factors. First, we are unable to predict with absolute certainty who will be a QP for the CY 2023 performance period/2025 MIPS payment year. New eligible clinician participants in Advanced APMs who become QPs will be excluded from MIPS reporting requirements and payment adjustments, and as such, are unlikely to report under MIPS; while some current Advanced APM participants may end participation such that the APM Entity's eligible clinicians may not be QPs for a year based on § 414.1425(c)(5), and thus be required to report under MIPS. Second, it is difficult to predict what Partial QPs, who can elect whether to report to MIPS, will do in the CY 2023 performance period/2025 MIPS payment year compared to the CY 2021 performance period/2023 MIPS payment year, and therefore, the actual number of Advanced APM participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data. Additionally, we will continue to update our estimates annually as data becomes available.

### (3) Summary of Quality Payment Program Changes: Advanced APMs

For these ICRs (identified above under, "ICRs Associated with MIPS and Advanced APMs"), the changes to currently approved burden estimates are adjustments based on updated projections for the CY 2023 performance period/2025 MIPS payment year. We did not implement any changes to the

Other Payer Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes; and submission of Data for QP determinations under the All-Payer Combination Option.

#### (4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 103 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. As shown in the first row of Table 103, MIPS eligible clinicians and other clinicians voluntarily submitting data will submit data either as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section unless otherwise noted. Beginning with the CY 2023 performance period/2025 MIPS payment year, clinicians could also participate as subgroups for reporting measures and activities in a MIPS Value Pathway (MVP). We note that the subgroup reporting option is not available for clinicians participating in traditional MIPS.

Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used for the cost performance category is not represented in Table 103.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. We previously finalized in the CY 2021 PFS final rule that the APP is available for both ACO participants and non-ACO participants to submit quality data (85 FR 84859 through 84866). Due to data limitations and our inability to determine who will use the APM Performance Pathway versus the traditional MIPS submission mechanism for the CY 2023 performance period/2025 MIPS payment year, we assume

ACO APM Entities will submit data through the APM Performance Pathway, using the CMS Web Interface option, and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity. We also want to note that as finalized in the CY 2022 PFS final rule (86 FR 65259 through 65263), the CMS Web Interface collection type is available through the CY 2024 performance period/2026 MIPS payment year only for clinicians participating in the Shared Savings Program. Per section 1899 of the Act (42 U.S.C. 1395jjj), submissions received from eligible clinicians in ACOs are not included in burden estimates for this final rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit data individually. As described in section IV.A.6.c.(5)(b) of this final rule, we finalized the introduction of a voluntary reporting option for APM Entities to report the Promoting Interoperability performance category at the APM Entity level beginning with the CY 2023 performance period/2025 MIPS payment year. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 QPP final rule, we described that for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the improvement activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM receives less than the maximum improvement activities performance category score, to date all MIPS APM have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 PFS final rule (82 FR 53841 through 53844).

**BILLING CODE 4150-28-P**

**TABLE 103: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician\***

| Category of Clinician  | Type of Data Submitted   |  |  |   |
|--|--|--|--|---|
|  | Quality Performance Category   | Promoting Interoperability Performance Category  | Improvement Activities Performance Category  | Other Data Submitted on Behalf of MIPS Eligible Clinicians  |
| MIPS Eligible Clinicians and Other Eligible Clinicians Voluntarily Submitting MIPS Data, Participating in the Shared Savings Program, and other MIPS APMs that use the APM Performance Pathway for model measures (CMS Web Interface will be available only to clinicians participating in Shared Savings Program ACOs <b>through the CY 2024</b> performance period/ <b>2026</b> MIPS payment year) | As a virtual group, group, subgroup, individual clinician, or APM Entity. <sup>a</sup> | <p>As a virtual group, group, subgroup, individual clinician, or APM Entity.</p> <p>Certain types of MIPS eligible clinicians are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category.</p> <p>Clinicians who submit an application and are approved for significant hardship or other exceptions are also eligible for a zero percent weighting.</p> <p>Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or APM Entity TIN or individual reporting. [The burden estimates for this final rule assume group TIN-level reporting].<sup>b</sup></p> | <p>As a virtual group, group, subgroup, or individual clinician.</p> <p>MIPS APMs do not submit information.</p> <p>CMS will assign the same improvement activities performance category score to each APM Entity based on the activities involved in participation in the MIPS APM.<sup>c</sup></p> | <p>Groups electing to use a CMS-approved survey vendor to administer CAHPS must register.</p> <p>MVP participants electing to submit data for the measures and activities in an MVP must register.</p> <p>Clinicians in MIPS APMs electing the APM Performance Pathway. (CMS Web Interface will be available to only clinicians in ACOs <b>through the CY 2024</b> performance period/<b>2026</b> MIPS payment year.)</p> <p>APM Entities will make Partial QP election for participating eligible clinicians.</p> <p>Virtual groups must register via email.<sup>d</sup></p> |

\* Because the cost performance category relies on administrative claims data, MIPS eligible clinicians are not required to provide any additional information, and therefore, the cost performance category is not represented in this table.

<sup>a</sup> Submissions by a Shared Savings Program ACO are not included in burden estimates for this final rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. Section 1899 of the Act (42 U.S.C. 1395jjj) states that the Shared Savings Program is not subject to the PRA.

<sup>b</sup> Promoting Interoperability performance category data may be submitted at the group TIN, APM Entity TIN and individual clinician level. If group TIN, APM Entity TIN, and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. For multi-TIN APM Entities that do not submit at the APM Entity level, the TIN/NPI scores are then aggregated for purposes of calculating the APM Entity score.

<sup>c</sup> The burden estimates for this final rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score. APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent (§ 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.

<sup>d</sup> Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.

and CY 2022 PFS final rules (83 FR 59452, 84 FR 62568, 85 FR 84472 and 86 FR 64996), and continued in this final rule create some additional data collection requirements not listed in Table 103. These additional data collections, some of which are currently approved by OMB under the control numbers 0938–1314 (Quality Payment Program, CMS–10621) and 0938–1222 (CAHPS for MIPS, CMS–10450), are as follows:

Additional ICRs related to MIPS third-party intermediaries (see section VI.B.9. of this final rule):

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59998 through 60000) (OMB 0938–1314).
- Self-nomination of new and returning registries (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59997 through 59998) (OMB 0938–1314)
- Third party intermediary plan audits (New)
- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (OMB 0938–1222).

- Open Authorization Credentialing and Token Request Process (OMB 0938–1314) (85 FR 84969 through 84970).

Additional ICRs related to the data submission and the quality performance category (see section VI.B.9. of this final rule):

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938–1222).
- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938–1314).

Additional ICRs related to the Promoting Interoperability performance category (see section VI.B.9.g. of this final rule):

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938–1314).

Additional ICRs related to call for new MIPS measures and activities (see sections VI.B.9.f., VI.B.9.h., VI.B.9.j., and VI.B.9.k. of this final rule):

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938–1314).
- Call for new Promoting Interoperability measures (83 FR 60014 through 60015) (OMB 0938–1314).
- Call for MIPS quality measures (83 FR 60010 through 60011) (OMB 0938–1314).
- Nomination of MVPs (85 FR 84990 through 84991) (OMB 0938–1314)

Additional ICRs related to MIPS (see section VI.B.9.o. of this final rule):

- Opt out of performance data display on Compare Tools for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938–1314).

Additional ICRs related to APMs (see sections VI.B.9.m. and VI.B.9.n. of this final rule):

- Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938–1314).
- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938–1314).
- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938–1314).
- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938–1314).

#### b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule does not create any new or revised collection of information requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938–1343 (CMS–10652). Consequently, we are not making any changes under that control number.

#### c. ICRs Regarding Third Party Intermediaries (§ 414.1400)

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2022 PFS final rule, for the burden related to the third party intermediaries, we combined the burden associated with the submission of: targeted audits, corrective action plans, participation plans and transition plans under the ICRs for QCDR and qualified registry self-nomination process (86 FR 65569 through 65576). In the CY 2023 PFS proposed rule, we proposed changes in our existing approach to capture the estimated burden for third party intermediaries (87 FR 46346). We proposed to separate the burden for submission of the targeted audits and other plans listed above under the ICR for third party intermediary plan audits. We stated that the change more accurately captures the associated burden for the QCDR and qualified registry self-nomination process because not every QCDR or qualified registry that submits a self-nomination

application will also submit a targeted audit, corrective action plan (CAP), participation plan, or a transition plan. We are finalizing the proposed addition of the new ICR. This change is not due to any finalized policies related to third party intermediaries in this rule, rather it is a change in representing the estimated burden from adopted policies.

In section IV.A.6.g.(1)(b) of this rule, we finalized the proposed updates to the definition of a third party intermediary at § 414.1305, and to make other minor conforming technical edits to the CFR governing third party intermediaries set forth in § 414.1400. We also finalized our proposal to revise QCDR measure self-nomination and measure approval requirements to delay the QCDR measure testing requirement for traditional MIPS by an additional year, until the CY 2024 performance period/CY 2026 MIPS payment year.

#### (1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to submit data on behalf of clinicians as a qualified registry, QCDR, or survey vendor must complete a self-nomination process annually.<sup>563</sup> The processes for self-nomination of entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to nominate QCDR measures for approval for the reporting of quality performance category data. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

#### (2) QCDR Self-Nomination Applications

As described below, in this rule we are adjusting the number of self-nomination applications used to calculate our burden estimates based on current data (from 84 to 63) from the CY 2022 QCDR self-nomination period for the CY 2023 performance period/2025 MIPS payment year. We are also adjusting our estimates for the number of existing or borrowed QCDR measures submitted for consideration by each

<sup>563</sup> As stated in the CY 2019 PFS final rule (83 FR 59998), health IT vendors are not included in the burden estimates for MIPS.

QCDR at the time of self-nomination and the average time required to submit information for each QCDR measure. We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77507 through 77508, and 82 FR 53906 through 53908, respectively), and the CY 2019, CY 2020, CY 2021 and CY 2022 PFS final rules (83 FR 59998 through 60000, 84 FR 63116 through 63121, 85 FR 84964 through 84969, and 86 FR 65569 through 65573, respectively) for our previously finalized requirements and estimated burden for self-nomination of QCDRs and nomination of QCDR measures.

#### (a) Self-Nomination Process and Other Requirements

In this rule, as explained below due to availability of updated data, we are adjusting: (1) the number of self-nomination applications (from 84 to 63) and (2) the estimated time required for QCDRs to submit a self-nomination application for the simplified (from 9.5 hours to 8.1 hours) and full self-nomination process (from 11.5 hours to 10.1 hours) due to an adjustment in the estimated weighted average time required for each QCDR to submit a measure (from 0.75 to 0.63 hours). In section IV.A.6.g.(1)(b) of this rule, we discuss our updates to the definition of a third party intermediary at § 414.1305 to align with existing policies and to make other minor conforming technical edits to the regulation text governing third party intermediaries set forth in § 414.1400. We assume that the revised definition of a (third party intermediary) and the conforming technical edits do not require additional information or change any of our active burden estimates during the self-nomination process. Therefore, we are not making such revisions under the aforementioned OMB control number.

#### (b) QCDR Measure Requirements

We previously finalized QCDR measure self-nomination requirements at § 414.1400(b)(4)(i), including the requirement at § 414.1400(b)(4)(i)(B) that entities must publicly post the measure specifications for QCDR measures no later than 15 calendar days following CMS' approval of any QCDR measure specifications.

In section IV.A.6.g.(2)(b) of this rule, we are finalizing our proposed revision to § 414.1400(b)(4)(i)(B) that clarifies requirements for publicly posting the QCDR measure specifications. Specifically, we are finalizing our proposal to revise QCDR measure self-

nomination and measure approval requirements, including to delay the QCDR measure testing requirement for traditional MIPS by an additional year, until the CY 2024 performance period/2026 MIPS payment year. We are finalizing our proposal to continue delaying this requirement based on our recognition of the continuing impact of the COVID-19 public health emergency on the ability of QCDRs to test measures. We will not revise or adjust our active requirements or burden estimates as a result of this clarification because the finalized policy will only delay measure testing requirements and it will not substantively change the estimated average weighted time of 0.63 hours (discussed below in section) required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

Additionally, in section IV.A.6.g.(2)(c) of this rule, we finalized our proposal to amend § 414.1400(b)(4)(iii)(A)(3) to delay the requirement for QCDR measure full testing until the CY 2024 performance period/2026 MIPS payment year. We will not revise or adjust our active requirements or burden estimates as result of this change because we assume that the delay does not meaningfully change the existing requirements, or the time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

Based on the number of QCDR measures submitted for consideration during the CY 2022 QCDR self-nomination period for the CY 2023 performance period/2025 MIPS payment year, we continue to estimate that each QCDR will submit 12 measures, on average. However, we are adjusting our estimated number of new (from 2 to 1) and existing or borrowed measures from 10 to 11 based on the number of QCDRs that borrowed measures during the CY 2022 QCDR self-nomination period. Due to this change, we are also adjusting the estimated weighted average time required for each QCDR to submit a measure from 0.75 hours to 0.63 hours  $[(1 \text{ new measure} \times 2 \text{ hr}) + (11 \text{ existing or borrowed measures} \times 0.5 \text{ hr}) / \text{total \# of measures (12)}]$  (a change of 0.12 hours). We note that we are not revising or adjusting our active estimated per response time for a QCDR to submit a new measure (2 hr/response) and an existing or borrowed measure (0.5 hr/response).

Based on the actual number of applications received during the CY 2022 self-nomination period for the CY 2023 performance period/2025 MIPS

payment year, we are adjusting the number of QCDRs that will submit self-nomination applications in the CY 2023 PFS proposed rule (87 FR 46347) from 90 to 63 (a decrease of 27 self-nomination applications). Based on the updated data, this will result in a decrease of 21 self-nomination applications (from 84 to 63) from the currently approved number of QCDR self-nomination applications.

We note that we are not making any changes to the currently approved time of 0.5 hours required for the QCDR simplified self-nomination process and 2.5 hours for the full self-nomination process. For QCDRs that submit measures as part of their self-nomination process, due to the estimated increase in the number of existing or borrowed QCDR measures and a decrease in the number of new QCDR measures submitted with the self-nomination application discussed above, we are adjusting our estimated time for the QCDR self-nomination process from a minimum of 8.1 hours  $[0.5 \text{ hr for the simplified self-nomination process} + (12 \text{ measures} \times 0.63 \text{ hr/measure for QCDR measure submission})]$  to a maximum of 10.1 hours  $[2.5 \text{ hr for the full self-nomination process} + (12 \text{ measures} \times 0.63 \text{ hr/measure for QCDR measure submission})]$ . In this regard the minimum time has decreased by 1.4 hours (from 9.5 to 8.1) while the maximum time has decreased by 1.4 hours (from 11.5 to 10.1).

Based on the above assumptions, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered "qualified" to submit quality measures results and numerator and denominator data on behalf of MIPS eligible clinicians.

As shown in Table 104, we assume that the staff involved in the QCDR self-nomination process will continue to be computer systems analysts or their equivalent, who have an average adjusted labor rate of \$98.28/hr. We estimate the burden per response will range between \$796.06  $(8.1 \text{ hr} \times \$98.28/\text{hr})$  for the simplified self-nomination process and \$992.63  $(10.1 \text{ hr} \times \$98.28/\text{hr})$  for the full self-nomination process. In aggregate, the estimated annual burden for the simplified and full-self nomination process for 63 QCDRs will range from 510 hours  $(63 \text{ responses} \times 8.1 \text{ hr})$  to 636 hours  $(63 \text{ responses} \times 10.1 \text{ hr})$  at a cost ranging from \$50,152  $(63 \text{ responses} \times \$796.06/\text{hr})$  to \$62,536  $(63 \text{ responses} \times \$992.63)$ .

**TABLE 104: Final Burden for QCDR Self-Nomination and QCDR Measure Submission**

| Burden and Respondent Descriptions  | Minimum         | Maximum         |
|---|-----------------|-----------------|
| # of QCDR Simplified Self-Nomination Applications submitted (a)   | 63              | 0               |
| # of QCDR Full Self-Nomination Applications submitted (b)   | 0               | 63              |
| Total Applications (c)  | <b>63</b>       | <b>63</b>       |
| Annual Hours Per QCDR for Simplified Process (d)  | 8.1             | 0               |
| Annual Hours Per QCDR for Full Process (e)  | 0               | 10.1            |
| Total Annual Hours for Self-nomination (f) = (a) * (d) and (b) * (e)  | <b>510</b>      | <b>636</b>      |
| Cost Per Simplified Process Per QCDR (@ computer systems analyst's labor rate of \$98.28/hr) (g) = (d) * \$98.28/hr | \$796.06        | 0               |
| Cost Per Full Process Per QCDR (@ computer systems analyst's labor rate of \$98.28/hr) (h) = (e) * \$98.28/hr       | 0               | \$992.63        |
| Total Annual Cost (i) = (a) * (g) (min) and (b) * (e) (max)   | <b>\$50,152</b> | <b>\$62,536</b> |

As shown in Table 105, we use the currently approved burden as the baseline for calculating the net change in burden for the QCDR self-nomination process. For the CY 2023 performance period/2025 MIPS payment year, the change in the representation of burden for this ICR described above and the estimated decrease of 21 respondents

results in a change of minus 408 hours and minus \$40,069 for the simplified self-nomination process (or minimum burden) and minus 540 hours and minus \$53,041 for the full self-nomination process (or maximum burden). We note that the decrease in burden accounts for the change due to separating the estimated burden for

targeted audits, CAPs, and participation plans and including that burden under a new ICR for third party intermediary plan audits (see Table 109).

We note that for the purpose of scoring the impact of this rule, we use only the maximum burden estimate in Tables 142, 143, and 145 of this rule.

**TABLE 105: Burden Adjustments for QCDR Self-Nomination and QCDR Measure Submission**

| Burden and Respondent Descriptions  | Minimum Burden   | Maximum Burden   |
|---|------------------|------------------|
| Total Currently Approved Annual Time (hr) (a)   | 918              | 1,176            |
| Total Annual Time (hr) for Respondents in CY 2023 PFS final rule (b) (See Table 104, row (f)) | 510              | 636              |
| Difference (c) = (b) - (a)  | <b>-408</b>      | <b>-540</b>      |
| Total Currently Approved Annual Cost (d)  | \$90,221         | \$115,577        |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 104, row (i))      | \$50,152         | \$62,536         |
| Difference (f) = (e) - (d)  | <b>-\$40,069</b> | <b>-\$53,041</b> |

We did not receive any comments on our proposed requirements and burden estimates for the QCDR self-nomination process. As discussed above in this section, we adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46346 through 46348) due to the availability of updated data.

### (3) Qualified Registry Self-Nomination Process and Other Requirements

We refer readers to § 414.1400 which states that qualified registries interested in submitting MIPS data to us on behalf of MIPS eligible clinicians, groups, or virtual groups need to complete a self-

nomination process to be considered for approval to do so.

In section IV.A.6.g.(1)(b) of this rule, we finalized the updated definition of a third party intermediary at § 414.1305 to include subgroups and APM Entities and to make minor edits for technical clarity. The revised definition of a third party intermediary will update the CFR to align with existing policy and does not create and new or revised requirements or burden. The number of respondents is unaffected by this change.

Based on the actual number of applications received during the CY 2022 self-nomination period for the CY

2023 performance period/2025 MIPS payment year, we are adjusting the number of qualified registries that will submit self-nomination applications in the CY 2023 PFS proposed rule (87 FR 46348), from 160 to 132. For this final rule, we estimate that 132 qualified registries will submit applications for self-nomination for the CY 2023 performance period/2025 MIPS payment year, a decrease of 15 applications from the currently approved estimate of 147 (86 FR 65574). We note that we are not making any changes to our currently approved per response time estimate of 0.5 hours for the simplified qualified registry self-

nomination process and 2 hours for the full qualified registry self-nomination process (86 FR 65574 through 65575).

As shown in Table 106, we assume that the staff involved in the qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$98.28/hr. Using the change in estimated number of respondents, combined with the estimated time required for a self-

nomination process ranging from a minimum of 0.5 hours to a maximum of 2 hours, we estimate that the burden ranges from a minimum of 66 hours (132 responses  $\times$  0.5 hr) and \$6,487 (132 hr  $\times$  \$98.28/hr) to a maximum of 264 hours (132 applications  $\times$  2 hr) to \$25,946 (264 hr  $\times$  \$98.28/hr), respectively.

Both the minimum and maximum burden shown in Table 106 reflect the updates in the estimated burden due to

availability of more recent data. Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit quality measures results and numerator and denominator data on MIPS eligible clinicians.

**TABLE 106: Final Burden for Qualified Registry Self-Nomination**

| Burden and Respondent Descriptions   | Minimum        | Maximum         |
|--|----------------|-----------------|
| # of Qualified Registry Simplified Self-Nomination Applications submitted (a)                                  | 132            | 0               |
| # of Qualified Registry Full Self-Nomination Applications submitted (b)  | 0              | 132             |
| <b>Total Applications (c)</b>  | <b>132</b>     | <b>132</b>      |
| Annual Hours Per Qualified Registry for Simplified Process (d)   | 0.5            | 0               |
| Annual Hours Per Qualified Registry for Full Process (e)   | 0              | 2               |
| <b>Total Annual Hours for Self-Nomination for min. (f) = (a) * (d) and max. (b) * (e)</b>                      | <b>66</b>      | <b>264</b>      |
| Cost Per Simplified Process Per Qualified Registry (@ computer systems analyst’s labor rate of \$98.28/hr) (g) | \$49.14        | 0               |
| Cost Per Full Process Per Qualified Registry (@ computer systems analyst’s labor rate of \$98.28/hr) (h)       | 0              | \$196.56        |
| <b>Total Annual Cost (i) = (a) * (g) (min.) and (b) * (h) (max.)</b>   | <b>\$6,487</b> | <b>\$25,946</b> |

As shown in Table 107, for the CY 2023 performance period/2025 MIPS payment year, the change in the representation of burden for this ICR described above in this section and the estimated decrease in 15 respondents results in a change of – 325 hours at a cost of –\$31,940 for the simplified self-

nomination process (or minimum burden) and – 577 hours at a cost of –\$56,707 for the full self-nomination process (or maximum burden). We note that the decrease in burden accounts for the change due to separating the estimated burden for targeted audits and participation plans and including that

burden under a new ICR for third party intermediary plan audits (see Table 109).

We note that for the purposes of calculating estimated change in burden in Tables 142, 143, and 145 of this rule, we use only the maximum burden estimate.

**TABLE 107: Burden Adjustments for Qualified Registry Self -Nomination**

| Burden and Respondent Descriptions  | Minimum Burden   | Maximum Burden   |
|---|------------------|------------------|
| Total Currently Approved Annual Hours (a)   | 391              | 841              |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (See Table 106, row (f)) | 66               | 320              |
| Difference (c) = (b) - (a)  | <b>-325</b>      | <b>-577</b>      |
| Total Currently Approved Annual Cost (d)  | \$38,427         | \$82,653         |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 106, row (i))  | \$6,487          | \$25,946         |
| Difference (f) = (e) - (d)  | <b>-\$31,940</b> | <b>-\$56,707</b> |

We did not receive any comments on our proposed requirements and burden estimates for the qualified registry self-nomination process.

#### (4) Third Party Intermediary Plan Audits

The following finalized requirements and burden associated with developing the plans and audits by QCDRs and qualified registries will be submitted to

OMB for approval under control number 0938–1314 (CMS–10621).

As discussed previously in this section of the final rule, we are finalizing the addition of a new ICR to distinctly capture the burden for requirements related to QCDR and

qualified registry targeted audits at § 414.1400(b)(3)(vi) through (viii) and the requirements for remedial action and termination of third party intermediaries at § 414.1400(e) during the third party intermediary self-nomination process. We note that we capture the estimated burden for third party intermediaries to submit additional requirements for compliance with both the conditions of approval and remedial action and termination criteria under one ICR.

In the CY 2022 PFS final rule, we combined the burden associated with the submission of the targeted audits, corrective action plans, participation plans and transition plans with the ICR for QCDR self-nomination process and other requirements (86 FR 65569 through 65573) and the ICR for qualified registry self-nomination process and other requirements (86 FR 65573 through 65576). For the purposes of this ICR, we refer to these audits and plans collectively as “plan audits.” For this final rule, we determined that it is necessary to set forth a new ICR to separately estimate the burden for QCDR and qualified registry targeted audits from self-nomination application burden because it will more accurately represent the burden.

In section IV.A.6.g.(3) of this rule, we finalized the proposed changes to the requirements for remedial actions and terminations set forth in § 414.1400(e). These include one revised and one new requirement for Corrective Action Plans (CAPs), and termination of certain approved QCDRs and qualified registries that continue to fail to submit performance data. The burden associated with these finalized policies is discussed below.

#### (a) Targeted Audits

In the CY 2022 PFS final rule (86 FR 65547 through 65548), we finalized that beginning with the CY 2021 performance period/CY 2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with requirements at § 414.1400(b)(3)(vi). Consistent with our assumptions in the CY 2022 PFS final rule for the QCDRs (86 FR 65574) and qualified registries (86 FR 65571) that will submit targeted audits, we estimate that the time required for a QCDR or qualified registry to submit a targeted audit ranges between 5 and 10 hours for the simplified and full self-nomination process, respectively. We assume that the staff involved in submitting the targeted audits will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$98.28/hr.

For this final rule, we received updated data and as a result, we estimate that 32 third party intermediaries (13 QCDRs and 19 qualified registries) will submit targeted audits for the CY 2023 performance period/2025 MIPS payment year (See Table 108). We note that we are adjusting the number of third party intermediaries that will submit targeted audits from our estimate of 70 targeted audits in the CY 2023 PFS proposed rule (87 FR 46350) based on the actual number of targeted audits submitted by QCDRs and qualified registries during the CY 2022 self-nomination period. We estimate that the cost for a QCDR or a qualified registry to submit a targeted audit will range from \$491.40 (5 hours  $\times$  \$98.28/hr) to \$982.80 (10 hours  $\times$  \$98.28/hr). In aggregate, the total impact associated with QCDRs and qualified registries completing targeted audits will range from 160 hours (32 responses  $\times$  5 hr/audit) and \$18,673 (32 responses  $\times$  \$491.40/response) to \$982.80/hr to minus 320 hours (32 responses  $\times$  10 hr/audit) and \$31,450 (32 responses  $\times$  \$982.80/response) for the simplified and full self-nomination process, respectively (see Table 109 for the cost per audit).

#### (b) Participation Plans

In the CY 2022 PFS final rule (86 FR 65546), we finalized requirements for approved QCDRs and qualified registries that did not submit performance data and therefore will need to submit a participation plan as part of their self-nomination process. We refer readers to § 414.1400(e) for current policies for remedial action and termination of third-party intermediaries.

In section IV.A.10.g.(3)(b) of this final rule, we finalized a new termination policy for approved QCDRs and qualified registries which are required to submit participation plans during the applicable self-nomination period under § 414.1400(b)(3)(viii). We finalized the termination of those QCDRs and qualified registries that are required to submit participation plans during the applicable self-nomination period under § 414.1400(b)(3)(viii) because they did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period and continue to not submit MIPS data to CMS for the applicable performance period. Specifically, we finalized the addition of a new ground for termination at § 414.1400(e)(5) stating that, beginning with the CY 2024 performance period/CY 2026 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under paragraph (b)(3)(viii), but does not

submit MIPS data for the applicable performance period for which they self-nominated under paragraph (b)(3)(viii), will be terminated. As a result of this policy, CMS will terminate the qualified registry or QCDR as applicable under § 414.1400(e)(5) and we assume that it will not require additional requirements for interested parties to submit their information during the qualified registry and QCDR self-nomination process. (86 FR 65574). We refer readers to section IV.A.10.g.(3)(b) of this rule for additional details related to these finalized policies.

Consistent with our assumptions in the CY 2022 PFS final rule for the QCDRs (86 FR 65574) and qualified registries (86 FR 65571) that will submit participation plans, we estimate that it will take 3 hours for a QCDR or qualified registry to submit a participation plan during the self-nomination process. We assume that the staff involved in submitting a participation plan will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$98.28/hr.

As shown in Table 108, we estimate that 75 third party intermediaries [5 self-nomination participation plans (2 QCDRs and 3 qualified registries) and 70 QCDR measure participation plans] will submit participation plans for the CY 2023 performance period/2025 MIPS payment year. We note that we adjusted the number of third party intermediaries that will submit participation plans from the estimate of 29 in the CY 2023 PFS proposed rule (87 FR 46350) due to a significant increase in the number of QCDR measure participation plans required for the CY 2023 performance period/2025 MIPS payment year.

As shown in Table 109, we estimate that the cost for a QCDR or a qualified registry to submit a participation plan is \$294.84 (3 hours  $\times$  \$98.28/hr). In aggregate, we estimate the total impact associated with QCDRs and qualified registries to submit participation plans will be 225 hours (75 responses  $\times$  3 hr/plan) at a cost of \$66,339 (75 responses  $\times$  \$294.84/response). (See Table 109 for the cost per audit).

#### (c) Corrective Action Plans (CAPs)

In section IV.A.10.g.(3)(a) of this rule, we finalized the proposed revision of the CAP requirement at § 414.1400(e)(1)(i)(B) to require the third party intermediary to address in its CAP the impact to individual clinicians, groups, or virtual groups, subgroups, or APM Entities, regardless of whether they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to

participating in the MIPS, and any QCDRs that were granted licenses to the measures of a QCDR upon which a CAP has been imposed. We also finalized the proposed addition of a new CAP requirement to require the third-party intermediary to notify the parties identified in § 414.1400(e)(1)(i)(B) of the impact to these parties by submitting a communication plan. We also finalized the proposed addition at § 414.1400(e)(1)(i)(E) to require the third party intermediary to develop a communication plan for communicating the impact to the parties identified in § 414.1400(e)(1)(i)(B). The intent of this policy is to enable affected parties to better understand and prepare for any operational and other challenges as needed. We believe having third party intermediaries submit a communication plan as part of their CAP will ensure third party intermediaries directly communicate the situation and its impact to these parties in a timely and consistent manner. However, due to the relatively low number of CAPs (an average of 10 responses) that we expect to receive from QCDRs and qualified registries for the CY 2023 performance period/2025 MIPS payment year, we are unable to estimate the burden associated with the development of a communication plan.

We are not making any changes to our currently approved estimates for the QCDRs and qualified registries that will submit CAPs. We continue to estimate that 10 third party intermediaries will submit CAPs for the CY 2023 performance period/2025 MIPS payment year and that it will take 3 hours for a QCDR or qualified registry to submit a CAP. We also assume that the staff involved in submitting the CAP will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$98.28/hr. As shown in Table 109, we estimate that the cost for a QCDR or a qualified registry to submit a CAP is \$294.84 (3 hours × \$98.28/hr). Therefore, we estimate the total impact associated with QCDRs and qualified registries to CAPs will be 30 hours (10 responses × 3 hr/plan) at a cost of \$2,948 (10 responses × \$294.84/response). (See Table 109 for the cost per audit).

#### (d) Transition Plans

In the CY 2020 PFS final rule (84 FR 63052 through 63053), we established a policy at § 414.1400(a)(4)(vi) that a condition of approval for the third party

intermediary is to agree that prior to discontinuing services to any MIPS eligible clinician, group or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan. In the CY 2020 PFS final rule (84 FR 63115), we did not estimate the total burden associated with the development of CMS approved transition plans because of the uncertain, but low frequency (less than 10 per year historically) with which third party intermediaries have elected to discontinue services during a performance period. We received updated data for the transition plans submitted by the registries and QCDRs. Based on the actual number of transition plans received during the CY 2022 self-nomination period, we believe that we overestimated the number of transition plans in the CY 2023 PFS proposed rule (87 FR 46351). Therefore, we are adjusting the estimated number of third party intermediaries that will submit transition plans for the CY 2023 performance period/2025 MIPS payment year from 15 to 10. As a result, we estimate that we will receive 10 transition plans for the CY 2023 performance period/2025 MIPS payment year. We estimate that it will take approximately 1 hour for a computer system analyst or their equivalent at a labor rate of \$98.28/hr to develop a transition plan on behalf of each QCDR or qualified registry during the self-nomination period. However, we are unable to estimate the burden for implementing the actions in the transition plan because the level of effort may vary for each QCDR or qualified registry. We did not receive any comments on the estimated burden for a QCDR or qualified registry to submit a transition plan. Therefore, we estimate the impact associated with qualified registries completing transition plans is 10 hours (10 transition plans × 1 hr/plan) and minus \$983 (10 hr × \$98.28/hr). We refer readers to section VII.E.16.e.(2)(c) of this final rule where we discuss our impact analysis for the transition plans submitted by QCDRs and qualified registries.

In section IV.A.6.g.(3) of this rule, we finalized the proposal to revise

conforming changes to § 414.1400(e)(2), which currently states that CMS may immediately or with advance notice terminate the ability of a third party intermediary to submit MIPS data on behalf of a MIPS eligible clinician, group, or virtual group under certain circumstances. Rather than amend this provision to add references to subgroups and APM Entities, we finalized the revision of § 414.1400(e)(2) to state that that CMS may immediately or with advance notice “terminate a third party intermediary” under the specified circumstances. The revision will simply provide that CMS may immediately or with advance notice “terminate a third party intermediary” under the specified circumstances. The change is intended to revise the CFR in conjunction with the finalized policies in section IV.A.6.g.(1)(b) of this rule to amend the definition of a “third party intermediary” to refer to subgroups and APM Entities, and do not require additional information from QCDRs and qualified registries during the self-nomination process.

In section IV.A.6.g.(4)(b) of this rule, we finalized the proposed update at § 414.1400(f)(1) to require that the entity must make available to CMS the contact information of each MIPS eligible clinician, group, virtual group, subgroup, or APM Entity on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity phone number, address, and, if available, email. The change is intended to update the CFR to align it with the updates to the definition of a “third party intermediary” at § 414.1305 and to account for third party intermediaries reporting on behalf of subgroups and APM entities. We do not expect to receive additional information from QCDRs and qualified registries during the self-nomination process due to this finalized policy. Additionally, we refer readers to section VII.E.16.e.(2)(c) of this final rule where we discuss the details in our impact analysis for these finalized policies.

#### e. Final Burden for Third Party Intermediary Plan Audits

In aggregate, as shown in Table 108, we assume that 127 third party intermediaries will submit plan audits (32 targeted audits, 75 participation plans, 10 CAPs, and 10 transition plans).

**TABLE 108: Estimated Number of Respondents to Submit Plan Audits**

| Burden and Respondent Descriptions                   | # of Respondents |
|--|------------------|
| # of Targeted Audits (a)                             | 32               |
| # of Participation Plans (b)                         | 75               |
| # of Corrective Action Plans (CAPs) (c)              | 10               |
| # of Transition Plans (d)                            | 10               |
| <b>Total Respondents (e) = (a) + (b) + (c) + (d)</b> | <b>127</b>       |

As shown in Table 109, we assume that the staff involved in the submission of the plan audits during the third party intermediary self-nomination process will continue to be computer systems analysts or their equivalent, who have

an average labor rate of \$98.28/hr. For the CY 2023 performance period/2025 MIPS payment year, in aggregate, the estimated annual burden for the simplified (or minimum) and full (or maximum) self-nomination process will

range from 425 hours (see Table 109, row i) to 585 hours (see Table 109, row i)) at a cost ranging from \$41,769 (425 hr × \$98.28/hr) and \$57,494 (585 hr × \$98.28/hr), respectively.

**TABLE 109: Final Burden for Third Party Intermediary Plan Audits**

| Burden and Respondent Descriptions   | Minimum         | Maximum         |
|--|-----------------|-----------------|
| # of Hours per Completion of Targeted Audit (a)  | 5               | 10              |
| <b>Total Annual Hours for Completion of 32 Targeted Audits (b)</b>   | <b>160</b>      | <b>320</b>      |
| # of Hours per Submission of Participation Plan (c)  | 3               | 3               |
| <b>Total Annual Hours for Submission of 75 Participation Plans (d)</b>   | <b>225</b>      | <b>225</b>      |
| # of Hours per Submission of CAP (e)   | 3               | 3               |
| <b>Total Annual Hours for Submission of 10 CAPs (f)</b>  | <b>30</b>       | <b>30</b>       |
| # of Hours per Submission of Transition Plan (g)   | 1               | 1               |
| <b>Total Annual Hours for Submission of 10 Transition Plans (h)</b>  | <b>10</b>       | <b>10</b>       |
| <b>Total Annual Hours for Submission of Plan Audits (i) = (b) + (d) + (f) + (h)</b>  | <b>425</b>      | <b>585</b>      |
| Cost Per Targeted Audit (@ computer systems analyst's labor rate of \$98.28/hr) (j) = (a) * \$98.28/hr                             | \$491.40        | \$982.80        |
| Cost Per Participation Plan (@ computer systems analyst's labor rate of \$98.28/hr) (k) = (c) * \$98.28/hr                         | \$294.84        | \$294.84        |
| Cost per CAP (@ computer systems analyst's labor rate of \$98.28/hr) (l) = (e) * \$98.28/hr  | \$294.84        | \$294.84        |
| Cost per Transition Plan @computer systems analyst's labor rate of \$98.28/hr (m) = (g) * \$98.28/hr                               | \$98.28         | \$98.28         |
| <b>Total Annual Cost (n) = 32 * (j) + 75 * (k) + 10 * (l) + 10 * (m) (min) and 32 * (j) + 75 * (k) + 10 * (l) + 10 * (m) (max)</b> | <b>\$41,769</b> | <b>\$57,494</b> |

As shown in Table 110, for the CY 2023 performance period/2025 MIPS payment year, the addition of this ICR for third party intermediary plan audits results in a change of +425 hours at a

cost of +\$41,769 for the simplified self-nomination process (or minimum burden) and +585 hours at a cost of +\$57,494 for the full self-nomination process (or maximum burden).

We note that for the purposes of calculating proposed estimated change in burden in Tables 142, 143, and 145 of this rule, we use only the maximum burden estimate.

**TABLE 110: Change in Estimated Burden for Third Party Intermediary Plan Audits**

| Burden and Respondent Descriptions  | Minimum Burden   | Maximum Burden   |
|---|------------------|------------------|
| Total Currently Approved Annual Hours (a)   | 0                | 0                |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (See Table 109, row (i)) | 425              | 585              |
| <b>Difference (c) = (b) - (a)</b>   | <b>+425</b>      | <b>+585</b>      |
| Total Currently Approved Annual Cost (d)  | \$0              | \$0              |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 109, row (n))  | \$41,769         | \$57,494         |
| <b>Difference (f) = (e) - (d)</b>   | <b>+\$41,769</b> | <b>+\$57,494</b> |

We did not receive any comments on our proposed addition of the ICR and burden estimates for the third party intermediary plan audits. As discussed above in this section, we finalized the addition of this ICR and adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46349 through 46352) due to the availability of updated data.

(5) Survey Vendor Requirements

This rule does not create any new or revised collection of information requirements or burden related to CAHPS Survey vendors. The requirements and burden for CAHPS survey vendors to submit data for eligible clinicians are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not making any changes under that control number.

d. ICRs Regarding Open Authorization (OAuth) Credentialing and Token Request Process

The requirements and burden associated with the OAuth Credentialing and token request process

will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). We refer readers to the CY 2021 and the CY 2022 PFS final rules (85 FR 84969 through 85 FR 84970 and 86 FR 65576) for our previously finalized requirements and burden estimates for the information collection related to the OAuth credentialing and token request process.

This rule does not create any new or revised collection of information requirements or burden related to the OAuth credentialing and token request process. However, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, we made administrative changes in the process for interested parties to submit their application for OAuth credentialing and token process. Based on the changes to the workflows, the CMS Office of Information Technology (OIT) has centralized Oka Administrator privileges. In previous years, the Quality Payment Program maintained the privileges for Administrator roles. As a result of this administrative change, interested parties that will submit their information for OAuth Credentialing

and Token request process are now required to meet with both Quality Payment Program and OIT for final approvals to have their applications integrated with the CMS Oka production environment. Therefore, we are revising our estimates that it will take 2 hours for a computer systems analyst (or their equivalent) to provide documentation and any follow-up communication via email. This is an increase of 1 hour from the currently approved estimated time of 1 hour for interested parties to provide their documentation and any follow-up communication via email.

As shown in Table 111, we are not making any changes to our currently approved estimate of 15 respondents that will complete this process for the CY 2023 performance period/2025 MIPS payment year. In aggregate, accounting for the increase in time required for a computer systems analyst (or their equivalent) to complete the token request process, we estimate a revised annual burden of 30 hours (15 vendors × 2 hr) at a cost of \$2,948 (30 hr × \$98.28/hr).

**TABLE 111: Final Burden for the OAuth Credentialing and Token Request Process**

| Burden and Respondent Descriptions         | Burden Estimate |
|--|-----------------|
| # of Respondents (a)                       | 15              |
| Total Hours per Respondent                 | 2               |
| <b>Total Annual Hours (c) = (a) * (b)</b>  | <b>30</b>       |
| Labor Rate for Computer System Analyst (d) | \$98.28/hr      |
| <b>Total Annual Cost (e) = (c) * (d)</b>   | <b>\$2,948</b>  |

As shown in Table 112, using our unchanged currently approved number of respondents (86 FR 65576), the increase in the amount of time required for the OAuth credentialing and token

request process results in a change of +15 hours (+15 responses × 1 hr/response) at a cost of +\$1,474 (+15 hr × \$98.28/hr) from our currently approved burden of 15 hours (15 responses × 1 hr/

response) at a cost of \$1,474 (15 hr × \$98.28/hr) for the CY 2023 performance period/2025 MIPS payment year.

**TABLE 112: Change in Burden for OAuth Credentialing and Token Request Process**

| Burden and Respondent Descriptions  | Burden Estimate |
|---|-----------------|
| Total Currently Approved Annual Hours (a)   | 15              |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (See Table 111, row (c)) | 30              |
| <b>Difference (c) = (b) - (a)</b>   | <b>+15</b>      |
| Total Currently Approved Annual Cost (d)  | \$1,474         |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 111, row (e))  | \$2,948         |
| <b>Difference (f) = (e) - (d)</b>   | <b>+\$1,474</b> |

We did not receive any comments on our proposed requirements and burden estimates for the OAuth Credentialing and Token Request process. As discussed above in this section, we adjusted the currently approved burden estimates due to the administrative change in the OAuth credentialing and token request process.

e. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

#### (1) Background

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77502 through 77503 and 82 FR 53908 through 53912, respectively), the CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (83 FR 60000 through 60003, 84 FR 63121 through 63124, 85 FR 84970 through 84974, and 86 FR 65576 through 65588, respectively) for our previously finalized estimated burden associated with data submission for the quality performance category.

Under our current policies, two groups of clinicians must submit quality data under MIPS: those who submit data as MIPS eligible clinicians, and those who submit data voluntarily but are not subject to MIPS payment adjustments. Clinicians are ineligible for MIPS payment adjustments if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

#### (2) Changes and Adjustments to Quality Performance Category Respondents

To determine which QPs should be excluded from MIPS, we used the Advanced APM payment and patient percentages from the APM Participant List for the third snapshot date for the 2021 QP Performance period. From this data, we calculated the QP determinations as described in the

Qualifying APM Participant (QP) definition at § 414.1305 for the CY 2023 performance period/2025 MIPS payment year. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future for the CY 2023 performance period/2025 MIPS payment year (and therefore will no longer need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

In the CY 2019 PFS final rule, we finalized limiting the Medicare Part B claims collection type to small practices beginning with the CY 2019 performance period/2021 MIPS payment year and allowing clinicians in small practices to report Medicare Part B claims as a group or as individuals (83 FR 59752). In the CY 2023 proposed rule, we noted that we continued to use CY 2019 performance period/CY 2021 MIPS payment year data to estimate the number of respondents (87 FR 46354). We note that in this final rule, we have adjusted the number of respondents from 27,006 to 14,736 (a change of minus 12,270 respondents) based on the submissions received for the CY 2021 performance period/2023 MIPS payment year.

We assume that 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional reporting for ACO APM entities, consistent with assumptions used in the CY 2021 and CY 2022 PFS final rules (85 FR 84972 and 86 FR 65567), we include all quality data voluntarily submitted by MIPS APM participants at the individual or TIN-level in our respondent estimates. As stated in section VI.B.9.a.(4) of this final rule, we assume non-ACO APM Entities will participate through traditional MIPS and submit as an individual or group rather than as an entity. To estimate who will be a MIPS APM participant in the CY 2023 performance period/2025 MIPS payment year, we

used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2021 QP performance period. We elected to use this data source because the overlap with the data submissions for the CY 2019 performance period/CY 2021 MIPS payment year enabled the exclusion of Partial QPs that elected to not participate in MIPS and required fewer assumptions as to who is a QP or not. Based on this information, if we determine that a MIPS eligible clinician will not be scored as a MIPS APM, then their reporting assumption is based on their reporting as a group or individual for the CY 2021 performance period/CY 2023 MIPS payment year.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The associated burden is excluded from this collection of information section but is discussed in the regulatory impact analysis section of this final rule because sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jjj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.<sup>564</sup>

For the CY 2023 performance period/2025 MIPS payment year, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types. We estimate the burden for collecting data via collection type: Medicare Part B claims, QCDR and MIPS CQMs, and eCQMs. Additionally, we capture the burden for clinicians who choose to submit via these collection types for the quality

<sup>564</sup> Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their APMs.

performance category of MVPs. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintaining consistency with previous rulemaking.

Because MIPS eligible clinicians may submit data for multiple collection types for a single performance category, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the CY 2021

performance period/CY 2023 MIPS payment year. We captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types.

Table 113 uses methods similar to those described above to estimate the number of clinicians that will submit data as individual clinicians via each collection type in the CY 2023 performance period/2025 MIPS payment year. For the CY 2023 performance period/2025 MIPS payment year, we estimate that

approximately 14,736 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 11,458 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 18,362 clinicians will submit data as individuals using eCQMs collection type. Based on performance data from the CY 2021 performance period/CY 2023 MIPS payment year, these are decreases of 10,691, 24,998, and 18,039 respondents from the currently approved estimates of 25,427, 36,456, and 36,401 for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, respectively.

**TABLE 113: Revisions to the Number of Clinicians Submitting Quality Performance Category Data as Individuals by Collection Type**

| <b>Burden and Respondent Description</b>  | <b>Medicare Part B Claims</b> | <b>QCDR/ MIPS CQM</b> | <b>eCQM</b>    | <b>Total</b>   |
|---|-------------------------------|-----------------------|----------------|----------------|
| 2023 MIPS performance period (excludes QPs) (a)   | 16,746                        | 13,020                | 20,866         | 50,632         |
| MVP Adjustment @ 12% (b) = (a)* 0.12  | -2,010                        | -1,562                | -2,504         | -6,076         |
| <b>2023 MIPS Performance Period (excludes QPs and Adjusted for MVP) (c) = (a) – (b)</b> | <b>14,736</b>                 | <b>11,458</b>         | <b>18,362</b>  | <b>44,556</b>  |
| **Currently approved 2023 MIPS Performance Period (excludes QPs) (d)                    | 25,427                        | 36,456                | 36,401         | 98,284         |
| <b>Difference (e) = (c) – (d)</b>   | <b>-10,691</b>                | <b>-24,998</b>        | <b>-18,039</b> | <b>-53,728</b> |

\* We estimate 12 percent of clinicians will participate in MVP reporting as discussed in section VI.B.9. of this rule.

\*\*Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 113 are not mutually exclusive.

Table 114 provides our estimated counts of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the

CY 2023 performance periods/2025 MIPS payment year. We assume that clinicians who submitted quality data as groups in the CY 2021 performance period/CY 2023 MIPS payment year will continue to submit quality data either as groups, or virtual groups for the same collection types for the 2023 performance period/2025 MIPS payment years. We used the same methodology described in the CY 2022 PFS final rule (86 FR 65577) on our assumptions related to the use of an alternate collection type for groups that submitted data via the CMS Web Interface collection type for the CY 2021 performance period/2023 MIPS payment year.

As shown in Table 114, for the CY 2023 performance period/2025 MIPS

payment year we estimate that 6,458 groups and virtual groups will submit data for the MIPS CQM and QCDR collection type and 5,527 groups and virtual groups will submit for eCQM collection types. These are decreases of 3,976 and 1,845 respondents from the currently approved estimates of 10,434, and 7,372 for the groups and virtual groups that will submit data using MIPS CQM and QCDR, and eCQM collection types, respectively.

As the data does not exist for APM performance pathway or MIPS quality measures for non-ACO APM entities, we assume non-ACO APM Entities will participate through traditional MIPS and base our estimates on submissions received in the CY 2021 performance period/CY 2023 MIPS payment year.

**TABLE 114: Revisions to the Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type**

| Burden and Respondent Description   | Medicare Part B Claims | QCDR/ MIPS CQM | eCQM          | Total          |
|---|------------------------|----------------|---------------|----------------|
| 2023 MIPS performance period (excludes QPs) (a) prior to adjustments                      | 0                      | 7,339          | 6,281         | 13,620         |
| Adjustment for MVPs (12%) (b) = (a) * 0.12  | 0                      | -881           | -754          | -1,635         |
| <b>2023 MIPS performance period (excludes QPs and) Adjusted for MVP). (c) = (a) – (b)</b> | <b>0</b>               | <b>6,458</b>   | <b>5,527</b>  | <b>11,985</b>  |
| **Currently approved 2023 MIPS performance period (excludes QPs) (d)                      | 0                      | 10,434         | 7,372         | 17,806         |
| Difference (e) = (d) - (c) - (d)  | 0                      | <b>-3,976</b>  | <b>-1,845</b> | <b>--5,821</b> |

\* We estimate 12 percent of clinicians will participate in MVP reporting as discussed in section VI.B.9. of this rule.

\*\*Currently approved by OMB under control number 0938-1314 (CMS-10621) from the CY 2021 PFS final rule.

The burden associated with the submission of quality performance category data has some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices' workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type. For example, clinicians submitting data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of their EHR implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimated the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures. Additionally, as finalized in the CY 2022 PFS final rule (86 FR 65394 through 65397), group TINs could also choose to participate as subgroups for MVP reporting beginning with the CY 2023 performance period/2025 MIPS payment year. we refer readers to the CY 2022 PFS final rule for additional details on MVP quality reporting requirements (86 FR 65411 through 65412).

In terms of the quality measures available for clinicians and groups to report for the CY 2023 performance period/2025 MIPS payment year, we finalized a measure set of 198 quality measures. The new MIPS quality measures finalized for inclusion in MIPS for the CY 2023 performance period/2025 MIPS payment year and future years are found in Table Group A of Appendix 1; MIPS quality measures with substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures finalized for removal can be found in Table Group C of Appendix 1. These measures are stratified by collection type in Table 115, as well as counts of new, removed, and substantively changed measures. There are no changes to the remaining measures not included in Appendix 1. We refer readers to section IV.A.6.c.(1) of this final rule for additional information.

**TABLE 115: Summary of Quality Measures Finalized for the CY 2023 Performance Period/2025 MIPS Payment Year**

| Collection Type          | # Measures Finalized as New | # Measures Finalized for Removal* | # Measures Finalized with a Substantive Change* | # Measures Finalized for CY 2023* |
|--------------------------|-----------------------------|-----------------------------------|---|-----------------------------------|
| Medicare Part B Claims   | 0                           | -4                                | 15  | 30                                |
| MIPS CQMs Specifications | +8                          | -10                               | 57  | 172                               |
| eCQM Specifications      | +1                          | -2                                | 42  | 47                                |
| Survey – CSV             | 0                           | 0                                 | 1   | 1                                 |
| Administrative Claims    | +1                          | 0                                 | 0   | 4                                 |
| Total*                   | +9                          | -11**                             | 76  | 198                               |

\*A measure may be specified under multiple collection types but will only be counted once in the total.

\*\*We are finalizing to remove 15 MIPS quality measures and partially remove 2 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use in MVPs.

For the CY 2023 performance period/2025 MIPS payment year, we are finalizing 198 measures, a net reduction of 2 quality measures across all collection types compared to the currently approved estimate of 200 measures. Specifically, as discussed in section IV.A.6.c.(1)(c) of this rule, we are finalizing to add 9 new MIPS quality measures, remove 11 MIPS quality measures, partially remove 2 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use in MVPs, and make substantive updates to 76 MIPS quality measures. We do not anticipate that our provision to remove these measures will increase or decrease the reporting burden on clinicians and groups as respondents generally are still required to submit quality data for 6 measures.

### (3) Quality Payment Program Identity Management Application Process

This rule does not create any new or revised collection of information requirements or burden related to the identity management application process. We are adjusting our currently approved estimates based on the updated data received for the number of respondents that will submit their information to obtain new user accounts in the HARP system for the CY 2023 performance period/2025 MIPS payment year. The finalized requirements and burden discussed below will be submitted to OMB under control number 0938–1314 (CMS–10621).

Based on historical trends for the number of eligible clinicians, groups, or third parties that register for new accounts, we noticed that we inadvertently underestimated our assumptions in the CY 2022 PFS final rule (86 FR 65582). In order to

accurately capture the incremental change in the number of respondents in previous years, we are using a rolling average of the number of respondents that will register for obtaining new accounts. Therefore, we proposed to adjust our estimates from 3,741 to 6,500 for the number of respondents that will submit their information to obtain new user accounts in the HARP system for the CY 2023 performance period/2025 MIPS payment year. This will result in an increase of 2,759 respondents. We did not propose to adjust the currently approved estimated time of 1 hour per response to obtain a new account. As shown in Table 116, it will take 1 hour at \$98.28/hr for a computer systems analyst (or their equivalent) to obtain an account for the HARP system. In aggregate we estimate an annual burden of 6,500 hours (6,500 registrations × 1 hr/registration) at a cost of \$638,820 (6,500 hr × \$98.28/hr).

**TABLE 116: Final Burden for Quality Payment Program Identity Management Application Process**

| Burden and Respondent Description  | Burden Estimate  |
|--|------------------|
| # of New Users completing the Identity Management Application Process (a)                          | 6,500            |
| Total Hours Per Application (b)  | 1                |
| <b>Total Annual Hours for completing the Identity Management Application Process (c) = (a)*(b)</b> | <b>6,500</b>     |
| Cost Per Application @ computer systems analyst's labor rate of \$95.22/hr.) (d)                   | \$98.28          |
| <b>Total Annual Cost for completing the Identity Management Application Process (e) = (a)*(d)</b>  | <b>\$638,820</b> |

As shown in Table 117, we used the currently approved burden estimate to calculate the net change in burden for

the ICR. In aggregate, using the currently approved time per response, the increase of 2,759 respondents from

3,741 to 6,500 for the CY 2023 performance period/2025 MIPS payment year will result in an estimated

increase of 2,759 hours (+2.759

responses  $\times$  1hr/response) at a cost of  
\$271,155 (2,759 hr  $\times$  98.28/hr).

**TABLE 117: Burden Changes for Quality Payment Program Identity Management Application Process**

| Burden and Respondent Description   | Burden Estimate |
|---|-----------------|
| Total Currently Approved Annual Hours (a)   | 3,741           |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (See Table 116, row (c)) (b) | 6,500           |
| <b>Difference (c) = (b) – (a)</b>   | <b>+2,759</b>   |
| Total Currently Approved Annual Cost (d)  | \$367,665       |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (See Table 116, row (e)) (e)  | \$638,820       |
| <b>Difference (f) = (e) – (d)</b>   | <b>+271,155</b> |

We did not receive any comments on our proposed requirements and burden estimates for the Quality Payment Program Identity Management application process. As discussed above in this section, we adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46356 through 46357) due to the availability of updated data.

**(4) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type**

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

While rule does not propose any new or revised collection of information requirements or burden related to the submission of Medicare Part B claims data for the quality performance category, We received updated data for the quality data submissions from clinicians using the Medicare Part B Claims-based collection type. Therefore, we are adjusting our currently approved burden estimates based on our changes in assumptions for calculating the data. We refer readers to Table 126 of this section for the change in associated burden related to the submission of Medicare Part B claims data for the MVP quality performance category in the CY 2023 performance period/2025 MIPS payment year.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77501 through 77504 and 82 FR 53912, respectively), the CY 2019, CY 2020, CY 2021 and CY 2022 PFS final rules (83 FR 60004 through 60005, 84 FR 63124 through 63126, 85 FR 84975 through 84976, and 86 FR 65582 through 65584, respectively) for our previously finalized requirements and burden for quality data submission via the Medicare Part B claims collection type.

As noted in Table 113, based on updated data from the CY 2021 performance period/2023 MIPS payment year, we estimate that 14,736 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type, a decrease of 10,691 from the currently approved estimate of 25,427 (86 FR 65583).

As shown in Table 113, consistent with our currently approved per response time figures, we continue to estimate that the burden of quality data submission using Medicare Part B claims will range from 0.15 hours (9 minutes) for a computer systems analyst at a cost of \$14.74 (0.15 hr  $\times$  \$98.28/hr) to 7.2 hours for a computer systems analyst at a cost of \$707.61 (7.2 hr  $\times$  \$98.28/hr). The burden also accounts for the effort needed to become familiar with MIPS quality measure specifications.

Consistent with our currently approved per response time estimates,

we believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours at \$115.22/hr for a medical and health services manager, 1 hour at \$259.98/hr for a physician, 1 hour at \$49.86/hr for an LPN, 1 hour at \$98.28/hr for a computer systems analyst, and 1 hour at \$41.10/hr for a billing and posting clerk.

As shown in Table 118, considering both data submission and start-up requirements for our adjusted number of clinicians, the estimated time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In aggregate, the total annual time for the CY 2023 performance period/2025 MIPS payment year ranges from 105,362 hours (7.15 hr  $\times$  14,736 clinicians) to 209,251 hours (14.2 hr  $\times$  14,736 clinicians). The estimated annual cost (per clinician) ranges from \$809.62 [(0.15 hr  $\times$  \$98.28/hr) + (3 hr  $\times$  \$115.22/hr) + (1 hr  $\times$  \$98.28/hr) + (1 hr  $\times$  \$49.86/hr) + (1 hr  $\times$  \$41.10/hr) + (1 hr  $\times$  \$259.98/hr)] to a maximum of \$1,502.49 [(7.2 hr  $\times$  \$98.28/hr) + (3 hr  $\times$  \$115.22/hr) + (1 hr  $\times$  \$98.28/hr) + (1 hr  $\times$  \$49.86/hr) + (1 hr  $\times$  \$41.10/hr) + (1 hr  $\times$  \$259.98/hr)]. The total annual cost for the CY 2023 performance period/2025 MIPS payment year ranges from a minimum of \$11,930,560 (14,736 clinicians  $\times$  \$810) to a maximum of \$22,140,693 (14,736 clinicians  $\times$  \$1,502.49).

**TABLE 118: Final Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type**

| <b>Burden and Respondent Descriptions</b>  | <b>Minimum Burden</b> | <b>Median Burden</b> | <b>Maximum Burden</b> |
|--|-----------------------|----------------------|-----------------------|
| # of Clinicians (a)  | 14,736                | 14,736               | 14,736                |
| Hours Per Computer Systems Analyst to Submit Quality Data (b)  | 0.15                  | 1.05                 | 7.2                   |
| # of Hours Medical and Health Services Manager Review Measure Specifications (c)                                     | 3                     | 3                    | 3                     |
| # of Hours Computer Systems Analyst Review Measure Specifications (d)  | 1                     | 1                    | 1                     |
| # of Hours LPN Review Measure Specifications (e)   | 1                     | 1                    | 1                     |
| # of Hours Billing Clerk Review Measure Specifications (f)   | 1                     | 1                    | 1                     |
| # of Hours Physician Review Measure Specifications (g)   | 1                     | 1                    | 1                     |
| Annual Hours per Clinician (h) = (b) + (c) + (d) + (e) + (f) + (g)   | 7.15                  | 8.05                 | 14.2                  |
| Total Annual Hours (i) = (a) * (h)   | <b>105,362</b>        | <b>118,625</b>       | <b>209,251</b>        |
| Cost to Submit Quality Data (@ computer systems analyst's labor rate of \$98.28/hr @ varying times) (j)              | \$14.74               | \$103.19             | \$707.61              |
| Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$115.22/hr @ 3 hr) (k) | \$345.66              | \$345.66             | \$345.66              |
| Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$98.28/hr @ 1 hr) (l)             | \$98.28               | \$98.28              | \$98.28               |
| Cost to Review Measure Specifications (@ LPN's labor rate of \$49.86/hr @ 1 hr) (m)                                  | \$49.86               | \$49.86              | \$49.86               |
| Cost to Review Measure Specifications (@ billing clerk's labor rate of \$41.10/hr @ 1 hr) (n)                        | \$41.10               | \$41.10              | \$41.10               |
| Cost to Review Measure Specifications (@ physician's labor rate of \$259.98/hr @ 1 hr) (o)                           | \$259.98              | \$259.98             | \$259.98              |
| *Total Annual Cost Per Clinician (p) = (j) + (k) + (l) + (m) + (n) + (o)   | \$809.62              | \$898.07             | \$1,502.49            |
| *Total Annual Cost (q) = (a) * (p)   | <b>\$11,930,560</b>   | <b>\$13,233,960</b>  | <b>\$22,140,693</b>   |

As shown in Table 119, we used the currently approved burden as the baseline to calculate the net burden for the quality data submissions from clinicians using the Medicare Part B Claims-based collection type. In

aggregate, using our currently approved per response time estimates, the decrease in number of responses from 25,427 to 16,746 (– 10,691) results in a total maximum adjustment of – 151,812 hours (– 10,691 responses × 14.2 hr/

response) at a cost of – \$16,063,120 (– 10,691 response × \$1,502.49/response). For purposes of calculating total burden associated with this final rule as shown in Tables 142, 143, and 145, only the maximum burden is used.

**TABLE 119: Burden Adjustments for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type**

| Burden and Respondent Descriptions  | Burden Estimate    |
|---|--------------------|
| Total Currently Approved Annual Hours (a)   | 361,063            |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (see Table 118, row (i)) | 209,251            |
| <b>Difference (c) = (b) - (a)</b>   | <b>-151,812</b>    |
| Total Currently Approved Annual Cost (d)  | \$38,203,813       |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (see Table 118, row (q))  | \$22,140,693       |
| <b>Difference (f) = (d) - (e)</b>   | <b>-16,063,120</b> |

We did not receive any comments on our proposed requirements and burden estimates for clinicians to submit data for the quality performance category via the Medicare Part B claims collection type. As discussed above in this section, we adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46357 through 46359) due to the availability of updated data.

**(5) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types**

The following requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77504 through 77505 and 82 FR 53912 through 53914, respectively), the CY 2019, CY 2020, CY 2021 and CY 2022 PFS final rules (83 FR 60005 through 60006, 84 FR 63127 through 63128, 85 FR 84977 through 84979, and 86 FR 65584 through 65586, respectively) for our previously finalized requirements and burden for quality data submission via the MIPS CQM and QCDR collection types. We refer readers to Table 126 for the estimated change in associated burden for quality data submission using MIPS CQM and QCDR collection types related to MVP and subgroup reporting in the CY 2023 performance period/2025 MIPS payment year.

As noted in Tables 113 and 114, based on updated data from the CY 2021 performance period/2023 MIPS payment year, for the CY 2023 performance period/2025 MIPS

payment year, we assume that 17,916 clinicians (11,458 individuals and 6,458 groups and virtual groups) will submit quality data as individuals or groups using MIPS CQM or QCDR collection types. This is a decrease of 24,998 individuals and a decrease of 3,976 groups from the currently approved estimates of 36,456 individuals and the 10,434 groups provided in the CY 2022 PFS final rule (86 FR 65585). Given that the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third-party intermediary to submit the data to us on the clinician's or group's behalf. We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe that the burden for an individual clinician or group to review measure specifications and submit quality data is total of 9 hours at a cost of \$982.65 per response. This consists of 3 hours at \$98.28/hr for

a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at \$115.22/hr for a medical and health services manager, 1 hour at \$98.28/hr for a computer systems analyst, 1 hour at \$49.86/hr for a LPN, 1 hour at \$41.10/hr for a billing clerk, and 1 hour at \$259.98/hr for a physician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hr) at \$98.28/hr for a computer systems analyst at a cost of \$8.15 (0.083 hr × \$98.28/hr). Overall, we estimate 9.083 hr/response (3 hr + 2 hr + 1 hr + 1 hr + 1 hr + 1 hr + 0.083 hr) at a cost of \$982.65/response [(3 hr × \$98.28/hr) + (2 hr × \$115.22/hr) + (1 hr × \$259.98/hr) + (1 hr × \$98.28/hr) + (1 hr × \$49.86/hr) + (1 hr × \$41.10/hr) + (0.083 hr × \$98.28/hr)].

As shown in Table 120, For the CY 2023 performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 162,731 hours [9.083 hr/response × (11,458 clinicians submitting as individuals + 6,458 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians, a total of 17,916 responses)] at a cost of \$17,605,157 (17,916 responses × \$982.65/response).

**BILLING CODE 4150–28–P**

**TABLE 120: Final Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type**

| Burden and Respondent Descriptions  | Burden Estimate     |
|---|---------------------|
| # of clinicians submitting as individuals (a)   | 11,458              |
| # of groups submitting via QCDR or MIPS CQM on behalf of individual clinicians (b)  | 6,458               |
| <b>Total # of Respondents (c)=(a)+(b)</b>   | <b>17,916</b>       |
| Hours Per Respondent to Report Quality Data (d)   | 3                   |

| # of Hours Physician Review Measure Specifications (i)  | 1                   |
| # of Hours Per Respondent to Authorize Qualified Registry to Report on Respondent's Behalf (j)  | 0.083               |
| Annual Hours Per Respondent (k)= (d) + (e) + (f) + (g) + (h) + (i) + (j)  | 9.083               |
| <b>Total Annual Hours (l) = (c)*(k)</b>   | <b>162,731</b>      |
| Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$98.28/hr) (m)  | \$294.84            |
| Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$115.22/hr) (n)   | \$230.44            |
| Cost Computer System's Analyst Review Measure Specifications (@ computer systems analyst's labor rate of \$98.28/hr) (o)                              | \$98.28             |
| Cost LPN Review Measure Specifications (@ LPN's labor rate of \$49.86/hr) (p)   | \$49.86             |
| Cost Billing Clerk Review Measure Specifications (@ clerk's labor rate of \$41.10/hr) (q)   | \$41.10             |
| Cost Physician Review Measure Specifications (@ physician's labor rate of \$259.98/hr) (r)  | \$259.98            |
| Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (@ computer systems analyst's labor rate of \$98.28/hr) (s) | \$8.15              |
| Total Annual Cost Per Respondent (t) = (m) + (n) + (o) + (p) + (q) + (r) + (s)  | \$982.65            |
| <b>Total Annual Cost (u) = (c) * (t)</b>  | <b>\$17,605,157</b> |

As shown in Table 121, we calculated the net change in estimated burden for quality performance category submissions using the MIPS CQM and QCDR collection type by using the currently approved burden in the CY

2022 PFS final rule (86 FR 65584 through 65586). In aggregate, using the unchanged currently approved time per response estimate, the decrease of 28,974 respondents from 46,890 to 17,916 for the CY 2023 performance

period/CY 2025 MIPS payment year results in a decrease of 263,171 hours (– 28,974 responses × 9.083 hr/response) at a cost of – \$28,471,302 (– 28,974 responses × \$982.65/response).

**TABLE 121: Burden Adjustments for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type**

| Burden and Respondent Descriptions  | Burden Estimate    |
|---|--------------------|
| Total Currently Approved Annual Hours (a)   | 425,902            |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (see Table 120, row (l)) | 162,731            |
| Difference (c) = (b) - (a)  | <b>-263,171</b>    |
| Total Currently Approved Annual Cost (d)  | \$46,076,459       |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (see Table 120, row (u))  | \$17,605,157       |
| Difference (f) = (e) - (d)  | <b>-28,471,302</b> |

## BILLING CODE 4150-28-C

We did not receive any comments on our proposed requirements and burden estimates for clinicians to submit data for the quality performance category via the MIPS CQM and QCDR collection type. As discussed above in this section, we adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46359 through 46360) due to the availability of updated data.

(6) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

The following requirements and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77505 through 77506), CY 2018 Quality Payment Program final rule (82 FR 53914 through 53915), CY 2019 PFS final rule (83 FR 60006 through 60007), CY 2020 PFS final rule (84 FR 63128 through 63130), CY 2021 PFS final rule (85 FR 84979 through 84980) and the CY 2022 PFS final rule (86 FR 65586 through 65588) for our previously finalized requirements and burden for quality data submission via the eCQM collection types. For the change in associated burden for quality data submission related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS

payment year, we refer readers to Table 126 of this section.

Based on updated data from the CY 2021 performance period/CY 2023 MIPS payment year data, we assume that 23,889 clinicians (18,362 individual clinicians and 5,527 groups and virtual groups) will submit quality data using the eCQM collection type for the CY 2023 performance period/CY 2025 MIPS payment year. This is a decrease of 18,039 individuals and a decrease of 1,845 groups from the estimates of 36,401 individuals and 7,372 groups provided in the CY 2021 PFS final rule (86 FR 65587). We assume the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their CEHRT and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry or use a health IT vendor to submit the data on behalf of the

clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry.

We estimate that it will take no more than 2 hours at \$98.28/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at \$115.22/hr for a medical and health services manager, 1 hour at \$259.98/hr for a physician, 1 hour at \$98.28/hr for a computer systems analyst, 1 hour at \$49.86/hr for an LPN, and 1 hour at \$41.10/hr for a billing clerk. Overall, we estimate a cost of \$876.22/response [(2 hr × \$98.28/hr) + (2 hr × \$115.22/hr) + (1 hr × \$259.98/hr) + (1 hr × \$98.28/hr) + (1 hr × \$49.86/hr) + (1 hr × \$41.10/hr)].

As shown in Table 122, for the CY 2023 performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 191,112 hours [8 hr × 23,889 (18,362 clinicians + 5,527 groups and virtual groups)] at a cost of \$20,932,020 (23,889 responses × \$876.22/response).

**TABLE 122: Final Estimated Burden for Quality Performance Category: Clinicians (Submitting Individually or as Part of a Group) Using the eCQM Collection Type**

| Burden and Respondent Descriptions  | Burden Estimate     |
|---|---------------------|
| # of clinicians submitting as individuals (a)   | 18,362              |
| # of Groups submitting via EHR on behalf of individual clinicians (b)   | 5,527               |
| <b>Total # of Respondents (c)=(a)+(b)</b>   | <b>23,889</b>       |
| Hours Per Respondent to Submit MIPS Quality Data File to CMS (d)  | 2                   |
| # of Hours Medical and Health Services Manager Review Measure Specifications (e)                              | 2                   |
| # of Hours Computer Systems Analyst Review Measure Specifications (f)   | 1                   |
| # of Hours LPN Review Measure Specifications (g)  | 1                   |
| # of Hours Billing Clerk Review Measure Specifications (h)  | 1                   |
| # of Hours Physicians Review Measure Specifications (i)   | 1                   |
| Annual Hours Per Respondent (j) = (d) + (e) + (f) + (g) + (h) + (i)   | 8                   |
| <b>Total Annual Hours (k) = (c) * (j)</b>   | <b>191,112</b>      |
| Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$98.28/hr) (l)        | \$196.56            |
| Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$115.22/hr) (m) | \$230.44            |
| Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$98.28/hr) (n)             | \$98.28             |
| Cost to Review Measure Specifications (@ LPN's labor rate of \$49.86/hr) (o)                                  | \$49.86             |
| Cost to Review Measure Specifications (@ clerk's labor rate of \$41.10/hr) (p)                                | \$41.10             |
| Cost to Review Measure Specifications (@ physician's labor rate of \$259.98/hr) (q)                           | \$259.98            |
| Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q)   | \$876.22            |
| <b>Total Annual Cost (s) = (c) * (r)</b>  | <b>\$20,932,020</b> |

In Table 123, we illustrate the net change in burden for submissions in the quality performance category using the eCQM collection type from the currently approved burden in the CY 2022 PFS final rule (86 FR 65586 through 65588).

In aggregate, using our currently approved time per response burden estimate, the decrease of 19,884 respondents from 43,773 to 23,889 for the CY 2023 performance period/2025 MIPS payment year results in a decrease

of 159,072 hours (– 19,884 responses × 8 hr/response) at a cost of – \$17,422,758 (– 19,884 responses × \$876.22/response).

**TABLE 123: Burden Adjustments for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the eCQM Collection Type**

| Burden and Respondent Descriptions  | Burden Estimate      |
|---|----------------------|
| Total Currently Approved Annual Hours (a)   | 350,184              |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (see Table 122, row (k)) | 191,112              |
| Difference (c) = (b) - (a)  | <b>-159,072</b>      |
| Total Currently Approved Annual Cost (d)  | \$38,354,778         |
| Total Annual Cost for Respondents in CY 2022 PFS final rule (e) (see Table 122, row (s))  | \$20,932,020         |
| Difference (f) = (e) - (d)  | <b>-\$17,422,758</b> |

We did not receive any comments on our proposed requirements and burden estimates for clinicians to submit data for the quality performance category via the eCQM collection type. As discussed above in this section, we adjusted the burden estimates from the CY 2023 PFS

proposed rule (87 FR 46361 through 46362) due to the availability of updated data.

(7) ICRs Regarding Burden for MVP Reporting

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

Public comments were received with regard to our proposed burden estimates for MVP registration. See below for a summary of the comments and our response.

(a) Burden for MVP Reporting Requirements

We refer readers to the CY 2022 PFS final rule (86 FR 65588 through 65592) for our previously finalized burden and requirements for submission of data for the MVP quality performance category. In the CY 2022 PFS final rule, we finalized an option for clinicians choosing to report MVPs to participate through subgroups beginning with the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We refer readers to the CY 2022 PFS final rule for our previously finalized assumptions on the estimated number of clinicians participating as subgroups in the CY 2023 performance period/2025 MIPS payment year (86 FR 65589).

For the requirements related to MVP participants, we used the MIPS submission data from the CY 2021 performance period/2023 MIPS payment year. In Appendix 3: MVP Inventory of this rule, we finalized the proposal to revise the 7 MVPs finalized in Appendix 3: MVP Inventory of the CY 2022 PFS final rule (86 FR 65998 through 66031). Specifically, these revisions are based on the removal of certain improvement activities in section IV.A.6.(3)(b)(ii) of this rule, the addition of other relevant existing quality measures for MVP participants to select from and the addition of the ONC direct review attestation requirement in the Promoting Interoperability performance category to all previously finalized MVPs. Additionally, we finalized 5 new MVPs beginning with the CY 2023 performance period/CY 2025 MIPS payment year. Therefore, MVP participants will have a total of 12 MVPs available for the CY 2023 performance period/2025 MIPS payment year. Due to the availability of new MVPs and addition of relevant quality measures to existing MVPs, we expect an increase in the number of MVP participants. Therefore, we estimate that 12 percent of the clinicians will participate in MVP reporting in the

CY 2023 performance period/2025 MIPS payment year. This is an increase of 2 percentage points from the currently approved estimate of 10 percent in the CY 2022 PFS final rule (86 FR 65588 through 65589).

We assume that the changes to the existing MVPs and the addition of new MVPs will not impact the currently approved number of subgroups. We expect that clinician participation in subgroups will be relatively low for the CY 2023 performance period/2025 MIPS payment year due the voluntary subgroup reporting option and the additional burden involved for groups to organize clinicians into subgroups. Therefore, we did not make any adjustments to our previously finalized assumption in the CY 2022 PFS final rule (86 FR 65589) of 20 subgroups that will participate in MVP reporting.

In section IV.A.4.e.(4)(b) of this rule, we finalized the modification of § 414.1365(d)(3)(i)(A)(1) to read that subgroups are scored on each selected population health measure based on their affiliated group score, if available, and that if the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points. We also finalized the addition of § 414.1365(d)(3)(i)(B)(1) so that subgroups are scored on each selected outcomes-based administrative claims measure based on their affiliated group score, if available, and that if the subgroup's affiliated group score is not available, each such measure will receive zero measure achievement points. We assume that the finalized policies are related to the subgroup scoring of administrative claim measures and do not impact clinician participation in subgroups. Therefore, we are not making any adjustments to our previously finalized assumptions for subgroup reporting burden of the MVP quality performance category in the CY 2022 PFS final rule (86 FR 65592). Furthermore, clinicians do not submit data for the administrative claims measures and hence, there is no associated burden relevant to these measures for clinicians participating as subgroups.

Additionally, in section IV.A.4.e.(4)(c) of this rule, we finalized at

§ 414.1318(b)(1) that we will not assign a score for a subgroup that registers and does not submit data for the applicable performance period. We also finalized the proposal to make conforming changes at § 414.1318(b) to state that, except as provided under § 414.1317(b) and (b)(1), each MIPS eligible clinician in the subgroup receives a final score based on the subgroup's combined performance assessment. We assume that subgroups that register for MVP reporting intend to submit data for the measures and activities in an MVP. These policies are meant to clarify the scoring for subgroups in instances when a subgroup does not submit data as originally intended when registering as a subgroup. Therefore, we are not making any adjustments to our previously finalized assumptions for subgroup reporting burden of the MVP quality performance category in the CY 2022 PFS final rule (86 FR 65592).

(i) Burden for MVP Registration: Individuals, Groups and APM Entities

We refer readers to the CY 2022 PFS final rule (86 FR 65589 through 65590) for our previously finalized burden relevant to MVP registration for clinicians participating as an individual and/or group for MVP reporting.

As discussed above, based on updated data from the CY 2021 performance period/CY 2023 MIPS payment year, the changes to existing MVPs and the addition of new MVPs, we estimate that approximately 12 percent of the clinicians that currently participate in MIPS will submit data for the measures and activities in an MVP. For the CY 2023 performance period/2025 MIPS payment year, we assume that the total number of individual clinicians, groups, subgroups and APM Entities to complete the MVP registration process is 7,731. To further clarify, we estimate that we will receive a total of 7,731 submissions for the measures and activities included in MVPs. As shown in Table 124, we estimate that it will take 1,933 hours (7,731 responses  $\times$  0.25 hr/response) at a cost of \$189,975 (1,938 hr  $\times$  98.28/hr) for individual clinicians, groups and APM Entities to register for MVPs in the CY 2023 performance period/2025 MIPS payment year.

**TABLE 124: Final Estimated Burden for MVP Registration  
(Individual clinicians, Groups, Subgroups and APM Entities)**

| Burden and Respondent Descriptions   | Burden Estimate  |
|--|------------------|
| Estimated # of Individual clinicians, groups, subgroups and APM Entities Registering (a) | 7,731            |
| Estimated Time Per Registration (hr) (b)   | 0.25             |
| Estimated Total Annual Time (hr) for MVP Registration (c) = (a) * (b)                    | <b>1,933</b>     |
| Computer systems analyst's labor rate (\$/hr). (d)                                       | 98.28            |
| Estimated Total Annual Cost for MVP Registration (e) = (c) * (d)                         | <b>\$189,975</b> |

In Table 125, we illustrate the net change in burden for MVP registration using the currently approved burden in the CY 2022 PFS final rule (86 FR 65588 through 65589). In aggregate, for the CY 2023 performance period/CY 2025 MIPS

payment year, the adjustment in the number of respondents expected to register for MVP reporting from 12,917 to 7,731 results in a decrease of 5,186 responses. In aggregate, when combined with the currently approved per

response time estimate, this will result in a decrease of 1,296 hours (3,229 hours – 1,933 hours) at a cost of –\$127,371 (–1,296 hr × 98.28/hr).

**TABLE 125: Burden Adjustment for MVP Registration: Individuals, Groups, and APM Entities**

| Burden and Respondent Descriptions  | Burden Estimate   |
|---|-------------------|
| Total Currently Approved Annual Hours (a)   | 3,229             |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (See Table 124, row (c)) | 1,933             |
| <b>Difference (c) = (b) - (a)</b>   | <b>-1,296</b>     |
| Total Currently Approved Annual Cost (d)  | \$317,346         |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 124, row (e))  | \$189,975         |
| <b>Difference (f) = (e) - (d)</b>   | <b>-\$127,371</b> |

The following is a summary of the comments received for our proposed burden estimates for MVP registration and our responses.

*Comment:* One commenter shared their results from a clinician poll that 13 percent of practices will participate in MVP reporting for the CY 2023 performance period/CY 2023 MIPS payment year.

*Response:* We thank the commenter for their feedback on MVP participation estimates for the CY 2023 performance period/2025 MIPS payment year. We note that the estimate received is slightly higher than our proposed estimate of 12 percent for MVP participant registration. However, we do not believe that we can make adjustments to our estimate of 12 percent for MVP participants based on this information as we do not have additional details (poll sample size, participant pool, etc.) of the poll.

After consideration of the public comments received for our proposed requirements and burden estimates for

the MVP registration process, we did not make any further changes. As discussed above in this section, we updated the burden estimates from the CY 2023 PFS proposed rule (87 FR 46362 through 46364) due to the availability of updated data.

(ii) Burden for Subgroup Registration

We previously established at § 414.1365(b) a registration process for clinicians who choose to report MVPs through a subgroup. We refer readers to the CY 2022 PFS final rule for our previously finalized burden relevant to subgroup registration for clinicians participating in MVP reporting (86 FR 65590).

In section IV.A.4.e.(2) of this rule, we finalized our proposed update to the definition of a single specialty group at § 414.1305 to state that single specialty group means a group that consists of one specialty type as determined by CMS using Medicare Part B claims. We also finalized our proposed update to the definition of a multispecialty group at § 414.1305 to state that multispecialty

group means a group that consists of two or more specialty types as determined by CMS using Medicare Part B claims. We believe that these definitions will help groups understand their specialty determination. However, we will not adjust the subgroups burden relevant to these policies because we believe that these definitions will not impact the utilization of subgroups by groups and hence, would not change the way groups choose to organize clinicians in subgroups.

In section IV.A.4.e.(3)(b) of this rule, we finalized that as part of the subgroup registration process, in addition to the previously established registration requirements, group TINs must provide a description of each subgroup that is registered. Under this policy, we will identify some key scenarios for subgroups to select from that we expect might reflect a typical subgroup, but also wish to offer an opportunity for group TINs to describe how they constructed their subgroups by providing a narrative in a text—only

field, if the options we provide do not correctly describe the subgroup. We assume that the burden associated with choosing a key scenario will minimize the time required for subgroups to provide a narrative description. Additionally, we anticipate the narratives to be short descriptions of the nature of a group practice and appropriately reflect the subgroup composition. Therefore, we are not adjusting the burden for subgroup registration because we assume that the narrative requirement will not add significant burden to the currently approved half an hour for subgroup registration in the CY 2022 PFS final rule (86 FR 65590). We refer readers to section IV.A.8.e.(3)(b) of this rule for examples of the subgroup narrative description.

In section IV.A.4.f.(3)(d) of this rule, we finalized our proposed addition at § 414.1318(a)(4) that CMS will apply the low-volume threshold criteria for a subgroup as described under § 414.1318(a)(1) using information from the initial 12-month segment of the applicable MIPS determination period. Additionally, we finalized the proposal to make conforming changes at § 414.1318(a)(1) to state that, except as provided under paragraph (a)(2) of this section and subject to paragraph (a)(4) of this section, for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for a subgroup is determined at the group level in accordance with §§ 414.1305 and 414.1310. We assume that these policies will provide clarification for groups to identify their eligibility to form subgroups and also ensure that an individual eligible clinician or group will continue to be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. This policy does not change the application of low-volume threshold and special status as described under § 414.1318(a)(1) for

clinicians in subgroups. Therefore, we are not adjusting the currently approved burden for subgroup registration.

In section IV.A.4.e.(3)(c) of this rule, we finalized at § 414.1318(a)(3) that an individual eligible clinician, as represented by a TIN–NPI combination may register for no more than one subgroup within a group's TIN. We assume that the policy will limit the number of subgroups that a clinician could participate under a TIN and will not result in additional burden for clinicians to participate as subgroups. Therefore, we are not adjusting the number of subgroups and the currently approved burden for subgroup registration.

As noted above, we are not making any changes to our previously finalized subgroup registration burden. The burden relevant to the subgroup registration requirement is currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes pertaining to subgroup registration under that control number. Similar to our assumptions in the CY 2022 PFS final rule, we continue to capture the burden associated with subgroup quality reporting in the ICR for MVP quality performance category submission (directly below). The burden associated with subgroup submissions for Promoting Interoperability and improvement activities is included in the relevant ICRs (Promoting Interoperability data submission and improvement activities submission), and in sections VI.B.9.g.(3) and VI.B.9.i. of this rule.

(iii) Burden for MVP Quality Performance Category Submission.

In the CY 2022 PFS final rule (86 FR 65411 through 65415), we previously finalized the reporting requirements for the MVP quality performance category at § 414.1365(c)(1)(i). As discussed in section IV.A.8.b. of this rule, we did not propose new requirements to submit

data for the quality performance category of MVPs. Therefore, we did not propose any changes to our currently approved per response time estimates for submitting the MVP quality performance category data.

As described above in section VI.B.9.e. of this final rule, we estimate that 12 percent of the clinicians who participated in MIPS for the CY 2021 performance period/2023 MIPS payment year will submit data for the quality performance category of MVP in the CY 2023 performance period/2025 MIPS payment year. We also estimate that there will be 20 subgroups reporters in the CY 2023 performance period/2025 MIPS payment year. As shown in Table 126, we estimate that 3,258 clinicians and 10 subgroups will submit data using eCQMs collection type at \$580.44/response (see line q for eCQMs); 2,443 clinicians and 10 subgroups will submit data using MIPS CQM and QCDR collection type at \$646.29/response (see line q for CQM and QCDRs); and 2,010 clinicians and 0 subgroups will submit data for the MVP quality performance category using the Medicare Part B claims collection type at \$998.67/response (see line q for claims). For the CY 2023 performance period/2025 MIPS payment year, using our currently approved per response time estimates for the clinicians and subgroups submitting data for the MVP quality performance category, we estimate a burden of 17,320 hours [5.3 hr × 3,268 (3,258 + 10) responses] at a cost of \$1,896,878 (3,268 responses × \$580.44/response) for the eCQM collection type, 14,644 hours [5.97 hr × 2,453 (2,443 + 10)] at a cost of \$1,585,349 (2,453 responses × \$646.29/responses) for the MIPS CQM and QCDR collection type, and 18,974 hours (9.44 hr × 2,010 clinician responses) at a cost of \$2,007,327 (2,010 responses × \$998.67/response) for the Medicare Part B claims collection type.

BILLING CODE 4150–28–P

**TABLE 126: Final Estimated Burden for MVP Quality Performance Category Submission**

| <b>Burden and Respondent Descriptions</b>   | <b>eCQM<br/>Collection<br/>Type</b> | <b>CQM and<br/>QCDR<br/>Collection Type</b> | <b>Claims<br/>Collection<br/>Type</b> |
|---|-------------------------------------|---|---------------------------------------|

| *Total Annual Cost Per Clinician (q) = (k) + (l) + (m) + (n) + (o) + (p)                                      | \$580.44                            | \$646.29                                    | \$998.67                              |
| <b>*Total Annual Cost (r) = (c) * (q)</b>   | <b>\$1,896,878</b>                  | <b>\$1,585,349</b>                          | <b>\$2,007,327</b>                    |

Table 127 illustrates the changes in estimated burden for clinicians who will submit the MVP quality performance category utilizing the eCQM, MIPS CQM and QCDR, and claims collection types in the CY 2023 performance period/2025 MIPS payment year. We note that we used the

currently approved burden in the CY 2022 PFS final rule (86 FR 65590 through 65592) as the baseline to determine the net change in burden. In aggregate, when combined with our currently approved per response time estimate, the decrease in 5,166 respondents that will submit data for

the MVP quality performance category will result in a decrease of 8,502 hours and \$931,027 for the eCQM collection type, a decrease of 16,519 hours and \$1,788,285 for the CQM and QCDR collection type, and a decrease of 7,714 hours and \$813,916 for the claims collection type.

**TABLE 127: Burden Adjustments for MVP Quality Performance Category Submission**

| Burden and Respondent Descriptions  | eCQM Collection Type | CQM and QCDR Collection Type | Claims Collection Type |
|---|----------------------|------------------------------|------------------------|
| Total Currently Approved Annual Hours (a)   | 25,822               | 31,163                       | 26,688                 |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (See Table 126, row (k)) | 17,320               | 14,644                       | 18,974                 |
| <b>Difference (c) = (b) - (a)</b>   | <b>-8,502</b>        | <b>-16,519</b>               | <b>-7,714</b>          |
| Total Currently Approved Annual Cost (d)  | \$2,827,905          | \$3,373,634                  | \$2,821,243            |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 126, row (r))  | \$1,896,878          | \$1,585,349                  | \$2,007,327            |
| <b>Difference (f) = (e) - (d)</b>   | <b>-\$931,027</b>    | <b>-\$1,788,285</b>          | <b>-\$813,916</b>      |

**BILLING CODE 4150-28-C**

We did not receive any comments on our proposed requirements and burden estimates for the submission of measures in the MVP quality performance category. As discussed above in this section, we adjusted our burden estimates from the CY 2023 PFS proposed rule (87 FR 46365 through 46367) due to the availability of updated data.

**(8) Beneficiary Responses to CAHPS for MIPS Survey**

This rule does not create any new or revised collection of information requirements or burden related to the CAHPS for MIPS survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not making any CAHPS for MIPS Survey changes under that control number.

**(9) Group Registration for CAHPS for MIPS Survey**

This rule does not create any new or revised collection of information requirements or burden related to the group registration for the CAHPS for MIPS Survey. The requirements and burden are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not making CAHPS for MIPS Survey registration changes under that control number.

**f. ICRs Regarding the Call for MIPS Quality Measures**

The following changes will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

This rule does not create any new or revised collection of information requirements or burden related to the call for MIPS quality measures. However, based on the actual number of quality measure submissions received

for CMS consideration during the 2022 Annual Call for Quality Measures, we are adjusting our burden estimates for the CY 2023 performance period/CY 2025 MIPS payment year.

In this rule, we estimate that we will receive 29 quality measure submissions during the 2023 Annual Call for Quality Measures, an increase of 1 from the currently approved number of quality measure submissions for consideration (86 FR 65594 through 65596). We are not making any changes to the 5.5 hour (2.4 hr for practice administrator + 3.1 hr for clinician) per response time estimate for quality measure submissions.

As shown in Table 128, we estimate an annual burden of 160 hours (line f: 29 measure submissions × 5.5 hr/measure) at a cost of \$31,392 (line j: 29 measure submissions × [(2.4 hr × \$115.22/hr) + (3.1 hr × \$259.98/hr)] for the CY 2023 performance period/2025 MIPS payment year.

**TABLE 128: Final Estimated Burden for Call for Quality Measures**

| Burden and Respondent Descriptions  | Burden estimate |
|---|-----------------|
| # of New Quality Measures Submitted for Consideration (a)   | 29              |
| # of Hours per Practice Administrator to Identify, Propose and Link Measure (b)   | 2.4             |
| # of Hours per Clinician to Identify and Link Measure (c)   | 1.1             |
| # of Hours per Clinician to Complete Peer Review Article Form (d)   | 2               |
| Annual Hours Per Response (e) = (b) + (c) + (d)   | 5.5             |
| <b>Total Annual Hours (f)=(a)*(e)</b>   | <b>160</b>      |
| Cost to Identify and Submit Measure (@ practice administrator's labor rate of \$115.22/hr) * 2.4 hr = (g)                       | \$276.53        |
| Cost to Identify Quality Measure and Complete Peer Review Article Form (@ clinician's labor rate of \$259.98/hr) * 3.1 hr = (h) | \$805.94        |
| Total Annual Cost Per Submitted Measure (i)   | \$1,082.47      |
| <b>*Total Annual Cost (j)=(a)*(i)</b>   | <b>\$31,392</b> |

In Table 129, we illustrate the net change in estimated burden for the call for quality measures using the currently approved burden in the CY 2022 PFS final rule (86 FR 65594 through 65596).

In aggregate, the estimated increase in the number of quality measure submissions will result in an adjustment of +6 hours (+1 measure submission × 5.5 hr/measure submission) at a cost of

\$1,083 (+1 measure submission × \$1082.47/measure submission) for the CY 2023 performance period/2025 MIPS payment year.

**TABLE 129: Burden Adjustments for Call for Quality Measures**

| Burden and Respondent Descriptions   | Burden Estimate |
|--|-----------------|
| Total Currently Approved Annual Hours for Respondents (a)                                    | 154             |
| Total Annual Hours for Respondents in CY 2023 PFS Final Rule (b)<br>(See Table 128, row (f)) | 160             |
| <b>Difference (c) = (b) - (a)</b>  | <b>+6</b>       |
| Total Currently Approved Annual Cost for Respondents (d)                                     | \$30,309        |
| Total Annual Cost for Respondents in CY 2022 PFS Final Rule (e)<br>(See Table 128, row (j))  | \$31,392        |
| <b>Difference (f) = (e) - (d)</b>  | <b>+\$1,083</b> |

We did not receive any comments on our proposed requirements and burden estimates for the submission of applications to request reweighting for the Promoting Interoperability and other performance categories. As discussed above in this section, we adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46367) due to the availability of updated data.

g. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

For the CY 2023 performance period/2025 MIPS payment year, clinicians and groups can submit Promoting Interoperability data through direct, log in and upload, or log in and attest submission types. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, which is not available for the quality performance category, we anticipate that individuals and groups will use the same data submission type for both of these performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. The following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. Although this analysis assesses burden by performance category and submission type, we emphasize that MIPS is a consolidated program and submission analysis, and decisions are

expected to be made for the program as a whole.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53918 through 53919), and the CY 2019, CY 2020, CY 2021 and CY 2022 PFS final rules (83 FR 60011 through 60012, 84 FR 63134 through 63135, 85 FR 84984 through 84985, and 86 FR 65596 through 65598, respectively) for our previously finalized requirements and burden for reweighting applications for Promoting Interoperability and other performance categories.

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians who meet the criteria for a significant hardship or other type of exception may submit an application requesting a zero percent weighting for the Promoting Interoperability, quality, cost, and/or improvement activities performance categories under specific circumstances (81 FR 77240 through 77243, 82 FR 53680 through 53686, and 82 FR 53783 through 53785). Respondents who apply for a reweighting of the quality, cost, and/or improvement activities performance categories have the option of applying for reweighting of the Promoting Interoperability performance category on the same online form. We assume that respondents applying for a reweighting of the Promoting Interoperability performance category

due to extreme and uncontrollable circumstances will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

In section IV.A.6.c.(4)(h) of this rule, we finalized the proposal to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals only for the CY 2023 performance period/CY 2025 MIPS payment year and to revise § 414.1380(c)(2)(i)(A)(4)(i) to reflect the proposal. We also finalized the proposal to continue the existing policy of reweighting the Promoting Interoperability performance category for clinical social workers for the CY 2023 performance period/2024 MIPS payment year and to revise § 414.1380(c)(2)(i)(A)(4)(iii) to reflect the proposal. We are not adjusting the number of respondents submitting reweighting applications due to these proposals because it does not change the existing reweighting policy for these clinician types participating in MIPS in the CY 2023 performance period/2025 MIPS payment year.

Table 130 summarizes the burden for clinicians to apply for reweighting of the Promoting Interoperability performance category to zero percent due to a significant hardship or as a result of a decertification of an EHR. Based on the number of reweighting applications received at the time of the publication of this rule for the CY 2022

performance period/2024 MIPS payment year, we are adjusting our burden estimates relevant to this ICR in the CY 2023 PFS proposed rule (87 FR 46367 through 46369). In this rule, we estimate that we will receive a total of 5,439 reweighting applications for the CY 2023 performance period/2025 MIPS payment year. Out of the 5,439, we estimate that 986 respondents (eligible clinicians or groups) will submit a request to reweight the Promoting Interoperability performance category to zero percent due to extreme and uncontrollable circumstances, insufficient internet connectivity, lack of control over the availability of CEHRT, or as a result of a decertification of an EHR. We estimate that the remaining 4,451 respondents will submit a request to reweight one or

more of the quality, cost, Promoting Interoperability, or improvement activities performance categories due to an extreme or uncontrollable circumstance. Additionally, we estimate that 2 APM Entities will submit an extreme and uncontrollable circumstances exception application for the CY 2023 performance period/CY 2024 MIPS payment year. This adjustment results in a decrease of 37,388 respondents compared to our currently approved estimate of 42,827 respondents (86 FR 65597). This decrease is based on the actual number of reweighting applications submitted for the CY 2022 performance period/2024 MIPS payment year. Similar to the data used to estimate the number of respondents in the CY 2021 PFS final rule, our respondent estimate includes a

significant number of applications submitted as a result of a data issue CMS was made aware of and is specific to a single third-party intermediary. While we do not anticipate similar data issues to occur in each performance period, we do believe future similar incidents may occur and are electing to use this data without adjustment to reflect this belief.

Consistent with our assumptions in the CY 2022 PFS final rule (86 FR 65596 through 65598), we continue to estimate it will take 0.25 hours for a computer system analyst to complete and submit the application. As shown in Table 130, we estimate an annual burden of 1,360 hours (5,439 applications  $\times$  0.25 hr/application) and \$133,661 (1,360 hr  $\times$  \$98.28/hr).

**TABLE 130: Final Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories**

| Burden and Respondent Descriptions   | Burden Estimate  |
|--|------------------|
| # of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions or Extreme and Uncontrollable Circumstances (a) | 5,437            |
| # APM Entities requesting Extreme and Uncontrollable Circumstances exception (b)   | 2                |
| Total Applications Submitted (c)   | <b>5,439</b>     |
| Hours Per Applicant per Application Submission (d)   | 0.25             |
| Total Annual Hours (e) = (a) * (c)   | <b>1,360</b>     |
| Labor Rate for a computer systems analyst (f)  | \$98.28/hr       |
| Total Annual Cost (g) = (e) * (f)  | <b>\$133,661</b> |

In Table 131, we illustrate the net change in estimated burden for submission of reweighting applications for Promoting Interoperability and other performance categories using the currently approved burden in the CY 2022 PFS final rule (86 FR 65596

through 65598). The adjustment in the estimated number of respondents, from 42,827 to 5,439 respondents, results in a decrease of 37,388 respondents. In aggregate, using our currently approved per response time estimate, as shown in Table 131, the decrease in 37,388

respondents results in a decrease of 9,347 hours ( $-37,388$  responses  $\times$  0.25 hr/response) and \$918,623 ( $-9,347$  hr  $\times$  \$98.28/hr) for the CY 2023 performance period/2025 MIPS payment year.

**TABLE 131: Change in Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories**

| Burden and Respondent Descriptions  | Burden Estimate   |
|---|-------------------|
| Total Currently Approved Annual Hours in CY 2022 PFS final rule (a)                       | 10,707            |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (See Table 130, row (c)) | 1,360             |
| Difference (c) = (b) - (a)  | <b>-9,347</b>     |
| Total Currently Approved Annual Cost in CY 2022 PFS final rule (d)                        | \$1,052,284       |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 130, row (g))  | \$133,661         |
| Difference (f) = (e) - (d)  | <b>-\$918,623</b> |

We did not receive any comments on our proposed requirements and burden estimates for the submission of applications to request reweighting for the Promoting Interoperability and other performance categories. As discussed above in this section, we adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46367 through 46369) due to the availability of updated data.

### (3) Submitting Promoting Interoperability Data

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77509 through 77511, and 82 FR 53919 through 53920, respectively), and the CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (83 FR 60013 through 60014, 84 FR 63135 through 63137, 85 FR 84985 through 84987, and 86 FR 65598 through 65600, respectively) for our previously finalized requirements and burden for submission of data for the Promoting Interoperability performance category.

In section IV.A.6.c.(4)(d)(i)(D)(ab) of this final rule, we finalized the proposal to require MIPS eligible clinicians to report the Query of PDMP measure (which requires reporting a “yes/no” response) for the Promoting Interoperability performance category. Additionally, we finalized two exclusions beginning with the performance period in CY 2023: (1) Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period, (2) Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period, and (3) Any MIPS eligible clinician for whom querying a PDMP would impose an excessive workflow or cost burden prior to the start of the performance period they select in CY 2023. Due to lack of sufficient data regarding the number of clinicians who voluntarily submitted data for optional measures in the Promoting Interoperability performance category, we have consistently been unable to estimate the associated burden for the reporting of such measures. Therefore, we did not make additional changes to the currently approved time required for clinicians to submit data for the Promoting Interoperability performance category because we are unable to account for any change in burden due

to the finalized policy to require the currently optional Query of PDMP measure.

In section IV.A.6.c.(4)(e) of this rule, we finalized the proposal to add an additional measure through which a MIPS eligible clinician could earn credit for the Health Information Exchange Objective by connecting to an entity that connects to a QHIN or connecting directly to a QHIN. Specifically, we finalized the proposal to add the following new measure to the Health Information Exchange Objective beginning with the performance period in CY 2023: Enabling Exchange Under TEFCA measure. We finalized that MIPS eligible clinicians will have three reporting options for the Health Information Exchange Objective: (1) report on both the Support Electronic Referral Loops by Sending Health Information measure (or the exclusion, if applicable) and the Support Electronic Referral Loops by Receiving and Reconciling Health Information measure (or the exclusion, if applicable); (2) report on the HIE Bi-Directional Exchange measure; or (3) report on the Enabling Exchange Under TEFCA measure. We believe that given the alignment between the Enabling Exchange under TEFCA measure and the existing HIE Bi-Directional exchange measure, adding this measure offers clinicians more opportunities to earn credit for the Health Information Exchange Objective. Because the addition of Enabling Exchange Under TEFCA measure is optional for the Health Information Exchange Objective, we are unable to estimate the number of clinicians that will report this measure. Therefore, we did not propose to adjust our currently approved burden for clinicians to submit data for the Promoting Interoperability performance category because we are unable to account for any change in burden due to the change.

The following is a summary of the comments we received for our estimates on the measures in the Health Exchange Objective of the Promoting Interoperability performance category and our responses.

*Comment:* One commenter supported CMS’ recommendation to not adjust the estimated time required for a clinician to submit the measures in the Health Information Exchange Objective for the Promoting Interoperability performance category.

*Response:* We thank the commenter for their support.

In section IV.A.6.c.(4)(f)(ii) of this rule, we finalized proposed revisions to the three active engagement options. Specifically, we finalized the proposal

to consolidate current options 1 and 2 into one option beginning with the performance period in CY 2023. Additionally, for the Public Health and Clinical Data Exchange Objective, in addition to submitting responses for the required measures and any optional measures a MIPS eligible clinician chooses to report, we finalized the proposal to require MIPS eligible clinicians to submit their level of active engagement, either Pre-production and Validation or Validated Data Production (as described in section IV.A.6.c.(4)(f)(ii)(C) of this final rule), for each measure they report beginning with the performance period in CY 2023. In the CY 2023 PFS proposed rule (87 FR 46369), we estimated that it would add an additional 1 minute (0.02 hr) to the currently approved estimated time of 2.69 hours for MIPS eligible clinicians to submit their level of active engagement, resulting in a total estimated time of 2.71 hours (2.69 hr + 0.02 hr), for clinicians to submit data for the Promoting Interoperability performance category. In the FY 2023 Medicare Hospital Inpatient Prospective Payment System for Acute Care Hospitals and Long-term Care Hospital Prospective Payment System final rule (87 FR 49394), it was finalized that it would take an estimated time of 30 seconds (or 0.5 minutes) for eligible hospitals and CAH (Critical Access Hospital) s to submit their level of active engagement. We assume that it will take a MIPS eligible clinician the same time estimated for a CAH or an eligible hospital to submit their level of active engagement. We recognize that our proposed estimate of 1 minute is an overestimate. Therefore, we are revising our estimate that it would take 0.5 minutes (0.0083 hr) for MIPS eligible clinicians to submit their level of active engagement, resulting in a total estimated time of 2.70 hours, for clinicians to submit data for the Promoting Interoperability performance category. We refer readers to the FY 2023 IPPS final rule (87 FR 49394) for additional details on the estimated burden relevant to the measure.

We did not receive any comments on our proposed requirements and burden estimates for clinicians to submit their level of active engagement. As described above in this section, we adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46369) due to the availability of additional information.

In section IV.A.6.c.(4)(f)(ii)(D) of this rule, we also finalized that beginning with the performance period in CY 2023, that MIPS eligible clinicians may spend only one performance period at the Pre-production and Validation level

of active engagement per measure, and that they must progress to the Validated Data Production level in the next performance period for which they report a particular measure. We refer readers to sections IV.A.6.c.4.(d) and IV.A.6.c.(4)(g) of this rule for additional information on measure descriptions and changes to scoring methodologies in the Promoting Interoperability performance category.

As shown in Table 132, based on updated data from the CY 2021 performance period/2023 MIPS payment year, we are adjusting our proposed estimate in the CY 2023 PFS proposed rule (87 FR 46370) for the total number of respondents that will submit Promoting Interoperability data in the CY 2023 performance period/2025 MIPS payment year. We estimate that a total number of 30,107 respondents, consisting of 22,293 individual MIPS eligible clinicians, 7,794 groups and virtual groups, and 20 subgroups will submit data for the Promoting

Interoperability performance category in the CY 2023 performance period/2025 MIPS payment year. We assume that MIPS eligible clinicians previously scored under the APM scoring standard, as described in the CY 2020 PFS final rule, will continue to submit Promoting Interoperability data (84 FR 63006) in a similar way through the APP. As a result, we do not anticipate any change in burden for APM Participants submitting data for the Promoting Interoperability performance category. In section IV.A.6.c.(5)(b) of this rule, we finalized the proposal to introduce a voluntary reporting option for APM Entities to report the Promoting Interoperability performance category at the APM Entity level beginning with the CY 2023 performance period/2025 MIPS payment year. Because the reporting of the Promoting Interoperability performance category is voluntary, we are unable to estimate the number of APM Entities that will submit data on behalf of their clinicians for this

category. Therefore, we assume that each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance category through either their group TIN or individual reporting. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA. However, in the CY 2019 PFS final rule, we established that MIPS eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822 and 59823). Burden estimates for this rule assume group TIN-level reporting as we believe this is the most reasonable assumption for MIPS eligible clinicians participating in the Shared Savings Program, which requires that ACOs include full TINs as ACO participants.

**TABLE 132: Adjustments to the Number of Respondents to Submit Promoting Interoperability Performance Data**

| Burden and Respondent Descriptions   | # of Respondents |
|--|------------------|
| Number of individual clinicians to submit Promoting Interoperability in CY 2023 (a)                        | 22,293           |
| Number of groups to submit Promoting Interoperability in CY 2023 (b)                                       | 7,794            |
| # of Subgroups to submit Promoting Interoperability in MVPs during the CY 2023 MIPS performance period (c) | 20               |
| Total Respondents in 2023 MIPS performance period (CY 2022 PFS Final Rule) (d) = (a) + (b) + (c)           | 30,107           |
| Currently Approved Respondents in 2023 MIPS performance period (e)   | 51,667           |
| Difference (f) = (d) – (e)   | -21,560          |

As shown in Table 133, accounting for the change in our per response time estimate due to the requirement for clinicians to submit their level of active engagement for the Public Health and Clinical Data Exchange Objective and the decrease in the number of

respondents from 51,667 to 30,107, we estimate that it will result in a total burden of 81,289 hours (30,107 responses × 2.70 incremental hr for a computer analyst's time above and beyond the physician, medical and health services manager, and computer

system's analyst time required to submit quality data) and \$7,989,083 (81,289 hr × \$98.28/hr) to submit data for the Promoting Interoperability performance category in the CY 2023 performance period/2025 MIPS payment year.

**TABLE 133: Final Burden for Promoting Interoperability Performance Category Data Submission in CY 2023**

| Burden and Respondent Description   | Burden Estimate    |
|---|--------------------|
| Number of individual clinicians to submit Promoting Interoperability (a)                | 22,293             |
| Number of groups to submit Promoting Interoperability (b)                               | 7,794              |
| Number of subgroups to submit Promoting Interoperability (c)                            | 20                 |
| Total (d) = (a) + (b) + (c)   | <b>30,107</b>      |
| Total Annual Hours Per Respondent (e)   | 2.70               |
| Total Annual Hours (f) = (d) * (e)  | <b>81,289</b>      |
| Labor rate for a computer systems analyst to submit Promoting Interoperability data (g) | \$98.28/hr         |
| Total Annual Cost (h) = (f) * (g)   | <b>\$7,989,083</b> |

As shown in Table 134, accounting for the changed per response time estimate, the decreased number of

respondents results in a change of minus 57,695 hours (– 21,560 responses × 2.69 hr + 30,107 × 0.01 hr) at a cost

of –\$5,670,265 (– 57,695 hr × \$98.28/hr).

**TABLE 134: Change in Estimated Burden for Promoting Interoperability Performance Category Data Submission**

| Burden and Respondent Description   | Burden Estimate     |
|---|---------------------|
| Total Currently Approved Annual Hours (a)   | 138,984             |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (see Table 133, row (f)) | 81,289              |
| <b>Difference (c) = (b) - (a)</b>   | <b>-57,695</b>      |
| Total Currently Approved Annual Cost (d)  | \$13,659,348        |
| Total Annual Cost for Respondents in CY 2022 PFS final rule (e) (see Table 133, row (h))  | \$7,989,083         |
| <b>Difference (f) = (e) - (d)</b>   | <b>-\$5,670,265</b> |

After consideration of the public comments received for our proposed requirements and burden estimates relevant to the submission of measures and objectives in the Promoting Interoperability performance, we did not make any further changes. As discussed above in this section, we adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46369 through 46371) due to the availability of updated data.

#### h. ICRs Regarding the Nomination of Promoting Interoperability (PI) Measures

This rule does create any new or revised collection of information requirements or burden related to the nomination of Promoting Interoperability measures. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes under that control number.

#### i. ICRs Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In section IV.A.6.c.(3)(b)(ii) of this rule, we finalized changes to the improvement activities Inventory for the CY 2023 performance period/2025 MIPS payment year and future years as follows: adding 4 new improvement activities; modifying 5 existing improvement activities; and removing 6 previously adopted improvement activities. We do not believe the changes will impact our currently approved time for interested parties to submit information, because MIPS eligible clinicians are still required to submit the same number of activities and the estimated per response time for each activity is uniform. Therefore, we did not propose to adjust our currently estimated time of 5 minutes or 0.083

hours (per response) for improvement activities submission.

In this rule, we are adjusting the estimates in the CY 2023 PFS proposed rule (87 FR 46372) due to availability of updated data. As represented in Table 133, based on data from the CY 2021 performance period/CY 2023 MIPS payment year, we estimate that a total of 44,136 respondents consisting of 31,743 individual clinicians, 12,373 groups and 20 subgroups will submit improvement activities during the CY 2023 performance period/CY 2025 MIPS payment year. This adjustment represents a decrease of 37,446 respondents (32,102 individuals, 5,344 groups and 0 subgroups) from the currently approved estimate of 81,582 respondents (63,845 individuals and 17,717 groups, and 20 subgroups) in the CY 2022 PFS final rule (86 FR 65603).

As discussed in sections VI.B.9.e.(2) and VI.B.9.g.(3) of this final rule regarding our estimate of clinicians and groups submitting data for the quality and Promoting Interoperability

performance categories, we are updating our estimates for the number of clinicians and groups that will submit improvement activities data based on projections of the number of eligible

clinicians that were not QPs or participating in an ACO in the CY 2021 performance period/2023 MIPS payment year but will be QPs in the CY 2023 performance period/2025 MIPS

payment year, and will therefore not be required to submit improvement activities data.

**TABLE 135: Estimated Burden for Improvement Activities Data Submission**

| Burden and Respondent Descriptions  | Count   |
|---|---------|
| # of clinicians to participate in improvement activities data submission as individuals during the CY 2023 MIPS performance period (a)  | 31,743  |
| # of Groups to submit improvement activities on behalf of clinicians during the CY 2023 MIPS performance period (b)   | 12,373  |
| # of Subgroups to submit improvement activities in MVPs during the CY 2023 MIPS performance period (c)  | 20      |
| Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data during the CY 2023 MIPS performance period (d) = (a) + (b) + (c)                      | 44,136  |
| *Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2023 MIPS performance period (CY 2022 PFS Final Rule) (e) | 81,582  |
| Difference (f) = (d) - (e)  | -37,446 |

Consistent with the CY 2022 PFS final rule, we continue to estimate that the time required per response per individual or group is 5 minutes or 0.083 hours for a computer system analyst at a labor rate of \$98.28/hr to

submit by logging in and manually attesting that certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials (86 FR 65603). As shown in Table 136, we estimate an

annual burden of 3,663 hours (44,136 responses  $\times$  0.083 hr) at a cost of \$360,000 (3,663 hr  $\times$  \$98.28/hr) for the CY 2023 performance period/2025 MIPS payment year.

**TABLE 136: Final Estimated Burden for Improvement Activities Data Submission**

| Burden and Respondent Descriptions  | Burden Estimate |
|---|-----------------|
| Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2023 performance period (a) | 44,136          |
| Total Annual Hours Per Respondent (b)   | 0.083           |
| Total Annual Hours (c) = (a) * (b)  | 3,663           |
| Labor rate for a computer systems analyst to submit improvement activities (d)  | \$98.28/hr      |
| Total Annual Cost (e) = (c) * (d)   | \$360,000       |

In Table 137, we illustrate the net change in estimated burden for the submission of improvement activities using the currently approved burden in the CY 2022 PFS final rule (86 FR

65603). In aggregate, using our currently approved per response time estimate, the decrease in the number of respondents results in a decrease of 3,108 hours (– 37,446 responses  $\times$  0.083

hr/response) at a cost of – \$305,454 (– 3,108 hr  $\times$  \$98.28/hr) for the CY 2023 performance period/2025 MIPS payment year.

**TABLE 137: Change in Estimated Burden for Improvement Activities Submission**

| <b>Burden and Respondent Descriptions</b>   | <b>Burden Estimate</b> |
|---|------------------------|
| Total Currently Approved Annual Hours (a)   | 6,771                  |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (See Table 135, row (c)) | 3,663                  |
| <b>Difference (c) = (b) - (a)</b>   | <b>-3,108</b>          |
| Total Currently Approved Annual Cost (d)  | \$665,454              |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 135, row (e))  | \$360,000              |
| <b>Difference (f) = (e) - (d)</b>   | <b>-\$305,454</b>      |

We did not receive any comments on our proposed requirements and burden estimates for the submission of improvement activities. As discussed above in this section, we adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46371 through 46373) due to the availability of updated data.

**j. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)**

This rule does not create any new or revised collection of information requirements or burden related to the nomination of improvement activities. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes under that control number.

**k. Nomination of MVPs**

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2021 PFS and CY 2022 PFS final rules (85 FR 84990 through 84991 and 86 FR 65605, respectively) for our previously finalized requirements and burden for collection of information relevant to nomination of MVPs for inclusion in the Quality Payment Program.

In section IV.A.4.a.(2) of this rule, we finalized updates to the previously finalized policies for the MVP development and maintenance process in the CY 2021 and 2022 PFS final rules (85 FR 84849 through 84856 and 86 FR 65410, respectively). Specifically, we finalized the proposal to modify the

MVP development process such that we will evaluate a submitted candidate MVP through the MVP development process, and if we determine it is “ready” for feedback, we will post a draft version of the submitted candidate MVP on the Quality Payment Program website (<https://qpp.cms.gov/>) and solicit feedback for a 30-day period. Interested parties and general public will have the opportunity to submit feedback on the candidate MVP for CMS’s consideration through an email inbox. We will review the feedback received and determine if any changes should be made to the candidate MVP prior to potentially including the MVP in a notice of proposed rulemaking. If we determined changes should be made to the candidate MVP, we will not notify the interested party who originally submitted the candidate MVP for CMS consideration in advance of the rulemaking process. We also finalized the proposal to modify the MVP maintenance process such that interested parties and the general public will be able to submit their recommendations for potential revisions to established MVPs on a rolling basis throughout the year. We will then review the submitted recommendations and determine whether any are potentially feasible and appropriate. If we identify any submitted recommendations that are potentially feasible and appropriate, we will host a public facing webinar, open to interested parties and the general public through which they may offer their feedback on the potential revisions we have identified. We will publish details related to the timing and registration process for the webinar through our

Quality Payment Program Listserv. If we decide to make any revisions to an established MVP based on the recommendations submitted, we will adopt such revisions through notice and comment rulemaking.

We also stated that these changes do not require additional steps to the MVP nomination process described in the CY 2021 PFS final rule (85 FR 84990 through 84991). Therefore, we did not make any changes to the currently approved 12 hours per response (86 FR 65605) time for interested parties to submit their MVP candidates utilizing a standard template. Additionally, we refer readers to section VII.E.16.e.(2)(a) of this final rule where we discuss our impact analysis for these proposals.

In this rule, based on the actual number of respondents that submitted MVP nominations, we are adjusting the estimated number of MVP nominations in the CY 2023 PFS proposed rule (87 FR 46373 through 46374). We estimate that we will receive approximately 10 MVP nominations for the CY 2023 performance period/2025 MIPS payment year. This adjustment will result in a decrease of 15 MVP nominations from our currently approved estimate of 25 nominations in the CY 2022 PFS final rule (86 FR 65605). As shown in Table 138, for the CY 2023 performance period/2025 MIPS payment year, we continue to estimate that the per response time is 12 hours. This will result in an estimated annual burden of 120 hours (10 nominations × 12 hr/nomination) at a cost of \$20,775 (10 × [(7.2 hr × \$115.22/hr for a medical and health services manager) + (4.8 hr × \$259.98/hr for a physician)]).

**TABLE 138: Final Burden for Nomination of MVPs**

| Burden and Respondent Descriptions  | Burden Estimate |
|---|-----------------|
| # of Nominations of New MVPs (a)  | 10              |
| # of Hours Per Medical and Health Services Manager (b)  | 7.2             |
| # of Hours Per Physician (c)  | 4.8             |
| Annual Hours Per Respondent (d)= (b) + (c)  | 12              |
| <b>Total Annual Hours (e) = (a) * (d)</b>   | <b>120</b>      |
| Cost to Nominate an MVP (@ medical and health services manager's labor rate of \$115.22/hr) (f) = (b) x \$115.22/hr | \$829.58        |
| Cost to Nominate an MVP (@ physician's labor rate of \$259.98/hr = ) (g) = (c) x \$259.98/hr                        | \$1,247.90      |
| Total Annual Cost Per Respondent (h) = (f) + (g)  | \$2,077.48      |
| <b>Total Annual Cost (i) = (a) * (h)</b>  | <b>\$20,775</b> |

In Table 139, we illustrate the net change in estimated burden for nomination of MVPs using the currently approved burden in the CY 2022 PFS final rule (86 FR 65605). In aggregate,

using our currently approved per response time estimate, the decrease in the number of respondents submitting MVP nominations results in a total annual adjustment of – 180 hours (– 15

responses × 12 hr/nomination) at a cost of – \$31,162 (– 15 × [(7.2 hr × \$115.22/hr) + (4.8 hr × \$259.98/hr)]) for the CY 2023 performance period/2025 MIPS payment year.

**TABLE 139: Change in Estimated Burden for Nomination of MVPs**

| Burden and Respondent Descriptions  | CY 2023 Performance Period |
|---|----------------------------|
| Total Currently Approved Annual Hours (a)   | 300                        |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (See Table 138, row (d)) | 120                        |
| <b>Difference (c) = (b) - (a)</b>   | <b>-180</b>                |
| Total Currently Approved Annual Cost (d)  | \$51,937                   |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 138, row (i))  | \$20,775                   |
| <b>Difference (f) = (e) - (d)</b>   | <b>-\$31,162</b>           |

We did not receive any comments on our proposed requirements and burden estimates relevant to the MVP nomination process. As discussed above in this section, we adjusted the burden estimates from the CY 2023 PFS proposed rule (87 FR 46373 through 46374) due to the availability of updated data.

#### I. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy. Moreover, the policies in this rule do not result in the need to add or revise or delete any claims data fields.

Consequently, we are not making any changes under that control number.

#### m. ICRs Regarding Partial QP Elections (§§ 414.1310(b) and 414.1430)

This rule does not create any new or revised collection of information requirements or burden related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician. However, we proposed to adjust our currently approved burden estimates based on updated projections for the CY 2023 performance period/2025 MIPS payment year. We did not receive any public comments related to the proposed burden estimates for Partial QP election. We are not making any adjustments to the proposed burden estimate for the ICR in the CY 2023 PFS rule (87 FR 46374 through 46375). The finalized adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As shown in Table 140, based on our predictive QP analysis for the 2023 QP performance period/2025 MIPS payment year, which accounts for historical response rates in the CY 2021 performance period/2023 MIPS payment year, we are finalizing to revise our estimate that a total of 287 respondents (156 APM Entities and 131 individual eligible clinicians representing approximately 7,182 Partial QPs) will make the election to participate as a Partial QP in MIPS. This is an increase of 37 from the 250 elections that are currently approved by OMB under the aforementioned control number. We continue to estimate it will take the APM Entity representative or eligible clinician 15 minutes (0.25 hr) to make this election. In aggregate, we are adjusting our estimated annual burden to 72 hours (287 responses × 0.25 hr/response) and \$7,076 (72 hr × \$98.28/hr).

**TABLE 140: Final Burden for Partial QP Election**

| Burden and Respondent Description   | Burden Estimate |
|---|-----------------|
| # of respondents making Partial QP election (156 APM Entities, 131 eligible clinicians) (a) | 287             |
| Total Hours Per Respondent to Elect to Participate as Partial QP (b)                        | 0.25            |
| Total Annual Hours (c) = (a) * (b)  | 72              |
| Labor rate for computer systems analyst (d)   | \$98.28/hr      |
| Total Annual Cost (e) = (c) * (d)   | \$7,076         |

As shown in Table 141, using our currently approved per respondent time estimate (86 FR 65605), the increase in

the number of Partial QP elections results in an adjustment of + 9 hours (+ 37 respondents × 0.25 hr/election) at a

cost of + \$884 (\$7,076 – \$6,192) for the CY 2023 performance period/2025 MIPS payment year.

**TABLE 141: Burden Adjustments for Partial QP Election**

| Burden and Respondent Descriptions  | Burden Estimate |
|---|-----------------|
| Total Currently Approved Annual Hours (a)   | 63              |
| Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (See Table 140, row (c)) | 72              |
| Difference (c) = (b) - (a)  | +9              |
| Total Currently Approved Annual Cost (d)  | \$6,192         |
| Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 140, row (e))  | \$7,076         |
| Difference (f) = (e) - (d)  | +\$884          |

We received no comments on our proposed requirements and burden estimates for the partial QP election process. As discussed above in this section, we adjusted the currently approved burden estimates due to the availability of updated data.

n. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1445) and Eligible Clinician-Initiated Process (§ 414.1445)

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

(1) Payer-Initiated Process (§ 414.1445)

This rule does not create any new or revised collection of information requirements related to the Payer-Initiated Process. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the Payer-Initiated process under that control number.

(2) Eligible Clinician-Initiated Process (§ 414.1445)

This rule does not create any new or revised collection of information

requirements or burden related to the Eligible Clinician-Initiated Process. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the Eligible Clinician-Initiated Process under that control number.

(3) Submission of Data for QP Determinations Under the All-Payer Combination Option (§ 414.1440)

This rule does not create any new or revised collection of information requirements or burden related to the Submission of Data for QP Determinations under the All-Payer Combination Option. The requirements and burden for the All-Payer Combination option are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes under that control number.

o. ICRs Regarding Voluntary Participants Election To Opt-Out of Performance Data Display on Compare Tools (§ 414.1395)

This rule does not create any new or revised collection of information requirements or burden related to the election by voluntary participants to

opt-out of public reporting on Compare Tools. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the election of voluntary participants to opt-out of performance data display on Compare Tools under that control number.

p. Summary of Annual Quality Payment Program Burden Estimates

Table 142 summarizes this final rule's total burden estimates for the Quality Payment Program for the CY 2023 performance period/2025 MIPS payment year.

In the CY 2022 PFS final rule, the total estimated burden for the CY 2023 performance period/2025 MIPS payment year (see Table 142, row a) was 1,383,049 hours at a cost of \$139,501,770 (86 FR 65613). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs discussed in this rule compared to the CY 2022 PFS final rule, the total estimated annual burden of continuing policies and information set forth in the CY 2022 PFS final rule into the CY 2023 performance period/2025 MIPS payment year is 1,386,803 hours at a cost of \$148,008,071 (see Table 142, row b). These represent an increase of 3,754

hours and an increase of \$8,506,301. To understand the burden implications of the policies in this rule, we provide an estimate of the total burden associated with continuing the policies and information collections set forth in the CY 2022 PFS final rule into the CY 2023 performance period/2025 MIPS payment year. This burden estimate of 714,352 hours at a cost of \$76,092,343 (see Table 142, row c) reflects the availability of more accurate data to account for all potential respondents and submissions across all the

performance categories and more accurately reflect the exclusion of QPs from all MIPS performance categories, a decrease of 672,451 hours and \$71,915,728 (see Table 142, row d). This burden estimate is lower than the burden approved for information collection related to the CY 2022 PFS final rule due to updated data and assumptions. Our total burden estimate for the CY 2023 performance period/2025 MIPS payment year is 710,644 hours and \$75,687,130 (see Table 142, row e), which represents a decrease of

676,159 hours and \$72,320,941 from the CY 2022 PFS final rule (see Table 142, row f). The difference of – 3,708 hours (672,451 hours – 676,159 hours) and – \$405,213 (\$71,915,728 – \$72,320,941) (see Table 142, row g) between this estimate and the total burden shown in Table 142 is the decrease in burden associated with impacts of the policies for the CY 2023 performance period/2025 MIPS payment year.

BILLING CODE 4150–28–P

**TABLE 142: Summary of Burden Estimates and Requirements from the CY 2023 PFS Final Rule**

| CY 2023 Performance Period/2025 MIPS Payment Year                    |              |               |
|--|--------------|---------------|
| Burden Estimate Description  | Time (Hours) | Cost          |
| Currently approved burden in CY 2022 PFS Final Rule (a)              | 1,383,049    | \$139,501,770 |
| CY 2022 PFS Final Rule w/ updated wage rates and ICRs (b)            | 1,386,803    | \$148,008,071 |
| CY 2022 PFS Final Rule w/ updated data and assumptions (c)           | 714,352      | \$76,092,343  |
| Change in burden due to updated data and assumptions (d) = (c) – (b) | -672,451     | -\$71,915,728 |
| CY 2023 PFS Final Rule Total Burden (e)                              | 710,644      | \$75,687,130  |
| Total change in burden (as shown in Table 143) (f) = (e) – (b)       | -676,159     | -\$72,320,941 |
| Change in burden associated with policies (g) = (f) – (d)            | -3,708       | -\$405,213    |

**TABLE 143: Summary of Quality Payment Program Burden Estimates and Requirements  
CMS-10621 (OMB 0938-1314)**

| §§ 414.1325 and 414.1335 (Quality Performance Category) eCQM Collection Type (see Table 123)  | 43,773                       | 23,889               | -19,884             | 350,184                                | 191,112                       | -159,072                     |
| MVP Registration (see Table 125)  | 12,917                       | 7,731                | -5,186              | 3,229                                  | 1,933                         | -1,296                       |
| MVP Quality Submission (see Table 127)  | 12,917                       | 7,731                | -5,186              | 83,673                                 | 50,938                        | -32,735                      |
| Call for Quality Measures (see Table 129)   | 28                           | 29                   | +1                  | 154                                    | 160                           | +6                           |
| § 414.1375 (Promoting Interoperability Performance Category) Reweighting Applications for Promoting Interoperability and Other Performance Categories (see Table 131) | 42,827                       | 5,439                | -37,388             | 10,707                                 | 1,360                         | -9,347                       |
| §§ 414.1375 and 414.1380 (Promoting Interoperability Performance Category) Data Submission (see Table 134)  | 51,667                       | 30,107               | -21,560             | 138,984                                | 81,289                        | -57,695                      |
| § 414.1360 (Improvement Activities Performance Category) Data Submission (see Table 137)  | 81,582                       | 44,136               | -37,446             | 6,771                                  | 3,663                         | -3,108                       |
| Nomination of MVPs (see Table 139)  | 25                           | 10                   | -15                 | 300                                    | 120                           | -180                         |
| § 414.1430 Partial Qualifying APM Participant (QP) Election (Table 141)   | 250                          | 287                  | 37                  | 63                                     | 72                            | +9                           |
| <b>TOTAL</b>  | 322,290                      | 158,848              | -163,442            | 1,386,803                              | 710,644                       | -676,159                     |

Table 144 provides the reasons for changes in the estimated burden for information collections in the Quality Payment Program segment of this final

rule. We have divided the reasons for our change in burden into those related to finalized policies and those related to adjustments in burden continued from

the CY 2022 PFS final rule policies that reflect updated data and revised methods.

**TABLE 144: Reasons for Change in Burden Compared to the Currently Approved CY 2023 Information Collection Burden**

| ICR Title   | Changes in burden due to CY 2023 final rule policies  | Adjustments in burden continued from CY 2022 PFS final rule policies due to revised methods or updated data  |
|---|---|--|
| QCDR Self-Nomination and other Requirements (See Table 104)   | None  | Decrease in number of respondents due to updated assumptions.<br>Decrease in the total number of hours due to restructuring the ICR.   |
| Qualified Registry Self-Nomination and other Requirements (See Table 106)   | None  | Decrease in number of respondents due to updated assumptions.<br>Decrease in the total number of hours due to restructuring the ICR.   |
| § 414.1400 Third Party Intermediary Plan Audits (see Table 108)   | None  | New ICR. Increase in number of respondents and hours due to restructuring the burden for third party intermediaries to submit a targeted audit, CAP, transition plan, or a participation plan. |
| Open Authorization (OAuth) Credentialing and Token Request Process (see Table 111)  | None  | Increase in the number of hours due to changes in administrative workflow for the application process.   |
| Quality Payment Program Identity Management Application Process (see Table 116)   | None  | Increase in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.  |
| §§ 414.1325 and 414.1335 (Quality Performance Category) Medicare Part B Claims Collection Type (see Table 118)  | Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the claims collection type.            | Decrease in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.  |
| §§ 414.1325 and 414.1335 (Quality Performance Category) QCDR/ MIPS CQM Collection Type (see Table 120)  | Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the QCDR and MIPS CQM collection type. | Decrease in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.  |
| §§ 414.1325 and 414.1335 (Quality Performance Category) eCQM Collection Type (see Table 122)  | Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the eCQM collection type.              | Decrease in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.  |
| MVP Registration (see Table 124)  | Increase in number of respondents due to finalized addition of 5 new MVPs.  | Decrease in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.  |
| MVP Quality Submission (see Table 126)  | Increase in number of respondents due to finalized addition of 5 new MVPs.  | Decrease in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.  |
| Call for Quality Measures (see Table 128)   | None  | Increase in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.  |
| § 414.1375 (Promoting Interoperability Performance Category) Reweighting Applications for Promoting Interoperability and Other Performance Categories (see Table 130) | None  | Decrease in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.  |

| ICR Title  | Changes in burden due to CY 2023 final rule policies  | Adjustments in burden continued from CY 2022 PFS final rule policies due to revised methods or updated data             |
|--|---|---|
| §§ 414.1375 and 414.1380 (Promoting Interoperability Performance Category) Data Submission (see Table 132) | Increase in the estimated time (+0.0083 hrs) for clinicians to submit their level of active engagement for the Public Health and Clinical Data Exchange Objective in the Promoting Interoperability performance category. | Decrease in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year. |
| § 414.1360 (Improvement Activities Performance Category) Data Submission (see Table 135)                   | None  | Decrease in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year  |
| Nomination of MVPs (see Table 138)   | None  | Decrease in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year. |
| § 414.1430 Partial Qualifying APM Participant (QP) Election (see Table 140)                                | None  | Increase in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year. |

*C. Summary of Annual Burden Estimates for Changes*

**TABLE 145: Annual Requirements and Burden Estimates**

| Section(s) Under Title 42 of the CFR  | OMB Control Number | No. Respondents | Total Annual Responses | Time per Response (hours) | Total Annual Time (hours) | Labor Cost (\$/hr) | Total Cost (\$) |
|---|--------------------|-----------------|------------------------|---------------------------|---------------------------|--------------------|-----------------|
| § 414.940 (Requiring Manufacturers of Certain Single-dose Container or Single-use Package Drugs to Provide Refunds with Respect to Discarded Amounts) | 0938-New           | 10              | 10                     | 40                        | 400                       | 39.50              | 15,800          |

| §§ 414.1325 and 414.1335, 414.1360, 414.1375, 414.1380, 414.1395, 414.1400, 414.1430, and 414.1440 (Quality Payment Program)                          | 0938-1314          | 117,697         | -2,193                 | Varies                    | -676,159                  | Varies             | -73,320,941     |
| <b>TOTAL</b>  |                    | 120,945         | 3,275                  | Varies                    | -635,999.33               | varies             | -\$71,741,739   |

\*The finalized requirements and burden will be submitted to OMB using the standard PRA process which includes the publication of non-rule 60- and 30-day Federal Register notices.

BILLING CODE 4150-28-C

## VII. Regulatory Impact Analysis

### A. Statement of Need

In this final rule, we are finalizing payment and policy changes under the Medicare PFS and required statutory

changes under the Consolidated Appropriations Act, 2021 (CAA, 2021); sections 301, 302, 303, 304, and 305 under the Consolidated Appropriations Act, 2022 (CAA, 2022); and sections 2003 and 2005 of the SUPPORT for Patients and Communities Act of 2018,

section 90004 of the Infrastructure Investment and Jobs Act, and section 4 of the Protecting Medicare and American Farmers from Sequester Cuts Act. Our policies in this rule specifically address: changes to the PFS; other changes to Medicare Part B

payment policies to ensure that payment systems are updated to reflect changes in medical practice, the relative value of services, and changes in the statute; improvements to the Medicare Shared Savings Program (Shared Savings Program) requirements that promote health equity and strengthen financial incentives for participation; updates to the Quality Payment Program; updates to the Medicare coverage of opioid use disorder services furnished by opioid treatment programs; updates to certain Medicare provider enrollment policies; updates to electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA–PD plan (section 2003 of the SUPPORT Act); changes to the Medicare policies for laboratory specimen collection fees and travel allowance; and updates to the Medicare Ground Ambulance Data Collection System. The policies reflect CMS's stewardship of the Medicare program and overarching policy objectives for ensuring equitable beneficiary access to appropriate and quality medical care.

#### 1. Statutory Provisions

##### a. Extension of Certain Medicare Telehealth Flexibilities, Under Section 1834(m) of the Act, as Amended by the Consolidated Appropriations Act, 2022

Section II.D.1.e. of this final rule implements sections 301, 302, 304, and 305, of the Consolidated Appropriations Act, 2022, which extended the geographic restrictions (section 301), extended the temporary expansion of practitioner types who are eligible to furnish Medicare telehealth (section 302), delayed the in-person requirements under Medicare for mental health services furnished through telehealth under the PFS (section 304), and extended audio-only flexibilities for certain telehealth services that will otherwise not be available via telehealth (section 305) after the expiration of the PHE to remain on the Medicare Telehealth Services List for a 151-day period beginning on the first day after the end of the public health emergency (PHE) for COVID–19. This provision is necessary to fulfill the statutory requirement to implement this extension until the 152nd day after the end of the PHE for COVID–19.

##### b. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs Payable Under Medicare Part B To Provide Refunds With Respect to Discarded Amounts

Section III.A. of this final rule implements section 90004 of the

Infrastructure Investment and Jobs Act (Pub. L. 117–9, November 15, 2021) which requires drug manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. These provisions are necessary to fulfill the statutory requirement to implement this policy effective January 1, 2023 and reduce unnecessary Medicare spending for discarded drug.

##### c. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

Section III.B.3. of this final rule implements sections 303 and 304 of the Consolidated Appropriations Act, 2022. Section 303 of the CAA, 2022 amended section 1834(m)(8) of the Act to temporarily continue payment for telehealth services furnished by FQHCs and RHCs for the 151-day period beginning on the first day after the end of the COVID–19 PHE using the methodology established for telehealth services furnished by FQHCs and RHCs during the PHE, which, in accordance with section 1834(m)(8)(B) of the Act, is based on payment rates that are similar to the national average payment rates for comparable telehealth services under the PFS.

Section 304 of the CAA, 2022 delays the in-person requirements under Medicare for mental health services furnished through telehealth under the PFS and for mental health visits furnished by RHCs and FQHCs via telecommunications technology for a 151-day period beginning on the first day after the end of the public health emergency (PHE) for COVID–19. These provisions are necessary to fulfill these statutory requirements.

We also note in section III.B.3. of this final rule we discuss implementation of sections 301 and 305 of the CAA, 2022 that will apply to telehealth services (those that are not mental health visits) furnished by RHCs and FQHCs. That is, section 301 of the CAA, 2022 extended the geographic restrictions and section 305 of the CAA, 2022 extended audio-only flexibilities for certain telehealth services that will otherwise not be available via telehealth.

##### d. Clinical Laboratory Fee Schedule (CLFS)—Revisions Consistent With Recent Statutory Changes

Section III.C.5. of this rule finalizes conforming regulations text changes for CLFS data reporting requirements due to the enactment of Protecting Medicare and American Farmers from Sequester Cuts Act (PMAFSCA). For clinical diagnostic laboratory tests (CDLTs) that

are not advanced diagnostic laboratory tests (ADLTs), the PMAFSCA delays the next data reporting period by one year. Instead of taking place from January 1, 2022 through March 31, 2022, data reporting will now take place from January 1, 2023 through March 31, 2023, based on the original data collection period of January 1, 2019 through June 30, 2019. Data reporting for these tests then resumes on a 3-year cycle (2026, 2029, etc.). Additionally, PMAFSCA amends the statutory provisions that phase in payment reductions resulting from private payor rate implementation to provide that for CYs 2023 through 2025, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

##### e. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan (Section 2003 of the SUPPORT Act)

In the CY 2023 PFS proposed rule, we proposed changes to the electronic prescribing for controlled substances (EPCS) requirement specified in section 2003 of the SUPPORT Act (87 FR 46238 through 46240). Previously finalized policies did not include actions for non-compliance after the 2023 year. Additionally, previously finalized policies for exceptions may not have properly identified prescribers that are small prescribers during the compliance period and may have misidentified prescribers in locations with a recognized emergency or natural disaster. The provisions in this final rule define the action for non-compliance with the electronic prescribing of controlled substances requirement for the 2024 year and refine policies to better identify prescribers who qualify for the small prescriber and recognized emergency exceptions to the EPCS requirement.

##### f. Medicare Ground Ambulance Data Collection System

Section 1834(l)(17)(A) of the Act requires the Secretary to develop a data collection system (which may include use of a cost survey) to collect cost, revenue, utilization, and other information determined appropriate by the Secretary for providers and suppliers of ground ambulance services. In this final rule, we are finalizing our proposed series of changes to the Medicare Ground Ambulance Data Collection System including the proposal to update § 414.626(d)(1) and (e)(2) to give us the necessary flexibility to specify how ground ambulance

organizations should submit the hardship exemption requests and informal review requests, including to our web-based portal once that portal is operational, and proposed revisions to the Medicare Ground Ambulance Data Collection Instrument. The changes and clarifications aim to reduce burden on respondents, improve data quality, or both.

*Comment:* We received one comment on the impacts. The commenter encouraged CMS to implement this proposal in a way that does not increase administrative burden and in a way that is revenue neutral given the increase in expenses to provide care to patients.

*Response:* As we described in the CY 2020 PFS final rule (84 FR 62868), we designed the Medicare Ground Ambulance Data Collection System to collect the information required in section 1834(l)(17)(A) of the Act while: (1) accommodating a wide range of ground ambulance organizations; and (2) minimizing respondent burden. Subsequent improvements in the Medicare Ground Ambulance Data Collection System in the CY 2022 PFS final rule (86 FR 65306), and those described in this final rule, aim to further streamline the Medicare Ground Ambulance Data Collection System and reduce burden.

#### g. Quality Payment Program

This final rule is also necessary to make changes to the Quality Payment Program to move the Quality Payment Program forward to focus more on measurement efforts, refine how clinicians will be able to participate in a more meaningful way through the Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs), and encourage participation in Advanced Alternative Payment Models (APMs). Authorized by MACRA, the Quality Payment Program is an incentive program that includes two participation tracks, MIPS and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. Currently, reporting for MIPS is not required to be coordinated across performance categories. These policies are intended to promote better quality reporting to improve patient health outcomes by coordinating reporting for MIPS across performance categories, and make changes to scoring that will provide a better picture of clinicians' performance.

## 2. Discretionary Provisions

### a. RHCs and FQHCs

In section III.B.2. of this final rule, we are finalizing a policy to include chronic pain management (CPM) services in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs. Since HCPCS code G3002 will be valued using a crosswalk to the PCM CPT code 99424, which is currently one of the CPT codes that comprise HCPCS code G0511, there is no change to the average used to calculate the G0511 payment rate.

In addition, in section III.B.2. of this final rule we are finalizing coding and payment for general behavioral health integration (BHI) services (HCPCS code G0323). We explain that since clinical psychologists (CPs) and clinical social workers (CSWs) are considered practitioners that can provide services in RHCs/FQHCs, we acknowledge when CPs and CSWs provide the services described in HCPCS code G0323 in an RHC or FQHC, they can bill HCPCS code G0511.

These provisions are necessary in that we evaluate coding provisions in this rule and their applicability to RHCs and FQHCs.

Section III.B.4. of this final rule finalizes the clarification regarding the use of short-period cost reports vs 12-consecutive month cost reports to establish the payment limit for specified provider-based RHCs. This provision is necessary to accurately reflect the costs of providing RHC services and will establish a more accurate base from which the payment limits will be upgraded going forward.

### b. Clinical Laboratory Fee Schedule (CLFS) Specimen Collection and Travel Allowance

As discussed in section III.C.6. of this rule we are finalizing revisions to the CLFS regulations to clarify and codify the CLFS specimen collection and travel allowance payment policies.

In general, section 1833(h)(3) of the Act requires the Secretary to pay a nominal fee for specimen collection for laboratory testing and a fee to cover transportation and personnel expenses for trained personnel to collect specimens from homebound patients and inpatients (not in a hospital). CMS' longstanding instructions regarding the statutory requirements for CLFS specimen collection and travel allowance are described in Medicare Claims Processing manual guidance. OIG and other interested parties have expressed concerns regarding inconsistent MAC implementation of

the payment policies as well as unclear or conflicting guidance to laboratories related to the CLFS travel allowance. In the CY 2022 PFS final rule we solicited comments regarding these two payment policies; commenters supported clarification to the existing policies and also made suggestions regarding possible refinements.

The payment policies related to CLFS specimen collection fees and travel allowance finalized in this rule are necessary to clarify existing policy, address concerns expressed by interested parties, and reduce administrative burden. For the specimen collection policy, we are increasing the specimen collection fee amount to account for the increases in resource costs, including the impact of inflation, so as to continue to provide appropriate payment for the costs of collecting, drawing and handling the specimen.

### c. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

In section III.F. of this final rule, we explain that because of the limitations of the voluntarily reported ASP data for orally-administered methadone, which reflects data from a small subset of methadone manufacturers, we do not believe this voluntarily reported ASP data currently provides a reliable source for pricing the methadone codes. We previously issued an interim final rule with comment period to establish a limited exception to the methodology for determining the payment amount for the drug component of an episode of care under the OTP benefit in order to freeze the payment amount for methadone furnished during an episode of care in CY 2022 at the payment amount that was determined for CY 2021. For CY 2023 and subsequent years, we are finalizing a revision to our methodology for pricing methadone under the OTP benefit, specifically, the drug component of the methadone weekly bundle and the add-on code for take-home supplies of methadone, so that it will not rely on voluntarily-submitted ASP data. We believe this policy change will stabilize the payment amount for methadone dispensed by OTPs during an episode of care and therefore maintain access to treatment with methadone in the OTP setting for Medicare beneficiaries. Additionally, in section III.F. of this final rule, we are finalizing a modification to the payment rate for the non-drug component of the bundled payment for an episode of care to base the rate for individual therapy on a crosswalk code describing a longer

duration of psychotherapy compared to the current crosswalk code. We believe this modification is needed in order to more accurately reflect the resource costs involved with furnishing therapy in the OTP setting.

#### d. Medicare Part B Payment for Preventive Vaccine Administration Services

Sections III.H.2. and 3. of this final rule discuss the implementation of policies that impact the payment amount for administration of preventive vaccines paid under the Part B vaccine benefit. Section III.H.4. of this final rule clarifies the timing of payment policies for COVID-19 vaccines and COVID-19 monoclonal antibody products. These provisions are necessary to provide stable payment for preventive vaccine administration to allow predictability for providers and suppliers to rely on for building and sustaining robust vaccination programs.

#### e. Medical Necessity and Documentation Requirements for Nonemergency, Scheduled, Repetitive Ambulance Services

We proposed to modify nonemergency, repetitive, scheduled ambulance policy at § 410.40(e)(2)(ii) by clarifying that (1) the physician certification statement and additional documentation must provide detailed explanations, that are consistent with the beneficiary's current medical condition, that explains the beneficiary's need for transport by an ambulance; and (2) that coverage includes observation or other services rendered by qualified ambulance personnel. Existing regulations at § 410.40(e)(2) are interpreted too narrowly by some interested parties, excluding beneficiaries in need of monitoring. This language clarifies the intent of existing regulatory language by explicitly stating that beneficiaries who may not be in need of tangible services, but otherwise are in need of monitoring, qualify for this limited ambulance benefit. This is not a statutorily-mandated provision but addresses a longstanding ambiguity potentially affecting vulnerable populations. We did not receive any comments on this regulatory impact analysis and are finalizing as proposed.

#### f. Expansion of Coverage for Colorectal Cancer Screening and Reducing Barriers

In CY 2019, the last year for which incidence data are available, colorectal cancer (CRC) accounted for the 4th highest rate of new cancer cases and 4th highest rate of cancer deaths in the

United States.<sup>565</sup> The Center for Disease Control and Prevention (CDC) advises, "Colorectal cancer almost always develops from precancerous polyps (abnormal growths) in the colon or rectum. Screening tests can find precancerous polyps, so that they can be removed before they turn into cancer. Screening tests can also find colorectal cancer early, when treatment works best. Regular screening, beginning at age 45, is the key to preventing colorectal cancer and finding it early."<sup>566</sup> This final rule will expand coverage for colorectal cancer screening tests by reducing the minimum age payment limitation for certain tests from 50 to 45 years of age. In addition, we proposed to expand the regulatory definition of CRC screening tests to include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based CRC screening test returns a positive result. Our provisions will update Medicare coverage and payment policies to align with our new understanding of CRC screening, the latest recommendations from the U.S. Preventive Services Task Force and recommendations from professional societies and other appropriate organizations. We proposed to expand coverage of colorectal cancer screening tests by exercising our authority under sections 1834(n) and 1861(pp)(1)(D) of the Act. We believe these provisions will expand access to quality care and improve health outcomes through prevention, early detection, more effective treatment and reduced mortality. Moreover, it will directly advance health equity by promoting access and removing barriers for much needed cancer prevention and early detection within rural communities and communities of color that are especially impacted by the incidence of CRC.

#### g. Removal of Selected National Coverage Determinations

CMS periodically identifies and proposes to remove National Coverage Determinations (NCDs) that no longer contain clinically pertinent and current information, in other words those items and services that no longer reflect current medical practice, or that involve items and services that are used infrequently by beneficiaries. Since the CY 2021 PFS final rule (85 FR 84472), we have used notice and comment rulemaking to obtain public comment on removing outdated NCDs, replacing the prior subregulatory administrative

process used on two occasions in 2013 and 2015. Eliminating an NCD that provides national coverage or non-coverage for items and services means that the item or service will no longer be automatically, nationally covered or non-covered by Medicare (42 CFR 405.1060). Instead, the initial coverage determinations for those items and services will be made by local Medicare Administrative Contractors (MACs).

As described in section III.E. of this final rule, we are removing as proposed, NCD 160.22 Ambulatory EEG Monitoring (06/12/1984), because the NCD contains outdated language that is inconsistent with, and contrary to current standards of care. We believe that allowing local contractor discretion to make coverage decision for this service better serves the needs of the Medicare program and its beneficiaries. We estimate there will be de minimis change to 2023 payments, compared to 2021 because this is a long-established service for which the MACs already have LCDs and guidance articles. Therefore, we believe removing the NCD will allow MACs to update local coverage guidance for this established diagnostic test, but will not result in significant changes to utilization or payments.

#### h. Medicare Shared Savings Program

As we seek to advance the overall value-based care strategy of growth, alignment, and equity, we are finalizing modifications to the Medicare Shared Savings Program to increase program participation by supporting organizations new to value-based care and shared savings, especially for organizations serving underserved populations, and providing greater flexibility in the progression to performance-based risk, allowing these organizations more time to redesign their care processes to be successful under risk arrangements. As part of this effort, we are establishing advance investment payments for new, low revenue ACOs that are inexperienced with performance-based risk Medicare ACO initiatives. To address the social needs of people with Medicare, these payments will increase with the number of beneficiaries who are enrolled in the Medicare Part D low-income subsidy (LIS), dually eligible for Medicare and Medicaid, and/or who live in areas with high deprivation (measured by the area deprivation index (ADI)) assigned to the ACO. We are also building on the existing Shared Savings Program benchmarking methodology by finalizing modifications to strengthen financial incentives for long term participation by reducing the impact of

<sup>565</sup> <https://gis.cdc.gov/Cancer/USCS/#/AtAGlance/>.

<sup>566</sup> [https://www.cdc.gov/cancer/colorectal/basic\\_info/screening/](https://www.cdc.gov/cancer/colorectal/basic_info/screening/).

ACOs' performance on their benchmarks, to address the impact of ACO market penetration on regional expenditures used to adjust and update benchmarks, and to strengthen the business case for participation for ACOs serving high-risk and high dually eligible populations, which will help sustain participation and grow the program. Additionally, we are finalizing modifications to the benchmarking methodology to mitigate bias in regional expenditure calculations that benefits ACOs electing prospective assignment. We are also finalizing changes to the quality reporting and the quality performance requirements to support the transition of ACOs to all payer quality measure reporting. These provisions include implementing a health equity adjustment to an ACO's MIPS quality performance category score to recognize high performing ACOs serving a high proportion of underserved beneficiaries. Finally, we are making changes that are important for improved operations of the Shared Savings Program, including policies to reduce ACO administrative burden while maintaining program integrity.

#### i. Provider Enrollment and DMEPOS Conditions of Payment

This final rule is also needed to make regulatory enhancements to our provider enrollment policies and to our DMEPOS conditions of payments. These provisions focus on, but are not limited to: (1) expanding the bases for denying or revoking a provider's or supplier's Medicare enrollment; (2) subjecting a greater number of providers and suppliers, such as skilled nursing facilities, to the highest level of screening, which includes fingerprinting all 5 percent or greater owners of these providers and suppliers; and (3) denying payment to DMEPOS suppliers that are not appropriately licensed. These changes are necessary to help ensure that payments are made only to qualified providers and suppliers and that owners of these entities are carefully screened. As explained in section III.J. of this final rule, we believe that fulfilling both of these objectives will assist in protecting the Trust Funds and Medicare beneficiaries.

#### j. Proposed Revisions to HCPCS Level II Coding Policies for Skin Substitutes

The HCPCS is a standardized coding system used to identify particular items and services on claims submitted to Medicare, Medicaid, and other health insurance programs in a consistent and orderly manner. The HCPCS is divided into two principal subsystems, referred

to as HCPCS Level I and HCPCS Level II. The HCPCS Level I code set is comprised of Current Procedural Terminology (CPT®) codes, which are owned and maintained by the American Medical Association. The HCPCS Level II code set is used primarily to identify items, services, supplies, and equipment that are not identified by CPT® codes. CMS updates and maintains the HCPCS Level II code set on a periodic and routine basis.

One of the categories of items and supplies that are typically described by HCPCS Level II codes are skin substitutes. After consideration of public comments, we are not finalizing the coding policies we proposed for skin substitute products under the PFS, as discussed in section III.N. of this final rule.

#### B. Overall Impact

We examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). An RIA must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimated, as discussed in this section, that the PFS provisions included in this final rule will redistribute more than \$100 million in 1 year. Therefore, we estimate that this rulemaking is "economically significant" as measured by the \$100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other

providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA's website at <http://www.sba.gov/content/table-small-business-size-standards> (refer to the 620000 series)). Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule will not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this final rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, the PFS pays for physicians' services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated

costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2022, that threshold is approximately \$165 million. This final rule will impose no mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. Since this final rule does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this final rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this final rule, we discussed a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services, and to implement provisions of the statute. We provide information for each of the policy changes in the relevant sections of this final rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this final rule. The relevant sections of this final rule contain a

description of significant alternatives if applicable.

#### *C. Changes in Relative Value Unit (RVU) Impacts*

##### **1. Resource-Based Work, PE, and MP RVUs**

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2022 with payment rates for CY 2023 using CY 2021 Medicare utilization. The payment impacts described in this final rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and will depend on the mix of services they furnish. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical diagnostic laboratory tests that are paid under the Clinical Laboratory Fee Schedule (CLFS).

The PFS update adjustment factor for CY 2023, as specified in section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments. In addition, the Protecting Medicare and American Farmers from Sequester Cuts Act provided a one-time 3.00 percent increase in PFS payment amounts for services furnished on or after January 1, 2022, and before January 1, 2023 and required that the supplementary increase shall not be taken into account in determining PFS payment rates for subsequent years. The expiration of this 3.00 percent increase in payment amounts will result in the CY 2023 conversion factor being calculated as though the 3.00 percent increase for the CY 2022 conversion factor had never been applied.

To calculate the CY 2023 PFS conversion factor (CF), we took the CY 2022 conversion factor without the 1-year 3.00 percent payment increase provided by the Protecting Medicare and American Farmers from Sequester Cuts Act and multiplied it by the BN adjustment required as described in the preceding paragraphs. We estimate the CY 2023 PFS CF to be 33.0607 which reflects the –1.60 percent BN adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the expiration of the 3.00 percent payment increase for services furnished in CY 2022, as provided in the CAA. We estimate the CY 2023 anesthesia CF to be 20.6097 which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

**TABLE 146: Calculation of the CY 2023 PFS Conversion Factor**

|  |                        |                |
|--|------------------------|----------------|
| CY 2022 Conversion Factor  |                        | 34.6062        |
| Conversion Factor without CY 2022 Protecting Medicare and American Farmers from Sequester Cuts Act |                        | 33.5983        |
| Statutory Update Factor  | 0.00 percent (1.0000)  |                |
| CY 2023 RVU Budget Neutrality Adjustment   | -1.60 percent (0.9840) |                |
| <b>CY 2023 Conversion Factor</b>   |                        | <b>33.0607</b> |

|  |                        |                |
|--|------------------------|----------------|
| CY 2022 National Average Anesthesia Conversion Factor  |                        | 21.5623        |
| Conversion Factor without CY 2022 Protecting Medicare and American Farmers from Sequester Cuts Act |                        | 20.9343        |
| Statutory Update Factor  | 0.00 percent (1.0000)  |                |
| CY 2023 RVU Budget Neutrality Adjustment   | -1.60 percent (0.9840) |                |
| CY 2023 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment                        | 0.05 percent (1.0005)  |                |
| <b>CY 2023 Conversion Factor</b>   |                        | <b>20.6097</b> |

Table 148 shows the payment impact of the policies contained in this final rule on PFS services. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 148 (CY 2023 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 148.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2021 utilization and CY 2022 rates. That

is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- Column C (Impact of Work RVU Changes): This column shows the estimated CY 2023 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.

- Column D (Impact of PE RVU Changes): This column shows the

estimated CY 2023 impact on total allowed charges of the changes in the PE RVUs.

- Column E (Impact of MP RVU Changes): This column shows the estimated CY 2023 impact on total allowed charges of the changes in the MP RVUs.

- Column F (Combined Impact): This column shows the estimated CY 2023 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

\* Column F may not equal the sum of columns C, D, and E due to rounding.

In recent years, we have received requests from interested parties for CMS to provide more granular information that separates the specialty-specific impacts by site of service. These interested parties have presented high-level information to CMS suggesting that Medicare payment policies are directly responsible for the consolidation of privately-owned physician practices and freestanding supplier facilities into larger health systems. Their concerns highlight a need to update the information under the PFS to account for current trends in the delivery of health care, especially concerning independent versus facility-based practices. We published an RFI in the NPRM this year to gather feedback on this issue and refer readers to section II.B. of this final rule. As part of our holistic review of how best to update

our data, and offer interested parties additional information that addresses some of the concerns raised, we have recently improved our current suite of public use files (PUFs) by including a new file that shows estimated specialty payment impacts at a more granular level, specifically by showing ranges of impact for practitioners within a specialty. This file is available on the CMS website under downloads for the CY 2023 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

For this rulemaking cycle, we are providing an additional impact table that includes a facility/non-facility breakout of payment changes. The following is an explanation of the information represented in Table 149.

- Column A (Specialty): Identifies the specialty for which data are shown.

- Column B (Setting): Identifies the facility or nonfacility setting for which data are shown.

- Column C (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2021 utilization and CY 2022 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- Column D (Combined Impact): This column shows the estimated CY 2023 combined impact on total allowed charges.

**TABLE 149: CY 2023 PFS Estimated Impact on Total Allowed Charges by Setting**

**BILLING CODE 4150-28-C****2. CY 2023 PFS Impact Discussion****a. Changes in RVUs**

The most widespread specialty impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including infectious disease, internal medicine, geriatrics, diagnostic testing facility, and physical medicine reflect increases relative to other physician specialties. These increases can largely be attributed to the revaluation of the other E/M services and/or the second-year transition to updated clinical labor pricing. The services that make up these specialties rely primarily on E/M services or on clinical labor for their practice expense costs. These increases are also due to increases in value for particular services after considering the recommendations from the American Medical Association's (AMA) Relative Value Scale Update Committee (RUC) and CMS review, and increased payments resulting from updates to supply and equipment pricing.

The estimated impacts for several specialties, including clinical social workers, clinical psychologists, radiology and interventional radiology, vascular surgery, and cardiac surgery, reflect decreases in payments relative to

payment to other physician specialties which are largely the result of the redistributive effects of the revaluation of other E/M services and/or the second year transition to updated clinical labor pricing. The services that make up these specialties were also negatively affected by updated malpractice premium data for CY 2023, or rely primarily on supply/equipment items for their practice expense costs and therefore were affected negatively by the transition to updated clinical labor pricing under budget neutrality. These decreases are also due to the revaluation of individual procedures based on reviews, including consideration of AMA RUC review and recommendations, as well as decreases resulting from the continued phase-in implementation of the previously finalized updates to supply and equipment pricing. The estimated impacts also reflect decreases due to continued implementation of previously finalized code-level reductions that are being phased in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 148), including comments received in response to the valuations. We remind

interested parties that although the estimated impacts are displayed at the specialty level, typically the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 148 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular services furnished by a single practitioner within any given specialty.

As discussed above, we have reviewed our suite of public use files and have worked on new ways to offer interested parties additional information that addresses some of the concerns raised about lack of granularity in our impact tables. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2021 utilization data, Total RVUs change between -1 percent and 1 percent for more than 36 percent of practitioners, representing approximately 35 percent of the changes in Total RVUs for all practitioners, with variation by

specialty. Specialties, such as chiropractic, hand surgery, ophthalmology, and optometry, exhibit little variation in changes in total RVUs per practitioner. For these specialties, more than 85 percent of these practitioners will experience a change in Total RVUs between –1 percent and 1 percent. The specific service mix *within* a specialty may vary by practitioner, so individual practitioners may experience different changes in total RVUs. For example, Table 148 (CY 2023 PFS Estimated Impact on Total Allowed Charges by Specialty) indicates a 4 percent increase in RVUs for the infectious disease specialty as a whole, however, only 32 percent of infectious disease specialty practitioners—representing over 46 percent of Total RVUs for the specialty—will experience a 5 percent or more increase in Total RVUs. Meanwhile, nearly 15 percent of infectious disease specialty practitioners will experience 1 percent or more decreases in Total RVUs, and these practitioners account for about 8 percent of Total RVUs for this specialty. We also note the code level RVU changes are available in the Addendum B public use file that we make available with each rule.

Many interested parties have requested that CMS maintain the 3.00 percent payment supplement to PFS payment amounts that was specified in the Protecting Medicare and American Farmers from Sequester Cuts Act for services furnished during CY 2022. We remind readers that this payment supplement was provided through a time-limited amendment to the statute, which CMS does not have legal authority to alter. The expiration of this 3.00 percent payment supplement to payment amounts will result in the CY 2023 conversion factor being calculated as though the 3.00 percent payment supplement for the CY 2022 conversion factor had never been applied. Several interested parties have requested clarification regarding whether the specialty impacts displayed in Table 148 reflected the expiration of the 3.00 percent payment supplement for CY 2023. We can clarify for the commenters that the specialty impacts displayed in Table 148 reflect changes that take place within the pool of total RVUs. The specialty impacts table therefore includes any changes in spending which result from finalized policies within BN (such as the revaluation of other E/M codes in CY 2023 or the clinical labor pricing update in CY 2022) but does not include any changes in spending which result from finalized policies that are not subject to BN

adjustment, and therefore, have a neutral impact across all specialties. The expiration of the 3.00 percent payment supplement for CY 2023 is a statutory change that takes place outside of BN, and therefore, is not captured in the specialty impacts displayed in Table 148.

#### b. Impact

Column F of Table 148 displays the estimated CY 2023 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under “downloads” on the CY 2023 PFS final rule website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>. We selected these procedures for sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>.

#### D. Changes Related to Telehealth Services

In last year’s final rule, we discussed various flexibilities that will expire at the end of the PHE. Further, we clarified certain policies that were initially implemented as temporary policies, and subsequently made permanent by provisions of the CAA, 2021 that amended section 1834(m) of the Act (refer to 86 FR 65055–65063). Also, we note that the CAA, 2022 includes provisions that further amend section 1834(m) of the Act. For a detailed discussion of our implementation of the CAA, 2022 provisions refer to section II.B of this final rule.

We note that the final day of the PHE remains uncertain, and it is possible that the CAA, 2022 transition period of 151 days following the final day of the PHE would occur during CY 2023. Because of this uncertainty, coupled with the possibility of a necessary mid-year transition in our policies related to the provision of Medicare telehealth services, we anticipate that Medicare telehealth utilization and non-telehealth utilization of E/M and Mental Health services may show anomalous shifts. CMS implemented many temporary policy changes during the PHE to facilitate continued safe access to care during the pandemic, and that those changes will end with the expiration of the PHE, or in the case of some policies,

after 151 days following the end of the PHE; as specified in the relevant sections of the CAA, 2022. We would closely monitor for these patterns, but underscore that the low volume of services possibly impacted creates a two-pronged challenge with low numbers and confounders; we believe the impact would be minor, or rather, inappropriate to isolate and attribute to telehealth alone.

Following the expiration of the flexibilities put in place during the PHE for COVID–19, the statutory and regulatory restrictions on payment for Medicare telehealth services under section 1834(m) of the Act and our regulations at §§ 410.78 and 414.65 will likely apply once again. CAA 2022 provides exceptions to these the pre-PHE restrictions that allow Medicare telehealth services to be furnished without geographic limitations, to patients in their homes, and in some cases using audio-only technology, when the services are for the diagnosis, evaluation, or treatment of a mental health disorder (including a substance use disorder (SUD), including opioid misuse). There are also limited statutory exceptions for home dialysis monthly ESRD-related visits and for services for purposes of diagnosis, evaluation or treatment of symptoms of an acute stroke, to allow Medicare telehealth services to be furnished without geographic limitations, and to patients in their homes or certain other residence-like locations.

As such, after the expiration of the flexibilities put in place during the PHE, we expect a significant reduction in the volume of Medicare telehealth services overall, and a corresponding reduction in aggregate spending for Medicare telehealth services. However, because the provisions of the CAA, 2021 and CAA, 2022 required permanent changes to remove previous restrictions on the use of telehealth for the diagnosis, evaluation or treatment of a mental health disorder (including a substance use disorder (SUD), including opioid use disorder), we anticipate that volume and spending for Medicare telehealth mental health services will increase from pre-pandemic levels coming years.

In this final rule, we finalized in section II.D. “Payment for Medicare Telehealth Services Under Section 1834(m) of the Act” to continue including on the Medicare Telehealth Services List, either permanently or temporarily through the end of CY 2023, many of the services added to the list during the PHE. However, after the expiration of the flexibilities put in place during the PHE, payment for Medicare telehealth services will be

subject to the statutory and regulatory limitations described previously in this section of the RIA. Compared to overall utilization of these services during the PHE, we do not expect new significant overall growth in Medicare telehealth services by aggregate volume. Further, we estimate that the addition of telehealth services added to the Medicare Telehealth Services List will have a negligible impact on PFS expenditures.

We are also finalizing implementation of provisions of the CAA, 2022 (Pub. L. 117–103, March 15, 2022) amended section 1834(m) of the Act that extend the application of certain Medicare telehealth flexibilities for an additional 151 days after the end of the PHE for COVID–19, including allowing Medicare telehealth services to be furnished to patients located anywhere within the U.S.; allowing the extended scope of eligible telehealth practitioners to include occupational therapists, physical therapists, speech-language pathologists, and audiologists; extending payment for telehealth services furnished by FQHCs and RHCs; and delaying the requirement that there be an in-person visit with the physician or practitioner within 6 months before an initial mental health telehealth service. We anticipate that these provisions will result in continued utilization of Medicare telehealth services during the remainder of the PHE and the immediate subsequent 151 days at levels comparable to observed utilization of these services thus far during the PHE for COVID–19.

Regarding our provision to retain on the Medicare Telehealth Services List until the end of CY 2023 many of the services that we added to the list on a temporary basis, we believe these provisions would provide clarity to interested parties, but will have a negligible impact on PFS expenditures, unless Congress further intervenes as they did with CAA 2022. For example, outside the circumstances and flexibilities available during the PHE, services that are permanently included on the Medicare Telehealth Services List are furnished via telehealth, on average, less than 0.1 percent of the time they are reported.<sup>567</sup> The statutory and regulatory requirements for payment of

Medicare telehealth services that apply outside the circumstances of the PHE have limited net increases in utilization.

#### *E. Other Provisions of the Regulation*

##### **1. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs Payable Under Medicare Part B To Provide Refunds With Respect to Discarded Amounts**

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–9, November 15, 2021) amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. The refund amount is either as noted in section 1847A(b)(1)(B) of the Act in the case of a single source drug or biological or as noted in section 1847A(b)(1)(C) of the Act in the case of a biosimilar biological product, multiplied by the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges (subject to certain exclusions) for the drug in a given calendar quarter. In section III.A of this final rule, we are finalizing implementation of this provision including: a definition of which drugs are subject to refunds (and exclusions), an applicable percentage for certain drugs reconstituted in hydrogel, how discarded amounts of drugs are determined, a refund calculation methodology, a dispute resolution process, and enforcement provisions. However, we are not finalizing that the initial reports will be sent no later than October 1, 2023. Although we are not finalizing the proposed timeline for sending reports to manufacturers, the effective date of the provision remains January 1, 2023, as required by statute, and reports will be sent for calendar quarters beginning on or after this date.

For the CY 2023 PFS proposed rule (87 FR 46396 through 46397), we provided an analysis of JW modifier data from 2020 to estimate anticipated quarterly refund amounts due from manufacturers and displayed this information in Table 140 of the proposed rule.

For this final rule, we reanalyzed JW modifier data from 2020 as if the data represented dates of service on or after the effective date of section 90004 of the

Infrastructure Act (that is, January 1, 2023).<sup>568</sup> That is, to assess if there was a change in the status of the billing and payment codes that were identified in the proposed rule as met the definition of refundable single-dose container or single-use package drug and have 10 percent or more discarded units. We found one billing and payment code had a change in status from single source to multiple source. Therefore, we updated the analysis to reflect this change under the provisions finalized as proposed in section II.A. of the proposed rule and as provided in the upcoming section of this final rule.

Overall in the 2020 calendar year, Medicare paid nearly \$720 million for discarded amounts of drugs from a single-dose container or single-use package paid under Part B. In that year, there were 39 billing and payment codes with 10 percent or more discarded units based on JW modifier data. Of these, 9 did not meet the definition of refundable single-dose container or single-use package drug in section 1847A(h)(8) of the Act because they are multiple source drug codes; 5 were excluded from the definition of refundable single-dose container or single-use package drug (as specified in section 1847A(h)(8)(B) of the Act) because they are identified as radiopharmaceuticals or imaging agents in FDA-approved labeling. After these exclusions, there were 25 billing and payment codes that met the definition of refundable single-dose container or single-use package drug and have 10 percent or more discarded units.

We estimated refund amounts as described in section 1847A(h)(3) of the Act were calculated based on this data by subtracting the percent units discarded by 10 percent (the applicable percentage). Then, we multiplied that percentage by the CY 2020 total allowed amount to estimate the annual refund for a given billing and payment code. The quarterly refund was estimated by dividing the annual estimate by 4. Based on this data, there would be approximately \$74.7 million in refunds due from manufacturers for the calendar year of 2020 (\$18.68 million each calendar quarter). See Table 150.

| J1640       | \$7,204,322.44               | 14.87%                  | 4.87%                         | \$350,850.50            | \$87,712.63                |
| J9153       | \$8,651,250.34               | 14.63%                  | 4.63%                         | \$400,552.89            | \$100,138.22               |
| J9179       | \$45,528,228.20              | 12.60%                  | 2.60%                         | \$1,183,733.93          | \$295,933.48               |
| J9264       | \$352,102,440.73             | 14.46%                  | 4.46%                         | \$15,703,768.86         | \$3,925,942.21             |
| J2562       | \$17,986,116.53              | 12.41%                  | 2.41%                         | \$433,465.41            | \$108,366.35               |
| Q4101       | \$2,701,473.78               | 12.11%                  | 2.11%                         | \$57,001.10             | \$14,250.27                |
| J9229       | \$25,178,218.24              | 12.06%                  | 2.06%                         | \$518,671.30            | \$129,667.82               |
| J3300       | \$8,454,347.46               | 11.44%                  | 1.44%                         | \$121,742.60            | \$30,435.65                |
| J0485       | \$65,351,086.26              | 11.43%                  | 1.43%                         | \$934,520.53            | \$233,630.13               |
| J9042       | \$167,324,055.19             | 11.41%                  | 1.41%                         | \$2,359,269.18          | \$589,817.29               |
| J2997       | \$71,164,289.22              | 11.34%                  | 1.34%                         | \$953,601.48            | \$238,400.37               |
| J9352       | \$9,562,087.18               | 10.95%                  | 0.95%                         | \$90,839.83             | \$22,709.96                |
| J0291       | \$264,734.03                 | 10.80%                  | 0.80%                         | \$2,117.87              | \$529.47                   |
| J9205       | \$54,328,144.16              | 10.50%                  | 0.50%                         | \$271,640.72            | \$67,910.18                |
| J9307       | \$22,242,951.07              | 10.27%                  | 0.27%                         | \$60,055.97             | \$15,013.99                |
| J9228       | \$375,059,594.99             | 10.06%                  | 0.06%                         | \$225,035.76            | \$56,258.94                |
|             |                              |                         | <b>Total</b>                  | <b>\$74,714,077.48</b>  | <b>\$18,678,519.35</b>     |

**BILLING CODE 4150–28–C**

There are several limitations to this analysis that could substantially affect the total quarterly refund. Since new drugs are continually being approved, this estimate does not consider newer drugs that will meet the definition of refundable single-dose container or single-use package drug on or after the effective date of January 1, 2023. Since section 1847A(h)(8)(B)(iii) of the Act excludes drugs approved by FDA on or after November 15, 2021 and for which payment has been made under Part B for fewer than 18 months from this definition, we expect an impact on refund amounts after the 18-month exclusion has ended if the drug otherwise meets the definition. We also note that this estimate is based on CY 2020 data for discarded drug amounts,

which, as discussed in section III.A. of this final rule, we believe to be an underestimate due to the frequent omission of the JW modifier. Once we begin to edit claims for both the JW and JZ modifiers, reported discarded drug amounts will likely increase. Other substantial changes to this estimate may occur if a billing and payment code no longer meets this definition. For example, if a generic version of one of these drugs is marketed, the billing and payment code will become a multiple source drug code and will no longer meet the definition of refundable single-dose container or single-use package drug. Subsequently, the manufacturers will not be responsible for refunds under this provision. There may be changes in the percent discarded units

for a given refundable single-dose container or single-use package drug if the manufacturer introduces additional vial sizes or modifies the vial size to reduce the amount discarded. Lastly, since data from the CMS website only includes billing and payment codes on the ASP drug pricing file<sup>569</sup> and implementation of section 90004 of the Infrastructure Act is not restricted to billing and payment codes included on the file, there may be other applicable data that was not assessed as part of this estimate.

<sup>569</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice>.

#### a. Impacts Related to the Proposed Dispute Resolution Process

As described in section VII.B.1. of this final rule, the information collection requirements, we estimate the annual burden per respondent/recordkeeper to be 40 hours. If we anticipate no more than 10 disputes per year, the total annual reporting and/or recordkeeping burden will be 400 hours (10 error reports per year  $\times$  40 hours per respondent). We estimate an annual cost of this burden to be \$15,800 (\$39.50/hour  $\times$  400 hours).

#### 2. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.2. of this final rule, we are finalizing our policy to include chronic pain management services in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs. Since HCPCS code G3002 will be valued using a crosswalk to the PCM CPT code 99424, which is currently one of the CPT codes that comprise HCPCS code G0511, there is no change to the average used to calculate the G0511 payment rate.

In addition, in section III.B.2. of this final rule we are finalizing policies regarding coding and payment for general behavioral health integration services (HCPCS code G0323). We explain that since clinical psychologists (CPs) and clinical social workers (CSWs) are considered practitioners that can provide services in RHCs/FQHCs, we acknowledge when CPs and CSWs provide the services described in HCPCS code G0323 in an RHC or FQHC, they can bill HCPCS code G0511.

In terms of estimated impacts to the Medicare program, expanding use of General Care Management HCPCS code G0511 to include chronic pain management services (G3002) and behavioral health integration services (G0323) for RHCs and FQHCs would have a negligible impact on Medicare spending because these services are already included in our calculations of overall expenditures.

In section III.B.4. of this final rule, we provide a discussion and clarification regarding the use of short-period cost reports vs 12-consecutive month cost reports to establish the payment limit for specified provider-based RHCs in accordance with section 1833(f)(3)(A) of the Act. We believe this clarification will have negligible impact on Medicare spending.

#### 3. Clinical Laboratory Fee Schedule

In section III.C.5. of this final rule, we discuss statutory revisions to the data

reporting period and phase-in of payment reductions under the CLFS. In accordance with section 4(b) of the Protecting Medicare and American Farmers from Sequester Cuts Act (PMAFSCA) (Pub. L. 117–71, enacted December 10, 2021), we are finalizing certain conforming changes to the data reporting and payment requirements in our regulations at 42 CFR part 414, subpart G. Specifically, for CDLTs that are not ADLTs, we are updating certain definitions and revising § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017 and is required every 3 years beginning January 2023. The PMAFSCA delays the next data reporting period under the CLFS for CDLTs that are not ADLTs by 1 year, that is, it requires the next data reporting period for these tests to take place during the period of January 1, 2023 through March 31, 2023. Subsequently, the next private payor rate-based CLFS update for these tests will be effective January 1, 2024 instead of January 1, 2023. In addition, we are making conforming changes to our requirements for the phase-in of payment reductions to reflect the PMAFSCA amendments. Specifically, we revising § 414.507(d) to indicate that for CY 2022, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2021, and for CYs 2023 through 2025, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

We recognize that private payor rates for CDLTs paid on the CLFS and the volumes paid at each rate for each test, which are used to determine the weighted medians of private payor rates for the CLFS payment rates, have changed since the first data collection period (January 1, 2016 through June 30, 2016) and data reporting period (January 1, 2017 through March 31, 2017). In addition, as discussed in section III.A. of this final rule, in the CY 2019 PFS final rule (83 FR 59671 through 59676), we amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS–1450 14x Type of Bill. As such, the PMAFSCA amendments to the data reporting period will delay using updated private payor rate data to set revised CLFS payment rates for CDLTs that are not ADLTs.

Due to the unforeseen changes in private payor rates due to shifts in market-based pricing for laboratory tests and the unpredictable nature of test volumes and their impact on calculating updated CLFS payment rates based on the weighted median of private payor

rates, it is uncertain whether the delay in data reporting will result in a measurable budgetary impact. In other words, to assess the impact of delayed reporting and subsequent implementation of updated CLFS rates, we will need to calculate weighted medians of private payor rates based on new data and compare the revised rates to the current rates. As such, we believe that we will only know the impact of the delay in data reporting after collecting actual updated applicable information from applicable laboratories, and calculating the updated CLFS rates.

Regarding the conforming changes to our requirements for the phase-in of payment reductions that we are finalizing in this rule, we note that for CYs 2023 through 2025, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

Based on data reported in the 2017 data collection period, we estimate 14.8 percent (191) of tests on the CLFS may be subject to the full 15 percent phase-in reduction in CY 2023.

In section III.C.6. of this final rule, we are finalizing an increase to the general nominal specimen collection fee amount from \$3.00 to \$8.57 for CY 2023. We are also finalizing that beginning January 1, 2024, we will update the specimen collection fee amount of \$8.57 for each calendar year by the percent change in the CPI–U (U.S. city average) for the 12-month period ending June 30th of the year preceding the update year. Additionally, as required by PAMA, we will increase this amount by \$2 for those specimens collected from a Medicare beneficiary in a SNF or by a laboratory on behalf of an HHA, which will result in a \$10.57 specimen collection fee for those beneficiaries.

The estimated impact of this increase in the nominal fee for specimen collection from \$3.00 to \$8.57 in CY 2023 is an increase in spending of roughly \$190 million. The estimated increase in the nominal fee from \$5.00 to \$10.57 for specimens collected from a Medicare beneficiary in a SNF or on behalf of an HHA in CY 2023 is an increase in spending of roughly \$10 million.

#### 4. Expansion of Coverage for Colorectal Cancer Screening and Reducing Barriers

In section III.D. of this final rule, we proposed to expand CRC screening test coverage by modifying coverage and payment limitations of certain CRC screening tests to begin at age 45 instead of 50. An updated modeling study that accompanied the May 2021 updated USPSTF CRC screening

recommendation found that the most efficient strategy for CRC screening began for individuals at 45 years of age. The expected benefits include longer life and fewer new cases and total deaths from colorectal cancer.<sup>570</sup> We considered the comparatively small population of traditional Medicare enrollees in the affected age group. The CMS website reports that total Medicare beneficiary enrollment in Part A and/or Part B aged 45–54 years in CY 2020 totaled only 1,956,634, whereas total Medicare beneficiary enrollment in Part A and/or Part B of all ages totaled 62,840,267.<sup>571</sup>

In addition, we propose to expand CRC screening test coverage to include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based CRC screening test returns a positive result. We anticipate the impact of beneficiary cost sharing no longer being applicable to the follow-on screening colonoscopy will be balanced, in part or in whole, by the benefits and savings of additional beneficiaries choosing a less expensive and non-invasive stool-based test as their first step in the CRC screening process.

We anticipate that both provisions will result in some additional service utilization, but we also anticipate the additional utilization to be balanced, in part or in whole, by benefits and savings resulting from increased prevention, early detection (allowing for less invasive and more effective treatment) and reduced mortality. We do not anticipate expanding CRC screening test coverage (in accordance with recommendations by the USPSTF and in consultation with other appropriate organizations described earlier in our provision) to result in a significant impact on the Medicare program.

An internal analysis by the CMS Office of the Actuary of CY 2019 Medicare FFS CRC screening test claims confirmed our understanding that our provisions will not likely result in a significant impact on the Medicare program. Regarding our provision to expand CRC screening test coverage by modifying coverage and payment limitations of certain CRC screening tests to begin at age 45 instead of 50, we calculated CY 2019 FFS CRC screening test spending and utilization for patients between 45 and 55 years old from the Integrated Data Repository (IDR), estimated CY 2019 Medicare FFS member months by age from the IDR,

and assumed that current colorectal screening test utilization for 45–49 year old patients will increase on a per enrollee basis to that of patients between 50–55. We estimated the impact from additional utilization to be approximately \$5 million in additional spending.

Similarly, regarding our provision to expand CRC screening test coverage to include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based CRC screening test returns a positive result, we matched CY 2019 FFS colonoscopy claims to Cologuard usage claims, identified colonoscopy claims as screening or diagnostic based on the presence of HCPCS modifier PT on the claims, assumed that all diagnostic colonoscopy claims with a prior Cologuard test had a positive test result, and calculated the applicable beneficiary cost sharing for those claims. The coinsurance and deductible liability from these claims were assumed to be non-applicable under the policy. We estimated the impact from additional utilization to be approximately \$5 million in additional spending.

Each of these proposals is estimated to increase fee-for-services (FFS) spending in CY 2023 by roughly \$5 million, therefore, the estimated impact of approximately \$10 million total in CY 2023 is based on the convergence of the two CRC provisions, and does not reflect secondary effects of the policies, such as increased utilization of preventive screening services, additional follow-up services, and potential offsetting savings (including prevention, more effective treatment through early detection and avoidance of over-servicing of colonoscopies) that may result from these expansions, as these secondary effects are difficult to predict, and may, in part, offset one another.

#### 5. Removal of Selected National Coverage Determinations (NCDs)

As described in section III.E. of this final rule, we are removing as proposed, one older NCD that no longer contains clinically pertinent and current information. NCDs generally fall into one of two impact categories. First, eliminating an NCD for items and services that were previously nationally covered means that the item or service will no longer be automatically nationally covered by Medicare. Instead, the coverage determinations for those items and services will be made by Medicare Administrative Contractors (MACs). Second, if the previous national coverage determination barred

coverage for an item or service under title XVIII, MACs will now be able to cover the item or service under local coverage authority if the MAC determines that such action is appropriate under the statute. We believe that allowing local contractor flexibility in these cases better serves the needs of the Medicare program and its beneficiaries.

Removing NCD 160.22 Ambulatory EEG Monitoring means moving from positive national coverage to local coverage by the MACs. Claims data for 2021 shows that for the 20 CPT/HCPCS codes associated with this NCD, CMS paid 167,242 Medicare FFS claims for approximately 78,267 unique beneficiaries totaling CMS payments of \$48,702,876.00. We estimate there will be de minimis change to 2023 payments, compared to 2021 because this is a long-established service for which the MACs already have LCDs and guidance articles. The NCD contains outdated language that is inconsistent with, and contrary to current standards of care. Therefore, removing the outdated NCD will allow MACs to update local coverage guidance for this established diagnostic test, but will not result in significant changes to utilization or payments.

#### 6. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As discussed in section III.F. of this final rule, for CY 2023 and subsequent years, we are revising our methodology for pricing the drug component of the methadone weekly bundle and the add-on code for take-home supplies of methadone. Under the revised methodology, we will base the payment amount for the drug component of HCPCS codes G2067 and G2078 for CY 2023 and subsequent years on the payment amount for methadone in CY 2021 and update this amount annually to account for inflation using the PPI for Pharmaceuticals for Human Use (Prescription). We are also finalizing our proposal to update the methadone payment amount for CY 2023 based on the projected increase in the PPI for Pharmaceuticals for Human Use (Prescription) to reflect the forecasted price growth for prescription drugs for the 2-year period from CY 2021 to 2022 and from CY 2022 to 2023. Because we froze the payment amount for methadone at the 2021 amount for CY 2022, we are accounting for the inflation for both CY 2022 and CY 2023 in setting the payment rate for CY 2023. Based on the third quarter 2022 forecast from IHS Global Inc. (IGI), the CY 2023

<sup>570</sup> <https://www.uspreventiveservicestaskforce.org/uspstf/document/final-modeling-study18/colorectal-cancer-screening>.

<sup>571</sup> <https://data.cms.gov/summary-statistics-on-beneficiary-enrollment/medicare-and-medicare-reports/medicare-total-enrollment>.

methadone payment amount will be \$39.37, which is the CY 2022 payment amount of \$37.38 increased by a projected 5.3 percent growth in the PPI for Pharmaceuticals for Human Use (Prescription) from CY 2021 to CY 2023 ( $\$37.38 \times 1.053 = \$39.37$ ). IGI is a nationally recognized economic and financial forecasting firm with which CMS contracts to forecast various price proxies used in the CMS market baskets.

Overall, CMS estimates that the impact of our revision to the OTP methadone pricing methodology will increase Medicare spending by roughly \$2.5 million in CY 2023. This estimate is based on actual utilization of the OTP benefit by Medicare beneficiaries under Part B through CY 2021. The estimate does not reflect any additional utilization that may occur in CY 2023.

Additionally, as discussed in section III.F. of this final rule, we are modifying the payment rate for the non-drug component of the bundled payment for an episode of care to base the rate for individual therapy on a crosswalk to CPT code 90834 (*Psychotherapy, 45 minutes with patient*), instead of a crosswalk to CPT code 90832 (*Psychotherapy, 30 minutes with patient*), as is our current policy. We believe CPT code 90834 most closely corresponds to a 50-minute therapy session, which interested parties have indicated is the typical amount of therapy received by patients in the first few months of treatment at an OTP. In the CY 2020 PFS final rule (84 FR 62658), we stated that we based the rate for individual therapy in the bundled payment on the 2019 non-facility payment rate for CPT code 90832, which was \$68.47. Therefore, to change the rate for individual therapy, we are substituting the 2019 rate for CPT code 90832 included in the non-drug component of each of the bundled payments for an episode of care with the 2019 PFS non-facility payment rate for CPT code 90834, which was \$91.18, to determine an adjusted payment rate for CY 2020 for the non-drug component of each applicable HCPCS code. As described in § 410.67(d)(4)(iii), we then applied the Medicare Economic Index (MEI) updates for 2021, 2022, and 2023 to these adjusted payment rates to determine the CY 2023 payment amounts for the non-drug component of the bundled payments for an episode of care.

The increase to the bundled rates to reflect longer individual therapy sessions results in an increase of \$24.39 to the non-drug component of the weekly bundled payments for HCPCS codes G2067 through G2075 from CY 2022 to 2023. Based on utilization data

from Medicare beneficiaries under the OTP benefit through CY 2021, the estimated impact of this policy is an increase in Medicare spending of approximately \$25 million in CY 2023. This estimate does not reflect any additional utilization that may occur during CY 2023.

Additionally, as discussed in section III.F. of this final rule, we are finalizing our proposal to allow the OTP intake add-on code to be furnished via two-way audio-video communications technology when billed for the initiation of treatment with buprenorphine, to the extent that the use of audio-video telecommunications technology to initiate treatment with buprenorphine is authorized by DEA and SAMHSA at the time the service is furnished. We are also permitting the use of audio-only communication technology to initiate treatment with buprenorphine in cases where audio-video technology is not available to the beneficiary. We are also allowing periodic assessments to be furnished via audio-only communication when two-way audio-video communications technology is not available to the beneficiary through the end of CY 2023, to the extent that it is authorized by SAMSHA and DEA at the time the service is furnished and all other applicable requirements are met.

We believe the Part B cost impact of these flexibilities for the use of telecommunications policies will be minimal because we do not expect that these flexibilities will increase the frequency with which medically necessary assessments are furnished.

#### 7. Medicare Shared Savings Program

##### a. General Impacts

As of January 1, 2022, over 11 million people with Medicare receive care from at least one health care provider in one of the 483 ACOs participating in the Medicare Shared Savings Program (Shared Savings Program), the largest value-based payment program in the country. The policies we are adopting in this final rule for the Shared Savings Program advance Medicare's overall value-based care strategy of growth, alignment, and equity, with many provisions overlapping these categories. These final policies are designed to reverse recent trends where participation has plateaued in the Shared Savings Program, higher spending populations are increasingly underrepresented in the program since the change to regionally-adjusted benchmarks, and access to ACOs appears inequitable as evidenced by data indicating underserved populations are less likely to be assigned to a Shared

Savings Program. The final policies are also designed to encourage growth of ACOs in underserved communities based, in part, on recent observations where the highest earning ACOs had a higher proportion of beneficiaries who were members of racial and ethnic minority communities and included a greater proportion of ESRD, disabled, and aged/dual eligible beneficiaries than the lowest earning ACOs.

Stagnation in overall participation in the Shared Savings Program in recent years has coincided with increasing total shared savings outlays, driven by sharply higher shared savings payments to ACOs that were already low spending relative to their region electing to transition to risk in the ENHANCED track. While this type of selection was anticipated in estimating the impacts of the December 2018 final rule (83 FR 67816), it was also assumed that: (1) ACOs making the transition to risk would respond with stronger efforts to improve efficiency; and (2) a broader spectrum of relatively higher-spending ACOs would be influenced by the revised benchmarking methodology to drive down spending for their assigned beneficiaries while participating under the BASIC track glide path in order to ultimately achieve sustainable participation under risk in subsequent agreement periods.

As we explained in the CY 2023 PFS proposed rule (87 FR 46400) the increase in shared savings payments to ACOs transitioning to the ENHANCED track appears to be driven largely by favorable regional benchmark adjustments and the ENHANCED track's higher sharing rate, calling into question whether ACOs selecting risk will further improve efficiency or simply be content to collect steady shared savings by maintaining their spending level relative to their region. Meanwhile, ACO Investment Model (AIM) participants—a subset of Track 1 ACOs that meaningfully outperformed peer ACOs in reducing spending and earning shared savings over the period from 2016 through 2018—have also dropped out at an elevated frequency before even attempting the risk-free portion of the BASIC track glide path. The spending reductions achieved by AIM ACOs were found to be similar regardless of an AIM ACO's decision to continue or exit the program. Superior financial performance during an initial agreement period under a one-sided model therefore failed to provide sufficient incentive to overcome a pronounced

aversion to risk demonstrated by this otherwise-effective subset of ACOs.<sup>572</sup>

We noted that without modification, the Shared Savings Program would be at high risk of increasing overall Medicare spending over the coming decade. ACOs serving patients with low spending would likely continue to dominate the roster of ACOs making the transition to risk. Shared savings payments to low-spending ACOs would increase alongside a growing disincentive for ACOs to serve higher spending populations for whom potential savings from care management would likely be greater.<sup>573</sup> We also explained that this selective participation was in response to regional benchmark adjustments that have increased shared savings payments to low spending ACOs and has resulted in higher cost beneficiaries, who have the most need for ACO care management, being increasingly excluded from assignment to ACOs participating in the program. We stated that it appeared very unlikely that selective transition to downside risk under the current participation options and financial methodology would drive down spending enough to offset increased shared savings payments to ACOs with favorable regional benchmarks. Furthermore, we acknowledged that a growing subset of ACOs that elect prospective beneficiary assignment are finding their regional benchmarks to be artificially inflated because of a systematic bias in calculations based on regional FFS expenditures resulting from comparing expenditures for the ACO's own assigned beneficiary population

identified based on the offset assignment window, and expenditures for the assignable population of beneficiaries in the ACO's region identified based on the calendar year assignment window. Therefore, the program's baseline trajectory was projected to increase net Medicare spending by approximately \$4.2 billion over the period from 2024–2034, which spans two 5-year agreement periods for ACOs renewing or entering in 2024 and 2025. Absent any changes, the program was also projected to violate the statutory requirement that provisions implemented under authority of section 1899(i)(3) of the Act not increase spending.

The policies we are finalizing in this final rule are designed to increase program participation for new ACOs through advance investment payments to promote health equity and provide ACOs greater choice in the pace of progression to performance-based risk; sustain program participation by reducing the effect of ACO performance on benchmark updates and benchmark rebasing; mitigate the bias in regional expenditure calculations that benefits ACOs electing prospective assignment; strengthen incentives for ACOs serving high risk and high dual populations; improve the risk adjustment methodology to better account for medically complex, high cost beneficiaries while continuing to guard against coding initiatives; increase opportunities for low revenue ACOs in the BASIC track to share in savings by allowing ACOs that do not meet the minimum savings rate (MSR)

requirement to share in savings at a lower rate; encourage ACOs to transition more quickly to all-payer quality measure reporting; update the ACO beneficiary assignment methodology; and reduce administrative burden on ACOs.

Reducing the cap on negative regional adjustments to high spending ACOs' benchmarks and offering eligible ACOs a shared savings-only BASIC track participation option for a full 5-year agreement period are expected to significantly re-engage participation for ACOs serving higher cost beneficiaries. While we are uncertain how large the group of new and re-entering ACOs will be and whether they will have a similar savings potential as the first implementation of Track 1, other incentives targeted to low revenue (typically physician-led) ACOs, like advance investment payments and paying partial shared savings to low-revenue ACOs with savings under their MSR, as well as adjusting rebased benchmarks for prior savings are expected to improve the incentive for new ACOs to join the program and reduce spending to a greater extent than the incentive provided under Track 1. Table 151 shows the combined benchmark and the relative impact that 2024/2025 renewing and new ACOs are expected to have on average over the two 5-year agreement periods from 2024–2034. The Baseline columns show these projections under current program rules and the Final columns show the projections for performance under this final rule.

**TABLE 151: Projected Impacts on Benchmark and Spending for 2024/2025 Renewing, Re-entering and New ACOs**

|  | Renewing ACOs |        | New ACOs / Re-entering ACOs |        |
|--|---------------|--------|-----------------------------|--------|
|  | Baseline      | Final  | Baseline                    | Final  |
| Average Annual Benchmark (\$ Billion)        | \$73          | \$91   | \$11                        | \$44   |
| Gross Savings (Impact on Claims, % of Bmark) | -2.7%         | -2.8%  | -1.3%                       | -2.7%  |
| AAPM QP Physician Pay Increase (% of Bmark)  | 0.3%          | 0.3%   | 0.3%                        | 0.1%   |
| Shared Savings/(Losses) (% of Bmark)         | 2.8%          | 2.1%   | 2.2%                        | 1.0%   |
| Net Advance Investment (% of Bmark)          |               |        |                             | 0.01%  |
| Net Federal Impact (% of Bmark)              | 0.4%          | -0.4%  | 1.2%                        | -1.6%  |
| Net Federal Impact (\$Billions)              | \$2.9         | -\$3.6 | \$1.3                       | -\$6.8 |
| 10th percentile                              | -\$1.4        | -\$10  | \$0.5                       | -\$11  |
| 90th percentile                              | \$7.0         | \$3.0  | \$2.0                       | -\$3.2 |

<sup>572</sup> Trombley, MJ, et al. ACO Investment Model Produced Savings, But the Majority of Participants Exited when Faced with Downside Risk. *Health*

*Affairs*. 2020; 138–146. doi:10.1377/hlthaff.2020.01819.

<sup>573</sup> McWilliams, JM, et al. Early Performance of Accountable Care Organizations in Medicare. *New England Journal of Medicine*. June 2016. 374:2357–2366. DOI: 10.1056/NEJMsa1600142.

**b. Impacts for Renewing ACOs**

Renewing ACOs for the projected two 5-year agreement periods are anticipated at baseline to generate higher net shared savings earnings (2.8 percent of benchmark) than actual reductions in spending on claims (2.7 percent of benchmark). After also accounting for higher physician fee schedule payments to qualifying practitioners (QPs), totaling on average 0.3 percent of benchmark over 10 years, this cohort of ACOs is projected to increase net program spending by 0.4 percent of benchmark on average, or \$2.9 billion over 10 years. For existing ACOs, the changes we are finalizing will help to retain more of the otherwise shrinking subset of ACOs that serve higher spending populations, will remove the bias favoring benchmarks for ACOs electing prospective assignment, and will marginally improve the incentive for efficiency via the use of a three-way blend of the Accountable Care Prospective Trend (ACPT)/national-regional growth rates to update benchmarks and the prior savings adjustment. As a result, overall savings on claims are projected to increase by a small margin to 2.8 percent of benchmark while average shared savings payments will be reduced to an average of 2.1 percent of benchmark. The total 10-year impact for this cohort will flip from a \$2.9 billion cost at baseline (range of \$1.4 billion savings to \$7.0 billion cost at 10th and 90th percentiles) to a \$3.6 billion savings under the final policies (range of \$10 billion savings to \$3 billion cost at the 10th and 90th percentiles).

**c. Impacts for New ACOs and Re-Entering ACOs**

At baseline without the finalized changes, the cohort of new ACOs and re-entering ACOs starting in 2024 would be relatively small (only \$11 billion in annual benchmark) and skewed toward ACOs serving beneficiary populations that are already low cost at baseline. Shared savings payments to this group would also be elevated by the bias inflating benchmarks for ACOs electing prospective assignment. At baseline this cohort would increase net program spending by an estimated 1.2 percent of benchmark or \$1.3 billion over 10 years (ranging from an increase of \$0.5 to \$2.0 billion at the 10th and 90th percentiles). In contrast, under the changes in this final rule, the cohort of new and re-entering participants starting in 2024 is estimated to increase to \$44 billion in combined benchmark per year. An anticipated influx of low revenue physician-led ACOs serving higher cost

patients is expected to allow this cohort to produce significantly greater savings on claims (2.7 percent of benchmark) than will be paid out in shared savings (1.0 percent of benchmark) because these ACOs will be starting with lower relative benchmarks than existing low-spending ACOs and they will predominantly be paid under the lower 40 percent sharing rate offered in the BASIC track's one-sided models. After accounting for slightly higher physician fee schedule payments to QPs and the nominal net cost of advance investment payments, this cohort is projected to reduce net program spending about 1.6 percent of benchmark or \$6.8 billion over a 10-year period (net savings range from \$3.2 billion to \$11 billion at the 90th and 10th percentiles).

Average gross savings for this cohort (2.7 percent of benchmark) are projected to roughly match average gross savings for renewing ACOs (2.8 percent of benchmark) despite being less-experienced and heavily concentrated in the BASIC track both because they are serving higher-spending patients presenting greater savings opportunities and because they are anticipated to predominantly include low-revenue ACOs for whom sharing-only incentives are relatively strong despite not being pushed toward risk in their first agreement period. As a percentage of benchmark, these projected gross savings rates are consistent with the savings range estimated for historical performance for the Shared Savings Program detailed in Regulatory Impact Analysis for the December 2018 final rule (83 FR 68047 through 68050) and represent modest progression from the 1.3 to 2 percent savings estimated by MEDPAC using an "intent to treat" approach for evaluating performance through 2016, which was dominated by participation in Track 1.<sup>574</sup>

**d. Annual Combined Impacts 2023–2034**

As described in Table 152, relative to baseline projections, the combined cohort entering or renewing for agreement periods beginning in 2024 and 2025 is projected to add roughly \$50 billion in annual benchmark, reduce claims costs by \$15.5 billion, and on net increase aggregate shared savings payments by about \$650 million. The changes in this final rule are estimated to reduce overall program spending by \$14.8 billion over 12 years

relative to the \$4.2 billion cost anticipated for the trajectory of the program at baseline, or \$10.6 billion in absolute terms relative to a baseline without a Shared Savings Program in FFS Medicare. Approximately 80 percent of advance investment payments are anticipated to be recovered from shared savings payments by the middle of the second agreement period; the estimate shows \$40 million in outstanding advance investment payments by the end of the projection period after an initial \$210 million in initial funding. Approximately \$60 million in net savings for 2023 is projected for retaining existing higher-spending ACOs that would otherwise have dropped out of the program if not offered the ability to remain in one-sided risk for the remainder of their current agreement period.

More importantly, the Shared Savings Program will increase participation from ACOs serving higher-spending beneficiaries by reducing the negative regional adjustment cap and creating a sharing-only option covering an entire agreement period plus the first 2 years of the succeeding agreement period for eligible ACOs. Advance investment payments and partial shared savings payments for certain ACOs in the BASIC track with savings below their MSR will only marginally increase payments to ACOs while increasing overall program savings by drawing new participation from low revenue ACOs (typically physician-led ACOs), the type that performed well under Track 1. Including a prior savings adjustment as part of benchmark rebasing will broaden the incentive for ACOs to drive down spending over multiple agreement periods by mitigating the ratchet effect for high-spending ACOs, for ACOs in competitive markets with collectively low trend, and for ACOs under prospective assignment that may be concerned about the provision to remove the favorable bias in regional benchmark calculations. Modifications to the quality scoring system through adding a sliding scale approach to determining shared savings and offering bonus points to higher performing ACOs with a high proportion of underserved populations may increase shared savings payments marginally overall depending on how ACOs may otherwise have progressed in future years against what is still a relatively new quality rubric. The finalized changes are estimated to reduce overall program spending by \$14.8 billion over 12 years relative to the \$4.2 billion cost anticipated for the trajectory of the program at baseline, or \$10.6 billion in

<sup>574</sup> Report to Congress: Medicare and the Health Delivery System (Chapter 6). MEDPAC publication dated June 2019. **BILLING CODE 4150-28-C**

**e. Discussion of Key Provisions and Related Assumptions**

The stochastic model and associated assumptions previously described in the December 2018 final rule (83 FR 67816) were updated to produce this estimate. The model continues to assume that high-revenue ACOs are on average only 50 percent as effective as low-revenue ACOs at reducing spending because high-revenue ACOs include a more comprehensive mix of hospitals and other providers and suppliers for whom the incentive to potentially share in a fraction of savings from preventing utilization is weak compared to the immediate revenue from utilization—an expectation that has been supported by evaluation of actual program performance.<sup>575</sup> Updates included accounting for the current mix of participating ACOs in constructing the

potential ACOs making up the renewing cohort and considering the population of exiting ACOs to build a sample of higher spending populations that may be added to the program under the provisions that are expected to boost interest in the program from potential ACOs associated with average and higher spending populations. New low-revenue ACOs were assumed to always prefer the extended glidepath unless they expected a regional benchmark at least 3 percent higher than baseline spending, in which case a one-third probability was assigned for the entrant to opt for higher potential earnings under Level E of the BASIC track. The model was also updated to first decrease the baseline savings potential for existing and new ACOs under the current program rules by about 25 to 50 percent (to better match emerging actual performance from selective low-spending ACO participation) which was then scaled up to estimate the impacts of the final policies to account for new incentives driven mainly by the ACPT and prior savings adjustment, taking the form of a 0 to 50 percent increase in

gross savings for low and average spending ACOs and a zero to 100 percent increase for new ACOs serving markedly high spending populations at baseline (at least 10 percent higher than their regional average benchmark spending level). The resulting savings ranges produced by the modeled participation are supported by the proximity to previous estimates of program savings under more balanced participation in Track 1, as noted previously in this section. Savings are expected to increase because of the many new features that will improve the incentive for ACOs to drive down spending over multiple agreement periods. Below is a further discussion of these factors.

Introducing a prospective 5-year growth rate to be blended with the existing retrospective benchmark trend will help to address the so-called ‘rural glitch’ complaint from ACOs and other interested parties and should at least marginally improve the incentive for ACOs to reduce spending, in particular when multiple ACOs are present in the same market and collectively driving

<sup>575</sup> McWilliams JM, et al. Medicare Spending After 3 Years of the Medicare Shared Savings Program. *New England Journal of Medicine*. Sept. 2018. 379:1139–1149. DOI: 10.1056/NEJMsa1803388.

down regional spending. The approach that interested parties have floated for mitigating ACOs' effects on their region—effectively removing ACO assigned beneficiaries from the regional calculation—has multiple problems that would increase program spending. It would amplify the benefit to ACOs for selecting lower cost patients and avoiding higher needs groups and drive market consolidation, and still fail to mitigate the cited problem for cases where multiple ACOs work in combination to drive down regional spending. Furthermore, it would increase program spending to such a degree that compliance with the requirements of section 1899(i)(3) of the Act, to use other payment models, would be violated.

We acknowledge a potential elevated risk; however, that uncertainty around external conditions related to the end of the PHE for COVID-19 and economic conditions like emerging inflation could cause a prospective trend to differ materially from actual program-wide growth in per capita spending. Blending the ACPT as one-third of the overall update helps lower the risk that projection error will create problems with appropriateness of spending targets. Risk-bearing ACOs will have extra protection against exposure to ACPT projection error because they will be held harmless on the downside if the new method will charge them more in losses than the prior retrospective trend method. Modeling indicates this safeguard will reduce shared losses owed by ACOs by about \$100 million over 10 years, but the net impact of this provision is likely to save several times that amount by retaining ACOs that would otherwise have dropped out of the program.

The most important factor returning the program to net savings is attracting more ACOs into the BASIC track that serve higher spending populations, particularly low revenue physician-led ACOs for whom a 40 percent sharing rate is a strong incentive for efficiency even absent downside risk. The most important provision for growing this participation is the policy change to allow ACOs to stay in a one-sided model (that is, Level A or Level B of the BASIC track) for a full 5-year agreement period. Advance investment payments and the opportunity to receive partial shared savings payments for savings under the MSR will help to increase the share of these new ACOs that are low revenue. These exclusive provisions for low revenue ACOs are estimated to drive \$3 billion in net savings over the projection period notwithstanding marginal increases in shared savings

outlays. This analysis highlights that the savings gained from increasing participation from this type of ACO will greatly exceed the marginal increase in program outlays from paying partial shared savings under the MSR and advance investment payments, as combined incentive payments (consisting mainly of shared savings payments combined with slightly higher payments to clinicians achieving QP status) to new and reentering ACOs are only projected to reach about 1.1 percent of benchmark over the projection period in return for savings on benefits of 2.7 percent (as detailed in Table 151).

Another key provision for improving the financial impact of the program is establishing a separate ratebook to calculate county-level expenditures for ACOs selecting prospective assignment using an assignable population of beneficiaries that is identified based on the offset assignment window. This final policy will remove a bias that would otherwise artificially boost benchmarks and thereby account for \$3.7 billion of the total savings projected above. Most existing ACOs currently benefiting from this bias will still expect to receive favorable regional adjustments at rebasing despite removal of the bias. The new adjustment to benchmarks for prior savings will help restore a positive benchmark adjustment for the subset of ACOs for whom removal of the prospective assignment bias will minimize their regional adjustments at rebasing. However, because the prior savings adjustment will only be applied if it produces a higher adjustment than the regional benchmark adjustment, it will not further increase benchmarks for ACOs already benefiting from the existing regional adjustment.

Modifications to the quality scoring system through the addition of a sliding scale approach to determining shared savings for ACOs to allow for payment of scaled shared savings and a health equity adjustment under which ACOs that perform well on at least one or more measures while serving a high proportion of beneficiaries enrolled in the Medicare Part D low-income subsidy or dually eligible for Medicare and Medicaid or beneficiaries in areas with high Area Deprivation Index scores may earn health equity bonus points are projected to increase shared savings payments marginally overall depending on how ACOs may otherwise have progressed in future years against what is still a relatively new quality rubric. The costs of adding these new methods for improving quality performance scores and paying scaled shared savings

are projected to add about \$1.3 billion in program spending over 10 years. Other provisions related to assignment and risk adjustment are expected to have relatively nominal financial impacts on the program.

#### f. Compliance With Requirements of Section 1899(i)(3) of the Act

Certain policies, including both existing policies and the new policies described in this final rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following provisions require the use of our authority under section 1899(i) of the Act: allowing for advance investment payments; the modifications to the loss sharing rate under the ENHANCED track to allow for a sliding scale based on an alternative quality performance standard; use of the ACPT/national-regional three-way blended benchmark update factor; expanding the criteria for certain low revenue ACOs participating in the BASIC track to qualify for shared savings in the event the ACO does not meet the MSR as required under section 1899(d)(1)(B)(i) of the Act; and exclusion of the new supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals from the determination of Medicare Parts A and B expenditures used in certain financial calculations under the Shared Savings Program. These changes to our payment methodology are expected to improve the quality and efficiency of care and are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

A comparison was constructed between the projected impact of the payment methodology that incorporates all changes adopted in this final rule and a hypothetical baseline payment methodology that excludes the policies that require section 1899(i)(3) of the Act authority. The hypothetical baseline was assumed to be limited to a 50 percent upside-only track rebased every three years but including adjustments allowed under section 1899(d)(1)(B)(ii) of the Act including the up to 50

percent weight used in calculating the regional adjustment to the ACO's rebased historical benchmark (capped on the upside or downside as detailed in this final rule) and the prior savings adjustment if producing a higher benchmark (also as detailed in this final rule). The stochastic model and associated assumptions described previously in this section were adapted to reflect a marginally reduced participation from low-revenue ACOs because the hypothetical baseline would lack advance investment payments and partial shared savings payments for certain BASIC track ACOs with savings under their MSR. Such analysis estimated approximately \$4.9 billion greater average net program savings under the alternative payment model (with the modifications in this final rule) that includes all policies that require the authority of section 1899(i)(3) of Act than would be expected under the hypothetical baseline in total over the 2023 to 2034 projection period.

Participation in performance-based risk in the ENHANCED track and the higher levels of the BASIC track is assumed to improve the incentive for ACOs to increase the efficiency of care for beneficiaries (similar to the assumptions used in the modeling of the impacts, described previously). Such added savings are partly offset by lower participation associated with the requirement to transition to performance-based risk. Despite the higher maximum sharing rate of 75 percent in the ENHANCED track under the alternative payment model that includes all policies adopted under section 1899(i)(3) of the Act, relative to the 50 percent maximum sharing rate assumed for the single one-sided risk track under the hypothetical baseline, shared savings payments are expected to be reduced relative to the hypothetical baseline because of lower expected participation resulting from the eventual requirement to transition to risk in the second agreement period under the BASIC track and generally more accurate benchmarks due to the incorporation of regional factors into the calculation of benchmark updates for all ACOs.

We will reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model that includes

policies established under section 1899(i)(3) of the Act no longer meets the requirements of section 1899(i)(3), we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

#### 8. Medicare Part B Payment for Preventive Vaccine Administration Services

In section III.H.2.c of this final rule, for CY 2023, we finalized our proposal to annually adjust the payment amount for administration of preventive vaccines to reflect geographic locality cost differences. That is, we will use the Geographic Adjustment Factor (GAF) described in § 414.26 to adjust the payment to reflect the costs of administering preventive vaccines in each of the PFS fee schedule areas. Additionally, in section III.H.2.d of this final rule, for CY 2023, we finalized our proposal to annually update the payment amount for the administration of preventive vaccines based upon the Medicare Economic Index (MEI). In section III.H.3.c. of this final rule, we finalized our proposal to continue the additional payment of \$35.50 when a COVID-19 vaccine is administered in a beneficiary's home under certain circumstances. Further, we will adjust and update the \$35.50 by the GAF and MEI as we proposed for the preventive vaccine administration services.

The estimated impact of updating the payment amount for the administration of preventive vaccines based upon the MEI (3.8%) in CY 2023 is an increase in spending of roughly \$40 million. Approximately \$30 million of the increase represents the administration of the COVID-19 vaccine, and the remaining \$10 million represents the other preventive vaccines. The provision to adjust the payment amount for the administration of preventive vaccines by the GAF and the provision to continue the additional payment for at-home COVID-19 vaccinations will have a negligible impact on Medicare spending.

#### 9. Medical Necessity and Documentation Requirements for Nonemergency, Scheduled, Repetitive Ambulance Services

In section III.I. of this final rule, we proposed to clarify § 410.40(e)(2)(ii) by reorganizing existing language and stating that the PCS and additional documentation from the beneficiary's medical record may be used to support

a claim that transportation by ground ambulance is required. We are also clarifying that the PCS and additional documentation must provide detailed explanations, that are consistent with the beneficiary's current medical condition, that explains the beneficiary's need for transport by an ambulance. Finally, we are clarifying that coverage includes observation or other services rendered by qualified ambulance personnel. While we believe that clarification of the regulatory provisions is needed and will be well received by interested parties, we do not believe that these clarifications will have any substantive monetary or impact the amount of time needed to submit claims. We believe the primary benefit of the clarification will be for providers and suppliers in preparing and submitting claims. It is feasible the clarification could result in fewer claims being denied. However, hypothetically, these denials are likely a small subset of the ambulance claim denials and those denied for technical PCS issues are likely appealed and overturned.

#### 10. Medicare Provider and Supplier Enrollment Changes

##### a. Expansion of Revocation Reasons

As explained in section III.J. of this final rule, we proposed changes to two of our existing revocation reasons:

- We proposed to expand § 424.535(a)(2) to permit revocation based on an OIG exclusion of the provider's or supplier's managing organization, corporate officer, or corporate director.
- We proposed to expand § 424.535(a)(3) to permit revocation based on a felony conviction of the provider's or supplier's managing organization, corporate officer, or corporate director.

We believe these two changes will result in an increase in the number of revocations that CMS imposes. However, we believe this number will be rather small. We currently impose only a limited number of revocations under §§ 424.535(a)(2) and (a)(3). Accordingly, since our expansion of these revocation reasons will be fairly modest, we do not foresee more than a very slight increase in revocations thereunder.

Table 153 outlines the number of revocations we estimate will ensue under our proposed revocation expansions. These numbers only account for additional revocations stemming from our changes:

**TABLE 153: Additional Revocations**

| Revocation Reason | Number    |
|-------------------|-----------|
| § 424.535(a)(2)   | 5         |
| § 424.535(a)(3)   | 5         |
| <b>Total</b>      | <b>10</b> |

Internal CMS data indicates that the average provider/supplier that will be affected by these regulatory expansions receives roughly \$50,000 in Medicare payments each year. (We used a similar \$50,000 annual payment estimate for our provider enrollment provisions in the CY 2022 PFS final rule) (86 FR 64995)). Providers/suppliers revoked under our proposed revocation expansions will thus not receive these payments. Hence, multiplying our \$50,000 estimate by the revocation totals in Table 153 results in a projected transfer from these providers/suppliers to the Federal Government of \$500,000 (\$50,000 × 10 revocations).

**b. Expansion of Fingerprinting Requirements**

We proposed the following three revisions to § 424.518:

- Adding provider or supplier ownership changes to the types of provider enrollment transactions falling within the scope of § 424.518. (As explained in section III.J. of this final rule, the affected owner(s) will have to submit fingerprints and be subject to a fingerprint-based criminal background check if the provider or supplier is in the “high” level of categorical screening.)

- Stating that any screening level adjustment to “high” also applies to all other enrolled and prospective providers and suppliers that have the same legal business name and tax identification number as the provider or supplier that originally triggered the screening level increase.

- Moving SNFs from the “limited” level of categorical screening to the “high” screening level.

These changes will result in an increase in the annual number of providers and suppliers that must furnish fingerprints for their 5 percent or greater direct or indirect owners. Based on existing enrollment statistics and our experience, we project that: (1) 29,726 providers and suppliers per year will be required to submit the fingerprints of their owners (new or existing) pursuant to these changes; and (2) 29,726 owners per year will be fingerprinted (or one owner per provider/supplier, which is roughly consistent with prior estimates).

Consistent with previous burden estimates we have made regarding fingerprinting, we estimate that it will take each owner approximately 2 hours to be fingerprinted. According to the most recent BLS wage data for May 2021, the mean hourly wage for the general category of “Top Executives” (the most appropriate BLS category for owners) is \$57.94. With fringe benefits and overhead, the figure is \$115.88. This will result in an estimated annual burden involving our proposed changes to § 424.518 of 59,452 hours at a cost of \$6,889,298.

**c. DMEPOS Payment Denials**

We also proposed to add a new DMEPOS condition of payment to § 424.57(b). It will require the DMEPOS supplier to be in compliance with all conditions of payment in § 424.57(b), as well as with the licensure requirements of § 424.57(c)(1)(ii)(A), at the time the item or service is furnished in order to receive payment. Based on data collected from our experience with the scenario our proposed change seeks to remedy, we project 6,100 claim denials per month associated with our provision involving \$1.3 million in denied/unpaid claims. Over a 12-month period, this results in 73,200 claim denials and \$15.6 million in unpaid claims, the latter constituting our estimated annual transfer to the federal government. We welcomed comments on this estimate.

We did not receive public comments on our fingerprinting or DMEPOS payment estimates. Therefore, we are finalizing these estimates as proposed.

**11. State Options for Implementing Medicaid Provider Enrollment Affiliation Provision**

We do not anticipate any additional costs or savings associated with our proposed revision to § 455.107(b), for the latter merely involves giving the states somewhat greater flexibility in executing the provisions of § 455.107.

**12. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan (Section 2003 of the SUPPORT Act)**

In section III.L. of this final rule, we extended the existing compliance action of sending letters to non-compliant prescribers from the CY 2023 EPCS program implementation year (January 1, 2023 through December 31, 2023) to the CY 2024 year (January 1, 2024 through December 31, 2024).

Additionally, effective January 1, 2023, we are changing the year from which PDE data is used from the preceding year to the current evaluated year when CMS determines whether a prescriber qualified for an exception based on the number of Part D controlled substance prescriptions (§ 423.160(a)(5)(ii)). We will determine whether a prescriber qualifies for the emergency or disaster exception (§ 423.160(a)(5)(iii)) based on the prescriber’s valid address in PECOS (Medicare Provider Enrollment, Chain, and Ownership System), instead of the NCPDP Pharmacy Database address, and for prescribers who are not enrolled or do not have a valid PECOS address, we will use the address in the National Plan and Provider Enumeration System (NPPES) data. We stated in the CY 2023 PFS proposed rule (87 FR 46406) that we understand that with continuing the compliance action of sending letters to non-compliant prescribers for another year, some prescribers may delay EPCS implementation, but we also believe that our education and outreach with these prescribers during this additional year may help increase adoption. Please see section III.L.4.a. of this final rule for our discussion, as we did receive public comment on the concern that a delay of further non-compliance action might delay EPCS adoption. We do not anticipate these provisions to have any incremental impact on the cost or time associated with prescriber compliance of the electronic prescribing for controlled substances requirement or the cost to interested parties. We did not receive any public comments on our impact assumptions.

### 13. Medicare Ground Ambulance Data Collection System

In section III.K. of this final rule, we are finalizing a series of changes to the Medicare Ground Ambulance Data Collection System including the provision to update § 414.626(d)(1) and (e)(2) to give us the necessary flexibility to specify how ground ambulance organizations should submit the hardship exemption requests and informal review requests, including to our web-based portal once that portal is operational, and proposed revisions to the Medicare Ground Ambulance Data Collection Instrument.

The changes and clarifications aim to reduce burden on respondents, improve data quality, or both. We grouped our proposed changes and clarifications into four broad categories: editorial changes for clarity and consistency; updates to reflect the web-based system; clarifications responding to feedback from interested parties questions and testing and typos and technical corrections.

While we believe that these changes and clarifications will be well received by the ground ambulance interested parties, we do not believe that these changes will have any substantive impact on the cost or time associated with completing the Medicare Ground Ambulance Data Collection Instrument. We note that the overall length of the Medicare Ground Ambulance Data Collection Instrument will be the same as previously finalized (84 FR 62888) with these changes. Additionally, some of the instructions which we proposed to add are intended to improve clarity and may therefore reduce the time the ground ambulance organizations spend addressing the questions.

### 14. HCPCS Level II Coding for Skin Substitutes

We proposed several changes to our policies for skin substitute products. In addition to soliciting feedback on our key objectives related to our skin substitute policies, we proposed to change the terminology of skin substitutes to more accurately reflect how clinicians use these products, to treat these products as incident to supplies under section 1861(s)(2)(A) of the Act, and to pay for these products as incident to supplies under the PFS beginning on Jan 1, 2024. Additionally, in section III.N. of this final rule, we discussed our proposal to revise our HCPCS coding procedures, the impacts related to these provisions are in section III.N.

After consideration of public comments, we are not finalizing the

proposed revisions to the payment methodology for skin substitutes. We are also not finalizing any change in terminology. Instead, we plan to host a townhall session in early CY 2023 to discuss alternative payment solutions and nomenclature ahead of CY 2024 rulemaking.

### 15. Effects of Medicare Parts A and B Payment for Dental Policy

In section II.L.2. of the proposed rule, we: (1) proposed to clarify our interpretation of section 1862(a)(12) of the Act, and clarify and codify certain of our current Medicare FFS payment policies for medically necessary dental services; (2) proposed and solicited comment on payment for other dental services, such as dental examinations, including necessary treatment, performed as part of a comprehensive workup and certain diagnostic and treatment services prior to organ transplant surgery, or prior to cardiac valve replacement or valvuloplasty procedures, that are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services; and (3) requested comments on other types of clinical scenarios where the dental services may be inextricably linked to, and substantially related and integral to the clinical success of, other covered medical services, such as the treatment for head and neck cancers.

If finalized, we stated that we did not believe the proposed codification of current payment policy would result in a significant payment impact because it would be a continuation of existing Medicare payment policy. We also stated that if we were to finalize the payment for an oral or dental examination, including necessary treatment, performed as part of a comprehensive workup prior to organ transplant surgery, or prior to cardiac valve replacement or valvuloplasty procedures, we did not anticipate any significant increase in utilization or payment impact for additional dental services given the historically low utilization of organ transplant, cardiac valve replacement and valvuloplasty surgeries.

As discussed further in section II.L.2. of this final rule, we are finalizing effective beginning in CY 2023: (1) a clarification of our interpretation of section 1862(a)(12) of the Act and codification of certain of our current Medicare FFS payment policies for medically necessary dental services; (2) Medicare Parts A and B payment for dental services, such as dental examinations, including necessary treatment, performed as part of a

comprehensive workup prior to organ transplant surgery, or prior to cardiac valve replacement or valvuloplasty procedures effective CY 2023; (3) for CY 2024, Medicare Parts A and B payment for dental services, such as dental examinations, including necessary treatments, performed as part of a comprehensive workup prior to the treatment for head and neck cancers which we indicated we may consider finalizing based on comments received on the proposed rule; (4) the establishment of a process to identify for our consideration and review submissions of additional dental services that are inextricably linked and substantially related and integral to the clinical success of other covered medical services, which we indicated we may consider finalizing in this CY 2023 final rule.

In the proposed rule, we noted that if we were to finalize, as discussed in section II.L.2.c.(i) of this final rule, payment in other clinical scenarios for dental services inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services, we could adjust our estimates that were included in the proposed rule. As such, we are revising our estimated impact analysis to include scenarios where Medicare Parts A and B would provide payment for dental services prior to the treatment for head and neck cancers in CY 2024. This is in addition to the proposals, as discussed in section II.L.2 of the proposed rule, to clarify and codify certain of our current Medicare FFS payment policies for medically necessary dental services that are not subject to the payment preclusion under section 1862(a)(12) of the Act, and to establish additional clinical scenarios under which Medicare payment for dental services, such as dental examinations, including necessary treatment, performed as part of a comprehensive workup and certain diagnostic and treatment services prior to certain medical services such as organ transplant surgery, cardiac valve replacement, or valvuloplasty procedures beginning in CY 2023.

To complete this analysis, and to ensure that we captured dental services that occurred prior to the covered medical service that occurred within CY 2019, we pulled claims data for which Medicare made payment for dental services from June 1, 2018 through December 31, 2019. This allowed us to capture any dental services that were furnished prior to 90 days of a covered medical service and also allowed us to mirror the claims data range that was utilized in the proposed rule estimate. Further, we believed that the use of

these claims data would be more representative of future utilization patterns given the COVID-19 PHE. Based on this analysis, we estimated that there were roughly 190,000 additional services where Medicare could provide payment for dental services prior to organ transplants, cardiac valve replacement, valvuloplasty procedures beginning in CY 2023, and an additional 29,000 services to accommodate the final policy to provide payment for dental services prior to the treatment for head and neck cancers. This represents a total of 219,000 additional services beginning in CY 2024. Based on claims data from this time period, the average cost of care remained the same between the proposed and final rule estimates. Our claims data showed that Medicare provided payment for dental services for 186 patients with an average cost of care of roughly \$525 per person. The majority of these claims were for tooth extraction in patients undergoing radiation treatment of the mouth as opposed to transplant patients, and the range in costs was from \$33 to \$5,711 per patient. Based on a review of claims data for our existing payment policies and our review of current utilization for beneficiaries, we estimated that the effective rate of coverage of current utilization was less than 0.2 percent. We acknowledge that the actual take-up rate of services could be higher due to the clarification and codification of current policy, which may raise awareness that payment is available. Because of this, we also created impact estimates under the utilization assumptions of 0.2 percent and between 1–3 percent. We then applied these utilization ratios to estimate projected payments for dental exams and treatments prior to organ transplants, cardiac valve replacement, valvuloplasty procedures and treatments for head and neck cancers. We found that the estimated yearly impact beginning in CY 2024 to be roughly \$230,000 per year with a 0.2 percent utilization assumption, and roughly \$1–3 million per year adjusting for the utilization assumptions of 1–3 percent. This represents an increase from CY 2023 to CY 2024 of roughly \$30,000–450,000 for the inclusion payment for dental services prior to head and neck cancers beginning in CY 2024 when applying the utilization assumptions of 0.2, 1, 2, and 3 percent. Therefore, we do not anticipate a significant payment impact for these provisions.

We received public comments, which were discussed earlier in this final rule, on payment for other dental services,

such as dental examinations, including necessary treatment, performed as part of a comprehensive workup and certain diagnostic and treatment services prior to organ transplant surgery, prior to cardiac valve replacement, valvuloplasty procedures or the treatment for head and neck cancers, that are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services; and other types of clinical scenarios where the dental services may be inextricably linked to, and substantially related and integral to the clinical success of, other covered medical services. In response to our request for information, we received comments on the types of data sources for establishing Medicare payments for these services, the request to consult with medical and dental professional interested parties, the request to produce an impact analysis that is reproducible, and also detail on potential savings for the Medicare program. We thank commenters for the information they provided in response to this request for information and we will continue to contemplate the suggestions as we consider potential future rulemaking. As we receive additional data, we will strive to ensure that such evaluations will be comprehensive and include further information on the rationale and details used to conduct such determinations. Lastly, we will continue to review the comments we received in response to our request for information on the other provisions discussed in section II.L.2 of the proposed rule.

We also received several comments requesting clarification on whether the estimated payment impact of these proposals would be incorporated into the budget neutrality adjustments to the conversion factor. Because we proposed to codify and update existing Medicare payment policies, these estimates were not incorporated in the budget neutrality adjustments to the conversion factor. Additionally, while the impact of access to these services to some individuals enrolled in Medicare may be very significant, we continue to not anticipate significant impact in the context of overall spending and utilization under the PFS nor do we anticipate significant utilization and spending impact of these policies finalized in section II.L.2 of this final rule.

We acknowledge that the actual take-up rate of services could be higher than the utilization assumptions included within our current estimates. As discussed in the proposed rule, we remain open to adjusting any finalized

policy through future rulemaking, and conducting further impact analysis while also providing an opportunity for public comment on such analysis once we have additional data. We continue to be open to conducting further impact analysis once we have additional data and input from interested parties.

#### 16. Updates to the Quality Payment Program

In this section, we estimate the overall and incremental impacts due to the Quality Payment Program policies finalized in this rule. We estimate participation, final scores, and payment adjustment for clinicians participating through traditional MIPS, MVPs, and the Advanced APMs. We also present the incremental impacts to the number of expected QPs and associated APM Incentive Payments that result from our policies relative to a baseline model that reflects the status quo in the absence of any modifications to the previously finalized policies.

##### a. Overall MIPS Modeling Approach and Data Assessment

###### (1) Updating the MIPS Model

In the CY 2023 PFS proposed rule (87 FR 46407 through 46408), we noted that we created two MIPS RIA models: a baseline and proposed policies RIA model. The aim of the baseline model is to reflect participation, final scores, and payment adjustments for the CY 2023 performance period/2025 MIPS payment year based on previously finalized policies for the CY 2023 performance period/CY 2025 MIPS payment year. Examples of previously finalized policies are an increase in the APM qualified participants threshold and the removal of the additional MIPS payment adjustment for exceptional performance and additional performance threshold. The finalized policies model builds off the baseline model and incorporates the MIPS policy provisions for the CY 2023 performance period/2025 MIPS payment year included in this rule. The aim of the baseline and final policy models is to estimate the incremental impacts of the policies in this final rule. There were two major updates to the modeling approach used in this RIA for the baseline and final policy model compared to the CY 2022 PFS final rule (87 FR 4606 through 46407).

First, we changed the MIPS modeling tool that we used in order to incorporate the same scoring engine as the one used to determine actual MIPS payment adjustments. We generally applied the same assumptions as our previous RIA analyses, but this update ensures that

the clinician population and final scores in our model align as much as possible with actual MIPS scoring and minimizes differences between projections and policy implementation. It should be noted, data limitations and assumptions which may impact model results still remain and are described later in this section of the RIA.

Second, we modeled participation, scoring, and payment adjustments for the MIPS Value Pathways (MVPs). The CY 2023 performance period/2025 MIPS payment year is the first year where clinicians can voluntarily submit MVPs. Although we are modeling MVPs, we are not modeling subgroup reporting. A more detailed discussion of the approach used to model MVPs can be found in section VII.E.16.d.(2) of this RIA.

For this final rule, we replaced the “proposed policies model” with the “final policies model” and as we discuss in the following sections, we updated the methodology to reflect data submitted in the 2021 MIPS performance period.

#### (2) Assessing Which Data To Use To Estimate Future MIPS Performance

In the 2023 PFS proposed rule (87 FR 46407), we discussed our decision to use 2019 MIPS performance period submissions to estimate eligibility and scoring. We noted that we assessed the use of 2020 performance period submissions for the 2022 PFS final rule (86 FR 65637) and stated in that same rule the reasons why we believed the CY 2019 performance period submissions would be a better data source for estimating future performance for MIPS eligible clinicians. We found that the extreme and uncontrollable circumstances policy combined with the COVID-19 Public Health Emergency (PHE) limit the data’s ability to simulate the future MIPS eligible population and associated performance using 2020 data.

In the 2023 PFS proposed rule (87 FR 46407), we stated the CY 2021 performance period submissions data were not available in time to assess whether the data can be used to predict future performance. We also stated that in this final rule we would evaluate whether it is appropriate to use the CY 2021 performance period data and what, if any, adjustments would need to be made in order to use that data.

After review of the finalized CY 2021 performance period submissions data, we believe that it is appropriate to use CY 2021 performance period data to estimate eligibility, final scores and payment adjustments for the CY 2023 performance period with some

exceptions described below. First, in the CY 2023 PFS proposed rule (87 FR 46411) we used cost measure testing files from prior to 2019 to estimate the cost performance category scores since several of the cost measures that we modeled were either revised or established after the 2019 performance period. For example, the Medicare Spending Per Beneficiary measure was proposed with modified specifications in the CY 2020 performance period. These measures were not part of the 2019 MIPS production system, which we used to model performance, and so we had to rely on measure testing files which often including data older than 2019 to model these measures. These data are not as current as 2021 data which may model the cost performance category more accurately. Second, the performance threshold for the CY 2019 performance period was 30 points, while the performance threshold was 60 points for the CY 2021 performance period. The CY 2021 performance threshold of 60 points is closer to our modeled performance threshold of 75 points and, therefore, more accurately reflects clinician behavior. Third, using data from 2021 allows us to more accurately estimate the Promoting Interoperability performance category score. In CY 2021 PFS final rule (85 FR 84819), we finalized two options for meeting the Promoting Interoperability Health Information Exchange Objective: (1) Support Electronic Referral Loops by Sending Health Information measure and Support Electronic Referral Loops by Receiving and Reconciling Health Information measure; and (2) Health Information Exchange Bi-Directional Exchange measure. The CY 2021 performance period submission data were the first data which included the Bi-Directional Exchange measure. Finally, the 2021 data is more recent and therefore is more likely to be reflective of current reporting patterns among clinicians and groups.

While we believe that the 2021 data is the best data source for the RIA model, we recognize that 2021 data has some limitations similar to those of the 2020 data. For instance, both 2020 and 2021 data were from years that occurred during the PHE and may reflect practice and billing patterns that differ from the usual practices of clinicians. We also recognize the 2021 cost measure data, which we discuss in section VII.E.16.d.3.(b) of this final rule, may still be impacted by the PHE for some MIPS eligible clinicians but we believe that it is still useful for modeling cost trends in the overall population of MIPS eligible clinicians. Another limitation of

using 2021 data is that we are not able to estimate facility-based scores because there are no Hospital Value-Based Purchasing total performance scores calculated due the PHE.

Due to the CY 2021 performance period PHE extreme and uncontrollable circumstances policy, some MIPS eligible clinicians may not have submitted data for MIPS for the CY 2021 performance period when they otherwise would have. To address this, we supplemented the CY 2021 performance period data with CY 2019 performance period data to more accurately model participation for the 2021 performance period. We further discuss this decision in section VII.E.16.c.2.(a) of this final rule.

#### b. Estimated APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

For payment years from 2019 through 2024, through the Medicare Option, eligible clinicians who have a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs will be QPs in the applicable QP Performance Period for a year and the corresponding payment year. These QPs will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for Medicare covered professional services furnished during the calendar year immediately preceding the payment year. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs but meet a lower threshold to become Partial QPs for the year may elect to report to MIPS and, if they elect to report, will then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status, and does not meet any other exemption category, the eligible clinician will be subject to the MIPS reporting

requirements and will receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, the update to the PFS CF for services that are furnished by clinicians who achieve QP status for a year is 0.75 percent, while the update to the PFS CF for services that are furnished by clinicians who do not achieve QP status for a year is 0.25 percent. In addition, MIPS eligible clinicians will receive positive, neutral, or negative MIPS payment adjustments to payment for their Part B covered professional services in a payment year based on performance during a prior performance period.

We incorporated this change into our baseline eligibility determination. In addition, the thresholds to achieve QP status beginning in the 2023 QP Performance Period will increase to 75 percent for payment amount, and 50 percent for patient count. Overall, we estimate that for the 2023 QP Performance Period between 144,700 and 186,000 eligible clinicians will become QPs, and therefore be excluded from MIPS.

In section VII.E.17.a. of this final rule, we projected the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2023 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2023 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that will attain QP status through the All-Payer Combination Option. The following APMs are expected to be Advanced APMs for the 2023 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);
- ACO REACH Model (formerly Global and Professional Direct Contracting) Model;
- Kidney Care Choices Model (Kidney Care First; Professional Option and Global Option);
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care Program);
- Medicare Shared Savings Program (Level E of the BASIC Track and the ENHANCED Track);
- Primary Care First (PCF) Model; and,

- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (see 81 FR 77444 and 77445 for information on the APM Participant Lists and QP determinations) on the 2021 third snapshot participation file to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM Incentive Payments for the 2023 QP Performance Period. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

#### c. Estimated Number of Clinicians Eligible for MIPS for the CY 2023 Performance Period/2025 MIPS Payment Year

##### (1) Clinicians Included in the Model Prior To Applying the Low-Volume Threshold Exclusion

For this final rule, we updated the data sources for this RIA with the more recent 2021 submissions and associated eligibility data and applied the same assumptions as the CY 2023 PFS proposed rule (87 FR 46409 through 46410) unless otherwise noted below. As discussed in section VII.E.16.c.2.(a) of this final rule, we made some engagement assumption modifications to mitigate the effect of potential non-engagement due to the extreme and uncontrollable circumstances policies related to the PHE. We use the terms “engaged” to refer to clinicians who submitted data to MIPS. The following paragraphs highlight the key assumptions and data updates.

We used the final reconciled eligibility determination file that aligned with the 2021 performance period submission data. In the CY 2023 PFS proposed rule (87 FR 46408), we noted that using the reconciled eligibility determination file was a change from our assumptions used in the CY 2022 PFS final rule RIA model (86 FR 65642). In the CY 2022 PFS final rule RIA model, we used a combination of data from the first determination period for the 2020 MIPS performance period and data from the end of calendar year 2019 to be paired with 2019 performance period submissions. We noted that we used the determination period from the CY MIPS performance period eligibility file because it was the most recent eligibility file available. However, we also stated

that as we updated our model for CY 2023 PFS proposed rule (87 FR 46408), we believed that using the final eligibility file from the CY 2021 MIPS submission data period, which reconciles information from two eligibility determination periods, would be a better data source to pair with our performance period submission data and so we used the final reconciled 2019 eligibility determination file which aligned with the 2019 performance period submission data. Similarly, in this final rule we used the final reconciled 2021 eligibility determination file which aligns with 2021 performance period submissions data.

We did not propose any modifications to MIPS eligibility, therefore the same eligibility assumptions apply to both the baseline and final policies models. Our analysis found that 1.7 million clinicians who had PFS claims from October 1, 2020 to September 30, 2021 as well as additional clinicians associated with a group who had at least one PFS claim from October 1, 2021 through December 31, 2021.

##### (2) Estimation of MIPS Eligible Clinicians After Applying Assumptions Related To Applying the Low-Volume Threshold Exclusion and Considering the Extreme and Uncontrollable Circumstances Policies Related to COVID-19 PHE.

The low-volume threshold policy may be applied at the individual (TIN/NPI) or group (TIN) levels based on how data are submitted to MIPS. A clinician or group that exceeds at least one, but not all three low-volume threshold criteria may become MIPS eligible by electing to opt-in and subsequently submitting data to MIPS, thereby being measured on performance and receiving a MIPS payment adjustment.

We describe below the estimated MIPS eligibility status and the associated PFS allowed charges of clinicians in the initial population of 1.7 million clinicians for the final policies model. We applied the same assumptions presented in the CY 2022 PFS final rule (86 FR 65617 through 65660) to apply the low-volume threshold and to determine whether clinicians participate as a group, virtual group, APM entity, or as individuals, but we made an additional adjustment to recognize the automatic extreme and uncontrollable circumstances policy that applied due to the PHE.

(a) Adjustments to Required Eligibility Engagement Assumptions To Account for the PHE

Clinicians who exceed the low-volume threshold as individuals and individuals in an approved virtual group are categorized as “required eligibility” because these clinicians are MIPS eligible regardless of whether they participate in MIPS or not. In the CY 2023 PFS proposed rule (87 FR 46409), we separated these MIPS eligible clinicians into “Engaged” and “Did not Engage” based on whether they submitted data in the CY 2019 performance period.

We are concerned, however, in moving to 2021 submissions data, that we may be overestimating the number of clinicians with “required eligibility” and who do not participate in MIPS since some MIPS eligible clinicians may not have submitted data due to the PHE. As discussed in section VII.E.16.c.2.(a) of this final rule, CMS applied the automatic extreme and uncontrollable circumstances (EUC) reweighting policy for the CY 2021 MIPS performance period due to the PHE. One effect of the automatic EUC policy is that individuals who are MIPS eligible in the CY 2021 MIPS performance period but do not submit data would have their performance categories reweighted and receive a final score equal to the performance threshold for the CY 2021 MIPS performance period/2023 MIPS payment year. These MIPS eligible clinicians would not receive a negative payment adjustment if they did not engage in the CY 2021 performance period, but they would receive a negative payment adjustment in our simulation of the CY 2023 performance period. Therefore, to mitigate the potential effect of the PHE on engagement estimates for the CY 2023 performance period, for MIPS eligible clinicians who submitted data for the CY 2019 performance period and did

not submit data for the CY 2021 performance period we assigned their participation status and final score data from the CY 2023 PFS proposed rule baseline model (87 FR 46408). This is because the CY 2023 PFS proposed rule baseline model (87 FR 46408) is based on 2019 submissions data and is hereafter called “2019 data supplement.”

We chose to use the 2019 data supplement instead of the CY 2023 PFS proposed rule policies model scores since the baseline policies are consistent between the proposal rule and this final rule and a baseline model is used in both rules. We believed these clinicians may participate and perform more similarly to the CY 2019 performance period than the CY 2021 performance period during the CY 2023 performance period. We assumed MIPS eligible clinicians that did not participate in either 2021 or in 2019 would not participate in 2023.

We do not have ability to assess the 2019 data supplement clinicians on performance in our model, so we used the final score from the CY 2023 PFS proposed rule baseline model and used that same score for this final rule’s baseline and final policies models. Because we used the same score for the baseline and final policies model, we were not able to assess the incremental impact of policies for this group. However, we believe making this adjustment is valuable because it helps mitigate the potential effect of overestimating the required eligibility/non-participants which in turn would affect the MIPS redistribution payment.

We have therefore separated the “required eligibility” into three buckets this year: (1) “Engaged in MIPS”; (2) “Did not engage in 2021 did engage in 2019”; and (3) “Did not engage in either 2021 or 2019” so that we can isolate both the effects of our final policies which are modeled using 2021 data, the

effect of the 2019 data supplement, and model the population of clinicians who did not engage in either year. The year refers to which population of data we used (ie the 2021 population of clinicians or the 2019 supplement).

(b) MIPS Eligibility Estimates

Table 154 summarizes our eligibility estimates for the proposed policies model after applying our assumptions.

We estimate approximately 120,887 MIPS eligible clinicians have required eligibility and engage in MIPS in 2019 and 2021, 17,529 MIPS eligible clinicians who did not engage in MIPS based on 2021 MIPS data but did engage based on 2019 MIPS data, and 10,885 MIPS eligible clinicians who did not engage in MIPS in either year. Additionally, 2,483 clinicians did not engage in 2021 and did not have data from 2019. These clinicians are counted in our model as “did not engage in 2019 or 2021”.

We estimate approximately 560,211 MIPS eligible clinicians as having “group eligibility” in Table 154. These clinicians belong to a group that meets the low-volume threshold. If they were not associated with the group submission, these clinicians will not be eligible for MIPS.

Finally, we estimate about 7,442 clinicians will be eligible and participate through “opt-in eligibility” through the “opt-in” policy. We updated our opt-in policy to reflect that a clinician can elect to opt-in into MIPS and will be scored even if they do not submit data to MIPS. We estimate that about 79 clinicians will opt-in to the program but not engage.

We estimate a total MIPS eligible clinician population of approximately 719,516 with \$56 billion PFS allowed charges estimated to be included in the CY 2023 performance period/2025 MIPS payment year.

**BILLING CODE 4150–28–P**

**TABLE 154: Description of MIPS Eligibility Status for CY 2023 Performance Period/2025 MIPS Payment Year Using the CY 2023 PFS Final Rule Assumptions\*\***

| Eligibility Status  | Predicted Participation Status in MIPS Among Clinicians                        | CY 2023 PFS Final Rule estimates |                                    |
|---|--|----------------------------------|------------------------------------|
|   |  | Number of Clinicians             | PFS allowed charges (\$ in mil)*** |
| <b>Required eligibility</b><br>(always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)  | Engaged in MIPS *  | 120,887                          | 32,372                             |
|   | Did not engage in 2021 but engaged in 2019                                     | 17,529                           | 5,120                              |
|   | Did not engage in 2021 and did not engage 2019 (or did not have data in 2019)* | 13,368                           | 3,499                              |
| <b>Group eligibility</b><br>(only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria)   | Had a group submission   | 560,211                          | 14,633                             |
| <b>Opt-In eligibility assumptions</b><br>(only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS) | Engaged in MIPS  | 7,442                            | \$417                              |
|   | Do not engage in MIPS  | 79                               | \$4                                |
| <b>Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges</b>  |  | <b>719,516</b>                   | <b>\$56,045</b>                    |
|   |  |                                  |                                    |
| <b>Potentially MIPS Eligible</b><br>(not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)   | Do not opt-in; or Do not submit as a group                                     | 475,882                          | \$11,990                           |
| <b>Below the low-volume threshold</b><br>(never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)  | Not applicable   | 98,909                           | \$657                              |
| <b>Excluded for other reasons</b><br>(Non-eligible clinician type, newly enrolled, QP)  | Not applicable   | 403,980                          | \$18,506                           |
| <b>Total Number of Clinicians Not MIPS Eligible</b>   |  | <b>978,771</b>                   | <b>\$31,153</b>                    |
| <b>Total Number of Clinicians (MIPS and Not MIPS Eligible)</b>  |  | <b>1,698,287</b>                 | <b>\$87,198</b>                    |

\* Engaged means submitting data to MIPS. Participation excludes facility-based clinicians who do not have scores in the 2021 MIPS submission data.

\*\*The 2,483 clinicians who did not engage in 2021 and were not present in 2019 data are included in this category

\*\*\* Allowed charges estimated in 2021 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

**BILLING CODE 4150-28-C**

Furthermore, we estimate there will be approximately 475,882 clinicians who are not MIPS eligible, but could be if the clinician or their group elects to opt-in. We describe this group as "Potentially MIPS eligible" in Table 154. These clinicians would be included as MIPS eligible in the unlikely scenario

in which all group practices elect to submit data as a group, or clinicians in a group that does not submit are eligible to opt-into MIPS individually and choose to do so. This assumption is important because it quantifies the maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate the MIPS

eligible clinician population could be as high as 1,195,398-clinicians. Finally, we estimate approximately 98,909 clinicians will not be MIPS eligible because they and their group are below the low-volume threshold on all three criteria and another approximately 403,980 will not be MIPS eligible because they are categorically excluded

regardless of volume or submission activity.

Eligibility among many clinicians is contingent on submission to MIPS as a group or election to opt-in, therefore we will not know the number of MIPS eligible clinicians who submit until the submission period for the CY 2023 performance period is closed. For the remaining analysis, we use the estimated population of 719,516 MIPS eligible clinicians described above.

d. Estimated Impacts on Payments to MIPS Eligible Clinicians for the CY 2023 Performance Period/2025 MIPS Payment Year

#### (1) Summary of Approach for MVPs and Traditional MPS

In sections IV.A.3.a. through IV.A.3.F. of this final rule, we present several provisions which impact the measures and activities that impact the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these changes in more detail in section VII.E.16.d.(3) of this RIA as we describe our methodology to estimate MIPS payments for the CY 2023 performance period/2025 MIPS payment year. We then present the impact of the overall final policies on the CY 2023 performance period/2025 MIPS payment year and then compare select metrics to the baseline model, which only incorporates previously finalized policies for the CY 2023 performance period/2025 MIPS payment year. By comparing the baseline model to the final policies model, we are able to estimate the incremental impact of the final policies for the CY 2023 performance period/2025 MIPS payment year.

The payment impact for a MIPS eligible clinician is based on the clinician's final score, and MIPS eligible clinicians can participate as an individual, group, virtual group, APM Entity, clinicians participating in MIPS through the APM Performance Pathway or through an MVP in the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. MIPS APM participants can participate in the APP as an individual, group, virtual group, APM Entity but are only scored on three MIPS performance categories: quality, improvement activities, and Promoting Interoperability. The average percentage change in total revenues that clinicians earn is less than the impact displayed here because MIPS eligible clinicians generally furnish services to both Medicare and non-Medicare patients; this program does not impact payment

from non-Medicare patients. In addition, MIPS eligible clinicians may receive Medicare revenues for services under other Medicare payment systems, such as the Medicare Federally Qualified Health Center Prospective Payment System, that will not be affected by MIPS payment adjustment factors.

#### (2) Methodology To Assess Impact for MIPS Value Pathways

In the 2022 PFS final rule (86 FR 65394 through 65397), we finalized policies at § 414.1365 for implementing MVPs beginning in the CY 2023 performance period/2025 MIPS payment year. In updating our MIPS RIA model, we have made some assumptions for both the baseline and final policies model to simulate MVP participants and their MVP final score which are described in the following sections.

##### (a) MVP Participant Assumptions

At § 414.1365(b), we require MVP Participants (which can be a group, individual, subgroup or APM entity) to register prior to submitting an MVP. As we do not yet have information on who will register, we assume for purposes of this model, that MVP Participants are individual clinicians or groups that currently submit at least four quality measures that are in an MVP. For these MVP Participants, we calculate both an MVP and a traditional MIPS score and take the highest score consistent with the scoring hierarchy as finalized in the CY 2022 PFS final rule 86 FR 65537). For the baseline model, we looked for the quality measures finalized for MVPs in the CY 2022 PFS final rule (86 FR 65441 through 65443):

- Advancing Rheumatology Patient Care
- Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes
- Advancing Care for Heart Disease MVP
- Optimizing Chronic Disease Management MVP
- Adopting Best Practices and Promoting Patient Safety within Emergency Medicine
- Improving Care for Lower Extremity Joint Repair
- Patient Safety and Support of Positive Experiences with Anesthesia MVP

For the final policies model, we incorporate the quality measure revisions for the above MVPs and use the quality measures to model scores for the new MVPs in Appendix X of this final rule:

- Advancing Cancer Care

- Optimal Care for Kidney Health
- Optimal Care for Neurological Conditions
- Supportive Care for Cognitive-Based Neurological Conditions
- Promoting Wellness

Our MVP Participant assumptions have limitations: we are not incorporating subgroups due to lack of data, not all of the assumed participants may elect to register for an MVP, and we may have additional clinicians or groups register for an MVP. However, we believe this is a reasonable approach to simulate the impact of MVPs and we sought comment on this assumption, but did not receive any feedback.

#### (b) MVP Scoring Methods and Assumptions

We simulate an MVP score using the same data sources as we did for traditional MIPS. We scored according to rules finalized in § 414.1365(d) and § 414.1365(e) using the MVP reporting requirements listed in § 414.1365(c) with one exception. We did not restrict the improvement activities to the activities listed in the MVP inventory. We believed this would lower our estimated MVP score as clinicians and groups were not required to select from a limited inventory in the CY 2021 performance period (upon which our model is based.) Therefore, we scored any improvement activities the MVP Participants submitted in 2021 as if those improvement activities are in the MVP inventory.

#### (3) Methodology To Assess Impact For Traditional MIPS

To estimate the impact of MIPS policies on MIPS eligible clinicians, we generally used the CY 2021 MIPS performance period submissions data, including data submitted or calculated for the quality, cost, improvement activities, and Promoting Interoperability performance categories. As discussed in section VII.E.16.c.2.(a) of this final rule, we supplemented with 2019 data supplement.

We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, administrative claims data for the new quality performance category measures, and other data sets. We calculated a hypothetical final score for the CY 2023 performance period/2025 MIPS payment year for the baseline and final policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, Promoting Interoperability, and improvement activities performance categories, where each are described in detail in the following sections.

**(a) Methodology To Estimate the Quality Performance Category Score**

We estimated the quality performance category score using a methodology like the one described in the CY 2022 PFS final rule (86 FR 65642 through 65643) for the baseline and final policies RIA models for the CY 2023 performance period/2025 MIPS payment year.

To create the baseline policies RIA model, which does not reflect the policies finalized in this rule, we made the following modifications to the CY 2022 PFS final rule final policies model to reflect the previously finalized quality performance category policies for the CY 2023 performance period/2025 MIPS payment year:

- As discussed in the CY 2022 PFS final rule (86 FR 65440), we finalized the removal of Web Interface measures after the CY 2022 performance period/2024 MIPS payment year for groups and virtual groups using the existing 10 CMS Web Interface measures. To estimate a quality performance category score for clinicians in groups who previously used the CMS Web Interface as a collection type in 2021, we assumed these groups will use the other two other collection types (MIPS CQMs and eCQMs) available in the CY 2023 performance period/2025 MIPS payment year. We then applied the same methodology described in the CY 2021 PFS proposed rule where we discussed the removal of Web Interface as a collection type (85 FR 50387 through 50388).

- As discussed in the CY 2022 PFS final rule (86 FR 65497 through 65498), we finalized removing the 3-point floor for each measure that can be reliably scored against the benchmark and score the measure from 1 to 10 points starting with the CY 2023 performance period/2025 MIPS payment year. Due to technical limitation we were previously not able to simulate the removal of the special scoring policy of scoring 3 points for class 2 measures for clinicians not in a small practices beginning with the CY 2023 performance period/2025 MIPS payment year in the 2023 PFS Proposed Rule (87 FR 46411). In this final rule, we were able to incorporate the removal of this scoring policy.

- In the CY 2022 PFS final rule (86 FR 65429), we also finalized extending the use of the CMS Web Interface as a reporting option under the APM Performance Pathway into the CY 2024 performance period/2026 MIPS payment year. Under this policy, for the CY 2023 performance period/2025 MIPS payment year, Web Interface reporting would work in the same manner as for the CY 2021 performance period/2023

MIPS payment year, where ACOs would have the option of reporting either the CMS Web Interface or the APP eCQM/MIPS CQM measure set. In integrating the 2021 data, we assumed that ACOs that submitted Web Interface in 2021 would continue to submit Web Interface in 2023 and that ACOs that submitted the APP eCQM/MIPS measures set in 2021 would continue to do so in 2023 and scored the quality performance category based on the way they submitted their quality data.

- Similar to the CY 2022 PFS final rule model (86 FR 65642), we utilized the most recent benchmark file: the CY 2021 MIPS performance period historical benchmarks; however for this baseline model, we calculated a performance period benchmark if a historical benchmark was not available.

For the final policies model, we made the following modifications to the baseline model to reflect the quality performance category policies for the CY 2023 performance period/2025 MIPS payment year:

- As discussed in section IV.A.10.d.(1)(b)(i) of this final rule, we will score administrative claims quality measures using a benchmark calculated from the performance period data. To simulate this policy in our proposed policies model, we used CY 2021 performance period data to score administrative claims measures.

- In Appendix 1 of this final rule, we added 9 new MIPS quality measures, removed 15 MIPS quality measures, partially removed 2 MIPS quality measures that will be removed from traditional MIPS and retained for use in MVPs, and substantially modified 75 MIPS quality measures. Consistent with prior rules, (83 FR 50053), our RIA estimates assume that clinicians who reported Medicare Part B claims, eCQM, MIPS CQM and QCDR measures that are removed would find alternate measures; therefore, we assign points to the measures that were submitted and included them in our scoring model.

- In Appendix A, we included one new administrative claims measure, Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System, for MIPS eligible clinicians, groups, subgroups, virtual groups, and APM Entities that include at least one cardiologist. We included the test data for this measure into our model.

**(b) Methodology To Estimate the Cost Performance Category Score**

We estimated the cost performance category score using a methodology

similar to the methodology described in the CY 2022 PFS final rule (86 FR 65643) for the baseline and the final policies RIA models. However, we updated the data source to use the cost measures calculated for the CY 2021 MIPS performance period.

The baseline policies RIA model used the same methodology as the final policies model in the CY 2022 PFS final rule (86 FR 65643) since there are no previously finalized cost performance category policies that will apply beginning with the CY 2023 MIPS performance period.

In section IV.A.10.c.(2)(b) of this final rule, we revise the operational list of care episode and patient condition groups and codes by adding the Medicare Spending Per Beneficiary (MSPB) Clinician cost measure as a care episode group. This recategorization of the MSPB measure does not affect the scoring of the cost performance category. Additionally, in section IV.A.10.d.(1)(c)(i) of this final rule, we establish a maximum cost improvement score of 1 percentage point out of 100 percentage points available for the cost performance category starting with the CY 2022 performance period/2024 MIPS payment year. Due to data limitations, we do not have multiple years of cost measures to model improvement scoring. Therefore, we did not make any modifications between the final policies and baseline model for the cost performance category scoring.

**(c) Methodology To Estimate the Facility-Based Measurement Scoring**

As discussed in section VII.E.16.c.2.(a) of this final rule, a limitation of using 2021 data is that we are not able to estimate facility-based scores because there are no Hospital Value-Based Purchasing total performance scores calculated due the COVID-19 PHE. However, for clinicians who did not participate in 2021, we did use the 2019 data supplement to identify final scores based on 2019 performance period submission and these scores include facility-based scores.

**(d) Methodology To Estimate the Promoting Interoperability Performance Category Score**

For the CY 2023 PFS final rule baseline RIA model, we are using the CY 2021 Promoting Interoperability performance period submissions data to estimate CY 2023 performance for the Promoting Interoperability performance category. By using the 2021 performance period submissions data, we were able to incorporate the Health Information Exchange bi-directional exchange

measure option into the Health Information Exchange objective. We did not make additional modifications to the Promoting Interoperability performance category baseline RIA model beyond what we finalized in the CY 2022 final rule (86 FR 64996).

For the final policies model, we considered the following policy provisions as potential modifications to the baseline RIA model:

- Require and modify the Query of PDMP measure for MIPS eligible clinicians participating in the Promoting Interoperability performance category and maintain the associated points at 10 points.

- Expand the Query of PDMP measure to include not only Schedule II opioids but also Schedule III, and IV drugs.

- Change the scoring for the e-Prescribing measure to 10 points available and the maximum total points available for the Electronic Prescribing Objective will remain at 20 points for CY 2023.

- Adding Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) measure as an optional alternative measure in the Health Information Exchange (HIE) objective.

- Modify the scoring methodology for the Promoting Interoperability performance category. We refer readers to section IV.A.6.c.(4)(g) of this final rule and Table 155: Scoring Methodology for the Performance Period in CY 2023 of this final rule for further information on the scoring.

- Consolidate the current options from three to two levels of active engagement for the Public Health and Clinical Data Exchange Objective and to require the reporting of active engagement for the measures under the objective

- Removing the automatic reweighting of NPs, PAs, CRNAs, or CNSs.

Due to limitations in our scoring engine-based model, we are unable to fully incorporate all of these changes into the final policies model. We incorporated into the model the modification to the scoring methodology for the Promoting Interoperability performance category and the removal of the automatic reweighting of NPs, PAs, CRNAs, and CNSs. Due to the high submission rate for the optional Query of PDMP measure and the expansion of the availability of PDMPs in all 50 States and several localities, we anticipate that clinicians who do not currently submit this newly required measure will now submit the measure or submit one of the associated

exclusions. Because we lack CY 2021 MIPS submissions data for the Enabling Exchange Under TEFCA measure, we only used past reporting on the existing Health Information Exchange Objective measures and the Health Information Exchange Bi-directional exchange measure to estimate CY 2023 Promoting Interoperability performance for the final policies model.

#### (e) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline model, we modeled the improvement activities performance category score based on CY 2021 performance period data and APM participation identified in section IV.A.10.d.(1)(c)(i) of this final rule. For clinicians and groups not participating in a MIPS APM, we used their CY 2021 improvement activities score. Using the CY 2021 performance period data, we are not able to incorporate the policy finalized in the CY 2020 performance period (84 FR 62980) to require a minimum threshold of 50 percent of clinicians in a group to complete an improvement activity for the group to receive credit. We continued to apply the methodology described in the CY 2020 PFS final rule (84 FR 63170) to assign an improvement activities performance category score. For the APM participants identified in section VII.F.17.c.(1) of this final rule, we assigned an improvement activity performance category score of 100 percent.

#### (f) Methodology To Estimate the Complex Patient Bonus Points

For the baseline and proposed policies RIA model, we used the previously established method to calculate the complex patient bonus as described in the CY 2022 PFS final rule (86 FR 64996). We calculated and applied the separate risk indicator complex patient bonus components methodology with a single overall cap described at section IV.A.10.d.(2)(a) of this final rule. In section IV.A.10.d.(2)(a)(ii) of this final rule, we allow facility-based clinicians to receive a complex patient bonus. As discussed in section VII.E.16.c.2.(a) of this final rule, we are not able to incorporate this provision because, generally, we do not have data for facility-based clinicians.

#### (g) Methodology To Estimate the Final Score

We did not propose any changes for how we calculated the MIPS final score. Our baseline and final policies RIA models assigned a final score for each TIN/NPI by multiplying each estimated

performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For the baseline policies RIA model, we applied the performance category weights and redistribution weights finalized in the CY 2022 PFS final rule (86 FR 65519 through 65524).

For both models, after adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to § 414.1380(c).

#### (h) Methodology To Estimate the MIPS Payment Adjustment

For the baseline and final policies RIA models, we applied the hierarchy as finalized in the CY 2022 PFS final rule (86 FR 65536 through 65537) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, and minimum and maximum adjustment percentages.

For the baseline model, we applied the performance threshold finalized in the 2022 PFS final rule (86 FR 65527) of 75 points finalized at § 414.1405. For the final policies model, we applied the performance threshold of 75 points finalized in section IV.A.10.e.(2) of this final rule. We used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the allowed charges for covered professional services furnished by the MIPS eligible clinician.

#### (4) Impact of Payments by Practice Size

We noticed minimal changes to the mean and median final score between our baseline and final policies model. In our baseline model, the mean and median final scores are 77.78 and 79.45 points, respectively. In the final policies model, the mean final score is 77.68 and the median final score is 79.98. Many clinicians are only slightly above or slightly below the performance threshold. For instance, in the final policies model, 176,512 clinicians have a final score between 70 and 80 points. We recognize that, because many scores are clustered around the performance threshold of 75, any variation in scoring

or submissions data can have a significant impact on the proportion of clinicians receiving a positive or a negative payment adjustment.

Between the baseline and final policies model we observe little difference in the percentage and distribution of clinicians receiving a negative payment adjustment. Overall, we project 63.34 percent of engaged clinicians<sup>576</sup> would receive a positive or neutral adjustment in our final policies model compared to 62.56 percent in the baseline model.

In this model, we no longer observe large differences in payment adjustments by practice size. All practices sizes saw either minimal change or a modest increase in the percentage of clinicians receiving either a positive or neutral adjustment.

Because many clinicians scores are close to the performance threshold, many of these clinician's payment adjustments are fairly small and many negative adjustments are much lower in magnitude than the statutory maximum negative adjustment of 9 percent. In our final policies model, we project a payment adjustment of negative 9 percent for clinicians with a score of 18 points.

<sup>576</sup> We define engaged MIPS clinicians as those who have submitted data for at least one MIPS performance category.

In our baseline model, the average positive payment adjustment among engaged clinicians is 3.78 percent and the average negative payment adjustment is -1.79 percent. In our final policies model, the average positive payment adjustment among engaged clinicians is 3.71 percent and the average negative payment adjustment among engaged clinicians is -1.84 percent. Only 8.46 percent of clinicians receive a score of less than 50 points and therefore a negative payment adjustment of more than 3 percent.

Because there is only a slight difference in the proportion of clinicians receiving a negative payment adjustment between the final policies and baseline model, we anticipate only a modest change in the amount of funds redistributed due to budget neutrality (from \$699 million to \$698 million) and a modest change in the maximum positive payment adjustment from 6.10 percent in the baseline to 6.09 percent in the final policies model.

We want to highlight we are primarily using CY 2021 performance period submissions data to simulate a CY 2023 performance period final score, and it is likely that there will be changes that we cannot account for at this time. It should also be noted that the estimated number of clinicians who do not submit data to MIPS may be an overestimate of non-

engagement in MIPS for the CY 2023 performance period/2025 MIPS payment year. This is because the PHE may have resulted in fewer clinicians submitting data to MIPS or more clinicians electing to apply for the extreme and uncontrollable circumstances policies due to the PHE for the CY 2019 and 2021 performance periods. Therefore, engagement levels in MIPS for the CY 2023 performance period/2025 MIPS payment year may differ from these reported estimates. We also note this participation data is generally based off participation for the CY 2021 performance period/2023 MIPS payment year, which is associated with a performance threshold of 60 points, and that participation may change since the finalized performance threshold is 75 points.

Finally, the combined impact of negative and positive adjustments as a percent of allowed charges among those that do not submit data to MIPS was not the maximum negative payment adjustment of 9 percent possible because some MIPS eligible clinicians that do not submit data to MIPS receive a non-zero score for the cost performance category, which utilizes administrative claims data and does not require separate data submission to MIPS.

**BILLING CODE 4150-28-P**

\*Practice size is the total number of TIN/NPIs in a TIN.

\*\*The percentage represents the total adjustments after taking all the positive adjustments and subtracting the negative adjustments for all MIPS eligible clinicians in the same respective practice size. Negative payment adjustments fund positive adjustments through the budget neutral pool.

\*\*\* 2021 used to estimate CY 2023 performance period/2025 MIPS payment year payment adjustments. Payment estimates trended to 2025 dollars.

\*\*\*\* 2023 proposed rule baseline model (which was based on 2019 submission), if available, is used to estimate CY 2023 performance period/2025 MIPS payment year payment adjustments. We count clinicians who did not engage in 2021 and who are not present in 2019 data as not engaging in either year.

\*\*\*\*\*. Payment adjustments are not reported for our 2019 supplement population because the payment adjustments were calculated using our 2021 population

\*Practice size is the total number of TIN/NPIs in a TIN.

\*\*2021 and 2019 data used to estimate CY 2023 performance period /2025 MIPS payment adjustments. Payment estimates trended to 2025 dollars.

\*\*\*The percentage represents the total adjustments after taking all the positive adjustments and subtracting the negative adjustments for all MIPS eligible clinicians in the same respective practice size.

e. Additional Impacts From Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting the payment adjustments, we finalized several policies that have an impact on burden in the CY 2023 performance

period/2025 MIPS payment year. In section VII.E.16.e. of this final rule, we outline estimates of the costs of data collection that includes both the effect of finalized policy updates and adjustments due to the use of updated data sources. For each provision

included in this regulation which impacts our estimate of collection burden, the incremental burden for each is summarized in Table 157. We also provide proposed additional burden discussions that we are not able to quantify.

**TABLE 157: Incremental Burden from Associated Finalized Policies**

| <b>Burden Description and associated finalized provisions</b>   | <b>Burden Hours</b> | <b>Burden Dollars</b> |
|---|---------------------|-----------------------|
| Total burden associated with the provision to continue the policies and ICRs set forth in the CY 2022 PFS final rule into the CY 2023 performance period/2025 MIPS payment year (as discussed in section V.B.9.p of this final rule).                             | 714,352             | \$76,092,343          |
| Burden change for MVP registration ICR due to the provision of additional MVPs (as discussed in section V.B.9.e.(7)(a)(i) of this final rule). *  | +321                | +\$31,597             |
| Burden change for Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as discussed in section V.B.9.e.(4) of this final rule). * | -4,757              | -\$503,424            |
| Burden change for Quality Data Submission by Clinicians: CQM/QCDR Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as discussed in section V.B.9.e.(5) of this final rule). *                     | -3,697              | -\$400,072            |
| Burden change for Quality Data Submission by Clinicians: eCQM Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as discussed in section V.B.9.e.(6) of this final rule). *                         | -4,344              | -\$475,787            |
| Burden change for MVP Quality Submission ICR submissions due to the provision of additional MVPs (as discussed in section V.B.9.e.(7)(a)(iii) of this final rule). *  | +8,468              | +\$912,778            |
| Burden change for Promoting Interoperability Submission ICR due to the requirement for clinicians to submit their level of active engagement for the Public Health and Clinical Data Exchange Objective (as discussed in section V.B.9.g.(3) of this final rule). | +301                | +\$29,695             |
| Total change in burden due to policy for CY 2023  | -3,708              | -\$405,213            |
| Total burden set forth in the CY 2023 PFS final rule  | 710,644             | \$75,687,130          |

\* The total change in burden due to this provision includes an increase in burden due to an anticipated increase in the number of respondents that will participate in MVP reporting based on the finalized addition of 5 new MVPs. Therefore, there will be a decrease in burden in the “Quality Data Submission: MIPS CQM and QCDR collection type,” “Quality Data Submission: eCQM collection type,” and “Quality Data Submission: Claims collection type” ICRs due to respondents who previously submitted MIPS through those collection types submitting data with reduced Quality submission requirements as a MVP participant. Total change in burden also includes the increase in submission burden due to the increase in the number of respondents for “MVP registration.” See section V.B.9.e.(7)(a)(i) of this final rule.

**BILLING CODE 4150–28–C****(2) Additional Impacts to Clinicians****(a) MVP Maintenance and Development Process**

In section IV.A.8.a. of this rule, we finalized the proposed updates to the previously finalized policies for the MVP development and maintenance process in the CY 2021 and 2022 PFS final rules (85 FR 84849 through 84856 and 86 FR 65410). Specifically, we finalized the proposal to modify the MVP development process such that we will evaluate a submitted candidate MVP through the MVP development process and if we determine it is “ready” for feedback, we will post a draft version of the MVP on the Quality Payment Program website (<https://>

[qpp.cms.gov/](https://qpp.cms.gov/)) and solicit feedback for a 30-day period. Interested parties and the general public will have the opportunity to submit feedback on the candidate MVP for CMS’s consideration through an email inbox. We will review the feedback received, and determine if any changes should be made to the candidate MVP prior to potentially including the MVP in a notice of proposed rulemaking. If we determine changes should be made to the candidate MVP, we will not notify the interested party who originally submitted the candidate MVP for CMS consideration in advance of the rulemaking process.

We also finalized that beginning with the CY 2023 performance period/2025 MIPS payment year, to modify the MVP

maintenance process such that interested parties and the general public will be able to submit their recommendations for potential revisions to established MVPs on a rolling basis throughout the year. We will then review the submitted recommendations and determine whether any are potentially feasible and appropriate. If we identify any submitted recommendations that are potentially feasible and appropriate, we will host a public facing webinar, open to interested parties and the general public, through which they may offer their feedback on the potential revisions we have identified. We will publish details related to the timing and registration process for the webinar

through our Quality Payment Program Listserv.

We acknowledge that there is administrative burden associated with the monitoring and review of the candidate MVPs. However, we are unable to estimate the impact of these policies and quantify the number of interested parties and members of the general public that will review and submit their feedback for a candidate MVP. Similarly, we are uncertain on the number of interested parties and members of the general public that will submit their recommendations for potential revisions to established MVPs for an applicable performance period and if CMS will be hosting a public webinar based on the review of the recommendations. In summary, we are unable to quantify the impact associated with the finalized changes to the MVP development and maintenance process.

#### (b) Subgroup Registration

In section IV.A.8.e.(3) of this rule, we finalized the proposed updates to the subgroup registration process. As part of the subgroup registration process, in addition to the previously established registration requirements, group TINs must provide a description of each subgroup that is registered. Under this policy, we will identify some key scenarios for subgroups to select from that we expect might reflect a typical subgroup, but also wish to offer an opportunity for group TINs to describe how they constructed their subgroups by providing a narrative in a text-only field, if the options we provide do not correctly describe the subgroup. We recognize that there may be additional burden associated with the proposed description requirement for subgroup registration. However, we assume that the burden associated with choosing a key scenario will minimize the time required for subgroups to provide a narrative description. Additionally, we anticipate the narratives to be short descriptions of the nature of a group practice and appropriately reflect the subgroup composition. We are unable to quantify the additional impact for the updates to the subgroup description requirement.

#### (c) Impact on Third Party Intermediaries

In section IV.A.10.g.(3)(a) of this rule, we finalized the proposed revisions to the corrective action plan (CAP) requirement at § 414.1400(e)(1)(i)(B) to address the impact to any affected parties, as appropriate. We also finalized the proposed addition at § 414.1400(e)(1)(i)(E) to require the detailed communication plan for communicating the issues that

contributed to the non-compliance and the impact to any affected parties, as appropriate. We anticipate administrative burden associated with the requirement for third party intermediaries to submit a detailed communication plan. Because of the relatively low number (fewer than 10 per year historically) of CAPs that we anticipate receiving from QCDRs for the CY 2023 performance period/2025 MIPS payment year, we are unable to quantify the burden associated with the development of a communication plan for third party intermediaries.

#### (d) Compare Tools: Public Reporting

In section IV.A.10.h.(1) of this rule, we finalized the proposal to identify clinicians who perform telehealth services using Place of Service Code 02 (indicating telehealth) on paid physician & ancillary service (that is, carrier) claims, or modifier 95 appended on paid claims. Additionally, we finalized the proposal to publicly report Medicare procedural utilization data on the Compare tool clinician and group profile pages in a way that is understandable to patients and caregivers, based on user testing, and helps them make healthcare decisions. We will begin publicly reporting procedural utilization data no earlier than CY 2023. We will use a 12-month lookback period and bi-monthly data refresh frequency, as technically feasible. While the Compare tool provisions do not increase the burden of collections, we note that the PRA package may require relevant modification to reflect the Compare tool's new uses and public display.

#### (e) Administrative Claims Measure

As discussed in appendix 1, we finalized the proposed addition of one new administrative claims quality measure beginning in the CY 2023 performance period/2025 MIPS payment year and for future performance periods: Risk-standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System. We acknowledge there are administrative burdens and related financial costs associated with each administrative claims measure that clinicians, groups, and organizations may choose to monitor. However, because these costs can vary significantly due to organizational size, number of administrative claims measures being reported, volume of clinicians reporting each measure, and the specific methods employed to improve performance, we are unable to provide an estimate of the financial

impact each clinician, group, or organization may experience. In summary, we are acknowledging that while there are no data submission requirements per § 414.1325(a)(2)(i) for administrative claim measures, there may be associated costs for clinicians and group practices to monitor new administrative claim measures; however, we are unable to quantify that impact.

#### (f) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.10.b of this final rule, we finalized the proposed changes to the improvement activities Inventory for the CY 2023 performance period/2025 MIPS payment year and future years as follows: adding four new improvement activities; modifying five existing improvement activities; and removing six previously adopted improvement activities. We refer readers to Appendix 2 of this final rule for further details. We do not believe these changes to the improvement activities Inventory will significantly impact time or financial burden on interested parties because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. We do not expect these changes to the improvement activities Inventory to affect our currently approved information collection burden estimates in terms of neither the number of estimated respondents nor the burden per response. We anticipate most clinicians performing improvement activities, to comply with existing MIPS policies, will continue to perform the same activities under the policies in this final rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the CY 2023 performance period/2025 MIPS payment year.

#### g. Assumptions & Limitations

In section VII.E.16.x of this rule, we outline several limitations in using 2021 submissions data for estimating 2023 performance. In addition, in section VII.E.16.d.(4) of this RIA we noted the limitation that, because many scores are clustered near the performance threshold of 75 points, minor variations in clinicians final scores relative to our estimations could have significant impacts on the proportion of clinicians receiving a positive or negative payment adjustment. In addition to this

limitation, we note several other limitations to our estimates of clinicians' MIPS eligibility and participation, negative MIPS payment adjustments, and positive payment adjustments for the CY 2023 performance period/2025 MIPS payment year.

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in for the CY 2021 Quality Payment Program and submitted data will continue to elect to opt-in for the CY 2023 performance period/2025 MIPS payment year. It is difficult to predict whether clinicians will elect to opt-in to participate in MIPS with the final policies.

In addition to the limitations described throughout the methodology sections, to the extent that there are year-to-year changes in the data submission, volume and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 154.

#### 17. Opioid Treatment Programs: CY 2022 Methadone Payment Exception

As discussed in section V. of this final rule, the "Medicare Program; Opioid Treatment Programs: CY 2022 Methadone Payment Exception" interim final rule with comment period (Methadone IFC), established a limited exception to the payment methodology for methadone furnished by Opioid Treatment Programs (OTPs). Specifically, under this exception, the payment amount for the drug component of the methadone bundle described by HCPCS code G2067 (*Medication assisted treatment, methadone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)*) and the methadone add-on code described by HCPCS code G2078 (*Take-home supply of methadone; up to 7 additional day supply (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure*) was maintained at the CY 2021 rate of \$37.38 on an interim final basis for the

duration of CY 2022 (86 FR 66032 through 66033).

In this final rule we are finalizing the interim revisions to the regulation text at § 410.67(d)(2)(i)(B), which governs the determination of the payment amount for oral medications, to reflect this exception and to make a conforming change to the reference to 42 CFR part 414, subpart J. There are no impacts to Medicare spending in CY 2023 as a result of finalizing the interim revisions promulgated in the Methadone IFC.

#### F. Alternatives Considered

This final rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when we proposed to exercise agency discretion, presents rationale for our policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this final rule, we present above the estimated impact on total allowed charges by specialty.

##### 1. Alternatives Considered for Adjusting RVUs To Match PE Share of the Medicare Economic Index (MEI)

As discussed in section II.B. of this final rule, "(5) PE RVU Methodology," Steps 3, 10, and 18, and "3. Adjusting RVUs To Match PE Share of the Medicare Economic Index (MEI)", we hold the work RVUs constant and adjust the PE RVUs, MP RVUs, and CF to produce the appropriate balance in RVUs among the PFS components and payment rates for individual services, that is, that the total RVUs on the PFS are proportioned to approximately 51 percent work RVUs, 45 percent PE RVUs, and 4 percent MP RVUs. As the Medicare Economic Index (MEI) cost shares are updated, we would typically propose to modify steps 3 and 10 described in section II.B. of this final rule to adjust the aggregate pools of PE costs (direct PE in step 3 and indirect PE in step 10) in proportion to the change in the PE share in the rebased and revised MEI cost share weights, as previously described in the CY 2014 PFS final rule (78 FR 74236 and 74237), and to recalibrate the relativity

adjustment that we apply in step 18 described in section II.B. of this final rule. The most recent recalibration was done for the CY 2014 RVUs, when the MEI was last updated.

As an alternative to adjusting the aggregate pools of direct and indirect PE costs and using a relativity adjustment based on the current CY 2014 MEI update, we considered using the proposed rebased and revised MEI cost share weights for CY 2023, as discussed in detail in section II.M. of the proposed rule, for purposes of adjusting the RVUs to match PE share of the MEI for CY 2023. Although we did not propose to for CY 2023, we considered using the rebased and revised cost share weights to adjust the aggregate pools of PE RVUs and the relativity adjustment to reflect more recent data, shifting over a 4-year transition to reach the proportions of work, PE, and MP, as explained in section II.M. of the final proposed rule.

Table 158 illustrates specialty-specific impacts if we were to use the proposed rebased and revised MEI cost share weights to adjust the RVUs to match the PE share of the MEI, as proposed in section II.M. of the proposed rule. Column C represents specialty level impacts of our provisions for CY 2023 without the recalibration of RVU proportions based on the proposed rebased and revised MEI cost share weights, shown for comparison to the alternatives considered (same impacts as shown in Table 149). Column E represents the specialty level impacts of our provisions for CY 2023 with Year 1 of a 4-year phased in recalibration of RVU proportions based on the proposed rebased and revised MEI cost share weights. Column F represents the specialty level impacts of our provisions for CY 2023 with the recalibration of RVU proportions based on the proposed rebased and revised MEI cost share weights, without a 4-year phase in, but rather, a full implementation for CY 2023. We note that, as discussed in detail in section II.M. of this final rule, the finalized rebased and revised cost share weights differ slightly from than the proposed rebased and revised cost share weights used to calculate the specialty-specific impacts in Columns E and F in Table 158 for this alternative considered.

The majority of specialties would experience shifts of 1 percent or greater if we used the proposed rebased and revised MEI cost share weights, as opposed to the current weights, displayed in Table 158, for

proportioning work, PE, and MP RVUs. Several specialties shifted by greater than 3 percent, particularly the specialties with relatively higher PE costs, which are mostly realizing a positive shift, or relatively higher

physician work costs, which are realizing a negative shift. As shown in Column F, the shifts are amplified, both negatively and positively, when use of the proposed rebased and revised MEI cost share weights is not phased in over

several years; therefore, we did not consider this a viable alternative for consideration. We note that there are significant shifts in specialty level payments if we used the proposed rebased and revised MEI cost share weights, some of which counter other CY 2023 provisions (that is, changes to Evaluation and Management (E/M) services, chronic pain management, and behavioral health services).

We proposed to delay the adjustments to allow public comment and finalization of the proposed rebased and revised MEI, and to maintain use of the current MEI cost share weights while presenting the information in section II.M. of this final rule and the specialty level impacts in Table 158. We also solicited comment on the use of a transition to phase in use of the proposed rebased and revised MEI cost share weights, if finalized, for potential future rulemaking. Because there are significant proposed methodological and data source changes to the MEI for CY 2023 and significant time has elapsed since the last rebasing and revision of the MEI, we believe it is important to allow public comment and finalization of the MEI changes based on the review of public comment before we incorporate the updated MEI into PFS ratesetting, and we believe this is consistent with our efforts to balance payment stability and predictability

with incorporating new data through more routine updates. Similarly, we proposed to delay the implementation of the rebased and revised MEI for use in the PE geographic practice cost index (GPCI) to allow public comment and finalization of the MEI changes based on the review of public comment before we incorporate the updated MEI into the PE GPCIs.

## 2. Alternatives Considered for the Practice Expense (PE) Geographic Practice Cost Index (GPCI)

As discussed in section II.G. of this final rule, we use the MEI cost share weights to weight the four components of the PE GPCI: employee compensation, the office rent, purchased services, and medical equipment, supplies, and other miscellaneous expenses. As the MEI cost shares are updated, we have historically updated the GPCI cost share weights to make them consistent with the most recent update to the MEI. Instead, we proposed to maintain the use of the current 2006-based MEI cost share weights for the CY 2023 GPCIs, allowing interested parties the opportunity to review and comment on, and for us to respond to comments and finalize, the rebased and revised MEI cost share weights. Because there are significant proposed methodological and data source changes to the MEI for

CY 2023 and significant time has elapsed since the last rebasing and revision of the MEI, we believe it is important to allow public comment and finalization of the proposed MEI changes based on the review of public comment before we incorporate the updated MEI into the PE GPCI.

As an alternative to using the current 2006-based cost share weights, we considered using the proposed rebased and revised Medicare Economic Index (MEI) cost share weights for CY 2023, as discussed in detail in section II.M. of this final rule for purposes of weighting the four components of the CY 2023 PE GPCI. Specifically, within the four components of the PE GPCI, we considered proposing to update the employee compensation component from 16.553 percent to 24.716 percent, the office rent component from 10.223 percent to 5.893 percent, the purchased services component from 8.095 percent to 13.914 percent, and the medical equipment, supplies, and other miscellaneous expense component from 9.968 percent to 6.819 percent, as shown in Table 159. We note that, as discussed in detail in section II.M. of this final rule, the finalized rebased and revised cost share weights differ slightly from the proposed rebased and revised MEI cost share weights used for this alternative considered.

**TABLE 159: Weighting of the PE GPCI Based on the Cost Share Weights for CY 2023**

| Expense Category             | Current Cost Share Weights | CY 2023 Cost Share Weights | Rebased and Revised Cost Share Weights as Proposed in Section II.M. |
|------------------------------|----------------------------|----------------------------|---|
| Practice Expense             | 44.839%                    | 44.839%                    | 51.341%   |
| - Employee Compensation      | 16.553%                    | 16.553%                    | 24.716%   |
| - Office Rent                | 10.223%                    | 10.223%                    | 5.893%%   |
| - Purchased Services         | 8.095%                     | 8.095%                     | 13.914%   |
| - Equipment, Supplies, Other | 9.968%                     | 9.968%                     | 6.819%  |

The use of the rebased and revised MEI cost share weights only impacts the PE GPCI. When the PE GPCI was calculated using the proposed rebased and revised MEI cost share weights, 10 of the 112 PE GPCI values remained the same compared to the calculated PE GPCI using the current 2006-based MEI cost share weights. Three of the 112 PE GPCI values differed by  $\pm 0.001$  and 68 of the 112 PE GPCI values differ less than or equal to  $\pm 0.009$ . Therefore, the provision to maintain the use of the

current 2006-based MEI cost share weights has little to no effect on over 70 percent of the localities' PE GPCIs. Of the remaining 31 localities with a difference of greater than  $\pm 0.009$  between the proposed PE GPCI and the alternative considered, 10 realize an increased PE GPCI when the current 2006-based MEI cost share weights were used, ranging from an increase of 0.010 to 0.012, as compared to the PE GPCI if the proposed rebased and revised MEI cost share weights were incorporated.

The remaining 21 localities realize a decrease in PE GPCI when the current 2006-based MEI cost share weights were used, ranging from a decrease of 0.010 to 0.028. We note that we solicited comments in section II.G. of this final rule on the provision to maintain the use of the current 2006-based MEI cost share weights and postpone the implementation of the proposed rebased and revised MEI cost share weights for consideration through potential future rulemaking. See Alternate Addenda D

and E to the proposed rule for the CY 2023 GPCIs and summarized GAFs if the proposed rebased and revised MEI cost share weights discussed in detail in section II.M. of the proposed rule, were incorporated to weight the proposed CY 2023 PE GPCIs (for comparison to Addenda D and E with the provision to maintain the current 2006-based MEI cost share weights for the PE GPCIs). Because the PE GPCIs factor into the GAF equation, we created an Alternate Addendum D to show the recalculated GAFs if the proposed rebased and revised MEI cost share weights were incorporated to weight the CY 2023 PE GPCIs as well. These alternative addenda are available on the CMS website under the supporting documents section of the CY 2023 PFS proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>. We note that only the PE GPCI and GAF values differ between Addenda D and E, and Alternate Addenda D and E, as the proposed rebased and revised cost share weights do not impact the work or MP GPCIs.

We received public comments on the provision to maintain the use of the current 2006-based MEI cost share weights and postpone the implementation of the rebased and revised MEI cost share weights for consideration through potential future rulemaking, which were discussed earlier in this final rule. In response to our comment solicitations, we received comments on the timing and implementation strategies for consideration in future rulemaking. We thank commenters for the information they provided and will continue to contemplate the suggestions as we consider future rulemaking.

### 3. Alternatives Considered Related to Payment for E/M Services

In developing our policies for other E/M visits effective January 1, 2023, we considered a number of alternatives. For reasons discussed in our E/M policy section (section II.F. of this final rule) we considered several refinements for the RUC-recommended work RVUs for several of the codes in the families based on survey time changes to include Hospital Inpatient or Observation Care, Nursing Facility visits, and Home or Residence Services. We proposed to accept the RUC recommendations for the work RVUs because we believe they are more accurate values. For some of these codes the overall times changed and the RUC recommended work RVUs accurately reflect changes based on changes in the times for the service. For some of the codes, changes were noted

in the total time and intra-service times which was reflected in the intra-time and total time ratios that led to an increase. Given our interest in maintaining continuity in the overall code set, we proposed to accept the RUC recommendations for the work time values and work RVUs for these codes and sought public comment on our concerns for specific codes.

We received public comments, which were discussed earlier in this final rule, related to revaluation of the Other E/M Visits. Commenters stated that CMS should finalize different values for some of the different families. For hospital inpatient and observation services, we received some comments that we should not accept the RUC-recommended values, especially for values that would decrease. These commenters recommended retaining the historical relative relationship between inpatient/observation and office/outpatient visits. We disagree that changes should never be made to adjust the relative valuation between office/outpatient visits and inpatient/observation care. Observation services are less intense than inpatient services, and the code set merger together with decreases in time, make it appropriate that we accept the RUC recommended values.

For ED visits, a few commenters did not agree with our rejection of the RUC-recommended decrease for one visit level, on the basis that this code would not be properly valued in relationship to the comparable office/outpatient visit. We continue to believe that this particular ED visit should have a higher RVU than the comparable outpatient/office visit, to reflect higher intensity.

For Nursing Facility visits, we received some comments indicating that due to anomalies in code descriptors and decreases in total time, we should retain current values or finalize alternative values, and ask the AMA to review this code family again. We believe this approach would be disruptive, so we are accepting the RUC values and may reconsider this family again in future rulemaking.

For Home and Residence services, a few commenters requested that CMS not finalize RUC-recommended decreases for some of the codes, to help cover costs associated with travel, addressing social determinants of health, and other comprehensive care. Historically, travel costs incurred by the physician or practitioner are not included in the valuation of E/M codes, since travel time and/or mileage is not considered a resource involved in furnishing the service. We appreciate the need to account for social determinants of health and other comprehensive care for

certain patients during home/residence visits. We are accepting the RUC-recommended values.

Commenters were concerned about the redistributive impacts of Other E/M revaluation under current legislation. Most commenters urged CMS to work with Congress on this issue, and some urged CMS to reactivate the complexity add-on for O/O visits promptly in 2024. Several commenters recommended that CMS continue to consider whether certain Other E/M revaluations disrupt appropriate PFS relativity. After considering the public comments, we are finalizing our proposals for revaluation of Other E/M's as proposed. For the majority of codes, this reflects the consensus reached at the RUC regarding Other E/M valuation. This does not necessarily mean that their valuation will not need to be adjusted in future years, and we will continue to consider appropriate valuation for all E/M visits as we gain experience with them under the new framework. We will also follow CPT proceedings for any additional developments, which we would consider through notice and comment rulemaking.

Regarding prolonged Other E/M services, in our proposed rule, after thoughtful consideration we proposed to develop Medicare-specific coding (three G-codes, one per setting) to avoid potentially substantial overpayment, provide administrative simplification, enable CMS to determine how much time is being spent with patients using claims data, and facilitate program integrity. Allowing for CMS to determine how much time is being spent with patients using claims data is important for future valuation of services on the PFS, and for program integrity. If we proposed to merely accept the CPT prolonged service coding changes, we would not be able to identify the time spent with patients in the claims data alone, because we might not know which primary service is the companion code to the prolonged service code(s) due to the wide service timespan (for prolonged services without direct patient contact) and non-specific care settings within the prolonged CPT code descriptors. We decided to take similar approach as we did for the office/outpatient E/M visits by proposing Medicare-specific coding (G0316 through G0318) for prolonged services for Other E/Ms. We considered two options in coming to our provision. First, we considered using the descriptor time plus 15 minutes, which would allow for prolonged Other E/M services to be reportable once the practitioner spends 15 additional minutes beyond the ceiling time of the

primary service. Or, our second option was to use total time plus 15 minutes, allowing for prolonged Other E/M services to be reportable once the practitioner spends 15 additional minutes beyond the total time of the primary service. Both of these options would allow for time to be counted on any day within the survey period with no frequency limit. We proposed to value the G codes similarly to the parallel CPT code, and require total time to be met before prolonged time starts. Reporting this way, through the use of a G code for each of the specified code families, allows for administrative simplicity and payment accuracy.

We received public comments, discussed earlier in this final rule, related to Medicare-specific coding for prolonged Other E/M services. While some commenters supported our approach, others felt it would result in administrative burden. Some commenters did not believe we should align reported times with survey times. The AMA stated that it would refer prolonged services back to the CPT Editorial Panel for potential further review, if CMS did not adopt the CPT codes for prolonged Other E/M services in the final rule.

We continue to believe that adopting the CPT codes for prolonged services would result in duplicative time counting, and reported times that do not align with work times used for valuation. Having three sets of codes for reporting time associated with a single visit is overly complex, and hinders our ability to assess how much time was spent with patients using claims data, and trends in time under the new framework. However, we agree with commenters that a uniform code set for use by all payers for prolonged services is important to further reduce administrative burden. After consideration of the public comments, we are finalizing our proposals for prolonged Other E/M services as proposed, and will continue to work with the AMA to potentially further refine and standardize this code set, through notice and comment rulemaking. We refer readers to the E/M Visits section of this final rule for a detailed discussion of these issues.

#### 4. Alternatives Considered Related to Provision To Allow Audiologists To Furnish Diagnostic Tests, as Appropriate Without a Physician Order

As discussed in section II.K. of this final rule, interested parties have told us that our regulatory requirement for a physician or NPP order for diagnostic audiology services may be impeding access to audiologists. More recently

they have requested that we eliminate the treating physician (or NPP) order requirement for the diagnostic hearing and balance assessment services furnished by audiologists—via notice and comment rulemaking—to enable greater access to these services.

As we also discussed in section II.K. of the final rule, we are concerned that direct access of audiologists' services, that is the removal of the order requirement for these hearing and balance services furnished by audiologists, might lead to payment for services that are not medically necessary because the results are not being used by a treating physician or NPP in the management of the patient's medical condition. Nonetheless, after careful consideration of the interested parties' requests, we proposed to amend the regulation at § 410.32(a)(4) to remove the order requirement for certain audiology services furnished personally by an audiologist once per beneficiary per 12-month period for non-acute hearing conditions. We also proposed to create HCPCS code GAUDX (*Audiology service(s) furnished personally by an audiologist without a physician/NPP order for non-acute hearing assessment unrelated to disequilibrium or hearing aids or examinations for the purpose of prescribing, fitting, or changing hearing aids; may be performed on an annual basis*) to describe audiology services furnished without the order of a treating physician or practitioner. However, we did not finalize the use of HCPCS code GAUDX to identify and pay audiology services furnished without a physician/NPP order, due to many commenters' concerns about HCPCS code GAUDX and support for instead establishing a new modifier, which increases the specificity for billing for audiology services and reduces burden for audiologists. As discussed later in this section, we are finalizing the use of a new modifier (AB), along with CPT codes audiologists already use, to identify audiology services furnished without the order of a physician or NPP, and making payment for those services as appropriate using the current CPT codes.

When developing our proposed policy, we considered adding audiologists to § 410.32(a)(2), under the provision that permits nonphysician practitioners to order diagnostic tests. However, unlike audiologists, the practitioners identified in this provision are all required to accept payment on an assignment-related basis under section 1842(b)(18)(C) of the Act and must accept the Medicare payment amount as payment in full. Medicare payment for

audiology services provided by audiologists who do not accept assignment will result in higher out-of-pocket expense (that is, the balance billed amount) than if they did accept assignment. In addition, Medicare Part B does not recognize audiologists to treat or manage patients, unlike PAs, NPs or CNSs who may bill for E/M services, and for whom Medicare Part B covers services and supplies incident to their own professional services as provided in the regulation at § 410.26. Rather, because audiology services furnished by audiologists include only diagnostic hearing and balance assessment services, we concluded that adding audiologists with the NPPs listed in § 410.32(a)(2) was inappropriate.

We also considered alternatively removing the requirement for the order of a treating physician or practitioner for audiology services without the annual limitation. However, we had concerns about the possibility of overutilization of HCPCS code GAUDX (which was not finalized) if the results of audiology testing are not used by a treating clinician to manage the patient's medical condition. Additionally, we do not have the ability to predict the behavioral response of audiologists to removal of order requirements. Therefore, we believe that adding an annual limitation will serve to address some of our concerns of overutilization. To monitor for the appropriate use of HCPCS code GAUDX (or modifier AB, as we finalized), we will establish system edits through our usual change management process to ensure that HCPCS code GAUDX (or, as finalized, services billed on the same date of service with modifier AB) is only paid once every 12 months per each beneficiary. This will also help address program integrity concerns about audiologists billing for directly accessed services without an order more frequently, furnishing services that are not reasonable or necessary for the treatment of the beneficiary's illness or injury. Finally, because we are concerned about beneficiaries with acute onset conditions that require immediate medical intervention, and the potential loss of valuable time for medical intervention if the patient sees an audiologist first, we are limiting the direct access to audiology services to non-acute hearing conditions and conditions for which patients' experience disequilibrium symptomatology. To help address these safety concerns about direct access to audiologists, we want to stress the importance that such hearing conditions with a rapid onset and balance

conditions with disequilibrium symptoms are to be referred directly to the primary care physician, ENT or other physician or NPP treating the beneficiary.

We received comments on our proposal to allow beneficiaries direct access to audiologists (without an order from the treating physician/NPP) for non-acute hearing conditions and without disequilibrium symptomology once every 12-months using the GAUDX code, as we discussed in Section II.K of this final rule. While a few commenters supported the use of the GAUDX code, including the built-in safeguards, many commenters supported an alternative approach using a new modifier, instead. We agreed with commenters that it would be more transparent to use a modifier alongside the CPT codes that audiologists already use that are paid at PFS rates rather than the proposed GAUDX code and its proposed amount. Although several medical organizations and societies did not support direct access to audiologists of any kind, a couple of commenters, including a medical specialty, agreed with specifically limiting the CPT codes to the same 36 codes we proposed that code GAUDX would encompass, this is, not including the 14 codes we had removed for vestibular function that are used for balance problems; while audiologists favored little or no restraints on which CPT codes they could bill for hearing and balance assessments. In consideration of the comments received, specifically, acknowledging that use of a modifier in this instance would be administratively simpler and transparent for audiologist practitioners, we are finalizing an alternative policy using a new modifier (AB), which still retains the safeguards we proposed to allow beneficiaries to directly access audiologists to provide non-acute hearing assessments, once every 12 months, using new modifier AB.

#### 5. Alternatives Considered Related to the Medicare Shared Savings Program

One purpose of the prior savings adjustment we are adopting in this final rule is to mitigate the rebasing ratchet effect on an ACO's benchmark in order to improve the incentive for higher spending ACOs to reduce spending in advance of eventual rebasing and to encourage their renewal for successive agreement periods. It remains a possibility, however, that even with this provision, higher spending ACOs that are effective in reducing spending may eventually drop out of the Shared Savings Program absent the opportunity to participate in a one-sided model in

the succeeding agreement period. While we project only 1 to 5 percent of new ACOs dropping out before the end of their first agreement period, the dropout rate could reach as high as 30 percent during the second agreement period. Signaling that risk will eventually be mandatory could prevent the formation of new low-revenue ACOs for whom a sharing-only incentive has proven to be effective. We considered an alternative in which low revenue ACOs would be permitted to participate in a one-sided model for a second full agreement period and estimate it would further increase program savings by at least \$1 billion because it would increase retention for the type of ACO that has favorably responded to a moderate upside-only incentive in the past. This additional savings would result from (1) about a 60 percent reduction in the projected dropout rate by the end of the second agreement period for new and re-entering ACOs and (2) an assumed incremental increase in the share of ACOs that would form as low revenue (a type that is assumed to be more effective at reducing spending). This alternative estimate is likely conservative, as the savings impact could be significantly greater if such signaling regarding the second agreement period were to prove to be a key factor motivating a significant increase in the overall number of ACOs that enter a first agreement period under the Shared Savings Program (instead of just the proportion that form as low revenue versus high revenue).

We also considered adding guardrails for calculating shared savings by limiting the difference the ACPT may be allowed to show (in either direction) from actual national assignable trend. As we discussed in the proposed rule, setting a prospective symmetric threshold for correcting extreme projection error would automatically correct for bias in either direction and prevent the need for CMS to address pressure to correct projection error on an ad hoc basis. Public pressure to correct for projection error would be strongest in situations where actual growth eclipses the ACPT by a significant margin. If CMS were assumed to only update the ACPT in years where such pressures were magnified because a change will favor ACOs, this impact estimate would show \$1.3 billion in additional spending over 10 years. This estimate presumes that CMS would limit deviation in ACPT from actual national trend to no more than 2 percent in years where the ACPT understates national trend. The cost of such policy to asymmetrically correct

for unfavorable projection error would grow if the threshold for making such adjustments were assumed to move lower than 2 percent.

#### 6. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. We ran separate final policies RIA models based on the actual mean for the CY 2019 performance period/2021 MIPS payment year and the CY 2020 performance period/2022 MIPS payment year with a performance threshold of 86 and 89, respectively which are potential values that may be used for the performance threshold for CY 2023 performance period/2025 MIPS payment year. The models have the same mean and median final score as our final policies RIA model since the performance threshold does not change the final score. In the iteration with a performance threshold of 86, 60.24 percent of MIPS eligible clinicians will receive a negative payment adjustment among engaged clinicians. In the model with a performance threshold of 89 points, 63.84 percent of MIPS eligible clinicians will receive a negative payment adjustment among those that submit data.

We report the findings for the baseline RIA model which describes the impact for the CY 2023 MIPS performance period/2025 MIPS payment year if this regulation did not exist. The baseline RIA model has a mean final score of 77.78 and median final score of 79.45. We estimate that \$699 million will be redistributed through budget neutrality. There will be a maximum payment adjustment of 6.1 percent after considering the MIPS payment adjustment. In addition, 38.81 percent of MIPS eligible clinicians will receive a negative payment adjustment among those that submit data.

#### G. Impact on Beneficiaries

##### 1. Shared Savings Program Provisions

As noted previously, a number of changes in this final rule collectively aim to increase participation in a more sustainable way for ACOs serving medically complex, high cost beneficiaries. The policies we are adopting in this final rule are designed to reverse recent trends where growth has plateaued in the Shared Savings Program, higher spending populations are increasingly underrepresented in the program since the change to regionally-adjusted benchmarks, and access to

ACOs appears inequitable as evidenced by data indicating that Black (or African American), Hispanic, Asian/Pacific Islander, and American Indian/Alaska Native beneficiaries are less likely to be assigned to a Shared Savings Program ACO than their Non-Hispanic White counterparts, and to encourage growth of ACOs in underserved communities.

Additionally, ACOs have been found to perform better on certain patient-experience and performance measures than physician groups participating in the MIPS. Increased participation in the Shared Savings Program will extend ACO care coordination and quality improvement to segments of the beneficiary population that potentially have more to benefit from care management, and will stave off the risk apparent in the previous trajectory of the Shared Savings Program where ACO participants and ACO providers/suppliers may have felt pressure to avoid engaging with beneficiaries in high needs communities in order to avoid assignment of high cost beneficiaries to their ACO and to improve their performance relative to a regional expenditures. In combination with the new participation options that are expected attract a mix of new participants, targeted provisions such as using an offset factor to reduce the negative regional adjustment for ACOs serving high risk and high dual populations, aim to increase the reach of ACO care coordination to more beneficiaries with high needs.

## 2. Quality Payment Program

There are several changes in this final rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup

provisions, if finalized, will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs.

Consequently, we anticipate this will improve the quality and value of care provided to Medicare beneficiaries. For example, several of the proposed new quality measures include patient-reported outcome-based measures, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and may also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcome-based measures are factors frequently of interest to patients when making decisions about treatment.

### H. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the total number of unique commenters on this year's final rule will be the number of reviewers of last year's rule. We acknowledge that this assumption may understate or overstate

the costs of reviewing this rule. It is possible that not all commenters will review this year's rule in detail, and it is also possible that some reviewers will choose not to comment on the rule. For these reasons we thought that the number of commenters will be a fair estimate of the number of reviewers of this year's final rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$115.22 per hour, including overhead and fringe benefits [https://www.bls.gov/oes/current/oes\\_nat.htm](https://www.bls.gov/oes/current/oes_nat.htm). Assuming an average reading speed, we estimate that it will take approximately 8.0 hours for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost is \$921.76 (8.0 hours × \$115.22). Therefore, we estimated that the total cost of reviewing this regulation is \$21,514,800 (\$931.35 × 23,341 reviewers on this year's proposed rule).

### I. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Tables 160 through 162 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2021 to CY 2022 based on the FY 2022 President's Budget baseline.

**TABLE 160: Accounting Statement: Classification of Estimated Expenditures**

| CATEGORY                               | TRANSFERS   |
|--|---|
| CY 2023 Annualized Monetized Transfers | Estimated increase in expenditures of -\$2.2 billion for PFS CF update.   |
| From Whom To Whom?                     | Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare. |

**TABLE 161: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings**

| CATEGORY  | TRANSFER                             |
|---|--------------------------------------|
| CY 2023 Annualized Monetized Transfers of beneficiary cost coinsurance. | -\$0.6 billion                       |
| From Whom to Whom?  | Beneficiaries to Federal Government. |

**TABLE 162: Accounting Statement for Provisions for the Medicare Shared Savings Program (CYs 2023-2034)**

| Category   | Primary Estimate | Minimum Estimate | Maximum Estimate | Source Citation |
|--|------------------|------------------|------------------|-----------------|
| <b>Transfers From the Federal Government to ACOs</b> |                  |                  |                  |                 |
| Annualized monetized:<br>Discount rate: 7%           | -1,139 million   | -458 million     | -1,744 million   | Table 152       |
| Annualized monetized:<br>Discount rate: 3%           | -1,197 million   | -484 million     | -1,876 million   |                 |

Notes: Negative values reflect reduction in federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects will be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

### J. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on October 26, 2022.

#### 42 CFR Part 455

Fraud, Grant programs—health, Health facilities, Health professions, Investigations, Medicaid, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

### **PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED**

■ 1. The authority citation for part 405 continues to read as follows:

**Authority:** 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 2. Section 405.2463 is amended by revising paragraph (b)(3) introductory text to read as follows:

#### **§ 405.2463 What constitutes a visit.**

\* \* \* \* \*

(b) \* \* \*

(3) *Visit—Mental health.* A mental health visit is a face-to-face encounter or

an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder, including an in-person mental health service, beginning 152 days after the end of the COVID–19 public health emergency, furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record, between an RHC or FQHC patient and one of the following:

\* \* \* \* \*

■ 3. Section 405.2469 is amended by revising paragraph (d) to read as follows:

#### **§ 405.2469 FQHC supplemental payments.**

\* \* \* \* \*

(d) *Per visit supplemental payment.* A supplemental payment required under this section is made to the FQHC when a covered face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit

a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in § 405.2463. Additionally, beginning 152 days after the end of the COVID-19 public health emergency, there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record.

#### **PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS**

■ 4. The authority citation for part 410 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 5. Amend § 410.10 by revising paragraphs (l) and (p) to read as follows:

#### **§ 410.10 Medical and other health services: Included services.**

(l) Pneumococcal, influenza, and COVID-19 vaccines and their administration.

(p) Hepatitis B vaccine and its administration, as defined in § 410.63(a) of this subchapter.

■ 6. Amend § 410.26 by revising paragraph (b)(5) to read as follows:

#### **§ 410.26 Services and supplies incident to a physician's professional services: Conditions.**

(b) \* \* \*

(5) In general, services and supplies must be furnished under the direct supervision of the physician (or other practitioner). Designated care management services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided incident to the services of a physician (or other practitioner). Behavioral health services can be furnished under general

supervision of the physician (or other practitioner) when these services or supplies are provided by auxiliary personnel incident to the services of a physician (or other practitioner). The physician (or other practitioner) supervising the auxiliary personnel need not be the same physician (or other practitioner) who is treating the patient more broadly. However, only the supervising physician (or other practitioner) may bill Medicare for incident to services.

\* \* \* \* \*

■ 7. Amend § 410.32 by adding paragraph (a)(4) to read as follows:

#### **§ 410.32 Diagnostic x-ray tests, diagnostic laboratory test, and other diagnostic tests: Conditions.**

(a) \* \* \*

(4) *Application to audiologists.* Except as otherwise provided in this paragraph, audiologists may personally furnish diagnostic audiology tests for a patient once per patient per 12-month period without an order from the physician or nonphysician practitioner treating the patient. Such diagnostic audiology tests can be for non-acute hearing conditions, but may not include audiology services that are related to disequilibrium, or hearing aids, or examinations for the purpose of prescribing, fitting, or changing hearing aids that are outlined at § 411.15(d). Audiology services furnished without an order from the treating physician or practitioner are billed using a modifier CMS designates for this purpose.

\* \* \* \* \*

■ 8. Amend § 410.37—

■ a. In paragraph (c)(1), by removing the phrase “under age 50” and adding in its place the phrase “under age 45”;

■ b. In paragraph (c)(2), by removing the phrase “individual 50 years of age” and adding in its place the phrase “individual 45 years of age”;

■ c. In paragraph (e)(1), by removing the phrase “under age 50” and adding in its place the phrase “under age 45”;

■ d. In paragraph (e)(2), by removing the phrase “individual 50 years of age” and adding in its place the phrase “individual 45 years of age”;

■ e. In paragraph (i)(1), by removing the phrase “individual age 50” and adding in its place the phrase “individual age 45”; and

■ f. By adding paragraph (k).

The addition reads as follows:

#### **§ 410.37 Colorectal cancer screening tests: Conditions for and limitations on coverage.**

\* \* \* \* \*

(k) *A complete colorectal cancer screening.* Effective January 1, 2023,

colorectal cancer screening tests include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based colorectal cancer screening test returns a positive result. The frequency limitations described for screening colonoscopy in paragraph (g) of this section shall not apply in the instance of a follow-on screening colonoscopy test described in this paragraph.

■ 9. Amend § 410.40 by revising paragraph (e)(2)(ii) to read as follows:

#### **§ 410.40 Coverage of ambulance services.**

\* \* \* \* \*

(e) \* \* \*

(2) \* \* \*

(ii) In all cases, the provider or supplier must keep appropriate documentation on file and, upon request, present it to CMS. The ambulance service must meet all program coverage criteria including vehicle and staffing requirements. While a signed physician certification statement (PCS), does not alone demonstrate that transportation by ground ambulance was medically necessary, the PCS and additional documentation from the beneficiary's medical record may be used to support a claim that transportation by ground ambulance is medically necessary. The PCS and additional documentation must provide detailed explanations, that are consistent with the beneficiary's current medical condition, that explains the beneficiary's need for transport by an ambulance, as described at § 410.41(a), that includes observation or other services rendered by qualified ambulance personnel, as described in § 410.41(b).

\* \* \* \* \*

■ 10. Amend § 410.57 by—

■ a. Revising the section heading and paragraph (a); and

■ b. Adding paragraph (d).

The revisions and addition read as follows:

#### **§ 410.57 Preventive vaccines.**

(a) Medicare Part B pays for the pneumococcal vaccine and its administration.

\* \* \* \* \*

(d) Medicare Part B pays for the Hepatitis B vaccine and its administration, as defined in § 410.63(a).

#### **§ 410.63 [Amended]**

■ 11. Amend § 410.63 in the introductory text by removing the phrase “vaccines (see § 405.310 of this chapter)” and adding in its place the phrase “vaccines (see § 411.15 of this chapter)”.

■ 12. Amend § 410.67 by—

■ a. In the definition of “Opioid use disorder treatment service” redesignating paragraphs (1) through (8) as paragraphs (i) through (viii) and revising newly redesignated paragraphs (vi) and (vii);

■ b. Revising (d)(2)(i)(B)(2);

■ c. Adding paragraph (d)(2)(iv); and

■ d. Revising paragraph (d)(4)(ii).

The revisions and addition read as follows:

**§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.**

\* \* \* \* \*

(b) \* \* \*

*Opioid use disorder treatment service*

\* \* \*

(vi) Intake activities, including initial medical examination services required under § 8.12(f)(2) of this title and initial assessment services required under § 8.12(f)(4) of this title. Services to initiate treatment with buprenorphine may be furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. In cases where audio-video communications technology is not available to the beneficiary, services to initiate treatment with buprenorphine may be furnished using audio-only telephone calls if all other applicable requirements are met.

(vii) Periodic assessment services required under § 8.12(f)(4) of this title, that are furnished during a face-to-face encounter, including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During the Public Health Emergency, as defined in § 400.200 of this chapter, and through the end of CY 2023, in cases where a beneficiary does not have access to two-way audio-video communications technology, periodic assessments can be furnished using audio-only telephone calls if all other applicable requirements are met.

\* \* \* \* \*

(d) \* \* \*

(2) \* \* \*

(i) \* \* \*

(B) \* \* \*

(2) For CY 2022, the payment amount for methadone is the payment amount determined under paragraph (d)(2)(i)(B)(1) of this section for methadone in CY 2021. For CY 2023 and subsequent years, the payment amount for methadone will be based on the payment amount determined under paragraph (d)(2)(i)(B)(1) of this section for methadone in CY 2021 and updated

by the PPI for Pharmaceuticals for Human Use (Prescription).

\* \* \* \* \*

(iv) *Increased level of psychotherapy.* For CY 2023 and subsequent years, the payment for the non-drug component of the bundled payment for an episode of care under paragraph (d)(2) of this section is adjusted to reflect the CY 2019 Medicare physician fee schedule non-facility rate for psychotherapy, 45 minutes with patient.

\* \* \* \* \*

(4) \* \* \*

(ii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be geographically adjusted using the Geographic Adjustment Factor described in § 414.26 of this subchapter. For purposes of this adjustment, OUD treatment services that are furnished via an OTP mobile unit will be treated as if they were furnished at the physical location of the OTP registered with the Drug Enforcement Administration (DEA) and certified by SAMHSA.

\* \* \* \* \*

**§ 410.78 [Amended]**

■ 13. Amend § 410.78 in paragraph (b)(3)(xiv) introductory text, by removing the phrase “the first day” and adding in its place the phrase “the day that is the 152nd day”.

■ 14. Amend § 410.152—

■ a. By revising paragraph (h);

■ b. In paragraph (l)(1), by removing the phrase “(as specified in paragraph (h) of this section)”.

The revision reads as follows:

**§ 410.152 Amounts of payment.**

\* \* \* \* \*

(h) *Amount of payment: Preventive vaccine administration.* For the administration of the preventive vaccines described in paragraph (l)(1) of this section, as furnished by providers described in §§ 409.100 and 410.150 of this subchapter, Medicare Part B pays the following amounts, except as otherwise provided under this subchapter:

(1) Effective January 1, 2022, for administration of an influenza, hepatitis B or pneumococcal vaccine, \$30 per dose.

(2) Effective January 1, 2022, for administration of a COVID-19 vaccine, \$40 per dose.

(3) For services furnished on or after January 1 of the year following the year

in which the Secretary ends the Emergency Use Authorization for drugs and biologicals issued pursuant to section 564 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360bbb-3), for administration of a COVID-19 vaccine, an amount equal to the amount that would be paid for the administration of a preventive vaccine described in paragraph (h)(1).

(4) The payment amount for the administration of a preventive vaccine described in paragraphs (h)(1) through (3) of this section is adjusted to reflect geographic cost variations:

(i) For services furnished before January 1, 2023, using the Geographic Practice Cost Indices (GPCIs) established for the year, as described in section 1848(e)(1) of the Act and §§ 414.2 and 414.26 of this subchapter.

(ii) For services furnished on or after January 1, 2023, using the Geographic Adjustment Factor (GAF) established for the year as described in section 1848(e)(2) of the Act and §§ 414.2 and 414.26 of this subchapter.

(5) The payment amount for administration of a preventive vaccine described in paragraphs (h)(1) through (3) of this section is updated annually using the percentage change in the Medicare Economic Index (MEI) as described in section 1842(i)(3) of the Act and § 405.504(d) of this subchapter.

\* \* \* \* \*

**PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT**

■ 15. The authority citation for part 411 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1395w-101 through 1395w-152, 1395hh, and 1395nn.

■ 16. Amend § 411.15 by revising paragraph (i) to read as follows:

**§ 411.15 Particular services excluded from coverage.**

\* \* \* \* \*

(i) *Dental services—(1) Basic rule.* *Dental services* in connection with the care, treatment, filling, removal, or replacement of teeth, or structures directly supporting the teeth.

(2) *Exception.* *Except* for inpatient hospital services in connection with such dental procedures when hospitalization is required because of—

(i) The individual’s underlying medical condition and clinical status; or  
(ii) The severity of the dental procedures.<sup>577</sup>

<sup>577</sup> Before July 1981, inpatient hospital care in connection with dental procedures was covered only when required by the patient’s underlying medical condition and clinical status.

(3) *Inapplicability.* (i) Dental services that are inextricably linked to, and substantially related and integral to the clinical success of, a certain covered medical service are not excluded; payment may be made under Medicare Parts A and B for services furnished in the inpatient or outpatient setting. Such services include, but are not limited to:

(A) Dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered organ transplant, cardiac valve replacement, or valvuloplasty procedures; and, medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, the organ transplant, cardiac valve replacement, or valvuloplasty procedure.

(B) The reconstruction of a dental ridge performed as a result of and at the same time as the surgical removal of a tumor.

(C) The stabilization or immobilization of teeth in connection with the reduction of a jaw fracture, and dental splints only when used in conjunction with covered treatment of a covered medical condition such as dislocated jaw joints.

(D) The extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease.

(ii) Ancillary services and supplies furnished incident to covered dental services are not excluded, and Medicare payment may be made under Part A or Part B, as applicable, whether the service is performed in the inpatient or outpatient setting, including, but not limited to the administration of anesthesia, diagnostic x-rays, use of operating room, and other related procedures.

\* \* \* \* \*

## PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 17. The authority citation for part 414 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1395hh, and 1395rr(b)(l).

■ 18. Amend § 414.502 by revising the definitions of “Data collection period” and “Data reporting period” to read as follows:

### § 414.502 Definitions.

\* \* \* \* \*

*Data collection period* is the 6 months from January 1 through June 30 during which applicable information is collected and that precedes the data

reporting period, except that for the data reporting period of January 1, 2023 through March 31, 2023, the data collection period is January 1, 2019 through June 30, 2019.

*Data reporting period* is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period, except that for the data collection period of January 1, 2019 through June 30, 2019, the data reporting period is January 1, 2023 through March 31, 2023.

\* \* \* \* \*

### § 414.504 [Amended]

■ 19. Amend § 414.504 in paragraph (a)(1) by removing the reference “January 1, 2022” and adding in its place the reference “January 1, 2023”.

■ 20. Amend § 414.507 by—

■ a. Revising paragraph (d) introductory text and paragraph (d)(5);

■ b. Adding paragraph (d)(8);

■ c. Removing paragraph (f); and

■ d. Redesignating paragraphs (g) and (h) as paragraphs (f) and (g), respectively.

The revisions and addition read as follows:

### § 414.507 Payment for clinical diagnostic laboratory tests.

\* \* \* \* \*

(d) *Phase-in of payment reductions.* For years 2018 through 2025, the payment rates established under this section for each CDLT that is not a new ADLT or new CDLT, may not be reduced by more than the following amounts for—

\* \* \* \* \*

(5) 2022—0.0 percent of the payment rate established in 2021.

\* \* \* \* \*

(8) 2025—15 percent of the payment rate established in 2024.

\* \* \* \* \*

■ 21. Add § 414.523 to subpart G to read as follows:

### § 414.523 Payment for laboratory specimen collection fee and travel allowance.

(a) *Specimen collection fee and travel allowance.* In addition to the payment amounts provided under this subpart for CDLTs, new CDLTs, and new ADLTs, CMS pays a specimen collection fee, as set forth in paragraph (a)(1) of this section, and a travel allowance, as set forth in paragraph (a)(2) of this section.

(1) *Payment for specimen collection.* Except as provided in paragraph (a)(1)(v) of this section and subject to the annual update in paragraph (a)(1)(iv)

of this section, beginning January 1, 2023, CMS pays \$8.57 for all specimens collected in one patient encounter, where the specimen(s) is:

(i) Used to perform a CDLT paid under this subpart G;

(ii) Collected by a trained technician from a Medicare beneficiary who is—

(A) Homebound as described in 42 CFR 424.22(a)(1)(ii).

(B) A non-hospital inpatient, but only when no qualified personnel are available at the facility to collect the specimen;

(iii) Of the following type—

(A) Blood specimen collected through venipuncture.

(B) A urine sample collected by catheterization.

(iv) Beginning January 1, 2024, CMS updates the specimen collection fee amount under paragraph (a)(1) of this section for each calendar year by the percent change in the Consumer Price Index for All Urban Consumers (CPI-U) (U.S. city average) for the 12-month period ending June 30th of the year preceding the update year.

(v) For a specimen collected from a Medicare beneficiary.

(2) *Payment for travel allowance—(i) General requirement.* CMS pays a travel allowance, as calculated under paragraph (a)(2)(iii) of this section, where the specimen is one for which a specimen collection fee is paid under paragraph (a)(1) of this section.

(ii) *Travel allowance basis.* CMS pays a travel allowance on the following bases:

(A) *Flat-rate travel allowance.* The flat-rate travel allowance applies when the trained technician travels 20 eligible miles or less (calculated in accordance with paragraph (a)(2)(iii)(A) of this section) to and from one location for specimen collection from one or more Medicare beneficiaries; or

(B) *Per-mile travel allowance.* The per-mile travel allowance applies when:

(1) The trained technician travels more than 20 eligible miles (calculated in accordance with paragraph (a)(2)(iii)(A) of this section) to and from one location for specimen collection from one or more Medicare beneficiaries; or

(2) The trained technician travels to more than one location for specimen collection from more than one Medicare beneficiary.

(iii) *Travel allowance amount—(A) Eligible miles.* Eligible miles begin at the laboratory or the starting point of the technician's travel for specimen collection as specified in paragraph (a)(1) of this section, and end at the laboratory or the ending point of the technician's travel for specimen

collection as specified in paragraph (a)(1) of this section. Eligible miles do not include miles traveled for any purpose unrelated to specimen collection as specified in paragraph (a)(1) of this section, such as collecting specimens from non-Medicare beneficiaries or for personal reasons.

(B) *Travel allowance mileage rate.* The travel allowance mileage rate is equal to the IRS standard mileage rate plus an amount to cover expenses for a trained technician equal to the most recent median hourly wage for phlebotomists, as published by the United States Bureau of Labor Statistics, divided by 40 to represent an average miles-per-hour driving speed.

(C) *Travel allowance amount calculation.* (1) For the flat-rate travel allowance basis specified in paragraph (a)(2)(ii)(A) of this section, the travel allowance amount is the travel allowance mileage rate specified in paragraph (a)(2)(iii)(B) of this section multiplied by ten, divided by the number of beneficiaries for whom a specimen collection fee is paid under paragraph (a)(1) of this section.

(2) For the per-mile travel allowance basis specified in paragraph (a)(2)(ii)(B) of this section, the travel allowance amount is the number of eligible miles multiplied by the travel allowance mileage rate specified in paragraph (a)(2)(iii)(B) of this section, divided by the number of beneficiaries for whom a specimen collection fee is paid under paragraph (a)(1) of this section.

(b) [Reserved]

#### § 414.626 [Amended]

■ 22. Amend § 414.626—

■ a. In paragraph (d)(1) introductory text, by removing the phrase “must submit a request form (accessed on the Ambulances Services Center website (<https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>) to CMS” and adding in its place the phrase “must submit a request to CMS, in the form and manner specified by CMS.”; and

■ b. In paragraph (e)(2) introductory text, by removing the phrase “by submitting all of the following information:” and adding in its place the phrase “by submitting a request to CMS, in the form and manner specified by CMS, that includes all of the following information:”.

#### § 414.707 [Amended]

■ 23. Amend § 414.707 in paragraph (a)(2)(iii), by removing the phrase “(as determined by the Secretary)” and adding in its place the phrase “(as defined in § 410.63(a) of this subchapter).”

■ 24. Amend § 414.902 by adding the definition of “Refundable single-dose container or single-use package drug” in alphabetical order to read as follows:

#### § 414.902 Definitions.

\* \* \* \* \*

*Refundable single-dose container or single-use package drug* means a single source drug or biological or a biosimilar biological product for which payment is made under this part and that is furnished from a single-dose container or single-use package based on FDA-approved labeling or product information. The term “refundable single-dose container or single-use package drug” excludes—

(1) A drug that is a therapeutic radiopharmaceutical, a diagnostic radiopharmaceutical, or an imaging agent as identified in the drug’s FDA-approved labeling.

(2) A drug for which the FDA-approved labeling for any National Drug Code assigned to a billing and payment code of such drug requires filtration during the drug preparation process, prior to dilution and administration and that any unused portion of such drug after the filtration process be discarded after the completion of such filtration process.

(3) A drug approved or licensed by the FDA on or after November 15, 2021, until the last day of the sixth full quarter for which the drug has been marketed (as reported to CMS) for the first National Drug Code assigned to the billing and payment code of such drug.

\* \* \* \* \*

#### § 414.904 [Amended]

■ 25. Amend § 414.904 in paragraph (e)(1), by removing the phrase “(as determined by the Secretary)” and adding in its place the phrase “(as defined in § 410.63(a) of this subchapter).”

■ 26. Section § 414.940 is added to subpart K to read as follows:

#### § 414.940 Refund for certain discarded single-dose container or single-use package drugs.

(a) *Provision of information to manufacturers*—(1) *In general.* For each calendar quarter beginning on or after January 1, 2023, CMS reports to each manufacturer (as defined in § 414.802) of a refundable single-dose container or single-use package drug the following for the calendar quarter:

(i) Information on the total number of billing units of the billing and payment code of such drug, if any, that were discarded during such quarter, as determined by the JW modifier (or any

successor modifier that includes the same data).

(ii) The refund amount that the manufacturer is liable for pursuant to paragraph (a)(3) of this section.

(iii) For purposes of this section, the term billing unit means the identifiable quantity associated with a billing and payment code, as established by CMS.

(2) *Exclusion of units of packaged drugs.* The total number of billing units of the billing and payment code of a refundable single-dose container or single-use package drug of a manufacturer furnished during a calendar quarter for purposes of paragraph (a)(1) of this section, and the determination of the estimated total allowed charges for the drug in the quarter for purposes of paragraph (c)(2) of this section, shall not include such units that are packaged into the payment amount for an item or service and are not separately payable.

(3) *Reports.* Reports are sent once annually.

(b) *Manufacturer requirement.* For each calendar quarter beginning on or after January 1, 2023, the manufacturer of a refundable single-dose container or single-use package drug shall, for such drug, pay a refund that is equal to the amount determined in accordance with paragraph (c) of this section for such drug for such quarter.

(1) Refund amounts that the manufacturer is liable for pursuant to this paragraph are paid in 12-month intervals, in a manner specified by CMS.

(2) In the case that a disputed report results in a refund amount due, refund amounts that the manufacturer is liable for pursuant to this paragraph shall be paid no later than 30 days following the resolution of the dispute.

(3) Amounts paid as refunds pursuant to this paragraph shall be deposited into the Federal Supplementary Medical Insurance Trust Fund established under section 1841 of the Act.

(c) *Refund amount.* The amount of the refund specified in this paragraph is, with respect to a refundable single-dose container or single-use package drug of a manufacturer assigned to a billing and payment code for a calendar quarter beginning on or after January 1, 2023, an amount equal to the estimated amount (if any) by which—

(1) The product of:

(i) The total number of units of the billing and payment code for such drug that were discarded during such quarter; and

(ii) The amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such quarter.

(2) Exceeds an amount equal to the applicable percentage of the estimated total allowed charges for such drug for the quarter.

(3) For purposes of paragraph (c)(1)(ii) of this section, the term “applicable percentage” means 10 percent except where an increased applicable percentage is applied in paragraph (d) of this section.

(d) *Treatment of drugs that have unique circumstances.* For purposes of paragraph (c)(1)(ii) of this section, the term “applicable percentage” means

(1) 35 percent for drugs that are reconstituted with a hydrogel and have variable dosing based on patient-specific characteristics

(2) [Reserved]

(e) *Dispute resolution.* Each manufacturer has an opportunity to dispute information in the report described in paragraph (a) of this section by submitting an error report as described in this paragraph.

(1) *Error report information.* To assert that there have been one or more errors in the report, a manufacturer must submit a dispute with each asserted error and provide the following information—

(i) Manufacturer name and address;

(ii) The name, telephone number, and email address of one or more employees or representatives of the manufacturer.

(iii) For a mathematical calculation error, the specific calculation element(s) that the manufacturer disputes and its proposed corrected calculation;

(iv) For any other asserted error, an explanation of the nature of the error, how the error affects the refund calculation, an explanation of why the manufacturer believes that an error occurred, the proposed correction to the error, and an explanation of why CMS should use the proposed corrected data.

(2) *Form, manner, and timing of submission.* Each manufacturer asserting an error must submit its error report(s), in the form and manner specified by CMS, within 30-days after the issuance of the report.

(e) *Enforcement.* (1) *Manufacturer audits.* Each manufacturer of a refundable single-dose container or single-use package drug that is required to provide a refund under this section shall be subject to periodic audit with respect to such drug and such refunds.

(2) *Civil money penalty.* The Secretary shall impose a civil money penalty on a manufacturer of a refundable single-dose container or single-use package drug who has failed to comply with the requirement under paragraph (b) of this section for such drug for a calendar quarter in an amount equal to the sum of—

(i) The amount that the manufacturer would have paid under such paragraph with respect to such drug for such quarter; and

(ii) 25 percent of such amount.

■ 27. Section § 414.1305 is amended by—

■ a. Adding the definition of “Facility-based group”;

■ b. Revising the definitions of “Facility-based MIPS eligible clinician”, “High priority measure”, “Multispecialty group”, “Single specialty group”, and “Third party intermediary” to read as follows:

**§ 414.1305 Definitions.**

\* \* \* \* \*

*Facility-based group* means a group that CMS determines meets the criteria specified in § 414.1380(e)(2)(ii).

*Facility-based MIPS eligible clinician* means an individual MIPS eligible clinician who CMS determines meets the criteria specified in § 414.1380(e)(2)(i).

\* \* \* \* \*

*High priority measure* means an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, opioid, or health equity-related quality measure.

\* \* \* \* \*

*Multispecialty group* means a group as defined at § 414.1305 that consists of two or more specialty types as determined by CMS using Medicare Part B claims.

\* \* \* \* \*

*Single specialty group* means a group as defined at § 414.1305 that consists of one specialty type as determined by CMS using Medicare Part B claims.

\* \* \* \* \*

*Third party intermediary* means an entity that CMS has approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity for one or more of the quality, improvement activities, and Promoting Interoperability performance categories.

\* \* \* \* \*

■ 28. Amend § 414.1318 by—

■ a. Revising paragraph (a)(1);

■ b. Adding paragraphs (a)(3) and (4); and

■ c. Revising paragraphs (b) and (c)(2). The revisions and addition read as follows:

**§ 414.1318 Subgroups.**

(a) \* \* \*

(1) *General.* Except as provided under paragraph (a)(2) of this section and subject to paragraph (a)(4) of this

section, for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for a subgroup is determined at the group level in accordance with §§ 414.1305 and 414.1310.

\* \* \* \* \*

(3) *Single subgroup per eligible clinician.* An individual eligible clinician (as represented by a TIN–NPI combination) may register for no more than one subgroup within a group’s TIN.

(4) *Subgroup determination period.* CMS will apply the low-volume threshold criteria for a subgroup as described under paragraph (a)(1) of this section using information from the initial 12-month segment of the applicable MIPS determination period.

(b) *Final score.* Except as provided under § 414.1317(b) and paragraph (b)(1) of this section, each MIPS eligible clinician in the subgroup receives a final score based on the subgroup’s combined performance.

(1) CMS will not assign a final score for a subgroup that registers and does not submit data as a subgroup for the applicable performance period.

(2) [Reserved]

(c) \* \* \*

(2) Individual eligible clinicians that elect to participate in MIPS as a subgroup will have their performance assessed at the subgroup level across all the MIPS performance categories based on an MVP in accordance with § 414.1365. Subgroups that are MVP Participants must adhere to an election process described in § 414.1365(b).

■ 29. Amend § 414.1340 by adding paragraphs (a)(4) and (b)(4) to read as follows:

**§ 414.1340 Data completeness criteria for the quality performance category.**

(a) \* \* \*

(4) At least 75 percent of the MIPS eligible clinician or group’s patients that meet the measure’s denominator criteria, regardless of payer for MIPS payment years 2026 and 2027.

\* \* \* \* \*

(b) \* \* \*

(4) At least 75 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment years 2026 and 2027.

\* \* \* \* \*

■ 30. Amend § 414.1365 by—

■ a. Adding paragraph (b)(2)(iii);

■ b. Revising paragraph (d)(3)(i)(A)(1);

■ c. Adding paragraphs (d)(3)(i)(B)(1) and (2);

■ d. Adding paragraphs (d)(3)(ii)(A) and (B).

The additions and revisions read as follows:

**§ 414.1365 MIPS Value Pathways.**

\* \* \* \* \*

- (b) \* \* \*  
(2) \* \* \*

(iii) TINs must provide a description of each subgroup that is registered.

\* \* \* \* \*

- (d) \* \* \*  
(3) \* \* \*  
(i) \* \* \*  
(A) \* \* \*

(1) A subgroup is scored on each selected population health measure based on its affiliated group score, if available. If the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points.

(2) [Reserved]

\* \* \* \* \*

- (B) \* \* \*

(1) A subgroup is scored on each selected outcomes-based administrative claims measure based on its affiliated group score, if available. If the subgroup's affiliated group score is not available, each such measure will receive zero measure achievement points.

(2) [Reserved]

- (ii) \* \* \*

(A) A subgroup is scored on each cost measure included in the MVP that it selects and reports based on its affiliated group score for each such measure, if available. If the subgroup's affiliated group score is not available for a measure, the measure is excluded from the subgroup's total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2)(i) through (v).

(B) [Reserved]

\* \* \* \* \*

■ 31. Amend § 414.1380 by—

- a. Adding paragraph (b)(1)(ii)(D); and  
■ b. Revising paragraphs (b)(2)(iv)(E), (b)(4)(ii)(B) and (C), (c)(2)(i)(A)(4)(i) and (iii), (c)(3) introductory text, (e)(2) introductory text, (e)(2)(ii), (e)(4), (e)(5)(i) and (ii), (e)(6)(iv) and (v), and (e)(6)(vi)(A) and (B).

The addition and revisions read as follow:

**§ 414.1380 Scoring.**

\* \* \* \* \*

- (b) \* \* \*  
(1) \* \* \*  
(ii) \* \* \*

(D) Beginning with the CY 2023 performance period/2025 MIPS payment year, CMS will calculate a benchmark for an administrative claims quality measure using the performance

on the measures during the current performance period.

\* \* \* \* \*

- (2) \* \* \*  
(iv) \* \* \*

(E) The maximum cost improvement score for the 2020, 2021, 2022, and 2023 MIPS payment years is zero percentage points. The maximum cost improvement score beginning with the 2024 MIPS payment year is 1 percentage point.

\* \* \* \* \*

- (4) \* \* \*  
(ii) \* \* \*

(B) For the 2019 performance period/2021 MIPS payment year through the 2022 performance period/2024 MIPS payment year, each required measure is worth 10, 20, or 40 points, as specified by CMS. For the 2023 performance period/2025 MIPS payment year and subsequent years, each required measure is worth 10, 15, 25 or 30 points, as specified by CMS.

(C) For the 2019 performance period/2021 MIPS payment year through the 2022 performance period/2024 MIPS payment year, each optional measure is worth five or ten bonus points, as specified by CMS. For the 2023 performance period/2025 MIPS payment year and subsequent years, each optional measure is worth five bonus points, as specified by CMS.

- (c) \* \* \*  
(2) \* \* \*  
(i) \* \* \*  
(A) \* \* \*  
(4) \* \* \*

(i) For the 2021 through 2025 MIPS payment years, the MIPS eligible clinician is a physical therapist, occupational therapist, clinical psychologist, qualified audiologist, qualified speech-language pathologist, or a registered dietitian or nutrition professional. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

\* \* \* \* \*

(iii) For the 2024 through 2025 MIPS payment years, the MIPS eligible clinician is a clinical social worker. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

\* \* \* \* \*

(3) *Complex patient bonus.* For the CY 2020, 2021, 2022, and 2023 MIPS

payment years and associated performance periods, provided that a MIPS eligible clinician, group, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as stated in paragraphs (c)(3)(i) through (iv) of this section. For the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii) of this section. Beginning with the CY 2023 MIPS performance period/CY 2025 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, or is a facility-based MIPS eligible clinician, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii) of this section.

\* \* \* \* \*

- (e) \* \* \*

(2) *Eligibility for facility-based measurement.* A MIPS eligible clinician is eligible for facility-based measurement for a MIPS payment year if CMS determines the MIPS eligible clinician to be facility-based as an individual clinician or as part of a group, or beginning with the 2023 performance period/2025 MIPS payment year, a virtual group, as follows:

\* \* \* \* \*

(ii) *Facility-based MIPS eligible group determination.* A facility-based MIPS eligible group is a group in which 75 percent or more of its eligible clinician NPIs billing under the group's TIN meet the requirements under paragraph (e)(2)(i) of this section.

\* \* \* \* \*

(4) *Data submission for facility-based measurement.* There are no data submission requirements for a MIPS eligible individual clinician to be scored under facility-based measurement. A MIPS eligible group must submit data in the improvement activities or Promoting Interoperability performance categories in order to be scored as a facility-based MIPS eligible group.

(5) \* \* \*

(i) A facility-based MIPS eligible clinician is scored with facility-based measurement using the score derived from the value-based purchasing score for the facility at which the clinician provided services to the most Medicare beneficiaries during the period the claims are drawn from in paragraph (e)(2) of this section. If there is an equal number of Medicare beneficiaries treated at more than one facility, the value-based purchasing score for the highest scoring facility is used.

(ii) A facility-based MIPS eligible group is scored with facility-based measurement using the score derived from the value-based purchasing score for the facility at which the plurality of clinicians identified as facility-based would have had their score determined under paragraph (e)(5)(i) of this section.

(6) \* \* \*

(iv) *Quality*. The quality performance category score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified year as described in paragraph (e)(1) of this section and awarding a score associated with that same percentile performance in the MIPS quality performance category score for those MIPS-eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. A MIPS eligible clinician or group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS quality performance category.

(v) *Cost*. The cost performance category score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified year as described in paragraph (e)(1) of this section and awarding a score associated with that same percentile performance in the MIPS cost performance category score for those MIPS eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. A MIPS eligible clinician or MIPS eligible group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS cost performance category.

\* \* \* \* \*

(vi) \* \* \*

(A) For the CY 2019 MIPS performance period/2021 MIPS payment year, through the CY 2021 MIPS performance period/2023 MIPS payment year, a MIPS eligible clinician or group receives a higher combined

MIPS quality and cost performance category score through another MIPS submission.

(B) Beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, a MIPS eligible clinician or group receives a higher MIPS final score through another MIPS submission.

■ 32. Amend § 414.1400 by—

■ a. Revising paragraphs (b)(4)(i)(B), (b)(4)(iii)(A)(3), and (e)(1)(i)(B);

■ b. Adding paragraphs (e)(1)(i)(E);

■ c. Revising paragraph (e)(2) introductory text and (e)(3);

■ d. Adding paragraph (e)(5); and

■ e. Revising paragraph (f)(1).

The revisions and additions read as follows:

**§ 414.1400 Third party intermediaries.**

\* \* \* \* \*

(b) \* \* \*

(4) \* \* \*

(i) \* \* \*

(B) For a QCDR measure, the entity must submit for CMS approval measure specifications including: Name/title of measure, NQF number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS posting of all approved specifications for a QCDR measure, the entity must publicly post the CMS-approved measure specifications for the QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted.

\* \* \* \* \*

(iii) \* \* \*

(A) \* \* \*

(3) Beginning with the CY 2022 performance period/2024 MIPS payment year, CMS may approve a QCDR measure only if the QCDR measure meets face validity. Beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR measure approved for a previous performance year must be fully developed and tested, with complete testing results at the clinician level, prior to self-nomination.

\* \* \* \* \*

(e) \* \* \*

(1) \* \* \*

(i) \* \* \*

(B) The impact to individual clinicians, groups, virtual groups, subgroups, or APM Entities, regardless of whether they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to

participating in the MIPS program, and any QCDRs that were granted licenses to the measures of a QCDR upon which a CAP has been imposed.

\* \* \* \* \*

(E) The communication plan for communicating the impact to the parties identified in paragraph (e)(1)(i)(B) of this section.

(2) CMS may immediately or with advance notice terminate a third party intermediary for one or more of the following reasons:

\* \* \* \* \*

(3) A data submission that contains data inaccuracies affecting the third party intermediary's total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

\* \* \* \* \*

(5) Beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under paragraph (b)(3)(viii) of this section, but does not submit MIPS data for the applicable performance period for which they self-nominated under paragraph (b)(3)(viii) of this section, will be terminated.

(f) \* \* \*

(1) The entity must make available to CMS the contact information of each MIPS eligible clinician, group, virtual group, subgroup, or APM Entity on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity phone number, address, and, if available, email.

\* \* \* \* \*

■ 33. Amend § 414.1405 by revising paragraph (b)(9) to read as follows:

**§ 414.1405 Payment.**

\* \* \* \* \*

(b) \* \* \*

(9) Pursuant to the methodology established at paragraph (g) of this section:

(i) The performance threshold for the 2024 MIPS payment year is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

(ii) The performance threshold for the 2025 MIPS payment year is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

\* \* \* \* \*

■ 34. Amend § 414.1415 by—

■ a. Revising paragraph (b)(3);

■ b. Adding paragraph (b)(4); and

■ c. Revising paragraphs (c)(3)(i)(A) and (c)(7).

The revisions and addition read as follows:

**§ 414.1415 Advanced APM criteria.**

\* \* \* \* \*

(b) \* \* \*

(3) The quality measures upon which an Advanced APM bases the payment in paragraph (b)(1) of this section must include at least one measure that is an outcome measure unless CMS determines that there are no available or applicable outcome measures included in the MIPS final quality measures list for the Advanced APM's first QP Performance Period. Beginning January 1, 2020, the included outcome measure must satisfy the criteria in paragraph (b)(2) of this section.

(4) A single quality measure that meets the criteria under both paragraphs (b)(2) and (3) of this section may be used to satisfy the requirements of paragraph (b)(1) of this section.

(c) \* \* \*

(3) \* \* \*

(i) \* \* \*

(A) For QP Performance Periods beginning in 2023, 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities; or

\* \* \* \* \*

(7) *Medical Home Model 50 eligible clinician limit.* Beginning in the 2023 QP Performance Period, notwithstanding paragraphs (c)(2) and (4) of this section, if an APM Entity participating in a Medical Home Model is comprised of more than 50 eligible clinicians, as determined by that APM Entity's Participation List on any of the three QP determination dates (March 31, June 30, and August 31 of the QP Performance Period), the requirements of paragraphs (c)(1) and (3) of this section apply.

■ 35. Amend § 414.1420 by—

■ a. Revising paragraph (c)(3)(ii);

■ b. Adding paragraph (c)(4); and

■ c. Revising paragraphs (d)(3)(i) and (d)(8).

The revisions and addition read as follows:

**§ 414.1420 Other payer advanced APM criteria.**

\* \* \* \* \*

(c) \* \* \*

(3) \* \* \*

(ii) For QP Performance Periods on or after January 1, 2020, use at least one measure that is an outcome measure and meets the criteria in paragraph (c)(2)(ii) of this section if there is such an applicable outcome measure on the MIPS quality measure list.

(4) A single quality measure that meets the criteria under both paragraphs (c)(2) and (3) of this section may be used to satisfy the requirements of paragraph (c)(1) of this section.

(d) \* \* \*

(3) \* \* \*

(i) For QP Performance Periods beginning in 2023, 8 percent of the total combined revenues from the payer to providers and other entities under the payment arrangement if financial risk is expressly defined in terms of revenue; or, 3 percent of the expected expenditures for which an APM Entity is responsible under the payment arrangement.

\* \* \* \* \*

(8) *Aligned Other Payer Medical Home Model and Medicaid Medical Home Model 50 eligible clinician limit.* Beginning with the 2023 QP Performance Period, notwithstanding paragraphs (d)(2) and (4) of this section, if an APM Entity participating in an Aligned Other Payer Medical Home Model or Medicaid Medical Home Model is comprised of 50 or more eligible clinicians is comprised of more than 50 eligible clinicians, as determined by the information submitted for any of the three QP determination dates (March 31, June 30, and August 31 of the QP Performance Period) as specified in § 414.1440(e), the requirements of paragraphs (d)(1) and (3) of this section apply.

■ 36. Amend § 414.1430 by—

■ a. Revising paragraphs (a)(2)(iii);

■ b. Removing the second paragraph (a)(3)(ii);

■ c. Adding paragraphs (a)(3)(iii) and (iv);

■ d. Revising paragraph (a)(4)(iii);

■ e. Adding paragraph (a)(4)(iv); and

■ f. Revising paragraphs (b)(3)(i)(A) and (B), and (b)(4)(i)(A) and (B).

The revisions and additions read as follows:

**§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.**

(a) \* \* \*

(2) \* \* \*

(iii) 2023 and 2024: 40 percent.

\* \* \* \* \*

(3) \* \* \*

(iii) 2023 and 2024: 35 percent.

(iv) 2025 and later: 50 percent.

(4) \* \* \*

(iii) 2023 and 2024: 25 percent.

(iv) 2025 and later: 35 percent.

(b) \* \* \*

(3) \* \* \*

(i) \* \* \*

(A) 2021 through 2024: 35 percent.

(B) 2025 and later: 50 percent.

\* \* \* \* \*

(4) \* \* \*

(i) \* \* \*

(A) 2021 through 2024: 25 percent.

(B) 2025 and later: 35 percent.

\* \* \* \* \*

■ 37. Amend § 414.1440 by revising paragraph (e)(2) to read as follows:

**§ 414.1440 Qualifying APM participant determination: All-payer combination option.**

\* \* \* \* \*

(e) \* \* \*

(2) To request a QP determination under the All-Payer Combination Option, for each payment arrangement submitted as set forth in paragraph (e)(1) of this section, the APM Entity or eligible clinician must include:

(i) The amount of revenue for services furnished through the payment arrangement, the total revenue received from all payers except those excluded as provided in paragraph (a)(2) of this section, the number of patients furnished any service through the arrangement, and the total number of patients furnished any services, except those excluded as provided in paragraph (a)(2) of this section; and

(ii) In the case of an APM Entity or eligible clinician requesting a QP determination under either a Medicaid Medical Home Model or Aligned Other Payer Medical Home Model pursuant to the criteria in § 414.1420, information specified by CMS for purposes of compliance with the 50 eligible clinician limit specified at § 414.1420(d)(8).

\* \* \* \* \*

**§ 414.1450 [Amended]**

■ 38. Amend § 414.1450(c)(8) by removing the reference “November 1” and adding in its place the reference “September 1”.

**PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS**

■ 39. The authority for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

**§ 415.140 [Amended]**

■ 40. Transfer § 415.140 from subpart D to subpart C.

■ 41. In § 415.140 in paragraph (a) amend the definition of “Substantive portion” by removing the reference “2022” and adding in its place the reference “2022 and 2023”.

**PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT**

■ 42. The authority citation for part 423 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1306, 1395w–101 through 1395w–152, and 1395hh.

■ 43. Amend § 423.160 by revising paragraphs (a)(5)(ii) and (iii) to read as follows:

**§ 423.160 Standards for electronic prescribing.**

(a) \* \* \*

(5) \* \* \*

(ii) Prescriber issues 100 or fewer controlled substance prescriptions for Part D drugs per calendar year as determined using CMS claims data with dates of service as of December 31st of the current year.

(iii) Prescriber has an address in PECOS in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity. If a prescriber does not have an address in PECOS, prescriber has an address in NPDES in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity.

\* \* \* \* \*

**PART 424—CONDITIONS FOR MEDICARE PAYMENT**

■ 44. The authority for part 424 continues to read as follows:

**Authority:** 42 U.S.C. 1302 and 1395hh.

■ 45. Amend § 424.57 by adding paragraph (b)(6) to read as follows:

**§ 424.57 Special payment rules for items furnished by DMEPOS suppliers and issuance of DMEPOS supplier billing privileges.**

\* \* \* \* \*

(b) \* \* \*

(6) The supplier is in compliance with all conditions of payment in paragraph (b) of this section, as well as with paragraph (c)(1)(ii)(A) of this section, at the time the item or service is furnished.

\* \* \* \* \*

■ 46. Amend § 424.502 by adding the definitions of “Director”, “Managing organization” and “Officer” in alphabetical order to read as follows:

**§ 424.502 Definitions.**

\* \* \* \* \*

*Director* means a director of a corporation, regardless of whether the provider or supplier is a non-profit entity. This includes any member of the corporation’s governing body irrespective of the precise title of either the board or the member.

\* \* \* \* \*

*Managing organization* means an entity that exercises operational or managerial control over, or that directly or indirectly conducts, the day-to-day operations of the provider or supplier, either under contract or through some other arrangement.

\* \* \* \* \*

*Officer* means an officer of a corporation, regardless of whether the provider or supplier is a non-profit entity.

\* \* \* \* \*

■ 47. Amend § 424.518 by—

■ a. Revising the introductory text;

■ b. Removing paragraph (a)(1)(xviii);

■ c. Adding paragraph (b)(1)(xiv);

■ d. Revising paragraph (c)(1)

introductory text; and

■ e. Adding paragraphs (c)(1)(v) and (vi), and (c)(4).

The revision and additions read as follows:

**§ 424.518 Screening levels for Medicare providers and suppliers.**

A Medicare contractor is required to screen all initial applications, revalidation applications, change of ownership applications pursuant to 42 CFR 489.18, applications to add a new practice location, and applications to report any new owner (regardless of ownership percentage) pursuant to a change of information or other enrollment transaction under title 42, based on a CMS assessment of risk and assignment to a level of “limited,” “moderate,” or “high.”

\* \* \* \* \*

(b) \* \* \*

(1) \* \* \*

(xiv) Revalidating skilled nursing facilities (SNFs)

\* \* \* \* \*

(c) \* \* \*

(1) *High categorical risk: Provider and supplier categories.* CMS has designated the following provider and supplier types as “high” categorical risk:

\* \* \* \* \*

(v) Prospective (newly enrolling) (SNFs).

(vi) Enrolled OTPs that have not been fully and continuously certified by SAMHSA since October 23, 2018, DMEPOS suppliers, MDPP suppliers, HHAs, and SNFs that are submitting a change of ownership application pursuant to 42 CFR 489.18 or reporting any new owner (regardless of ownership percentage) pursuant to a change of information or other enrollment transaction under title 42.

\* \* \* \* \*

(4) Any screening level adjustment under paragraph (c)(3) of this section also applies to all other enrolled and

prospective providers and suppliers that have the same legal business name and tax identification number as the provider or supplier for which the screening level under paragraph (c)(3) of this section was originally raised.

\* \* \* \* \*

■ 48. Amend § 424.530 by—

■ a. Revising paragraphs (a)(2) and (a)(3) introductory text;

■ b. Adding paragraph (a)(3)(iii); and

■ c. Revising paragraph (c).

The revisions and addition read as follows:

**§ 424.530 Denial of enrollment in the Medicare program.**

(a) \* \* \*

(2) *Provider or supplier conduct.* (i) The provider or supplier, or any owner, managing employee, managing organization, officer, director, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a federal health care program, of the provider or supplier is—

(A) Excluded from the Medicare, Medicaid, and any other Federal health care program, as defined in § 1001.2 of this chapter, in accordance with section 1128, 1128A, 1156, 1842, 1862, 1867 or 1892 of the Act.

(B) Debarred, suspended, or otherwise excluded from participating in any other Federal procurement or nonprocurement activity in accordance with section 2455 of the Federal Acquisition Streamlining Act (FASA).

(ii) The individuals and organizations identified in paragraph (a)(2)(i) of this section include, but are not limited to, W–2 employees and contracted individuals and organizations of the provider or supplier.

(3) *Felonies.* The provider, supplier, or any owner, managing employee, managing organization, officer, or director of the provider or supplier was, within the preceding 10 years, convicted (as that term is defined in 42 CFR 1001.2) of a Federal or State felony offense that CMS determines is detrimental to the best interests of the Medicare program and its beneficiaries.

\* \* \* \* \*

(iii) The individuals and organizations identified in paragraph (a)(3) of this section include, but are not limited to, W–2 employees and contracted individuals and organizations of the provider or supplier.

\* \* \* \* \*

(c) *Reversal of denial.* If the denial was due to adverse activity (sanction,

exclusion, debt, felony) of an owner, managing employee, managing organization, officer, director, authorized or delegated official, medical director, supervising physician, or other health care personnel of the provider or supplier furnishing Medicare reimbursable services, the denial may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that individual or organization within 30 days of the denial notification.

\* \* \* \* \*

■ 49. Amend § 424.535 by—

■ a. Revising paragraphs (a)(2) and (a)(3)(i);

■ b. Adding paragraph (a)(3)(iv); and

■ c. Revising paragraphs (a)(12)(ii) and (e).

The revisions and addition read as follows:

**§ 424.535 Revocation of enrollment in the Medicare program.**

(a) \* \* \*

(2) *Provider or supplier conduct.* (i) The provider or supplier, or any owner, managing employee, managing organization, officer, director, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, of the provider or supplier is—

(A) Excluded from the Medicare, Medicaid, and any other Federal health care program, as defined in § 1001.2 of this chapter, in accordance with section 1128, 1128A, 1156, 1842, 1862, 1867 or 1892 of the Act.

(B) Debarred, suspended, or otherwise excluded from participating in any other Federal procurement or nonprocurement activity in accordance with the FASA implementing regulations and the Department of Health and Human Services nonprocurement common rule at 45 CFR part 76.

(ii) The individuals and organizations identified in paragraph (a)(2)(i) of this section include, but are not limited to, W–2 employees and contracted individuals and organizations of the provider or supplier.

(3) \* \* \*

(i) The provider, supplier, or any owner, managing employee, managing organization, officer, or director of the provider or supplier was, within the preceding 10 years, convicted (as that term is defined in 42 CFR 1001.2) of a Federal or State felony offense that CMS determines is detrimental to the best

interests of the Medicare program and its beneficiaries.

\* \* \* \* \*

(iv) The individuals and organizations identified in paragraph (a)(3) of this section include, but are not limited to, W–2 employees and contracted individuals and organizations of the provider or supplier.

\* \* \* \* \*

(12) \* \* \*

(ii) Medicare may not revoke unless and until a provider or supplier has exhausted all applicable appeal rights or the timeframe for filing an appeal has expired without the provider or supplier filing an appeal.

\* \* \* \* \*

(e) *Reversal of revocation.* If the revocation was due to adverse activity (sanction, exclusion, or felony) against the provider's or supplier's owner, managing employee, managing organization, officer, director, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, the revocation may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that individual within 30 days of the revocation notification.

\* \* \* \* \*

**PART 425—MEDICARE SHARED SAVINGS PROGRAM**

■ 50. The authority citation for part 425 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

■ 51. Amend § 425.20 by—

■ a. In paragraph (2) of the definition of “Experienced with performance-based risk Medicare ACO initiatives” by removing the phrase “prior to the agreement start date”;

■ b. In paragraph (2) of the definition of “Inexperienced with performance-based risk Medicare ACO initiatives” by removing the phrase “prior to the agreement start date”;

■ c. In the definition of “Performance-based risk Medicare ACO initiative”:

■ i. Revising paragraph (1)(i);

■ ii. Redesignating paragraphs (1)(ii) and (1)(iii) as paragraphs (1)(iii) and (1)(iv); and

■ iii. Adding a new paragraph (1)(ii).

The revision and addition read as follows:

**§ 425.20 Definitions.**

\* \* \* \* \*

**Performance-based risk Medicare ACO initiative**

\* \* \* \* \*

(1) \* \* \*

(i) For performance years beginning prior to January 1, 2023, BASIC track (Levels A through E).

(ii) For performance years beginning January 1, 2023 and in subsequent years, BASIC track (Levels C through E).

\* \* \* \* \*

■ 52. Amend § 425.100 by—

■ a. Revising paragraph (b)(1); and

■ b. Adding paragraph (d).

The revision and addition read as follows:

**§ 425.100 General.**

\* \* \* \* \*

(b) \* \* \*

(1) The ACO meets or exceeds the applicable minimum savings rate established under §§ 425.604, 425.605 (except as provided under § 425.605(h)), 425.606, 425.609, or 425.610.

\* \* \* \* \*

(d) An ACO is eligible to receive advance investment payments if it meets the criteria under § 425.630(b).

**§ 425.204 [Amended]**

■ 53. Amend § 425.204(g) introductory text by removing the references “§ 425.601, § 425.602, or § 425.603” and adding in its place the references “§§ 425.601, 425.602, 425.603, or 425.652”.

**§ 425.224 [Amended]**

■ 54. Amend § 425.224(a)(4) by removing the phrase “, or a one-sided model of the BASIC track’s glide path (Level A or Level B),”.

■ 55. Amend § 425.302 by adding paragraph (a)(3)(iv) to read as follows:

**§ 425.302 Program requirements for data submission and certifications.**

(a) \* \* \*

(3) \* \* \*

(iv) That the ACO has moved all advance investment payments received during that performance year into a designated advance investment payments account established under § 425.630(e) and the advance investment payments have been dispersed only for allowable uses.

\* \* \* \* \*

■ 56. Amend § 425.308 by adding paragraph (b)(8) to read as follows:

**§ 425.308 Public reporting and transparency.**

\* \* \* \* \*

(b) \* \* \*

(8) Information, updated annually about the ACO’s use of advance

investment payments under § 425.630, for each performance year, including the following:

- (i) The ACO's spend plan.
- (ii) The total amount of any advance investment payments received from CMS.
- (iii) An itemization of how advance investment payments were spent during the year, including expenditure categories, the dollar amounts spent on the various categories, any changes to the spend plan submitted under § 425.630(d), and such other information as may be specified by CMS.

\* \* \* \* \*

■ 57. Section 425.310 is revised to read as follows:

**§ 425.310 Marketing requirements.**

(a) *Requirements.* Marketing materials and activities must:

- (1) Use template language developed by CMS, if available.
- (2) Not be used in a discriminatory manner or for discriminatory purposes.
- (3) Comply with § 425.304 regarding beneficiary incentives.
- (4) Not be materially inaccurate or misleading.

(b) *Monitoring.* (1) CMS may request the submission of marketing materials and activities at any time. If CMS determines that the marketing materials and activities do not comply with the requirements of paragraph (a) of this section, CMS will issue written notice of disapproval to the ACO.

(2) The ACO shall discontinue, and require its ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities to discontinue, use of any marketing materials or activities disapproved by CMS.

(c) *Sanctions.* Failure to comply with this section will subject the ACO to the penalties set forth in § 425.216, termination under § 425.218, or both.

■ 58. Amend § 425.312 by revising paragraph (a)(2) to read as follows:

**§ 425.312 Beneficiary notifications.**

(a) \* \* \*

(2) Notification of the information specified in paragraph (a)(1) of this section must be carried out through the following methods:

- (i) By an ACO participant posting signs in all of its facilities.
- (ii) By an ACO participant making standardized written notices available upon request in all settings in which beneficiaries receive primary care services.
- (iii) In the case of an ACO that has selected preliminary prospective

assignment with retrospective reconciliation, by the ACO or ACO participant providing each fee-for-service beneficiary with a standardized written notice at least once during an agreement period in the form and manner specified by CMS. The standardized written notice must be furnished to all fee-for-service beneficiaries prior to or at the first primary care service visit during the first performance year in which the beneficiary receives a primary care service from an ACO participant.

(iv) In the case of an ACO that has selected prospective assignment, by the ACO or ACO participant providing each prospectively assigned beneficiary with a standardized written notice at least once during an agreement period in the form and manner specified by CMS. The standardized written notice must be furnished during the performance year for which the beneficiary is prospectively assigned to the ACO.

(v) Following the provision of the standardized written notice to a beneficiary, as specified in paragraphs (a)(2)(iii) and (iv) of this section, the ACO or ACO participant must provide a verbal or written follow-up communication to the beneficiary.

(A) The follow-up communication must occur no later than the earlier of the beneficiary's next primary care service visit or 180 days from the date the standardized written notice was provided.

(B) The ACO must retain a record of all beneficiaries receiving the follow-up communication, and the form and manner in which the communication was made available to the beneficiary. The ACO must make these records available to CMS upon request.

\* \* \* \* \*

■ 59. Amend § 425.316 by adding paragraph (e) to read as follows:

**§ 425.316 Monitoring of ACOs.**

\* \* \* \* \*

(e) *Monitoring ACO eligibility for advance investment payments.* (1) CMS monitors an ACO that receives advance investment payments pursuant to § 425.630 for changes in its ACO participants that may cause the ACO to no longer meet the standards specified in § 425.630(b)(3) and (4).

(2) If CMS determines during any performance year of the agreement period that an ACO receiving advance investment payments is experienced with performance-based risk Medicare ACO initiatives or is a high revenue ACO, CMS—

- (i) Will cease payment of advance investment payments, starting the

quarter after the ACO became experienced with performance-based risk Medicare ACO initiatives or became a high revenue ACO.

(ii) May take compliance action as specified in §§ 425.216 and 425.218.

(3) If an ACO remains an ACO experienced with performance-based risk Medicare ACO initiatives or a high revenue ACO after a deadline specified by CMS pursuant to compliance action under this section, the ACO must repay all advance investment payments it received. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

■ 60. Amend § 425.400 by—

■ a. Revising paragraph (c)(1)(vi) introductory text; and

■ b. Adding paragraph (c)(1)(vii).

The addition and revision read as follows:

**§ 425.400 General.**

\* \* \* \* \*

(c) \* \* \*

(1) \* \* \*

(vi) For the performance year starting on January 1, 2022 as follows:

\* \* \* \* \*

(vii) For the performance year starting on January 1, 2023, and subsequent performance years as follows:

(A) CPT codes:

(1) 96160 and 96161 (codes for administration of health risk assessment).

(2) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(3) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

(4) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(5) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

(6) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(vii)).

(7) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(8) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(9) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(10) 99439 (code for non-complex chronic care management).

(11) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(12) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(13) 99495 and 99496 (codes for transitional care management services).

(14) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(1) G0402 (code for the Welcome to Medicare visit).

(2) G0438 and G0439 (codes for the annual wellness visits).

(3) G0442 (code for alcohol misuse screening service).

(4) G0443 (code for alcohol misuse counseling service).

(5) G0444 (code for annual depression screening service).

(6) G0463 (code for services furnished in ETA hospitals).

(7) G0506 (code for chronic care management).

(8) G2010 (code for the remote evaluation of patient video/images).

(9) G2012 and G2252 (codes for virtual check-in).

(10) G2058 (code for non-complex chronic care management).

(11) G2064 and G2065 (codes for principal care management services).

(12) G0317, G0318, and G2212 (codes for prolonged office or other outpatient visit for the evaluation and management of a patient).

(13) G2214 (code for psychiatric collaborative care model).

(14) G3002 and G3003 (codes for chronic pain management).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(vii)(A) of this section or a HCPCS code specified in paragraph (c)(1)(vii)(B) of this section, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

\* \* \* \* \*

■ 61. Amend § 425.402 by adding paragraph (f) to read as follows:

**§ 425.402 Basic assignment methodology.**

\* \* \* \* \*

(f) For performance year 2023 and subsequent performance years, CMS

employs the following process to identify services furnished by FQHCs, RHCs, Method II CAHs, and ETA hospitals for purposes of the beneficiary assignment methodology under this section.

(1) Prior to the start of the performance year and periodically during the performance year, CMS will determine the CCNs for all FQHCs, RHCs, Method II CAHs, and ETA hospitals enrolled under the TIN of an ACO participant, including all CCNs with an active enrollment in Medicare and all CCNs with a deactivated enrollment status.

(2) CMS uses the CCNs identified in paragraph (f)(1) of this section in determining assignment for the performance year.

(3) CMS accounts for changes in CCN enrollment status during the performance year as follows:

(i) If a CCN with no prior Medicare claims experience enrolls under the TIN of an ACO participant after the ACO certifies its ACO participant list for a performance year as required under § 425.118(a)(3), CMS will consider services furnished by that CCN in determining beneficiary assignment to the ACO for the applicable performance year for ACOs under preliminary prospective assignment with retrospective reconciliation.

(ii) Services furnished by a CCN with a deactivated enrollment status that is enrolled under an ACO participant at the start of a performance year will be considered in determining beneficiary assignment to the ACO for the applicable performance year or benchmark year.

(iii) If a CCN enrolled under the TIN of an ACO participant at the start of the performance year enrolls under a different TIN during a performance year, CMS will continue to treat services billed by the CCN as services furnished by the ACO participant it was enrolled under at the start of the performance year for purposes of determining beneficiary assignment to the ACO for the applicable performance year.

■ 62. Amend § 425.512—

■ a. In paragraph (a)(4)(i)(A), by removing the phrase “quality performance score” and adding in its place the phrase “health equity adjusted quality performance score”;

■ b. By revising paragraph (a)(4)(ii) and adding paragraph (a)(4)(iii);

■ c. By revising paragraphs (a)(5)(i) and (ii) and adding paragraph (a)(5)(iii)

■ d. By adding paragraph (a)(6);

■ e. By redesignating paragraph (b) as paragraph (c);

■ f. By adding new paragraph (b);

■ g. In newly redesignated paragraph (c)(2) introductory text, by removing the reference “paragraph (b)(1) of this section” and adding in its place the reference “paragraph (c)(1) of this section”; and

■ h. By revising newly redesignated paragraph (c)(3).

The revisions and additions read as follows:

**§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.**

(a) \* \* \*

(4) \* \* \*

(ii) For performance year 2023, CMS designates an alternative quality performance standard for an ACO that does not meet the criteria described in paragraphs (a)(2) or (a)(4)(i) of this section, but reports quality data via the APP established under § 414.1367 of this subchapter according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set.

(iii) If an ACO does not report any of the ten CMS Web Interface measures or any of the three eQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard or the alternative quality performance standard.

\* \* \* \* \*

(5) \* \* \*

(i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this subchapter, according to the method of submission established by CMS and the following:

(A) For performance year 2024—

(1) Achieving a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or

(2) If the ACO reports the three eQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter and the case minimum requirement at § 414.1380 of this subchapter for all three eQMs/MIPS CQMs, achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure

set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set.

(B) For performance year 2025 and subsequent years—Achieving a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

(ii) CMS designates an alternative quality performance standard for an ACO that does not meet the criteria described in paragraphs (a)(2) or (a)(5)(i) of this section, but reports quality data via the APP established under § 414.1367 of this subchapter according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set.

(iii) An ACO will not meet the quality performance standard or the alternative quality performance standard if:

(A) For performance year 2024, the ACO does not report any of the ten CMS Web Interface measures or any of the three eQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP.

(B) For performance year 2025 and subsequent years, the ACO does not report any of the three eQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP.

(6) For performance years 2022, 2023, and 2024, CMS designates a performance benchmark and minimum attainment level for each CMS Web Interface measure and establishes a point scale for the measure as described in § 425.502(b).

(b) *Calculation of ACO's health equity adjusted quality performance score for performance year 2023 and subsequent performance years.*

(1) For an ACO that reports the three eQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eQMs/MIPS CQMs, and administers the CAHPS for MIPS survey, CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(2) of this section. The sum of these values may not exceed 100 percent.

(2) CMS calculates the ACO's health equity adjustment bonus points as follows:

(i) For each measure in the APP measure set, CMS groups an ACO's performance into the top, middle, or bottom third of ACO measure performers by reporting mechanism.

(ii) CMS assigns values to the ACO for its performance on each measure as follows:

(A) Values of four, two, or zero for each measure for which the ACO's performance places it in the top, middle, or bottom third of ACO measure performers, respectively.

(B) Values of zero for each measure that CMS does not evaluate because the ACO does not meet the case minimum or the minimum sample size for the measure.

(iii) CMS sums the values assigned to the ACO according to paragraph (b)(2)(ii) of this section, to calculate the ACO's measure performance scaler.

(iv) CMS calculates an underserved multiplier for the ACO.

(A) CMS determines the proportion ranging from zero to one of the ACO's assigned beneficiary population for the performance year that is considered underserved based on the highest of —

(1) The proportion of the ACO's assigned beneficiaries residing in a census block group with an Area Deprivation Index national percentile rank of at least 85; or

(2) The proportion of the ACO's assigned beneficiaries that are enrolled in the Medicare Part D low-income subsidy (LIS); or are dually eligible for Medicare and Medicaid.

(B) If the proportion determined in accordance with paragraph (b)(2)(iv)(A) of this section is lower than 20 percent, the ACO is ineligible for health equity adjustment bonus points.

(v) Except as specified in paragraph (b)(2)(iv)(B) of this section, CMS calculates the ACO's health equity adjustment bonus points as the product of the measure performance scaler determined under paragraph (b)(2)(iii) of this section and the underserved multiplier determined under paragraph (b)(2)(iv) of this section. If the product of these values is greater than 10, the value of the ACO's health equity adjustment bonus points is set equal to 10.

(3) The ACO's health equity adjusted quality performance score, determined in accordance with paragraphs (b)(1) and (b)(2) of this section, is used as follows:

(i) In determining whether the ACO meets the quality performance standard as specified under paragraphs

(a)(4)(i)(A), (a)(5)(i)(A)(1), and (a)(5)(i)(B) of this section.

(ii) In determining the final sharing rate for calculating shared savings payments under the BASIC track in accordance with § 425.605(d), and under the ENHANCED track in accordance with § 425.610(d), for an ACO that meets the alternative quality performance standard by meeting the criteria specified in paragraphs (a)(4)(ii) or (a)(5)(ii) of this section.

(iii) In determining the shared loss rate for calculating shared losses under the ENHANCED track in accordance with § 425.610(f), for an ACO that meets the quality performance standard established in paragraphs (a)(2), (a)(4)(i) and (a)(5)(i) of this section or the alternative quality performance standard established in paragraphs (a)(4)(ii) or (a)(5)(ii) of this section.

(iv) In determining the quality performance score for an ACO affected by extreme and uncontrollable circumstances as described in paragraphs (c)(3)(ii) and (iii) of this section.

(c) \* \* \*

(3) If the ACO reports quality data via the APP and meets data completeness and case minimum requirements:

(i) For performance years 2021 and 2022, CMS will use the higher of the ACO's quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(ii) For performance year 2023, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(iii) For performance year 2024 and subsequent performance years, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

\* \* \* \* \*

■ 63. Amend § 425.600—

■ a. By revising the heading of paragraph (a)(4)(i)(B);

■ b. In paragraph (a)(4)(i)(B)(2)(ii), revise the last sentence.

■ c. In paragraph (a)(4)(i)(B)(2)(iv), by removing the phrase “For performance year 2023, the ACO is automatically advanced to the level of the BASIC track’s glide path to which the ACO would have automatically advanced absent the election to maintain its participation level for performance year 2022” and adding in its place the phrase “Except as provided in paragraph (a)(4)(i)(B)(2)(vi) of this section, for performance year 2023, the ACO is automatically advanced to the level of the BASIC track’s glide path to which the ACO would have automatically advanced absent the election to maintain its participation level for performance year 2022”;

■ d. By adding paragraphs (a)(4)(i)(B)(2)(vi) and (vii), and (a)(4)(i)(C);

■ e. In paragraph (a)(4)(ii), by removing the reference “paragraph (d) of this section” and adding in its place the references “paragraph (d) or paragraph (g)(2) of this section, as applicable”;

■ f. In paragraph (d) introductory text, by removing the phrase “beginning on July 1, 2019, and in subsequent years” and adding in its place the phrase “beginning on or after July 1, 2019, and before January 1, 2024”;

■ g. By revising paragraph (e) introductory text;

■ h. In paragraph (f)(4)(ii), by removing the reference “§ 425.601(f)” and adding in its place the references “§§ 425.601(f), and 425.656(d)”;

■ i. In paragraph (f)(4)(iii), by removing the reference “§ 425.601(e)” and adding in its place the references “§§ 425.601(e), and 425.652(c)(2)”;

■ j. By adding paragraphs (g) and (h).

The revisions and additions read as follows:

#### § 425.600 Selection of risk model.

(a) \* \* \*  
(4) \* \* \*  
(i) \* \* \*

(B) *Glide path progression for agreement periods beginning on or after July 1, 2019 and before January 1, 2024.*  
\* \* \*

(2) \* \* \*

(ii) \* \* \* In the case of an ACO that elects to remain in Level B for an additional performance year pursuant to the second sentence of paragraph (a)(4)(i)(B)(2)(ii) of this section, and except as provided in paragraph (a)(4)(i)(B)(2)(vi) of this section, the ACO is automatically advanced to Level E under paragraph (a)(4)(i)(A)(5) of this section at the start of performance year 4 (or performance year 5 in the case of ACOs entering an agreement period beginning on July 1, 2019).

\* \* \* \* \*

(vi) For performance year 2023, an ACO in Level A under paragraph (a)(4)(i)(A)(1) of this section or in Level B under paragraph (a)(4)(i)(A)(2) of this section may elect to remain in the same level of the BASIC track’s glide path in which it participated during performance year 2022, for the remainder of the agreement period, unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track’s glide path as provided in § 425.226(a)(2)(i). If the ACO does not elect to remain under Level A or Level B, for performance year 2023, the ACO is automatically advanced to the next level of the BASIC track’s glide path to which the ACO would have automatically advanced absent any election to maintain its participation level for performance year 2022 under paragraph (a)(4)(i)(B)(2)(iv) of this section and, if applicable, the election to maintain its participation level for performance year 2021 under paragraph (a)(4)(i)(B)(2)(iii) of this section, unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track’s glide path as provided in § 425.226(a)(2)(i). A voluntary election by an ACO under this paragraph must be made in the form and manner and by a deadline established by CMS.

(vii) For performance year 2024, an ACO with an agreement period beginning January 1, 2023 in Level A under paragraph (a)(4)(i)(A)(1) of this section or in Level B under paragraph (a)(4)(i)(A)(2) of this section may elect to remain in the same level of the BASIC track’s glide path in which it participated during performance year 2023, for the remainder of the agreement period, unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track’s glide path as provided in § 425.226(a)(2)(i). If the ACO does not elect to remain under Level A or Level B, for performance year 2024, the ACO is automatically advanced to the next level of the BASIC track’s glide path, unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track’s glide path as provided in § 425.226(a)(2)(i). A voluntary election by an ACO under this paragraph must be made in the form and manner and by a deadline established by CMS.

\* \* \* \* \*

(C) *Glide path progression for agreement periods beginning on or after January 1, 2024. (1) Level of glide path entry.* An ACO eligible to enter the BASIC track’s glide path as determined under paragraph (g)(1) of this section

may elect to enter its agreement period at any of the levels of risk and potential reward available under paragraphs (a)(4)(i)(A)(1) through (5) of this section.

(2) *Automatic advancement.* An ACO is automatically advanced to the next level of the BASIC track’s glide path at the start of each subsequent performance year of the agreement period, if a higher level of risk and potential reward is available under the BASIC track, except as follows:

(i) The ACO elects to transition to a higher level of risk and potential reward within the BASIC track’s glide path as provided in § 425.226(a)(2)(i).

(ii) The ACO elects to maintain its level of participation as provided in paragraph (a)(4)(i)(C)(3) of this section.

(iii) The ACO is automatically advanced to Level E pursuant to paragraph (h)(2)(i) of this section.

(3) *Election to remain under a one-sided model.* An eligible ACO that enters the BASIC track’s glide path at Level A under paragraph (a)(4)(i)(A)(1) of this section and is currently at Level A may elect to remain in Level A under paragraph (a)(4)(i)(A)(1) of this section for all subsequent performance years of the agreement period.

(i) To be eligible to participate under Level A of the BASIC track as described in this paragraph, the ACO must meet the following requirements: the ACO is participating in its first agreement period under the BASIC track under paragraph (a)(4) of this section, and is not participating in an agreement period under the BASIC track as a renewing ACO (as defined at § 425.20) or a re-entering ACO (as defined in § 425.20) that previously participated in the BASIC track’s glide path under paragraph (a)(4) of this section; and the ACO is inexperienced with performance-based risk Medicare ACO initiatives (as defined in § 425.20).

(ii) A voluntary election by an ACO under this paragraph (a)(4)(i)(C)(3) must be made in the form and manner and by a deadline established by CMS.

(iii) The ACO’s election to remain in Level A applies for the entirety of the agreement period, unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track’s glide path as provided in § 425.226(a)(2)(i).

(4) Prior to entering performance-based risk, an ACO must meet all requirements to participate under performance-based risk, including establishing an adequate repayment mechanism as specified under § 425.204(f) and selecting a MSR/MLR from the options specified under § 425.605(b).

(5) If the ACO fails to meet the requirements to participate under performance-based risk under paragraph (a)(4)(i)(C)(4) of this section, the agreement is terminated.

(6) If, in accordance with § 425.226(a)(2)(i), the ACO elects to transition to a higher level of risk and reward available under paragraphs (a)(4)(i)(A)(3) through (5) of this section, then the automatic transition to levels of higher risk and reward specified in paragraph (a)(4)(i)(C)(2) of this section applies to all subsequent performance years of the agreement period.

\* \* \* \* \*

(e) For performance years beginning on or after July 1, 2019 and before January 1, 2024, CMS monitors low revenue ACOs identified as experienced with performance-based risk Medicare ACO initiatives, during an agreement period in the BASIC track, for changes in the revenue of ACO participants that would cause the ACO to be considered a high revenue ACO and ineligible for participation in the BASIC track. If the ACO meets the definition of a high revenue ACO (as specified in § 425.20)—

\* \* \* \* \*

(g) For agreement periods beginning on or after January 1, 2024, CMS determines an ACO's eligibility for the Shared Savings Program participation options specified in paragraph (a) of this section as follows:

(1) If an ACO is determined to be inexperienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track's glide path at any of the levels of risk and potential reward under paragraphs (a)(4)(i)(A)(1) through (5) of this section, or the ENHANCED track under paragraph (a)(3) of this section.

(i) An ACO that is inexperienced with performance-based risk Medicare ACO initiatives may participate under the BASIC track's glide path for a maximum of two agreement periods, as specified in paragraph (a)(4)(i)(C) of this section.

(ii) An ACO that enters an agreement under the BASIC track's glide path at either Level A under paragraph (a)(4)(i)(A)(1) of this section or Level B under paragraph (a)(4)(i)(A)(2) of this section is deemed to have completed one agreement under the BASIC track's glide path and is only eligible to enter a second agreement under the BASIC track's glide path if the ACO continues to meet the definition of inexperienced with performance-based risk Medicare ACO initiatives and satisfies either of the following:

(A) The ACO is the same legal entity as a current or previous ACO that

previously entered into a participation agreement for participation in the BASIC track's glide path only one time.

(B) For a new ACO identified as a re-entering ACO, the ACO in which the majority of the new ACO's participants were participating previously entered into a participation agreement for participation in the BASIC track's glide path only one time.

(iii) An ACO that is determined to be inexperienced with performance-based risk Medicare ACO initiatives but is not eligible to enter the BASIC track's glide path as specified in paragraph (a)(4)(i)(C) of this section may enter either the BASIC track Level E under paragraph (a)(4)(i)(A)(5) of this section for all performance years of the agreement period, or the ENHANCED track under paragraph (a)(3) of this section.

(2) If an ACO is determined to be experienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track Level E under paragraph (a)(4)(i)(A)(5) of this section for all performance years of the agreement period, or the ENHANCED track under paragraph (a)(3) of this section.

(h)(1) For performance years beginning on or after January 1, 2024, CMS monitors ACOs identified as inexperienced with performance-based risk Medicare ACO initiatives and participating in the BASIC track under a one-sided model during an agreement period pursuant to an election under paragraph (a)(4)(i)(B)(2)(vi), paragraph (a)(4)(i)(B)(2)(vii), or paragraph (a)(4)(i)(C)(3) of this section for changes to their certified list of ACO participants that would cause the ACO to be considered experienced with performance-based risk Medicare ACO initiatives and ineligible for participation in a one-sided model.

(2) If the ACO meets the definition of experienced with performance-based risk Medicare ACO initiatives (under § 425.20)—

(i) The ACO is permitted to complete the performance year for which it met the definition of experienced with performance-based risk Medicare ACO initiatives in a one-sided model of the BASIC track, but is ineligible to continue participation in the one-sided model after the end of that performance year if it continues to meet the definition of experienced with performance-based risk Medicare ACO initiatives. The ACO will be automatically advanced to Level E within the BASIC track under paragraph (a)(4)(i)(A)(5) of this section at the start of the next performance year and will remain in Level E for all subsequent

performance years of the agreement period; and

(ii) Prior to entering performance-based risk, the ACO must meet all requirements to participate under performance-based risk, including establishing an adequate repayment mechanism as specified under § 425.204(f) and selecting a MSR/MLR from the options specified under § 425.605(b), in accordance with paragraph (a)(4)(i)(B)(2)(v) of this section or paragraph (a)(4)(i)(C)(4) of this section, as applicable. If the ACO fails to meet the requirements to participate under performance-based risk, the agreement is terminated in accordance with paragraph (a)(4)(i)(B)(3) of this section or paragraph (a)(4)(i)(C)(5) of this section, as applicable.

■ 64. Amend § 425.601 by—

■ a. Revising the section heading, and paragraphs (a)(1)(i) and (c)(2)(i);

■ b. In paragraph (d) introductory text, by removing the dash at the end of the paragraph, and adding a colon in its place;

■ c. In paragraph by (d)(1)(iv), by removing the semicolon at the end of paragraph, and adding a period in its place;

■ d. In paragraph (d)(2), by removing “; and”, and adding a period in its place;

■ e. Removing paragraph (d)(3);

■ f. In paragraph (f)(5)(ii), by removing the reference “paragraph (f)(4)(i) of this section”, and adding in its place the reference “paragraph (f)(5)(i) of this section”; and

■ g. In paragraph (f)(5)(iv), by removing the references “paragraphs (f)(1) and (2) of this section”, and adding in their place the references “paragraphs (f)(1) through (3) of this section”.

The revisions read as follows:

**§ 425.601 Establishing, adjusting, and updating the benchmark for agreement periods beginning on or after July 1, 2019, and before January 1, 2024.**

\* \* \* \* \*

(a) \* \* \*

(1) \* \* \*

(i) This calculation excludes indirect medical education (IME) and disproportionate share hospital (DSH) payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals.

\* \* \* \* \*

(c) \* \* \*

(2) \* \* \*

(i) Excludes IME and DSH payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals; and

\* \* \* \* \*

■ 65. Amend § 425.605—

- a. By revising paragraph (a) introductory text, paragraphs (a)(1)(i) and (ii), paragraph (a)(2) introductory text, and paragraphs (a)(5)(i) and (a)(6);
- b. By adding paragraph (b)(2)(ii)(E);
- c. By revising paragraphs (b)(3), and (c)(2);
- d. In paragraph (d)(1) introductory text, by removing the reference “§ 425.600(d)” and adding in its place the references “§ 425.600(d) or § 425.600(g)”;
- e. By revising the heading of (d)(1)(i)(A)(2);
- f. By adding paragraphs (d)(1)(i)(A)(3) and (4);
- g. By revising paragraph (d)(1)(i)(B)(1);
- h. By revising the heading of paragraph (d)(1)(ii)(A)(2);
- i. By adding paragraphs (d)(1)(ii)(A)(3) and (4);
- j. By revising paragraph (d)(1)(ii)(B)(1);
- k. By revising the heading of paragraph (d)(1)(iii)(A)(2);
- l. By adding paragraphs (d)(1)(iii)(A)(3) and (4);
- m. By revising paragraph (d)(1)(iii)(B)(1);
- n. In paragraph (d)(1)(iii)(D)(2), by removing the reference “§ 425.601” and adding in its place the references “§ 425.601 or § 425.652”;
- o. By revising the heading of paragraph (d)(1)(iv)(A)(2);
- p. By adding paragraphs (d)(1)(iv)(A)(3) and (4);
- q. By revising paragraph (d)(1)(iv)(B)(1);
- r. In paragraph (d)(1)(iv)(D)(2), by removing the reference “§ 425.601” and adding in its place the references “§ 425.601 or § 425.652”;
- s. By revising the heading of paragraph (d)(1)(v)(A)(2);
- t. By adding paragraphs (d)(1)(v)(A)(3) and (4);
- u. By revising paragraph (d)(1)(v)(B)(1);
- v. In paragraph (d)(1)(v)(D)(2), by removing the reference “§ 425.601” wherever it appears and adding in its place the references “§ 425.601 or § 425.652”;
- w. In paragraph (d)(2), by removing the reference “§ 425.600(d)” and adding in its place the references “§ 425.600(d) or § 425.600(g)”;
- x. By adding paragraph (h).

The revisions and additions read as follows:

**§ 425.605 Calculation of shared savings and losses under the BASIC track.**

(a) *General rules.* For each performance year, CMS determines whether the estimated average per capita Medicare Parts A and B fee-for-service expenditures for Medicare fee-

for-service beneficiaries assigned to the ACO are above or below the updated benchmark determined under § 425.601 or § 425.652, as applicable. In order to qualify for a shared savings payment under the BASIC track, or to be responsible for sharing losses with CMS, an ACO's average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for the performance year must be below or above the updated benchmark, respectively, by at least the minimum savings or loss rate under paragraph (b) of this section except as provided in paragraph (h) of this section.

(1) \* \* \*

(i) For agreement periods beginning before January 1, 2024:

(A) Positive adjustments in prospective HCC risk scores are subject to a cap of 3 percent.

(B) This cap is the maximum increase in risk scores for each agreement period, such that any positive adjustment between BY3 and any performance year in the agreement period cannot be larger than 3 percent.

(ii) For agreement periods beginning on January 1, 2024, and in subsequent years:

(A) Positive adjustments in prospective HCC risk scores are subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year (positive or negative) plus 3 percentage points.

(B) The cap described in paragraph (a)(1)(ii)(A) of this section will apply to prospective HCC risk score growth for a population described in paragraph (a)(2) of this section only if the ACO's aggregate growth in prospective HCC risk scores between BY3 and the performance year across all of the populations described in paragraph (a)(2) of this section exceeds this cap. If the cap described in paragraph (a)(1)(ii)(A) of this section is determined to apply, the value of the cap is the maximum increase in risk scores for the applicable performance year, such that any positive adjustment between BY3 and the performance year cannot be larger than the value of the cap for any of the populations described in paragraph (a)(2) of this section.

(C) The aggregate growth in demographic risk scores for purposes of paragraph (a)(1)(ii)(A) of this section and the aggregate growth in prospective HCC risk scores for purposes of paragraph (a)(1)(ii)(B) of this section is calculated by taking a weighted average of the growth in demographic risk scores or prospective HCC risk scores, as applicable, across the populations

described in paragraph (a)(2) of this section. When calculating the weighted average growth in demographic risk scores or prospective HCC risk scores, as applicable, the weight applied to the growth in risk scores (expressed as a ratio of the ACO's performance year risk score to the ACO's BY3 risk score) for each Medicare enrollment type is equal to the product of the historical benchmark expenditures for that enrollment type and the performance year person years for that enrollment type.

(2) In risk adjusting the benchmark as described in §§ 425.601(a)(10) and 425.652(a)(10), CMS makes separate adjustments for each of the following populations of beneficiaries:

\* \* \* \* \*

(5) \* \* \*

(i) These calculations exclude indirect medical education (IME) and disproportionate share hospital (DSH) payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals.

\* \* \* \* \*

(6) In order to qualify for a shared savings payment, the ACO's average per capita Medicare Parts A and B fee-for-service expenditures for the performance year must be below the applicable updated benchmark by at least the minimum savings rate established for the ACO under paragraph (b) of this section except as provided in paragraph (h) of this section.

(b) \* \* \*

(2) \* \* \*

(ii) \* \* \*

(E) Automatic transition from Level A to Level E of the BASIC track's glide path under § 425.600(h)(2).

(3) Except as provided in paragraph (h) of this section, in order to qualify for a shared savings payment, an ACO's average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for the performance year must be below its updated benchmark by at least the MSR established for the ACO.

\* \* \* \* \*

(c) \* \* \*

(2) *For performance years beginning on or after January 1, 2021.* To qualify for shared savings, an ACO must—

(i) Meet either the minimum savings rate requirement established under paragraph (b) of this section, or the criteria described in paragraph (h) of this section;

(ii) Meet either the quality performance standard or alternative quality performance standard established under § 425.512; and

(iii) Otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(d) \* \* \*

(1) \* \* \*

(i) \* \* \*

(A) \* \* \*

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

\* \* \*

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level A, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(i)(B) of this section). The percentage is as follows:

(i) 40 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 40 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level A, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(i)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(i) 40 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 40 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(B) \* \* \*

(1) If an ACO qualifies for savings by meeting or exceeding the MSR, or as provided in paragraph (h) of this section, the final sharing rate specified in paragraph (d)(1)(i)(A) of this section applies to an ACO's savings on a first dollar basis.

\* \* \* \* \*

(ii) \* \* \*

(A) \* \* \*

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

\* \* \*

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level B, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(ii)(B) of this section). The percentage is as follows:

(i) 40 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 40 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level B, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(ii)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(i) 40 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 40 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(B) \* \* \*

(1) If an ACO qualifies for savings by meeting or exceeding the MSR, or as provided in paragraph (h) of this section, the final sharing rate specified in paragraph (d)(1)(ii)(A) of this section applies to an ACO's savings on a first dollar basis.

\* \* \* \* \*

(iii) \* \*

(A) \* \* \*

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

\* \* \*

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level C, receives

a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iii)(B) of this section). The percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level C, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iii)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(B) \* \* \*

(1) If an ACO qualifies for savings by meeting or exceeding the MSR, or as provided in paragraph (h) of this section, the final sharing rate specified in paragraph (d)(1)(iii)(A) of this section applies to an ACO's savings on a first dollar basis.

\* \* \* \* \*

(iv) \* \* \*

(A) \* \* \*

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

\* \* \*

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level D, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iv)(B) of this section). The percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by

meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level D, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iv)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(B) \* \* \*

(1) If an ACO qualifies for savings by meeting or exceeding the MSR, or as provided in paragraph (h) of this section, the final sharing rate specified in paragraph (d)(1)(iv)(A) of this section applies to an ACO's savings on a first dollar basis.

\* \* \* \* \*

(v) \* \* \*

(A) \* \* \*

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

\* \* \*

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level E, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section). The percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level E, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(B) \* \* \*

(1) If an ACO qualifies for savings by meeting or exceeding the MSR, or as provided in paragraph (h) of this section, the final sharing rate specified in paragraph (d)(1)(v)(A) of this section applies to an ACO's savings on a first dollar basis.

\* \* \* \* \*

(h) *Calculation of shared savings for certain BASIC track ACOs not meeting MSR requirement.* An ACO that does not meet the minimum savings rate requirement established under paragraph (b) of this section but meets the other criteria described in paragraphs (c)(2)(ii) and (iii) of this section may qualify for a shared savings payment as provided in this paragraph.

(1) To qualify for a shared savings payment under this paragraph, an ACO must meet all of the following criteria:

(i) The ACO has average per capita Medicare Parts A and B fee-for-service expenditures for the performance year below the updated benchmark determined under § 425.652.

(ii) The ACO is a low revenue ACO as defined in § 425.20 as determined at the time of financial reconciliation for the performance year.

(iii) The ACO has at least 5,000 assigned beneficiaries for the relevant performance year as determined at the time of financial reconciliation for the performance year.

(iv) The ACO is participating in an agreement period beginning on January 1, 2024, or in subsequent years.

(2) The ACO's shared savings payment will be calculated as described in paragraph (d) of this section according to the ACO's applicable level of the BASIC track with the exception

that the final sharing rate applied will equal one-half of the applicable percentage described in paragraph (d)(1)(i)(A)(4), (d)(1)(ii)(A)(4), (d)(1)(iii)(A)(4), (d)(1)(iv)(A)(4), or (d)(1)(v)(A)(4) of this section.

■ 66. Amend § 425.610—

■ a. In paragraph (a) introductory text, by removing the references “§ 425.601, § 425.602 or § 425.603” and adding in its place the references “§ 425.601, 425.602, 425.603, or 425.652”;

■ b. By revising paragraphs (a)(2)(i) and (ii), (a)(3) introductory text, (a)(6)(i) and (d)(2) paragraph heading;

■ c. By adding paragraphs (d)(3) and (4);

■ d. By revising the heading of paragraph (f)(2);

■ e. By adding paragraphs (f)(3) and (4); and

■ f. In paragraph (g), by removing the references “§ 425.601, § 425.602 or § 425.603” and adding in its place the references “§ 425.601, 425.602, 425.603 or 425.652”.

The revisions and additions read as follows:

**§ 425.610 Calculation of shared savings and losses under the ENHANCED track.**

(a) \* \* \*

(2) \* \* \*

(i) For agreement periods beginning before January 1, 2024:

(A) Positive adjustments in prospective HCC risk scores are subject to a cap of 3 percent.

(B) This cap is the maximum increase in risk scores for each agreement period, such that any positive adjustment between BY3 and any performance year in the agreement period cannot be larger than 3 percent.

(ii) For agreement periods beginning on January 1, 2024, and in subsequent years:

(A) Positive adjustments in prospective HCC risk scores are subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year (positive or negative) plus 3 percentage points.

(B) The cap described in paragraph (a)(2)(ii)(A) of this section will apply to prospective HCC risk score growth for a population described in paragraph (a)(3) of this section only if the ACO's aggregate growth in prospective HCC risk scores between BY3 and the performance year across all of the populations described in paragraph (a)(3) of this section exceeds this cap. If the cap described in paragraph (a)(2)(ii)(A) of this section is determined to apply, the value of the cap is the maximum increase in risk scores for the applicable performance year, such that any positive adjustment between BY3

and the performance year cannot be larger than the value of the cap for any of the populations described in paragraph (a)(3) of this section.

(C) The aggregate growth in demographic risk scores for purposes of paragraph (a)(2)(ii)(A) of this section and the aggregate growth in prospective HCC risk scores for purposes of paragraph (a)(2)(ii)(B) of this section is calculated by taking a weighted average of the growth in demographic risk scores or prospective HCC risk scores, as applicable, across the populations described in paragraph (a)(3) of this section. When calculating the weighted average growth in demographic risk scores or prospective HCC risk scores, as applicable, the weight applied to the growth in risk scores (expressed as a ratio of the ACO's performance year risk score to the ACO's BY3 risk score) for each Medicare enrollment type is equal to the product of the historical benchmark expenditures for that enrollment type and the performance year person years for that enrollment type.

(3) In risk adjusting the benchmark as described in §§ 425.601(a)(10), 425.602(a)(9), 425.603(c)(10), and 425.652(a)(10) CMS makes separate adjustments for each of the following populations of beneficiaries:

\* \* \* \* \*

(6) \* \* \*

(i) These calculations will exclude indirect medical education (IME) and disproportionate share hospital (DSH) payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals.

\* \* \* \* \*

(d) \* \* \*

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the ENHANCED track will receive a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (e)(2) of this section). The percentage is as follows:

(i) 75 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 75 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the ENHANCED track will receive a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (e)(2) of this section). The percentage is as follows:

(i) 75 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 75 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

\* \* \* \* \*

(f) \* \* \*

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

\* \* \*

(3) *For the performance year beginning on January 1, 2023.* For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined as follows:

(i) If the ACO meets either the quality performance standard established in § 425.512 applicable for the performance year by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i), or the alternative quality performance standard established in § 425.512(a)(4)(ii), CMS determines the shared loss rate as follows:

(A) Calculate the product of 75 percent and the ACO's health equity adjusted quality performance score calculated according to § 425.512(b).

(B) Calculate the shared loss rate as 1 minus the product determined in paragraph (f)(3)(i)(A) of this section. The shared loss rate—

(1) May not exceed 75 percent; and

(2) May not be less than 40 percent.

(ii) If the ACO fails to meet either the quality performance standard or the alternative quality performance standard established in § 425.512 applicable for the performance year, the shared loss rate is 75 percent.

(4) *For performance years beginning on or after January 1, 2024.* For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined as follows:

(i) If the ACO meets either the quality performance standard established in § 425.512 applicable for the

performance year by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i), or the alternative quality performance standard established in § 425.512(a)(5)(ii), CMS determines the shared loss rate as follows:

(A) Calculate the product of 75 percent and the ACO's health equity adjusted quality performance score calculated according to § 425.512(b).

(B) Calculate the shared loss rate as 1 minus the product determined in paragraph (f)(4)(i)(A) of this section. The shared loss rate—

(1) May not exceed 75 percent; and

(2) May not be less than 40 percent.

(ii) If the ACO fails to meet either the quality performance standard or the alternative quality performance standard established in § 425.512 for the applicable performance year, the shared loss rate is 75 percent.

\* \* \* \* \*

■ 67. Amend § 425.611—

■ a. In paragraph (c)(2)(i), by removing the references “§§ 425.601(c) and 425.603(e)” and adding in its place the references “§§ 425.601(c), 425.603(e), and 425.654(a)”;

■ b. In paragraph (c)(2)(ii)(A), by removing the references “§§ 425.601(a)(4), 425.602(a)(4), and 425.603(c)(4)” and adding in its place the references “§§ 425.601(a)(4), 425.602(a)(4), 425.603(c)(4), and 425.652(a)(4)”;

■ c. In paragraph (c)(2)(ii)(B), by removing the references “§§ 425.601(c)(3) and 425.603(e)(3)” and adding in its place the references “§§ 425.601(c)(3), 425.603(e)(3), and 425.654(a)(3)”;

■ d. By revising paragraph (c)(2)(iii);

■ e. In paragraph (c)(2)(v), by removing the reference “§ 425.601(a)(5)(ii)” and adding in its place the references “§§ 425.601(a)(5)(ii) and 425.652(a)(5)(ii)” and removing the reference “§ 425.601(b)(2)” and adding in its place the references “§§ 425.601(b)(2) and 425.652(b)(2)(i)”;

and

■ f. By revising paragraph (c)(4).

The revisions read as follows:

**§ 425.611 Adjustments to Shared Savings Program calculations to address the COVID-19 pandemic.**

\* \* \* \* \*

(c) \* \* \*

(2) \* \* \*

(iii) Determining national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program for assignable beneficiaries for purposes of capping the regional adjustment to the ACO's historical benchmark according to §§ 425.601(a)(8)(ii)(C) and 425.656(c)(3),

and capping the prior savings adjustment according to § 425.652(a)(8)(iv).

\* \* \* \* \*

(4) Calculation of total Medicare Parts A and B fee-for-service revenue of ACO participants and total Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries for purposes of identifying whether an ACO is a high revenue ACO or low revenue ACO, as defined under § 425.20, determining an ACO's eligibility for participation options according to § 425.600(d), and determining an ACO's eligibility to receive advance investment payments according to § 425.630.

\* \* \* \* \*

■ 68. Amend § 425.612 by—

■ a. Revising paragraph (a)(1)(i)(A) introductory text; and

■ b. In paragraph (a)(1)(i)(A)(1) by removing the phrase “The communication plan” and adding in its place the phrase “A communication plan”.

The revision reads as follows:

**§ 425.612 Waivers of payment rules or other Medicare requirements.**

(a) \* \* \*

(1) \* \* \*

(i) \* \* \*

(A) An attestation that it has established and will make available to CMS upon request the following narratives describing how the ACO plans to implement the waiver:

\* \* \* \* \*

**§§ 425.614 through 425.629 [Reserved]**

■ 69. Add and reserve §§ 425.614 through 425.629 to subpart G.

■ 70. Section 425.630 is added to subpart G to read as follows:

**§ 425.630 Option to receive advance investment payments.**

(a) *Purpose.* Advance investment payments are intended to encourage low-revenue ACOs that are inexperienced with risk to participate in the Shared Savings Program and to provide additional resources to such ACOs in order to support care improvement for underserved beneficiaries.

(b) *Eligibility.* An ACO is eligible to receive advance investment payments as specified in this section if CMS determines that all of the following criteria are met:

(1) The ACO is not a renewing or a re-entering ACO.

(2) The ACO has applied to participate in the Shared Savings Program under any level of the BASIC track's glide path and is eligible to

participate in the Shared Savings Program.

(3) The ACO is inexperienced with performance-based risk Medicare ACO initiatives.

(4) The ACO is a low revenue ACO.

(c) *Application procedure.* To obtain a determination regarding whether an ACO may receive advance investment payments, the ACO must submit to CMS complete supplemental information as part of its application to participate in the Shared Savings Program (filed pursuant to § 425.202) in the form and manner and by a deadline specified by CMS.

(d) *Application contents and review.*

(1) *General.* An ACO must submit to CMS supplemental application information sufficient for CMS to determine whether the ACO is eligible to receive advance investment payments. In addition, the ACO must submit a proposed spend plan as part of the supplemental application information.

(2) *Spend plan.* The spend plan must:

(i) Describe how the ACO will spend its advance investment payments during the agreement period to build care coordination capabilities (including coordination with community-based organizations, as appropriate), address specific health disparities, and meet other criteria under this section.

(ii) Identify the categories of goods and services that will be purchased with advance investment payment funds (including any allowable uses under paragraph (e) of this section), the dollar amounts to be spent on the various categories, and such other information as may be specified by CMS.

(iii) State that the ACO has established a separate designated account for the deposit and expenditure of all advance investment payments in accordance with paragraph (e)(4) of this section.

(3) *CMS review.* CMS will review the supplemental application information to determine whether an ACO meets the eligibility criteria and other requirements for advance investment payments and will approve or deny the advance investment payment application accordingly. CMS may review an ACO's spend plan at any time and require the ACO to modify its spend plan to comply with the requirements of this paragraph (d) and paragraph (e) of this section.

(e) *Use and management of advance investment payments.* (1) *Allowable uses.* An ACO must use an advance investment payment to improve the quality and efficiency of items and services furnished to beneficiaries by investing in increased staffing, health

care infrastructure, and the provision of accountable care for underserved beneficiaries, which may include addressing social determinants of health. Expenditures of advance investment payments must comply with the beneficiary incentive provision at § 425.304, paragraph (e)(2) of this section, and all other applicable laws and regulations.

(2) *Prohibited uses.* Advance investment payments may not be used for any expense other than allowable uses under paragraph (e)(1) of this section. In the case of an ACO participating in Level E of the BASIC track, the repayment of any shared losses incurred as specified in a written notice in accordance with § 425.605(e)(2).

(3) *Duration for spending payments.* An ACO may spend an advance investment payment over its entire agreement period. An ACO must repay to CMS any unspent funds remaining at the end of the ACO's agreement period.

(4) *Segregation of advance investment payments.* An ACO must segregate advance investment payments from all other revenues by establishing and maintaining a separate account into which all advance investment payments will be deposited immediately and from which all disbursements of such funds are made only for allowable uses in accordance with this paragraph.

(f) *Payment methodology.* An ACO receives two types of advance investment payments: a one-time payment of \$250,000 and quarterly payments calculated pursuant to the methodology defined in paragraph (f)(2) of this section. CMS notifies in writing each ACO of its determination of the amount of advance investment payment. If CMS does not make any advance investment payment, the notice will specify the reason(s) why and inform the ACO of its right to request reconsideration review in accordance with the procedures specified in subpart I of this part.

(1) *Frequency of payments.* An ACO will receive the one-time payment at the beginning of Performance Year 1 of the ACO's agreement period. An ACO will receive quarterly payments each quarter for the first two performance years of the ACO's agreement period. An ACO may receive no more than eight quarterly payments.

(2) *Quarterly payment amount calculation methodology.* CMS does all of the following in determining the quarterly payment amount prior to the start of the quarter.

(i) Determines the ACO's assigned beneficiary population. The assigned beneficiaries used in determining the

quarterly payment amount are the beneficiaries most recently assigned to the ACO under § 425.400(a)(2) (for an ACO under preliminary prospective assignment with retrospective reconciliation) or § 425.400(a)(3) (for an ACO under prospective assignment), based on the certified ACO participant list for the relevant performance year.

(ii) Assigns each beneficiary a risk factors-based score. For each beneficiary in the assigned population identified in paragraph (f)(2)(i) of this section, CMS applies the following requirements in assigning a risk factors-based score:

(A) The risk factors-based score will be set to 100 if the beneficiary is

enrolled in the Medicare Part D LIS or is dually eligible for Medicare and Medicaid.

(B) The risk factors-based score will be set to the Area Deprivation Index national percentile rank matched to the beneficiary's mailing address if the beneficiary is not enrolled in the LIS or is not dually eligible for Medicare and Medicaid and sufficient data is available to match the beneficiary to an Area Deprivation Index national percentile rank.

(C) The risk factors-based score will be set to 50 if the beneficiary is not enrolled in the LIS or is not dually eligible for Medicare and Medicaid and

sufficient data is not available to match the beneficiary to an Area Deprivation Index national percentile rank.

(iii) Determines a beneficiary's payment amount. For each beneficiary in the assigned population identified in paragraph (f)(2)(i) of this section, CMS determines the payment amount that corresponds to the beneficiary's risk factors-based score determined in paragraph (f)(2)(ii) of this section. The beneficiary payment amount is as follows:

TABLE 1 TO PARAGRAPH (f)(2)(iii)

| Risk factors-based score | 1–24 | 25–34 | 35–44 | 45–54 | 55–64 | 65–74 | 75–84 | 85–100 |
|--------------------------|------|-------|-------|-------|-------|-------|-------|--------|
| Payment amount .....     | \$0  | \$20  | \$24  | \$28  | \$32  | \$36  | \$40  | \$45   |

(iv) Calculates the ACO's quarterly payment amount. The ACO's quarterly payment amount is the sum of the beneficiary payment amounts corresponding to each assigned beneficiary's risk factors-based score, specified in paragraph (f)(2)(iii) of this section, capped at 10,000 beneficiaries. If the ACO has more than 10,000 assigned beneficiaries according to paragraph (f)(2)(i) of this section, CMS will calculate the quarterly payment amount based on the 10,000 assigned beneficiaries with the highest risk factors-based scores determined according to paragraph (f)(2)(ii) of this section.

(g) *Recoupment and recovery of advance investment payments, and notice of bankruptcy.* (1) CMS will recoup advance investment payments made to an ACO from any shared savings the ACO earns until CMS has recouped in full the amount of advance investment payments made to the ACO. For both renewing and re-entering ACOs, CMS will carry forward any remaining balance owed to subsequent performance year(s) in which the ACO achieves shared savings, including in any performance year(s) in a subsequent agreement period.

(2) If the amount of shared savings earned by the ACO is revised upward by CMS for any reason, CMS will reduce the redetermined amount of shared savings by the amount of advance investment payments made to the ACO as of the date of the redetermination. If the amount of shared savings earned by the ACO is revised downward by CMS for any reason, the ACO will not receive a refund of any portion of the advance

investment payments previously recouped or otherwise repaid.

(3) Except as provided for in paragraphs (g)(4) of this section and § 425.316(e)(3), for each performance year, CMS will not recover an amount of advance investment payments greater than the shared savings earned by an ACO in that performance year.

(4) If an ACO terminates its participation agreement during the agreement period in which it received an advance investment payment, the ACO must repay all advance investment payments it received. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

(5) In the event of bankruptcy—

(i) If an ACO has filed a bankruptcy petition, whether voluntary or involuntary, the ACO must provide written notice of the bankruptcy to CMS and to the U.S. Attorney's Office in the district where the bankruptcy was filed, unless final payment for the agreement period has been made by either CMS or the ACO and all administrative or judicial review proceedings relating to any payments under the Shared Savings Program have been fully and finally resolved.

(ii) The notice of bankruptcy must be sent by certified mail no later than 5 days after the petition has been filed and must contain a copy of the filed bankruptcy petition (including its docket number). The notice to CMS must be addressed to the CMS Office of Financial Management at 7500 Security Boulevard, Mailstop C3–01–24, Baltimore, MD 21244 or such other address as may be specified on the CMS

website for purposes of receiving such notices.

(h) *Termination of advance investment payments.* (1) *General.* Except as provided in paragraph (h)(2) of this section, CMS may terminate an ACO's advance investment payments if the ACO—

(i) Fails to comply with the requirements of this section; or

(ii) Meets any of the grounds for ACO termination set forth in § 425.218(b).

(2) *Eligibility sanction.* CMS will terminate an ACO's advance investment payments in accordance with § 425.316(e) if the ACO no longer meets the eligibility requirements specified in paragraphs (b)(3) and (b)(4) of this section.

(3) *No pre-termination actions.* CMS may immediately terminate an ACO's advance investment payments without taking any of the pre-termination actions set forth in § 425.216.

#### §§ 425.631 through 425.649 [Reserved]

■ 71. Add and reserve §§ 425.631 through 425.649 to subpart G.

■ 72. Section 425.650 is added to subpart G to read as follows:

#### § 425.650 Benchmarking methodology.

(a) *Scope and purpose.* The methodology by which CMS establishes, adjusts, updates and resets an ACO's historical benchmark is described within this subpart G. The benchmarking methodology for agreement periods beginning before January 1, 2024, is specified in §§ 425.601, 425.602, and 425.603. The benchmarking methodology for agreement periods beginning on or after January 1, 2024, is specified in §§ 425.652 through 425.660.

(b) [Reserved]

■ 73. Section 425.652 is added to subpart G to read as follows:

**§ 425.652 Establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.**

(a) *Computing per capita Medicare Part A and Part B benchmark expenditures for an ACO's first agreement period.* For agreement periods beginning on January 1, 2024, and in subsequent years, in computing an ACO's historical benchmark for its first agreement period under the Shared Savings Program, CMS determines the per capita Parts A and B fee-for-service expenditures for beneficiaries that would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period using the ACO participant TINs identified before the start of the agreement period as required under § 425.118(a) and the beneficiary assignment methodology selected by the ACO for the first performance year of the agreement period as required under § 425.226(a)(1). CMS does all of the following:

(1) Calculates the payment amounts included in Parts A and B fee-for-service claims using a 3-month claims run out with a completion factor.

(i) This calculation excludes indirect medical education (IME) and disproportionate share hospital (DSH) payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals.

(ii) This calculation includes individually beneficiary identifiable final payments made under a demonstration, pilot or time limited program.

(2) Makes separate expenditure calculations for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(3) Adjusts expenditures for changes in severity and case mix using prospective HCC risk scores.

(4) Truncates an assigned beneficiary's total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries identified for the 12-month calendar year corresponding to each benchmark year in order to minimize variation from catastrophically large claims.

(5) Trends forward expenditures for each benchmark year (BY1 and BY2) to the third benchmark year (BY3) dollars

using a blend of national and regional growth rates.

(i) To trend forward the benchmark, CMS makes separate calculations for expenditure categories for each of the following populations of beneficiaries:

(A) ESRD.

(B) Disabled.

(C) Aged/dual eligible Medicare and Medicaid beneficiaries.

(D) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(ii) National growth rates are computed using CMS Office of the Actuary national Medicare expenditure data for each of the years making up the historical benchmark for assignable beneficiaries identified for the 12-month calendar year corresponding to each benchmark year.

(iii) Regional growth rates are computed using expenditures for the ACO's regional service area for each of the years making up the historical benchmark as follows:

(A) Determine the counties included in the ACO's regional service area based on the ACO's assigned beneficiary population for the relevant benchmark year.

(B) Determine the ACO's regional expenditures as specified under § 425.654 of this section.

(iv) The national and regional growth rates are blended together by taking a weighted average of the two. The weight applied to the—

(A) National growth rate is calculated as the share of assignable beneficiaries in the ACO's regional service area for BY3 that are assigned to the ACO in BY3, as calculated in paragraph (a)(5)(v) of this section; and

(B) Regional growth rate is equal to 1 minus the weight applied to the national growth rate.

(v) CMS calculates the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO by doing all of the following:

(A) Calculating the county-level share of assignable beneficiaries that are assigned to the ACO for each county in the ACO's regional service area. The assignable population of beneficiaries is identified for the assignment window corresponding to BY3 that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(B) Weighting the county-level shares according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries residing in the county in relation to the ACO's total number of assigned beneficiaries.

(C) Aggregating the weighted county-level shares for all counties in the ACO's regional service area.

(6) Restates BY1 and BY2 trended and risk adjusted expenditures using BY3 proportions of ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(7) Weights each year of the benchmark for an ACO's initial agreement period using the following percentages:

(i) BY3 at 60 percent.

(ii) BY2 at 30 percent.

(iii) BY1 at 10 percent.

(8) Adjusts the historical benchmark based on the ACO's regional service area expenditures (as specified under § 425.656), or for savings generated by the ACO, if any, in the 3 most recent years prior to the start of the agreement period, if applicable (as specified under § 425.658), or a combination of these two adjustments. CMS does all of the following to determine the adjustment(s) applied to the historical benchmark:

(i) Computes the regional adjustment in accordance with § 425.656 and the prior savings adjustment in accordance with § 425.658.

(ii) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), the ACO will receive the regional adjustment to its benchmark as described in § 425.656.

(iii) If an ACO is eligible to receive a prior savings adjustment, CMS compares the pro-rated positive average per capita savings amount calculated in § 425.658(b)(3)(ii) with the regional adjustment described in § 425.656(c), expressed as a single per capita value by taking a person-year weighted average of the Medicare enrollment type-specific regional adjustment values.

(A) If the regional adjustment, expressed as a single value, is negative or zero, calculate the sum of the regional adjustment value and the pro-rated positive average per capita savings amount.

(1) If the sum is positive, the ACO will receive a prior savings adjustment in place of the negative regional adjustment equal to the lesser of 50 percent of the positive sum and the cap described in paragraph (a)(8)(iv) of this section. The adjustment will be applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) If the sum is negative, the ACO will receive a reduced negative regional adjustment amount equal to the negative

sum. The adjustment will be applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(B) If the regional adjustment, expressed as a single value, is positive, the ACO will receive an adjustment to the benchmark equal to the higher of the following:

(1) The positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) A prior savings adjustment equal to the lesser of 50 percent of the prorated positive average per capita savings amount described in § 425.658(b)(3)(ii) and the cap described in paragraph (a)(8)(iv) of this section. The adjustment will be applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(iv) The cap on the prior savings adjustment calculated in either paragraph (a)(8)(iii)(A)(1) or paragraph (a)(8)(iii)(B)(2) of this section is equal to 5 percent of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary and expressed as a single value by taking a person-year weighted average of the Medicare enrollment type-specific values.

(9) For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), and for a change to the beneficiary assignment methodology specified in subpart E of this part. To adjust the benchmark, CMS does the following:

(i) Takes into account the expenditures of beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period.

(ii) Redetermines the regional adjustment amount under § 425.656 according to the ACO's assigned beneficiaries for BY3, and based on the assignable population of beneficiaries identified for the assignment window corresponding to BY3 that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.226(a)(1).

(iii) Redetermines the offset factor used in determining the negative regional adjustment amount under § 425.656(c)(4) and (5).

(iv) Redetermines the proration factor used in calculating the prior savings adjustment under § 425.658(b)(3)(ii) to account for changes in the ACO's assigned beneficiary population in the benchmark years of the ACO's current agreement period due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection under § 425.400(a)(4)(ii), or changes to the beneficiary assignment methodology under subpart E of this part.

(v) In accordance with paragraph (a)(8) of this section, CMS redetermines the adjustment to the historical benchmark based on the redetermined regional adjustment (as specified under § 425.656), or the prior savings adjustment (as specified under § 425.658), or a combination of these two adjustments.

(10) The historical benchmark is further adjusted at the time of reconciliation for a performance year to account for changes in severity and case mix of the ACO's assigned beneficiary population as described under §§ 425.605(a) and 425.610(a).

(b) *Updating the benchmark.* For all agreement periods beginning on January 1, 2024, and in subsequent years, CMS updates the historical benchmark annually for each year of the agreement period using a three-way blend calculated as a weighted average of a two-way blend of national and regional growth rates determined after the end of each performance year and a fixed projected growth rate determined at the beginning of the ACO's agreement period called the Accountable Care Prospective Trend (ACPT).

(1) To update the benchmark, CMS makes separate calculations for expenditure categories for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) CMS computes the two-way blend of national and regional growth rates as follows:

(i) Computes national growth rates using CMS Office of the Actuary national Medicare expenditure data for BY3 and the performance year for assignable beneficiaries identified for the 12-month calendar year corresponding to each year.

(ii) Computes regional growth rates using expenditures for the ACO's regional service area for BY3 and the performance year, computed as follows:

(A) Determine the counties included in the ACO's regional service area based on the ACO's assigned beneficiary population for the year.

(B) Determine the ACO's regional expenditures as specified under § 425.654.

(iii) The national and regional growth rates are blended together by taking a weighted average of the two. The weight applied to the—

(A) National growth rate is calculated as the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO for the applicable performance year as specified in paragraph (b)(2)(iv) of this section; and

(B) Regional growth rate is equal to 1 minus the weight applied to the national growth rate.

(iv) CMS calculates the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO by doing all of the following:

(A) Calculating the county-level share of assignable beneficiaries that are assigned to the ACO for each county in the ACO's regional service area. The assignable population of beneficiaries is identified for the assignment window corresponding to the performance year that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(B) Weighting the county-level shares according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries residing in the county in relation to the ACO's total number of assigned beneficiaries.

(C) Aggregating the weighted county-level shares for all counties in the ACO's regional service area.

(3) CMS computes the ACPT as described in § 425.660.

(4) The two-way blend computed under paragraph (b)(2) of this section and the ACPT are blended together by taking a weighted average of the two.

(i) Absent unforeseen circumstances, the weight applied to the components of the blend is as follows—

(A) Two-way blend is equal to two-thirds; and

(B) ACPT is equal to one-third.

(ii) CMS has sole discretion to determine whether an unforeseen circumstance exists that warrants a reduction to the weight of the ACPT and the reduced weight that will apply to the ACPT.

(5) If an ACO's average per capita Medicare expenditures for the performance year are above its updated benchmark for the year determined as described in paragraph (b)(4) of this section by at least the MLR or negative MSR established for the ACO, CMS will compute a recalculated updated benchmark using the two-way blend described in paragraph (b)(2) of this section.

(i) If the ACO's average per capita Medicare expenditures for the performance year are above the recalculated updated benchmark by a smaller amount than the amount by which they are above the updated benchmark determined as described in paragraph (b)(4) of this section, CMS will use the recalculated updated benchmark to determine the following:

(A) The ACO's responsibility for sharing losses with the Medicare program for ACOs in two-sided models as described under §§ 425.605 and 425.610.

(B) The ACO's financial performance for purposes of monitoring ACO financial performance as described under § 425.316(d).

(ii) If the ACO's average per capita Medicare expenditures for the performance year are below the recalculated updated benchmark, the ACO will neither be responsible for sharing losses with the Medicare program nor eligible for sharing in savings.

(c) *Resetting the benchmark.* (1) An ACO's benchmark is reset at the start of each subsequent agreement period.

(2) For second or subsequent agreements periods beginning on January 1, 2024, and in subsequent years, CMS establishes, adjusts, and updates the rebased historical benchmark in accordance with paragraphs (a) and (b) of this section except that rather than weighting each year of the benchmark using the percentages provided in paragraph (a)(7) of this section, each benchmark year is weighted equally.

■ 74. Section 425.654 is added to subpart G to read as follows:

**§ 425.654 Calculating county expenditures and regional expenditures.**

(a) *Calculating county expenditures.*

For agreement periods beginning on January 1, 2024, and in subsequent years, CMS does all of the following to determine risk adjusted county fee-for-service expenditures for use in calculating the ACO's regional fee-for-service expenditures:

(1)(i) Determines average county fee-for-service expenditures based on expenditures for the assignable population of beneficiaries in each county in the ACO's regional service area. The assignable population of beneficiaries is identified for the assignment window corresponding to the relevant benchmark or performance year that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(ii) Makes separate expenditure calculations for each of the following populations of beneficiaries:

(A) ESRD.

(B) Disabled.

(C) Aged/dual eligible Medicare and Medicaid beneficiaries.

(D) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Calculates assignable beneficiary expenditures using the payment amounts included in Parts A and B fee-for-service claims with dates of service in the 12-month calendar year for the relevant benchmark or performance year, using a 3-month claims run out with a completion factor. The calculation—

(i) Excludes IME and DSH payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals; and

(ii) Considers individually beneficiary identifiable final payments made under a demonstration, pilot or time limited program.

(3) Truncates a beneficiary's total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries identified for the 12-month calendar year that corresponds to the relevant benchmark or performance year, in order to minimize variation from catastrophically large claims.

(4) Adjusts fee-for-service expenditures for severity and case mix of assignable beneficiaries in the county using prospective HCC risk scores. The calculation is made according to the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(b) *Calculating regional expenditures.* For all agreement periods beginning on January 1, 2024, and in subsequent years, CMS calculates an ACO's risk adjusted regional expenditures by:

(1) Weighting the risk adjusted county-level fee-for-service expenditures determined under paragraph (a) of this section according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries in the applicable population (according to Medicare enrollment type) residing in the county in relation to the ACO's total number of assigned beneficiaries in the applicable population (according to Medicare enrollment type) for the relevant benchmark or performance year for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Aggregating the values determined under paragraph (b)(1) of this section for each population of beneficiaries (according to Medicare enrollment type) across all counties within the ACO's regional service area.

■ 75. Section 425.656 is added to subpart G to read as follows:

**§ 425.656 Calculating the regional adjustment to the historical benchmark.**

(a) *General.* This section describes the methodology for calculating the regional adjustment to the historical benchmark based on the ACO's regional service area expenditures, making separate calculations for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries. This section applies to regional adjustment calculations for agreement periods beginning on January 1, 2024, and in subsequent years.

(b) *Calculation of an average per capita expenditure amount for the ACO's regional service area.* To compute an average per capita expenditure amount for the ACO's regional service area, CMS does all of the following:

(1) Determines the counties included in the ACO's regional service area based on the ACO's BY3 assigned beneficiary population.

(2) Determines the ACO's regional expenditures as specified under § 425.654 for BY3.

(3) Adjusts for differences in severity and case mix between the ACO's assigned beneficiary population for BY3 and the assignable population of beneficiaries for the ACO's regional service area for BY3. The assignable population of beneficiaries is identified using the assignment window corresponding to BY3 that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(c) *Calculation of the adjustment.* To calculate the adjustment, CMS does all of the following:

(1) Determines the difference between the average per capita amount of expenditures for the ACO's regional service area as specified under paragraph (b)(1) of this section and the average per capita amount of the ACO's historical benchmark determined under § 425.652(a)(1) through (7) and (c)(2), for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Applies a percentage, as determined in paragraph (d) of this section.

(3) Caps the per capita dollar amount for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) calculated under paragraph (c)(2) of this section at a dollar amount equal to a percentage of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary. The cap is applied as follows:

(i) For positive adjustments, the per capita dollar amount for a Medicare enrollment type is capped at 5 percent of the national per capita expenditure amount for the enrollment type for BY3.

(ii) For negative adjustments, the per capita dollar amount for a Medicare enrollment type is capped at negative 1.5 percent of the national per capita expenditure amount for the enrollment type for BY3.

(4) For negative adjustments, CMS will multiply the regional adjustments

calculated in paragraphs (c)(2) or (3) of this section by 1 minus an offset factor equal to the sum of the following—

(i) Proportion of the ACO's BY3 assigned beneficiaries that are dually eligible for Medicare and Medicaid; and

(ii) The difference between the ACO's weighted average prospective HCC risk score for BY3 taken across the four Medicare enrollment types and 1. When calculating the weighted average prospective HCC risk score, the weight applied to the prospective HCC risk score for BY3 for each Medicare enrollment type is equal to the product of the BY3 per capita expenditures for that enrollment type and the BY3 person years for that enrollment type.

(5) The offset factor described in paragraph (c)(4) of this section is subject to a minimum value of zero

(representing no offset to the negative regional adjustment) and a maximum value of 1 (representing a full offset to the negative regional adjustment).

(d) *Phase-in of weights used in regional adjustment calculation.* (1) The first time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have lower spending than the ACO's regional service area.

(ii) Using 15 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have higher spending than the ACO's regional service area.

(2) The second time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area.

(ii) Using 25 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(3) The third time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area.

(ii) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(4) The fourth or subsequent time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment to the historical benchmark using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark.

(5) To determine if an ACO has lower or higher spending compared to the ACO's regional service area, CMS does the following:

(i) Multiplies the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's historical benchmark for each population of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) as calculated under paragraph (c)(1) of this section by the applicable proportion of the ACO's assigned beneficiary population (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) for BY3 of the historical benchmark.

(ii) Sums the amounts determined in paragraph (d)(5)(i) of this section across the populations of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries).

(iii) If the resulting sum is a net positive value, the ACO is considered to have lower spending compared to the ACO's regional service area. If the resulting sum is a net negative value, the ACO is considered to have higher spending compared to the ACO's regional service area.

(iv) If during the term of the agreement period CMS adjusts the ACO's benchmark, as specified in § 425.652(a)(9), CMS redetermines whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage in paragraphs (d)(1) through (3) of this section used in calculating the regional adjustment.

(e) *Special rules for determining the weights used in the regional adjustment calculation for a re-entering ACO.* For a re-entering ACO whose prior agreement period benchmark was calculated according to § 425.603(c), CMS determines the weight used in the regional adjustment calculation described in paragraphs (b) through (d) of this section by considering the agreement period the ACO is entering into according to § 425.600(f) in combination with either of the following—

(1) The weight previously applied to calculate the regional adjustment to the ACO's benchmark under § 425.603(c)(9) in its most recent prior agreement period; or

(2) For a new ACO identified as a re-entering ACO, CMS considers the weight previously applied to calculate the regional adjustment to the benchmark under § 425.603(c)(9) in its most recent prior agreement period of the ACO in which the majority of the new ACO's participants were participating previously.

■ 76. Section 425.658 is added to subpart G to read as follows:

**§ 425.658 Calculating the prior savings adjustment to the historical benchmark.**

(a) *General.* For agreement periods beginning on January 1, 2024, and in subsequent years, CMS calculates an adjustment to the historical benchmark to account for savings generated in the 3 years prior to the start of the ACO's current agreement period for renewing or re-entering ACOs that were reconciled for one or more performance years in the Shared Savings Program during this period.

(b) *Calculate average per capita savings amount.* (1) Calculate total per capita savings or losses for each performance year during the 3 years prior to the start of the ACO's current agreement period. CMS applies the following requirements in determining the amount of per capita savings or losses for each performance year:

(i) Per capita savings or losses will be set to zero for a performance year if the ACO was not reconciled for the performance year.

(ii) If an ACO generated savings for a performance year but was not eligible to receive a shared savings payment for that year due to noncompliance with the requirements of this part, per capita savings for that year will be set to zero.

(iii) For a new ACO identified as re-entering ACO, per capita savings or losses will be determined based on the per capita savings or losses of the ACO in which the majority of the ACO's ACO participants were participating.

(2) Take the simple average of the per capita savings or losses calculated in paragraph (b)(1) of this section, including values of zero, if applicable.

(3) Determine the ACO's eligibility for the prior savings adjustment as follows:

(i) If the average per capita amount computed in paragraph (b)(2) of this section is less than or equal to zero, the ACO is not eligible to receive an adjustment for prior savings. The ACO will receive the regional adjustment to its benchmark as described in § 425.656.

(ii) If the average per capita amount computed in paragraph (b)(2) of this section is positive, apply a proration factor to account for any upward growth in the ACO's assigned population in the benchmark years of the ACO's current agreement period as compared to the size of the assigned population when the ACO was reconciled for the corresponding performance years in its prior agreement period.

(c) *Applicability of the prior savings adjustment.* CMS compares the prorated average per capita savings amount determined in paragraph (b)(3)(ii) of this section with the regional adjustment described in § 425.656(c), to determine the applicability of the prior savings adjustment, the regional adjustment or a combination of these two adjustments in accordance with § 425.652(a)(8).

■ 77. Section 425.660 is added to subpart G to read as follows:

**§ 425.660 Accountable Care Prospective Trend (ACPT).**

(a) *General.* For agreement periods beginning on January 1, 2024, and in subsequent years, CMS incorporates a fixed projected growth rate determined at the beginning of the ACO's agreement period called the Accountable Care Prospective Trend (ACPT) into the blended update factor described in § 425.652(b) when updating an ACO's benchmark for each performance year of the agreement period.

(b) *Determination of ACPT.* An ACPT is a flat dollar amount calculated using one or more annualized growth rates based on national fee-for-service Medicare expenditures projected by the CMS Office of the Actuary. In determining the ACPT for an enrollment

type for each performance year, CMS does all of the following:

(1) Projects per capita growth in Parts A and B fee-for-service expenditures for benchmark year 3 (BY3) and each performance year of the ACO's agreement period. The calculation—

(i) Excludes IME and DSH payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals; and

(ii) Makes separate expenditure calculations for each of the following populations of beneficiaries:

(A) ESRD.

(B) Aged/Disabled.

(2) Calculates one or more annualized growth rates for the population of beneficiaries described in paragraph (b)(1)(ii)(A) of this section (the ESRD ACPT) and one or more annualized growth rates for the population of beneficiaries described in paragraph (b)(1)(ii)(B) of this section (the Aged/Disabled ACPT). These annualized growth rates will remain fixed over the ACO's agreement period. The annualized growth rate is an annual rate of growth in projected expenditures during the ACO's 5-year agreement period relative to BY3, calculated as follows—

(i) Using a uniform annualized projected rate of growth over each of the 5 performance years of the 5-year agreement period; or

(ii) If annualization as specified in paragraph (b)(2)(i) of this section is determined not to reasonably fit the anticipated growth curve, CMS will apply an alternative annualization technique using two or more annualized growth rates reflecting the projected rates of growth during the 5 performance years comprising the 5-year agreement period.

(3) For each performance year, multiplies the applicable annualized growth rate described in paragraph (b)(2) of this section by BY3 truncated national per capita fee-for-service Medicare expenditures for assignable beneficiaries for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries) identified for the 12-month calendar year corresponding to BY3 to express the annualized growth rate as a flat dollar amount as follows:

(i) The ESRD ACPT is used for the ESRD population.

(ii) The Aged/Disabled ACPT is used for the following populations: disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(4) Adjusts the flat dollar amounts described in paragraph (b)(3) of this section for each performance year for differences in severity and case mix between the ACO's BY3 assigned beneficiary population and the national assignable FFS population for each Medicare enrollment type identified for the 12-month calendar year corresponding to BY3.

(5) Divides the risk adjusted flat dollar amounts described in paragraph (b)(4) of this section by the ACO's historical benchmark expenditures described in § 425.652(a) for each Medicare enrollment type to calculate the percent increase to be included in the blended update factor described in § 425.652(b)(4).

■ 78. Amend § 425.702 by adding paragraph (c)(2)(iii) to read as follows:

**§ 425.702 Aggregate reports.**

\* \* \* \* \*

(c) \* \* \*

(2) \* \* \*

(iii) As an organized health care arrangement (as defined at 45 CFR 160.103), and the request reflects the minimum data necessary for the ACO to conduct health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501 on

behalf of the organized health care arrangement.

\* \* \* \* \*

■ 79. Amend § 425.704 by revising paragraph (b) introductory text and adding paragraph (b)(3) to read as follows:

**§ 425.704 Beneficiary-identifiable claims data.**

\* \* \* \* \*

(b) The ACO must certify that it is requesting claims data about any of the following:

\* \* \* \* \*

(3) The patients of the organized health care arrangement (as defined at 45 CFR 160.103) in which the ACO is participating with its ACO participants and ACO providers/suppliers, and the request reflects the minimum data necessary for the ACO to conduct health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501 on behalf of the organized health care arrangement.

\* \* \* \* \*

**§ 425.800 [Amended]**

■ 80. Amend § 425.800 in paragraph (a)(4) by removing the references “§§ 425.601, 425.602, 425.603, 425.604,

425.605, 425.606, and 425.610” and adding in its place the references “§§ 425.601, 425.602, 425.603, 425.604, 425.605, 425.606, 425.610, and 425.652”.

**PART 455—PROGRAM INTEGRITY: MEDICAID**

■ 81. The authority citation for part 455 continues to read as follows:

**Authority:** 42 U.S.C. 1302.

■ 82. Amend § 455.107 by revising paragraph (b)(1)(ii) to read as follows:

**§ 455.107 Disclosure of affiliations.**

\* \* \* \* \*

(b) \* \* \*

(1) \* \* \*

(ii) *Change of selection.* A State may, in consultation with CMS, change its selection after it has been made from the option in paragraph (b)(2)(ii) of this section to that in paragraph (b)(2)(i) of this section.

\* \* \* \* \*

Dated: October 28, 2022.

**Xavier Becerra,**

*Secretary, Department of Health and Human Services.*

**Note:** The following appendices will not appear in the Code of Federal Regulations.

**APPENDIX 1: MIPS QUALITY MEASURES**

NOTE: Except as otherwise noted in this final rule, previously finalized measures and specialty measures sets will continue to apply for the CY 2023 performance period/2025 MIPS payment year and future years. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table A as follows: NQF # / eCQM NQF #.

**TABLE Group A: New Quality Measures Finalized for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years**

**A.1. Psoriasis – Improvement in Patient-Reported Itch Severity**

| <b>Category</b>  | <b>Description</b>   |
|--|--|
| <b>NQF # / eCQM NQF #:</b>                               | N/A / N/A  |
| <b>Quality #:</b>  | 485  |
| <b>Description:</b>                                      | The percentage of patients, aged 18 years and older, with a diagnosis of psoriasis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 2 or more points at a follow up visit.   |
| <b>Measure Steward:</b>                                  | American Academy of Dermatology  |
| <b>Numerator:</b>  | Patients who achieve an assessment score that is reduced by 2 or more points (minimal clinically important difference) from the initial (index) assessment score.  |
| <b>Denominator:</b>                                      | All patients aged 18 years and older, with a diagnosis of psoriasis with an initial (index visit) Numeric Rating Scale (NRS), Visual Rating Scale (VRS), or ItchyQuant assessment score of greater than or equal to 4 who are returning for a follow-up visit.   |
| <b>Exclusions:</b>                                       | N/A  |
| <b>Measure Type:</b>                                     | Patient-Reported Outcome-based Performance Measure (PRO-PM)  |
| <b>Measure Domain:</b>                                   | Person and Caregiver-centered Experience and Outcomes (section 1848(s)(1)(B)(iv) of the Act)   |
| <b>High Priority Measure:</b>                            | Yes  |
| <b>Collection Type:</b>                                  | MIPS CQMs Specifications   |
| <b>Measure-Specific Case Minimum/Performance Period:</b> | N/A for this measure   |
| <b>Rationale:</b>  | <p>We proposed this measure because it addresses a gap in care for patients with psoriasis. This measure assesses for improvement of itch severity of symptoms from index visit to follow up visit, with an achieved score reduction of at least 2 points at follow up. This measure will represent another patient-reported outcome measure for interested parties to report within the MIPS Dermatology specialty set.</p> <p>This measure received conditional support for rulemaking from the Measures Application Partnership (MAP) pending Consensus-Based Entity (CBE) endorsement. While we agreed with the MAP that CBE (for example, NQF) endorsement is preferred, we believed this measure should nonetheless be added to MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based. Here, guidelines of care for the management and treatment of psoriasis established by the Joint American Academy of Dermatology-National Psoriasis Foundation (AAD-NPF) recommend an itch severity assessment to appropriately assess the degree of pruritus when present.<sup>1</sup> We believed patient-reported outcome performance measures such as this measure ensure that patients and families are engaged partners in their care and can be an effective way to measure the quality of care provided by clinicians.</p> <p>Psoriasis is a common condition, with some 7.5 million people affected in the U.S., leading to millions of clinical visits every year (<a href="https://www.aad.org/media/stats-numbers">https://www.aad.org/media/stats-numbers</a>). Chronic pruritis, the symptom assessed in this patient-reported outcome-based measure, has a significant impact on quality of life and is associated with depression and global distress, among other effects.<sup>2</sup> We believed that completion of the measure will support the creation of an effective treatment plan for the patient.</p> <p>Though the required assessment score reduction for this new quality measure is lower than current AAD-NPF guidelines, the measure's current implementation as a MIPS Qualified Clinical Data Registry (QCDR) measure shows an aggregate performance score for this measure of 43.3 percent, indicating a gap in care for achieving 2 point or more reduction in itch severity. The denominator for this measure includes an initial index score for the numeric Rating Scale (NRS) and Visual Rating Scale (VRS) and the ItchyQuant assessment score of 4 or greater. This threshold indicates a clinically realistic goal for patients with an index score of 4 or more (minimal</p> |

|  |   |
|--|---|
|  | <p>to moderate severity) and ensures capture of a more complete denominator eligible patient population to assess for an improvement in itch severity with psoriasis treatment. Additionally, the reliability performance score was high at 0.93 for the 2-point improvement from the index score.</p> <p>Therefore, we believed that incorporating this measure into MIPS will encourage measure adoption which will support clinician adherence to the AAD-NPF clinical guidelines, leading to better symptom control and improved quality of life for patients affected by chronic pruritis. Patients and providers on a technical expert panel agreed that the quality construct measured was actionable, and the measure result could be used to evaluate quality of care.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698">https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698</a>.</p>   |
|  | <p><b>Comment:</b> Several commenters supported the addition of the Psoriasis – Improvement in Patient-Reported Itch Severity measure to MIPS. Several commenters appreciated CMS’ effort to increase the number of PRO-PM measures. Commenters agreed that measures that assess aspects such as quality of life, or care preferences and patient priorities that are aligned to current clinical guidelines can help advance the current standard of care in ways that would meaningfully improve patient health and reduce overall health costs.</p> <p><b>Response:</b> We thank the commenters for supporting this new measure in MIPS.</p> <p><b>Comment:</b> One commenter agreed that patient-reported outcomes are important and appreciated the addition of a new dermatology-specific MIPS measure but was concerned that adequate training and education on using an itch-severity scale for psoriasis has not been expanded properly. The commenter heard from multiple practices there is a lack of education on using these tools.</p> <p><b>Response:</b> While this measure does require action on the part of the clinician to administer an itch-severity scale, the tools are publicly available and relatively low burden to administer. There are three different tools available for this measure requiring a numerical value regarding itch severity. Data can be collected by the clinician in a manner that compliments their clinical workflow. As clinicians can choose which measures to report, addition of this measure would add additional flexibility for reporting and provide an additional option for an outcome, high priority measure for the dermatology specialty.</p> <p><b>Comment:</b> One commenter opposed the addition of this new measure, in addition to the other new measures proposed, stating they will be administratively burdensome to implement. The commenter stated that quality performance requires a full year of data yet constant changes to workflow and data collection hinder accurate reporting and are burdensome.</p> <p><b>Response:</b> We believe this patient experience of care outcome measure fulfills an important gap for dermatologists by including consideration of the patient’s voice and experience. While this measure does require action on the part of the clinician, the tools are publicly available and relatively low burden to administer. The tools can be incorporated from multiple data sources allowing flexibility in collection to accommodate clinical workflows. As clinicians can choose which measures to report, addition of this measure would add additional flexibility for reporting and provide an additional option for an outcome, high priority measure for the dermatology specialty. While MIPS quality measures require data collection for the full performance year, individual clinicians and groups can set up their internal systems or work with their third-party intermediaries to efficiently collect data and reduce reporting burden. It is the responsibility of the individual clinician, group, or third-party intermediary to ensure data accuracy.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46458), we are finalizing the <i>Psoriasis – Improvement in Patient-Reported Itch Severity</i> measure as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |

**A.2. Dermatitis – Improvement in Patient-Reported Itch Severity**

| Category   | Description   |
|--|---|
| NQF # / eCQM NQF #:  | N/A / N/A   |
| Quality #:   | 486   |
| Description:   | The percentage of patients, aged 18 years and older, with a diagnosis of dermatitis where at an initial (index) visit have a patient reported itch severity assessments performed, score greater than or equal to 4, and who achieve a score reduction of 2 or more points at a follow up visit.  |
| Measure Steward:   | American Academy of Dermatology   |
| Numerator:   | Patients who achieve an assessment score that is reduced by 2 or more points (minimal clinically important difference) from the initial (index) assessment score.   |
| Denominator:   | All patients aged 18 years and older, with a diagnosis of dermatitis with an initial (index visit) Numeric Rating Scale (NRS), Visual Rating Scale (VRS), or ItchyQuant assessment score of greater than or equal to 4 who are returning for a follow-up visit.   |
| Exclusions:  | N/A   |
| Measure Type:  | Patient-Reported Outcome-based Performance Measure (PRO-PM)   |
| Measure Domain:  | Person and Caregiver-centered Experience and Outcomes (section 1848(s)(1)(B)(iv) of the Act)  |
| High Priority Measure:   | Yes   |
| Collection Type:   | MIPS CQMs Specifications  |
| Measure-Specific Case Minimum/Performance Period:  | N/A for this measure  |
| Rationale:   | <p>We proposed this measure because it addresses a gap in care for patients with dermatitis. This measure assesses for improvement of itch severity of symptoms from index visit to follow up visit, with an achieved score reduction of at least 2 points at follow up. This measure will represent another patient-reported outcome measure for clinicians to report within the MIPS Dermatology specialty set.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agreed with the MAP that CBE (for example, NQF) endorsement is preferred, we believed this measure should nonetheless be added to MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based.</p> <p>Chronic pruritis, the symptom assessed in this measure, has a significant impact on quality of life and is associated with depression, global distress, and sleep impairment among other effects.<sup>1</sup></p> <p>Though the required assessment score reduction for this new quality measure is lower than current AAD guidelines (<a href="https://www.aad.org/member/clinical-quality/guidelines/atopic-dermatitis">https://www.aad.org/member/clinical-quality/guidelines/atopic-dermatitis</a>), the measure's current implementation as a MIPS Qualified Clinical Data Registry (QCDR) measure shows an aggregate performance score for this measure of 54.9 percent, indicating a gap in care for achieving 2 point or more reduction in itch severity. The denominator for this measure includes an initial index score for the numeric Rating Scale (NRS) and Visual Rating Scale (VRS) and the ItchyQuant assessment score of 4 or greater. This threshold indicates a clinically realistic goal for patients with an index score of 4 or more (minimal to moderate severity) and ensures capture of a more complete denominator eligible patient populations to assess for an improvement in itch severity with dermatitis treatment. Additionally, reliability performance score was sufficient at 0.69 for the 2-point improvement from the index score.</p> <p>Therefore, we believed that incorporating this measure into MIPS will encourage measure adoption which will support clinician adherence to the AAD-NPF clinical guidelines, leading to better symptom control and improved quality of life for patients affected by chronic pruritis. Patients and providers on a technical expert panel agreed that the quality construct measured was actionable, and the measure result could be used to evaluate quality of care.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698">https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698</a>.</p> |
| <p><b>Comment:</b> Several commenters supported the addition of the Dermatitis – Improvement in Patient-Reported Itch Severity measure to MIPS. Several commenters appreciated CMS' effort to increase the number of PRO-PM measures.</p> <p><b>Response:</b> We thank the commenters for supporting this new measure in MIPS.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46459), we are finalizing the <i>Dermatitis – Improvement in Patient-Reported Itch Severity</i> measure as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |   |

<sup>1</sup> Lee, J., Suh, H., Jung, H., Park, M., & Ahn, J. (2021). Association between Chronic Pruritus, Depression, and Insomnia: A Cross-sectional Study. *JAAD International*, 3, 54-60. <https://www.sciencedirect.com/science/article/pii/S2666328721000122>.

## A.3. Screening for Social Drivers of Health

| Category  | Description   |
|---|---|
| NQF # / eCOM NQF #:                               | N/A / N/A   |
| Quality #:  | 487   |
| Description:                                      | Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.   |
| Measure Steward:                                  | Physicians Foundation   |
| Numerator:  | Number of patients 18 and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.  |
| Denominator:                                      | Number of patients 18 years and older.  |
| Exclusions:                                       | N/A   |
| Measure Type:                                     | Process   |
| Measure Domain:                                   | Community/Population Health (section 1848(s)(1)(B)(ii) of the Act)  |
| High Priority Measure:                            | Yes   |
| Collection Type:                                  | MIPS CQMs Specifications  |
| Measure-Specific Case Minimum/Performance Period: | N/A for this measure  |
| Rationale:  | <p>We proposed this measure because it will address health equity, an important topic that is currently not included within MIPS' quality measure inventory. This measure will assess the rate at which providers screen their adult patients for certain social drivers of health (DOHs); specifically, food insecurity, housing instability, transportation needs, utility help needs, and interpersonal safety. Nearly all physicians within a recent survey indicated that their patients' health outcomes are affected by one or more DOH.<sup>1</sup> The most common DOHs experienced by the respondent physicians' patients were financial instability (34 percent) and transportation needs (24 percent).<sup>1</sup> Studies have shown that social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health.<sup>2</sup> Thus, systematically screening patients for social determinants of health and referring them to community-based resources as needed can result in improved health outcomes.<sup>2,3</sup> Furthermore, improving the clinician's understanding of the social obstacles their patients face beyond the clinical realm – but which may affect their clinical outcomes – can provide critical insights, catalyze prevention and/or early identification and prompt referral, improve a patient's overall health and well-being.<sup>2,3</sup> As an example, early findings from the Accountable Health Communities Model shows those patients within the 'Assistance Track' had 9 percent fewer emergency department visits as compared to their "control group counterparts during the first year following screening" (<a href="https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt">https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt</a>). Adoption of this measure will address a significant performance gap as 84 percent of physician offices do not screen for all five needs.<sup>4</sup></p> <p>Therefore, we proposed this measure within the specialty sets of all clinician types to support those interested or already gathering DOH data. We believed the measure supports the process of collecting DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians who choose to submit this measure.</p> <p>This measure is consistent with our priority to advance health equity throughout our various programs, including the Quality Payment Program. We are working to advance health equity by designing, implementing, and operationalizing policies and programs that support health for all the people served by our programs, eliminating avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and providing the care and support that our enrollees need to thrive (<a href="https://www.cms.gov/pillar/health-equity">https://www.cms.gov/pillar/health-equity</a>).</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agreed with the MAP that endorsement of measures is preferred, we believed that the inclusion of this measure serves an important purpose in advancing quality measurement in MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based. Here, the U.S. Preventive Services Task Force (USPSTF), which is charged by section 915 of the Public Health Service Act to "review the scientific evidence related to the effectiveness, appropriateness, and cost-effectiveness of clinical preventive services for the purpose of developing recommendations," specified the screening for key DOHs in its portfolio of recommendations (<a href="https://www.acpjournals.org/doi/10.7326/M20-0730">https://www.acpjournals.org/doi/10.7326/M20-0730</a>).</p> <p>In a cross-sectional study, DOH were associated with 37.7 percent of variation in price-adjusted Medicare per beneficiary spending between counties in the highest and lowest quintiles of spending in 2017, including both direct contributions and indirect contributions through other factors. DOH's direct contribution accounted for 5.8 percent of the variation after controlling for patient demographic characteristics, clinical risk, and supply of health care resources. These findings suggest that addressing DOH is important for reducing geographic spending variation and improving the value of health care. The evidence demonstrates that specific social risk factors are directly associated with patient health outcomes as well as healthcare utilization, costs, and performance in quality-based payment programs.<sup>5,6</sup> Another cross-sectional study found that screening for all five social needs was reported by 15.6 percent of practices, whereas 33.3 percent of practices reported no screening, suggesting that few US physician practices screen patients for all five key social needs associated with health outcomes.<sup>4</sup></p> <p>We also proposed a similar measure for the Hospital Inpatient Quality Reporting (IQR) Program. For further information on the Screening for Social Drivers of Health measure finalized for the Hospital IQR Program in the FY2023 IPPS/LTCH PPS final rule (<a href="https://www.govinfo.gov/content/pkg/FR-2022-08-10/pdf/2022-16472.pdf">https://www.govinfo.gov/content/pkg/FR-2022-08-10/pdf/2022-16472.pdf</a>), we refer readers to 87 FR 49202 through 49215.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698">https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698</a>.</p> |

| Category | Description  |
|----------|--|
|          | <p><b>Comment:</b> Numerous commenters strongly supported the inclusion of this new health equity measure in MIPS. Several commenters noted this measure's adoption in the Hospital IQR Program and recommended that CMS apply this measure across other programs for alignment. Several commenters agreed this is a high priority measure in MIPS.</p> <p>Commenters' stated reasons for supporting this new measure included:</p> <ul style="list-style-type: none"> <li>• The country cannot improve health outcomes or reduce health care costs without addressing DOH.</li> <li>• Given the impact of DOH, this measure is a first step in the process of addressing these factors to achieve value and equity.</li> <li>• CMS uses hundreds of measures to assess the quality of health care and to direct health care spending, but until this new measure, had zero quality measures that capture these drivers of health in federal payment programs.</li> <li>• Adoption of this measure will improve access and health outcomes for all patients and to maximize the use of limited government resources to help those most in need.</li> <li>• The measure is a vital step toward collecting standardized data to support a data-driven approach to addressing health-related social need and informing potential future measure development.</li> <li>• The particular emphasis on food insecurity and risk for malnutrition can help facilitate access to appropriate and timely interventions for patients.</li> <li>• DOH has a profound impact on patients and the physicians, particularly in the wake of the public health emergency.</li> <li>• Interpersonal safety is a key domain, since one in four women in their lifetime will experience intimate partner violence.</li> <li>• All health care interested parties should take a leading role in creating a more inclusive environment and providing accessible care, including through screenings for health-related social needs.</li> </ul> <p><b>Response:</b> We appreciate commenters' support for this measure. We will continue to work toward alignment of measures across CMS programs. We will take this feedback into consideration during the public notice and comment cycle for possible implementation in future years.</p> <p><b>Comment:</b> Several commenters requested that CMS also implement the Screen Positive Rate for Social Drivers of Health measure in MIPS that was recently adopted for the Hospital IQR Program. Commenters stated that this would mitigate the risk of measure fragmentation, physician and patient burden, and would align measures across hospital and provider payment programs.</p> <p><b>Response:</b> We thank the commenters for their input and will take this feedback regarding the Screen Positive Rate for Social Drivers of Health measure into consideration during future rulemaking. We will continue to work toward alignment of measures across CMS programs.</p> <p><b>Comment:</b> One commenter supported this new measure but indicated that additional steps are needed to lead change, in part through connection to and partnership with community-based organizations. One suggestion by the commenter was to have measures evaluating referral rate and completion rate for receiving services after positive screens. Another commenter urged CMS to consider developing a companion measure to document if the practice coordinates care based on patient responses, such as connecting patients with community resources. Another commenter recommended that CMS consider a more comprehensive measure that required a plan of action or targeted intervention to meet the patients' needs and assess improvements for at-risk populations.</p> <p><b>Response:</b> We thank the commenters for their feedback and will take it into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years. Additionally, we encourage the commenters to reach out to measure developers/stewards to develop new outcome/high priority measures for submission to the Call for Measures for possible future implementation.</p> <p><b>Comment:</b> One commenter supported this new measure and the role nurses play in conducting screening for social drivers of health in any setting. The commenter encouraged CMS to monitor and study implementation to gain a profile of clinical practices that report on the measure, who within the practice is performing the screening itself, and to identify potential implications for promoting team-based care. In addition, the commenter stated that it would be useful to understand if the screening question for utility difficulties is sufficient to capture access to telehealth modalities.</p> <p><b>Response:</b> We will monitor data submitted and any trends that may impact scoring or reporting of the measures; however, we do not intend to prescribe each clinician or group's clinical workflow. As the measure steward, we will take this feedback into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years. However, at this time, we are not requiring the use of a particular tool to screen for DOH. As such, there is no specific requirement to capture access to telehealth modalities in the screening question for utility difficulties.</p> <p><b>Comment:</b> One commenter strongly supported CMS' position that social needs are a significant driver of health, and that greater screening and structured data collection on social needs is critical to more rigorously understand and document that impact. The commenter strongly encouraged CMS to coordinate with other HHS agencies to align protocols and screening across programs. The commenter also requested that CMS coordinate with states, particularly among Medicaid recipients, to reduce burden. The commenter stated that it is critical to share standardized social needs data with providers, community-based organizations, and others to improve efficiency, reduce data collection burden on both providers and recipients, and coordinate efforts among all relevant interested parties within a community.</p> <p><b>Response:</b> We believe this measure is an important first step for eligible clinicians to gather DOH data and advance health equity within MIPS and improve health outcomes. As the measure steward, we will take this feedback into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years.</p> <p><b>Comment:</b> One commenter supported this new measure in MIPS but urged CMS to delay the implementation of this measure until the end of the public health emergency. The commenter stated practices are suffering under increased regulatory reporting requirements while the public health emergency is still in effect and urged CMS to consider the strain on practices the public health emergency has caused. The commenter, as well as other commenters, were concerned by the data collection burden associated with the measure and encouraged CMS to balance changes to MIPS against the growing data collection burden upon practices.</p> <p><b>Response:</b> While we acknowledge the commenters' concerns, we believe this is an important process measure to support the process of collecting DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians who chose to implement this measure. We tried to design this measure with flexibility to reduce burden on clinicians. For example, this measure allows the use of any tool to screen for DOH and therefore, we believe the clinician can determine what tool/process works best for their clinical workflow. More generally, because clinicians have the flexibility to choose which measures to report, the adoption of this measure does not place additional burden on clinicians. Clinicians are not required to select this measure to report. Therefore, if the clinician considers this measure overly</p> |

| Category | Description  |
|----------|--|
|          | <p>burdensome, he or she may opt to report a different measure. Instead, the addition of this measure enhances clinician choice when they select which measures to report. We are also committed to lessening the burden of reporting quality measures through Meaningful Measures 2.0.</p> <p><b>Comment:</b> One commenter stated that family physicians play an important role in helping identify health-related social needs of patients. However, clinicians cannot be held accountable for providing resources to address individual health-related social needs when those resources do not exist in the community, and the commenter stated that CMS should incentivize the development and use of community care organization, or other payer and provider referral systems to ease the burden on all parties to address patients' social needs. The commenter urged caution when considering measurement of this activity as an indicator of care quality in a single health care setting and that the measure should address factors within the control of the individuals or organizations being measured. Another commenter agreed that DOH and inequities in health reach far beyond the control of a medical team and are rooted in societal policies impacting equity in education, housing, and income. The commenter firmly believed that healthcare providers and teams must never be accountable for and paid based on the amelioration of patients' DOH.</p> <p><b>Response:</b> This measure is a first step in the process of collecting DOH that will support advancing health equity and improving health outcomes. We believe this measure is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians who chose to implement this measure. This measure does not hold clinicians accountable for and paid based on improvements in patients' DOH. This measure purely focuses on the completion of screening for DOH patient information. It does not require a referral to services or any other action on the part of the clinician, nor does it penalize clinicians for those patients who screen positive for any of the social determinants within the measure. We do note, however, that the information that a clinician collects during a DOH screening may be clinically relevant and may not have otherwise been collected by the clinician absent the screening. As such, better scores on this measure are still indicators of the quality of care provided to patients. Because clinicians have the flexibility to choose measures to report and this measure's performance is just assessing the screening of patients, we do not believe there would be unintended consequences for the clinicians or the patients they serve regarding things such as clinician/patient relationship, patient care, and clinician performance.</p> <p><b>Comment:</b> One commenter had significant concerns about a quality measure to assess clinician referrals to community-based services to address DOH. The commenter stated this measure is more appropriate for Federally Qualified Health Centers (FQHCs) that have funding for hiring staff who will connect patients with external resources. If CMS wants private and public health organizations to measure equity, the commenter stated, they should consider allowing these organizations to apply for the same grants made accessible to FQHCs. Additional commenters agreed that this measure is most appropriate for facility-level accountability since facilities have the capacity, including staff resources, to conduct these assessments on all patients. One commenter indicated that if a clinician or practice has the capacity to screen all patients, then they should have the option to choose this measure. However, clinicians who might find it difficult to conduct these screenings on all patients due to limited time with the patient, lack of resources, and workflow issues should not be required to report this measure. Another commenter believed that while the data collected in this measure will be valuable, this measure may be more appropriate if reported at the system or regional level.</p> <p><b>Response:</b> While we acknowledge the commenters' concerns, we note that no clinician is required to choose to report this measure. We believe this is an important process measure for clinicians that supports the process of collecting DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. This measure will hold clinicians/groups accountable for screening all patients for DOH, a first step towards this becoming a standard of care that drives meaningful impact and quality outcomes for impacted patients. Clinicians choosing to report on this measure would meet the measure's quality action by completing a screening for all patients 18 years and older once during the performance period. As this measure is only assessing that all patients are screened for DOH and it is not prescriptive in an assessment tool, we don't believe that the measure should only be available at the facility-level. Clinicians can enact any clinical workflow and screening tool combination that works best for their practice, and we believe this is an important aspect to consider when assessing a patient's health and implementing a care plan at both at the clinician and facility-levels.</p> <p><b>Comment:</b> One commenter valued the importance of systematically addressing DOH affecting individual patients, which can help improve the early identification of risk and/or need and prompt referral to relevant sources. In the Inpatient Prospective Payment System (IPPS) rule, CMS noted how providers may use a self-selected screening tool and collect these data in multiple ways. The commenter urged CMS to allow clinicians reporting this measure to use a self-selected screening tool and collect these data in ways that best accommodate the populations they serve and their individual needs. In addition, the Hospital IQR Program is a pay-for-reporting program, while payments are tied to performance under MIPS. The commenter requested that CMS clarify how it intends to set benchmarks and evaluate performance under this measure, which, as proposed, requires screening of all patients with no exclusions.</p> <p>Additional commenters also supported flexibility in the selection of screening tools to better understand DOH and their impact before standardizing screening tools across care settings, geographic locations, and patient populations. One commenter stated that over time CMS should require the use of one set of reliable and commonly used tools.</p> <p><b>Response:</b> We will take this feedback into consideration during the annual revisions for possible implementation in future years. The measure allows use of any tool to screen for the DOH and therefore, the clinician can determine what tool/process works best for their clinical workflow. Because clinicians have the flexibility to choose this measure and it only assesses for the screening of patients, we do not believe there would be unintended consequences for the clinicians or the patients they serve regarding things such as clinician/patient relationship, patient care, and clinician performance. As described in the CY 2023 PFS proposed rule, (87 FR 46460 through 46461) performance is based upon screening DOH for all denominator eligible patients. Scoring analytics for data completeness and performance, in order to establish a benchmark, will be consistent with other measures within MIPS, which are established pursuant to 42 CFR § 414.1380(b)(1)(ii).</p> <p><b>Comment:</b> Several commenters were concerned over the lack of standardized and valid tools across all domains included in the measure and agreed that the domains should align with data standards such as the HL7 Gravity Project and USCDI (for example, only food insecurity has been finalized and uses a gold standard tool). Commenters stated that the typical measure development process is needed for this measure rather than "the trial-and-error data submission and reporting approach currently proposed." One commenter recommended utilizing a restructured version of the measure to create a more standardized approach with identified tools to effectively screen for DOH before inclusion into MIPS.</p> <p><b>Response:</b> While we acknowledge the commenters' concerns, the measure allows use of any tool to screen for the DOH and therefore, we believe the clinician can determine what tool/process/data source works best for their clinical workflow. There are standardized validated tools available for these screenings. This measure does not currently require the capture of granular data from all DOH domain screening results; therefore, it is not necessary to require the use of a specific tool or standardized approach beyond the measure specification as clinicians/groups begin the process of incorporating this screening into their clinical workflow. Adoption of screening DOH in all patients is a critical first step in identifying and addressing DOH deficiencies. As</p> |

| Category | Description  |
|----------|--|
|          | <p>noted above, we strongly encourage, but do not require, clinicians to capture and exchange this information in a standardized format so that this data can be made available across the care continuum.</p> <p><b>Comment:</b> Several commenters indicated that the measure as a process measure determines whether the physician screened for these potential barriers but does not drive the providers to take a specific action to address DOH. One of these commenters stated that in the proposed rule, CMS noted that this could prompt physicians and other providers to make referrals as necessary but does not provide details of what is expected or what methods or tools physicians should use to collect this information.</p> <p><b>Response:</b> As proposed (87 FR 46460 through 46461), this measure does not require specific referrals by the clinician to address DOH or require the use of specific tools to collect such information. We believe public input will be valuable in the continuing development of our health equity quality measurement efforts and broader commitment to health equity, and we intend to review data submitted for this measure to help define and determine the future resources necessary to begin addressing DOH. As the measure steward, we will take this feedback into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years. We encourage the commenters to reach out to measure developers/stewards to develop new measures based upon this clinical topic for submission to the Call for Measures for possible future implementation.</p> <p><b>Comment:</b> One commenter, in support of this new measure, stated that assessment of social needs for every patient aligns with their goal of advancing equity and well-being by 2030. However, the commenter had concerns about the data required for this measure, stating that the required data elements may not be reliably documented using discrete data fields that can be captured electronically. The commenter further described that this potential gap in electronic feasibility may place an additional burden on health systems as they attempt to capture the required data. Similarly, another commenter indicated that the proposed rule on this measure stated that electronic specifications are not being developed at this time. In general, the commenter supported this measure concept; however, after years of reported physician burden related to quality measures, the commenter cannot support a manually collected and reported measure. The commenter stated that this “regressive proposal” does not support other HHS requirements to reduce paperwork. The commenter urged the agency to create electronic specifications for any measure, including this one, and ensure that the reporting requirements align with the United States Core Data for Interoperability (USCDI) data element inclusion and vendor adoption to standardize collection and reporting for these important health equity topics. The commenter stated currently USCDI v3 includes data elements that would assist in collecting this information; however, the ONC has yet to mandate the adoption for vendor systems. Another commenter recommended that CMS delay this measure until electronic specifications have been developed and until USCDI v3 is fully adopted by all electronic health record systems.</p> <p><b>Response:</b> While we appreciate the commenters’ concerns, we believe this measure is an important first step for eligible clinicians to gather DOH data and advance health equity within MIPS and improve health outcomes. This measure data would then be available for assessment of trends across health systems and may allow for further delineation of health inequities across different regions of the country, which is an important first step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. This measure is voluntary; therefore, clinicians have the flexibility to choose to report this measure and it only looks at the screening of patients.</p> <p>We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures, however, not all measures are submitted for the eCQM collection type as this is not currently a requirement prior to submitting a measure for consideration into Call for Quality Measures. We endeavor to include different collection types within our quality measure inventory to allow flexibility in reporting. This measure was submitted to the Call for Quality Measures for the MIPS CQM collection type only by a different entity, and we recently assumed stewardship of this measure. Therefore, this measure is not currently available for additional collection types for implementation for the 2023 performance period. However, as the measure steward, we will take this feedback into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years. Moreover, we do not believe that electronic specification of this measure is necessary to proceed with implementation at this time; however, we expect and encourage developers to identify ways to automate collection of information about whether a screening has been done.</p> <p>We further appreciate commenters’ concerns about the interoperability of DOH data collected as part of screening activities to support this measure. We note that the measure allows use of any tool to screen for the DOH and therefore, the clinician can determine what tool/process/data source works best for their clinical workflow. However, we recommend use of screening instruments that maximize opportunities to collect and analyze standardized, quantifiable, and actionable data. While we did not propose additional requirements for the tools used to collect screening data under this measure, we strongly encourage the use of tools with screening instruments that are validated, widely used, and which support capture of data in a standardized way (that is, tools coded in accordance with health IT vocabulary standards) so that this data can be made available across the care continuum. The use of validated screening instruments that use available health IT coding terminology will enable greater standardization of social needs data and facilitate interoperable exchange of such data. There are currently a number of tools available to eligible clinicians that incorporate coded screening instruments, including the Accountable Health Communities Health Related Social Needs Survey (AHC HRSN) developed for CMMI’s Accountable Health Communities Model<sup>7</sup> as well as other tools identified by key stakeholders, such as the Social Interventions Research and Evaluation Network (SIREN).<sup>8</sup></p> <p>These screening instruments incorporated within these tools use value sets identified by the Gravity Project, a stakeholder-led initiative that evaluates the validity and appropriateness of available assessment instruments to screen for various domains (<a href="https://thegravityproject.net/">https://thegravityproject.net/</a>), and are included in the NLM Value Set Authority Center (VSAC).<sup>9</sup> Questions and responses in these screening instruments are mapped to health IT vocabulary standards (that is, have LOINC coding terminology). More information and links to these value sets can be found through the Interoperability Standards Advisory maintained by the Office of the National Coordinator for Health IT (<a href="https://www.healthit.gov/isa/representing-social-determinants-health-screening-assessments">https://www.healthit.gov/isa/representing-social-determinants-health-screening-assessments</a>).</p> <p>Finally, ONC has also identified these value sets for representing SDOH assessment data in certified health IT products as part of the United States Core Data for Interoperability (USCDI) beginning with USCDI Version 2 (<a href="https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi">https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi</a>). While not yet required under the ONC Health IT Certification program, developers of certified health IT may upgrade their certified health IT products to USCDI Version 2<sup>10</sup> to support the availability of information about DOH with other members of the care team. We encourage eligible clinicians to work with their vendors to explore these options. We appreciate the commenters’ support for alignment with USCDI Version 3 and encourage review of information about how USCDI is aligned with available tools for capturing coded DOH information, as well as opportunities for health IT developers to use updated versions of USCDI that have not been adopted in regulation.<sup>10</sup></p> <p><b>Comment:</b> Several commenters expressed concerns related to how the measure was designed and the lack of measure specifications. One commenter stated that the measure does not provide information on what encounters are included and appears to be specified so broadly that there is significant potential for the measure to be attributed to specialists and others for whom requiring this broad screening approach would not be appropriate. Another commenter stated that there was no information provided on requirements for the frequency of data collection or the measure timeframe, how to account for patients who visit the provider or practice multiple times a year, or how the data will be used. Another commenter stated this measure as currently defined does not provide sufficient detail for clinician to understand whether this measure would be applicable to them. The commenter did not know if the measure denominator</p> |

| Category | Description   |
|----------|---|
|          | <p>intended to capture only those patients with an established relationship with primary care or would other encounters or procedures also be counted, and whether patients who reside in a skilled nursing facility included or excluded.</p> <p><b>Response:</b> This is a process measure that would be required once per performance period for patients meeting the denominator criteria. The measure was based on the Accountable Health Communities universal screening protocol (<a href="https://innovation.cms.gov/files/worksheets/ahcm-screeningtool.pdf">https://innovation.cms.gov/files/worksheets/ahcm-screeningtool.pdf</a>) with the intent to ensure all patients of MIPS-eligible clinicians are screened. Therefore, the intended denominator population is all patients 18 years of age and older with an encounter during the performance period. Under MIPS, clinicians have the flexibility to choose to report the measures that would work best for their scope of practice and clinical workflow. As is the case with all adopted measures, the detailed technical measure specifications for this measure will be posted to the QPP Resource Library at the end of the year and can then be reviewed for applicability and appropriateness to each clinician/group. The measure does not prescribe how a clinician or group should implement this measure into their workflow.</p> <p><b>Comment:</b> Several commenters expressed the lack of alignment of the measure specifications for this measure in MIPS when compared to the specifications for the Hospital IQR Program (87 FR 49202 through 49215). For example, in the 2023 IPPS final rule, the Screening for Social Drivers of Health measure's numerator definition allows a hospital to screen a patient on "one or all" of the five factors, while the measure as proposed for MIPS does not provide this level of detail and is not consistent with previous statements regarding the need to ensure consistency in specifications of related measures across CMS quality programs. In addition, commenters noted the lack of exclusions included in the measure specifications since the inpatient version finalized excludes (1) patients who opt out of screening; and (2) patients who are themselves unable to complete the screening during their inpatient stay and have no legal guardian or caregiver able to do so on the patient's behalf during their inpatient stay. The commenters believed that these are important exclusions and should be included in the MIPS version of this measure.</p> <p><b>Response:</b> While we acknowledge the commenters' concerns, the DOH measures are not intended to be consistent between the two programs. At this time, we believe that this measure can be implemented into MIPS without the exclusions found within the Hospital IQR Program. The Hospital IQR Program DOH measure exclusions in question are (1) patients who opt out of screening; and (2) patients who themselves are unable to complete the screening during their inpatient stay and have no legal guardian or caregiver able to do so on the patient's behalf during their inpatient stay. Since MIPS also includes outpatient and ambulatory settings and includes clinicians that report as individuals and groups, we believe these exclusions are not necessary because the first exclusion would remove these patients from the denominator eligible patient population, removing them from the quality action assessment creating the potential for use of this exclusion in place of screening in addition to not being able to collect any data on these patients. We believe this subset of patients who refuse to do the screening, would be something all clinicians/groups would encounter and it is their responsibility to outline the importance of completing such screening to their care. The second exclusion is specific to the inpatient care setting only and would therefore not apply to outpatient and ambulatory encounters. However, we will monitor feedback received on this measure for possible revisions in future program years. The FY 2023 IPPS/LTCH PPS proposed rule had two instances in the preamble in which a technical error was made by stating screening was for "one or all" of the five HRSNs (87 FR 28502 and 87 FR 28503). This was corrected to "all five HRSNs" in the FY 2023 IPPS/LTCH PPS final rule as per the measure specifications that we referred to throughout the preamble of the CY 2023 PFS proposed rule (87 FR 28497) in which we proposed to adopt a Screening for Social Drivers of Health measure and as was reviewed as part of the MUC review process (87 FR 49208). The five questions of the proposed structural measure are adapted from the CMS Office of Minority Health's Building an Organizational Response to Health Disparities framework, which focuses on data collection, data analysis, culture of equity, and quality improvement (87 FR 49193). We believe that each element within a domain is important as together they help clinicians identify, prioritize, and act on health disparities. We will take this feedback into consideration during the annual revisions for possible implementation in future years.</p> <p><b>Comment:</b> Many commenters expressed concern over the lack of adequate measure testing cited in the proposed rule and stated that the measure must be tested for reliability and validity prior to implementation in MIPS. Another commenter indicated that CMS continues to implement costly testing requirements but does not hold MIPS quality measures to the same QCDR measure testing standards. If implemented effectively, the measure could provide meaningful feedback for clinicians to act. One commenter urged CMS to delay adoption of this measure until testing has been completed to ensure the measure is methodologically sound before using this measure in a reimbursement program. Several commenters stated that this measure should not be considered for use in MVPs until best practices and education are widely available and the measure is adequately specified and tested. Several commenters requested this measure remain voluntary in MIPS. Another commenter believed that prior to implementation of this measure in MIPS, concerns regarding necessary specification and testing must be addressed and endorsement by the NQF should be achieved.</p> <p><b>Response:</b> As we have previously stated (83 FR 53636; 84 FR 62954), we request that interested parties consider when submitting a quality measure for possible inclusion whether the measure is "beyond the measure concept phase of development and [has] started testing, at a minimum, with strong encouragement and preference for measures that have completed or are near completion of reliability and validity testing." While we consider whether or not a measure is fully tested, it is not the only relevant standard. This is a screening data collection measure. We believe that achieving health equity is a pressing issue which deserves serious focus and rapid action. This measure is an important first step for data collection of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. This measure was not proposed for use within any MVPs, and therefore has not been finalized for use within any MVPs at this time, but we believe that clinicians should still have the choice to report it. If clinicians choose to report this measure, it will allow them to begin assessing health inequities within the scope of MIPS reporting. We believe this is vital to allow further testing and development of additional health equity measures.</p> <p>In addition, the five domains of this measure were adapted from the CMS Office of Minority Health's Building an Organizational Response to Health Disparities framework, which focuses on data collection, data analysis, culture of equity, and quality improvement and we encourage its use for data analysis to further understand the factors we have highlighted. This provides a scientific basis and use case for the five domains included in this measure to facilitate reliable data collection. We believe this is an important step towards the future development of outcome-based measures within this topic. We agree with the commenter that endorsement of measures is preferred, however this is not required for measures included in MIPS. Additionally, we did not identify any endorsed measures on this topic for MIPS. We believe that the inclusion of this measure serves an important purpose in advancing quality measurement in MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. While we consider whether or not a measure is fully tested, it is not the only relevant standard. This measure supports health equity, a national healthcare priority and is responsive to filling a critical gap in MIPS. This measure does not result in negative unintended consequences as described in the Blueprint (<a href="https://mmsub.cms.gov/measure-lifecycle/measure-implementation/selection">https://mmsub.cms.gov/measure-lifecycle/measure-implementation/selection</a>) such as overuse or inappropriate use of care or treatment, or limiting access to care. Therefore, based upon the importance of this topic and need to address this national healthcare priority, we are finalizing the measure.</p> <p><b>Comment:</b> A commenter stated that there is lack of equivalence with the Accountable Health Communities Model leading to excessive burden on physicians and the measure could also harm the patient-provider relationship. Another commenter suggested that CMS begin the DOH process by measuring organizations on health disparities and by collecting a standardized dataset of characteristics until the industry determines which interventions to reduce these disparities are effective.</p> |

| Category | Description   |
|----------|---|
|          | <p><b>Response:</b> The measure was based on the Accountable Health Communities universal screening protocol with the intent to ensure all patients of MIPS-eligible clinicians are screened. The following five domains were selected to screen for social risk factors in Medicare and Medicaid beneficiaries under the Accountable Health Communities Model: food insecurity; housing instability; transportation needs; utility difficulties; and interpersonal safety. In addition to established evidence of their association with health status, risk, and outcomes, these five domains were selected because they can be assessed across the broadest spectrum of individuals in a variety of settings. This measure is a first step in the process of collecting data on DOH that will support advancing health equity and improving health outcomes. This measure purely focuses on the completion of screening for DOH patient information. It does not require a referral to services or any other action on the part of the clinician, nor does it penalize clinicians for those patients who screen positive for any of the DOH within the measure. We do note, however, that the information that a clinician collects during a DOH screening may be clinically relevant and may not have otherwise been collected by the clinician absent the screening. Because clinicians have the flexibility to choose this measure, for traditional MIPS, as it was not proposed for inclusion within any MVPs, and it only assesses for the completion of screening for DOH, we do not believe there would be unintended consequences, including harm, to the clinicians or the patients they serve. Instead, it measures the collection of important information regarding the patient that can help to achieve quality clinical outcomes. Additionally, screening for DOH may allow clinicians insight into their patients' life that would allow them to create care plans tailored specifically to patient's assessed social limitations that could impede their overall healthcare delivery and status. The current measure does not require intervention or granular data capture of health disparities, and therefore, allows time for continued development of DOH interventions and standardization of this data.</p> <p><b>Comment:</b> Several commenters were concerned that clinicians may become focused on screening for DOH without addressing them and suggested coordinated efforts across the health care system including how to best address patients' needs and provide interventions is required first. In addition, prior to holding providers accountable for screening patients and the associated data collection, commenters recommended CMS simultaneously implement an education effort explaining the importance of the information, best practices for collecting the data and intentions for use, as well as education related to privacy and security. Two additional commenters agreed, noting that implementation of this measure is premature until necessary resources and tools to address the individual's needs for any one of the selected DOH are widely available. Another commenter suggested CMS support providers through funding opportunities to have the necessary infrastructure to gather data.</p> <p><b>Response:</b> We will take this feedback into consideration for future policymaking. This measure is only looking at the percentage of patients screened and does not require an action to address these needs if screening is positive. As previously mentioned, this measure was based on the Accountable Health Communities universal screening protocol with the intent to ensure all patients of MIPS-eligible clinicians are screened. There are publicly available screening tools, including the Accountable Health Communities screening tool (<a href="https://innovation.cms.gov/files/workbooks/ahcm-screeningtool.pdf">https://innovation.cms.gov/files/workbooks/ahcm-screeningtool.pdf</a>). While we acknowledge the commenters' concerns, we believe this measure to be a building block that lays the groundwork for a more comprehensive suite of measures that would assess progress in providing high-quality healthcare for all patients regardless of social risk factors or demographic characteristics which would include providing patients with the appropriate resources and interventions. We agree that the data submitted for this measure will be a significant step towards addressing the role of DOHs in improving health equity and is one of our quality improvement goals, which can then be utilized to help define and determine resources necessary to begin addressing DOH. We agree that should screening for DOH become a standard of care, the vital next step would be to work across the healthcare system to ensure resources are in place that address and alleviate identified patient social needs to further drive quality health outcomes in all patients. As with all quality measures, the technical specification provides information on how to implement the measure, including clinical recommendation statements and rationale, and will be posted in the December timeframe for review. There are standardized validated tools available for these screenings. This measure remains optional for traditional MIPS, allowing for clinician choice in choosing measures to report. We believe the information obtained from this measure would be managed with the same level of privacy and security as any other medical data related to the patient.</p> <p><b>Comment:</b> One commenter did not support adding this new measure to MIPS, stating that the measure does not address the need for referral and bidirectional communication with community-based services to track outcomes. The commenter urged CMS to examine the challenges to linking data from medical and nonmedical sources and encouraged CMS to streamline and align the collection of data related to equity measures across settings and care providers to reduce administrative burden and to avoid a patient being asked the same sensitive questions repeatedly at various points along the care continuum.</p> <p><b>Response:</b> We thank the commenter for their comment. This measure purely focuses on the completion of screening for DOH patient information. It does not require a referral to services or any other action on the part of the clinician, nor does it penalize clinicians for those patients who screen positive for any of the social determinants within the measure. We do note, however, that the information that a clinician collects during a DOH screening may be clinically relevant and may not have otherwise been collected by the clinician absent the screening. As such, better scores on this measure are still indicators of the quality of care provided regardless of the availability of community care organizations and whether patients are referred to such organizations.</p> <p>While we acknowledge the commenter's concerns, we believe this measure to be a building block that lays the groundwork for a more comprehensive suite of measures that would assess progress in providing high-quality healthcare for all patients regardless of social risk factors or demographic characteristics. We agree that should screening for DOH become a standard of care, a vital next step would be to ensure bidirectional communication with community-based services/resources to endeavor to alleviate DOH needs to further drive quality outcomes in all patients. We agree with the commenter's suggestion and continue to work towards data element standardization and alignment of measures across programs, to streamline capture of DOH data, as these are current areas of interest and actively being examined and researched.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46460 and 46461), we are finalizing the <i>Screening for Social Drivers of Health</i> measure as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |

## A.4. Kidney Health Evaluation

| Category   | Description  |
|--|--|
| NQF # / eCQM NQF #:  | N/A / N/A  |
| Quality #:   | 488  |
| Description:   | Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the measurement period.  |
| Measure Steward:   | National Kidney Foundation   |
| Numerator:   | Patients who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the measurement period.  |
| Denominator:   | All patients aged 18-75 years with a diagnosis of diabetes at the start of the measurement period with a visit during the measurement period.  |
| Exclusions:  | Denominator Exclusions:<br>1. Patients with a diagnosis of End Stage Renal Disease (ESRD);<br>2. Patients with a diagnosis of Chronic Kidney Disease (CKD) Stage 5;<br>3. Patients who have an order for or are receiving hospice or palliative care.  |
| Measure Type:  | Process  |
| Measure Domain:  | Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)  |
| High Priority Measure:   | No   |
| Collection Type:   | eCQM Specifications, MIPS CQMs Specifications  |
| Measure-Specific Case Minimum/Performance Period:  | N/A for this measure   |
| Rationale:   | <p>We proposed this measure because it focuses on nephrology and the critical condition of diabetes, both identified as gaps within MIPS' quality measure inventory. We identified these gaps as priorities for future quality measures. This measure will replace and improve upon the existing measure Q119: Diabetes Medical Attention for Nephropathy. This measure is more specific than measure Q119 as it requires utilizing multiple tests, estimated glomerular filtration rate (eGFR) and urine albumin creatinine ratio (uACR) tests, to assess a patient's kidney health.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agreed with the MAP that CBE (for example, NQF) endorsement is preferred, we believed this measure should nonetheless be added to MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based.</p> <p>Approximately 9 percent of American adults currently have CKD,<sup>1</sup> and it is projected that by 2030 approximately 17 percent of Americans aged 30 years and older will have CKD.<sup>2,3</sup> In the U.S. from 2002-2016, the burden of CKD, defined as years of life lost, years living with disability, disability-adjusted life years, and deaths, outpaced changes in the burden of disease for other conditions.<sup>4</sup> Patients with CKD are readmitted to the hospital more frequently than those without diagnosed CKD.<sup>2</sup> This public health issue is driven largely by the impact of diabetes—the most common comorbid risk factor for CKD.<sup>2,4</sup></p> <p>The intent of this process measure is to improve rates of guideline-concordant kidney health evaluation in patients with diabetes. According to the American Diabetes Association (ADA) 'Standards of Medical Care in Diabetes', "Albuminuria and eGFR should be monitored regularly to enable timely diagnosis of CKD, [and] monitor progression of CKD..."<sup>5</sup> Higher rates of such evaluations are believed to improve the rate identification and, potentially, the treatment or delayed progression of CKD in this high-risk population. Early detection is critical in order to initiate timely care as the disease may silently progress to advanced stages (<a href="https://www.aafp.org/afp/2017/1215/p776.html">https://www.aafp.org/afp/2017/1215/p776.html</a>). Annual kidney health evaluation in patients with diabetes to determine risk of CKD using estimated glomerular filtration rate (eGFR) and urine albumin creatinine ratio (uACR) is recommended by clinical practice guidelines and has been a focus of various local and national health care quality improvement initiatives, including Healthy People 2020.<sup>2</sup></p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698">https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698</a>.</p> |
| <p><b>Comment:</b> Several commenters supported this new measure and removal of measure Q119: Diabetes Medical Attention for Nephropathy measure if finalized. Several commenters agreed that this new measure represents an important opportunity to improve the number of adult patients with diabetes who receive an annual kidney health evaluation as identification of kidney disease is critical to slowing its progression and maintain kidney health.</p> <p>One commenter stated this measure fills a gap in care and provides a more comprehensive assessment of kidney health. The measure is supported by a strong evidence base and was tested at the individual and clinician group levels and the commenter believed that monitoring of kidney health is very important to confirm correct dosages of medications and evaluation of the progression of CKD. Another commenter supported this new measure stating it is part of the of the Core Quality Measure Collaborative (CQMC) ACO/PCMH/Primary Care core measures set. Another commenter stated adoption of this new measure will incentivize appropriate screening of individuals at risk for CKD and should address the challenge of underdiagnosis that often contributes to missed opportunities to delay progression of kidney disease, dialysis, and preventable cardiovascular events. Another commenter applauded CMS for its efforts to mitigate the impact of CKD among Medicare beneficiaries and its associated complications. Several commenters indicated this measure is concordant with recommendations from both the National Kidney Foundation and the American Diabetes Association.</p> <p><b>Response:</b> We thank the commenters for supporting this new measure in MIPS.</p> <p><b>Comment:</b> One commenter supported the inclusion of this measure in MIPS as it should help focus efforts on this critical aspect of care. The commenter believes the measure will help promote awareness about kidney health evaluations to allow early identification and help reduce the current gap in delivery of evidence-based kidney care to patients with diabetes.</p> |  |

| Category | Description   |
|----------|---|
|          | <p>However, the commenter believes there should be no upper age limit, especially considering the aging population and the importance of CKD in the older population. The specified denominator exclusions should remove most patients who are less likely to benefit from early identification of CKD and initiation or intensification of treatment, so there is no reason to cap the measure at 75 years. The commenter stated that if patients do not meet the exclusion criteria, they should be regularly screened and appropriately treated if identified as having diabetic kidney disease, regardless of age.</p> <p><b>Response:</b> We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p><b>Comment:</b> Several commenters were alarmed to see the proposed new exclusion of those receiving palliative care from this measure. Palliative care seems to be equated with hospice, which is incorrect. Excluding those on hospice, who are at the end of life, is appropriate while those receiving palliative care could live for years longer. According to the commenters, palliative care is appropriate at any point in a serious illness and can be provided along with any curative, disease-modifying treatment. The commenters requested that this exclusion be removed as it perpetuates the harmful misconception that palliative care and hospice are the same thing when they are not.</p> <p><b>Response:</b> We agree that palliative care is appropriate at any point in a serious illness and can be provided with any curative, disease-modifying treatment. It is our expectation that clinicians know the difference between palliative and hospice care and would not equate them. Palliative care is generally provided by an interdisciplinary medical team that focuses on the patient as a whole and would be inclusive of the types of services addressed by this measure as needed. Due to the complexities of care required for this population, clinicians that support patients receiving palliative care may inadvertently not perform well from the aspect of producing quality metrics (<a href="https://doi.org/10.1186/s12913-019-3961-0">https://doi.org/10.1186/s12913-019-3961-0</a>). However, we encourage clinicians to provide care as they determine best supports all patients during their healthcare journey even if the patient population is not included within the targeted denominator of a given measure specification.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46462), we are finalizing the <i>Kidney Health Evaluation</i> measure as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |

**A.5. Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:   | 1662 / N/A   |
| Quality #:  | 489  |
| Description:  | Percentage of patients aged 18 years and older with a diagnosis of chronic kidney disease (CKD) (Stages 1-5, not receiving Renal Replacement Therapy (RRT)) and proteinuria who were prescribed ACE inhibitor or ARB therapy within a 12-month period.   |
| Measure Steward:  | Renal Physicians Association   |
| Numerator:  | Patients who were prescribed ACE inhibitor or ARB therapy within a 12-month period.  |
| Denominator:  | All patients aged 18 years and older with the diagnosis of CKD (Stages 1-5, not receiving RRT) and proteinuria.  |
| Exclusions:   | Denominator Exclusions: Patients receiving RRT.  |
| Measure Type:   | Process  |
| Measure Domain:   | Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)  |
| High Priority Measure:  | No   |
| Collection Type:  | MIPS CQMs Specifications   |
| Measure-Specific Case Minimum/Performance Period:   | N/A for this measure   |
| Rationale:  | <p>We proposed this nephrology measure because it focuses on chronic kidney disease and diabetes. We identified both conditions as gaps within MIPS and priority areas for future quality measurement. This measure received support for rulemaking by the MAP and was endorsed by the NQF (<a href="https://www.cms.gov/files/document/2022-muc-list-program-specific-measure-needs-and-priorities.pdf">https://www.cms.gov/files/document/2022-muc-list-program-specific-measure-needs-and-priorities.pdf</a>).</p> <p>This measure is intended to increase the number of patients receiving high-quality nephrology care by focusing on using clinically recommended CKD therapeutic interventions to treat diabetic kidney disease and nondiabetic kidney diseases with proteinuria (albuminuria). Patients with these conditions who are treated with ACE inhibitors or ARB therapy have been shown to have lower rates of kidney failure, better cardiovascular outcomes, and lower mortality (<a href="https://pubmed.ncbi.nlm.nih.gov/23732715/">https://pubmed.ncbi.nlm.nih.gov/23732715/</a>).</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698">https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698</a>.</p> |
| <p><b>Comment:</b> One commenter supported the inclusion of this new measure, as this measure is aimed at increasing the number of patients with CKD and albuminuria who are prescribed ACE inhibitor or ARB therapy. The commenter stated that ACE inhibitors and ARBs are recommended as preferred agents for diabetic kidney disease and nondiabetic kidney diseases with proteinuria (albuminuria), even in the absence of hypertension. In these diseases, they lower blood pressure, reduce proteinuria (albuminuria), slow the progression of kidney disease, and likely reduce CVD risk by mechanisms in addition to lowering blood pressure.</p> <p>Another commenter supported the adoption of this measure, stating that patients with CKD have an increased risk for cardiovascular disease, primarily due to complications related to the blood vessels; and cardiovascular complications often cause death in patients with CKD. Prescribing ACE or ARB to patients to control blood pressure in patients with CKD can slow the progression of the disease and serve as a protective factor for cardiovascular disease.</p> <p><b>Response:</b> We thank the commenters for supporting this new measure in MIPS.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46463), we are finalizing the <i>Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy</i> measure as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |  |

### A.6. Appropriate Intervention of Immune-Related Diarrhea and/or Colitis in Patients Treated with Immune Checkpoint Inhibitors

| Category   | Description   |
|--|---|
| NQF # / eCQM NQF #:  | N/A / N/A   |
| Quality #:   | 490   |
| Description:   | Percentage of patients, aged 18 years and older, with a diagnosis of cancer, on immune checkpoint inhibitor therapy, and grade 2 or above diarrhea and/or grade 2 or above colitis, who have immune checkpoint inhibitor therapy held and corticosteroids or immunosuppressants prescribed or administered.   |
| Measure Steward:   | Society for Immunotherapy of Cancer (SITC)  |
| Numerator:   | Patients with immune checkpoint inhibitor therapy held and corticosteroids or immunosuppressants prescribed or administered.  |
| Denominator:   | Patients, 18 years and older, with a diagnosis of cancer and on immune checkpoint inhibitors and who have grade 2 or above diarrhea and/or grade 2 or above colitis.  |
| Exclusions:  | Denominator Exclusions: Patients with pre-existing inflammatory bowel disease (IBD) (for example, ulcerative colitis, Crohn's disease).   |
| Measure Type:  | Process   |
| Measure Domain:  | Patient Safety (section 1848(s)(1)(B)(ii) of the Act)   |
| High Priority Measure:   | No  |
| Collection Type:   | MIPS QCMs Specifications  |
| Measure-Specific Case Minimum/Performance Period:  | N/A for this measure  |
| Rationale:   | <p>We proposed this measure because it addresses a gap in care and focuses on patient safety by enhancing early appropriate intervention for adverse effects experienced by patients diagnosed with cancer. We stated that if this measure was finalized, it will represent the only quality measure in MIPS addressing gastrointestinal adverse effects from the use of immune checkpoint inhibitors as part of cancer treatment. This measure will address a gap in care for specific cancer types, leading to a potential increase in personalized care and informing quality improvement.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agreed with the MAP that CBE (for example, NQF) endorsement is preferred, we believed this measure should nonetheless be added to MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based. This measure's intent is to promote and assess for appropriate care for immune-related diarrhea and colitis, in accordance with recommendations by clinical guidelines addressing the topic of toxicities in immunotherapy. The occurrence of diarrhea and colitis can be a normal and treatable toxicity (and is many times not immune-related), but if it is immune-related, it can become life-threatening if not addressed in a timely manner.<sup>1</sup></p> <p>Diarrhea and colitis are the second-most reported adverse events with immune checkpoint inhibitors. The measure is intended to support compliance with the clinical guidelines<sup>2</sup> by ensuring the eligible clinician is addressing the adverse event of diarrhea or colitis by immediately providing an intervention to prevent the adverse event from worsening.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698">https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698</a>.</p> |
| We received no public comments on this new measure. For the reasons stated above and in the proposed rule (87 FR 46464), we are finalizing the <i>Appropriate Intervention of Immune-Related Diarrhea and/or Colitis in Patients Treated with Immune Checkpoint Inhibitors</i> measure as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. |   |

**A.7. Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status in Colorectal Carcinoma, Endometrial, Gastroesophageal, or Small Bowel Carcinoma**

| Category  | Description  |
|---|--|
| NQF # / eCQM NQF #:                               | 3661 / N/A   |
| Quality #:  | 491  |
| Description:                                      | Percentage of surgical pathology reports for primary colorectal, endometrial, gastroesophageal or small bowel carcinoma, biopsy or resection, that contain impression or conclusion of or recommendation for testing of mismatch repair (MMR) by immunohistochemistry (biomarkers MLH1, MSH2, MSH6, and PMS2), or microsatellite instability (MSI) by DNA-based testing status, or both.   |
| Measure Steward:                                  | College of American Pathologists   |
| Numerator:  | Surgical pathology reports that contain impression or conclusion of or recommendation for testing of MMR by immunohistochemistry, MSI by DNA-based testing status, or both.  |
| Denominator:                                      | All surgical pathology reports for primary colorectal, endometrial, gastroesophageal or small bowel carcinoma, biopsy or resection.  |
| Exclusions:                                       | Denominator Exclusions:<br>1. Patients with an existing diagnosis of Lynch Syndrome.<br>2. Patients with an existing diagnosis of squamous cell carcinoma of the esophagus.<br>3. Hospice services provided to patient any time during the measurement period.   |
| Measure Type:                                     | Process  |
| Measure Domain:                                   | Communication and Care Coordination (section 1848(s)(1)(B)(ii) of the Act)   |
| High Priority Measure:                            | Yes  |
| Collection Type:                                  | MIPS CQMs Specifications   |
| Measure-Specific Case Minimum/Performance Period: | N/A for this measure   |
| Rationale:  | <p>We proposed this measure because it will address a gap in care for pathology. The measure will assess for impression/conclusion of or recommendation for biomarker testing for specific cancer types, potentially leading to an increase in the rate of proper diagnosis. This measure will represent a new quality measure clinical concept within the Pathology specialty set. This measure focuses on surgical pathology reports that contain impression or conclusion of or recommendation for testing of MMR by immunohistochemistry, MSI by DNA-based testing status, or both. The measure is fully tested and exhibited definitive reliability testing.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agreed with the MAP that the CBE (for example, NQF) endorsement is preferred, we believed this measure should nonetheless be added to MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based.</p> <p>This measure is intended to drive quality care, assessing for the efficient use of resources and promote increased use of personalized patient care and patient choice. Lynch syndrome can be attributed to 2-4 percent of all colorectal carcinomas and has clinical implications for treatment of the affected patient and family members.<sup>1,2</sup> In the Molecular Biomarkers for the Evaluation of Colorectal Cancer guideline from the American Society for Clinical Pathology, College of American Pathologists, Association for Molecular Pathology, and American Society of Clinical Oncology it is recommended that mismatch repair status testing in patients with colorectal cancers is necessary for the identification of patients at high risk for Lynch syndrome and/or prognostic stratification.<sup>1</sup></p> <p>One of two different initial tests can be performed on colorectal specimens to identify individuals who might have Lynch Syndrome: 1) Immunohistochemistry (IHC) for MMR protein expression, which is often diminished because of mutation; or 2) analysis for microsatellite instability (MSI), which results from MMR deficiency. The National Comprehensive Cancer Network (NCCN) guidelines state IHC and MSI on newly diagnosed colorectal and endometrial cancers regardless of family history to determine Lynch Syndrome, is cost effective and has been confirmed for colorectal cancer and endorsed by the Evaluation of Genomic Applications in Practice and Prevention (EGAPP) working group at the CDC, the US Multi-Society Task Force on Colorectal Cancer, and the American Gastroenterological Association.<sup>3,4</sup> In 2020, the average performance rate for the colorectal carcinoma only measure was 71.05 percent and the average performance rate for the endometrial carcinoma only measure was 76.63 percent.</p> <p>The detection of defective mismatch repair (MMR) or microsatellite instability (MSI) can assist with the proper diagnoses of cancer.<sup>2,5</sup> Currently, there are no existing guidelines for the use of MMR/MSI for the detection of four cancer types (Colorectal Carcinoma, Endometrial, Gastroesophageal, and Small Bowel Carcinoma) and the potential utilization of Checkpoint Blockade Therapy. There are upcoming guidelines in development that will address these medical topics. This measure was developed to align with these guidelines to ensure it will drive quality outcomes.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698">https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=96698</a>.</p> |
| Comment:  | Several commenters supported the addition of this new quality measure in MIPS. One commenter stated that pathologists play a critical role in communicating information about a tumor's profile that informs patient-provider decision making. The commenter appreciated CMS' recognition on the importance of biomarker testing. Furthermore, the commenter stated that MMR and MSI testing is already recommended in guidelines to identify patients at high risk for Lynch syndrome and agreed that finalizing this measure could lead to an increase in the rate of proper diagnosis and promote increased use of personalized medicine and patient choice.  |

| Category | Description   |
|----------|---|
|          | <p>Another commenter indicated this measure is currently in use as a QCDR measure in the Pathologists Quality Registry, where it has seen high levels of use. The commenter also stated that the measure has been designed to work with a CAP Clinical Practice Guideline, released in August of 2022, therefore it represents the most up-to-date clinical information.</p> <p>Another commenter supported this new measure as testing for loss of MMR proteins and microsatellite instability (MSI) has crucial diagnostic, predictive implications to identifying patients at risk for Lynch Syndrome, the most common hereditary colorectal cancer (CRC) syndrome. While gastroenterologists and other clinicians order testing for loss of MMR proteins/MSI for individuals with CRC to screen for Lynch Syndrome, they depend on pathologists' interpretations of the results of these tests and recommendations for further testing to provide high-quality patient care. This measure is applicable to numerous specialties (for example, gastroenterology, pathology, oncology, surgery) and fits the larger paradigm of cross-cutting measures, which are particularly relevant. The commenter stated the measure also promotes effective communication of critical information for the purpose of care coordination and efficient use of resources.</p> <p>Another commenter supported this measure stating that the CQMC Gastroenterology had previously noted the importance of this concept but did not add it to the Gastroenterology core measures set given it is primarily a pathology measure.</p> <p><b>Response:</b> We thank the commenters for supporting this new measure in MIPS.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46465 through 46466), we are finalizing the <i>Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status in Colorectal Carcinoma, Endometrial, Gastroesophageal, or Small Bowel Carcinoma</i> measure as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |

**A.8. Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System**

| Category            | Description   |
|---------------------|---|
| NQF # / eCQM NQF #: | 3612 / N/A  |
| Quality #:          | 492   |
| Description:        | Annual risk-standardized rate of acute, unplanned cardiovascular-related admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with heart failure (HF) or cardiomyopathy.  |
| Measure Steward:    | Centers for Medicare & Medicaid Services  |
| Numerator:          | <p>The outcome for this measure is the number of acute cardiovascular-related admissions per 100 person-years at risk for admission during the measurement year. Time at risk is calculated as the number of days a patient is alive, from the start of the measurement period or first visit, until heart transplantation, LVAD implantation, or home inotropic therapy; enrollment in hospice; death; or the end of the measurement period.</p> <p>Time not considered at risk and excluded: Days spent in a hospital, SNF, or acute rehabilitation facility; 10 days following discharge from a hospital, SNF, or acute rehabilitation facility; and Time during and after LVAD implantation, home inotropic therapy, or heart transplantation.</p> <p>Acute cardiovascular-related admissions are defined using individual ICD-10-CM codes and the Agency for Healthcare Research and Quality's (AHRQ) Clinical Classification Software (CCS) diagnosis categories, which group clinically similar codes together. AHRQ CCS diagnosis categories used to define outcome: 55: Fluid and electrolyte disorders; 96: Heart valve disorders; 97: Peri-, endo-, and myocarditis; cardiomyopathy (except that caused by tuberculosis or sexually transmitted disease); 98: Essential hypertension; 100: Acute myocardial infarction; 102: Nonspecific chest pain; 104: Other and ill-defined heart disease; 105: Conduction disorders; 106: Cardiac dysrhythmias; 107: Cardiac arrest and ventricular fibrillation; 108: Congestive heart failure; non-hypertensive; 110: Occlusion or stenosis of precerebral arteries; 112: Transient cerebral ischemia; 115: Aortic; peripheral; and visceral artery aneurysms; 116: Aortic and peripheral arterial embolism or thrombosis; 157: Acute and unspecified renal failure; 245: Syncope. Subsets of the following AHRQ CCS diagnosis categories used to define outcome: 99: Hypertension with complications and secondary hypertension; 101: Coronary atherosclerosis and other heart disease; 103: Pulmonary heart disease; 109: Acute cerebrovascular disease; 114: Peripheral and visceral atherosclerosis; 117: Other circulatory disease; 130: Pleurisy; pneumothorax; pulmonary collapse; 131: Respiratory failure; insufficiency; arrest (adult); 133: Other lower respiratory disease; 237: Complication of device; implant or graft.</p> <p>The measure has several outcome exclusions: Planned admissions; Admissions from a skilled nursing facility (SNF) or acute rehab facility; Admissions within 10 days of discharge from a hospital, SNF, or acute rehab; Admissions after patient has entered hospice; Admissions before first visit to provider if no prior year visit; Admissions at time of or following: LVAD implantation, home inotropic therapy, or heart transplant.</p>   |
| Denominator:        | <p>The measure includes Medicare FFS beneficiaries ≥65 years of age with at least one inpatient principal diagnosis for heart failure/cardiomyopathy, or at least two outpatient or inpatient heart failure/cardiomyopathy diagnoses in any coding position (for example, primary or secondary position) within the two years prior to the measurement year.</p> <ul style="list-style-type: none"> <li>Beneficiaries must be enrolled full-time in Medicare Parts A and B during the year prior to measurement and during the measurement period. Additionally, the cohort excludes: Patients with internalized left ventricular assist devices (LVADs); Patients with heart transplants; Patients on home inotropic therapy; Patients on hospice for any reason; Patients with end-stage renal disease (ESRD) – defined as chronic kidney disease stage 5 or on dialysis.</li> </ul> <p>Provider types included for measurement (vetted by TEP and Clinician Committee): Primary care providers (PCPs): CMS designates PCPs as physicians who practice internal medicine, family medicine, general medicine, or geriatric medicine, and non-physician providers, including nurse practitioners, certified clinical nurse specialists, and physician assistants; Cardiologists: Cardiologists are covered by the measure because they provide overall coordination of care for patients with HF and manage the conditions that put HF patients at risk for admission due to acute cardiovascular-related conditions.</p> <p>Outcome attribution: We begin by assigning each patient to the clinician most responsible for the patient's care, based on the pattern of outpatient visits with PCPs and relevant specialists. The patient can be assigned to a cardiologist, a PCP, or can be left unassigned. A patient who is eligible for attribution is assigned to a cardiologist if they have 2 or more visits with a single cardiologist, regardless of how many visits that patient has with a PCP. There are two scenarios where a patient can be assigned to a PCP.</p> <ul style="list-style-type: none"> <li>First, if the patient has seen the PCP at least once but has no visits with a cardiologist, the patient is assigned to the PCP.</li> <li>Second, if the patient has seen the PCP two or more times and has only one visit with a cardiologist, the patient is assigned to the PCP. If the patient has 1 visit each with a cardiologist and a PCP, the patient is assigned to the cardiologist. If the patient has 1 visit with a cardiologist and no visit with a PCP, the patient is assigned to the cardiologist.</li> </ul> <p>Finally, the patient will be unassigned if they had no visits with a PCP or cardiologist. Patients are then assigned at the Taxpayer Identification Number (TIN) level, which includes solo clinicians and groups of clinicians who have chosen to report their quality under a common TIN. Patients "follow" their clinician to the TIN designated by the clinician (that is, they are assigned to their clinician's TIN). Patients unassigned at the individual clinician-level, therefore, continue to be unassigned at the TIN level.</p> |
| Exclusions:         | <p>Numerator Exclusions: The measure does not include the following types of admissions in the outcome because they do not reflect the quality of care provided by ambulatory care clinicians who are managing the care of HF patients: Planned admissions (utilizes the adapted planned admission algorithm (PAA) to identify and exclude admissions that are planned); Admissions that likely do not reflect the quality of heart failure management provided by ambulatory clinicians including: Admissions that occur within 10 days of discharge from a hospital, skilled nursing facility, or acute rehabilitation facility ("10-day buffer period"); Admissions that occur while patients are enrolled in Medicare's hospice benefit; Admissions that occur</p>  |

| Category   | Description   |
|--|---|
|  | <p>prior to the first visit with the assigned clinician. Admissions on the date or after any of the following: LVAD implantation, home inotropic therapy, or heart transplant (censored at the time of transition to advanced care).</p> <p>Denominator Exclusions: The measure excludes:</p> <ol style="list-style-type: none"> <li>1. Patients without continuous enrollment in Medicare Parts A and B for the duration of the measurement period.</li> <li>2. Patients who (or until death), were ever in hospice during the year prior to the measurement year or in hospice at the start of the measurement period.</li> <li>3. Patients who have had no Evaluation &amp; Management (E&amp;M) visits to a MIPS eligible clinician.</li> <li>4. Patients who have had a heart transplant, been on home inotropic therapy, or who have had a left ventricular assist device (LVAD) placed.</li> </ol>   |
| <b>Measure Type:</b>   | Outcome   |
| <b>Measure Domain:</b>   | Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)   |
| <b>High Priority Measure:</b>  | Yes   |
| <b>Collection Type:</b>  | Administrative Claims   |
| <b>Measure-Specific Case Minimum/Performance Period:</b>                         | <p>MIPS eligible clinicians, groups, subgroups*, virtual groups, and APM Entities containing at least 1 cardiologist / 21 case minimum / 1 year performance period (January 1st – December 31st)</p> <p>*Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.</p>   |
| <b>Rationale:</b>  | <p>We proposed this measure because heart failure (HF) is a leading cause of hospitalization in the United States and a major source of disease burden among older adults. There is strong evidence that ambulatory care clinicians can influence admission rates by providing high quality of care to patients with heart failure/cardiomyopathy (<a href="https://pubmed.ncbi.nlm.nih.gov/22665827/">https://pubmed.ncbi.nlm.nih.gov/22665827/</a>).</p> <p>We originally proposed this measure in the CY 2022 PFS proposed rule for the CY 2022 performance period/2024 MIPS payment year for MIPS eligible clinicians, groups, subgroups, virtual groups, and APM Entities but did not finalize this proposal or adopt the measure (86 FR 65692 through 65694). Key reasons for not finalizing the measure were concerns related to how beneficiaries are attributed to clinicians and concerns about the appropriateness of risk adjustment for severity of heart failure (86 FR 65692 through 65694). We have subsequently worked to mitigate these concerns, and we re-proposed this measure for the CY 2023 performance period/2025 MIPS payment year to be initially reported only for MIPS eligible clinicians, groups, subgroups, virtual groups, and APM Entities that include at least 1 cardiologist. After CY 2023, we will consider expanding reporting of this measure to include both cardiologists and PCPs.</p> <p>This HF measure was included on the 2020 Measures Under Consideration (MUC) list and evaluated by the MAP, which did not support the measure for rulemaking with potential for mitigation citing NQF endorsement and an analysis of the appropriateness of the risk adjustment for clinicians with higher caseloads of patients with more complicated or severe heart failure. We agreed that NQF endorsement of measures is preferred, and this measure was subsequently submitted for NQF endorsement as part of the spring 2021 cycle and was endorsed by the NQF in January 2022. NQF currently serves as the CBE regarding certain performance measurement activities performed for CMS pursuant to sections 1890 and 1890A of the Act.</p> <p>We proposed this administrative claims collection type outcome measure as HF is a leading cause of hospitalization in the United States and a major source of disease burden among the elderly population. Approximately 5.7 million adults in the United States have HF, costing the United States \$30.7 billion each year, which includes the cost of health care services, medications for treatment, and missed days of work.<sup>1</sup> The toll on patients is also great, with high rates of hospitalization and mortality; nearly half of people with HF die within 5 years of their diagnosis.<sup>2</sup> Patients with chronic HF are vulnerable to a range of complications that may put them at risk for hospitalization, including worsening of HF symptoms and destabilization due to other conditions, such as respiratory disease or infection. To expand the list of available reporting options for clinicians, we proposed this HF measure for use in MIPS, as it is an administrative claims measure, which has no reporting burden. Another version of this measure specified for Accountable Care Organizations (ACOs), “Risk-standardized Acute Admission Rates for Patients with Heart Failure” (ACO-37, NQF ID 2886) was previously used in the CMS Medicare Shared Savings Program, initially for accountability and currently as an informational measure.</p> <p>Although concerns have been raised about the appropriateness of risk adjustment, the measure accounts for patients with more complicated or severe heart failure in several ways: by excluding patients at advanced stages of heart failure, such as those with implanted left ventricular assist device (LVAD), those who receive home inotropic therapy, or those with prior heart transplant or with end stage renal disease; by risk adjusting for AICDs (defibrillators), systolic heart failure, comorbidities (including chronic kidney disease), and for frailty/disability. Moreover, the measure does not include advanced heart failure/transplant specialists for attribution. We conducted analyses of the appropriateness of risk adjustment which demonstrated that the risk adjustment model performed well across deciles of predicted admission risk. Based on this information and the material presented to the MAP and subsequently to the NQF, we believed the measure is evidence-based and will provide important information to drive improvements in clinical practice for heart failure patients. To mitigate concerns about risk adjustment for clinicians with higher caseloads of patients with more complex heart failure, the measure will be initially reported only for MIPS eligible cardiology TINs (that is, MIPS TINs with at least one cardiologist) with a 21-patient case minimum. We believed this approach will allow clinicians and groups who will be scored on the measure to become familiar with the measure.</p> <p>Note: Refer to the 2020 MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=94650">http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=94650</a>.</p> |
| <b>Comment:</b> One commenter supported the addition of this new measure.        |   |
| <b>Response:</b> We thank the commenter for supporting this new measure in MIPS. |   |

| Category | Description   |
|----------|---|
|          | <p><b>Comment:</b> One commenter appreciated that hospitalizations put patients at risk of exposure to adverse events and recognized the importance of continuity of follow-up post-discharge. The commenter also appreciated that the revised version of this measure does not include advanced heart failure/transplant specialists for attribution and continues to exclude planned admissions.</p> <p>The commenter however, continued to have concerns about assigning hospitalization rates per capita to a single clinician. The commenter did not believe this measure was appropriate in its current iteration for physician-level accountability and was more appropriate for facility or system-level accountability (for example, ACOs, the VA, etc.).</p> <p>The commenter also believed that metrics that count hospitalizations focus on utilization without regard to quality. At the hospital level, “success” on the 30-day readmission metric has been found to be associated with excess mortality over the same time frame in some analyses. Outcomes, namely survival, should be measured at the hospital-level. The commenter was concerned that the risk adjustment methodology was inadequate in that it relies exclusively on claims data and on variables that do not fully account for severity of illness, medical complexity, and social determinants of health, all of which are critical drivers of heart failure admissions.</p> <p>The commenter appreciated changes to the measure specifications that address heart failure severity and having the 21-case minimum to mitigate concerns about risk. However, the revised measure still does not adequately adjust for social determinants and other risk factors.</p> <p><b>Response:</b> The overall goals of heart failure therapy are to reduce mortality and morbidity associated with the disease, including decreasing the rate of hospitalizations. This measure is focused on acute unplanned cardiovascular-related admissions, which represents an actionable subset of admissions that can be influenced by primary care providers (PCPs) and cardiologists. In designing this measure, we took into consideration the types of acute hospital admissions that ambulatory providers caring for patients with heart failure could be held accountable for and excluded those that do not reflect the quality of ambulatory care. Because ambulatory providers may not be able to control all the factors that drive cardiovascular-related acute hospital admissions among patients with heart failure, the measure is carefully risk adjusted for comorbid conditions, severity of heart failure, frailty and disability, as well as for the AHRQ Socioeconomic Status (SES) Index (<a href="https://www.ahrq.gov/patient-safety/settings/long-term-care/resource/hcbs/findings/index.html">https://www.ahrq.gov/patient-safety/settings/long-term-care/resource/hcbs/findings/index.html</a>), a marker of socioeconomic disadvantage. We note that the target rate of admissions is not “capped” nor is it zero since disease progression often necessitates hospital admission to stabilize and treat cardiovascular complications; rather, the measure assesses whether the admission rate for providers’ patients is higher than expected given their risk factors.</p> <p>We agree that some process measures do not capture all the actions that clinicians can take to influence favorable outcomes. Moreover, patients are interested in surviving, avoiding hospital admissions, minimizing symptoms, achieving optimal functioning, and optimizing their quality of life. No set of process measures can be comprehensive enough to serve as a surrogate for these patient outcomes. Thus, we prioritize the use of outcome measures to evaluate quality in MIPS.</p> <p>We will continue to monitor for any unintended consequences of the measure. We note that although thresholds to admit a patient with heart failure from the emergency department (ED) to the hospital can be variable, they are unlikely to be unduly influenced by ambulatory MIPS clinicians. The decision to admit or discharge a patient is generally made by the ED physician. Therefore, it is unlikely that the measure would incentivize changes in thresholds to admit a heart failure patient or create caps on the number of patients admitted. In addition, the measure uses claims codes that are subject to auditing to minimize fraudulent coding.</p> <p>Finally, we note that this measure is adjusted for the AHRQ SES Index, which captures multiple aspects of social deprivation that can impact patients’ health and health outcomes, including poverty and median household income; unemployment; education; and housing value and quality. These factors are deeply rooted in societal disparities, and MIPS providers may have little ability to influence their effect. However, ambulatory providers can work with patients to improve on their continuity of care, adherence to prescribed medications, and access to appointments.</p> <p><b>Comment:</b> A few commenters were concerned there is a significant risk for unintended consequences posed by implementation of this measure. Commenters were concerned that the measure still does not adequately consider the competing risk of mortality. One commenter stated that providers with higher mortality rates for more severe heart failure patients could appear to be providing better quality care. Another commenter indicated that there should not be incentives for physicians to select alternative codes, avoid high-risk patients, or fail to admit patients when necessary. The commenter emphasized that metrics should be linked to quality of care and account for any consequences that are tied to rewards and penalties.</p> <p><b>Response:</b> The concern about mortality as a competing outcome was considered during development of the measure since patients with heart failure are at high risk of both hospital admissions and mortality. The measure does not favor providers with higher mortality rates and we will continue to monitor for any unintended consequences of the measure. First, patients who die in the measurement year tend to be admitted more often in that year. Second, when a patient dies, he/she no longer contributes time to the measure denominator (person-years). A better score on the measure is achieved by helping patients stay alive and contribute to the denominator while avoiding hospitalization. With respect to the link between readmissions and mortality, we were concerned about the possibility of unintended consequences of the Hospital Readmissions Reduction Program (HRRP) and commissioned a group of statisticians to undertake an independent study of the relationship between HRRP implementation and mortality rates. The results of the study reassured us that HRRP has not caused an unintended increase in mortality in Medicare patients.</p> <p><b>Comment:</b> A few commenters were concerned about attribution. One commenter stated that heart failure management benefits from close management by both the cardiologist and the primary care clinicians and multiple attribution to all clinicians meeting the attribution criteria would more effectively promote team-based care and care coordination than identifying a single “most responsible” clinician. The proposed algorithm for identifying the most responsible clinician in also problematic and could potentially lead to additional perverse incentives. The commenter stated that CMS specialty indication codes can be unreliable. Second, a cardiologist with a single visit may be more responsible for a patient than a primary care clinician with two visits over the measurement period. In addition, many heart failure patients see multiple cardiologists (for example, electrophysiologist and heart failure specialist). In this case, attributing the patient to the clinician with the most visits or highest charges would be imprecise. A second commenter agreed and believed an attribution to primary care, as opposed to cardiology, is specious and questioned why it needed to be one or the other but not both jointly. Finally, the commenter stated that outpatient evaluation and management codes used in the attribution algorithm are relatively non-specific for heart failure management; therefore, use of Patient Relationship codes would greatly improve the accuracy of attribution of patients to providers.</p> <p>Another commenter noted that it had previously stated that many TINs in large organizations comprise both primary and specialty practices and therefore it is not entirely clear how attribution might be determined. This may be of concern, for example, with Advanced Practice Provider (APP)s who are often considered primary care but may also be in a cardiology practice. The commenter stated that it is not clear if a Cardiology APP visit would count as a primary care visit, or a second visit to the cardiologist. The commenter stated that CMS could explore that possibility that APPs could form subgroups.</p> |

| Category | Description   |
|----------|---|
|          | <p>The commenter had other concerns related to attribution, such as how telehealth visits will impact attribution. While MIPS was designed to cater to individual clinicians, attribution of the individual provider for complex conditions and complex systems of care, including heart failure patients, is difficult to achieve and does not accurately reflect patient outcomes. The commenter asked that consideration be given to the fact that operational and clinical processes are increasingly team-based and assessing admission rates via a single clinician (or clinician groups), again elucidates the issue of attribution. Overall, the commenter suggested to CMS that going forward, measures should offer rewards for reduced hospitalization, which would include considerations for team-based care.</p>  |
|          | <p><b>Response:</b> The measure is an administrative claims measure and attribution for the measure is determined based upon the pattern of office visits with eligible providers, which reflect opportunities to deliver high-quality care. The patient is attributed to the individual clinician first. We considered multiple attribution for this measure but decided against it given interested party support for identifying and holding accountable the clinician who is “quarterbacking” a patient’s care. The aim of attributing patients to an individual provider is to incentivize accountability for care and thus address fragmentation of care for patients with heart failure. We agree there are instances where patients are seeing multiple providers who impact the risk of admission. An underlying premise of our approach to attribution is that ideally there is an individual clinician who is taking responsibility for managing and coordinating the care of a heart failure patient. In most cases, this will be a PCP or a cardiologist. The patient “follows” the individual clinician to which they are assigned to the TIN level assignment. The TIN may be comprised of primary care providers, cardiologists, or it may be a multi-specialty TIN. However, the information about the composition of the TIN is not used for attribution.</p> |
|          | <p>Each patient is attributed to the clinician most responsible for the patient’s care based on the pattern of outpatient visits with PCPs and relevant specialists. A patient may be assigned to a cardiologist, a PCP, or may be unassigned. We assign a patient who is eligible for attribution to a cardiologist if the patient has 2 or more visits with a single cardiologist, regardless of how many visits that patient has with a PCP. In cases in which a patient has a single visit with a cardiologist and 2 or more visits with a PCP, the patient will be assigned to the PCP to reflect greater opportunity to influence patient management afforded to the PCP. If an electrophysiologist sees a HF patient for an initial visit and a follow-up (2 visits in a year) and the patient does not have visits with another cardiologist, that patient will be assigned to the electrophysiologist over the PCP. Most patients who require electrophysiology consultation and follow-up may be expected to be also under general cardiology care; indeed, &lt;5% of providers in the measure are comprised of electrophysiology specialists.</p>  |
|          | <p>We acknowledge that non-physician practitioners may practice in primary care or in internal medicine subspecialties, including cardiology. Currently available administrative claims data do not distinguish between non-physician practitioners in primary care versus cardiology. However, if the patient had the most touchpoints with a cardiology APP, they would be assigned to that individual provider. If this provider was part of a cardiology TIN, the patient would follow the APP to the TIN level assignment. Whether or not the TIN is multi-specialty or primary care does not influence the attribution logic.</p>   |
|          | <p>We appreciate that in some circumstances the attribution algorithm will not always accurately reflect the most responsible clinician. In consultation with the technical expert panel (TEP) and Clinician Committee, we have selected an attribution algorithm that is reasonable under most circumstances. We will consider possible refinements of the attribution algorithm when the measure undergoes reevaluation. We will also explore approaches to attribution that incorporate the Patient Relationship Categories and Codes as they become routinely used and recorded in Medicare claims data.</p>  |
|          | <p>We also acknowledge that telemedicine visits have increased during the public health emergency. The HCPCS codes used to identify E&amp;M office visits may reflect either in-person or telemedicine appointments. Both types of visits are used for attribution; however, telephone visits are not used for attribution. We also continue to prioritize the use of outcome measures to evaluate quality in MIPS.</p>   |
|          | <p><b>Comment:</b> One commenter stated that this measure, like the existing measure Q479: Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment System (MIPS) Groups, will be triggered for physician extenders that are part of specialty groups (for example, nurse practitioners and physician assistants that are part of radiology, orthopedic, oncology groups, etc.). The commenter also stated that these administrative claims measures should not be applied to physician extenders that are part of specialty groups.</p>   |
|          | <p><b>Response:</b> Non-physician practitioners may practice in primary care or in internal medicine subspecialties, including cardiology, or in other specialties. Currently available administrative claims data do not distinguish between non-physician practitioners in primary care versus other specialties. However, if the patient had the most touchpoints with a cardiology advanced practice practitioner (APP), they would be assigned to that provider. If this provider was part of a cardiology TIN, the patient would follow the APP to the TIN level assignment. Please note that the patient would be assigned to the cardiologist over an APP if they had 2 or more visits with the cardiologist. In addition, the measure will only be applied to TINs that contain at least 1 cardiologist, precluding the possibility of a patient being assigned to a TIN of orthopedic specialists. We will continue to evaluate and explore refinements to the attribution algorithm.</p>   |
|          | <p><b>Comment:</b> One commenter had concerns about risk adjustment and the methods used for risk model development and whether the model will adequately discriminate good from poor performance on this measure. It was also unclear why age was categorized. It was also not clear why gender and race/ethnicity would be excluded from the model. There is also no adjustment for long term institutionalization or prior nursing facility placement. These are strong markers of frailty and increased risk of admission. The commenter was concerned that the measure does not adequately account for unmeasured patient differences across these specialties. This could bias measure results against those specialties (for example, advanced heart failure specialists) that care for the sickest, most vulnerable patients.</p>   |
|          | <p><b>Response:</b> There is indeed growing literature on the advantages of penalized regression, for example Least Absolute Shrinkage and Selection Operator (LASSO) regression analysis, over stepwise methods as a way to select model variables. While the latter method may lead to low prediction accuracy, the measure developer tried to address this by running the stepwise method on bootstrap samples and selecting only the risk factors that consistently entered the final model in at least 90 percent of the bootstrap samples. During measure development, the measure developer explored LASSO and found the method to have a significantly longer run time; however, there was an almost 100 percent overlap in the variables selected between LASSO and stepwise methods.</p>  |
|          | <p>During measure development, in both univariate and multivariate analyses, we found a monotonic non-linear relationship between age and risk of cardiovascular-related admission. Non-linearity can be addressed in various ways, such as modeling the variable as categorical, or introducing splines. We chose the former method to address non-linearity due to ease of interpretation of the model coefficients. We also tested and included age but not sex or race in the model, consistent with the rationale and approach taken for other CMS outcome measures. Studies suggest that sex- and race-based differences in outcomes are generally driven by age and comorbidities (which are included in the risk adjustment), as well as disparities in care delivery (for example, women with diabetes and HF tend to receive less evidence-based treatment), and not by biological differences.</p>   |

| Category | Description   |
|----------|---|
|          | <p>The measure excludes from the outcome hospital admissions that occur when patients are in skilled nursing facility, or acute rehabilitation facilities because, during that time, institutional clinicians have a more direct influence on patients' care and safety as opposed to their primary ambulatory care clinicians. Similarly, the measure excludes time spent in a skilled nursing facility from time at risk for the outcome for the same reasons. The measure is also adjusted for case mix to take into account differences in case mix across providers. However, the measure does not include advanced heart failure specialists for attribution given the sickest patients with most severe heart failure may be concentrated among these provider types.</p> <p><b>Comment:</b> One commenter had concerns related to validity of this measure and stated it remains unclear that hospital readmission rates actually reflect the quality of heart failure care. Admission rates may be modified by providing better quality care or they may be modified by simply raising the threshold to admit patients who would benefit from admission. Thus, they may be measuring differences in admission thresholds or even unmeasured differences in social risk or disease severity and not quality of care. The commenter stated that CMS should focus on measures that address heart failure treatment goals directly (for example, mortality or health status) or on evidence-based process measures that have been shown to improve survival and/or health status. At a minimum, admission rates should be evaluated concurrently with more direct heart failure outcome and process measures.</p> <p><b>Response:</b> The overall goals of heart failure therapy are to reduce mortality and morbidity associated with the disease, including decreasing the rate of hospitalizations. The measure is focused on acute unplanned cardiovascular-related admissions because they represent an actionable subset of admissions that can be influenced by PCPs and cardiologists. In designing this measure, we took into consideration the types of acute hospital admissions that ambulatory providers caring for patients with heart failure could be held accountable for and excluded those that do not reflect the quality of ambulatory care. The measure is carefully risk adjusted for comorbid conditions, severity of heart failure, frailty and disability, as well as for the AHRQ SES Index, a marker of socioeconomic disadvantage. The measure assesses whether the admission rate for providers' patients is higher than expected given their risk factors.</p> <p>We agree that some process measures, for example, those focused on adoption of guideline-directed medical therapy in patients with heart failure or those focused on achievement of blood pressure or glycemic control targets, can be used to incentivize quality improvement for patients with heart failure. However, they do not capture all of the actions that clinicians can take to influence favorable outcomes. Moreover, patients are interested in surviving, avoiding hospital admissions, minimizing symptoms, achieving optimal functioning, and optimizing their quality of life. No set of process measures can be comprehensive enough to serve as a surrogate for these patient outcomes. Thus, we prioritize the use of outcome measures to evaluate quality in MIPS.</p> <p><b>Comment:</b> One commenter requested that CMS hold off on finalizing this measure until the CQMC Cardiology Workgroup has completed its review of the measure. The commenter recognized the importance reducing avoidable readmissions but stated a number of concerns with this measure including a lack of information about outcomes and survival, inadequate adjustment for social risk factors, concerns about appropriate attribution of the measure, and potential carveouts for certain procedures (for example, revascularization, device implantation and ablation).</p> <p><b>Response:</b> We appreciate that the CQMC Cardiology Workgroup is in the process of reviewing the measure. We note that the measure is adjusted for the AHRQ SES Index which captures multiple aspects of social deprivation that can impact patients' health and health outcomes, including poverty and median household income; unemployment; education; and housing value and quality. These factors are deeply rooted in societal disparities, and MIPS providers may have little ability to influence their effect. However, ambulatory providers can work with patients to improve on their continuity of care, adherence to prescribed medications, and access to appointments.</p> <p>We appreciate that in some circumstances the attribution algorithm will not always accurately reflect the most responsible clinician. In consultation with the TEP and Clinician Committee, we have selected an attribution algorithm that is reasonable under most circumstances. The measure outcome includes acute cardiovascular-related hospital admissions. Note that the measure outcome excludes planned admissions, such as those for planned revascularization, device implantation or ablation, as long as they are not accompanied by a discharge diagnosis that is acute or a complication of care.</p> <p><b>Comment:</b> One commenter did not believe that the sole proposed modification to attribute this measure to groups with at least one cardiologist sufficiently addressed their concerns. It is appropriate to attribute these admissions to clinician groups since MIPS participants do not know which patients were assigned to them until well after the reporting period ends (that is, retrospectively), making it impossible for clinicians and practices to implement near real-time interventions. The commenter stated that this measure should not be implemented until MIPS clinicians can actively engage in activities that minimize and prevent those hospitalizations that could be avoided, and the commenter encouraged CMS to explore avenues by which attribution of patients could be done prospectively to allow for such engagement.</p> <p>The commenter is also concerned that while the median reliability score was 0.60 for practices with at least 21 patients, the range was from 0.401 to 0.995. The commenter believes that the minimum sample size must be increased to a higher number to produce a minimum reliability threshold of sufficient magnitude (for example, 0.7 or higher). Ensuring that the resulting performance scores produce information that would not misrepresent the quality of care provided by a group is imperative and while an increase in the sample size would result in a decrease in the number of groups to which the measure would apply, the commenter believes that it would still be a considerable number of patients with heart failure that would continue to be factored into the measure. The commenter appreciated the inclusion of social risk factors within the risk adjustment model and strongly advocated that dual eligibility also be included since it was a strong predictor of whether a patient would be admitted. The commenter also stated all variables that are determined to be predictors that are outside of the control of a group be included.</p> <p><b>Response:</b> We acknowledge that retrospective attribution has the disadvantage that providers do not know who counts as their patients until after they have already provided care. Prospective attribution approaches remove uncertainty on the part of the provider. However, prospective attribution is problematic as it introduces the possibility of gaming or providing differential levels of care to patients based on attribution status. Moreover, patients attributed to a provider may seek care outside of their designation. As a result, prospective attribution may lead to inaccurate assignments of patients. Retrospective attribution makes assignments based on how care is actually delivered.</p> <p>In setting a minimum reliability threshold, we needed to balance measure reliability with the statutory requirement to make performance measures applicable to the broadest number of providers. We typically set a minimum reliability threshold of 0.4 in MIPS for these reasons.</p> <p>This measure is adjusted for the AHRQ SES Index which captures multiple aspects of social deprivation that can impact patients' health and health outcomes, including poverty and median household income; unemployment; education; and housing value and quality. These factors are deeply rooted in societal disparities, and MIPS providers have little influence on their effect. While dual-eligible beneficiaries are likely to have fewer available health/healthcare supports, and may also have other unmeasured social risk factors (for example, low health literacy), we are not adjusting the model for dual eligibility because: adjusting for dual eligibility can mask disparities in care for dual-eligible beneficiaries, the marginal impact of including dual eligibility is attenuated after accounting for demographic, clinical, and frailty risk factors, as well as the AHRQ SES Index, clinicians may have more ability</p> |

| Category | Description  |
|----------|--|
|          | <p>to mitigate social risk associated with dual eligibility, especially if a dual-eligible beneficiary is living in a non-socially deprived community, and TEP members supported including only the AHRQ SES Index in the model.</p> <p><b>Comment:</b> One commenter stated that because programs to decrease acute hospitalizations were found beneficial in only 2 of 11 CMS demonstration projects, and only 4 of 11 were effective when the sub-group analysis was limited to high-risk populations, it is evident that this measure should focus on high-risk populations. At first glance, one may think that including low risk patients in the denominator lowers the acute hospitalization utilization and is a good thing, but it actually obfuscates any impact that well-designed programs are having. For organizations without high-risk patients, it is not a meaningful measure. High-risk subgroups had positive effects for the 4 of 11 programs, but 7 still failed. High risk subgroups that saw benefit in all 4 programs were defined by <math>\geq 2</math> hospitalizations in the prior 2 years. The programs had to be directed at the right patients which were high risk patients. The other finding is that these programs had to be offered over multiple years. Therefore, the commenter stated that it is unclear what it means where CMS measures this yearly and thereby give the impression that the measure is valid within a year.</p> <p><b>Response:</b> The goal of the measure is to assess whether the admission rate for providers' patients is higher than expected given their risk factors and thus assess the quality of care delivered to patients with heart failure. The measure is not designed to assess changes in care or to assess the impact of specific programs on outcomes of patients with heart failure. We acknowledge that interventions are most effective when targeted to patients who need them. Although focusing on patients with prior hospitalizations may be an effective strategy for healthcare systems, the purpose of the measure is to evaluate the quality of care of all patients with heart failure, including patients who are well managed and thus avoid hospitalization. We acknowledge that quality improvement programs may require variable time to become effective. The measure evaluates outcomes over a period of 1 year, but this should not disincentivize investment in longer-term programs to improve the care of heart failure patients.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46467 through 46469), we are finalizing the <i>Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System</i> measure as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |

## A.9. Adult Immunization Status

| Category  | Description  |
|---|--|
| NQF # / eCOM NQF #:                               | N/A / N/A  |
| Quality #:  | 493  |
| Description:                                      | Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.  |
| Measure Steward:                                  | National Committee for Quality Assurance   |
| Numerator:  | Submission Criteria 1: Patients in Denominator 1 (D1) who received an influenza vaccine on or between July 1 of the year prior to the measurement period and June 30 of the measurement period.<br>Submission Criteria 2: Patients in D2 who received at least 1 Td vaccine or 1 Tdap vaccine between 9 years prior to the encounter and the end of the measurement period.<br>Submission Criteria 3: Patients in D3 who received at least 1 dose of the herpes zoster live vaccine or 2 doses of the herpes zoster recombinant vaccine anytime on or after the patients' 50th birthday.<br>Submission Criteria 4: Patients in D4 who were administered any pneumococcal conjugate vaccine or polysaccharide vaccine, on or after their 60 <sup>th</sup> birthday and before the end of the measurement period.  |
| Denominator:                                      | Submission Criteria 1: Patients 19 years of age and older on the date of the encounter with a visit during the measurement period.<br>Submission Criteria 2: Patients 19 years of age and older on the date of the encounter with a visit during the measurement period.<br>Submission Criteria 3: Patients 50 years of age and older on the date of the encounter with a visit during the measurement period.<br>Submission Criteria 4: Patients 66 years of age or older on the date of the encounter with a visit during the measurement period.  |
| Exclusions:                                       | Denominator Exclusion: All submission criteria:<br>Active chemotherapy during the measurement period; or<br>Bone marrow transplant during the measurement period; or<br>History of immunocompromising conditions, cochlear implants, anatomic or functional asplenia, sickle cell anemia & HB-S disease or cerebrospinal fluid leaks any time during the patient's history prior to or during the measurement period; or<br>In hospice or using hospice services during the measurement period   |
| Measure Type:                                     | Process  |
| Measure Domain:                                   | Community/Population Health (section 1848(s)(1)(B)(v) of the Act)  |
| High Priority Measure:                            | No   |
| Collection Type:                                  | MIPS CQMs Specifications   |
| Measure-Specific Case Minimum/Performance Period: | N/A for this measure   |
| Rationale:  | <p>We proposed this multiple performance rate measure because it supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. Evidence provided by the measure steward testing indicates a gap in performance with average performance rates of 24 percent for influenza; 35 percent for Td or Tdap; 28 percent for zoster; and 17 percent for pneumococcal.</p> <p>This robust measure assesses the quality of clinical actions regarding the administration of the influenza, Tdap/Td, herpes zoster, and pneumococcal vaccines. The immunizations included within this measure will work to reduce the prevalence of severe diseases that may be associated with hospitalization and potentially lead to a decrease in overall health care costs. We believed the measure will improve overall vaccination rates more effectively than the current individual MIPS measures, Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Vaccination Status for Older Adults because performance is based on the administration of all four vaccinations rather than focusing on just one vaccination per measure. The measure will set a more stringent performance standard by requiring a set of adult immunizations in one composite measure compared to the prior framework, under which the administration of each vaccine was reported through a separate quality measure.</p> <p>In connection with the proposal of this measure, we also proposed to remove measures Q110 and Q111 from traditional MIPS, while retaining those two measures for use in relevant MVPs as discussed under Table Group CC and retaining measure Q110 for the purposes of Shared Savings Program ACOs reporting through the APM Performance Pathway (APP) as discussed in section III.G.4.c.(1) of this final rule.</p> <p>We originally proposed this measure in the CY 2020 PFS proposed rule for the CY 2020 performance period/2022 MIPS payment year but did not finalize this proposal due to eminent changes to the pneumococcal vaccination guidelines (84 FR 63207 through 63209). We now proposed this measure for the CY 2023 performance period/2025 MIPS payment year since it reflects the updated guidelines to include any pneumococcal conjugate vaccine or polysaccharide vaccine.</p> <p>Healthy People 2020—an initiative under the Office of Disease Prevention and Health Promotion that provides science-based, 10-year national objectives for improving the health of all Americans—recommends increasing the percentage of adults who are vaccinated against influenza, zoster, and pneumococcal disease.<sup>1</sup></p> <p>The CDC Advisory Committee in Immunization Practices (ACIP) makes evidence-based recommendations for vaccine use. This measure encourages compliance with the recommendations by showing how many adults within the population receive vaccines per guideline recommendations (<a href="https://www.cdc.gov/vaccines/acip/recs/grade/about-grade.html">https://www.cdc.gov/vaccines/acip/recs/grade/about-grade.html</a>). This measure will incentivize higher rates of adoption of the ACIP's recommendations.</p> <p>We proposed that submission of all 4 performance rates will be required for this measure and will be used to determine data completeness. Submission of all 4 performance rates will align with current clinical guidelines as clinicians should attempt to</p> |

| Category | Description  |
|----------|--|
|          | administer to the appropriate patient population all vaccines this measure will assess for compliance. By requiring submission of all 4 performance rates, we will capture a complete data set to show performance gaps in vaccine administration. If this measure is finalized for inclusion within MIPS, we proposed to score this measure using a weighted average for the first 2 years of implementation. Beginning with the CY 2025 performance period/2027 MIPS payment year, we will score this measure as an all-or-none composite measure to ensure a more thorough assessment of a patient's vaccination status.  |
|          | <p><b>Comment:</b> Several commenters supported adding the Adult Immunization Status (AIS) measure because the measure will improve the capture of routine adult immunizations and fill a critical measure gap. Commenters indicated the measure would provide a strong signal to clinicians of all types, including specialists, about the role of vaccination in driving quality health outcomes and promote adherence to ACIP-recommended vaccinations.</p> <p>Commenters' stated reasons for supporting this new measure included:</p> <ul style="list-style-type: none"> <li>Given that three out of every four adults in the U.S. are missing one or more routinely recommended vaccines, it is important to employ strategies to ensure individuals are up-to-date on necessary vaccination, and effective performance measures can be a strong tool to drive clinician behavior change, improve quality of care, and address health disparities.</li> <li>Increased adult immunizations in Medicare has the potential to reduce health care costs by decreasing the prevalence of vaccine preventable diseases, many of which are associated with hospitalizations and use of other health care services.</li> <li>This new measure meets the three core strategies underlying the movement toward a truly patient-centered health care delivery system by: 1) Improving the way clinicians are paid to incentivize quality and value of care over simply quantity of services; 2) improving the way care is delivered by providing clinical practice support, data and feedback reports to guide improvement and better decision-making and; 3) making data more available in real-time at the point of contact and enabling the use of certified Electronic Health Recorder (EHR) technology and other data sources to support care delivery.</li> <li>It is imperative for everyone to receive immunizations as vaccines are critical to infectious disease prevention and control. Given the role of nurses in vaccination efforts and their role in advising patients to adhere to recommended vaccination schedules, it is appropriate for CMS to expand immunization reporting with this measure. CMS and the Medicare administration have been critical to public health efforts during the public health emergency and quality measurement.</li> </ul> <p><b>Response:</b> We thank the commenters for supporting this new measure in MIPS.</p> <p><b>Comment:</b> One commenter was concerned that the new Adult Immunization Status measure that is replacing measures Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Vaccination Status for Older Adults is being proposed as a CQM measure and not an eCQM measure and requested the measure also be allowed to be submitted through eCQMs.</p> <p><b>Response:</b> We encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted to the Call for Quality Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We endeavor to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measure steward to the Call for Quality Measures. We encourage the commenter to reach out to the measure steward of current measures not available as an eCQM to discuss revisions for possible implementation in future years. However, we believe that this is a more robust measure to drive quality care and ensure appropriate immunization status, as compared to the individual measures Q110 and Q111.</p> <p><b>Comment:</b> One commenter indicated it is vital that Medicare payment policies support primary care physicians' ability to offer recommended immunizations in their practices. However, the commenter remained concerned that CMS intends to include the Adult Immunization Status measure in the future. The commenter stated that current immunization registries and health data information sharing systems must first be fixed to more effectively aggregate patient information, including immunization records, to evaluate the quality of the care reliably and accurately. This is particularly true for the influenza vaccine which is frequently received by patients in the community at grocery stores, pharmacies, workplaces, etc. Inadequate data aggregation and information sharing increases the burden of reporting, as physicians and their staff must manually track down and enter information for immunizations received outside of their clinic. The commenter stated there will undoubtedly be data gaps that will inappropriately be identified as care deficiencies under this measure.</p> <p>The commenter encouraged CMS to explore the use of their regulatory authority to address this long-standing gap in data aggregation and information sharing which results in unnecessary administrative time and burden placed on patients and physician practices. Until these changes are in place, the commenter encouraged CMS to prioritize measures that are supported by more efficient and accurate data sources and do not increase burden to physician practices.</p> <p><b>Response:</b> We acknowledge that the measure will set a more stringent performance standard by requiring a set of adult immunizations in one multi-performance measure compared to the prior framework, under which the administration of each vaccine was reported through a separate quality measure. This robust measure assesses the administration or patient reported receipt of appropriate adult immunizations.</p> <p>We believe the measure will encourage improvement in overall vaccination rates more effectively because performance is based on the administration of all four vaccinations rather than focusing on just one vaccination per measure. Additionally, this measure is being proposed as a MIPS CQM and may be supported by Qualified Registries or QCDRs meaning that the data for calculation of this measure may be abstracted from multiple medical resources and not necessarily reliant on immunization registries. We believe these types of measures drive the continued efforts of the interoperability of health data information sharing systems and may ameliorate the data aggregation issues identified by commenter.</p> <p><b>Comment:</b> One commenter stated that the new Adult Immunization Status measure is much more difficult to report for many providers, specifically specialists. The commenter was concerned many patients will not be able to accurately recall when or if they received a Td/Tdap, flu, or zoster vaccine, noting clinician reliance on the state's immunization registry for data on flu and pneumonia vaccine administration. The commenter indicated that having providers report on whether patients have received these vaccines is unrelated to compliance with the ACIP recommendation, as they believe clinician reporting does not encourage patients to receive vaccines the patient considers unnecessary. Finally, the commenter stated that if CMS is working toward true interoperability, it does not make sense to create a new quality measure that required reporting of data that should be available via HIE, state immunization registry, or other interoperable mechanisms.</p> <p><b>Response:</b> Because clinicians have the flexibility to choose measures to report and this measure's performance is based on a weighted average of those measures, we believe that this measure provides a comprehensive adult immunization measure. Each component measure would allow patient reported vaccination documented in the medical record to meet performance. MIPS measures collect data on all payer sources, and therefore we believe this measure</p> |

| Category | Description  |
|----------|--|
|          | <p>would capture a more robust representation of performance than the individual components. This measure is being proposed as a MIPS CQM and may be supported by Qualified Registries or QCDRs, which supports data abstraction for calculation of this measure from multiple medical resources and not necessarily reliant on immunization registries. The measure contains denominator criteria that is specific to the targeted patient population for the vaccination represented in the component measures. Additionally, this composite measure contains denominator exclusions, applicable to all four submission criteria, that assist with identifying patients that meet the intent of the measure. We believe patients have the right to choose if the vaccination is appropriate for them although believe this measure will encourage engagement between the patient and clinician regarding clinical reasons to consider vaccination as a preventive health option.</p> <p><b>Comment:</b> One commenter had concerns about the applicability and practicality of the Adult Immunization Status measure. A number of the vaccines covered by this measure currently are reimbursed only when administered at the pharmacy under Medicare Part D (for example, Tdap and zoster) and beneficiaries may choose to receive most of the covered vaccines at the pharmacy. Moreover, provider access to state immunization registry data is uneven at best with some states charging providers for access to such data for their patients. If CMS finalizes the addition of this measure for MIPS, the commenter urged CMS to clarify that eligible clinicians and groups may satisfy this measure by documenting patient-reported immunization status, in lieu of data from the patient's electronic medical record or a state registry.</p> <p><b>Response:</b> Each measure component would be reported as defined individually within the measure, which includes medical record documentation and registry data, while also allowing patient reported receipt of vaccination documented in the medical record to meet performance. MIPS measures collect data on all payer sources, and therefore we believe this measure would capture a more robust representation of performance than the individual components. This measure was proposed as a MIPS CQM and may be supported by Qualified Registries or QCDRs, which supports data abstraction for calculation of this measure from multiple medical resources and not necessarily reliant on immunization registries. We believe these types of measures drive the continued efforts of the interoperability of health data information sharing systems. Because clinicians have the flexibility to choose measures to report and this measure's performance is based on a weighted average of those measures, we believe that this measure provides a comprehensive adult immunization measure.</p> <p><b>Comment:</b> One commenter believed this measure provided an inclusive assessment of adult vaccination status with a strong evidence base. However, the commenter had concerns with feasibility at the individual clinician and clinician group attribution levels, as patients do not always go to the same physician to receive all required vaccinations.</p> <p><b>Response:</b> We believe this measure is a more robust reflection of quality care and the recommended adult immunizations. Each component measure would allow patient reported vaccination documented in the medical record to meet performance by individual clinicians or clinician groups. This measure is being proposed as a MIPS CQM and may be supported by Qualified Registries or QCDRs meaning that the data for calculation of this measure may be abstracted from multiple medical resources and not necessarily reliant on immunization registries.</p> <p><b>Comment:</b> One commenter stated that introduction of this new measure in MIPS prior to introduction in MVPs further misaligns the two programs. The commenter was also concerned that the measure was not supported by the MAP and had not been analytically tested at the clinician level. In addition, combining the separate immunization measures into one single measure reduces the impact of each individual measure. Another commenter expressed that the measure was developed, tested, and endorsed at the health plan level, and the MAP did not support this measure for use at individual clinician and clinician group levels.</p> <p><b>Response:</b> We do not believe there is misalignment between MIPS and MVPs. We, in discussion with interested parties, intend to only include measures within MVPs that are most applicable to the clinical topic being addressed by the MVP. Additionally, clinicians and clinician groups are provided the opportunity to select the measures that are appropriate to their specialties within MIPS and MVPs. Additionally, clinicians and clinician groups are provided the opportunity to select the measures that are appropriate to their specialties within traditional MIPS and MVPs. We believe this measure will encourage improvement in overall vaccination rates more effectively because performance is based on the administration of all four vaccinations rather than focusing on just one vaccination per measure. We acknowledge that the measure will set a more stringent performance standard by requiring a set of adult immunizations in one multi-performance measure compared to the prior framework, under which the administration of each vaccine was reported through a separate quality measure. Since this multiperformance measure utilizes components of measures that have been implemented MIPS either currently or in prior MIPS performance years at the individual clinician and group level, we believe it can be successfully implemented into MIPS. While CBE endorsement is preferred, it is not a requirement for measure inclusion in MIPS. We are not aware of a similar composite measure specified for clinicians that is NQF endorsed.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46470 through 46471), we are finalizing the <i>Adult Immunization Status</i> measure as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.</p> |

<sup>1</sup> U.S. Department of Health and Human Services (2017). HealthyPeople.gov 2020 Topics & Objectives: Immunization and Infectious Diseases. Retrieved from <https://www.healthypeople.gov/2020/topics-objectives/topic/immunization-and-infectious-diseases>.

**TABLE Group B: Previously Finalized Specialty Measures Sets Finalized for Combination and Modifications to Previously Finalized Specialty Measures Sets Finalized for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years**

In the CY 2023 PFS proposed rule (87 FR 46471), we proposed to add “Psychiatry” to the title of the Mental/Behavioral Health specialty set to create a combined new specialty set: Mental/Behavioral Health and Psychiatry (see Table B.21). We also proposed to add “Optometry” to the title of the Ophthalmology specialty set to create a combined new specialty set: Ophthalmology/Optometry (see Table B.28). For both Ophthalmology/Optometry and Mental/Behavioral Health and Psychiatry Specialty Measures sets, there were no proposed changes to the measures contained within each specialty measures set. However, based upon interested parties’ feedback and the overlap in denominator eligibility of both individual specialties, we revised the specialty measures set titles to better reflect the applicable and appropriate MIPS eligible clinician types.

We proposed to modify the below previously finalized specialty measures sets based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures had proposed substantive changes in Table Group D. In the first column, existing measures with substantive changes described in Table Group D are noted with an asterisk (\*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table Group B as follows: NQF # / eCQM NQF #.

We finalized in section IV.A.6.c.(1)(b)(i) of this final rule an expansion of the definition of a high priority measure at §414.1305 to include health equity measures. Further details of these types of measures are located in the CMS Measures Management System Blueprint Version 17.0 (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>).

**NOTE:**

- Updates to measure titles and/or measure descriptions under Table Group B in this final rule may or may not be considered substantive in nature and therefore may not be proposed or updated under Table Group D. If the change was considered substantive in nature, it will have been finalized in Table Group D.
- Under Table Group B, we responded to comments that are related to new measures that were proposed for addition to measure sets, and measures that were proposed for removal. Any comments received on previously finalized measures are out of scope and not included in this final rule. Commenters who requested additions or removals of quality measures to specific specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these updates must be proposed through rulemaking.
- Measures that were not finalized for removal in this final rule have been added back into the applicable previously finalized specialty set(s) under Table Group B, have been removed from the applicable Removal table, and the reason for their retention was addressed under Table Group C. For some specialty sets, this resulted in the Removal Table being removed in its entirety in this final rule if no measures proposed for removal were finalized for removal. As a result, the Removal Table was removed for the following specialty set: Audiology.

It should be noted that the CMS Web Interface collection type will no longer be available in MIPS, except for the purposes of APM entities reporting through the APM Performance Pathway (APP), starting with the CY 2023 performance period; therefore, this collection type is no longer listed in any specialty sets under Table Group B. The CMS Web Interface collection type will remain through CY 2025 for Shared Savings Program ACOs reporting through the APP. For further information on the Shared Savings Program and reporting through the APP, see sections III.G.4.b.(9) and III.G.4.c.(1) of this final rule. For information on changes to measures under the CMS Web Interface collection type proposed for the CY 2023 performance period/2025 MIPS payment year and future years, see Table Group E of this final rule.

**B.1. Allergy/Immunology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| <b>B.1. Allergy/Immunology</b>   |                           |                  |                    |  |                     |   |  |   |

## B.1. Allergy/Immunology

| MEASURES FINALIZED FOR ADDITION TO THE ALLERGY/IMMUNOLOGY SPECIALTY SET |                    |           |             |                          |              |                                  |   |                       |   |
|---|--------------------|-----------|-------------|--------------------------|--------------|----------------------------------|---|-----------------------|---|
| Indicator   | NQF # / eCQM NQF # | Quality # | CMS eCQM ID | Collection Type          | Measure Type | National Quality Strategy Domain | Measure Title And Description   | Measure Steward       | Rationale for Inclusion   |
| ! (Equity)  | N/A/ N/A           | 487       | N/A         | MIPS CQMs Specifications | Process      | Patient Safety                   | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians Foundation | We proposed to include this measure in the Allergy/Immunology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

## B.1. Allergy/Immunology

| MEASURES FINALIZED FOR ADDITION TO THE ALLERGY/IMMUNOLOGY SPECIALTY SET |                    |           |             |                          |              |                                  |   |  |  |
|---|--------------------|-----------|-------------|--------------------------|--------------|----------------------------------|---|--|--|
| Indicator   | NQF # / eCQM NQF # | Quality # | CMS eCQM ID | Collection Type          | Measure Type | National Quality Strategy Domain | Measure Title And Description   | Measure Steward                          | Rationale for Inclusion  |
|   | NA / N/A           | 493       | N/A         | MIPS CQMs Specifications | Process      | Community/Population Health      | <b>Adult Immunization Status:</b><br>Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal. | National Committee for Quality Assurance | We proposed to include this measure in the Allergy/Immunology specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale. |

### B.1. Allergy/Immunology

| MEASURES FINALIZED FOR ADDITION TO THE ALLERGY/IMMUNOLOGY SPECIALTY SET   |                      |           |             |                 |              |                                  |                               |                 |                         |
|---|----------------------|-----------|-------------|-----------------|--------------|----------------------------------|-------------------------------|-----------------|-------------------------|
| Indicator   | NQF # / eCQM M NQF # | Quality # | CMS eCQM ID | Collection Type | Measure Type | National Quality Strategy Domain | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| <p><b>Comment:</b> One commenter opposed the addition of the Screening for Social Drivers of Health measure to the Allergy/Immunology Specialty Set. They stated that there is a lack of adequate specification and testing. Another commenter opposed including the measure in this set stating there are no standardized screening tools and concerns on the administrative burden related to DOH data collection and what responsibility there would be to act on the data.</p> <p><b>Response:</b> This measure does not hold clinicians accountable for improvements in patients' DOH and focuses on the completion of screening for DOH patient information. It does not require a referral to services or any other action on the part of the clinician, nor does it penalize clinicians for those patients who screen positive for any of the social determinants within the measure. We believe that achieving health equity is a pressing issue which deserves serious focus and rapid action. The measure focuses on data collection, data analysis, culture of equity, and quality improvement. Additionally, the measure was based on the Accountable Health Communities universal screening protocol with the intent to ensure all patients of MIPS eligible clinicians are screened for DOH. The following five domains were selected to screen for social risk factors in Medicare and Medicaid beneficiaries under the Accountable Health Communities Model: food insecurity; housing instability; transportation needs; utility difficulties; and interpersonal safety.</p> <p>We believe this measure is an important step towards the future development of outcome-based measures within this topic. While we consider whether or not a measure is fully tested, it is not the only relevant standard. This measure supports health equity, a national healthcare priority, and is responsive to filling a critical gap in MIPS. This measure does not result in negative unintended consequences as described in the Blueprint (<a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/selection">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/selection</a>), such as overuse or inappropriate use of care or treatment, or limiting access to care. Therefore, based upon the importance of this topic and need to address this national healthcare priority, we are finalizing the measure.</p> <p>We designed this measure with flexibility to reduce burden on clinicians. For example, this measure allows the use of any tool to screen for DOH and therefore, we believe the clinician can determine what tool/process works best for their clinical workflow. In addition, this is a screening data collection measure and is voluntary; therefore, clinicians have the flexibility to choose to report this measure and it only looks at the screening of patients. Currently, the Allergy/Immunology Specialty Set contains 13 measures allowing clinicians to choose to submit those measures that are most meaningful to their scope of care. Under MIPS, clinicians have the flexibility to choose to report the measures that would work best for their scope of practice and clinical workflow. While we appreciate the commenters' concerns, we believe this is an important process measure that supports collecting DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians who chose to implement this measure. CMS is committed to lessening the burden of reporting quality measures through Meaningful Measures 2.0.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46474 through 46475), we are finalizing the above measures for addition to the <i>Allergy/Immunology Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix I: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                      |           |             |                 |              |                                  |                               |                 |                         |

## B.1. Allergy/Immunology

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ALLERGY/IMMUNOLOGY SPECIALTY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|--|---|---|
| 0041 /<br>N/A               | 110          | CMS147v<br>12  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Preventive Care and<br/>Screening: Influenza<br/>Immunization:</b><br>Percentage of patients aged 6<br>months and older seen for a visit<br>during the measurement period<br>who received an influenza<br>immunization OR who reported<br>previous receipt of an influenza<br>immunization. | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |

**Comment:** One commenter opposed removal of measures Q110 and Q111 from the Allergy/Immunology Specialty Set. Another commenter stated that measure Q110 is one of the highest reported measures by this specialty because many of its patients are immunocompromised. Considering the performance rate is lower than 50 percent (based on prior year data), they stated there is obvious room for improvement. The commenter stated that CMS should maintain this measure in MIPS, as well as this specialty set.

**Response:** As mentioned, the new Adult Immunization Status measure is more robust and will help drive care by ensuring complete vaccination status for patients. Measures Q110 and Q111 only focus on the administration of a single immunization rather than providing a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. It is important to ensure duplicative measures are removed from MIPS to develop an ecosystem of quality measures that drive value-based care. Please note that measure Q110 is not being removed due to a high benchmark or topped out status but is being replaced by a more robust measure, which will still allow for clinicians to report and demonstrate improvement on the administration of vaccines.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46475), we are finalizing the above measures for removal from the *Allergy/Immunology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.2. Anesthesiology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Anesthesiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.2. Anesthesiology**

## B.2. Anesthesiology

| MEASURES NOT FINALIZED FOR ADDITION TO THE ANESTHESIOLOGY SPECIALTY SET |                          |              |                   |                                     |                 |   |   |                       |   |
|---|--------------------------|--------------|-------------------|-------------------------------------|-----------------|---|---|-----------------------|---|
| Indicator   | NQF # /<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type                  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description  | Measure<br>Steward    | Rationale for Inclusion   |
| !<br>(Equity)   | N/A/<br>N/A              | 487          | N/A               | MIPS<br>CQMs<br>Specifi-<br>cations | Process         | Patient Safety                            | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians Foundation | We proposed to include this measure in the Anesthesiology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

## B.2. Anesthesiology

| MEASURES NOT FINALIZED FOR ADDITION TO THE ANESTHESIOLOGY SPECIALTY SET   |                    |           |             |                 |              |                                  |                               |                 |                         |
|---|--------------------|-----------|-------------|-----------------|--------------|----------------------------------|-------------------------------|-----------------|-------------------------|
| Indicator   | NQF # / eCQM NQF # | Quality # | CMS eCQM ID | Collection Type | Measure Type | National Quality Strategy Domain | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| <p><b>Comment:</b> One commenter was unable to make a recommendation on whether the Screening for Social Drivers of Health measure should be included in the Anesthesiology Specialty Set. The commenter felt that the measure steward and CMS have not been forthcoming with how the measure can be collected or reported. The commenter also requested but did not receive the measure specifications for this measure. The commenter was concerned that a published survey on the topic, which is the basis for the measure steward’s assertions about physicians identifying the importance of social determinants of health, cites multiple medical specialties as participating in the survey, but fails to mention anesthesiology.</p> <p>The commenter mentioned having to wait until the final rule to see measure specifications and be able to assess CPT codes listed in the measure. This limits the commenter’s ability to determine whether a measure can be collected and reported via its registry and may create confusion among its registry participants.</p> <p>The commenter cited lack of transparency on this measure and requested that future measure proposals intended to capture health equity throughout a patient’s care must demonstrate that physicians can report the measure. The commenter stated that CMS and measure stewards should distribute and make public the measure specifications for any proposed measures.</p> <p><b>Response:</b> As we implement the Screening for Social Drivers of Health measure within the MIPS quality measure inventory and measure sets starting with the CY 2023 performance period, we believe it is critical for individual MIPS eligible clinicians, groups, and virtual groups to have the option of choice in selecting and reporting such measure. We recognize that the Anesthesiology Specialty Set would contain six MIPS quality measures if the Screening for Social Drivers of Health measure were implemented within this set. For specialty sets that contain more than 6 MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups have the flexibility to select a minimum of six MIPS quality measures to report to meet the MIPS reporting requirement for the quality performance category. For specialty sets that contain six or less MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups must report on all MIPS quality measures within the specialty set. In the case of the Anesthesiology Specialty Set, this measure would thus inadvertently become mandatory to report. While we believe that the Screening for Social Drivers of Health measure is an important topic for anesthesiologists to assess within their patient population, we appreciate that the inclusion of such measure within this set would eliminate the option of choice to select and report the measure. As we intend to provide clinician choice in selecting and reporting the Screening for Social Drivers of Health measure, we will not include such measure within the Anesthesiology Specialty Set.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46477), we are not finalizing the Screening for Social Drivers of Health measure for addition to the <i>Anesthesiology Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                    |           |             |                 |              |                                  |                               |                 |                         |

## B.2. Anesthesiology

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ANESTHESIOLOGY SPECIALTY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and<br>Description  | Measure<br>Steward                    | Rationale for Removal  |
|-----------------------------|--------------|-------------------|---|-----------------|---|---|---------------------------------------|--|
| 2726 /<br>N/A               | 076          | N/A               | Medicare<br>Part B<br>Claims<br>Measure<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process         | Patient Safety                            | <b>Prevention of Central Venous Catheter (CVC) – Related Bloodstream Infections:</b><br>Percentage of patients, regardless of age, who undergo central venous catheter (CVC) insertion for whom CVC was inserted with all elements of maximal sterile barrier technique, hand hygiene, skin preparation and, if ultrasound is used, sterile ultrasound techniques followed. | American Society of Anesthesiologists | This measure was proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale. |

**Comment:** One commenter opposed removal of measure Q076 from the Anesthesiology Specialty Set. The commenter stated that while this measure has topped out, the measure is still useful for monitoring patient safety and the impact of patient outcomes. Another commenter opposed removal of measure Q076 from this set for the same reasons related to quality and patient safety. The commenter stated that removing the measure will limit the opportunities for anesthesiologists from meeting base MIPS quality performance category requirements via the Qualified Registry reporting option.

**Response:** We agree that reducing infections is an important barometer of patient safety and recognize that the measure is endorsed by NQF. The data shows that both the MIPS CQM and Medicare Part B Claims specifications collection types have reached the end of their topped-out life cycles which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2022 Benchmark File. We acknowledge that removal of this measure decreases the number of available measures for anesthesiology, however, there are policies in place to account for this when working to meet MIPS quality performance category requirements.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46478), we are finalizing the above measure for removal from the *Anesthesiology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.3. Audiology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Audiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.3. Audiology**

## B.3. Audiology

| MEASURES FINALIZED FOR ADDITION TO THE AUDIOLOGY SPECIALTY SET |                          |              |                   |                             |                 |   |  |  |  |
|--|--------------------------|--------------|-------------------|-----------------------------|-----------------|---|--|--|--|
| Indicator  | NQF #<br>/ eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description   | Measure<br>Steward                                   | Rationale for Inclusion  |
| *<br>§   | 2152/<br>N/A             | 431          | N/A               | MIPS CQMs<br>Specifications | Process         | Community/<br>Population<br>Health        | <b>Preventive Care and Screening: Unhealthy Alcohol Use: Screening &amp; Brief Counseling:</b><br>Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user. | National<br>Committee<br>for<br>Quality<br>Assurance | We proposed to include this measure in the Audiology specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that this measure will help to broaden the patient population being screened for unhealthy alcohol use. There is known risk of adverse effects on the auditory system due to alcohol consumption making this an important aspect of care for audiologists.   |
| !<br>(Equity)  | N/A/<br>N/A              | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.  | Physicians<br>Foundation                             | We proposed to include this measure in the Audiology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

**Comment:** Several commenters were supportive of adding measure Q431 and the new Screening for Social Drivers of Health measure to the Audiology Specialty Set. The commenters thanked CMS for their continued support of the inclusion and expansion of audiology within MIPS. Another commenter recognized that these measures are important drivers of improving health care quality and patient outcomes. Another commenter requested that CMS provide educational resources to facilitate the implementation of the Screening for Social Drivers of Health measure across varied clinical settings.

**Response:** We thank the commenters for supporting the addition of these measures to the Audiology Specialty Set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46481), we are finalizing the above measures for addition to the *Audiology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

**B.4a. Cardiology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Cardiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| ! (Equity)  | N/A/ N/A           | 487       | N/A         | MIPS CQMs Specifications | Process      | Patient Safety                   | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians Foundation | We proposed to include this measure in the Cardiology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

## B.4a. Cardiology

| MEASURES FINALIZED FOR ADDITION TO THE CARDIOLOGY SPECIALTY SET |                    |           |             |                          |              |                                  |   |  |   |
|---|--------------------|-----------|-------------|--------------------------|--------------|----------------------------------|---|--|---|
| Indicator   | NQF # / eCQM NQF # | Quality # | CMS eCQM ID | Collection Type          | Measure Type | National Quality Strategy Domain | Measure Title And Description   | Measure Steward                          | Rationale for Inclusion   |
|   | N/A/ N/A           | 493       | N/A         | MIPS CQMs Specifications | Process      | Community/Population Health      | <b>Adult Immunization Status:</b><br>Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal. | National Committee for Quality Assurance | We proposed to include this measure in the Cardiology specialty set as it is generally clinically relevant to this clinician type, for those cardiologists that do not subspecialize. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale. |

### B.4a. Cardiology

| MEASURES FINALIZED FOR ADDITION TO THE CARDIOLOGY SPECIALTY SET   |                    |           |             |                 |              |                                  |                               |                 |                         |

| Indicator   | NQF # / eCQM NQF # | Quality # | CMS eCQM ID | Collection Type | Measure Type | National Quality Strategy Domain | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| <p><b>Comment:</b> One commenter did not support the addition of measure Q187 to the Cardiology Specialty Set. The commenter stated this measure is more appropriately aligned with emergency medicine and neurosurgery, rather than cardiology, and it is included in the specialty measure sets for these other specialties. Another commenter disagreed with the addition of measure Q187 to this set because cardiologists do not typically treat acute stroke patients. While both stroke and heart attack have similar risk factors, they differ drastically in presentation, acute evaluation, and acute treatment. Stroke patients and heart attack patients are both initially evaluated by emergency physicians, but in the emergency department their care pathways immediately diverge. For heart attacks the ECG is the diagnostic tool. ST elevation leads to a call to an interventional cardiologist and rapid transfer to a cardiac catheterization lab. For stroke patients, the diagnostic tool is the physical exam, followed by CT scan, followed by a choice between thrombolytic therapy and/or the interventional laboratory for thrombus extraction. Interventional cardiologists do not typically treat acute stroke patients and neurologists do not treat acute heart attack patients. The commenter stated that to rate cardiologists by stroke care is inconsistent with patterns of normal clinical care and would be inappropriate.</p> <p><b>Response:</b> We agreed with commenters' feedback that this measure will help to incentivize timely initiation of appropriate thrombolytic therapy for patients with stroke, which is an important component of cardiology care. Up to half of ischemic strokes are directly related to cardiac and large artery diseases and cardiovascular risk factors are involved in most other strokes. Moreover, in an acute stroke direct central brain signals and a consecutive autonomic/vegetative imbalance may account for severe and life-threatening cardiovascular complications. The strong cerebro-cardiac link in acute stroke has recently been addressed as the stroke-heart syndrome that requires careful cardiovascular monitoring and immediate therapeutic measures (<a href="https://academic.oup.com/eurheartjsupp/article/22/Supplement_M/M3/6024772">https://academic.oup.com/eurheartjsupp/article/22/Supplement_M/M3/6024772</a>). Despite substantial progress in stroke research and clinical care that has been achieved, relevant gaps in clinical evidence remain and cause uncertainties in best practices for the treatment and prevention of stroke (<a href="https://academic.oup.com/eurjpc/article/27/7/682/5924645">https://academic.oup.com/eurjpc/article/27/7/682/5924645</a>). Currently, the Cardiology Specialty Set contains 25 measures allowing clinicians to choose to submit those measures that are most meaningful to their scope of care, thus cardiologists who do not consider this measure appropriate for their practice may opt to select another measure.</p> <p><b>Comment:</b> One commenter supported the addition of the Screening for Social Drivers of Health measure to determine whether patients' social needs are being assessed. Another commenter agreed with the addition of this measure, but only if all other specialties are also rated by this metric. They stated that it is true that cardiovascular disease is profoundly affected by DOH, but it is also true that virtually every other disease is similarly influenced.</p> <p><b>Response:</b> We thank the commenters for supporting the addition of this measure to the Cardiology Specialty Set. This measure has also been added to other specialty sets as appropriate.</p> <p><b>Comment:</b> One commenter supported the adoption of Adult Immunization Status measure that will replace the individual component measures for influenza and pneumococcal vaccines. Contracting influenza can be gravely serious for patients with heart failure.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of this measure to the Cardiology Specialty Set.</p> <p><b>Comment:</b> One commenter stated that retaining measures Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Status for Older Adults for cardiologists is more relevant to this specialty than adding the new Adult Immunization Status to this set. Cardiovascular disease is exacerbated by flu and pneumonia so that immunizations against these diseases are a special concern for cardiovascular specialists. Td, Tdap, and zoster are unrelated to cardiac care and not relevant to cardiologists. They stated that having to report on the status of other unrelated immunizations will also cause undue burden.</p> <p><b>Response:</b> We acknowledge that the measure will set a more stringent performance standard by requiring a set of adult immunizations in one multi-performance measure compared to the prior framework, under which the administration of each vaccine was reported through a separate quality measure. This robust measure assesses the administration of appropriate adult immunizations. These measures' clinical concept is included within the new Adult Immunization Status measure. We understand that some of these immunizations may not be relevant to, or administered in, certain fields; however, patient reported vaccine receipt, when recorded in the medical record, is acceptable for meeting the numerator. This allows for a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46488 through 46489), we are finalizing the above measures for addition to the <i>Cardiology Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                    |           |             |                 |              |                                  |                               |                 |                         |

## B.4a. Cardiology

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE CARDIOLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF # / eCQM NQF # | Quality # | CMS eCQM ID | Collection Type  | Measure Type | National Quality Strategy Domain | Measure Title and Description   | Measure Steward                           | Rationale for Removal   |
|--------------------|-----------|-------------|--|--------------|----------------------------------|---|---|---|
| 0041 / N/A         | 110       | CMS147v12   | Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications | Process      | Community /Population Health     | <b>Preventive Care and Screening: Influenza Immunization:</b><br>Percentage of patients aged 6 months and older seen for a visit during the measurement period who received an influenza immunization OR who reported previous receipt of an influenza immunization.  | National Committee for Quality Assurance  | This measure was proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale. |
| N/A / N/A          | 111       | CMS127v11   | Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications | Process      | Community /Population Health     | <b>Pneumococcal Vaccination Status for Older Adults:</b><br>Percentage of patients 66 years of age and older who have received a pneumococcal vaccine.  | National Committee for Quality Assurance  | This measure was proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale. |
| N/A / N/A          | 323       | N/A         | MIPS CQMs Specifications   | Efficiency   | Efficiency and Cost Reduction    | <b>Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Routine Testing After Percutaneous Coronary Intervention (PCI):</b><br>Percentage of all stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), cardiac computed tomography angiography (CCTA), and cardiovascular magnetic resonance (CMR) performed in patients aged 18 years and older routinely after percutaneous coronary intervention (PCI), with reference to timing of test after PCI and symptom status. | American College of Cardiology Foundation | This measure was proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.                        |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46490), we are finalizing the above measures for removal from the *Cardiology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.4b. Electrophysiology Cardiac Specialist**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## B.4b. Electrophysiology Cardiac Specialist

| MEASURES NOT FINALIZED FOR ADDITION TO THE ELECTROPHYSIOLOGY CARDIAC SPECIALIST SPECIALTY SET |                             |              |                   |                             |                 |   |  |                          |  |
|---|-----------------------------|--------------|-------------------|-----------------------------|-----------------|---|--|--------------------------|--|
| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description   | Measure<br>Steward       | Rationale for<br>Inclusion   |
| !<br>(Equity)   | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers<br/>of Health:</b><br>Percent of patients 18 years and<br>older screened for food<br>insecurity, housing instability,<br>transportation needs, utility<br>difficulties, and interpersonal<br>safety. | Physicians<br>Foundation | We proposed to<br>include this measure in<br>the Electrophysiology<br>Cardiac Specialist<br>specialty set as<br>patients' social drivers<br>of health can be a key<br>component to a patient<br>achieving health equity<br>within all clinical<br>settings and clinician<br>types. Improving the<br>clinician's<br>understanding of the<br>social obstacles their<br>patients face can<br>provide critical insight<br>into predicting<br>negative health<br>outcomes and<br>improving a patient's<br>health status. Social<br>needs can create<br>significant barriers to<br>patients receiving and<br>achieving high quality<br>of care and can also<br>contribute to poorer<br>health. Therefore,<br>screening patients for<br>social drivers is a<br>priority topic for us<br>and we believed this<br>quality measure should<br>be implemented across<br>the spectrum of<br>clinician specialties.<br>The addition of this<br>quality measure to this<br>specialty set reinforces<br>our commitment that<br>all clinicians should be<br>actively engaging in<br>activities that address<br>the screening of social<br>drivers of health of<br>their patients and is in<br>alignment with our<br>priorities to support<br>overall patient health.<br>See Table A.3 for<br>rationale, including<br>clinical evidence<br>supporting the<br>inclusion of this<br>measure in MIPS. |

#### B.4b. Electrophysiology Cardiac Specialist

| MEASURES NOT FINALIZED FOR ADDITION TO THE ELECTROPHYSIOLOGY CARDIAC SPECIALIST SPECIALTY SET  |                             |           |             |                 |              |                                  |                               |                 |                         |
|--|-----------------------------|-----------|-------------|-----------------|--------------|----------------------------------|-------------------------------|-----------------|-------------------------|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality # | CMS eCQM ID | Collection Type | Measure Type | National Quality Strategy Domain | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| <p><b>Comment:</b> One commenter supported the addition of the Screening for Social Drivers of Health measure to the Electrophysiology Cardiac Specialist specialty set and stated this measure also aligns with the AHA's 2030 Impact Goal of Advancing Equity and Well-Being. However, the commenter believed this measure may be more appropriate if reported at the system or regional level. The commenter was concerned about data required for this measure and that the potential gap in electronic feasibility may place an addition burden on health systems as they attempt to capture the required data.</p> <p><b>Response:</b> As we implement the Screening for Social Drivers of Health measure within the MIPS quality measure inventory and measure sets starting with the CY 2023 performance period, we believe it is critical for individual MIPS eligible clinicians, groups, and virtual groups to have the option of choice in selecting and reporting such measure. We recognize that the Electrophysiology Cardiac Specialist Specialty Set would contain three MIPS quality measures if the Screening for Social Drivers of Health measure were implemented within this set. For specialty sets that contain more than six MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups have the flexibility to select a minimum of six MIPS quality measures to report to meet the MIPS reporting requirement for the quality performance category. For specialty sets that contain six or less MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups must report on all MIPS quality measures within the specialty set. In the case of the Electrophysiology Cardiac Specialist Specialty Set, this measure would thus inadvertently become mandatory to report. While we believe that the Screening for Social Drivers of Health measure is an important topic for electrophysiologists to assess within their patient population, we appreciate that the inclusion of such measure within this set would eliminate the option of choice to select and report the measure. As we intend to provide clinician choice in selecting and reporting the Screening for Social Drivers of Health measure, we will not include such measure within the Electrophysiology Cardiac Specialist Specialty Set.</p> <p>After consideration of public comments, we are not finalizing the Screening for Social Drivers of Health measure for addition to the <i>Electrophysiology Cardiac Specialist Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                             |           |             |                 |              |                                  |                               |                 |                         |

**B.5. Certified Nurse Midwife**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Certified Nurse Midwife specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## B.5. Certified Nurse Midwife

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE CERTIFIED NURSE MIDWIFE SPECIALTY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/ Ecqm<br>NQF # | Quality<br># | CMS<br>Ecqm ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|--------------------------|--------------|----------------|---|-----------------|---|--|---|---|
| 0041 /<br>N/A            | 110          | CMS147v<br>12  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Preventive Care and<br/>Screening: Influenza<br/>Immunization:</b><br>Percentage of patients aged 6<br>months and older seen for a visit<br>during the measurement period<br>who received an influenza<br>immunization OR who reported<br>previous receipt of an influenza<br>immunization. | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |

We received no public comments on the measure proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46496), we are finalizing the above measure for removal from the *Certified Nurse Midwife Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.6. Chiropractic Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Chiropractic Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.7. Clinical Social Work**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Clinical Social Work specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| ! (Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Clinical Social Work specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

**Comment:** One commenter supported the inclusion of the Screening for Social Drivers of Health measure in the Clinical Social Work Specialty Set. The commenter agreed with CMS that social drivers of health can be a key component to a beneficiary achieving health equity within all clinical settings and clinician types and encouraged CMS to continue to include measures pertinent to social work practice such as measures in behavioral health.

**Response:** We thank the commenter for supporting the addition of this measure to the Clinical Social Work Specialty Set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46504), we are finalizing the above measure for addition to the *Clinical Social Work Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

**B.8. Dentistry**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Dentistry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.8. Dentistry**

The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

### B.8. Dentistry

| MEASURES NOT FINALIZED FOR ADDITION TO THE DENTISTRY SPECIALTY SET   |                             |              |                   |                    |                 |   |                                  |                    |                            |
|--|-----------------------------|--------------|-------------------|--------------------|-----------------|---|----------------------------------|--------------------|----------------------------|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description | Measure<br>Steward | Rationale for<br>Inclusion |
| <p>Although we did not receive any comments pertaining to the inclusion of the Screening for Social Drivers of Health measure in the Dentistry Specialty Set, we want to clarify how we intended the measure would be implemented as an available MIPS quality measure within the inventory, particularly within a specialty set. As we implement the Screening for Social Drivers of Health measure within the MIPS quality measure inventory and measure sets starting with the CY 2023 performance period, we believe it is critical for individual MIPS eligible clinicians, groups, and virtual groups to have the option of choice in selecting and reporting such measure. We recognize that the Dentistry Specialty Set would contain three MIPS quality measures if the Screening for Social Drivers of Health measure were implemented within this set. For specialty sets that contain more than six MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups have the flexibility to select a minimum of six MIPS quality measures to report to meet the MIPS reporting requirement for the quality performance category. For specialty sets that contain six or less MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups must report on all MIPS quality measures within the specialty set. In the case of the Dentistry Specialty Set, this measure would inadvertently become mandatory to report. While we believe that the Screening for Social Drivers of Health measure is an important topic for dentists, to assess within their patient population, the inclusion of such measure within this set would eliminate the option of choice to select and report such measure. As we intend to provide clinician choice in selecting and reporting the Screening for Social Drivers of Health measure, we will not include such measure within the Dentistry Specialty Set.</p> <p>We received no public comments on the measure proposed for addition to this specialty set; however, we are not finalizing the above measure for addition to the <i>Dentistry Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                             |              |                   |                    |                 |   |                                  |                    |                            |

**B.9. Dermatology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Dermatology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

We agreed with interested parties' feedback that this is an important patient-centered measure that helps to address any changes in the patient's quality of life during treatment of dermatitis. This measure incorporates the patient voice, empowering patients to make the best-informed decisions about their own healthcare while also allowing clinicians to optimally adjust care as needed. See Table A.2 for rationale. |

### B.9. Dermatology

| MEASURES FINALIZED FOR ADDITION TO THE DERMATOLOGY SPECIALTY SET |                             |           |             |                                 |              |                                  |   |                              |  |
|--|-----------------------------|-----------|-------------|---------------------------------|--------------|----------------------------------|---|------------------------------|--|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality # | CMS eCQM ID | Collection Type                 | Measure Type | National Quality Strategy Domain | Measure Title And Description   | Measure Steward              | Rationale for Inclusion  |
| ! (Equity)   | N/A/<br>N/A                 | 487       | N/A         | MIPS CQMs<br>Specification<br>s | Process      | Patient<br>Safety                | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundatio<br>n | We proposed to include this measure in the Dermatology specialty set as patients’ social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician’s understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient’s health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

**Comment:** Several commenters supported the addition of the Psoriasis: Improvement in Patient-Reported Itch Severity and Dermatitis: Improvement in Patient-Reported Itch Severity measures to the Dermatology Specialty Set. They believed the addition of these outcome measures helps clinicians, particularly solo practitioners, in meeting case minimum quality measures for dermatology.

**Response:** We thank the commenters for supporting the new outcome measures in the Dermatology Specialty Set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46509 through 46510), we are finalizing the above measures for addition to the *Dermatology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

## B.9. Dermatology

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE DERMATOLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain    | Measure Title and Description  | Measure<br>Steward                    | Rationale for Removal  |
|-----------------------------|--------------|----------------|-----------------------------|-----------------|--|--|---------------------------------------|--|
| N/A /<br>N/A                | 265          | N/A            | MIPS CQMs<br>Specifications | Process         | Communication<br>and<br>Care<br>Coordination | <b>Biopsy Follow-Up:</b><br>Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient. | American<br>Academy of<br>Dermatology | This measure was proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale. |

**Comment:** One commenter stated that the removal of measure Q265 would reduce the number of available/applicable measures in the Dermatology Specialty Set and decrease MIPS scores, noting that only two measures remaining in the set are applicable to providers who prescribe biologics/DMARD'S (measures Q410 and Q176) and only two measures are not topped out. They stated that across the Dermatology Specialty Set, measure Q265 continues to be helpful with patient follow-up and retention especially with staffing shortages this measure has continued to help and promote effective coordination of care across the specialty.

**Response:** We thank the commenter for their comment and agree that this is a relevant measure for providers that prescribe biologic/DMARD'S; however, we strive to ensure that all measures align with MIPS' goals and priorities, including the removal of measures that are at the end of the topped-out lifecycle. Topped out status is determined by the data reported to MIPS within the 2022 Benchmark file from individual clinicians, groups, and virtual groups, therefore we would be unable to utilize data from other reporting programs as there may be differences in implementation and/or the level of analysis needed to determine topped out status of a quality measure. When a measure has reached the end of their topped-out life cycles it no longer allows for meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. We encourage the commenter to reach out to measure developers/stewards to develop new biopsy follow-up measures that take into account race, ethnicity, and/or language for submission to the Call for Measures for possible future implementation.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46510), we are finalizing the above measure for removal from the *Dermatology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.10. Diagnostic Radiology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.10. Diagnostic Radiology**

| ! (Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Diagnostic Radiology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

We received no public comments on the measure proposed for addition. For the reasons stated above and in the proposed rule (87 FR 46513), we are finalizing the above measure for addition to the *Diagnostic Radiology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix I: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

**B.11. Emergency Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Emergency Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| *<br>§<br>!<br>(Appropriate Use)  | 0069/<br>N/A                | 065          | CMS15<br>4v11     | eCQM<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s  | Process         | Efficiency and<br>Cost<br>Reduction       | <b>Appropriate Treatment for Upper Respiratory Infection (URI):</b><br>Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic order.   | National<br>Committee for<br>Quality<br>Assurance       | We proposed to include this measure in the Emergency Medicine specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that this measure will help decrease the overuse of antibiotics for the treatment of upper respiratory infections. The addition of this measure to this specialty set is feasible given the high rates that patients are assessed, treated, and managed for this condition in the emergency care setting.   |
| *<br>§  | N/A/<br>N/A                 | 134          | CMS2v<br>12       | Medicare<br>Part B<br>Claims<br>Measure<br>Specification<br>s, eCQM<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process         | Community/Population<br>Health            | <b>Preventive Care and Screening: Screening for Depression and Follow-Up Plan:</b><br>Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter. | Centers<br>for<br>Medicare<br>&<br>Medicaid<br>Services | We proposed to include this measure in the Emergency Medicine specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that it is imperative to complete depression screenings in the emergency care setting to identify mental health conditions as well as forming appropriate treatment plans. Studies have shown depression to be more widespread in emergency departments than in the general public. Identifying patients with depression and their access to care in the emergency department is important as depression has been associated with poorer patient outcomes from care received in the emergency department, as well as increased length of stay in the emergency department and increased number of repeated emergency department visits ( <a href="https://pubmed.ncbi.nlm.nih.gov/28007366/">https://pubmed.ncbi.nlm.nih.gov/28007366/</a> ). |

## B.11. Emergency Medicine

| MEASURES FINALIZED AND NOT FINALIZED FOR ADDITION TO THE EMERGENCY MEDICINE SPECIALTY SET |                             |              |                   |   |                 |   |  |   |   |

| !<br>(Equity)   | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specification<br>s | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Emergency Medicine specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description | Measure<br>Steward | Rationale for Inclusion |
| <p><b>Comment:</b> One commenter supported the addition of measure Q065 to the Emergency Medicine Specialty Set.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of this measure to the Emergency Medicine Specialty Set.</p> <p><b>Comment:</b> One commenter supported the addition of measure Q226 to this specialty set and six additional specialty sets. They stated that tobacco use is one of the leading preventable causes of death in the U.S. and globally and is a major risk factor for cardiovascular disease and stroke. Quitting smoking at any age significantly reduces the risk of cardiovascular morbidity and mortality for smokers with and without existing cardiovascular disease, so it is essential that smokers be advised to quit at every visit in every setting and be offered evidence-based interventions to support them in doing so.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of this measure to the Emergency Medicine Specialty Set, however, based upon feedback received we are not finalizing measure Q226 for inclusion as the time restraints may not allow for implementation.</p> <p><b>Comment:</b> Two commenters did not support the addition of the other measures proposed for addition to this set.</p> <p>One commenter stated that measure Q134 is not clinically relevant to the practice of emergency medicine, as emergency clinicians do not typically conduct this comprehensive screening in the emergency department. The EHR systems that emergency physicians use in emergency departments do not always receive data from other parts of the hospital. It would be difficult to only rely on data from the emergency department encounter to calculate this measure. Some emergency departments may not have the resources and staffing required to conduct these surveys for every patient and adding additional screenings could delay necessary care for patients.</p> <p>Another commenter indicated that in addition to requiring the clinician to screen a patient for depression, this measure requires the clinician to document a follow-up plan if the patient screens positive. While the commenter supports the intent and value of these screening measures, they do not believe they are truly reflective of emergency care compared to other measures. They stated that it has long been established through CMS coding policies that time-based codes are not applicable in the emergency setting.</p> <p>The commenter had a similar concern to adding measure Q226 to this set. They believe cessation counseling would be particularly difficult and time-consuming to document for each patient. Furthermore, they believe it would not be clinically relevant to screen every patient that comes to the emergency department. Also, if the patient is admitted to the hospital, the counseling becomes part of the discharge process which never gets translated to an emergency department chart. The commenter stated that more appropriate measures exist, such as QCDR measure CEDR called "Tobacco Use: Screening Cessation Intervention for Patients with Asthma and COPD."</p> <p>Regarding measure Q431, one commenter stated the measure is not clinically relevant, will add to administrative burden, and is not meaningful in the emergency department setting. Another commenter questioned why CMS is proposing to re-incorporate measures Q226 and Q431 after it had previously determined that these measures were inappropriate for Emergency Medicine and removed them from the Emergency Medicine specialty set in 2018.</p> <p><b>Response:</b> We believe these measures represent important concepts; however, based upon the commenter's feedback, measures Q226 and Q431 may not be appropriate for this setting based upon the time required to complete cessation intervention for those patients identified as a tobacco user and will not be adding these two measures to this set. We will take this feedback to the measure steward for potential revisions for future implementation.</p> <p><b>Comment:</b> One commenter supported the overall intent of the Screening for Social Drivers of Health measure but stated this screening is done at the facility level, and it may be difficult for individual physicians to report the measure at the individual reporting level. Many institutions have limited resources to conduct these types of screening on every patient. It may be more feasible to limit the screening to certain patients such as patients who are homeless or lack health insurance.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of this measure to the Emergency Medicine Specialty Set and note that the measure does not require a referral to services or any other action on the part of the clinician so should be achievable for reporting at the individual reporting level. Because clinicians have the flexibility to choose this measure and it only assesses for the screening of patients, we do not believe there would be unintended consequences for the clinicians or the patients they serve.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46516 through 46518), we are finalizing the above measures for addition to the <i>Emergency Medicine Specialty Set</i> as proposed, except measures Q226 and Q431. For the reasons stated above, we are not finalizing our proposals to add measures Q226 and Q431 to the <i>Emergency Medicine Specialty Set</i> for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                             |              |                   |                    |                 |   |                                  |                    |                         |

**B.12. Endocrinology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Endocrinology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| ! (Equity)   | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications                            | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.  | Physicians<br>Foundation         | We proposed to include this measure in the Endocrinology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
|  | N/A/<br>N/A                 | 488          | CMS95<br>lv1      | eCQM<br>specifications, MIPS<br>CQMs<br>Specifications | Process         | Effective<br>Clinical<br>Care             | <b>Kidney Health Evaluation:</b><br>Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period. | National<br>Kidney<br>Foundation | We proposed to include this measure in the Endocrinology specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.   |

## B.12. Endocrinology

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ENDOCRINOLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|--|---|---|

See Table Group CC<br>for rationale. |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| 0062 /<br>N/A               | 119          | CMS134v<br>11  | eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications  | Process         | Effective<br>Clinical<br>Care             | <b>Diabetes: Medical Attention<br/>for Nephropathy:</b><br>The percentage of patients 18-<br>75 years of age with diabetes<br>who had a nephropathy<br>screening test or evidence of<br>nephropathy during the<br>measurement period.  | National<br>Committee of<br>Quality<br>Assurance  | This measure was proposed<br>for removal beginning with<br>the CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group C for<br>rationale.                           |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46523), we are finalizing the above measures for removal from the *Endocrinology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.13. Family Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| MEASURES FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET |                             |              |                   |                                 |   |   |  |  |   |
|--|-----------------------------|--------------|-------------------|---------------------------------|---|---|--|--|---|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type              | Measure<br>Type   | National<br>Quality<br>Strategy<br>Domain   | Measure Title<br>And Description   | Measure<br>Steward   | Rationale for Inclusion   |
| *  | N/A /<br>N/A                | 176          | N/A               | MIPS CQMs<br>Specification<br>s | Process   | Effective<br>Clinical<br>Care   | <b>Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy:</b><br>If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period.   | America<br>n<br>College<br>of<br>Rheumat<br>ology  | We proposed to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that appropriate tuberculosis screening prior to initiation of biologic therapy is an important quality of care consideration that lies within this specialty's scope of practice. Proper screening helps ensure that treatment is not adversely affecting patients with an active infection.   |
| *<br>!<br>(Outcom<br>e)  | N/A /<br>N/A                | 476          | CMS77<br>1v4      | eCQM<br>Specification<br>s      | Patient-<br>Reported<br>Outcome<br>-Based<br>Performa<br>nce<br>Measure | Person<br>and<br>Caregive<br>r-<br>centered<br>Experien<br>ce and<br>Outcome<br>s | <b>Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia:</b><br>Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points. | Large<br>Urology<br>Group<br>Practice<br>Associati<br>on and<br>Oregon<br>Urology<br>Institute | We proposed to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that benign prostatic hyperplasia is a common medical condition that is frequently seen in family medicine practices. Including this measure will enhance patient-centered care amongst patients and their family medicine providers. Increasing the quality of comprehensive patient care can also result in the overall improvement of the patient's functional status. |

## B.13. Family Medicine

| MEASURES FINALIZED FOR <b>ADDITION</b> TO THE FAMILY MEDICINE SPECIALTY SET |                             |              |                   |  |                 |   |  |                                      |  |
|---|-----------------------------|--------------|-------------------|--|-----------------|---|--|--------------------------------------|--|
| Indicator   | NQF #<br>/<br>eCOM<br>NQF # | Quality<br># | CMS<br>eCOM<br>ID | Collection<br>Type   | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description   | Measure<br>Steward                   | Rationale for Inclusion  |
| ! (Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specification<br>s                                | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.  | Physicia<br>ns<br>Foundati<br>on     | We proposed to include this measure in the Family Medicine specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
|   | N/A/<br>N/A                 | 488          | CMS95<br>lv1      | eCOM<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process         | Effective<br>Clinical<br>Care             | <b>Kidney Health Evaluation:</b><br>Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period. | National<br>Kidney<br>Foundati<br>on | We proposed to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.   |

### B.13. Family Medicine

| MEASURES FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET |                          |           |             |                          |              |                                  |   |  |   |
|--|--------------------------|-----------|-------------|--------------------------|--------------|----------------------------------|---|--|---|
| Indicator  | NQF #<br>/ eCQM<br>NQF # | Quality # | CMS eCQM ID | Collection Type          | Measure Type | National Quality Strategy Domain | Measure Title And Description   | Measure Steward                          | Rationale for Inclusion   |
|  | N/A/<br>N/A              | 493       | N/A         | MIPS CQMs Specifications | Process      | Community/Population Health      | <b>Adult Immunization Status:</b><br>Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal. | National Committee for Quality Assurance | We proposed to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale. |

We received no public comments on the measures proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46535 through 46537), we are finalizing the above measures for addition to the *Family Medicine Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

## B.13. Family Medicine

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|--|---|---|
| 0041 /<br>N/A               | 110          | CMS147v<br>12  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Preventive Care and<br/>Screening: Influenza<br/>Immunization:</b><br>Percentage of patients aged 6<br>months and older seen for a visit<br>during the measurement period<br>who received an influenza<br>immunization OR who reported<br>previous receipt of an influenza<br>immunization. | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| 0062 /<br>N/A               | 119          | CMS134v<br>11  | eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications  | Process         | Effective<br>Clinical<br>Care             | <b>Diabetes: Medical Attention<br/>for Nephropathy:</b><br>The percentage of patients 18-<br>75 years of age with diabetes<br>who had a nephropathy<br>screening test or evidence of<br>nephropathy during the<br>measurement period.  | National<br>Committee of<br>Quality<br>Assurance  | This measure was proposed<br>for removal beginning with<br>the CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group C for<br>rationale.                           |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46537), we are finalizing the above measures for removal from the *Family Medicine Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.14. Gastroenterology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| !<br>(Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Gastroenterology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
| We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46541), we are finalizing the above measure for addition to the <i>Gastroenterology Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS. |                             |              |                   |                             |                 |   |   |                          |   |

## B.14. Gastroenterology

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GASTROENTEROLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type          | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description   | Measure<br>Steward                                       | Rationale for Removal   |
|-----------------------------|--------------|----------------|-----------------------------|-----------------|---|---|--|---|
| N/A /<br>N/A                | 425          | N/A            | MIPS CQMs<br>Specifications | Process         | Effective<br>Clinical<br>Care             | <b>Photodocumentation of Cecal<br/>Intubation:</b><br>The rate of screening and<br>surveillance colonoscopies for<br>which photodocumentation of at<br>least two landmarks of cecal<br>intubation is performed to<br>establish a complete<br>examination. | American<br>Society for<br>Gastrointestinal<br>Endoscopy | This measure was proposed<br>for removal beginning with<br>the CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group C for<br>rationale. |

We received no public comments on the measure proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46542), we are finalizing the above measures for removal from the *Gastroenterology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.15. General Surgery**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the General Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| ! (Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs Specifications | Process         | Patient Safety                            | <b>Screening for Social Drivers of Health:</b> Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians Foundation | We proposed to include this measure in the General Surgery specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
| We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46545), we are finalizing the above measure for addition to the <i>General Surgery Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS. |                             |              |                   |                          |                 |   |  |                       |  |

**B.16. Geriatrics**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Geriatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## B.16. Geriatrics

| MEASURES FINALIZED FOR ADDITION TO THE GERIATRICS SPECIALTY SET |                          |              |                   |   |                 |   |  |  |  |
|---|--------------------------|--------------|-------------------|---|-----------------|---|--|--|--|
| Indicator   | NQF #<br>/ eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description   | Measure<br>Steward                       | Rationale for Inclusion  |
| *<br>§  | N/A /<br>N/A             | 134          | CMS2v<br>12       | Medicare<br>Part B<br>Claims<br>Measure<br>Specification<br>s, eCQM<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process         | Communi-<br>ty/Pop-<br>ulation<br>Health  | <b>Preventive Care and Screening: Screening for Depression and Follow-Up Plan:</b><br>Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter. | Centers for Medicare & Medicaid Services | We proposed to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. Depression is a serious medical illness associated with higher rates of chronic disease, increased health care utilization, and impaired patient functioning. For the older patient population, depression is commonly diagnosed with other illnesses or as a side effect to medication. Proper depression assessment and intervention is important for the patients within the geriatric population.         |
| *<br>§  | 0028/0<br>028e           | 226          | CMS13<br>8v11     | Medicare<br>Part B<br>Claims<br>Measure<br>Specification<br>s, eCQM<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process         | Communi-<br>ty/Pop-<br>ulation<br>Health  | <b>Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:</b><br>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.   | National Committee on Quality Assurance  | We proposed to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco will reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs. |
| *<br>!<br>(Patient<br>Safety)                                   | 0101 /<br>N/A            | 318          | CMS13<br>9v11     | eCQM<br>Specification<br>s  | Process         | Patient<br>Safety                         | <b>Falls: Screening for Future Fall Risk:</b><br>Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.  | National Committee for Quality Assurance | We proposed to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. Complications from patient falls are the leading cause of death from injury in people over the age of 65. Screening patients for their risk of future falls can help reduce the number of patients falls per year.  |

## B.16. Geriatrics

| MEASURES FINALIZED FOR ADDITION TO THE GERIATRICS SPECIALTY SET |                          |              |                   |  |                 |   |  |                                  |   |
|---|--------------------------|--------------|-------------------|--|-----------------|---|--|----------------------------------|---|
| Indicator   | NQF #<br>/ eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type   | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description   | Measure<br>Steward               | Rationale for Inclusion   |
| ! (Equity)  | N/A/<br>N/A              | 487          | N/A               | MIPS CQMs<br>Specification<br>s                                | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.  | Physicians<br>Foundation         | We proposed to include this measure in the Geriatrics specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
|   | N/A/<br>N/A              | 488          | CMS95<br>lv1      | eCQM<br>Specification<br>s, MIPS<br>CQMs<br>Specification<br>s | Process         | Effective<br>Clinical<br>Care             | <b>Kidney Health Evaluation:</b><br>Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period. | National<br>Kidney<br>Foundation | We proposed to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.   |

## B.16. Geriatrics

| MEASURES FINALIZED FOR ADDITION TO THE GERIATRICS SPECIALTY SET |                          |              |                   |                                 |                 |   |  |   |  |
|---|--------------------------|--------------|-------------------|---------------------------------|-----------------|---|--|---|--|
| Indicator   | NQF #<br>/ eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type              | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description   | Measure<br>Steward                                | Rationale for Inclusion  |
|   | 1662/<br>N/A             | 489          | N/A               | MIPS CQMs<br>Specification<br>s | Process         | Effective<br>Clinical<br>Care             | <b>Adult Kidney Disease:<br/>Angiotensin Converting<br/>Enzyme (ACE) Inhibitor or<br/>Angiotensin Receptor<br/>Blocker (ARB) Therapy:</b><br>Percentage of patients aged<br>18 years and older with a<br>diagnosis of CKD (Stages 1-<br>5, not receiving Renal<br>Replacement Therapy (RRT))<br>and proteinuria who were<br>prescribed ACE inhibitor or<br>ARB therapy within a 12-<br>month period. | Renal<br>Physicians<br>Association                | We proposed to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that this measure is relevant to this specialist's patient population. Along with the high burden of cardiovascular morbidity and mortality in patients with chronic kidney disease, the fact that kidney function decreases in the normal aging process, and evidence that patients over the age of 60 have a greater likelihood of resistant hypertension without proper ACE or ARB therapy, this is an important and relevant measure for this specialty. See Table A.5 for rationale.   |
|   | N/A/<br>N/A              | 493          | N/A               | MIPS CQMs<br>Specification<br>s | Process         | Communi-<br>ty/Pop-<br>ulation<br>Health  | <b>Adult Immunization Status:</b><br>Percentage of members 19<br>years of age and older who<br>are up-to-date on<br>recommended routine<br>vaccines for influenza;<br>tetanus and diphtheria (Td) or<br>tetanus, diphtheria and<br>acellular pertussis (Tdap);<br>zoster; and pneumococcal.  | National<br>Committee<br>for Quality<br>Assurance | We proposed to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale. |

## B.16. Geriatrics

| MEASURES FINALIZED FOR ADDITION TO THE GERIATRICS SPECIALTY SET   |                             |              |                   |                    |                 |   |                                  |                    |                         |

| <p><b>Comment:</b> One commenter opposed the addition of the Kidney Health Evaluation measure to the Geriatrics Specialty Set. The commenter stated that while adults over 60 years of age are more likely to develop kidney disease and more than 50 percent of adults over the age of 75 are believed to have kidney disease, there is strong evidence that the current definition of chronic kidney disease (CKD) leads to overdiagnosis and identifies older adults as having CKD even though they do not have an increased risk for adverse outcomes. The commenter encouraged CMS to reconsider the addition of the Kidney Health Evaluation measure so as not to encourage overdiagnosis, overestimation of the burden of CKD, and unnecessary interventions in older adults.</p> <p><b>Response:</b> For the specified patient population who experience decreased kidney functioning due to the normal aging process, it is important to appropriately treat CKD to lower the rates of kidney failure, improve cardiovascular outcomes, and lower mortality. (<a href="https://pubmed.ncbi.nlm.nih.gov/23732715/">https://pubmed.ncbi.nlm.nih.gov/23732715/</a>). Currently, the Geriatric Specialty Set contains 19 measures allowing clinicians to choose to submit those measures that are meaningful to their scope of care.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46541), we are finalizing the above measures for addition to the <i>Geriatrics Specialty Set</i> as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p> |                             |              |                   |                    |                 |   |                                  |                    |                         |

## B.16. Geriatrics

| PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GERIATRICS SPECIALTY SET  |           |             |  |              |                                  |  |  |   |
|--|-----------|-------------|--|--------------|----------------------------------|--|--|---|
| Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies. |           |             |  |              |                                  |  |  |   |

See Table Group C for rationale.                        |

**Comment:** One commenter supported the removal of measures Q110 and Q111 from the Geriatrics Specialty Set.

**Response:** We thank the commenter for supporting the removal of measures Q110 and Q111 from traditional MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46542), we are finalizing the above measures for removal from the *Geriatrics Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.17. Hospitalists**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.17. Hospitalists**

| !<br>(Equity)   | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians<br>Foundation | We proposed to include this measure in the Hospitalists specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

## B.17. Hospitalists

## MEASURES NOT FINALIZED FOR ADDITION TO THE HOSPITALISTS SPECIALTY SET

| Indicator | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description | Measure<br>Steward | Rationale for<br>Inclusion |
|-----------|-----------------------------|--------------|-------------------|--------------------|-----------------|---|----------------------------------|--------------------|----------------------------|
|-----------|-----------------------------|--------------|-------------------|--------------------|-----------------|---|----------------------------------|--------------------|----------------------------|

**Comment:** One commenter did not support the inclusion of the Screening for Social Drivers of Health measure in the Hospitalists Specialty Set. The commenter stated this measure should not be applied in a one-sized-fits-all approach across MIPS.

CMS has already finalized this measure and an additional measure (Screen Positive Rate for Social Drivers of Health) in the CY 2023 Inpatient Prospective Payment System Rule (87 FR 49202 through 49215), with mandatory reporting beginning in the 2024 reporting/FY2026 payment period. Patients seen by hospitalists and other hospital-based clinicians will already receive screening for these social drivers of health as hospitals begin to report the hospital-level measures. The commenter felt this means the data will already be captured and documented in the medical record used by those hospitalists. Therefore, it would be duplicative and counterproductive to create a requirement for hospitalists and other hospital-based clinicians to screen patients again for these drivers of health and repeated screenings could create distress for patients.

**Response:** We thank the commenter for their comment. As we implement the Screening for Social Drivers of Health measure within the MIPS quality measure inventory and measure sets starting with the CY 2023 performance period, we believe it is critical for individual MIPS eligible clinicians, groups, and virtual groups to have the option of choice in selecting and reporting such measure. We recognize that the Hospitalists Specialty Set would contain five MIPS quality measures if the Screening for Social Drivers of Health measure were implemented within this set. For specialty sets that contain more than six MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups have the flexibility to select a minimum of six MIPS quality measures to report to meet the MIPS reporting requirement for the quality performance category. For specialty sets that contain six or less MIPS quality measures, individual MIPS eligible clinicians, groups, and virtual groups must report on all MIPS quality measures within the specialty set. In the case of the Hospitalists Specialty Set, this measure would inadvertently become mandatory to report. While we believe that the Screening for Social Drivers of Health measure is an important topic for hospitalists to assess within their patient population, the inclusion of such measure within this set would eliminate the option of choice to select and report such measure. As we intend to provide clinician choice in selecting and reporting the Screening for Social Drivers of Health measure, we will not include such measure within the Hospitalists Specialty Set.

After consideration of public comments, we are not finalizing the Screening for Social Drivers of Health measure for addition to the *Hospitalists Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

## B.17. Hospitalists

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE HOSPITALISTS SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description   | Measure<br>Steward                    | Rationale for Removal  |
|-----------------------------|--------------|----------------|---|-----------------|---|---|---------------------------------------|--|
| 2726 /<br>N/A               | 076          | N/A            | Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications | Process         | Patient Safety                            | <b>Prevention of Central Venous Catheter (CVC) – Related Bloodstream Infections:</b><br>Percentage of patients, regardless of age, who undergo central venous catheter (CVC) insertion for whom CVC was inserted with all elements of maximal sterile barrier technique, hand hygiene, skin preparation and, if ultrasound is used, sterile ultrasound techniques followed. | American Society of Anesthesiologists | This measure was proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale. |

**Comment:** One commenter supported the removal of measure Q076 from the Hospitalists Specialty Set but requested the measure remain in MIPS because it has served as an important impetus for driving the implementation of bloodstream infection controls and improved systems around CVC insertions.

**Response:** We thank the commenter for supporting the removal of this measure for the Hospitalists Specialty Set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46555), we are finalizing the above measure for removal from the *Hospitalists Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.18. Infectious Disease**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Infectious Disease specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

## B.18. Infectious Disease

| MEASURES FINALIZED FOR ADDITION TO THE INFECTIOUS DISEASE SPECIALTY SET |                             |           |             |                          |              |                                  |   |  |  |

|   | N/A/<br>N/A                 | 493       | N/A         | MIPS CQMs Specifications | Process      | Community/Population Health      | <b>Adult Immunization Status:</b><br>Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal. | National Committee for Quality Assurance | We proposed to include this measure in the Infectious Disease specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale. |

**Comment:** One commenter noted there is a lack of clinically appropriate quality measures in the MIPS program for infectious disease physicians, especially if traditional MIPS is sunset. The commenter made recommendations on how to make improvements for the Infectious Disease Specialty Set.

**Response:** We encourage the commenter to reach out to measure developers/stewards to develop new infectious disease-related measures for submission to the Call for Measures for possible future implementation.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46558 through 46560), we are finalizing the above measures for addition to the *Infectious Disease Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

## B.18. Infectious Disease

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE INFECTIOUS DISEASE SPECIALTY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |
|-----------------------------|--------------|----------------|---|-----------------|---|--|---|---|

See Table Group CC<br>for rationale. |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (87 FR 46560), we are finalizing the above measures for removal from the *Infectious Disease Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.19. Internal Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

| *  | N/A /<br>N/A                | 176          | N/A               | MIPS CQMs<br>Specifications | Process   | Effective<br>Clinical<br>Care  | <b>Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy:</b><br>If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period.  | American College of Rheumatology                                      | We proposed to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that appropriate tuberculosis screening prior to initiation of biologic therapy is an important quality of care consideration relevant to this specialty. Proper screening helps ensure that treatment is not adversely affecting patients with an active infection. |
| *<br>!<br>(Outcome)  | N/A /<br>N/A                | 476          | CMS77<br>1v4      | eCQM<br>Specifications      | Patient-<br>Reported<br>Outcome-<br>Based<br>Performance<br>Measure | Person<br>and<br>Caregiver-<br>centered<br>Experience<br>and<br>Outcomes | <b>Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia:</b><br>Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptom Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points. | Large Urology Group Practice Association and Oregon Urology Institute | We proposed to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. We agreed with interested parties' feedback that benign prostatic hyperplasia is a common condition among older men and inclusion of this measure in the internal medicine specialty set will promote patient-centered care with the goal of functional status improvement among primary care providers.         |

## B.19. Internal Medicine

| MEASURES FINALIZED FOR ADDITION TO THE INTERNAL MEDICINE SPECIALTY SET |                             |              |                   |  |                 |   |  |                                  |  |
|--|-----------------------------|--------------|-------------------|--|-----------------|---|--|----------------------------------|--|
| Indicator  | NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM<br>ID | Collection<br>Type                                     | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title<br>And Description   | Measure<br>Steward               | Rationale for Inclusion  |
| !<br>(Equity)  | N/A/<br>N/A                 | 487          | N/A               | MIPS CQMs<br>Specifications                            | Process         | Patient<br>Safety                         | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.  | Physicians<br>Foundation         | We proposed to include this measure in the Internal Medicine specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
|  | N/A/<br>N/A                 | 488          | CMS95<br>1v1      | eCQM<br>specifications, MIPS<br>CQMs<br>Specifications | Process         | Effective<br>Clinical<br>Care             | <b>Kidney Health Evaluation:</b><br>Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period. | National<br>Kidney<br>Foundation | We proposed to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.   |

## B.19. Internal Medicine

| MEASURES FINALIZED FOR ADDITION TO THE INTERNAL MEDICINE SPECIALTY SET |                          |           |             |                          |              |                                  |   |  |   |
|--|--------------------------|-----------|-------------|--------------------------|--------------|----------------------------------|---|--|---|
| Indicator  | NQF #<br>/ eCQM<br>NQF # | Quality # | CMS eCQM ID | Collection Type          | Measure Type | National Quality Strategy Domain | Measure Title And Description   | Measure Steward                          | Rationale for Inclusion   |
|  | N/A/<br>N/A              | 493       | N/A         | MIPS CQMs Specifications | Process      | Community/Population Health      | <b>Adult Immunization Status:</b><br>Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal. | National Committee for Quality Assurance | We proposed to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale. |

**Comment:** One commenter supported the addition of measure Q176 to the Internal Medicine Specialty Set and stated that most often, the measure will apply to rheumatologists, but primary care physicians may also manage rheumatoid arthritis. The commenter also supported the addition of the new Adult Kidney Health measure.

**Response:** We thank the commenter for supporting the addition of these measures to the Internal Medicine Specialty Set.

**Comment:** One commenter did not support the addition of the Screening for Social Drivers of Health measure to this set and recommended delayed adoption of this measure until reliability and validity testing has been completed.

**Response:** We believe that the inclusion of this measure serves an important purpose in advancing quality measurement in MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. While we consider whether or not a measure is fully tested, it is not the only relevant standard. This measure supports health equity, a national healthcare priority and is responsive to filling a critical gap in MIPS. This measure does not result in negative unintended consequences as described in the Blueprint (<https://mmshub.cms.gov/measure-lifecycle/measure-implementation/selection>), such as overuse or inappropriate use of care or treatment, or limiting access to care. Therefore, based upon the importance of this topic and need to address this national healthcare priority, we are finalizing the measure.

While we appreciate the commenter’s concerns, we believe this is an important process measure that supports collecting DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians who chose to implement this measure. We believe that achieving health equity is a pressing issue which deserves serious focus and rapid action. This is a screening data collection measure and is voluntary; therefore, clinicians have the flexibility to choose to report this measure and it only looks at the screening of patients. Under MIPS, clinicians have the flexibility to choose to report the measures that would work best for their scope of practice and clinical workflow. Currently, the Internal Medicine Specialty set has 60 measures, which allows clinicians to choose to submit those measures that are meaningful to their scope of care.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46572 through 46574), we are finalizing the above measures for addition to the *Internal Medicine Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix I: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

## B.19. Internal Medicine

## PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE INTERNAL MEDICINE SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

| NQF #<br>/<br>eCQM<br>NQF # | Quality<br># | CMS<br>eCQM ID | Collection<br>Type  | Measure<br>Type | National<br>Quality<br>Strategy<br>Domain | Measure Title and Description  | Measure<br>Steward                                | Rationale for Removal   |

See Table Group CC<br>for rationale. |
| N/A /<br>N/A                | 111          | CMS127v<br>11  | Medicare Part<br>B Claims<br>Measure<br>Specifications,<br>eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications | Process         | Community<br>/Population<br>Health        | <b>Pneumococcal Vaccination<br/>Status for Older Adults:</b><br>Percentage of patients 66 years<br>of age and older who have<br>received a pneumococcal<br>vaccine.  | National<br>Committee for<br>Quality<br>Assurance | This measure was proposed<br>for removal from traditional<br>MIPS beginning with the<br>CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group CC<br>for rationale. |
| 0062 /<br>N/A               | 119          | CMS134v<br>11  | eCQM<br>Specifications,<br>MIPS CQMs<br>Specifications  | Process         | Effective<br>Clinical<br>Care             | <b>Diabetes: Medical Attention<br/>for Nephropathy:</b><br>The percentage of patients 18-<br>75 years of age with diabetes<br>who had a nephropathy<br>screening test or evidence of<br>nephropathy during the<br>measurement period.  | National<br>Committee of<br>Quality<br>Assurance  | This measure was proposed<br>for removal beginning with<br>the CY 2023 performance<br>period/2025 MIPS payment<br>year. See Table Group C for<br>rationale.                           |

**Comment:** One commenter did not support the removal of measure Q110 from the Internal Medicine Specialty Set unless the Adult Immunization Status measure was finalized for adoption. The commenter did not support the removal of measure Q119 unless the Kidney Health Evaluation measure was finalized for adoption. The commenter also did support the removal of measure Q111.

**Response:** We thank the commenter and have finalized the Adult Immunization Status measure under Table A.9 and the Kidney Health Evaluation measure under Table A.4.

After consideration of public comments, and for the reasons stated above and in the proposed rule (87 FR 46574), we are finalizing the above measure for removal from the *Internal Medicine Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Note: Where applicable, see Table Group C in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.

**B.20. Interventional Radiology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## B.20. Interventional Radiology

| MEASURES FINALIZED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET |                             |           |             |                          |              |                                  |   |                       |   |
|---|-----------------------------|-----------|-------------|--------------------------|--------------|----------------------------------|---|-----------------------|---|
| Indicator   | NQF #<br>/<br>eCQM<br>NQF # | Quality # | CMS eCQM ID | Collection Type          | Measure Type | National Quality Strategy Domain | Measure Title And Description   | Measure Steward       | Rationale for Inclusion   |
| ! (Equity)  | N/A/<br>N/A                 | 487       | N/A         | MIPS CQMs Specifications | Process      | Patient Safety                   | <b>Screening for Social Drivers of Health:</b><br>Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. | Physicians Foundation | We proposed to include this measure in the Interventional Radiology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believed this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (87 FR 46576), we are finalizing the above measure for addition to the *Interventional Radiology Specialty Set* as proposed for the CY 2023 performance period/2025 MIPS payment year and future years. Where applicable, see Table Group A in this section of the final rule (Appendix 1: MIPS Quality Measures) for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

**B.21. Mental/Behavioral Health and Psychiatry**

As indicated in the introductory language of Table Group B of the appendix to this final rule, we finalized adding “Psychiatry” to the title of the Mental/Behavioral Health specialty set to create a combined new specialty set: Mental/Behavioral Health and Psychiatry. The Mental/Behavioral Health and Psychiatry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.
