**SUPPLEMENTARY INFORMATION:** PHMSA is evaluating a petition from DNV GL Digital Solutions (DNV) requesting approval, pursuant to 49 CFR 190.9, authorizing use of its Process Hazard Analysis Software Tool version 8.4 (Phast v8.4) as an alternate model for calculating, pursuant to § 193.2059, the flammable vapor-gas dispersion exclusion zones for part 193-regulated LNG facilities.

PHMSA's safety standards for the siting of LNG facilities are found in subpart B of part 193. Section 193.2059 in particular requires that each LNG container and LNG transfer system must have a flammable vapor-gas dispersion exclusion zone, defined as the area surrounding an LNG facility in which an operator or government agency legally controls all activities. The exclusion zone is intended to protect the public from the flammable vapor gas and unsafe levels of thermal radiation in the event of a release or ignition, respectively. In accordance with § 193.2059(a), an LNG operator must calculate vapor-gas dispersion exclusion zones using either the Dense Gas Dispersion model or FEM3A model. Section 193.2059 also states that the Administrator (or his delegate) may, pursuant to the procedures set forth in § 190.9, approve the use of alternative vapor-gas dispersion models that take into account the same physical factors and have been validated by experimental test data.

On May 18, 2020, DNV petitioned PHMSA for approval of its Phast version 8.23 as an alternate model for calculating the LNG flammable vapor-gas dispersion exclusion zones. PHMSA had previously approved DNV's Phast versions 6.6 and 6.7 as alternate models for LNG flammable vapor-gas dispersion on October 7, 2011. On September 4, 2020, DNV submitted an updated petition requesting approval of Phast v8.4, instead of version 8.23.

The petition request, draft letter of decision, and DEA for Phast v8.4 are available for review and public comment in Docket No. PHMSA-2021-0041. We invite interested persons to review and submit comments on the draft letter of decision and the DEA in the docket. Please include any comments on potential safety and environmental impacts that may result if Phast v8.4 is approved. Comments may also include relevant data.

Before issuing a final decision on DNV's petition, PHMSA will evaluate

all comments received on or before the comment closing date. Comments received after the closing date will be evaluated if it is possible to do so without incurring additional expense or delay. PHMSA will consider each relevant comment we receive in making our final decision to grant or deny this request.

Issued in Washington, DC, under authority delegated in 49 CFR 1.97.
