FEDERAL REGISTER

Vol. 88 Thursday,
No. 81 April 27 2023

Pages 25479–26218

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 88 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Interagency Policy Statement on Allowances for Credit Losses (Revised April 2023)

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury; Board of Governors of the Federal Reserve System (Board); Federal Deposit Insurance Corporation (FDIC); and National Credit Union Administration (NCUA).

ACTION: Final interagency policy statement.

SUMMARY: The Office of the Comptroller of the Currency, the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, and the National Credit Union Administration (collectively, the agencies) are issuing a revised interagency policy statement on allowances for credit losses (ACLs) (revised statement). The agencies are issuing the revised statement in response to changes to U.S. generally accepted accounting principles (GAAP) as promulgated by the Financial Accounting Standards Board (FASB) in Accounting Standards Update (ASU) 2022–02, *Financial Instruments—Credit Losses (Topic 326): Troubled Debt Restructurings and Vintage Disclosures* issued in March 2022.

DATES: The interagency policy statement is available on April 27, 2023.

FOR FURTHER INFORMATION CONTACT:

OCC: Amanda Freedle, Deputy Comptroller and Chief Accountant, (202) 649–6317; or Ashley Rangel, Deputy Chief Accountant, (202) 649–5648, Office of the Chief Accountant; or Kevin Korzeniewski, Counsel, Chief Counsel's Office, (202) 649–5490. If you are deaf, hard of hearing, or have a speech disability, please dial 7–1–1 to access telecommunications relay services.

Board: Lara Lylozian, Deputy Associate Director and Chief Accountant, (202) 475–6656; or Kevin Chiu, Senior Accounting Policy Analyst, (202) 912–4608, Division of Supervision and Regulation; or David Imhoff, Attorney, (202) 452–2249, Legal Division, Board of Governors of the Federal Reserve System, 20th and C Streets NW, Washington, DC 20551. For users of telephone systems via text telephone (TTY) or any TTY-based Telecommunications Relay Services (TRS), please call 711 from any telephone, anywhere in the United States.

FDIC: Shannon Beattie, Chief Accountant, (202) 898–3952; or Bryan Jonasson, Deputy Chief Accountant, (781) 794–5641; or Andrew Overton, Assistant Chief Accountant, (202)-898–8922; Division of Risk Management Supervision; or Catherine Wood, Counsel, (202) 898–3788, Legal Division, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

NCUA: Technical information: Chris McGrath, Acting Chief Accountant, Office of Examination and Insurance, (703) 518–6611 or *Legal information:* Marvin Shaw, Staff Attorney, Office of General Counsel, (703) 548–2778. National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314.

SUPPLEMENTARY INFORMATION:

I. Background

On June 1, 2020, the agencies published in the **Federal Register** an interagency policy statement [1] (original statement) in response to changes to GAAP as promulgated by the FASB in ASU 2016–13, *Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments* and subsequent amendments issued between June 2016 and the date of issuance of the original statement (collectively, Topic 326).

In March 2022, the FASB further amended Topic 326 with the issuance of ASU 2022–02, *Financial Instruments—Credit Losses (Topic 326): Troubled Debt Restructurings and Vintage Disclosures* (ASU 2022–02). ASU 2022–02 eliminates the recognition and measurement accounting guidance for Troubled Debt Restructurings (TDRs) by creditors upon adoption of Topic 326.

II. Current Actions

To maintain conformance with GAAP following the issuance of ASU 2022–02, the agencies are revising the original statement to remove references to TDRs. The agencies are also correcting a citation to a regulation in footnote 4 of the original statement. No other changes are being made to the original statement. Through this notice, the agencies are publishing the revised statement.

Consistent with the original statement, the revised statement continues to describe the measurement of expected credit losses under the current expected credit losses (CECL) methodology and the accounting for impairment on available-for-sale debt securities in accordance with Topic 326; the design, documentation, and validation of expected credit loss estimation processes, including the internal controls over these processes; the maintenance of appropriate ACLs; the responsibilities of boards of directors and management; and examiner reviews of ACLs.

III. Paperwork Reduction Act

In accordance with the requirements of the Paperwork Reduction Act of 1995 (PRA),[2] the agencies may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number.

The revised statement does not create any new or revise any existing

[1] 85 FR 32991 (June 1, 2020).

[2] 44 U.S.C. 3501–3521.

collections of information under the PRA. Therefore, no information collection request will be submitted to the OMB for review.

IV. Final Interagency Policy Statement on Allowances for Credit Losses

The text of the final interagency Policy Statement is as follows:

Interagency Policy Statement on Allowances for Credit Losses (Revised April 2023)

Purpose

The Office of the Comptroller of the Currency (OCC), the Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA) (collectively, the agencies) are issuing this Interagency Policy Statement on Allowances for Credit Losses (hereafter, the policy statement) to promote consistency in the interpretation and application of Financial Accounting Standards Board (FASB) Accounting Standards Update 2016–13, *Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments,* as well as the amendments issued since June 2016.[1] These updates are codified in Accounting Standards Codification (ASC) Topic 326, *Financial Instruments—Credit Losses* (FASB ASC Topic 326). FASB ASC Topic 326 applies to all banks, savings associations, credit unions, and financial institution holding companies (collectively, institutions), regardless of size, that file regulatory reports for which the reporting requirements conform to U.S. generally accepted accounting principles (GAAP).[2] This policy statement describes the measurement of expected credit losses in accordance with FASB ASC Topic 326; the design, documentation, and validation of expected credit loss estimation processes, including the internal controls over these processes; the maintenance of appropriate allowances for credit losses (ACLs); the responsibilities of boards of directors and management; and examiner reviews of ACLs.

This policy statement is effective at the time of each institution's adoption of FASB ASC Topic 326.[3] The following policy statements are no longer effective for an institution upon its adoption of FASB ASC Topic 326: the December 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses; the July 2001 Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions; and the NCUA's May 2002 Interpretive Ruling and Policy Statement 02–3, Allowance for Loan and Lease Losses Methodologies and Documentation for Federally Insured Credit Unions (collectively, ALLL Policy Statements). After FASB ASC Topic 326 is effective for all institutions, the agencies will rescind the ALLL Policy Statements.

The principles described in this policy statement are consistent with GAAP, applicable regulatory reporting requirements,[4] safe and sound banking practices, and the agencies' codified guidelines establishing standards for safety and soundness.[5] The operational and managerial standards included in those guidelines, which address such matters as internal controls and information systems, an internal audit system, loan documentation, credit underwriting, asset quality, and earnings, should be appropriate for an institution's size and the nature, scope, and risk of its activities.

Scope

This policy statement describes the current expected credit losses (CECL) methodology for determining the ACLs applicable to loans held-for-investment, net investments in leases, and held-to-maturity debt securities accounted for at amortized cost.[6] It also describes the estimation of the ACL for an available-for-sale debt security in accordance with FASB ASC Subtopic 326–30. This policy statement does not address or supersede existing agency requirements or guidance regarding appropriate due diligence in connection with the purchase or sale of assets or determining whether assets are permissible to be purchased or held by institutions.[7]

The CECL methodology described in FASB ASC Topic 326 applies to financial assets measured at amortized cost, net investments in leases, and off-balance-sheet credit exposures (collectively, financial assets) including:

[1] The FASB issued Accounting Standards Update (ASU) 2016–13 on June 16, 2016. The following updates were published after the issuance of ASU 2016–13: ASU 2018–19—*Codification Improvements to Topic 326, Financial Instruments—Credit Losses;* ASU 2019–04—*Codification Improvements to Topic 326, Financial Instruments—Credit Losses, Topic 815, Derivatives and Hedging, and Topic 825, Financial Instruments;* ASU 2019–05—*Financial Instruments—Credit Losses (Topic 326): Targeted Transition Relief;* ASU 2019–10—*Financial Instruments—Credit Losses (Topic 326), Derivatives and Hedging (Topic 815), and Leases (Topic 842): Effective Dates;* ASU 2019–11—*Codification Improvements to Topic 326, Financial Instruments—Credit Losses;* and ASU 2022–02, *Financial Instruments—Credit Losses (Topic 326): Troubled Debt Restructurings and Vintage Disclosures.* Additionally, institutions may refer to FASB Staff Q&A-Topic 326, No. 1, *Whether the Weighted-Average Remaining Maturity Method is an Acceptable Method to Estimate Expected Credit Losses,* and FASB Staff Q&A-Topic 326, No. 2, *Developing an Estimate of Expected Credit Losses on Financial Assets.*

[2] U.S. branches and agencies of foreign banking organizations may choose to, but are not required to, maintain ACLs on a branch or agency level. These institutions should refer to the instructions for the FFIEC 002, *Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks;* Supervision and Regulation (SR) Letter 95–4, *Allowance for Loan and Lease Losses for U.S. Branches and Agencies of Foreign Banking Organizations;* and SR Letter 95–42, *Allowance for Loan and Lease Losses for U.S. Branches and Agencies of Foreign Banking Organizations.*

[3] As noted in Accounting Standards Update 2019–10, FASB ASC Topic 326 is effective for fiscal years beginning after December 15, 2019, including interim periods within those fiscal years, for public business entities that meet the definition of a Securities Exchange Commission (SEC) filer, excluding entities eligible to be small reporting companies as defined by the SEC. FASB ASC Topic 326 is effective for all other entities for fiscal years beginning after December 15, 2022, including interim periods within those fiscal years. For all entities, early application of FASB ASC Topic 326 is permitted as set forth in ASU 2016–13.

[4] For FDIC-insured depository institutions, section 37(a) of the Federal Deposit Insurance Act (12 U.SC. 1831n(a)) states that, in general, the accounting principles applicable to the Consolidated Reports of Condition and Income (Call Report) ''shall be uniform and consistent with generally accepted accounting principles.'' Section 202(a)(6)(C) of the Federal Credit Union Act (12 U.S.C. 1782(a)(6)(C)) establishes the same standard for federally insured credit unions with assets of $10 million or greater, providing that, in general, the ''[a]ccounting principles applicable to reports or statements required to be filed with the [NCUA] Board by each insured credit union shall be uniform and consistent with generally accepted accounting principles.'' Furthermore, regardless of asset size, all federally insured credit unions must comply with GAAP for certain financial reporting requirements relating to charges for loan losses. *See* 12 CFR 702.113(d).

[5] FDIC-insured depository institutions should refer to the *Interagency Guidelines Establishing Standards for Safety and Soundness* adopted by their primary federal regulator pursuant to section 39 of the Federal Deposit Insurance Act (12 U.S.C. 1831p–1) as follows: For national banks and federal savings associations, Appendix A to 12 CFR part 30; for state member banks, Appendix D to 12 CFR part 208; and for state nonmember banks, state savings associations, and insured state-licensed branches of foreign banks, Appendix A to 12 CFR part 364. Federally insured credit unions should refer to section 206(b)(1) of the Federal Credit Union Act (12 U.S.C. 1786) and 12 CFR 741.3.

[6] FASB ASC Topic 326 defines the amortized cost basis as the amount at which a financing receivable or investment is originated or acquired, adjusted for applicable accrued interest, accretion, or amortization of premium, discount, and net deferred fees or costs, collection of cash, write-offs, foreign exchange, and fair value hedge accounting adjustments.

[7] *See* the final guidance attached to OCC Bulletin 2012–18, *Guidance on Due Diligence Requirements in Determining Whether Securities Are Eligible for Investment* (for national banks and federal savings associations), 12 CFR part 1, *Investment Securities* (for national banks), and 12 CFR part 160, *Lending and Investment* (for federal savings associations). Federal credit unions should refer to 12 CFR part 703, *Investment and Deposit Activities.* Federally insured, state-chartered credit unions should refer to applicable state laws and regulations, as well as 12 CFR 741.219 (''investment requirements'').

- Financing receivables such as loans held-for-investment;
- Overdrawn deposit accounts (*i.e.* overdrafts) that are reclassified as held-for-investment loans;
- Held-to-maturity debt securities;
- Receivables that result from revenue transactions within the scope of Topic 606 on revenue from contracts with customers and Topic 610 on other income, which applies, for example, to the sale of foreclosed real estate;
- Reinsurance recoverables that result from insurance transactions within the scope of Topic 944 on insurance;
- Receivables related to repurchase agreements and securities lending agreements within the scope of Topic 860 on transfers and servicing;
- Net investments in leases recognized by a lessor in accordance with Topic 842 on leases; and
- Off-balance-sheet credit exposures including off-balance-sheet loan commitments, standby letters of credit, financial guarantees not accounted for as insurance, and other similar instruments except for those within the scope of Topic 815 on derivatives and hedging.

The CECL methodology does not apply to the following financial assets:

- Financial assets measured at fair value through net income, including those assets for which the fair value option has been elected;
- Available-for-sale debt securities;[8]
- Loans held-for-sale;
- Policy loan receivables of an insurance entity;
- Loans and receivables between entities under common control; and
- Receivables arising from operating leases.

Measurement of ACLs for Loans, Leases, Held-to-Maturity Debt Securities, and Off-Balance-Sheet Credit Exposures

Overview of ACLs

An ACL is a valuation account that is deducted from, or added to, the amortized cost basis of financial assets to present the net amount expected to be collected over the contractual term[9] of the assets. In estimating the net amount expected to be collected, management should consider the effects of past events, current conditions, and reasonable and supportable forecasts on the collectibility of the institution's financial assets.[10] FASB ASC Topic 326 requires management to use relevant forward-looking information and expectations drawn from reasonable and supportable forecasts when estimating expected credit losses.

ACLs are evaluated as of the end of each reporting period. The methods used to determine ACLs generally should be applied consistently over time and reflect management's current expectations of credit losses. Changes to ACLs resulting from these periodic evaluations are recorded through increases or decreases to the related provisions for credit losses (PCLs). When available information confirms that specific loans, securities, other assets, or portions thereof, are uncollectible, these amounts should be promptly written off[11] against the related ACLs.

Estimating appropriate ACLs involves a high degree of management judgment and is inherently imprecise. An institution's process for determining appropriate ACLs may result in a range of estimates for expected credit losses. An institution should support and record its best estimate within the range of expected credit losses.

Collective Evaluation of Expected Losses

FASB ASC Topic 326 requires expected losses to be evaluated on a collective, or pool, basis when financial assets share similar risk characteristics. Financial assets may be segmented based on one characteristic, or a combination of characteristics.

Examples of risk characteristics relevant to this evaluation include, but are not limited to:

- Internal or external credit scores or credit ratings;
- Risk ratings or classifications;
- Financial asset type;
- Collateral type;
- Size;
- Effective interest rate;
- Term;
- Geographical location;
- Industry of the borrower; and
- Vintage.

Other risk characteristics that may be relevant for segmenting held-to-maturity debt securities include issuer, maturity, coupon rate, yield, payment frequency, source of repayment, bond payment structure, and embedded options.

FASB ASC Topic 326 does not prescribe a process for segmenting financial assets for collective evaluation. Therefore, management should exercise judgment when establishing appropriate segments or pools. Management should evaluate financial asset segmentation on an ongoing basis to determine whether the financial assets in the pool continue to share similar risk characteristics. If a financial asset ceases to share risk characteristics with other assets in its segment, it should be moved to a different segment with assets sharing similar risk characteristics if such a segment exists.

If a financial asset does not share similar risk characteristics with other assets, expected credit losses for that asset should be evaluated individually. Individually evaluated assets should not be included in a collective assessment of expected credit losses.

Estimation Methods for Expected Credit Losses

FASB ASC Topic 326 does not require the use of a specific loss estimation method for purposes of determining ACLs. Various methods may be used to estimate the expected collectibility of financial assets, with those methods generally applied consistently over time. The same loss estimation method does not need to be applied to all financial assets. Management is not precluded from selecting a different method when it determines the method will result in a better estimate of ACLs.

Management may use a loss-rate method,[12] probability of default/loss given default (PD/LGD) method, roll-rate method, discounted cash flow method, a method that uses aging schedules, or another reasonable method to estimate expected credit losses. The selected method(s) should be appropriate for the financial assets being evaluated, consistent with the institution's size and complexity.

Contractual Term of a Financial Asset

FASB ASC Topic 326 requires an institution to measure estimated

[8] Refer to FASB ASC Subtopic 326–30, Financial Instruments—Credit Losses—Available-for-Sale Debt Securities (FASB ASC Subtopic 326–30).

[9] Consistent with FASB ASC Topic 326, an institution's determination of the contractual term should reflect the financial asset's contractual life adjusted for prepayments and renewal and extension options that are not unconditionally cancellable by the institution. For more information, see the ''Contractual Term of a Financial Asset'' section in this policy statement.

[10] Recoveries are a component of management's estimation of the net amount expected to be collected for a financial asset. Expected recoveries of amounts previously written off or expected to be written off that are included in ACLs may not exceed the aggregate amounts previously written off or expected to be written off. In some circumstances, the ACL for a specific portfolio or loan may be negative because the amount expected to be collected, including expected recoveries, exceeds the financial asset's amortized cost basis.

[11] Consistent with FASB ASC Topic 326, this policy statement uses the verbs ''write off'' and ''written off'' and the noun ''write-off.'' These terms are used interchangeably with ''charge off,'' ''charged off,'' and ''charge-off,'' respectively, in the agencies' regulations, guidance, and regulatory reporting instructions.

[12] Various loss-rate methods may be used to estimate expected credit losses under the CECL methodology. These include the weighted-average remaining maturity (WARM) method, vintage analysis, and the snapshot or open pool method.

expected credit losses over the contractual term of its financial assets, considering expected prepayments. Renewals, extensions, and modifications are excluded from the contractual term of a financial asset for purposes of estimating the ACL unless the renewal and extension options are part of the original or modified contract and are not unconditionally cancellable by the institution. If such renewal or extension options are present, management must evaluate the likelihood of a borrower exercising those options when determining the contractual term.

Historical Loss Information

Historical loss information generally provides a basis for an institution's assessment of expected credit losses. Historical loss information may be based on internal information, external information, or a combination of both. Management should consider whether the historical loss information may need to be adjusted for differences in current asset specific characteristics such as differences in underwriting standards, portfolio mix, or when historical asset terms do not reflect the contractual terms of the financial assets being evaluated as of the reporting date.

Management should then consider whether further adjustments to historical loss information are needed to reflect the extent to which current conditions and reasonable and supportable forecasts differ from the conditions that existed during the historical loss period. Adjustments to historical loss information may be quantitative or qualitative in nature and should reflect changes to relevant data (such as changes in unemployment rates, delinquency, or other factors associated with the financial assets).

Reasonable and Supportable Forecasts

When estimating expected credit losses, FASB ASC Topic 326 requires management to consider forward-looking information that is both reasonable and supportable and relevant to assessing the collectibility of cash flows. Reasonable and supportable forecasts may extend over the entire contractual term of a financial asset or a period shorter than the contractual term. FASB ASC Topic 326 does not prescribe a specific method for determining reasonable and supportable forecasts nor does it include bright lines for establishing a minimum or maximum length of time for reasonable and supportable forecast period(s). Judgment is necessary in determining an appropriate period(s) for each institution. Reasonable and supportable forecasts may vary by portfolio segment or individual forecast input. These forecasts may include data from internal sources, external sources, or a combination of both. Management is not required to search for all possible information nor incur undue cost and effort to collect data for its forecasts. However, reasonably available and relevant information should not be ignored in assessing the collectibility of cash flows. Management should evaluate the appropriateness of the reasonable and supportable forecast period(s) each reporting period, consistent with other inputs used in the estimation of expected credit losses.

Institutions may develop reasonable and supportable forecasts by using one or more economic scenarios. FASB ASC Topic 326 does not require the use of multiple economic scenarios; however, institutions are not precluded from considering multiple economic scenarios when estimating expected credit losses.

Reversion

When the contractual term of a financial asset extends beyond the reasonable and supportable period, FASB ASC Topic 326 requires reverting to historical loss information, or an appropriate proxy, for those periods beyond the reasonable and supportable forecast period (often referred to as the reversion period). Management may revert to historical loss information for each individual forecast input or based on the entire estimate of loss.

FASB ASC Topic 326 does not require the application of a specific reversion technique or use of a specific reversion period. Reversion to historical loss information may be immediate, occur on a straight-line basis, or use any systematic, rational method. Management may apply different reversion techniques depending on the economic environment or the financial asset portfolio. Reversion techniques are not accounting policy elections and should be evaluated for appropriateness each reporting period, consistent with other inputs used in the estimation of expected credit losses.

FASB ASC Topic 326 does not specify the historical loss information that is used in the reversion period. This historical loss information may be based on long-term average losses or on losses that occurred during a particular historical period(s). Management may use multiple historical periods that are not sequential. Management should not adjust historical loss information for existing economic conditions or expectations of future economic conditions for periods beyond the reasonable and supportable period. However, management should consider whether the historical loss information may need to be adjusted for differences in current asset specific characteristics such as differences in underwriting standards, portfolio mix, or when historical asset terms do not reflect the contractual terms of the financial assets being evaluated as of the reporting date.

Qualitative Factor Adjustments

The estimation of ACLs should reflect consideration of all significant factors relevant to the expected collectibility of the institution's financial assets as of the reporting date. Management may begin the expected credit loss estimation process by determining its historical loss information or obtaining reliable and relevant historical loss proxy data for each segment of financial assets with similar risk characteristics. Historical credit losses (or even recent trends in losses) generally do not, by themselves, form a sufficient basis to determine the appropriate levels for ACLs.

Management should consider the need to qualitatively adjust expected credit loss estimates for information not already captured in the loss estimation process. These qualitative factor adjustments may increase or decrease management's estimate of expected credit losses. Adjustments should not be made for information that has already been considered and included in the loss estimation process.

Management should consider the qualitative factors that are relevant to the institution as of the reporting date, which may include, but are not limited to:

- The nature and volume of the institution's financial assets;
- The existence, growth, and effect of any concentrations of credit;
- The volume and severity of past due financial assets, the volume of nonaccrual assets, and the volume and severity of adversely classified or graded assets; [13]

[13] For banks and savings associations, adversely classified or graded loans are loans rated ''substandard'' (or its equivalent) or worse under the institution's loan classification system. For credit unions, adversely graded loans are loans included in the more severely graded categories under the institution's credit grading system, *i.e.,* those loans that tend to be included in the credit union's ''watch lists.'' Criteria related to the classification of an investment security may be found in the interagency policy statement *Uniform Agreement on the Classification and Appraisal of Securities Held by Depository Institutions* issued by the FDIC, Board, and OCC in October 2013.

- The value of the underlying collateral for loans that are not collateral-dependent; [14]
- The institution's lending policies and procedures, including changes in underwriting standards and practices for collections, write-offs, and recoveries;
- The quality of the institution's credit review function;
- The experience, ability, and depth of the institution's lending, investment, collection, and other relevant management and staff;
- The effect of other external factors such as the regulatory, legal and technological environments; competition; and events such as natural disasters; and
- Actual and expected changes in international, national, regional, and local economic and business conditions and developments [15] in which the institution operates that affect the collectibility of financial assets.

Management may consider the following additional qualitative factors specific to held-to-maturity debt securities as of the reporting date: [16]

- The effect of recent changes in investment strategies and policies;
- The existence and effect of loss allocation methods, the definition of default, the impact of performance and market value triggers, and credit and liquidity enhancements associated with debt securities;
- The effect of structural subordination and collateral deterioration on tranche performance of debt securities;
- The quality of underwriting for any collateral backing debt securities; and
- The effect of legal covenants associated with debt securities.

Changes in the level of an institution's ACLs may not always be directionally consistent with changes in the level of qualitative factor adjustments due to the incorporation of reasonable and supportable forecasts in estimating expected losses. For example, if improving credit quality trends are evident throughout an institution's portfolio in recent years, but management's evaluation of reasonable and supportable forecasts indicates expected deterioration in credit quality of the institution's financial assets during the forecast period, the ACL as a percentage of the portfolio may increase.

Collateral-Dependent Financial Assets

FASB ASC Topic 326 describes a collateral-dependent asset as a financial asset for which the repayment is expected to be provided substantially through the operation or sale of the collateral when the borrower, based on management's assessment, is experiencing financial difficulty as of the reporting date. For regulatory reporting purposes, the ACL for a collateral-dependent loan is measured using the fair value of collateral, regardless of whether foreclosure is probable.[17]

When estimating the ACL for a collateral-dependent loan, FASB ASC Topic 326 requires the fair value of collateral to be adjusted to consider estimated costs to sell if repayment or satisfaction of the loan depends on the sale of the collateral. ACL adjustments for estimated costs to sell are not appropriate when the repayment of a collateral-dependent loan is expected from the operation of the collateral.

The fair value of collateral securing a collateral-dependent loan may change over time. If the fair value of the collateral as of the ACL evaluation date has decreased since the previous ACL evaluation date, the ACL should be increased to reflect the additional decrease in the fair value of the collateral. Likewise, if the fair value of the collateral has increased as of the ACL evaluation date, the increase in the fair value of the collateral is reflected through a reduction in the ACL. Any negative ACL that results is capped at the amount previously written off. Changes in the fair value of collateral described herein should be supported and documented through recent appraisals or evaluations.[18]

Purchased Credit-Deteriorated Assets

FASB ASC Topic 326 introduces the concept of purchased credit-deteriorated (PCD) assets. PCD assets are acquired financial assets that, at acquisition, have experienced more-than-insignificant deterioration in credit quality since origination. FASB ASC Topic 326 does not provide a prescriptive definition of more-than-insignificant credit deterioration. The acquiring institution's management should establish and document a reasonable process to consistently determine what constitutes a more-than-insignificant deterioration in credit quality.

When recording the acquisition of PCD assets, the amount of expected credit losses as of the acquisition date is added to the purchase price of the financial assets rather than recording these losses through PCLs. This establishes the amortized cost basis of the PCD assets. Any difference between the unpaid principal balance of the PCD assets and the amortized cost basis of the assets as of the acquisition date is the non-credit discount or premium. The initial ACL and non-credit discount or premium determined on a collective basis at the acquisition date are allocated to the individual PCD assets.

After acquisition, ACLs for PCD assets should be adjusted at each reporting date with a corresponding debit or credit to the PCLs to reflect management's current estimate of expected credit losses. The non-credit discount recorded at acquisition will be accreted into interest income over the remaining life of the PCD assets on a level-yield basis.

Financial Assets With Collateral Maintenance Agreements

Institutions may have financial assets that are secured by collateral (such as debt securities) and are subject to collateral maintenance agreements requiring the borrower to continuously replenish the amount of collateral securing the asset. If the fair value of the collateral declines, the borrower is

[14] *See* the ''Collateral-Dependent Financial Assets'' section of this policy statement for more information on collateral-dependent loans.

[15] Changes in economic and business conditions and developments included in qualitative factor adjustments are limited to those that affect the collectibility of an institution's financial assets and are relevant to the institution's financial asset portfolios. For example, an economic factor for current or forecasted unemployment at the national or state level may indicate a strong job market based on low national or state unemployment rates, but a local unemployment rate, which may be significantly higher, for example, because of the actual or forecasted loss of a major local employer may be more relevant to the collectibility of an institution's financial assets.

[16] This list is not all-inclusive, and all of the factors listed may not be relevant to all institutions.

[17] The agencies, at times, prescribe specific regulatory reporting requirements that fall within a range of acceptable practice under GAAP. These specific reporting requirements, such as the requirement for institutions to apply the practical expedient in ASC 326–20–35–5 for collateral-dependent loans, regardless of whether foreclosure is probable, have been adopted to achieve safety and soundness and other public policy objectives and to ensure comparability among institutions. The regulatory reporting requirement to apply the practical expedient for collateral-dependent financial assets is consistent with the agencies' long-standing practice for collateral-dependent loans, and it continues to be limited to collateral-dependent loans. It does not apply to other financial assets such as held-to-maturity debt securities that are collateral-dependent.

[18] For more information on regulatory expectations related to the use of appraisals and evaluations, see the *Interagency Appraisal and Evaluation Guidelines* published on December 10, 2010. Insured depository institutions should also refer to the interagency regulations on appraisals adopted by their primary federal regulator as follows: For national banks and federal savings associations, Subpart C of 12 CFR part 34; for state member banks, 12 CFR parts 208 and 225; for state nonmember banks, state savings associations, and insured state-licensed branches of foreign banks, 12 CFR part 323; and for federally insured credit unions, 12 CFR part 722.

required to provide additional collateral as specified by the agreement.

FASB ASC Topic 326 includes a practical expedient for financial assets with collateral maintenance agreements where the borrower is required to provide collateral greater than or equal to the amortized cost basis of the asset and is expected to continuously replenish the collateral. In those cases, management may elect the collateral maintenance practical expedient and measure expected credit losses for these qualifying assets based on the fair value of the collateral.[19] If the fair value of the collateral is greater than the amortized cost basis of the financial asset and management expects the borrower to replenish collateral as needed, management may record an ACL of zero for the financial asset when the collateral maintenance practical expedient is applied. Similarly, if the fair value of the collateral is less than the amortized cost basis of the financial asset and management expects the borrower to replenish collateral as needed, the ACL is limited to the difference between the fair value of the collateral and the amortized cost basis of the asset as of the reporting date when applying the collateral maintenance practical expedient.

Accrued Interest Receivable

FASB ASC Topic 326 includes accrued interest receivable in the amortized cost basis of a financial asset. As a result, accrued interest receivable is included in the amounts for which ACLs are estimated. Generally, any accrued interest receivable that is not collectible is written off against the related ACL.

FASB ASC Topic 326 permits a series of independent accounting policy elections related to accrued interest receivable that alter the accounting treatment described in the preceding paragraph. These elections are made upon adoption of FASB ASC Topic 326 and may differ by class of financing receivable or major security-type level. The available accounting policy elections [20] are:

- Management may elect not to measure ACLs for accrued interest receivable if uncollectible accrued interest is written off in a timely manner. Management should define and document its definition of a timely write-off.
- Management may elect to write off accrued interest receivable by either reversing interest income, recognizing the loss through PCLs, or through a combination of both methods.
- Management may elect to separately present accrued interest receivable from the associated financial asset in its regulatory reports and financial statements, if applicable. The accrued interest receivable is presented net of ACLs (if any).

Financial Assets With Zero Credit Loss Expectations

There may be certain financial assets for which the expectation of credit loss is zero after evaluating historical loss information, making necessary adjustments for current conditions and reasonable and supportable forecasts, and considering any collateral or guarantee arrangements that are not free-standing contracts. Factors to consider when evaluating whether expectations of zero credit loss are appropriate may include, but are not limited to:

- A long history of zero credit loss;
- A financial asset that is fully secured by cash or cash equivalents;
- High credit ratings from rating agencies with no expected future downgrade; [21]
- Principal and interest payments that are guaranteed by the U.S. government;
- The issuer, guarantor, or sponsor can print its own currency and the currency is held by other central banks as reserve currency; and
- The interest rate on the security is recognized as a risk-free rate.

A loan that is fully secured by cash or cash equivalents, such as certificates of deposit issued by the lending institution, would likely have zero credit loss expectations. Similarly, the guaranteed portion of a U.S. Small Business Administration (SBA) loan or security purchased on the secondary market through the SBA's fiscal and transfer agent would likely have zero credit loss expectations if these financial assets are unconditionally guaranteed by the U.S. government. Examples of held-to-maturity debt securities that may result in expectations of zero credit loss include U.S. Treasury securities as well as mortgage-backed securities issued and guaranteed by the Government National Mortgage Association, the Federal Home Loan Mortgage Corporation, and the Federal National Mortgage Association. Assumptions related to zero credit loss expectations should be included in the institution's ACL documentation.

Estimated Credit Losses for Off-Balance-Sheet Credit Exposures

FASB ASC Topic 326 requires that an institution estimate expected credit losses for off-balance-sheet credit exposures within the scope of FASB ASC Topic 326 over the contractual period during which the institution is exposed to credit risk. The estimate of expected credit losses should take into consideration the likelihood that funding will occur as well as the amount expected to be funded over the estimated remaining contractual term of the off-balance-sheet credit exposures. Management should not record an estimate of expected credit losses for off-balance-sheet exposures that are unconditionally cancellable by the issuer.

Management must evaluate expected credit losses for off-balance-sheet credit exposures as of each reporting date. While the process for estimating expected credit losses for these exposures is similar to the one used for on-balance-sheet financial assets, these estimated credit losses are not recorded as part of the ACLs because cash has not yet been disbursed to fund the contractual obligation to extend credit. Instead, these loss estimates are recorded as a liability, separate and distinct from the ACLs.[22] The amount needed to adjust the liability for expected credit losses for off-balance-sheet credit exposures as of each reporting date is reported in net income.

Measurement of the ACL for Available-for-Sale Debt Securities

FASB ASC Subtopic 326–30, *Financial Instruments—Credit Losses—Available-for-Sale Debt Securities* (FASB ASC Subtopic 326–30) describes the accounting for expected credit losses associated with available-for-sale debt securities. Credit losses for available-for-sale debt securities are evaluated as of each reporting date when the fair value is less than amortized cost. FASB ASC

[19] For example, an institution enters into a reverse repurchase agreement with a collateral maintenance agreement. Management may not need to record the expected credit losses at each reporting date as long as the fair value of the security collateral is greater than the amortized cost basis of the reverse repurchase agreement. Refer to ASC 326–20–55–46 for more information.

[20] The accounting policy elections related to accrued interest receivable that are described in this paragraph also apply to accrued interest receivable for an available-for-sale debt security that, for purposes of identifying and measuring an impairment, exclude the applicable accrued interest from both the fair value and amortized cost basis of the securities.

[21] Management should not rely solely on credit rating agencies but should also make its own assessment based on third party research, default statistics, and other data that may indicate a decline in credit rating.

[22] The ACL associated with off-balance-sheet credit exposures is included in the ''Allowance for credit losses on off-balance-sheet credit exposures'' in *Schedule RC–G—Other Liabilities* in the Call Report and in the *Liabilities* schedule in NCUA Call Report Form 5300.

Subtopic 326–30 requires credit losses to be calculated individually, rather than collectively, using a discounted cash flow method, through which management compares the present value of expected cash flows with the amortized cost basis of the security. An ACL is established, with a charge to the PCL, to reflect the credit loss component of the decline in fair value below amortized cost. If the fair value of the security increases over time, any ACL that has not been written off may be reversed through a credit to the PCL. The ACL for an available-for-sale debt security is limited by the amount that the fair value is less than the amortized cost, which is referred to as the fair value floor.

If management intends to sell an available-for-sale debt security or will more likely than not be required to sell the security before recovery of the amortized cost basis, the security's ACL should be written off and the amortized cost basis of the security should be written down to its fair value at the reporting date with any incremental impairment reported in income.

A change during the reporting period in the non-credit component of any decline in fair value below amortized cost on an available-for-sale debt security is reported in other comprehensive income, net of applicable income taxes.[23]

When evaluating impairment for available-for-sale debt securities, management may evaluate the amortized cost basis including accrued interest receivable, or may evaluate the accrued interest receivable separately from the remaining amortized cost basis. If evaluated separately, accrued interest receivable is excluded from both the fair value of the available-for-sale debt security and its amortized cost basis.[24]

Documentation Standards

For financial and regulatory reporting purposes, ACLs and PCLs must be determined in accordance with GAAP. ACLs and PCLs should be well documented, with clear explanations of the supporting analyses and rationale. Sound policies, procedures, and control systems should be appropriately tailored to an institution's size and complexity, organizational structure, business environment and strategy, risk appetite, financial asset characteristics, loan administration procedures, investment strategy, and management information systems.[25] Maintaining, analyzing, supporting, and documenting appropriate ACLs and PCLs in accordance with GAAP is consistent with safe and sound banking practices.

The policies and procedures governing an institution's ACL processes and the controls over these processes should be designed, implemented, and maintained to reasonably estimate expected credit losses for financial assets and off-balance-sheet credit exposures as of the reporting date. The policies and procedures should describe management's processes for evaluating the credit quality and collectibility of financial asset portfolios, including reasonable and supportable forecasts about changes in the credit quality of these portfolios, through a disciplined and consistently applied process that results in an appropriate estimate of the ACLs. Management should review and, as needed, revise the institution's ACL policies and procedures at least annually, or more frequently if necessary.

An institution's policies and procedures for the systems, processes, and controls necessary to maintain appropriate ACLs should address, but not be limited to:

- Processes that support the determination and maintenance of appropriate levels for ACLs that are based on a comprehensive, well-documented, and consistently applied analysis of an institution's financial asset portfolios and off-balance-sheet credit exposures. The analyses and loss estimation processes used should consider all significant factors that affect the credit risk and collectibility of the financial asset portfolios;
- The roles, responsibilities, and segregation of duties of the institution's senior management and other personnel who provide input into ACL processes, determine ACLs, or review ACLs. These departments and individuals may include accounting, financial reporting, treasury, investment management, lending, special asset or problem loan workout teams, retail collections and foreclosure groups, credit review, model risk management, internal audit, and others, as applicable. Individuals with responsibilities related to the estimation of ACLs should be competent and well-trained, with the ability to escalate material issues;
- Processes for determining the appropriate historical period(s) to use as the basis for estimating expected credit losses and approaches for adjusting historical credit loss information to reflect differences in asset specific characteristics, as well as current conditions and reasonable and supportable forecasts that are different from conditions existing in the historical period(s);
- Processes for determining and revising the appropriate techniques and periods to revert to historical credit loss information when the contractual term of a financial asset or off-balance-sheet credit exposure extends beyond the reasonable and supportable forecast period(s);
- Processes for segmenting financial assets for estimating expected credit losses and periodically evaluating the segments to determine whether the assets continue to share similar risk characteristics;
- Data capture and reporting systems that supply the quality and breadth of relevant and reliable information necessary, whether obtained internally or externally, to support and document the estimates of appropriate ACLs for regulatory reporting requirements and, if applicable, financial statement and disclosure requirements;
- The description of the institution's systematic and logical loss estimation process(es) for determining and consolidating expected credit losses to ensure that the ACLs are recorded in accordance with GAAP and regulatory reporting requirements. This may include, but is not limited to:
  - Management's judgments, accounting policy elections, and application of practical expedients in determining the amount of expected credit losses;
  - The process for determining when a loan is collateral-dependent;
  - The process for determining the fair value of collateral, if any, used as an input when estimating the ACL, including the basis for making any adjustments to the market value conclusion and how costs to sell, if applicable, are calculated;
  - The process for determining when a financial asset has zero credit loss expectations;
  - The process for determining expected credit losses when a financial asset has a collateral maintenance provision; and

[23] Non-credit impairment on an available-for-sale debt security that is not required to be recorded through the ACL should be reported in other comprehensive income as described in ASC 326–30–35–2.

[24] The accounting policy elections described in the ''Accrued Interest Receivable'' section of this policy statement apply to accrued interest receivable recorded for an available-for-sale debt security if an institution excludes applicable accrued interest receivable from both the fair value and amortized cost basis of the security for purposes of identifying and measuring impairment.

[25] Management often documents policies, procedures, and controls related to ACLs in accounting or credit risk management policies, or a combination thereof.

○ A description of and support for qualitative factors that affect collectibility of financial assets;

- Procedures for validating and independently reviewing the loss estimation process as well as any changes to the process from prior periods;
- Policies and procedures for the prompt write-off of financial assets, or portions of financial assets, when available information confirms the assets to be uncollectible, consistent with regulatory reporting requirements; and
- The systems of internal controls used to confirm that the ACL processes are maintained and periodically adjusted in accordance with GAAP and interagency guidelines establishing standards for safety and soundness.

Internal control systems for the ACL estimation processes should:

- Provide reasonable assurance regarding the relevance, reliability, and integrity of data and other information used in estimating expected credit losses;
- Provide reasonable assurance of compliance with laws, regulations, and the institution's policies and procedures;
- Provide reasonable assurance that the institution's financial statements are prepared in accordance with GAAP, and the institution's regulatory reports are prepared in accordance with the applicable instructions;
- Include a well-defined and effective loan review and grading process that is consistently applied and identifies, measures, monitors, and reports asset quality problems in an accurate, sound and timely manner. The loan review process should respond to changes in internal and external factors affecting the level of credit risk in the portfolio; and
- Include a well-defined and effective process for monitoring credit quality in the debt securities portfolio.

Analyzing and Validating the Overall Measurement of ACLs

To ensure that ACLs are presented fairly, in accordance with GAAP and regulatory reporting requirements, and are transparent for regulatory examinations, management should document its measurements of the amounts of ACLs reported in regulatory reports and financial statements, if applicable, for each type of financial asset (*e.g.,* loans, held-to-maturity debt securities, and available-for-sale debt securities) and for off-balance-sheet credit exposures. This documentation should include ACL calculations, qualitative adjustments, and any adjustments to the ACLs that are required as part of the internal review and challenge process. The board of directors, or a committee thereof, should review management's assessments of and justifications for the reported amounts of ACLs.

Various techniques are available to assist management in analyzing and evaluating the ACLs. For example, comparing estimates of expected credit losses to actual write-offs in aggregate, and by portfolio, may enable management to assess whether the institution's loss estimation process is sufficiently designed.[26] Further, comparing the estimate of ACLs to actual write-offs at the financial asset portfolio level allows management to analyze changing portfolio characteristics, such as the volume of assets or increases in write-off rates, which may affect future forecast adjustments. Techniques applied in these instances do not have to be complex to be effective, but, if used, should be commensurate with the institution's size and complexity.

Ratio analysis may also be useful for evaluating the overall reasonableness of ACLs. Ratio analysis assists in identifying divergent or emerging trends in the relationship of ACLs to other factors such as adversely classified or graded loans, past due and nonaccrual loans, total loans, historical gross write-offs, net write-offs, and historic delinquency and default trends for securities.

Comparing the institution's ACLs to those of peer institutions may provide management with limited insight into management's own ACL estimates. Management should apply caution when performing peer comparisons as there may be significant differences among peer institutions in the mix of financial asset portfolios, reasonable and supportable forecast period assumptions, reversion techniques, the data used for historical loss information, and other factors.

When used prudently, comparisons of estimated expected losses to actual write-offs, ratio analysis, and peer comparisons can be helpful as a supplemental check on the reasonableness of management's assumptions and analyses. Because appropriate ACLs are institution-specific estimates, the use of comparisons does not eliminate the need for a comprehensive analysis of financial asset portfolios and the factors affecting their collectibility.

When an appropriate expected credit loss framework has been used to estimate expected credit losses, it is inappropriate for the board of directors or management to make further adjustments to ACLs for the sole purpose of reporting ACLs that correspond to a peer group median, a target ratio, or a budgeted amount. Additionally, neither the board of directors nor management should further adjust ACLs beyond what has been appropriately measured and documented in accordance with FASB ASC Topic 326.

After analyzing ACLs, management should periodically validate the loss estimation process, and any changes to the process, to confirm that the process remains appropriate for the institution's size, complexity, and risk profile. The validation process should include procedures for review by a party with appropriate knowledge, technical expertise, and experience who is independent of the institution's credit approval and ACL estimation processes. A party who is independent of these processes could be from internal audit staff, a risk management unit of the institution independent of management supervising these processes, or a contracted third-party. One party need not perform the entire analysis as the validation may be divided among various independent parties.[27]

Responsibilities of the Board of Directors

The board of directors, or a committee thereof, is responsible for overseeing management's significant judgments and estimates used in determining appropriate ACLs. Evidence of the board of directors' oversight activities is subject to review by examiners. These activities should include, but are not limited to:

- Retaining experienced and qualified management to oversee all ACL and PCL activities;
- Reviewing and approving the institution's written loss estimation policies, including any revisions thereto, at least annually;

[26] Institutions using models in the loss estimation process may incorporate a qualitative factor adjustment in the estimate of expected credit losses to capture the variance between modeled credit loss expectations and actual historical losses when the model is still considered predictive and fit for use. Institutions should monitor this variance, as well as changes to the variance, to determine if the variance is significant or material enough to warrant further changes to the model.

[27] Engaging the institution's external auditor to perform the validation process described in this paragraph when the external auditor also conducts the institution's independent financial statement audit, may impair the auditor's independence under applicable auditor independence standards and prevent the auditor from performing an independent audit of the institution's financial statements.

- Reviewing management's assessment of the loan review system and management's conclusion and support for whether the system is sound and appropriate for the institution's size and complexity;
- Reviewing management's assessment of the effectiveness of processes and controls for monitoring the credit quality of the investment portfolio;
- Reviewing management's assessments of and justifications for the estimated amounts reported each period for the ACLs and the PCLs;
- Requiring management to periodically validate, and, when appropriate, revise loss estimation methods;
- Approving the internal and external audit plans for the ACLs, as applicable; and
- Reviewing any identified audit findings and monitoring resolution of those items.

Responsibilities of Management

Management is responsible for maintaining ACLs at appropriate levels and for documenting its analyses in accordance with the concepts and requirements set forth in GAAP, regulatory reporting requirements, and this policy statement. Management should evaluate the ACLs reported on the balance sheet as of the end of each period (and for credit unions, prior to paying dividends), and debit or credit the related PCLs to bring the ACLs to an appropriate level as of each reporting date. The determination of the amounts of the ACLs and the PCLs should be based on management's current judgments about the credit quality of the institution's financial assets and should consider known and expected relevant internal and external factors that significantly affect collectibility over reasonable and supportable forecast periods for the institution's financial assets as well as appropriate reversion techniques applied to periods beyond the reasonable and supportable forecast periods. Management's evaluations are subject to review by examiners.

In carrying out its responsibility for maintaining appropriate ACLs, management should adopt and adhere to written policies and procedures that are appropriate to the institution's size and the nature, scope, and risk of its lending and investing activities. These policies and procedures should address the processes and activities described in the ''Documentation Standards'' section of this policy statement.

Management fulfills other responsibilities that aid in the maintenance of appropriate ACLs. These activities include, but are not limited to:

- Establishing and maintaining appropriate governance activities for the loss estimation process(es). These activities may include reviewing and challenging the assumptions used in estimating expected credit losses and designing and executing effective internal controls over the credit loss estimation method(s);
- Periodically performing procedures that compare credit loss estimates to actual write-offs, at the portfolio level and in aggregate, to confirm that amounts recorded in the ACLs were sufficient to cover actual credit losses. This analysis supports that appropriate ACLs were recorded and provides insight into the loss estimation process's ability to estimate expected credit losses. This analysis is not intended to reflect the accuracy of management's economic forecasts;
- Periodically validating the loss estimation process(es), including changes, if any, to confirm it is appropriate for the institution; and
- Engaging in sound risk management of third parties involved [28] in ACL estimation process(es), if applicable, to ensure that the loss estimation processes are commensurate with the level of risk, the complexity of the third-party relationship and the institution's organizational structure.

Additionally, if an institution uses loss estimation models in determining expected credit losses, management should evaluate the models before they are employed and modify the model logic and assumptions, as needed, to help ensure that the resulting loss estimates are consistent with GAAP and regulatory reporting requirements.[29] To demonstrate such consistency, management should document its evaluations and conclusions regarding the appropriateness of estimating credit losses with models. When used for multiple purposes within an institution, models should be specifically adjusted and validated for use in ACL loss estimation processes. Management should document and support any adjustments made to the models, the outputs of the models, and compensating controls applied in determining the estimated expected credit losses.

Examiner Review of ACLs

Examiners are expected to assess the appropriateness of management's loss estimation processes and the appropriateness of the institution's ACL balances as part of their supervisory activities. The review of ACLs, including the depth of the examiner's assessment, should be commensurate with the institution's size, complexity, and risk profile. As part of their supervisory activities, examiners generally assess the credit quality and credit risk of an institution's financial asset portfolios, the adequacy of the institution's credit loss estimation processes, the adequacy of supporting documentation, and the appropriateness of the reported ACLs and PCLs in the institution's regulatory reports and financial statements, if applicable. Examiners may consider the significant factors that affect collectibility, including the value of collateral securing financial assets and any other repayment sources. Supervisory activities may include evaluating management's effectiveness in assessing credit risk for debt securities (both prior to purchase and on an on-going basis). In reviewing the appropriateness of an institution's ACLs, examiners may:

- Evaluate the institution's ACL policies and procedures and assess the loss estimation method(s) used to arrive at overall estimates of ACLs, including the documentation supporting the reasonableness of management's assumptions, valuations, and judgments. Supporting activities may include, but, are not limited to:
  - Evaluating whether management has appropriately considered historical loss information, current conditions, and reasonable and supportable forecasts, including significant qualitative factors that affect the collectibility of the financial asset portfolios;
  - Assessing loss estimation techniques, including loss estimation models, if applicable, as well as the incorporation of qualitative adjustments to determine whether the resulting estimates of expected credit losses are in

[28] Guidance on third party service providers may be found in SR Letter 13–19/Consumer Affairs Letter 13–21, *Guidance on Managing Outsourcing Risk* (FRB); Financial Institution Letter (FIL) 44–2008, *Guidance for Managing Third Party Risk* (FDIC); Supervisory Letter No. 07–01, *Evaluating Third Party Relationships* (NCUA); and OCC Bulletin 2013–29, *Third Party Relationships: Risk Management Guidance,* OCC Bulletin 2017–7, *Third Party Relationships: Supplemental Examination Procedures,* and OCC Bulletin 2017–21, *Third Party Relationships: Frequently Asked Questions to Supplement OCC Bulletin 2013–29.*

[29] *See* the interagency statement titled, *Supervisory Guidance on Model Risk Management,* published by the Board in SR Letter 11–7 and OCC Bulletin 2011–12 on April 4, 2011. The statement also addresses the incorporation of vendor products into an institution's model risk management framework following the same principles relevant to in-house models. The FDIC adopted the interagency statement on June 7, 2017. Institutions supervised by the FDIC should refer to FIL–22–2017, *Adoption of Supervisory Guidance on Model Risk Management,* including the statement of applicability in the FIL.

conformity with GAAP and regulatory reporting requirements; and

○ Evaluating the adequacy of the documentation and the effectiveness of the controls used to support the measurement of the ACLs;

- Assess the effectiveness of board oversight as well as management's effectiveness in identifying, measuring, monitoring, and controlling credit risk. This may include, but is not limited to, a review of underwriting standards and practices, portfolio composition and trends, credit risk review functions, risk rating systems, credit administration practices, investment securities management practices, and related management information systems and reports;
- Review the appropriateness and reasonableness of the overall level of the ACLs relative to the level of credit risk, the complexity of the institution's financial asset portfolios, and available information relevant to assessing collectibility, including consideration of current conditions and reasonable and supportable forecasts. Examiners may include a quantitative analysis (*e.g.,* using management's results comparing expected write-offs to actual write-offs as well as ratio analysis) to assess the appropriateness of the ACLs. This quantitative analysis may be used to determine the reasonableness of management's assumptions, valuations, and judgments and understand variances between actual and estimated credit losses. Loss estimates that are consistently and materially over or under predicting actual losses may indicate a weakness in the loss forecasting process;
- Review the ACLs reported in the institution's regulatory reports and in any financial statements and other key financial reports to determine whether the reported amounts reconcile to the institution's estimate of the ACLs. The consolidated loss estimates determined by the institution's loss estimation method(s) should be consistent with the final ACLs reported in its regulatory reports and financial statements, if applicable;
- Verify that models used in the loss estimation process, if any, are subject to initial and ongoing validation activities. Validation activities include evaluating and concluding on the conceptual soundness of the model, including developmental evidence, performing ongoing monitoring activities, including process verification and benchmarking, and analyzing model output.[30] Examiners may review model validation findings, management's response to those findings, and applicable action plans to remediate any concerns, if applicable. Examiners may also assess the adequacy of the institution's processes to implement changes in a timely manner; and
- Review the effectiveness of the institution's third-party risk management framework associated with the estimation of ACLs, if applicable, to assess whether the processes are commensurate with the level of risk, the complexity and nature of the relationship, and the institution's organizational structure. Examiners may determine whether management monitors material risks and deficiencies in third-party relationships, and takes appropriate action as needed.[31]

When assessing the appropriateness of ACLs, examiners should recognize that the processes, loss estimation methods, and underlying assumptions an institution uses to calculate ACLs require the exercise of a substantial degree of management judgment. Even when an institution maintains sound procedures, controls, and monitoring activities, an estimate of expected credit losses is not a single precise amount and may result in a range of acceptable outcomes for these estimates. This is a result of the flexibility FASB ASC Topic 326 provides institutions in selecting loss estimation methods and the wide range of qualitative and forecasting factors that are considered.

Management's ability to estimate expected credit losses should improve over the contractual term of financial assets as substantive information accumulates regarding the factors affecting repayment prospects. Examiners generally should accept an institution's ACL estimates and not seek adjustments to the ACLs, when management has provided adequate support for the loss estimation process employed, and the ACL balances and the assumptions used in the ACL estimates are in accordance with GAAP and regulatory reporting requirements. It is inappropriate for examiners to seek adjustments to ACLs for the sole purpose of achieving ACL levels that correspond to a peer group median, a target ratio, or a benchmark amount when management has used an appropriate expected credit loss framework to estimate expected credit losses.

If the examiner concludes that an institution's reported ACLs are not appropriate or determines that its ACL evaluation processes or loss estimation method(s) are otherwise deficient, these concerns should be noted in the report of examination and communicated to the board of directors and senior management.[32] Additional supervisory action may be taken based on the magnitude of the shortcomings in ACLs, including the materiality of any errors in the reported amounts of ACLs.

Michael J. Hsu,

Acting Comptroller of the Currency.

By order of the Board of Governors of the Federal Reserve System.

Ann E. Misback,

Secretary of the Board.

Federal Deposit Insurance Corporation.

By order of the Board of Directors.

Dated at Washington, DC, on March 31, 2023.

James P. Sheesley,

Assistant Executive Secretary.

By the National Credit Union Administration Board.

Melane Conyers-Ausbrooks,

Secretary of the Board.

[32] Each agency has formal and informal communication channels for sharing supervisory information with the board of directors and management depending on agency practices and the nature of the information being shared. These channels may include, but are not limited to, institution specific supervisory letters, letters to the industry, transmittal letters, visitation findings summary letters, targeted review conclusion letters, or official examination or inspection reports.

DEPARTMENT OF STATE

22 CFR Part 121

[Public Notice: 11986]

RIN 1400–AF27

International Traffic in Arms Regulations: U.S. Munitions List Targeted Revisions

AGENCY: Department of State.

ACTION: Interim final rule; request for comments.

SUMMARY: The Department of State (the Department) amends the International Traffic in Arms Regulations (ITAR) to remove from U.S. Munitions List (USML) Category XI certain high-energy storage capacitors and to clearly identify the high-energy storage capacitors that remain in USML Category XI.

DATES: Effective date May 21, 2023.

Send comments by May 30, 2023.

ADDRESSES: Interested parties may submit comments to the Department of State by any of the following methods:

- *Visit the Regulations.gov website at: http://www.regulations.gov* and search for the docket number DOS–2023–0003.

• *Email: DDTCPublicComments@state.gov.* Commenting parties must include RIN 1400–AF27 in the subject line of the email message.

• All comments should include the commenter's name, the organization the commenter represents, if applicable, and the commenter's address. If the Department of State is unable to read a comment for any reason, and cannot contact the commenting party for clarification, the Department of State may not be able to consider your comment. After the conclusion of the comment period, the Department of State will publish a Final Rule (in which it will address relevant comments) as expeditiously as possible.

FOR FURTHER INFORMATION CONTACT: Mr. Chris Weil, Office of Defense Trade Controls Policy, Department of State, telephone (202) 571–7051; email *DDTCCustomerService@state.gov* SUBJECT: ITAR Amendment—USML Targeted Revisions (RIN 1400–AF27).

SUPPLEMENTARY INFORMATION: The Department of State's Directorate of Defense Trade Controls (DDTC) administers the ITAR (22 CFR parts 120 through 130) to regulate the export, reexport, retransfer, and temporary import of, and brokering activities related to certain items and services. The articles, services, and information subject to the jurisdiction of the Department of State under the ITAR (*e.g.,* ''defense articles'' and ''defense services'') are identified on the USML at ITAR § 121.1. Items not subject to the ITAR or to the exclusive licensing jurisdiction of any other Department or Agency of the U.S. Government are subject to the Export Administration Regulations (EAR, 15 CFR parts 730 through 774, which includes the Commerce Control List (CCL) in Supplement No. 1 to part 774), administered by the Bureau of Industry and Security (BIS), U.S. Department of Commerce. This rule does not modify the list of defense articles subject to permanent import control by the Attorney General, as enumerated on the U.S. Munitions Import List at 27 CFR part 447.

The Department seeks to control on the USML those articles and services that provide a critical military or intelligence advantage. The Department undertakes these revisions pursuant to the discretionary statutory authority afforded the President in section 38(a)(1) of the AECA and delegated to the Department of State in Executive Order 13637, to control the export and temporary import of defense articles and defense services in furtherance of world peace and the security and foreign policy of the United States and to designate those items which constitute the USML. The Department, informed by consultations with its interagency partners, determined the articles removed from the USML under this rulemaking no longer warrant control pursuant to the ITAR.

Targeted USML Revisions

With this rulemaking, the Department is removing from USML Category XI certain high-energy storage capacitors that it assesses have broad commercial application, are available internationally, and do not provide a critical military or intelligence advantage. The Department assesses that adding a 125-volt (125 V) voltage criterion for the high-energy capacitors described on the USML ensures the capacitors that remain warrant control on the USML. While adding the 125 V criterion to paragraph (c)(5), the Department is simultaneously reorganizing the paragraph to delineate each element of the control criteria more clearly and adding a note to explain those criteria.

These changes are warranted because the Department found that certain low-voltage high-energy storage capacitor technology has progressed such that many models that exceed the existing USML control criteria no longer provide a critical military or intelligence advantage. Although these lower-voltage capacitors meet the energy density and full energy life criteria, the technology for these lower-voltage capacitors is well understood, and the capacitors have been extensively integrated into commercial applications, such as Wi-Fi routers and civil aviation aircraft transponders. Further, comparable capacitors manufactured in other countries are widely available internationally without multilateral export restrictions placed on them.

The Department considered two methods of implementation for specifying this voltage criterion. First, the Department considered applying a voltage rating criterion, assessing it to be an industry-standard term used to describe a value for existing capacitors that is readily accessible to exporters and customers through the specifications typically provided by Original Equipment Manufacturers (OEMs). The Department assessed that this criterion would facilitate compliance and implementation. This approach also would be in keeping with the Department's intent to establish threshold criteria in language readily understood by practitioners. However, it is possible different OEMs determine voltage ratings using differing methodologies or underlying assumptions, which could produce significantly different ratings for equivalent products. The Department assesses this drawback could be mitigated by clearly defining the term ''voltage rating'' in the regulation but would require more information to do so appropriately.

Second, the Department considered identifying the voltage performance capability of the capacitors, as performance capability can be empirically tested and is potentially less prone to misinterpretation. However, it is not clear to the Department how much additional testing would be required to confirm a given capacitor model's capability or whether customers have ready access to that information to facilitate compliance.

In this interim final rule, the Department implements the 125 V criterion based on the voltage at which the capacitor is capable of operating, in order to allow for public comment on advantages or disadvantages of each approach and on potential definitions for ''voltage rating'' and ''capable of.''

The Department further reaffirms a core concept for compliance programs:

When a commodity is described by a single criterion within a USML entry, it is imperative to evaluate the remaining criteria of the control to verify whether the commodity is described—even when the commodity was not intentionally designed to meet or exceed the control criteria.

Request for Comments

Consistent with its ongoing USML review process, the Department is requesting public comments on the revisions described in this rulemaking. The Department encourages the public to provide comments directly related to this rule and responsive to the questions described below. To facilitate timely review and assessment, comments should be provided in a concise sentence or paragraph, followed by supporting explanatory paragraphs and examples, with each distinct comment treated separately (as opposed to multiple comments in one paragraph or section). The Department requests comments focused on the following questions:

1. Please provide specific examples of any high-energy storage capacitors that exceed the 125 V threshold but fall under a 500 V threshold that you believe do not provide a critical military advantage.

2. What implementation challenges are presented by the use of either ''capable of operating'' or ''voltage

rating'' to describe the voltage threshold?

3. Is there additional guidance that would be useful in parsing ''capable of operating,'' as used in this rule?

a. Is it sufficiently clear in the ''capable of operating'' implementation that the voltage capability is for steady-state, versus transient or surge, operating conditions?

b. Is it sufficiently clear in the 'capable of operating' implementation that the voltage capability does not vary based on circuit design margins?

4. Could a ''voltage rating'' criterion be implemented more easily and consistently? If so,

a. Do you assess that a sufficient definition of ''voltage rating'' would be ''the value, based on the capacitor's design, testing, and evaluation, that describes the maximum amount of continuous voltage that will not damage the capacitor''?

b. Is it sufficiently clear in the alternative 'voltage rating' implementation that the voltage rating is for steady-state, versus transient or surge, operating conditions?

c. Is it sufficiently clear in the alternative 'voltage rating' implementation that the voltage rating does not vary based on circuit design margins?

d. What would be the effect of adding a temperature criterion (*e.g.,* ''measured at or below 85 °C'') and is it accurate that the voltage rating of a capacitor only declines with an increase in temperature?

e. Would a criterion such as ''will not reduce the capacitor's full energy life below 10,000 discharges'' address the fact that each charge and discharge cycle likely inflicts some damage on a capacitor?

5. Are these revisions unclear in any way, or can they be more concisely stated? For example, please identify any:

—Terms that you find ambiguous in definition or context

—Constructions or language that vary from existing USML entries

6. Are there other technical issues directly related to this entry which the Department should address in a future rulemaking?

Comment Submissions

Instructions

Include the agency name and docket number or Regulatory Information Number (RIN) (1400–AF27) for all submissions related to this rulemaking. Relevant comments may be posted without substantive change to the DDTC website (*www.pmddtc.state.gov*). Please remove any personal information, because the Department will not edit comments. Parties who wish to comment anonymously may do so by submitting their comments via *www.regulations.gov,* leaving the fields that would identify the commenter blank and including no identifying information in the comment itself. Commenters are cautioned not to include proprietary, export-controlled, or other sensitive information that they are not comfortable making public in their comments. If such information would provide useful insight to the comment: (1) assemble that information in a separate document with proprietary markings; (2) include ''Proprietary supplement on file with: [provide POC]'' as the first line in the body of the email submission; (3) submit the public portion of the comment via email; and (4) call DDTC at (202) 663–1282 to coordinate submission of the proprietary supplement.

Regulatory Analysis and Notices

Administrative Procedure Act

This rulemaking is exempt from section 553 (Rulemaking) and section 554 (Adjudications) of the Administrative Procedure Act (APA) pursuant to 5 U.S.C. 553(a)(1) as a military or foreign affairs function of the United States Government. Although the Department is of the opinion that this rule is exempt from the rulemaking provisions of the APA, the Department is publishing this rule with a 30-day provision for public comment and a delayed effective date, without prejudice to its determination that controlling the import and export of defense articles and defense services is a military or foreign affairs function.

Regulatory Flexibility Act

Since the Department is of the opinion that this rule is exempt from the provisions of 5 U.S.C. 553, there is no requirement for an analysis under the Regulatory Flexibility Act.

Unfunded Mandates Reform Act of 1995

This rulemaking does not involve a mandate that will result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector of $100 million or more in any year and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

Congressional Review Act

The Department assesses that this rulemaking is not a major rule under the criteria of 5 U.S.C. 804. Moving the subject commodities to the jurisdiction of the EAR will reduce regulatory restrictions and compliance costs, particularly for U.S. exporters as well as some importers who source the subject commodities from abroad. This will not increase costs or prices and should have no adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic and export markets. To the contrary, the rule is expected to reduce regulatory compliance costs in the long term and facilitate U.S. manufacturers' competitiveness with foreign manufacturers of similar commodities. The Department does not, however, expect this change to have an annual effect on the economy of $100 million or more.

Executive Orders 12372 and 13132

This rulemaking does not have sufficient federalism implications to require consultations or warrant the preparation of a federalism summary impact statement. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities do not apply to this rulemaking.

Executive Orders 12866 and 13563

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributed impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has been deemed a ''significant regulatory action'' by the Office and Information and Regulatory Affairs under Executive Order 12866.

This rule moves the export regulation of certain capacitors from the ITAR to the EAR. This action reduces the regulatory burden on those who export, temporarily import, retransfer, reexport, or perform brokering activities involving the subject capacitors. In particular, this action averts substantial regulatory burdens that would otherwise apply to supply chains that rely on the subject capacitors and commercial items into which the subject capacitors have been integrated or incorporated. As discussed in ITAR § 120.11(c), defense articles remain subject to the ITAR after

incorporation or integration into an item not described on the USML, unless otherwise provided in the ITAR. The Department assesses that continuing to subject these capacitors (which are used in a wide swath of everyday commercial items, including commercial aircraft and Wi-Fi equipment) to the ITAR is unnecessary and would have significant negative consequences for global commerce, including the grounding of civil aircraft and the disruption of supply chains.

In implementing this rule, the Department is also revising USML Category XI(c)(5) to clarify its structure and explain certain terms used therein to minimize the potential for uncertainty.

The Department assesses that the benefits of this rulemaking outweigh any costs, that modifying the USML in this manner is the most cost-effective method to achieve the Department's regulatory objectives on this matter, and that doing so will result in a net reduction of the burden on the regulated community.

Executive Order 12988

The Department of State has reviewed this rulemaking in light of sections 3(a) and 3(b)(2) of Executive Order 12988 to eliminate ambiguity, minimize litigation, establish clear legal standards, and reduce burden.

Executive Order 13175

The Department of State has determined that this rulemaking will not have tribal implications, will not impose substantial direct compliance costs on Indian tribal governments, and will not preempt tribal law. Accordingly, the requirements of Executive Order 13175 do not apply to this rulemaking.

Paperwork Reduction Act

This rulemaking does not impose or revise any information collections subject to 44 U.S.C. Chapter 35.

List of Subjects in 22 CFR Part 121

Arms and munitions, Classified information, Exports.

Accordingly, for the reasons set forth above, Title 22, Chapter I, Subchapter M, part 121 is amended as follows:

PART 121—THE UNITED STATES MUNITIONS LIST

■ 1. The authority citation for part 121 continues to read as follows:

Authority: 22 U.S.C. 2752, 2778, 2797; 22 U.S.C. 2651a; Sec. 1514, Pub. L. 105–261, 112 Stat. 2175; E.O. 13637, 78 FR 16129, 3 CFR, 2013 Comp., p. 223.

■ 2. In § 121.1, under Category XI, revise paragraph (c)(5) as follows:

§ 121.1 The United States Munitions List.

* * * * *

Category XI—Military Electronics

* * * * *

(c) * * *

(5) High-energy storage capacitors that:

(i) Are capable of operating at greater than one hundred twenty-five volts (125 V);

(ii) Have a repetition rate greater than or equal to six (6) discharges per minute;

(iii) Have a full energy life greater than or equal to 10,000 discharges at greater than 0.2 Amps per Joule peak current; and

(iv) Have any of the following:

(A) Volumetric energy density greater than or equal to 1.5 J/cc; or

(B) Mass energy density greater than or equal to 1.3 kJ/kg;

Note to paragraph (c)(5): *Volumetric energy density* is Energy per unit Volume. *Mass energy density* is Energy per unit Mass, sometimes referred to as *Gravimetric energy density* or *Specific energy*. *Energy* ($E = \frac{1}{2}CV^2$, where C is Capacitance and V is the Voltage rating) in these calculations must not be confused with useful energy or extractable energy.

* * * * *

The Under Secretary of State for Arms Control and International Security, Bonnie Jenkins, having reviewed and approved this document, is delegating the authority to electronically sign this document to Jae E. Shin, who is the Director of the Office of Defense Trade Controls Compliance within the Directorate of Defense Trade Controls, for purposes of publication in the **Federal Register**.

Jae E. Shin,

Director, Office of Defense Trade Controls Compliance, Department of State.

[FR Doc. 2023–08825 Filed 4–26–23; 8:45 am]

BILLING CODE 4710–25–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

31 CFR Parts 560 and 588

Corrections in the Iranian Transactions and Sanctions Regulations and Western Balkans Stabilization Regulations

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Final rule.

SUMMARY: The Department of the Treasury's Office of Foreign Assets Control (OFAC) is adopting a final rule to correct a typographical error in the Iranian Transactions and Sanctions Regulations and to correct two typographical errors and incorporate one general license in the Western Balkans Stabilization Regulations.

DATES: This rule is effective April 27, 2023.

FOR FURTHER INFORMATION CONTACT: OFAC: Assistant Director for Licensing, 202–622–2480; Assistant Director for Regulatory Affairs, 202–622–4855; or Assistant Director for Sanctions Compliance & Evaluation, 202–622–2490.

SUPPLEMENTARY INFORMATION:

Electronic Availability

This document and additional information concerning OFAC are available on OFAC's website: *www.treas.gov/ofac.*

Background

OFAC is amending the Iranian Transactions and Sanctions Regulations, 31 CFR part 560 (ITSR), to replace the word ''insure'' with the word ''ensure'' in § 560.528.

OFAC is amending the Western Balkans Stabilization Regulations, 31 CFR part 588 (WBSR), to correct cross references in §§ 588.307 and 588.405. On December 21, 2022, OFAC issued an amendment to the WBSR (87 FR 78484). This amendment added a general license for activities of nongovernmental organizations to the WBSR, but because the amendment contained an error in the amendatory instructions, the general license could not be incorporated. OFAC is now amending the WBSR to redesignate a second general license currently in § 588.512 as § 588.513, and to properly add the nongovernmental organizations general license in § 588.512.

Public Participation

Because the amendment of the ITSR and the WBSR involves a foreign affairs function, the provisions of E.O. 12866 of September 30, 1993, ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993), and the Administrative Procedure Act (5 U.S.C. 553) requiring notice of proposed rulemaking, opportunity for public participation, and delay in effective date are inapplicable. Because no notice of proposed rulemaking is required for this rule, the Regulatory Flexibility Act (5 U.S.C. 601–612) does not apply.

Paperwork Reduction Act

The collections of information related to the ITSR and the WBSR are contained in 31 CFR part 501 (the ''Reporting, Procedures and Penalties Regulations''). Pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3507), those collections of information have been approved by the Office of Management and Budget under control number 1505–0164. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number.

List of Subjects in 31 CFR Parts 560 and 588

Administrative practice and procedure, Banks, banking, Blocking of assets, Credit, Foreign trade, Penalties, Reporting and recordkeeping requirements, Sanctions, Securities, Services.

For the reasons set forth in the preamble, OFAC amends 31 CFR parts 560 and 588 as follows:

PART 560—IRANIAN TRANSACTIONS AND SANCTIONS REGULATIONS

■ 1. The authority citation for part 560 continues to read as follows:

Authority: 3 U.S.C. 301; 18 U.S.C. 2339B, 2332d; 22 U.S.C. 2349aa–9, 7201–7211, 8501–8551, 8701–8795; 31 U.S.C. 321(b); 50 U.S.C. 1601–1651, 1701–1706; Pub. L. 101–410, 104 Stat. 890, as amended (28 U.S.C. 2461 note); E.O. 12613, 52 FR 41940, 3 CFR, 1987 Comp., p. 256; E.O. 12957, 60 FR 14615, 3 CFR, 1995 Comp., p. 332; E.O. 12959, 60 FR 24757, 3 CFR, 1995 Comp., p. 356; E.O. 13059, 62 FR 44531, 3 CFR, 1997 Comp., p. 217; E.O. 13599, 77 FR 6659, 3 CFR, 2012 Comp., p. 215; E.O. 13846, 83 FR 38939, 3 CFR, 2018 Comp., p. 854.

Subpart E—Licenses, Authorizations, and Statements of Licensing Policy

§ 560.528 [Amended]

■ 2. In § 560.528, remove ''insure'' and add in its place ''ensure''.

PART 588—WESTERN BALKANS STABILIZATION REGULATIONS

■ 3. The authority citation for part 588 is revised to read as follows:

Authority: 3 U.S.C. 301; 31 U.S.C. 321(b); 50 U.S.C. 1601–1651, 1701–1706; 22 U.S.C. 287c; Pub. L. 101–410, 104 Stat. 890, as amended (28 U.S.C. 2461 note); E.O. 13219, 66 FR 34777, 3 CFR, 2001 Comp., p. 778; E.O. 13304, 68 FR 32315, 3 CFR, 2004 Comp., p. 229; E.O. 14033, 86 FR 43905, 3 CFR, 2022 Comp., p. 591.

Subpart B—General Definitions

§ 588.307 [Amended]

■ 4. In § 588.307, in the heading for Note 1 to § 588.306, remove ''§ 588.306'' and add in its place ''§ 588.307''.

Subpart D—Interpretations

§ 588.405 [Amended]

■ 5. In § 588.405, in Note 1 to § 588.405, remove ''§ 588.5507'' and add in its place ''§ 588.507''.

Subpart E—Licenses, Authorizations, and Statements of Licensing Policy

§ 588.512 [Redesignated as § 588.513]

■ 6. Redesignate § 588.512 as § 588.513.

■ 7. Add new § 588.512 to read as follows:

§ 588.512 Authorizing certain transactions in support of nongovernmental organizations' activities.

(a) Except as provided in paragraph (c) of this section, all transactions prohibited by this part that are ordinarily incident and necessary to the activities described in paragraph (b) of this section by a nongovernmental organization are authorized, provided that the nongovernmental organization is not a person whose property or interests in property are blocked pursuant to this part.

(b) The activities referenced in paragraph (a) of this section are non-commercial activities designed to directly benefit the civilian population that fall into one of the following categories:

(1) Activities to support humanitarian projects to meet basic human needs, including disaster, drought, or flood relief; food, nutrition, or medicine distribution; the provision of health services; assistance for vulnerable or displaced populations, including individuals with disabilities and the elderly; and environmental programs;

(2) Activities to support democracy building, including activities to support rule of law, citizen participation, government accountability and transparency, human rights and fundamental freedoms, access to information, and civil society development projects;

(3) Activities to support education, including combating illiteracy, increasing access to education, international exchanges, and assisting education reform projects;

(4) Activities to support non-commercial development projects directly benefiting civilians, including those related to health, food security, and water and sanitation;

(5) Activities to support environmental and natural resource protection, including the preservation and protection of threatened or endangered species, responsible and transparent management of natural resources, and the remediation of pollution or other environmental damage; and

(6) Activities to support disarmament, demobilization, and reintegration (DDR) programs and peacebuilding, conflict prevention, and conflict resolution programs.

(c) This section does not authorize funds transfers initiated or processed with knowledge or reason to know that the intended beneficiary of such transfers is a person blocked pursuant to this part, other than for the purpose of effecting the payment of taxes, fees, or import duties, or the purchase or receipt of permits, licenses, or public utility services.

(d) Specific licenses may be issued on a case-by-case basis to authorize nongovernmental or other entities to engage in other activities designed to directly benefit the civilian population, including support for the removal of landmines and economic development projects directly benefiting the civilian population.

Note 1 to § 588.512. This section does not relieve any person authorized thereunder from complying with any other applicable laws or regulations.

Andrea M. Gacki,

Director, Office of Foreign Assets Control.

Coast Guard

33 CFR Part 100

[Docket Number USCG–2023–0254]

RIN 1625–AA08

Special Local Regulation: Safety Zone, Monongahela River Mile Marker 89.8 to Mile Marker 90.8, Point Marion, PA

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for the waters of the Monongahela River from mile marker 89.8 to mile marker 90.8. This action is necessary to provide for the safety of life on these navigable waters during a power boat race on May 27 and May 28, 2023. This rulemaking prohibits persons and vessels from being in the safety zone unless authorized by the Captain of the Port Pittsburgh or a designated representative.

DATES: This rule is effective from 8 a.m. on May 27, 2023, through 8 p.m. on May 28, 2023.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2023–0254 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email LTJG Eyobe Mills, Marine Safety Unit Pittsburgh, U.S. Coast Guard, at telephone 412–221–0807, email *Eyobe.D.Mills@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. We must establish this safety zone by May 27, 2023 and lack sufficient time to provide a reasonable comment period and then consider those comments before issuing this rule.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port Pittsburgh (COTP) has determined that potential hazards associated with the boat race starting on May 27, 2023, will be a safety concern for anyone on the Monongahela River within a mile marker 89.8 and 90.8. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone.

IV. Discussion of the Rule

This rule establishes a safety zone from 8 a.m. through 8 p.m. on May 27 and May 28, 2023. The safety zone will cover all navigable waters on Monongahela River, within mile marker 89.8 and 90.8. The duration of the zone is intended to protect personnel, vessels, and the marine environment in these navigable waters during a boat race.

No vessel or person is permitted to enter the safety zone without obtaining permission from the COTP or a designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard (USCG) assigned to units under the operational control of the COTP. To seek permission to enter, contact the COTP or a designated representative via VHF–FM channel 13 or 16, or through Marine Safety Unit Pittsburgh at 412–221–0807. Persons and vessels permitted to enter the safety zone must comply with all lawful orders or directions issued by the COTP or designated representative. The COTP or a designated representative will inform the public of the effective period for the safety zone as well as any changes in the dates and times of enforcement through Local Notice to Mariners (LNMs), Broadcast Notices to Mariners (BNMs), and/or Marine Safety Information Bulletins (MSIBs), as appropriate.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, and duration of the temporary safety zone. This safety zone impacts only a one-mile stretch of the Monongahela River for 12 hours a day starting May 27, 2023, at 8 a.m. until May 28, 2023, at 8 p.m. Vessel traffic will be informed about the safety zone through local notices to mariners. Moreover, the Coast Guard will issue LNMs, MSIBs, and/or BNMs via VHF–FM marine channel 13 or 16 about the zone and the rule allows vessels to seek permission from the COTP to transit the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees

who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have Tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone that impacts only a one-mile stretch of the Monongahela River for 12 hours a day starting May 27, 2023, at 8 a.m. until May 28, 2023, at 8 p.m. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 100

Marine safety, Navigation (water), Reporting and recordkeeping requirements, Waterways.

For the reasons discussed in the preamble, the Coast Guard is amending 33 CFR part 100 as follows:

PART 100—SAFETY OF LIFE ON NAVIGABLE WATERS

■ 1. The authority citation for part 100 continues to read as follows:

Authority: 46 U.S.C. 70041; 33 CFR 1.05–1.

■ 2. Add § 100.T08–0254 to read as follows:

§ 100.T08–0254 2023 Powerboat National's Point Marion Regatta, Point Marion, Pennsylvania.

(a) *Regulated area.* The regulations in this section apply to the following area: All waters of the Monongahela River, from surface to bottom, between mile markers 89.8 to 90.8.

(b) *Definitions.* As used in this section—

Designated representative means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Pittsburgh (COTP) in the enforcement of the regulations in this section.

Participant means all persons and vessels registered with the event sponsor as a participant in the race.

(c) *Regulations.* (1) All non-participants are prohibited from entering, transiting through, anchoring in, or remaining within the regulated area described in paragraph (a) of this section unless authorized by the Captain of the Port Pittsburgh or their designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative by VHF Channel 13 or 16. Those in the regulated area must comply with all lawful orders or directions given to them by the COTP or the designated representative.

(3) The COTP will provide notice of the regulated area through advanced notice via broadcast notice to mariners and by on-scene designated representatives.

(d) *Enforcement periods.* This section will be subject to enforcement from 8 a.m. through 8 p.m. each day on May 27 and 28, 2023.

Eric J. Velez,

Commander, U.S. Coast Guard, Captain of the Port Marine Safety Unit Pittsburgh.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2022–0352]

RIN 1625–AA00

Safety Zone; Fairport Harbor, Fairport, OH

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for all navigable waters of Fairport Harbor, OH. The safety zone is necessary and intended to protect personnel, vessels, and the marine environment from hazards created by shoaling in the area.

DATES: This rule is effective without actual notice from April 27, 2023 through August 19, 2023. For enforcement purposes, actual notice will be used from April 21, 2023, until April 27, 2023.

ADDRESSES: To view documents mentioned in this preamble as being

available in the docket, go to *https://www.regulations.gov,* type USCG–2022–0352 in the ''SEARCH'' box and click ''SEARCH.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email LT Jared Stevens, Waterways Management Division, U.S. Coast Guard; telephone 216–937–0124, email *D09-SMB-MSUCleveland-WWM@uscg.mil*.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the Coast Guard has learned that significant shoaling has developed in the vicinity of the navigational channel, and the nature and location of the shoaling presents an imminent hazard to navigation. The safety zone must be established as soon as possible for the safety of all personnel, vessels, and the marine environment; thus, it is impracticable to publish an NPRM.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable because immediate action is needed in order to mitigate the safety hazards associated with the shoaling in Fairport Harbor.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231), 46 U.S.C. 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3. The Captain of the Port (COTP) Buffalo has determined that the hazards associated with shoaling in Fairport Harbor, OH are a safety concern for all marine traffic. This rule is necessary to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone until dredging can be completed in accordance with the U.S. Army Corps of Engineers' approved project depth for the federally maintained sections of the waterway.

IV. Discussion of the Rule

This rule establishes a safety zone for all federally maintained waters of Fairport Harbor, OH. The duration of the safety zone is intended to protect personnel, vessels, and the marine environment in these navigable waters while the federally maintained channel is dredged in accordance with the approved U.S. Army Corps of Engineers federal project depths. All vessels greater than 100 Gross Registered Tons shall not meet or pass another vessel while navigating within the safety zone.

The most recent U.S. Army Corps of Engineers project condition surveys and hydrological surveys can be found on their website: *https://www.lrb.usace.army.mil/Library/Maps-and-Charts/*.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, and duration of the safety zone. Moreover, the Coast Guard will issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 regarding the safety zone, and this regulatory action allows vessel traffic to transit within and around the safety zone under the conditions outlined in this rulemaking.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of

power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have Tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969(42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting approximately 120 days, or until cancelled. This rule requires all vessels greater than 100 Gross Registered Tons shall not meet or pass another vessel while navigating within the safety zone. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Marine safety, Navigation (water), reporting and recordkeeping requirements, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—SAFETY OF LIFE ON NAVIGABLE WATERS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034,50 U.S.C. 191; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 1.3

■ 2. Add § 165.T–090352 to read as follows:

§ 165.T–090352 Fairport Harbor Shoaling, Fairport, OH.

(a) *Location.* The following area is a safety zone: all federally maintained waters within Fairport Harbor, OH.

(b) *Definitions. Official Patrol Vessel* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the COTP Buffalo in the enforcement of the regulations in this section.

(c) *Regulations.* (1) All vessels greater than 100 Gross Registered Tons shall not meet nor pass another vessel while navigating within the safety zone.

(2) The Coast Guard may patrol the safety zone under the direction of a designated Coast Guard Patrol Commander. The Patrol Commander may be contacted on Channel 16 VHF–FM (156.8 MHz) by the call sign ''PATCOM.''

(3) No vessel shall anchor, block, loiter, or impede the through transit of vessels in the regulated area during the effective dates and times, unless cleared by or through an official patrol vessel. The Patrol Commander may forbid and control the movement of all vessels in the regulated area. When hailed or signaled by an official patrol vessel, a vessel shall comply with the directions given. Failure to do so may result in expulsion from the area, citation for failure to comply, or both.

(4) Any vessel may anchor outside the regulated areas specified in this chapter, but may not anchor in, block, or loiter in a navigable channel.

(5) The Patrol Commander may terminate the operation of any vessel at any time it is deemed necessary for the protection of life or property.

(6) The Patrol Commander will terminate enforcement of the special regulations upon satisfactory completion of dredging operations in consultation with U.S. Army Corps of Engineers and the COTP Buffalo.

(d) *Enforcement Period.* This safety zone will be enforced for 120 days starting on April 21, 2023.

Dated: April 21, 2023.

S.M. Murray,

Commander, U.S. Coast Guard, Alternate Captain of the Port Buffalo.

[FR Doc. 2023–08947 Filed 4–26–23; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2023–0314]

RIN 1625–AA00

Safety Zone; Cumberland River

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is proposing to establish a temporary safety zone for certain waters of the Cumberland River. This action is necessary to provide for the safety of life on the navigable waters of the Cumberland River near Cadiz, KY. This rule would prohibit persons and vessels from entering the safety zone unless authorized by the Captain of the Port Sector Ohio Valley (COTP) or a designated representative.

DATES: This rule is effective from May 4, 2023, through May 7, 2023.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2023–0314 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email MST1 Evan Dawson, U.S. Coast Guard Marine Safety Unit Paducah; telephone 270–442–1621 x 2113, email: *STL-SMB-MSUPaducah-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations

CUMB Cumberland River
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code
CUMB Cumberland River
MM Mile Marker

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. This safety zone must be established by May 4, 2023 and there is a lack of sufficient time to provide a reasonable comment period and then consider those comments before issuing the rule.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be contrary to the public interest because immediate action is needed to respond to the potential safety hazards associated with a jet ski race.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port (COTP) Sector Ohio Valley has determined that potential hazards associated with the large gathering of small craft vessels on to the Cumberland River (CUMB) MM 55 exists. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone while the event is occurring.

IV. Discussion of the Rule

The COTP is establishing a safety zone from 6 a.m. May 4, 2023, to 5 p.m. on May 7, 2023. The safety zone would cover all navigable waters within two hundred fifty feet of the racecourse at any point of the event. The duration of the zone is intended to ensure the safety of vessels and persons during the event. No vessel or person would be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, duration, and time-of-day of the safety zone. The Marine Event will be within a protected cove not utilized for commercial traffic, causing minimal disruption to vessel traffic. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM marine channel 22–A about the enforcement time of the zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have Tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or Tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure,

we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting 96 hours that would prohibit entry within two hundred fifty feet of the event which is inside of a protected cove. Normally such actions are categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165 REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.T08–0314 to read as follows:

§ 165.T08–0314 Safety Zone; Cumberland River; Cadiz, Kentucky.

(a) *Location.* The safety zone will cover all waters on the Cumberland River within two hundred fifty feet of the marine event, near Cadiz, KY, during daylight race activities drawing a line from 36°54′43.5″ N 87°59′09.6″ W north west to 36°54′44.9″ N 87°59′12.0″ W, continuing north east to 36°54′53.5″ N 87°59′04.1″ W, and ending at 36°54′47.1″ N 87°58′53.0″ W.

(b) *Effective period.* This rule will be effective from 6 a.m. on May 4, 2023 to 5 p.m. on May 7, 2023.

(c) *Enforcement period.* This section will be subject to enforcment from 6 a.m. on May 4, 2023, and will continue through 5 p.m. on May 7, 2023, or until the hazards associated with the Midamerica Watercross Championship Race, near Cadiz, KY, have been completed. If there is inclement weather or other disruptions the U.S. Coast Guard will inform mariners of the change in enforcement period via Broadcast Notice to Mariners on VHF–FM channel 16 and on-scene notice.

(d) *Regulations.* (1) In accordance with the general regulations in § 165.23, entry of vessels or persons into the zone during transit operations is prohibited unless specifically authorized by the Captain of the Port Sector Ohio Valley (COTP) or designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of USCG Sector Ohio Valley or a designated Coast Guard Auxiliary unit.

(2) If permission is granted, all persons and vessels must comply with the instructions of the COTP or designated representative.

Dated: April 21, 2023.

H.R. Mattern,

Captain, U.S. Coast Guard, Captain of the Port Sector Ohio Valley.

[FR Doc. 2023–08905 Filed 4–26–23; 8:45 am]

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2022–0295; FRL–10162–04–R5]

Air Plan Approval; Michigan; Revisions to Part 1 and 2 Rules

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving revisions to Michigan Air Pollution Control Rules Part 1 Definitions, and Part 2 Air Use Approval for inclusion in the Michigan State Implementation Plan (SIP). Additionally, EPA is removing rules from the SIP that are part of Michigan's title V Renewable Operating Permit program, and rules that have been moved to other sections of the Michigan Administrative Code and approved into the Michigan SIP.

DATES: This final rule is effective on May 30, 2023.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA–R05–OAR–2022–0295. All documents in the docket are listed on the *www.regulations.gov* website. Although listed in the index, some information is not publicly available, *i.e.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either through *www.regulations.gov* or at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays and facility closures due to COVID–19. We recommend that you telephone Constantine Blathras at (312) 886–0671 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT: Constantine Blathras, Environmental Engineer, Air Permits Section, Air Programs Branch (AR18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–0671, *Blathras.constantine@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA.

I. Background

On September 27, 2022, EPA proposed approval via a direct final rulemaking (87 FR 58471) of the Michigan SIP revisions submitted on March 8, 2022. During the public comment period, EPA received an adverse comment on the Michigan rule revisions to R 336.1285 ''Permit to install exemptions; miscellaneous'' and R 336.1291, ''Permit to install exemptions; emission units with ''de minimis'' emissions'', which included two new exemptions from the permitting for small sources. On November 14, 2022 (87 FR 68634), EPA withdrew the direct final rule. EPA is approving the following revisions to the Michigan rule revision which did not

receive adverse comment. We do not consider the comments received to be germane or relevant to EPA's proposal to approve Michigan's Part 1 and Part 2 rules as described below, and therefore not adverse to this action. EPA will respond to the comments received on R 336.1285 and R 336.1291 and take further action on that portion of the Michigan SIP revision at a later date.

EPA is approving revisions to Michigan's Part 1. Definitions, and Part 2. Air Use Approval for inclusion in the Michigan SIP. The following Michigan Air Pollution Control Rules are being added or revised: R 336.1101(q), R 336.1103(aa), R 336.1201a, R 336.1202–1203, R 336.1206–1207, R 336.1209, R 336.1214a, R 336.1219(1), R 336.1240–1241, R 336.1278.

The Part 1 definition revisions include new or revised definitions for the following, R 336.1101(q) ''Aqueous based parts washer'', and R 336.1103(aa) ''cold cleaner''.

The Part 2 modifications consist of wording changes made to help clarify the air use approval rules, and to update references and terminology. EPA is not approving at this time the two new exemptions from the permitting program for small sources found in R 336.1285 and R 336.1291. EPA will address the comments received on rules R 336.1285 and R 336.1291 at a later date.

EPA is removing the Michigan Air Pollution Control Rules R 336.1212 ''Administratively complete applications; insignificant activities; streamlining applicable requirements; emissions reporting and fee calculations'', R 336.1216 ''Modifications to renewable operating permits'', R 336.1219(2) ''Amendments for change of ownership or operational control'', R 336.1220 (rescinded), and R 336.1299 (rescinded) from the Michigan SIP.

The rescinded rules have been moved to other sections in the Michigan Administrative Code where they have already been approved into the Michigan SIP and rescinded from the original Part 2 location. This action completes the transition process for these rescinded rules.

The other Part 2 rules removed from the Michigan SIP by this action do not address the requirements related to attainment and maintenance of the National Ambient Air Quality Standards (NAAQS) under section 110 of the Clean Air Act (CAA). EPA has determined that these rules were erroneously incorporated into the SIP. These rules instead address the requirements under title V of the CAA for operating permit programs. EPA fully approved Michigan's title V Renewable Operating Permit Program on November 10, 2003 (68 FR 63735), to implement its program. Since these rules do not address the requirements related to attainment and maintenance of the NAAQS under Section 110 of the CAA and have been approved as part of the title V program approval, EPA will remove them from this section of the Michigan SIP.

EPA proposed to rescind rule R 336.1220 in a February 6, 2013 (78 FR 8485), action (in addition to approval of revisions to Michigan rules in Parts 1 and 19). EPA did not receive any comments on that proposal and published a final action on December 16, 2013 (78 FR 76064).

As part of the SIP revision request, Michigan submitted a 110(l) demonstration for each of the proposed revisions to the SIP. Section 110(l) of the CAA governs the submittal of SIP revisions as part of Attachment E of its submittal. It states that each revision to an implementation plan submitted by a State under this chapter shall be adopted by such State after reasonable notice and public hearing. The Administrator shall not approve a revision of a plan if the revision would interfere with any applicable requirement concerning the attainment and reasonable further progress (as defined by 7501 of the title), or any other applicable requirement of the chapter. The 110(l) demonstration in the SIP revision request adequately addresses this requirement for each rule revision being approved in this action, and the revisions should cause minimal to no impact on the emissions of any source, will have no effect on Michigan's NAAQS attainment status, or any backsliding on achieved improvements. The revision for the removed and rescinded rules pertain to the Michigan title V renewable operating permit program which has already been approved.

II. What action is EPA taking?

EPA is approving revisions to Michigan's Part 1 and Part 2 regulations. Specifically, EPA is approving revisions to Michigan Air Pollution Control Rules R 336.1101, R 336.1103, R 336.1201a, R 336.1202, R 336.1203, R 336.1206, R 336.1207, R 336.1209, R 336.1214a, R 336.1219, R 336.1240, R 336.1241, R 336.1278, effective December 20, 2016. EPA is also removing Michigan Air Pollution Control Rules R 336.1212, R 336.1216, and R 336.1299 from the SIP.

III. Incorporation by Reference

In this rule, EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, EPA is finalizing the incorporation by reference of the Michigan Regulations described in Section I of this preamble and set forth in the amendments to 40 CFR part 52 below. EPA has made, and will continue to make, these documents generally available through *www.regulations.gov* and at the EPA Region 5 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information). Therefore, these materials have been approved by EPA for inclusion in the SIP, have been incorporated by reference by EPA into that plan, are fully federally enforceable under sections 110 and 113 of the CAA as of the effective date of the final rulemaking of EPA's approval, and will be incorporated by reference in the next update to the SIP compilation.[1]

Also in this document, as described in Section I of this preamble and the proposed amendments to 40 CFR part 52 set forth below, EPA is proposing to remove provisions of the EPA-Approved Michigan Regulations from the Michigan SIP, which is incorporated by reference in accordance with the requirements of 1 CFR part 51.

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely

[1] 62 FR 27968 (May 22, 1997).

affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);

- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

This action is subject to the Congressional Review Act, and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by June 26, 2023. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: April 17, 2023.

Debra Shore,

Regional Administrator, Region 5.

For the reasons stated in the preamble, 40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

■ 2. In § 52.1170, the table in paragraph (c) is amended:

■ a. Under ''Part 1. General Provisions'' by revising the entries for R 336.1101 and R 336.1103; and

■ b. Under ''Part 2. Air Use Approval'' by:

■ i. Revising the entries for R 336.1201a, R 336.1202, R 336.1203, R 336.1206, R 336.1207, and R 336.1209;

■ ii. Removing the entry for R 336.1212;

■ iii. Adding the entry for R 336.1214a in numerical order;

■ iv. Removing the entry for R 336.1216;

■ v. Revising the entries for R 336.1219, R 336.1240, R 336.1241, and R 336.1278; and

■ vi. Removing the entry for R 336.1299.

The revisions and additions read as follows:

§ 52.1170 Identification of plan.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2021–0310 and EPA–HQ–OPP–2021–0529; FRL–10884–01–OCSPP]

Fluazifop-P-butyl; Pesticide Tolerances

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes tolerances for residues of fluazifop-P-butyl in or on multiple commodities which are identified and discussed later in this document. The Interregional Research Project Number 4 (IR–4) and Syngenta Crop Protection, LLC requested these tolerances under the Federal Food, Drug, and Cosmetic Act (FFDCA).

DATES: This regulation is effective April 27, 2023. Objections and requests for hearings must be received on or before June 26, 2023 and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The dockets for this action, identified by docket identification (ID) numbers EPA–HQ–OPP–2021–0310 and EPA–HQ–OPP–2021–0529, are available at *https://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room and the OPP Docket is (202) 566–1744. For the latest status information on EPA/DC services, docket access, visit *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Charles Smith, Director, Registration Division (7505T), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (202) 566–1030; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of EPA's tolerance regulations at 40 CFR part 180 through the Office of the Federal Register's e-CFR site at *https://www.ecfr.gov/current/title-40.*

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID numbers EPA–HQ–OPP–2021–0310 and EPA–HQ–OPP–2021–0529 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before June 26, 2023. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior

notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID numbers EPA–HQ–OPP–2021–0310 and EPA–HQ–OPP–2021–0529, by one of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *https://www.epa.gov/dockets/where-send-comments-epa-dockets.*

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

II. Summary of Petitioned-For Tolerance

In the **Federal Register** of August 24, 2021 (86 FR 47275) (FRL–8792–02–OCSPP), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP1E8909) by IR–4, North Carolina State University, 1730 Varsity Drive, Venture IV, Suite 210, Raleigh, NC 27606. The petition requested that 40 CFR 180.411 be amended by establishing tolerances for residues of the herbicide fluazifop-P-butyl, butyl(R)-2-[4-[[5-(trifluoromethyl)-2-pyridinyl]oxy]phenoxy]propanoate, in or on berry, low growing, subgroup 13–07G at 3 parts per million (ppm); Brassica, leafy greens, subgroup 4–16B at 15 ppm; chive, dried leaves at 40 ppm; fruit, citrus, group 10–10 at 0.03 ppm; fruit, stone, group 12–12 at 0.05 ppm; leaf petiole vegetable subgroup 22B at 3 ppm; onion, green, subgroup 3–07B at 4 ppm; papaya at 0.01 ppm; and vegetable, brassica, head and stem, group 5–16 at 30 ppm. Upon the establishment of these tolerances, IR–4 requested that EPA remove the existing tolerances in 40 CFR 180.411 for residues of fluazifop-P-butyl in or on fruit, citrus, group 10 at 0.03 ppm; fruit, stone at 0.05 ppm; onion, green at 1.5 ppm; rhubarb at 0.50 ppm; and strawberry at 3.0 ppm. That document referenced a summary of the petition prepared by IR–4, the petitioner, which is available in the docket, *https://www.regulations.gov* in docket ID EPA–HQ–OPP–2021–0310. A comment was received on the notice of filing. EPA's response to the comment is discussed in Unit IV.C.

In the **Federal Register** of November 17, 2022 (87 FR 68959) (FRL–9410–07–OCSPP), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP0F8890) by Syngenta Crop Protection, LLC, P.O. Box 18300, Greensboro, NC 27419. The petition requested that 40 CFR part 180 be amended by establishing tolerances for inadvertent residues of fluazifop-P-butyl metabolite 5-(Trifluoromethyl)-2-Pyridone (TFP) in or on the raw agricultural commodities corn forage at 0.01 ppm; corn grain at 0.01 ppm; and corn stover at 0.015 ppm. That document referenced a summary of the petition prepared by Syngenta Crop Protection, LLC, the registrant, which is available in the docket, *https://www.regulations.gov* in docket ID EPA–HQ–OPP–2021–0529. There were no comments received in response to the notice of filing.

Based upon review of the data supporting the petition, EPA has modified the levels at which tolerances are being established for some commodities and has adjusted the commodity definition for others. The reasons for these changes are explained in Unit IV.D.

III. Aggregate Risk Assessment and Determination of Safety

Section 408(b)(2)(A)(i) of FFDCA allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is ''safe.'' Section 408(b)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. . . .''

Consistent with FFDCA section 408(b)(2)(D), and the factors specified in FFDCA section 408(b)(2)(D), EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for fluazifop-P-butyl including exposure resulting from the tolerances established by this action. EPA's assessment of exposures and risks associated with fluazifop-P-butyl follows.

In an effort to streamline its publications in the **Federal Register**, EPA is not reprinting sections that repeat what has been previously published for tolerance rulemaking of the same pesticide chemical. Where scientific information concerning a particular chemical remains unchanged, the content of those sections would not vary between tolerance rulemaking and republishing the same sections is unnecessary. EPA considers referral back to those sections as sufficient to provide an explanation of the information EPA considered in making its safety determination for the new rulemaking.

EPA has previously published a tolerance rulemaking for fluazifop-P-butyl in which EPA concluded, based on the available information, that there is a reasonable certainty that no harm results from aggregate exposure to fluazifop-P-butyl and established tolerances for residues of that chemical. EPA is incorporating previously published sections from this rulemaking as described further in this rulemaking, as they remain unchanged.

Toxicological profile. For a discussion of the Toxicological Profile of fluazifop-P-butyl, see Unit III.A. of the September 27, 2017, final rulemaking (82 FR 44936) (FRL–9966–67).

Toxicological points of departure/Levels of concern. For a summary of the Toxicological Points of Departure/Levels of Concern for fluazifop-P-butyl used for human risk assessment, please reference Unit III.B. of the September 27, 2017, final rulemaking. As explained in the Food Quality Protection Act (FQPA) safety factor section in this rule, the safety factor for inhalation exposure has decreased from 10X to 1X so the level of concern for short term inhalation exposures is now 100 rather than 1,000 like it was in 2017.

Exposure assessment. Much of the exposure assessment remains the same although updates have occurred to accommodate the exposures from the petitioned-for tolerances. These updates are discussed in this section; for a description of the rest of the EPA approach to and assumptions for the exposure assessment, please reference Unit III.C of the September 27, 2017, final rulemaking.

EPA's dietary exposure assessments have been updated to include the

additional exposure from the proposed new uses and indirect/inadvertent residues of fluazifop-P-butyl on the commodities identified in this action and were conducted using the Dietary Exposure Evaluation Model software using the Food Commodity Intake Database (DEEM–FCID) Version 4.02, which uses the 2005–2010 food consumption data from the United States Department of Agriculture's (USDA's) National Health and Nutrition Examination Survey, What We Eat in America (NHANES/WWEIA). The acute dietary exposure assessment assumed tolerance-level residues for plant commodities, anticipated residues for livestock commodities, 100 percent crop treated (PCT) and default processing factors. The chronic dietary exposure assessment was based on mean residue levels from crop field trials, average PCT estimates for registered uses of fluazifop-P-butyl, projected PCT estimates for proposed new uses on broccoli and cauliflower, and experimentally determined processing factors where available. For both the acute and chronic exposure assessments, the residues were adjusted to account for additional metabolites of concern.

Anticipated residue and percent crop treated (PCT) information. Section 408(b)(2)(E) of FFDCA authorizes EPA to use available data and information on the anticipated residue levels of pesticide residues in food and the actual levels of pesticide residues that have been measured in food. If EPA relies on such information, EPA must require, pursuant to FFDCA section 408(f)(1), that data be provided 5 years after the tolerance is established, modified, or left in effect, demonstrating that the levels in food are not above the levels anticipated. For the present action, EPA will issue such data call-ins as are required by FFDCA section 408(b)(2)(E) and authorized under FFDCA section 408(f)(1). Data will be required to be submitted no later than 5 years from the date of issuance of these tolerances.

Section 408(b)(2)(F) of FFDCA states that the Agency may use data on the actual percent of food treated for assessing chronic dietary risk only if:

- *Condition a:* The data used are reliable and provide a valid basis to show what percentage of the food derived from such crop is likely to contain the pesticide residue.
- *Condition b:* The exposure estimate does not underestimate exposure for any significant subpopulation group.
- *Condition c:* Data are available on pesticide use and food consumption in a particular area, and the exposure estimate does not understate exposure for the population in such area.

In addition, the Agency must provide for periodic evaluation of any estimates used. To provide for the periodic evaluation of the estimate of PCT as required by FFDCA section 408(b)(2)(F), EPA may require registrants to submit data on PCT.

The Agency estimated the PCT for existing uses as follows:

For the acute dietary analysis, 100% crop treated was assumed for all crops. The average percent crop treated estimates were used in the chronic dietary risk assessments for the following crops that are currently registered for fluazifop-P-butyl: apricots 1%; asparagus 1%; carrots 25%; cherries 1%; cotton 1%; dry beans/peas 1%; garlic 5%; grapefruit 5%; grapes 1%; lemons 1%; onions 10%; oranges 1%; peaches 2.5%; peanuts 1%; plums/prunes 1%; potatoes 1%, soybeans 2.5%; strawberries 1%; sugar beets 1%.

In most cases, EPA uses available data from United States Department of Agriculture/National Agricultural Statistics Service (USDA/NASS), proprietary market surveys, and California Department of Pesticide Regulation (CalDPR) Pesticide Use Reporting (PUR) for the chemical/crop combination for the most recent 10 years. EPA uses an average PCT for chronic dietary risk analysis and a maximum PCT for acute dietary risk analysis. The average PCT figure for each existing use is derived by combining available public and private market survey data for that use, averaging across all observations, and rounding to the nearest 5%, except for those situations in which the average PCT is less than 1% or less than 2.5%. In those cases, the Agency would use 1% or 2.5% as the average PCT value, respectively. The maximum PCT figure is the highest observed maximum value reported within the recent 10 years of available public and private market survey data for the existing use and rounded up to the nearest multiple of 5%, except where the maximum PCT is less than 2.5%, in which case, the Agency uses 2.5% as the maximum PCT.

In addition, projected PCT was used for the proposed uses on broccoli (30% PCT) and cauliflower (45% PCT); 100 PCT was assumed for the other proposed uses. EPA assumes the percent crop treated for a new use (PCTn) is unlikely to exceed that of the PCT of the dominant pesticide (*i.e.,* the one with the greatest PCT) used on that crop over the three most recent years of available data, which spans from 2016—2020. Comparisons are only made among pesticides of the same pesticide types (*e.g.,* the dominant insecticide on the crop is selected for comparison with a new insecticide). The PCTs included in the analysis may be for the same pesticide or for different pesticides since the same or different pesticides may dominate each year. Typically, EPA uses USDA/NASS as the source for raw PCT data because it is publicly available and does not have to be calculated from available data sources. When USDA/NASS does not survey a specific use site, EPA uses other appropriate public data or private market research to calculate the PCTn.

The average PCT of the market leader(s) is appropriate for use in the chronic dietary risk assessment because it represents exposure over time. This method of estimating a PCT for a new use of a registered pesticide or a new pesticide produces a high-end estimate that is unlikely, in most cases, to be exceeded during the initial five years of actual use. The predominant factors that bear on whether the estimated PCTn could be exceeded are (1) the extent of pest pressure on the crops in question; (2) the pest spectrum of the new pesticide in comparison with the market; and (3) resistance concerns with the market leaders. EPA has examined the relevant data and concludes that it is unlikely that the actual PCT with fluazifop-P-butyl on broccoli and cauliflower will exceed the PCTn within the next 5 years.

The Agency believes that the three conditions discussed in this section have been met. With respect to Condition a, PCT estimates are derived from Federal and private market survey data, which are reliable and have a valid basis. The Agency is reasonably certain that the percentage of the food treated is not likely to be an underestimation. As to Conditions b and c, regional consumption information and consumption information for significant subpopulations is taken into account through EPA's computer-based model for evaluating the exposure of significant subpopulations including several regional groups. Use of this consumption information in EPA's risk assessment process ensures that EPA's exposure estimate does not understate exposure for any significant subpopulation group and allows the Agency to be reasonably certain that no regional population is exposed to residue levels higher than those estimated by the Agency. Other than the data available through national food consumption surveys, EPA does not have available reliable information on the regional consumption of food to

which fluazifop-P-butyl may be applied in a particular area.

Dietary exposure from drinking water. The recommended estimated drinking water concentrations in the September 27, 2017, final rulemaking remain valid and are considered protective of potential drinking water residue levels anticipated from the proposed new uses.

Non-occupational exposure. The term ''residential exposure'' is used in this document to refer to non-occupational, non-dietary exposure (*e.g.,* for lawn and garden pest control, indoor pest control, termiticides, and flea and tick control on pets).

There are no new proposed residential uses. Fluazifop-P-butyl is currently registered for use on lawns/turf (including home lawns and golf courses) and ornamentals in residential settings that could result in residential exposures. For these currently registered uses of fluazifop-P-butyl, there are no residential (handler and post-application) risk estimates of concern. The residential exposure scenarios recommended for aggregate risk assessment of fluazifop-P-butyl are dermal and inhalation handler exposure from applications to gardens/trees using a backpack sprayer for adults and combined dermal plus hand-to-mouth post-application exposure from high-contact activities on treated turf for children 1 to less than 2 years old.

Cumulative effects from substances with a common mechanism of toxicity. Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider ''available information'' concerning the cumulative effects of a particular pesticide's residues and ''other substances that have a common mechanism of toxicity.'' Unlike other pesticides for which EPA has followed a cumulative risk approach based on a common mechanism of toxicity, EPA has not made a common mechanism of toxicity finding as to fluazifop-P-butyl and any other substances, and fluazifop-P-butyl does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has not assumed that fluazifop-P-butyl has a common mechanism of toxicity with other substances.

Safety factor for infants and children. Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the Food Quality Protection Act Safety Factor (FQPA SF). In applying this provision, EPA either retains the default value of 10X, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor.

Prenatal and postnatal sensitivity. Increased quantitative sensitivity of the fetus was observed in the rat developmental studies in which no maternal toxicity was observed. Developmental toxicity in the rat was generally related to incomplete and/or delayed ossification. At higher doses, decreased fetal body weight and an increased incidence of diaphragmatic hernia were observed. In the rabbit, maternal and developmental toxicity were observed at the same dose. Maternal toxicity included abortions, weight loss, and death, while fetal toxicity included abortions, skeletal effects, and fetuses that were small and/or had cloudy eyes. In the rat reproduction and fertility study, maternal toxicity (increased liver weight, bile duct hyperplasia, and geriatric nephropathy) and offspring toxicity (decreased pup viability, decreased pup body weight, and hydronephrosis) were observed at the same dose level, and decreased female fertility was observed at the highest dose.

Conclusion. The FQPA Safety Factor is being retained at 10X for the acute dietary assessment, as an uncertainty factor for lowest observed adverse effect level (LOAEL) to no observed adverse effect level (NOAEL) extrapolation (UF_L) due to lack of a NOAEL in the acute neurotoxicity study from which the risk assessment endpoint was chosen. For the remaining applicable exposure scenarios, EPA has determined that reliable data show the safety of infants and children would be adequately protected if the FQPA SF were reduced to 1X. That decision is based on the following findings:

- The toxicity database is adequate for characterizing pre- and postnatal risk for infants and children. The database includes five rat developmental toxicity studies, two rabbit developmental toxicity studies, a rat reproduction study, acute and subchronic neurotoxicity studies, a delayed neurotoxicity study, and an immunotoxicity study. EPA previously retained the 10X FQPA SF when assessing short-term inhalation exposures due to a lack of a subchronic inhalation study; however, EPA has determined that the subchronic inhalation study is no longer necessary to assess risk to infants and children because of the low potential for volatilization, the low acute inhalation toxicity of fluazifop, the fact that the respiratory system is not a target organ, and the fact that the use of the oral point of departure (POD) results in margins of exposure (MOEs) greater than 1,000 for all residential handler scenarios. Thus, the available data is sufficient to ensure that the 1X will be protective.
- The endpoints selected are protective of any potential neurotoxic effects.
- There was no indication of increased fetal or offspring susceptibility compared to maternal toxicity in the rabbit developmental or rat reproduction studies. Quantitative susceptibility of the fetus was noted in the rat developmental studies. However, the selected PODs are protective for these effects. Therefore, the degree of concern is low.
- There is no residual uncertainty in the exposure database for fluazifop-P-butyl with respect to dietary (food and water) and residential (turf and ornamental use) exposure. The dietary food exposure assessments include assumptions that result in high-end estimates of dietary food exposure. Also included in the assessments are modeled drinking water estimates that are designed to be protective of the highest potential residue levels in drinking water from among a range of exposure scenarios. In addition, the residential exposure assessment was conducted based on the conservative assumptions for assessing post-application exposure of children found in the Residential Standard Operating Procedures and chemical-specific data such that residential exposure and risk will not be underestimated.

Aggregate risks and determination of safety. EPA determines whether acute and chronic dietary pesticide exposures are safe by comparing dietary exposure estimates to the acute population adjusted dose (aPAD) and the chronic population adjusted dose (cPAD). Short-, intermediate-, and chronic term aggregate risks are evaluated by comparing the estimated total food, water, and residential exposure to the appropriate points of departure to ensure that an adequate MOE exists.

Acute dietary risks are below the Agency's level of concern of 100% of the aPAD; they are 38% of the aPAD for children 1 to 2 years old, the group with the highest exposure. Chronic dietary risks are below the Agency's level of concern of 100% of the cPAD; they are 66% of the cPAD for children 1 to 2

years old, the most highly exposed group. Fluazifop-P-butyl is currently registered for uses that could result in short-term residential exposure, and the Agency has determined that it is appropriate to aggregate chronic exposure through food and water with short-term residential exposures to fluazifop-P-butyl. The short-term aggregate MOE for adults is 200 and for children 1 to <2 years old is 480. These are greater than the level of concern of 100 and are not of concern. All residential exposures are anticipated to be short-term in duration; thus, an intermediate-term aggregate risk assessment is not required.

Fluazifop-P-butyl is classified as ''Not Likely to be Carcinogenic to Humans''; therefore, EPA does not expect fluazifop-P-butyl exposures to pose an aggregate cancer risk.

Therefore, based on the risk assessments and information described above, EPA concludes there is a reasonable certainty that no harm will result to the general population, or to infants and children, from aggregate exposure to fluazifop-P-butyl residues. More detailed information on this action can be found in the document ''Fluazifop-P-butyl. Human Health Risk Assessment for Proposed Uses and/or Tolerances on Brassica, leafy greens (subgroup 4–16B), Vegetable, Brassica, head and stem (group 5–16), Leaf petiole vegetable (subgroup 22B), Chive, dried leaves, and Papaya; Crop group expansions to Onion, green, subgroup 3–07B and Berry, low growing, subgroup 13–07G; Crop group conversions to Fruit, citrus, group 10–10 and Fruit, stone, group 12–12; and Rotational Field Corn'' in docket ID EPA–HQ–OPP–2021–0310 and EPA–HQ–OPP–2021–0529.

IV. Other Considerations

A. Analytical Enforcement Methodology

Adequate enforcement methodology (High Performance Liquid Chromatography/Ultra-Violet Spectrometry (HPLC/UV)) is available to enforce the tolerance expression for crops. In addition, method GRM044.09A, a liquid chromatography and tandem mass spectroscopy (LC/MS/MS) method, is available for the enforcement of 5-(Trifluoromethyl)-2-Pyridone (TFP) residues in/on rotational crops.

The method may be requested from: Chief, Analytical Chemistry Branch, Environmental Science Center, 701 Mapes Rd., Ft. Meade, MD 20755–5350; telephone number: (410) 305–2905; email address: *residuemethods@epa.gov.*

B. International Residue Limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). The tolerances for fruit, citrus, group 10–10 and fruit, stone, group 12–12 are being harmonized with the respective Codex MRLs at 0.01 ppm. No Codex MRLs have been established for residues of fluazifop-P-butyl in or on the other commodities in this rulemaking.

C. Response to Comments

One comment was received on the notice of filing, which opposed EPA establishing the requested tolerances and objected to the use of pesticides on crops. Although the Agency recognizes that some individuals believe that pesticides should be banned on agricultural crops, the existing legal framework provided by section 408 of the FFDCA authorizes EPA to establish tolerances when it determines that the tolerances are safe. Upon consideration of the validity, completeness, and reliability of the available data as well as other factors the FFDCA requires EPA to consider, EPA has determined that the fluazifop-P-butyl tolerances are safe. The commenter has provided no information indicating that a safety determination cannot be supported.

D. Revisions to Petitioned-For Tolerances

The tolerance levels for fruit, citrus, group 10–10 and fruit, stone, group 12–12 are being set at the method limit of quantitation (LOQ) of the analytical method, 0.01 ppm, to harmonize with the Codex MRLs for these crop groups. The Codex MRL for citrus and stone fruit is established at 0.01 ppm, reflecting the LOQ of the enforcement method and no detects in the field trial data. The established U.S. tolerances of 0.03 ppm for fruit, citrus, group 10 and 0.05 ppm for fruit, stone reflect the highest LOQ reported in the respective field trials. As sprays are directed to weeds at the base of the trees or vines, residue translocation into tree/vine fruit is not expected, and suitably sensitive analytical enforcement methods are available. Therefore, a tolerance of 0.01 ppm for groups 10–10 and 12–12 is not expected to lead to violative residues.

IR–4 requested a tolerance of 4 ppm for onion, green, subgroup 3–07B based partly on the established tolerance of 1.5 ppm for onion, green and field trial residue data on chives, fresh leaves that supports a tolerance of 4 ppm. Because green onion is the representative commodity for onion, green, subgroup 3–07B, EPA is establishing the tolerance for subgroup 3–07B at 1.5 ppm and is establishing a tolerance for chives, fresh leaves at 4 ppm based on the chives field trial residue data. In addition, EPA corrected the commodity definitions for the field corn commodities to reflect standard Agency terminology.

E. International Trade Considerations

In this rule, EPA is establishing tolerances for fluazifop-P-butyl residues in or on fruit, citrus, group 10–10 and fruit, stone, group 12–12 at 0.01 ppm that are lower than the current tolerances of 0.03 ppm for fruit, citrus, group 10 and 0.05 ppm for fruit, stone. For the reasons explained in Unit IV.D, the Agency believes these revised, lower tolerances are appropriate based on available residue data and analytical methods.

In accordance with the World Trade Organization's (WTO) Sanitary and Phytosanitary Measures (SPS) Agreement, EPA intends to notify the WTO of the changes to these tolerances in order to satisfy its obligations under the Agreement. In addition, the SPS Agreement requires that Members provide a ''reasonable interval'' between the publication of a regulation subject to the Agreement and its entry into force to allow time for producers in exporting Member countries to adapt to the new requirement. Accordingly, EPA is retaining the existing tolerances for citrus group 10 and stone fruit by establishing an expiration date for these at the existing tolerance levels of 0.03 ppm and 0.05 ppm, respectively, to allow these tolerances to remain in effect for a period of 6 months after the effective date of this final rule. After the 6-month period expires, the allowable residues on members of the citrus fruit group 10–10 and the stone fruit group 12–12 must conform to the new lower tolerance level of 0.01 ppm. This reduction in tolerance level is not discriminatory; the same food safety standard contained in the FFDCA applies equally to domestically produced and imported foods. The new tolerance levels are supported by available residue data.

V. Conclusion

Therefore, tolerances are established for residues of fluazifop-P-butyl in or on berry, low growing, subgroup 13–07G at 3 ppm; Brassica, leafy greens, subgroup 4–16B at 15 ppm; chives, dried leaves at 40 ppm; chives, fresh leaves at 4 ppm;

fruit, citrus, group 10–10 at 0.01 ppm; fruit, stone, group 12–12 at 0.01 ppm; leaf petiole vegetable subgroup 22B at 3 ppm; onion, green, subgroup 3–07B at 1.5 ppm; papaya at 0.01 ppm; and vegetable, Brassica, head and stem, group 5–16 at 30 ppm. The established tolerances for fruit, citrus, group 10 at 0.03 ppm and fruit, stone at 0.05 ppm are designated to expire 6 months from the publication of this document. EPA is removing the established tolerances for onion, green at 1.5 ppm; rhubarb at 0.50 ppm; and strawberry at 3.0 ppm as unnecessary upon the establishment of the new tolerances. In addition, EPA is revising the residue definition for fluazifop-P-butyl in both 40 CFR 180.411(a) and (c) to be consistent with Agency practice and to read as follows:

''Tolerances are established for residues of the herbicide fluazifop-P-butyl, butyl (2*R*)-2-[4-[[5-(trifluoromethyl)-2-pyridinyl]oxy]phenoxy]propanoate, including its metabolites and degradates, in or on the commodities listed below. Compliance with the tolerance levels specified below is to be determined by measuring only those fluazifop-P-butyl residues convertible to fluazifop, 2-[4-[[5-(trifluoromethyl)-2-pyridinyl]oxy]phenoxy]propanoic acid, expressed as fluazifop, in or on the commodity''.

Additionally, tolerances are established for indirect or inadvertent residues of the fluazifop-P-butyl metabolite, 5-trifluoromethyl-2-pyridinone (TFP) in or on corn, field, forage at 0.01 ppm; corn, field, grain at 0.01 ppm; and corn, field, stover at 0.015 ppm.

VI. Statutory and Executive Order Reviews

This action establishes tolerances under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001), or to Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), nor does it require any special considerations under Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerances in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or Tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or Tribal Governments, on the relationship between the National Government and the States or Tribal Governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian Tribes. Thus, the Agency has determined that Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999), and Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides, and pests, Reporting and recordkeeping requirements.

Dated: April 24, 2023.

Charles Smith,

Director, Registration Division, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, EPA is amending 40 CFR chapter 1 as follows:

PART 180—TOLERANCES AND EXEMPTIONS FOR PESTICIDE CHEMICAL RESIDUES IN FOOD

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. Revise § 180.411 to read as follows:

§ 180.411 Fluazifop-P-butyl; tolerances for residues.

(a) *General.* Tolerances are established for residues of the herbicide fluazifop-P-butyl, butyl (2*R*)-2-[4-[[5-(trifluoromethyl)-2-pyridinyl]oxy]phenoxy]propanoate, including its metabolites and degradates, in or on the commodities in table 1 to this paragraph (a). Compliance with the tolerance levels specified in table 1 is to be determined by measuring only those fluazifop-P-butyl residues convertible to fluazifop, 2-[4-[[5-(trifluoromethyl)-2-pyridinyl]oxy]phenoxy]propanoic acid, expressed as fluazifop, in or on the commodity''.

TABLE 1 TO PARAGRAPH (a)

Commodity	Parts per million
Banana	0.01
Beans, dry, seed	50
Beet, sugar, dried pulp	1.0
Beet, sugar, molasses	3.5
Beet, sugar, roots	0.25
Berry, low growing, subgroup 13–07G	3
Brassica, leafy greens, subgroup 4–16B	15
Bushberry subgroup 13–07B	0.30
Caneberry subgroup 13–07A	0.08
Carrot, roots	2.0
Cattle, fat	0.05
Cattle, meat	0.05
Cattle, meat byproducts	0.05
Chives, dried leaves	40
Chives, fresh leaves	4
Citrus, dried pulp	0.40
Citrus, juice	0.06
Citrus, oil	30.0
Cotton, gin byproducts	1.5
Cotton, refined oil	1.3
Cotton, undelinted seed	1.0
Egg	0.05
Endive	6.0
Fruit, citrus, group 10[2]	0.03
Fruit, citrus, group 10–10	0.01
Fruit, small vine climbing, except fuzzy kiwifruit, subgroup 13–07F	0.03
Fruit, stone[2]	0.05
Fruit, stone, group 12–12	0.01
Goat, fat	0.05
Goat, meat	0.05
Goat, meat byproducts	0.05
Hog, fat	0.05
Hog, meat	0.05
Hog, meat byproducts	0.05
Horse, fat	0.05
Horse, meat	0.05
Horse, meat byproducts	0.05
Leaf petiole vegetable subgroup 22B	3
Lettuce, head	3.0
Lettuce, leaf	5.0
Milk	0.05
Nut, macadamia	0.1
Onion, bulb, subgroup 3–07A	0.50
Onion, green, subgroup 3–07B	1.5
Papaya	0.01
Peanut	1.5
Peanut, meal	2.2
Pecans	0.05
Poultry, fat	0.05
Poultry, meat	0.05
Poultry, meat byproducts	0.05
Potato[1]	1.0
Potato, chips[1]	2.0
Potato, granules/flakes[1]	4.0
Sheep, fat	0.05
Sheep, meat	0.05
Sheep, meat byproducts	0.05
Soybean, seed	2.5
Vegetable, Brassica, head and stem, group 5–16	30
Vegetable, tuberous and corm, except potato, subgroup 1D	1.5

[1] No U.S. registrations.
[2] This tolerance expires on June 26, 2023.

(b) [Reserved]

(c) *Tolerances with regional registrations.* Tolerances are established for residues of the herbicide fluazifop-P-butyl, butyl (2*R*)-2-[4-[[5-(trifluoromethyl)-2-pyridinyl]oxy]phenoxy]propanoate, including its metabolites and degradates, in or on the commodities in table 2 to this paragraph (c). Compliance with the tolerance levels specified in table 2 is to be determined by measuring only those fluazifop-P-butyl residues convertible to fluazifop, 2-[4-[[5-(trifluoromethyl)-2-

pyridinyl]oxy]phenoxy]propanoic acid, expressed as fluazifop, in or on the commodity''.

TABLE 2 TO PARAGRAPH (c)

Commodity	Parts per million
Asparagus	3.0
Coffee, bean	0.1
Fescue, forage	4.0
Fescue, hay	15
Pepper, tabasco	1.0

(d) *Indirect or inadvertent residues.* Tolerances are established for residues of the herbicide fluazifop-P-butyl, butyl (2*R*)-2-[4-[[5-(trifluoromethyl)-2-pyridinyl]oxy]phenoxy]propanoate, including its metabolites and degradates, in or on the commodities in table 3 to this paragraph (d). Compliance with the tolerance levels specified in table 3 is to be determined by measuring only those fluazifop-P-butyl residues convertible to 5-trifluoromethyl-2-pyridinone (TFP), expressed as TFP, in or on the commodity.

TABLE 3 TO PARAGRAPH (d)

Commodity	Parts per million
Corn, field, forage	0.01
Corn, field, grain	0.01
Corn, field, stover	0.015

[FMR Case 2019–102–01; Docket No. GSA–FMR–2019–0015, Sequence No. 2]

RIN 3090–AK11

Federal Management Regulation; Replacement of Personal Property Pursuant to the Exchange/Sale Authority

AGENCY: Office of Government-wide Policy (OGP), General Services Administration (GSA).

ACTION: Final rule.

SUMMARY: GSA is issuing a final rule amending the Federal Management Regulation (FMR) to clarify the exchange/sale provisions and improve the application of this important authority across Federal agencies. The related FMR Part, Replacement of Personal Property Pursuant to the Exchange/Sale Authority, was last revised in November of 2011.

DATES: *Effective:* May 30, 2023.

FOR FURTHER INFORMATION CONTACT: William Garrett, Director, Personal Property Policy Division, Office of Government-wide Policy, Office of Asset and Transportation Management (MA), at 202–368–8163 or *william.garrett@gsa.gov* for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755 or *GSARegSec@gsa.gov.* Please cite FMR Case 2019–102–01.

SUPPLEMENTARY INFORMATION:

I. Background

This final rule amends the Federal Management Regulation (FMR) to update current policy and remove outdated and unnecessary information as proposed with changes published on February 18, 2022 at 87 FR 9303. These changes, made as a result of public comments, are detailed in section II.B. of this notice. In 2018, the Government Accountability Office (GAO) Report 19–33, ''GSA and VA Have Opportunities to Improve the Exchange/Sale Process'', identified confusion among some agencies on the use of the exchange/sale authority which could be alleviated by, among other actions, revising FMR Part 102–39.

Personal property includes a wide variety of Government items such as computers, office equipment, furniture, and vehicles, as well as more specialized items specific to agencies, such as medical equipment for the U.S. Department of Veterans Affairs (VA) and medical helicopters for the U.S. Army. The Federal Government owns and manages more than a trillion dollars of personal property. In Fiscal Year (FY) 2021, Federal agencies reported approximately $1.9 trillion in capitalized personal property assets under their control. Over time, agencies' personal property may no longer adequately perform the task for which it was acquired. Title 40, United States Code (U.S.C.), section 503 authorizes agencies to exchange (trade-in) or sell such property still needed to meet mission needs and apply the exchange allowance or sale proceeds to acquire similar replacement property.

Such transactions are known as personal property ''exchange/sale'' transactions. These transactions facilitate the replacement of personal property by allowing agencies to offset the cost of new, similar property, resulting in savings to agency funds. Without this authority, agencies would have to expend the full purchase price of new personal property from appropriations, while depositing the proceeds from the disposition of worn property in the U.S. Treasury. Because exchange/sale transactions provide agencies with opportunities to save costs, it is important that agencies using this authority establish policies, processes, and procedures with effective controls, in order to ensure that they meet applicable requirements and are good stewards of Government resources.

GSA's regulations at 41 Code of Federal Regulations (CFR) part 102–39 describe the terms, conditions, and reporting requirements for personal property exchanged or sold under this authority. The personal property exchange/sale authority allows agencies to replace property that is not excess or surplus, *i.e.,* the property is still needed to meet the agency's continuing mission. In addition, agencies must meet the following requirements to use the exchange/sale authority:

- The property exchanged or sold is similar to the property acquired.
- The personal property exchanged or sold was not acquired for the principal purpose of later exchanging it or selling it using the authority. For example, an agency cannot purchase a more costly piece of equipment than necessary to meet mission needs for the sole reason that it will deliver a higher value when sold using this exchange/sale authority.
- Exchange allowances and sales proceeds can only be put toward the purchase of similar replacement property and cannot be used for services. In other words, an agency can use proceeds from the sale of a vehicle to purchase a new vehicle, but it cannot use proceeds to hire a mechanic to repair an existing vehicle.
- Exchange allowances and sales proceeds are available during the same fiscal year (FY) the property was exchanged or sold and the following FY. This means that for an item sold in FY 2023, an agency has the rest of FY 2023, as well as FY 2024 to purchase a replacement item. If agencies do not spend these funds by the end of the next FY, monies are to be deposited in the U.S. Treasury as miscellaneous receipts, except as otherwise authorized by law. Such legal authority may, for example, take the form of an authorized revolving fund where the rules of the program allow use of funds beyond the restrictions of the FMR.
- Agencies are prohibited from using the authority to replace certain types of property as detailed in FMR § 102–39.60 (weapons, nuclear ordinances, etc.).

Agencies may choose between two transaction methods to replace property,

the exchange (trade-in) method or the sale method, but must determine which method provides the greatest return to the Government, including factoring in administrative and overhead expenses. A typical exchange occurs when the original manufacturer delivers a replacement item to the agency and removes the item being replaced. The manufacturer applies a trade-in credit (an allowance) for the purchase of the replacement item. If the sale method is used, the agency receives the sale proceeds for the sale of the item and applies those proceeds to the purchase of the replacement personal property.

If contemplating an exchange/sale, agencies are guided to follow a process similar to the disposal process for excess property by making it available to other Federal agencies and state agencies by posting it to GSAXcess at *https://gsaxcess.gov/.* This is GSA's website for reporting, searching, and selecting property. This process allows other Federal agencies or state agencies to obtain the property for the price required by the reporting agency to help fund the acquisition of replacement property under the exchange/sale authority.

Agencies are required to submit a summary report to GSA through the GSA Personal Property Reporting Tool (PPRT), *https://www.property.reporting.gov,* at the end of each FY on the type, the quantity, the exchange allowances and/or sale proceeds, as applicable, and the original acquisition cost of items for both exchange and sale transactions. Agencies with no transactions during a FY must submit a negative report. Ultimately, agencies decide whether to use the exchange/sale authority to replace personal property in their inventories.

II. Discussion of the Final Rule

A. Summary of Significant Changes

The definition for ''similar'' in FMR § 102–39.20 is revised to include items designed or constructed for the same general purpose. A Note is also added to clarify that only one of the criteria in this definition needs to be met for the property to be considered ''similar'' for an exchange/sale transaction.

FMR § 102–39.25 is revised to allow deviations to the exchange/sale provisions except for those mandated by statute or otherwise described in the part, including FMR § 102–39.80, which details the accounting requirements for exchange allowances and sales proceeds.

FMR § 102–39.40 is revised to clarify the differences between the use of the exchange/sale authority and the disposal process for excess/surplus personal property. The primary difference is that personal property disposal under the excess/surplus process does not allow for the use of proceeds or allowances (if any), in acquiring replacement similar assets. Exchange/sale property is replacement property that is non-excess and nonsurplus, meaning the agency has a continuing need for the property, but the specific item(s) are no longer suitable to the need and must be replaced, and therefore are not reported to GSA as excess or surplus for transfer or donation purposes.

The following Federal Supply Classification (FSC) Groups are removed from the ''prohibited list'' at FMR § 102–39.60:

- *FSC Group 42:* Firefighting, rescue, and safety equipment;
- *FSC Group 51:* Hand tools; and
- *FSC Group 54:* Prefabricated structure and scaffolding (FSC 5410 Prefabricated and Portable Buildings, FSC 5411 Rigid Wall Shelters, and FSC 5419 Collective Modular Support System only).

The restrictions remaining in FMR § 102–39.60 involve assets which are inherently dangerous or could pose a significant public health or safety concern, comprising assets in the following FSC Groups of personal property:

- 10 Weapons.
- 11 Nuclear ordnance.
- 44 Furnace, Steam Plant, and Drying Equipment; and Nuclear Reactors (FSC Class 4470, Nuclear Reactors only);
- *FSC Group 84:* Clothing, individual equipment, and insignia; and
- 68 Chemical and chemical products.

This change also removes ''except medicinal chemicals'' from FMR § 102–39.60 as they are categorized under FSG 65, not FSG 68.

FMR § 102–39.65 is revised to clarify that an exchange or sale under this part may occur after the acquisition of the replacement property. For example, if a Magnetic Resonance Imaging (MRI) machine is needed for use daily, the replacement machine may be acquired and installed before the existing machine is removed and exchanged or sold. If the existing machine is sold, in accordance with agency policy, the funds may be returned to the appropriation used to acquire the replacement machine. If the existing machine is exchanged, in accordance with agency policy, the agency agreement with the entity providing the replacement must document the responsibilities of both parties to execute this transaction.

FMR § 102–39.80 is revised to add language that no deviations will be granted for this section.

FMR § 102–39.85 is revised to update the reporting policy and process to reflect the use of a new online reporting tool.

FMR § 102–39.90 is added in accordance with the recommendations of GAO report 19–33 to provide additional guidance to Federal agencies regarding the publication of GSA Bulletins, including Bulletin B–48, Guidance on Exchange/Sale Financial Accounting for Personal Property, and updates to GSA's exchange/sale website.

According to GSA's annual summary data, 27 agencies reported using the exchange/sale authority and received a total of about $2.8 billion in exchange allowances or sale proceeds from fiscal year 2016 through fiscal year 2020. While many agencies used the authority, a few agencies, particularly GSA, together accounted for about 88 percent of all allowances and proceeds. Specifically, 5 of 27 agencies reported nearly all exchange allowances and sale proceeds. GSA accounted for about $1.5 billion of about $2.8 billion (or about 55 percent) of reported allowances and proceeds across the Federal Government. Four other agencies—the Departments of Homeland Security, Agriculture, Defense, and the Interior—accounted for about $899 million (or about 32 percent) of the total. The other 22 agencies using the authority reported about $340 million (or about 12 percent) in exchange allowances or sales proceeds over the 5-year period. Finally, agencies reported using the sale method more than the exchange method. Sales by agencies accounted for about $2.5 billion (or about 91 percent), while use of the exchange method accounted for about $247 million (or about 9 percent) of total transactions reported, primarily due to GSA's reporting more use of the sale method over the exchange method.

While some agencies reported hundreds of millions of dollars in exchange allowances and sale proceeds, the data show that 8 Federal agencies—including the Department of Labor and the Office of Personnel Management—reported relatively few transactions, which totaled less than $200,000 in exchange allowances and sales proceeds.

By using the exchange/sale authority, agencies have an opportunity to be good stewards of government property by efficiently replacing needed property, including high-value items, that serves critical and continuing requirements to meet agency missions. GSA expects

these amendments to increase agency flexibility and understanding of this program. GSA believes these amendments will help agencies take better advantage and increase the use of this authority, thereby becoming more effective stewards of government property and replenishing property more efficiently.

B. Analysis of Public Comments

The proposed rule was published in the **Federal Register** on February 18, 2022 (87 FR 9303). Comments were received from six respondents, some of which included multiple questions, comments, or concerns. Of the comments received, there were five topics germane to and within the scope of the final rule. An analysis of these public comments follows:

Comment: Five respondents expressed concerns about the proposed revision to one of the criteria of the definition of ''similar'' in FMR § 102–39.20 to require that replacement property fall within a defined Federal Supply Classification (FSC), instead of the current, broader FSC Group. In particular, many objected that the revision would negatively impact agency missions and place extensive administrative and financial burden on their aviation, vehicle, and maritime programs.

Response: Agree. Revising the definition of ''similar'' to more narrowly tailor one of the criteria of ''similar'' to require that replacement property fall within a defined 4-digit Federal Supply Classification is unduly restrictive. The proposed revision to FMR § 102–39.20(2) was removed and is not included in the final rule.

Comment: In addition to the concern addressed directly above, one respondent suggested also adding ''capability'' to the definition of ''similar'' in FMR § 102–39.20(4).

Response: Disagree. GSA informed the commenting agency that the proposed revision to FMR § 102–39.20(2) was removed from the final rule. The commenting agency still recommended adding capability to FMR § 102–39.20(4), but does not object to leaving FMR § 102–39.20(4) as is. As a result, GSA chose to maintain the language of the proposed rule. Additionally, an item only needs to meet one of the four criteria of the definition of ''similar.''

Comment: One respondent opposed prohibiting deviations to FMR § 102–39.80, which states exchange allowances or proceeds of sale will be available during the fiscal year in which the property was exchanged or sold and for one fiscal year thereafter for the purchase of replacement property.

Response: Disagree. GSA does not have the authority to alter an agency's applicable fiscal law constraints as determined by the GAO, and therefore, cannot extend the availability of funds. Please refer to the GAO, Principles of Federal Appropriations Law, 3rd ed., 2008 rev., ch. 12, sec. A.4, GAO–08–978SP (Washington, DC: Sept. 2008). The regulation does, however, recognize that agencies may be allowed to retain allowances or proceeds ''as authorized by law.'' GSA accordingly recommends that agencies consult their respective Offices of Chief Financial Officer and Offices of the General Counsel, as well as their Office of Management and Budget Resource Management Officers, as necessary, on the use and availability of these funds.

Comment: One respondent suggested that GSA should eliminate the proposed revision to FMR § 102–39.60, which would remove the following FSC Groups from the prohibited list: FSC Groups 42, Firefighting, rescue, and safety equipment; 51, Hand tools; and 54, Prefabricated structure and scaffolding (FSC 5410 Prefabricated and Portable Buildings, FSC 5411 Rigid Wall Shelters, and FSC 5419 Collective Modular Support System only).

Response: Disagree. The removal of the aforementioned FSC Groups will allow agencies to recoup funds for vital programs to support their agency missions. The remaining restrictions on the prohibited list involve assets which are inherently dangerous or pose a significant public health or safety concern.

Comment: One respondent suggested that GSA should add additional reporting requirements to FMR § 102–39.85. Specifically, the respondent suggested agencies should be required to include the four-digit FSC and the item nomenclature as part of the annual exchange/sale report.

Response: Disagree. As explained above under paragraph A of this section, the proposed revisions to FMR § 102–39.20(2) were removed and are not included in the final rule; therefore, collecting data at the 4-digit FSC Group level is not warranted.

C. Expected Cost Impact to the Public

There is no expected cost to the public from this rule, as this rule is largely administrative. The changes will clarify the exchange/sale provisions and improve the application of this important authority across Federal agencies.

III. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The Office of Information and Regulatory Affairs (OIRA) has determined that this is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of Executive Order 12866, Regulatory Planning and Review, dated September 30, 1993.

IV. Congressional Review Act

OIRA has determined that this rule is not a ''major rule'' as defined by 5 U.S.C. 804(2). Additionally, this rule is excepted from Congressional Review Act reporting requirements prescribed under 5 U.S.C. 801 since it relates to agency management or personnel under 5 U.S.C. 804(3).

V. Regulatory Flexibility Act

This final rule will not have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because it applies to agency management or personnel. Therefore, an Initial Regulatory Flexibility Analysis has not been performed.

VI. Paperwork Reduction Act

The Paperwork Reduction Act does not apply because the changes to the FMR do not impose recordkeeping or information collection requirements, or the collection of information from offerors, contractors, or members of the public that require the approval of the Office of Management and Budget (OMB) under 44 U.S.C. 3501, *et seq.* Reporting requirements are only addressed to Federal agencies regarding their Federal personal property transactions.

List of Subjects in 41 CFR Part 102–39

Excess and surplus Government property, Government property management.

Robin Carnahan,

Administrator of General Services.

For the reasons set forth in the preamble, GSA amends 41 CFR part 102–39 as set forth below:

PART 102–39—REPLACEMENT OF PERSONAL PROPERTY PURSUANT TO THE EXCHANGE/SALE AUTHORITY

■ 1. The authority citation for 41 CFR part 102–39 continues to read as follows:

Authority: 40 U.S.C. 121(c); 40 U.S.C. 503.

■ 2. Amend § 102–39.20 in the definition ''Similar'' by revising paragraph (4) and adding a note to read as follows:

§ 102–39.20 What definitions apply to this part?

* * * * *

Similar * * *

(4) Are designed or constructed for the same general purpose (includes any and all forms of property regardless of the FSC Group to which they are assigned).

Note 1 to the definition of ''similar'': Only one of the criteria in this definition needs to be met for the property to be considered ''similar'' for an exchange/sale transaction.

* * * * *

■ 3. Amend § 102–39.25 by revising the first sentence to read as follows:

§ 102–39.25 Which exchange/sale provisions are subject to deviation?

All of the provisions in this part are subject to deviation (upon presentation of adequate justification) except for those mandated by statute, as described in note 1 to § 102–39.60(a) and § 102–39.80. * * *

■ 4. Revise § 102–39.40 to read as follows:

§ 102–39.40 How does the exchange/sale authority differ from the disposal process for excess/surplus personal property?

(a) The primary difference is that sales proceeds or exchange allowances may be used to acquire similar replacement personal property that is still needed under the exchange/sale authority as described in this part; whereas under the more frequently used excess/surplus disposal process, you would not be able to use sales proceeds or exchange allowances to acquire replacement personal property.

(b) Your use of the exchange/sale authority is optional and should be considered when needed replacement assets may be acquired under the provisions of this part. If exchange/sale is not practicable (for example, if conducting an exchange/sale transaction is not cost effective), you should dispose of the property through the excess/surplus disposal process by reporting the property as excess, as addressed in part 102–36 of this chapter.

(c) In the excess/surplus disposal process, any net proceeds from the sale of surplus property generally must be forwarded to the miscellaneous receipts account at the United States Treasury, and thus would not be available to you for use in acquiring similar replacement property or for any other purpose. You may use the exchange/sale authority in the acquisition of personal property even if the acquisition is under a services contract, as long as the property acquired under the services contract is similar to the property exchanged or sold (*e.g.,* for a service life extension program (SLEP), exchange allowances or sales proceeds would be available for replacement of similar items, but not for services).

■ 5. Amend § 102–39.60 by revising paragraph (a) to read as follows:

§ 102–39.60 What restrictions and prohibitions apply to the exchange/sale of personal property?

* * * * *

(a) The following FSC Groups of personal property:

(1) 10 Weapons.

(2) 11 Nuclear ordinance.

(3) 44 Furnace, Steam Plant, and Drying Equipment; and Nuclear Reactors (FSC Class 4470, Nuclear Reactors only).

(4) 68 Chemical and chemical products.

(5) 84 Clothing, individual equipment, and insignia.

Note 1 to paragraph (a): Under no circumstances will deviations be granted for FSC Class 1005, Guns through 30mm. Deviations are not required for Department of Defense (DoD) property in FSC Groups 10 (for classes other than FSC Class 1005), or any other FSC Group, for which the applicable DoD demilitarization requirements, and any other applicable regulations and statutes are met.

* * * * *

■ 6. Amend § 102–39.65 by:

■ a. Removing ''and'' from the end of paragraph (d);

■ b. Redesignating paragraph (e) as paragraph (f); and

■ c. Adding new paragraph (e).

The addition reads as follows:

§ 102–39.65 What conditions apply to the exchange/sale of personal property?

* * * * *

(e) Your agency documents at the time of exchange or sale (or at the time of acquiring the replacement property if acquisition precedes the exchange or sale) that the exchange allowance or sale proceeds will be applied to the acquisition of replacement property; and

* * * * *

■ 7. Amend § 102–39.80 by adding a sentence at the end to read as follows:

§ 102–39.80 What are the accounting requirements for exchange allowances or proceeds of sale?

* * * Under no circumstances will deviations be granted for this section.

■ 8. Revise § 102–39.85 to read as follows:

§ 102–39.85 What information am I required to report?

You must submit, within 90 calendar days after the close of each fiscal year (FY), an exchange/sale report using the online Personal Property Reporting Tool template found at *https://www.property.reporting.gov.* This template provides the specific information needed for your agency's report. You can contact the GSA Help Desk at *help.PPRT@gsa.gov* if you need assistance accessing the online reporting tool. All reports, including negative reports, must be submitted electronically through the Personal Property Reporting Tool. Transactions involving books and periodicals in your libraries need not be reported.

■ 9. Add § 102–39.90 to read as follows:

§ 102–39.90 Where do I obtain additional information?

Additional information is provided at the GSA websites *www.gsa.gov/bulletin* and *www.gsa.gov/exchangesale.*

[FR Doc. 2023–08549 Filed 4–26–23; 8:45 am]

BILLING CODE P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Parts 212 and 228

[Docket DARS–2023–0001]

Defense Federal Acquisition Regulation Supplement; Technical Amendments

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule; technical amendment.

SUMMARY: DoD is amending the Defense Federal Acquisition Regulation Supplement (DFARS) in order to make needed editorial changes.

DATES: Effective April 27, 2023.

FOR FURTHER INFORMATION CONTACT: Ms. Jennifer D. Johnson, Defense

Acquisition Regulations System, telephone 703–717–8226.

SUPPLEMENTARY INFORMATION: This final rule amends the DFARS to make needed editorial changes to 48 CFR part 212. Section 212.301(f)(vii) is amended to list the clauses in numerical order. Sections 212.503 and 212.504 are revised to list the statutory entries in numerical and alphabetical order, and add the descriptive term ''(prohibits mandatory arbitration)'' at the redesignated section 212.503 paragraph (vii) and section 212.504 paragraph (xiv). A typographical error is corrected at section 228.371.

List of Subjects in 48 CFR Parts 212 and 228

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, 48 CFR parts 212 and 228 are amended as follows:

■ 1. The authority citation for 48 CFR parts 212 and 228 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 212—ACQUISITION OF COMMERCIAL PRODUCTS AND COMMERCIAL SERVICES

■ 2. Amend section 212.301 by—
■ a. Removing paragraph (f)(vii)(C);
■ b. Redesignating paragraphs(f)(vii)(A) and (B) as paragraphs (f)(vii)(B) and (C), respectively; and
■ c. Adding a new paragraph (f)(vii)(A).

The addition reads as follows:

212.301 Solicitation provisions and contract clauses for the acquisition of commercial products and commercial services.

* * * * *

(f) * * *

(vii) * * *

(A) Use the provision at 252.219–7000, Advancing Small Business Growth, as prescribed in 219.309(1), to comply with 10 U.S.C. 4959.

* * * * *

■ 3. Amend section 212.503 by revising paragraphs (a)(iii) through (viii) and (c)(i) and (ii) to read as follows:

212.503 Applicability of certain laws to Executive agency contracts for the acquisition of commercial products and commercial services.

(a) * * *

(iii) 10 U.S.C. 3845, Contractor Inventory Accounting System Standards (see 252.242–7004).

(iv) 10 U.S.C. 4651, note prec. (section 855, Pub. L. 117–81), Employment Transparency Regarding Individuals Who Perform Work in the People's Republic of China.

(v) 10 U.S.C. 4656(a), Prohibition on Persons Convicted of Defense Related Felonies.

(vi) 10 U.S.C. 4753(b), Requirement to Identify Suppliers.

(vii) Section 8116 of the Defense Appropriations Act for Fiscal Year 2010 (Pub. L. 111–118) (prohibits mandatory arbitration) and similar sections in subsequent DoD appropriations acts.

(viii) Domestic Content Restrictions in the National Defense Appropriations Acts for Fiscal Years 1996 and Subsequent Years, unless the restriction specifically applies to commercial products or commercial services. For the restriction that specifically applies to commercial ball or roller bearings as end items, see 225.7009–3 (section 8065 of Pub. L. 107–117).

(c) * * *

(i) 10 U.S.C. 3703, Truthful Cost or Pricing Data (see FAR 15.403–1(b)(3)).

(ii) 10 U.S.C. 4655, Prohibition on Limiting Subcontractor Direct Sales to the United States (see FAR 3.503 and 52.203–6).

■ 4. Amend section 212.504 by revising paragraphs (a)(i) through (xv) to read as follows:

212.504 Applicability of certain laws to subcontracts for the acquisition of commercial products and services.

(a) * * *

(i) 10 U.S.C. 2391 note, Notification of Substantial Impact on Employment.

(ii) 10 U.S.C. 2631, Transportation of Supplies by Sea (except as provided in the clause at 252.247–7023, Transportation of Supplies by Sea).

(iii) 10 U.S.C. 3321(b), Prohibition on Contingent Fees.

(iv) 10 U.S.C. 3741–3750, Allowable Costs Under Defense Contracts.

(v) 10 U.S.C. 3841(d), Examination of Records of a Contractor.

(vi) 10 U.S.C. 3845, Contractor Inventory Accounting System Standards.

(vii) 10 U.S.C. 4651, note prec. (section 855, Pub. L. 117–81), Employment Transparency Regarding Individuals Who Perform Work in the People's Republic of China.

(viii) 10 U.S.C. 4654, Prohibition Against Doing Business with Certain Offerors or Contractors.

(ix) 10 U.S.C. 4656(a), Prohibition on Persons Convicted of Defense Related Felonies.

(x) 10 U.S.C. 4753(b), Requirement to Identify Suppliers.

(xi) 10 U.S.C. 4801 note prec., Notification of Proposed Program Termination.

(xii) 10 U.S.C. 4864, Miscellaneous Limitations on the Procurement of Goods Other Than United States Goods.

(xiii) 10 U.S.C. 4871, Reporting Requirement Regarding Dealings with Terrorist Countries.

(xiv) Section 8116 of the Defense Appropriations Act for Fiscal Year 2010 (Pub. L. 111–118) (prohibits mandatory arbitration) and similar sections in subsequent DoD appropriations acts.

(xv) Domestic Content Restrictions in the National Defense Appropriations Acts for Fiscal Years 1996 and Subsequent Years, unless the restriction specifically applies to commercial products and commercial services. For the restriction that specifically applies to commercial ball or roller bearings as end items, see 225.7009–3 (section 8065 of Pub. L. 107–117).

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

[Docket No. FWS–R3–ES–2019–0020; FF09E21000 FXES1111090FEDR 234]

RIN 1018–BD98

Endangered and Threatened Wildlife and Plants; Threatened Species Status With Section 4(d) Rule for Big Creek Crayfish and St. Francis River Crayfish and Designation of Critical Habitat

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), determine threatened species status under the Endangered Species Act of 1973 (Act), as amended, for the Big Creek crayfish (*Faxonius peruncus*) and the St. Francis River crayfish (*Faxonius quadruncus*), two crayfish species from southern Missouri. We also finalize a rule under the authority of section 4(d) of the Act that provides regulatory measures that are necessary and advisable to provide for the conservation of these species. In addition, we designate critical habitat for the species; in total, approximately 1,069 river miles (1,720 river

kilometers) for the Big Creek crayfish and 1,043 river miles (1,679 river kilometers) for the St. Francis River crayfish in Iron, Madison, St. Francois, Washington, and Wayne Counties, Missouri, fall within the boundaries of the critical habitat designations. This rule applies the protections of the Act to these species and their designated critical habitats.

DATES: This rule is effective May 30, 2023.

ADDRESSES: This final rule is available on the internet at *https://www.regulations.gov and https://www.fws.gov/midwest/*. Comments and materials we received, as well as supporting documentation we used in preparing this rule, are available for public inspection at *https://www.regulations.gov at* Docket No. FWS–R3–ES–2019–0020.

The coordinates or plot points or both from which the maps are generated are included in the decision file for the critical habitat designations and are available at *https://www.regulations.gov* at Docket No. FWS–R3–ES–2019–0020, and at the field office responsible for the designations (see **FOR FURTHER INFORMATION CONTACT**, below). Any additional tools or supporting information that we developed for the critical habitat designations will also be available at the Service's website and at *https://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: John Weber, Field Supervisor; U.S. Fish and Wildlife Service; Missouri Ecological Services Field Office; 101 Park DeVille Drive, Suite A; Columbia, MO 65203–0057; telephone 573–234–2132. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

Executive Summary

Why we need to publish a rule. Under the Act, a species warrants listing if it meets the definition of an endangered species (in danger of extinction throughout all or a significant portion of its range) or a threatened species (likely to become endangered within the foreseeable future throughout all or a significant portion of its range). If we determine that a species warrants listing, we must list the species promptly and designate the species' critical habitat to the maximum extent prudent and determinable. We have determined that the Big Creek crayfish and the St. Francis River crayfish both meet the definition of threatened species; therefore, we are listing them as such and finalizing designations of critical habitat for both species. Both listing a species as an endangered or threatened species and designating critical habitat can be completed only by issuing a rule through the Administrative Procedure Act rulemaking process.

What this document does. This rule lists the Big Creek crayfish (*Faxonius peruncus*) and the St. Francis River crayfish (*Faxonius quadruncus*) as threatened species and designates critical habitat for both species. We are designating approximately 1,069 river miles (1,720 river kilometers) for the Big Creek crayfish and 1,043 river miles (1,679 river kilometers) for the St. Francis River crayfish in Iron, Madison, St. Francois, Washington, and Wayne Counties, Missouri. We are also finalizing a rule under the authority of section 4(d) of the Act that provides measures that are necessary and advisable to provide for the conservation of these species.

The basis for our action. Under the Act, we may determine that a species is an endangered or threatened species based on any of five factors: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence. We have determined that displacement (Factor E) by the woodland crayfish (*Faxonius hylas*) is the primary threat to both the Big Creek crayfish and the St. Francis River crayfish. However, degraded water quality (Factor A) from heavy metal mining activities in the watershed is impacting the species and may act synergistically with the spread of the nonnative woodland crayfish and subsequent displacement of the Big Creek crayfish and St. Francis River crayfish. The existing regulatory mechanisms are not adequately addressing these threats such that the species do not warrant listing (Factor D).

Section 4(a)(3) of the Act requires the Secretary of the Interior (Secretary) to designate critical habitat concurrent with listing to the maximum extent prudent and determinable. Section 3(5)(A) of the Act defines critical habitat as (i) the specific areas within the geographical area occupied by the species, at the time it is listed, on which are found those physical or biological features (I) essential to the conservation of the species and (II) which may require special management considerations or protections; and (ii) specific areas outside the geographical area occupied by the species at the time it is listed, upon a determination by the Secretary that such areas are essential for the conservation of the species. Section 4(b)(2) of the Act states that the Secretary must make the designation on the basis of the best scientific data available and after taking into consideration the economic impact, the impact on national security, and any other relevant impacts of specifying any particular area as critical habitat.

Previous Federal Actions

On September 17, 2020, we published in the **Federal Register** (85 FR 58192) a proposed rule to list the Big Creek crayfish and the St. Francis River crayfish as threatened species under the Act, to adopt a species-specific rule issued under section 4(d) of the Act (''4(d) rule'') that provides for the protection of the Big Creek crayfish and the St. Francis River crayfish, and to designate critical habitat for both species under the Act. Please refer to that proposed rule for a detailed description of previous Federal actions concerning this species.

During the public comment period for the September 17, 2020, proposed rule, we received a request for a public hearing. On April 27, 2021, we published a document (86 FR 22127) reopening the September 17, 2020, proposed rule's comment period for an additional 30 days and announcing a public informational meeting and public hearing on the proposed rule. We held the virtual public informational meeting followed by a public hearing on May 13, 2021.

Summary of Changes From the Proposed Rule

The final rule incorporates changes to our September 17, 2020, proposed rule (85 FR 58192) and our species status assessment report based on the comments we received, as discussed below under Summary of Comments and Recommendations. We have also revised our significant portion of the range analysis.

Based on information we received in comments and our further consideration, in this rule, we refine the 4(d) rule for these species to more clearly define take prohibitions and to accurately regulate only those activities that are necessary and advisable for the protection of the Big Creek crayfish and the St. Francis River crayfish (see

Provisions of the 4(d) Rule, below). The Missouri Department of Conservation (MDC) informed us that adopting two of the exceptions to the prohibitions in the proposed 4(d) rule (the exceptions to the incidental take prohibitions for a person capturing crayfish for educational and observation purposes, and for a person capturing and possessing up to 25 of each species for use as bait) would conflict with the Wildlife Code of Missouri (Missouri Code). Under the Missouri Code, any species added to the Federal List of Endangered and Threatened Wildlife is also added to Missouri's State list of endangered species. Because the Missouri Code also prohibits the purposeful take of any species listed by the State as endangered, allowing capture of the crayfishes for educational and observation purposes and for use as bait would be in direct conflict with the Missouri Code and hinder the MDC's ability to conserve the species. The MDC also expressed concerns that these two exceptions would hinder the enforcement of the prohibition on activities that may facilitate the introduction or spread of the invasive woodland crayfish. After reviewing the MDC's comment and further coordinating with the State of Missouri, we conclude that adopting those two exceptions to the prohibitions in the 4(d) rule would undermine the State's ability to provide conservation for the species, and we do not include them in this final rule.

In this rule, we also expand the exception to the prohibitions in the proposed 4(d) rule concerning incidental take caused by restoration activities or other activities that will result in an overall benefit to one or both of the species. In this exception, we now include the additional restoration activity of replacing in-stream low water crossings that obstruct movement of aquatic organisms with crossings that facilitate the movement of species and materials. Replacing these crossings is expected to result in an overall benefit to one or both species and including it as an exception is an additional activity that we would expect to be beneficial to the conservation of the species. We removed mention of specific Federal agencies that we may consult with on these activities. We removed the list of Federal agencies to reduce confusion, as we would consult whenever a Federal nexus exists, not only with the Federal agencies we specifically named in the proposed 4(d) rule. We also added ''surface and groundwater withdrawals'' to the list of prohibited activities that could impact the hydrological flows such that the species' reproduction or survival will be impacted, in an effort to provide a more detailed list of such activities.

Lastly, in this critical habitat designation, we do not include ''[s]paces under rocks or shallow burrows in gravel that provide refugia'' as a physical or biological feature. That physical and biological feature, which was included in the proposed designation, is redundant with the following physical or biological feature that remains in this designation: ''Adequately low stream embeddedness so that spaces under rocks and cavities in gravel remain available to the Big Creek crayfish and St. Francis River crayfish.''

Supporting Documents

A species status assessment (SSA) team prepared an SSA report for the Big Creek crayfish and the St. Francis River crayfish. The SSA team was composed of Service biologists, in consultation with other species experts. The SSA report represents a compilation of the best scientific and commercial data available concerning the status of the species, including the impacts of past, present, and future factors (both negative and beneficial) affecting the species.

In accordance with our joint policy on peer review published in the **Federal Register** on July 1, 1994 (59 FR 34270), and our August 22, 2016, memorandum updating and clarifying the role of peer review of listing actions under the Act, we solicited independent scientific review of the information contained in the SSA report. We sent the SSA report to four independent peer reviewers and received one response. The peer reviews can be found at *https://www.regulations.gov.* In preparing the proposed rule, we incorporated the results of these reviews, as appropriate, into the SSA report, which was the foundation for the proposed rule and this final rule.

I. Final Listing Determination

Background

A thorough review of the taxonomy, life history, and ecology of the Big Creek crayfish and the St. Francis River crayfish is presented in the SSA report (Service 2022, entire).

The Big Creek crayfish (*Faxonius peruncus*) is a small, olive-tan crayfish with blackish blotches and specks over the upper surface of pincers, carapace, and abdomen. Length of adult individuals ranges from 1.1 to 2.2 inches (in) (2.8 to 5.6 centimeters (cm)). The St. Francis River crayfish (*Faxonius quadruncus*) is a small, dark brown crayfish with blackish blotches or specks over the upper surfaces of the pincers, carapace, and abdomen. Lengths of adult individuals of St. Francis River crayfish have been observed to be similar to adult Big Creek crayfish.

Both the Big Creek crayfish and the St. Francis River crayfish have localized distributions in the Upper St. Francis River watershed upstream of Wappapello Dam in Iron, Madison, St. Francois, Washington, and Wayne Counties in southeastern Missouri (see figure 1, below). The Big Creek crayfish appears most abundant in Big Creek and other streams on the west side of the watershed, as well as in the Twelvemile Creek subwatersheds on the east side; the St. Francis River crayfish mainly inhabits the upper St. Francis River tributaries on the upper end of the Upper St. Francis River watershed. Despite occupying the Upper St. Francis River watershed at a coarse spatial scale, these two species have been observed at the same location only seven times and exhibit mostly discrete distributions (Westhoff 2011, pp. 34–36).

Big Creek crayfish are generally found in streams with widths less than 33 feet (ft) (10 meters (m)) under small rocks or in shallow burrows in headwater streams and small rocky creeks in shallow depths. St. Francis River crayfish are generally found in swiftly moving streams under rocks and boulders in small headwater streams and up to moderately larger rivers. St. Francis River crayfish may prefer pool/backwater areas and run macrohabitats over faster riffles.

Given that both the Big Creek crayfish and St. Francis River crayfish are habitat generalists (Westhoff 2017, pers. comm.) and not all reaches of streams within the watershed have been sampled, it is likely that the species occur at more locations in the watershed. Therefore, we defined the species' ranges as the streams within subwatersheds (12-digit hydrologic units) known to be occupied by each species. We consider these ranges to be a more accurate depiction of the actual ranges of the Big Creek crayfish and St. Francis River crayfish than using only known locations. Within the St. Francis River mainstem (where it is a 5th order stream), the Big Creek crayfish also intermittently occurs in 86 river miles (rmi) (139 river kilometers (km)), and the St. Francis River crayfish occurs in 99 rmi (159 km). Thus, the Big Creek crayfish is found in 1,069 rmi (1,720 km) and the St. Francis River Crayfish is found in 1,043 rmi (1,679 km) in the Upper St. Francis watershed.

Individuals of the Big Creek crayfish and St. Francis River crayfish mate in the fall. Big Creek crayfish females generate an average of 61 eggs, and St. Francis River crayfish females generate an average of 43 to 81 eggs (Pflieger 1996, pp. 116, 122). The normal lifespan for both the Big Creek crayfish and the St. Francis River crayfish appears to be about 2 years (Pflieger 1996, pp. 116, 122). We presume that both species' feeding habits are similar to those of other crayfish species in the region, and their diets likely consist of plant detritus, periphyton, and invertebrates.

Based on genetic analyses (Fetzner and DiStefano 2008, pp. 12–15), we consider the Big Creek crayfish species to consist of two populations (referred to as the Main and Twelvemile Creek populations), whereas the St. Francis River crayfish species consists of a single population (see figure 1, below). We have no evidence to indicate that there has been a reduction in the number of populations for either species from historical conditions. For analytical purposes and for better representation of groups of individuals that occupy the same area and are subject to the same environmental pressures, we defined finer-scale subpopulations. We consider a subpopulation to be those individuals that are able to interbreed and occur within the same stream reach of occupied habitat. Therefore, multiple subpopulations make up the single population (and species) of the St. Francis River crayfish, and multiple subpopulations make up the two populations of the Big Creek crayfish. For Big Creek crayfish and St. Francis River crayfish subpopulations to be healthy, they require a population size and growth rate sufficient to withstand natural environmental fluctuations and habitat of sufficient quantity and quality to support all life stages (specific details of each of these requirements remains unclear). Healthy subpopulations of each species also require gene flow among subpopulations and a native community structure free from nonnative crayfish species that may outcompete and ultimately displace the two species (for more information, see chapter 2 of the SSA report).

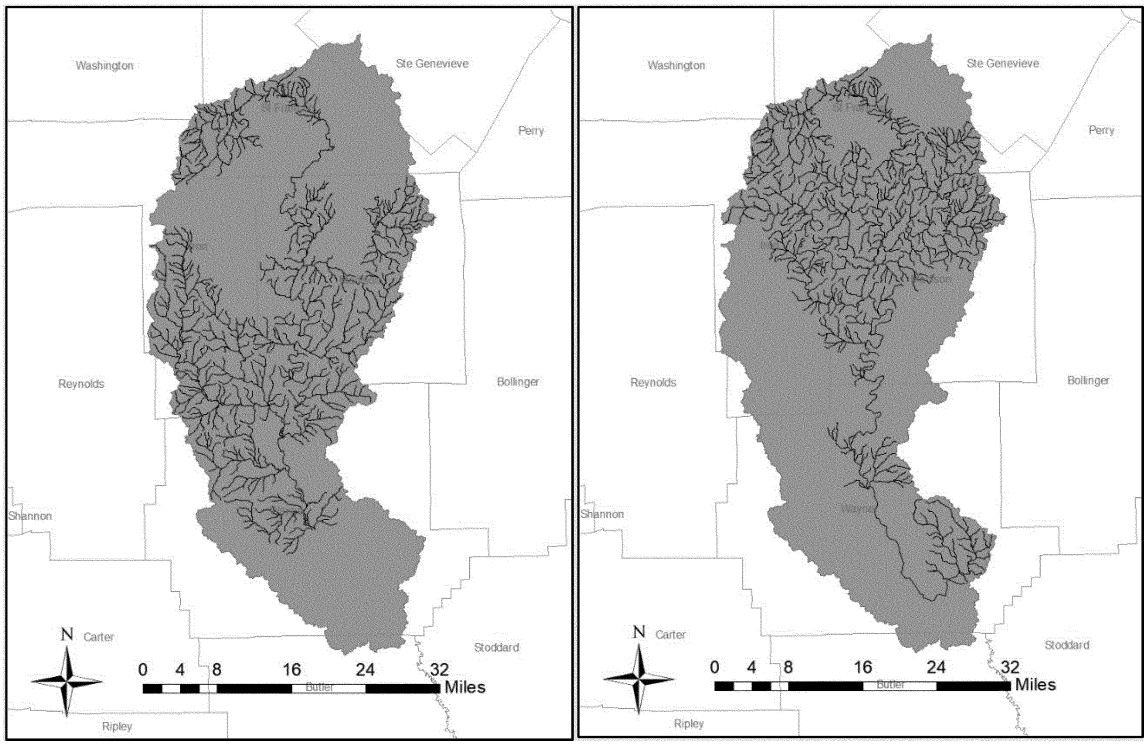

Figure 1. Range of the Big Creek crayfish (left) and St. Francis River crayfish (right) in Missouri.

Regulatory and Analytical Framework

Regulatory Framework

Section 4 of the Act (16 U.S.C. 1533) and the implementing regulations in title 50 of the Code of Federal Regulations set forth the procedures for determining whether a species is an endangered species or a threatened species, issuing protective regulations for threatened species, and designating critical habitat for endangered and threatened species. In 2019, jointly with the National Marine Fisheries Service, the Service issued a final rule that revised the regulations in 50 CFR part 424 regarding how we add, remove, and reclassify endangered and threatened species and the criteria for designating listed species' critical habitat (84 FR 45020; August 27, 2019). On the same day, the Service also issued final regulations that, for species listed as threatened species after September 26, 2019, eliminated the Service's general protective regulations automatically applying to threatened species the prohibitions that section 9 of the Act applies to endangered species (84 FR 44753; August 27, 2019).

The Act defines an ''endangered species'' as a species that is in danger of extinction throughout all or a significant portion of its range, and a ''threatened species'' as a species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act requires that we determine whether any species is an endangered species or a threatened species because of any of the following factors:

(A) The present or threatened destruction, modification, or curtailment of its habitat or range;

(B) Overutilization for commercial, recreational, scientific, or educational purposes;

(C) Disease or predation;

(D) The inadequacy of existing regulatory mechanisms; or

(E) Other natural or manmade factors affecting its continued existence.

These factors represent broad categories of natural or human-caused actions or conditions that could have an effect on a species' continued existence. In evaluating these actions and conditions, we look for those that may have a negative effect on individuals of the species, as well as other actions or conditions that may ameliorate any negative effects or may have positive effects.

We use the term ''threat'' to refer in general to actions or conditions that are known to or are reasonably likely to negatively affect individuals of a species. The term ''threat'' includes actions or conditions that have a direct impact on individuals (direct impacts), as well as those that affect individuals through alteration of their habitat or required resources (stressors). The term ''threat'' may encompass—either together or separately—the source of the action or condition or the action or condition itself.

However, the mere identification of any threat(s) does not necessarily mean that the species meets the statutory definition of an ''endangered species'' or a ''threatened species.'' In determining whether a species meets either definition, we evaluate all identified threats by considering the expected response by the species and the effects of the threats—in light of those actions and conditions that will ameliorate the threats—on an individual, population, and species level. We evaluate each threat and its expected effects on the species, then analyze the cumulative effect of all of the threats on the species as a whole. We also consider the cumulative effect of the threats in light of those actions and conditions that will have positive effects on the species, such as any existing regulatory mechanisms or conservation efforts. The Secretary determines whether the species meets the definition of an ''endangered species'' or a ''threatened species'' only after conducting this cumulative analysis and describing the expected effect on the species now and in the foreseeable future.

The Act does not define the term ''foreseeable future,'' which appears in the statutory definition of ''threatened species.'' Our implementing regulations at 50 CFR 424.11(d) set forth a framework for evaluating the foreseeable future on a case-by-case basis. The term ''foreseeable future'' extends only so far into the future as the Services can reasonably determine that both the future threats and the species' responses to those threats are likely. In other words, the foreseeable future is the period of time in which we can make reliable predictions. ''Reliable'' does not mean ''certain''; it means sufficient to provide a reasonable degree of confidence in the prediction. Thus, a prediction is reliable if it is reasonable to depend on it when making decisions. It is not always possible or necessary to define foreseeable future as a particular number of years. Analysis of the foreseeable future uses the best scientific and commercial data available and should consider the timeframes applicable to the relevant threats and to the species' likely responses to those threats in view of its life-history characteristics. Data that are typically relevant to assessing the species' biological response include species-specific factors such as lifespan, reproductive rates or productivity, certain behaviors, and other demographic factors.

Analytical Framework

The SSA report documents the results of our comprehensive biological review of the best scientific and commercial data regarding the status of the species, including an assessment of the potential threats to the species. The SSA report does not represent our decision on whether the species should be listed as an endangered or threatened species under the Act. However, it does provide the scientific basis that informs our regulatory decisions, which involve the further application of standards within the Act and its implementing regulations and policies.

To assess the viability of the Big Creek crayfish and the St. Francis River crayfish, we used the three conservation biology principles of resiliency, redundancy, and representation (Shaffer and Stein 2000, pp. 306–310). Briefly, resiliency supports the ability of the species to withstand environmental and demographic stochasticity (for example, wet or dry, warm or cold years), redundancy supports the ability of the species to withstand catastrophic events (for example, droughts, large pollution events), and representation supports the ability of the species to adapt over time to long-term changes in the environment (for example, climate changes). In general, the more resilient and redundant a species is and the more representation it has, the more likely it is to sustain populations over time, even under changing environmental conditions. Using these principles, we identified the species' ecological requirements for survival and reproduction at the individual, population, and species levels, and described the beneficial and risk factors influencing the species' viability.

The SSA process can be categorized into three sequential stages. During the first stage, we evaluated the individual species' life-history needs. The next stage involved an assessment of the historical and current condition of the species' demographics and habitat characteristics, including an explanation of how the species arrived at its current condition. The final stage of the SSA involved making predictions about the species' responses to positive and negative environmental and anthropogenic influences. Throughout all of these stages, we used the best available information to characterize viability as the ability of a species to sustain populations in the wild over time. We use this information to inform our regulatory decision.

The following is a summary of the key results and conclusions from the SSA report; the full SSA report can be found at Docket No. FWS–R3–ES–2019–0020 on *https://www.regulations.gov.*

Summary of Biological Status and Threats

In this discussion, we review the biological condition of the species and its resources, and the threats that influence the species' current and future condition, in order to assess the species' overall viability and the risks to that viability.

The primary threat to the future viability of the Big Creek crayfish and the St. Francis River crayfish is displacement by a nonnative crayfish species (woodland crayfish). Currently, no means to slow or stop the spread of the woodland crayfish exist. Contamination from heavy metal mining and habitat degradation from sedimentation also affect the species' viabilities. A brief summary of these stressors is presented below; for a full description of these stressors, refer to chapter 3 of the SSA report for each species (USFWS 2022, pp. 13–22).

Nonnative Crayfish

The introduction of nonnative crayfish is one of the primary factors contributing to declining crayfish populations (Taylor et al. 2007, p. 374). Nonnative crayfish species can displace native crayfishes through competition, differential predation, reproductive interference or hybridization, disease transmission, or a combination of these mechanisms (Lodge *et al.* 2000, pp. 9, 12).

Reproductive interference in the form of hybridization may be the main mechanism driving the displacement of the Big Creek crayfish and the St. Francis River crayfish. Woodland crayfish have been observed engaging in mating behavior with St. Francis River crayfish (Westhoff 2011, p. 117). There is also genetic evidence of hybridization between the woodland crayfish and the Big Creek crayfish, as well as between the woodland crayfish and the St. Francis River crayfish (Fetzner et al. 2016 pp. 19–26). Alleles from both parental species have been detected in individuals in areas invaded by the woodland crayfish, which suggest that both native species readily hybridize with the woodland crayfish (Fetzner *et al.* 2016, p. 28). Genetic swamping (a process by which the local genotype is replaced) appears to be the mechanism that leads to the eventual full displacement of the native species of crayfish, as at least some of the hybrid young appear to be viable (Fetzner *et al.* 2016, p. 29).

In 1984, the woodland crayfish, endemic to southeastern Missouri, was first documented in the Upper St. Francis River watershed, which is outside of its native range (Pflieger 1996, p. 82). It is estimated that by 2008 (22 years later), the crayfish had invaded 5 to 20 percent of the total 3,225 rmi in the watershed (DiStefano and Westhoff 2011, p. 40). Within areas invaded by the woodland crayfish, the distribution and abundance of the Big Creek crayfish and St. Francis River crayfish have been substantially impacted. In one stream, the Big Creek crayfish constituted 87 percent of the crayfish community in areas not invaded by the woodland crayfish, but only 27 percent in invaded areas (DiStefano and Westhoff 2011, p. 40). Similarly, the St. Francis crayfish constituted 50 percent of the crayfish community in uninvaded areas, but only 13 percent in invaded areas of the stream. In the invaded areas of these streams, the woodland crayfish had become the dominant species, constituting 57 to 86 percent of the crayfish community (DiStefano and Westhoff 2011, p. 40).

The woodland crayfish's impact on abundance of the Big Creek crayfish and St. Francis River crayfish has resulted in the range contraction of both of the native species. In one stream, the range of the Big Creek crayfish contracted 9.1 rmi (14.7 km) from 2004 to 2009, simultaneously with the woodland crayfish's expansion in the stream (DiStefano and Westhoff 2011, p. 40). In three other streams, the range of the St. Francis River crayfish contracted in conjunction with the woodland crayfish's invasion (Riggert et al. 1999, p. 1999; DiStefano 2008, p. 419).

The known locations of the woodland crayfish are likely an under-representation of where the species is present in the watershed, given that: (1) The majority of locations were documented prior to 2010, and the species can expand at a rate as high as 745 yards (yd) per year (681 meters (m) per year) in the upstream direction and 2,499 yd per year (2,285 m per year) in the downstream direction (DiStefano and Westhoff 2011, pp. 38, 40); and (2) the woodland crayfish has already been introduced at several locations throughout the watershed and has likely been introduced at additional, undocumented locations (it is not feasible to survey every stream throughout the watershed).

Contamination by Heavy Metal Mining

Approximately 22 percent of the Big Creek crayfish's range and 16 percent of the St. Francis River crayfish's range occur in areas with contaminated soil. Southeastern Missouri has been a primary producer of lead since the early 1700s, in an area referred to as the Old Lead Mining Belt, and more recently in an area referred to as the New Lead Mining Belt. Although most mining ceased in the 1970s, waste from mining operations is still present in the landscape, resulting in contamination of fish and other aquatic biota, alteration of fish and invertebrate communities, and public health advisories against human consumption of lead-contaminated fish (Czarneski 1985, pp. 17–23; Schmitt *et al.* 1993, pp. 468–471). The relocation of mine waste (chat) throughout the area as topsoil, fill material, and aggregate for roads, railroads, concrete, and asphalt has further expanded the area of contamination, as has aerial deposition from heavy metal smelters and the use of lead mining tailings for agricultural purposes due to their lime content (NASEM 2017, pp. 25–37). All of these uses have contributed to contamination of streams in portions of the Upper St. Francis River watershed. As a result, 24.2 rmi (38.9 km) of the Little St. Francis River are currently included in the Environmental Protection Agency's (EPA) 303(d) list of impaired waters for not meeting water quality standards for lead (EPA 2020, p. 28; MDNR 2020, p. 8). In 2012, a portion of Big Creek (34.1 rmi; 54.9 km) was added to the EPA's 303(d) list for not meeting water quality standards for lead and cadmium. That stream reach recently was removed from the 303(d) list for lead (in sediment) due to remediation efforts, but 1.8 rmi (2.9 km) remain listed for cadmium (EPA 2020, p. 16).

Studies conducted in southeastern Missouri and other areas demonstrate that heavy metal contamination adversely affects riffle-dwelling crayfish. In a study conducted in a watershed adjacent to that of the Upper St. Francis River, metal concentrations in crayfish at sites downstream of mining activities were significantly higher than those at reference sites (Allert *et al.* 2008, pp. 100–101). Significantly lower crayfish densities were observed at sites downstream of mining activities than those at reference sites, indicating that metals associated with mining activities have negative impacts on crayfish populations in Ozark streams (Allert *et al.* 2008, p. 100). Similar results were observed in other areas impacted by mining wastes (including sites in the Upper St. Francis River watershed), with sites downstream of mining activities having significantly higher metal concentrations in crayfish, reduced densities of crayfish (from 80 to 100 percent) (Allert et al. 2008, pp. 100–101; Allert et al. 2013, p. 567), and significantly lower survivorship. The mechanisms by which crayfish can be impacted by heavy metal contamination include interference with orienting (Hubschman 1967, pp. 144–147; Lahman et al. 2015, pp. 443–444), inhibition of respiration or aerobic metabolism, and increased susceptibility to predation.

Sedimentation

Crayfish presence is dependent on rocks embedded in little or no sediment and open interstitial spaces (Loughman *et al.* 2016, p. 645; Loughman *et al.* 2017, p. 5). There is little gravel accumulation in the Upper St. Francis River watershed due to the surrounding geology. Streambank soils also are less likely to erode than in most Ozark streams because of these lower densities of gravel. Thus, stream channel substrates contain a significant proportion of stable cobble, stone, and boulders, which provide habitat for crayfishes (Boone 2001, p. GE1). However, similar to many Ozark streams, streams within the Upper St. Francis River watershed may experience increased sedimentation in the future if land uses change or if riparian corridors are cleared. Three streams within the watershed have experienced excessive sedimentation due to eroding or breached mine tailings (Boone 2001, p. WQ4; DiStefano 2008, p. 191). Breaches can allow a large volume of tailings to enter a stream, such as the 1,500 cubic yd (1,200 cubic m) spilled into a stream

in 1992 (Boone 2001, p. WQ4), and it can take multiple years for the aquatic community to begin to recover following a breach. Excessive deposition of fine sediment from tailings or other sources can cover rocks and cavities used by the Big Creek crayfish and St. Francis River crayfish as refugia (an area in which a population of organisms can survive through a period of unfavorable conditions). The loss of refugia likely results in reduced foraging habitat, thereby reducing carrying capacity and the density of subpopulations. The loss of refugia may also increase competition with the woodland crayfish and potentially facilitate displacement of the Big Creek crayfish and St. Francis River crayfish. The loss of refugia, caused by sedimentation, likely also increases predation risk.

Cumulative Effects

In addition to individually affecting the species, it is likely that several of the risk factors summarized above are acting synergistically or additively on both species. The combined impact of multiple stressors is likely more harmful than a single stressor acting alone. For example, in areas affected by lead mining contamination, the rate of displacement of Big Creek crayfish and St. Francis River crayfish by woodland crayfish may increase. Although lead contamination may have negative effects on woodland crayfish as well, we anticipate cumulative synergistic effects in areas where woodland crayfish have invaded and lead mining contamination is present. Additionally, in areas invaded by the woodland crayfish, the loss of refugia from sedimentation may increase competition between the native species and the woodland crayfish. The combination of stressors acting on the Big Creek crayfish and the St. Francis River crayfish will likely impact them more severely in combination than any one factor alone.

We note that, by using the SSA framework to guide our analysis of the scientific information documented in the SSA report, we have not only analyzed individual effects on the species, but we have also analyzed their potential cumulative effects. We incorporate the cumulative effects into our SSA analysis when we characterize the current and future condition of the species. To assess the current and future condition of the species, we undertake an iterative analysis that encompasses and incorporates the threats individually and then accumulates and evaluates the effects of all the factors that may be influencing the species, including threats and conservation efforts. Because the SSA framework considers not just the presence of the factors, but to what degree they collectively influence risk to the entire species, our assessment integrates the cumulative effects of the factors and replaces a standalone cumulative effects analysis.

Conservation Efforts and Regulatory Mechanisms

Monitoring and research on the Big Creek crayfish and St. Francis River crayfish have been conducted by the Missouri Department of Conservation (MDC) and various other organizations. Multiple evaluations of effects from lead mining contamination on crayfish, including the St. Francis River crayfish, have been conducted by the U.S. Geological Survey (USGS). Monitoring efforts benefit conservation efforts of the Big Creek crayfish and St. Francis River crayfish by providing information on population health and trends and on the magnitude and extent of threats; research efforts provide information on mechanisms by which threats may impact the native crayfishes.

To help curtail the spread of nonnative crayfish in Missouri, MDC amended the Wildlife Code of Missouri (Missouri Code) in 2011–2012, to increase regulations pertaining to the sale, purchase, and import of live crayfishes. While the virile crayfish (*Faxonius virilis*) may still be commercially sold in the State for live bait, all other live crayfishes can be imported, sold, or purchased in Missouri only for the purposes of human consumption or as food for captive animals kept by authorized entities (for example, research institutions/agencies, publicly owned zoos) (Missouri Code of State Regulations 2018b, pp. 6–7). This State regulation effectively bans the sale and purchase of live crayfish for bait, the import and sale of live crayfishes in pet stores, and the purchase and import of live crayfishes by schools for classroom study, all of which are vectors for crayfish invasions. It is also illegal in Missouri to release any baitfish or crayfish into public waters, except as specifically permitted by the MDC (Missouri Code of State Regulations 2018a, p. 3). These State regulations may help reduce the likelihood of future invasions of nonnative crayfishes within the Upper St. Francis River watershed. However, as the woodland crayfish has already been introduced at several locations in the watershed, these State regulations will not affect the inevitable spread of that species within the Upper St. Francis River watershed.

Approximately 41 percent of the Upper St. Francis River watershed is in Federal and State ownership, with the majority managed by the U.S. Forest Service as part of the Mark Twain National Forest. The U.S. Forest Service's management efforts benefit stream health by focusing on riparian protection and control and reduction of sediment entering streams. Other major public landowners in the watershed include the MDC, the U.S. Army Corps of Engineers, and the Missouri Department of Natural Resources. Additionally, 5.3 rmi (8.5 km) of Big Creek are designated an ''Outstanding State Resource Water.'' Missouri Outstanding State Resource Waters are high-quality waters with significant aesthetic, recreational, or scientific value and receive special protection against degradation in quality (Missouri Code of State Regulations 2018c, pp. 14, 16). These protections help maintain water quality and minimize additional sedimentation; therefore, these protections may maintain the quantity and quality of habitat of the Big Creek crayfish and St. Francis River crayfish.

The EPA has conducted, and has plans to continue, extensive remediation efforts in areas of southeastern Missouri impacted by lead mining, including the Upper St. Francis River watershed (EPA 2017, entire; EPA 2018b, entire). These efforts include sediment, soil, and mine waste removal. The EPA also has funded the development of a watershed master plan for the Little St. Francis River, located in the upper end of the watershed (EPA 2018a, entire). This plan will identify sources of pollution (related to lead mining) and measures to reduce the pollution.

Current Condition of Species

To evaluate the current (and future viability) of the Big Creek crayfish and the St. Francis River crayfish, we assessed a range of conditions to allow us to consider the species' resiliency, representation, and redundancy. For the purposes of this assessment, populations were delineated using known locations and expanded to a subwatershed scale As previously stated, we scaled down to a subpopulation level for analytical purposes, as both species have a limited number of populations. In the case of the St. Francis River crayfish, population-level ecology is also species-level ecology because genetic analyses indicate the entire species exists as a single population. Scaling down to the subpopulation level allowed us to better represent and compare groups of individuals at a finer scale. A summary of the current condition of each species

is given at the end of this section (Table 1 and Table 2).

The Big Creek crayfish and St. Francis River crayfish currently occur in 16 subwatersheds. In 2008, it was estimated that the woodland crayfish occupied 103 to 403 rmi (166 to 649 km) or 5 to 20 percent of the total 2,004 rmi (3,225 km) in the Upper St. Francis River watershed (DiStefano and Westhoff 2011, p. 40). Based on known locations of the woodland crayfish, we know that 5 of the 16 Big Creek crayfish subwatersheds have been invaded (31 percent) and 4 of the 16 St. Francis River subwatersheds have been invaded (25 percent). We also know that the invasion has resulted in extirpation of the Big Creek crayfish in 9.1 rmi (14.7 km) and of the St. Francis River crayfish in 8.5 rmi (13.7 stream km) (Figure 2). This is likely a sizable underestimate of the actual extent of both range contractions, given that data for known native range contractions represent conditions in only 2 of the 11 streams known to be invaded by the woodland crayfish (the range contractions for each species occurred in different streams).

In addition, the known locations of the woodland crayfish depicted in Figure 2 are likely an under-representation of where the species is present in the watershed given that (1) the majority of locations were documented prior to 2010, (2) the species can expand at a rate as high as 745 yards (y) per year (681 m per year) in the upstream direction and 2,499 y per year (2,285 m year) in the downstream direction (DiStefano and Westhoff 2011, pp. 38, 40) and (3) the woodland crayfish has already been introduced at several locations throughout the watershed and has likely been introduced at additional, undocumented locations (it is not feasible to survey every stream throughout the watershed). Finally, there is currently no means to slow or stop the spread of the woodland crayfish.

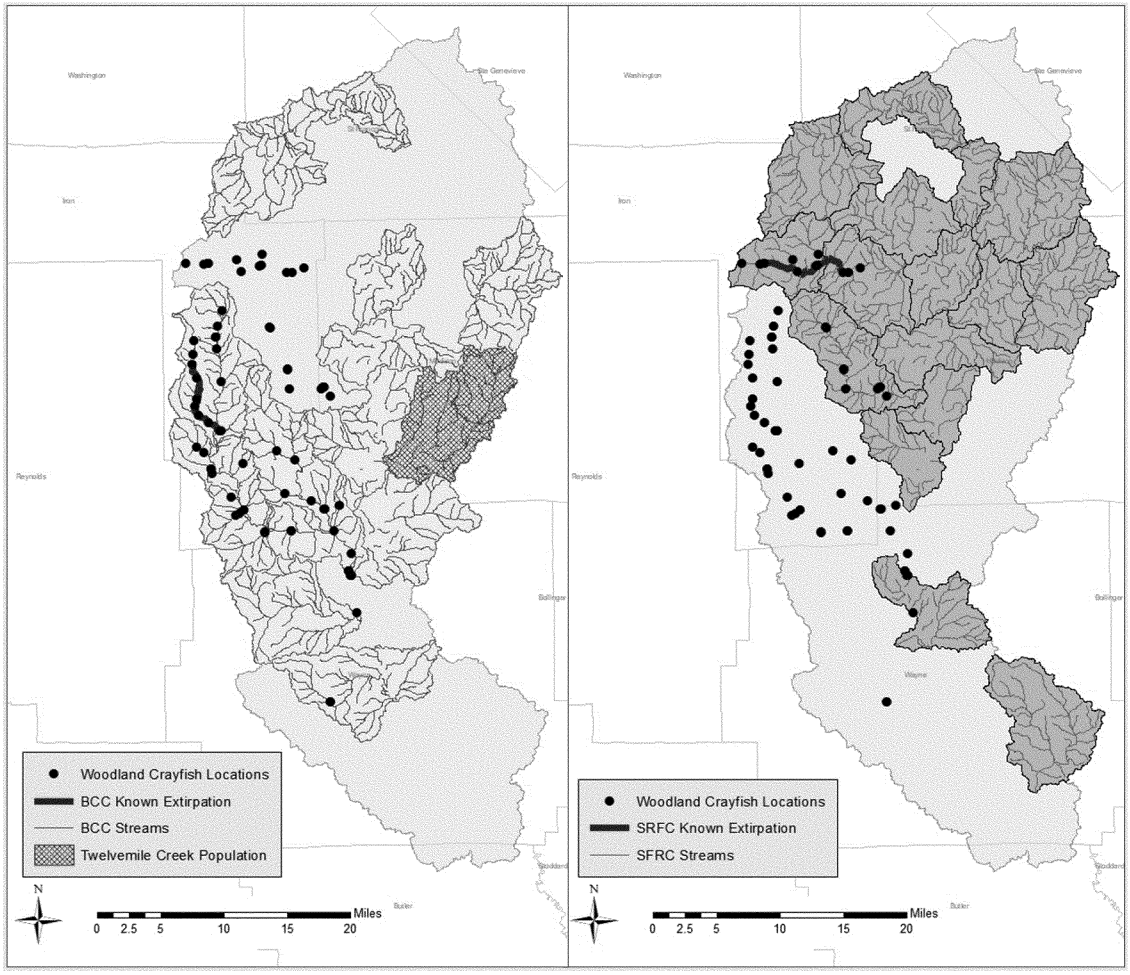

Figure 2. Known locations (as of 2018) of the Woodland Crayfish and stream segments from which the Big Creek Crayfish (BCC; left) and St. Francis River Crayfish (SFRC; right) have been extirpated due to the Woodland Crayfish invasion.

To evaluate the current condition of the Big Creek crayfish and St. Francis River crayfish in terms of the 3Rs, we reviewed available information on health of the subpopulations and queried species experts on the species' representation and redundancy. The full explanation of this analysis can be found in the SSA report; a summary of our conclusions is given below.

Resiliency

Although the Twelvemile Creek population of the Big Creek crayfish has not been invaded by the woodland crayfish, the woodland crayfish has been documented at 30 locations within the Main population, with 5 of the 14 (36 percent) of the population's subwatersheds invaded. Based on the Big Creek crayfish's range contractions

and the rate at which the woodland crayfish can expand, we expect that range contractions are happening throughout the other invaded subwatersheds. We also conclude that it is likely that St. Francis River crayfish abundance in the Main population has been substantially reduced from heavy metal contamination given that 208 rmi (335 km) of the 940 rmi (1,514 km), or 22 percent, of the population occurs in areas with heavy metal surface contamination. Studies conducted in nearby watersheds demonstrate that heavy metal contamination reduces abundance. These impacts have reduced resiliency of the Main population and thus resiliency of the Big Creek crayfish has been reduced.

Four of the 16 subwatersheds occupied by the St. Francis River crayfish (25 percent) have been invaded by the woodland crayfish. Similar to the Big Creek crayfish, we expect that contractions of the St. Francis River crayfish are occurring in these areas based on range contractions documented elsewhere and the rate at which the woodland crayfish can expand. Resiliency of the St. Francis River crayfish has been further reduced due to impacts from heavy metal contamination, with 16 percent of the range occurring in areas with heavy metal contamination.

The narrow ranges of both the Big Creek crayfish and St. Francis River crayfish also inherently make them vulnerable to environmental variation and stochastic events that could affect their entire range (for example, extreme drought or flooding).

Representation

We consider Big Creek crayfish representation as having healthy subpopulations in both the Twelvemile Creek population and the Main population, to maintain the full breadth of adaptive diversity (and, thus, adaptive capacity). There appears to be gene flow throughout most of the Big Creek crayfish's range (Fetzner and DiStefano 2008, p. 12). However, the Big Creek crayfish in the Twelvemile Creek population contain unique haplotypes (a group of alleles that are inherited from a single parent) that were not found anywhere else in the watershed (Fetzner and DiStefano 2008, p. 12). Although the Twelvemile Creek population is currently not impacted by the woodland crayfish, the range of the Main population has been reduced due to woodland crayfish invasion, with 36 percent of the subwatersheds invaded (Table 1 and Table 2). Therefore, the species may have lost some level of representation. For the St. Francis River crayfish, we consider representation as having multiple, healthy subpopulations distributed across the range of the species to maintain the breadth of adaptive diversity (that is, throughout its range in the Upper St. Francis River watershed). Similar to the Big Creek crayfish, some level of representation of the St. Francis River crayfish may have been lost due to documented and undocumented range contractions, with 4 of the 16 (25 percent) of the St. Francis River subwatersheds invaded.

Redundancy

For the purposes of the SSA, we define a catastrophic event as a biotic or abiotic event that causes significant impacts at the population level such that the population cannot rebound from the effects or the population becomes highly vulnerable to normal population fluctuations or stochastic events.

Based on expert input (further described in the SSA report), we do not consider extreme drought or chemical spills as catastrophic events that are likely to have catastrophic effects on the Big Creek crayfish and St. Francis River crayfish at the species-level. While these events may not have the devastating effects of a catastrophic event, the occurrence of extreme droughts or chemical spills would reduce resiliency of the species acting as a stressor on a more localized scale. These stressors may potentially extirpate or compromise subpopulations throughout the impacted area (see chapter 3 of the SSA report). However, both species are inherently vulnerable to extreme events or large-scale stressors given their small range, and there has been some reduction of in-population redundancy due to the extirpation of individuals (and subpopulations) in some areas because of woodland crayfish invasion.

TABLE 1—SUMMARY OF BIG CREEK CRAYFISH'S CURRENT CONDITION

	Assessment of current condition
Currently Occupied Stream Distance.	Occurs in approximately 983 rmi (1,581 km) within 16 subwatersheds. However, this does not account for documented and undocumented range contractions that we expect are occurring in 31 percent of the species' subwatersheds due to the woodland crayfish invasion. In addition, 86 rmi (139 km) of stream reaches are likely occupied intermittently by the species due to movement among occupied watersheds.
Health of Subpopulations	In areas invaded by the woodland crayfish (31 percent of occupied subwatersheds), abundance is substantially reduced, with the species completely extirpated in some invaded areas. In areas impacted by lead mining contamination (22 percent of the range), abundance is also likely reduced. In areas not invaded by the woodland crayfish or impacted by lead mining contamination, we presume subpopulations are healthy.
Health of Populations	We presume the Twelvemile Creek population is currently healthy because it does not appear that the woodland crayfish has invaded the population and the population is outside of the area of lead mining contamination. The health of the Main population, however, has been impacted due to documented and undocumented range contractions from the woodland crayfish invasion in 36 percent of the population's subwatersheds. Abundance has also likely been reduced in 22 percent of the Main population due to heavy metal contamination.
Resiliency	Reduced due to documented and undocumented range contractions in 31 percent of the Big Creek crayfish's subwatersheds and expected reduced abundance in 22 percent of the range due to heavy metal contamination.
Representation	Somewhat reduced ecological diversity due to documented and undocumented range contractions in 25 percent of the Big Creek crayfish's subwatersheds.
Redundancy	Somewhat reduced due to documented and undocumented range contractions in 36 percent of subwatersheds in the Main population. The species is also inherently vulnerable to some extreme events given its small range, However, both populations of the species have a high level of redundancy relative to extreme events that affect areas downstream of the source of the event (for example, chemical spills) due to the number of tributaries that they occupy that would not be downstream of the event.

TABLE 2—SUMMARY OF ST. FRANCIS RIVER CRAYFISH'S CURRENT CONDITION

	Assessment of current condition
Currently Occupied Stream Distance.	Occurs in approximately 944 rmi (1,519 km) within 16 subwatersheds. However, this does not account for documented and undocumented range contractions that we expect are occurring in 25 percent of the species' subwatersheds due to the woodland crayfish invasion. In addition, 99 rmi (159 km) of stream reaches are likely occupied intermittently by the species due to movement among occupied watersheds.
Health of Subpopulations	In areas invaded by the woodland crayfish (25 percent of occupied subwatersheds), abundance is substantially reduced, with the species completely extirpated in some invaded areas. In areas impacted by lead mining contamination (16 percent of the range), abundance is also likely reduced. In areas not invaded by the woodland crayfish or impacted by lead mining contamination, we presume subpopulations are healthy.
Resiliency	Reduced due to documented and undocumented range contractions in 25 percent of the St. Francis River crayfish's subwatersheds. Also reduced due to reduced abundance in 16 percent of the range due to heavy metal contamination.
Representation	Somewhat reduced ecological diversity due to documented and undocumented range contractions in 25 percent of the St. Francis River crayfish's subwatersheds.
Redundancy	Somewhat reduced due to documented and undocumented range contractions in 25 percent of the St. Francis River crayfish's subwatersheds. The species is also inherently vulnerable to some extreme events given the species' small range, and there has been some reduction in redundancy due to reduction of the range. However, the species have a high level of redundancy relative to extreme events that affect areas downstream of the source of the event (for example, chemical spills) due to the number of tributaries that they occupy that would not be downstream of the event.

Future Scenarios

For the purpose of this assessment, we define viability as the ability of the species to sustain populations in the wild over time. To evaluate future conditions of the Big Creek crayfish and St. Francis River crayfish, we predicted the expansion of the nonnative woodland crayfish within the ranges of the native crayfishes. We asked biologists with expertise on crayfishes to estimate the future expansion rate in the Upper St. Francis River watershed, the impact on Big Creek crayfish and St. Francis River crayfish abundances, and the length of time for those impacts to be fully realized. A full description of the expert elicitation meeting methodology and results are available in the SSA report (Service 2022, pp. 36–47 & 64–70). As a way to characterize uncertainty in predicting future conditions and to capture the entire breadth of plausible future conditions, we developed ''reasonable best,'' ''reasonable worst,'' and ''most likely'' scenarios that represent the plausible range of the Big Creek crayfish's and St. Francis River crayfish's future conditions (see Table 3, below). Each of the scenarios is based on the expert-elicited estimates of the woodland crayfish's expansion rates, impacts of the invasion, and time for impacts to be fully realized. For each of the scenarios, we predicted the extent of future expansion of the woodland crayfish at 10, 25, and 50 years into the future. We then calculated the extent of the Big Creek crayfish's and St. Francis River crayfish's ranges that would be affected under each scenario and described effects to abundance based on the experts' projections. Because we used a finer scale data, we present results in river miles invaded, rather than subwatersheds invaded (as we did to assess current conditions). Additional details on the expert elicitation and a summary of results can be found in appendix B of the SSA report. Below is a summary of the results from the SSA; for further details on the methods, assumptions, and results, see chapter 5 of the SSA report. A summary of predicted impacts in 50 years for both species is summarized in Tables 4 and 5 below.

TABLE 3—EXPLANATION OF SCENARIOS USED TO PREDICT THE FUTURE CONDITION OF BIG CREEK CRAYFISH AND ST. FRANCIS RIVER CRAYFISH

Scenario	Estimates used
Reasonable Best	• Lowest plausible expansion rate of the woodland crayfish • Lowest level of predicted impact on abundance of Big Creek crayfish and St. Francis River crayfish • Highest number of years for impacts to be fully realized
Reasonable Worst	• Highest plausible expansion rate of the woodland crayfish • Highest level of predicted impact on abundance of Big Creek crayfish and St. Francis River crayfish • Lowest number of years for impacts to be fully realized
Most Likely	• Most likely expansion rate of the woodland crayfish • Most likely level of predicted impact on abundance of Big Creek crayfish and St. Francis River crayfish • Most likely number of years for impacts to be fully realized

Big Creek Crayfish

Under the ''reasonable best'' scenario, we expect the woodland crayfish invasion will expand to 25 percent of the Big Creek crayfish Main population in 10 years, constituting 24 percent of the species' range. In 25 years, 35 percent of the Big Creek crayfish Main population will have been invaded, constituting 33 percent of the species' range. In 50 years, 49 percent of the Main population will be invaded, constituting 46 percent of the species' range. The Twelvemile Creek population is not predicted to be invaded in 25 or 50 years under this scenario. In areas invaded by the woodland crayfish, abundance is predicted to be reduced by over 50 percent in 10 to 20 years.

Under the ''reasonable worst'' scenario, we expect 44 percent of the Main population and 0.2 percent of the Twelvemile Creek population will be invaded by the woodland crayfish in 10 years, constituting 42 percent of the Big Creek crayfish's total range. In 25 years, 70 percent of the Main population and 81 percent of the Twelvemile Creek population will be invaded by the woodland crayfish, constituting 70 percent of the Big Creek crayfish's total range. In 50 years, 90 percent of the Main population and 100 percent of the Twelvemile Creek population will be invaded, constituting 91 percent of the species' range. In areas invaded by the woodland crayfish, abundance is

predicted to be reduced by approximately 100 percent (that is, extirpation) in less than 10 years.

Under the ''most likely'' scenario, we expect 28 percent of the Big Creek crayfish Main population will be invaded by the woodland crayfish in 10 years, constituting 27 percent of the species' range. In 25 years, 44 percent of the Main population and 6 percent of the Twelvemile Creek population will be invaded by the woodland crayfish, constituting 42 percent of the Big Creek crayfish's total range. In 50 years, 64 percent of the Main population and 56 percent of the Twelvemile Creek population will be invaded, constituting 64 percent of the species' range. The best available information indicates that once an area is invaded by the woodland crayfish, the Big Creek crayfish will be extirpated within 10 years.

Given that there are currently no known feasible measures to curtail the woodland crayfish invasion for the long term, we consider it extremely likely that the invasion will continue. Based on our use of expert-elicited estimates of the rate of expansion and the resulting impacts on the Big Creek crayfish, we are also reasonably certain that we can predict the plausible range of future conditions within 50 years. Here, we discuss the species' future condition in terms of the next 50 years (Summarized below in Table 4.); 10- and 25-year future conditions are discussed (beyond what was stated above) in the SSA report. As previously stated, resiliency of the Big Creek crayfish has already been reduced from historical conditions due to range contractions in 31 percent of occupied subwatersheds caused by invasion of the woodland crayfish. Resiliency also has likely been reduced due to lead mining contamination in 22 percent of the crayfish's range. Using the modeling results (that represent the range of all future scenarios), we predict that within 50 years resiliency of the species will continue to be reduced due to a 50 to 100 percent reduction in abundance in 49 to 90 percent of the Main population and 0 to 100 percent of the Twelvemile Creek population. In addition, if other threats (aside from woodland crayfish invasion and lead mining contamination) such as drought, flood events, disease, and degraded water quality, remain the same or increase, resiliency will be further reduced by these threats. Thus, our modeled results represent the minimum amount of the species' range that is expected to be impacted within 50 years because the decline in resiliency only considers impacts of the woodland crayfish invasion and none of the other stressors mentioned above that affect the Big Creek crayfish.

We predict that the Big Creek crayfish will continue to lose ecological diversity, given the expected expansion of the woodland crayfish and the resulting impact on subpopulations in both the Main and Twelvemile Creek populations. Both populations are expected to experience a 50 to 100 percent reduction in abundance in invaded areas. For the Twelvemile Creek population, in 50 years there may be as much as 100 percent of the population's range invaded, whereas up to 90 percent of the Main population's range may be invaded in the same time. Given the unique haplotypes contained in the Twelvemile Creek population, the reduced abundance of subpopulations in the majority of that population, or especially the complete loss of that population, would represent an appreciable reduction in the species' representation.

The Big Creek crayfish is inherently vulnerable to extreme events and other stressors, given the species' small range. There has been already been some reduction in redundancy due to documented and undocumented range contractions in 36 percent of subwatersheds in the Main population. Based on results of the future scenario modeling, we expect that within 50 years, redundancy of the Big Creek crayfish will be further reduced by the predicted 50 to 100 percent reduction in abundance in 49 to 90 percent of the range of the Main population and 0 to 100 percent of the range of the Twelvemile Creek population. Because the Twelvemile Creek population consists of only one subwatershed, it will be more vulnerable to extreme events if multiple sub-tributaries are impacted by the woodland crayfish invasion.

St. Francis River Crayfish

Under the ''reasonable best'' scenario, we expect 12 percent of the St. Francis River crayfish's range will be invaded by the woodland crayfish in 10 years. In 25 years, 21 percent of the range will have been invaded, and 33 percent of the range will have been invaded in 50 years. In areas where the woodland crayfish has invaded, abundance is predicted to be reduced by over 10 to 50 percent in 30 to 40 years.

Under the ''reasonable worst'' scenario, we expect 30 percent of the St. Francis River crayfish's range will be invaded by the woodland crayfish in 10 years. In 25 years, 56 percent of the range will have been invaded, and 81 percent of the range will have been invaded in 50 years. In areas where the woodland crayfish has invaded, abundance is predicted to be reduced by approximately 100 percent (that is, extirpation) in less than 10 years.

Under the ''most likely'' scenario, we expect 18 percent of the St. Francis River crayfish's range will be invaded by the woodland crayfish in 10 years. In 25 years, 32 percent of the range will have been invaded, and 50 percent of the range will have been invaded in 50 years. In areas where the woodland crayfish has invaded, abundance is predicted to be reduced by 50 to 100 percent in 10 to 30 years (Table 5).

Similar to the Big Creek crayfish, we are also reasonably certain that we can predict the plausible range of future conditions for the St. Francis River crayfish within 50 years because there are no known feasible measures to curtail the spread of the woodland crayfish. Here, we discuss the species' future condition over the next 50 years; 10- and 25-year future conditions are discussed (beyond what was stated above) in the SSA report. As previously stated, resiliency of the St. Francis River crayfish has already been reduced from historical conditions due to effects of the woodland crayfish invasion in 25 percent of subwatersheds occupied by the St. Francis River crayfish and also from lead mining contamination in 22 percent of the species' range. Based on the modeling results (the range of all future scenarios), we predict that resiliency of the species will continue to be reduced due to the woodland crayfish invasion and resulting 10 to 100 percent reduction in abundance in an estimated 33 to 81 percent of the range within 50 years. If threats other than the woodland crayfish and lead mining contamination, such as drought, flood events, disease and degraded water quality remain the same or increase, resiliency will be further reduced. Like the Big Creek crayfish, our modeled results represent the minimum amount of the species' range that is expected to be impacted within 50 years because the decline in resiliency only considers impacts of the woodland crayfish invasion and none of the other stressors mentioned above that affect the St. Francis River crayfish.

There has already been some loss in St. Francis River crayfish's representation due to the loss of the subpopulations (and therefore ecological diversity) impacted by the woodland crayfish invasion and impacts of lead mining contamination. The reduction in representation is expected to continue given the predicted 10 to 100 percent reduction in abundance in 33 to 81 percent of the species' range,

based on the results of all future scenarios.

The St. Francis River crayfish is inherently vulnerable to extreme events and stressors, given the species' small range and single population, and there has been some reduction in redundancy due to range reduction and reduced abundance of subpopulations due to the woodland crayfish invasion and lead mining contamination. Similar to representation, we expect that redundancy of the St. Francis River crayfish will be further reduced by the predicted 10 to 100 percent reduction in abundance in 33 to 81 percent of the species' range within 50 years as more tributaries are invaded and subpopulations are extirpated.

TABLE 4—THE RANGE OF PREDICTED IMPACTS TO THE BIG CREEK CRAYFISH FROM THE WOODLAND CRAYFISH AT 50 YEARS BASED ON EXPERT INPUT

	Reasonable best (percent)	Most likely (percent)	Reasonable worst (percent)
Percent of Main population invaded	48.7	64.1	90.4
Percent of Twelvemile Creek population invaded	0	55.6	100
Percent of total range invaded	46.2	63.7	90.9
Percent reduction in abundance in invaded areas	>50	~100	~100

TABLE 5—THE RANGE OF PREDICTED IMPACTS TO THE ST. FRANCIS RIVER CRAYFISH FROM THE WOODLAND CRAYFISH AT 50 YEARS BASED ON EXPERT INPUT

	Reasonable best (percent)	Most likely (percent)	Reasonable worst (percent)
Percent of range invaded	33.2	49.5	81.0
Percent reduction in abundance in invaded areas	10 to 50	50 to 100	~100

Summary of Comments and Recommendations

In the proposed rule published on September 17, 2020 (85 FR 58192), we requested that all interested parties submit written comments on the proposal by November 16, 2020. We also contacted appropriate Federal and State agencies, scientific experts and organizations, and other interested parties and invited them to comment on the proposal. Newspaper notices inviting public comment were published in the Democratic News (October 7, 2020) and the Farmington Press (October 1, 2020). After receiving a request for a public hearing, we reopened the public comment period on April 27, 2021 (86 FR 22127) and requested that all interested parties submit their comments by May 27, 2021. We held a virtual public informational meeting followed by a public hearing on May 13, 2021. All substantive information received during both comment periods has either been incorporated directly into this final determination or is addressed below.

Peer Reviewer Comments

As discussed in Supporting Documents, above, we received comments from one peer reviewer. We reviewed all comments we received from the peer reviewer for substantive issues regarding the information contained in the SSA report and new information about the species. The peer reviewer generally concurred with our methods and conclusions and provided additional information, clarifications, and suggestions to improve the final SSA report. Peer reviewer comments were incorporated into the final SSA report as appropriate.

Public Comments

(1) Comment: Commenters stated that the Service should consider best management practices (BMPs) for forestry activities in the assessment of conservation efforts benefitting the species and account for these beneficial actions in any analyses conducted on the species' status.

Our Response: To assess the conservation benefit provided by the forestry BMPs, we considered the extent to which the BMPs are implemented within the two crayfishes' ranges. Based on information from surrounding States, the implementation rate of BMPs in Missouri is estimated to be 82 percent, with the rate representing the number of sites at which forestry BMPs were applied correctly or where major water quality impacts were avoided (Ice et al. 2010, p. 272). However, actual rates for Missouri are not available, as implementation of forestry BMPs is not required or monitored (NASF 2019, p. 3). In particular, we have no information to determine whether the estimate in Ice et al. (2010, p. 272) is applicable within the ranges of the two crayfishes. Because we are not able to confidently assess the extent to which implementation of forestry BMPs is benefitting the species, we did not factor the conservation benefits of BMPs into the analysis conducted on the species' status. Should we obtain data on BMP implementation rates within the species' ranges, we will include that information in the next revision of the species' SSA report.

(2) Comment: Commenters stated that because the woodland crayfish is native to other watersheds in Missouri, it should not be referred to as a nonnative species and should not be considered a threat to the Big Creek crayfish or St. Francis River crayfish.

Our Response: Because the woodland crayfish is not endemic (native) to the Upper St. Francis River watershed, we consider it accurate to refer to the species as nonnative in the watershed. We also consider it accurate to characterize the woodland crayfish as a threat to the Big Creek crayfish and St. Francis River crayfish given the documented declines in their abundance in stream reaches invaded by the woodland crayfish.

(3) Comment: Commenters believe there are no data to support that hybridization with the woodland crayfish is detrimental to the Big Creek crayfish and St. Francis River crayfish.

Our Response: Although some of the hybrid individuals appear to be viable, alleles (versions of a gene) from the Big Creek crayfish and St. Francis River crayfish are typically absent at most or all of the loci (specific physical locations of genes or other DNA sequences on a chromosome) of the hybrid individuals (Fetzner et al. 2016, p. 29). The low frequency of alleles from

the native crayfishes indicates that individuals with the native crayfish alleles are experiencing lower survivorship and/or reproduction than crayfish with the woodland crayfish alleles. Thus, the distribution of alleles within stream reaches invaded by the woodland crayfish is expected to shift towards the alleles of the woodland crayfish and away from those of the Big Creek crayfish and St. Francis River crayfish.

(4) Comment: Historical mining activities within the Upper St. Francis River watershed are not negatively affecting crayfish if the woodland crayfish is expanding its range within the watershed.

Our Response: The woodland crayfish's expansion in the watershed has been documented in areas other than those with heavy metal contamination. Therefore, it is possible for woodland crayfish abundance to be reduced in contaminated stream reaches while simultaneously expanding its range within the rest of the watershed.

(5) Comment: A commenter said remediation activities for heavy metal contamination have improved water quality in certain areas of the crayfishes' ranges from historical conditions. Therefore, the Service's assertion that heavy metal mining activities have affected crayfish abundance is not supported.

Our Response: Remediation activities have improved water quality in some areas of the crayfishes' ranges. However, we expect that abundance is still lower in these areas due to the time required for crayfishes to repopulate the affected stream reaches. In addition, heavy metal contamination is still present in more than 24 miles of the Little St. Francis River due to lead and 1.8 miles of Big Creek due to cadmium, as evidenced by the inclusion of these areas on the EPA's 303(d) list of impaired waterbodies (EPA 2020, pp. 16, 28).

(6) Comment: A commenter stated results of studies evaluating effects to crayfish from heavy metal exposure cannot be extrapolated to areas outside of where the studies were conducted.

Our Response: Various water chemistry parameters, such as water hardness and alkalinity, can influence bioavailability (the extent to which a chemical is absorbed) and toxicity of metals. However, heavy metal concentrations in tissue are representative of bioavailability since the concentrations represent the amount to heavy metals absorbed by crayfish. In the northeast portion of the Upper St. Francis River watershed (within the two crayfishes' ranges), Allert *et al.* (2016) documented heavy metal concentrations in crayfish tissue that were either higher than or comparable to the crayfish tissue concentrations documented in several of the other studies cited in the SSA report and the proposed rule (Allert *et al.* 2008, 2009, 2012). Total chronic toxic unit scores in the Upper St. Francis River watershed study also were either higher than or comparable to those in most of the other studies (Allert *et al.* 2009, 2012, 2013), with the scores representing the combined toxicity of metals given water hardness and the extent to which the metals dissolve in water (making the metals available for absorption by aquatic species). Lastly, Allert *et al.* (2016) documented significantly reduced densities of crayfish, including the St. Francis River Crayfish, downstream of mining sites and in some areas, a complete absence of crayfish, providing direct evidence that heavy metal exposure is negatively affecting crayfish in the Upper St. Francis River watershed.

(7) Comment: One commenter asserted that contamination due to heavy metal mining should not be considered a primary threat to the two crayfishes and that activities related to heavy metal mining should not be included in the list of prohibitions in the 4(d) rule for the species because the commenter does not consider it appropriate to use results of two studies (Allert *et al.* 2009 and Allert *et al.* 2010) to assess impacts to the Big Creek crayfish and St. Francis River crayfish from heavy metal exposure for reasons detailed below in *(7a)–(7e) Comments.* We address this commenter's specific assertions regarding the use of those two studies below.

(7a) Comment: Physical conditions such as substrate coarseness, water depth, and current velocity differed between reference and study sites and could explain the differences in crayfish densities observed.

Our Response: In a separate study, Allert *et al.* (2008, p. 105), documented significantly lower crayfish densities at mining sites, despite mining and reference sites having similar temperature, physical habitat, and organic matter. Crayfish densities did not correlate with any of the physical habitat variables that were measured (Allert *et al* 2008, p. 104). In addition, Allert *et al.* (2009, pp. 1209, 1213) documented significantly reduced crayfish survival downstream of mining sites when caging crayfish in situ (in the wild as opposed to a laboratory setting) with the same substrate and organic material as reference sites. These results are consistent with other studies documenting reduced crayfish densities and survival downstream of mining sites.

(7b) Comment: Two of the study sites were downstream of a city, and contaminants other than heavy metals were not assessed. Instead of heavy metal exposure, inputs from the city's residential, commercial, and industrial activities, as well as the agricultural uses surrounding the city, may have caused the reduced crayfish abundance.

Our Response: Multiple studies have demonstrated that, regardless of proximity to cities, crayfish have elevated heavy metal concentrations, reduced densities, and reduced survival downstream of mining sites (Allert *et al.* 2008, pp. 100–105; Allert *et al.* 2009, pp. 1210–1213; Allert *et al.* 2013, pp. 512–515). These results provide multiple lines of evidence that heavy metal exposure does negatively affect crayfish, regardless of proximity to cities.

(7c) Comment: Because macroinvertebrate populations vary significantly over small spatial scales, it cannot be concluded that heavy metal exposure caused the reduced crayfish abundance at study sites.

Our Response: As noted above, multiple lines of evidence demonstrate that heavy metal exposure negatively affects crayfish. The large number of studies documenting reduced macroinvertebrate populations downstream of mining sites, combined with heavy metal concentrations in macroinvertebrates downstream of mining sites, indicates that heavy metal exposure is responsible for the reduced crayfish densities downstream of mining sites documented by Allert *et al.* (2008, pp. 100–104; 2012, p. 569; 2013, p. 512).

(7d) Comment: Heavy metal levels were measured in fine sediment obtained from depositional areas. However, crayfish predominantly occupy riffles. Therefore, it is not appropriate to correlate heavy metal concentrations in fine sediment with crayfish densities.

Our Response: Allert *et al.* (2009, p. 1210) and Allert *et al.* (2010, p. 8) evaluated heavy metal concentrations in riffle crayfish tissue as well as in sediment. For both studies, heavy metal concentrations were higher in sediment and in crayfish tissue downstream of mining sites, with crayfish downstream of mining sites in the 2010 study having 100 to 200 times higher concentrations of lead than crayfish at reference sites (Allert *et al.* 2010, p. 19). Crayfish densities were significantly lower in areas with higher heavy metal concentrations in sediment and also in areas with higher heavy metal

concentrations in crayfish tissue (Allert *et al.* 2010, p. 28).

(7e) Comment: To assess heavy metal concentrations in sediment, Allert *et al.* (2009 and 2010) sieved the sediment to remove particles larger than 2 millimeters. The process of sieving the sample to concentrate sediments biased the sampling results.

Our Response: As noted above, Allert *et al.* 2010 (entire) assessed heavy metal concentrations in crayfish as well as in sediment and found a significant negative correlation of both with crayfish density (Allert *et al.* 2010, p. 28). Allert *et al.* 2009 (p. 1213) also found a significant negative correlation between heavy metal concentrations in crayfish and crayfish survival. These results are consistent with other studies documenting reduced crayfish density in areas downstream of mining sites. Therefore, negative effects from heavy metal exposure can be concluded even without the sediment data.

(8) Comment: A public commenter stated that lead is no longer a concern in Big Creek, and lead is not listed as a pollutant for the stream on the EPA's current list of impaired streams under section 303(d) of the Clean Water Act (33 U.S.C. 1251 *et seq.*). Although 1.8 miles of the stream is currently listed for cadmium, the listing is predominantly based on older data ranging from 2008–2012, and values only slightly exceed the chronic water quality standard. Therefore, heavy metal mining should not be included in the list of prohibitions in the 4(d) rule for the species.

Our Response: We have noted that the extent of Big Creek listed as impaired under section 303(d) of the Clean Water Act is only 1.8 miles and that lead is no longer listed as a pollutant for the waterbody. Because heavy metal contamination remains a factor influencing the crayfishes elsewhere in the watershed, however, we are retaining heavy metal mining in the list of prohibitions in the 4(d) rule for the species.

(9) Comment: A commenter stated the Service should add an exception to the prohibitions in the proposed 4(d) rule for the discharge or other introduction of heavy metals conducted in compliance with relevant Federal and State permits.

Our Response: Under the Act's section 4(d), whenever a species is listed as a threatened species, the Secretary issues regulations as she deems necessary and advisable to provide for the conservation of the listed species. As we discuss above, mining activities can increase heavy metal exposure in downstream stream reaches, and results of multiple studies indicate that the heavy metal exposure significantly reduces crayfish survival and abundance (Allert *et al.* 2008, pp. 100–104; 2012, p. 569; 2013, p. 512). Thus, we consider regulating take from mining activities as necessary and advisable for conserving the Big Creek crayfish and the St. Francis River crayfish. As such, we include a prohibition on activities that lead to the introduction of heavy metals into streams, such as heavy metal mining, in the 4(d) rule for these species.

(10) Comment: A public commenter stated because the declines of these two crayfishes appear to be directly attributed to the woodland crayfish, most of the prohibitions in the 4(d) rule should be removed, except for those directly aimed at slowing the spread of the woodland crayfish.

Our Response: Although invasion by the woodland crayfish is the primary factor causing the species' population declines, additional stressors that affect crayfishes' reproduction or survival make the species less viable. Lowered viability, in turn, results in the crayfishes being more susceptible to displacement by the woodland crayfish. Therefore, prohibiting take from these additional stressors will maximize the species' ability to withstand woodland crayfish invasion. As such, prohibiting take from these additional stressors is considered necessary and advisable, and these prohibitions are included in the 4(d) rule for the species.

(11) Comment: One commenter stated that because the woodland crayfish is the primary factor impacting the two crayfish species, the critical habitat designation will not help to conserve the species. Another commenter asserted that, given the economic impact of designating critical habitat and the minimal conservation benefit, the Service should not designate critical habitat.

Our Response: Under section 4(a)(3)(A) of the Act, the Secretary shall, to the maximum extent prudent and determinable, concurrently with making a determination that a species is an endangered species or a threatened species, designate critical habitat for that species. We have determined that designating critical habitat is both prudent and determinable for the Big Creek crayfish and the St. Francis River crayfish. Therefore, as required by the Act, we proposed to designate as critical habitat those areas occupied by the species at the time of listing and that contain the physical or biological features essential for the conservation of the species, which may require special management considerations or protection.

We are making a determination based on the best scientific data available and after taking into consideration the economic impact, the impact on national security, and any other relevant impact, of specifying any particular area as critical habitat, as required by section 4(b)(2) of the Act. Our consideration of the economic impacts of the designation are laid out in our economic analysis, as summarized in a memorandum produced by Industrial Economics, Incorporated (IEc) (IEc 2019, entire).

We are not relieved of our statutory obligation to designate critical habitat based on the contention that it will not provide additional conservation benefit. We also do not agree with the assertion that critical habitat will not help conserve the species. Habitat-based threats have been identified as affecting the current and future conditions of these species. Consultations with Federal agencies (and those projects with a Federal nexus) will provide additional conservation benefit. For more information, see the discussion under Summary of Biological Status and Threats, above. If any area provides the physical or biological features essential to the conservation of the species, that area qualifies as critical habitat under the statutory definition of that term (see section 3(5)(A) of the Act) if special management considerations or protection are needed.

(12) Comment: One commenter believes the economic analysis for the proposed designation of critical habitat does not address all of the incremental costs from the designation, particularly costs to those who currently discharge to streams occupied by the two species.

Our Response: In our economic analysis, we incorporated the incremental costs from section 7 consultations associated with the regulation of discharges in our discussion of the Clean Water Act and how discharges are regulated. Regardless of the listing status or designation of critical habitat for the Big Creek crayfish and St. Francis River crayfish, anyone who wishes to discharge dredge or fill material into Big Creek crayfish and St. Francis River crayfish habitat must obtain a permit from the U.S. Army Corps of Engineers (Corps). Under the Clean Water Act, the EPA also implements pollution control programs, such as setting standards for wastewater and other point sources discharges and sets water quality standards for all contaminants in surface waters. Under section 7 of the Act, Federal agencies are required to consult with the Service to ensure that

any action the agencies authorize, fund, or carry out is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of habitat of such species that is determined by the Secretary to be critical habitat. Issuance of permits by the Corps, implementation of pollution control programs by the EPA, and creation of water quality standards by the EPA all constitute Federal actions and thus require section 7 consultation on the effects on the species, regardless of whether critical habitat is designated. The incremental costs (costs beyond those attributable to a species' listing) associated with section 7 consultations on critical habitat were found to be limited to administrative costs. A further explanation of the incremental costs of section 7 consultations can be found in the screening analysis memorandum for the Big Creek crayfish and the St. Francis River crayfish (IEc 2019, section 3).

Determination of Big Creek Crayfish's and St. Francis River Crayfish's Status

Section 4 of the Act (16 U.S.C. 1533) and its implementing regulations (50 CFR part 424) set forth the procedures for determining whether a species meets the definition of an endangered species or a threatened species. The Act defines an ''endangered species'' as a species that is in danger of extinction throughout all or a significant portion of its range, and a ''threatened species' as a species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act requires that we determine whether a species meets the definition of endangered species or threatened species because of any of the following factors: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence.

Status Throughout All of Its Range

After evaluating threats to the species and assessing the cumulative effect of the threats under the Act's section 4(a)(1) factors, we found that both the Big Creek crayfish and the St. Francis River crayfish face threats from a nonnative crayfish invasion (Factor E) and declines in water quality (due to heavy metal mining, sedimentation, etc.) (Factor A). These threats continue to impact the species despite the existing regulatory mechanisms (Factor D) and on-going conservation efforts. Given current and predicted future decreases in resiliency, populations will become more vulnerable to extirpation from stochastic events, thereby resulting in concurrent losses in representation and redundancy. The range of plausible future scenarios for the Big Creek crayfish and the St. Francis River crayfish suggests significant reductions in viability into the future (USFWS 2022, pp. 39–43).

In 2008, the woodland crayfish, which is not native to the Upper St. Francis River watershed, was estimated to occupy between 103 and 403 rmi (166 to 649 km) in 5 to 20 subwatersheds. Based on known locations of the woodland crayfish, we know that 5 of the 16 Big Creek crayfish subwatersheds (31 percent) and 4 of the 16 St. Francis River crayfish subwatersheds (25 percent) have been invaded. We also know that the invasion has resulted in extirpation of the Big Creek crayfish in 9.1 rmi (14.7 km) and the St. Francis River crayfish in 8.5 rmi (13.7 km). This is likely an underestimate of the actual extent of both range contractions, given that this represents conditions in only 2 of the 21 streams and 3 of 9 subwatersheds known to be invaded by the woodland crayfish (not all known invaded streams and subwatersheds were surveyed; MDC 2018, unpublished data). In addition, the known locations of the woodland crayfish are likely an under-representation of where the species is present in the watershed given that: (1) The majority of locations were documented prior to 2010; (2) the species can expand at a rate as high as 745 yd per year (681 m per year) in the upstream direction and 2,499 yd per year (2,285 m year) in the downstream direction (DiStefano and Westhoff 2011, pp. 38, 40); (3) the woodland crayfish has likely been introduced at additional, undocumented locations (it is not feasible to survey every stream throughout the watershed); and (4) the invasion has likely progressed since the development of the SSA report and this final rule because there is currently no means to slow or stop the spread of the woodland crayfish.

The range of plausible future scenarios for the Big Creek crayfish and St. Francis River crayfish suggests reduced viability into the future. Under the ''most likely'' scenarios for both species, resiliency is expected to decline within 50 years, given that more than 50 percent of streams occupied by the species are predicted to be invaded by the woodland crayfish. As additional subpopulations become extirpated, this expected reduction in both the number and distribution of healthy (and thus sufficiently resilient) subpopulations is likely to make the species vulnerable to extreme disturbances and environmental and demographic stochasticity.

Our analysis of the Big Creek crayfish's and the St. Francis River crayfish's current and future conditions based on the increasing threat of woodland crayfish invasion and the continuing threat of contamination, as well as the consideration of conservation efforts discussed above, indicates that viability for both the Big Creek crayfish and the St. Francis River crayfish will continue to decline such that they are likely to become in danger of extinction within the foreseeable future throughout all of their ranges.

We considered whether these species are presently in danger of extinction and determined that endangered status is not appropriate. The current conditions as assessed in the SSA indicate that the species are abundant in areas not invaded by the woodland crayfish and the nonnative woodland crayfish has displaced only a portion of both species in their ranges. Although there are documented declines in areas that have been invaded by woodland crayfish, both species are presumed present in over 99 percent of their historical ranges and these areas are relatively small in comparison to the whole occupied area (Service 2022, pp. 27–28). Although the species' representation has declined by some small amount, ecological diversity (and, therefore, adaptive capacity) likely remains at a level that is currently adequate. Redundancy has also slightly declined from historical conditions from a reduction in subpopulations. In short, while the primary threats are currently acting on the species and many of those threats are expected to continue or increase into the future, we did not find that either species is currently in danger of extinction throughout all of its range.

These declines in the species' viability that are predicted to occur in the future will put the species in danger of extinction in the foreseeable future. Thus, after assessing the best available information, we determine that Big Creek crayfish and St. Francis River crayfish are not currently in danger of extinction but are likely to become in danger of extinction within the foreseeable future throughout all of their ranges.

Status Throughout a Significant Portion of Its Range

Under the Act and our implementing regulations, a species may warrant

listing if it is in danger of extinction or likely to become so in the foreseeable future throughout all or a significant portion of its range. The court in *Center for Biological Diversity* v. *Everson,* 435 F. Supp. 3d 69 (D.D.C. 2020) (*Everson*), vacated the aspect of the Final Policy on Interpretation of the Phrase ''Significant Portion of Its Range'' in the Endangered Species Act's Definitions of ''Endangered Species'' and ''Threatened Species'' (Final Policy; 79 FR 37578; July 1, 2014) that provided that the Service does not undertake an analysis of significant portions of a species' range if the species warrants listing as threatened throughout all of its range.

Therefore, we proceed to evaluating whether the species is endangered in a significant portion of its range—that is, whether there is any portion of the species' range for which both (1) the portion is significant; and (2) the species is in danger of extinction in that portion. Depending on the case, it might be more efficient for us to address the ''significance'' question or the ''status'' question first. We can choose to address either question first. Regardless of which question we address first, if we reach a negative answer with respect to the first question that we address, we do not need to evaluate the other question for that portion of the species' range.

Following the court's holding in *Everson,* we now consider whether there are any significant portions of the species' range where the species is in danger of extinction now (*i.e.,* endangered). In undertaking these analyses for Big Creek crayfish and the St. Francis River crayfish, we chose to address the status question first—we considered information pertaining to the geographic distribution of both the species and the threats that the species faces to identify portions of the range where the species may be endangered.

We evaluated the range of the Big Creek crayfish and the St. Francis River crayfish to determine if either species is in danger of extinction now in any portion of their ranges.

St. Francis River Crayfish

The St. Francis River Crayfish is a narrow endemic that functions as a single population. Thus, there is no biologically meaningful way to break this limited range into portions, and the threats that this species faces affect the species throughout its entire range. As a result, there are no portions of the species' range where the species has a different biological status from its rangewide biological status. Therefore, we conclude that there are no portions of this species' range that warrant further consideration, and the St. Francis River crayfish is not in danger of extinction in any significant portion of its range, and we determine that this species is likely to become in danger of extinction within the foreseeable future throughout all of its range. This does not conflict with the courts' holdings in *Desert Survivors* v. *U.S. Department of the Interior,* 321 F. Supp. 3d 1011, 1070–74 (N.D. Cal. 2018) and *Center for Biological Diversity* v. *Jewell,* 248 F. Supp. 3d 946, 959 (D. Ariz. 2017) because, in reaching this conclusion, we did not apply the aspects of the Final Policy, including the definition of ''significant'' that those court decisions held to be invalid.

Big Creek Crayfish

We evaluated the range of the Big Creek crayfish to determine if the species is in danger of extinction now in any portion of its range. The range of a species can theoretically be divided into portions in an infinite number of ways. We focused our analysis on portions of the species' range that may meet the definition of an endangered species. For Big Creek crayfish, we considered whether the threats or their effects on the species are greater in any biologically meaningful portion of the species' range than in other portions such that the species is in danger of extinction now in that portion.

The statutory difference between an endangered species and a threatened species is the time frame in which the species becomes in danger of extinction; an endangered species is in danger of extinction now while a threatened species is not in danger of extinction now but is likely to become so in the foreseeable future. Thus, we reviewed the best scientific and commercial data available regarding the time horizon for the threats that are driving the Big Creek crayfish to warrant listing as a threatened species throughout all of its range. We then considered whether these threats or their effects are occurring in any portion of the species' range such that the species is in danger of extinction now in that portion of its range. We examined the following threats: effects from the invasion of nonnative crayfish, contamination by heavy metal mining, and sedimentation, including cumulative effects.

As discussed above, the Big Creek crayfish functions as two populations: the Main and the Twelvemile populations. The woodland crayfish has invaded part of (approximately 31 percent) the range of the Big Creek crayfish but not the Twelvemile population. Because of this difference in the threats, we evaluated whether or not the Main population may have a different status from the rest of the range.

Within the Main population, the woodland crayfish has invaded approximately 36 percent of the range and effects to the species have begun in those areas. However, declines have not been observed in 64 percent of this population (Table 1) and the woodland crayfish will not be impacting those areas until the foreseeable future. Abundance in the Main population has also likely been reduced from heavy metal contamination given that 22 percent of the population occurs in areas with heavy metal surface contamination. However, as discussed above, there are currently multiple healthy subpopulations within the Main population.

The best scientific and commercial data available indicate that the time horizon on which the woodland crayfish threat to the species and the species' responses to this threat are likely to occur is the foreseeable future. In addition, while there are ongoing threats of heavy metal contamination within a small area of the Main population, these combined threats are not causing the Big Creek Crayfish to be in danger of extinction in the Main population, now. The best scientific and commercial data available do not indicate that any of the species' responses to those threats are more immediate in any portions of the species' range.

Instead, the Big Creek Crayfish is likely to become in danger of extinction within the foreseeable future due to the demonstrated threat of the woodland crayfish (and cumulative impacts of other identified threats) in the future for the Main population and the anticipated arrival of the woodland crayfish into the Twelvemile population.

Therefore, we determine, that the Big Creek crayfish is likely to become in danger of extinction within the foreseeable future throughout all of its range. This does not conflict with the courts' holdings in *Desert Survivors* v. *U.S. Department of the Interior,* 321 F. Supp. 3d 1011, 1070–74 (N.D. Cal. 2018) and *Center for Biological Diversity* v. *Jewell,* 248 F. Supp. 3d 946, 959 (D. Ariz. 2017) because, in reaching this conclusion, we did not apply the aspects of the Final Policy, including the definition of ''significant'' that those court decisions held to be invalid.

Determination of Status

Our review of the best scientific and commercial data available indicates that the Big Creek crayfish and the St. Francis River crayfish meet the Act's definition of threatened species.

Therefore, we are listing the Big Creek crayfish and the St. Francis River crayfish as threatened species in accordance with sections 3(20) and 4(a)(1) of the Act.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened species under the Act include recognition as a listed species, planning and implementation of recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing results in public awareness, and conservation by Federal, State, Tribal, and local agencies, private organizations, and individuals. The Act encourages cooperation with the States and other countries and calls for recovery actions to be carried out for listed species. The protection required by Federal agencies, including the Service, and the prohibitions against certain activities are discussed, in part, below.

The primary purpose of the Act is the conservation of endangered and threatened species and the ecosystems upon which they depend. The ultimate goal of such conservation efforts is the recovery of these listed species, so that they no longer need the protective measures of the Act. Section 4(f) of the Act calls for the Service to develop and implement recovery plans for the conservation of endangered and threatened species. The goal of this process is to restore listed species to a point where they are secure, self-sustaining, and functioning components of their ecosystems.

Recovery planning consists of preparing draft and final recovery plans, beginning with the development of a recovery outline, and making it available to the public within 30 days of this final listing determination. The recovery outline guides the immediate implementation of urgent recovery actions and describes the process to be used to develop a recovery plan. Revisions of the plan may be done to address continuing or new threats to the species, as new substantive information becomes available.

The recovery plan also identifies recovery criteria for review of when a species may be ready for reclassification from endangered to threatened (''downlisting'') or removal from protected status (''delisting''), and methods for monitoring recovery progress. Recovery plans also establish a framework for agencies to coordinate their recovery efforts and provide estimates of the cost of implementing recovery tasks. Recovery teams (composed of species experts, Federal and State agencies, nongovernmental organizations, and other conservation partners) are often established to develop recovery plans. When completed, the recovery outline, draft recovery plan, and the final recovery plan will be available on our website (*https://ecos.fws.gov/ecp/*) by searching for each species of crayfish, or from our Missouri Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

Implementation of recovery actions generally requires the participation of a broad range of partners, including other Federal agencies, States, Tribes, nongovernmental organizations, businesses, and private landowners. Examples of recovery actions include habitat restoration (*e.g.,* restoration of native vegetation), research, captive propagation and reintroduction, and outreach and education. The recovery of many listed species cannot be accomplished solely on Federal lands because their ranges may occur primarily or solely on non-Federal lands. To achieve recovery of these species requires cooperative conservation efforts on private, State, and Tribal lands.

When this listing becomes effective, funding for recovery actions will be available from a variety of sources, including Federal budgets, State programs, and cost-share grants for non-Federal landowners, the academic community, and nongovernmental organizations. In addition, pursuant to section 6 of the Act, the State of Missouri will be eligible for Federal funds to implement management actions that promote the protection or recovery of the Big Creek crayfish and the St. Francis River crayfish. Information on our grant programs that are available to aid species recovery can be found at: *https://www.fws.gov/service/financial-assistance.*

Please let us know if you are interested in participating in recovery efforts for the Big Creek crayfish and the St. Francis River crayfish. Additionally, we invite you to submit any new information on these species whenever it becomes available and any information you may have for recovery planning purposes (see **FOR FURTHER INFORMATION CONTACT**).

Section 7(a) of the Act requires Federal agencies to evaluate their actions with respect to any species that is listed as an endangered or threatened species and with respect to its critical habitat. Regulations implementing this interagency cooperation provision of the Act are codified at 50 CFR part 402. Section 7(a)(2) of the Act requires Federal agencies to ensure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of any endangered or threatened species or destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency must enter into consultation with us.

Federal agency actions within the species' habitat that may require conference or consultation or both as described in the preceding paragraph may include, but are not limited to, management and any other landscape-altering activities on Federal lands administered by the Service, or U.S. Forest Service; issuance of section 404 Clean Water Act permits by the U.S. Army Corps of Engineers; and construction and maintenance of roads or highways by the Federal Highway Administration.

It is our policy, as published in the **Federal Register** on July 1, 1994 (59 FR 34272), to identify to the maximum extent practicable at the time a species is listed, those activities that would or would not constitute a violation of section 9 of the Act. The intent of this policy is to increase public awareness of the effect of a final listing on proposed and ongoing activities within the range of a listed species. The discussion below regarding protective regulations under section 4(d) of the Act complies with our policy.

II. Final Rule Issued Under Section 4(d) of the Act

Background

Section 4(d) of the Act contains two sentences. The first sentence states that the Secretary shall issue such regulations as she deems necessary and advisable to provide for the conservation of species listed as threatened. The U.S. Supreme Court has noted that statutory language like ''necessary and advisable'' demonstrates a large degree of deference to the agency (see *Webster* v. *Doe,* 486 U.S. 592 (1988)). Conservation is defined in the Act to mean the use of all methods and procedures which are necessary to bring any endangered species or threatened species to the point at which the measures provided pursuant to the Act are no longer necessary. Additionally, the second sentence of section 4(d) of the Act states that the Secretary may by regulation prohibit with respect to any threatened species any act prohibited under section 9(a)(1), in the case of fish or wildlife, or section 9(a)(2), in the case of plants. Thus, the combination of the two sentences of section 4(d) provides

the Secretary with wide latitude of discretion to select and promulgate appropriate regulations tailored to the specific conservation needs of the threatened species. The second sentence grants particularly broad discretion to the Service when adopting the prohibitions under section 9.

The courts have recognized the extent of the Secretary's discretion under this standard to develop rules that are appropriate for the conservation of a species. For example, courts have upheld rules developed under section 4(d) as a valid exercise of agency authority where they prohibited take of threatened wildlife or include a limited taking prohibition (see *Alsea Valley Alliance* v. *Lautenbacher,* 2007 U.S. Dist. Lexis 60203 (D. Or. 2007); *Washington Environmental Council* v. *National Marine Fisheries Service,* 2002 U.S. Dist. Lexis 5432 (W.D. Wash. 2002)). Courts have also upheld 4(d) rules that do not address all of the threats a species faces (see *State of Louisiana* v. *Verity,* 853 F.2d 322 (5th Cir. 1988)). As noted in the legislative history when the Act was initially enacted, ''once an animal is on the threatened list, the Secretary has an almost infinite number of options available to [her] with regard to the permitted activities for those species. [She] may, for example, permit taking, but not importation of such species, or [she] may choose to forbid both taking and importation but allow the transportation of such species'' (H.R. Rep. No. 412, 93rd Cong., 1st Sess. 1973).

Exercising our authority under section 4(d), we have developed a rule that is designed to address the Big Creek crayfish's and the St. Francis River crayfish's specific threats and conservation needs. Although the statute does not require us to make a ''necessary and advisable'' finding with respect to the adoption of specific prohibitions under section 9, we find that this rule as a whole satisfies the requirement in section 4(d) of the Act to issue regulations deemed necessary and advisable to provide for the conservation of the Big Creek crayfish and the St. Francis River crayfish. As discussed above under Summary of Biological Status and Threats, we have concluded that the Big Creek crayfish and the St. Francis River crayfish are likely to become in danger of extinction within the foreseeable future primarily due to invasion by the woodland crayfish, but additionally from the impacts from heavy metal contamination and sedimentation. The provisions of this 4(d) rule will promote conservation of the Big Creek crayfish and the St. Francis River crayfish by discouraging the spread of the woodland crayfish (and other invasive species) and encouraging management of the landscape in ways that maintains the health of Big Creek crayfish and St. Francis River crayfish and conserves the species by maximizing their ability to withstand the woodland crayfish invasion. The provisions of this rule are one of many tools that we will use to promote the conservation of the Big Creek crayfish and the St. Francis River crayfish.

Section 7(a)(2) of the Act requires Federal agencies, including the Service, to ensure that any action they fund, authorize, or carry out is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of designated critical habitat of such species.

If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency (action agency) must enter into consultation with us. Examples of actions that are subject to the section 7 consultation process are actions on State, Tribal, local, or private lands that require a Federal permit (such as a permit from the U.S. Army Corps of Engineers under section 404 of the Clean Water Act (33 U.S.C. 1251 *et seq.*) or a permit from the Service under section 10 of the Act) or that involve some other Federal action (such as funding from the Federal Highway Administration, Federal Aviation Administration, or the Federal Emergency Management Agency). Federal actions not affecting listed species or critical habitat—and actions on State, Tribal, local, or private lands that are not federally funded, authorized, or carried out by a Federal agency—do not require section 7 consultation.

This obligation does not change in any way for a threatened species with a species-specific 4(d) rule. Actions that result in a determination by a Federal agency of ''not likely to adversely affect'' continue to require the Service's written concurrence and actions that are ''likely to adversely affect'' a species require formal consultation and the formulation of a biological opinion.

Provisions of the 4(d) Rule

This 4(d) rule will provide for the conservation of the Big Creek crayfish and the St. Francis River crayfish by prohibiting the following activities, except as otherwise authorized or permitted: Import or export; take; possession and other acts with unlawfully taken specimens; delivery, receipt, transport, or shipment in interstate or foreign commerce in the course of commercial activity; and sale or offer for sale in interstate or foreign commerce. The 4(d) rule will also provide for the conservation of the species by the use of other protective regulations as follows:

As discussed above under Summary of Biological Status and Threats, the spread of nonnative crayfish (Factor E) and declines in water quality (due to mining, sedimentation, etc.) (Factor A) are affecting the status of the Big Creek crayfish and the St. Francis River crayfish. A range of activities have the potential to impact these species, including, but not limited to: Recreational activities that promote the spread of the woodland crayfish; mining (heavy metal and gravel); wastewater effluent discharge; agricultural activities; construction of low-water crossings and bridge construction; and destruction of bank habitat that increases rates of sedimentation. Regulating take from these activities would help preserve these species, slow their rate of decline, and decrease synergistic, negative effects from other stressors.

Under the Act, ''take'' means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. Some of these provisions have been further defined in regulation at 50 CFR 17.3. Take can result knowingly or otherwise, by direct and indirect impacts, intentionally or incidentally. Regulating incidental and intentional take will help discourage the spread of the woodland crayfish and will maintain or increase water quality to preserve the Big Creek crayfish and the St. Francis River crayfish, slow their rate of decline, and decrease synergistic, negative effects from other stressors.

We may issue permits to carry out otherwise prohibited activities, including those described above, involving threatened wildlife under certain circumstances. Regulations governing permits are codified at 50 CFR 17.32. With regard to threatened wildlife, a permit may be issued for the following purposes: For scientific purposes, to enhance propagation or survival, for economic hardship, for zoological exhibition, for educational purposes, for incidental taking, or for special purposes consistent with the purposes of the Act. The statute also contains certain exemptions from the prohibitions, which are found in sections 9 and 10 of the Act.

We recognize the special and unique relationship with our State natural resource agency partners in contributing to conservation of listed species. State

agencies often possess scientific data and valuable expertise on the status and distribution of endangered, threatened, and candidate species of wildlife and plants. State agencies, because of their authorities and their close working relationships with local governments and landowners, are in a unique position to assist us in implementing all aspects of the Act. In this regard, section 6 of the Act provides that we shall cooperate to the maximum extent practicable with the States in carrying out programs authorized by the Act. Therefore, any qualified employee or agent of a State conservation agency that is a party to a cooperative agreement with us in accordance with section 6(c) of the Act, who is designated by his or her agency for such purposes, will be able to conduct activities designed to conserve Big Creek crayfish or St. Francis River crayfish that may result in otherwise prohibited take without additional authorization. Additionally, this 4(d) rule also allows a person to take a Big Creek crayfish or a St. Francis River crayfish if that person is conducting research or education under a valid Missouri Department of Conservation Wildlife Collector's permit.

Along with State (and State-sponsored) conservation efforts, a person may take, incidental to an otherwise lawful activity, a Big Creek crayfish or a St. Francis River crayfish during restoration activities or other activities that will result in an overall benefit to one or both of the species or their habitat. Such activities include, but are not limited to, heavy metal remediation efforts and habitat restoration efforts.

Our full 4(d) rule for the Big Creek crayfish and the St. Francis River crayfish, including all of the prohibitions and exceptions to prohibitions for these species, is provided below, under Regulation Promulgation.

Nothing in this 4(d) rule will change in any way the recovery planning provisions of section 4(f) of the Act, the consultation requirements under section 7 of the Act, or the ability of the Service to enter into partnerships for the management and protection of the Big Creek crayfish and the St. Francis River crayfish. However, interagency cooperation may be further streamlined through planned programmatic consultations for the species between Federal agencies and the Service.

III. Critical Habitat

Background

Critical habitat is defined in section 3 of the Act as:

(1) The specific areas within the geographical area occupied by the species, at the time it is listed in accordance with the Act, on which are found those physical or biological features

(a) Essential to the conservation of the species, and

(b) Which may require special management considerations or protection; and

(2) Specific areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Our regulations at 50 CFR 424.02 define the geographical area occupied by the species as an area that may generally be delineated around species' occurrences, as determined by the Secretary (*i.e.,* range). Such areas may include those areas used throughout all or part of the species' life cycle, even if not used on a regular basis (*e.g.,* migratory corridors, seasonal habitats, and habitats used periodically, but not solely by vagrant individuals).

Conservation, as defined under section 3 of the Act, means to use and the use of all methods and procedures that are necessary to bring an endangered or threatened species to the point at which the measures provided pursuant to the Act are no longer necessary. Such methods and procedures include, but are not limited to, all activities associated with scientific resources management such as research, census, law enforcement, habitat acquisition and maintenance, propagation, live trapping, and transplantation, and, in the extraordinary case where population pressures within a given ecosystem cannot be otherwise relieved, may include regulated taking.

Critical habitat receives protection under section 7 of the Act through the requirement that Federal agencies ensure, in consultation with the Service, that any action they authorize, fund, or carry out is not likely to result in the destruction or adverse modification of critical habitat. The designation of critical habitat does not affect land ownership or establish a refuge, wilderness, reserve, preserve, or other conservation area. Such designation also does not allow the government or public to access private lands. Such designation does not require implementation of restoration, recovery, or enhancement measures by non-Federal landowners. Where a landowner requests Federal agency funding or authorization for an action that may affect a listed species or critical habitat, the Federal agency will be required to consult with the Service under section 7(a)(2) of the Act. However, even if the Service were to conclude that the proposed activity would result in destruction or adverse modification of the critical habitat, the Federal action agency and the landowner are not required to abandon the proposed activity, or to restore or recover the species; instead, they must implement ''reasonable and prudent alternatives'' to avoid destruction or adverse modification of critical habitat.

Under the first prong of the Act's definition of critical habitat, areas within the geographical area occupied by the species at the time it was listed are included in a critical habitat designation if they contain physical or biological features (1) essential to the conservation of the species and (2) which may require special management considerations or protection. For these areas, critical habitat designations identify, to the extent known using the best scientific and commercial data available, those physical or biological features that are essential to the conservation of the species (such as space, food, cover, and protected habitat).

Under the second prong of the Act's definition of critical habitat, we can designate critical habitat in areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Section 4 of the Act requires that we designate critical habitat on the basis of the best scientific data available. Further, our Policy on Information Standards Under the Endangered Species Act (published in the **Federal Register** on July 1, 1994 (59 FR 34271)), the Information Quality Act (section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Pub. L. 106–554; H.R. 5658)), and our associated Information Quality Guidelines provide criteria, establish procedures, and provide guidance to ensure that our decisions are based on the best scientific data available. They require our biologists, to the extent consistent with the Act and with the use of the best scientific data available, to use primary and original sources of information as the basis for recommendations to designate critical habitat.

When we are determining which areas should be designated as critical habitat, the primary sources of information are generally referenced in the SSA report and also include information developed during the listing process for the species. Additional information sources may include any generalized conservation strategy, criteria, or outline that may have been developed for the species; the recovery plan for the species; articles in peer-reviewed journals; conservation plans developed by States and counties; scientific status surveys and studies; biological assessments; other unpublished materials; or experts' opinions or personal knowledge.

Habitat is dynamic, and species may move from one area to another over time. We recognize that critical habitat designated at a particular point in time may not include all of the habitat areas that we may later determine are necessary for the recovery of the species. For these reasons, a critical habitat designation does not signal that habitat outside the designated area is unimportant or may not be needed for recovery of the species. Areas that are important to the conservation of the species, both inside and outside the critical habitat designation, will continue to be subject to: (1) Conservation actions implemented under section 7(a)(1) of the Act; (2) regulatory protections afforded by the requirement in section 7(a)(2) of the Act for Federal agencies to ensure their actions are not likely to jeopardize the continued existence of any endangered or threatened species; and (3) the prohibitions found in section 9 of the Act. Federally funded or permitted projects affecting listed species outside their designated critical habitat areas may still result in jeopardy findings in some cases. These protections and conservation tools will continue to contribute to recovery of this species. Similarly, critical habitat designations made on the basis of the best available information at the time of designation will not control the direction and substance of future recovery plans, habitat conservation plans (HCPs), or other species conservation planning efforts if new information available at the time of these planning efforts calls for a different outcome.

Physical or Biological Features Essential to the Conservation of the Species

In accordance with section 3(5)(A)(i) of the Act and regulations at 50 CFR 424.12(b), in determining which areas we will designate as critical habitat from within the geographical area occupied by the species at the time of listing, we consider the physical or biological features that are essential to the conservation of the species and that may require special management considerations or protection. The regulations at 50 CFR 424.02 define ''physical or biological features essential to the conservation of the species'' as the features that occur in specific areas and that are essential to support the life-history needs of the species, including, but not limited to, water characteristics, soil type, geological features, sites, prey, vegetation, symbiotic species, or other features. A feature may be a single habitat characteristic or a more complex combination of habitat characteristics. Features may include habitat characteristics that support ephemeral or dynamic habitat conditions. Features may also be expressed in terms relating to principles of conservation biology, such as patch size, distribution distances, and connectivity. For example, physical features essential to the conservation of the species might include gravel of a particular size required for spawning, alkaline soil for seed germination, protective cover for migration, or susceptibility to flooding or fire that maintains necessary early-successional habitat characteristics. Biological features might include prey species, forage grasses, specific kinds or ages of trees for roosting or nesting, symbiotic fungi, or a particular level of nonnative species consistent with conservation needs of the listed species. The features may also be combinations of habitat characteristics and may encompass the relationship between characteristics or the necessary amount of a characteristic essential to support the life history of the species.

In considering whether features are essential to the conservation of the species, we may consider an appropriate quality, quantity, and spatial and temporal arrangement of habitat characteristics in the context of the life-history needs, condition, and status of the species. These characteristics include, but are not limited to, space for individual and population growth and for normal behavior; food, water, air, light, minerals, or other nutritional or physiological requirements; cover or shelter; sites for breeding, reproduction, or rearing (or development) of offspring; and habitats that are protected from disturbance.

Summary of Essential Physical or Biological Features

We derive the specific physical or biological features essential to the conservation of Big Creek crayfish and St. Francis River crayfish from studies of the species' habitat, ecology, and life history, and describe them below. Additional information can be found in the SSA report (Service 2022, entire) or the proposed rule (85 FR 58192), both documents are available on *https://www.regulations.gov* under Docket No. FWS–R3–ES–2019–0020). We have determined that the following physical or biological features are essential to the conservation of Big Creek crayfish and St. Francis River crayfish:

(1) Stream flow velocity generally between 0 and 1.1 feet per second (ft/s) (0 and 0.35 meters per second (m/s)).

(2) Stream depths generally between 0.2 and 1.6 ft (0.06 and 0.49 m) for the Big Creek crayfish, and stream depths generally between 0.2 and 1.7 ft (0.06 and 0.52 m) for the St. Francis River crayfish.

(3) Water temperatures between 34 and 84 degrees Fahrenheit (°F) (1.1 and 28.9 degrees Celsius (°C)).

(4) Adequately low stream embeddedness so that spaces under rocks and cavities in gravel remain available to the Big Creek crayfish and St. Francis River crayfish.

(5) An available forage and prey base consisting of invertebrates, periphyton, and plant detritus.

(6) Connectivity among occupied stream reaches of the Big Creek crayfish (both within and among occupied subwatersheds), and connectivity among occupied stream reaches of the St. Francis River crayfish (both within and among occupied subwatersheds).

(7) Ratios or densities of nonnative species low enough to allow for maintaining the populations of the Big Creek crayfish and St. Francis River crayfish.

Special Management Considerations or Protection

When designating critical habitat, we assess whether the specific areas within the geographical area occupied by the species at the time of listing contain features that are essential to the conservation of the species and which may require special management considerations or protection. The features essential to the conservation of the Big Creek crayfish and St. Francis River crayfish may require special management considerations or protections to reduce the following threats: (1) Facilitated movement of nonnative crayfish (for example, bait bucket dumping); (2) nutrient pollution that impacts water quantity and quality, including, but not limited to, agricultural runoff and wastewater effluent; (3) significant alteration of water quality (for example, heavy metal contamination); (4) forest management

or silviculture activities that do not implement State-approved best management practices (BMPs) such that riparian corridors are impacted or sedimentation is increased; (5) sedimentation from construction of dams, culverts, and low water crossings that do not allow for the passage of species or materials, and pipeline and utility installation that creates barriers to movement; and (6) other watershed and floodplain disturbances that release sediments or nutrients into the water.

Management activities that could ameliorate these threats include, but are not limited to: Education to encourage responsible and legal bait use and proper disposal of unused bait; use of BMPs designed to reduce sedimentation, erosion, and bank side destruction; protection of riparian corridors and retention of sufficient canopy cover along banks; moderation of surface and ground water withdrawals to maintain natural flow regimes; increased use of stormwater management and reduction of stormwater flows into the systems; remediation of contaminated stream reaches and eroding stream banks; and reduction of other watershed and floodplain disturbances that release sediments, pollutants, or nutrients into the water.

Criteria Used To Identify Critical Habitat

As required by section 4(b)(2) of the Act, we use the best scientific data available to designate critical habitat. In accordance with the Act and our implementing regulations at 50 CFR 424.12(b), we review available information pertaining to the habitat requirements of the species and identify specific areas within the geographical area occupied by the species at the time of listing and any specific areas outside the geographical area occupied by the species to be considered for designation as critical habitat. We are not designating any areas outside the geographical areas occupied by the species because we have not identified any unoccupied areas that meet the definition of critical habitat and we have determined that designating the occupied areas is sufficient to conserve the Big Creek crayfish and the St. Francis River crayfish.

We anticipate that recovery will require continued protection of existing populations and habitat, as well as ensuring there are adequate numbers of Big Creek crayfish and St. Francis River crayfish in stable subpopulations and that these subpopulations occur over a wide geographic area. This strategy will help to ensure that extreme events, such as the effects of flooding (for example, flooding that causes excessive sedimentation, nutrients, and debris to disrupt stream ecology), droughts, or chemical spills, cannot simultaneously affect all known subpopulations. The following rangewide potential recovery actions were considered in formulating this designation of critical habitat: (1) Mitigating or minimizing the effects of the spread of woodland crayfish, preventing additional introductions of woodland crayfish (and other nonnative species), investigating methods to slow or halt the expansion of woodland crayfish, and investigating methods of eradicating woodland crayfish; (2) maintaining the quality and quantity of habitat (including, but not limited to, preventing increased sedimentation rates); (3) preventing additional heavy metal contamination and remediating previous heavy metal contamination; (4) investigating other water quality issues that may impact crayfish abundance; and (5) minimizing loss of rangewide genetic diversity by maintaining adequate population sizes, distribution, and connectivity.

Sources of data for these designations of critical habitat include the Missouri Department of Conservation, National Hydrography Dataset Plus (for mapping purposes), published literature, survey reports on water quality in various streams within the species' ranges (for more information, see the SSA report), and the proposed rule (85 FR 58192; September 17, 2020). We have also reviewed available information that pertains to the habitat requirements of this species. Sources of information on habitat requirements include studies conducted at occupied sites and published in peer-reviewed articles, agency reports, and data collected during monitoring efforts (see the SSA report: Service 2022). We have also reviewed all comments submitted by the public during two public comment periods on the proposed rule (see 85 FR 58192, September 17, 2020, and 86 FR 22127, April 27, 2021).

We consider the areas occupied at the time of listing to include all streams within occupied subwatersheds (at the 12-digit hydrologic unit level). Occupied watersheds were determined using data from the Missouri Department of Conservation. For the purposes of designating critical habitat, we also consider stretches of the St. Francis River between subwatersheds as occupied migratory corridors, based on genetic analyses that indicate there is gene flow among subwatersheds.

Based on this information, we consider all streams within the following subwatersheds in the Upper St. Francis River watershed to be currently occupied by the Big Creek crayfish at the time of this final listing (numbers in parentheses represent the 12-digit hydrologic codes): Big Lake Creek-St. Francis River (080202020503), Blankshire Branch-St. Francis River (080202020204), Captain Creek-St. Francis River (080202020405), Cedar Bottom Creek-St. Francis River (080202020402), Clark Creek (080202020407), Cedar Bottom Creek (080202020501), Crane Pond Creek (080202020303), Headwaters St. Francis River (080202020201), Headwaters Twelvemile Creek (080202020403), Leatherwood Creek-St. Francis River (080202020406), Lower Big Creek (080202020304), Middle Big Creek (080202020302), Saline Creek-Little St. Francis River (080202020102), Turkey Creek-St. Francis River (080202020210), Twelvemile Creek (080202020404), and Upper Big Creek (080202020301). We also consider the entire St. Francis River upstream of 37.091254N, 90.447212W to be occupied, as genetic analyses indicate gene flow among the subwatersheds.

For the St. Francis River crayfish, we consider all streams within the following subwatersheds to be currently occupied at the time of listing: Blankshire Branch-St. Francis River (80202020204), Captain Creek-St. Francis River (80202020405), Cedar Bottom Creek-St. Francis River (80202020402), Headwaters St. Francis River (80202020201), Headwaters Stouts Creek (80202020207), Hubble Creek-St. Francis River (80202020502), Leatherwood Creek-St. Francis River (80202020406), Little St. Francis River (80202020103), Lost Creek (80202020507), Marble Creek (80202020401), Musco Creek-Little St. Francis River (80202020101), O'Bannon Creek-St. Francis River (80202020206), Saline Creek-Little St. Francis River (80202020102), Stouts Creek (80202020208), Turkey Creek-St. Francis River (80202020210), and Wachita Creek-St. Francis River (80202020209). We also consider the entire St. Francis River upstream of 36.982104N, 90.335400W to be currently occupied, given that genetic analyses indicate gene flow among subwatersheds. The final critical habitat designation for each species includes all known currently occupied streams within the historical range, as well as those that connect occupied streams that contain the physical or biological features that will allow for the maintenance and expansion of existing populations and movement between them. See Final Critical Habitat

Designations, below, for a more detailed explanation of the units.

When determining critical habitat boundaries, we made every effort to avoid including developed areas such as lands covered by buildings, pavement, and other structures because such lands lack physical or biological features necessary for Big Creek crayfish and the St. Francis River crayfish. The scale of the maps we prepared under the parameters for publication within the Code of Federal Regulations may not reflect the exclusion of such developed lands. Any such lands inadvertently left inside critical habitat boundaries shown on the maps of this rule have been excluded by text in the rule and are not designated as critical habitat. Therefore, a Federal action involving these lands will not trigger section 7 consultation with respect to critical habitat and the requirement of no adverse modification unless the specific action will affect the physical or biological features in the adjacent critical habitat.

We are designating as critical habitat areas that we have determined are occupied at the time of listing (*i.e.,* currently occupied) and that contain one or more of the physical or biological features that are essential to support life-history processes of the species.

We are designating one critical habitat unit for each species, for a total of two units for both species, based on one or more of the physical or biological features being present to support the Big Creek crayfish or St. Francis River crayfish's life-history processes. All units are occupied and contain one or more of the identified physical or biological features and support multiple life-history processes.

The critical habitat designations are defined by the map or maps, as modified by any accompanying regulatory text, presented at the end of this document under Regulation Promulgation. We include more detailed information on the boundaries of each critical habitat designation in the preamble of this document. We will make the coordinates or plot points or both on which each map is based available to the public on *https://www.regulations.gov* at Docket No. FWS–R3–ES–2019–0020 and at the field office responsible for the designation (see **FOR FURTHER INFORMATION CONTACT**).

Final Critical Habitat Designations

We are designating one unit for each species, for a total of two units for both species, as critical habitat for the Big Creek crayfish and the St. Francis River crayfish. The critical habitat areas we describe below constitute our current best assessment of areas that meet the definition of critical habitat for Big Creek crayfish and St. Francis River crayfish. We are designating approximately 1,069 rmi (1,720 km) of critical habitat in one unit for Big Creek crayfish. We are designating approximately 1,043 rmi (1,679 km) of critical habitat in another unit for the St. Francis River crayfish. Tables 6 and 7 provide information on the approximate area of each unit and the adjacent land ownership. Because all streambeds are navigable waters, both critical habitat units are managed by the State of Missouri. The units include stream habitat up to bank full height. We are not designating any adjacent land as critical habitat.

TABLE 6—CRITICAL HABITAT UNIT FOR BIG CREEK CRAYFISH

Adjacent land ownership	Stream miles (kilometers)
Federal	296 (476)
State	42 (68)
Private	730 (1,175)
Total	1,069 (1,720)

Note: Area sizes may not sum due to rounding.

TABLE 7—CRITICAL HABITAT UNIT FOR ST. FRANCIS RIVER CRAYFISH

Adjacent land ownership	Stream miles (kilometers)
Federal	329 (529)
State	22 (35)
Private	693 (1,115)
Total	1,043 (1,679)

Note: Area sizes may not sum due to rounding.

We present brief descriptions of both units, and reasons why each one meets the definition of critical habitat for Big Creek crayfish or St. Francis River crayfish, below.

Big Creek Crayfish Unit

The Big Creek crayfish unit consists of approximately 1,069 rmi (1,720 km) in the Upper St. Francis River watershed upstream of Wappapello Dam in Iron, Madison, St. Francois, Washington, and Wayne Counties in Missouri. The unit consists of all of the streams in the following 12-digit hydrologic units: Big Lake Creek-St. Francis River (080202020503), Blankshire Branch-St. Francis River (080202020204), Captain Creek-St. Francis River (080202020405), Cedar Bottom Creek-St. Francis River (080202020402), Clark Creek (080202020407), Cedar Bottom Creek (080202020501), Crane Pond Creek (080202020303), Headwaters St. Francis River (080202020201), Headwaters Twelvemile Creek (080202020403), Leatherwood Creek-St. Francis River (080202020406), Lower Big Creek (080202020304), Middle Big Creek (080202020302), Saline Creek-Little St. Francis River (080202020102), Turkey Creek-St. Francis River (080202020210), Twelvemile Creek (080202020404), and Upper Big Creek (080202020301). The unit also consists of the entire St. Francis River upstream of 37.091254N, 90.447212W. The unit does not include any areas of adjacent land. A large portion of the riparian land adjacent to streams in this unit is privately owned (68 percent), with 28 percent in Federal ownership and 4 percent in State ownership.

St. Francis River Crayfish Unit

The St. Francis River crayfish unit consists of approximately 1,043 rmi (1,679 km) in the Upper St. Francis River watershed upstream of Wappapello Dam in Iron, Madison, St. Francois, Washington, and Wayne Counties in Missouri. The unit consists of all of the streams in the following 12-digit hydrologic units: Blankshire Branch-St. Francis River (80202020204), Captain Creek-St. Francis River (80202020405), Cedar Bottom Creek-St. Francis River (80202020402), Headwaters St. Francis River (80202020201), Headwaters Stouts Creek (80202020207), Hubble Creek-St. Francis River (80202020502), Leatherwood Creek-St. Francis River (80202020406), Little St. Francis River (80202020103), Lost Creek (80202020507), Marble Creek (80202020401), Musco Creek-Little St. Francis River (80202020101), O'Bannon Creek-St. Francis River (80202020206), Saline Creek-Little St. Francis River (80202020102), Stouts Creek (80202020208), Turkey Creek-St. Francis River (80202020210), and Wachita Creek-St. Francis River (80202020209). The unit also consists of the entire St. Francis River upstream of 36.982104N, 90.335400W. The unit does not include any areas of adjacent land. A large portion of the riparian land adjacent to streams in this unit is privately owned (66 percent), with 32 percent in Federal ownership and 2 percent in State ownership.

Effects of Critical Habitat Designation

Section 7 Consultation

Section 7(a)(2) of the Act requires Federal agencies, including the Service, to ensure that any action they fund, authorize, or carry out is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of designated critical habitat of such species.

We published a final rule revising the definition of destruction or adverse modification on August 27, 2019 (84 FR 44976). Destruction or adverse modification means a direct or indirect alteration that appreciably diminishes the value of critical habitat as a whole for the conservation of a listed species.

If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency (action agency) must enter into consultation with us. Examples of actions that are subject to the section 7 consultation process are actions on State, Tribal, local, or private lands that require a Federal permit (such as a permit from the U.S. Army Corps of Engineers under section 404 of the Clean Water Act or a permit from the Service under section 10 of the Act) or that involve some other Federal action (such as funding from the Federal Highway Administration, Federal Aviation Administration, or the Federal Emergency Management Agency). Federal actions not affecting listed species or critical habitat—and actions on State, Tribal, local, or private lands that are not federally funded, authorized, or carried out by a Federal agency—do not require section 7 consultation.

Compliance with the requirements of section 7(a)(2) is documented through our issuance of:

(1) A concurrence letter for Federal actions that may affect, but are not likely to adversely affect, listed species or critical habitat; or

(2) A biological opinion for Federal actions that may affect, and are likely to adversely affect, listed species or critical habitat.

When we issue a biological opinion concluding that a project is likely to jeopardize the continued existence of a listed species and/or destroy or adversely modify critical habitat, we provide reasonable and prudent alternatives to the project, if any are identifiable, that would avoid the likelihood of jeopardy and/or destruction or adverse modification of critical habitat. We define ''reasonable and prudent alternatives'' (at 50 CFR 402.02) as alternative actions identified during consultation that:

(1) Can be implemented in a manner consistent with the intended purpose of the action,

(2) Can be implemented consistent with the scope of the Federal agency's legal authority and jurisdiction,

(3) Are economically and technologically feasible, and

(4) Would, in the Service Director's opinion, avoid the likelihood of jeopardizing the continued existence of the listed species and/or avoid the likelihood of destroying or adversely modifying critical habitat.

Reasonable and prudent alternatives can vary from slight project modifications to extensive redesign or relocation of the project. Costs associated with implementing a reasonable and prudent alternative are similarly variable.

Regulations at 50 CFR 402.16 set forth requirements for Federal agencies to reinitiate consultation on previously reviewed actions. These requirements apply when the Federal agency has retained discretionary involvement or control over the action (or the agency's discretionary involvement or control is authorized by law) and, subsequent to the previous consultation: (a) if the amount or extent of taking specified in the incidental take statement is exceeded; (b) if new information reveals effects of the action that may affect listed species or critical habitat in a manner or to an extent not previously considered; (c) if the identified action is subsequently modified in a manner that causes an effect to the listed species or critical habitat that was not considered in the biological opinion or written concurrence; or (d) if a new species is listed or critical habitat designated that may be affected by the identified action. The reinitiation requirement applies only to actions that remain subject to some discretionary Federal involvement or control. As provided in 50 CFR 402.16, the requirement to reinitiate consultations for new species listings or critical habitat designation does not apply to certain agency actions (*e.g.,* land management plans issued by the Bureau of Land Management in certain circumstances.

Application of the ''Adverse Modification'' Standard

The key factor related to the destruction or adverse modification determination is whether implementation of the proposed Federal action directly or indirectly alters the designated critical habitat in a way that appreciably diminishes the value of the critical habitat as a whole for the conservation of the listed species. As discussed above, the role of critical habitat is to support physical or biological features essential to the conservation of a listed species and provide for the conservation of the species.

Section 4(b)(8) of the Act requires us to briefly evaluate and describe, in any proposed or final regulation that designates critical habitat, activities involving a Federal action that may violate section 7(a)(2) of the Act by destroying or adversely modifying such habitat, or that may be affected by such designation.

At this time, we are not aware of any activities that are likely to destroy or adversely modify critical habitat. However, during each consultation under section (7a)(2) of the Act, we will evaluate whether proposed activities are likely to destroy or adversely modify critical habitat.

Exemptions

Application of Section 4(a)(3) of the Act

Section 4(a)(3)(B)(i) of the Act (16 U.S.C. 1533(a)(3)(B)(i)) provides that the Secretary shall not designate as critical habitat any lands or other geographical areas owned or controlled by the Department of Defense (DoD), or designated for its use, that are subject to an integrated natural resources management plan (INRMP) prepared under section 101 of the Sikes Act Improvement Act of 1997 (16 U.S.C. 670a), if the Secretary determines in writing that such plan provides a benefit to the species for which critical habitat is proposed for designation. There are no DoD lands with a completed INRMP within the final critical habitat designations.

Consideration of Impacts Under Section 4(b)(2) of the Act

Section 4(b)(2) of the Act states that the Secretary shall designate and make revisions to critical habitat on the basis of the best available scientific data after taking into consideration the economic impact, national security impact, and any other relevant impact of specifying any particular area as critical habitat. The Secretary may exclude an area from critical habitat if she determines that the benefits of such exclusion outweigh the benefits of specifying such area as part of the critical habitat, unless she determines, based on the best scientific data available, that the failure to designate such area as critical habitat will result in the extinction of the species. In making the determination to exclude a particular area, the statute on its face, as well as the legislative history, are clear that the Secretary has broad discretion regarding which factor(s) to use and how much weight to give to any factor. In this final rule, we have not considered any areas for exclusion from critical habitat.

On December 18, 2020, we published a final rule in the **Federal Register** (85 FR 82376) revising portions of our regulations pertaining to exclusions of critical habitat. These final regulations became effective on January 19, 2021, and apply to critical habitat rules for which a proposed rule was published

after January 19, 2021. Consequently, these new regulations do not apply to this final rule.

Exclusions Based on Economic Impacts

Section 4(b)(2) of the Act and its implementing regulations require that we consider the economic impact that may result from a designation of critical habitat. To consider economic impacts, we prepared an incremental effects memorandum (IEM) and screening analysis, which, together with our narrative and interpretation of effects, we consider our economic analysis of the proposed critical habitat designations and related factors (IEc 2019, entire). The analysis, dated March 28, 2019, was made available for public review from September 17, 2020, through November 16, 2020 (see 85 FR 58192; September 17, 2020) and from April 27, 2021, to May 27, 2021 (see 86 FR 22127; April 27, 2021). The economic analysis addressed probable economic impacts of critical habitat designation for Big Creek crayfish and St. Francis River crayfish. Following the close of the comment periods, we reviewed and evaluated all information submitted during the comment periods that may pertain to our consideration of the probable incremental economic impacts of these critical habitat designations.

Our analysis concluded that these costs will not reach the threshold of ''significant'' under E.O. 12866. For the critical habitat designations for both species, we anticipate a maximum of 115 section 7 consultations annually at a total incremental cost of approximately $135,000 per year (IEc 2019, entire).

As we stated earlier, we solicited data and comments from the public on the economic analysis, as well as all aspects of the proposed rule and our required determinations. We did not receive any comments or additional data that would necessitate a revision of our IEM or screening analysis. Therefore, we are adopting our draft economic analysis as our final economic analysis.

We considered the economic impacts of the critical habitat designations. The Secretary is not exercising her discretion to exclude any areas from these designations of critical habitat for the Big Creek crayfish and the St. Francis River crayfish based on economic impacts.

Exclusions Based on Impacts on National Security and Homeland Security

In preparing this final rule, we have determined that the lands within the designations of critical habitat for Big Creek crayfish and St. Francis River crayfish are not owned or managed by the DoD or Department of Homeland Security, and, therefore, we anticipate no impact on national security or homeland security. We did not receive any additional information during the public comment period for the proposed designation regarding impacts of the designation on national security or homeland security that would support excluding any specific areas from the final critical habitat designation under authority of section 4(b)(2) and our implementing regulations at 50 CFR 424.19.

Exclusions Based on Other Relevant Impacts

Under section 4(b)(2) of the Act, we consider any other relevant impacts, in addition to economic impacts and impacts on national security as discussed above. We consider a number of factors, including whether there are permitted conservation plans covering the species in the area such as HCPs, safe harbor agreements (SHAs), or candidate conservation agreements with assurances (CCAAs), or whether there are non-permitted conservation agreements and partnerships that would be encouraged by designation of, or exclusion from, critical habitat. In addition, we look at the existence of Tribal conservation plans and partnerships and consider the government-to-government relationship of the United States with Tribal entities. We also consider any social impacts that might occur because of the designations.

In preparing this final rule, we have determined that there are currently no HCPs or other management plans for Big Creek crayfish and St. Francis River crayfish, and the designations do not include any Tribal lands or trust resources. We anticipate no impact on Tribal lands, partnerships, or HCPs from the critical habitat designations. Additionally, as described above, we are not excluding any particular areas on the basis of impacts to national security or economic impacts because there are no national security areas in the critical habitat designations.

During the development of these final designations, we considered all additional information received through the public comment periods regarding other relevant impacts to determine whether any specific areas should have been excluded from the final critical habitat designations under authority of section 4(b)(2) and our implementing regulations at 50 CFR 424.19. As stated above, the Secretary is not exercising her discretion to exclude any areas from the final critical habitat designations.

Required Determinations

Regulatory Planning and Review (Executive Orders 12866 and 13563)

Executive Order 12866 provides that the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget will review all significant rules. OIRA has determined that this rule is not significant.

Executive Order 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this final rule in a manner consistent with these requirements.

Regulatory Flexibility Act (5 U.S.C. 601 et seq.)

Under the Regulatory Flexibility Act (RFA; 5 U.S.C. 601 *et seq.*), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA; 5 U.S.C. 801 *et seq.*), whenever an agency is required to publish a notice of rulemaking for any proposed or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effects of the rule on small entities (*i.e.,* small businesses, small organizations, and small government jurisdictions). However, no regulatory flexibility analysis is required if the head of the agency certifies the rule will not have a significant economic impact on a substantial number of small entities. The SBREFA amended the RFA to require Federal agencies to provide a certification statement of the factual basis for certifying that the rule will not have a significant economic impact on a substantial number of small entities.

According to the Small Business Administration, small entities include small organizations such as independent nonprofit organizations; small governmental jurisdictions, including school boards and city and town governments that serve fewer than 50,000 residents; and small businesses (13 CFR 121.201). Small businesses include manufacturing and mining

concerns with fewer than 500 employees, wholesale trade entities with fewer than 100 employees, retail and service businesses with less than $5 million in annual sales, general and heavy construction businesses with less than $27.5 million in annual business, special trade contractors doing less than $11.5 million in annual business, and agricultural businesses with annual sales less than $750,000. To determine if potential economic impacts to these small entities are significant, we considered the types of activities that might trigger regulatory impacts under this designation as well as types of project modifications that may result. In general, the term ''significant economic impact'' is meant to apply to a typical small business firm's business operations.

Under the RFA, as amended, and as understood in light of recent court decisions, Federal agencies are required to evaluate the potential incremental impacts of rulemaking on those entities directly regulated by the rulemaking itself; in other words, the RFA does not require agencies to evaluate the potential impacts to indirectly regulated entities. The regulatory mechanism through which critical habitat protections are realized is section 7 of the Act, which requires Federal agencies, in consultation with the Service, to ensure that any action authorized, funded, or carried out by the agency is not likely to destroy or adversely modify critical habitat. Therefore, under section 7, only Federal action agencies are directly subject to the specific regulatory requirement (avoiding destruction and adverse modification) imposed by critical habitat designation. Consequently, it is our position that only Federal action agencies will be directly regulated by this designation. There is no requirement under the RFA to evaluate the potential impacts to entities not directly regulated. Moreover, Federal agencies are not small entities. Therefore, because no small entities will be directly regulated by this rulemaking, we certify that the final critical habitat designations will not have a significant economic impact on a substantial number of small entities.

In summary, we have considered whether the final critical habitat designations will result in a significant economic impact on a substantial number of small entities. For the above reasons and based on currently available information, we certify that the final critical habitat designation will not have a significant economic impact on a substantial number of small business entities. Therefore, a regulatory flexibility analysis is not required.

Energy Supply, Distribution, or Use—Executive Order 13211

Executive Order 13211 (Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use) requires agencies to prepare Statements of Energy Effects when undertaking certain actions. In our economic analysis, we did not find that the critical habitat designations will significantly affect energy supplies, distribution, or use. The critical habitat designations for Big Creek crayfish and St. Francis River crayfish are unlikely to generate costs exceeding $100 million in a single year (IEc 2019, p. 2). Therefore, this action is not a significant energy action, and no Statement of Energy Effects is required.

Unfunded Mandates Reform Act (2 U.S.C. 1501 et seq.)

In accordance with the Unfunded Mandates Reform Act (2 U.S.C. 1501 *et seq.*), we make the following finding:

(1) This rule will not produce a Federal mandate. In general, a Federal mandate is a provision in legislation, statute, or regulation that would impose an enforceable duty upon State, local, or Tribal governments, or the private sector, and includes both ''Federal intergovernmental mandates'' and ''Federal private sector mandates.'' These terms are defined in 2 U.S.C. 658(5)–(7). ''Federal intergovernmental mandate'' includes a regulation that ''would impose an enforceable duty upon State, local, or Tribal governments'' with two exceptions. It excludes ''a condition of Federal assistance.'' It also excludes ''a duty arising from participation in a voluntary Federal program,'' unless the regulation ''relates to a then-existing Federal program under which $500,000,000 or more is provided annually to State, local, and Tribal governments under entitlement authority,'' if the provision would ''increase the stringency of conditions of assistance'' or ''place caps upon, or otherwise decrease, the Federal Government's responsibility to provide funding,'' and the State, local, or Tribal governments ''lack authority'' to adjust accordingly. At the time of enactment, these entitlement programs were: Medicaid; Aid to Families with Dependent Children work programs; Child Nutrition; Food Stamps; Social Services Block Grants; Vocational Rehabilitation State Grants; Foster Care, Adoption Assistance, and Independent Living; Family Support Welfare Services; and Child Support Enforcement. ''Federal private sector mandate'' includes a regulation that ''would impose an enforceable duty upon the private sector, except (i) a condition of Federal assistance or (ii) a duty arising from participation in a voluntary Federal program.''

The designation of critical habitat does not impose a legally binding duty on non-Federal Government entities or private parties. Under the Act, the only regulatory effect is that Federal agencies must ensure that their actions do not destroy or adversely modify critical habitat under section 7. While non-Federal entities that receive Federal funding, assistance, or permits, or that otherwise require approval or authorization from a Federal agency for an action, may be indirectly impacted by the designation of critical habitat, the legally binding duty to avoid destruction or adverse modification of critical habitat rests squarely on the Federal agency. Furthermore, to the extent that non-Federal entities are indirectly impacted because they receive Federal assistance or participate in a voluntary Federal aid program, the Unfunded Mandates Reform Act would not apply, nor would critical habitat shift the costs of the large entitlement programs listed above onto State governments.

(2) We do not believe that this rule will significantly or uniquely affect small governments because the lands within the critical habitat designations are primarily Federally or privately owned and are managed by the State of Missouri and, therefore, do not fall within the jurisdiction of small governments. Therefore, a Small Government Agency Plan is not required.

Takings—Executive Order 12630

In accordance with E.O. 12630 (Government Actions and Interference with Constitutionally Protected Private Property Rights), we have analyzed the potential takings implications of designating critical habitat for Big Creek crayfish and St. Francis River crayfish in a takings implications assessment. The Act does not authorize the Service to regulate private actions on private lands or confiscate private property as a result of critical habitat designation. Designation of critical habitat does not affect land ownership, or establish any closures, or restrictions on use of or access to the designated areas. Furthermore, the designation of critical habitat does not affect landowner actions that do not require Federal funding or permits, nor does it preclude development of habitat conservation programs or issuance of incidental take permits to permit actions that do require

Federal funding or permits to go forward. However, Federal agencies are prohibited from carrying out, funding, or authorizing actions that would destroy or adversely modify critical habitat. A takings implications assessment has been completed for the designation of critical habitat for Big Creek crayfish and the St. Francis River crayfish, and it concludes that the designations of critical habitat do not pose significant takings implications for lands within or affected by the designations.

Federalism—Executive Order 13132

In accordance with E.O. 13132 (Federalism), this rule does not have significant Federalism effects. A federalism summary impact statement is not required. In keeping with Department of the Interior and Department of Commerce policy, we requested information from, and coordinated development of the critical habitat designations with, appropriate State resource agencies and incorporated comments when applicable into this final rule. From a federalism perspective, the designation of critical habitat directly affects only the responsibilities of Federal agencies. The Act imposes no other duties with respect to critical habitat, either for States and local governments, or for anyone else. As a result, the rule does not have substantial direct effects either on the States, or on the relationship between the national government and the States, or on the distribution of powers and responsibilities among the various levels of government. The designations may have some benefit to these governments because the areas that contain the features essential to the conservation of the species are more clearly defined, and the physical or biological features of the habitat necessary for the conservation of the species are specifically identified. This information does not alter where and what federally sponsored activities may occur. However, it may assist State and local governments in long-range planning because they no longer have to wait for case-by-case section 7 consultations to occur.

Where State and local governments require approval or authorization from a Federal agency for actions that may affect critical habitat, consultation under section 7(a)(2) of the Act will be required. While non-Federal entities that receive Federal funding, assistance, or permits, or that otherwise require approval or authorization from a Federal agency for an action, may be indirectly impacted by the designation of critical habitat, the legally binding duty to avoid destruction or adverse modification of critical habitat rests squarely on the Federal agency.

Civil Justice Reform—Executive Order 12988

In accordance with Executive Order 12988 (Civil Justice Reform), the Office of the Solicitor has determined that the rule will not unduly burden the judicial system and that it meets the requirements of sections 3(a) and 3(b)(2) of the Order. We are designating critical habitat in accordance with the provisions of the Act. To assist the public in understanding the habitat needs of the species, this rule identifies the physical or biological features essential to the conservation of the species. The designated areas of critical habitat are presented on maps, and the rule provides several options for the interested public to obtain more detailed location information, if desired.

Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.)

This rule does not contain information collection requirements, and a submission to the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) is not required. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

National Environmental Policy Act (32 U.S.C. 4321 et seq.)

Regulations adopted pursuant to section 4(a) of the Act are exempt from the National Environmental Policy Act (NEPA; 42 U.S.C. 4321 *et seq.*) and do not require an environmental analysis under NEPA. We published a notice outlining our reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244). This includes listing, delisting, and reclassification rules, as well as critical habitat designations and species-specific protective regulations promulgated concurrently with a decision to list or reclassify a species as threatened. The courts have upheld this position (*e.g., Douglas County* v. *Babbitt,* 48 F.3d 1495 (9th Cir. 1995) (critical habitat); *Center for Biological Diversity* v. *U.S. Fish and Wildlife Service,* 2005 WL 2000928 (N.D. Cal. Aug. 19, 2005) (concurrent 4(d) rule)).

Government-To-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994 (Government-to-Government Relations with Native American Tribal Governments; 59 FR 22951), Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments), and the Department of the Interior's manual at 512 DM 2, we readily acknowledge our responsibility to communicate meaningfully with federally recognized Tribes on a government-to-government basis. In accordance with Secretarial Order 3206 of June 5, 1997 (American Indian Tribal Rights, Federal-Tribal Trust Responsibilities, and the Endangered Species Act), we readily acknowledge our responsibilities to work directly with Tribes in developing programs for healthy ecosystems, to acknowledge that Tribal lands are not subject to the same controls as Federal public lands, to remain sensitive to Indian culture, and to make information available to Tribes. We have determined that no Tribal lands fall within the boundaries of the final critical habitat designation for the Big Creek crayfish or for the St. Francis River crayfish, so no Tribal lands will be affected by the designations.

Authors

The primary authors of this final rule are the staff members of the Fish and Wildlife Service's Species Assessment Team and the Missouri Ecological Services Field Office.

List of Subjects in 50 CFR Part 17

Endangered and threatened species, Exports, Imports, Plants, Reporting and recordkeeping requirements, Transportation, Wildlife.

Regulation Promulgation

Accordingly, we amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—ENDANGERED AND THREATENED WILDLIFE AND PLANTS

■ 1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 1531–1544; and 4201–4245, unless otherwise noted.

■ 2. Amend § 17.11, in paragraph (h), by adding, in alphabetical order under CRUSTACEANS, entries for ''Crayfish, Big Creek'' and ''Crayfish, St. Francis

River'' to the List of Endangered and Threatened Wildlife to read as follows:

§ 17.11 Endangered and threatened wildlife.

* * * * *

(h) * * *

Common name	Scientific name	Where listed	Status	Listing citations and applicable rules
*	*	*	*	*
CRUSTACEANS				
*	*	*	*	*
Crayfish, Big Creek	*Faxonius peruncus*	Wherever found	T	88 FR [insert **Federal Register** page where the document begins], 4/27/2023; 50 CFR 17.46(c);[4d] 50 CFR 17.95(h).[CH]
*	*	*	*	*
Crayfish, St. Francis River.	*Faxonius quadruncus*	Wherever found	T	88 FR [insert **Federal Register** page where the document begins], 4/27/2023; 50 CFR 17.46(c);[4d] 50 CFR 17.95(h).[CH]
*	*	*	*	*

■ 3. Amend § 17.46 by adding paragraph (c) to read as follows:

§ 17.46 Special rules—crustaceans.

* * * * *

(c) Big Creek crayfish (*Faxonius peruncus*) and St. Francis River crayfish (*Faxonius quadruncus*).

(1) *Prohibitions.* The following prohibitions that apply to endangered wildlife also apply to the Big Creek crayfish and the St. Francis River crayfish. Except as provided under paragraph (c)(2) of this section and §§ 17.4 and 17.5, it is unlawful for any person subject to the jurisdiction of the United States to commit, to attempt to commit, to solicit another to commit, or cause to be committed, any of the following acts in regard to this species:

(i) Import or export, as set forth at § 17.21(b) for endangered wildlife.

(ii) Take, as set forth at § 17.21(c)(1) for endangered wildlife. Activities that could result in take are those that:

(A) Impact crayfish habitat, riparian areas adjacent to crayfish sites, or habitat between connecting sites such that the species' reproduction or survival will be impacted or the effects of woodland crayfish invasion will be exacerbated. Such activities include, but are not limited to:

(*1*) Construction of instream low-water crossings;

(*2*) Destruction of riparian habitat that results in excessive sedimentation;

(*3*) Bridge construction; and

(*4*) Gravel mining.

(B) Lead to the introduction of heavy metals into streams. Such activities include, but are not limited to, heavy metal mining.

(C) Appreciably negatively affect water quality, chemistry, or quantity such that the species' reproduction or survival will be impacted. Such activities may include, but are not limited to, the release of wastewater effluent and agricultural runoff.

(D) Impact hydrological flows such that the species' reproduction or survival will be impacted. Such activities include, but are not limited to, construction of dams, modification of stream channels, and surface and groundwater withdrawals.

(E) Facilitate the spread of woodland crayfish or introduce additional woodland crayfish in occupied Big Creek crayfish or St. Francis River crayfish stream reaches. Such activities may include, but are not limited to, bait bucket dumping.

(iii) Possession and other acts with unlawfully taken specimens, as set forth at § 17.21(d)(1) for endangered wildlife.

(iv) Interstate or foreign commerce in the course of commercial activity, as set forth at § 17.21(e) for endangered wildlife.

(v) Sale or offer for sale, as set forth at § 17.21(f) for endangered wildlife.

(2) *Exceptions from prohibitions.* In regard to this species, you may:

(i) Conduct activities as authorized by a permit under § 17.32.

(ii) Take, as set forth at § 17.21(c)(2) through (c)(4) for endangered wildlife.

(iii) Take, as set forth at § 17.31(b).

(iv) Take incidental to an otherwise lawful activity caused by:

(A) Restoration activities or other activities that will result in an overall benefit to one or both of the species or their habitat that are completed in coordination with the Missouri Ecological Services Field Office. Such activities include, but are not limited to, stream bank stabilization, habitat restoration, heavy metal remediation, and replacement of low water crossings that obstruct movement of aquatic organisms with crossings that facilitate the movement of aquatic species (aquatic organism passages).

(B) A person conducting research or education under a valid Missouri Department of Conservation Wildlife Collector's permit.

(v) Possess and engage in other acts with unlawfully taken wildlife, as set forth at § 17.21(d)(2) for endangered wildlife.

■ 4. In § 17.95 amend paragraph (h), by:

■ a. Adding an entry for ''Big Creek Crayfish (*Faxonius peruncus*)'' following the entry for ''Pecos amphipod (*Gammarus pecos*)''; and

■ b. Adding an entry for ''St. Francis River Crayfish (*Faxonius quadruncus*)'' following the entry for ''Slenderclaw Crayfish (*Cambarus cracens*)''.

The additions read as follows:

§ 17.95 Critical habitat—fish and wildlife.

* * * * *

(h) *Crustaceans.*

* * * * *

Big Creek Crayfish (*Faxonius peruncus*)

(1) The critical habitat unit is depicted for Iron, Madison, St. Francois, Washington, and Wayne Counties in Missouri, on the map in this entry.

(2) Within the critical habitat unit, the physical or biological features essential to the conservation of the Big Creek crayfish consist of the following components:

(i) Stream flow velocity generally between 0 and 1.1 feet per second (ft/s) (0 and 0.35 meters per second (m/s)).

(ii) Stream depths generally between 0.2 and 1.6 feet (0.06 and 0.49 meters).

(iii) Water temperatures between 34 and 84 °F (1.1 and 28.9 °C).

(iv) Adequately low stream embeddedness so that spaces under rocks and cavities in gravel remain available to the Big Creek crayfish.

(v) An available forage and prey base consisting of invertebrates, periphyton, and plant detritus.

(vi) Connectivity among occupied stream reaches of the Big Creek crayfish (both within and among occupied subwatersheds).

(vii) Adequately low ratios or densities of nonnative species that allow for maintaining populations of the Big Creek crayfish.

(3) Critical habitat does not include manmade structures (such as buildings, aqueducts, runways, roads, and other paved areas) and the land on which they are located existing within the legal boundaries on May 30, 2023.

(4) The National Hydrography Dataset Plus (NHD*Plus*) was the geospatial data used to delineate critical habitat. NHD*Plus* is a national geospatial surface water framework that integrates the National Hydrography Dataset with the National Elevation Dataset and the Watershed Boundary Dataset. NHD*Plus* uses medium resolution (1:100,000-scale) data with a geographic projection and NAD83 datum. Critical habitat was delineated by including all streams within subwatersheds (at the 12-digit hydrologic unit level) occupied by the Big Creek crayfish. Occupied watersheds were defined using data from the Missouri Department of Conservation; the entire St. Francis River upstream of 37.091254N, 90.447212W is also considered occupied as a migratory route. The map in this entry, as modified by any accompanying regulatory text, establishes the boundaries of the critical habitat designation. The coordinates or plot points or both on which the map is based are available to the public at *https://www.regulations.gov* under Docket No. FWS–R3–ES–2019–0020 and at the Missouri Ecological Services Field Office. You may obtain field office location information by contacting one of the Service regional offices, the addresses of which are listed at 50 CFR 2.2.

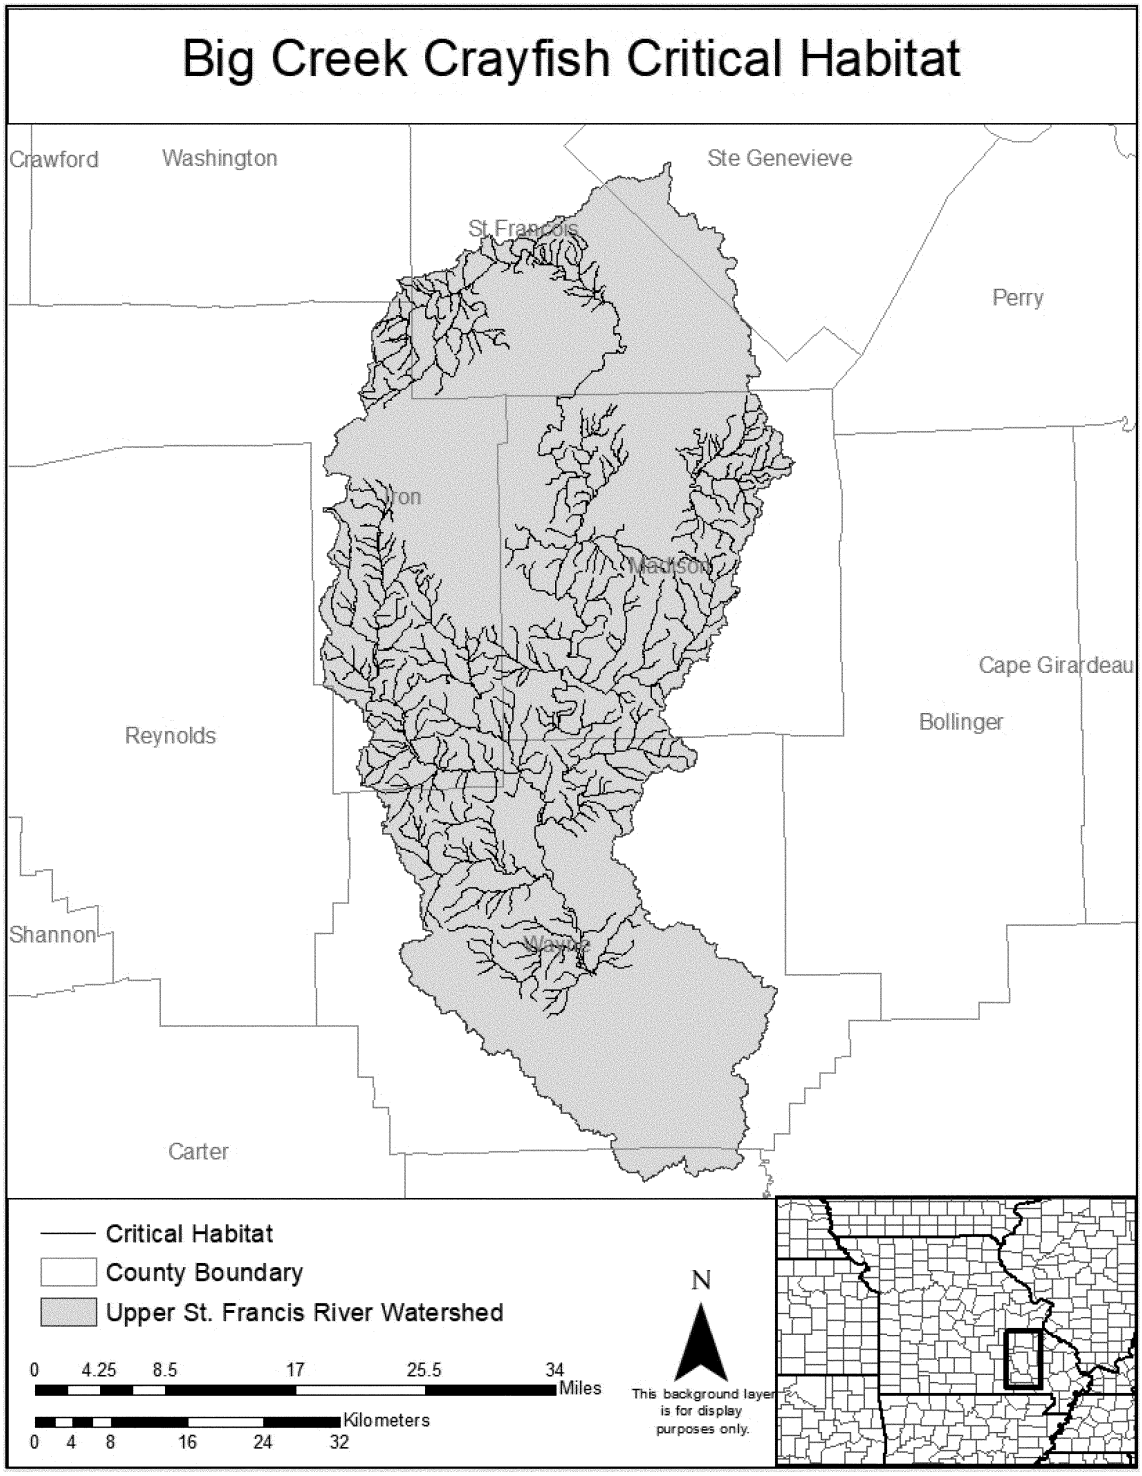
(5) Big Creek Crayfish Unit—Iron, Madison, St. Francois, Washington, and Wayne Counties, Missouri.

(i) The unit consists of all of the streams (approximately 1,069 river miles (1,720 kilometers)) upstream of Wappapello Dam in the following subwatersheds (numbers in parentheses represent the 12-digit hydrologic codes): Big Lake Creek-St. Francis River (080202020503), Blankshire Branch-St. Francis River (080202020204), Captain Creek-St. Francis River (080202020405), Cedar Bottom Creek-St. Francis River (080202020402), Clark Creek (080202020407), Cedar Bottom Creek (080202020501), Crane Pond Creek (080202020303), Headwaters St. Francis River (080202020201), Headwaters Twelvemile Creek (080202020403), Leatherwood Creek-St. Francis River (080202020406), Lower Big Creek (080202020304), Middle Big Creek (080202020302), Saline Creek-Little St. Francis River (080202020102), Turkey Creek-St. Francis River (080202020210), Twelvemile Creek (080202020404), and Upper Big Creek (080202020301). The unit also consists of the entire St. Francis River upstream of 37.091254N, 90.447212W. The unit does not include any areas of adjacent land. This unit includes stream habitat up to bank full height.

(ii) Map of Big Creek Crayfish Unit of Big Creek crayfish critical habitat follows:

BILLING CODE 4333–15–P

Figure 1 for Big Creek Crayfish (*Faxonius peruncus*) paragraph (5)(ii)



* * * * *

BILLING CODE 4333–15–C

St. Francis River Crayfish (*Faxonius quadruncus*)

(1) The critical habitat unit is depicted for Iron, Madison, St. Francois, Washington, and Wayne Counties in Missouri, on the map in this entry.

(2) Within the critical habitat unit, the physical or biological features essential to the conservation of the St. Francis River crayfish consist of the following components:

(i) Stream flow velocity generally between 0 and 1.1 feet per second (ft/s) (0 and 0.35 meters per second (m/s)).

(ii) Stream depths generally between 0.2 and 1.7 feet (0.06 and 0.52 meters).

(iii) Water temperatures between 34 and 84 °F (1.1 and 28.9 °C).

(iv) Adequately low stream embeddedness so that spaces under rocks and cavities in gravel remain available to the St. Francis River crayfish.

(v) An available forage and prey base consisting of invertebrates, periphyton, and plant detritus.

(vi) Connectivity among occupied stream reaches of the St. Francis River

crayfish (both within and among occupied subwatersheds).

(vii) Adequately low ratios or densities of nonnative species that allow for maintaining populations of the St. Francis River crayfish.

(3) Critical habitat does not include manmade structures (such as buildings, aqueducts, runways, roads, and other paved areas) and the land on which they are located existing within the legal boundaries on May 30, 2023.

(4) The National Hydrography Dataset Plus (NHD*Plus*) was the geospatial data used to delineate critical habitat. NHD*Plus* is a national geospatial surface water framework that integrates the National Hydrography Dataset with the National Elevation Dataset and the Watershed Boundary Dataset. NHD*Plus* uses medium resolution (1:100,000-scale) data with a geographic projection and NAD83 Datum. Critical habitat was delineated by including all streams within subwatersheds (at the 12-digit hydrologic unit level) occupied by the St. Francis River crayfish. Occupied watersheds were defined using data from the Missouri Department of Conservation; the entire St. Francis River upstream of 36.982104N, 90.335400W is also considered occupied as a migratory route. The map in this entry, as modified by any accompanying regulatory text, establishes the boundaries of the critical habitat designation. The coordinates or plot points or both on which the map is based are available to the public at *https://www.regulations.gov* under Docket No. FWS–R3–ES–2019–0020 and at the Missouri Ecological Services Field Office. You may obtain field office location information by contacting one of the Service regional offices, the addresses of which are listed at 50 CFR 2.2.

(5) St. Francis River Crayfish Unit—Iron, Madison, St. Francois, Washington, and Wayne Counties, Missouri.

(i) The unit consists of all of the streams (approximately 1,043 river miles (1,679 kilometers)) upstream of Wappapello Dam in the following subwatersheds (numbers in parentheses represent the 12-digit hydrologic codes): Blankshire Branch-St. Francis River (80202020204), Captain Creek-St. Francis River (80202020405), Cedar Bottom Creek-St. Francis River (80202020402), Headwaters St. Francis River (80202020201), Headwaters Stouts Creek (80202020207), Hubble Creek-St. Francis River (80202020502), Leatherwood Creek-St. Francis River (80202020406), Little St. Francis River (80202020103), Lost Creek (80202020507), Marble Creek (80202020401), Musco Creek-Little St. Francis River (80202020101), O'Bannon Creek-St. Francis River (80202020206), Saline Creek-Little St. Francis River (80202020102), Stouts Creek (80202020208), Turkey Creek-St. Francis River (80202020210), and Wachita Creek-St. Francis River (80202020209). The unit also consists of the entire St. Francis River upstream of 36.982104N, 90.335400W. The unit does not include any areas of adjacent land. The Upper St. Francis River Watershed Unit includes stream habitat up to bank full height.

Endangered and Threatened Wildlife and Plants; Endangered Species Status for South Llano Springs Moss

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), determine endangered species status under the Endangered Species Act of 1973 (Act), as amended, for the South Llano springs moss (*Donrichardsia macroneuron*), an aquatic moss species from Edwards County, Texas. We are excluding the single unit of proposed critical habitat, and, therefore, no critical habitat is being designated for the South Llano springs moss. This rule adds the species to the List of Endangered and Threatened Plants and applies the protections of the Act to the species.

DATES: This rule is effective May 30, 2023.

ADDRESSES: This final rule is available on the internet at *https://www.regulations.gov.* Comments and materials we received, as well as supporting documentation we used in preparing this rule, are available for public inspection at *https://www.regulations.gov at* Docket No. FWS–R2–ES–2020–0015.

FOR FURTHER INFORMATION CONTACT: Karen Myers, Field Supervisor, U.S. Fish and Wildlife Service, Austin Ecological Services Field Office, 1505 Ferguson Lane, Austin, Texas; telephone 512–937–7371. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

Executive Summary

Why we need to publish a rule. Under the Act, a species warrants listing if it meets the definition of an endangered species (in danger of extinction throughout all or a significant portion of its range) or a threatened species (likely to become endangered within the foreseeable future throughout all or a significant portion of its range). If we determine that a species warrants listing, we must list the species promptly and designate the species' critical habitat to the maximum extent prudent and determinable. We have determined that the South Llano springs moss meets the definition of an endangered species; therefore, we are listing it as such. Both listing a species as an endangered or threatened species and designating critical habitat can be completed only by issuing a rule through the Administrative Procedure Act rulemaking process.

What this document does. This rule lists the South Llano springs moss (*Donrichardsia macroneuron*) as an endangered species under the Act. We are excluding the single proposed critical habitat unit for the species.

The basis for our action. Under the Act, we may determine that a species is an endangered or threatened species because of any of five factors: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence. We have determined that increased groundwater pumping from the Edwards-Trinity aquifer that supplies water for the springs that the South Llano springs moss is dependent on, as well as flash floods, sedimentation, invasive plant species, a single population, small population size, and lack of genetic diversity, and cumulative impacts from these threats, pose threats to this plant species to the degree that listing it as an endangered species under the Act is warranted.

Section 4(a)(3) of the Act requires the Secretary of the Interior (Secretary) to designate critical habitat concurrent with listing to the maximum extent prudent and determinable. Section 3(5)(A) of the Act defines critical habitat as (i) the specific areas within the geographical area occupied by the species, at the time it is listed, on which are found those physical or biological features (I) essential to the conservation of the species and (II) which may require special management considerations or protections; and (ii) specific areas outside the geographical area occupied by the species at the time it is listed, upon a determination by the Secretary that such areas are essential for the conservation of the species. Section 4(b)(2) of the Act states that the Secretary must make the designation on the basis of the best scientific data available and after taking into consideration the economic impact, the impact on national security, and any other relevant impacts of specifying any particular area as critical habitat.

Previous Federal Actions

Please refer to the proposed listing and critical habitat rule (86 FR 53609; September 28, 2021) for a detailed description of previous Federal actions concerning this species.

Summary of Changes From the Proposed Rule

We reviewed the comments related to our proposed listing determination and critical habitat for the South Llano springs moss (see Summary of Comments and Recommendations, below) and completed our analysis of areas considered for exclusion under section 4(b)(2) of the Act. This final rule incorporates changes from our proposed listing and critical habitat rule (86 FR 53609; September 28, 2021) based on the exclusion analysis described in *Exclusions Based on Other Relevant Impacts,* below.

Specifically, we have determined that the benefits of excluding critical habitat outweigh the benefits of inclusion. For a complete description of our exclusion analysis, see Consideration of Impacts under Section 4(b)(2) of the Act, below. Based on our analysis, we are excluding the Upper South Llano River Unit (0.48 acre (ac) (0.19 hectares (ha))) of proposed critical habitat. As this was the only unit proposed for designation as critical habitat, no critical habitat is designated for this species in this rule.

Because we are not designating critical habitat for this species, we present an abbreviated list of determinations under Required Determinations in this rule (see below). In that portion of this rule, we present only those determinations that apply to listing actions due to the Act's requirement that listing decisions be made ''solely on the basis of the best scientific and commercial data available'' (16 U.S.C. 1533(b)(1)(A)), instead of the longer list of determinations that apply to critical habitat designations.

Supporting Documents

A species status assessment (SSA) team prepared an SSA report for the South Llano springs moss. The SSA team was composed of Service biologists, in consultation with other species experts. The SSA report represents a compilation of the best

scientific and commercial data available concerning the status of the species, including the impacts of past, present, and future factors (both negative and beneficial) affecting the species.

In accordance with our joint policy on peer review published in the **Federal Register** on July 1, 1994 (59 FR 34270), and our August 22, 2016, memorandum updating and clarifying the role of peer review of listing actions under the Act, we sought the expert opinions of four appropriate specialists regarding the SSA. We received one response. We also sent the SSA report to partners, including scientists with expertise regarding this species, for review. We received review from one partner (Texas Parks and Wildlife Department).

I. Final Listing Determination

Background

The South Llano springs moss is an aquatic moss that grows on submerged or partially submerged rocks. The deep, loosely interwoven mats are blue-green to blackish-brown when shaded and yellow-green when exposed to full sun. Like all mosses, the South Llano springs moss forms clonal colonies of leaf-bearing stems.

The South Llano springs moss has an extremely limited range: it has only been documented in two locations and is thought to be extirpated from one of those. The remaining extant site is from Seven Hundred Springs, on the South Llano River in Edwards County, Texas. The extirpated site, referred to as the Redfearn site, was about 5 kilometers (km) (3.1 miles (mi)) downstream from Seven Hundred Springs in Kimble County, Texas, although the exact location is unknown. Both sites occur within the Edwards Plateau. Researchers visited 10 other springs in the Llano and South Llano River watersheds in 1978 and 1979 but found no additional populations (Wyatt and Stoneburner 1980, pp. 514, 516).

The South Llano springs moss was discovered at Seven Hundred Springs in 1932 and was most recently confirmed there in 1979 (Wyatt and Stoneburner 1980, entire). When last observed in 1979, the South Llano springs moss was abundantly dispersed in the spring outflow, partially submerged in shaded areas within an area of about 10 by 100 meters (m) (33 by 328 feet (ft)) between the springs and the river below on privately owned land (Wyatt and Stoneburner 1980, p. 516). Observation of the habitat from the opposite side of the river in 2017 indicated that the habitat appears to be in excellent condition (Service 2017, entire). This is the best available information we have for this site; consequently, we consider the Seven Hundred Springs population to be extant. The South Llano springs moss was last documented at the Redfearn site in 1971. The two specimen labels from these collections state that they were collected ''1 mile south of Telegraph'' with one specimen collected on a dam and the other from limestone at the edge of the creek. On topographic maps, Telegraph is a location consisting of a single store that is not directly along the river; however, there is a road connecting Telegraph to the South Llano River with a bridge, and this may be the location from which Redfearn was measuring. Due to the vague location description, there is uncertainty around the exact location of the Redfearn site. In 2017, we conducted surveys along 5.7 km of the South Llano River, including the 2.25 km in which we believe Redfearn collected his specimens. All aquatic moss species encountered were collected and a sample of each of the four species encountered was sent to a bryologist at the Missouri Botanical Garden for identification. None of the species collected were found to be the South Llano springs moss. This is the best available information we have for this site; consequently, we consider the Redfearn population to be extirpated. It is possible that the species does not occur anywhere else. However, few surveys for this species have been conducted. Consequently, it is possible that this species occurs elsewhere along Paint Creek or the South Llano River. The best available data indicate that only the Seven Hundred Springs population persists.

A thorough review of the taxonomy, life history, and ecology of the South Llano springs moss is presented in the SSA report (version 1.1; Service 2023, entire).

Regulatory and Analytical Framework

Regulatory Framework

Section 4 of the Act (16 U.S.C. 1533) and the implementing regulations in title 50 of the Code of Federal Regulations set forth the procedures for determining whether a species is an endangered species or a threatened species, issuing protective regulations for threatened species, and designating critical habitat for endangered and threatened species. In 2019, jointly with the National Marine Fisheries Service, the Service issued a final rule that revised the regulations in 50 CFR part 424 regarding how we add, remove, and reclassify endangered and threatened species and the criteria for designating listed species' critical habitat (84 FR 45020; August 27, 2019). On the same day, the Service also issued final regulations that, for species listed as threatened species after September 26, 2019, eliminated the Service's general protective regulations automatically applying to threatened species the prohibitions that section 9 of the Act applies to endangered species (84 FR 44753; August 27, 2019).

The Act defines an ''endangered species'' as a species that is in danger of extinction throughout all or a significant portion of its range, and a ''threatened species'' as a species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act requires that we determine whether any species is an endangered species or a threatened species because of any of the following factors:

(A) The present or threatened destruction, modification, or curtailment of its habitat or range;

(B) Overutilization for commercial, recreational, scientific, or educational purposes;

(C) Disease or predation;

(D) The inadequacy of existing regulatory mechanisms; or

(E) Other natural or manmade factors affecting its continued existence.

These factors represent broad categories of natural or human-caused actions or conditions that could have an effect on a species' continued existence. In evaluating these actions and conditions, we look for those that may have a negative effect on individuals of the species, as well as other actions or conditions that may ameliorate any negative effects or may have positive effects.

We use the term ''threat'' to refer in general to actions or conditions that are known to or are reasonably likely to negatively affect individuals of a species. The term ''threat'' includes actions or conditions that have a direct impact on individuals (direct impacts), as well as those that affect individuals through alteration of their habitat or required resources (stressors). The term ''threat'' may encompass—either together or separately—the source of the action or condition or the action or condition itself.

However, the mere identification of any threat(s) does not necessarily mean that the species meets the statutory definition of an ''endangered species'' or a ''threatened species.'' In determining whether a species meets either definition, we must evaluate all identified threats by considering the expected response by the species and the effects of the threats—in light of those actions and conditions that will

ameliorate the threats—on an individual, population, and species level. We evaluate each threat and its expected effects on the species, then analyze the cumulative effect of all of the threats on the species as a whole. We also consider the cumulative effect of the threats in light of those actions and conditions that will have positive effects on the species, such as any existing regulatory mechanisms or conservation efforts. The Secretary determines whether the species meets the definition of an ''endangered species'' or a ''threatened species'' only after conducting this cumulative analysis and describing the expected effect on the species now and in the foreseeable future.

The Act does not define the term ''foreseeable future,'' which appears in the statutory definition of ''threatened species.'' Our implementing regulations at 50 CFR 424.11(d) set forth a framework for evaluating the foreseeable future on a case-by-case basis. The term ''foreseeable future'' extends only so far into the future as the Services can reasonably determine that both the future threats and the species' responses to those threats are likely. In other words, the foreseeable future is the period of time in which we can make reliable predictions. ''Reliable'' does not mean ''certain''; it means sufficient to provide a reasonable degree of confidence in the prediction. Thus, a prediction is reliable if it is reasonable to depend on it when making decisions.

It is not always possible or necessary to define the foreseeable future as a particular number of years. Analysis of the foreseeable future uses the best scientific and commercial data available and should consider the timeframes applicable to the relevant threats and to the species' likely responses to those threats in view of its life-history characteristics. Data that are typically relevant to assessing the species' biological response include species-specific factors such as lifespan, reproductive rates or productivity, certain behaviors, and other demographic factors.

Analytical Framework

The SSA report documents the results of our comprehensive biological review of the best scientific and commercial data regarding the status of the species, including an assessment of the potential threats to the species. The SSA report does not represent our decision on whether the species should be listed as an endangered or threatened species under the Act. However, it does provide the scientific basis that informs our regulatory decisions, which involve the further application of standards within the Act and its implementing regulations and policies. The following is a summary of the key results and conclusions from the SSA report; the full SSA report can be found at Docket FWS–R2–ES–2020–0015 on *https://www.regulations.gov*.

To assess South Llano springs moss' viability, we used the three conservation biology principles of resiliency, redundancy, and representation (Shaffer and Stein 2000, pp. 306–310). Briefly, resiliency supports the ability of the species to withstand environmental and demographic stochasticity (for example, wet or dry, warm or cold years), redundancy supports the ability of the species to withstand catastrophic events (for example, droughts, large pollution events), and representation supports the ability of the species to adapt over time to long-term changes in the environment (for example, climate changes). In general, the more resilient and redundant a species is and the more representation it has, the more likely it is to sustain populations over time, even under changing environmental conditions. Using these principles, we identified the species' ecological requirements for survival and reproduction at the individual, population, and species levels, and described the beneficial and risk factors influencing the species' viability.

The SSA process can be categorized into three sequential stages. During the first stage, we evaluated the individual species' life-history needs. The next stage involved an assessment of the historical and current condition of the species' demographics and habitat characteristics, including an explanation of how the species arrived at its current condition. The final stage of the SSA involved making predictions about the species' responses to positive and negative environmental and anthropogenic influences. Throughout all of these stages, we used the best available information to characterize viability as the ability of a species to sustain populations in the wild over time. We use this information to inform our regulatory decision.

Summary of Biological Status and Threats

In this discussion, we review the biological condition of the species and its resources, and the threats that influence the species' current and future condition, in order to assess the species' overall viability and the risks to that viability.

Based on the conditions of the only known current and historical populations, the South Llano springs moss requires a constant flow of mineral-rich spring water or spring-fed river water over shallow limestone rocks. Seven Hundred Springs and the areas thought to contain the Redfearn sites are supported by spring flows within the Edwards-Trinity aquifer and the South Llano River watershed (Seven Hundred Springs and Big Paint Springs). These springs have never ceased flowing in recorded history. Water from these springs emerges at a very consistent temperature and is rich in travertine minerals. Rocks and plants immersed in the upper South Llano River quickly become encrusted with travertine- or tufa-like mineral deposits, to an unusual degree not seen in most springs in the Edwards-Trinity aquifer (Service 2017, p. 2). Thus, it is possible that high mineral concentrations, or the precipitation of minerals from solution, could be requirements for the establishment and growth of South Llano springs moss individuals.

The water temperature of Seven Hundred Springs was consistently 21.5 degrees Celsius (°C) (70.7 degrees Fahrenheit (°F)) in June, and the pH ranged from 7.0 to 7.2 (Wyatt and Stoneburner 1980, p. 516). The species occurred in both shaded and exposed niches at Seven Hundred Springs (Wyatt and Stoneburner 1980, p. 516). Associated vascular plant species included maidenhair fern (*Adiantum capillus-veneris*), southern shield fern (*Thelypteris kunthii*), watercress (*Nasturtium officinale*), and members of the mint family (Lamiaceae) and composite family (Asteraceae) (Wyatt and Stoneburner 1980, p. 516). Associated moss species included *Hygroamblystegium tenax* and *Eucladium verticillatum* (Wyatt and Stoneburner 1980, p. 517).

Mosses closely related to the South Llano springs moss reproduce both sexually and asexually. However, there is no evidence that sexual reproduction is occurring in the single remaining known site of occurrence, as no plants with female reproductive structures were observed in the wild population or during a 16-month propagation study in 1978 and 1979 (Wyatt and Stoneburner 1980, p. 517). The plants cultivated in captivity produced only male reproductive structures. It is possible that the known population may be a clone of a single or a few male individuals and that sexual reproduction is no longer possible for the species. Therefore, the South Llano springs moss has extremely low representation with one or just a few genetically identical individuals.

In addition to the habitat requirements described above,

sufficiently resilient populations of South Llano springs moss need to be large enough that local stochastic events do not eliminate all individuals, allowing the overall population to recover from any one event. The larger a population is, the greater the chances that a portion of the population will survive. The minimum viable population size is not known for this species. However, the geographic extent is provided from the observations of Wyatt and Stoneburner (1980, p. 516). When last observed, the South Llano springs moss grew in the spring outflow partially submerged in shaded areas within a 10–m (33–ft) zone between the springs and the river below (Wyatt and Stoneburner 1980, p. 516). We assume that the population could be as large as the spring flow and substrate allow in this zone. The area occupied by a moss population is a practical surrogate for abundance, provided that it is understood that this does not address the number of genetically unique individuals. Since the South Llano springs moss occupies only a small area at one location, this species has no redundancy and would be unable to recolonize following a catastrophic event.

Recruitment is also needed for populations to be adequately resilient. The colony at Seven Hundred Springs may be a clone of a single individual, or only male individuals, and is presumed incapable of sexual reproduction (Wyatt and Stoneburner 1980, p. 520). Unless female individuals are present, the colony of South Llano springs moss at Seven Hundred Springs can persist and grow only through vegetative budding or through the establishment of fragments that happen to lodge in suitable niches. These mats can expand to occupy new habitats while the portion that established earlier dies. An individual remains alive as long as old stems die no faster than new stems develop. The same individual could migrate back and forth through available habitats for an unlimited period of time, and it is not inconceivable that the individuals we see today arose from spores that germinated many thousands of years ago. For the species to persist, the recruitment of new individuals must equal or exceed mortality.

The species' range may have been more extensive 10,000 years ago, and subsequently became restricted to this single location as the climate warmed and other springs periodically stopped flowing (Wyatt and Stoneburner 1980, pp. 519–520). To assess the climate changes that could affect this species into the future, we examined the climate parameters using both the representative concentration pathway (RCP) 4.5 and RCP 8.5 scenarios to provide a range of projected values. These models predict that by 2074, climate changes could result in a reduction of aquifer recharge and an increased duration and severity of droughts and heavy rainfall, thereby increasing the threats of interrupted spring flows and flash floods. Annual precipitation is highly variable in central Texas, and severe, multi-year droughts occurred during the 1950s and from 2006 through 2012. During these historical periods of drought, only the largest springs along the South Llano River, including Seven Hundred Springs, continued flowing, but at lower rates. Prolonged drought in combination with increased pumping from the Edwards-Trinity aquifer could increase the probability of interrupted flows of these springs and, consequently, the extirpation or extinction of the South Llano springs moss. Despite the frequency of prolonged drought, the region is also subject to extremely heavy rainfall, often resulting from tropical storms in the Gulf of Mexico as well as the Pacific Ocean. All of these factors contribute to flash floods (high intensity, low duration floods) that can drastically change stream beds and the surrounding vegetation, potentially scouring the South Llano springs moss from its rock substrate along the edge of the stream, or burying it beneath deposits of silt, sand, and gravel.

The amount of pumping from the Edwards-Trinity aquifer is one of the most important factors influencing storage in the aquifer and spring flows. Aquifer water levels are stable or have declined slightly over most of the Edwards-Trinity aquifer, but in some areas, heavy pumping has led to long-term declines in aquifer levels and diminished or interrupted spring flows (George et al. 2011, p. 35; Region F Water Planning Group 2015, pp. 1–34, 3–15; Plateau Region Water Planning Group 2016, pp. 7–11). These sources project relatively little growth in the human population in Edwards and Kimble Counties during the next 50 years. Conversely, population growth is projected to increase for five central Texas counties, which include the metropolitan areas of San Antonio, New Braunfels, San Marcos, Austin, Round Rock, and Georgetown, by 32 percent between 2017 and 2037, and by 53 percent between 2017 and 2050 (Texas Demographic Center 2017, p. 1). It is reasonably foreseeable that increased pumping may occur from the Edwards-Trinity aquifer for transfer to other regions to supply increased municipal water demands. This increased pumping could reduce water storage in the Edwards-Trinity aquifer and spring flows in the South Llano River. Loss of spring flows, even for a short time, would likely reduce or extirpate the only known remaining population of the South Llano springs moss because the species requires constant immersion in flowing spring water to persist.

The Upper Llano River Watershed Protection Plan (Broad et al. 2016, pp. 51, 64–66, 86) identifies increased runoff, evapotranspiration, and sediment loading as impacts to the upper Llano River watersheds due to the encroachment of woody species. Recharge into the Edwards-Trinity aquifer in Edwards County has been reduced during prior periods of vegetation loss from overgrazing, resulting in increased runoff and the drying of some smaller springs (Brune 1981, p. 173). Aquifer recharge may also have been reduced by the encroachment of brush into formerly grass-dominated uplands (South Llano Watershed Alliance 2012, p. 9; Broad et al. 2016, pp. 40–41, 51). Aquifer recharge would also be reduced by an increase in evapotranspiration, due to increased temperatures.

Small populations are less able to recover from losses caused by random fluctuations in recruitment (demographic stochasticity) or variations in spring outflow (environmental stochasticity) (Service 2015, p. 12). In addition to population size, it is likely that population density also influences population viability, as sexual reproduction, if it occurs at all in the species' current situation, requires male and female mosses to be in close proximity. Small, reproductively isolated populations are also susceptible to the loss of genetic diversity, to genetic drift, and to inbreeding (Barrett and Kohn 1991, pp. 3–30). The loss of genetic diversity may reduce the ability of a species or population to resist pathogens and parasites, to adapt to changing environmental conditions, or to colonize new habitats. The combined demographic and genetic consequences of small population sizes may reduce population recruitment, leading to even smaller populations and greater isolation, and further decreasing the viability of the species. These factors may already have contributed to the decline of the South Llano springs moss to its current state of extreme endemism in the upper South Llano River. All of the above stressors are exacerbated by the fact that the South Llano springs moss likely consists of only one small population. This species has an extremely low level of representation,

no redundancy, and limited resiliency making it vulnerable to catastrophic events such as flash floods and droughts.

We note that, by using the SSA framework to guide our analysis of the scientific information documented in the SSA report, we have not only analyzed individual effects on the species, but we have also analyzed their potential cumulative effects. We have considered the cumulative effects from climate change, aquifer recharge, population growth, and groundwater pumping on the spring flows on which the South Llano springs moss is dependent. We have also considered the risk of prolonged drought and increased flash floods due to climate change. We incorporate the cumulative effects into our SSA analysis when we characterize the current and future condition of the species. To assess the current and future condition of the species, we undertake an iterative analysis that encompasses and incorporates the threats individually and then accumulates and evaluates the effects of all the factors that may be influencing the species, including threats and conservation efforts. Because the SSA framework considers not just the presence of the factors, but to what degree they collectively influence risk to the entire species, our assessment integrates the cumulative effects of the factors and replaces a standalone cumulative effects analysis.

Conservation Efforts and Regulatory Mechanisms

We are not aware of any projects specifically dedicated to the conservation of the South Llano springs moss. However, all efforts to improve rangeland and vegetation management within the Edwards-Trinity Aquifer recharge zone, and within the upper South Llano River watershed, and all efforts to manage and conserve the Edwards-Trinity Aquifer itself, contribute to the uninterrupted flow of spring water and protection of this species' habitat. The Partners for Fish and Wildlife program has assisted several local landowners with conducting upland habitat restoration and management. The landowner of the Seven Hundred Springs property has worked with the Partners for Fish and Wildlife Program to conduct prescribed burning and restore 1,600 acres of upland native grassland habitat for migratory monarch butterflies.

Regulatory Mechanisms

The continued existence of the South Llano springs moss requires the uninterrupted flow of groundwater from the Edwards-Trinity Aquifer at Seven Hundred Springs. In Texas, the use of groundwater is managed through the overlapping authorities of Regional Water Planning groups and Groundwater Management Areas established by the Texas Water Development Board and by Groundwater Conservation Districts established by either the Texas Legislature or the Texas Commission on Environmental Quality. The hydrologic basin that supplies the springs of the South Llano River lies within Regional Water Planning regions F (32 counties, including Kimble) and J Plateau (6 counties, including Edwards). The Hydrologic Unit Code (HUC)-12 watersheds (sub-watersheds) of the upper South Llano River occur in four Groundwater Conservation Districts: Real-Edwards Conservation and Reclamation District, Kimble County Groundwater Conservation District, Sutton County Underground Water Conservation District, and Headwaters Underground Water Conservation District. These districts lie within Groundwater Management Area 7, which has established a desired future condition limiting average drawdown of the Edwards-Trinity aquifer to 2.1 m (7 ft). Therefore, if this limit on aquifer drawdown is not exceeded, we do not expect any interruptions to the flow of water at Seven Hundred Springs.

Summary of Comments and Recommendations

In the proposed rule published on September 28, 2021 (86 FR 53609), we requested that all interested parties submit written comments on the proposal by November 29, 2021. We also contacted appropriate Federal and State agencies, scientific experts and organizations, and other interested parties and invited them to comment on the proposal. A newspaper notice inviting general public comment was published in the Junction Eagle. We did not receive any requests for a public hearing. All substantive information received during comment periods has either been incorporated directly into this final determination or is addressed below.

Peer Reviewer Comments

As discussed in Supporting Documents, above, we received comments from one peer reviewer. We reviewed the comments we received from the peer reviewer for substantive issues and new information regarding the information contained in the SSA report (version 1.1; Service 2023, entire). The peer reviewer generally concurred with our methods and conclusions and did not provide any additional information or substantive comments.

Comments From States

(1) Comment: We received a comment from the State of Texas stating that the Service lacks sufficient data on status, trends, and threats to warrant listing the South Llano springs moss as an endangered species or to designate critical habitat.

Our Response: We are required to make listing determinations based on the best scientific and commercial data available at the time of our rulemaking. In our September 28, 2021, proposed rule (86 FR 53609) and in this final rule, we considered the best scientific and commercial data available regarding the South Llano springs moss to evaluate the species' potential status under the Act. Even though the species was last confirmed to be present in 1979, the best available information indicates the species is extant because the habitat remains intact and there has been no interruption to spring flow since that time. In our SSA, we document ongoing threats to the only known location of the species. We solicited peer review of our evaluation of the available data, and the peer reviewer who responded supports our analysis. In making a listing decision, we are not required to document a decline in species abundance, but rather document threats to the species and the risks these threats pose to the survival of the species. To date, we have been unable to access this location to conduct surveys, but we would welcome the opportunity to do so. Science is a cumulative process, and the body of knowledge is ever-growing. In light of this, we will always take new research into consideration.

Based on the best scientific and commercial data available, in this rule, we list the South Llano springs moss as an endangered species under the Act. We are excluding the single proposed critical habitat unit for the species (for more information, see our exclusion analysis under *Exclusions Based on Other Relevant Impacts,* below).

Public Comments

(2) Comment: One commenter stated that the listing of the South Llano springs moss would affect the ability of the landowner to use their private property and would require the landowner to bear costs associated with the protection of the species.

Our Response: When a plant species is listed, owners of private property where the species occurs are not obligated to incur any costs related to the species' conservation or alter current

land management. The presence of a listed species on privately owned property does not affect land ownership, establish any restrictions on use of or access to the designated areas, or establish specific land management standards or prescriptions. Additionally, the presence of a listed species does not allow the government or public to access private lands.

The Act's section 9 prohibitions apply to the import and export, removal and reduction to possession, interstate or foreign commerce, and sale or offer for sale in interstate or foreign commerce of endangered plants. The prohibition on removal and reduction to possession of endangered plants applies to removing and reducing to possession, and maliciously damaging or destroying, the species on areas under Federal jurisdiction, not on private lands. That prohibition also applies to removing, cutting, digging up, or damaging or destroying the species on any other area in knowing violation of any State (in this case, Texas) law or regulation or in the course of any violation of a State criminal trespass law.

Section 7 of the Act does require Federal agencies to review the projects they fund, regulate, or carry out, such as federally funded highways and federally regulated pipelines and powerlines, to assess their effects on listed plants that occur on private lands. Through consultation with the Service, such projects may be modified to avoid or reduce effects to listed plants. Programs are available to aid interested landowners in the voluntary conservation of listed species. These programs may provide technical or financial assistance and may be requested from a local Service field office.

(3) Comment: One commenter stated that the Service lacks the authority to regulate intrastate species.

Our Response: We have the legal authority to regulate intrastate species. Numerous Federal appellate courts have held that regulation of purely intrastate species is an essential part of the Act's regulatory scheme. See *San Luis & Delta-Mendota Water Authority* v. *Salazar,* 638 F.3d 1163 (9th Cir. 2011); *Alabama-Tombigbee Rivers Coalition* v. *Kempthorne,* 477 F.3d 1250 (11th Cir. 2007); *GDF Realty Investments, LTD.* v. *Norton,* 326 F.3d 622 (5th Cir. 2003); *Gibbs* v. *Babbitt,* 214 F.3d 483 (4th Cir 2000); and *Nat'l Ass'n of Home Builders* v. *Babbitt,* 130 F.3d 1041 (D.C.Cir. 1997). In particular, the Fifth Circuit Court of Appeals (the Fifth Circuit includes Texas) has held that regulation of purely intrastate species ''is an essential part of'' the Act's larger regulatory scheme (*GDF Realty,* 326 F.3d at 640).

(4) Comment: One commenter stated that the proposed rule would designate much of the Edwards Aquifer as critical habitat.

Our Response: We proposed a critical habitat designation only in the immediate vicinity of Seven Hundred Springs, an area of 0.48 ac (0.19 ha). We have determined that the benefits of excluding this single unit of critical habitat outweigh the benefits of including it, so we are excluding this single 0.48-ac area from critical habitat designation (for more information, see our exclusion analysis under *Exclusions Based on Other Relevant Impacts,* below). As a result, no critical habitat is being designated for the South Llano springs moss in this rule.

(5) Comment: Two commenters expressed concerns that the listing of the South Llano springs moss would stop or reduce groundwater pumping from the Edwards aquifer.

Our Response: Nothing in this rule requires a reduction or stoppage of groundwater pumping from the Edwards aquifer. See our response to *(2) Comment,* above. As we state there, section 7 of the Act requires Federal agencies to review the projects they fund, regulate, or carry out, such as federally funded highways and federally regulated pipelines and powerlines, to assess their effects on listed plants. Although increased pumping from the Edwards-Trinity aquifer could potentially pose a threat to the species' survival, especially if combined with prolonged drought, pumping from this aquifer is not regulated by the Federal Government and is unlikely to have a Federal nexus.

(6) Comment: One commenter stated that the economic and societal costs from listing the South Llano springs moss outweigh the extinction of this species.

Our Response: Although we may consider economic impacts from a critical habitat designation, the decision on whether or not to list a species under the Act must rely solely on the best available scientific and commercial data (see 16 U.S.C. 1533(b)(1)(A)), without consideration of economic or societal costs.

(7) Comment: One comment stated that the proposed rule did not provide adequate alternatives through a National Environmental Policy Act (NEPA; 42 U.S.C. 4321 *et seq.*) analysis.

Our Response: It is our position that, outside the jurisdiction of the U.S. Court of Appeals for the Tenth Circuit, we do not need to prepare environmental analyses pursuant to NEPA in connection with regulations adopted pursuant to section 4(a) of the Act. We published a notice outlining our reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244). This position was upheld by the U.S. Court of Appeals for the Ninth Circuit (*Douglas County* v. *Babbitt,* 48 F.3d 1495 (9th Cir. 1995), cert. denied 516 U.S. 1042 (1996)).

(8) Comment: One commenter stated that the Service should specify conservation measures for the species.

Our Response: The Act does not require this rule to specify conservation measures for the species. When we list a species as endangered or threatened under the Act, we first propose it as such, then we evaluate new information received through the public comment process, then we make a final determination through a final rule. For the South Llano springs moss, we have determined the species is in danger of extinction. During the rulemaking process, we developed a recovery outline that will be used as the foundation of a recovery plan following listing. The recovery outline will be posted to our Environmental Conservation Online System (ECOS) website (*https://ecos.fws.gov/ecp/*) within 30 days after this final listing rule is published. The recovery outline presents a preliminary conservation strategy that will guide recovery actions until the full recovery plan is available. We then prepare a draft recovery plan, with the goal of completing it within 18 months of the publication of the final listing rule. We will post the draft recovery plan to ECOS when it is ready and provide a 60-day public review and comment period. The draft recovery plan will contain site-specific management actions needed for recovery, objective and measurable recovery criteria, and estimates of time and cost needed for recovery. Based on public and peer review comments, we will then prepare a final recovery plan, with a goal of completing it within 1 year after completing the draft recovery plan. We will also prepare a recovery implementation strategy, which will contain step-down activities or projects needed to implement the recovery actions described in the recovery plan.

(9) Comment: One commenter recommended that we designate additional unoccupied critical habitat downstream from Seven Hundred Springs.

Our Response: We have the ability to designate areas that are not occupied by the species (*i.e.,* unoccupied areas) as critical habitat if they possess one or more of the physical and biological features that are essential for the

conservation of the species. While we find that the species needs additional populations in more locations in order to recover to the point of no longer needing the protections of the Act, we do not possess sufficient data to demonstrate that any other areas exist that possess habitat essential for the conservation of South Llano springs moss.

Determination of South Llano Springs Moss's Status

Section 4 of the Act (16 U.S.C. 1533) and its implementing regulations (50 CFR part 424) set forth the procedures for determining whether a species meets the definition of an endangered species or a threatened species. The Act defines an ''endangered species'' as a species in danger of extinction throughout all or a significant portion of its range, and a ''threatened species'' as a species likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act requires that we determine whether a species meets the definition of endangered species or threatened species because of any of the following factors: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence.

Status Throughout All of Its Range

After evaluating threats to the species and assessing the cumulative effect of the threats under the Act's section 4(a)(1) factors, we are listing the South Llano springs moss as an endangered species throughout all of its range. Only two very small populations of South Llano springs moss have been documented, which were last observed in 1971 and 1979. One is now extirpated, and the other is restricted to a 10-by-100-m (33-by-328-ft) zone between Seven Hundred Springs and the South Llano River (Wyatt and Stoneburner 1980, p. 516). Therefore, the species has an extremely low level of representation, and no redundancy, making it vulnerable to catastrophic events such as flash floods and droughts. During historical droughts, such as in the 1950s and 2006–2012, many regional springs ceased flowing, and the flow of Seven Hundred Springs was greatly reduced. Projected climate changes include an increased frequency, duration, and severity of droughts (Factor E), thereby increasing the risk of interrupting the flow of Seven Hundred Springs and the desiccation and mortality of this obligately aquatic moss (Factor A). The amount of pumping from the Edwards-Trinity aquifer is one of the most important factors influencing storage in the aquifer and the spring flows on which the South Llano springs moss relies. Groundwater pumping is likely to increase as the human population grows and as the severity and duration of droughts increases. Prolonged drought (Factor E), in combination with increased pumping from the Edwards-Trinity aquifer (Factor E), further increase the probability of interrupting the flow of Seven Hundred Springs (Factor A) and, consequently, the probability of extinction of the South Llano springs moss.

The South Llano springs moss has little or no genetic diversity (Factor E) because this species likely consists of clones of one or a few male individuals and is no longer capable of sexual reproduction (Factor E). Consequently, the species has very low representation and likely has very little ability to adapt to environmental changes. In addition, the South Llano springs moss has poor redundancy because there is only one small population remaining. One future drought event that reduces the flow of Seven Hundred Springs could result in the extirpation of this species.

We find that the South Llano springs moss is presently in danger of extinction throughout its entire range based on the one small population that is likely genetically compromised. This status puts the species on the brink of extinction where normal stochastic events, such as drought, flooding, or a human-caused drop in the aquifer level, could lead to further decline or loss of the species entirely. The only other known population has not been observed since 1971 and is considered likely extirpated. This one remaining population could be affected by a variety of threats acting in combination to reduce the overall viability of the species. The risk of extinction is high because the remaining population is small, with no known potential for natural recolonization. We find that a threatened species status is not appropriate for the South Llano springs moss because of the species' current precarious condition due to its contracted range, small population size, and likely compromised genetics, and because these stressors are severe, ongoing, and expected to continue into the future.

Therefore, after assessing the best available information, we determine that the South Llano springs moss is in danger of extinction throughout all of its range.

Status Throughout a Significant Portion of Its Range

Under the Act and our implementing regulations, a species may warrant listing if it is in danger of extinction or likely to become so in the foreseeable future throughout all or a significant portion of its range. We have determined that the South Llano springs moss is in danger of extinction throughout all of its range and accordingly did not undertake an analysis of any significant portions of its range. Because the South Llano springs moss warrants listing as endangered throughout all of its range, our determination does not conflict with the decision in *Center for Biological Diversity* v. *Everson,* 435 F. Supp. 3d 69 (D.D.C. 2020), because that decision related to significant portion of the range analyses for species that warrant listing as threatened, not endangered, throughout all of their range.

Determination of Status

Our review of the best available scientific and commercial information indicates that the South Llano springs moss meets the Act's definition of an endangered species. Therefore, we are listing the South Llano springs moss as an endangered species in accordance with sections 3(6) and 4(a)(1) of the Act.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened species under the Act include recognition as a listed species, planning and implementation of recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing results in public awareness, and conservation by Federal, State, Tribal, and local agencies, private organizations, and individuals. The Act encourages cooperation with the States and other countries and calls for recovery actions to be carried out for listed species. The protection required by Federal agencies, including the Service, and the prohibitions against certain activities are discussed, in part, below.

The primary purpose of the Act is the conservation of endangered and threatened species and the ecosystems upon which they depend. The ultimate goal of such conservation efforts is the recovery of these listed species, so that they no longer need the protective measures of the Act. Section 4(f) of the Act calls for the Service to develop and implement recovery plans for the

conservation of endangered and threatened species. The goal of this process is to restore listed species to a point where they are secure, self-sustaining, and functioning components of their ecosystems.

The recovery planning process begins with development of a recovery outline made available to the public soon after a final listing determination. The recovery outline guides the immediate implementation of urgent recovery actions while a recovery plan is being developed. Recovery teams (composed of species experts, Federal and State agencies, nongovernmental organizations, and stakeholders) may be established to develop and implement recovery plans. The recovery planning process involves the identification of actions that are necessary to halt and reverse the species' decline by addressing the threats to its survival and recovery. The recovery plan identifies recovery criteria for review of when a species may be ready for reclassification from endangered to threatened (''downlisting'') or removal from protected status (''delisting''), and methods for monitoring recovery progress. Recovery plans also establish a framework for agencies to coordinate their recovery efforts and provide estimates of the cost of implementing recovery tasks. Revisions of the plan may be done to address continuing or new threats to the species, as new substantive information becomes available. The recovery outline, draft recovery plan, final recovery plan, and any revisions will be available on ECOS as they are completed (*https://ecos.fws.gov/ecp/*), or from our Austin Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

Implementation of recovery actions generally requires the participation of a broad range of partners, including other Federal agencies, States, Tribes, nongovernmental organizations, businesses, and private landowners. Examples of recovery actions include habitat restoration (*e.g.,* restoration of native vegetation), research, captive propagation and reintroduction, and outreach and education. The recovery of many listed species cannot be accomplished solely on Federal lands because their range may occur primarily or solely on non-Federal lands. To achieve recovery of these species requires cooperative conservation efforts on private, State, and Tribal lands.

Once this species is listed (see **DATES**, above), funding for recovery actions may be available from a variety of sources, including Federal budgets, State programs, and cost-share grants for non-Federal landowners, the academic community, and nongovernmental organizations. In addition, pursuant to section 6 of the Act, the State of Texas will be eligible for Federal funds to implement management actions that promote the protection or recovery of the South Llano springs moss. Information on our grant programs that are available to aid species recovery can be found at: *https://www.fws.gov/service/financial-assistance.*

Please let us know if you are interested in participating in recovery efforts for the South Llano springs moss. Additionally, we invite you to submit any new information on this species whenever it becomes available and any information you may have for recovery planning purposes (see **FOR FURTHER INFORMATION CONTACT**).

Section 7(a) of the Act requires Federal agencies to evaluate their actions with respect to any species that is listed as an endangered or threatened species and with respect to its critical habitat, if any is designated. Regulations implementing this interagency cooperation provision of the Act are codified at 50 CFR part 402. Section 7(a)(2) of the Act requires Federal agencies to ensure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of any endangered or threatened species or destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency must enter into consultation with us.

Federal agency actions within the species' habitat that may require conference, consultation, or both as described in the preceding paragraph include management and conservation projects conducted on private lands with support from the Service's Partners for Fish and Wildlife Program; issuance of section 404 Clean Water Act (33 U.S.C. 1251 *et seq.*) permits by the U.S. Army Corps of Engineers; construction and maintenance of roads or highways by the Federal Highway Administration; construction and maintenance of railways by the Federal Railroad Administration; and discharge permits from the Environmental Protection Agency.

The Act and its implementing regulations set forth a series of general prohibitions and exceptions that apply to endangered plants. The prohibitions of section 9(a)(2) of the Act, codified at 50 CFR 17.61, make it illegal for any person subject to the jurisdiction of the United States to: Import or export; remove and reduce to possession from areas under Federal jurisdiction; maliciously damage or destroy on any such area; remove, cut, dig up, or damage or destroy on any other area in knowing violation of any law or regulation of any State or in the course of any violation of a State criminal trespass law; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever and in the course of a commercial activity; or sell or offer for sale in interstate or foreign commerce an endangered plant. Certain exceptions apply to employees of the Service, other Federal land management agencies, and State conservation agencies.

We may issue permits to carry out otherwise prohibited activities involving endangered plants under certain circumstances. Regulations governing permits are codified at 50 CFR 17.62. With regard to endangered plants, a permit may be issued for scientific purposes or for enhancing the propagation or survival of the species. The statute also contains certain exemptions from the prohibitions, which are found in sections 9 and 10 of the Act.

It is our policy, as published in the **Federal Register** on July 1, 1994 (59 FR 34272), to identify to the maximum extent practicable at the time a species is listed those activities that would or would not constitute a violation of section 9 of the Act. The intent of this policy is to increase public awareness of the effect of a final listing on proposed and ongoing activities within the range of a listed species. Based on the best available information, the following actions are unlikely to result in a violation of section 9, if these activities are carried out in accordance with existing regulations and permit requirements; this list is not comprehensive:

(1) Recreational use of the streams, such as fishing, swimming, and canoeing, as these activities normally take place in the river or on the river bank and not in the spring itself; and

(2) Normal residential landscaping activities, as these activities do not take place in the spring, nor do they affect the quantity or quality of water in the spring.

Based on the best available information, the following activities may potentially result in a violation of section 9 of the Act if they are not authorized in accordance with applicable law; this list is not comprehensive:

(1) Removing, cutting, digging up, or damaging or destroying the South Llano springs moss in knowing violation of any law or regulation of the State of Texas or in the course of any violation of a State criminal trespass law;

(2) Importing the South Llano springs moss into, or exporting it from, the United States;

(3) Delivering, receiving, carrying, transporting, or shipping the South Llano springs moss in interstate or foreign commerce, by any means and in the course of a commercial activity; and

(4) Selling or offering the South Llano springs moss for sale in interstate or foreign commerce.

Questions regarding whether specific activities would constitute a violation of section 9 of the Act should be directed to the Austin Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

II. Critical Habitat

Background

Section 4(a)(3) of the Act requires that, to the maximum extent prudent and determinable, we designate a species' critical habitat concurrently with listing the species. Critical habitat is defined in section 3 of the Act as:

(1) The specific areas within the geographical area occupied by the species, at the time it is listed in accordance with the Act, on which are found those physical or biological features

(a) Essential to the conservation of the species, and

(b) Which may require special management considerations or protection; and

(2) Specific areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Our regulations at 50 CFR 424.02 define the geographical area occupied by the species as an area that may generally be delineated around species' occurrences, as determined by the Secretary (*i.e.,* range). Such areas may include those areas used throughout all or part of the species' life cycle, even if not used on a regular basis (*e.g.,* migratory corridors, seasonal habitats, and habitats used periodically, but not solely by vagrant individuals).

This critical habitat designation was proposed when the regulations defining ''habitat'' (85 FR 81411; December 16, 2020) and governing the 4(b)(2) exclusion process for the Service (85 FR 82376; December 18, 2020) were in place and in effect. However, those two regulations have been rescinded (87 FR 37757; June 24, 2022, and 87 FR 43433; July 21, 2022) and no longer apply to any designations of critical habitat. Therefore, for this final rule designating critical habitat for the South Llano springs moss, we apply the regulations at 424.19 and the 2016 Joint Policy on 4(b)(2) exclusions (81 FR 7226; February 11, 2016).

Conservation, as defined under section 3 of the Act, means to use and the use of all methods and procedures that are necessary to bring an endangered or threatened species to the point at which the measures provided pursuant to the Act are no longer necessary. Such methods and procedures include, but are not limited to, all activities associated with scientific resources management such as research, census, law enforcement, habitat acquisition and maintenance, propagation, live trapping, and transplantation, and, in the extraordinary case where population pressures within a given ecosystem cannot be otherwise relieved, may include regulated taking.

Critical habitat receives protection under section 7 of the Act through the requirement that Federal agencies ensure, in consultation with the Service, that any action they authorize, fund, or carry out is not likely to result in the destruction or adverse modification of critical habitat. The designation of critical habitat does not affect land ownership or establish a refuge, wilderness, reserve, preserve, or other conservation area. Such designation also does not allow the government or public to access private lands. Such designation does not require implementation of restoration, recovery, or enhancement measures by non-Federal landowners. Where a landowner requests Federal agency funding or authorization for an action that may affect a listed species or critical habitat, the Federal agency would be required to consult with the Service under section 7(a)(2) of the Act. However, even if the Service were to conclude that the proposed activity would result in destruction or adverse modification of the critical habitat, the Federal action agency and the landowner are not required to abandon the proposed activity, or to restore or recover the species; instead, they must implement ''reasonable and prudent alternatives'' to avoid destruction or adverse modification of critical habitat.

Under the first prong of the Act's definition of critical habitat, areas within the geographical area occupied by the species at the time it was listed are included in a critical habitat designation if they contain physical or biological features (1) which are essential to the conservation of the species and (2) which may require special management considerations or protection. For these areas, critical habitat designations identify, to the extent known using the best scientific and commercial data available, those physical or biological features that are essential to the conservation of the species (such as space, food, cover, and protected habitat).

Under the second prong of the Act's definition of critical habitat, we can designate critical habitat in areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Section 4 of the Act requires that we designate critical habitat on the basis of the best scientific data available. Further, our Policy on Information Standards Under the Endangered Species Act (published in the **Federal Register** on July 1, 1994 (59 FR 34271)), the Information Quality Act (section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Pub. L. 106–554; H.R. 5658)), and our associated Information Quality Guidelines provide criteria, establish procedures, and provide guidance to ensure that our decisions are based on the best scientific data available. They require our biologists, to the extent consistent with the Act and with the use of the best scientific data available, to use primary and original sources of information as the basis for recommendations to designate critical habitat.

When we are determining which areas should be designated as critical habitat, our primary source of information is generally the information from the SSA report and information developed during the listing process for the species. Additional information sources may include any generalized conservation strategy, criteria, or outline that may have been developed for the species; the recovery plan for the species; articles in peer-reviewed journals; conservation plans developed by States and counties; scientific status surveys and studies; biological assessments; other unpublished materials; or experts' opinions or personal knowledge.

Habitat is dynamic, and species may move from one area to another over time. We recognize that critical habitat designated at a particular point in time may not include all of the habitat areas that we may later determine are necessary for the recovery of the species. For these reasons, a critical habitat designation does not signal that habitat outside the designated area is unimportant or may not be needed for recovery of the species. Areas that are important to the conservation of the

species, both inside and outside the critical habitat designation, will continue to be subject to: (1) Conservation actions implemented under section 7(a)(1) of the Act; (2) regulatory protections afforded by the requirement in section 7(a)(2) of the Act for Federal agencies to ensure their actions are not likely to jeopardize the continued existence of any endangered or threatened species; and (3) the prohibitions found in section 9 of the Act. Federally funded or permitted projects affecting listed species outside their designated critical habitat areas may still result in jeopardy findings in some cases. These protections and conservation tools will continue to contribute to recovery of this species. Similarly, critical habitat designations made on the basis of the best available information at the time of designation will not control the direction and substance of future recovery plans, habitat conservation plans (HCPs), or other species conservation planning efforts if new information available at the time of these planning efforts calls for a different outcome.

Physical or Biological Features Essential to the Conservation of the Species

In accordance with section 3(5)(A)(i) of the Act and regulations at 50 CFR 424.12(b), in determining which areas we will designate as critical habitat from within the geographical area occupied by the species at the time of listing, we consider the physical or biological features that are essential to the conservation of the species and which may require special management considerations or protection. The regulations at 50 CFR 424.02 define ''physical or biological features essential to the conservation of the species'' as the features that occur in specific areas and that are essential to support the life-history needs of the species, including, but not limited to, water characteristics, soil type, geological features, sites, prey, vegetation, symbiotic species, or other features. A feature may be a single habitat characteristic or a more complex combination of habitat characteristics. Features may include habitat characteristics that support ephemeral or dynamic habitat conditions. Features may also be expressed in terms relating to principles of conservation biology, such as patch size, distribution distances, and connectivity. For example, physical features essential to the conservation of the species might include gravel of a particular size required for spawning, alkaline soil for seed germination, protective cover for migration, or susceptibility to flooding or fire that maintains necessary early-successional habitat characteristics. Biological features might include prey species, forage grasses, specific kinds or ages of trees for roosting or nesting, symbiotic fungi, or absence of a particular level of nonnative species consistent with conservation needs of the listed species. The features may also be combinations of habitat characteristics and may encompass the relationship between characteristics or the necessary amount of a characteristic essential to support the life history of the species.

In considering whether features are essential to the conservation of the species, we may consider an appropriate quality, quantity, and spatial and temporal arrangement of habitat characteristics in the context of the life-history needs, condition, and status of the species. These characteristics include, but are not limited to, space for individual and population growth and for normal behavior; food, water, air, light, minerals, or other nutritional or physiological requirements; cover or shelter; sites for breeding, reproduction, or rearing (or development) of offspring; and habitats that are protected from disturbance.

Summary of Essential Physical or Biological Features

We derive the specific physical or biological features essential to the conservation of South Llano springs moss from studies of the species' habitat, ecology, and life history as described below. Additional information can be found in the SSA report (Service 2023, entire; available at *https://www.regulations.gov* under Docket No. FWS–R2–ES–2020–0015). We have determined that the following physical or biological features are essential to the conservation of South Llano springs moss:

(1) The uninterrupted flow of spring water supplied by the Edwards-Trinity aquifer within the South Llano watershed.

(2) Relatively constant water temperature due to proximity to the point of spring outflow.

(3) A substrate of calcareous or travertine rock not more than 15 centimeters (cm) (6 inches (in)) below the surface of the water.

(4) Contaminant and sediment levels that do not exceed the tolerance limits of South Llano springs moss and associated plant and animal species.

Special Management Considerations or Protection

When designating critical habitat, we assess whether the specific areas within the geographical area occupied by the species at the time of listing contain features which are essential to the conservation of the species and which may require special management considerations or protection.

The features essential to the conservation of this species may require special management considerations or protection to reduce the following stressors: reduction or loss of spring flow, erosion, and sedimentation. Management activities that could ameliorate these stressors include (but are not limited to): prescribed fire, brush management, and grazing management to increase infiltration into the Edwards-Trinity aquifer and reduce runoff and subsequent flooding.

Criteria Used To Identify Critical Habitat

As required by section 4(b)(2) of the Act, we use the best scientific data available to designate critical habitat. In accordance with the Act and our implementing regulations at 50 CFR 424.12(b), we review available information pertaining to the habitat requirements of the species and identify specific areas within the geographical area occupied by the species at the time of listing and any specific areas outside the geographical area occupied by the species to be considered for designation as critical habitat. We are not designating any areas outside the geographical area occupied by the species because we have not identified any unoccupied areas that meet the definition of critical habitat. While we acknowledge that the conservation of the species will depend on increasing the number of sites, we are not aware of any other area that has habitat suitable to support the species. Therefore, we are unable at this time to identify any specific unoccupied areas that are essential to the species' conservation. For an area to be considered essential unoccupied habitat, we must have reasonable certainty both that the area will contribute to the conservation of the species and that the area contains one or more of the physical or biological features essential to the conservation of the species. The exact location of the Redfearn site is unknown, and, although there are a number of other large springs emerging from the Edwards-Trinity aquifer, it is unknown if these sites would be biologically suitable for the species. In addition, there is uncertainty that the species could be transplanted successfully if suitable sites existed for reintroduction.

In summary, for areas within the geographic area occupied by the species at the time of listing, we delineated

critical habitat unit boundaries by evaluating the area of spring flow and submerged limestone within the geographic area occupied at the time of listing. We delineated one critical habitat unit that we determined to be occupied at the time of listing (*i.e.,* currently occupied) and that contains one or more of the physical or biological features that are essential to support life-history processes of the species.

As a result of our exclusion analysis (see *Exclusions Based on Other Relevant Impacts,* below), we are not designating critical habitat for this species.

Final Critical Habitat Designation

We are not designating critical habitat for South Llano springs moss (see *Exclusions Based on Other Relevant Impacts,* below).

Exemptions

Application of Section 4(a)(3) of the Act

Section 4(a)(3)(B)(i) of the Act (16 U.S.C. 1533(a)(3)(B)(i)) provides that the Secretary shall not designate as critical habitat any lands or other geographical areas owned or controlled by the Department of Defense (DoD), or designated for its use, that are subject to an integrated natural resources management plan (INRMP) prepared under section 101 of the Sikes Act Improvement Act of 1997 (16 U.S.C. 670a), if the Secretary determines in writing that such plan provides a benefit to the species for which critical habitat is proposed for designation. In preparing this final rule, we have determined that the lands within the unit proposed as critical habitat for South Llano springs moss are not owned or managed by the DoD.

Consideration of Impacts Under Section 4(b)(2) of the Act

Section 4(b)(2) of the Act states that the Secretary shall designate and make revisions to critical habitat on the basis of the best available scientific data after taking into consideration the economic impact, national security impact, and any other relevant impact of specifying any particular area as critical habitat. The Secretary may exclude an area from designated critical habitat based on economic impacts, impacts on national security, or any other relevant impacts. Exclusion decisions are governed by the regulations at 50 CFR 424.19 and the Policy Regarding Implementation of Section 4(b)(2) of the Endangered Species Act (hereafter, the ''2016 Policy''; 81 FR 7226, February 11, 2016), both of which were developed jointly with the National Marine Fisheries Service (NMFS). We also refer to a 2008 Department of the Interior Solicitor's opinion entitled, ''The Secretary's Authority to Exclude Areas from a Critical Habitat Designation under Section 4(b)(2) of the Endangered Species Act'' (M–37016). We explain each decision to exclude areas, as well as decisions not to exclude, to demonstrate that the decision is reasonable.

In considering whether to exclude a particular area from the designation, we identify the benefits of including the area in the designation, identify the benefits of excluding the area from the designation, and evaluate whether the benefits of exclusion outweigh the benefits of inclusion. If the analysis indicates that the benefits of exclusion outweigh the benefits of inclusion, the Secretary may exercise discretion to exclude the area only if such exclusion would not result in the extinction of the species. In making the determination to exclude a particular area, the statute on its face, as well as the legislative history, are clear that the Secretary has broad discretion regarding which factor(s) to use and how much weight to give to any factor. We describe below the process that we undertook for taking into consideration each category of impacts and our analyses of the relevant impacts.

Exclusions Based on Economic Impacts

Section 4(b)(2) of the Act and its implementing regulations require that we consider the economic impact that may result from a designation of critical habitat. In order to consider economic impacts, we prepared an incremental effects memorandum (IEM) and screening analysis which, together with our narrative and interpretation of effects, we consider our economic analysis of the critical habitat designation and related factors (IEc 2019, entire). The analysis, dated December 20, 2019, was made available for public review from September 28, 2021, through November 29, 2021 (see 86 FR 53609). The economic analysis addressed probable economic impacts of critical habitat designation for South Llano springs moss. Following the close of the comment period, we reviewed and evaluated all information submitted during the comment period that may pertain to our consideration of the probable incremental economic impacts of this critical habitat designation. Additional information relevant to the probable incremental economic impacts of critical habitat designation for the South Llano springs moss is summarized below and available in the screening analysis for the South Llano springs moss (IEc 2019, entire), available at *https://www.regulations.gov.*

The screening analysis found that the critical habitat designation for the South Llano springs moss would be likely to result in annual incremental costs of approximately $8,100 per year above those incurred due to the species listing alone. These costs would occur as a result of additional administrative efforts to consider adverse modification of critical habitat during section 7 consultations. The designation of critical habitat is not expected to trigger additional requirements under State or local regulations, nor is the designation expected to have perceptional effects on markets.

We considered the economic impacts of the critical habitat designation. The Secretary is not exercising her discretion to exclude any areas from this designation of critical habitat for the South Llano springs moss based on economic impacts.

Exclusions Based on Impacts on National Security and Homeland Security

In preparing this rule, we have determined that the lands within the proposed designation of critical habitat for South Llano springs moss are not owned or managed by the DoD or Department of Homeland Security (DHS), and, therefore, we anticipate no impact on national security or homeland security. We also received no requests for exclusion from DoD or DHS. We did not receive any additional information during the public comment period for the proposed designation regarding impacts of the designation on national security or homeland security that would support excluding any specific areas from the final critical habitat designation under authority of section 4(b)(2) and our implementing regulations at 50 CFR 424.19. Based on this information, the Secretary has determined not to exercise her discretion to exclude any areas from this designation of critical habitat based on impacts on national security or homeland security.

Exclusions Based on Other Relevant Impacts

Under section 4(b)(2) of the Act, we consider any other relevant impacts, in addition to economic impacts and impacts on national security discussed above. We consider a number of factors, including whether there are permitted conservation plans covering the species in the area—such as HCPs, safe harbor agreements (SHAs), or candidate conservation agreements with assurances (CCAAs)—or whether there

are non-permitted conservation agreements and partnerships that would be encouraged by designation of, or exclusion from, critical habitat. In addition, we look at the existence of Tribal conservation plans and partnerships and consider the government-to-government relationship of the United States with Tribal entities. We also consider any social impacts that might occur because of the designation.

When identifying the benefits of inclusion for an area, we consider the additional regulatory benefits that the area would receive due to the protection from destruction or adverse modification as a result of actions with a Federal nexus, the educational benefits of mapping essential habitat for recovery of the listed species, and any benefits that may result from a designation due to State or Federal laws that may apply to critical habitat.

In the case of the South Llano springs moss, the benefits of critical habitat include public awareness of the presence of the species and the importance of habitat protection, and, where a Federal nexus exists, increased habitat protection for the South Llano springs moss due to protection from destruction or adverse modification of critical habitat.

When identifying the benefits of exclusion, we consider, among other things, whether exclusion of a specific area is likely to result in conservation, or in the continuation, strengthening, or encouragement of partnerships. Additionally, continued implementation of an ongoing management plan that provides equal to or more conservation than a critical habitat designation would reduce the benefits of including that specific area in the critical habitat designation.

We evaluate the existence of a conservation plan when considering the benefits of inclusion. We consider a variety of factors, including, but not limited to, whether the plan is finalized; how it provides for the conservation of the essential physical or biological features; whether there is a reasonable expectation that the conservation management strategies and actions contained in a management plan will be implemented into the future; whether the conservation strategies in the plan are likely to be effective; and whether the plan contains a monitoring program or adaptive management to ensure that the conservation measures are effective and can be adapted in the future in response to new information.

After identifying the benefits of inclusion and the benefits of exclusion, we carefully weigh the two sides to evaluate whether the benefits of exclusion outweigh those of inclusion. If our analysis indicates that the benefits of exclusion outweigh the benefits of inclusion, we then determine whether exclusion would result in extinction of the species. If exclusion of an area from critical habitat will result in extinction, we will not exclude it from the designation.

Based on the public comments we received, and the best scientific data available, we evaluated whether lands in the critical habitat unit identified in the proposed rule were appropriate for exclusion from the final designation under section 4(b)(2) of the Act. If the analysis indicates that the benefits of excluding lands from the final designation outweigh the benefits of designating those lands as critical habitat, then the Secretary may exercise her discretion to exclude the lands from the final designation. In the paragraphs below, we provide a detailed balancing analysis of the critical habitat being excluded under section 4(b)(2) of the Act.

Non-Permitted Conservation Plans, Agreements, or Partnerships

We sometimes exclude specific areas from critical habitat designations based in part on the existence of private or other non-Federal conservation plans or agreements and their attendant partnerships. A conservation plan or agreement describes actions that are designed to provide for the conservation needs of a species and its habitat, and may include actions to reduce or mitigate negative effects on the species caused by activities on or adjacent to the area covered by the plan. Conservation plans or agreements can be developed by private entities with no Service involvement, or in partnership with the Service, sometimes through the permitting process under Section 10 of the Act.

When we undertake a discretionary section 4(b)(2) analysis, we evaluate a variety of factors to determine how the benefits of any exclusion and the benefits of inclusion are affected by the existence of private or other non-Federal conservation plans or agreements and their attendant partnerships. Shown below is a non-exhaustive list of factors that we consider in evaluating how non-permitted plans or agreements affect the benefits of inclusion or exclusion. These are not required elements of plans or agreements. Rather, they are some of the factors we may consider, and not all of these factors apply to every plan or agreement.

(i) The degree to which the record of the plan, or information provided by proponents of an exclusion, supports a conclusion that a critical habitat designation would impair the realization of the benefits expected from the plan, agreement, or partnership.

(ii) The extent of public participation in the development of the conservation plan.

(iii) The degree to which agency review and required determinations (*e.g.,* State regulatory requirements) have been completed, as necessary and appropriate.

(iv) Whether NEPA reviews or similar reviews occurred, and the nature of any such reviews.

(v) The demonstrated implementation and success of the chosen mechanism.

(vi) The degree to which the plan or agreement provides for the conservation of the physical or biological features that are essential to the conservation of the species.

(vii) Whether there is a reasonable expectation that the conservation management strategies and actions contained in a management plan or agreement will be implemented.

(viii) Whether the plan or agreement contains a monitoring program and adaptive management to ensure that the conservation measures are effective and can be modified in the future in response to new information.

Upper South Llano River Unit (also known as Seven Hundred Springs)—We proposed to designate critical habitat identified as the ''Upper South Llano River Unit'' (0.48 ac (0.19 ha)) on privately owned lands where the South Llano springs moss occurs.

Our Partners for Fish and Wildlife Program has a history of working with the private landowner on whose property Seven Hundred Springs occurs and where critical habitat was proposed. Since 2013, we have completed five habitat improvement projects in partnership with the private landowner. These projects included prescribed burning on over 1,000 ac plus mechanical restoration on 1,126 ac of upland native grassland habitat that benefit the South Llano springs moss by reducing runoff, flash flooding, and soil erosion, and increasing infiltration of rainwater into the aquifer that supplies Seven Hundred Springs. These benefits to the springs help ensure the physical and biological features necessary for the persistence of the species, including uninterrupted flow of spring water and sediment levels that do not exceed the tolerance limits of the South Llano springs moss.

Benefits of Inclusion

The benefits of including lands in critical habitat can be regulatory, can be educational, or can aid in recovery of

species as generally discussed above. We expect only minimal regulatory benefits from the designation of critical habitat for the South Llano springs moss. Section 7(a)(2) of the Act requires Federal agencies, including the Service, to ensure that any action they fund, authorize, or carry out is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of designated critical habitat of such species. The difference in the outcomes of the jeopardy analysis and the adverse modification analysis represents the regulatory benefits and costs of critical habitat. A critical habitat designation requires Federal agencies to consult on whether their activity would destroy or adversely modify critical habitat to the point where recovery could not be achieved. However, all proposed critical habitat is occupied by the species, and thus would require section 7 consultation for any project with a Federal nexus that may affect the South Llano springs moss. Any project that would destroy or adversely modify critical habitat would also jeopardize the continued existence of the species, since the species is entirely dependent upon Seven Hundred Springs for its survival. Additionally, as the proposed critical habitat is located entirely on private property, we foresee very few section 7 consultations due to a lack of a Federal nexus. Any additional projects conducted by the Partners for Fish and Wildlife Program would be covered by a section 7 consultation. The rarity of section 7 consultations results in very limited regulatory benefits for the designation of critical habitat in the proposed Upper South Llano River Unit. Given the anticipated rarity of section 7 consultation, the dependence on private conservation actions is more important.

Another important benefit of including lands in a critical habitat designation is that it can serve to educate landowners, agencies, Tribes, and the public regarding the potential conservation value of an area, and this may focus and contribute to conservation efforts by other parties by clearly delineating areas of high conservation value for certain species. Any information about the South Llano springs moss and its habitat that reaches a wide audience, including other parties engaged in conservation activities, would be considered valuable. We expect the educational benefits to be especially limited in the proposed Upper South Llano River Unit, because it occurs entirely on private lands that are not open to the public. With limited regulatory and educational benefits likely as a result of designating critical habitat, we foresee no other tangible benefits to further recovery of the species, and so the benefits of inclusion are outweighed by the benefits of exclusion as further explained below.

Benefits of Exclusion

The only known population of the South Llano springs moss is fully within private ownership, and, therefore, Federal agencies have no jurisdiction to manage its habitat. As a result, partnerships with and among private individuals, like the landowner of the proposed Upper South Llano River Unit, are the key to conserving the species through habitat conservation projects such as the Partners for Fish and Wildlife projects that have been completed near Seven Hundred Springs. Therefore, we find it is important to consider the potential benefits that will be realized by fostering positive relationships with the landowner if we exclude the area from critical habitat designation.

Excluding the entirety of the proposed critical habitat, known as the Upper South Llano River Unit, would provide benefits through the continuance and strengthening of our effective cooperative relationship with the landowner to promote the conservation of the South Llano springs moss and its habitat. Since the South Llano springs moss occurs only in the privately owned Upper South Llano River Unit, continued conservation and recovery of this species is entirely dependent upon cooperation and coordination with the landowner. This landowner has worked with our Partners for Fish and Wildlife program in the past, and the aforementioned five habitat improvement projects accomplished in partnership with the private landowner since 2013 have benefited the South Llano springs moss and its habitat. The designation of critical habitat is anticipated to harm the previously cooperative working relationship that we have established with the landowner. We anticipate that continuing our cooperative relationship with the landowner will allow voluntary conservation work to continue, which will benefit the South Llano springs moss and its recovery.

The South Llano springs moss and its habitat are expected to benefit substantially from voluntary landowner management actions that implement appropriate and effective conservation strategies. Where consistent with the discretion provided by the Act, it is beneficial to implement policies that provide positive incentives to private landowners to voluntarily conserve natural resources and that remove or reduce disincentives to conservation (Wilcove et al. 1998, entire; Bean 2002, pp. 1–7). Thus, it is important for the South Llano springs moss's recovery to build on continued conservation activities such as these with a proven partner, and to provide positive incentives to the private landowner to implement voluntary conservation activities. These conservation actions help ensure the uninterrupted flow of spring water and sediment levels that do not exceed the tolerance limits of the South Llano springs moss, aiding the recovery of the species.

The benefits of excluding this area from critical habitat will encourage the continued conservation, land management, and coordination between the landowner and the Service. Excluding the proposed Upper South Llano River Unit from critical habitat helps ensure the future conservation, research, and information sharing for the recovery of the South Llano springs moss.

Benefits of Exclusion Outweigh the Benefits of Inclusion

We have determined that the benefits of exclusion of the proposed Upper South Llano River Unit from critical habitat designation outweigh the benefits of inclusion of the unit because maintaining a positive working relationship and partnership with the landowner is vital to the conservation and recovery of the species. The benefits of designating critical habitat for the moss are few since these lands are privately owned and thus lack a trigger for section 7 consultation for adverse modification of critical habitat unless a project with a Federal nexus is proposed. Additionally, all habitat within the proposed critical habitat unit is occupied, so any project with a Federal nexus would require consultation with us due to the listing of the species. Section 9 of the Act provides few protections to listed plants, and protections to listed plants on private lands pertain only to prohibited actions conducted in knowing violation of any State law or regulation, or in violation of a State criminal trespass law. Without the presence of a Federal nexus which would require a consultation under section 7, the South Llano springs moss would have little to no protections. Since the only known population of this species occurs on this private land, the maintenance of a working relationship with the landowner is vital to the recovery and conservation of the species. Therefore, the benefits of

excluding this area from designation as critical habitat for the South Llano springs moss outweigh the benefits of inclusion.

Exclusion Will Not Result in Extinction of the Species

We have determined that excluding all proposed critical habitat from designation will not result in the extinction of the species, nor hinder its recovery. If a Federal action or Federal permitting occurs that may affect the moss, the listing of South Llano springs moss will require evaluation under the jeopardy standard of section 7 of the Act, even absent the designation of critical habitat, and thus will protect the species against extinction. Accordingly, based on the above discussion, the Secretary is exercising her discretion to exclude the entirety of the proposed Upper South Llano River Unit (approximately 0.48 ac (0.19 ha) of land) and, therefore, critical habitat for the moss will not be designated under section 4(b)(2) of the Act because the benefits of exclusion outweigh the benefits of inclusion and will not cause the extinction of the species.

Tribal Lands

Several Executive Orders, Secretary's Orders, and policies concern working with Tribes. These guidance documents generally confirm our trust responsibilities to Tribes, recognize that Tribes have sovereign authority to control Tribal lands, emphasize the importance of developing partnerships with Tribal governments, and direct the Service to consult with Tribes on a government-to-government basis.

A joint Secretary's Order that applies to both the Service and the National Marine Fisheries Service (NMFS)—Secretary's Order 3206, *American Indian Tribal Rights, Federal-Tribal Trust Responsibilities, and the Endangered Species Act* (June 5, 1997) (S.O. 3206)—is the most comprehensive of the various guidance documents related to Tribal relationships and Act implementation, and it provides the most detail directly relevant to the designation of critical habitat. In addition to the general direction discussed above, the appendix to S.O. 3206 explicitly recognizes the right of Tribes to participate fully in any listing process that may affect Tribal rights or Tribal trust resources; this includes the designation of critical habitat. Section 3(B)(4) of the appendix requires us to consult with affected Tribes when considering the designation of critical habitat in an area that may impact Tribal trust resources, Tribally owned fee lands, or the exercise of Tribal rights. That provision also instructs us to avoid including Tribal lands within a critical habitat designation unless the area is essential to conserve a listed species, and it requires us to evaluate and document the extent to which the conservation needs of the listed species can be achieved by limiting the designation to other lands.

Our implementing regulations at 50 CFR 424.19 and the 2016 Policy are consistent with S.O. 3206. When we undertake a discretionary exclusion analysis under section 4(b)(2) of the Act, in accordance with S.O. 3206 we consult with any Tribe whose Tribal trust resources, tribally owned fee lands, or Tribal rights may be affected by including any particular areas in the designation. We evaluate the extent to which the conservation needs of the species can be achieved by limiting the designation to other areas and give great weight to Tribal concerns in analyzing the benefits of exclusion.

However, S.O. 3206 does not override the Act's statutory requirement of designation of critical habitat. As stated above, we must consult with any Tribe when a designation of critical habitat may affect Tribal lands or resources. The Act requires us to identify areas that meet the definition of ''critical habitat'' (*i.e.,* areas occupied at the time of listing that contain the essential physical or biological features that may require special management or protection and unoccupied areas that are essential to the conservation of a species), without regard to land ownership. While S.O. 3206 provides important direction, it expressly states that it does not modify the Secretary's statutory authority under the Act or other statutes.

There are no Tribal lands or Tribal trust resources within the range of the South Llano springs moss.

Summary of Exclusions

As discussed above, based on the information provided by entities seeking exclusion, as well as any additional public comments we received, we evaluated whether certain lands in the proposed critical habitat were appropriate for exclusion from final designation pursuant to section 4(b)(2) of the Act. We are not designating critical habitat for the South Llano springs moss; the area we proposed for critical habitat designation but that we are excluding in this rule is described in the table below.

TABLE OF AREA EXCLUDED FROM CRITICAL HABITAT DESIGNATION BY PROPOSED CRITICAL HABITAT UNIT

Proposed unit	Specific area	Areas meeting the definition of critical habitat, in acres (hectares)	Areas excluded from critical habitat, in acres (hectares)
1: Upper South Llano River	Seven Hundred Springs	0.48 (0.19)	0.48 (0.19)

Required Determinations

National Environmental Policy Act (42 U.S.C. 4321 et seq.)

It is our position that, outside the jurisdiction of the U.S. Court of Appeals for the Tenth Circuit, we do not need to prepare environmental analyses pursuant to the National Environmental Policy Act (NEPA) in connection with regulations adopted pursuant to section 4(a) of the Act. We have determined that environmental assessments and environmental impact statements, as defined under the authority of the National Environmental Policy Act (NEPA; 42 U.S.C. 4321 *et seq.*), need not be prepared in connection with listing a species as an endangered or threatened species under the Act. We published a notice outlining our reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244). This position was upheld by the U.S. Court of Appeals for the Ninth Circuit (*Douglas County* v. *Babbitt,* 48 F.3d 1495 (9th Cir. 1995), cert. denied 516 U.S. 1042 (1996)).

Government-to-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994 (Government-to-Government Relations with Native American Tribal Governments; 59 FR 22951), Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments), and the Department of the Interior's manual at 512 DM 2, we

readily acknowledge our responsibility to communicate meaningfully with Federally recognized Tribes on a government-to-government basis. In accordance with Secretary's Order 3206 of June 5, 1997 (American Indian Tribal Rights, Federal-Tribal Trust Responsibilities, and the Endangered Species Act), we readily acknowledge our responsibilities to work directly with Tribes in developing programs for healthy ecosystems, to acknowledge that Tribal lands are not subject to the same controls as Federal public lands, to remain sensitive to Indian culture, and to make information available to Tribes. No Tribal lands or Tribal trust resources will be affected by this rule.

List of Subjects in 50 CFR Part 17

Endangered and threatened species, Exports, Imports, Plants, Reporting and recordkeeping requirements, Transportation, Wildlife.

Regulation Promulgation

Accordingly, we amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—ENDANGERED AND THREATENED WILDLIFE AND PLANTS

■ 1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 1531–1544; and 4201–4245, unless otherwise noted.

■ 2. Amend § 17.12, in paragraph (h), the List of Endangered and Threatened Plants, by:

■ a. Adding the heading ''MOSSES'' to the end of the table; and

■ b. Adding an entry for ''*Donrichardsia macroneuron*'' under the new heading ''MOSSES''.

The additions read as follows:

§ 17.12 Endangered and threatened plants.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 230316–0077]

RTID 0648–XC789

Fisheries of the Northeastern United States; Atlantic Herring Fishery; 2023 River Herring and Shad Catch Cap Reached for Midwater Trawl Vessels in the Cape Cod Catch Cap Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; possession limit adjustment.

SUMMARY: NMFS is implementing a 2,000-lb (907.2-kg) Atlantic herring possession limit for herring vessels fishing with midwater trawl gear in the Cape Cod Catch Cap Closure Area. This is required because NMFS projects that midwater trawl herring vessels will catch 95 percent of the river herring and shad catch cap allocated to the Cape Cod Catch Cap Area before the end of the fishing year. This action is intended to prevent overharvest of river herring and shad.

DATES: Effective 0001 hr local time, April 26, 2023, through December 31, 2023.

FOR FURTHER INFORMATION CONTACT: Maria Fenton, Fishery Management Specialist, 978–281–9196.

SUPPLEMENTARY INFORMATION: The Regional Administrator of the Greater Atlantic Regional Fisheries Office monitors river herring and shad catch by Atlantic herring vessels. River herring and shad catch caps are allocated to the herring fishery by area and gear type. The four river herring and shad catch caps that are currently allocated to the herring fishery are:

- Gulf of Maine Midwater Trawl Catch Cap;
- Cape Cod Midwater Trawl Catch Cap;
- Southern New England Bottom Trawl Catch Cap; and
- Southern New England Midwater Trawl Catch Cap.

Catch from all trips that land more than 6,600 lb (2,994 kg) of herring is counted towards the applicable river herring and shad catch cap. Regulations at 50 CFR 648.201(a)(4)(ii) require NMFS to implement a 2,000-lb (907.2-kg) herring possession limit for vessels fishing with the specified gear in a specified catch cap closure area beginning on the date that catch is projected to reach 95 percent of the river herring and shad catch cap for that area.

Based on vessel reports, dealer reports, and other available information, the Regional Administrator estimates that midwater trawl herring vessels will have caught 96 percent of the 2023 river herring and shad catch cap allocated to the Cape Cod Catch Cap Area by April 20, 2023. Therefore, effective 0001 hr local time April 26, 2023, through 2400 hr local time on December 31, 2023, midwater trawl vessels may not attempt or do any of the following: Fish for, possess, transfer, receive, land, or sell more than 2,000 lb (907.2 kg) of herring from the Cape Cod Catch Cap Closure Area per trip; or land herring from the Cape Cod Catch Cap Closure Area more than once per calendar day. Also effective 0001 hr local time, April 26, 2023, through 2400 hr local time, December 31, 2023, federally permitted dealers may not attempt or do any of the following: Purchase; receive; possess; have custody or control of; sell; barter; trade; or transfer more than 2,000 lb (907.2 kg) of herring per trip or calendar day from a midwater trawl vessel fishing in the Cape Cod Catch Cap Closure Area, unless it is from a vessel that enters port before 0001 hr local

time on April 26, 2023, and catch is landed in accordance with State management measures.

Midwater trawl vessels may transit through or land in the Cape Cod Catch Cap Closure Area with more than 2,000 lb (907.2 kg) of herring on board, provided that: The herring were caught in an area not subject to a 2,000-lb (907.2-kg) limit; all fishing gear is stowed and not available for immediate use as defined by § 648.2; and the vessel is issued a permit appropriate to the amount of herring on board and the area where the herring was harvested.

Classification

This action is required by 50 CFR part 648 and is exempt from review under Executive Order 12866.

NMFS finds good cause pursuant to 5 U.S.C. 553(b)(3)(B) to waive prior notice and the opportunity for public comment because it would be impracticable, unnecessary, and contrary to the public interest. Data only recently became available indicating that midwater trawl herring vessels will catch 95 percent of the river herring and shad catch cap allocated to the Cape Cod Catch Cap Area before the end of the fishing year. High-volume catch and landings in the herring fishery can increase river herring and shad catch relative to catch caps quickly. If implementation of this action is delayed to solicit prior public comment, the 2023 river herring and shad catch cap allocated to the Cape Cod Catch Cap Area will likely be exceeded; thereby undermining the conservation objectives of the Herring Fishery Management Plan (FMP). Additionally, the regulations at § 648.201(a)(4)(ii) are designed to be implemented as quickly as possible to prevent catch from exceeding river herring and shad catch caps and NMFS is acting in accordance with those regulations to carry out the fishery management plan under the authority provided in section 305(d) of the Magnuson-Stevens Fishery Conservation and Management Act. These regulations were subject to public notice and opportunity to comment when they were first adopted in 2014. Further, herring fishing industry participants monitor catch closely and anticipate potential possession limit adjustments as catch totals approach river herring and shad catch caps, and they expect these actions to occur in a timely way consistent with the FMP's objectives. For the reasons stated above, NMFS also finds good cause to waive the 30-day delayed effectiveness in accordance with 5 U.S.C 553(d)(3).

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 24, 2023.

Kelly Denit,

Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Proposed Rules

Federal Register
Vol. 88, No. 81
Thursday, April 27, 2023

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 927

[Doc. No. AMS–SC–22–0089]

Pears Grown in Oregon and Washington; Continuance Referendum

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Referendum order; correction.

SUMMARY: The Agricultural Marketing Service, USDA, published a document in the **Federal Register** of April 7, 2023, that directed a referendum be conducted among eligible Oregon and Washington pear growers to determine whether they favor continuance of the marketing order regulating the handling of pears grown in Oregon and Washington. This correction addresses errors regarding certain dates contained in the narrative of the referendum order.

DATES: Effective April 27, 2023.

FOR FURTHER INFORMATION CONTACT: Dale Novotny, Marketing Specialist, or Gary Olson, Chief, Western Region Branch, Market Development Division, Specialty Crops Program, Agricultural Marketing Service, USDA, 1220 SW 3rd Avenue, Suite 305, Portland, Oregon 97212; Telephone: (503) 326–2724, or Email: *DaleJ.Novotny@usda.gov* or *GaryD.Olson@usda.gov.*

SUPPLEMENTARY INFORMATION: In FR Doc 2023–07396, appearing on page 20780 in the **Federal Register** of Friday, April 7, 2023, in the second column, first paragraph, correct the referendum dates ''March 20 to March 31, 2023'' to read ''May 8 to May 30, 2023''. In addition, on page 20780, in the second column, third paragraph, correct the date ''March 31, 2023'' to read ''May 30, 2023''.

Erin Morris,

Associate Administrator, Agricultural Marketing Service.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 981

[Doc. No. AMS–SC–21–0089]

Almonds Grown in California; Amendments to the Marketing Order

AGENCY: Agricultural Marketing Service, Department of Agriculture (USDA).

ACTION: Proposed rule.

SUMMARY: This proposed rule invites comments on proposed amendments to Marketing Order No. 981, which regulates the handling of almonds grown in California. The proposed amendments would modify certain marketing order provisions to facilitate orderly administration of the program. Additionally, the proposed amendments would modernize, simplify, or align language with current industry practices and definitions, and would establish authority to borrow funds. The proposal would also establish authority for the Almond Board of California (Board) to accept advanced assessments.

DATES: Comments must be received by June 26, 2023.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposed rule. Comments must be sent to the Docket Clerk, Market Development Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, STOP 0237, Washington, DC 20250–0237; Fax: (202)720–8938; or via internet at: *https://www.regulations.gov.* Comments should reference the document number and the date and page number of this issue of the **Federal Register**. All comments will be made available for public inspection in the Office of the Docket Clerk during regular business hours, or can be viewed at: *https://www.regulations.gov.* Please be advised that the identity of the individuals or entities submitting the comments will be made public.

FOR FURTHER INFORMATION CONTACT: Thomas Nalepa, Marketing Specialist, or Matthew Pavone, Chief, Rulemaking Services Branch, Market Development Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, Stop 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or Email: *MarketOrderComment@usda.gov.*

Small businesses may request information on complying with this regulation by contacting Richard Lower, Market Development Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, Stop 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, or Email: *Richard.Lower@usda.gov.*

SUPPLEMENTARY INFORMATION: This action, pursuant to 5 U.S.C. 553, proposes to amend regulations issued to carry out a marketing order as defined in 7 CFR 900.2(j). This proposal is issued under Marketing Order No. 981, as amended (7 CFR part 981), regulating the handling of almonds grown in California. Part 981 (referred to as the ''Order'') is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the ''Act.'' The Board locally administers the Order and comprises growers and handlers of almonds operating within the area of production.

Section 8c(17) of the Act (7 U.S.C. 608c(17)) and the applicable rules of practice and procedure governing the formulation of marketing agreements and orders (7 CFR part 900) authorize amendment of the Order through this informal rulemaking action. The Agricultural Marketing Service (AMS) will consider comments received in response to this proposed rule, and based on all the information available, will determine if the Order amendment is warranted. If AMS determines amendment of the Order is warranted, a subsequent proposed rule and notice of referendum would be issued, and producers would be allowed to vote for or against the proposed amendments. If appropriate, AMS would then issue a final rule effectuating any amendments approved by producers in the referendum.

AMS is issuing this proposed rule in conformance with Executive Orders 12866 and 13563. Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts and equity). Executive Order 13563 emphasizes the

importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. This action falls within a category of regulatory actions that the Office of Management and Budget (OMB) exempted from Executive Order 12866 review.

This proposed rule has been reviewed under Executive Order 13175—Consultation and Coordination with Indian Tribal Governments, which requires agencies to consider whether their rulemaking actions would have Tribal implications. AMS has determined this proposed rule is unlikely to have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

This proposal has been reviewed under Executive Order 12988, Civil Justice Reform.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 8c(15)(A) of the Act (7 U.S.C. 608c(15)(A)), any handler subject to an order may file with USDA a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. A handler is afforded the opportunity for a hearing on the petition. After the hearing, USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA's ruling on the petition, provided an action is filed no later than 20 days after the date of entry of the ruling.

Section 1504 of the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill) (Pub. L. 110–246) amended section 8c(17) of the Act, which in turn required the addition of supplemental rules of practice to 7 CFR part 900 (73 FR 49307; August 21, 2008). The amendment of section 608c(17) of the Act and the supplemental rules of practice authorize the use of informal rulemaking (5 U.S.C. 553) to amend Federal fruit, vegetable, and nut marketing agreements and orders. USDA may use informal rulemaking to amend marketing orders depending upon the nature and complexity of the proposed amendments, the potential regulatory and economic impacts on affected entities, and any other relevant matters.

AMS has considered these factors and has determined that the amendments proposed herein are not unduly complex and the nature of the proposed amendments is appropriate for utilizing the informal rulemaking process to amend the Order. This proposed rule encompasses a number of changes that are primarily administrative or modernizing in nature. These changes would simplify, clarify, or align Order language with current industry practices and definitions. A discussion of the potential regulatory and economic impacts on affected entities is discussed later in the ''Initial Regulatory Flexibility Analysis'' section of this proposed rule. The amendments would apply equally to all producers and handlers, regardless of size. The proposed amendments also have no additional impact on the reporting, record-keeping, or compliance costs of small businesses.

The Board unanimously recommended seven proposed Order amendments following deliberations at a public meeting held on August 11, 2020. The Board submitted its formal recommendation to amend the Order through the informal rulemaking process on August 9, 2021. The proposed rule would:

- Amend the Order to modify the definitions of ''Almonds'' and ''Shelled almonds'', and add a definition for ''Almond biomass'' (Proposal 1).
- Change the date utilized to determine the applicable handler volume for the purpose of tabulating handler votes in the nomination process for handler positions on the Board (Proposal 2).
- Replace obsolete references to ''Control Board'' with ''Board'' in two sections (Proposal 3).
- Simplify language pertaining to incoming quality control (Proposal 4).
- Change the date that the Board is required to submit volume regulation estimates and recommendations to the Secretary (Proposal 5).
- Remove language that distinguishes certain funds in the accounting of the Board's operating reserve fund and sets the reserve fund limit at approximately six-months' expenses instead of six-months' budget (Proposal 6).
- Add authority to accept advanced assessments and to borrow funds from commercial lenders (Proposal 7).

Proposal 1—Modification or Inclusion of Definitions for Almonds, Almond Biomass, and Shelled Almonds

Sections 981.4 and 981.6 define *Almonds* and *Shelled Almonds,* respectively, for the purposes of the Order. Specifically, as defined in the Order, ''*almonds* mean (unless otherwise specified) all varieties of almonds (except bitter almonds), either shelled or unshelled, grown in the State of California, and for the purposes of research includes almond shells and hulls.'' ''*Shelled almonds* mean raw or roasted almonds after the shells are removed and includes blanched, diced, sliced, slivered, cut, halved, or broken almonds, or any combination thereof. Additional almond products may be included by the Secretary from time to time upon consideration of a recommendation from the Board or other pertinent information.'' This proposal would amend § 981.4 to broaden the definition of *Almonds* to include almond biomass for research purposes. This proposal would add a new section, § 981.4 (a), to specifically define *almond biomass.* Section 981.6, which defines *Shelled almonds,* would also be amended to include any form that almonds without shells might take.

As the almond industry has significantly evolved since promulgation of the Order, the versatility of almond usage has also expanded.

In the mid-1970s, the Board sought to redefine almonds to include shells and hulls. A formal rulemaking hearing covering that and other proposals took place. The initial proposal sought to redefine almonds to include hulls and shells for the purpose of § 981.41. See 40 FR 50289.

Section 981.41 authorizes projects involving production and marketing research designed to assist, improve, or promote the marketing, distribution, consumption, or efficient production of almonds. Testimony at the hearing explained that research to find new and more profitable uses for, or better methods of, handling shells and hulls should be permitted under the Order. Testimony further indicated that shells and hulls together weigh approximately three times the kernelweight of almonds. Accordingly, a sizable quantity of shells and hulls is produced annually and represents a significant economic factor. Testimony indicated that grower returns could be improved if more profitable outlets or better methods of handling can be found for shells and hulls. See 41 FR 15341.

Testimony at the hearing further indicated that the Board should not undertake any marketing promotion including advertising activity for shells and hulls. Ultimately, the definition of almonds was revised to include hulls and shells for the purposes of research. See 41 FR 26852.

This proposal would amend § 981.4 to broaden the definition of *Almonds* to

include almond biomass for research purposes. This proposal would add a new section, § 981.4(a), to specifically define *almond biomass.*

In the past, biomass (hulls, shells, skins, prunings, etc.) offered limited additional value to the growers. Huller/shellers would primarily sell their hulls for feed, use the shells for bedding or power cogeneration, and burn woody biomass, such as whole trees or prunings. Now, with expanding production levels, the industry estimates that it generates over 5.6 billion pounds of hulls and shells alone each year. In addition, stricter environmental regulations have made it more difficult to dispose of organic material through burning. Consequently, the industry has devoted significant effort to identify new solutions to utilize waste material in the orchard or in other non-edible product streams.

With an increased focus on full utilization of what comes out of the almond orchard, innovative technologies and research have revealed more value-added applications for what were previously by-products with limited to no value. For example, almond skins, which are the result of blanching brownskin almonds, are being used for fiber addition, shells are incorporated into plastics using torrefaction, sugar can be extracted from hulls, and ''whole orchard recycling'' techniques incorporate chipped prunings and woody biomass into the soil. These new uses bring additional profitability to the grower.

Therefore, the Board recommended that the current almond definition in § 981.4 be broadened to accommodate all almond biomass, not just shells and hulls. It also recommended that the definition of almonds be further expanded to include § 981.4(a) to specifically define almond biomass as almond hulls, shells, skins, and woody biomass (*i.e.,* trees and prunings).

During discussions regarding the definition of ''almonds,'' Board members noted that their research and development projects should address the entire almond category. Such efforts should encompass all aspects of almond production, going beyond almond kernels, inshell almonds, and the by-product shells and hulls. The interest in innovative applications for almond by-products and biomass utility has expanded over the years. Specifically, the Board has prioritized research of water conservation, zero orchard waste production practices, environmentally friendly pest management tools, and additional ways to reduce carbon dioxide emissions.

The Board does not intend to engage in marketing promotion or advertising of almond biomass, nor does it intend to permit any credit-back reimbursements to be applied to biomass (just as such reimbursements were never applied to shells and hulls). In its marketing promotion and advertising activity for consumable almonds, the Board would likely refer to its research efforts associated with almond biomass and its focus on sustainability and improving grower returns.

During subsequent discussions, the Board emphasized that none of the changes in definitions would impact or materially expand the Board's authorities, nor would they expand the type of research or activities which are conducted by the Board. Rather, these changes would update the regulatory text to reflect current industry terminology and more accurately describe almond by-products that now represent additional value to the grower, which were previously viewed as waste.

Finally, to accommodate for new innovations in the almond industry, the Board recommended modifying the definition of shelled almonds in § 981.6 to include any form an almond without a shell might take, rather than specifying the exact almond form. This modification would simplify the language to provide flexibility in the event there are different forms or descriptors of almonds used in the future. The modifications to § 981.6 would strike ''raw or roasted'' and remove the overly prescriptive language ''blanched, diced, sliced, slivered, cut, halved, or broken almonds, or any combination thereof.''

Proposal 2—Almond Board of California Voting Date Change

Section 981.32(b)(2) of the Order establishes the criteria for how handlers may vote for Board nominees. This proposal would amend § 981.32(b)(2) by changing the handling period date for determining a handler's nomination weighting from December 31 to March 31 of the crop year in which the nominations are made (crop year being August 1 to the following July 31). Moving the date forward (further into the crop year) would allow for a more accurate determination of handler volume to be utilized when calculating each handler's weighting for Board nominations.

The volume of almonds handled, as reported by the handlers, determines each handler's weighted vote for membership on the Board. The Board issues assessment invoices to handlers four times per year on a set schedule. The Board currently uses the volume handled per the December 31 assessment invoice to establish a handler's weighted vote. When the nominations and term of office dates were changed in the last amendment to the Order in October 2019 (84 FR 50713), it shifted the period for voting to later in the year. With the reestablishment of election dates, the Board can now utilize each handler's March 31 assessment volume as the basis for computing handler volume for voting purposes. Moreover, as crop yields increase and deliveries of almonds from growers to handlers extend later into the crop year, using the March 31 assessment date to determine handling quantity would ensure that a larger proportion of the crop will be delivered and reported to the Board, and a more accurate estimate of handler volume may be utilized in the voting process.

This proposed date change would not impact how handler volume is calculated, nor would it have any impact on the voting process. The proposed date change would also take into consideration timing of Board meetings and election dates.

Proposal 3—Update Language Regarding the Board

Section 981.41(b) provides authorization for the Board to recommend research, development, and marketing promotion projects. However, the existing language in § 981.41(b) refers to the Board by its former name ''Control Board.'' This proposal would update this section to correctly refer to the Board by its current name.

Similarly, § 981.59(a), which provides authorization for the Board to determine the reserve obligation for handlers, refers to the Board by its old name ''Control Board.'' The proposed action would update this section to correctly refer to the Board by its current name.

Each of the proposed changes to §§ 981.41(b) and 981.59(a) are administrative in nature and would have no impact on the Board's activities.

Proposal 4—Revise Language Addressing Outlets for Inedible Kernels

Section 981.42(a) requires handlers to determine, through quality control inspections performed by the inspection agency, the percentage of inedible kernels received and report the determination to the Board. Such inedible kernels shall be delivered to the Board or a Board-approved alternate outlet. The current language specifies such outlets as ''crushers, feed manufacturers, or feeders'' and limits the delivery of inedible kernels to the

same. This proposal would change § 981.42(a) to refer to all delivery outlets approved by the Board for inedible kernels as ''accepted users'' and would authorize alternative outlets for such product, so long as they meet established criteria determined by the Board.

This change would broaden language related to approved outlets for inedible kernels in the incoming quality control regulations. Specifically, it would adopt the more common industry term—accepted users—to refer to the types of outlets for inedible kernels currently delineated in the Order (crushers, feed manufacturers, and feeders). The term is recognized by industry to encompass other disposition outlets not specifically prescribed, but commonly used, such as a landfill. Using the term ''accepted users'' would also not limit other disposition outlets that may be utilized in the future.

Further, the term ''accepted user'' is utilized later in the Administrative Requirements section of the Order, so the term is understood and utilized by the Board and the industry in the administration of the Order. Section 981.442(a)(5) stipulates the requirements for handlers to meet their disposition obligation. In that section, handlers must deliver inedible product to entities ''on record with the Board as accepted users.'' The Board utilizes Form ABC–34, *Application to be Approved as an Accepted User of Inedible Almonds and Almond Waste,* in the approval process for accepted users. This action would harmonize § 981.41(a) with other sections of the Order and the existing administrative oversight mechanisms of the Board.

Proposal 5—Volume Regulation Submission Date Change

Section 981.49 requires that the Board furnish to the Secretary estimates of the supply and demand for almonds, and the corresponding salable and reserve percentages to be established, by August 1 of each year that volume regulation is being considered. The estimates aid the Secretary in determining if volume regulation would tend to effectuate the policy of the Act and in fixing the appropriate salable and reserve percentages.

This proposal would change the date that such information must be furnished to the Secretary from August 1 to September 1 of each crop year. Revising the reporting date would allow for more data to be considered when making recommendations for volume regulation.

Currently, the Order specifies August 1 as the date when industry estimates and volume recommendation must be furnished to the Secretary. However, this date immediately follows the end of the crop year, and it provides little time for the Board to compile industry data and formulate recommendations for salable and reserve percentages. In addition, data pertinent to the subject are not available until after the August 1 date. As an example, the final position report of crop year shipments and commitments is not published until the first week of August.

The current submission date also limits the time available for discussion by the Board when considering volume control recommendations. The Board normally meets in early August, after the publication of National Agricultural Statistics Service's (NASS) Objective Forecast in July and year-end crop information are available. By moving the date of notification to the Secretary to September 1, the Board would avoid having to schedule a special meeting in July to meet the Order's requirement. The September 1 date would also allow the Board's staff to complete a full analysis utilizing final crop numbers and the NASS data. As such, the proposed date change would increase the time available for Board discussions and allow for more thorough data analysis, providing greater accuracy in the calculations that might be made for the reserve recommendation. This change would have no impact on crop estimates or other Board activities.

Proposal 6—Modification of the Accounting of Funds Held in Reserve

Section 981.81(b) stipulates authorized use and refund requirements for assessments collected but not utilized within the applicable crop year. Under the provisions in that paragraph, certain excess funds, if not expended, must be held as qualified reserve funds that may only be expended on marketing promotion expenses. Further, the paragraph refers to accounting for funds held in reserve as being segregated into separate ''portions'' of the reserve.

Section 981.81(c) prescribes requirements for the Board's financial reserve. Currently, the Board maintains its operating reserve in two ''portions,'' one consisting of funds to be used for administrative-research functions and another consisting of funds to be used for marketing promotion activities. The amount in each portion is not to exceed approximately six-months' budget for the respective activity area.

The Board has found it impractical to maintain separate accounting of excess and reserve funds for administrative-research purposes and marketing promotion purposes. The Board has authority to recommend an operating budget and assessment rate each year, and it can also draw from its operating reserve to fund operations at any time during the year. Maintaining separate accounting to designate reserve funds for certain distinct purposes, however, adds administrative burden with no recognizable benefit. While the accounting scheme may have served a purpose in the past, the Board believes that it is redundant and obsolete moving forward.

This proposal would revise the Order's regulatory language in §§ 981.81(b) and 981.81(c) regarding assessment accounting procedures and processes for funds held in reserve. Both sections refer to keeping separate the funds used for administrative-research activities and funds used for marketing promotion activities. To facilitate the efficient accounting of reserve funds moving forward, this proposal would remove language in § 981.81(b) that refers to the proportional segregation of reserve funds according to their administrative-research or marketing promotion use. Similarly, this proposal would strike language in § 981.81(c) which currently specifies that the reserve fund consists of an administrative-research portion and a marketing promotion portion. It would also modify the language that limits the amount held in reserve to not exceed ''approximately six-months' budget'' for each activity to read ''six-months' expenses'', without any reference to ''each activity.''

The recommended changes would not impact the percentage of the assessment available for credit-back, nor would it materially impact reserves. In addition, although there would not be separate reserve accounts for different activities, the Board and USDA would continue to know how all monies are spent and to which activities they are allocated through the Board's marketing policy, budget, and other approval and oversight mechanisms and records. This is an administrative change, clarifying in the Order language that each portion would not technically be maintained in separate accounts.

Proposal 7—Acceptance of Advanced Assessments and Borrowing Authority

Section 981.81 authorizes the collection of assessments from almond handlers to provide funds to meet authorized Board expenses and the operating reserve requirements. This proposal would create a new § 981.81(f) to authorize the Board to accept advance payments of assessments and to borrow funds from commercial lending

institutions to better ensure continuity in operations during periods when neither operating assessments nor reserve funds are sufficient to fund Board functions.

As almond tonnage and assessment revenue have increased since the Order's promulgation, the industry has approved increasingly larger budgets which have year-round financial commitments. However, growers do not necessarily deliver the entire assessable crop at one time, nor do handlers have the facilities to process the entire crop at one time, and handlers instead purchase and market almonds throughout the production cycle. As a result, only about 17 percent of assessment revenue is paid to the Board when the first crop year assessment invoice is sent to handlers in October. Consequently, the Board invoices for assessments in the second and third quarters of the crop year. Yet, many research activities and marketing programs are initiated early in the crop year, necessitating payment when services are performed, often well before the first assessments are received from October invoices. Although the Board currently maintains a reserve fund to help pay for early expenses, this fund is insufficient to advance some of the necessary payments. Authorizing the Board to accept advance assessment payments and to borrow from commercial lending institutions would help it manage and sustain program activities during times of cash flow deficiencies.

Board members further noted that the ability to borrow against a line of credit is a common tool authorized in other federal marketing orders, especially to accommodate expenses when the assessment revenue necessary to pay such expenses is not received until later in the year.

While addressing general business concerns about the potential risks associated with debt financing, the Board agreed that its internal control policies would be revised to reflect the new borrowing authorities. Notably, the Board stressed that these policies would include financing procedures that would require any borrowing by the Board to be reimbursed upon receipt of sufficient assessment revenue. Moreover, Board members stressed that any borrowing of funds would be short-term in nature, limited, and would not extend beyond the end of the crop year.

Initial Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), AMS has considered the economic impact of this action on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 7,600 almond growers in the production area and approximately 100 handlers subject to regulation under the Order. Small agricultural almond producers are defined by the Small Business Administration (SBA) as those having annual receipts of less than $3,250,000, and small agricultural service firms are defined as those having annual receipts of less than $30,000,000 (13 CFR 121.201). The National Agricultural Statistics Service (NASS) reported in its 2017 Census of Agriculture (Census) that there were 7,611 almond farms in the production area, of which 6,683 had bearing acres. Additionally, the Census indicates that out of the 6,683 California farms with bearing acres of almonds, 4,425 (66 percent) have fewer than 100 bearing acres.

In another publication, NASS reported a 2021 crop year average yield of 2,210 pounds per acre and a season average grower price of $1.76 per pound. Therefore, a 100-acre farm with an average yield of 2,210 pounds per acre would produce about 221,000 pounds of almonds (2,210 pounds times 100 acres equals 221,000 pounds). At $1.76 per pound, that farm's production would be valued at $388,960 (221,000 pounds times $1.76 per pound equals $388,960). Since the Census indicated that 66 percent of California's almond farms are less than 100 acres, it could be concluded that the majority of California almond growers had annual receipts from the sale of almonds of less than $388,960 for the 2020–21 crop year, which is below the SBA threshold of $3,250,000 for small producers. Therefore, the majority of growers may be classified as small businesses.

To estimate the proportion of almond handlers that would be considered small businesses, it was assumed that the unit value per pound of almonds exported in a particular year could serve as a representative almond price at the handler level. A unit value for a commodity is the value of exports divided by the quantity exported. Data from the Global Agricultural Trade System (GATS) database of USDA's Foreign Agricultural Service showed that the value of almond exports from August 2020 to July 2021 (combining shelled and inshell) was $4.647 billion. The quantity of almond exports over that time-period was 2.162 billion pounds. Dividing the export value by the quantity yields a unit value of $2.15 per pound ($4.647 billion divided by 2.162 billion pounds equals $2.15).

NASS estimated that the California almond industry produced 2.915 billion pounds of almonds in 2021. Applying the $2.15 derived representative handler price per pound to total industry production results in an estimated total revenue at the handler level of $6.267 billion (2.915 billion pounds × $2.15 per pound). With an estimated 100 handlers in the California almond industry, average revenue per handler would be approximately $62.67 million ($6.267 billion divided by 100). Assuming a normal distribution of revenues, most almond handlers shipped almonds valued at more than $30,000,000 during the 2020–21 crop year. Therefore, the majority of handlers may be classified as large businesses.

This proposed rule would revise multiple provisions in the Order's subpart regulating handling of California almonds. The proposed rule would:

- Amend the Order to modify the definitions of ''Almonds'' and ''Shelled almonds'', and add a definition for ''Almond biomass'' (Proposal 1).
- Change the date utilized to determine the applicable handler volume for the purpose of tabulating handler votes in the nomination process for handler positions on the Board (Proposal 2).
- Replace obsolete references to ''Control Board'' with ''Board'' in two sections (Proposal 3).
- Simplify language pertaining to incoming quality control (Proposal 4).
- Change the date that the Board is required to submit volume regulation estimates and recommendations to the Secretary (Proposal 5).
- Remove language that distinguishes certain funds in the accounting of the Board's operating reserve fund and set the reserve fund limit at approximately six-months' expenses instead of six-months' budget (Proposal 6).
- Add authority to accept advanced assessments and to borrow funds from commercial lenders (Proposal 7).

Proposals 1, 3, and 4 are modernizing in nature and align Order provisions with current industry definitions and practices in §§ 981.4, 981.6, 981.41(b), and 981.59(a). Proposal 1 would also add § 981.4(a) to define *Almond Biomass* and simplify language in § 981.42(a) to identify disposition

outlets more broadly as *Accepted Users.* There are no substantial changes or additional requirements to industry practices effectuated as a result of these proposed amendments.

Proposals 2 and 5 would adjust or align dates to allow for the inclusion of more available data when determining weighting of handler votes for Board nominations (§ 981.32(b)(2)) and providing volume regulation recommendations to the Secretary (§ 981.49). These changes would not impact how volume is calculated for handler vote weighting, materially affect crop estimates, or adversely impact Board activities.

Proposal 6 would remove language that distinguishes between funds for administrative-research and funds for marketing promotion activities in the accounting of excess funds (§ 981.81(b) and (c)). In addition, it would set the reserve fund limit at approximately six-months' expenses instead of the current six-months' budget. This is an administrative adjustment that provides technical clarification on the accounting of assessments and reserves. It does not impact the percentage of assessments available for refund, nor does it materially impact reserves.

Proposal 7 would add a new section, § 981.81(f), to allow the Board to accept advance payment of assessments and borrow funds against the current season's assessment receipts using a line of credit from a commercial financial institution to provide additional flexibility in managing its cashflows and expenses.

This proposed rule encompasses a number of changes that are primarily administrative or modernizing in nature. These changes would simplify, clarify, or align Order language with current industry practices and definitions, and include a common authority to borrow funds. The amendments would apply equally to all producers and handlers, regardless of size. The proposed amendments also have no additional impact on the reporting, record-keeping, or compliance costs of small businesses. Proposal 7 would authorize the Board to receive advance assessment payments and borrow funds. These authorities are necessary to ensure that adequate funds are available throughout the year to pay the Board's management and administrative expenses. Any borrowing or interest costs associated with the borrowing provision in the proposed rule would be calculated and accounted for within the Board's annual budget.

Alternatives to this proposed rule were considered, including making no changes at this time. However, the Board believes it would be beneficial to update Order language to better reflect the current state of the almond industry and the industry's vernacular, and to have the means and funds necessary to effectively administer the program.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Order's information collection requirements have been previously approved by OMB and assigned OMB No. 0581–0178, Vegetable and Specialty Crops. No changes in those requirements are necessary because of this proposed action. Should any changes become necessary, they would be submitted to OMB for approval.

This proposed rule would impose no additional reporting or recordkeeping requirements on either small or large almond handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public-sector agencies.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

AMS has not identified any relevant Federal rules that duplicate, overlap, or conflict with this proposed action.

The Board's meetings are widely publicized throughout the California almond production area. All interested persons are invited to attend the meeting and encouraged to participate in Board deliberations on all issues. Like all Board meetings, the meetings held on December 9, 2019; August 11, 2020; and December 7, 2020, were public, and all entities, both large and small, were encouraged to express their views on the proposals.

Interested persons are invited to submit comments on the proposed amendments to the Order, including comments on the regulatory and information collection impacts of this proposed action on small businesses.

Following analysis of any comments received on the amendments in this proposed rule, AMS will evaluate all available information and determine whether to proceed. If appropriate, a proposed rule and notice of referendum would be issued, and producers would be provided the opportunity to vote for or against the proposed amendments. Information about the referendum, including dates and voter eligibility requirements, would be published in a future issue of the **Federal Register**. If appropriate, a final rule would then be issued to effectuate any amendments favored by producers participating in the referendum.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: *https://www.ams.usda.gov/rules-regulations/moa/small-businesses.* Any questions about the compliance guide should be sent to Richard Lower at the previously mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

General Findings

The findings hereinafter set forth are supplementary to the findings and determinations which were previously made in connection with the issuance of Marketing Order 981; and all said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

1. Marketing Order 981 as hereby proposed to be amended and all the terms and conditions thereof, would tend to effectuate the declared policy of the Act;

2. Marketing Order 981 as hereby proposed to be amended regulates the handling of almonds grown in California and is applicable only to persons in the respective classes of commercial and industrial activity specified in the Order;

3. Marketing Order 981 as hereby proposed to be amended is limited in application to the smallest regional production area which is practicable, consistent with carrying out the declared policy of the Act, and the issuance of several marketing orders applicable to subdivisions of the production area would not effectively carry out the declared policy of the Act;

4. Marketing Order 981 as hereby proposed to be amended prescribes, insofar as practicable, such different terms applicable to different parts of the production area as are necessary to give due recognition to the differences in the production and marketing of almonds produced or packed in the production area; and

5. All handling of almonds grown or handled in the production area, as defined in Marketing Order 981 is in the current of interstate or foreign commerce or directly burdens, obstructs, or affects such commerce.

A 60-day comment period is provided to allow interested persons to respond to these proposals. Any comments received on the amendments proposed

in this rule will be analyzed, and if AMS determines to proceed based on all the information presented, a producer referendum would be conducted to determine producer support for the proposed amendments. If appropriate, a final rule would then be issued to effectuate the amendments favored by producers participating in the referendum.

List of Subjects in 7 CFR Part 981

Marketing agreements, Nuts, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Agricultural Marketing Service proposes to amend 7 CFR part 981 as follows:

PART 981—ALMONDS GROWN IN CALIFORNIA

■ 1. The authority citation for 7 CFR part 981 continues to read as follows:

Authority: 7 U.S.C. 601–674.

■ 2. Revise § 981.4 to read as follows:

§ 981.4 Almonds.

Almonds means (unless otherwise specified) all varieties of almonds (except bitter almonds), either shelled or unshelled, grown in the State of California, and, for the purposes of research includes almond biomass.

■ 3. Add § 981.4a to read as follows:

§ 981.4a Almond Biomass.

Almond Biomass means the hulls, shells, and skins of harvested almonds and woody biomass derived from almond trees (*e.g.,* tree limbs, bark, prunings).

■ 4. In § 981.6 revise the first sentence to read as follows:

§ 981.6 Shelled almonds.

Shelled almonds mean almonds after the shells are removed and includes any form those almonds might take. * * *

■ 5. Revise § 981.32 paragraph (b)(2) to read as follows:

§ 981.32 Nominations.

* * * * *

(b) * * *

(2) Each handler may vote for a nominee for each position representing the group to which the handler belongs. Each handler vote shall be weighted by the quantity of almonds (kernel weight basis computed to the nearest whole ton) handled for the handler's own account through March 31 of the crop year in which nominations are made. The nominee for each position shall be the person receiving the highest weighted vote for the position.

* * * * *

§ 981.41 [Amended]

■ 6. In § 981.41 paragraph (b) remove the word ''Control''.

§ 981.42 [Amended]

■ 7. In § 981.42 paragraph (a) the second sentence, removing the words ''accepted crushers, feed manufacturers, or feeders'' and adding, in their place the words ''approved accepted users.''

§ 981.49 [Amended]

■ 8. In § 981.49, in the introductory text removing the word ''August'' and adding in its place the word ''September''.

§ 981.59 [Amended]

■ 9. In § 981.59 paragraph (a), remove the word ''Control''.

■ 10. Amend § 981.81 by:

■ a. Revising the third and fourth sentences in paragraph (b);

■ b. Revising paragraph (c); and

■ c. Adding paragraph (f).

The revisions and addition read as follows:

§ 981.81 Assessment.

* * * * *

(b) * * * Any amounts, not credited pursuant to § 981.41 for a crop year may be used by the Board for its marketing promotion expenses of the succeeding crop year, and any unexpended portion of those amounts at the end of that crop year shall be retained in the operating reserve fund. Any funds of the operating reserve fund in excess of the level authorized pursuant to paragraph (c) of this section shall be refunded to handlers or used to reduce the assessment rate of the subsequent crop year, as the Board may determine. * * *

(c) *Reserves.* The Board may maintain an operating reserve fund which shall not exceed approximately six-months' expenses or such lower amount as the Board may establish with the approval of the Secretary: *Provided,* That this limitation shall not restrict the temporary retention of excess funds for the purpose of stabilizing or reducing the assessment rate of a crop year. To the extent that funds from current crop year assessments are inadequate, funds in the operating reserve may be used for the authorized activities of the crop year. Funds so used, and not exceeding the six-month limitation, shall be replaced to the extent practicable from assessments subsequently collected for the crop year.

* * * * *

(f) *Advanced Assessments and Commercial Loans.* To provide funds for the administration of the programs during the part of a crop year when neither sufficient operating reserve funds nor sufficient revenue from assessment on the current season's receipts are available, the Board may accept payment of handler assessments in advance of the date when due or may borrow funds from a commercial lending institution for such purposes.

Erin Morris,

Associate Administrator, Agricultural Marketing Service.

[FR Doc. 2023–08851 Filed 4–26–23; 8:45 am]

BILLING CODE P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 981

[Doc. No. AMS–SC–22–0069]

Marketing Order Regulations for Almonds Grown in California

AGENCY: Agricultural Marketing Service, Department of Agriculture (USDA).

ACTION: Proposed rule.

SUMMARY: This proposed rule would implement a recommendation from the Almond Board of California (Board) to make changes to multiple provisions in the administrative requirements prescribed under the Federal marketing order regulating the handling of almonds grown in California (Order). This action would amend administrative requirements regulating quality control, exempt dispositions, and interest and late charges provisions. In addition, the proposed rule would stay two sections of the administrative requirements that define almond butter and stipulate disposition in reserve outlets by handlers to facilitate the efficient administration of the Order.

DATES: Comments must be received by June 26, 2023. Comments on the forms and information collection must also be received by June 26, 2023.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposed rule. Comments must be sent to the Docket Clerk, Market Development Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, Stop 0237, Washington, DC 20250–0237; Fax: (202) 720–8938; or via internet at: *https://www.regulations.gov.* Comments should reference the document number and the date and page number of this issue of the **Federal Register**. All comments submitted in response to this proposed rule will be included in the record and will be made available for public inspection in the Office of the Docket Clerk during regular business

hours, or viewed at: *https://www.regulations.gov.* Please be advised that the identity of individuals or entities submitting comments will be made public.

FOR FURTHER INFORMATION CONTACT: Barry Broadbent, Senior Marketing Specialist, or Gary Olson, Regional Director, West Region Field Office, Market Development Division, Specialty Crops Program, AMS, USDA; Telephone: (559) 487–5901, Fax: (559) 487–5906, or Email: *Barry.Broadbent@usda.gov* or *GaryD.Olson@usda.gov.*

Small businesses may request information on complying with this regulation by contacting Richard Lower, Market Development Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, Stop 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or Email: *Richard.Lower@usda.gov.*

SUPPLEMENTARY INFORMATION: This action, pursuant to 5 U.S.C. 553, proposes to amend regulations issued to carry out a marketing order as defined in 7 CFR 900.2(j). This proposed rule is issued under Marketing Order No. 981, as amended (7 CFR part 981), regulating the handling of almonds grown in California. Part 981 (referred to as the ''Order'') is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the ''Act.'' The Board locally administers the Order and comprises growers and handlers of almonds operating within the production area.

The Agricultural Marketing Service (AMS) is issuing this proposed rule in conformance with Executive Orders 12866 and 13563. Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. This action falls within a category of regulatory actions that the Office of Management and Budget (OMB) exempted from Executive Order 12866 review.

This proposed rule has been reviewed under Executive Order 13175—Consultation and Coordination with Indian Tribal Governments, which requires agencies to consider whether their rulemaking actions would have Tribal implications. AMS has determined this proposed rule is unlikely to have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

This proposed rule has been reviewed under Executive Order 12988, Civil Justice Reform. This proposed rule is not intended to have retroactive effect.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with USDA a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. A handler is afforded the opportunity for a hearing on the petition. After the hearing, USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

This proposed rule would amend administrative requirements in the Order regulating quality control, exempt dispositions, and interest and late charges provisions. In addition, the proposed rule would stay two sections of the administrative requirements that define almond butter and stipulate disposition in reserve outlets by handlers. These proposed changes modify the requirements to reflect updates in industry practices and are expected to help facilitate the orderly administration of the Order.

The Board initially recommended the changes proposed herein, along with proposed changes to the Order's roadside stand exemption and credit-back provisions, at meetings held on December 7, 2020, and June 17, 2021. AMS subsequently published a proposed rule addressing the aggregate of those proposed changes on February 22, 2022 (87 FR 9455), with a 60-day comment period ending April 25, 2022. Four comments were received during the comment period. One of those comments opposed changes to the credit-back provision and further questioned the Board's administrative process in recommending the proposed changes to AMS.

After consideration of the comments received during the proposed rule's initial comment period, AMS reopened the comment period for 15 additional days from June 22, 2022, to July 7, 2022 (87 FR 37240). During the reopened comment period, 1,155 comments were received. Approximately 98 percent of the comments were opposed to the proposed changes to the roadside stand exemption.

Given the opposition to proposed changes to the credit-back and roadside stand exemption provisions in the Order, AMS published a withdrawal of the proposed rule in the **Federal Register** on August 22, 2022 (87 FR 51270).

The Board met on September 30, 2022, and unanimously recommended the resubmission of proposed changes to the Order's regulations, minus the previously proposed changes to the credit-back and roadside stand exemption provisions. Excepting the previously discussed provisions that were removed, the modifications to the Order's regulations, as proposed herein, are identical to the changes proposed in the initial proposed rule published February 22, 2022 (87 FR 9455).

Multiple sections in the Order provide the authority for this proposed action. The authorities are cited with the descriptions of each of the proposed changes in the following narrative.

Section 981.42 of the Order provides the authority to establish quality control regulations for both incoming and outgoing product. Section 981.442 of the Order's administrative requirements establishes quality control regulations under that authority. Section 981.442(a) establishes the quality requirements for incoming product received by handlers. Section 981.442(b) establishes the quality requirements for outgoing product prior to being shipped by handlers.

This proposal would modify provisions in § 981.442(a) to clarify ambiguous language, remove irrelevant dates, and more clearly define ''accepted user'' as it is referenced in the regulations. The proposed rule would also relax the requirements for handlers in meeting their disposition obligation under the regulations. The incoming quality requirements would be amended to allow inedible kernels, foreign material, and other defects sorted from off-site cleaning facilities to be credited to a handler's disposition obligation. In addition, almond meal would be allowed to meet the non-inedible portion of the disposition obligation, with the meal content to be determined in a manner acceptable to the Board.

In § 981.442(b), the proposed rule would amend the regulations to facilitate handlers utilizing off-site

cleaning and treatment facilities in fulfillment of their quality control requirements. The proposal would allow the transfer of product for off-site cleaning without being considered a shipment, would designate off-site treatment facilities as ''custom processors,'' and would establish application and approval procedures for Board authorization of such custom processors. This action would also clarify the roles of the Technical Expert Review Panel (TERP) and the Board in administering the program as detailed in several provisions in § 981.442(b). Lastly, the proposed rule would refine the duties of a Direct Verifiable (DV) program auditor to disallow individuals who conduct process validations from being named as the DV auditor for that same equipment used in the treatment process.

Section 981.50 of the Order establishes handler reserve obligation requirements. Under those Order provisions, certain products are exempted from the reserve obligation, subject to the accountability of the Board. Section 981.450 establishes the provisions for exempt dispositions under the reserve obligation. This proposed rule would enhance the procedures currently in place for the Board to account for exempt dispositions. Under the proposed rule, outlets for exempted product would need to be pre-approved by the Board in accordance with the requirements contained in § 981.442(a)(7).

Section 981.66(b) of the Order establishes the conditions governing the disposition of reserve product. Within that paragraph, diversion of reserve almonds to be manufactured into almond butter is listed as an allowable outlet for such product. Section 981.466 further defines ''almond butter'' as used in § 981.66. The expanded definition of almond butter is no longer relevant in the administration of the program. The proposed rule would stay § 981.466 indefinitely.

Section 981.467 establishes the requirements regarding the disposition in reserve outlets by handlers. The section details the establishment of agents of the Board, delineates reserve credit in satisfaction of a reserve obligation, sets minimum prices, and establishes certain dates pertaining to the reserve disposition obligations. As the Order is not currently regulating volume, and a significant portion of the requirements is outdated, the provisions in § 981.467 are not currently relevant to the administration of the Order. As such, this proposed rule would stay the entire section indefinitely.

Lastly, § 981.481 stipulates the requirements for submission of handler assessment payments, which includes documentary requirements for proof of timely submission of assessment payments. Other than actual receipt of payment in the Board's office within 30 days of the invoice date on the handler's statement, the current provisions only identify the U.S. Postal Service postmark as proof of timely submission. This proposed rule would add ''or by some other verifiable delivery tracking system'' to allow handlers alternative delivery methods.

The Board believes that the changes recommended herein are necessary to update the Order's administrative requirements to adapt to changes in the industry and to reflect current industry practices. Many of the revisions may be considered conforming changes, but the proposed rule also makes changes to the quality control regulations that the Board views as essential to the continued efficient administration of the Order. The proposed changes contained herein are expected to facilitate the orderly marketing of California almonds and benefit growers and handlers in the industry.

Initial Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), AMS has considered the economic impact of this action on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 7,600 almond growers in the production area and approximately 100 handlers subject to regulation under the Order. Small agricultural almond producers are defined by the Small Business Administration (SBA) as those having annual receipts of less than $3,250,000, and small agricultural service firms are defined as those having annual receipts of less than $30,000,000 (13 CFR 121.201).

National Agricultural Statistics Service (NASS) reported in its 2017 Census of Agriculture (Census) that there were 7,611 almond farms in the production area, of which 6,683 had bearing acres. Additionally, the Census indicates that out of the 6,683 California farms with bearing acres of almonds, 4,425 (66 percent) have fewer than 100 bearing acres.

In another publication, NASS reported a 2021 crop year average yield of 2,210 pounds per acre and a season average grower price of $1.76 per pound. Therefore, a 100-acre farm with an average yield of 2,210 pounds per acre would produce about 221,000 pounds of almonds (2,210 pounds times 100 acres equals 221,000 pounds). At $1.76 per pound, that farm's production would be valued at $388,960 (221,000 pounds times $1.76 per pound equals $388,960). Since the Census indicated that 66 percent of California's almond farms are less than 100 acres, it could be concluded that the majority of California almond growers had annual receipts from the sale of almonds of less than $388,960 for the 2020–21 crop year, which is below the SBA threshold of $3,250,000 for small producers. Therefore, the majority of growers may be classified as small businesses.

To estimate the proportion of almond handlers that would be considered small businesses, it was assumed that the unit value per pound of almonds exported in a particular year could serve as a representative almond price at the handler level. A unit value for a commodity is the value of exports divided by the quantity exported. Data from the Global Agricultural Trade System (GATS) database of USDA's Foreign Agricultural Service showed that the value of almond exports from August 2020 to July 2021 (combining shelled and inshell) was $4.647 billion. The quantity of almond exports over that time-period was 2.162 billion pounds. Dividing the export value by the quantity yields a unit value of $2.15 per pound ($4.647 billion divided by 2.162 billion pounds equals $2.15).

NASS estimated that the California almond industry produced 2.915 billion pounds of almonds in 2021. Applying the $2.15 derived representative handler price per pound to total industry production results in an estimated total revenue at the handler level of $6.267 billion (2.915 billion pounds × $2.15 per pound). With an estimated 100 handlers in the California almond industry, average revenue per handler would be approximately $62.67 million ($6.267 billion divided by 100). Assuming a normal distribution of revenues, most almond handlers shipped almonds valued at more than $30,000,000 during the 2010–21 crop year. Therefore, the majority of handlers may be classified as large businesses.

This proposed rule would revise multiple provisions in the Order's administrative requirements. This

proposal would amend regulations covering the Order's quality control, exempt dispositions, and interest and late charges provisions. In addition, it would stay regulations contained in §§ 981.466 and 981.467. One of the sections that would be stayed defines almond butter and the other regulates almond disposition in reserve outlets by handlers. Both sections would be stayed indefinitely.

More specifically, in § 981.442(a), the proposed rule would clarify ambiguous language, remove irrelevant dates, and more clearly define the term ''accepted user'' as it is referenced in the regulations. It would also relax the requirements for handlers in meeting their disposition obligation under the Order.

Additionally, in § 981.442(b), the proposed rule would allow the transfer of product for off-site cleaning without being considered a shipment, designate off-site treatment facilities as ''custom processors,'' and establish the application and approval procedures for Board authorization of custom processors. This proposal would also clarify the roles of the TERP and the Board in administering the program in several subparagraphs in the section. Further, the proposed rule would refine the definition of a DV program auditor to disallow individuals who conduct process validations from being named as the DV auditor for that same equipment used in the treatment process.

This proposed rule would also amend § 981.450 to require outlets for exempted product be Board-approved, in accordance with § 981.442(a)(7).

Further, under the proposed action, § 981.466, which defines ''almond butter'' as it is used in § 981.66(b), is no longer relevant in the administration of the program and would be stayed indefinitely. In addition, as the Order is not currently regulating volume, § 981.467 is not necessary for the administration of the Order and would also be stayed indefinitely.

Lastly, this action would revise § 981.481 by adding ''or by some other verifiable delivery tracking system'' to the requirements to allow handlers alternative trackable delivery methods for demonstration of timely submission of assessment payments.

The authorities for the proposed changes above are contained in §§ 981.42, 981.50, 981.66, 981.67, and 981.81 of the Order.

The Board believes that the administrative requirement revisions recommended herein are necessary to reflect changes in the industry and to update the regulations to reflect current practices. Many of the modifications may be considered conforming changes, but this proposal also makes substantive changes to quality control requirements that the Board views as essential to the efficient administration of the Order. The proposed changes contained herein are expected to facilitate the orderly marketing of California almonds and benefit growers and handlers in the industry.

Initially, the Board unanimously recommended the changes contained herein, along with other recommended changes that were subsequently removed from consideration. The Board unanimously recommended the proposed changes contained herein at a meeting on September 30, 2022.

AMS anticipates that this proposed rule would impose minimal, if any, additional costs on handlers or growers, regardless of size. The proposed changes to the administrative requirements are intended to clarify certain provisions, remove ambiguous and obsolete language, and adapt the requirements to facilitate the orderly marketing of almonds. The benefits derived from this proposed rule are not expected to be disproportionately more or less for small handlers or growers than for larger entities.

The Board considered alternatives to this action, including making no changes to the current requirements and only making changes to some of the requirements. After consideration of all the alternatives, and in consultation with AMS, the Board determined that making the recommended changes would be the best option to facilitate the Order's administration, contribute to the orderly marketing of almonds, and provide the greatest benefit to growers and handlers while maintaining the integrity of the Order.

Further, the Board's meeting was widely publicized throughout the California almond industry, and all interested persons were invited to attend the meetings and participate in Board deliberations. Like all Board meetings, the September 30, 2022, meeting was a public meeting, and all entities, both large and small, were able to express their views on this issue. Finally, interested persons are invited to submit comments on this proposed rule, including the regulatory and information collection impacts of this proposed action on small businesses.

In accordance with the Paperwork Reduction Act of 1995, (44 U.S.C. Chapter 35), the Order's information collection requirements have been previously approved by the Office of Management and Budget (OMB) and assigned OMB Nos. 0581–0178 (Vegetable and Specialty Crops) and 0581–0242 (Almond Salmonella). This proposed rule announces AMS's intent to request approval from OMB for amendments made to existing information collections under OMB Nos. 0581–0178 and 0581–0242, and for a new information collection under OMB No. 0581–NEW.

Upon finalization of the proposed rule, AMS will submit a Justification for Change to OMB for the ABC Form 52—Direct Verifiable (DV) Program for Further Processing of Untreated Almonds Application Form (OMB No. 0581–0242). The form is necessary to administer the DV Program established by § 981.442(b)(6)(i) in the Order's quality control requirements. The proposed rule would change the body that approves DV Program applications from the TERP to the Board. The instructions that accompany ABC Form 52 would need to be revised accordingly.

Lastly, this proposed rule would create a new form for California almond handlers, titled ABC Form 55—Custom Processor Application.

Title: Custom Processor Application (7 CFR part 981).

OMB Number: 0581–NEW.

Type of Request: New Collection.

Abstract: The information requirements in this request are essential to carry out the intent of the Act and to administer the Order. The Order is effective under the Act, and USDA is responsible for the oversight of the Order's administration.

The Order's quality control requirements for outgoing product require handlers to subject their almonds to a treatment process or processes prior to shipment to reduce potential *Salmonella* bacteria contamination. The Order's quality control requirements allow handlers to utilize off-site treatment facilities to fulfill that requirement. The Board unanimously recommended that the Order's quality control requirements be amended to define off-site treatment facilities located within the production area as ''custom processors'' and to require such custom processors to annually apply to the Board for approval.

An individual desiring approval as a custom processor must demonstrate that their facility meets the Order's treatment process requirements and must submit an application to the Board. This form, numbered ABC Form 55 and titled ''Custom Processor Application,'' would be submitted directly to the Board once each year no later than July 31. The application would provide the Board with the name of the applicant, the location of each treatment facility

covered by the application, applicant contact information, and certification that the applicant's technology and equipment provide a treatment process that has been validated by a Board-approved process authority.

The Order authorizes the Board to collect certain information necessary for the administration of the Order. The information collected would only be used by authorized representatives of the AMS, including the AMS Specialty Crops Program regional and headquarters staff, and authorized employees of the Board. All proprietary information would be kept confidential in accordance with the Act and the Order.

The proposed request for new information collection under the Order is as follows:

Custom Processor Application

Estimate of Burden: Public reporting burden for this collection of information is estimated to be an average of 0.5 hours per response.

Respondents: Nut processors located within the Order's area of production.

Estimated Number of Respondents: 25.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Responses: 25.

Estimated Total Annual Burden on Respondents: 12.5 hours.

Comments are invited on: (1) whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (2) the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments should reference OMB No. 0581–NEW and the marketing order for almonds grown in California. Comments should be sent to AMS in care of the Docket Clerk at the previously mentioned address or at *https://www.regulations.gov.*

All responses to this notice will be summarized and included in the request for OMB approval. All comments received will become a matter of public record and will be available for public inspection during regular business hours at the address of the Docket Clerk or at *https://www.regulations.gov.*

If this proposed rule is finalized, this information collection will be merged with the forms currently approved under OMB No. 0581–0242 (Almond Salmonella).

As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies. AMS has not identified any relevant Federal rules that duplicate, overlap, or conflict with this proposed rule.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

Further, the Board's meetings are widely publicized throughout the California almond industry, and all interested persons are invited to attend the meetings and participate in Board deliberations on all issues. Like all Board meetings, the December 7, 2020, June 17, 2021, and September 30, 2022, meetings were open to the public, and all entities, both large and small, were able to express their views on the proposed changes. Also, the Board has several appointed committees to review certain issues and make recommendations to the Board. The Board's Almond Quality, Food Safety, and Services Committee met several times in 2019 and discussed these changes in detail. Those meetings were also public meetings, and both large and small entities were able to participate and express their views. Finally, interested persons are invited to submit comments on this proposed rule, including the regulatory and information collection impacts of this action on small businesses.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: *https://www.ams.usda.gov/rules-regulations/moa/small-businesses.* Any questions about the compliance guide should be sent to Richard Lower at the previously mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

After consideration of all relevant material presented, including the information and recommendations submitted by the Board and other available information, AMS has determined that this proposed rule is consistent with and will effectuate the purposes of the Act.

A 60-day comment period is provided to allow interested persons to respond to this proposal. All written comments timely received will be considered before a final determination is made on this matter.

List of Subjects in 7 CFR Part 981

Marketing agreements, Nuts, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Agricultural Marketing Service proposes to amend 7 CFR part 981 as follows:

PART 981—ALMONDS GROWN IN CALIFORNIA

■ 1. The authority citation for 7 CFR part 981 continues to read as follows:

Authority: 7 U.S.C. 601–674.

■ 2. Amend § 981.442 by:
■ a. Revising paragraphs (a)(1), (a)(4)(i), and (a)(5);
■ b. Revising the introductory text of paragraph (b);
■ c. Revising paragraphs (b)(2), (b)(3)(i) and (v), and (b)(4)(i) and (v);
■ d. Revising the introductory text of paragraph (b)(6)(i); and
■ e. Revising paragraphs (b)(6)(i)(A), (C), and (D).

The revisions read as follows:

§ 981.442 Quality control.

(a) * * *

(1) *Sampling.* Each handler shall cause a representative sample of almonds to be drawn from each lot of any variety received from any incoming source. The sample shall be drawn before inedible kernels are removed from the lot after hulling/shelling, or before the lot is processed or stored by the handler. For receipts at premises with mechanical sampling equipment and under contracts providing for payment by the handler to the grower for sound meat content, samples shall be drawn by the handler in a manner acceptable to the Board and the inspection agency. The inspection agency shall make periodic checks of the mechanical sampling procedures. For all other receipts, including but not limited to field examination and purchase receipts, accumulations purchased for cash at the handler's door or from an accumulator, or almonds of the handler's own production, sampling shall be conducted or monitored by the inspection agency in a manner acceptable to the Board. All samples shall be bagged and identified in a manner acceptable to the Board and the inspection agency.

* * * * *

(4) * * *

(i) The weight of inedible kernels in excess of 2 percent of kernel weight reported to the Board of any variety received by a handler shall constitute that handler's disposition obligation. For any almonds sold inshell, the weight may be reported to the Board and that disposition obligation for that variety reduced proportionately.

* * * * *

(5) *Meeting the disposition obligation.* Each handler shall meet its disposition obligation by delivering packer pickouts, kernels rejected in blanching, pieces of kernels, meal accumulated in manufacturing, or other material, to Board-approved accepted users, which can include, but is not limited to, crushers, feed manufacturers, feeders, or dealers in nut wastes, located within the production area. Inedible kernels, foreign material, and other defects sorted from edible kernels by off-site cleaning facilities may be used towards that handler's disposition obligation or destroyed. Handlers shall notify the Board at least 72 hours prior to delivery of product to an off-site cleaning facility or accepted user location: *Provided,* That the Board or its employees may lessen this notification time whenever it determines that the 72-hour requirement is impracticable. The Board may supervise deliveries at its option. In the case of a handler having an annual total obligation of less than 1,000 pounds, delivery may be to the Board in lieu of an accepted user, in which case the Board would certify the disposition lot and report the results to the USDA. For dispositions by handlers with mechanical sampling equipment, samples may be drawn by the handler in a manner acceptable to the Board and the inspection agency. For all other dispositions, samples shall be drawn by or under supervision of the inspection agency. Upon approval by the Board and the inspection agency, sampling may be accomplished at the accepted user's destination. The edible and inedible almond meat content of each delivery shall be determined by the inspection agency and reported by the inspection agency to the Board and the handler. The handler's disposition obligation will be credited upon satisfactory completion of ABC Form 8. ABC Form 8, Part A, is filled out by the handler, and Part B by the accepted user. At least 50 percent of a handler's total crop year inedible disposition obligation shall be satisfied with dispositions consisting of inedible kernels as defined in § 981.408: *Provided,* That this 50 percent requirement shall not apply to handlers with total annual obligations of less than 1,000 pounds. Each handler's disposition obligation shall be satisfied when the almond meat content of the material delivered to accepted users equals the disposition obligation, but no later than September 30 succeeding the crop year in which the obligation was incurred. Almond meal can be used for meeting the non-inedible portion of the obligation. Meal content shall be determined in a manner acceptable to the Board.

* * * * *

(b) *Outgoing.* Pursuant to § 981.42(b), and except as provided in § 981.13 and in paragraph (b)(6) of this section, handlers shall subject their almonds to a treatment process or processes prior to shipment to reduce potential *Salmonella* bacteria contamination in accordance with the provisions of this section. Temporary transfer by a handler to an off-site cleaning facility is not considered a shipment under this section. Handlers may utilize off-site cleaning facilities within the production area, on record with the Board, to provide sorting services to separate inedible kernels, foreign material, and other defects from edible kernels. Product sent by a handler to an off-site cleaning facility is considered a temporary transfer, with ownership maintained by the handler, and accountability required for all product fractions and handler obligations pursuant to § 981.42.

* * * * *

(2) *On-site versus off-site treatment.* Handlers shall subject almonds to a treatment process or processes prior to shipment either at their handling facility (on-site) or a custom processor (defined as a Board-approved off-site treatment facility located within the production area subject to the provisions of paragraph (b)(4)(v) of this section). Transportation of almonds by a handler to a custom processor shall not be deemed a shipment. A handler with an on-site treatment process or processes may use such facility to act as a custom processor for other handlers.

(3) * * *

(i) Validation means that the treatment technology and equipment have been demonstrated to achieve in total a minimum 4-log reduction of *Salmonella* bacteria in almonds. Validation data prepared by a Board-approved process authority must be submitted to the Board, and accepted by the TERP, for each piece of equipment used to treat almonds prior to its use under the program.

* * * * *

(v) The TERP, in coordination with the Board, may revoke any approval for cause. The Board shall notify the process authority in writing of the reasons for revoking the approval. Should the process authority disagree with the decision, they may appeal the decision in writing to the Board, and ultimately to USDA. A process authority whose approval has been revoked must submit a new application to the TERP and await approval.

(4) * * *

(i) By May 31, each handler shall submit to the Board a Handler Treatment Plan (Treatment Plan) for the upcoming crop year. A Treatment Plan shall describe how a handler plans to treat his or her almonds and must address specific parameters as outlined by the Board for the handler to ship almonds. Such plan shall be reviewed by the Board, in conjunction with the inspection agency, to ensure it is complete and can be verified, and be approved by the Board. Almonds sent by a handler for treatment at a custom processing facility affiliated with another handler shall be subject to the approved Treatment Plan utilized at that facility. Handlers shall follow their own approved Treatment Plans for almonds sent to custom processors that are not affiliated with another handler.

* * * * *

(v) Custom processors shall provide access to the inspection agency and Board staff for verification of treatment and review of treatment records. Custom processors shall utilize technologies that have been determined to achieve, in total, a minimum 4-log reduction of Salmonella bacteria in almonds, pursuant to a letter of recommendation issued by FDA or accepted by the TERP. Custom processors must submit a Custom Processor Application, ABC Form XX, to the Board annually by July 31. A custom processor who submits a timely application, and utilizes a treatment process or processes that has been validated by a Board-approved process authority and approved by the Board in conjunction with the TERP, shall be approved by the Board for handler use. The Board may revoke any such approval for cause. The Board shall notify the custom processor of the reasons for revoking the approval. Should the custom processor disagree with the Board's decision, it may appeal the decision in writing to USDA. Handlers may treat their almonds only at custom processor treatment facilities that have been approved by the Board.

* * * * *

(6) * * *

(i) Handlers may ship untreated almonds for further processing directly to manufacturers located within the U.S., Canada, or Mexico. This program shall be termed the Direct Verifiable (DV) program. Handlers may only ship untreated almonds to manufacturers who have submitted ABC Form No. 52, ''Application for Direct Verifiable (DV) Program for Further Processing of Untreated Almonds,'' and have been approved by the Board. Such almonds must be shipped directly to approved manufacturing locations, as specified on Form No. 52. Such manufacturers (DV Users) must submit an initial Form No. 52 to the Board for review and approval in conjunction with the TERP. Should the applicant disagree with the Board's decision concerning approval, it may appeal the decision in writing to the Board, and ultimately to USDA. For subsequent crop years, approved DV Users with no changes to their initial application must send the Board a letter, signed and dated, indicating that there are no changes to the application the Board has on file. Approved DV Users desiring to make changes to their approved application must resubmit Form No. 52 to the Board for approval. The TERP, in coordination with the Board, may revoke any approval for cause. The Board shall notify the DV User in writing of the reasons for revoking the approval. Should the DV User disagree with the decision, it may appeal the decision in writing to the Board, and ultimately to USDA. A DV User whose approval has been revoked must submit a new application to the Board and await approval. The Board shall issue a DV User code to an approved DV User. Handlers must reference such code in all documentation accompanying the lot and identify each container of such almonds with the term ''unpasteurized.'' Such lettering shall be on one outside principal display panel, at least ½ inch in height, clear and legible. If a third party is involved in the transaction, the handler must provide sufficient documentation to the Board to track the shipment from the handler's facility to the approved DV user. While a third party may be involved in such transactions, shipments to a third party and then to a manufacturing location are not permitted under the DV program. Approved DV Users shall:

(A) Subject such almonds to a treatment process or processes using technologies that achieve in total a minimum 4-log reduction of *Salmonella* bacteria as determined by the FDA or established by a process authority accepted by the TERP, in accordance with and subject to the provisions and procedures of paragraph (b)(3) of this section. Establish means that the treatment process and protocol have been evaluated to ensure the technology's ability to deliver a lethal treatment for *Salmonella* bacteria in almonds to achieve a minimum 4-log reduction;

* * * * *

(C) Have their treatment technology and equipment validated by a Board-approved process authority, and accepted by the TERP. Documentation must be provided with their DV application to verify that their treatment technology and equipment have been validated by a Board-approved process authority. Such documentation shall be sufficient to demonstrate that the treatment processes and equipment achieve a 4-log reduction in *Salmonella* bacteria. Treatment technology and equipment that have been modified to a point where operating parameters such as time, temperature, or volume change, shall be revalidated;

(D) Have their technology and procedures verified by a Board-approved DV auditor to ensure they are being applied appropriately. A DV auditor may not be an employee of the manufacturer that they are auditing. A DV auditor may not be the same individual who conducted the process validation accepted by the TERP for the equipment being audited. DV auditors must submit a report to the Board after conducting each audit. DV auditors must submit an initial application to the Board on ABC Form No. 53, ''Application for Direct Verifiable (DV) Program Auditors,'' and be approved by the Board in coordination with the TERP. Should the applicant disagree with the decision concerning approval, they may appeal the decision in writing to the Board, and ultimately to USDA. For subsequent crop years, approved DV auditors with no changes to their initial application must send the Board a letter, signed and dated, indicating that there are no changes to the application the Board has on file. Approved DV auditors whose status has changed must submit a new application. The Board, in coordination with the TERP, may revoke any approval for cause. The Board shall notify the DV auditor in writing of the reasons for revoking the approval. Should the DV auditor disagree with the decision to revoke, it may appeal the decision in writing to the Board, and ultimately to USDA. A DV auditor whose approval has been revoked must submit a new application to the Board and await approval;

* * * * *

■ 3. Revise § 981.450 to read as follows:

§ 981.450 Exempt dispositions.

As provided in § 981.50, any handler disposing of almonds for crushing into oil, or for animal feed, may have the kernel weight of these almonds excluded from their program obligations, so long as:

(a) The handler qualifies as, or delivers such almonds to, a Board-approved accepted user;

(b) Each delivery is made directly to the accepted user by June 30 of each crop year; and

(c) Each delivery is certified to the Board by the handler on ABC Form 8.

§§ 981.466 and 981.467 [Stayed]

■ 4. Sections 981.466 and 981.467 are stayed indefinitely.

■ 5. Revise § 981.481 to read as follows:

§ 981.481 Interest and late payment charges.

(a) Pursuant to § 981.81(e), the Board shall impose an interest charge on any handler whose assessment payment has not been received in the Board's office within 30 days of the invoice date shown on the handler's statement, or the envelope containing the payment has not been legibly postmarked by the U.S. Postal Service or some other verifiable delivery tracking system, as having been remitted within 30 days of the invoice date. The interest charge shall be a rate of one and a half percent per month and shall be applied to the unpaid assessment balance for the number of days all or any part of the unpaid balance is delinquent beyond the 30-day payment period.

(b) In addition to the interest charge specified in paragraph (a) of this section, the Board shall impose a late payment charge on any handler whose payment has not been received in the Board's office, or the envelope containing the payment legibly postmarked by the U.S. Postal Service or some other verifiable delivery tracking system, within 60 days of the invoice date. The late payment charge shall be 10 percent of the unpaid balance.

Erin Morris,

Associate Administrator, Agricultural Marketing Service.

BILLING CODE P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2023–0184]

RIN 1625–AA09

Drawbridge Operation Regulation; Maumee River, Toledo, OH

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard proposes to modify the operating schedule that governs the CSX Railroad Bridge, mile 1.07, the Wheeling and Lake Erie Railroad Bridge, mile 1.80, the Craig Memorial Bridge, mile 3.30, the Martin Luther King Jr. Memorial Bridge, mile 4.30, and the Norfolk Southern Railroad Bridge, mile 5.76, all over the Maumee River at Toledo, Ohio. The original regulation was published in 1986 and has been amended over the years but a full review of the regulations for the waterway has not been completed. The current regulations are cumbersome, difficult to understand, and cause confusion to recreational vessels and some drawtenders. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must reach the Coast Guard on or before June 26, 2023.

ADDRESSES: You may submit comments identified by docket number USCG–2023–0184 using Federal Decision-Making Portal at *https://www.regulations.gov.*

See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section below for instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions on this proposed rule, call or email If you have questions on this temporary final rule, call or email Mr. Lee D. Soule, Bridge Management Specialist, Ninth Coast Guard District; telephone 216–902–6085, email *Lee.D.Soule@uscg.mil.*

II. Background, Purpose and Legal Basis

The Maumee River is formed at the confluence of the St. Joseph and St. Mary's Rivers in the northeast corner of Fort Wayne, Indiana and flows 137 miles to Lake Erie. The Maumee River was designated an Ohio State Scenic River on July 18, 1974. The entire river was considered a navigable waterway until the maintenance of the locks were discontinued in 1913 and the head of navigation just past the US 20/Perrysburg-Maumee Bridge at mile 14.72 was established. The rest of the Maumee River continues to be in an advance approval waterway jurisdiction. The Maumee River watershed is the largest of any river feeding the Great Lakes and supplies five percent of Lake Erie's water.

The mouth of the river at Toledo and Lake Erie is wide and supports considerable international and domestic commercial traffic, including oil, grain, and coal *cargoes.* Powered and unpowered recreational vessels utilize the entire river; however, the rapids at mile 15 are unpassable without an operable lock system.

The Maumee River from the head of navigation to the mouth of the river is crossed by ten bridges, four of which are movable. The vertical clearance of all bridges on the Maumee River are based on LWD.

The CSX Railroad Bridge, mile 1.07, is a swing bridge with a horizontal clearance of 143-feet in both left and right draws and a vertical clearance of 22-feet in the closed position and an unlimited clearance in the open position.

The Wheeling and Lake Erie Railroad Bridge, mile 1.80, is a swing bridge with a horizontal clearance of 134-feet in both left and right draws and a vertical clearance of 20-feet in the closed position and an unlimited clearance in the open position.

The Craig Memorial Bridge, mile 3.30, is a double leaf bascule bridge, that provides a horizontal clearance of 200-feet with a minimum vertical clearance of 34-feet with a vertical clearance of 44-feet available in the center 31-feet while in the closed position and an unlimited clearance in the open position.

The Martin Luther King Jr. Memorial Bridge (prior to 1989, the Cherry Street Bridge), mile 4.30, is a double leaf bascule bridge, that provides a horizontal clearance of 200-feet with a minimum vertical clearance of 34-feet with a vertical clearance of 44-feet available in the center 31-feet while in the closed position and an unlimited clearance in the open position. The Martin Luther King Jr. Memorial Bridge is a Scherzer rolling lift bridge built in 1914 and is eligible for listing on the national register of historic places. It was rehabilitated in 2002 with an adverse effect. All of the movable bridge's superstructure and operating systems were replaced with a modern bascule span. It no longer conveys the technological significance of the Scherzer design due to loss of integrity of design and materials. The arches and piers are the only original fabrication remaining from 1914.

The Norfolk Southern Railroad Bridge, mile 5.76, is a swing bridge with a horizontal clearance of 115-feet in both left and right draws and a vertical clearance of 17-feet in the closed position and an unlimited clearance in the open position.

The CSX Railroad Bridge, mile 11.38, was a swing bridge with a horizontal clearance of 110-feet in both left and right draws and a vertical clearance of 53-feet in the closed position and an unlimited clearance in the open position. The bridge was allowed to remain closed by regulation when the upriver ship building facility closed. The bridge was removed in its entirety and at the District Commander's satisfaction in 2019.

On November 3, 1986, we published (51 FR 39858) in the **Federal Register** new regulations for the Maumee River's movable bridges under 33 CFR 117.855 (Maumee River) that included several schedules for the bridges, the new schedules were intended to ease the travel of motorists across the bridges while still allowing recreational and commercial commerce to travel the river.

Since 1986, operators of the recreational vessels using the large Pier 75 marina near mile 7 have claimed that the Norfolk Southern Railroad Bridge, mile 5.76, has repeatedly refused to open for recreational vessels. Influenced by Norfolk Southern's failure to open for recreational vessels, marina owners and clients moved to a new marina near mile 1.07, eliminating most of the recreational vessel traffic in that part of the river. The Brennen Marina near mile 4.2 was relocated to the former Harrison Marina at mile 1. A smaller marina has been built near mile 3.30, but all the vessels in this marina can make it through all the bridges, except for the Norfolk Southern Railroad Bridge at mile 5.76, without an opening.

The current regulations governing the five Toledo-area moveable bridges are inconsistent and difficult to understand.

III. Discussion of Proposed Rule

We propose to require a 12-hour advance notice from December 15 through March 31. Each bridge owner will be responsible to provide to the District Commander an appropriate phone number to be advertised to the mariners in the Local Notice to Mariners and would be required to be included in the requirements of 33 CFR 117.55.

After careful review of the annual average vehicle counts at each highway bridge, we propose the hourly restrictions imposed on the recreational vessels be dismissed due to the reduction in vehicle crossing numbers as reported by the TMMS website hosted by ODOT and the reduction in recreational vessels with an air draft that would require bridge openings.

In the past three years we have received 66 complaints of delays at three of the drawbridges over the Maumee River. These complaints include: three written complaints against the Craig memorial Bridge, mile 3.30; thirty-one written complaints against the CSX Railroad Bridge, mile 1.07; and thirty-two written complaints against the Norfolk Southern Railroad Bridge, mile 5.76. Most of the complaints against the two railroad bridges have been about a lack of communications between the vessels and the drawtender. Often the miscommunications have been between the drawtender and the railroad dispatchers. To improve communications, we propose to require all drawbridges over the Maumee River to maintain and operate a VHF–FM Marine Radio and in addition to the Marine Radio the Railroad Bridges at mile 1.07 and mile 5.76 will maintain and operate a telephone with a correct number to be placed on signage at the bridge.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive Orders related to rulemaking. Below we summarize our analyses based on these statutes and Executive Orders.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This NPRM has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the ability that vessels can still transit the bridge given advanced notice and that most restrictions against vessels have been removed.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the bridge may be small entities, for the reasons stated in section IV.A above this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would call for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520.).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule will not result in such an expenditure, we do discuss the effects of this proposed rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01, Rev.1, associated implementing instructions, and Environmental Planning Policy COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA)(42 U.S.C. 4321–4370f). The Coast Guard has determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule promulgates the operating regulations or procedures for drawbridges. Normally such actions are categorically excluded from further review, under paragraph L49, of Chapter 3, Table 3–1 of the U.S. Coast Guard Environmental Planning Implementation Procedures.

Neither a Record of Environmental Consideration nor a Memorandum for the Record are required for this rule. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision-Making Portal at *https://www.regulations.gov.* To do so, go to *https://www.regulations.gov,* type USCG–2023–0184 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If your material cannot be submitted using *https://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

Viewing material in docket. To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page. We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted, or a final rule is published of any posting or updates to the docket.

We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects in 33 CFR Part 117

Bridges.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 117 as follows:

PART 117—DRAWBRIDGE OPERATION REGULATIONS

■ 1. The authority citation for part 117 continues to read as follows:

Authority: 33 U.S.C. 499; 33 CFR 1.05–1; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Revise *§* 117.855 Maumee River to read as follows:

(a) The draw of the CSX Railroad Bridge, mile 1.07, will open on signal, except that from December 15 through March 31 the bridge will require at least 12-hours advance notice. The bridge will operate and maintain a VHF–FM Marine Radio and a telephone number.

(b) The draw of the Wheeling and Lake Erie Railroad Bridge, mile 1.80, will open on signal, except that from December 15 through March 31 the bridge will require at least 12-hours advance notice. The bridge will operate and maintain a VHF–FM Marine Radio.

(c) The draw of the Craig Memorial Bridge, mile 3.30, will open on signal, except that from December 15 through March 31 the bridge will require at least 12-hours advance notice. The bridge will operate and maintain a VHF–FM Marine Radio.

(d) The draw of the Martin Luther King Jr Memorial Bridge, mile 4.30, will open on signal, except that from December 15 through March 31 the bridge will require at least 12-hours advance notice. The bridge will operate and maintain a VHF–FM Marine Radio.

(e) The draw of the Norfolk Southern Railroad Bridge, mile 5.76, will open on signal, except that from December 15 through March 31 the bridge will require at least 12-hours advance notice. The bridge will operate and maintain a VHF–FM Marine Radio and a telephone number.

M.J. Johnston,

Rear Admiral, U.S. Coast Guard, Commander, Ninth Coast Guard District.

National Emission Standards for Hazardous Air Pollutants: Ethylene Production, Miscellaneous Organic Chemical Manufacturing, Organic Liquids Distribution (Non-Gasoline), and Petroleum Refineries Reconsideration

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; reconsideration of final rule.

SUMMARY: On July 6, 2020, the U.S. Environmental Protection Agency (EPA) finalized the residual risk and technology review (RTR) conducted for the Ethylene Production source category, which is part of the Generic Maximum Achievable Control Technology (GMACT) Standards National Emission Standards for Hazardous Air Pollutants (NESHAP); on July 7, 2020, the EPA finalized the RTR conducted for the Organic Liquids Distribution (Non-Gasoline) NESHAP; and on August 12, 2020, the EPA finalized the RTR conducted for the Miscellaneous Organic Chemical Manufacturing NESHAP. Amendments to the Petroleum Refineries NESHAP were most recently finalized on February 4, 2020. Subsequently, the EPA received and granted various petitions for reconsideration on these NESHAP for, among other things, the provisions related to the work practice standards for pressure relief devices (PRDs), emergency flaring, and degassing of floating roof storage vessels. In response to the petitions, the EPA is proposing amendments to the work practice standards for PRDs, emergency flaring, and degassing of floating roof storage vessels. In addition, the EPA is proposing other technical corrections and clarifications for each of the rules. The EPA will not respond to comments addressing any other issues or any other provisions of the final rule not specifically addressed in this proposed rulemaking.

DATES:

Comments. Comments must be received on or before June 12, 2023. Under the Paperwork Reduction Act (PRA), comments on the information collection provisions are best assured of consideration if the Office of Management and Budget (OMB)

receives a copy of your comments on or before May 30, 2023.

Public hearing. If anyone contacts us requesting a public hearing on or before May 2, 2023, we will hold a virtual public hearing. See **SUPPLEMENTARY INFORMATION** for information on requesting and registering for a public hearing.

ADDRESSES: You may send comments, identified by Docket ID No. EPA–HQ–OAR–2022–0787, by any of the following methods:

Federal eRulemaking Portal: https://www.regulations.gov/ (our preferred method). Follow the online instructions for submitting comments.

Email: a-and-r-docket@epa.gov. Include Docket ID No. EPA–HQ–OAR–2022–0787 in the subject line of the message.

Fax: (202) 566–9744. Attention Docket ID No. EPA–HQ–OAR–2022–0787.

Mail: U.S. Environmental Protection Agency, EPA Docket Center, Docket ID No. EPA–HQ–OAR–2022–0787, Mail Code 28221T, 1200 Pennsylvania Avenue NW, Washington, DC 20460.

Hand/Courier Delivery: EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004. The Docket Center's hours of operation are 8:30 a.m.–4:30 p.m., Monday–Friday (except Federal holidays).

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the **SUPPLEMENTARY INFORMATION** section of this document. Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are open to the public by appointment only. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. Hand deliveries and couriers may be received by scheduled appointment only. For further information on EPA Docket Center services and the current status, please visit us online at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: For questions about this proposed action, contact Ms. Angie Carey, Sector Policies and Programs Division (E143–01), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541–2187; fax number: (919) 541–0516; and email address: *carey.angela@epa.gov.*

SUPPLEMENTARY INFORMATION:

Participation in virtual public hearing. To request a virtual hearing, contact the public hearing team at (888) 372–8699 or by email at *SPPDpublichearing@epa.gov.* If requested, the hearing will be held via virtual platform on May 12, 2023. The hearing will convene at 10 a.m., Eastern Time (ET) and conclude at 5 p.m. ET. The EPA may close a session 15 minutes after the last pre-registered speaker has testified if there are not additional speakers. The EPA will announce further details on the virtual public hearing website at *https://www.epa.gov/stationary-sources-air-pollution/petroleum-refinery-sector-rule-risk-and-technology-review-and-new.*

If a public hearing is requested, the EPA will begin pre-registering speakers for the hearing no later than 1 business day after a request has been received. To register to speak at the virtual hearing, please use the online registration form available at *https://www.epa.gov/stationary-sources-air-pollution/petroleum-refinery-sector-rule-risk-and-technology-review-and-new* or contact the public hearing team at (888) 372–8699 or by email at *SPPDpublichearing@epa.gov.* The last day to pre-register to speak at the hearing will be May 9, 2023. Prior to the hearing, the EPA will post a general agenda that will list pre-registered speakers in approximate order at *https://www.epa.gov/stationary-sources-air-pollution/petroleum-refinery-sector-rule-risk-and-technology-review-and-new.*

The EPA will make every effort to follow the schedule as closely as possible on the day of the hearing; however, please plan for the hearing to run either ahead of schedule or behind schedule.

Each commenter will have 4 minutes to provide oral testimony. The EPA encourages commenters to submit a copy of their oral testimony as written comments to the rulemaking docket.

The EPA may ask clarifying questions during the oral presentations but will not respond to the presentations at that time. Written statements and supporting information submitted during the comment period will be considered with the same weight as oral testimony and supporting information presented at the public hearing.

Please note that any updates made to any aspect of the hearing will be posted online at *https://www.epa.gov/stationary-sources-air-pollution/petroleum-refinery-sector-rule-risk-and-technology-review-and-new.* While the EPA expects the hearing to go forward as set forth above, please monitor our website or contact the public hearing team at (888) 372–8699 or by email at *SPPDpublichearing@epa.gov* to determine if there are any updates. The EPA does not intend to publish a document in the **Federal Register** announcing updates.

If you require the services of a translator or a special accommodation such as audio description, please pre-register for the hearing with the public hearing team and describe your needs by May 4, 2023. The EPA may not be able to arrange accommodations without advance notice.

Docket. The EPA has established a docket for this rulemaking under Docket ID No. EPA–HQ–OAR–2022–0787. All documents in the docket are listed in *https://www.regulations.gov/.* Although listed, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy. With the exception of such material, publicly available docket materials are available electronically in *https://www.regulations.gov/* or in hard copy at the EPA Docket Center, Room 3334, WJC West Building, 1301 Constitution Avenue NW, Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the EPA Docket Center is (202) 566–1742.

Instructions. Direct your comments to Docket ID No. EPA–HQ–OAR–2022–0787. The EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *https://www.regulations.gov/,* including any personal information provided, unless the comment includes information claimed to be CBI or other information whose disclosure is restricted by statute. Do not submit electronically to *https://www.regulations.gov/* any information that you consider to be CBI or other information whose disclosure is restricted by statue. This type of information should be submitted as discussed below.

The EPA may publish any comment received to its public docket. Multimedia submissions (audio, video, *etc.*) must be accompanied by a written comment. The written comment is considered the official comment and

should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the Web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

The *https://www.regulations.gov/* website allows you to submit your comment anonymously, which means the EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to the EPA without going through *https://www.regulations.gov/,* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. If you submit an electronic comment, the EPA recommends that you include your name and other contact information in the body of your comment and with any digital storage media you submit. If the EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, the EPA may not be able to consider your comment. Electronic files should not include special characters or any form of encryption and should be free of any defects or viruses. For additional information about the EPA's public docket, visit the EPA Docket Center homepage at *https://www.epa.gov/dockets.*

Submitting CBI. Do not submit information containing CBI to the EPA through *https://www.regulations.gov/.* Clearly mark the part or all of the information that you claim to be CBI. For CBI information on any digital storage media that you mail to the EPA, note the docket ID, mark the outside of the digital storage media as CBI, and identify electronically within the digital storage media the specific information that is claimed as CBI. In addition to one complete version of the comments that includes information claimed as CBI, you must submit a copy of the comments that does not contain the information claimed as CBI directly to the public docket through the procedures outlined in *Instructions* above. If you submit any digital storage media that does not contain CBI, mark the outside of the digital storage media clearly that it does not contain CBI and note the docket ID. Information not marked as CBI will be included in the public docket and the EPA's electronic public docket without prior notice. Information marked as CBI will not be disclosed except in accordance with procedures set forth in 40 Code of Federal Regulations (CFR) part 2.

Our preferred method to receive CBI is for it to be transmitted electronically using email attachments, File Transfer Protocol (FTP), or other online file sharing services (*e.g.,* Dropbox, OneDrive, Google Drive). Electronic submissions must be transmitted directly to the Office of Air Quality Planning and Standards (OAQPS) CBI Office at the email address *oaqpscbi@epa.gov* and, as described above, should include clear CBI markings and note the docket ID. If assistance is needed with submitting large electronic files that exceed the file size limit for email attachments, and if you do not have your own file sharing service, please email *oaqpscbi@epa.gov* to request a file transfer link. If sending CBI information through the postal service, please send it to the following address: OAQPS Document Control Officer (C404–02), OAQPS, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711, Attention Docket ID No. EPA–HQ–OAR–2022–0787. The mailed CBI material should be double wrapped and clearly marked. Any CBI markings should not show through the outer envelope.

Preamble acronyms and abbreviations. Throughout this document the use of ''we,'' ''us,'' or ''our'' is intended to refer to the EPA. We use multiple acronyms and terms in this preamble. While this list may not be exhaustive, to ease the reading of this preamble and for reference purposes, the EPA defines the following terms and acronyms here: {* * * WILL NEED TO REVIEW LIST LATER IN THE PROCESS, DELETE UNUSED ACRONYMS, ADD OTHER COMMONLY USED ACRONYMS}

Organization of this document. The information in this preamble is organized as follows:

I. General Information

A. What is the source of authority for the reconsideration action?

The statutory authority for this action is provided by sections 112 and 307(d)(7)(B) of the Clean Air Act (CAA) (42 U.S.C. 7412 and 7607(d)(7)(B)).

B. Does this action apply to me?

Table 1 of this preamble lists the NESHAP and associated regulated industrial source categories that are the subject of this proposal. Table 1 is not intended to be exhaustive, but rather provides a guide for readers regarding the entities that this proposed action is likely to affect. The proposed standards, once promulgated, will be directly applicable to the affected sources. Federal, state, local, and tribal government entities would not be affected by this proposed action. Each of the source categories covered by this proposal were defined in the *Initial List of Categories of Sources Under Section 112(c)(1) of the Clean Air Act Amendments of 1990* (see 57 FR 31576; July 16, 1992) and *Documentation for Developing the Initial Source Category List, Final Report* (see EPA–450/3–91–030, July 1992), as well as the *National Emission Standards for Hazardous Air Pollutants; Revision of Initial List of Categories of Sources and Schedule for Standards Under Sections 112(c) and (e) of the Clean Air Act Amendments of 1990* (61 FR 28197; June 4, 1996), as presented here.

TABLE 1—NESHAP AND INDUSTRIAL SOURCE CATEGORIES AFFECTED BY THIS PROPOSED ACTION

Source category	NESHAP	NAICS [1] code
Ethylene Production	40 CFR part 63, subparts XX and YY	325110.
Miscellaneous Organic Chemical Manufacturing	40 CFR part 63, subpart FFFF	3251, 3252, 3253, 3254, 3255, 3256, and 3259, with several exceptions.
Organic Liquids Distribution (Non-Gasoline)	40 CFR part 63, subpart EEEE	3222, 3241, 3251, 3252, 3259, 3261, 3361, 3362, 3399, 4247, 4861, 4869, 4931, 5622.
Petroleum Refineries	40 CFR part 63, subpart CC	324110.

[1] North American Industry Classification System.

The Ethylene Production source category includes any chemical manufacturing process unit in which ethylene and/or propylene are produced by separation from petroleum refining process streams or by subjecting hydrocarbons to high temperatures in the presence of steam. The ethylene production unit includes the separation of ethylene and/or propylene from associated streams such as a C_4 product,[1] pyrolysis gasoline, and pyrolysis fuel oil. The ethylene production unit does not include the manufacture of Synthetic Organic Chemical Manufacturing Industry (SOCMI) chemicals such as the production of butadiene from the C_4 stream and aromatics from pyrolysis gasoline.

The Organic Liquids Distribution (Non-Gasoline) source category includes, but is not limited to, those activities associated with the storage and distribution of organic liquids other than gasoline, at sites which serve as distribution points from which organic liquids may be obtained for further use and processing. The distribution activities include the storage of organic liquids in storage tanks not subject to other 40 CFR part 63 standards and transfers into or out of the tanks from or to cargo tanks, containers, and pipelines.

After the initial source category listings, in a November 7, 1996, document (61 FR 57602), the Agency combined 21 of the 174 originally defined source categories, and other organic chemical processes which were not included in the original 174 source category list, into one source category called the ''Miscellaneous Organic Chemical Processes'' source category. In a November 18, 1999, document (64 FR 63035), the Agency divided the ''Miscellaneous Organic Chemical Processes'' source category into 2 new source categories called the ''Miscellaneous Organic Chemical Manufacturing'' source category and the ''Miscellaneous Coating Manufacturing'' source category. The Miscellaneous Organic Chemical Manufacturing source category includes any facility engaged in the production of benzyltrimethylammonium chloride, carbonyl sulfide chelating agents, chlorinated paraffins, ethylidene norbornene, explosives, hydrazine, photographic chemicals, phthalate plasticizers, rubber chemicals, symmetrical tetrachloropyridine, oxybisphenoxarsine/1,3-diisocyanate, alkyd resins, polyester resins, polyvinyl alcohol, polyvinyl acetate emulsions, polyvinyl butyral, polymerized vinylidene chloride, polymethyl methacrylate, maleic anhydride copolymers, or any other organic chemical processes not covered by another maximum achievable control technology (MACT) standard. Many of these organic chemical processes involve similar process equipment, emission points, and control equipment, and are in many cases collocated with other source categories.

The Petroleum Refineries sector includes 2 source categories. The Petroleum Refineries MACT 1 source category includes any facility engaged in producing gasoline, naphthas, kerosene, jet fuels, distillate fuel oils, residual fuel oils, lubricants, or other products from crude oil or unfinished petroleum derivatives. The refinery process units in this source category include, but are not limited to, thermal cracking, vacuum distillation, crude distillation, hydroheating/hydrorefining, isomerization, polymerization, lubricating (''lube'') oil processing, and hydrogen production. The Petroleum Refineries MACT 2—Catalytic Cracking (Fluid and Other) Units, Catalytic Reforming Units, and Sulfur Recovery Units source category includes any facility engaged in producing gasoline, naphthas, kerosene, jet fuels, distillate fuel oils, residual fuel oils, lubricants, or other products from

[1] The C_4 product stream is a hydrocarbon product stream from an ethylene production unit consisting of compounds with 4 carbon atoms (*i.e.,* butanes, butenes, butadienes).

crude oil or unfinished petroleum derivates.

C. Where can I get a copy of this document and other related information?

In addition to being available in the docket, an electronic copy of this action is available on the internet. Following signature by the EPA Administrator, the EPA will post a copy of this proposed action at *https://www.epa.gov/stationary-sources-air-pollution/petroleum-refinery-sector-rule-risk-and-technology-review-and-new, https://www.epa.gov/stationary-sources-air-pollution/acetal-resins-acrylic-modacrylic-fibers-carbon-black-hydrogen, https://www.epa.gov/stationary-sources-air-pollution/miscellaneous-organic-chemical-manufacturing-national-emission,* and *https://www.epa.gov/stationary-sources-air-pollution/organic-liquids-distribution-national-emission-standards-hazardous.* Following publication in the **Federal Register,** the EPA will post the **Federal Register** version of the proposal and key technical documents at this same website.

Redline strikeout versions of each rule showing the edits that would be necessary to incorporate the changes proposed in this action are presented in the memoranda titled *Proposed Regulatory Text Edits for Subpart EEEE, Proposed Regulatory Text Edits for Subpart FFFF, Proposed Regulatory Text Edits for Subpart YY, and Proposed Regulatory Text Edits for Subpart CC,* available in the docket for this action (Docket ID No. EPA–HQ–OAR–2022–0787).

II. Background

A. Ethylene Production

The Ethylene Production MACT standards (herein called the EMACT standards) for the Ethylene Production source category are contained in the GMACT NESHAP, which also includes MACT standards for several other source categories. The EMACT standards were promulgated on July 12, 2002 (67 FR 46258), and codified at 40 CFR part 63, subparts XX and YY. As promulgated in 2002, and further amended on April 13, 2005 (70 FR 19266), and July 6, 2020 (85 FR 40386), the EMACT standards regulate hazardous air pollutant (HAP) emissions from ethylene production units located at major sources (as defined by CAA section 112(a)(1)). An ethylene production unit is a chemical manufacturing process unit in which ethylene and/or propylene are produced by separation from petroleum refining process streams or by subjecting hydrocarbons to high temperatures in the presence of steam. The EMACT standards define the affected source as all storage vessels, ethylene process vents, transfer racks, equipment, waste streams, heat exchange systems, and ethylene cracking furnaces and associated decoking operations that are associated with each ethylene production unit located at a major source as defined in CAA section 112(a)(1).

Following promulgation of the EMACT standards in July 2020, the EPA received 2 petitions for reconsideration in September 2020. The EPA received a joint petition from the American Chemistry Council (ACC) and American Fuel & Petrochemical Manufacturers (AFPM) and a petition from Earthjustice (on behalf of RISE St. James, Louisiana Bucket Brigade, Louisiana Environmental Action Network, Texas Environmental Justice Advocacy Services, Air Alliance Houston, Community In-Power & Development Association, Clean Air Council, Center for Biological Diversity, Environmental Integrity Project, and Sierra Club). Copies of the petitions are provided in the EMACT RTR rulemaking docket (EPA–HQ–OAR–2017–0357). The ACC/AFPM petitioned the EPA on, among other things, the storage vessel degassing provisions, ethylene cracking furnace burner repair provisions, and ethylene cracking furnace isolation valve inspections. Earthjustice petitioned the EPA on, among other things, the *force majeure* and exemption allowances for PRDs and emergency flaring. The ACC/AFPM and Earthjustice also raised other issues that are not being addressed in this rulemaking.

On April 19, 2022, the EPA sent a letter to petitioners informing them that it would grant reconsideration of the provisions addressing the work practice standards for PRDs, emergency flaring, and degassing of floating roof storage vessels. The EPA also stated in the letter to petitioners that it is continuing to review all issues raised in the petitions. A copy of the letter to petitioners is available in the docket for this rulemaking. The EPA will not respond to comments addressing any other issues or any other provisions of the final rule not specifically addressed in this proposed rulemaking.

B. Organic Liquids Distribution (Non-Gasoline)

The Organic Liquids Distribution (Non-Gasoline) (herein called OLD) NESHAP was promulgated on February 3, 2004 (69 FR 5038) and is codified at 40 CFR part 63, subpart EEEE. Organic liquids are any crude oils downstream of the first point of custody transfer and any non-crude oil liquid that contains at least 5 percent by weight of any combination of the 98 HAP listed in table 1 of 40 CFR part 63, subpart EEEE. For the purposes of the OLD NESHAP, as promulgated in 2004, and further amended on July 28, 2006 (71 FR 42898), April 23, 2008 (73 FR 21825), July 17, 2008 (73 FR 40977), and July 7, 2020 (85 FR 40740), organic liquids do not include gasoline, kerosene (No. 1 distillate oil), diesel (No. 2 distillate oil), asphalt, heavier distillate oil and fuel oil, fuel that is consumed or dispensed on the plant site, hazardous waste, wastewater, ballast water, or any non-crude liquid with an annual average true vapor pressure less than 0.7 kilopascals (0.1 pounds per square inch (psi)). Emission sources controlled by the OLD NESHAP are storage tanks, transfer operations, transport vehicles while being loaded, and equipment leak components (valves, pumps, and sampling connections) that have the potential to leak.

The EPA received three petitions for reconsideration for the OLD NESHAP in September 2020. The EPA received petitions from the American Petroleum Institute (API) and AFPM, Stoel Rives LLP (on behalf of Alyeska Pipeline Company), and Earthjustice (on behalf of California Communities Against Toxics, Coalition for a Safe Environment, and Sierra Club). Copies of the petitions are provided in the docket for this rulemaking. The API/AFPM and Stoel Rives LLP (on behalf of Alyeska Pipeline Company) commented on storage vessel degassing. The API/AFPM, Stoel Rives, and Earthjustice also raised other issues that are not being addressed in this rulemaking.

On September 8, 2021, the EPA sent a letter to petitioners informing them that it would grant voluntary reconsideration on certain issues, including the work practice standards for storage vessel degassing that apply broadly. Other issues for which EPA stated that it would grant voluntary reconsideration in the September 8, 2021, letter (*i.e.,* work practice standards for venting from conservation vents on the Valdez Marine Terminal's crude oil fixed roof tanks, fenceline monitoring) are still being reviewed and are not part of this action, and the EPA will not respond to comments addressing these other issues in this proposed rulemaking. The EPA also stated in the letter to petitioners that it is continuing to review all issues raised in the petitions. A copy of the letter to

petitioners is available in the docket for this rulemaking.

C. Miscellaneous Organic Chemical Manufacturing

The Miscellaneous Organic Chemical Manufacturing NESHAP (herein called the MON) for the Miscellaneous Organic Chemical Manufacturing source category was promulgated on November 10, 2003 (68 FR 63852), and codified at 40 CFR part 63, subpart FFFF. As promulgated in 2003, and further amended on July 1, 2005 (70 FR 38562), July 14, 2006 (71 FR 40316), and August 12, 2020 (85 FR 49084), the MON regulates HAP emissions from miscellaneous organic chemical manufacturing process units (MCPUs) located at major sources. An MCPU includes a miscellaneous organic chemical manufacturing process, as defined in 40 CFR 63.2550(i), and must meet the following criteria: it manufactures any material or family of materials described in 40 CFR 63.2435(b)(1); it processes, uses, or generates any of the organic HAP described in 40 CFR 63.2435(b)(2); and, except for certain process vents that are part of a chemical manufacturing process unit, as identified in 40 CFR 63.100(j)(4), the MCPU is not an affected source or part of an affected source under another subpart of 40 CFR part 63. An MCPU also includes any assigned storage tanks and transfer racks; equipment in open systems that is used to convey or store water having the same concentration and flow characteristics as wastewater; and components such as pumps, compressors, agitators, PRDs, sampling connection systems, open-ended valves or lines, valves, connectors, and instrumentation systems that are used to manufacture any material or family of materials described in 40 CFR 63.2435(b)(1). Sources of HAP emissions regulated by the MON include the following: process vents, storage tanks, transfer racks, equipment leaks, wastewater streams, and heat exchange systems.

Following promulgation of the MON in August 2020, the EPA received five petitions for reconsideration between October and December 2020. The EPA received petitions from Earthjustice (on behalf of RISE St. James, Louisiana Bucket Brigade, Louisiana Environmental Action Network, Texas Environmental Justice Advocacy Services, Air Alliance Houston, Ohio Valley Environmental Coalition, Blue Ridge Environmental Defense League, Environmental Justice Health Alliance for Chemical Policy Reform, Sierra Club, Environmental Integrity Project, and Union of Concerned Scientists), the Texas Commission on Environmental Quality (TCEQ), Squire Patton Boggs LLP (on behalf of Huntsman Petrochemical, LLC), and the ACC (who submitted two petitions). Copies of the petitions are provided in the docket for this rulemaking. The ACC petitioned the EPA on, among other things, the storage vessel degassing provisions and requirements for ethylene oxide sources. Earthjustice petitioned the EPA on, among other things, the *force majeure* and exemption allowances for PRDs and emergency flaring. The TCEQ, ACC, and Huntsman Petrochemical requested that the EPA reassess the MON risk assessment for issues around ethylene oxide risks; the EPA is responding to that reconsideration petition request in a separate rulemaking (87 FR 77985; December 21, 2022). Earthjustice and ACC also raised other issues that are not being addressed in this rulemaking.

On June 17, 2021, the EPA sent a letter to petitioners informing them that it is continuing to review all issues raised in the petitions. A copy of the letter to petitioners is available in the docket for this rulemaking.

D. Petroleum Refineries

On December 1, 2015 (80 FR 75178), the EPA finalized amendments to the petroleum refinery sector rules as the result of a sector RTR. These amendments included, among other provisions, adding work practice requirements to Petroleum Refinery MACT 1 (40 CFR part 63 subpart CC) for PRDs and flares in 40 CFR 63.648(j) and 63.670(o), respectively. These provisions specifically provide requirements for owners and operators to follow in the event of an atmospheric PRD release or emergency flaring event, including performing root cause analysis for each event and implementing corrective action(s) in accordance with the rule requirements. The atmospheric PRD release and emergency flaring provisions specify the conditions that result in a violation of the work practice standards in 40 CFR 63.648(j)(3)(v) and 63.670(o)(7), respectively. The owner or operator is required to track the number of events by emission unit and root cause. An atmospheric PRD release or emergency flaring event for which the root cause is determined to be poor maintenance or operator error is a violation of the work practice standards. Two atmospheric PRD releases or two emergency flaring events from the same emission unit when determined to be the result of the same root cause in a 3-year period is a violation of the work practice standard. Finally, three atmospheric PRD releases or 3 emergency flaring events from the same emission unit regardless of the root cause is a violation of the work practice standard (also referred to as ''the 'three strikes' provisions''). Notably, if the root cause is determined to be due to a *force majeure* event, as defined in 40 CFR 63.641, it does not count towards the criteria for a violation of the work practice standards.

The EPA received three petitions to reconsider the December 2015 final rule. Two petitions were filed on January 19, 2016, and February 1, 2016, jointly by API and the AFPM. In response to the January 19, 2016, petition, the EPA issued a proposal on February 9, 2016 (81 FR 6814), and a final rule on July 13, 2016 (81 FR 45232), fully responding to the January 19, 2016, petition for reconsideration. The third petition was filed on February 1, 2016, by Earthjustice on behalf of Air Alliance Houston, California Communities Against Toxics, Clean Air Council, Coalition for a Safe Environment, Community In-Power & Development Association, Del Amo Action Committee, Environmental Integrity Project, Louisiana Bucket Brigade, Sierra Club, Texas Environmental Justice Advocacy Services, and Utah Physicians for a Healthy Environment. The Earthjustice petition claimed that several aspects of the revisions to the Petroleum Refinery MACT 1 were not proposed and that, therefore, the public was precluded from commenting on the altered provisions during the public comment period, including, among other provisions, the work practice standards for PRDs and emergency flaring. On June 16, 2016, the EPA sent letters to petitioners granting reconsideration on issues where petitioners claimed they had not been provided an opportunity to comment. These petitions and letters granting reconsideration are available for review in the rulemaking docket (see Docket ID Item No. EPA–HQ–OAR–2022–0787). On October 18, 2016 (81 FR 71661), the EPA proposed for public comment the issues for which reconsideration was granted in the June 16, 2016, letters. The EPA solicited public comment on five issues in the proposal, including: the work practice standard for PRDs; the work practice standard for emergency flaring events; and the assessment of risk as modified based on implementation of these PRD and emergency flaring work practice standards. On February 4, 2020, the EPA issued a final action (85 FR 6064) setting forth its decisions on each of the five reconsideration items included in the October 18, 2016 (81 FR 71661),

proposed notice of reconsideration (October 2016 proposed notice of reconsideration).

On April 6, 2020, Earthjustice submitted a petition for reconsideration of the February 2020 final action on behalf of Air Alliance Houston, California Communities Against Toxics, Clean Air Council, Coalition For A Safe Environment, Community In-Power & Development Association, Del Amo Action Committee, Environmental Integrity Project, Louisiana Bucket Brigade, Sierra Club, Texas Environmental Justice Advocacy Services, and Utah Physicians for a Healthy Environment (Docket Item No. EPA–HQ–OAR–2010–0682–1000). The petition for reconsideration requested that the EPA reconsider five issues in the February 4, 2020, final rule: (1) The EPA's rationale that the PRD standards and emergency flaring standards are continuous; (2) the EPA's rationale for the PRD standards under CAA sections 112(d)(2) and 112(d)(3); (3) the EPA's rationale for separate work practice standards for flares operating above the smokeless capacity; (4) the EPA's rationale for risk acceptability and risk determination; and (5) the EPA's analysis and rationale in its assessment of acute risk. The EPA initially denied the April 6, 2020, petition for reconsideration (85 FR 67665) and provided detailed responses to each of the five issues raised in the April 2020 petition in a September 3, 2020, letter, which is available in the Petroleum Refinery rulemaking docket (Docket Item No. EPA–HQ–OAR–2010–0682–0999). Subsequently, after further consideration, the EPA wrote a letter on April 19, 2022, to petitioners explaining that it has decided to undertake reconsideration on select provisions related to the work practice standards for PRDs and emergency flaring. Specifically, the EPA is reconsidering the inclusion of the *force majeure* allowances in the PRD and emergency flaring work practice standards as discussed in detail in section III.A of this preamble. As noted in our April 19, 2022, letter, we may reconsider additional issues in the future.

III. Reconsideration Issues, Request for Public Comments, and Other Proposed Changes

To address selected issues for which we granted reconsideration and to provide other technical corrections, the EPA is proposing revisions to the EMACT standards, OLD NESHAP, MON, and Petroleum Refineries NESHAP. The EPA is proposing revisions to the work practice standards for PRDs and emergency flaring related to *force majeure* provisions in the EMACT standards, MON, and Petroleum Refineries NESHAP, and is proposing standards for the degassing of storage vessels in the EMACT standards, OLD NESHAP, and MON. The EPA is also proposing to add requirements for pressure-assisted flares and mass spectrometers to the Petroleum Refineries NESHAP to align this rule with other more recent chemical sector rules and eliminate the need to request site-specific alternative means of emission limitations (AMELs) for these units. In addition, the EPA is proposing other technical corrections, clarifications, and correction of typographical errors in all rules. To ensure public participation in its final decisions, the EPA is requesting public comment on these specific issues as described below. The EPA will not respond to comments addressing any other issues or any other provisions of the final rule not specifically addressed in this proposed rulemaking.

A. Pressure Relief Devices and Emergency Flaring

As described in the background section II.D of this preamble, the work practice standards for PRDs and emergency flaring in Petroleum Refinery MACT 1 provide the criteria for violating the work practice standards based on a count of the events by emission unit and root cause. The count of events by emission unit currently excludes events for which the root cause is determined to be *force majeure* as defined in 40 CFR 63.641. In their April 2020 petition, petitioners took issue with the inclusion of the *force majeure* allowance as they claim that it makes the standards non-continuous and that it is inappropriate to include this allowance based on the inclusion of similar provisions in two local California rules (South Coast Air Quality Management District; Bay Area Air Quality Management District). The EPA fully responded to these issues in the September 2020 letter (Docket Item No. EPA–HQ–OAR–2010–0682–0999) and the EPA's position on these issues has not changed. Namely, there are components of both the PRD management provisions and emergency flaring provisions that apply at all times and not all components of the standard must apply at all times for the standard to be continuous. The EPA also stated that its consideration of the continuous nature of the work practice standards and their basis in the two local California rules has been set forth in a manner consistent with public review and comment requirements.

However, during our recent reconsideration efforts, the EPA recognizes that despite the term ''*force majeure*'' being carefully defined, the *force majeure* allowance in the work practice standards may present difficulties for determining compliance. It may also represent a provision that some facility owners or operators may seek to use to avoid incurring violations and pursuing potentially disruptive corrective actions. The reporting requirements for the work practice standards in 40 CFR 63.655(g)(10)(iv) and 63.655(g)(11)(iv) provide that the refinery owner or operator must report the results of the root cause and corrective action analysis completed during the reporting period (*i.e.,* semiannually). The reporting of the event-specific data associated with the work practice standards is currently included in periodic reports that are submitted to the delegated state authority and/or EPA Regional Office, as applicable, and are thus not publicly available. During the root cause analysis and corrective action process, refineries maintain discretion when categorizing and reporting the root cause of atmospheric PRD releases and emergency flaring events, thereby placing the onus on the EPA to determine whether the definition of *force majeure* has been appropriately applied.

In acknowledgement of these concerns and to fully inform our decision as to whether rule amendments for Petroleum Refinery MACT 1 are necessary with respect to the *force majeure* allowance, we reviewed periodic reports from refineries in Texas and Louisiana obtained through the EPA Regional Office. For atmospheric PRD releases, we reviewed periodic reports from 18 refineries spanning 0.5–1.5 years of time per refinery, and a total of 12.5 refinery-years. These reports covered semiannual compliance reporting periods during calendar years 2019 through 2021. During that time, there were atmospheric PRD releases at four of these 18 refineries. There were five total releases. None of the determined root causes were attributed to events that meet the definition of the term *force majeure.* For emergency flaring events, we reviewed periodic reports from 22 refineries spanning 0.5–1.5 years of time per refinery, and a total of 15.5 refinery-years. During that time, there were emergency flaring events at six of these 22 refineries. There were eight total events at these six refineries. Of these, three of the eight events were attributed to causes that, as reported, meet the definition of the term *force*

majeure. In reviewing these data, we conclude that atmospheric PRD releases and emergency flaring events are relatively infrequent at refineries and that those determined to have a root cause characterized as a *force majeure* event are even less so.

When we initially proposed the Petroleum Refinery MACT 1 requirements, the primary data available for event releases were from the TCEQ Air Emission Event Report Database,[2] which requires the reporting of emission events that exceed a reportable quantity and industry comments with limited supporting documentation. Based on the available data, we concluded that the ''three strikes'' provisions were reasonable, but there were concerns that circumstances outside of the refinery's control may cause violations. Based on the data available now, we conclude that the frequency of these types of releases is lower than originally expected. This lower frequency may be due to the refinery sector rule's provisions, like the redundant prevention measures for PRD, which were implemented in the final rule and that apply at all times. Given these data and the lower frequency of *force majeure* events, we conclude that the *force majeure* allowances included in the provisions for PRDs and flares are not necessary. We also find that by removing the *force majeure* allowance, the rule is strengthened, and compliance becomes easier to assess as it is determined purely based on the count of events by emission unit and root cause. There is no categorization or interpretation related to the root cause of the event. The corrective action component of the work practice standards would now apply to all events regardless of the root cause and all events would count towards the violation criteria set forth in the standard. As noted, our analyses were performed on data we requested directly from the EPA Regional Offices, which are not readily available to the public. We find that making these data readily available to the public would increase the transparency of the events regulated by the work practice standards.

Therefore, in this proposed action, the EPA is proposing to remove the term *force majeure* from the list of defined terms in 40 CFR 63.641 as well as to remove the *force majeure* allowance from the criteria for a violation of the work practice standards for atmospheric PRD releases and emergency flaring events in 40 CFR 63.648(j)(3) and 63.670(o)(7). We are also proposing to amend the reporting requirements for the event-specific work practice standard data in 40 CFR 63.655(g)(10)(iv) and 63.655(g)(11)(iv) to require these data to be reported electronically through the EPA's Central Data Exchange (CDX) using the Compliance and Emissions Data Reporting Interface (CEDRI).

The EMACT standards and MON include the same work practice standards for PRDs and emergency flaring as Petroleum Refinery MACT 1. The OLD NESHAP also includes the same work practice standard for emergency flaring as Petroleum Refinery MACT 1. Because compliance with the work practice standards for existing sources begins in summer of 2023 for these 3 rules, we do not have the number of events that count towards violations for these NESHAP, but the rationale and benefits for removing the *force majeure* allowance follows exactly as discussed above for refineries. These include removing the onus from the EPA as to whether the definition of *force majeure* has been appropriately applied when determining the root cause, making compliance easier to assess, and strengthening both rules. For flares, the EMACT standards, OLD NESHAP, and MON directly reference the petroleum refinery flare provisions at 40 CFR 63.670. Therefore, the above-mentioned proposed revisions to 40 CFR 63.670(o)(7) for emergency flaring events would be automatically incorporated into the requirements for the EMACT standards, OLD NESHAP, and MON. In addition, the EPA is proposing to remove the term ''*force majeure*'' from the list of defined terms in 40 CFR 63.2406, because this definition was included specifically due to the *force majeure* provisions for emergency flaring events. The EPA is also proposing to remove the term ''*force majeure*'' from the list of defined terms in 40 CFR 63.1103(e)(2) and 63.2550 as well as to remove the *force majeure* allowance from the criteria for a violation of the work practice standard for atmospheric PRD releases in 40 CFR 63.1107(h)(3) and 63.2480(e)(3). Lastly, the EPA is proposing new reporting requirements for the EMACT standards at 40 CFR 63.1110(a)(10)(iii) to require electronic reporting, through the CDX using CEDRI, of the event-specific work practice standard data in 40 CFR 63.1110(e)(4)(iv) and 63.1110(e)(8)(iii). We note that the MON already has a more general compliance report template for electronic reporting, see 40 CFR 63.2520(e), which will automatically incorporate electronic reporting of the event-specific work practice standard data.

B. Storage Vessel Degassing

The 2020 EMACT standards, OLD NESHAP, and MON included a standard for storage vessel degassing to control emissions from shutdown operations (see the work practice standards in 40 CFR 63.1103(e)(10), 63.2346(a)(6), and 63.2470(f), respectively). The rules allow storage vessels to be vented to the atmosphere once a storage vessel degassing concentration threshold is met (*i.e.,* less than 10 percent of the lower explosive limit (LEL)) and all standing liquid has been removed from the vessel to the extent practicable. The requirements are applicable to fixed roof and floating roof storage vessels that are subject to control requirements in each of the rules. We did not propose a storage vessel degassing standard in the EMACT standards, OLD NESHAP, and MON, but we finalized a standard based on comments received for all 3 rules. We based the degassing standard on Texas permit conditions, which represented the MACT floor.[3] Specifically, permit condition 6 (applicable to floating roof storage vessels) and permit condition 7 (applicable to fixed roof storage vessels) formed the basis of the storage vessel degassing standard.

The petitioners argued that including a storage vessel degassing standard for floating roof storage vessels was not a logical outgrowth of the proposal and that it was not possible to comment on this standard. As previously noted in section II of this preamble, the EPA granted reconsideration on this issue. The petitioners stated that while they did identify the Texas permit conditions as a reference in their comments, certain key information was not incorporated into the final EMACT standards, OLD NESHAP, and MON for the degassing of floating roof storage vessels. Additionally, the petitioners argued that they did not request additional work practices for floating roof storage vessels for which owners and operators already elect to comply with the floating roof storage vessels requirements in 40 CFR part 63, subpart WW because, even with the removal of the shutdown exemption, the petitioners contended that it is still possible to comply with the subpart WW provisions (because these provisions already provide continuous control during degassing by limiting the vapor space of the storage vessel via the

[2] TCEQ Search Air Emission Event Reports, *https://www.texas.gov/.*

[3] Texas Permit Conditions are available at: *https://www.tceq.texas.gov/assets/public/permitting/air/Guidance/NewSourceReview/mss/chem-mssdraftconditions.pdf.*

floating roof and requiring prompt and continuous filling until the roof is refloated).

We disagree with the petitioners' claims that a separate standard for floating roof storage vessel degassing is not needed due to the removal of the shutdown exemption. Rather, as discussed here, the EPA must set a storage vessel degassing standard that applies to all storage vessels under CAA section 112, and 40 CFR part 63, subpart WW, does not adequately control degassing emissions from floating roof storage vessels. First, the emission source for which the EPA is required to set a MACT standard is storage vessels, regardless of whether the source has a fixed roof or floating roof. While petitioners contend that their comments did not specifically mention the degassing of floating roof storage vessels (rather, only the degassing of fixed roof storage vessels), the CAA is clear that the EPA is required to set MACT standards for each emission source, which, in this instance, includes all storage vessels, regardless of roof type. Further, the EPA has never subcategorized storage vessels by roof type. Rather, the EMACT standards, OLD NESHAP, and MON allow owners or operators to choose from different options to control emissions from storage vessels and comply with the MACT standards. As is relevant, using a floating roof that meets the requirements in 40 CFR part 63, subpart WW, is one of the control options owners or operators may choose for control of emissions during normal storage vessel operations. Thus, the EPA is required under CAA section 112 to set a MACT standard for previously unregulated degassing operations for all storage vessels (regardless of roof type) and not for some subset of storage vessels as the petitioners assert.

Second, storage vessel degassing is a unique shutdown activity with operations and emissions that are completely different from normal storage vessel operations. While the previous MACT standards-controlled emissions of breathing losses and working losses from normal storage vessel operations, storage vessel degassing is a very infrequent event (*i.e.,* occurring on average every 14 years based on EMACT data) for which commenters requested an alternative standard in the EMACT standards, OLD NESHAP, and MON when EPA removed the shutdown exemption in those NESHAP. The storage vessel degassing process first requires owners or operators to empty the tank of liquid contents. When this occurs, the floating roof on a floating roof storage vessel no longer acts as a control for HAP emissions as it is no longer floating on the liquid in the tank and minimizing vapor space. Rather, the roof is landed on legs and effectively acts as a fixed roof storage vessel with respect to emissions generation. From there, the storage vessel is generally purged, typically with an inert material such as nitrogen or steam, for a period of time to remove residual vapors before the vessel can be opened to perform maintenance. This purge stream generates HAP emissions and is the subject of the MACT control requirements for which the EPA is proposing alternative standards. As such, complying with the 40 CFR part 63, subpart WW, requirements for floating roof storage vessels is not an effective control for HAP emissions during the degassing phase of a floating roof storage vessel, when it essentially operates as a fixed roof storage vessel. Furthermore, storage vessel degassing provisions in Texas and the South Coast Air Quality Management District in California exist precisely because a standard specific to storage vessel degassing is warranted, including for floating roof storage vessels.

After determining that a standard is necessary for degassing of all storage vessels (regardless of roof type), the EPA reviewed the Texas permit conditions again to determine if revisions to the degassing standard for floating roof storage vessels in the EMACT standards, OLD NESHAP, and MON are appropriate. As noted by the petitioners, Texas permit condition 6.B does provide certain allowances for the degassing process for floating roof storage vessels; a 24-hour window is provided to start controlled degassing after the floating roof storage vessel has been drained, and the storage vessel may be opened during this period only to set up for degassing and cleaning. We determined that the 24-hour window stipulates how long a floating roof storage vessel can be landed before it needs to be filled again or degassed, but it does not have a direct bearing on the underlying control standard for degassing operations. As such, we are not revising the rules to incorporate the 24-hour window into the storage vessel degassing standard. Regarding the opening of the floating roof storage vessel to set up for degassing and cleaning, while we do not believe the current language precludes a facility from taking this step, we are revising the standard to include related language for clarity. For example, the petitioners noted that it is necessary to make connections to a temporary control device to control the floating roof storage vessel degassing emissions, which may require opening the storage vessel to make these connections. Therefore, we are proposing that a floating roof storage vessel may be opened prior to degassing to set up equipment (*i.e.,* make connections to a temporary control device), but this must be done in a limited manner and must not actively purge the storage vessel while connections are made.

An opportunity to comment on the storage vessel degassing provisions was not previously provided because the provisions were included in the final rules but not in the proposed rules. Therefore, the EPA is re-proposing what was finalized for each rule in 2020 and is proposing additional revisions to address degassing of floating roof storage vessels. We are proposing storage vessel degassing standards for the EMACT standards at 40 CFR 63.1103(e)(10), the OLD NESHAP at 40 CFR 63.2346(a)(6), and the MON at 40 CFR 63.2470(f).

C. Other Technical Corrections and Clarifications

There are several additional revisions that we are proposing for the EMACT standards, OLD NESHAP, MON, and Petroleum Refineries NESHAP to address other technical corrections and clarifications and to correct typographical errors. These proposed corrections and clarifications are summarized in table 2 through table 4 of this preamble in the following sections. We request public comment on each of these revisions.

1. EMACT Standards

Table 2 of this preamble provides responses to specific issues raised by stakeholders and presents proposed revisions to the EMACT standards to address certain technical corrections, clarifications, and typographical errors.

TABLE 2—SUMMARY OF PROPOSED REVISIONS TO 40 CFR PART 63, SUBPART YY

Provision	Issue summary	Proposed revision
40 CFR 63.1103(e)(7)(i)	Delay of burner repair provisions: A petitioner argued that requiring an ethylene cracking furnace to implement the delay of burner repair provisions finalized in the 2020 final rule is impracticable and is inconsistent with what the best performers are doing. The petitioner stated that a significant amount of preparation is needed to shut down an ethylene cracking furnace and that no source can comply with the delay of burner repair provisions as written. Accordingly, where a burner cannot be repaired without an ethylene cracking furnace shutdown, owners or operators would have to decoke their ethylene cracking furnaces immediately (*i.e.,* within 1 day of identifying flame impingement), leading to more decoking events and subsequently more emissions from the decoking of ethylene cracking furnaces.	An opportunity to comment on the delay of burner repair provisions was not previously provided because the provisions were included in the final rule but not in the proposed rule. Therefore, the EPA is re-proposing what was finalized along with the following revisions for delay of burner repair. The EPA is proposing to remove the requirement that the owner or operator may only delay burner repair beyond 1 calendar day if a shutdown for repair would cause greater emissions than the potential emissions from delaying repair. We agree that this requirement is impracticable and could lead to more decoking events and more emissions from decoking of ethylene cracking furnaces. Instead, the EPA is proposing that delay of repair beyond 1 calendar day is allowed if the repair cannot be completed during normal operations, the burner cannot be shut down without significantly impacting the furnace heat distribution and firing rate, and action is taken to reduce flame impingement as much as possible during continued operation. We are also maintaining that if a delay of repair is required to fully resolve burner flame impingement, repair must be completed following the next planned decoking operation (and before returning the ethylene cracking furnace back to normal operations) or during the next ethylene cracking furnace complete shutdown (when the ethylene cracking furnace firebox is taken completely offline), whichever is earlier.
40 CFR 63.1103(e)(8)(i)	Isolation valve inspection and repair: A petitioner requested that the EPA revise the requirement to rectify poor isolation prior to continuing decoking operations. The petitioner argued that certain isolation valve repairs must be completed after the ethylene cracking furnace is shut down, which consequently requires the ethylene cracking furnace to go through decoking. The petitioner said that if a furnace is not decoked prior to shutdown, damage can occur to the furnace tubes and could pose a safety issue. In addition, the petitioner noted that some isolation valves serve gas streams from multiple ethylene cracking furnaces, and there may be instances when all furnaces would need to be decoked and shut down to properly rectify the isolation valve issue. The petitioner argued that allowing for some flexibility is necessary for facilities to operate properly and to avoid damaging equipment.	The EPA agrees with the petitioner and is proposing language to allow facilities to wait and rectify isolation valve issues after a decoking operation, provided that the owner or operator can reasonably demonstrate that damage to the radiant tube(s) or ethylene cracking furnace would occur if the repair was attempted prior to completing a decoking operation and/or prior to the ethylene cracking furnace being shut down.
40 CFR 63.1110(e)(4)(iii)	Provision contains a typographical error	The EPA is proposing to replace ''§ 63.1109(e)(7)'' with ''§ 63.1109(e)(6)'' to correct the typographical error.
40 CFR 63.1102(c)(11), (d)(2)(ii), and (e)(2)(iii).	Provisions contain a typographical error	The EPA is proposing to replace ''§ 63.1108(a)(4)(i)'' with ''§ 63.1108(a)(4)'' to correct a typographical error that we made while removing startup, shutdown, and malfunction (SSM) exemptions. Our intent was to include all of 40 CFR 63.1108(a)(4) in the EMACT standards. This proposed revision would also resolve analogous typographical errors for the carbon black and cyanide chemicals source categories that are also contained in 40 CFR part 63, subpart YY.

TABLE 2—SUMMARY OF PROPOSED REVISIONS TO 40 CFR PART 63, SUBPART YY—Continued

Provision	Issue summary	Proposed revision
40 CFR 63.1103(e)(4)(iii) and 63.1110(a)(10)(i), (ii), (iii), and (iv).	Provisions needing technical clarifications or removal	The EPA is proposing to remove duplication and point directly to 40 CFR 63.9(k) when the source is required to submit certain reports to CEDRI. Specifically, instructions for submitting reports electronically through CEDRI, including instructions for submitting CBI and asserting a claim of EPA system outage or *force majeure,* were recently added to 40 CFR 63.9(k) (85 FR 73885); therefore, text related to these requirements is no longer necessary in the EMACT standards.

2. OLD NESHAP

Table 3 of this preamble provides responses to specific issues raised by stakeholders and presents proposed revisions to the OLD NESHAP to address certain technical corrections, clarifications, and typographical errors.

TABLE 3—SUMMARY OF PROPOSED REVISIONS TO 40 CFR PART 63, SUBPART EEEE

Provision	Issue summary	Proposed revision
40 CFR 63.2346(a)(6)	Provision contains a typographical error.	The EPA is proposing to replace ''items 3 through 6 of table 2 to this subpart'' with ''items 2 through 6 of table 2 to this subpart'' to correct the typographical error.
40 CFR 63.2346(e)	Provision contains a typographical error.	The EPA is proposing to replace ''storage vessels'' with ''storage tanks'' to correct the typographical error.
40 CFR 63.2378(e)(3)	Provisions needing technical clarifications.	The EPA is proposing to add the word ''planned'' in front of ''routine maintenance'' in the last sentence of the provision to further clarify that the exemption only applies to periods of planned routine maintenance. We are also proposing to replace ''storage vessel'' with ''storage tank'' in the last sentence of the provision to correct a typographical error.
40 CFR 63.2378(e)(4)	Provisions needing technical clarifications.	To create consistency in the time period during which the bypass provision applies (*i.e.,* the level of material in the storage tank must not be increased during the same time period that breathing loss emissions bypass the fuel gas system or process), we are proposing to delete ''to perform routine maintenance'' from the last sentence of 40 CFR 63.2378(e)(4). We are also proposing to replace ''storage vessel'' with ''storage tank'' in the last sentence of the provision to correct a typographical error.
40 CFR 63.2382(d)(3), and 63.2386(f), (g), (h), (i), and (j).	Provisions needing technical clarifications or removal.	The EPA is proposing to remove duplication and point directly to 40 CFR 63.9(k) when the source is required to submit certain reports to CEDRI. Specifically, instructions for submitting reports electronically through CEDRI, including instructions for submitting CBI and asserting a claim of EPA system outage or *force majeure,* were recently added to 40 CFR 63.9(k) (85 FR 73885); therefore, text related to these requirements is no longer necessary in the OLD NESHAP.

3. MON

This section of this preamble presents revisions we are proposing to the MON heat exchange system requirements. In addition, table 4 of this preamble provides responses to other specific issues raised by stakeholders and presents proposed revisions to the MON to address certain technical corrections, clarifications, and typographical errors.

In May 2021, EPA Region 4 received a request from Eastman Chemical Company to perform alternative monitoring instead of the Modified El Paso Method to monitor for leaks in Eastman's Tennessee Operations heat exchange systems, which primarily have cooling water containing soluble HAP with a high boiling point. Eastman requested that the previous water sampling requirements for heat exchange system leaks provided in the MON, which ultimately references 40 CFR 63.104(b) (*i.e.,* use of any EPA-approved method listed in part 136 of this chapter as long as the method is sensitive to concentrations as low as 10 parts per million (ppm) and the same method is used for both entrance and exit samples), be allowed for cooling water containing certain soluble HAP in lieu of using the Modified El Paso Method.

Eastman specifically identified two HAP, 1,4-dioxane and methanol, which do not readily strip out of water using the Modified El Paso Method. Eastman's application for alternative monitoring included experimental data showing that the Modified El Paso Method would likely not identify a leak of these HAP in heat exchange system cooling water. Eastman conducted Modified El Paso Method monitoring under controlled scenarios to determine how much methanol and 1,4-dioxane would be detected. The scenarios included solutions of water and either methanol or 1,4-dioxane at concentrations of 1 part per million by weight (ppmw), 20 ppmw, and 100 ppmw (as measured using water sampling methods allowed previously in the MON). The Modified El Paso Method did not detect any

methanol or 1,4-dioxane from the 1 ppmw and 20 ppmw solutions (*i.e.,* methanol and 1,4-dioxane did not strip out of the water in detectable amounts). The Modified El Paso Method detected very little HAP from the 100 ppmw solutions, with a maximum of only 0.17 percent of the 1,4-dioxane stripping out and being detected.

Based on this information, the EPA is proposing at 40 CFR 63.2490(e) that the leak monitoring requirements for heat exchange systems at 40 CFR 63.104(b) may be used in limited instances, instead of using the Modified El Paso Method to monitor for leaks. We still maintain that the Modified El Paso Method is the preferred method to monitor for leaks in heat exchange systems and are proposing that the requirements of 40 CFR 63.104(b) may only be used if 99 percent by weight or more of all the organic compounds that could potentially leak into the cooling water have a Henry's Law Constant less than 5.0E–6 atmospheres per mole per cubic meter (atm-m^3/mol) at 25° Celsius. We selected this threshold based on a review of Henry's Law Constants for the HAP listed in table 4 to subpart F of 40 CFR part 63, as well as the water-soluble organic compounds listed in Eastman's request. Henry's Law Constants are available from the EPA at *https://comptox.epa.gov/dashboard/.* Examples of HAP that have a Henry's Law Constant of less than 5.0E–6 atm-m^3/mol at 25° Celsius are aniline, 2-chloroacetophenone, diethylene glycol diethyl ether, diethylene glycol dimethyl ether, dimethyl sulfate, 2,4-dinitrotoluene, 1,4-dioxane, ethylene glycol monoethyl ether acetate, ethylene glycol monomethyl ether acetate, methanol, and toluidine. Many of these HAP also have very high boiling points, with most above 300 °F, which means they will generally stay in the cooling water and not be emitted to the atmosphere. While we are proposing that the leak monitoring and leak definition requirements at 40 CFR 63.104(b) may be used in limited instances, we are not proposing that other provisions of 40 CFR 63.104 apply. Instead, for example, facilities that use water sampling to detect leaks must still comply with the recordkeeping and reporting requirements of 40 CFR 63.2520(e)(16) and 40 CFR 63.2525(r). We are proposing revisions at 40 CFR 63.2520(e)(16) and 40 CFR 63.2525(r) to specify this.

Table 4 of this preamble provides responses to other specific issues raised by stakeholders and presents proposed revisions to the MON to address certain technical corrections, clarifications, and typographical errors.

TABLE 4—SUMMARY OF PROPOSED REVISIONS TO 40 CFR PART 63, SUBPART FFFF

Provision	Issue summary	Proposed revision
40 CFR 63.2450(e)(6)(i)	Provision contains a typographical error	The EPA is proposing to replace the reference to 40 CFR 63.148(h)(3) with a reference to 40 CFR 63.148(i)(3) to correct the typographical error.
40 CFR 63.2450(e)(7)	A petitioner requested that the EPA clarify whether certain adsorber provisions referenced within 40 CFR 63.983 and other related requirements and exceptions (*i.e.,* 40 CFR 63.2470(c)(3), 40 CFR 63.2520(d)(6) and (e)(13), and 40 CFR 63.2525(o)) apply to this paragraph. The petitioner also pointed out that it is not clear whether a supplement to the notification of compliance status (NOCS) report is needed, and if necessary, what information should be provided.	The EPA is proposing to clarify that 40 CFR 63.2470(c)(3), 40 CFR 63.2520(d)(6) and (e)(13), 40 CFR 63.2525(o), and the provisions referenced within 40 CFR 63.983 all apply (in addition to 40 CFR 63.2450(e)(4) and (e)(6)) if facilities reduce organic HAP emissions by venting emissions through a closed-vent system to an adsorber(s) that cannot be regenerated or a regenerative adsorber(s) that is regenerated offsite. We are also clarifying in 40 CFR 63.2450(e)(1) that 40 CFR 63.2450(e)(1) does not apply when complying with 40 CFR 63.2450(e)(7). As part of this clarification, we are also proposing a new requirement at 40 CFR 63.2520(d)(6) for adsorbers subject to the requirements of 40 CFR 63.2450(e)(7) requiring a supplement to the NOCS report within 150 days after the first applicable compliance date. We are proposing that the supplement to the NOCS report must describe whether the adsorber cannot be regenerated or is a regenerative adsorber(s) that is regenerated offsite and must specify the breakthrough limit and adsorber bed life that was established during the initial performance test or design evaluation of the adsorber. Finally, we are proposing to revise the introductory paragraph of 40 CFR 63.2520 as well as the requirement in 40 CFR 63.2515(d) to update the reference to the proposed 40 CFR 63.2520(d)(6) paragraph.
40 CFR 63.2460(c)(9)	Provision contains a typographical error	The EPA is proposing to replace the phrase ''in paragraphs (c)(9)(i) through (vi) of this section'' with ''in paragraphs (c)(9)(i) through (iv) of this section'' to correct the typographical error.
40 CFR 63.2480(a)	Provision contains a typographical error	The EPA is proposing to replace the phrase ''For each light liquid pump, valve, and connector in ethylene oxide service'' with ''For each light liquid pump, pressure relief device, and connector in ethylene oxide service'' to correct the typographical error.

TABLE 4—SUMMARY OF PROPOSED REVISIONS TO 40 CFR PART 63, SUBPART FFFF—Continued

Provision	Issue summary	Proposed revision
40 CFR 63.2480(e)(2)(ii) and (e)(2)(iii).	A petitioner pointed out that EPA agreed in its response to comment document (see docket item EPA–HQ–OAR–2018–0746–0200) to delete the second sentence from these provisions; however, the final rule (85 FR 49084) does not reflect these deletions.	It was our intent to delete the second sentence from these provisions (*i.e.,* the requirement to conduct monitoring if rupture disks are replaced). As stated in our response to comment document (see docket item EPA–HQ–OAR–2018–0746–0200), we agree that the language diverges from what 40 CFR part 63, subpart UU, required for PRDs. Therefore, we are proposing to correct this error by deleting the second sentence from these provisions.
40 CFR 63.2480(f)(18)(iii)	Provision contains a typographical error	The EPA is proposing to replace ''§ 63.181(b)(2)(i)'' with ''§ 63.181(b)(3)(i)'' to correct the typographical error.
40 CFR 63.2480(f)(18)(vi)	A petitioner contended that the reference to information required to be reported under 40 CFR 63.182(d)(2)(xiv) is too broad and should be more narrowly described as ''information in § 63.165(a) required to be reported under 40 CFR 63.182(d)(2)(xiv)'' in order to clarify that the reporting requirement is specific to the recently promulgated PRD requirements.	We agree with the petitioner and are proposing to clarify this provision by including ''in § 63.165(a).'' The proposed language reads ''The information in § 63.165(a) required to be reported under 40 CFR 63.182(d)(2)(xiv) is now required to be reported under § 63.2520(e)(15)(i) through (iii).''
40 CFR 63.2480(f)(18)(x)	Provision contains a typographical error	The EPA is proposing to replace ''§ 63.1022(a)(1)(v)'' with ''§ 63.1023(a)(1)(v)'' to correct the typographical error.
40 CFR 63.2480(f)(18)(xiii)	A petitioner contended that the reference to information required to be reported under 40 CFR 63.1039(b)(4) is too broad and should be more narrowly described as ''information in § 63.1030(b) required to be reported under 40 CFR 63.1039(b)(4)'' in order to clarify that the reporting requirement is specific to the recently promulgated PRD requirements.	We agree with the petitioner and are proposing to clarify this provision by including ''in § 63.1030(b).'' The proposed language reads ''The information in § 63.1030(b) required to be reported under 40 CFR 63.1039(b)(4) is now required to be reported under § 63.2520(e)(15)(i) and (ii).''
40 CFR 63.2493(a)(2)(vi) and (b)(4).	A petitioner requested clarification of scrubber monitoring parameters and the types of scrubbers that are applicable to certain requirements. The petitioner stated that the rule is only applicable to scrubbers that use an acid solution and reactant tank, but that other types of scrubbers are used in instances when ethylene oxide is present in small amounts. The petitioner requested that the pH monitoring parameter be revised to account for other types of scrubbers. The petitioner also requested that the temperature of the ''scrubber liquid'' be monitored instead of the temperature of the ''water.''	Scrubbers that use an acid solution and reactant tank are the primary focus of the scrubber monitoring requirements because this type of scrubber liquid is necessary to specifically control ethylene oxide. As such, we are not revising the monitoring parameters to apply more broadly, such as to scrubbers that use water as the scrubbing liquid. We are proposing clarifying language that the monitoring requirements are applicable to scrubbers ''with a reactant tank.'' We agree with the petitioner regarding temperature monitoring and are proposing a correction that the temperature of the ''scrubber liquid'' must be monitored. If a facility uses a scrubber without a reactant tank that provides incidental control of ethylene oxide, the facility may establish site-specific parameters using 40 CFR 63.2493(a)(2)(viii) and (b)(6).
40 CFR 63.2492(b)	A petitioner requested that an alternative to sampling and analysis of storage tank materials should be allowed, to determine if a storage tank is in ethylene oxide service. The petitioner stated that information already exists for some storage tanks to show that the ethylene oxide concentration in the material stored is less than 0.1 percent by weight (sometimes significantly so) and the requirement to conduct sampling and analysis is unnecessary.	We agree with the petitioner and are proposing to allow calculations to be performed to show that the ethylene oxide concentration is less than 0.1 percent by weight of the material stored in the storage tank, provided the calculations rely on information specific to the material stored. This may include using, for example, specific concentration information from safety data sheets.
40 CFR 63.2493(b)(2)	A petitioner requested that the EPA include introductory language to clarify that the requirements apply only if the facility chooses to route emissions to a non-flare control device and chooses to comply with the 1 ppmv standard via continuous emission monitoring systems (CEMS).	We agree with the petitioner that 40 CFR 63.2493(b)(2) only applies if the facility chooses to route emissions to a non-flare control device and chooses to comply with the 1 ppmv standard via CEMS. Therefore, we are proposing to add introductory text at 40 CFR 63.2493(b)(2) that clarifies this.
40 CFR 63.2493(d)(3)	A petitioner contended that the reference to ''affected source'' should be revised to ''MCPU'' to be consistent with the second column of table 6 to subpart FFFF of part 63.	We agree with the petitioner to revise the provision for consistency with table 6 to subpart FFFF of part 63; therefore, we are proposing to replace ''affected source'' with ''MCPU.''
40 CFR 63.2493(d)(4)(v)	Provision contains a typographical error	The EPA is proposing to replace ''§ 63.2445(h)'' with ''§ 63.2445(i)'' to correct the typographical error.

TABLE 4—SUMMARY OF PROPOSED REVISIONS TO 40 CFR PART 63, SUBPART FFFF—Continued

Provision	Issue summary	Proposed revision
40 CFR 63.2493(e)	A petitioner requested the EPA clarify whether ''delay of repair'' provisions apply to equipment in ethylene oxide service. The petitioner noted that in the response to comments for the final rule the EPA stated that ''delay of repair'' provisions do not apply. However, the petitioner further noted, the final rule language did not reflect this.	We confirm that ''delay of repair'' provisions do not apply for equipment in ethylene oxide service. However, we recognize the rule language did not correctly reflect this. As such, we are proposing to revise 40 CFR 63.2493(e) to appropriately specify that the ''delay of repair'' provisions of 40 CFR part 63, subparts H and UU, and 40 CFR part 65, subpart F, do not apply.
40 CFR 63.2520(d)	A petitioner pointed out that the EPA indicated in the preamble to the final rule (85 FR 49084) that electronic reporting is required at 40 CFR 63.2520(d) for the NOCS report; however, the final rule does not contain this requirement. The petitioner requested that the EPA clarify that this was a misstatement in the preamble language and that the NOCS report is not required to be submitted electronically.	We acknowledge there was an inconsistency in what we said in the preamble about electronic reporting NOCS reports versus what we required in the final rule. However, the inconsistency is irrelevant because in this rulemaking, we are proposing at 40 CFR 63.2520(d) to require that NOCS reports be submitted electronically through the EPA's CEDRI. The proposed requirement to submit NOCS reports electronically will increase the ease and efficiency of data submittal and data accessibility. For a more thorough discussion of electronic reporting, see the memorandum, *Electronic Reporting Requirements for New Source Performance Standards (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP) Rules,* which is available in the docket for this rulemaking (see Docket Item No. EPA–HQ–OAR–2018–0746–0169).
40 CFR 63.2525(o)	A petitioner requested that the EPA update the recordkeeping requirements for adsorbers that cannot be regenerated and for regenerative adsorbers that are regenerated offsite to reflect the monitoring requirements in the final rule (85 FR 49084). Specifically, the petitioner requested that the EPA revise 40 CFR 63.2525(o)(1) to require that you must keep records of the breakthrough limit and bed life for each adsorber established according to 40 CFR 63.2450(e)(7)(i); revise 40 CFR 63.2525(o)(2) to require that you keep records of each outlet HAP or TOC concentration measured according to 40 CFR 63.2450(e)(7)(ii) and (e)(7)(iii); and revise 40 CFR 2525(o)(3) to require records of the date and time each adsorber is replaced. The petitioner also requested that EPA remove the requirement at 40 CFR 63.2525(o)(4) in its entirety.	In the final rule (85 FR 49084), we inadvertently did not revise the recordkeeping requirements to reflect the associated monitoring requirements in 40 CFR 63.2450(e)(7) (for adsorbers that cannot be regenerated and for regenerative adsorbers that are regenerated offsite). We are proposing to correct this by revising 40 CFR 63.2525(o)(1) and (2) and removing the requirement at 40 CFR 63.2525(o)(4) in its entirety, as recommended by the petitioner. However, we are not proposing to revise 40 CFR 63.2525(o)(3) as requested by the petitioner. We are keeping the language of 40 CFR 63.2525(o)(3) ''as is,'' which aligns with the language used in 40 CFR 63.2450(e)(7)(iii)(B).
40 CFR 63.2520(e)(2)	Provision contains a typographical error	The EPA is proposing to correct the spelling of ''paragraph.''
40 CFR 63.2450(e)(5)(iv), 63.2520(e), (f), (g), (h), and (i).	Provisions needing technical clarifications or removal	The EPA is proposing to remove duplication and point directly to 40 CFR 63.9(k) when the source is required to submit certain reports to CEDRI. Specifically, instructions for submitting reports electronically through CEDRI, including instructions for submitting CBI and asserting a claim of EPA system outage or *force majeure,* were recently added to 40 CFR 63.9(k) (85 FR 73885); therefore, text related to these requirements is no longer necessary in the MON.

4. Petroleum Refineries NESHAP

In addition to removing the *force majeure* allowance from the PRD and emergency flaring work practice standards as discussed in section III.A of this preamble, we are also proposing other amendments to Petroleum Refinery MACT 1 that are consistent with flaring provisions in other recent rules (*i.e.,* EMACT standards) that adopted the Petroleum Refinery MACT 1 flare requirements but addressed additional issues, such as adding provisions for pressure-assisted flares. The proposed amendments include adding pressure-assisted flares to the definition of the term ''flare'' in 40 CFR 63.641 and adding appropriate requirements for pressure-assisted flares in 40 CFR 63.670. These amendments are consistent with the EPA's intention that all types of flares, including pressure-assisted flares, are covered by the provisions in Petroleum Refinery MACT 1. The proposed amendments for pressure-assisted flares include pilot flame standards and requirements for cross-lighting in 40 CFR 63.670(b), pressure monitoring in 40 CFR 63.670(d)(3), higher combustion zone operating limits in 40 CFR 63.670(e), and requirements to use only the direct calculation methods for determining the flare vent gas net heating value according to 40 CFR 63.670(l)(5)(ii). We are also proposing reporting and recordkeeping requirements specific to pressure-assisted flares in 40 CFR

63.655(g)(11)(iii) and (i)(9)(vi), respectively.

Further, to provide additional flexibility to the monitoring requirements for flare gas composition as required by 40 CFR 63.670(j), we are proposing to add mass spectrometry as a method in 40 CFR 63.671. The current provisions in 40 CFR 63.671 could be interpreted to suggest that gas chromatographs must be used for flare gas compositional analysis. This was not our intent. We recognize that there are some methods, like mass spectrometry, which can determine flare gas composition without the use of a gas chromatograph. We are proposing to add specific requirements for calibration and operation of mass spectrometers that parallel the requirements for gas chromatographs.

D. What compliance dates are we proposing?

We are not proposing new compliance dates for any revisions that we are proposing for the EMACT standards, OLD NESHAP, and MON. The rules that were promulgated in 2020 have still not come into full effect and owners and operators have until July 6, 2023, to comply with the EMACT standards, July 7, 2023, for the OLD NESHAP, and August 12, 2023, for the MON. As such, owners and operators would have until those dates to comply with the proposed revisions. In addition, the proposed revisions do not impose substantial new requirements but rather provide clarity to the rules for owners and operators.

For most actions that we are proposing for the petroleum refineries NESHAP, we are positing that facilities would need some time to successfully apply these revisions, including time to: read and understand the amended rule requirements; evaluate their operations to ensure that they can meet the standards during periods of startup and shutdown, as defined in the rule; and make any necessary adjustments, including making adjustments to standard operating procedures, and convert reporting mechanisms to install necessary hardware and software. The EPA recognizes the confusion that multiple compliance dates for individual requirements would create and the additional burden such an assortment of dates would impose. From our assessment of the timeframe needed for compliance with the revised requirements, the EPA considers a period of 60 days after the effective date of the final rule to be the most expeditious compliance period practicable. Therefore, we are proposing that affected sources must be in compliance with most of the proposed revisions to the petroleum refineries NESHAP upon initial startup or within 60 days of the effective date of the final rule, whichever is later. There is one exception to this compliance period, discussed next.

We are proposing that petroleum refinery owners or operators must comply with the new operating and monitoring requirements for flares upon initial startup or by the effective date of the final rule, whichever is later. We believe that compliance with the flare requirements immediately upon finalizing the rule is necessary to ensure that pressure-assisted flares are appropriately operated.

IV. Summary of Cost, Environmental, and Economic Impacts

A. What are the affected facilities?

In our final RTRs, we estimated the following:

There are 26 facilities subject to the EMACT standards that are currently operating and five additional facilities under construction. A complete list of known facilities in the EMACT standards is available in appendix A of the memorandum, *Review of the RACT/BACT/LAER Clearinghouse Database for the Ethylene Production Source Category* (see Docket ID No. EPA–HQ–OAR–2017–0357–0008).

There are 173 OLD NESHAP facilities currently operating and four additional OLD NESHAP facilities under construction. A complete list of known OLD NESHAP facilities is available in appendix A of the memorandum, *National Impacts of the 2020 Risk and Technology Review Final Rule for the Organic Liquids Distribution (Non-Gasoline) Source Category* (see Docket ID No. EPA–HQ–OAR–2018–0746–0069).

There are 201 MON facilities currently operating. A complete list of known MON facilities is available in appendix 1 of the memorandum, *Residual Risk Assessment for the Miscellaneous Organic Chemical Manufacturing Source Category in Support of the 2019 Risk and Technology Review Proposed Rule* (see Docket Item No. EPA–HQ–OAR–2018–0746–0011).

Additionally, based on the Energy Information Administration's 2021 Refinery Capacity Report, there are 129 operable petroleum refineries in the United States (U.S.) and the U.S. territories, all of which are expected to be major sources of HAP emissions.

B. What are the air quality impacts?

We did not estimate baseline emissions or emissions reductions for the proposed revisions. None of the proposed revisions would have a direct and quantifiable impact on emissions because they are minor revisions to existing requirements.

C. What are the cost impacts?

We expect minimal to no cost impacts due to the proposed revisions. There could be minor costs for affected facilities related to reading the proposed rule, making minor updates to operating procedures in some limited cases, and making minor adjustments to reporting systems. A few proposed revisions provide slightly greater flexibility and could yield minor cost savings. Any potential costs or cost savings are expected to be negligible.

D. What are the economic impacts?

No economic impacts are anticipated due to the proposed revisions because any potential cost impacts are expected to be very minor.

E. What are the benefits?

The proposed revisions are not expected to yield air quality benefits because emissions will not be affected. However, the proposed revisions should improve clarity, monitoring, compliance, and implementation of the rules for the affected source categories.

F. What analysis of environmental justice did we conduct?

The proposed revisions are not expected to impact emissions and therefore we did not conduct an environmental justice analysis. However, environmental justice analyses were conducted for the final 2020 rules for the EMACT standards, OLD NESHAP, and MON. Further information regarding these environmental justice analyses is available at 85 FR 40415, 85 FR 40757, and 85 FR 49129, respectively.

V. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the OMB for review.

B. Paperwork Reduction Act (PRA)

This action is not expected to impose any new information collection burden under the PRA for the EMACT

standards, OLD NESHAP, MON, or Petroleum Refineries NESHAP. We are proposing certain technical revisions, including new electronic reporting provisions for the PRD and emergency flaring work practice standards, but the technical revisions would not result in changes to the information collection burden. The reporting of the current PRD and emergency flaring data elements currently are typed up in a word processor and/or spreadsheet software and included in the submission to the delegated state authority and/or the EPA Regional Office. The proposed amendments would instead require facilities to submit the work practice related data using an EPA-provided spreadsheet template electronically through CEDRI. These data would not be expected to also be included in a facility's submission to the delegated state authority and/or EPA Regional Office, so no duplication is expected. The proposed amendments to the mode of reporting of the work practice related data are not expected to change the current burden under the PRA and we have not revised the information collection request (ICR) for the existing rules. OMB has previously approved the information collection activities contained in the existing regulations at: 40 CFR part 63, subpart YY, and has assigned OMB control number 2060–0489; 40 CFR part 63, subpart EEEE, and has assigned OMB control number 2060–0539; 40 CFR part 63, subpart FFFF, and has assigned OMB control number 2060–0533; and 40 CFR part 63, subpart CC, and has assigned OMB control number 2060–0340.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. The proposed amendments to 40 CFR part 63, subparts CC, YY, EEEE, and FFFF would only minimally change the existing requirements for all entities. There could be minor costs for affected facilities related to reading the proposed rule, making minor updates to operating procedures in some limited cases, and making minor adjustments to reporting systems. A few proposed revisions provide slightly greater flexibility and could yield minor cost savings. Any potential costs or cost savings are expected to be negligible.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. While this action creates an enforceable duty on the private sector, the annual cost does not exceed $100 million or more.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the National Government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. It will not have substantial new direct effects on tribal governments, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes, as specified in Executive Order 13175. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking involves technical standards. Therefore, the EPA conducted searches for the EMACT standards, MON, OLD NESHAP, and Petroleum Refineries NESHAP through the Enhanced National Standards Systems Network Database managed by the American National Standards Institute (ANSI). We also contacted voluntary consensus standards (VCS) organizations and accessed and searched their databases. We conducted searches for: EPA Methods 1, 1A, 2, 2A, 2C, 2D, 2F, 2G, 3B, 4, 5, 18, 21, 22, 25, 25A, 27, and 29 of 40 CFR part 60, appendix A; EPA Methods 301, 316 and 320 of 40 CFR part 63, appendix A; and EPA Methods 602 and 624 of 40 CFR part 136, appendix A.

No applicable voluntary consensus standards were identified for any of the listed methods. During the EPA's VCS search, if the title or abstract (if provided) of the VCS described technical sampling and analytical procedures that are similar to the EPA's reference method, the EPA reviewed it as a potential equivalent method.

After reviewing the available standards, the EPA determined that the 20 candidate VCS identified for measuring emissions of pollutants or their surrogates subject to emission standards in the rule would not be practical due to lack of equivalency, documentation, or validation data, or due to other important technical and policy considerations. Additional information for the VCS search and determinations can be found in the memorandum, *Voluntary Consensus Standard Results for National Emission Standards for Hazardous Air Pollutants: for Ethylene Production, Miscellaneous Organic Chemical Manufacturing, Organic Liquids Distribution (Non-Gasoline), and Petroleum Refineries,* which is available in the docket for this action.

The EPA welcomes comments on this aspect of the proposed rulemaking, and, specifically, invites the public to identify potentially applicable VCS, and to explain why the EPA should use such standards in this regulation.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order 12898 (59 FR 7629; February 16, 1994) directs federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations (people of color and/or indigenous peoples) and low-income populations.

Because the proposed revisions are not expected to impact emissions, the EPA believes that this action is not likely to change existing disproportionate and adverse effects on

people of color, low-income populations, and/or indigenous peoples. See section IV.F of this preamble for related information regarding environmental justice analyses.

[EPA–HQ–OPPT–2022–0923; FRL–10453–01–OCSPP]

Polyvinyl Alcohol (PVA); TSCA Section 21 Petition for Rulemaking; Reasons for Agency Response; Denial of Requested Rulemaking

AGENCY: Environmental Protection Agency (EPA).

ACTION: Petition; reasons for Agency response.

SUMMARY: On January 26, 2023, EPA received a petition from Blueland, Plastic Pollution Coalition, and partners, including Beyond Plastics, Plastic Oceans International, The Shaw Institute, Lonely Whale, 5 Gyres, Global Alliance for Incinerator Alternatives (GAIA), Oceanic Global Foundation, The Last Beach Cleanup, Rio Grande International Study Center, Inland Ocean Coalition, Occidental Arts and Ecology Center, Turtle Island Restoration Network, Friends of the Earth, Surfrider, and Made Safe. The petition requests under the Toxic Substances Control Act (TSCA) that EPA require manufacturers and processors of polyvinyl alcohol (PVA) affiliated with EPA's Safer Choice certification program to fund and conduct health and environmental safety testing using independent, third-party scientists. The petition also requests under the Administrative Procedure Act (APA) that EPA update the status of PVA on EPA's Safer Chemical Ingredients List (SCIL) from ''green circle'' to ''gray square'' until the testing is complete and reviewed by EPA. The Safer Choice program is a voluntary EPA program that certifies cleaning and other products made with ingredients that meet criteria for human health and the environment and manages these safer ingredients on the SCIL. After careful consideration, the EPA has denied the TSCA petition and APA petition requests for reasons discussed in this document.

DATES: EPA's response to the petition was signed on April 21, 2023.

ADDRESSES: EPA established a docket for this petition under docket identification (ID) number EPA–HQ–OPPT–2022–0923 which is available online at *https://www.regulations.gov*. Additional instructions on visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets*.

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: *TSCAHotline@epa.gov*.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general. However, this action may be of particular interest to those who manufacture (including import), distribute in commerce, process, use, or dispose of polyvinyl alcohol (PVA). Since other entities may also be interested, the Agency has not attempted to describe all of the specific entities that may be affected by this action.

B. What is EPA's authority for taking this action?

Under TSCA section 21 (15 U.S.C. 2620), any person can petition EPA to initiate a proceeding for the issuance, amendment, or repeal of a rule under TSCA sections 4, 6, or 8, or to issue an order under TSCA sections 4, 5(e), or 5(f). A TSCA section 21 petition must set forth the facts which it has claimed establish that it is necessary to initiate the action requested. EPA is required to grant or deny the petition within 90 days of its filing. If EPA grants the petition, the Agency must promptly commence an appropriate proceeding. If EPA denies the petition, the Agency must publish its reasons for the denial in the **Federal Register**. A petitioner may commence a civil action in a U.S. district court seeking to compel initiation of the requested proceeding within 60 days of a denial or, if EPA does not issue a decision, within 60 days of the expiration of the 90-day period.

Under the Administrative Procedure Act (APA) section 553(e), any person may petition for a rule's issuance, amendment, or repeal. Petitions should identify the rule requested to be repealed or provide the text of a proposed rule or amendment and include reasons supporting the petition. The agency may either grant the petition, undertake public rulemaking proceedings, or deny the petition. If an agency grants a petition for rulemaking—thereby initiating an action to issue, amend, or repeal a rule per request of the petitioner—any relevant procedural requirements for rulemaking or other types of action would still apply. In the case of the full or partial denial of a petition, prompt notice is given to the interested parties. Except in affirming a prior denial or when the denial is self-explanatory, the notice shall be accompanied by a brief statement of the grounds for denial.

C. What criteria apply to the decision on the TSCA section 21 petition?

1. Legal standard regarding TSCA section 21 petitions.

TSCA section 21(b)(1) requires that the petition ''set forth the facts which it is claimed establish that it is necessary'' to initiate the proceeding requested. 15 U.S.C. 2620(b)(1). Thus, TSCA section 21 implicitly incorporates the statutory standards that apply to the requested actions. Accordingly, EPA has relied on the standards in TSCA section 21 and the provisions under which actions have been requested to evaluate this TSCA section 21 petition.

2. Legal standard regarding TSCA section 4.

TSCA section 21(a) authorizes any person to petition the Agency to ''initiate a proceeding'' for the issuance of a rule or an order under TSCA section 4. 15 U.S.C. 2620(a). To grant a petition for the testing of a chemical substance, EPA must find that the petitioners ''set forth the facts which it is claimed establish that it is necessary'' for testing under TSCA section 4(a)(1)(A)(i), TSCA section 4(a)(1)(A)(ii), or TSCA section 4(a)(1)(B). If the information the petitioner provides fails to present such facts, the petition must be denied. Additionally, if testing is initiated under TSCA section 21, TSCA section 4(h) dictates requirements for limiting testing on vertebrate animals. The specific section 4 provisions are provided in the units that follow.

a. Legal standard regarding TSCA section 4(a)(1)(A)(i) and TSCA section 4(a)(1)(A)(ii).

Under TSCA section 4(a)(1)(A)(i), in order to initiate a rule or order, EPA must find that the manufacture, distribution in commerce, processing, use, or disposal of a chemical substance or mixture, or that any combination of such activities, may present an unreasonable risk of injury to health or the environment; that information and experience are insufficient to reasonably determine or predict the effects of such activity or activities on health or the environment; and that testing of the chemical substance or mixture is necessary to develop the missing information. 15 U.S.C. 2603(a)(1)(A)(i).

Under TSCA section 4(a)(1)(A)(ii), in order to initiate a rule, EPA must find that the chemical substance or mixture is or will be produced in substantial quantities, and it enters or may reasonably be anticipated to enter the environment in substantial quantities or there is or may be significant or substantial human exposure to such substance or mixture; that information and experience are insufficient to reasonably determine or predict the effects of the manufacture, distribution in commerce, processing, use, or disposal of the chemical substance or mixture on health or the environment; and that testing of the chemical substance or mixture is necessary to develop the missing information. 15 U.S.C. 2603(a)(1)(A)(ii).

b. Legal standard regarding TSCA section 4(a)(1)(B) and relationship to TSCA section 21(b)(4).

In the case of a mixture, per TSCA section 4(a)(1)(B), EPA must also find that the effects which the mixture's manufacture, distribution in commerce, processing, use, or disposal, or any combination of such activities, may have on health or the environment may not be reasonably and more efficiently determined or predicted by testing the chemical substances which comprise the mixture. 15 U.S.C. 2603(a)(1)(B). In addition, TSCA section 21 establishes standards a court must use to decide whether to order EPA to initiate rulemaking in the event of a lawsuit filed by the petitioner after denial of a TSCA section 21 petition. 15 U.S.C. 2620(b)(4)(B). EPA believes TSCA section 21(b)(4) does not provide for judicial review of a petition to promulgate a test rule for mixtures. TSCA section 21(b)(4)(B)(i) specifies that the court's review pertains to application of the TSCA section 4 factors to chemical substances. Moreover, TSCA section 21(b)(4)(B)(i) does not contain the additional finding that TSCA section 4 requires for issuing a test rule for mixtures (that the effect may not be reasonably and more efficiently determined or predicted by testing the chemical components). Congress left the complex issues associated with the testing of mixtures to the Administrator's discretion.

c. Legal standard regarding TSCA section 4(h).

TSCA section 4(h) requires EPA to reduce and replace the use of vertebrate animals in the testing of chemical substances or mixtures, to the extent practicable, scientifically justified, and consistent with the policies of TSCA. 15 U.S.C. 2603(h).

3. Legal standard regarding TSCA section 26.

TSCA section 26(h) requires EPA, in carrying out TSCA sections 4, 5, and 6, to make a decision using ''scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed in a manner consistent with the best available science,'' while also taking into account six considerations, including the relevance of information and any uncertainties. TSCA section 26(i) requires that decisions under TSCA sections 4, 5, and 6 be ''based on the weight of scientific evidence.'' Finally, TSCA section 26(k) requires that EPA consider reasonably available information in carrying out TSCA sections 4, 5, and 6.

II. Summary of the Section 21 Petition

A. What action was requested under TSCA section 21?

On January 26, 2023, EPA received a TSCA section 21 petition (Ref. 1) from Blueland, Plastic Pollution Coalition, and partners Beyond Plastics, Plastic Oceans International, The Shaw Institute, Lonely Whale, 5 Gyres, GAIA (Global Alliance for Incinerator Alternatives), Oceanic Global Foundation, The Last Beach Cleanup, Rio Grande International Study Center, Inland Ocean Coalition, Occidental Arts and Ecology Center, Turtle Island Restoration Network, Friends of the Earth, Surfrider, and Made Safe (petitioners) to initiate a rulemaking proceeding or issue an order under the authorities afforded to EPA under TSCA section 4(a)(1), compelling health and environmental effects tests under the TSCA on PVA and ''ultimately regulate PVA used in dishwasher and laundry pods and sheets as a toxic substance, pending the results from testing'' (Ref. 1, Pg. 11). This petition specifically requests a test order be issued to those manufacturers and processors of PVA who ''are part of the EPA Safer Choice Program, have products with the EPA Safer Choice certification, and who are seeking an EPA Safer Choice certification for pods or sheets products'' (Ref. 1, pg. 11). The petitioners request that EPA require the test order recipients to fund and conduct this testing under the guidance and direction of independent, third-party scientists.

B. What support did the petitioners offer for the TSCA section 21 request?

By referencing TSCA section 4(a)(1) the petitioners assert that EPA can direct manufacturers and/or processors to test a chemical substance or mixture if all three of the following findings are made:

- The manufacture, distribution in commerce, processing, use, or disposal of a chemical substance or mixture, or that any combination of such activities, may present an unreasonable risk of injury to health or the environment or is produced in substantial quantities and it enters or may reasonably be anticipated to enter the environment in substantial quantities or there is or may be significant or substantial human exposure to such substance or mixture;
- There is insufficient information and experience upon which the effects of such manufacture, distribution in commerce, processing, use, or disposal of such substance or mixture or of any combination of such activities on health or the environment can reasonably be determined or predicted; and
- Testing of such substance or mixture with respect to such effects is necessary to develop such information.

The petitioners assert that ''Given the potential for PVA to persist in the environment as a harmful plastic pollutant, this petition requests that the EPA require health and environmental safety tests under the Toxic Substances Control Act'' (Ref. 1, pg. 11). Although not explicitly stated, EPA interprets this assertion as indicating that the petitioners believe PVA may present an ''unreasonable risk of injury to health or the environment.'' Similarly, the petitioners provide estimates of the use of PVA-wrapped laundry pods in the United States (Ref. 1, pg. 3), which EPA interprets as an assertion that PVA is ''produced in substantial quantities.'' The evidence the petitioners provide for each assertion is detailed in the units that follow.

1. May present an unreasonable risk of injury to health or the environment or produced in substantial quantities.

a. May present an unreasonable risk of injury to health or the environment.

In support of the belief that PVA may present an unreasonable risk of injury to

health or the environment, the petitioners provide some references which specifically discuss PVA, while others focus generally on microplastics (Ref. 1, pg. 5–6). Based on the references provided, the petitioners conclude that ~75% of PVA from dishwasher and laundry pods persist through conventional wastewater treatment, passing into waterways and ecosystems beyond (Ref. 1, pg. 4 and 6). Petitioners claim that PVA could bioaccumulate and potentially absorb dangerous contaminants and move those contaminants up the food chain (Ref. 1, pg. 3 and 6). Although it is not explicitly stated, from these claims the Agency infers that the petitioners believe that PVA may present an ''unreasonable risk of injury to health or the environment.''

b. May be produced in substantial quantities.

The petitioners do not directly provide a statement indicating that they believe PVA is produced in ''substantial quantities'' as discussed in TSCA section 4(a)(1). Typically, substantial quantities are defined by EPA as any production in excess of one million pounds per year (Ref. 2, pg. 6). The petition states that ''. . . over 20 billion PVA wrapped laundry and dishwasher pods are used every year in the United States alone'' (Ref. 1, pg. 3). The petition also cites a study by Rolsky and Kelkar, which estimates that ''17,200 ± 5000 metric ton units per year (mtu/yr) of PVA are used . . . [in laundry detergent pods] in the United States'' (Ref. 3, pg. 1; see also Ref. 1, pg. 6). Although it is not explicitly stated, the Agency infers through the discussion of volumes of PVA used and the discussed widespread consumer uses of soluble PVA that the petitioners believe that the soluble PVA films used in detergent pods are produced in ''substantial quantities'' and ''there is or may be significant or substantial human exposure to such substance.''

2. Insufficiency of information and experience.

The petitioners assert, ''Further research is needed to determine the potential hazards that polluted PVA can pose to ecosystems and human health'' (Ref. 1, pg. 14). To support their assertion, the petitioners did not provide evidence of a literature search or data gap analysis. However, a literature review was conducted as part of the study by Rolsky and Kelkar (Ref. 3, pg. 3) related to the fate of PVA in wastewater treatment plants. The objective of this study was to estimate the US nationwide emissions of PVA resulting from domestic use of laundry and dish detergent pods corroborated by a nationwide, online consumer survey and a literature review of its fate within conventional wastewater treatment plants (WWTPs) (Ref. 3, pg. 1). As evidence of insufficient information and experience related to the effects of PVA on health and the environment, the petitioners reference the testing methods commonly used to establish biodegradability, including Organization for Economic Cooperation and Development (OECD) 301 and OECD 310 tests for Ready Biodegradability (Ref. 1, pg. 9). The petitioners believe that these testing procedures are insufficient to evaluate biodegradation in wastewater treatment plants and assert that there are ''critical gaps between the OECD tests and real-world WWTP conditions'' (Ref. 1, pg. 10). The petitioners assert that the established OECD testing methodologies are inadequate for the evaluation of the biodegradation of PVA due to the testing conditions differing from those present in a wastewater treatment plant (Ref. 1, pg. 9–10). The petitioners also assert that the elapsed time required for PVA to degrade in these tests is not being evaluated appropriately (Ref. 1, pg. 10).

3. Need for testing.

The petitioners claim that PVA poses unknown dangers to the environment, and further research is needed to understand PVA's ability to absorb and bioaccumulate dangerous contaminants up the food chain (Ref. 1, pg. 6). Additionally, the petitioners claim that the established OECD tests for inherent biodegradation are insufficient to determine if PVA poses a risk to human health and the environment (Ref. 1, pg. 10–12).

C. What additional information did EPA receive regarding the TSCA section 21 request?

As a result of this petition, Proctor and Gamble has made available to EPA previously unreleased tests related to the biodegradability and toxicity of the forms of PVA used in detergent pods and sheets. EPA has posted this information in the petition docket, which is available to the public for review online at *https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/tsca-section-21#polyvinyl.*

III. Disposition of Section 21 Response

A. What was EPA's response?

After careful consideration, EPA has denied the section 21 portion of this petition. A copy of the Agency's response, which consists of the letter to the petitioners and this document, is posted on the EPA petition website at *https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/tsca-section-21#reporting.* The response, the petition (Ref. 1), and other information is available in the docket for this TSCA section 21 petition (see **ADDRESSES**).

B. What was EPA's reason for this response?

In considering the petition within the statutory 90-day petition review period, EPA evaluated the information presented or referenced in the petition and considered that information in the context of the applicable authorities and requirements contained in TSCA sections 4, 21, and 26, as previously described in Unit I.C. of this document. Also, notwithstanding that the burden is on the petitioners to present ''the facts which it is claimed establish that it is necessary'' for EPA to initiate the rule or issue the order sought, EPA nonetheless evaluated relevant information that was reasonably available to the Agency during the 90-day petition review period.

EPA finds the petitioners have not provided the facts necessary for the Agency to determine that existing information and experience are insufficient and that testing of such substance or mixture with respect to such effects is necessary to develop such information. These deficiencies, among other findings, are detailed in this document.

1. May present unreasonable risk of injury to health or the environment or produced in substantial quantities.

EPA is not opining on the sufficiency of the information presented for purposes of determining whether PVA may present unreasonable risk because the Agency finds that petitioners have not provided the facts necessary for the Agency to determine that existing information and experience are insufficient and that testing with respect to such effects is necessary to develop such information, as described in more detail later in this document. However, EPA agrees that PVA is or will be produced in substantial quantities and that there is or may be significant or substantial human exposure due to its common use in agriculture, foodstuffs, cleaning, and personal-care products. 15 U.S.C. 2603(a)(1)(A)(ii)(I).

2. Insufficiency of information in the petition.

The petition does not set forth the facts necessary to demonstrate that there is ''insufficient information and experience'' on which the effects of PVA can reasonably be determined or predicted, as TSCA section 4(a)(1) requires.

Although the petitioners point to some evidence that there is insufficient

information on soluble versions of PVA commonly used in detergent pods and sheets, the information supplied by petitioners is only a sample of the information available on the health and environmental risks potentially associated with PVA. The petitioners primarily rely on a study that models the potential extent of biodegradation of soluble versions of PVA at wastewater treatment plants, and a limited number of additional studies related to PVA and microplastics. The petitioners also assert that, ''[m]any of the tests used to determine PVA's biodegradability rely on OECD standards for biodegradability. While OECD biodegradability standards can be an important tool to determine a material's end of life implications, in the case of PVA and current conditions within WWTPs, these tests are insufficient'' (Ref. 1, pg. 14). Petitioners rely on this assertion to claim that there is a data need for biodegradability of PVA in real world scenarios to inform EPA's understanding of health and environmental effects from PVA. However, as explained in further detail in the Unit V.B.1, the OECD biodegradation test conditions are more conservative than real world conditions in WWTPs and are appropriate tools for predicting biodegradation of PVA. The petitioners have not provided the facts to show that ''there is insufficient information and experience'' per TSCA section 4(a)(1)(A)(i)(II).

Furthermore, the petitioners failed to acknowledge the nature and extent of existing data and articulate why these data are insufficient. While the petitioners point to a single study that models the potential extent of biodegradation of soluble versions of PVA at wastewater treatment plants, and a limited number of additional studies related to PVA and microplastics, they do not refer to or provide an assessment of other reasonably available health and environmental effects studies completed on the soluble versions of PVA commonly used in detergent pods and sheets. EPA performed a cursory search of publicly available databases on the endpoints raised by the petition request (*i.e.,* biodegradation, toxicity, and bioaccumulation potential of PVA) and has found that there is, at a minimum, one study assessing the biodegradation of PVA using non-OECD test guidelines, as well as multiple studies—which were not identified or considered by the petitioner—on the toxicity and bioaccumulation potential of PVA available in the public domain. These studies include, but are not limited to, materials related to the approval of PVA as a food additive, approval for use in pharmaceutical products, and approval for use in medical appliances and devices, some of which are as follows:

- ''Review of the oral toxicity of polyvinyl alcohol (PVA)'' (Ref. 4) was published in the journal Food and Chemical Toxicology in March 2003. The study investigated the toxicity of PVA in association with its use as an indirect food additive and coating agent for pharmaceutical and dietary supplement products. The study concluded that orally administered PVA has low oral toxicity, is poorly absorbed from the gastrointestinal tract, does not bioaccumulate when administered orally, and is not mutagenic or clastogenic.
- ''Assessment of Toxicity and Biodegradability of Poly(vinyl alcohol) Based Materials in Marine Water'' (Ref. 5) was published in the journal Polymers in September 2021. This study characterizes the biodegradation and ecotoxicity of PVA polymers in marine environments. The results support the limited biodegradability of PVA materials under conditions representative of a natural marine environment but also concluded that none of the tested polymers pose a relevant risk to the model marine organism used in the studies.
- ''Final Report on the Safety Assessment of Polyvinyl Alcohol'' (Ref. 6) was published in The International Journal of Toxicity in 2003. In this study, PVA was evaluated by the Cosmetic Ingredient Review Expert Panel. The study included an assessment of general biology, toxicology, mutagenicity, carcinogenicity, and a clinical assessment of the safety of PVA. The CIR Expert Panel concluded that Polyvinyl Alcohol is safe for use in cosmetic formulations.
- The European Food Safety Authority (EFSA) released its ''Opinion of the Scientific Panel on Food Additives, Flavourings, Processing Aids and Materials in Contact with Food (AFC) related to the use of polyvinyl alcohol as a coating agent for food supplements'' in 2006. (Ref. 7). In this report, EFSA provides an evaluation of PVA as a food additive. The report included an assessment of an analysis of toxicological data, the reaction and fate of PVA in food, and exposure levels to PVA through ingestion in order to assess its safety for use in food supplements. The panel concluded that the consumption of the PVA through the use as a coating agent for food supplement tablets and/or capsules at its intended use level is not a safety concern.

Specific to the petitioner's claim that there is a data gap regarding the biodegradation endpoint because OECD guidelines fail to inform real world scenarios at WWTPs, the petitioners do not provide an inventory of other biodegradation data on PVA that could potentially address the purported data need. In addition to not identifying existing studies, the petitioners have not provided facts to show why such studies or other existing resources are insufficient to inform the characterization of biodegradation of PVA in the real world at WWTPs. Because EPA, upon a cursory review, has been able to easily identify existing, reasonably available information on PVA's biodegradation and toxicity potential not mentioned in the petition, the petitioners have failed in carrying their burden of setting forth facts which are necessary to demonstrate that there is insufficient information, thereby necessitating the requested action. The petitioners do not provide evidence that a literature search of publicly available information has been completed, have not included an analysis and characterization of the results of such a literature search, and have not provided an inventory of knowledge they claim is missing from the public domain, specifically the ''health and environmental safety tests'' they claim are needed because ''there is insufficient information and experience upon which the effects of such manufacture, distribution in commerce, processing, use, or disposal of such substance or mixture or of any combination of such activities on health or the environment can reasonably be determined or predicted'' per TSCA section 4(a)(1)(A)(i)(II).

EPA finds the petitioners have not incorporated available existing information related to their request, or adequately indicated that gaps were located for data needed in order for EPA to make a decision using the best available science. Such an evaluation is necessary for EPA to carry out TSCA section 4, as provided under TSCA section 26(h).

3. Testing of such substance or mixture with respect to such effects is necessary to develop such information.

No evidence of toxicity or bioaccumulation potential for the soluble form of PVA used in detergent pods and sheets has been presented in the petition to the extent necessary to warrant EPA initiating a TSCA section 4 action. The petitioners provide no further information identifying specific gaps in the data already available to the public, or why additional testing in lieu of other data generation methods, such

as modeling or using existing analog data as read across, is necessary under TSCA section 4(a)(1)(A). The petitioners' request for ''full environmental and human health tests on both untreated and treated PVA'' also lacks specificity. For example, the petitioner did not specify the relevant PVA Chemical Abstracts Service Registry Number (CASRN) or polymer structure required for testing. EPA notes that the PVA used in consumer products and industry varies based on polymer size, degree of hydrolysis, solubility, and other physical and chemical characteristics (Ref. 4, pg. 144). These PVA structures are represented by several different CASRNs. Therefore, any requested testing should provide detail on which specific chemical substance, or category of chemical substances, testing should be conducted. In addition, the petitioners could have presented information about the types of tests that could be conducted, including some analysis of the methods that could be used to identify the data or information submitted or used, hazard thresholds recommended, and exposure estimates. The need for more specificity regarding testing requirements and a failure to identify the PVA forms that may require additional testing and studies disallows sufficient evaluation of associated data necessary to determine the need for new testing.

EPA finds the petitioners have not explained why the testing requested, as compared to other testing or other data generation methods, would provide the quality of data being sought in order for EPA to make a decision using the best available science. Such an evaluation is necessary for EPA to carry out TSCA section 4, as provided under TSCA section 26(h).

4. Request for oversight by a third party.

Regarding the petitioners' request that testing be conducted only under the guidance and direction of independent third-party scientists, EPA finds that such an oversight arrangement is not in keeping with the authority provided under TSCA section 21. *See Ctr. for Envtl. Health, et al.* v. *EPA,* No. 7:22–CV–00073–M, slip op. at 25–26 (E.D.N.C. March 30, 2023). Additionally, the petition has not demonstrated a need for additional measures ensuring the reliability of studies required under TSCA section 4 beyond that already provided in the Good Laboratory Practice Standards in 40 CFR part 792, and the petitioners provide no legal, administrative, or organizational procedures for the implementation of such oversight. Therefore, the Agency has no obligation to grant or deny this request. All test orders must be planned and completed in a manner consistent with the best available science per TSCA section 26(h). To that end, EPA conducts reviews of all testing plans, reports, and test data to ensure the validity of results. When reviewing data in response to a TSCA section 4 test order, EPA is required to consider the extent to which information, procedures, measures, protocols, and methodologies or models employed are ''reasonable for and consistent with the intended use of the information.'' EPA also must consider, per TSCA section 26(i), the extent of independent verification and peer review and ''shall make decisions under sections 4, 5, and 6 based on the weight of the scientific evidence.''

C. What were EPA's conclusions under TSCA section 21?

EPA is denying the request to initiate a rule or issue an order under TSCA section 4 because the TSCA section 21 petition does not set forth the facts necessary for the Agency to determine that existing information and experience are insufficient and testing of such substances or mixture with respect to such effects is necessary to develop such information. Therefore, the petitioners have yet to demonstrate that the rule or order they requested is necessary.

Additionally, because the authorities provided to EPA under TSCA section 4 specifically relate to test rules, enforceable consent agreements, or orders issued directly to manufacturers and/or processors of a chemical substance, any requests made under section 4 that extend beyond those statutory authorities cannot be granted. Therefore, the petitioners' request for the EPA to require third-party oversight of PVA testing, paid for by manufacturers and/or processors is outside of the authorities provided in TSCA section 4.

IV. Administrative Procedure Act Petition

A. What action was requested under Administrative Procedures Act?

The petitioners also asked EPA to change the geometric color code indicating the status of PVA on the Safer Chemical Ingredients List (SCIL) from a green circle to a gray square until the health and environmental safety testing requested in the TSCA section 21 portion of the petition is complete (Ref. 1, pg. 13–14). EPA is responding to this portion of the petition under the APA.

B. What support and rationale do the petitioners offer for the APA request?

The petitioners define PVA as ''a synthetic, petroleum-derived polymer'' with many applications and commonly ''used as a plastic film in all dishwasher and laundry pods and sheets'' (Ref. 1, pg. 3). The petitioners state that PVA ''can contribute to plastic pollution in oceans, waterways and soil . . . and may negatively impact ecosystems and the food and water supply'' (Ref. 1, pg. 3), citing Rolsky and Kelkar (Ref. 3). The petitioners also suggest that PVA meets EPA's definition of a persistent, bioaccumulative, and toxic (PBT) substance (Ref. 1, pg. 13–14).

In support of their claims, the petitioners provide information on the persistence and bioaccumulation potential of PVA. The petitioners also address marketing claims by companies regarding the use of PVA in products. The petitioners' arguments on these topics are summarized in the units that follow.

1. Persistence of PVA.

The petitioners cite research that models PVA as it travels through a wastewater treatment plant. This modeling estimates that 77 percent of PVA remains intact after passing through conventional wastewater treatment (Ref. 3; see also Ref. 1, pg. 7–8). Based on these results, the authors suggest that the incomplete degradation of PVA results in the release of PVA into the aquatic environment through WWTPs effluent and the terrestrial environment through the application of biosolids (Ref. 3).

2. Bioaccumulation of PVA.

The petitioners posit that PVA has the potential to bioaccumulate (Ref. 1, pg. 13–14). The petitioners argue that PVA has the ability to carry toxic chemicals and carcinogens up the food chain and may be present in human breast milk (Ref. 1, pg. 6). EPA notes that the source materials in the references cited by the petitioners are specific to microplastics and not relevant to the types of PVA used in Safer Choice-certified products (Ref. 3; Ref. 8; Ref. 9).

3. Marketing claims of PVA.

The petitioners also describe marketing claims made in relation to use of PVA in products. The petitioners state that many brands market products containing PVA as '' '100% biodegradable' and or '100% plastic-free' . . . [which] can mislead consumers to think these products are better for the environment than they are'' (Ref. 1, pg. 14). The petitioners further request ''that the EPA Safer Choice program review claims about PVA through the lens of truth in

advertising to ensure that consumers have accurate information about PVA and its potential environmental impacts'' (Ref. 1, pg. 14).

C. What is EPA's Safer Choice program?

Safer Choice is a voluntary EPA program that certifies cleaning and other products made with ingredients that are safer for human health and the environment. Importantly, the Safer Choice program identifies safer ingredients by functional use within a product formulation and does not describe any chemicals, ingredients, or products as ''safe.'' EPA reviews every chemical within a product, regardless of use level, against the Safer Choice Standard and its applicable functional class criteria. Under the Safer Choice Standard, the Safer Choice criteria define data requirements and toxicity thresholds for a chemical to be considered low concern or best in class for a given functional use. Chemicals that meet EPA's Safer Choice criteria are eligible for listing on SCIL. The Safer Choice Standard also contains requirements (*e.g.,* use limits) for the chemical's use in a product or formulation.

EPA lists chemicals on the SCIL by CASRN. The CASRN-level listing of ingredients on SCIL is one tool that can help manufacturers as they formulate products with safer chemicals that may be eligible for Safer Choice certification. Manufacturers may not use chemicals from SCIL in Safer Choice-certified products unless those SCIL chemicals also meet the requirements of the Safer Choice Standard.

In some cases, a single CASRN may cover a broad range of chemical structures. For example, for a given polymer listing, a CASRN might cover a range of structures and chain lengths. Similarly, for a given surfactant listing, a single CASRN might cover varying degrees of ethoxylation and propoxylation. When considering a product for Safer Choice certification, EPA requires complete disclosure of the name(s), CASRN(s), and concentration(s) of all chemicals in a formulation. If a proposed formulation includes a SCIL chemical with a CASRN that covers a broad range of chemical structures, EPA also requires disclosure of the structure(s) under the CASRN associated with that chemical. EPA evaluates data associated with these specific structures and allows use of only chemicals with structures that meet both the Safer Choice Standard and criteria to be used in Safer Choice-certified products.

1. PVA applicability in the Safer Choice program.

The structure and function of PVA can vary depending on how the chemical is synthesized. PVA is generated by hydrolyzing polyvinyl acetate—converting acetates to alcohols—resulting in either partially hydrolyzed or fully hydrolyzed PVA. The extent of hydrolysis, polymer size, and monomer arrangement impart physical-chemical properties that impact the polymer's functionality, water solubility, degradation potential, and other characteristics.

Optimum solubility in cold water is typically observed in PVA with a degree of hydrolysis between 87 to 89 mole percent and molecular weights between 25,000 and 100,000 Daltons. In contrast, fully hydrolyzed, high-molecular-weight PVA is highly crystalline and insoluble in cold water (Ref. 10). Manufacturers choose the grade of PVA for a given product based on function and other properties. To facilitate this choice, manufacturers usually characterize PVA using properties linked to structure, such as degree of hydrolysis and viscosity.

The petitioners do not specify PVA by CASRN, structure, grade, or specification in the petition. The petitioners do state, however, that their request is targeted at ''PVA used in laundry and dishwasher detergent pods and sheets as these are product categories relevant to the EPA Safer Choice program'' (Ref. 1, pg. 1). Based on this description of the type of PVA of interest to the petitioners, EPA understands that the request to mark PVA with a grey square on the SCIL is specific to two relevant CASRNs listed on SCIL that cover chemicals used in Safer Choice-certified products. EPA relies on this understanding throughout the remainder of the response. On SCIL, the PVA polymeric structures of interest to the petitioners are represented under CASRN 25213–24–5 (preferred Chemical Abstract Index Name: Acetic acid ethenyl ester, polymer with ethenol) and CASRN 9002–89–5 (preferred Chemical Abstract Index Name: Ethenol, homopolymer). The PVA structures allowed in Safer Choice-certified products, and which support the CASRN listings on SCIL range from 87 to 89 mole percent hydrolyzed with an average molecular weight ranging from 70,000 to 215,000 Daltons. The Safer Choice program allows use of only the PVA structures represented under CASRN 25213–24–5 and CASRN 9002–89–5 that are also associated with data demonstrating the chemical(s) meet(s) the Safer Choice Standard and criteria.

2. Safer Choice Program criteria for polymers.

The Safer Choice Master- and Functional-Class Criteria, available at *https://www.epa.gov/saferchoice/safer-choice-standard,* documents allowable toxicity thresholds for ingredients that are acceptable for use in Safer Choice-certified products. Within ''functional classes,'' many ingredients share similar toxicological and environmental fate characteristics. Recognizing this similarity, the Safer Choice program was able to focus its criteria—and its ingredient review—on the environmental and health characteristics of concern within a functional class. This approach allows EPA to distinguish the safest chemicals in each functional class and allows manufacturers to use ingredients with lower hazard profiles while formulating high-performing products.

The criteria for polymers are listed in EPA's Safer Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals, available at *https://www.epa.gov/saferchoice/safer-choice-criteria-colorants-polymers-preservatives-and-related-chemicals,* and includes toxicological thresholds and data requirements polymers must meet to be eligible for use in Safer Choice-certified products. The following requirements in the criteria for environmental toxicity and fate endpoints are relevant to the petitioners' request:

- *Limitation on Persistent, Bioaccumulative and Toxic chemicals:* Acceptable chemicals must not be persistent (half-life >60 days), bioaccumulative (BCF/BAF ≥1,000), and aquatically toxic (LC/EC50 ≤10 mg/L or NOEC/LOEC ≤1 mg/L);
- *Limitation on very Persistent and very Bioaccumulative chemicals:* Acceptable chemicals must not be very persistent (half-life >180 days or recalcitrant) and very bioaccumulative (>5,000); and
- *Limitation on very Persistent and very Toxic chemicals:* Acceptable chemicals must not be very persistent (half-life >180 days or recalcitrant) and very aquatically toxic (LC/EC50 <1.0 mg/L or NOEC/LOEC <0.1 mg/L).

The Safer Choice criteria also requires polymers to be screened against authoritative lists (specified in EPA's Safer Choice Master Criteria, available at *https://www.epa.gov/saferchoice/safer-choice-master-criteria-safer-chemical-ingredients*) for acute mammalian toxicity, repeated dose toxicity, carcinogenicity, genetic toxicity, reproductive and developmental toxicity, neurotoxicity, respiratory sensitization, and skin sensitization. Acceptable polymers must have low concern characteristics. See EPA's Safer

Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals available at *https://www.epa.gov/saferchoice/safer-choice-criteria-colorants-polymers-preservatives-and-related-chemicals.*

When necessary, EPA reviews information on chemicals or suitable analogs against the criteria using a weight-of-evidence (WOE) approach. For this WOE approach, EPA prefers experimental data but also considers estimated measures of fate and toxicity from predictive tools that are based on a chemical's physical/chemical properties and structural and/or biological similarity to known chemicals of concern. EPA's Safer Choice Master Criteria, available at *https://www.epa.gov/saferchoice/safer-choice-criteria-colorants-polymers-preservatives-and-related-chemicals,* outlines preferred toxicological test methods for the data used in Safer Choice chemical reviews. The preferred test methods include OECD Guideline studies, which are accepted internationally by professionals in environmental advocacy groups, industry, academia, and government as standard methods for characterizing chemicals. These Guidelines are updated as needed to ensure they reflect the latest science and techniques, in consultation with experts from regulatory agencies, academia, industry, and environmental and animal welfare organizations, and available at *https://www.oecd-ilibrary.org/environment/oecd-guidelines-for-the-testing-of-chemicals_72d77764-en.* The preferred test methods also include EPA OPPT Test Guidelines that were developed in consideration of the guidelines published by the OECD, available at *https://www.epa.gov/test-guidelines-pesticides-and-toxic-substances.* Standardized methods and guidelines are essential for proper comparison of chemical hazard profiles and to identify those that are considered safer.

V. Disposition of the APA Portion of the Petition

A. What was EPA's response?

EPA has considered the evidence presented by petitioners and is denying the request to remove PVA from SCIL for two reasons: (1) The petition does not demonstrate that PVA fails to meet the Safer Choice criteria, and (2) The data cited and explained in this unit indicate that the PVA structures allowed for use in Safer Choice-certified products under the EPA Safer Choice Standard meet the criteria of the program. The petition cites five blogs and eight peer-reviewed journal articles. Most of these focus on the environmental impacts of microplastics rather than the soluble PVA used in Safer Choice-certified products. EPA identified additional peer-reviewed literature not discussed in the petition that is relevant to the PVA structures used in Safer Choice-certified products.

B. What was EPA's reason for this response?

The petitioners cite a portion of the Safer Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals and write that ''if a polymer does break down into PBTs, it should be excluded from the EPA Safer Chemical list [sic]'' (Ref. 1, pg. 13). ''PBT'' in this text stands for persistent, bioaccumulative, and toxic chemical substances (86 FR 894, January 6, 2021 (FRL–10018–88)). EPA will address the persistence, bioaccumulation, and toxicity endpoints individually and explain that the PVA used in Safer Choice-certified products is not a ''PBT'' in the units that follow.

1. Persistence of PVA.

The petitioners state that ''dissolved PVA enters WWTPs but ~75 percent exits WWTPs intact'' (Ref. 1, pg. 7). The referenced Rolsky paper more specifically references the potential for PVA to persist within the environment with an estimated 77 percent of PVA (61.2 percent via biosolid sludge and 15.7 percent via wastewater effluent) remaining intact after wastewater treatment (Ref. 3, pg. 10). The petitioners also state that ''in conventional WWTPs within the United States, specific PVA-adapted bacteria and microbes are needed to aid in the near to complete degradation of PVA, though they are not likely present'' (Ref. 3, pg. 7; see also Ref. 1, pg. 7).

The Rolsky and Kelkar study does not use measured data and instead estimates or models the WWTPs emission of PVA into the environment. Through the following examples, EPA explains why the study has limited relevance to the specific PVA polymer structures allowed for use in Safer Choice-certified products (Ref. 3).

A first example is that the model assumes low degradation efficiencies in WWTPs, with 20 percent biodegradation in aerobic sludge and 10 percent in anaerobic sludge. These values were taken from studies on PVA in textile wastewaters and highly crystalline starch and PVA blends used in food packaging materials (Ref. 11; Ref. 12). Blends such as these behave very differently from the soluble PVA structures used in detergent applications and are not used in Safer Choice-certified products.

A second example is the assumptions Rolsky and Kelkar (Ref. 3) make about microbial communities in WWTPs. The authors include summaries of studies with higher biodegradation values in supplementary Table S1, but disregard these values based on an assumption that PVA degrading bacterial species would only be found in textile wastewaters and would not be found in conventional WWTPs (Ref. 3, pg. 7). This is not a valid assumption. Recent standard ready biodegradation tests that use unacclimated inoculum show degradation of PVA, demonstrating that competent organisms are present in conventional WWTPs where the inocula are collected (Ref. 13; Ref. 14).

A third example relates to Rolsky and Kelkar's assumption about sorption of PVA to solids. The authors' model assumes a removal efficiency of 30 percent in the primary clarifier and 75 percent in the secondary clarifier based on sorption to biosolids (Ref. 3 and 15). EPA expects less sorption to solids for the specific PVA structures used in Safer Choice-certified products based on the physical-chemical properties of these water-soluble PVA structures (Ref. 16; Ref. 17).

In summary, Rolsky and Kelkar did not address a range of factors that are critical to the fate of PVA used in detergent films and PVA allowed in Safer Choice-certified products. These factors are associated with the structure of the chemical and include degree of polymerization, degree of hydrolysis, tacticity of the main chain (regular or irregular stereochemical configuration), ethylene content, and 1,2-glycol content (Refs. 3, 16; and 18).

The petitioners state that guideline ready biodegradation tests (*i.e.,* OECD 301 series and OECD 310) ''evaluate the biodegradability of PVA, typically in laboratories, under the most optimal circumstances [and] in real world scenarios within conventional WWTPs, neither the conditions in the lab nor the amount of time needed for PVA to fully biodegrade are likely to be met'' (Ref. 1, pg. 9). Guideline OECD tests for ready biodegradation and their EU and EPA equivalent tests are not intended to mimic WWTPs. Ready biodegradation tests are designed to be conservative screening tests, with conditions that reflect a compromise between ''real world'' scenarios and what is practical and economical to ensure consistency. Although the OECD 301 series tests were not significantly updated since 1992, they have undergone review by OECD, both in 1995 and 2006 (Ref. 19; Ref. 20).

Because ready biodegradation tests are not simulations of WWTPs, the test

duration and biodegradation time are not directly analogous to WWTP conditions. The test conditions in ready biodegradation tests are less optimized to promote biodegradation and therefore more conservative than real world conditions in WWTPs. Ready biodegradation test inoculum, which per the testing protocol are unacclimated, have microorganism cell densities that are up to 10,000 times less concentrated than in WWTPs, resulting in a higher food-to-microorganism ratio (Ref. 19; Ref. 21). Ready biodegradation tests are run for 14–28 days to encourage microbial population to acclimate and grow to a sufficient level before consumption of test substances (Ref. 20).

The Safer Choice Master Criteria states that the preferred testing methods for screening chemicals for persistence in the Safer Choice program are OECD Guideline tests for ready biodegradability. Compounds that pass ready biodegradation tests (*i.e.,* meet the designated pass levels, such as 70 percent removal of DOC, within the 28-day period of the test) are understood to be completely removed within WWTPs (Ref. 19, pg. 70; Ref. 22 and 23). The Agency acknowledges that degradation potential may vary by PVA structure and across different environments (*e.g.,* terrestrial vs. aquatic; WWTPs vs. textile and paper mill effluents) based on the presence of specific microorganisms. However, the claim that PVA ''does not fully biodegrade due to the conditions in most wastewater treatment plants'' (Ref. 1, pg. 4) (*i.e.,* lack of microorganisms adapted to PVA) is unlikely to be correct because PVA biodegradation in activated sludge inoculum is well supported and discussed later in this unit. The inoculum allowed in the OECD Guideline tests for ready biodegradation may be derived from activated sludge, unchlorinated sewage effluents, surface waters and soils, or a mixture of these sources, available at *https://www.oecd-ilibrary.org/environment/test-no-301-ready-biodegradability_9789264070349-en.* The OECD Guidelines allow for pre-conditioning of the inoculum to the experimental conditions (*e.g.,* aerating activated sludge in mineral medium or secondary effluent for 5–7 days at the test temperature), but do not allow for inoculum to be pre-adapted to the test substance (*i.e.,* PVA) (Ref. 20).

The Agency identified peer-reviewed literature using OECD Guideline studies (Ref. 14) showing PVA chemical structures used in laundry detergent packets are readily biodegradable. The study measured the persistence of four different PVA structures, with molecular weights ranging from 10,000–130,000 Daltons and degrees of hydroxylation of 79 mole percent and 88 mole percent, using OECD 301B Guidelines to determine ready biodegradability of the structures (Ref. 14). The inoculum used in the study was activated, non-adapted sludge collected from a WWTP receiving greater than 90 percent domestic sewage in Fairfield, OH. The results indicated that the four PVA structures showed greater than 75 percent CO_2 evolution after 28 days and greater than 87 percent CO_2 evolution after 60 days, demonstrating that these four materials met the OECD 301B Guideline pass levels and are considered readily biodegradable (Ref. 14). Additionally, the study tested the same four PVA structures, using the same type of inoculum described previously, following OECD 302B Guidelines to determine inherent biodegradability of the structures. The results indicated greater than 88 percent CO_2 evolution after 28 days, showing all four structures are also considered inherently biodegradable (Ref. 14). Furthermore, additional studies of detergent formulations and films containing PVA suggest ultimate biodegradation following OECD Guidelines and have half-lives less than 60 days (Ref. 13; Ref. 24).

According to the Safer Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals, for a chemical to be classified as persistent or as very persistent, the half-life must be greater than 60 days or greater than 180 days, respectively. EPA notes that chemicals that pass ready biodegradation tests are projected to have half-lives of a few hours in sewage treatment plant sludges and half-lives of a few days in water (Ref. 25). EPA has reviewed the available modeled and experimental data, and EPA believes that the weight of the scientific evidence supports EPA's determination that the PVA structures used in Safer Choice certified products have a half-life of less than 60 days (*i.e.,* does not meet the criterion to be classified as persistent or very persistent). Thus, the data supports the continued listing of PVA CASRN 25213–24–5 and CASRN 9002–89–5 on SCIL.

2. Bioaccumulation of PVA.

Bioaccumulation describes a process by which an organism accumulates chemical substances across various routes of exposure. Bioaccumulation is typically evaluated using the Bioaccumulation Factor (BAF). The Bioconcentration Factor (BCF) can be used as part of a weight-of-evidence approach when BAF information is not available. EPA's Safer Choice program classifies chemicals with BCF or BAF value greater than 1000 as bioaccumulative, as listed on the Safer Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals at *https://www.epa.gov/saferchoice/safer-choice-criteria-colorants-polymers-preservatives-and-related-chemicals.* Water solubility is factored into BAF and BCF calculations. Chemicals with high water solubility have an affinity to remain in water versus bioconcentrating and bioaccumulating in biota (Ref. 26).

The petitioners contend that PVA can bioaccumulate, but do not provide any evidence on specific PVA structures relevant to the Safer Choice program (Ref. 1, pg. 6 and 9). In a Guideline bioaccumulation study conducted by Japan's National Institute of Technology and Evaluation (NITE), researchers exposed Rice fish (Oryzias latipes) to two concentrations of a PVA structure (MW approximately 77,000 Daltons, reported to be water soluble, and in the range of PVA types used in detergent film applications) dissolved in the test water for 6 weeks (Ref. 27). NITE performed the study using guidelines that measured the concentration of the PVA substance in test water and in the fish to calculate the steady state BCF. The results demonstrate a BCF value less than 10 for both concentrations, which provides strong evidence that water soluble PVA structures have low concern for bioaccumulation and invalidates the petitioners' contention.

The petitioners submitted two biomonitoring studies identifying microplastics in human breast milk and placenta (Ref. 8; and 28). Both studies included compositional analyses that classify the types of microplastics found in these tissues, and noted the presence of primarily polyethylene, polypropylene, polyvinyl chloride, and plastic additives such as pigments. Ragusa *et al.* (Ref. 8) also found that PVA accounted for 2 percent of the total microplastic composition and that ''no films or fibres were identified'' in breast milk. While these results demonstrate the presence of insoluble microplastics in human tissue, they do not indicate bioaccumulation of water soluble PVA structures. As noted in the previous section, the PVA structures used in Safer Choice-certified detergent products are highly water-soluble, have low potential to bioaccumulate in biota, and do not meet the European Chemicals Agency's (ECHA) definition of a microplastic. The ECHA describes microplastics as insoluble and nonbiodegradable solid particles measuring less than 5 mm (Ref. 29).

3. Potential for PVA to mobilize and transport other pollutants.

The petitioners also state that PVA may act as a vector to adsorb heavy metals and other pollutants (Ref. 1, pg. 9). Studies referenced in Rolsky and Kelkar report increased sorption of other pollutants in degraded solid microplastics (Refs. 3, 30; and 31). The authors state degraded microplastics may have a greater affinity for sorption to other pollutants, resulting in increased mobility of contaminants. Degraded microplastics may sorb other pollutants through various mechanisms such as through the formation of surface defects on the degraded microplastic particles that can trap other pollutants, or through an increase in the number of polar functional groups on the particle surfaces, which can enhance interactions with other polar pollutants (Ref. 30; Ref. 31). The petitioners' references are specific to microplastics and not relevant to soluble PVA structures in the Safer Choice program.

The petitioners argue that PVA also has the potential to ''mobilize heavy metals from sediments to water resources'' (Ref. 1, pg. 14). Rolsky and Kelkar's statement is based on evidence of PVA-based composite hydrogels removing heavy metals from wastewater (Ref. 3 and 32). Additives used in PVA-based blends, such as PVA-based composite hydrogels, can influence the sorption and bioaccumulation potential of PVA structures by altering the overall physical-chemical properties of the ingredient. EPA's Safer Choice program classifies a PVA-based composite hydrogel as an ingredient (made up of multiple chemicals). EPA organizes SCIL by CASRNs and does not include ingredients. For product certification, the Safer Choice program reviews every chemical within an ingredient (*e.g.,* impurities, residuals, stabilizers, etc.), regardless of use level, against the Safer Choice Standard, available at *https://www.epa.gov/saferchoice/safer-choice-standard,* and applicable functional class criteria. All components of an ingredient must meet the Safer Choice Standard and criteria to be used in Safer Choice-certified products. PVA-based composite hydrogels have never been reviewed for certification by the Safer Choice program and are different from and not relevant to the PVA structures and applications (*e.g.,* detergent packets) in question for this petition.

The petitioners' concerns over bioaccumulation and transport of other pollutants up the food chain appear to be based on microplastic pollution research with the assumption that PVA will degrade into microplastics. The PVA structures used in detergent films in Safer Choice-certified products do not degrade into microplastics; rather they degrade via successive oxidation and cleavage steps, producing shorter hydroxy, carboxy, and carbonyl-substituted products that are also water soluble (Ref. 13).

4. Toxicity of PVA.

The petitioners state that PVA ''can contribute to plastic pollution'' and that ''plastic pollution can inflict substantial harm to aquatic and marine environments'' (Ref. 1, pg. 3 and 5).

In addition to persistence and bioaccumulation, the Safer Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals require toxicity data on aquatic organisms and human health to be considered for the Safer Choice program. The petitioners argue that the requirements in the criteria—*i.e.,* that a polymer must not break down into PBT substances—are not met for PVA and therefore should be excluded from the SCIL (Ref. 1, pg. 14). While the petitioners do not provide environmental and human health toxicity data relevant to the endpoints listed in the Safer Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals in the petition, to substantiate these statements, the Agency believes there is sufficient toxicity information available on PVA structures used in Safer Choice-certified products to meet the program's criteria for low concern.

a. Aquatic toxicity of PVA.

The Agency identified toxicity studies measuring the effects on aquatic organisms of the subset of PVA structures that are used in detergent packets. Meier *et al.* (Ref. 24) performed aquatic toxicity testing using a raw material based on PVA that is a component of a liquid laundry detergent formulation. Additional information on the structures was not provided in the publication and the Agency is unable to confirm the PVA-based material is a film. The results indicated the potential for high concern for algal toxicity (EC50 = 1–10 mg/L based on an OECD 201 guideline study) and high concern for invertebrate toxicity (IC50 = 1–10 mg/L based on an OECD 202 guideline study) (Ref. 24).

The Agency has also reviewed aquatic toxicity data from companies to support the weight-of-evidence approach for the Safer Choice program's evaluation of the PVA structures. Proctor and Gamble (P&G) submitted supporting data on PVA structures used in their detergent films (molecular weight of 130,000 Daltons with 88 mole percent degree of hydrolysis) to EPA after this petition was filed. While the P&G PVA films are not Safer Choice-certified, the structures of the PVA in these films are relevant to the films used in Safer Choice-certified products. The data included an acute fish embryo toxicity study following OECD 236 Guidelines, an acute algal inhibition assay following OECD 201 Guidelines, and an acute invertebrate study following OECD 202 Guidelines on a PVA structure used in P&G detergent packets. The 96-hour algal inhibition study demonstrated no effects on growth or biomass at concentrations greater than 100 mg/L in Raphidocelis subcapitata. The 48-hour invertebrate study demonstrated no effects on mortality, resulting in an EC50 >100 mg/L. These results suggest low potential for algal and invertebrate aquatic toxicity, which differs from the results reported by Meier *et al.* (2013) (Ref. 24). The 96-hour Danio rerio fish embryo toxicity study submitted by P&G demonstrated an LC50 >100 mg/L.

Another supplier submitted an acute toxicity test to the Safer Choice program. This acute toxicity test on freshwater fish followed OECD 203 guidelines and demonstrated low aquatic toxicity for a PVA film used in Safer Choice-certified products. Guideline studies are available for PVA structures used in detergent film used in both Safer Choice certified products and other products across multiple suppliers. These studies suggest variable aquatic toxicity for algae and invertebrate, and low toxicity for fish. Note that the Meier study showing toxicity for PVA does not include details on the specific PVA structure tested. We have included consideration of these results to be conservative in our weight of the scientific evidence approach.

b. Human health toxicity of PVA.

PVA does not carry an EU Hazard or Risk Phrase for any of the human health endpoints identified in Safer Choice criteria and is not included on authoritative lists as a known or suspected carcinogen, mutagen, or reproductive toxicant. Additionally, for applications in pesticide formulations used for food animals, including polyvinyl acetate-polyvinyl alcohol copolymers with MW >50,000 daltons used in water soluble film, EPA established a pesticides tolerance exemption on the basis that PVA was poorly absorbed, showed a lack of carcinogenic effects, and was cleared as a food additive (59 FR 76, April 20, 1994 (FRL–4769–6)). While data is limited, human health hazards for PVA structures used in Safer Choice certified are not expected based on read across to other PVA structures.

5. EPA's Safer Choice evaluation of persistence, bioaccumulation, and toxicity endpoints for polymers.

To meet the Safer Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals, a chemical must not be ''persistent, bioaccumulative and toxic'', ''very persistent and very toxic'', or ''very persistent and very bioaccumulative'', available at *https://www.epa.gov/saferchoice/safer-choice-criteria-colorants-polymers-preservatives-and-related-chemicals.* In Unit IV.B., the Agency provides evidence that the PVA structures listed on SCIL do not meet the criteria to be considered ''persistent'', ''very persistent'', ''bioaccumulative'', or ''very bioaccumulative.'' Two of the three conditions (persistence and bioaccumulation) that must be met for a chemical to be characterized as a ''PBT'' are not met by the subset of PVA structures used in Safer Choice-certified products. Therefore, these structures do not meet the criteria to be classified as an ''PBT'' chemical. If only the most conservative aquatic toxicity data were considered (Meier *et al.* (2013) (Ref. 24), the PVA structures would be classified as ''toxic'' (characterized by an LC/EC50 values less than 10 mg/L) to algae and invertebrates, but still meet Safer Choice criteria due to the mitigation of aquatic toxicity through rapid biodegradation. These aquatic toxicity values do not meet the criteria for ''very toxic'' (characterized by an LC/EC50 value less than 1 mg/L). As a result, the PVA structures that form the basis for listing on the SCIL and are used in Safer Choice-certified products also do not meet the criteria of ''very persistent and very toxic.'' The weight of evidence for environmental toxicity and fate demonstrates that PVA meets the Safer Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals.

6. Marketing claims of PVA.

The petition finally requests ''the EPA Safer Choice program review claims about PVA through the lens of truth in advertising to ensure that consumers have accurate information about PVA and its potential environmental impacts'' (Ref. 1, pg. 14). As part of the Safer Choice product submission, companies must provide complete ingredient disclosures and product labels for review. Safer Choice evaluates environmental marketing claims on the proposed product label and website, encouraging partners to comply with Federal Trade Commission (FTC) Guidelines. Any language or claims made on or associated with Safer Choice-certified products are subject to FTC regulations and must be supportable. Under the Green Guides, the FTC recognizes that marketers make unqualified degradability claims, which are prohibited unless they have ''competent and reliable scientific evidence that the entire product or package will completely break down and return to nature within a reasonably short period of time after customary disposal,'' typically one year (Ref. 33). When certifying products, EPA does not substantiate label claims unless they are supported by the Safer Choice Standard. Examples of claims generally not substantiated by the standard include ''environmentally safe,'' ''100 percent biodegradable,'' or ''100 percent plastic-free.'' EPA requests that partners remove such claims from the product and marketing materials before EPA grants a Safer Choice certification.

Additionally, the petitioner states, ''PVA is currently on the Safer Choice Program's Safer Chemicals Ingredients List with a green circle, suggesting to consumers that the PVA plastic film encasing laundry and dishwasher pods is safe for people and the environment, and does not have any adverse impacts on the planet'' (Ref. 1, pg. 4). The Safer Choice program uses the Safer Choice Standard and relevant criteria to identify ingredients that are safer for their functional use within a product formulation and does not use the term ''safe'' to describe any chemicals, ingredients, or products.

C. What are the conclusions under the APA portion of the petition?

EPA evaluated the information presented in the APA portion of this petition and identified additional information relevant to the PVA structures allowed for use in Safer Choice-certified products and that form the basis for listing on SCIL. The clear weight of the evidence presented in this **Federal Register** notice demonstrates that the PVA structures allowed in Safer Choice-certified products meet the Safer Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals. Specifically, the PVA structures in Safer Choice-certified products that are the subject of this petition are not ''PBT'' substances, ''very persistent and very bioaccumulative'' substances, or ''very persistent and very toxic'' substances, and are expected to be of low concern for human health. The Agency therefore denies the request in the APA portion of this petition to change the status of PVA on the SCIL. The petition did not provide adequate information to demonstrate that the PVA structures used in Safer Choice-certified products and that form the basis for listing on SCIL do not meet the Safer Choice Criteria for Colorants, Polymers, Preservatives, and Related Chemicals, in light of the evidence supporting such use and listing identified by EPA.

While EPA is denying the APA portion of this petition, EPA does appreciate the petitioners' concerns, especially related to plastic pollution and microplastics. Past efforts for transparency relevant to the concerns stated by the petitioners are reflected in the Safer Chemical Ingredients List. SCIL includes a caveat for polymers as follows: ''Note for Polymers: The hazard profile of a polymer varies with its structure. Manufacturers using CAS numbers in this functional class may need to provide additional information for Safer Choice review'', available at *https://www.epa.gov/saferchoice/safer-ingredients#searchList.*

VI. References

The following is a listing of the documents that are specifically referenced in this document. The docket includes these documents and other information considered by EPA, including documents that are referenced within the documents that are included in the docket, even if the referenced document is not physically located in the docket. [Docket DARS–2023–0017]

RIN 0750–AL14

Defense Federal Acquisition Regulation Supplement: Consolidation of DoD Government Property Clauses (DFARS Case 2020–D029)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule.

SUMMARY: DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to consolidate existing contract clauses for the management and reporting of Government property into a single contract clause, to replace references to legacy software applications used for reporting Government property within the DoD enterprise-wide eBusiness

platform, and to convert existing form-based processes into electronic processes within that platform.

DATES: Comments on the proposed rule should be submitted in writing to the address shown below on or before June 26, 2023, to be considered in the formation of a final rule.

ADDRESSES: Submit comments identified by DFARS Case 2020–D029, using any of the following methods:

○ *Federal eRulemaking Portal: https://www.regulations.gov.* Search for ''DFARS Case 2020–D029.'' Select ''Comment'' and follow the instructions to submit a comment. Please include ''DFARS Case 2020–D029'' on any attached documents.

○ *Email: osd.dfars@mail.mil.* Include DFARS Case 2020–D029 in the subject line of the message.

Comments received generally will be posted without change to *https://www.regulations.gov,* including any personal information provided. To confirm receipt of your comment(s), please check *https://www.regulations.gov,* approximately two to three days after submission to verify posting.

FOR FURTHER INFORMATION CONTACT: Heather Kitchens, telephone 571–296–7152.

SUPPLEMENTARY INFORMATION:

I. Background

DoD is proposing to amend the DFARS to consolidate contract clauses related to management and reporting of Government property, update references to certain forms that are being incorporated into electronic processes, and update references to applications used to report receipt, shipment, transfer, or loss of Government property, or excess Government property. DoD developed the Government-furnished property (GFP) module within the Procurement Integrated Enterprise Environment (PIEE) to house the GFP life-cycle reporting requirements to provide end-to-end accountability for all GFP transactions within a single, secure, integrated system, while employing enhancements in technology to reduce burden on the public and the Government.

There are no changes to the Government property data that contractors are required to report; only the application used to submit the information is changing. The GFP module application is based upon newer technology that will provide contractors with a much more efficient process to submit data for their reports. For instance, contractors will not be required to enter the same data into multiple fields; the system will automatically populate data fields throughout the process. By creating a single tool for all reporting of Government property, data can be readily accessed across various processes, thereby reducing contractor input and errors while enabling traceability across the Government property life cycle.

II. Discussion and Analysis

This proposed rule would remove four DFARS clauses and consolidate their requirements into a single clause at DFARS 252.245–70XX, Management and Reporting of Government Property. The four clauses being removed, and related text for those clauses, are as follows:

a. DFARS clause 252.211–7007, Reporting of Government-Furnished Property. Upon removal of this clause, the associated policy at DFARS 211.274–4, Policy for reporting of Government-furnished property, is no longer applicable and is removed. The removal of 211.274–4 necessitates redesignating subsequent sections. Removal of the clause prescription at 211.274–6(b) results in the redesignation of the subsequent paragraph. DFARS clause 252.211–7007 is also removed from section 212.301, Solicitation provisions and contract clauses for the acquisition of commercial products and commercial services.

b. DFARS clause 252.245–7001, Tagging, Labeling, and Marking of Government-Furnished Property, is removed along with the associated clause prescription at 245.107(3).

c. DFARS clause 252.245–7002, Reporting Loss of Government Property, is removed along with the associated clause prescription at 245.107(4).

d. DFARS clause 252.245–7004, Reporting, Reutilization, and Disposal, is removed along with the associated clause prescription at 245.107(6).

The new consolidated DFARS clause, 252.245–70XX, Management and Reporting of Government Property, instructs contractors to use the GFP module in the PIEE instead of legacy applications when reporting receipt, shipment, transfer, or loss of Government property, and for reporting excess property. A new prescription for this proposed clause is at DFARS 245.107(4). The clause is also added to DFARS 212.301 for use in DoD solicitations and contracts using FAR part 12 procedures for the acquisition of commercial products and commercial services.

At DFARS 245.102, Policy, a reference in paragraph (2) is updated; and in paragraph (5) the paragraph heading is changed to ''Reporting Government property'', and guidance is added concerning the new clause 252.245–70XX to replace the obsolete guidance for clause 252.245–7002, which is removed. At 245.103–72, Government-furnished property attachments to solicitations and awards, updated guidance is provided for using GFP attachments in acquisitions.

DFARS 245.201–70, Definitions, provided a cross-reference to DFARS Procedures, Guidance, and Information (PGI) 245.201–70 that is no longer needed; therefore, the section is removed. As a result, section 245.201–71 is redesignated as 245.201–70.

DFARS 245.604–1, Sales procedures, for the sale of surplus personal property is updated. This DFARS section supplements Federal Acquisition Regulation (FAR) 45.604–1, which states that sales shall be in accordance with the policy for the sale of surplus property contained in the Federal Management Regulation (41 CFR part 102–38) and that agencies may specify implementing procedures. The implementing procedures at DFARS 245.604–1 are revised to align two sales procedures terms with 41 CFR 102–38 to reflect ''invitation for bid'' and ''negotiated sales'' in lieu of ''informal bid procedures'' and ''noncompetitive sales.'' Sales procedures for the contractor are addressed in DFARS clause 252.245–70XX.

Subpart 245.70, Plant Clearance Forms, is no longer needed and is removed and reserved. DD Form 1149, Requisition and Invoice Shipping Document; DD Form 1348–1, DoD Single Line Item Release/Receipt Document; and DD Form 1640, Request for Plant Clearance, have been converted from form-based processes into electronic processes within the GFP module and are addressed in the new clause 252.245–70XX. Coverage for the SF–97, Certificate of Release of a Motor Vehicle (Agency Record Copy), and the DD form 1641, Disposal Determination Approval, is relocated to DFARS PGI 245.602–70. As a result of addressing these forms in DFARS PGI and in the new clause, DFARS subpart 245.70, Plant Clearance Forms, is no longer needed and is removed.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT) and for Commercial Services and Commercial Products, Including Commercially Available Off-the-Shelf (COTS) Items

This proposed rule includes a new DFARS contract clause 252.245–7XXX, Management and Reporting of

Government Property. The clause at DFARS 252.245–7XXX is prescribed at DFARS 245.107(4) for use in solicitations and contracts containing the clause at FAR 52.245–1, Government Property. The new clause 252.245–7XXX is applicable to acquisitions at or below the SAT and to acquisitions of commercial products and commercial services when the contract contains the clause at FAR 52.245–1. For DoD, the FAR clause 52.245–1 is required to be used in all purchase orders for repair, maintenance, overhaul, or modification of Government property regardless of the unit acquisition cost of the items to be repaired. These purchase orders are likely to fall under the SAT. Not applying this clause to contracts below the SAT and for the acquisition of commercial products, including COTS items, and commercial services would exclude contracts intended to be covered by this rule and undermine the overarching purpose of the rule. Consequently, DoD plans to apply the rule to contracts at or below the SAT and to those for the acquisition of commercial products, including COTS items, and commercial services.

IV. Expected Impact of the Rule

The proposed rule consolidates the requirements for Government property reporting from multiple DFARS contract clauses into a single DFARS clause, reflecting the move of this activity into a single integrated eBusiness platform. This change will improve the ability of contractors and the Government to access and use the data across the Government property life cycle. The technical enhancements of the PIEE GFP Module allow for importing data, which will substantially reduce the reporting burden on DoD contractors while improving the accuracy of information. The PIEE GFP Module further enables DoD to consolidate and electronically share data about Government property in the possession of contractors, thereby improving accountability and auditability.

V. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993.

VI. Regulatory Flexibility Act

DoD does not expect this proposed rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because the rule is not creating any new requirements for contractors. However, an initial regulatory flexibility analysis has been performed and is summarized as follows:

DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to consolidate existing contract clauses for the management and reporting of Government property into a single DFARS clause, eliminate some form-based reporting by providing an electronic equivalent, and replace references to legacy software applications used for the reporting of Government property with updated language directing the Government and contractors to utilize the Procurement Integrated Enterprise Environment (PIEE) Government-furnished property (GFP) Module within the DoD enterprise-wide eBusiness platform. DoD developed the GFP module within the PIEE to house the GFP life-cycle reporting requirements, thus providing end-to-end accountability for all GFP transactions within a single, secure, integrated system. Use of the PIEE GFP Module capitalizes on technological enhancements and reduces burden on the public and the Government.

The objective of the rule is to create more efficient instructions for reporting Government property by consolidating reporting requirements for Government property. The proposed rule transitions instructions for property reporting from multiple stand-alone, legacy software applications to the PIEE GFP Module, a fully integrated, DoD enterprise-wide eBusiness platform. Use of the new system functionality will enable DoD to address numerous audit findings and security concerns. The legal basis for the rule is 41 U.S.C. 1303.

This proposed rule will likely affect some small business concerns that are provided Government-furnished property in the performance of their contracts. Data generated from the Federal Procurement Data System for fiscal years 2019 through 2021 indicates that, on average, 2,022 unique small entities per year received awards with Government property that would be subject to this proposed rule.

The proposed rule does not impose any new reporting, recordkeeping, or compliance requirements. The replacement application used for reporting is intended to maintain the status quo regarding the information to be reported and to reduce compliance requirements due to the technological advances in the PIEE GFP Module.

This proposed rule does not duplicate, overlap, or conflict with any other Federal rules. There are no practical alternatives available to meet the objectives of the rule.

DoD invites comments from small business concerns and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2020–D029), in correspondence.

VII. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. chapter 35) applies. The proposed rule contains information collection requirements under the new consolidated DFARS clause 252.245–70XX, Management and Reporting of Government Property. Accordingly, DoD has submitted a request for approval of a revised information collection requirement for 0704–0246, DFARS part 245, Government Property, to the Office of Management and Budget (OMB).

As a result of the consolidation of Government-furnished property reporting requirements under a single contract clause, 252.245–70XX, two associated OMB Control Numbers will be discontinued, as the reporting requirements are included in the revised request for OMB Control Number 0704–0246. The OMB Control Numbers to be discontinued are 0704–0398, DFARS Part 211, Describing Agency Needs and related clause at 252.211; and 0704–0557, DFARS Part 245, Use of the Government Property Clause for Repair of Government-furnished Property. Upon approval of the revisions to OMB Control Number 0704–0246 and publication of the final rule for this case, OMB Control Numbers 0704–0398 and 0704–0557 will be discontinued.

The following sets forth the revised information collection request for OMB Control Number 0704–0246:

A. Estimate of Public Burden

Public reporting burden for this collection of information is estimated to average 0.1 hour per response, including the time for reviewing instructions,

searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

The annual reporting burden estimated as follows:

Respondents: 3,513.

Total annual responses: 454,184.

Total response burden hours: 47,659.

B. Request for Comments Regarding Paperwork Burden

Written comments and recommendations on the proposed information collection, including suggestions for reducing this burden, should be submitted within 60 days to *https://www.regulations.gov.* Public comments are particularly invited on: whether this collection of information is necessary for the proper performance of functions of the DFARS, and will have practical utility; whether DoD's estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

To obtain a copy of the supporting statement and associated collection instruments, please email *osd.dfars@mail.mil.* Include DFARS Case 2020–D029 in the subject line of the message.

List of Subjects in 48 CFR Parts 211, 212, 245, and 252

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, 48 CFR parts 211, 212, 245, and 252 are proposed to be amended as follows:

■ 1. The authority citation for 48 CFR parts 211, 212, 245, and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 211—DESCRIBING AGENCY NEEDS

211.274–4 [Removed]

■ 2. Remove section 211.274–4.

211.274–5 and 211.274–6 [Redesignated as 211.274–4 and 211.274–5]

■ 3. Redesignate sections 211.274–5 and 211.274–6 as sections 211.274–4 and 211.274–5, respectively.

211.274–5 [Amended]

■ 4. Amend the newly redesignated section 211.274–5 by—

■ a. Redesignating paragraphs (a)(1), (2), and (3) as paragraphs (a) introductory text and (a)(1) and (2), respectively;

■ b. Removing paragraph (b); and

■ c. Redesignating paragraph (c) as paragraph (b).

PART 212—ACQUISITION OF COMMERCIAL PRODUCTS AND COMMERCIAL SERVICES

■ 5. Amend section 212.301—

■ a. In paragraph (f)(iv)(A) by removing ''211.274–6(a)(1)'' and adding ''211.274–5(a)'' in its place;

■ b. By removing paragraph (f)(iv)(B);

■ c. By redesignating paragraph (f)(iv)(C) as paragraph (f)(iv)(B);

■ d. In the newly redesignated paragraph (f)(iv)(B) by removing ''211.274–6(c)'' and adding ''211.274–5(b)'' in its place;

■ e. Redesignating paragraphs (f)(xviii) and (xix) as paragraphs (f)(xix) and (xx), respectively; and

■ f. Adding a new paragraph (f)(xviii).

The addition reads as follows:

212.301 Solicitation provisions and contract clauses for the acquisition of commercial products and commercial services.

* * * * *

(f) * * *

(xviii) *Part 245—Government Property.* Use the clause at 252.245–70XX, Management and Reporting of Government Property, as prescribed in 245.107(4).

* * * * *

PART 245—GOVERNMENT PROPERTY

■ 6. Amend section 245.102:

■ a. By revising paragraph (2);

■ b. In the paragraph (4) heading and paragraphs (4)(i) and (4)(ii)(A) by removing ''Government-furnished property'' and adding ''GFP'' in their places, respectively; and

■ c. By revising paragraph (5).

The revisions read as follows:

245.102 Policy.

* * * * *

(2) *Government supply sources.* When a contractor will be responsible for preparing requisitioning documentation to acquire Government-furnished property (GFP) from Government supply sources, include in the contract the requirement to prepare the documentation in accordance with Volume 2 of the Defense Logistics Manual (DLM) 4000.25, Military Standard Transaction Reporting and Accounting Procedures (MILSTRAP). Copies are available from the address cited at PGI 251.102.

* * * * *

(5) *Reporting Government property.* It is DoD policy that all Government property be reported in the GFP module or Wide Area WorkFlow module of the Procurement Integrated Enterprise Environment (PIEE) as required by the clause at 252.245–70XX, Management and Reporting of Government Property.

■ 7. Revise section 245.103–72 to read as follows:

245.103–72 Government-furnished property attachments to solicitations and awards.

When performance will require the use of GFP, contracting officers shall include the GFP attachment to solicitations and awards. See PGI 245.103–72 for links to the formats and procedures for preparing the GFP attachment.

■ 8. Amend section 245.107 by—

■ a. Removing paragraphs (3), (4), and (6);

■ b. Redesignating paragraph (5) as paragraph (3); and

■ c. Adding a new paragraph (4).

The addition reads as follows:

245.107 Contract clauses.

* * * * *

(4) Use the clause at 252.245–70XX, Management and Reporting of Government Property, in solicitations and contracts, including solicitations and contracts using FAR part 12 procedures for the acquisition of commercial products and commercial services, that contain the clause at FAR 52.245–1, Government Property.

245.201–70 [Removed]

■ 9. Remove section 245.201–70.

245.201–71 [Redesignated as 245.201–70]

■ 10. Redesignate section 245.201–71 as 245.201–70 and revise it to read as follows:

245.201–70 Security classification.

Follow the procedures at PGI 245.201–70 for security classification.

■ 11. Amend section 245.604–1—

■ a. In paragraph (1) by removing ''(formal or informal sales)'';

■ b. By revising the paragraph (2) heading;

■ c. In paragraph (3)(ii) by removing ''252.245–7004, Reporting, Reutilization, and Disposal'' and adding ''252.245–70XX, Management and Reporting of Government Property'' in its place;

■ d. In the paragraph (4) heading and paragraphs (4)(i) introductory text and (4)(ii) by removing ''Noncompetitive'' and adding ''Negotiated'' in its place

wherever it appears and in paragraph (4)(iii) introductory text by removing ''noncompetitive'' and adding ''negotiated'' in its place; and

■ e. In paragraph (5) by removing ''Implementation of Trade Security Controls'' and adding ''Implementation of Trade Security Controls (TSCs) for Transfers of DoD Personal Property to Parties Outside DoD Control'' in its place.

The revision reads as follows:

245.604–1 Sales procedures.

* * * * *

(2) *Invitation for bid procedures.*

* * *

* * * * *

Subpart 245.70 [Removed and Reserved]

■ 12. Remove and reserve subpart 245.70 consisting of sections 245.7001 and 245.7001–1 through 245.7001–6.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

252.211–7003 [Amended]

■ 13. Amend section 252.211–7003 introductory text by removing ''211.274–6(a)(1)'' and adding ''211.274–5(a)'' in its place.

252.211–7007 [Removed and Reserved]

■ 14. Remove and reserve section 252.211–7007.

252.211–7008 [Amended]

■ 15. Amend section 252.211–7008 introductory text by removing ''211.274–6(c)'' and adding ''211.274–5(b)'' in its place.

252.245–7001 [Removed and Reserved]

■ 16. Remove and reserve section 252.245–7001.

252.245–7002 [Removed and Reserved]

■ 17. Remove and reserve section 252.245–7002.

252.245–7003 [Amended]

■ 18. Amend section 252.245–7003 introductory text by removing ''245.107(5)'' and adding ''245.107(3)'' in its place.

252.245–7004 [Removed and Reserved]

■ 19. Remove and reserve section 252.245–7004.

■ 20. Add section 252.245–70XX to read as follows:

252.245–70XX Management and Reporting of Government Property.

As prescribed in 245.107(4), use the following clause:

Management and Reporting of Government Property (Date)

(a) *Definitions.* As used in this clause—

As is means that the Government makes no warranty with respect to the serviceability and/or suitability of the Government property for contract performance and that the Government will not pay for any repairs, replacement, and/or refurbishment of the property.

Commercial and Government Entity (CAGE) code means—

(1) An identifier assigned to entities located in the United States or its outlying areas by the Defense Logistics Agency (DLA) Commercial and Government Entity (CAGE) Branch to identify a commercial or government entity by unique location; or

(2) An identifier assigned by a member of the North Atlantic Treaty Organization (NATO) or by the NATO Support and Procurement Agency (NSPA) to entities located outside the United States and its outlying areas that the DLA Commercial and Government Entity (CAGE) Branch records and maintains in the CAGE master file. This type of code is known as a NATO CAGE (NCAGE) code.

Contractor-acquired property, contractor inventory, Government property, Government-furnished property, and *loss of Government property* have the meanings given in the Federal Acquisition Regulation (FAR) 52.245–1, Government Property, clause of this contract.

Demilitarization means the act of eliminating the functional capabilities and inherent military design features from DoD personal property. Methods and degree range from removal and destruction of critical features to total destruction by cutting, tearing, crushing, mangling, shredding, melting, burning, etc.

Export-controlled items has the meaning given in the Defense Federal Acquisition Regulation Supplement (DFARS) 252.225–7048, Export-Controlled Items, clause of this contract.

Ineligible transferee means an individual, an entity, or a country—

(1) Excluded from Federal programs by the General Services Administration as identified in the System for Award Management Exclusions located at *https://sam.gov;*

(2) Delinquent on obligations to the U.S. Government under surplus sales contracts;

(3) Designated by the Department of Defense as ineligible, debarred, or suspended from defense contracts; or

(4) Subject to denial, debarment, or other sanctions under export control laws and related laws and regulations, and orders administered by the Department of State, the Department of Commerce, the Department of Homeland Security, or the Department of the Treasury.

Item unique identification means a system of assigning, reporting, and marking DoD property with unique item identifiers that have machine-readable data elements to distinguish an item from all other like and unlike items.

National stock number means a 13-digit stock number used to identify items of supply. It consists of a four-digit Federal Supply Code and a nine-digit National Item Identification Number.

Reparable item means an item, typically in unserviceable condition, furnished to the contractor for maintenance, repair, modification, or overhaul.

Scrap means property that has no value except for its basic material content. For purposes of demilitarization, scrap is defined as recyclable waste and discarded materials derived from items that have been rendered useless beyond repair, rehabilitation, or restoration such that the item's original identity, utility, form, fit, and function have been destroyed. Items can be classified as scrap if processed by cutting, tearing, crushing, mangling, shredding, or melting. Intact or recognizable components and parts are not ''scrap.''

Serially-managed item means an item designated by DoD to be uniquely tracked, controlled, or managed in maintenance, repair, and/or supply systems by means of its serial number or unique item identifier.

Serviceable or usable property means property with potential for reutilization or sale as is or with minor repairs or alterations.

Supply condition code means a classification of materiel in terms of readiness for issue and use or to identify action underway to change the status of materiel.

Unique item identifier (UII) means a set of data elements marked on an item that is globally unique and unambiguous. The term includes a concatenated UII or a DoD recognized unique identification equivalent.

(b) *Reporting Government property.* (1) The Contractor shall use the Government Furnished Property (GFP) module of the Procurement Integrated Enterprise Environment (PIEE) to—

(i) Report physical receipt of GFP;

(ii) Report the loss of Government property, in accordance with paragraph (f)(1)(vii) of the FAR 52.245–1 clause of this contract. Unless otherwise provided for in this contract, this requirement applies to a loss of GFP that results from damage that occurs during work in process (*e.g.,* workmanship errors);

(iii) Report the transfer of GFP to another DoD contract;

(iv) Report the shipment of GFP to the Government or to a contractor. The GFP module generates the electronic equivalent of the DD Form 1149, DD Form 1348–1, or other required shipping documents;

(v) Report when serially-managed items of GFP are incorporated into a higher-level component, assembly, or end item;

(vi) Complete the plant clearance inventory schedule in accordance with paragraph (j)(2) of the FAR 52.245–1 clause of this contract, unless disposition instructions are otherwise included in this contract. The GFP module generates the electronic equivalent of the Standard Form (SF) 1428, Inventory Disposal Schedule; and

(vii) Submit a request to buy back or to convert to GFP items of Contractor-acquired property.

(2) Information regarding the GFP module is available in the GFP Module Vendor Guide at *https://dodprocurementtoolbox.com/site-pages/gfp-resources.* Users may also register

for access to the GFP module and obtain training on the PIEE home page at *https://wawf.eb.mil/piee-landing.*

(3) In complying with paragraphs (b)(1)(i) through (v) of this clause, the Contractor shall report the updated status of the property to the GFP module within 7 business days of the date the change in status occurs, unless otherwise specified in the contract.

(4) The Contractor shall use Wide Area WorkFlow in accordance with DFARS Appendix F, Material Inspection and Receiving Report, to report the shipment of reparable items after completion of repair, maintenance, modification, or overhaul.

(5) When Government property is in the possession of subcontractors, the Contractor shall ensure that reporting is accomplished using the data elements required in paragraph (c) of this clause.

(c) *Records of Government property.* To facilitate reporting of Government property to the GFP module, the Contractor's property records, in addition to the requirements of paragraph (f)(iii) of the FAR 52.245–1 clause of this contract, shall enable recording of the following data elements:

(1) National stock number (NSN). If an NSN is not available, use either the combination of manufacturer's CAGE code and part number, or model number.

(2) CAGE code on the accountable Government contract.

(3) Received/sent (shipped) date.

(4) Accountable Government contract number.

(5) Serial number (for serially-managed items that do not have a UII); and

(6) Supply condition code (only required for reporting of reparable items). See Appendix 2.5 of Volume 2 of the Defense Logistics Manual (DLM) 4000.25, Military Standard Transaction Reporting and Accounting Procedures (MILSTRAP), at *https://www.dla.mil/HQ/InformationOperations/DLMS/elibrary/manuals/v2/* for information on Federal supply condition codes.

(d) *Marking, reporting, and UII registration of GFP requirements.* The Contractor—

(1) Shall assign the UII and mark the GFP items identified as serially managed in the GFP attachment to this contract with an item unique identification (IUID) data matrix, when the technical drawing for the item is accessible to the Contractor and includes IUID data matrix location and marking method;

(2) Shall report the UII either before or during shipment of the repaired item;

(3) Is not required to mark items that were previously marked with an IUID data matrix and registered in accordance with DFARS 252.211–7003, Item Unique Identification and Valuation; and

(4) Shall assign a new UII, then mark and register the item, when the conditions of paragraph (d)(1) are met, if an item is found to be marked but not registered.

(e) *Disposing of Government property.* (1) The Contractor shall complete the plant clearance inventory schedule using the plant clearance capability of the GFP module of the PIEE to generate an electronic equivalent of the SF 1428, Inventory Disposal Schedule. The plant clearance inventory schedule requires the following:

(i) If known, the applicable Federal supply code (FSC) for all items, except items in scrap condition.

(ii) If known, the manufacturer name for all aircraft components under Federal supply group (FSG) 16 or 17 and FSCs 2620, 2810, 2915, 2925, 2935, 2945, 2995, 4920, 5821, 5826, 5841, 6340, and 6615.

(iii) The manufacturer name, make, model number, model year, and serial number for all aircraft under FSCs 1510 and 1520.

(iv) The appropriate Federal condition codes. See Appendix 2.5 of Volume 2 of DLM 4000.25–2, Supply Standards and Procedures, edition in effect as of the date of this contract, at *https://www.dla.mil/Portals/104/Documents/DLMS/manuals/dlm/v2/Volume2Change13Files.pdf.*

(2) If the schedules are acceptable, the plant clearance officer will confirm acceptance in the GFP module plant clearance capability, which will transmit a notification to the Contractor. The electronic acceptance is equivalent to the DD Form 1637, Notice of Acceptance of Inventory.

(f) *Demilitarization, mutilation, and destruction.* If demilitarization, mutilation, or destruction of contractor inventory is required, the Contractor shall demilitarize, mutilate, or destroy contractor inventory, in accordance with the terms and conditions of the contract and consistent with Defense Demilitarization Manual, DoD Manual (DoDM) 4160.28–M, edition in effect as of the date of this contract. If the property is available for purchase, the plant clearance officer may authorize the purchaser to demilitarize, mutilate, or destroy as a condition of sale provided the property is not inherently dangerous to public health and safety.

(g) *Classified Contractor inventory.* The Contractor shall dispose of classified contractor inventory in accordance with applicable security guides and regulations or as directed by the Contracting Officer.

(h) *Inherently dangerous Contractor inventory.* Contractor inventory that is dangerous to public health or safety shall not be disposed of unless rendered innocuous or until adequate safeguards are provided.

(i) *Contractor inventory located in foreign countries.* Consistent with contract terms and conditions, property disposition shall be in accordance with foreign and U.S. laws and regulations, including laws and regulations involving export controls, host nation requirements, final governing standards, and government-to-government agreements. The Contractor's responsibility to comply with all applicable laws and regulations regarding export-controlled items exists independent of, and is not established or limited by, the information provided by this clause.

(j) *Disposal of scrap*—(1) *Contractor scrap procedures.* (i) The Contractor shall include, within its property management procedure, a process for the accountability and management of Government-owned scrap. The process shall, at a minimum, provide for the effective and efficient disposition of scrap, including sales to scrap dealers, so as to minimize costs, maximize sales proceeds, and contain the necessary internal controls for mitigating the improper release of non-scrap property.

(ii) The Contractor may commingle Government and contractor-owned scrap and provide routine disposal of scrap, with plant clearance officer concurrence, when determined to be effective and efficient.

(2) *Scrap warranty.* The plant clearance officer may require the Contractor to secure from scrap buyers a DD Form 1639, Scrap Warranty.

(k) *Sale of surplus Contractor inventory*—(1) *Sales procedures.* (i) The Contractor shall conduct sales of contractor inventory (both useable property and scrap) in accordance with the requirements of this contract and plant clearance officer direction. The Contractor shall include in its invitation for bids the sales terms and conditions provided by the plant clearance officer.

(ii) The Contractor may conduct internet-based sales, to include use of a third party.

(iii) If the Contractor wishes to bid on the sale, the Contractor or its employees shall submit bids to the plant clearance officer prior to soliciting bids from other prospective bidders.

(iv) The Contractor shall solicit bids to obtain adequate competition. Negotiated sales are subject to obtaining such competition as is feasible under the circumstances of the negotiated sale.

(v) The Contractor shall solicit bids at least 15 calendar days before bid opening to allow adequate opportunity to inspect the property and prepare bids.

(vi) For large sales, the Contractor may use summary lists of items offered as bid sheets with detailed descriptions attached.

(vii) In addition to providing notice of the proposed sale to prospective bidders, the Contractor may, when the results are expected to justify the additional expense, display a notice of the proposed sale in appropriate public places, *e.g.,* publish a sales notice on the internet, in appropriate trade journals or magazines, and in local newspapers.

(viii) The plant clearance officer or designated Government representative will witness the bid opening. The Contractor shall submit the bid abstract in electronic format to the plant clearance officer within 2 days of bid opening. If the Contractor is unable to submit the bid abstract electronically, the Contractor may submit 2 copies of the abstract manually within 2 days of bid opening. The plant clearance officer will not approve award to any bidder who is an ineligible transferee.

(2) *Required terms and conditions for sales contracts.* The Contractor shall include the following terms and conditions in sales contracts:

(i) For sales contracts or other documents transferring title:

''The Purchaser certifies that the property covered by this contract will be used in *[Insert name of country].* In the event of resale or export by the Purchaser of any of the property, the Purchaser agrees to obtain the appropriate U.S. and foreign export or re-export license approval.''

(ii) For sales contracts that require demilitarization, mutilation, or destruction of property:

''The following item(s) *[Insert list provided by plant clearance officer]* require demilitarization, mutilation, or destruction by the Purchaser. Additional instructions are provided in accordance with Defense Demilitarization Manual, DoDM 4160.28–M, edition in effect as of the date of this sales contract. A Government representative will certify and verify demilitarization of items. Prepare demilitarization certificates in accordance with DoDM 4160.28, Volume 2, section 4.5, DEMIL Certificate (see figure 2, Example DEMIL Certificate).''

(iii) Removal and title transfer:

''Property requiring demilitarization shall not be removed, and title shall not pass to the Purchaser, until demilitarization has been accomplished and verified by a Government representative.''

(iv) Assumption of cost incident to demilitarization:

''The Purchaser agrees to assume all costs incident to the demilitarization and to restore the working area to its present condition after removing the demilitarized property.''

(v) Failure to demilitarize:

''If the Purchaser fails to demilitarize, mutilate, or destroy the property as specified in the sales contract, the Contractor may, upon giving 10 days written notice from to the Purchaser—

(A) Repossess, demilitarize, and return the property to the Purchaser, in which case the Purchaser hereby agrees to pay to the Contractor, prior to the return of the property, all costs incurred by the Contractor in repossessing, demilitarizing, and returning the property;

(B) Repossess, demilitarize, and resell the property, and charge the defaulting Purchaser with all costs incurred by the Contractor. The Contractor shall deduct these costs from the purchase price and refund the balance of the purchase price, if any, to the Purchaser. In the event the costs exceed the purchase price, the defaulting Purchaser hereby agrees to pay these costs to the Contractor; or

(C) Repossess and resell the property under similar terms and conditions, and charge the defaulting Purchaser with all costs incurred by the Contractor. The Contractor shall deduct these costs from the original purchase price and refund the balance of the purchase price, if any, to the defaulting Purchaser. Should the excess costs to the Contractor exceed the purchase price, the defaulting Purchaser hereby agrees to pay these costs to the Contractor.''

(l) *Restrictions on purchase or retention of Contractor inventory.* The Contractor may not knowingly sell the inventory to any person or that person's agent, employee, or household member if that person—

(1) Is a civilian employee of DoD or the U.S. Coast Guard;

(2) Is a member of the armed forces of the United States, including the U.S. Coast Guard; or

(3) Has any functional or supervisory responsibilities for or within DoD's property disposal, disposition, or plant clearance programs or for the disposal of contractor inventory.

(m) *Proceeds from sales of surplus property.* Unless otherwise provided in the contract, the proceeds of any sale, purchase, or retention shall be—

(1) Forwarded to the Contracting Officer;

(2) Credited to the Government as part of the settlement agreement pursuant to the termination of the contract;

(3) Credited to the price or cost of the contract; or

(4) Applied as otherwise directed by the Contracting Officer.

(End of clause)

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Part 212, 237, and 252

[Docket DARS–2023–0016]

RIN 0750–AL07

Defense Federal Acquisition Regulation Supplement: Transfer and Adoption of Military Animals (DFARS Case 2020–D021)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule.

SUMMARY: DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to implement a section of the National Defense Authorization Act for Fiscal Year 2020.

DATES: Comments on the proposed rule should be submitted in writing to the address shown below on or before June 26, 2023, to be considered in the formation of the final rule.

ADDRESSES: Submit comments identified by DFARS Case 2020–D021, using any of the following methods:

○ *Federal eRulemaking Portal: https://regulations.gov.* Search for ''DFARS Case 2020–D021.'' Select ''Comment'' and follow the instructions to submit a comment. Please include ''DFARS Case 2020–D021'' on any attached documents.

○ *Email: osd.dfars@mail.mil.* Include DFARS Case 2020–D021 in the subject line of the message.

Comments received generally will be posted without change to *https://www.regulations.gov,* including any personal information provided. To confirm receipt of your comment(s), please check *https://www.regulations.gov,* approximately two to three days after submission to verify posting.

FOR FURTHER INFORMATION CONTACT: Kimberly R. Ziegler, telephone 703–901–3176.

SUPPLEMENTARY INFORMATION:

I. Background

DoD is proposing to amend DFARS part 237, Service Contracting, to implement section 372(f) of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2020 (Pub. L. 116–92). Section 372(f), as implemented at 10 U.S.C. 2387 (previously 10 U.S.C. 2410r), requires DoD contracting officers to include a clause in contracts when contract working dogs are provided under the contract. 10 U.S.C. 2387 requires the transfer of a contract working dog, after the service life of the dog has terminated, to the United States Air Force, 341st Training Squadron, for—

a. Veterinary screening and care; and

b. Reclassification as a military animal and placement for adoption in accordance with 10 U.S.C. 2583.

The service life of a contract working dog may be terminated if a contracting officer determines that—

a. The final contractual obligation of the dog preceding the transfer is with DoD; and

b. The dog cannot be used by another department or agency of the Federal Government due to age, injury, or performance.

DoD determines the status of military animals and whether a military animal is suitable for transfer or adoption under the statutory direction provided in 10 U.S.C. 2583, Military animals: transfer and adoption. It also provides the priority for adoptions or transfer, standards for veterinary care, and transportation of retiring military working dogs. The 341st Training Squadron is responsible for the performance of these duties under the DoD Military Working Dog Program. Section 372 amends 10 U.S.C. 2583; however, those amendments are outside of the scope of this proposed rule.

II. Discussion and Analysis

The proposed rule creates a new subpart under DFARS part 237, Service Contracting, to address the requirements in 10 U.S.C. 2387. DoD generally contracts for contract working dogs as a service performed by a contracted handler and dog as a unit or team, most often for security, law enforcement, or other specialized circumstances. These contract working dogs are under the control of an experienced, contracted handler at all times and are not paired with an active duty military member or DoD civilian handler. Based upon the manner in which DoD contracts for the contract working dogs and the definition of a contract working dog provided in 10 U.S.C. 2387(c), the new

direction is implemented in DFARS part 237.

A contract working dog would be transferred to the Government only when the conditions at 10 U.S.C. 2387(b) are met. In the event that a requiring activity submits a request based upon both conditions being met, a contracting officer may determine that the service life of a contract working dog has terminated. The dog will then be transferred to the 341st Training Squadron for reclassification as a military animal and placement for adoption in accordance with 10 U.S.C. 2583.

The proposed rule prescribes a new contract clause at 252.237–70XX, Transfer and Adoption of Military Animals, for use in solicitations and contracts for contract working dog services, to include solicitations and contracts using Federal Acquisition Regulation (FAR) part 12 procedures and for commercial products and commercial services. The new clause provides notification to offerors and contractors that under certain circumstances, the contract working dog is required to be transferred to the 341st Training Squadron for care and reclassification as a military animal and placement for adoption in accordance with 10 U.S.C. 2583.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT) and for Commercial Services and Commercial Products, Including Commercially Available Off-the-Shelf (COTS) Items

This proposed rule implements 10 U.S.C. 2387 as amended by section 372(f) of the NDAA for FY 2020. The statute requires DoD to add a contract clause to contracts for the provision of contract working dog services. As a result, the proposed rule adds one new contract clause at 252.237–70XX, Transfer and Adoption of Military Animals, for use in solicitations and contracts, including solicitations and contracts using FAR part 12 procedures for commercial products and commercial services, that require the services of a contract working dog. Accordingly, DoD intends to apply the proposed rule to acquisitions below the SAT and to the acquisition of commercial services.

A. Applicability to Contracts at or Below the Simplified Acquisition Threshold

41 U.S.C. 1905 governs the applicability of laws to contracts or subcontracts in amounts not greater than the SAT. It is intended to limit the applicability of laws to such contracts or subcontracts. 41 U.S.C. 1905 provides that if a provision of law contains criminal or civil penalties, or if the Federal Acquisition Regulatory Council makes a determination that it is not in the best interest of the Federal Government to exempt contracts or subcontracts at or below the SAT, the law will apply to them. The Principal Director, Defense Pricing and Contracting (DPC), is the appropriate authority to make comparable determinations for regulations to be published in the DFARS, which is part of the Federal Acquisition Regulation system of regulations. DoD intends to make that determination to apply this proposed rule at or below the SAT.

B. Applicability to Contracts for the Acquisition of Commercial Services and Commercial Products, Including COTS Items

10 U.S.C. 3452 (previously 10 U.S.C. 2375) governs the applicability of laws to DoD contracts and subcontracts for the acquisition of commercial products, including COTS items, and commercial services from provisions of law enacted after October 13, 1994, and is intended to limit the applicability of laws to contracts and subcontracts for the acquisition of commercial services and commercial products including COTS items. 10 U.S.C. 3452 provides that if a provision of law contains criminal or civil penalties, or if the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)) makes a written determination that it is not in the best interest of the Federal Government to exempt commercial product and commercial service contracts, the provision of law will apply to contracts for the acquisition of commercial products and commercial services. Due to delegations of authority from USD(A&S), the Principal Director, DPC is the appropriate authority to make this determination. DoD intends to make that determination to apply this proposed rule to the acquisition of commercial services if otherwise applicable.

C. Determination

DoD is proposing to apply the requirements of 10 U.S.C. 2387 to contracts at or below the SAT, since the requirements of the proposed clause at 252.237–70XX would apply to contracts that are normally of a value at or below the SAT and conducted under FAR part 12 procedures. The new requirements will apply to contracts for the acquisition of commercial services, because the services provided under these contracts are considered commercial in nature. The requirements do not apply to COTS items.

It is not in the best interest of the Federal Government to exempt application of this proposed rule to actions at or below the SAT or for commercial services. An exception for contracts below the SAT and those for commercial services would exclude the majority of the contracts intended to be covered by the law, thereby undermining the overarching public policy purpose of the law.

IV. Expected Impact of the Rule

DoD does not expect the proposed rule to have a significant impact on the public, because the need for a contracting officer to make a determination that a contract working dog has reached the end of its service life will be rare. Such acquisitions are few in number, and service contractors who provide contract working dogs and handlers are expected to replace dogs and handlers who are unable to perform to DoD standards. A contracting officer's representative would be responsible for monitoring contract performance and coordinating any replacement dog and handler requirements.

V. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993.

VI. Regulatory Flexibility Act

DoD does not expect this proposed rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because the proposed rule will apply to a limited number of service providers. However, an initial regulatory flexibility analysis has been performed and is summarized as follows:

DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to implement 10 U.S.C. 2387 (previously 10 U.S.C. 2410r), as amended by section 372(f) of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2020 (Pub.

L. 116–92). Under 10 U.S.C. 2387, DoD contracting officers are required to include a clause in contracts for contract working dog services.

The objective of the rule is to implement the statutory requirements for terminating the service life of a contract working dog, when certain circumstances apply, and transferring the animal to the Department of the Air Force, 341st Training Squadron. The legal basis of the rule is 10 U.S.C. 2387, as amended by section 372(f) of the NDAA for FY 2020.

This proposed rule will apply to small entities providing contract working dog and handler services to DoD. The proposed clause is prescribed for use in solicitations and contracts for such services, including those conducted under FAR part 12 procedures for the acquisition of commercial products and commercial services.

Research conducted in the Contract Opportunities section of *SAM.gov* indicates that contract working dog and handler services are generally procured under North American Industry Classification System codes and product and service codes that provide for certain physical security and law enforcement services. Data obtained from the Federal Procurement Data System (FPDS) for FY 2019, 2020, and 2021 indicate that DoD awards an average of 227 contract actions annually for these physical security and law enforcement services, which may include a requirement for a contract working dog and handler. Of the estimated 227 awards, an average of approximately 72 awards are made annually to an estimated 52 unique small entities. Neither FPDS nor *SAM.gov* provide data for the number of awards that are specific to the contract working dog and handler services; however, this analysis assumes all of the estimated awards and unique small entities may be impacted.

The proposed rule does not impose any new reporting, recordkeeping, or compliance requirements.

The proposed rule does not duplicate, overlap, or conflict with any other Federal rules.

There are no practical alternatives that will accomplish the objectives of the statute.

DoD invites comments from small business concerns and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by the rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2020–D021), in correspondence.

VII. Paperwork Reduction Act

This proposed rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Part 212, 237, and 252

Government Procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, 48 CFR parts 212, 237, and 252 are proposed to be amended as follows:

■ 1. The authority citation for parts 212, 237, and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 212—ACQUISITION OF COMMERCIAL PRODUCTS AND COMMERCIAL SERVICES

■ 2. Amend section 212.301 by adding paragraph (f)(xiv)(E) to read as follows:

212.301 Solicitation provisions and contract clauses for the acquisition of commercial products and commercial services.

* * * * *

(f) * * *

(xiv) * * *

(E) Use the clause at 252.237–70XX, Transfer and Adoption of Military Animals, as prescribed in 237.7X04 to comply with 10 U.S.C. 2387.

PART 237—SERVICE CONTRACTING

■ 3. Add subpart 237.7X to read as follows:

SUBPART 237.7X—TRANSFER AND ADOPTION OF MILITARY ANIMALS

SUBPART 237.7X—TRANSFER AND ADOPTION OF MILITARY ANIMALS

237.7X00 Scope of subpart.

This subpart implements 10 U.S.C. 2387, which requires, under certain circumstances, the transfer of a contract working dog to the Department of Air Force, 341st Training Squadron, for veterinary screening and care in accordance with 10 U.S.C. 2583.

237.7X01 Definition.

As used in this subpart—

Contract working dog means a dog that—

(1) Performs a service for DoD pursuant to a contract; and

(2) Is trained and kenneled by an entity that provides such a dog pursuant to such a contract.

237.7X02 Policy.

(a) In accordance with 10 U.S.C. 2387, DoD will transfer a contract working dog to the Department of the Air Force, 341st Training Squadron, for veterinary screening and care after the service life of the dog has terminated.

(b) The service life of a contract working dog may be terminated if—

(1) The final contractual obligation of the dog preceding transfer is with DoD; and

(2) The dog cannot be used by another department or agency of the Federal Government due to age, injury, or performance.

(c) A contract working dog that has reached the end of its service life will be transferred for care and reclassification as a military animal and placement for adoption in accordance with 10 U.S.C. 2583.

237.7X03 Procedures.

Contracting officers, at the request of the requiring activity, may issue a determination that the service life of a contract working dog has terminated if the conditions in 237.7X02(b) have been documented by the requiring activity.

237.7X04 Contract clause.

Use the clause at 252.237–70XX, Transfer and Adoption of Military Animals, in solicitations and contracts, including solicitations and contracts using FAR part 12 procedures for the acquisition of commercial products and commercial services, that require the use of a contract working dog.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 4. Add section 252.237–70XX to read as follows:

252.237–70XX Transfer and Adoption of Military Animals.

As prescribed in 237.7X04, use the following clause:

Transfer and Adoption of Military Animals (Date)

(a) *Definition.* As used in this clause—

Contract working dog means a dog that—

(1) Performs a service for DoD pursuant to a contract; and

(2) Is trained and kenneled by an entity that provides such a dog pursuant to such a contract.

(b) In accordance with 10 U.S.C. 2387, a contract working dog, after the service life of the dog has terminated, is required to be transferred to the Department of the Air Force, 341st Training Squadron, for veterinary screening and care and for reclassification as a military animal and placement for adoption in accordance with 10 U.S.C. 2583.

(c) The service life of a contract working dog may be terminated if the Contracting Officer determines that—

(1) The final contractual obligation of the dog preceding transfer is with DoD; and

(2) The dog cannot be used by another department or agency of the Federal Government due to age, injury, or performance.

(d) If the Contracting Officer determines that the service life of a contract working dog has terminated, the dog will be transferred to the 341st Training Squadron for care and reclassification as a military animal and placement for adoption in accordance with 10 U.S.C. 2583.

(End of clause)

RIN 0750–AL33

Defense Federal Acquisition Regulation Supplement: Restriction on Certain Metal Products (DFARS Case 2021–D015)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule.

SUMMARY: DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to implement a section of the National Defense Authorization Act for Fiscal Year 2021 that provides restrictions on the acquisition of certain covered materials from North Korea, the People's Republic of China, Russia, and Iran.

DATES: Comments on the proposed rule should be submitted in writing to the address shown below on or before June 26, 2023, to be considered in the formation of a final rule.

ADDRESSES: Submit comments identified by DFARS Case 2021–D015, using any of the following methods:

○ *Federal eRulemaking Portal: https://www.regulations.gov.* Search for ''DFARS Case 2021–D015.'' Select ''Comment'' and follow the instructions to submit a comment. Please include your name, company name (if any), and ''DFARS Case 2021–D015'' on any attached documents.

○ *Email: osd.dfars@mail.mil.* Include DFARS Case 2021–D015 in the subject line of the message.

Comments received generally will be posted without change to *https://www.regulations.gov,* including any personal information provided. To confirm receipt of your comment(s), please check *https://www.regulations.gov,* approximately two to three days after submission to verify posting.

FOR FURTHER INFORMATION CONTACT: Kimberly Bass, telephone 703–717–3446.

SUPPLEMENTARY INFORMATION:

I. Background

DoD is proposing to revise the DFARS to implement section 844 of the National Defense Authorization Act for Fiscal Year 2021 (Pub. L. 116–283). Section 844 amends 10 U.S.C. 2533c (redesignated 10 U.S.C. 4872) and removes from the restriction ''material melted'' and replaces it with ''material mined, refined, separated, melted''. In addition, the reference to ''tungsten'' is removed and replaced with ''covered material'' in the exception for commercially available-off-the-shelf (COTS) items to the restriction of 50 percent or more by weight. The new restriction in the proposed rule will go into effect on January 1, 2026.

II. Discussion and Analysis

A. Restriction

The proposed rule would revise the restriction on the acquisition of covered materials melted or produced in the Democratic People's Republic of North Korea, the People's Republic of China, the Russian Federation, or the Islamic Republic of Iran at DFARS 225.7018–2(a), to include a reference to the end date of the current restriction effective through December 31, 2025, at paragraph (a)(1). The revision also states that the new restriction at paragraph (a)(2) for the covered materials becomes effective on January 1, 2026. The term ''covered materials,'' already defined at DFARS 225.7018–1, means samarium-cobalt magnets, neodymium-iron-boron magnets, tantalum metals and alloys, tungsten metal powder, and tungsten heavy alloy or any finished or semi-finished component containing tungsten heavy alloy.

DFARS 225.7018–2(b)(2) is added to reflect the restriction effective on January 1, 2026, for samarium-cobalt magnets to convey that the new restriction will include the entire supply chain from mining or production of a cobalt and samarium ore or feedstock, including recycled material, through production of finished magnets. Accordingly, paragraph (b)(1) was revised to reflect the end date of the current restriction for samarium-cobalt magnets and neodymium-iron-boron magnets on December 31, 2025. In addition, revisions at DFARS 225.7018–2(b)(4) include the new restriction for neodymium-iron-boron magnets covering the entire supply chain effective on January 1, 2026.

Paragraph (c)(1) adds the end date of the current restrictions for tantalum metals and alloys, effective through December 31, 2025. DFARS 225.7018–2(c)(2) implements the new restriction for the production of tantalum metals and alloys effective on January 1, 2026. DFARS 225.7018–2(d)(2) implements the new restriction for the production of tungsten metal powder, tungsten heavy alloy, or any finished or semi-finished component containing tungsten heavy alloy in effect on January 1, 2026. Paragraph (d)(1) adds the end date of the current restrictions for tungsten metal powder, tungsten heavy alloy, or any finished or semi-finished component containing tungsten heavy alloy, effective through December 31, 2025.

B. Exceptions

The proposed rule at 225.7018–3(c)(1)(i) revises the COTS items exception to the restriction of 50 percent or more by weight to include all covered material and removes the individual exception for tungsten. Subsequently, the restriction was revised at DFARS 225.7018–3(c)(1)(i)(A) to add the end date of the current restriction of 50 percent or more tungsten by weight, effective through December 31, 2025. In addition, the new COTS items exception is added at (c)(1)(i)(B) to implement the new restriction for 50 percent or more covered material by weight effective on January 1, 2026. The proposed rule at DFARS 225.7018–3(c)(1)(ii) revises the current COTS items exception to reflect the restriction effective through December 31, 2025.

DFARS 225.7018–3(c)(1)(iii) is added to implement the COTS items exception for the new restriction on a covered material that is a mill product such as bar, billet, slab, wire, cube, sphere, block, blank, plate, or sheet, that has not been incorporated into an end item, subsystem, assembly, or component, to be effective on January 1, 2026.

C. Contract Clause Revision

The clause at DFARS 252.225–7052, Restriction on the Acquisition of Certain Magnets, Tantalum, and Tungsten, is revised to incorporate conforming revisions at paragraph (b)(1)(i) for the current restriction with the end date; and the new statutory restriction with the effective date is in paragraph (b)(1)(ii). The current restriction for samarium-cobalt magnets and neodymium-iron-boron magnets at paragraph (b)(2)(i)(A) includes a reference to the end date of December 31, 2025, and the new restriction is implemented at paragraph (b)(2)(B) effective on January 1, 2026. The COTS items exceptions to the restriction are included in paragraphs (c)(1)(ii)(A)(*1*) and (*2*) in accordance with section 844 of the NDAA for FY 2021 and 10 U.S.C. 4872.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT) and for Commercial Products, Including Commercially Available Off-the-Shelf (COTS) Items, and Commercial Services

This proposed rule includes amendments to the clause at DFARS 252.225–7052, Restriction on the Acquisition of Certain Magnets, Tantalum, and Tungsten. However, this proposed rule does not impose any new requirements on contracts at or below the SAT or for commercial products, including COTS items. DFARS 252.225–7052 does not apply to acquisitions at or below the SAT, in accordance with 41 U.S.C. 1905, but applies to contracts for the acquisition of commercial products, including COTS items, except as provided in the statute at 10 U.S.C. 4872(c)(3). DoD has previously signed a determination of applicability of 10 U.S.C. 4872 to acquisitions of commercial items, except for COTS items to the extent exempted in the statute.

IV. Expected Impact of the Rule

This proposed rule is expected to have an impact on the Government and industry because this rule significantly expands the scope of compliance in accordance with section 844 of the NDAA for FY 2021 and 10 U.S.C. 4872.

The current restriction at DFARS 225.7018–2 covers the melting of precursor metals (*e.g.,* samarium metal and cobalt metal) to produce alloys (*e.g.,* samarium-cobalt alloy) and other equivalent processes (*e.g.,* atomization, calcination and reduction, or final consolidation of non-melt derived metal powders). One of the materials covered by this proposed rule at 225.7018–2 and the clause at DFARS 252.225–7052, Restriction on the Acquisition of Certain Magnets, Tantalum, and Tungsten, is also covered by longstanding restrictions for the acquisition of specialty metals at DFARS 225.7003–2 (10 U.S.C. 4875) and under the clause at DFARS 252.225–7009, Restriction on Acquisition of Specialty Metals, that includes the same coverage of production steps (*e.g.,* melt or produce).

This proposed rule expands the scope of product coverage to all upstream mining, refining, separation, and melting of covered materials. Taken together with the overlapping restriction on specialty metals at DFARS 225.7003–2 and the clause at DFARS 252.225–7009, Restriction on Acquisition of Specialty Metals, covered materials that are compliant with the specialty metals clause may not be compliant with the current restriction at DFARS 225.7018–2 or the clause at DFARS 252.225–7052, Restriction on the Acquisition of Certain Magnets, Tantalum, and Tungsten, nor are they likely to be compliant with this proposed rule.

For example, assume that a contractor purchases a component from a United Kingdom-based supplier, and the assembly contains a samarium-cobalt magnet manufactured in China. This component would be compliant with the specialty metals clause, because the specialty metals clause exempts qualifying country components. However, this proposed rule has no exemption for qualifying country components, and thus the assembly would be noncompliant with the current restriction at DFARS 225.7018–2 and the clause at DFARS 252.225–7052, Restriction on the Acquisition of Certain Magnets, Tantalum, and Tungsten, in its current form and as proposed.

Further, assume that a company purchases a motor from a U.S. manufacturer, and that U.S. motor manufacturer purchases a magnet from a U.S. company. The U.S. magnet company purchases cobalt metal and samarium metal from China, and these metals are melted in the United States. This magnet would be compliant with both the restriction required by the specialty metals clause at DFARS 252.225–7009 and the current restriction at DFARS 225.7018–2 and the clause at DFARS 252.225–7052. However, this magnet would not be compliant with the proposed rule requirements effective on January 1, 2026.

Further, assume that a company produces business jets and modifies them for military use. During a given year, the business jet manufacturer purchases 50 percent of its samarium-cobalt magnet needs from a U.S. source that mines and conducts all subsequent processing steps in the United States. The balance of the company's samarium-cobalt magnets are procured from Chinese sources and the company commingles domestically and Chinese-produced magnets on its production line. In this scenario, the modified business jet is compliant with the restriction at DFARS 225.7003–2 and the clause at DFARS 252.225–7009, because it is a commercial derivative military article, and the company procures 50 percent of its total needs from a domestic source. However, the modified business jet is potentially noncompliant with the proposed rule, given the commingling of Chinese and U.S. samarium-cobalt magnets in each aircraft.

Notwithstanding the significant change in scope, DoD notes that Congress enacted this requirement on January 1, 2021, through Public Law 116–283. This five-year phase-in period provides a reasonable period for industry to develop alternative sources of supply for covered materials from sources other than the People's Republic of China, the Russian Federation, the Democratic People's Republic of North Korea, and the Islamic Republic of Iran.

DoD also notes that it has invested and continues to invest in domestic supply chains for covered materials, such as light and heavy rare earth elements and rare earth magnet manufacture, using authorities under 50 U.S.C. 4533 and 10 U.S.C. 4817 among others. For those materials not currently covered by DoD investments, such as tantalum and tungsten, publicly traded U.S. companies, including DoD contractors and their subcontractors, already are required to conduct supply chain due diligence on these minerals when they are necessary to the functionality or production of a product manufactured by that company. This requirement stems from section 1502 of Public Law 111–203 (implemented at 17 CFR 240.13p–1) to ensure that such minerals are not supporting armed conflict in the Democratic Republic of Congo and adjoining countries.

The principal benefit of this proposed rule is continuing to transition the defense industrial base toward the procurement of strategic and critical materials from sources other than North Korea, Russia, Iran, or the People's Republic of China, with the latter constituting the pacing challenge identified in the National Defense Strategy. Russia is a major producer and exporter of a wide array of strategic and critical materials, and the extreme

volatility in these markets since Russia's invasion of Ukraine demonstrates the national security imperative to build resilience into supply chains for covered materials of this proposed rule.

V. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993.

VI. Regulatory Flexibility Act

DoD does not expect this proposed rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* However, an initial regulatory flexibility analysis has been performed and is summarized as follows:

This proposed rule is required to implement section 844 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2021 (Pub. L. 116–283), which amends 10 U.S.C. 2533c (now 10 U.S.C. 4872) to revise the restriction on the acquisition of covered materials melted or produced in any covered country (*i.e.,* North Korea, the People's Republic of China, Russia, or Iran) to include covered materials mined, refined, separated, melted, or produced. In addition, it revises the commercially available off-the-shelf (COTS) items exception to the restriction of 50 percent or more by weight to now include all covered material and remove the individual exception to only tungsten. The term ''covered materials,'' already defined in the statute and at DFARS 225.7018–1, means samarium-cobalt magnets, neodymium-iron-boron magnets, tantalum metals and alloys, tungsten metal powder, and tungsten heavy alloy or any finished or semi-finished component containing tungsten heavy alloy.

The objective of the proposed rule is to implement section 844 of the NDAA for FY 2021. The legal basis for this proposed rule is 10 U.S.C. 4872, as amended by section 844 of the NDAA for FY 2021.

Based on data from the Federal Procurement Data System for FY 2020, 2021, and 2022, DoD awarded in the United States 22,729 contracts that exceeded the simplified acquisition threshold of $250,000 and were for the acquisition of manufactured end products, excluding those categories that could not include restricted metals (such as clothing and fabrics, books, or lumber products). These contracts were awarded to a total of 2,070 unique entities, of which 1,624 were unique small entities; contracts were awarded to a median of 527 unique small entities per year. It is not known what percentage of these awards involved the specific covered materials from China, North Korea, Russia, or Iran.

There are no projected reporting or recordkeeping requirements. However, there may be compliance costs to track the origin of covered materials.

The proposed rule does not duplicate, overlap, or conflict with any other Federal rules.

DoD is exempting acquisitions equal to or less than the simplified acquisition threshold in accordance with 41 U.S.C. 1905. DoD was unable to identify any other alternatives that would reduce burden on small businesses and still meet the objectives of the statute.

DoD invites comments from small business concerns and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2021–D015), in correspondence.

VII. Paperwork Reduction Act

This proposed rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Parts 225 and 252

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, 48 CFR parts 225 and 252 are proposed to be amended as follows:

■ 1. The authority citation for parts 225 and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 225—FOREIGN ACQUISITION

■ 2. Add section 225.7018–0 to read as follows:

225.7018–0 Scope.

This section implements 10 U.S.C. 4872.

■ 3. Revise section 225.7018–2 to read as follows:

225.7018–2 Restriction.

(a) *General.* Except as provided in 225.7018–3 and 225.7018–4—

(1) Effective through December 31, 2025, do not acquire any covered material melted or produced in any covered country, or any end item, manufactured in any covered country, that contains a covered material; and

(2) Effective January 1, 2026, do not acquire any covered material mined, refined, separated, melted, or produced in any covered country, or any end item, manufactured in any covered country, that contains a covered material. (Section 844, Pub. L. 116–283; 10 U.S.C. 4872.)

(b) *Samarium-cobalt magnets and neodymium-iron-boron magnets.* (1) Effective through December 31, 2025, for samarium-cobalt magnets and neodymium-iron-boron magnets, this restriction includes—

(i) Melting samarium with cobalt to produce the samarium-cobalt alloy or melting neodymium with iron and boron to produce the neodymium-iron-boron alloy; and

(ii) All subsequent phases of production of the magnets, such as powder formation, pressing, sintering or bonding, and magnetization.

(2) Effective January 1, 2026, for samarium-cobalt magnets this restriction includes the entire supply chain from mining or production of a cobalt and samarium ore or feedstock, including recycled material, through production of finished magnets, except as provided at 225.7018–3.

(3) The restriction on melting and producing of samarium-cobalt magnets is in addition to any applicable restrictions on melting of specialty metals at 225.7003 and the clause at 252.225–7009, Restriction on Acquisition of Certain Articles Containing Specialty Metals.

(4) Effective January 1, 2026, for neodymium-iron-boron magnets, this restriction includes the entire supply chain from mining of neodymium, iron, and boron through production of finished magnets, except as provided at 225.7018–3.

(c) *Tantalum metals and alloys.* (1) Effective through December 31, 2025, for production of tantalum metals of any

kind and alloys, this restriction includes the reduction or melting of any form of tantalum to create tantalum metal including unwrought, powder, mill products, and alloys. The restriction also covers all subsequent phases of production of tantalum metals and alloys.

(2) Effective January 1, 2026, for production of tantalum metals of any kind and alloys, this restriction includes mining or production of a tantalum ore or feedstock, including recycled material, through production of metals of any kind and alloys, except as provided at 225.7018–3.

(d) *Tungsten metal powder and tungsten heavy alloy.* (1) Effective through December 31, 2025, for production of tungsten metal powder and tungsten heavy alloy, this restriction includes—

(i) Atomization;

(ii) Calcination and reduction into powder;

(iii) Final consolidation of non-melt derived metal powders; and

(iv) All subsequent phases of production of tungsten metal powder, tungsten heavy alloy, or any finished or semi-finished component containing tungsten heavy alloy.

(2) Effective January 1, 2026, for production of tungsten metal powder, tungsten heavy alloy, or any finished or semi-finished component containing tungsten heavy alloy, this restriction includes mining or production of a tungsten ore or feedstock, including recycled material, through production of tungsten metal powders, except as provided at 225.7018–3.

■ 4. Amend section 225.7018–3—

■ a. By revising paragraph (c)(1); and

■ b. In paragraph (d)(1) by removing ''this contract;'' and adding ''the contract;'' in its place.

The revision reads as follows:

225.7018–3 Exceptions.

* * * * *

(c) * * *

(1) A commercially available off-the-shelf item (but see PGI 225.7018–3(c)(1) with regard to commercially available samarium-cobalt magnets), other than—

(i) A commercially available off-the-shelf item that is—

(A) 50 percent or more tungsten by weight effective through December 31, 2025; or

(B) 50 percent or more covered material by weight effective January 1, 2026;

(ii) Effective through December 31, 2025, a tantalum metal, tantalum alloy, or tungsten heavy alloy mill product, such as bar, billet, slab, wire, cube, sphere, block, blank, plate, or sheet, that has not been incorporated into an end item, subsystem, assembly, or component; or

(iii) Effective January 1, 2026, a covered material that is a mill product such as bar, billet, slab, wire, cube, sphere, block, blank, plate, or sheet, that has not been incorporated into an end item, subsystem, assembly, or component; or

* * * * *

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 5. Amend section 252.225–7052 by revising the clause date and paragraphs (b) and (c)(1) to read as follows:

252.225–7052 Restriction on the Acquisition of Certain Magnets, Tantalum, and Tungsten.

* * * * *

Restriction on the Acquisition of Certain Magnets, Tantalum, and Tungsten (Date)

* * * * *

(b) *Restriction.* (1) Except as provided in paragraph (c) of this clause—

(i) Effective through December 31, 2025, the Contractor shall not deliver under this contract any covered material melted or produced in any covered country, or any end item, manufactured in any covered country, that contains a covered material; and

(ii) Effective January 1, 2026, the Contractor shall not deliver under this contract any covered material mined, refined, separated, melted, or produced in any covered country, or any end item, manufactured in any covered country, that contains a covered material (section 844, Pub. L. 116–283; 10 U.S.C. 4872).

(2)(i)(A) Effective through December 31, 2025, for samarium-cobalt magnets and neodymium-iron-boron magnets, this restriction includes—

(*1*) Melting samarium with cobalt to produce the samarium-cobalt alloy or melting neodymium with iron and boron to produce the neodymium-iron-boron alloy; and

(*2*) All subsequent phases of production of the magnets, such as powder formation, pressing, sintering or bonding, and magnetization.

(B) Effective January 1, 2026, for samarium-cobalt magnets this restriction includes the entire supply chain from mining or production of a cobalt and samarium ore or feedstock, including recycled material, through production of finished magnets.

(ii) The restriction on melting and producing of samarium-cobalt magnets is in addition to any applicable restrictions on melting of specialty metals if the clause at 252.225–7009, Restriction on Acquisition of Certain Articles Containing Specialty Metals, is included in the contract.

(3) Effective January 1, 2026, for neodymium-iron-boron magnets, this restriction includes entire supply chain from mining of neodymium, iron, and boron through production of finished magnets.

(4)(i) Effective through December 31, 2025, for production of tantalum metals of any kind and alloys, this restriction includes the reduction or melting of any form of tantalum to create tantalum metal including unwrought, powder, mill products, and alloys. The restriction also covers all subsequent phases of production of tantalum metals and alloys.

(ii) Effective January 1, 2026, for production of tantalum metals of any kind and alloys, this restriction includes mining or production of a tantalum ore or feedstock, including recycled material, through production of metals of any kind and alloys.

(5)(i) Effective through December 31, 2025, for production of tungsten metal powder and tungsten heavy alloy, this restriction includes—

(A) Atomization;

(B) Calcination and reduction into powder;

(C) Final consolidation of non-melt derived metal powders; and

(D) All subsequent phases of production of tungsten metal powder, tungsten heavy alloy, or any finished or semi-finished component containing tungsten heavy alloy.

(ii) Effective January 1, 2026, for production of tungsten metal powder, tungsten heavy alloy, or any finished or semi-finished component containing tungsten heavy alloy, this restriction includes mining or production of a tungsten ore or feedstock, including recycled material, through production of tungsten metal powders, tungsten heavy alloy, or any finished or semi-finished component containing tungsten heavy alloy.

(c) *Exceptions.* This clause does not apply—

(1) To an end item containing a covered material that is—

(i) A commercially available off-the-shelf item, other than—

(A) A commercially available off-the-shelf item that is—

(*1*) 50 percent or more tungsten by weight effective through December 31, 2025; or

(*2*) 50 percent or more covered material by weight effective January 1, 2026;

(B) Effective through December 2025, a tantalum metal, tantalum alloy, or tungsten heavy alloy mill product, such as bar, billet, slab, wire, cube, sphere, block, blank, plate, or sheet, that has not been incorporated into an end item, subsystem, assembly, or component; or

(ii) Effective January 1, 2026, a covered material that is a mill product such as bar, billet, slab, wire, cube, sphere, block, blank, plate, or sheet, that has not been incorporated into an end item, subsystem, assembly, or component; or

(iii) An electronic device, unless otherwise specified in the contract; or

(iv) A neodymium-iron-boron magnet manufactured from recycled material if the milling of the recycled material and sintering of the final magnet takes place in the United States.

BILLING CODE 5001–06–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

[Docket No. FWS–R8–ES–2023–0052; FF09E21000 FXES1111090FEDR 234]

RIN 1018–BH21

Endangered and Threatened Wildlife and Plants; Threatened Status for the Bi-State Distinct Population Segment of Greater Sage-Grouse With Section 4(d) Rule and Designation of Critical Habitat

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule; reopening of the comment periods.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce that we are reopening the comment periods on our October 28, 2013, proposed rules to list the Bi-State distinct population segment (DPS) of greater sage-grouse (*Centrocercus urophasianus*) (hereafter Bi-State DPS) as threatened under the Endangered Species Act (Act) with a section 4(d) rule and to designate critical habitat for the Bi-State DPS. The District Court for the Northern District of California vacated our March 31, 2020, withdrawal of the October 28, 2013, proposed listing rule, and that action serves to reinstate the proposed listing rule. We will initiate a new status review to determine whether the Bi-State DPS meets the definition of an endangered or threatened species under the Act. We request new information to inform this status review. Comments previously submitted need not be resubmitted, as they will be fully considered in preparing the final determination.

DATES: The comment periods are reopened on the proposed rules that published October 28, 2013 (at 78 FR 64358 and 78 FR 64328). So that we can fully consider your comments in our final determination, submit your comments on or before June 26, 2023.

ADDRESSES:

Document availability: Documents associated with the proposed rule to list the Bi-State DPS and a related proposed rule to designate critical habitat for the DPS are available on the internet at *https://www.regulations.gov* under these dockets: FWS–R8–ES–2013–0072, FWS–R8–ES–2013–0042, FWS–R8–ES–2018–0106, and FWS–R8–ES–2018–0107, as described below in **SUPPLEMENTARY INFORMATION** under *Information Requested.*

Written comments: The docket for this reopened comment period is FWS–R8–ES–2023–0052. You may submit written comments by one of the following methods:

(1) *Electronically:* Go to the Federal eRulemaking Portal: *https://www.regulations.gov.* In the Search box, enter FWS–R8–ES–2023–0052. Then, click on the Search button. On the resulting page, in the Search panel on the left side of the screen, under the Document Type heading, click on the Proposed Rules link to locate this document. You may submit a comment by clicking on ''Comment.''

(2) *By hard copy:* Submit by U.S. mail to: Public Comments Processing, Attn: FWS–R8–ES–2023–0052, U.S. Fish and Wildlife Service, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041–3803.

We request that you send comments only by the methods described above. We will post all comments on *https://www.regulations.gov.* This generally means that we will post any personal information you provide us (see *Public Comments,* below, for more information).

FOR FURTHER INFORMATION CONTACT: Justin Barrett, Deputy Field Supervisor, U.S. Fish and Wildlife Service, Reno Fish and Wildlife Office, 1340 Financial Boulevard, Suite 234, Reno, NV 89502; telephone 775–861–6300; or facsimile 775–861–6301. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

Background

On October 28, 2013, we published a proposed rule to list the Bi-State DPS in California and Nevada as a threatened species under the Endangered Species Act of 1973, as amended (''Act''; 16 U.S.C. 1531 *et seq.*), with a rule under section 4(d) of the Act (78 FR 64358). We concurrently published a proposed rule to designate critical habitat for the Bi-State DPS (78 FR 64328). On April 23, 2015, we published a withdrawal of the proposed rule to list the Bi-State DPS as a threatened species, including withdrawal of the section 4(d) and proposed critical habitat rules (80 FR 22828). That decision was based on our conclusion that the threats to the Bi-State DPS as identified in the proposed listing rule were no longer as significant as believed at the time of publication of the proposed rule and that conservation plans were ameliorating threats to the species. Thus, we concluded that the Bi-State DPS did not meet the definition of a threatened or endangered species throughout all or a significant portion of its range.

On March 9, 2016, Desert Survivors, the Center for Biological Diversity, WildEarth Guardians, and Western Watershed Project filed suit in the United States District Court for the Northern District of California. The suit challenged the withdrawal of the proposal to list the Bi-State DPS. On May 5, 2018, the court issued a decision. As the result of the court order, the April 23, 2015 (80 FR 22828), withdrawal was vacated and remanded to the Service for further consideration consistent with the order, and on April 12, 2019, we reopened the comment periods on the 2013 proposed listing and critical habitat rules (84 FR 14909).

After review of the public comments received and other information, on March 31, 2020, we published another withdrawal of the proposed rule to list the Bi-State DPS as a threatened species, including withdrawal of the proposed section 4(d) and critical habitat rules (85 FR 18054). That decision was again based on our conclusion that the threats to the Bi-State DPS as identified in the 2013 proposed listing rule were no longer as significant as believed at the time of publication of the 2013 proposed rule and that conservation plans were ameliorating threats to the species. Thus, we concluded that the Bi-State DPS did not meet the definition of a threatened or endangered species throughout all or a significant portion of its range.

On September 29, 2020, Desert Survivors, the Center for Biological Diversity, WildEarth Guardians, and Western Watershed Project filed suit in the United States District Court for the Northern District of California. The suit again challenged the withdrawal of the proposal to list the Bi-State DPS. On May 16, 2022, the court issued a decision. As the result of the court order, the March 31, 2020 (85 FR 18054), withdrawal was vacated and remanded to the Service for further consideration consistent with the order.

Current Situation

The court's action returns the rulemaking process to the proposed rule stage, and the status of the Bi-State DPS has reverted to that of a species proposed for listing for the purposes of consultation under section 7 of the Act. The court's action also reinstates the

proposed section 4(d) rule and the proposed critical habitat rule for the Bi-State DPS (78 FR 64358 and 64328; October 28, 2013). Therefore, this document notifies the public that we are reopening the comment periods on the 2013 proposed rules to list the Bi-State DPS as threatened with a section 4(d) rule and designate critical habitat. We also announce that we will be initiating an entirely new species status assessment (SSA) of the Bi-State DPS. The SSA will inform the decision of whether the Bi-State DPS meets the definition of an endangered or threatened species under the Act, or whether the species is not warranted for listing. We are targeting making a new listing determination through publication in the **Federal Register** by May 2024, which could include withdrawal, re-proposal, or a final listing status and critical habitat determination. We will accept written comments and information during this reopened comment period on our proposed rules to list the Bi-State DPS as threatened with a section 4(d) rule and designate critical habitat that were published in the **Federal Register** on October 28, 2013 (78 FR 64358 and 64328; October 28, 2013). Any listing determination we make must be made based on the best available information. To inform this status review, we request new information regarding the Bi-State DPS that has become available since the publication of the 2013 proposed rules.

Species Information

Please refer to the March 31, 2020, withdrawal of our proposed listing rule (85 FR 18054) and the 2020 Species Report (Service 2020, entire; available on the internet at *https://www.regulations.gov* under Docket No. FWS–R8–ES–2018–0106) for information about the Bi-State DPS taxonomy, habitat (sagebrush ecosystem), seasonal habitat selection, life-history characteristics, home range, life expectancy and survival rates, historical and current range distribution, population estimates and lek (sage-grouse breeding complex) counts, population trends, and land ownership information. Please also refer to our March 23, 2010, 12-month petition finding (75 FR 13910) for the greater sage-grouse for a detailed evaluation of the Bi-State DPS under our DPS policy, which published in the **Federal Register** on February 7, 1996 (61 FR 4722). For a detailed summary of previous open comment periods, please see our 2015 and 2020 withdrawals of the proposed listing rules (80 FR 22828, April 23, 2015; 85 FR 18054, March 31, 2020).

Information Requested

We will accept written comments and information during this reopened comment period on our proposed rules to list the Bi-State DPS as threatened with a section 4(d) rule and designate critical habitat that were published in the **Federal Register** on October 28, 2013 (78 FR 64358 and 78 FR 64328). We will consider information and recommendations from all interested parties. We are particularly interested in comments concerning:

(1) The Bi-State DPS's biology, range, and population trends, including:

(a) Biological or ecological requirements of the species, including habitat requirements for feeding, breeding, and sheltering;

(b) Genetics and taxonomy;

(c) Historical and current range, including distribution patterns and the locations of any additional leks or populations of this species;

(d) Historical and current population levels, and current and projected trends; and

(e) Past and ongoing conservation measures for the Bi-State DPS, its habitat, or both.

(2) Threats and conservation actions affecting the species, including:

(a) Factors that may be affecting the continued existence of the species, which may include habitat modification or destruction, overutilization, disease, predation, the inadequacy of existing regulatory mechanisms, or other natural or manmade factors.

(b) Biological, commercial trade, or other relevant data concerning any threats (or lack thereof) to this species.

(c) Existing regulations or conservation actions that may be addressing threats to this species.

(3) Additional information concerning the historical and current status of the Bi-State DPS.

(4) Information on regulations that may be necessary and advisable to provide for the conservation of the Bi-State DPS and that we can consider in developing a section 4(d) rule for the species. In particular, information concerning the extent to which we should include any of the section 9 prohibitions in the 4(d) rule or whether we should consider any additional exceptions from the prohibitions in the 4(d) rule.

(5) Whether we should add a provision to the proposed 4(d) rule that covers incidental take of the Bi-State DPS in accordance with agricultural or conservation activities consistent with the Act.

(6) Information on effectiveness of ongoing conservation measures and management actions.

(7) Information on current habitat conditions including but not limited to quality of upland and meadow or riparian sites, presence and abundance of annual invasive grasses and weeds or other increasing plants (*e.g.,* conifer trees), and recovery of previously burned sites. This information may include larger landscape-scale assessments or smaller site-specific investigations.

(8) Specific information on:

(a) The amount and distribution of habitat for the Bi-State DPS.

(b) Any additional areas occurring within the range of the species in western Nevada and eastern California that should be included in the critical habitat designation because they (i) are occupied at the time of listing and contain the physical or biological features that are essential to the conservation of the species and that may require special management considerations, or (ii) are unoccupied at the time of listing and are essential for the conservation of the species.

(c) Special management considerations or protection that may be needed in critical habitat areas we are proposing, including managing for the potential effects of climate change.

(d) To evaluate the potential to include areas not occupied at the time of listing, we particularly seek comments regarding whether occupied areas are adequate for the conservation of the species. Additionally, please provide specific information regarding whether or not unoccupied areas would, with reasonable certainty, contribute to the conservation of the species and contain at least one physical or biological feature essential to the conservation of the species. We also seek comments or information regarding whether areas not occupied at the time of listing qualify as critical habitat for the species.

(9) Land use designations and current or planned activities in the subject areas and their possible impacts on proposed critical habitat.

(10) Any probable economic, national security, or other relevant impacts of designating any area that may be included in the final designation, and the related benefits of including or excluding specific areas.

(11) Information on the extent to which the description of probable economic impacts in the draft economic analysis (available on the internet at *https://www.regulations.gov* under Docket No. FWS–R8–ES–2013–0042) is a reasonable estimate of the likely economic impacts and any additional information regarding probable

economic impacts that we should consider.

(12) Whether any specific areas we are proposing for critical habitat designation should be considered for exclusion under section 4(b)(2) of the Act, and whether the benefits of potentially excluding any specific area outweigh the benefits of including that area under section 4(b)(2) of the Act. If you think we should exclude any additional areas, please provide information supporting a benefit of exclusion.

(13) Whether we could improve or modify our approach to designating critical habitat in any way to provide for greater public participation and understanding, or to better accommodate public concerns and comments.

Prior information regarding this rulemaking action may be found in these dockets on *https://www.regulations.gov:*

Docket No.	Rulemaking actions reflected in the docket	Information available in the docket
FWS–R8–ES–2013–0072	• Proposed listing rule (78 FR 64358, October 28, 2013). • First withdrawal of the 2013 proposed listing and critical habitat rules (80 FR 22828, April 23, 2015).	• A Hierarchical Integrated Population Model for Greater Sage-Grouse in the Bi-State Distinct Population Segment, California and Nevada, 2014. • Species Status Assessment Maps by Population Management Units, January 2013. • Species Status Assessment Bi-State Distinct Population Segment of Greater Sage-Grouse, 2013. • Bi-State Action Plan, March 2012. • Greater Sage-Grouse Conservation Objectives Team Report, February 2013. • Commitment letters from Federal, State, and local partners. • Policy for Evaluation of Conservation Efforts When Making Listing Decisions (PECE) Evaluation for the Bi-State Distinct Population Segment of Greater Sage-Grouse 2012 Bi-State Action Plan. • Conference Report for the Natural Resources Conservation Service Sage-grouse Initiative, 2010.
FWS–R8–ES–2013–0042	• Proposed critical habitat rule (78 FR 64328, October 28, 2013). • First withdrawal of the 2013 proposed listing and critical habitat rules (80 FR 22828, April 23, 2015).	• Draft Economic Analysis for the Bi-State DPS of Greater Sage-Grouse, 2014. • References cited for proposed critical habitat designation.
FWS–R8–ES–2018–0106	• Reopening of the comment period on the 2013 proposed listing rule (84 FR 14909, April 12, 2019). • Second withdrawal of the 2013 proposed listing and critical habitat rules (85 FR 18054, March 31, 2020).	• Species Report for the Bi-State Distinct Population Segment of Greater Sage-Grouse, January 2020. • References cited in proposed rule withdrawal.
FWS–R8–ES–2018–0107	• Reopening of the comment period on the 2013 proposed critical habitat rule (84 FR 14909, April 12, 2019). • Second withdrawal of the 2013 proposed listing and critical habitat rules (85 FR 18054, March 31, 2020).	• References cited in proposed rule withdrawal.
FWS–R8–ES–2023–0052 (This is the docket number for this document, and comments should be submitted to this docket.).	• Reopening of the comment periods on the 2013 proposed listing rule (78 FR 64358, October 28, 2013) and proposed critical habitat rule (78 FR 64328, October 28, 2013).	

Public Comments

Please do not resubmit comments or information already provided on the proposed rules (78 FR 64358 and 64328; October 28, 2013) during the initial comment periods in 2013 or any of the subsequent comment periods (in 2014, as the result of several extensions and reopenings of the comment periods, and in 2019). Any such comments are incorporated as part of the public record of this rulemaking proceeding, and we will fully consider them in the preparation of our determination. Please note that submissions merely stating support for, or opposition to, the action under consideration without providing supporting information, although noted, do not provide substantial information necessary to support a determination. Section 4(b)(1)(A) of the Act directs that determinations as to whether any species is an endangered or a threatened species must be made solely on the basis of the best scientific and commercial data available.

You may submit your comments and materials concerning the proposed rule by one of the methods listed in **ADDRESSES**. We request that you send comments only by the methods described in **ADDRESSES**.

Comments and materials we receive will be available for public inspection on *https://www.regulations.gov* at Docket No. FWS–R8–ES–2023–0052. If you submit information via *https://www.regulations.gov,* your entire comment—including any personal identifying information—will be posted on the website. If your submission is made via a hardcopy that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy submissions on *https://www.regulations.gov.*

Because we will consider all comments and information we receive during the comment period, our final determinations may differ from this proposal. Based on the new information we receive (and any comments on that new information), we may conclude that the species is endangered instead of threatened, or we may conclude that the species does not warrant listing as either an endangered species or a threatened species. For critical habitat, our final designation may not include all areas proposed, may include some additional areas that meet the definition of critical habitat, or may exclude some areas if we find the benefits of exclusion outweigh the benefits of inclusion and exclusion will not result in the extinction of the species. In addition, we may change the parameters of the prohibitions or the exceptions to those prohibitions in the proposed 4(d) rule if we conclude it is appropriate in light of comments and new information received. For example, we may expand the prohibitions to include prohibiting additional activities if we conclude that those additional activities are not compatible with conservation of the species. Conversely,

we may establish additional exceptions to the prohibitions in the final rule if we conclude that the activities would facilitate or are compatible with the conservation and recovery of the species.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

The Department of Agriculture will submit the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13 on or after the date of publication of this notice. Comments are requested regarding: (1) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding these information collections are best assured of having their full effect if received by May 30, 2023. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

National Agricultural Statistics Service

Title: Agricultural Resource Management Phases 3 Economic Surveys.

OMB Control Number: 0535–NEW.

Summary of Collection: The primary functions of the National Agricultural Statistics Service (NASS) are to prepare and issue State and national estimates of crop and livestock production, disposition, and prices and to collect information on related environmental and economic factors. Detailed economic and environmental data for various crops and livestock help to maintain a stable economic atmosphere and reduce the risk for production, marketing, and distribution operations. The Agricultural Resource Management Surveys (ARMS), are the primary source of information for the U.S. Department of Agriculture on a broad range of issues related to agricultural resource use, cost of production, and farm sector financial conditions. NASS uses a variety of survey instruments to collect the information in conjunction with these studies. General authority for these data collection activities is granted under U.S. Code title 7, section 2204.

This information collection request will focus on the Agricultural Resource Management Phase 3 Surveys. The previous two phases of ARMS will be submitted as a separate information collection request. The requests are being separated to better accommodate changes requested by data users and policy makers.

Need and Use of the Information: ARMS is the only annual source of whole farm information available for objective evaluation of many critical issues related to agriculture and the rural economy, such as: Production practices for certain livestock commodities; as well as whole farm finance data, marketing information, and input usage. Without these data, decision makers cannot analyze and report on critical issues that affect farms and farm households.

Description of Respondents: Farms; Business or other for-profit.

Number of Respondents: 43,817.

Frequency of Responses: Reporting: Annually, monthly.

Total Burden Hours: 70,556.

National Agricultural Statistics Service

Title: Agricultural Resource Management Phases 1 & 2 and Chemical Use Surveys.

OMB Control Number: 0535–0218.

Summary of Collection: The primary functions of the National Agricultural Statistics Service (NASS) are to prepare and issue State and national estimates of crop and livestock production, disposition, and prices and to collect information on related environmental and economic factors. Detailed economic and environmental data for various crops and livestock help to maintain a stable economic atmosphere and reduce the risk for production, marketing, and distribution operations. The Agricultural Resource Management Surveys (ARMS), are the primary source of information for the U.S. Department of Agriculture on a broad range of issues related to agricultural resource use, cost of production, and farm sector financial conditions. NASS uses a variety of survey instruments to collect the information in conjunction with these studies. General authority for these data collection activities is granted under U.S. Code title 7, section 2204.

This information collection request will focus on the Agricultural Resource Management Phases 1 and 2 as well as Chemical Use Surveys. The ARMS Phase 3 Cost and Returns Report will be submitted as a separate information collection request. The requests are being separated to better accommodate changes requested by data users and policy makers.

Need and Use of the Information: ARMS is the only annual source of whole farm information available for objective evaluation of many critical issues related to agriculture and the rural economy. This issues that will be addressed in this request are: input usage, production practices, and chemical use. Without these data, decision makers cannot analyze and report on critical issues that affect farms and farm households when pesticide regulatory actions are being considered.

Description of Respondents: Farms; Business or other for-profit.

Number of Respondents: 114,083.

Frequency of Responses: Reporting: Annually.

Total Burden Hours: 51,222.

Levi S. Harrell,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–20–P

DEPARTMENT OF AGRICULTURE

National Agricultural Statistics Service

Notice of Intent To Request Revision and Extension of a Currently Approved Information Collection

AGENCY: National Agricultural Statistics Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the intention of the National Agricultural Statistics Service (NASS) to request revision and extension of a currently approved information collection, the Agricultural Prices Surveys. Revision to burden hours will be needed due to the addition and/or deletion of surveys, changes in the size of the target population, sampling design, and/or questionnaire length.

DATES: Comments on this notice must be received by June 26, 2023 to be assured of consideration.

ADDRESSES: You may submit comments, identified by docket number 0535–0003, by any of the following methods:

- *Email: ombofficer@nass.usda.gov.* Include docket number above in the subject line of the message.
- *E-fax:* (855) 838–6382.
- *Mail:* Mail any paper, disk, or CD–ROM submissions to: Richard Hopper, NASS Clearance Officer, U.S. Department of Agriculture, Room 5336 South Building, 1400 Independence Avenue SW, Washington, DC 20250–2024.
- *Hand Delivery/Courier:* Hand deliver to: Richard Hopper, NASS Clearance Officer, U.S. Department of Agriculture, Room 5336 South Building, 1400 Independence Avenue SW, Washington, DC 20250–2024.

FOR FURTHER INFORMATION CONTACT: Kevin L. Barnes, Associate Administrator, National Agricultural Statistics Service, U.S. Department of Agriculture, (202) 720–2707. Copies of this information collection and related instructions can be obtained without charge from Richard Hopper, NASS—OMB Clearance Officer, at (202) 690–2388 or at *ombofficer@nass.usda.gov.*

SUPPLEMENTARY INFORMATION:

Title: Agricultural Prices.

OMB Control Number: 0535–0003.

Expiration Date of Approval: November 30, 2023.

Type of Request: Intent to Seek Approval to Revise and Extend an Information Collection for 3 years.

Abstract: The primary objective of the National Agricultural Statistics Service (NASS) is to prepare and issue State and national estimates of crop and livestock production, prices, and disposition; as well as economic statistics, environmental statistics related to agriculture and to conduct the Census of Agriculture.

The Agricultural Prices surveys provide data on the prices received by farmers and prices paid by them for production goods and services. NASS estimates based on these surveys are used as a Principle Economic Indicator of the United States. These price estimates are also used to compute Parity Prices in accordance with requirements of the Agricultural Adjustment Act of 1938 as amended (Title III, Subtitle A, Section 301(a)). In addition, price data are used by the Federal Crop Insurance Corporation to help determine payment rates, program option levels, and disaster programs.

Changes from the currently approved information collection include:

(1) Addition of the Tobacco Price Inquiry. The Tobacco Price Inquiry is included in the Field Crops Information Collection Request (0535–0002).

(2) Removal of the biennial hay production and sales survey. The data collected on the biennial hay survey was used to weight (by quantity) the monthly hay (alfalfa and other hay) prices to calculate the Marketing Year Average (MYA) and United States hay prices This has been replaced with assuming the % of alfalfa and other hay marketings by month by state hasn't changed from recent surveys.

(3) Addition of collecting hay prices on the Cattle on Feed Survey. The Cattle on Feed questionnaire (OMB No. 0535–0213) has a total burden of 15 minutes on the questionnaire (6 minutes for cattle on feed questions, 9 minutes for hay prices). This survey is conducted monthly and hay price questions are included to prevent separate contacts for both cattle on feed and hay price surveys. Similar methodology is used to collect hay prices on the milk production survey already included in this request.

(4) Changes in the size of the target population, sampling design, number of mailings, and/or questionnaire length.

These combined changes will decrease number of respondents by around 27,025 and burden by around 1,820 responses and 6,415 hours.

Authority: These data will be collected under authority of 7 U.S.C. 2204(a). Individually identifiable data collected under this authority are governed by Section 1770 of the Food Security Act of 1985 as amended, 7 U.S.C. 2276, which requires USDA to afford strict confidentiality to non-aggregated data provided by respondents. This Notice is submitted in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–113) and Office of Management and Budget regulations at 5 CFR part 1320.

All NASS employees and NASS contractors must also fully comply with all provisions of the Confidential Information Protection and Statistical Efficiency Act (CIPSEA) of 2018, Title III of Public Law 115–435, codified in 44 U.S.C. Ch. 35. CIPSEA supports NASS's pledge of confidentiality to all respondents and facilitates the agency's efforts to reduce burden by supporting statistical activities of collaborative agencies through designation of NASS agents, subject to the limitations and penalties described in CIPSEA.

Estimate of Burden: Public reporting burden for this information collection is based on more than 30 individual surveys with expected responses of 5–20 minutes and frequency of 1–12 times per year. Estimated number of responses per respondent is approximately 4.1 times per year.

Respondents: Farmers and farm-related businesses.

Estimated Number of Respondents: 40,000.

Estimated Total Annual Burden on Respondents: 26,000 hours.

Copies of this information collection and related instructions can be obtained without charge from Richard Hopper, NASS Clearance Officer, at (202) 690–2388.

Comments: Comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, through the use of appropriate automated, electronic, mechanical, technological or other forms of information technology collection methods. All responses to this notice will become a matter of

public record and be summarized in the request for OMB approval.

Signed at Washington, DC, April 11, 2023.

Kevin L. Barnes,

Associate Administrator.

BILLING CODE 3410–20–P

DEPARTMENT OF AGRICULTURE

Natural Resources Conservation Service

[Docket No. NRCS–2023–0005]

Proposed Revisions to the National Handbook of Conservation Practices for the Natural Resources Conservation Service

AGENCY: Natural Resources Conservation Service, U.S. Department of Agriculture.

ACTION: Notice of availability, request for comments.

SUMMARY: The Natural Resources Conservation Service (NRCS) is giving notice that we intend to issue a series of revised conservation practice standards in the National Handbook of Conservation Practices (NHCP). NRCS is also giving the public an opportunity to provide comments on specified conservation practice standards in the NHCP.

DATES: We will consider comments that we receive by May 30, 2023.

ADDRESSES: We invite you to submit comments in response to this notice. You may submit your comments through one of the following methods below:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and search for Docket ID NRCS–2023–0005. Follow the online instructions for submitting comments; or
- *Mail or Hand Delivery:* Mr. Clarence Prestwich, National Agricultural Engineer, Conservation Engineering Division, NRCS, USDA, 1400 Independence Avenue, South Building, Room 4636, Washington, DC 20250. In your comment, please specify the Docket ID NRCS–2023–0005.

All comments received will be made publicly available on *http://www.regulations.gov.*

The copies of the proposed revised standards are available through *http://www.regulations.gov* by accessing Docket No. NRCS–2023–0005. Alternatively, the proposed revised standards can be downloaded or printed from *https://www.nrcs.usda.gov/getting-assistance/conservation-practices.*

FOR FURTHER INFORMATION CONTACT: Mr. Clarence Prestwich; telephone: (202) 720–2972, or email: *clarence.prestwich@usda.gov.* Individuals who require alternative means for communication should contact the U.S. Department of Agriculture (USDA) Target Center at (202) 720–2600 (voice).

SUPPLEMENTARY INFORMATION:

Background

NRCS plans to revise the conservation practice standards in the NHCP. This notice provides an overview of the planned changes and gives the public an opportunity to offer comments on the specific conservation practice standards and NRCS's proposed changes.

NRCS State Conservationists who choose to adopt these practices in their States will incorporate these practices into the respective electronic Field Office Technical Guide. These practices may be used in conservation systems that treat highly erodible land (HEL) or on land determined to be wetland. Section 343 of the Federal Agriculture Improvement and Reform Act of 1996 (Pub. L. 104–127) requires NRCS to make available for public review and comment all proposed revisions to conservation practice standards used to carry out HEL and wetland provisions of the law.

Revisions to the National Handbook of Conservation Practices

The amount of the proposed changes varies considerably for each of the conservation practice standards addressed in this notice. To fully understand the proposed changes, individuals are encouraged to compare these changes with each standard's current version, which can be found at: *https://www.nrcs.usda.gov/resources/guides-and-instructions/conservation-practice-standards.*

NRCS is requesting comments on the following conservation practice standards:

- Anaerobic Digester (Code 366);
- Drainage Water Management (Code 554);
- Irrigation and Drainage Tailwater Recovery (Code 447);
- Pond Sealing or Lining, Geomembrane or Geosynthetic Clay Liner (Code 521);
- Roofs and Covers (Code 367); and
- Surface Drain, Main or Lateral (Code 608).

The following are highlights of some of the proposed changes to each standard:

Anaerobic Digester (Code 366): Reorganized requirements and clarified wording and formatting to increase readability of the standard. Aligned criteria with other Conservation Practice Standards and planning criteria to maintain consistency. Strengthened requirements to account for effects of nutrients and hazardous gases when implementing anaerobic digesters. Incorporated a limited allowance for emergency venting of biogas when the operation of a flare would lead to an exceedance of local air pollution regulations.

Drainage Water Management (Code 554): Clarified wording and formatting to increase readability of the standard. Added text to general criteria section that the project is required to comply with Federal, State, Tribal, and local laws, and regulations. Also clarified within general criteria section the allowance of manual and automation technology. Added text to the additional criteria to ''Reduce Nutrient, Pathogen, and Pesticide Loading'' section.

Irrigation and Drainage Tailwater Recovery (Code 447): Clarified wording and formatting to increase readability of the standard. Added text to general criteria section that the project is required to comply with Federal, state, tribal, and local laws, and regulations. The water quality practice purpose was clarified to include downstream drinking water source improvement.

Pond Sealing or Lining, Geomembrane or Geosynthetic Clay Liner (Code 521): Revised the materials table; the gas venting, water drainage, and leak detection criteria; and the slope requirements. Also, added new considerations on safety, leak detection, and liner protection.

Roofs and Covers (Code 367): Clarified wording and formatting to increase readability of the standard. The purpose was updated to be consistent with the resource concern list. The allowable flexible cover material thickness was updated based on industry standard change.

Surface Drain, Main or Lateral (Code 608): Added statement that the project is required to comply with all Federal, State, Tribal and local laws, rules, and regulations. Removed statement on wetland determinations to make the standard more consistent with other drainage standards. Added other minor changes to improve clarity and readability.

USDA Non-Discrimination Policy

In accordance with Federal civil rights law and USDA civil rights regulations and policies, USDA, its agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on

race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family or parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Individuals who require alternative means of communication for program information (for example, braille, large print, audiotape, American Sign Language, etc.) should contact the responsible agency or USDA's TARGET Center at (202) 720–2600 (voice and text telephone (TTY)) or dial 711 for Telecommunicaions Relay Service (both voice and text telephone users can initiate this call from any phone). Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD–3027, found online at *https://www.usda.gov/oascr/how-to-file-a-program-discrimination-complaint* and at any USDA office, or write a letter addressed to USDA and provide in the letter all the information requested in the form. To request a copy of the complaint form, call (866) 632–9992. Submit your completed form or letter to USDA by mail to: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410 or email to *program.intake@usda.gov.*

USDA is an equal opportunity provider, employer, and lender.

Louis Aspey,

Associate Chief, Natural Resources Conservation Service.

BILLING CODE 3410–16–P

DEPARTMENT OF COMMERCE

International Trade Administration

Announcement of Approved International Trade Administration Trade Mission

AGENCY: International Trade Administration, Department of Commerce.

SUMMARY: The United States Department of Commerce, International Trade Administration (ITA), is announcing one upcoming trade mission that will be recruited, organized, and implemented by ITA. This mission is: Trade Mission to Canada and Mexico—September 17–22, 2023. A summary of the mission is found below. Application information and more detailed mission information, including the commercial setting and sector information, can be found at the trade mission website: *https://www.trade.gov/trade-missions.* For each mission, recruitment will be conducted in an open and public manner, including publication in the **Federal Register,** posting on the Commerce Department trade mission calendar (*https://www.trade.gov/trade-missions-schedule*) and other internet websites, press releases to general and trade media, direct mail, broadcast fax, notices by industry trade associations and other multiplier groups, and publicity at industry meetings, symposia, conferences, and trade shows.

FOR FURTHER INFORMATION CONTACT: Jeffrey Odum, Events Management Task Force, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington DC 20230; telephone (202) 482–6397 or email *Jeffrey.Odum@trade.gov.*

SUPPLEMENTARY INFORMATION:

The Following Conditions for Participation Will Be Used for the Mission

Applicants must submit a completed and signed mission application and supplemental application materials, including adequate information on their products and/or services, primary market objectives, and goals for participation that is adequate to allow the Department of Commerce to evaluate their application. If the Department of Commerce receives an incomplete application, the Department of Commerce may either: reject the application, request additional information/clarification, or take the lack of information into account when evaluating the application. If the requisite minimum number of participants is not selected for a particular mission by the recruitment deadline, the mission may be cancelled.

Each applicant must also certify that the products and services it seeks to export through the mission are either produced in the United States, or, if not, are marketed under the name of a U.S. firm and have at least fifty-one percent U.S. content by value. In the case of a trade association or organization, the applicant must certify that, for each firm or service provider to be represented by the association/organization, the products and/or services the represented firm or service provider seeks to export are either produced in the United States or, if not, marketed under the name of a U.S. firm and have at least 51% U.S. content.

A trade association/organization applicant must certify to the above for every company it seeks to represent on the mission. In addition, each applicant must:

- Certify that the products and services that it wishes to market through the mission would be in compliance with U.S. export controls and regulations;
- Certify that it has identified any matter pending before any bureau or office in the Department of Commerce;
- Certify that it has identified any pending litigation (including any administrative proceedings) to which it is a party that involves the Department of Commerce; and
- Sign and submit an agreement that it and its affiliates (1) have not and will not engage in the bribery of foreign officials in connection with a company's/participant's involvement in this mission, and (2) maintain and enforce a policy that prohibits the bribery of foreign officials.

In the case of a trade association/organization, the applicant must certify that each firm or service provider to be represented by the association/organization can make the above certifications.

The Following Selection Criteria Will Be Used for the Mission

Targeted mission participants are U.S. firms, services providers and trade associations/organizations providing or promoting U.S. products and services that have an interest in entering or expanding their business in the mission's destination country. The following criteria will be evaluated in selecting participants:

- Suitability of the applicant's (or in the case of a trade association/organization, represented firm's or service provider's) products or services to these markets;
- The applicant's (or in the case of a trade association/organization, represented firm's or service provider's) potential for business in the markets, including likelihood of exports resulting from the mission; and
- Consistency of the applicant's (or in the case of a trade association/organization, represented firm's or service provider's) goals and objectives with the stated scope of the mission. Balance of company size and location may also be considered during the review process.

Referrals from a political party or partisan political group or any information, including on the application, containing references to political contributions or other partisan political activities will be excluded from the application and will not be considered during the selection process. The sender will be notified of these exclusions. The Department of Commerce will evaluate applications and inform applicants of selection decisions on a rolling basis until the maximum number of participants has been selected.

Trade Mission Participation Fees

If and when an applicant is selected to participate on a particular mission, a payment to the Department of Commerce in the amount of the designated participation fee below is required. Upon notification of acceptance to participate, those selected have 5 business days to submit payment or the acceptance may be revoked.

Participants selected for a trade mission will be expected to pay for the cost of personal expenses, including, but not limited to, international travel, lodging, meals, transportation, communication, and incidentals, unless otherwise noted. Participants will, however, be able to take advantage of U.S. Government rates for hotel rooms. In the event that a mission is cancelled, no personal expenses paid in anticipation of a mission will be reimbursed. However, participation fees for a cancelled mission will be reimbursed to the extent they have not already been expended in anticipation of the mission.

Trade mission members participate in trade missions and undertake mission-related travel at their own risk. The nature of the security situation in a given foreign market at a given time cannot be guaranteed. The U.S. Government does not make any representations or guarantees as to the safety or security of participants. The U.S. Department of State issues U.S. Government international travel alerts and warnings for U.S. citizens available at *https://travel.state.gov/content/travel/en/traveladvisories/traveladvisories.html/.* Any question regarding insurance coverage must be resolved by the participant and its insurer of choice.

Definition of Small- and Medium-Sized Enterprise

For purposes of assessing participation fees, an applicant is a small or medium-sized enterprise (SME) if it qualifies as a ''small business'' under the Small Business Administration's (SBA) size standards (*https://www.sba.gov/document/support-table-size-standards*), which vary by North American Industry Classification System (NAICS) Code. The SBA Size Standards Tool (*https://www.sba.gov/size-standards*) can help you determine the qualifications that apply to your company.

Important Note About the Covid–19 Pandemic

Travel and in-person activities are contingent upon the safety and health conditions in the United States and the mission countries. Should safety or health conditions not be appropriate for travel and/or in-person activities, the Department will consider postponing the event or offering a virtual program in lieu of an in-person agenda. In the event of a postponement, the Department will notify the public and applicants previously selected to participate in this mission will need to confirm their availability but need not reapply. Should the decision be made to organize a virtual program, the Department will adjust fees, accordingly, prepare an agenda for virtual activities, and notify the previously selected applicants with the option to opt-in to the new virtual program.

Mission List: (additional information about trade missions can be found at *https://www.trade.gov/trade-missions*).

Trade Mission to Canada and Mexico—September 17–22, 2023

Summary

The United States Department of Commerce, International Trade Administration is organizing a trade mission to Canada and Mexico from September 17–22, 2023, that will include the *Business Opportunities in the Americas Conference* in Washington, DC on September 17–22, 2023.

The United States, Canada, and Mexico share common interests in strengthening regional economic growth, prosperity and competitiveness, and understand that North American competitiveness underpins the future prosperity, security and sustainability of all three countries.

Trade mission participants will arrive in Washington, DC to attend the opening reception for the *Business Opportunities in the Americas Conference* on September 17, which is also open to U.S. companies not participating in the trade mission. The U.S. Department of Commerce's *Business Opportunities in the Americas Conference* will focus on regional and industry-specific sessions, and will gather experts on market entry strategies, logistics, procurement, trade financing and other important topics.

On Sunday, September 17, trade mission participants will participate in the Conference in one-on-one meetings (U.S. diplomats and/or industry specialists from 24 U.S. Embassies will be available) and a trade mission briefing in addition to a networking reception. On Monday, September 18, participants will engage in the main business conference that will include a plenary session in the morning, a networking lunch, workshops and one-one meetings with U.S. diplomats and/or industry specialists from 24 U.S. Embassies in the afternoon, and the main networking reception in the evening. On the last day of the Conference, Tuesday, September 19, participants will engage in workshops in the morning, a networking lunch, and one-one meetings throughout the day. Trade mission participants will travel on Wednesday, September 20 to engage in business-to-business (B2B) appointments on Thursday, September 21 with pre-screened potential buyers, agents, distributors or joint-venture partners, in the selected city/stop in Canada and/or Mexico.

The U.S. Commercial Service Canada and/or Mexico also will be offering to arrange B2B meetings through November 30, 2023 on a first-come, first-served basis in the various mission stops in Mexico and Canada for trade mission applicants that are waitlisted. U.S. exporters interested in business-to-business meetings or other services in these markets after November 30th should contact their local U.S. Export Assistance Center.

One-on-one meetings will be pre-scheduled with the available U.S. diplomats and/or industry specialists from 24 U.S. Embassies in the Western Hemisphere region, as well as key service providers and other trade related resources. U.S. Embassies participating in the event are from the following countries: Argentina, Barbados, Belize, Bolivia, Brazil, Canada, Chile, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Honduras, Jamaica, Mexico, Panama, Paraguay, Peru, Suriname, The Bahamas, Trinidad & Tobago, and Uruguay.

The mission is open to U.S. companies from industries with growing potential in Canada and Mexico. Best prospects sectors for U.S. companies in Canada and Mexico are: Aerospace and Defense; Agribusiness; Automotive; Construction; Cosmetics; Defense Equipment; Education and Training;

Electricity Sector; Energy; Environmental Technologies; Financial Technologies (Fintech) Industry; Healthcare Products & Services; Information and Communications Technology (ICT); Medical Devices; Mining and Minerals; Oil and Gas; Packaging; Machinery Industry; Plastics and Resins; Renewable Energy; Safety and Security; Transportation Infrastructure; Equipment and Services; and Travel and Tourism.

Proposed Timetable

[*]*Note:* The final schedule and potential site visits will depend on the availability of host government and business officials, specific goals of mission participants, and ground transportation.

Sunday, September 17, 2023	Washington, DC. *Afternoon:* Registration, One-on-One Meetings Markets Briefing. Evening: Networking Reception.
Monday, September 18, 2023	Washington, DC. *Morning:* Registration, Business Conference, Networking Break. *Afternoon:* Networking Lunch, One-on-One Meetings, and Workshops.
Tuesday, September 19, 2023	Washington, DC. *Morning:* Workshops and One-on-One Meetings. Afternoon: Networking Lunch and One-on-One Meetings.
B2B Meetings Options	
Wednesday, September 20, 2023	Travel Day for B2B Meetings.
Thursday, September 21, 2023	B2B Meetings in (up to two cities/markets): Option (A) Toronto, Canada. Option (B) Montreal, Canada. Option (C) Ottawa, Canada. Option (D) Calgary, Canada. Option (E) Mexico City, Mexico. Option (F) Guadalajara, Mexico. Option (G) Monterrey, Mexico.
Friday, September 22, 2023	Travel Day. Return to the U.S.

Participation Requirements

All parties interested in participating in the trade mission must submit an application package for consideration by the Department of Commerce. All applicants will be evaluated on their ability to meet certain conditions and best satisfy the selection criteria as outlined below. A minimum of thirty and maximum of fifty companies and/or trade associations will be selected to participate in the mission on a rolling basis. All selected participants will attend the business conference in Washington, DC and will have the opportunity to have business-to-business meetings in up-to two cities in Canada and/or Mexico.

The number of firms that may be selected for each stop are as follows: 10 companies for Toronto; 5 companies for Montreal; 10 companies for Ottawa and 4 companies for Calgary; 15 companies for Mexico City; 3 companies for Monterrey; and 3 companies for Guadalajara.

Fees and Expenses

After a firm or trade association has been selected to participate on the mission, a payment to the Department of Commerce in the form of a participation fee is required. The fees are as follow:

If only one stop is selected for B2B meetings, the participation fee will be $2,800 for a small or medium-sized enterprises (SME) [1] and $4,000 for large firms.

If two stops are selected for B2B meetings, the participation fee will be $3,800 for a small or medium-sized enterprises (SME) [1] and $5,000 for large firms.

The mission participation fee includes the *Business Opportunities in the Americas Conference,* registration fee of $650 per participant from each firm.

There will be a $300 fee for each additional firm representative (large firm or SME) that wishes to participate in B2B meetings in any of the stops selected.

If an applicant is selected to participate on a particular mission, a payment to the Department of Commerce in the amount of the designated participation fee is required. Upon notification of acceptance to participate, those selected have 5 business days to submit payment or the acceptance may be revoked. Participants selected for a trade mission will be expected to pay for the cost of personal expenses, including, but not limited to, international travel, lodging, meals, transportation, communication, and incidentals, unless otherwise noted. Participants will, however, be able to take advantage of U.S. Government rates for hotel rooms. In the event that a mission is cancelled, no personal expenses paid in anticipation of a mission will be reimbursed. However, participation fees for a cancelled mission will be reimbursed to the extent they have not already been expended in anticipation of the mission.

If a visa is required to travel on a particular mission, applying for and obtaining such a visa will be the responsibility of the mission participant. Government fees and processing expenses to obtain such a visa are not included in the participation fee. However, the Department of Commerce will provide instructions to each participant on the procedures required to obtain business visas.

Trade mission members participate in trade missions and undertake mission-related travel at their own risk. The nature of the security situation in a given foreign market at a given time cannot be guaranteed. The U.S. Government does not make any representations or guarantees as to the safety or security of participants. The U.S. Department of State issues U.S. Government international travel alerts and warnings for U.S. citizens available at *https://travel.state.gov/content/passports/en/alertswarnings.html.* Any question regarding insurance coverage must be resolved by the participant and its insurer of choice.

Timeframe for Recruitment and Applications

Mission recruitment will be conducted in an open and public manner, including publication in the **Federal Register**, posting on the Department of Commerce trade mission calendar (*http://export.gov/trademissions*) and other internet websites, press releases to general and trade media, direct mail, notices by industry trade associations and other multiplier groups, and publicity at industry meetings, symposia, conferences, and trade shows. Recruitment for the mission will begin

immediately and conclude no later than July 28th, 2023. The Department of Commerce will evaluate applications and inform applicants of selection decisions on a rolling basis until the maximum number of participants has been selected. Applications received after July 28th, 2023, will be considered only if space and scheduling constraints permit.

BILLING CODE 3510–DR–P

DEPARTMENT OF COMMERCE

United States Patent and Trademark Office

[Docket No. PTO–T–2023–0016]

Trademark Public Advisory Committee Public Hearing on the Proposed Trademark Fee Schedule

AGENCY: United States Patent and Trademark Office, Department of Commerce.

ACTION: Notice of public hearing.

SUMMARY: The United States Patent and Trademark Office (USPTO) is announcing the date, time, and place of a public hearing that will be held by the Trademark Public Advisory Committee (TPAC) on the USPTO's proposed setting or adjusting of trademark fees pursuant to the USPTO's fee setting authority under section 10 of the Leahy-Smith America Invents Act (AIA). The USPTO will make its proposed trademark fees available—as set forth in the **SUPPLEMENTARY INFORMATION** section of this notice—before the TPAC hearing. The public is invited to testify at the hearing and submit written comments regarding proposed trademark fees.

DATES: A hybrid public hearing will be held on Monday, June 5, 2023, from 1–3 p.m. ET. The USPTO will publish a proposed trademark fee schedule and related supplementary information for public viewing no later than May 19, 2023, on the fee setting and adjusting section of the USPTO website, *www.uspto.gov/FeeSettingAndAdjusting.* Anyone wishing to present oral testimony at the hearing must submit a written request for an opportunity to do so no later than May 26, 2023. Written comments on proposed trademark fees will be accepted until June 12, 2023.

ADDRESSES: The public hearing will be held in person in the Clara Barton Auditorium at the USPTO, 600 Dulany Street, Alexandria, Virginia 22314. The hearing will also be available via live feed for those wishing to attend remotely. Information on remote attendance will be posted on the TPAC section of the USPTO website, *www.uspto.gov/tpac,* before the hearing.

Requests To Present Oral Testimony

The public is invited to testify at the TPAC hearing regarding proposed trademark fees. Anyone wishing to present oral testimony at the hearing must submit a request in writing no later than May 26, 2023. Requests to testify should indicate:

A. The name of the person wishing to testify;

B. The person's contact information (telephone number and email address);

C. The organization(s) the person represents, if any;

D. An indication of the amount of time needed for the testimony; and

E. An indication of whether testimony will be provided in person or remotely.

Speaking slots are limited, and the USPTO may be unable to honor all requests. Requests to testify must be submitted by email to Charles Joyner at *TMExec@uspto.gov.* If more requests to provide oral testimony are received than time allows, requestors will be invited to submit written comments. Time slots will be at least five minutes each. Speakers providing testimony at the hearing should submit a written copy of their testimony for inclusion in the record of the proceedings no later than June 12, 2023.

An agenda for witness testimony will be sent to testifying requesters and posted on the fee setting and adjusting section of the USPTO website, *www.uspto.gov/FeeSettingAndAdjusting.* If time permits, the TPAC may permit unscheduled testimony as well.

The hearing will be physically accessible to people with disabilities. Individuals requiring accommodation, such as sign language interpretation or other ancillary aids, should communicate their needs to the individuals listed under the **FOR FURTHER INFORMATION CONTACT** section of this notice at least seven (7) business days prior to the hearing.

Written Comments

Written comments on proposed trademark fees must be submitted through the Federal eRulemaking Portal at *www.regulations.gov.* To submit comments via the portal, commenters should enter docket number PTO–T–2023–0016 on the homepage and select the Search button. The site will provide search results listing all documents associated with this docket. Commenters can find a reference to this document and select the Comment icon, complete the required fields, and enter or attach their comments. Attachments to electronic comments will be accepted in Adobe portable document format (PDF) or Microsoft Word format. Information that you do not want to make public, such as an address or phone number, should not be included in the comments to protect your privacy.

Visit the Federal eRulemaking Portal for additional instructions on providing comments via the portal. If electronic submission of comments is not possible, please contact the USPTO using the contact information below at the **FOR FURTHER INFORMATION CONTACT** section of this notice for special instructions.

Recordings

A recording of the public hearing will be posted on the fee setting and adjusting section of the USPTO website, *www.uspto.gov/FeeSettingAndAdjusting,* shortly after the hearing.

Transcripts

A transcript of the hearing will be available on the fee setting and adjusting section of the USPTO website, *www.uspto.gov/FeeSettingAndAdjusting,* shortly after the hearing.

FOR FURTHER INFORMATION CONTACT: Brendan Hourigan, Director, Office of Planning and Budget, at 571–272–8966, or at *Brendan.Hourigan@uspto.gov;* or Dianne Buie, Director, Forecasting and Analysis Division, at 571–272–6301, or at *Dianne.Buie@uspto.gov.*

SUPPLEMENTARY INFORMATION: The USPTO is authorized under section 10 of the AIA to set or adjust by rule all patent and trademark fees established, authorized, or charged under title 35 of the United States Code and the Trademark Act of 1946, respectively. This authority was extended through

September 15, 2026, by the Study of Underrepresented Classes Chasing Engineering and Science Success Act of 2018 (Pub. L. 115–273). Patent and trademark fees set or adjusted by rule under section 10 of the AIA may only recover the aggregate estimated costs to the USPTO for processing, activities, services, and materials relating to patents and trademarks, respectively, including administrative costs of the office with respect to each. Congress set forth the process for the USPTO to follow in setting or adjusting patent and trademark fees by rule under section 10 of the AIA, including additional procedural steps in the rulemaking proceeding for the issuance of regulations under this section. Congress requires the relevant advisory committee to hold a public hearing regarding proposed fees after receiving them from the USPTO. Congress, likewise, requires the relevant advisory committee to prepare a written report on proposed fees and the USPTO to consider the relevant advisory committee's report before setting or adjusting fees.

The USPTO is planning to exercise its fee setting authority to set or adjust trademark fees. The USPTO will publish a proposed trademark fee schedule and related supplementary information for public viewing no later than May 19, 2023, on the fee setting and adjusting section of the USPTO website, *www.uspto.gov/FeeSettingAndAdjusting.* The TPAC will hold a public hearing regarding the proposed trademark fee schedule on the date indicated in this notice. The USPTO will assist the TPAC in holding the hearing by providing resources to organize the hearing and notifying the public. Following the TPAC public hearing and considering all comments, advice, and recommendations, the USPTO, if it continues with the fee setting process, will publish a Notice of Proposed Rulemaking in the **Federal Register**, setting forth its proposed trademark fees.

Katherine K. Vidal,

Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office.

BILLING CODE 3510–16–P

CONSUMER FINANCIAL PROTECTION BUREAU

[Docket No. CFPB–2023–0031]

Agency Information Collection Activities: Comment Request

AGENCY: Consumer Financial Protection Bureau.

ACTION: Notice and request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (PRA), the Consumer Financial Protection Bureau (Bureau or CFPB) is requesting the Office of Management and Budget's (OMB's) approval for a new information collection titled ''Student Loan Survey.''

DATES: Written comments are encouraged and must be received on or before June 26, 2023 to be assured of consideration.

ADDRESSES: You may submit comments, identified by the title of the information collection, OMB Control Number (see below), and docket number (see above), by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Email: PRA_Comments@cfpb.gov.* Include Docket No. CFPB–2023–0031 in the subject line of the email.
- *Mail/Hand Delivery/Courier:* Comment Intake, Consumer Financial Protection Bureau (Attention: PRA Office), 1700 G Street NW, Washington, DC 20552. Because paper mail in the Washington, DC area and at the Bureau is subject to delay, commenters are encouraged to submit comments electronically.

Please note that comments submitted after the comment period will not be accepted. In general, all comments received will become public records, including any personal information provided. Sensitive personal information, such as account numbers or Social Security numbers, should not be included.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Anthony May, PRA Officer, at (202) 435–7278, or email: *CFPB_PRA@cfpb.gov.* If you require this document in an alternative electronic format, please contact *CFPB_Accessibility@cfpb.gov.* Please do not submit comments to these email boxes.

SUPPLEMENTARY INFORMATION:

Title of Collection: Student Loan Survey.

OMB Control Number: 3170–00XX.

Type of Review: New information collection.

Affected Public: Individuals or households.

Estimated Number of Respondents: 3,750.

Estimated Total Annual Burden Hours: 1,238.

Abstract: Under the Dodd-Frank Wall Street Reform and Consumer Protection Act, the Bureau is charged with researching, analyzing, and reporting on topics including consumer behavior, consumer awareness, and developments in markets for consumer financial products and services. To improve its understanding of how consumers engage with financial markets, the Bureau has successfully used credit record data as a sampling frame to survey people about their experiences in consumer credit markets.

The Bureau now seeks to obtain approval for a new survey of student loan borrowers to understand their borrowing decisions, their experience managing their loans, and their expectations for the future. The survey will be sent to a random sample selected from individuals in the Bureau's new Consumer Credit Information Panel (CCIP) which is itself a sample of de-identified credit records from one of the nationwide consumer reporting agencies. The survey responses will be matched to the Bureau's CCIP data to provide a more complete picture of borrowers' financial standings. The survey will follow similar methods as in the Bureau's prior Making Ends Meet Survey (approved under OMB Control Number 3170–0066) and Consumer Views on Debt Survey (approved under OMB Control Number 3170–0047) but sample a different population of borrowers and focus primarily on student loans. The Bureau expects to recruit about 15,000 participants to participate in the survey. The Bureau will collect demographics, measures of financial well-being, consumers' feelings about their financial well-being, experiences with the student loan system, and behavioral measures related to seeking out financial information or willingness to take financial-related actions.

Request for Comments: Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the Bureau, including whether the information will have practical utility; (b) The accuracy of the Bureau's estimate of the burden of the collection of information, including the validity of the methods and the assumptions used; (c) Ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques

or other forms of information technology. Comments submitted in response to this notice will be summarized and/or included in the request for OMB's approval. All comments will become a matter of public record.

Anthony May,

Paperwork Reduction Act Officer, Consumer Financial Protection Bureau.

BILLING CODE 4810–AM–P

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE

Agency Information Collection Activities; Comment Request; Application Package for AmeriCorps Seniors Applications Instructions, Progress Reporting, Independent Living and Respite Surveys

AGENCY: Corporation for National and Community Service.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the Corporation for National and Community Service (operating as AmeriCorps) is proposing to renew an information collection.

DATES: Written comments must be submitted to the individual and office listed in the **ADDRESSES** section June 26, 2023.

ADDRESSES: You may submit comments, identified by the title of the information collection activity, by any of the following methods:

(1) Electronically through *www.regulations.gov* (preferred method).

(2) *By mail sent to:* AmeriCorps, Attention Robin Corindo, 250 E Street SW, Washington, DC 20525.

(3) By hand delivery or by courier to the AmeriCorps mailroom at the mail address given in paragraph (2) above, between 9 a.m. and 4 p.m. Eastern Time, Monday through Friday, except Federal holidays.

Comments submitted in response to this notice may be made available to the public through *regulations.gov*. For this reason, please do not include in your comments information of a confidential nature, such as sensitive personal information or proprietary information. If you send an email comment, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. Please note that responses to this public comment request containing any routine notice about the confidentiality of the communication will be treated as public comment that may be made available to the public, notwithstanding the inclusion of the routine notice.

FOR FURTHER INFORMATION CONTACT: Robin Corindo, 202–489–5578, or by email at *RCorindo@cns.gov.*

SUPPLEMENTARY INFORMATION:

Title of Collection: Application Instructions and Progress Reporting.

OMB Control Number: 3045–0035.

Type of Review: Renewal with change.

Respondents/Affected Public: Businesses and Organizations OR State, Local or Tribal Governments.

*Total Estimated Number of Annual Responses:*1,250.

Total Estimated Number of Annual Burden Hours: 6,250 hours.

Abstract: The AmeriCorps Seniors Grant Application is for use by prospective and existing sponsors of AmeriCorps Seniors projects under the AmeriCorps Seniors RSVP (RSVP), AmeriCorps Seniors Foster Grandparent Program (FGP), AmeriCorps Seniors Senior Companion Program (SCP), and AmeriCorps Seniors Senior Demonstration Program SDP (SDP).

The Project Progress Report and Project Report Supplement will be used to report progress toward accomplishing work plan goals and objectives, reporting volunteer and service outputs, reporting actual outcomes related to self-nominated performance measures, meeting challenges encountered, describing significant activities, and requesting technical assistance.

The Application Instructions and PPR and PRS forms in this package conform to AmeriCorps' web-based electronic grants management system.

The SCP Independent Living Survey and SCP Respite Survey are instruments that collect information from a sample of Senior Companion clients and caregivers. The purpose of the surveys is to assess the feasibility of conducting a longitudinal, quasi-experimental evaluation of the impact of independent living and respite services on clients' social ties and perceived social support. The results of the surveys may also be used to inform the feasibility of using a similar instrument to measure client and caregiver outcomes for an evaluation of RSVP.

AmeriCorps also seeks to continue using the currently approved information collection until the revised information collection is approved by OMB. The currently approved information collection is due to expire on 11/30/2025.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information. All written comments will be available for public inspection on *regulations.gov*.

Atalaya Sergi,

Director, AmeriCorps Seniors.

[FR Doc. 2023–08826 Filed 4–26–23; 8:45 am]

BILLING CODE 6050–28–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Board of Visitors, National Defense University; Notice of Federal Advisory Committee Meeting

AGENCY: Office of the Chairman Joint Chiefs of Staff, Department of Defense (DoD).

ACTION: Notice of Federal Advisory Committee meeting.

SUMMARY: The DoD is publishing this notice to announce that the following Federal Advisory Committee meeting of the Board of Visitors, National Defense University (BoV NDU) will take place.

DATES: Wednesday, May 24, 2023 from 9 a.m. to 3 p.m.

ADDRESSES: Normandy Hall, Joint Forces Staff College, 7800 Hampton Blvd., Naval Support Activity Hampton Roads, Norfolk, VA 23511–1702. Visitors should report to the Front Security Desk in the lobby of Normandy Hall and from there, they will be directed to the meeting room.

FOR FURTHER INFORMATION CONTACT: Dr. John W. Yaeger, (202) 664–2629 (Voice), *yaegerj@ndu.edu*; Ms. Joycelyn Stevens, (202) 685-0079 (Voice) *joycelyn.a.stevens.civ@mail.mil*; *stevensj7@ndu.edu* (Email). Mailing address is National Defense University, Fort McNair Washington, DC 20319–5066. Website: *http://www.ndu.edu/About/Board-of-Visitors/.* The most up-to-date changes to the meeting agenda can be found at *https://www.ndu.edu/About/Board-of-Visitors/BOV-May-24-2023.*

SUPPLEMENTARY INFORMATION: This meeting is being held in accordance with chapter 10 of title 5, U.S.C. (formerly known as the Federal Advisory Committee Act (FACA) (5 U.S.C., App.)) under the provisions of the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102–3.140 and 102–3.150. Pursuant to 5 U.S.C. 552b and 41 CFR 102–3.140 through 102–3.165, this meeting is open to the public.

Purpose of the Meeting: The purpose of the meeting will include discussion on accreditation compliance, organizational management, resource management, and other matters of interest to the National Defense University.

Agenda: Wednesday, May 24, 2023 from 9 a.m. to 3 p.m. (Eastern Time): Call to Order and Administrative Notes; State of the University Address; Reaffirmation of Middle States Commission on Higher Education (MSCHE) Accreditation Outcomes; Ethics and Constitutional Law in Curriculum; Budget Update; Student Demographics; Access to Mental Health Resources; Discussion of Public Written Comments; Board of Visitors Member Deliberation and Feedback; Wrap-up and Closing Remarks.

Meeting Accessibility: Limited space is available for observers and will be allocated on a first come, first served basis. Meeting location is handicap accessible. Visitors must enter Naval Support Activity Hampton Roads via Gate A from Terminal Blvd. and Meredith St.

Base Access Requirements: All visitors without a U.S. Department of Defense Common Access Card (CAC) or U.S. military ID must be vetted in advance to gain entry onto the base. Visitors must complete and sign the Department of the Navy Local Population ID Card/Base Access Pass Registration (Form SECNAV 5512/1). Please visit *https://www.cnic.navy.mil/Operations-and-Management/Base-Support/DBIDS/* and scroll to the bottom of the page to download the form. In block #24 on the form, please enter Mr. David McManaway as the Base Sponsor; his phone number is (757) 443–6621. Please fax the completed and signed Form SECNAV 5512/1 to Mr. David McManaway, JFSC Events Coordinator at (757) 443–6028. Please include a separate fax cover sheet listing your email address so Mr. McManaway can notify you if you have been cleared for base access. Please note vetting may take 14–21 working days.

Visitors who successfully complete vetting and identity proofing will be issued a DBIDS credential or paper access pass. The pass can be picked up the day prior or morning of the meeting at the Pass & ID Office at Norfolk Naval Station, 9040 Hampton Blvd., CD9, Norfolk, VA 23511. Hours of operation are 7 a.m. to 4 p.m. Monday through Friday. Please bring your ID. Additional supporting documents (including directions to Normandy Hall) are available at *http://www.ndu.edu/About/Board-of-Visitors/.* For questions or additional information, you may contact Mr. McManaway at (757) 443–6621 (Voice).

Vehicle Search: Non-DoD, Non-federally-affiliated visitors' vehicles are subject to search.

Written Statements: Pursuant to 41 CFR 102–3.105(j) and 102–3.140, and section 10(a)(3) of the Federal Advisory Committee Act of 1972, written statements to the committee may be submitted to the committee at any time or in response to a stated planned meeting agenda by email or fax to Ms. Joycelyn Stevens at *bov@ndu.edu* or Fax (202) 685–3920. Any written statements received by 5 p.m. on Tuesday, May 23 will be distributed to the BoV NDU in the order received. Comments pertaining to the agenda items will be discussed during the public meeting. Any written statements received after the deadline will be provided to the members of the BoV NDU prior to the next scheduled meeting and posted on the website.

Dated: April 24, 2023.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2023–08867 Filed 4–26–23; 8:45 am]

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID DoD–2023–OS–0012]

Submission for OMB Review; Comment Request

AGENCY: National Defense University, Chairman of the Joint Chiefs of Staff (CJCS), Department of Defense (DoD).

ACTION: 30-Day information collection notice.

SUMMARY: The DoD has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by May 30, 2023.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Angela Duncan, 571–372–7574, *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: ISMO International Fellows Personal Information Collection; OMB Control Number 0704–0601.

Type of Request: Revision.

Number of Respondents: 136.

Responses per Respondent: 2.

Annual Responses: 272.

Average Burden per Response: 45 Minutes.

Annual Burden Hours: 204.

Needs and Uses: This collection is necessary to collect essential personal information on Foreign National students attending the National Defense University. The information collected is used to create profiles for the international students that ensures their needs are met as they transition to their time living in the United States as a student. It also helps them secure driving licenses, CAC's, FIN's, TLA payments, and a DTS profile. Their preliminary information, including name, service, past assignments, etc. is collected via email correspondence while they are still in their home country. More sensitive information such as passport information, DOB, Visa # and their FIN are collected either in person or over the WhatsApp messaging

service, utilizing their end-end encryption. All student information is stored in a database that is only accessible to members of our office.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

• *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

DOD Clearance Officer: Ms. Angela Duncan.

Requests for copies of the information collection proposal should be sent to Ms. Duncan at *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

Dated: April 24, 2023.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF EDUCATION

[Docket No.: Docket Search Results ED–2023–SCC–0073]

Agency Information Collection Activities; Comment Request; National Professional Development Program: Grantee Performance Report

AGENCY: Office of English Language Acquisition (OELA), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing an extension without change of a currently approved information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before June 26, 2023.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2023–SCC–0073. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the *regulations.gov* site is not available to the public for any reason, the Department will temporarily accept comments at *ICDocketMgr@ed.gov.* Please include the docket ID number and the title of the information collection request when requesting documents or submitting comments. Please note that comments submitted after the comment period will not be accepted. Written requests for information or comments submitted by postal mail or delivery should be addressed to the Manager of the Strategic Collections and Clearance Governance and Strategy Division, U.S. Department of Education, 400 Maryland Ave. SW, LBJ, Room 6W203, Washington, DC 20202–8240.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Melissa Escalante, (202) 987–1745.

SUPPLEMENTARY INFORMATION: The Department, in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. The Department is soliciting comments on the proposed information collection request (ICR) that is described below. The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: National Professional Development Program: Grantee Performance Report.

OMB Control Number: 1885–0555.

Type of Review: Extension without change of a currently approved ICR.

Respondents/Affected Public: State, local, and Tribal governments.

Total Estimated Number of Annual Responses: 138.

Total Estimated Number of Annual Burden Hours: 6,900.

Abstract: Information is collected in compliance with the authorized by section 3131(c)(1)(C) of the Elementary and Secondary Education Act of 1965 as amended by the Every Student Succeeds Act, and in accordance with the Education Department General Administrative Regulations (EDGAR), 34 CFR 75.253. EDGAR states that recipients of multi-year discretionary grants must submit an Annual Performance Report (APR) demonstrating that substantial progress has been made towards meeting the approved objectives of the project. In addition, discretionary grantees are required to report on their progress toward meeting the performance measures established for the U.S. Department of Education (ED) grant program.

Dated: April 24, 2023.

Kun Mullan,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Environmental Management Advisory Board

AGENCY: Office of Environmental Management, Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a virtual meeting of the Environmental Management Advisory Board (EMAB). The Federal Advisory Committee Act requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Monday, May 22, 2023; 3:00 p.m.–5:00 p.m. EDT

ADDRESSES: This virtual meeting will be open to the public (observation only). To attend, please contact Alyssa Petit by email, *Alyssa.Petit@em.doe.gov,* no later than 5:00 p.m. EDT on Thursday, May 18, 2023.

FOR FURTHER INFORMATION CONTACT: Alyssa Petit, EMAB Federal Coordinator. U.S. Department of Energy, 1000 Independence Avenue SW, Washington, DC 20585. Phone (202) 430–9624 or Email: *Alyssa.Petit@em.doe.gov.*

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of EMAB is to provide the Assistant Secretary for Environmental Management (EM) with independent advice and recommendations on corporate issues confronting the EM program. EMAB's membership reflects a diversity of views, demographics, expertise, and professional and academic experience. Individuals are appointed by the Secretary of Energy to serve as either special Government employees or representatives of specific interests and/or entities.

Tentative Agenda

- Public Comment
- EMAB Tank Waste Roadmap Recommendation and Vote
- Board Business

Public Participation: The online virtual meeting is open to the public. The Designated Federal Officer is empowered to conduct the conference call in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make public comments should email them as directed above. If you require special accommodations due to a disability, please contact Alyssa Petit at least seven days in advance of the meeting at the email address listed above.

Public Comment: Public comments will be accepted via email prior to and after the meeting. Comments received no later than 5:00 p.m. EDT on Thursday, May 18, 2023, will be read aloud during the virtual meeting. Comments will also be accepted after the meeting by no later than 5:00 p.m. EDT on Monday, May 29, 2023. Please send comments to *Alyssa.Petit@em.doe.gov.*

Minutes: Minutes will be available by writing or calling Alyssa Petit at the address or phone number listed above. Minutes will also be available at the following website: *https://www.energy.gov/em/listings/emab-meetings.*

Signed in Washington, DC, on April 21, 2023.

LaTanya Butler,

Deputy Committee Management Officer.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

National Quantum Initiative Advisory Committee

AGENCY: Office of Science, Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces an open virtual meeting of the National Quantum Initiative Advisory Committee (NQIAC). The Federal Advisory Committee Act requires that public notice of these meetings be announced in the **Federal Register**.

DATES: Friday, May 19, 2023; 1:00 p.m. to 4:00 p.m. EST.

ADDRESSES: Virtual Meeting: Instructions to participate remotely will be posted on the National Quantum Initiative Advisory Committee website at: *www.quantum.gov/about/nqiac* prior to the meeting and can also be obtained by contacting Thomas Wong, (240) 220–4668, or email: *NQIAC@quantum.gov.*

FOR FURTHER INFORMATION CONTACT: Thomas Wong, Designated Federal Officer, NQIAC, (240) 220–4668 or *NQIAC@quantum.gov.*

SUPPLEMENTARY INFORMATION:

Purpose of the Committee: The NQIAC has been established to advise the President, the National Science and Technology Council (NSTC) Subcommittee on Quantum Information Science (SCQIS), and the NSTC Subcommittee on Economic and Security Implications of Quantum Science (ESIX) on the National Initiative Act (NQI) Program, and on trends and developments in quantum information science and technology, in accordance with the National Quantum Initiative Act (*Pub. L. 115–368*) and *Executive Order 14073.*

Tentative Agenda:

- Deliberate and Approve Report on Reauthorizing the National Quantum Initiative.

Public Participation: The meeting is open to the public. It is the policy of the NQIAC to accept written public comments no longer than 5 pages and to accommodate oral public comments, whenever possible. The NQIAC expects that public statements presented at its meetings will not be repetitive of previously submitted oral or written statements. The public comment period for this meeting will take place on May 19, 2023, at a time specified in the meeting agenda. This public comment period is designed only for substantive commentary on NQIAC's work, not for business marketing purposes. The Chairperson of the Committee will conduct the meeting to facilitate the orderly conduct of business.

Oral Comments: To be considered for the public speaker list at the meeting, interested parties should register to speak at *NQIAC@quantum.gov,* no later than 12:00 p.m. Eastern Time on May 12, 2023. To accommodate as many speakers as possible, the time for public comments will be limited to three (3) minutes per person, with a total public comment period of up to 15 minutes. If more speakers register than there is space available on the agenda, NQIAC will select speakers on a first-come, first-served basis from those who applied. Those not able to present oral comments may always file written comments with the committee.

Written Comments: Although written comments are accepted continuously, written comments relevant to the subjects of the meeting should be submitted to *NQIAC@quantum.gov* no later than 12:00 p.m. Eastern Time on May 12, 2023, so that the comments may be made available to the NQIAC members prior to this meeting for their consideration. Please note that because NQIAC operates under the provisions of FACA, all public comments and related materials will be treated as public documents and will be made available for public inspection, including being posted on the NQIAC website.

Minutes: The minutes of this meeting will be available on the National Quantum Initiative Advisory Committee website at: *https://www.quantum.gov/about/nqiac/.*

Signed in Washington, DC, on April 21, 2023.

LaTanya Butler,

Deputy Committee Management Officer.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP23–161–000]

Southern Star Central Gas Pipeline, Inc.; Notice of Request Under Blanket Authorization and Establishing Intervention and Protest Deadline

Take notice that on April 17, 2023, Southern Star Central Gas Pipeline, Inc. (Southern Star) filed a prior notice request for authorization, in accordance with Sections 157.205, 157.208.157.211 and 157.216 of the Federal Energy Regulatory Commission's (Commission) regulations under the Natural Gas Act and Southern Star's blanket certificate issued in Docket No. CP82–479–000 to implement its Line ESA Replacement

Project. Specifically, Southern Star proposes to install approximately 6.62 miles of new 16-inch pipe, which will be designated as Line EVA, to replace approximately 4.75 miles of 16-inch pipe comprising the entirety of Line ESA and a 2.82-mile portion of 4-inch Line EV, both of which will subsequently be abandoned in place, in Douglas and Leavenworth Counties, Kansas. Additionally, a meter setting will be replaced at the Kansas Power and Light Co. Lawrence Plant, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact the Federal Energy Regulatory Commission at *FERCOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

Any questions concerning this application should be directed to Cindy C. Thompson, Director, Regulatory, Compliance, and Information Governance, 4700 State Route 56, Owensboro, Kentucky 42301 at (270) 852–4655; or email at *Cindy.Thompson@southernstar.com*.

Pursuant to Section 157.9 of the Commission's Rules of Practice and Procedure,[1] within 90 days of this Notice the Commission staff will either: complete its environmental review and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or environmental assessment (EA) for this proposal. The filing of an EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

Public Participation

There are three ways to become involved in the Commission's review of this project: you can file a protest to the project, you can file a motion to intervene in the proceeding, and you can file comments on the project. There is no fee or cost for filing protests, motions to intervene, or comments. The deadline for filing protests, motions to intervene, and comments is 5:00 p.m. Eastern Time on June 20, 2023. How to file protests, motions to intervene, and comments is explained below.

Protests

Pursuant to section 157.205 of the Commission's regulations under the NGA,[2] any person [3] or the Commission's staff may file a protest to the request. If no protest is filed within the time allowed or if a protest is filed and then withdrawn within 30 days after the allowed time for filing a protest, the proposed activity shall be deemed to be authorized effective the day after the time allowed for protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request for authorization will be considered by the Commission.

Protests must comply with the requirements specified in section 157.205(e) of the Commission's regulations,[4] and must be submitted by the protest deadline, which is June 20, 2023. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

Interventions

Any person has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and Procedure [5] and the regulations under the NGA [6] by the intervention deadline for the project, which is June 20, 2023. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more information about motions to intervene, refer to the FERC website at *https://www.ferc.gov/how-guides*.

All timely, unopposed motions to intervene are automatically granted by operation of Rule 214(c)(1). Motions to intervene that are filed after the intervention deadline are untimely and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations. A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Comments

Any person wishing to comment on the project may do so. The Commission considers all comments received about the project in determining the appropriate action to be taken. To ensure that your comments are timely and properly recorded, please submit your comments on or before June 20, 2023. The filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding.

How To File Protests, Interventions, and Comments

There are two ways to submit protests, motions to intervene, and comments. In both instances, please reference the Project docket number CP23–161–000 in your submission.

(1) You may file your protest, motion to intervene, and comments by using the Commission's eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then

[1] 18 CFR (Code of Federal Regulations) § 157.9.

[2] 18 CFR 157.205.

[3] Persons include individuals, organizations, businesses, municipalities, and other entities. 18 CFR 385.102(d).

[4] 18 CFR 157.205(e).

[5] 18 CFR 385.214.

[6] 18 CFR 157.10.

select ''Protest'', ''Intervention'', or ''Comment on a Filing''; or [7]

(2) You can file a paper copy of your submission by mailing it to the address below. Your submission must reference the Project docket number CP23–161–000.

To mail via USPS, use the following address: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To send via any other courier, use the following address: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of submissions (option 1 above) and has eFiling staff available to assist you at (202) 502–8258 or *FERCOnlineSupport@ferc.gov*.

Protests and motions to intervene must be served to the applicant by mail to:

Cindy C. Thompson, Director, Regulatory, Compliance, and Information Governance, 4700 State Route 56, Owensboro, Kentucky 42301 or by email (with a link to the document) at *Cindy.Thompson@southernstar.com*. Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the ''eLibrary'' link as described above. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to *https://www.ferc.gov/ferc-online/overview*.

Dated: April 21, 2023.

BILLING CODE 6717–01–P

[7] Additionally, you may file your comments electronically by using the eComment feature, which is located on the Commission's website at *www.ferc.gov* under the link to Documents and Filings. Using eComment is an easy method for interested persons to submit brief, text-only comments on a project.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. IC23–11–000]

Commission Information Collection Activities (FERC–510); Comment Request; Extension

AGENCY: Federal Energy Regulatory Commission, DOE.

ACTION: Notice of information collection and request for comments.

SUMMARY: In compliance with the requirements of the Paperwork Reduction Act of 1995, the Federal Energy Regulatory Commission (Commission or FERC) is soliciting public comment on the proposed extension of currently approved information collection, FERC–510 (Application for Surrender of a Hydropower License).

DATES: Comments on the collection of information are due June 26, 2023.

ADDRESSES: You may submit comments (identified by Docket No. IC23–11–000) by one of the following methods:

- *Electronic Filing (preferred):* Documents must be filed in acceptable native applications and print-to-PDF, but not in scanned or picture format.
- For those unable to file electronically, comments may be filed by USPS mail or by hand (including courier) delivery.
  - *Mail via U.S. Postal Service:* Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC 20426.
  - *Mail via any other service:* Federal Energy Regulatory Commission, Secretary of the Commission, 12225 Wilkins Avenue, Rockville, MD 20852.

Instructions: All submissions must be formatted and filed in accordance with submission guidelines at: *https://www.ferc.gov/help/submission-guide.asp.* For user assistance, contact FERC Online Support by email at *ferconlinesupport@ferc.gov,* or by phone at: (866) 208–3676 (toll-free), or (202) 502–8659 for TTY.

Docket: Users interested in receiving automatic notification of activity in this docket or in viewing/downloading comments and issuances in this docket may do so at *https://www.ferc.gov/docs-filing/docs-filing.asp.*

FOR FURTHER INFORMATION CONTACT: Ellen Brown may be reached by email at *DataClearance@FERC.gov,* telephone at (202) 502–8663.

SUPPLEMENTARY INFORMATION:

Title: FERC–510, Application for Surrender of a Hydropower License.

OMB Control No.: 1902–0068.

Type of Request: Three-year extension of the FERC–510 information collection requirements with no changes to the current reporting and recordkeeping requirements.

Abstract: The purpose of FERC–510 is to implement information collections pursuant to sections 4(e), 6, and 13 of the Federal Power Act (FPA) (16 U.S.C. 797(e), 799 and 806). Section 4(e) gives the Commission authority to issue licenses for the purposes of constructing, operating and maintaining dams, water conduits, reservoirs, powerhouses, transmission lines or other power project works necessary or convenient for developing and improving navigation, transmission and utilization of power using bodies of water over which Congress has jurisdiction. Section 6 gives the Commission the authority to prescribe the conditions of licenses including the revocation or surrender of the license. Section 13 defines the Commission's authority to delegate time periods for when a license must be terminated if project construction has not begun. Surrender of a license may be desired by a licensee when a licensed project is retired or not constructed or natural catastrophes have damaged or destroyed the project facilities.

FERC–510 is the application for the surrender of a hydropower license.[1] The information is used by Commission staff to determine the broad impact of such surrender. The Commission will issue a notice soliciting comments from the public and other agencies and conduct a review of the application before issuing an order for Surrender of a License. The order is the result of an analysis of the information produced (*i.e.,* dam safety, public safety, and environmental concerns, etc.), which is examined to determine whether any conditions must be satisfied before granting the surrender. The order implements the existing regulations and is inclusive for surrender of all types of hydropower licenses issued by FERC and its predecessor, the Federal Power Commission.

Type of Respondent: Private or Municipal Hydropower Licensees.

[1] 18 CFR 6.1–6.4

Estimate of Annual Burden: [2] The Commission estimates the total annual burden and cost [3] for this information collection as follows:

FERC–510

Number of respondents	Annual number of responses per respondent	Total number of responses	Average burden hrs. & cost ($) per response	Total annual burden hrs. & total annual cost	Cost per respondent
(1)	(2)	(1)*(2)=(3)	(4)	($)(3)*(4)=(5)	($)(5)÷(1)
7	1	7	80 hrs.; $7,280	560 hrs.; $50,960	$7,280

Comments: Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Dated: April 21, 2023.

Debbie-Anne A. Reese,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER23–1669–000]

Raceway Solar 1, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of Raceway Solar 1, LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is May 11, 2023.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov*. To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*) using the ''eLibrary'' link. [Project No. 2445–028]

Green Mountain Power Corporation; Notice of Waiver Period for

Water Quality Certification Application

On April 12, 2023, Green Mountain Power Corporation submitted to the Federal Energy Regulatory Commission (Commission) a copy of its application for a Clean Water Act section 401(a)(1) water quality certification filed with the Vermont Department of Environmental Conservation (Vermont DEC), in conjunction with the above captioned project. Pursuant to 40 CFR 121.6 and section 4.34(b)(5) of the Commission's regulations,[1] we hereby notify the Vermont DEC of the following:

Date of Receipt of the Certification Request: April 12, 2023.

Reasonable Period of Time To Act on the Certification Request: One year, April 12, 2024.

If Vermont DEC fails or refuses to act on the water quality certification request on or before the above date, then the agency certifying authority is deemed waived pursuant to section 401(a)(1) of

[2] ''Burden'' is the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. For additional information, refer to Title 5 Code of Federal Regulations 1320.3. The number of respondents is based on the average number of respondents over the last three years.

[3] The Commission staff thinks that the average respondent for this collection is similarly situated to the Commission, in terms of salary plus benefits. The FERC 2022 average salary plus benefits for one FERC full-time equivalent (FTE) is $188,922/year (or $91.00/hour).

[Docket No. NJ23–9–000]

City of Vernon, California; Notice of Filing

Take notice that on April 12, 2023, City of Vernon, California submits tariff filing: 2022 Transmission Revenue Requirement and Transmission Revenue Balancing Account Adjustment, to be effective January 1, 2022.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*) using the ''eLibrary'' link. BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OW–2015–0641; FRL–10930–01–OMS]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; BEACH Act Grant Program (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Beaches Environmental Assessment and Coastal Health (BEACH) Act Grant Program (EPA ICR Number 2048.07, OMB Control Number 2040–0244) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through April 30, 2023. Public comments were previously requested via the **Federal Register** on July 11, 2022 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

DATES: Comments may be submitted on or before May 30, 2023.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OW–2015–0641, to EPA online using *www.regulations.gov* (our preferred method), by email to *OW-Docket@epa.gov,* or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Lisa Larimer, Office of Water, Office of Science and Technology, Standards and Health Protection Division, (4305T), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 566–1017; fax number: (202) 566–0409; email address: *larimer.lisa@epa.gov.*

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through April 30, 2023. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Public comments were previously requested via the **Federal Register** on July 11, 2022 during a 60-day comment period (87 FR 41124). This notice allows for an additional 30 days for public comments. Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave., NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: The Beaches Environmental Assessment and Coastal Health (BEACH) Act amends the Clean Water Act (CWA) in part and authorizes the U.S. Environmental Protection Agency (EPA) to award BEACH Act Grants to coastal and Great Lakes states, tribes, and territories (collectively referred to as jurisdictions) to develop and implement beach monitoring and notification programs. The grants assist those jurisdictions to develop and implement a consistent approach to monitor coastal recreational water quality; assess, manage, and communicate health risks from waterborne microbial contamination; notify the public of pollution occurrences; and post beach advisories and closures to prevent public exposure to microbial pathogens.

Per CWA section 406 (33 U.S.C. 1346), to qualify for a BEACH Act grant a jurisdiction must submit information to EPA documenting that its beach monitoring and notification program is consistent with performance criteria outlined in the *National Beach Guidance and Required Performance Criteria for Grants, 2014 Edition.* In addition, recipients of BEACH Act grants must submit water quality monitoring data and information on public notification actions to EPA. All beach program information will be collected by EPA's Office of Science and Technology, stored in the Beach Advisory and Closing On-line Notification (BEACON) system, and accessible via EPA's Beaches website for use by the public; state, tribal, territorial, and local environmental and public health agencies; and EPA.

Form Numbers: None.

Respondents/affected entities: Potential respondents to this ICR are recipients of BEACH Act grants, including 29 coastal and Great Lakes states, 4 tribes, 5 U.S. territories, and Erie County, Pennsylvania.

Respondent's obligation to respond: Required to obtain or retain a benefit (Section 406 of the Clean Water Act, 33 U.S.C. 1346).

Estimated number of respondents: 40 (total).

Frequency of response: Annual; however, the Agency encourages more frequent reporting to provide more up-to-date information to the public.

Total estimated burden: 322,954 hours (per year). Burden is defined at 5 CFR 1320.03(b)

Total estimated cost: $22,976,864 (per year), includes $9,955,800 annualized capital or operation & maintenance costs.

Changes in the estimates: There is an increase of 230,953 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This increase adjusts estimates in response to feedback to better account for labor costs and to structure the ICR to better align with the burden associated with the present program. Specifically, the increase is due to three main reasons: (1) the existing ICR does not fully capture the respondent labor associated with collecting water quality samples, (2) the restructuring of actions into developmental and annual grant activities and subsequent recalculation of the associated burden, and (3) the anticipated addition of one tribal respondent. The total respondent cost increased by $7.459M due to the changes described above, an increase in the cost to analyze water samples, and slight increases in the salary rates. However, this increase is offset by a $1.5M decrease in respondent O&M cost resulting from using actual respondent sampling frequency data rather than previous estimates that overcounted sampling. Agency burden and cost increased by 117 hours because the existing ICR did not capture some of the labor associated with the administration of beach grants or the Agency O&M cost for contractor assistance to jurisdictions

with data submission and maintaining the statutorily required database.

Courtney Kerwin,

Director, Regulatory Support Division.

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; State Review Framework (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), State Review Framework (EPA ICR Number 2185.08, OMB Control Number 2020–0031) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through April 30, 2023. Public comments were previously requested via the **Federal Register** on September 19, 2022, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

DATES: Comments may be submitted on or before May 30, 2023.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OECA–2020–0031, to EPA online using *www.regulations.gov* (our preferred method), or by email to *docket.oeca@epa.gov,* or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Dave Hoffman, Office of Enforcement and Compliance Assurance, Office of Compliance, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 564–0725; email address: *Hoffman.dave@epa.gov.*

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through April 30, 2023. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Public comments were previously requested via the **Federal Register** on September 19, 2022, during a 60-day comment period (87 FR 57193). This notice allows for an additional 30 days for public comments. Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: The State Review Framework is an oversight tool designed to assess state performance in enforcement and compliance assurance. The Framework's goal is to evaluate state performance by examining existing data to provide a consistent level of oversight and develop a uniform mechanism by which EPA Regions, working collaboratively with their states, can ensure state environmental agencies consistently implement the national compliance and enforcement program to meet agreed-upon goals. Furthermore, the Framework is designed to foster dialogue on enforcement and compliance performance between states to enhance relationships and increase feedback, which will in turn lead to consistent program management and improved environmental results. This request will allow OECA to review and collect information from state and local agency enforcement and compliance files, to support the State Review Framework implementation from FY 2024 to FY 2027. It will also allow EPA to make inquiries to assess the State Review Framework process, including consistency achieved among the EPA Regions and states, resources required to conduct reviews, and overall effectiveness of the program.

Form Numbers: None.

Respondents/affected entities: States and localities and territories.

Respondent's obligation to respond: mandatory (as part of program authorization under the Clean Water, Clean Air, Safe Drinking Water and Resource Conservation and Recovery Acts).

Estimated number of respondents: 213 (total).

Frequency of response: Once every 5 years.

Total estimated burden: 12,993 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $937,030 (per year), includes $0 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is an increase of 87 hours in the total estimated per-response burden compared with the ICR currently approved by OMB. This increase is due to the addition of the safe drinking water act enforcement review pilot, which was not captured in the previous ICR. This pilot is not formally part of the SRF, but the Agency believes this ICR is an appropriate forum to collect input, due to their similarities in workload and purpose. At the conclusion of the pilot, the agency will review the program and if necessary, revise this ICR. In addition, there is an increase in the number of respondents from 54 to 213 due to inclusion of all media (CAA, CWA, RCRA and SDWA) for 50 states and 4 territories. Previous ICR's for this collection included a single response for each state/territory, whereas this ICR utilized a different methodology to capture the burden more accurately.

Courtney Kerwin,

Director, Regulatory Support Division.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–10915–01–OAR]

California State Nonroad Engine Pollution Control Standards; Commercial Harbor Craft; Notice of Public Hearing

AGENCY: Environmental Protection Agency.

ACTION: Notice of opportunity for public hearing and comment.

SUMMARY: The California Air Resources Board (CARB) has notified EPA that is

has adopted amendments to its Commercial Harbor Craft (CHC) regulation. By letter dated January 31, 2023, CARB asked that EPA authorize these amendments pursuant to section 209(e) of the Clean Air Act (CAA). On March 17, 2023, EPA announced an opportunity for public hearing and request for public comment on this request. In that Notice, EPA announced that it would only hold a virtual public hearing if a request for hearing was submitted and that the written comment period would close on May 1, 2023. EPA also announced that it would extend the written comment closure date in the event a virtual public hearing was requested and held. EPA has received multiple requests for a virtual public hearing, so therefore EPA is announcing the date of the virtual public hearing and the new comment deadline for CARB's request.[1]

DATES: EPA will hold a virtual public hearing concerning CARB's request on June 1, 2023, beginning at 10 a.m. EST. Any party may submit written comments on this request by July 1, 2023. Parties wishing to present oral testimony at the virtual public hearing should email one of the persons noted below in the **FOR FURTHER INFORMATION CONTACT**, by or before May 25, 2023.

FOR FURTHER INFORMATION CONTACT: David Dickinson, Office of Transportation and Air Quality, Transportation and Climate Division, Environmental Protection Agency; Email Address: *dickinson.david@epa.gov;* (202) 343–9256; or Kayla Steinberg, Office of Transportation and Air Quality, Transportation and Climate Division, Environmental Protection Agency; Email Address: *steinberg.kayla@epa.gov;* 202–564–7658.

ADDRESSES: You may submit your comments, identified by Docket ID No. EPA–HQ–OAR–2023–0153 by any of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov* (our preferred method). Follow the online instructions for submitting comments.
- *Email:a-and-r-docket@epa.gov.*
- *Mail:* U.S. Environmental Protection Agency, EPA Docket Center, OAR, Docket EPA–HQ–OAR–2023–0153, Mail Code 28221T, 1200 Pennsylvania Avenue NW, Washington, DC 20460.
- *Hand Delivery or Courier (by scheduled appointment only):* EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004. The Docket Center's hours of operations are 8:30 a.m.–4:30 p.m., Monday–Friday (except federal holidays). Instructions: All submissions received must include the Docket ID No. for this action. Comments received may be posted without change to *https://www.regulations.gov,* including any personal information provided. For detailed instructions on sending comments and additional information on the process for this action, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.
- *Public Hearing:* EPA will hold a public hearing on June 1, 2023, at 10 a.m. EST. More information about the public hearing, including registration and viewing information, will be posted at *https://www.epa.gov/state-and-local-transportation/vehicle-emissions-california-waivers-and-authorizations* (click ''**Federal Register** Notices List'' and find the link in the entry for this Notice). Please visit that page for the most up-to-date information about this public hearing. Any questions can be directed by email to one of the persons noted in the **FOR FURTHER INFORMATION CONTACT**.
- EPA's Office of Transportation and Air Quality also maintains a web page that contains general information on its review of California waiver and authorization requests. Included on that page are links to prior waiver and authorization **Federal Register** notices. This page will also include updates and additional information regarding this authorization proceeding. The page can be accessed at *https://www.epa.gov/state-and-local-transportation/vehicle-emissions-california-waivers-and-authorizations.*

SUPPLEMENTARY INFORMATION:

Public Participation: EPA will allow each commenter 5 minutes to provide oral testimony. In addition, the EPA recommends submitting the text of your oral testimony to the docket. Written statements and supporting information submitted during the comment period will be considered with the same weight as oral testimony and supporting information present at the virtual public hearing. It is not necessary to register in order to attend the public on June 1, 2023, at 10 a.m. EST. More information about the public hearing, including registration and viewing information, will be posted at *https://www.epa.gov/state-and-local-transportation/vehicle-emissions-california-waivers-and-authorizations* (click ''**Federal Register** Notices List'' and find the link in the entry for this Notice). Please visit that page for the most up-to-date information about this public hearing. Those wishing to present oral testimony at the virtual public hearing should notify a person in the **FOR FURTHER INFORMATION CONTACT** noted above and should do so by or before May 25, 2023.

Dated: April 21, 2023.

Karl Simon,

Director, Transportation and Climate Division, Office of Transportation and Air Quality, Office of Air and Radiation.

[FR Doc. 2023–08871 Filed 4–26–23; 8:45 am]

BILLING CODE 6560–50–P

[1] In the same March 17 Notice (88 FR 16439), EPA announced an opportunity for public hearing and request for public comment on CARB's request for a waiver for another regulation, its 2020 Ocean-Going Vessels At-Berth Amendments. EPA did not receive any requests for a virtual public hearing on CARB's 2020 Ocean-Going Vessels At-Berth Amendments before the public hearing request deadline. Therefore, EPA is not holding a virtual public hearing or extending the written comment closure date for the 2020 Ocean-Going Vessels At Berth Amendment waiver request.

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), EPA Application Materials for the Water Infrastructure Finance and Innovation Act (EPA ICR Number 2549.02, OMB Control Number 2040–0292) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through April 30, 2023. Public comments were previously requested via the **Federal Register** on September 19, 2022 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

DATES: Comments may be submitted on or before May 30, 2023.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OW–2016–0178, to EPA online using *www.regulations.gov* (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW,

Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Amelia Letnes, Water Infrastructure Division, Office of Wastewater Management, 4201–T, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 202–564–5627; email address: *Letnes.amelia@epa.gov.*

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through April 30, 2023. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Public comments were previously requested via the **Federal Register** on September 19, 2022 during a 60-day comment period (87 FR 57194). This notice allows for an additional 30 days for public comments. Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: The collection of information is necessary in order to receive applications for credit assistance pursuant to section 5024 of the Water Infrastructure Finance and Innovation Act (WIFIA) of 2014, 33 U.S.C. 3903. The purpose of the WIFIA program is to provide Federal credit assistance in the form of direct loans and loan guarantees to eligible water infrastructure projects.

WIFIA requires that an eligible entity submit to the Administrator an application at such time, in such manner, and containing such information, as the Secretary or the Administrator *may require* to receive assistance under WIFIA. In order to satisfy these requirements, EPA must collect an application from prospective borrowers seeking funding. The Letters of Interest and Applications collected from prospective borrowers through this solicitation will be used by the EPA, WIFIA program staff, and reviewers to evaluate applications for credit assistance under the WIFIA eligibility requirements and selection criteria.

Form Numbers: EPA 6100–030, 6100–031, 6100–32, 6100–033, 6100–054, 6100–080.

Respondents/affected entities: Corporations, partnerships, joint ventures, trusts, federal, state, or local government entities, tribal governments or a consortium of tribal governments, and state infrastructure finance authorities.

Respondent's obligation to respond: Required to obtain or retain a benefit (section 5024 of WIFIA, 33 U.S.C. 3903).

Estimated number of respondents: 105 per year (total).

Frequency of response: One per funding round.

Total estimated burden: 10,450 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $10,772,065 (per year), which includes $10,000,000 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is a decrease of 375 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This decrease is due to EPA anticipating fewer collections based on average numbers in the past 3 years. That decrease is offset by a small increase due to a new form.

Courtney Kerwin,

Director, Regulatory Support Division.

Abstract: Section 608 of the Clean Air Act (CAA), also known as the National Recycling and Emission Reduction Program (the Program), directs the Environmental Protection Agency (EPA) to issue regulations governing the use of ozone-depleting substances (ODS), including chlorofluorocarbons (CFCs) and hydrochlorofluorocarbons (HCFCs), during the maintenance, service, repair, or disposal of air-conditioning and refrigeration appliances. Section 608 also prohibits knowingly venting or releasing ozone-depleting and substitute refrigerants in the course of maintaining, servicing, repairing, or disposing of appliances or industrial process refrigeration except for de minimis releases associated with good faith attempts to recycle or recover refrigerants. The regulations require persons servicing refrigeration and air-conditioning appliances to follow certain service practices that reduce emissions of refrigerants. The regulations also establish certification programs for technicians, recovery/recycling equipment, and refrigerant reclamation. In addition, EPA requires that refrigerants contained in appliances be removed prior to disposal of the appliances and that all refrigeration and air-conditioning appliances be provided with a servicing aperture that facilitates recovery of the refrigerant. The Agency requires that substantial refrigerant leaks in appliances containing ozone-depleting refrigerant be repaired when they are discovered.

Form Numbers: 5900–404, 5900–405, 5900–407.

Respondents/affected entities: Entities required to comply with reporting and recordkeeping requirements include technicians; technician certification programs; refrigerant wholesalers; refrigerant reclaimers; refrigerant recovery equipment certification programs; certain refrigeration and air-conditioning equipment owners and/or operators; and other establishments that perform refrigerant removal, service, or disposal.

Respondent's obligation to respond: Mandatory (40 CFR part 82, subpart F).

Estimated number of respondents: 572,727 (total).

Frequency of response: The frequency of responses varies from once a year to daily.

Total estimated burden: 425,514 hours (per year). Burden is defined at 5 CFR 1320.03(b)

Total estimated cost: $31,432,946 (per year), includes $0 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is a decrease of 8,845 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This decrease is due to adjusted respondent estimates for appliance leak repair and retrofit or retirement plan extension requests based on recently available industry data and reported activity.

Courtney Kerwin,

Director, Regulatory Support Division.

BILLING CODE 6560–50–P

EXPORT-IMPORT BANK OF THE UNITED STATES

[Public Notice EIB–2023–0003]

Application for Final Commitment for a Long-Term Loan or Financial Guarantee in Excess of $100 Million: AP089473XX

AGENCY: Export-Import Bank of the United States.

ACTION: Notice.

SUMMARY: This Notice is to inform the public the Export-Import Bank of the United States (''EXIM'') has received an application for final commitment for a long-term loan or financial guarantee in excess of $100 million. Comments received within the comment period specified below will be presented to the EXIM Board of Directors prior to final action on this Transaction.

DATES: Comments must be received on or before May 22, 2023 to be assured of consideration before final consideration of the transaction by the Board of Directors of EXIM.

ADDRESSES: Comments may be submitted through *Regulations.gov* at *www.regulations.gov.* To submit a comment, enter EIB–2023–0003 under the heading ''Enter Keyword or ID'' and select Search. Follow the instructions provided at the Submit a Comment screen. Please include your name, company name (if any) and EIB–2023–0003 on any attached document.

SUPPLEMENTARY INFORMATION:

Reference: AP089473XX.

Purpose and use:

Brief description of the purpose of the transaction: Construction of two large photovoltaic (PV) solar power plants in Angola. The first power plant is expected to generate 400 MW of power in Malanje Province. The second plant will generate 104 MW of power in Luanda Province.

Brief non-proprietary description of the anticipated use of the items being exported: Provide solar-generated electricity to underserved rural areas of Angola.

Once completed, these two large solar PV generation projects will supply 6 to 10% of the country's total electric generation capacity. A transmission line will connect each plant to an existing Angola Ministry of Energy and Water (MINEA) substation.

Parties:

Principal Supplier: Omatapalo, Inc.

Obligor: Ministry of Finance of the Republic of Angola

Guarantor(s): None

Description of items being exported: Solar panels, connectors, switches, sensors and other equipment and design and engineering services for the construction of two photovoltaic (PV) solar power plants.

Information on decision: Information on the final decision for this transaction will be available in the ''Summary Minutes of Meetings of Board of Directors'' on *http://exim.gov/newsandevents/boardmeetings/board/.*

Confidential information: Please note that this notice does not include confidential or proprietary business information; information which, if disclosed, would violate the Trade Secrets Act; or information which would jeopardize jobs in the United States by supplying information that competitors could use to compete with companies in the United States.

Authority: Section 3(c)(10) of the Export-Import Bank Act of 1945, as amended (12 U.S.C. 635a(c)(10)).

Joyce B. Stone,

Assistant Corporate Secretary.

FEDERAL ELECTION COMMISSION

Sunshine Act Meetings

TIME AND DATE: Tuesday, May 2, 2023 at 10:30 a.m. and its continuation at the

conclusion of the open meeting on May 4, 2023.

PLACE: 1050 First Street NE, Washington, DC and virtual. (This meeting will be a hybrid meeting.)

STATUS: This meeting will be closed to the public.

MATTERS TO BE CONSIDERED:

Compliance matters pursuant to 52 U.S.C. 30109.

Matters relating to internal personnel decisions, or internal rules and practices.

Investigatory records compiled for law enforcement purposes and production would disclose investigative techniques.

Information the premature disclosure of which would be likely to have a considerable adverse effect on the implementation of a proposed Commission action.

Matters concerning participation in civil actions or proceedings or arbitration.

CONTACT PERSON FOR MORE INFORMATION: Judith Ingram, Press Officer, Telephone: (202) 694–1220.

(Authority: Government in the Sunshine Act, 5 U.S.C. 552b.)

Vicktoria J. Allen,

Deputy Secretary of the Commission.

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at *https://www.federalreserve.gov/foia/request.htm.* Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)).

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington, DC 20551–0001, not later than May 30, 2023.

A. Federal Reserve Bank of Atlanta (Erien O. Terry, Assistant Vice President) 1000 Peachtree Street NE, Atlanta, Georgia 30309; Comments can also be sent electronically to *Applications.comments@atl.frb.org:*

1. *Smith & Hood Holding Company, L.L.C., Amite, Louisiana, and First Guaranty Bancshares, Inc., Hammond, Louisiana;* to acquire Lone Star Bank, Houston, Texas.

Board of Governors of the Federal Reserve System.

Michele Taylor Fennel,

Deputy Associate Secretary of the Board.

BILLING CODE P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[60Day–FY–2023; Docket No. CDC–2023–0032]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other federal agencies the opportunity to comment on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project titled Airline and Vessel Traveler Information Collection. The information collected will be used to conduct contact tracing and public health follow-up on travelers who have been identified in a risk exposure zone on a conveyance where a traveler was confirmed or suspected of traveling with infectious with a communicable disease of public health importance.

DATES: CDC must receive written comments on or before June 26, 2023.

ADDRESSES: You may submit comments, identified by Docket No. CDC–2023–0032 by either of the following methods:

- *Federal eRulemaking Portal: www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H21–8, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. CDC will post, without change, all relevant comments to *www.regulations.gov.*

Please note: Submit all comments through the Federal eRulemaking portal (*www.regulations.gov*) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H21–8, Atlanta, Georgia 30329; Telephone: 404–639–7570; Email: *omb@cdc.gov.*

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

The OMB is particularly interested in comments that will help:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information,

including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected;

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses; and

5. Assess information collection costs.

Proposed Project

Airline and Vessel Traveler Information Collection (OMB Control No. 0920–1180, Exp. 6/30/2023)—Revision—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The rapid speed and tremendous volume of international travel, commerce, and human migration enable infectious disease threats to disperse worldwide in 24 hours—less time than the incubation period of most communicable diseases. These and other forces intrinsic to modern technology and ways of life favor the emergence of new communicable diseases and the reemergence or increased severity of known communicable diseases. Stopping a communicable disease outbreak—whether it is naturally occurring or intentionally caused—requires the use of the most rapid and effective public health tools available. Basic public health practices, such as collaborating with airlines in the identification and notification of potentially exposed travelers, are critical tools in the fight against the introduction, transmission, and spread of communicable disease in the United States. The collection of timely, accurate, and complete conveyance and traveler information enables CDC to notify state and local health departments in order for them to make contact with individuals who may have been exposed to a communicable disease during travel, or due to an outbreak of disease in a geographic location and identify appropriate next steps.

Section 361 of the Public Health Service Act (42 U.S.C. 264) authorizes the Secretary of the Department of Health and Human Services (DHHS) to make and enforce regulations necessary to prevent the introduction, transmission, or spread of communicable diseases from foreign countries into the United States, or from one State or possession into any other State or possession. Regulations that implement federal quarantine authority are currently promulgated in 42 CFR parts 70 and 71. Part 71 contains regulations to prevent the introduction, transmission, and spread of communicable diseases into the states and possessions of the United States.

Passenger and crewmember manifests are used to collect travelers information from airlines and vessels after travel has been completed and when a disease is confirmed or there is a suspected exposure. Manifests include locating and contact information, as well as information concerning where passengers sat while aboard an airline or their location (*e.g.* cabin numbers) and activities aboard a vessel. Manifests collect the following data elements:

- Full name (last, first, and, if available, middle or others);
- Date of birth;
- Sex;
- Country of residence;
- If a passport is required; passport number, passport country of issuance, and passport expiration date;
- If a travel document, other than a passport is required, travel document type, travel document number, travel document country of issuance and travel document expiration date;
- Address while in the United States (number and street, city, state, and zip code), except that U.S. citizens and lawful permanent residents will provide address of permanent residence in the U.S. (number and street, city, state, and zip code; as applicable);
- Primary contact phone number to include country code;
- Secondary contact phone number to include country code;
- Email address;
- Airline name;
- Flight number;
- City of departure;
- Departure date and time;
- City of arrival;
- Arrival date and time; and
- Seat number for all passengers

CDC also requests seat configuration for the requested contact area (example: AB/aisle/CDE/aisle/FG, bulkhead in front of row 9), identification on the manifest of the crew and what zone crew were assigned to, the identification of any babes-in-arms, and finally CDC requests the total number of passengers on board if measles is the cause of the investigation, due to the highly infectious nature of the disease. CDC then uses this passenger and crew manifest information to coordinate with state and local health departments or International Health Regulation (IHR) National Focal Points (NFPs) so they can follow-up with residents who live or are currently located in their jurisdiction. In most cases, the manifests are issued for air travel and state and local health departments or IHR NFPs are responsible for the contact investigations; airlines and vessels may take responsibility for follow-up of crew members. In rare cases, CDC may use the manifest data to perform the contact investigation directly.

CDC requests OMB approval for an estimated 875 annual burden hours. There are no costs to respondents other than their time to participate.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
Airline Medical Officer or Equivalent/Analysist/Travel Specialist/Manager Equivalent.	International Manifest Template/Informal Manifest Request Template.	350	1	150/60	875
Total					875

Jeffrey M. Zirger,

Lead, Information Collection Review Office, Office of Public Health Ethics and Regulations, Office of Science, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[Docket No. CDC–2020–0046; NIOSH–233–C]

Hazardous Drugs: Procedures for Developing the NIOSH List of Hazardous Drugs in Healthcare Settings and Managing Hazardous Drug Exposures: Information for Healthcare Settings

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: General notice.

SUMMARY: The National Institute for Occupational Safety and Health (NIOSH) of the Centers for Disease Control and Prevention (CDC), in the Department of Health and Human Services (HHS), announces the following final documents are available in the docket and on the NIOSH website: *Procedures for Developing the NIOSH List of Hazardous Drugs in Healthcare Settings* and *Managing Hazardous Drug Exposures: Information for Healthcare Settings*.

DATES: The documents announced in this notice are available on April 27, 2023.

ADDRESSES: The documents announced in this notice are available in the docket at *www.regulations.gov* and through the NIOSH Hazardous Drug Exposures in Healthcare website at *https://www.cdc.gov/niosh/topics/hazdrug/default.html*.

FOR FURTHER INFORMATION CONTACT: Jerald Ovesen, NIOSH, Robert A. Taft Laboratories, 1090 Tusculum Avenue, MS–C15, Cincinnati, OH 45226; Telephone: (513) 533–8472 (not a toll-free number); Email: *jovesen@cdc.gov*.

SUPPLEMENTARY INFORMATION: This notice is organized as follows:

I. Public Participation

In a **Federal Register** notice published on May 1, 2020 (85 FR 25439), NIOSH invited the public to participate in the development of a suite of tools designed to assist with the identification of hazardous drugs and appropriate handling practices: (1) *Procedures for Developing the NIOSH List of Hazardous Drugs in Healthcare Settings*; (2) *NIOSH List of Hazardous Drugs in Healthcare Settings,* and (3) *Managing Hazardous Drug Exposures: Information for Healthcare Settings*.

The *Procedures for Developing the NIOSH List of Hazardous Drugs in Healthcare Settings* (*Procedures*) establish the NIOSH definition of a hazardous drug and a methodology for evaluating chemical properties, pre-clinical information, and available clinical information about each drug. The *Procedures* also clarify how

interested parties can ask NIOSH to reevaluate a determination to place or not to place a drug on the *NIOSH List of Hazardous Drugs in Healthcare Settings,* or a decision to place a drug on a particular table of the *NIOSH List of Hazardous Drugs in Healthcare Settings*.

The *NIOSH List of Hazardous Drugs in Healthcare Settings* (*List*) assists employers in providing safe and healthy workplaces by identifying drugs approved by the Food and Drug Administration (FDA) Center for Drug Evaluation and Research (CDER) that meet the NIOSH definition of a hazardous drug and that may pose hazards to healthcare workers who handle, prepare, dispense, administer, or dispose of these drugs. In accordance with the *Procedures,* NIOSH's approach to evaluating information relevant to making determinations about placing drugs on the *List,* excluding drugs from the *List,* and removing drugs from the *List,* includes the following:

(1) regularly monitoring FDA databases to identify drugs that have the potential to meet the NIOSH definition of a hazardous drug;

(2) reviewing molecular properties and information in the manufacturer-provided drug package insert for each identified drug;

(3) assessing, integrating, and synthesizing evidence from human, animal, and in vitro studies of drug toxicity for each identified drug; and

(4) evaluating the totality of the evidence regarding the molecular properties and toxicity using the hazard characterization criteria in Sec. IV.C. of the *Procedures*.

The *List* creates no legal obligation for employers; it is advisory in nature and informational in content.

Managing Hazardous Drug Exposures: Information for Healthcare Settings (Managing Exposures) offers guidance to healthcare facilities regarding occupational exposure and risk assessments, risk management plans, waste and spill control, and control approaches for the safe handling of hazardous drugs by activity and formulation. *Managing Exposures* builds upon previous work by NIOSH including *NIOSH ALERT: Preventing Occupational Exposures to Antineoplastic and Other Hazardous Drugs* and the table *Personal Protective Equipment and Engineering Controls for Working with Hazardous Drugs in Healthcare Settings* (often referred to as ''Table 5''), published in previous iterations of the *List. Managing Exposures* creates no legal obligation for employers; it is advisory in nature and informational in content.

The public was invited to submit written comments regarding the three draft 2020 versions of these three documents, as well as views, opinions, recommendations, and/or data on any topic related to the drugs reviewed by NIOSH for possible placement on the *List*.

In addition, NIOSH invited comments specifically related to the following question and statement associated with this activity:

1. Which unique ingredient identifier is the most useful for users of the *List*?

2. Because there is conflicting evidence about the hazard posed by botulinum toxins to the workers who handle these drugs, NIOSH is not proposing the placement of botulinum toxins on the *List* at this time and invites additional studies, data, and expert opinions pertinent to this issue in order to evaluate the botulinum toxins more fully.

The public comment period for the May 2020 notice was initially open until June 30, 2020 (85 FR 25439), and later extended until July 30, 2020 (85 FR 37101), to ensure commenters had adequate time to comment.

One hundred thirty-two submissions were received from commenters in Docket CDC–2020–0046 (NIOSH–233–C). Commenters consisted of nurses; pharmacists; safety personnel; a veterinarian; healthcare, business, and government administrators and committees; and anonymous and unaffiliated individuals. The commenters represented a wide range of institutions, including academic and general medical centers and healthcare systems; hospital, commercial drug store, and compounding pharmacies; manufacturers of pharmaceuticals and medical devices; professional healthcare and veterinary organizations and associations; home infusion organizations; suppliers of cleanroom products; boards of pharmacy; and consultant companies for healthcare improvement and the performance of healthcare facilities, risk assessment, and waste management. Public comments on the documents discussed in the May 2020 notice are available for review at *www.regulations.gov* (Docket CDC–2020–0046). NIOSH also conducted a peer review, with four independent reviewers, of the draft *Managing Exposures Drug Exposures: Information for Healthcare Settings*.

NIOSH carefully considered all public comments and peer reviews resulting from the 2020 notice and determined that some clarifications and changes should be made to the draft *Procedures, List,* and the *Managing Exposures* documents. These changes are reflected in the two final documents described in this notice. Publication of the *NIOSH List of Hazardous Drugs in Healthcare Settings, 2023* (2023 *List*) will be announced in a forthcoming **Federal Register** notice. The 2023 *List* is not discussed further in this notice.

Public comments on the draft *Procedures* are summarized and answered by NIOSH in Sec. III of this notice and significant peer review and public comments on *Managing Exposures* are summarized and answered in Sec. IV. The changes to both documents are summarized in Sec. V.

Final versions of the *Procedures* document [1] and *Managing Exposures* are available on the NIOSH website and in the docket for this activity.[2]

II. Background

In 2004, NIOSH published the *NIOSH Alert: Preventing Occupational Exposures to Antineoplastic and Other Hazardous Drugs in Health Care Settings (Alert),* which contained a compilation of lists of drugs considered to be as hazardous to workers' health. NIOSH periodically updates this list, now named the *NIOSH List of Hazardous Drugs in Healthcare Settings,* to assist employers in providing safe and healthful workplaces by identifying drugs that meet the NIOSH definition of a hazardous drug.

In 2017, NIOSH began developing a document to make the process used to guide the addition of hazardous drugs to the *List* more transparent, entitled the *Policy and Procedures for Developing the NIOSH List of Antineoplastic and Other Hazardous Drug in Healthcare Settings (Policy and Procedures)*. The *Policy and Procedures* document was created to formalize NIOSH's methodology and establish a process for requesting the addition of a drug to, the removal of a drug from, or relocation of a drug within the *List*. This document was reviewed by four peer reviewers and eight interested parties before NIOSH made the document available for public comment in a February 14, 2018

[1] NIOSH [2023]. *Procedures for Developing the NIOSH List of Hazardous Drugs in Healthcare Settings*. By Whittaker C, Ovesen JL, MacKenzie BA, Hartley T, Berry KA, Piacentino J. Cincinnati, OH: U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, National Institute for Occupational Safety and Health, DHHS (NIOSH) Publication Number 2023–129, *https://wcms-wp.cdc.gov/niosh/docs/2023-129/default.html*.

[2] NIOSH [2023]. *Managing Hazardous Drug Exposures: Information for Healthcare Settings*. By Hodson L, Ovesen J, Couch J, Hirst D, Lawson C, Lentz TJ, MacKenzie B, Mead K. Cincinnati, OH: U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, National Institute for Occupational Safety and Health, DHHS (NIOSH) Publication 2023–130, *https://wcms-wp.cdc.gov/niosh/docs/2023-130/default.html*.

notice (83 FR 6563). The peer reviewers and interested parties also provided input on the drugs considered for placement on the *List*.

Consistent with the draft *Policy and Procedures,* NIOSH proposed the addition of 20 drugs and one class of drugs to the *List* in the framework for the draft *List* in the February 2018 notice. Public comments were invited regarding any topic related to drugs identified in the notice, the draft *Policy and Procedures,* and the framework for the February 2018 update to the *List,* as well as the following questions related to this activity:

1. Has NIOSH appropriately identified and categorized the drugs considered for placement on the *NIOSH List of Antineoplastic and Other Hazardous Drugs in Healthcare Settings,* 2018?

2. Is information available from FDA or other Federal agencies or in the published, peer-reviewed scientific literature about a specific drug or drugs identified in this notice that would justify the reconsideration of NIOSH's categorization decision?

3. Does the draft *Policy and Procedures for Developing the NIOSH List of Antineoplastic and Other Hazardous Drugs in Healthcare Settings* include a methodology for reviewing toxicity information that is appropriate for this activity?

Fifty-five public comments were submitted in response to the February 2018 notice and summarized with NIOSH responses in a May 2020 notice (85 FR 25439). Those comments are available in Docket CDC–2018–0004. The substantive input provided by peer reviewers, interested parties, and public commenters on the February 2018 notice caused NIOSH to reconsider certain aspects of the draft *Policy and Procedures* and the draft framework for the *List*. As a result, NIOSH revised and updated the draft *Policy and Procedures,* renamed ''*Procedures,*'' as well as the draft list of drugs proposed for placement on the *List*. This collective input also contributed to the development of the draft document *Managing Exposures,* also announced in the May 2020 notice. Comments resulting from the May 2020 notice are available at *www.regulations.gov* in Docket CDC–2020–0046.

III. Procedures for Developing the NIOSH List of Hazardous Drugs in Healthcare Settings

The public comments submitted in response to the May 2020 version of the draft *Procedures* have been organized in accordance with the sections of the *Procedures* document. Substantive public comments are summarized below, followed by NIOSH responses. Sec. I of the *Procedures* addresses the statutory authority for this activity; no public comments were received on this section, therefore Sec. I is not discussed below.

A. Section II. Purposes

1. Application to Occupational Settings

Public comment: One commenter suggested that NIOSH make it clear that the hazardous drug designations apply to occupational exposure rather than patient use. The concern was for pharmacies adding warning labels that patients may receive.

NIOSH response: NIOSH states throughout all three documents that they are intended to address occupational exposures, not patient use. NIOSH does not require specific labeling, nor can NIOSH control how individual facilities implement their risk management processes to protect workers. No change to the *Procedures* has been made in response to this comment.

2. Coordination With U.S. Pharmacopeia (USP)

Public comment: Several commenters reflected on USP General Chapter <800> *Hazardous Drugs—Handling in Healthcare Settings* (USP <800>) [3] and how USP and NIOSH documents interrelate. USP has incorporated the NIOSH *List* into USP <800> and some states require compliance with USP <800>, the effect of which has been that certain healthcare settings in some jurisdictions are required to handle NIOSH-identified hazardous drugs in accordance with the standards in USP <800>.

Some commenters suggested close coordination of NIOSH and USP on the issues of hazardous drugs handling, as well as standardizing the language. Two commenters suggested that NIOSH specifically reference USP in its documents. A few commenters noted that compliance with USP <800> is burdensome if a drug is identified as hazardous. One commenter suggested dropping the descriptor ''antineoplastic'' from both USP and NIOSH documents as uninformative, acknowledging that cancer treatment drugs now have a wide variety of modes of action. Another commenter suggested limiting the scope of the hazardous drugs *List* to chemicals for which NIOSH had ''definitive proof'' of hazard because USP recommendations for application of the *List* may lead to overuse of personal protective equipment (PPE).

NIOSH response: While NIOSH and USP have continuing contact and stay informed of progress and potential areas of conflict in their respective documents, the respective missions of NIOSH and USP differ, and the NIOSH and USP document processes also differ. Therefore, standardized language, while convenient for the reader, may not be attainable. NIOSH works to ensure that the *List* and associated documents are consistent with relevant sources of information and guidance, including USP. However, the *List* is informational in nature and does not confer any requirements or legal obligations on users. Additionally, NIOSH does not specifically reference USP <800> in its *Procedures* and *List* documents because NIOSH intends the *List* and associated documents as stand-alone informational materials for employers in healthcare settings. NIOSH has also removed some references to USP from the *Managing Exposures* document, as discussed further below.

Regarding the descriptor ''antineoplastic,'' NIOSH agrees with the commenter that it is no longer useful for understanding the hazards posed by individual drugs and has dropped that nomenclature from the document title and table titles in the *List*.

Finally, NIOSH does not agree with the suggestion to limit the *List* to drugs for which there is ''definitive proof'' of hazard. NIOSH evaluates the evidence of toxicity to determine the potential for the drug to be hazardous to workers. This analysis does not consider dosage form (the physical form of the pharmaceutical drug, *e.g.,* coated tablet, capsule, liquid). Therefore, it is incumbent on employers in healthcare settings to evaluate how drugs are used in their facilities and what risks may ensue, given the dosage forms, procedures, and tasks undertaken. This is called a ''site risk assessment'' and is described further in *Managing Exposures*.

For questions or concerns about the implementation of USP <800>, commenters should contact USP directly.

Public comment: One commenter stated, ''. . . the explicit use of the NIOSH *List* by USP to enforce Chapter <800> makes the *List* regulatory. Facilities that do not comply with USP Chapter <800> standards, and thus the NIOSH *List* designation of hazardous drugs, can be cited and face regulatory and legal consequences.''

NIOSH response: NIOSH did not compile the *List* for standardized compliance purposes and the *List* creates no legal obligation for employers. The *List* is an advisory statement. NIOSH does not have statutory authority to enforce the

[3] *See https://www.usp.org/compounding/general-chapter-hazardous-drugs-handling-healthcare.*

recommendations comprising the *List* and companion *Managing Exposures*.

Moreover, the *List* is intended to be a helpful reference tool for use in employers' own workplace assessments. As detailed in the *Procedures,* compilation of the *List* is a hazard identification process in which NIOSH considers the inherent hazard of the drug. As such, the *List* is intended solely as a first step for employers in conducting their own assessments of hazardous drug risks to their particular workers that might result from myriad drug formulations and exposure scenarios.

Additionally, NIOSH has no ability to direct USP or the State and local jurisdictions that have incorporated USP <800> into their own requirements. While NIOSH has no control over USP <800>, NIOSH has relayed commenters' concerns to the organization. No change to the *Procedures* has been made in response to this comment.

B. Section III. Background

1. Exposure to Drugs in Healthcare Settings

Public comment: One commenter expressed concern that NIOSH did not consider the impact of hazardous drugs on cleaning staff. Another requested that NIOSH explicitly state that this applied to all pharmacies, including compounding pharmacies and mail-order pharmacies.

NIOSH response: NIOSH considers all workers who come into contact with hazardous drugs in healthcare settings as within the scope of the *Procedures, List,* and *Managing Exposures* documents, no matter the type of workplace. Accordingly, Sec. III.A of the *Procedures* addresses the tasks that workers undertake (*e.g.,* receipt, storage, preparation, compounding, manipulation, cleanup, and disposal of drugs and patient waste), rather than specific types of facilities. No change to the *Procedures* has been made in response to this comment.

C. Section IV. NIOSH Definition of a Hazardous Drug

Public comment: NIOSH received many comments on the NIOSH definition of hazardous drugs in Sec. IV of the draft *Procedures*. Specifically, many comments were received from parties that did not approve of the change in definition from previous versions of the *Procedures*. There were several issues raised objecting to the changes. Some public commenters and one *Managing Exposures* peer reviewer objected to NIOSH changing the hazardous drugs definition from the original 2004 definition of a hazardous drug, alleging that NIOSH made the change in its definition without the consensus of all interested parties. (Note: the *Managing Exposures* peer review comment is addressed in this section because it relates to the hazardous drugs definition in the *Procedures* document.)

Other commenters objected to specific wording changes in the definition. Some of these commenters objected to language that specifies how NIOSH considers drugs with high molecular weight, citing the potential for increased risks to workers. However, there was also some support among commenters for the NIOSH perspective, including one commenter who noted ''. . . the procedure should be refined from a system that focuses primarily on the intrinsic hazards of a drug to one that considers the occupational relevance of the intrinsic hazard.'' Commenters also objected to language indicating that NIOSH was limiting consideration of drugs to those approved by FDA CDER. These commenters recommended that, in addition to FDA CDER approval, NIOSH also fully consider all drugs approved by FDA Center for Biologics Evaluation and Research (CBER) to assess all potentially hazardous drugs in the workplace more fully. Other commenters disapproved of how NIOSH intended to consider drugs with insufficient toxicity data as not meeting the NIOSH definition of hazardous drugs. They recommended that NIOSH consider to be hazardous any drugs with insufficient toxicity data to meet the definition of hazardous drugs.

NIOSH response: The original 2004 definition of hazardous drug was based on an American Society of Health-System Pharmacists (ASHP) definition developed in 1990 and revised by NIOSH in collaboration with a large group of interested parties. NIOSH has used that definition as the basis for the *List* since 2004. In the *Policy and Procedures* described in the February 2018 notice, NIOSH proposed revising the definition to ''those drugs approved for use in humans by the FDA, not otherwise regulated by the U.S. Nuclear Regulatory Commission and either contains special handling information for workers handling the drug in the package insert or exhibits one of the six toxicity criteria.'' In the revised *Procedures* described in the May 2020 notice, NIOSH proposed further revisions, such as specifying drugs approved by FDA CDER. In addition, the definition included evaluating molecular properties that may limit the potential for adverse health effects for the exposed worker.

NIOSH notes that the definition in the final *Procedures* is still based largely on the 2004 definition. The *Procedures* document makes explicit the steps in evaluating the drugs that were not fully described in earlier versions of the *List,* although they have been NIOSH's long-standing practices. Except for considering molecular properties of drugs, the definition in the *Procedures* reflects how NIOSH has been implementing the 2004 definition to make decisions about hazardous drugs. Therefore, NIOSH did not consider it necessary to engage a large group of interested parties to make minor changes in the definition as the underlying foundation of the definition remains the same. In addition, NIOSH believed that the peer review and public comment processes provided ample opportunity for such interested parties to provide input on the changes to the definition.

Since the inception of the *List* in 2004, NIOSH practice is to only consider drugs approved by CDER to be included in the *List*. Therefore, to be transparent, one change from the 2004 definition includes the clarification that only FDA CDER-approved drugs are considered for the *List*. Drugs on the *List* that had been approved by CBER were part of the initial compilation of lists only; however, no drugs have been added to the *List* in intervening years that were subject to CBER approval. In addition to adopting the new language to the definition of ''hazardous drug'' in the final version of the *Procedures* Sec. IV, NIOSH has also added the language to footnote 12 to clarify that only CDER-approved drugs are included on the 2023 *List*. Similarly, it has not been a NIOSH practice to consider drugs approved by the Nuclear Regulatory Commission and this is also specified in the definition in the *Procedures*.

The six toxicity endpoints—carcinogenicity; teratogenicity or other developmental toxicity; reproductive toxicity; organ toxicity at low dose; genotoxicity; and structure and activity profiles of drugs that mimic existing drugs determined hazardous by the above criteria—in the definition of a hazardous drug remain unchanged from 2004. However, one caveat was added to the definition to clarify that a drug may be found not to be a hazard if it also exhibits a molecular property that may limit the potential for adverse health effects from exposure in healthcare workers. Such molecular properties typically include chemical, physical, and structural properties that affect the drug's absorption, (*e.g.,* chemical structure, molecular weight, or mass).

NIOSH has always emphasized that identification of potential hazards does not equate to occupational risks. In the 2004 *Alert,* NIOSH stated that drugs may be hazardous in one exposure scenario but have much less risk associated with another. Specifically, NIOSH noted in 2004 that ''Physical characteristics of the agents (such as liquid versus solid, or water versus lipid solubility) also need to be considered in determining the potential for occupational exposure. Therefore, the caveat inserted into the current hazardous drugs definition clarifies and extends that consideration for specific scenarios. It recognizes that although a drug may meet the definition of a hazardous drug in other ways, if NIOSH determines that occupational risks are not significant because of the chemical and physical properties of the drug, that drug may be excluded from the *List.* The purpose of this exclusion is to focus the *List* on drugs that have a reasonable potential for toxicity after occupational exposure, so that workers' attention is focused on drugs that are likely to be hazardous in occupational settings. It is important to note that this is not an automatic exclusion. NIOSH has not established a specific molecular weight, for example, above which drugs are automatically excluded from the *List.* Instead, this is a guideline to alert NIOSH reviewers that they should look at the totality of the evidence, thoroughly consider the possible occupational exposure scenarios, and evaluate whether there is significant risk under those conditions. This would include assessing exposure by inhalation of dust, vapor or mist, dermal absorption (including through abraded or compromised skin), ingestion, contact with mucous membranes, and needle sticks (using ''worst case'' assumptions). This exclusion also does not apply to the dosage form of the drug. Specifically, the *Procedures* notes in Sec. V.C.4.b,

> NIOSH does not consider dosage form as a molecular property of a drug because the same active pharmaceutical product can be offered in several different dosage forms, new dosage forms can be offered later, and some dosage forms can be discontinued.

NIOSH has considered the public comments and remains supportive of the idea of examining molecular properties of drugs as a consideration of whether they should be included on the *List.* In addition, NIOSH has added a column to the tables that allows for identification of those drugs approved by CDER under a biologics license application. Unlike the biological products approved by CBER, those approved by CDER are often large, single-molecule protein/peptide-based drugs such as monoclonal antibodies, intended for therapeutic use.[4] Denoting these drugs in the *List* will make it easier for users to identify drugs that are large, single-molecule products and peptides in order to implement the appropriate risk management strategies. In Sec. IV of the *Procedures,* the final NIOSH definition of hazardous drug is a drug that is:

A. Approved for use in humans [a] by the Food and Drug Administration's (FDA) Center for Drug Evaluation and Research (CDER),[b]

B. Not otherwise regulated by the U.S. Nuclear Regulatory Commission,[c] and

C. Either

1. Is accompanied by prescribing information in the ''package insert'' [d] that includes a manufacturer's special handling information (MSHI),[e] or

2. Is determined to be a carcinogenic hazard, developmental hazard, reproductive hazard, genotoxic hazard, or other health hazard by exhibiting one or more of the following toxicity criteria in humans, animal models, or in vitro systems:

- Carcinogenicity;
- Developmental toxicity (including teratogenicity);
- Reproductive toxicity;
- Genotoxicity;
- Organ toxicity at low doses; [f] or a
- Structure and toxicity profile that mimics existing drugs determined hazardous by exhibiting any one of the previous five toxicity types.[g]

However, if a drug also exhibits a molecular property [h] that may limit the potential for adverse health effects from exposure to the drug in healthcare workers, it may be determined it is not a hazard.

[a] Although only drugs approved by FDA for use in humans are included in the definition of hazardous drug, some of those drugs may be used in veterinary settings for treatment of animals and may be a hazard for veterinary care workers.

[b] Although biological products, such as vaccines, blood and blood components, allergenics, somatic cells, gene therapy, tissues, recombinant therapeutic proteins, are included in FDA definition of a drug, they are not included in the drugs that NIOSH evaluates for potential inclusion on the *List* because they are approved for use by FDA's Center for Biologic Evaluation and Research (CBER), not by FDA's CDER. This provision makes clear NIOSH's long-standing practice of only considering drugs approved by FDA CDER.

[c] 10 CFR parts 19, 20, and 35. *See https://www.nrc.gov/materials/miau/med-use.html.* Drugs regulated by the Nuclear Regulatory Commission are not included on the *List.*

[d] *See* Drug Advertising: A Glossary of Terms at *https://www.fda.gov/drugs/resourcesforyou/consumers/prescriptiondrugadvertising/ucm072025.htm.* ''Prescribing information is also called product information, product labeling, or the package insert (''the PI''). It is generally drafted by the drug company and approved by FDA. This information travels with a drug as it moves from the company to the pharmacist. It includes the details and directions healthcare providers need to prescribe the drug properly. It is also the basis for how the drug company can advertise its drug. The prescribing information includes such details about the drug as: its chemical description; how it works; how it interacts with other drugs, supplements, foods, and beverages; what condition(s) or disease(s) it treats; who should not use the drug; serious side effects, even if they occur rarely; commonly occurring side effects, even if they are not serious; effects on specific groups of patients, such as children, pregnant women, or older adults and how to use it in these populations.''

[e] MSHI includes language that informs those handling the drug of the need to follow heightened handling and disposal procedures. For example, language such as ''follow special handling and disposal procedures'' or ''procedures for proper handling and disposal of anticancer drugs should be considered'' is frequently used in package inserts. However, NIOSH does not consider language pertaining to packaging and temperature controls as MSHI.

[f] All drugs have toxic side effects, but some exhibit toxicity at low doses. The level of toxicity reflects a continuum from relatively nontoxic to production of toxic effects in patients at low doses (for example, a few milligrams or less). For example, a daily therapeutic dose of 10 milligrams per day (mg/day) or a dose of 1 milligram per kilogram (mg/kg) per day in laboratory animals that produces serious organ toxicity, developmental toxicity, or reproductive toxicity has been used by the pharmaceutical industry to develop occupational exposure limits (OELs) of less than 10 micrograms per cubic meter (µg/m3) after applying appropriate uncertainty factors. See Naumann BD, Sargent EV [1997]. Setting occupational exposure limits for pharmaceuticals. Occup Med 12(1):67–80; Sargent EV, Kirk GD [1988]. Establishing airborne exposure control limits in the pharmaceutical industry airborne exposure control limits in the pharmaceutical industry, Am Ind Hyg Assoc J 49(6):309–313; Sargent EV, Naumann BD, Dolan DG, Faria EC, Schulman L [2002]. The importance of human data in the establishment of occupational exposure limits. Hum Ecol Risk Assess 8(4):805–822]. OELs in this range are typically established for potent or toxic drugs in the pharmaceutical industry.

1. Investigational Drugs

Public comment: Two commenters remarked on the exclusion of investigational new drugs from the definition of ''hazardous drug'' in Sec. IV. One commenter sought guidance in how to handle those drugs, while the second commenter supported the idea that drugs with inadequate safety information not be automatically added to the *List*.

NIOSH response: Although the NIOSH *Procedures* are focused on drugs that have received FDA CDER approval, and do not consider investigational drugs, NIOSH has addressed this issue in the document *Managing Exposures*. Guidance for employers developing a facility-specific hazardous drug list is found in Ch. 3, Sec. 3.1 of that document, Developing a Facility-Specific Hazardous Drug List, which now states:

> Toxicological data may be incomplete or unavailable for some drugs, specifically investigational drugs. Until adequate information becomes available, it is prudent to handle investigational drugs as hazardous if the mechanism of action suggests that there may be a concern.

2. Over-the-Counter Drugs

Public comment: One commenter indicated that it was unclear why over-the-counter drugs were excluded from the definition of a hazardous drug in Sec. IV of the *Procedures*.

NIOSH response: Over-the-counter (OTC) drugs are not evaluated by NIOSH because FDA regulations at 21 CFR 330.10 require OTC drugs to meet a safety standard that includes:

> . . . a low incidence of adverse reactions or significant side effects under adequate directions for use and warnings against unsafe use as well as low potential for harm which may result from abuse under conditions of widespread availability.[5]

NIOSH acknowledges that this does not mean these drugs are always safe and there are circumstances under which there may be risks to workers who handle OTC drugs. However, to focus resources on the most hazardous drugs, NIOSH has decided to exclude drugs with an OTC form from consideration for the *List*. No change to the *Procedures* has been made in response to this comment.

3. Veterinary Drugs

Public comment: One commenter on the *List* requested that NIOSH consider including veterinary drugs in the *List* because these drugs are often approved first for veterinary uses and later approved for human therapies.

NIOSH response: At this time the *List* is compiled from drugs approved by CDER. The veterinary drugs prescribing insert often does not include information about the toxicity criteria that NIOSH considers. NIOSH may consider developing further resources related to the handling of drugs approved by the FDA Center for Veterinary Medicine in the future. No change to the *Procedures* has been made in response to this comment.

D. Section V. Identifying, Screening, Evaluating, and Reviewing a Drug for Placement on the List

1. Section V.A. Step 1: Identifying Potentially Hazardous Drugs

Public comment: One commenter was concerned that the NIOSH *List* might be inconsistent with FDA labeling requirements, specifically questioning whether NIOSH is considering individual branded product labeling and how the criteria for carcinogenicity are applied when the information is derived from the package insert.

NIOSH response: In developing the *List,* NIOSH considers the toxicity of the drug, not a specific brand or dosage form. Regarding the concerns about how the information on the package insert is used to support a carcinogenicity determination, NIOSH notes that a mention of tumors or malignancies does not automatically result in a NIOSH determination that there is an occupational cancer hazard in handling the drug. NIOSH takes all the available information into consideration including therapeutic dose, carcinogenic dose in any animal studies, and other factors in making its determination. Mention of carcinogenicity on a package insert is insufficient to automatically meet the NIOSH criteria for carcinogenicity. No change to the *Procedures* has been made in response to this comment.

2. Section V.B. Step 2: Screening Potentially Hazardous Drugs

Public comment: Some commenters expressed concern regarding *Procedures* Sec. V.B.2.b, which describes screening outcomes when there is ''insufficient information in the drug package insert to suggest that the drug exhibits any one of the toxicity criteria in the NIOSH definition of hazardous drug.'' The text of the *Procedures* indicates that for those drugs for which NIOSH has determined that there is insufficient toxicity information to suggest that the drug exhibits any one of the toxicity criteria, NIOSH will not propose to add that drug to the *List.* Commenters were concerned that this decision would increase worker hazards. Specifically, one commenter stated, ''[w]e suggest that NIOSH consider additional parameters to ensure that any drug that could potentially pose a hazard to employees not fall through the cracks.''

NIOSH response: NIOSH understands the concern that it appears that drugs that have been insufficiently studied might be removed from consideration. However, unlike other workplace chemicals, pharmaceuticals are subject to rigorous, required toxicity testing to merit approval by FDA. NIOSH understands that there is a difference in the focus of the two agencies. NIOSH notes that the FDA-required toxicity tests, which are based on the mode of action and potential toxicity of the drug at treatment exposure levels, provide sufficient information for NIOSH to identify potential hazards at the levels of occupational exposure expected in healthcare settings. In Sec. V.B.2.b of the *Procedures,* NIOSH now states:

> If there is insufficient information in the drug package insert to suggest that the drug exhibits any one of the toxicity criteria in the NIOSH definition of hazardous drug, then NIOSH will not propose to add the drug to the *List.*

This does not mean that the drug has been insufficiently tested to determine potential toxicity. Instead, it indicates that in some cases, in its review of all available information, FDA did not find a concern for toxicity of a particular type and such tests were not required or that the available toxicity data are insufficient to meet the NIOSH criteria for a hazardous drug. NIOSH has added footnote 29 with this explanation to the *Procedures* in response to this comment.

3. Section V.C. Step 3: Evaluating Potentially Hazardous Drugs

a. Toxicity Criteria

Public comment: One commenter asked NIOSH to clarify whether drugs

[5] 21 CFR 330.10(4)(i).

are placed on the *List* solely based on in vitro studies.

NIOSH response: NIOSH examines the totality of the evidence from the specified sources described in the *Procedures.* In Sec. V.C.3.e, NIOSH specifies the use of in vitro studies in genotoxicity determinations as those toxicity tests are the most common tests for that toxicity endpoint. However, NIOSH also notes in multiple places in the *Procedures* that human data are preferred over animal data and both human and animal data are preferred over in vitro toxicity data. In Sec. V.C.3.e.(1) of the *Procedures,* regarding genotoxicity data, NIOSH states:

> Human genotoxicity studies are not commonly available for evaluation. If available, NIOSH gives preference to human genotoxicity studies over animal and in vitro studies. However, NIOSH considers all relevant information in its evaluation.

Public comment: One commenter questioned the NIOSH use of animal toxicity data and in vitro data in making a hazardous drug determination. In particular, the commenter expressed concern that the inclusion of data from animal models or in vitro systems in defining a hazardous drug may not be relevant to hazard risk in human exposure. The commenter further recommended that drugs placed on the *List* solely due to animal or in vitro toxicity data should be so identified.

NIOSH response: NIOSH notes in the *Procedures* that human data are preferred over both animal and in vitro data for making determinations about the hazardous nature of drugs. Data from animal and in vitro studies designed to predict human toxicities contain valuable information about the potential toxicity of drugs. Therefore, NIOSH fully evaluates all available relevant scientific information regarding the potential toxicity of hazardous drugs and does not separately identify which determinations have been made based solely on animal and/or in vitro data. Doing so might give an erroneous impression of less concern for certain drugs based on the type of information available.

Public comment: The same commenter was concerned that the language in Secs. V.C.3.a.(5)(c), V.C.3.b.(4)(b), and V.C.3.c.(4)(b) of the *Procedures,* regarding adverse effects observed in toxicity studies at doses near, at, or below the maximum recommended human dose, indicated that NIOSH would use such findings to support a hazardous drug determination, even when the adverse effect may not be related to a toxic effect.

NIOSH response: The language cited by the commenter is from the *Procedures* and is parallel to language in sections on carcinogenicity, reproductive toxicity, and developmental toxicity. The adverse effects observed would be those associated with the specific toxicity resulting from administration of the drug to experimental animals. The occurrence of these effects below or near the maximal recommended human dose clarify that they are occurring at a dose level of concern. In considering the potential occupational hazard, it is important for NIOSH to consider when effects occur only at doses much higher than the human therapeutic dose, as workers are unlikely to be exposed to drugs at those therapeutic dose concentrations or higher doses. NIOSH has used the maximal recommended human dose as a benchmark to indicate the high end of doses of concern. Typically, NIOSH would be most concerned with toxic effects that occurred below this level.

Public comment: One commenter stated that the toxicity criteria in Sec. V.C.3 should be clarified and further defined. According to the commenter, ''unclear terms include 'serious organ toxicity,' 'low doses,' and 'generally support.' ''

NIOSH response: While NIOSH appreciates the desire to have more explicit language in describing the toxicity criteria, the broad spectrum of drugs covered makes it difficult to precisely define the criteria in a way that will apply to both all drugs and all modes of action considered. Language that would be precise for a particular drug may create a situation where, when applied to another drug, is inadequate to protect workers or results in over-protection. The remedies for this are to either have precise language with an exhaustive list of exceptions (assuming one could know all the potential exceptions that are possible) or to provide as much indication of how NIOSH views toxicity as possible, knowing that there are exceptions that will arise. NIOSH chose the latter strategy, but notes that for any particular drug consideration, NIOSH relies on the professional judgement of NIOSH staff scientists, conducts rigorous peer review of the determinations, and provides an opportunity for public comment on how that language was applied to that drug. No changes to the *Procedures* have been made in response to this comment.

b. Developmental and Reproductive Toxicity

Public comment: Two commenters suggested that NIOSH may not want to use developmental and reproductive hazards as inclusion criteria, citing concerns that drugs contraindicated in pregnancy may be automatically included in the *List* as reproductive or developmental hazards. The commenters also stated that the risks were easily mitigated with normal drug handling procedures.

NIOSH response: The *List* is intended to identify potential hazards in the healthcare workplace so that workplaces can further consider what risk management strategies are appropriate for their specific needs. This includes, but is not limited to, reproductive and developmental hazards. Drugs that pose developmental and reproductive hazards are identified to protect workers, both male and female, who may be pregnant or trying to become pregnant.

Contraindication during pregnancy is not enough for NIOSH to consider a drug to be a developmental or reproductive hazard. *See Procedures,* Sec.V.C.3.b and c. No change to the *Procedures* has been made in response to this comment.

c. Organ Toxicity at Low Dose

Public comment: One commenter expressed concern with the language regarding low dose toxicity in Sec. V.C.3.d of the draft *Procedures.* Specifically, the commenter did not agree with the toxicity level of 10 milligrams per day (mg/day) in human adults or 1 milligram per kilogram per day (mg/kg/day) in laboratory animals as proposed by NIOSH. The commenter used the drugs clonazepam and olaparib as examples of drugs for which these criteria should not be used.

NIOSH response: NIOSH uses a dose 10 mg/day in an adult human or 1 mg/kg/day in animals as one consideration in evaluating potential hazards related specifically to organ system toxicity at low doses. NIOSH also may consider the human recommended dose as a threshold for some effects. This is because occupational exposure is expected to be lower (and therefore, less potentially hazardous) than therapeutic exposure. NIOSH does not usually use a lethality measure (LD_{50}) when assessing potential hazards. In general, if the effect of concern occurs at or below the human treatment dose, then it would likely be considered a hazardous drug. Clonazepam is on the *List* because it has developmental and reproductive effects at lower than the

maximum human recommended dosage. Olaparib is also on the *List* because of the potential reproductive and developmental hazards at less than the human dosage. Therefore, NIOSH does not agree with the commenter's recommendation and has made no change in the *Procedures.*

d. Tabular Arrangement of Hazardous Drugs on the List

Public comment: Several commenters questioned the use of manufacturer's MSHI as a criterion for placement in Table 1 of the NIOSH *List.* Table 1 contains drugs that have MSHI in the package insert and/or meet the NIOSH definition of a hazardous drug, and are classified by the National Toxicology Program (NTP) as *known to be a human carcinogen* and/or classified by the International Agency for Research on Cancer (IARC) as *carcinogenic to humans* (Group 1) or *probably carcinogenic to humans* (Group 2A). The commenters indicated that, because MSHI is not a part of the package insert required by FDA, linking the MSHI to placement on Table 1 would provide a disincentive to manufacturers to provide MSHI.

NIOSH response: The MSHI is directly relevant to worker protection from hazardous drugs and often cites the Occupational Safety and Health Administration (OSHA) hazardous drug guidance website.[6] Manufacturers have provided MSHI to alert workers to how their drug can be safely handled. By placing drugs with MSHI into Table 1, NIOSH is acknowledging and amplifying what manufacturers, who are in the best position to know the toxicity information for their drugs, have already determined to be the best way to handle their product. Manufacturers do not provide MSHI lightly and NIOSH believes it is in the manufacturers' interest to continue to provide information to protect workers handling their drugs. Accordingly, the Table 1 MSHI criterion has been retained. No change to the *Procedures* has been made in response to this comment.

Public comment: Commenters also weighed in on the carcinogen classifications by the IARC and NTP required for placement in Table 1. One commenter suggested that when drugs are identified by IARC as known human carcinogens ''only after prolonged exposure,'' NIOSH should consider moving them to Table 2 of the *List.* Table 2 contains drugs that meet the definition of a hazardous drug but do not have MSHI and are not classified as human carcinogens by NTP or IARC. The commenters also indicated that NIOSH should look carefully at the drug's mode of action when making that determination. Another commenter noted that NIOSH placed drugs that NTP classified as ''known to be carcinogenic in humans'' in Table 1 but did not do so with drugs that were classified as ''reasonably anticipated to be carcinogenic in humans.''

NIOSH response: To simplify the criteria for Table 1, NIOSH is retaining the criteria proposed in the May 2020 notice, so that ''[d]rugs that have MSHI in the package insert and/or meet the NIOSH definition of a hazardous drug and one or more of the following criteria: are classified by NTP as *known to be a human carcinogen,* or are classified by IARC as Group 1 *carcinogenic to humans* or Group 2A *probably carcinogenic to humans*'' are included in Table 1. Drugs classified by NTP as reasonably anticipated to be carcinogenic to humans are evaluated by NIOSH and may be placed on Table 2; the designation of reasonably anticipated alone is not sufficient to place a drug in Table 1. However, NIOSH acknowledges that the context of the carcinogenicity and the mode of action are important information to consider when employers are evaluating the potential risk to workers related to this hazard.

Table 2 of the *List* includes ''[d]rugs that meet the NIOSH definition of a hazardous drug and do not have MSHI, are not classified by NTP as *known to be a human carcinogen,* and are not classified by IARC as Group 1, *carcinogenic to humans,* or Group 2A, *probably carcinogenic to humans.* (Some may also have adverse developmental and/or reproductive effects.)'' Of note, Table 2 includes those drugs that meet the NIOSH definition of a hazardous drug and exhibit carcinogenicity in humans but have not been evaluated by IARC or NTP or have been classified by NTP as *reasonably anticipated to be carcinogenic to humans* or by IARC as *possibly carcinogenic to humans* (Group 2B). No change to the *Procedures* has been made in response to this comment.

4. Section V.D. Step 4: Peer Review of Potentially Hazardous Drugs and Section V.E. Step 5: Public Review of Potentially Hazardous Drugs

Public comment: One commenter stated that the process would be improved with an opportunity for manufacturers (called ''sponsors'' in some comments) to provide input early in the screening process described in Sec. V of the *Procedures.* Specifically, the commenter suggested that

> . . . NIOSH could include an additional step in the screening process of drugs being considered for inclusion on the *List.* This step would involve notifying sponsors when their drug(s) is/are being considered for inclusion on the *List.* NIOSH would then have an opportunity to request sponsor input on inclusion of specific products, and sponsors could choose to submit additional data regarding the potential hazards (or lack thereof) that could be useful to the peer review committee in their review activities.

NIOSH response: NIOSH finds the current process utilizing peer review and public comment provides ample opportunity for interested parties to participate in development of the *List.* Manufacturers (sponsors) and others are welcome to provide relevant data and information that may not be already available. In addition, there is a formal reevaluation process through which manufacturers can provide additional data for reevaluation of a drug, described in Sec. VI of the *Procedures.* NIOSH notes that, to date, interested parties have provided only limited additional toxicology information in response to publication of the draft *List* in the May 2020 notice, and much of that data was provided as part of the reevaluation process. No change to the *Procedures* has been made in response to this comment.

Public comment: One commenter indicated that the peer reviewers who reviewed the draft *Procedures* in 2018 were inadequately identified and their credentials were not clear.

NIOSH response: The peer reviewers, their credentials, and the charge to reviewers can be viewed on the NIOSH web page, Peer Review Plan for the Procedures for Developing the NIOSH List of Hazardous Drugs in Healthcare Settings, available at *https://www.cdc.gov/niosh/topics/hazdrug/peer-review-plan.html.*

IV. Managing Hazardous Drug Exposures: Information for Healthcare Settings

In addition to the *Procedures* and *List* documents, NIOSH solicited feedback on the guidance document, *Managing Hazardous Drug Exposures: Information for Healthcare Settings.* Four peer reviewers, whose names and credentials are available on the NIOSH Peer Review web page,[7] *reviewed the draft.* Public comments follow the peer review responses below, along with NIOSH responses. Overall, peer reviewers and public commenters were supportive of

[6] *See http://www.osha.gov/SLTC/hazardousdrugs/index.html.*

[7] *https://www.cdc.gov/niosh/review/peer/isi/healthsafetyrisks.html.*

this new resource and offered many suggestions for its improvement.

A. Peer Review

The charge given to the peer reviewers for the *Managing Exposures* document is available on the NIOSH Peer Review web page.[8] Peer review questions are listed below with the peer reviewer responses summarized beneath each question.

Reviewers' concerns that focused on issues in other documents (for example, the definition of hazardous drugs or the organization of the tables in the *List*) are included under the NIOSH responses to comments for those documents.

1. Charge 1.a. What additional information would improve [the document's] usefulness and why?

Peer review: One peer reviewer suggested additional helpful references to ''. . . resources developed by professional organizations regarding safer handling of hazardous drugs.'' In addition, multiple reviewers suggested more extensive referencing of USP <800>.

NIOSH response: Additional links to helpful resources were added to the document. However, regarding USP <800>, NIOSH notes that many of the references circle back to NIOSH recommendations, so in those instances reference to USP <800> was not made. However, some references to USP <800> were added into the text where the recommendations were not originally from NIOSH guidance. A link to USP <800> has also been added to the document's Resources section.

2. Charge 1.b. What changes could be made to improve the utility of the information?

Peer review: One reviewer expressed concern that the definition of hazardous drug was changed without input from a much larger and international group of interested parties.

NIOSH response: This comment is addressed with the public comments received in the response to comments in Sec. II of the *Procedures* document.

Peer review: Another reviewer suggested that the information be distilled into a fact sheet or job aid to encourage implementation.

NIOSH response: NIOSH has reformatted the Table of Control Approaches for Safer Handling of Hazardous Drugs, by Activity and Formulation (Table of Control Approaches) in *Managing Exposures,* Ch. 8, to make it easy to reproduce. NIOSH is also considering the development of additional materials to summarize the information in *Managing Exposures* and help employers implement the NIOSH guidance.

3. Charge 1.c. What information is redundant, incorrect, missing, or not needed? Please Explain

Peer review: One reviewer suggested that the narrative immediately following the Table of Control Approaches did not add substantive information and could be removed.

NIOSH response: Since no other peer or public comments identified this as a problem, and in recognition that people absorb information in different ways, NIOSH has decided not to revise or remove the narrative following the table. No change to *Managing Exposures* has been made in response to this comment.

Peer review: One reviewer noted some differences between the Oncology Nursing Society (ONS) recommendations and the NIOSH recommendations in the Table of Control Approaches. These included recommendations for the use of double versus single gloves when handling manufacturer prefilled syringes and the double flushing of toilets.

NIOSH response: NIOSH reviewed the risks addressed in the ONS recommendations and adjusted the text throughout the *Managing Exposures* document as necessary, emphasizing that facilities are responsible for conducting site risk assessments and developing standard operating procedures (SOPs). The NIOSH recommendation for single gloves in handling prefilled syringes has been retained. The recommendation for flushing twice has been removed, specifying that a plastic-backed absorbent pad should be placed over toilets without lids during flushing.

Peer review: One reviewer noted that NIOSH should clarify that the controls were in descending order of effectiveness in the Table of Control Approaches.

NIOSH response: NIOSH has clarified the hierarchy of controls with additional text in Ch. 6, stating, ''[t]he controls at the top of the hierarchy are the most effective and provide the best business value.''

Peer review: The same reviewer asked whether medical surveillance was part of administrative controls.

NIOSH response: Medical surveillance is part of a comprehensive exposure control program complementing engineering controls, safe work processes (administrative controls), and use of PPE. In response to the peer reviewer's query, NIOSH has rearranged *Managing Exposures* and moved the section on medical surveillance into Ch. 6 to clarify that this consideration should be a part of the workplace's risk management plan.

4. Charge 2. Please Provide Any Additional Studies or Scientific Information That Evaluate or Validate Engineering, Work Practice, or Administrative Controls To Reduce Exposures to Hazardous Drugs in Healthcare Settings

Peer review: Reviewers commented on including references to USP <800> and provided additional links to resources and additional citations.

NIOSH response: As discussed above, links to suggested resources and suggested citations have been added to the document where appropriate.

Peer review: One reviewer requested that a citation be added regarding the insufficient protection offered by surgical masks during compounding.

NIOSH response: NIOSH agrees; this reference was included in the May 2020 notice draft *Managing Exposures. See* Ch. 6, Sec. 6.4, Personal Protective Equipment, in which NIOSH states:

> Surgical masks that are not labeled as N95 are not NIOSH-approved, do not provide respiratory protection, and should not be used to compound or administer fine powders which may result from handling hazardous drugs [citations omitted].

Peer review: Reviewers suggested specific risk mitigation strategies, such as requiring that all employees handling hazardous drugs wear PPE; having written policies to govern spill cleanup; requiring the availability of spill kits; having written policies that address medical surveillance; specifying that training should happen prior to working with hazardous drugs and annually thereafter; and that demonstrating and documenting annual competency were warranted.

NIOSH response: NIOSH recommends that workers performing any task involving hazardous drugs, including all compounding, administration, waste handling, and spill response, wear all assigned PPE to reduce the exposure and provide a barrier of protection. The recommendations on spill cleanup and spill kits, written policies on medical surveillance, training prior to working with hazardous drugs, and competency being determined and documented have been added to *Managing Exposures.*

[8] *Id.*

5. Charge 3. Please Provide Any Additional Studies or Scientific Information That Support or Validate the Use of the NIOSH Recommended Control Strategies or Alternative Strategies To Control Exposures to Hazardous Drugs

Peer review: One reviewer suggested including a reference on spills and PPE use and another on the hierarchy of controls and PPE use.

NIOSH response: In response to the peer reviewer, NIOSH has added references to *Managing Exposures* to support the use of the hierarchy of controls when PPE is inconsistently used (Friese *et al.* 2011) [9] and during spill response (Friese *et al.* 2020) [10] were added to document.

6. Charge 4. Please Provide Any Additional Studies or Scientific Information That Support or Validate Evidence-Based Strategies or Approaches for Controlling Exposures to Hazardous Drugs That Are Different From Those That NIOSH Has Proposed

Peer review: Reviewers suggested language clarifications and additional references for NIOSH consideration.

NIOSH response: NIOSH agrees with many of the suggestions and references offered by peer reviewers and has revised the final *Managing Exposures* accordingly.

Peer review: Reviewers questioned the location and composition of the recommendations for medical surveillance.

NIOSH response: As discussed above, in response to the peer reviewer, the topic of medical surveillance was moved into Ch. 6, Risk Management Plan. Medical surveillance should be included as a part of a comprehensive exposure control program to protect the health of workers. This section now includes the following recommendation:

> Elements of a medical surveillance program for workers exposed to hazardous drugs should include the following:
>
> • Consideration of a baseline clinical evaluation to allow for an individualized point of comparison should adverse health effects of exposure to hazardous drugs be suspected in the future. Whether a worker should undergo baseline clinical evaluation should be based on the availability of clinical examinations and tests which can be targeted toward specific hazardous drugs and health endpoints, as well as their corresponding performance characteristics, such as sensitivity, specificity, and predictive value. If a baseline clinical evaluation is performed, it can include a targeted (1) medical history, (2) physical examination, and (3) laboratory testing. Selection of baseline evaluation components should be informed by the toxicities of the hazardous drugs to be handled.
>
> • Health questionnaires administered by a healthcare professional at the time of hire and periodically. The questionnaires should include information about relevant symptoms and medical events. Reproductive outcomes such as miscarriage should be included whenever anticipated as an adverse outcome of hazardous drug exposure because their occurrence may go unreported.
>
> • History of drug handling as an estimate of prior and current exposure, including dates of duty assignment related to hazardous drugs and similar types of information.
>
> • A follow-up plan, as needed, for workers who have had health changes suggesting toxicity or have experienced acute exposure (for example, from substantial skin contact or inhalation or from cleaning a large spill [a broken IV bag, leaking IV line, etc.]) [citation omitted].

Peer review: One reviewer suggested a reference describing controls in urological procedures.

NIOSH response: This reference has not been included because NIOSH determined it is a general paper and does not address specific worker exposure from the medical procedure, bladder installation. No change to *Managing Exposures* has been made in response to this comment.

7. Charge 5.a. What additional information would improve the usefulness of [the Table of Control Approaches in Chapter 8] and why?

Peer review: One reviewer suggested adding a statement indicating that compounding and manipulating oral hazardous drugs should be done in a compounding area, and not a patient care area, and to alert medical personnel of the hazards.

NIOSH response: NIOSH has provided separate recommendations for compounding and administering in the Table of Control Approaches. It would be impractical to try to identify all actions that would fall under a ''do not do this'' recommendation. No change to *Managing Exposures* has been made in response to this comment.

Peer review: Another reviewer mentioned that a job aid or standard operating procedure would be of particular help associated with the Table of Control Approaches.

NIOSH response: The Table of Control Approaches is meant to stand alone without a standard operating procedure. NIOSH is developing a shorter fact sheet to assist employers. No change to *Managing Exposures* has been made in response to this comment.

8. Charge 5.b. What structural or format changes could be made to improve the utility of [the Table of Control Approaches]?

Peer review: Two reviewers noted that the format of the Table of Control Approaches should be considered for potential use as a stand-alone document and maximized for searching online.

NIOSH response: NIOSH agrees and has developed the final Table of Control Approaches with those considerations in mind.

9. Charge 5.c. What information is redundant, incorrect, missing, or not needed [in the Table of Control Approaches]? Please Explain

Peer review: One reviewer suggested reference to the 2018 Oncology Nursing Society's Safe Handling of Hazardous Drugs, 3rd edition (ONS 2018) as an additional resource for exposure control approaches and recommended a specific control strategy when attaching needles to closed system transfer devices (CSTDs). The same reviewer mentioned that double flushing was no longer recommended.

NIOSH response: NIOSH agrees and has added a citation to ONS 2018 to provide an additional resource for exposure control strategies. NIOSH has also included a link to a NIOSH topic page on CSTDs to further describe the appropriate controls needed when using CSTDs. The suggested revision, however, is too specific for this general recommendation document. NIOSH concurs that double flushing was not recommended and has revised the document to update the recommendations.

Peer review: Another reviewer stated that the content of the Table of Control Approaches was overwhelming and suggested a bullet point summary. The reviewer also suggested linking to the USP Reference Standards Mobile App.

NIOSH response: NIOSH is developing a shorter fact sheet to present a summary of the information. A reference to USP <800> has been added to the document's Resources section. However, NIOSH has not provided a link to a for-purchase product.

[9] Friese CR, Himes-Ferris L, Frasier MN, McCullagh MC, Griggs JJ [2011]. *Structures and Processes of Care in Ambulatory Oncology Settings and Nurse-Reported Exposure to Chemotherapy.* BMJ Qual Saf. 21(9):753–759.

[10] Friese CR, Wong M, Fauer A, Mendelsohn-Victor K, Polovich M, McCullagh MC [2020]. *Hazardous Drug Exposure: Case Report Analysis from a Prospective, Multisite Study of Oncology Nurses' Exposure in Ambulatory Settings.* Clin J Oncol Nurs. 24(3):249–255.

10. Charge 6. What improvements could be made to this risk management information to make it more useful to employers and healthcare workers? Please Provide Specific Examples

Peer review: Two reviewers suggested that NIOSH recommend alternative duty for pregnant women or individuals trying to conceive to further reduce potential worker risks and advocated expanding the Medical Surveillance section with specific requirements.

NIOSH response: NIOSH has determined that the employer is in the best position to ascertain the utility and feasibility of alternative duty as a control strategy in their workplace. As discussed above, the components and timing of medical surveillance should be determined by the licensed healthcare professional conducting the medical evaluation. No change to *Managing Exposures* has been made in response to this comment.

Peer review: Another reviewer suggested visual abstracts and graphics to better convey concepts and summarize key points referenced in a 2019 study by Friese *et al.,* entitled *Randomized Controlled Trial of an Intervention to Improve Nurses' Hazardous Drug Handling,* published in the Oncology Nursing Forum.[11]

NIOSH response: The visual aspect of Friese *et al.* 2019 is inspiring. NIOSH is considering reviewing the documents to look for opportunities to create shorter fact sheets with meaningful graphics to improve understanding. In addition, a NIOSH visual communication team has worked to make the Table of Control Approaches in the *Managing Exposures* document easier to read and reproduce.

Peer review: One reviewer suggested adding a section on home veterinary care, recommending information from a specific reference.

NIOSH response: The NIOSH document is geared towards employees in healthcare settings, including veterinarians and veterinary staff, but not pet owners doing home veterinary care. However, the veterinary resource suggested was a ''consensus opinion'' about protecting both veterinary workers and owners so it was added to the document's Resources section.

11. Charge 7. Please Provide Information About Your Professional Experience, if Any, of Implementing Control Strategies for Exposures to Hazardous Drugs in Healthcare or Similar Settings. Please Describe What You Found to Be Most or Least Effective and Why. Include Relevant Publications if Available

Peer review: One reviewer indicated that there is a need for increased signage for all staff, family, and visitors in contact with patients receiving hazardous drugs. References were suggested outlining the scope of the problem.

NIOSH response: The recommendation for signage has been added to the document.

Peer review: Another reviewer asked why recommendations were made to protect veterinary patients but not humans in veterinary practices.

NIOSH response: NIOSH has clarified that the recommendations are designed to protect veterinary workers not the veterinary patients.

Peer review: One reviewer was concerned with potential hazardous drugs exposures from patient or general public exposure to toilets in outpatient settings and suggested the addition of the following reference: Walton A, Bush MA, Douglas C, Allen DH, Polovich M, Spasojevic I [2020], *Surface Contamination with Antineoplastic Drugs on Two Inpatient Oncology Units,* Oncol Nurs Forum 47(3):263–272.

NIOSH response: NIOSH determined the reference cited contained useful information pertaining to identification of potentially contaminated areas and has added it to the section on surface contamination.

Peer review: One reviewer was concerned that wipe testing be conducted where hazardous drugs should not be found as an important exposure control.

NIOSH response: Ch. 6, Sec. 6.5, Surface Contamination, has been edited to include sampling where hazardous drugs are prepared, administered to patients, or otherwise handled (*i.e.,* receiving areas, transit routes throughout the facility, and waste storage areas).

Peer review: One reviewer recommended NIOSH add references on the persistence of contamination even when workplace controls are used (*i.e.,* Kopp B, Schierl R, Nowak D, 2013; and Walton A, Bush MA, Douglas C, Allen DH, Polovich M, Spasojevic I, 2020).

NIOSH response: Ch. 6, Sec. 6.5 has been edited to include the suggested references as well as others to support the premise that workplace contamination with hazardous drugs continues to be an issue in the United States.

Peer review: One reviewer suggested that *Managing Exposures* recommend ''spill drills'' to train and refresh training for employees.

NIOSH response: NIOSH concurs and has added language to the document recommending that workplaces practice for spills.

12. Charge 8. Please Provide Any Additional Comments or Suggestions Either as a List Below or Using Track Changes in the Attached Draft Document

Peer review: One reviewer suggested that *Managing Exposures* include guidance from ONS 2018 regarding the use of chewing gum and tobacco and the application of cosmetics in the areas where hazardous drugs are handled; written policies that address spill cleanup and medical surveillance; and the availability of spill kits.

NIOSH response: NIOSH concurs and has added language to the final document pertaining to the suggestions. Additionally, ONS 2018 has been both cited and listed as an additional resource.

Peer review: One reviewer recommended changing ''nurses' aides'' to ''nurses' assistants.''

NIOSH response: NIOSH concurs with the suggested change and has revised the final *Managing Exposures* accordingly.

Peer review: One reviewer suggested that ''large spill'' be defined.

NIOSH response: NIOSH concurs this should be clearer, and in the recommendation regarding a follow-up plan for workers who have experienced acute exposures from large spills has clarified that large spills may result from a broken IV bag, leaking line, or similar event. NIOSH has determined that defining ''large spill'' would be too prescriptive because ''large'' is subjective and may depend on such factors as the concentration of the drug and the amount of surface area upon which it may be spilled. Accordingly, the definition of ''large spill'' should be defined by each facility according to its own needs.

Peer review: One reviewer requested more specific language in the recommendations for training.

NIOSH response: NIOSH agrees and has added information about providing training frequently and when there are new hazardous drugs brought into the facility. Workers should be trained prior to beginning work with hazardous drugs and should demonstrate competency before they handle a hazardous drug, clean an area where hazardous drugs are

[11] Friese CR, Yang J, Mendelsohn-Victor K, McCullagh M [2019]. *Randomized Controlled Trial of an Intervention to Improve Nurses' Hazardous Drug Handling.* Oncol Nurs Forum. 46(2):248–256.

used, and perform work tasks that will potentially expose them to the body fluids of a patient who is taking hazardous drugs.

Peer review: One reviewer requested more clarity about signage.

NIOSH response: NIOSH agrees and has clarified that signage should be placed where the hazardous drugs are used and stored.

Peer review: One reviewer requested additional information about handling contaminated excreta.

NIOSH response: NIOSH agrees and has added language about handling of drug contaminated excreta.

Peer review: Two reviewers commented that *Managing Exposures* should specify the types of gloves that should be used for different hazards, and that NIOSH should clarify how often PPE should be changed and the order of doffing PPE.

NIOSH response: NIOSH disagrees that the document should provide specifics on the type of glove to be used since different glove types offer different protection from dermal exposure to hazardous drugs. NIOSH does agree that providing information on when to change PPE and the order of doffing PPE is important and has added the recommendation ''[r]emove PPE in the following order: shoe covers, sleeve covers, outer gloves, face shield, gown, respirator/mask, inner gloves'' to Sec. 6.4, Personal Protective Equipment. No change to *Managing Exposures* has been made in response to this comment.

Peer review: One reviewer had specific suggestions regarding controls for CSTDs, specifically regarding double gloving when using prefilled syringes and when plastic-backed pads should be used.

NIOSH response: NIOSH agrees with the suggestion about the use of plastic-backed pads and new language has been added to the existing discussion on CSTDs in Ch. 6, Sec. 6.2, Engineering Controls. NIOSH disagrees that double gloves are needed when using prefilled syringes and has made no changes in response to this recommendation.

Peer review: One reviewer commented that eyewash stations should be mentioned, exposure assessment through wipe sampling (at baseline and routine intervals) could be clarified, and the heading for Sec. 8.3 could be made more explicit.

NIOSH response: NIOSH agrees and has added information to Sec. 6.5 Surface Contamination, on wipe sampling, and to Sec. 7.2, Spill Control, on eyewash stations. The heading for Sec. 8.3 in the 2020 draft *Managing Exposures* has been changed to ''Additional Considerations for Handling Hazardous Drugs'' and the section was turned into a new Ch. 9.

B. Public Comments

1. Glossary

Public comment: NIOSH received comments from five commenters related to definitions in the Glossary. The following definitions were suggested:

- *Biological safety cabinet (BSC):* ''laboratory'' may be confusing; consider instead ''an enclosed, ventilated workspace . . .''
- *Cleaning:* Removal of organic and inorganic material from objects and surfaces using water, detergents, surfactants, solvents, and/or other chemicals.
- *Decontamination:* Inactivating, neutralizing, or physically removing hazardous drug residue from non-disposable surfaces and transferring it to absorbable, disposable materials appropriate to the area being cleaned.
- *Deactivation:* To render a compound inert or inactive.
- *Disinfection:* A process of inhibiting or destroying microorganisms.

NIOSH response: NIOSH has added the suggested definitions for ''deactivation'' and ''disinfection'' in the final *Managing Exposures.*

2. Chapter 1.0 Purpose and Scope

Public comment: A commenter asked for clarity on recommendations for retail pharmacies.

NIOSH response: NIOSH notes that retail facilities should perform the appropriate risk assessments. The assessments may show, due to limited handling or manipulation of open containers, that the risks of exposure are limited. However, the assessment of potential handling scenarios in the facility should still be performed to determine what those risks are. No change was made to the final *Managing Exposures* in response to this comment.

Public comment: A commenter suggested NIOSH highlight potential exposures to hazardous drugs through handling of human fluids and wastes.

NIOSH response: NIOSH agrees and has edited Ch. 4.0, Occupational Exposure Assessment, to highlight the potential risk from exposure to human waste products (*i.e.,* urine, feces, vomit).

3. Chapter 6.0 Risk Management Plan

Public comment: Several commenters on both the *Managing Exposures* draft and the *List* draft mentioned specific issues regarding the assessment of risk discussed in Ch. 6.0. Several asked for more specific guidance for site risk assessments, particularly surrounding administration and compounding.

NIOSH response: NIOSH disagrees that *Managing Exposures* should provide more specific guidance for risk assessments. Each facility should conduct its own risk assessment to determine which tasks within the facility would be considered administration or compounding. In response to these comments, NIOSH has revised the language in the final document to specify that each facility should conduct its own risk assessment and develop SOPs specific to its use of hazardous drugs.

a. Section 6.2 Engineering Controls

Public comment: Seven comments were received on engineering controls discussed in Sec. 6.2 (in addition to comments related to CSTDs, which are considered below). Commenters suggested adding information about engineering controls, such as uninterrupted power supply, negative pressure, and unidirectional flow of air. Some commenters also suggested specific recommendations regarding use of BSCs and compounding aseptic containment isolators (CACIs), clarification of the recommendations regarding nonsterile preparations in footnote 4 of the Table of Controls in Ch. 8, use of glove bags and suggestions for various updated references. One commenter noted that cleaning is not the only step needed to ensure the BSC or CACI is in optimal condition to compound drugs. Proper use also includes processes to deactivate (*i.e.,* render a compound inert or inactive), decontaminate (*i.e.,* remove hazardous drug residue), and disinfect (*i.e.,* destroy microorganisms).

NIOSH response: BSC selection should be based on a risk assessment of the hazardous drugs in use at each facility and be flexible enough to allow for evolving equipment types and performance specifications. In response to comments, NIOSH has clarified the language in the document as follows:

> Class II BSCs that exhaust filtered cabinet air to the outdoors are recommended. BSCs that exhaust cabinet air back into the segregated engineering control (SEC) are discouraged. When the work activity requires handing volatiles, a risk analysis should be conducted to identify the appropriate Class II BSC selection to ensure that any air recirculation internal to the BSC does not result in vapor accumulation.

NIOSH provides recommendations related to the proper use of ventilated cabinets, and, in response to comments, NIOSH has revised one of the recommendations to clarify that proper use requires users to ''[i]nstall, maintain, deactivate, decontaminate, clean and disinfect the BSC.'' Another

recommendation has been revised to read ''[h]ave readily available or display a current field-certification label prominently on the ventilated cabinet.'' NIOSH has also added recommendations for negative pressure and an uninterrupted power source.

In response to comments, NIOSH has defined the terms ''deactivate,'' ''decontaminate,'' and ''disinfect'' in the Glossary to improve clarity.

In reference to the comment on nonsterile preparations in the Table of Control Approaches footnote 4, the footnote is only intended for nonsterile preparations, as stated. It should not be taken to suggest that NIOSH recommends that sterile compounding does not need to be performed in a sterile ventilated engineering control as long as the person compounding is wearing appropriate respiratory protection. This document addresses worker safety. In the interest of patient safety and drug safety all appropriate USP guidelines should be followed. No change to the document was made in response to this comment.

Regarding the comment on glove bag use, NIOSH is unaware of any reason why a small sterile glove bag that does not deflect airflow to outside of the direct compounding area could not be used inside a BSC. NIOSH is also unaware of any confusion or conflicts created by past glove bag recommendations. In NIOSH's experience, these are only rarely used but they could indeed be used as described and would also be protective. NIOSH is unaware of a unidirectional airflow requirement. Even if used under unidirectional airflow, if the glove bag interior and inserted supplies were all sterile, and the glove bag placed beneath a laminar flow of ISO 5 air, NIOSH believes this still would meet the intent of the recommendation. Of course, each facility should conduct their own risk assessment and develop SOPs specific to their use of hazardous drugs. No change to *Managing Exposures* has been made in response to this comment.

Closed System Transfer Devices

Public comment: One commenter suggested removing or altering images that reference proprietary names in Figures 4 and 5. Particularly in Figure 5, which includes a photograph of a robotic drug preparation system with the manufacturer's name in the photo credit. This device is ''not yet fully functional in the United States'' and should not be part of the NIOSH informational document. In general, such images may not be representative of the numerous products available on the U.S. market for safely compounding hazardous drugs and demonstrates bias.

NIOSH response: Regarding the figures, NIOSH has decided to keep them in the final *Managing Exposures.* However, in Figure 4, NIOSH has substituted more non-specific images of two types of CSTDs that are representative of those available in the U.S. market rather than photographs. The following Disclaimer continues to be included on the title page: ''[m]ention of any company or product does not constitute endorsement by the National Institute for Occupational Safety and Health (NIOSH).''

Public comment: A commenter suggested the removal of references to robotic systems.

NIOSH response: NIOSH has not changed the document in response to this comment, noting that the text already states ''robotic systems are considered supplemental controls that should only be used in combination with primary engineering controls (*i.e.,* BSCs and CACIs) to further protect against worker exposures to hazardous drugs.''

Public comment: One commenter requested clarification in the wording related to priming IV tubing.

NIOSH response: In response to the comment, NIOSH has reworded the sentence to state, ''[c]ompounding personnel should prime the IV tubing and syringes inside the ventilated cabinet or prime them in-line with nondrug solutions or by use of a CSTD to prevent the escape of hazardous drugs.''

Public comment: Five comments were received on recommendations regarding CSTDs, all specifically focused on issues of compatibility with the drug product.

NIOSH response: Each facility should conduct its own risk assessment and develop SOPs specific to its use of hazardous drugs. NIOSH states in Sec. 8.1 that the MSHI should be consulted. However, in response to comments, NIOSH has added the language ''when dosage form allows'' in every case where a CSTD is recommended in the Table of Control Approaches.

b. Section 6.3 Administrative Controls

Alternative Duty

Public comment: Two commenters made suggestions on alternative duty. Both proposed including recommendations on the importance of alternative duty for healthcare workers who are pregnant, trying to conceive, or who are breastfeeding.

NIOSH response: NIOSH recognizes that alternative duty is one method to control hazardous exposures to healthcare workers who are pregnant, trying to conceive, or who are breastfeeding. However, NIOSH has determined that the specific control strategies should be left up to the employer who is in the best position to conduct an in-depth individual facility risk assessment. No change to *Managing Exposures* has been made in response to this comment.

Cleaning

Public comment: One commenter requested clarification of the terms associated with cleaning activities.

NIOSH response: In response to the comment, NIOSH has edited Sec. 6.3 to clarify the difference between cleaning and decontamination. In Sec. 6.3, NIOSH has replaced the term ''rags'' with ''disposable wipes'' and has clarified that ''[w]ork surfaces should be deactivated, decontaminated, and cleaned before and after each activity and at the beginning and end of the work shift.'' The terms ''deactivation'' and ''decontamination'' have been added to the Glossary.

Counting Tablets

Public comment: Four commenters had questions on counting tablets, discussed in Sec. 6.3. Specifically, the comments questioned whether the information was considered to establish requirements or merely recommendations, and how the recommendation to limit the use of automated counting machines should be implemented.

NIOSH response: In this document, NIOSH is issuing recommendations not requirements. The document is informational in nature and creates no legal obligation. Regarding counting tablets, NIOSH has clarified the language in Sec. 6.3 of the document recommending that automated counting machines be prohibited for hazardous drugs unless the machine has been evaluated and found to not release powders.

Public comment: One commenter suggested changing the NIOSH recommendations for use of automated counting machines.

NIOSH response: In response to the comment, NIOSH has revised the recommendations on the use of counting machines to include the following text and references:

> Tablet and capsule forms of hazardous drugs should not be placed in an automated counting machine unless a facility risk assessment validates that the specific machine does not introduce dust and contamination; most counting machines can stress tablets and capsules thereby introduce

powdered contaminants into the work area [citations omitted].

c. Section 6.4 Personal Protective Equipment

Use of Gloves

Public comment: Fourteen comments were received about the recommendations on glove use discussed in Sec. 6.4. The comments specifically addressed the use of single versus double gloves during shipping and receiving and while handling prefilled syringes. There were also comments on the use of spray alcohol on gloves and the use of sleeve covers with gloves.

NIOSH response: In response to several comments, the recommendation for receiving, unpacking, and placing in storage has been changed to single glove. Although NIOSH already recommends employers ''ensure that the selected gloves are not degraded by the alcohol,'' the recommendation for use of spray alcohol was removed. NIOSH is retaining the recommendation of a single glove for manufacturers' prefilled syringes as it is anticipated that they have less of a chance for exterior contamination. Facilities should conduct their own risk assessment to determine gloving requirements for their specific situations.

Use of Gowns, Sleeve Covers, and Head Covers

Public comment: Seven reviewers suggested that the recommendation for sleeve covers should be removed or modified.

NIOSH response: In response to the comment, NIOSH has turned the recommendation for the use of sleeves into a consideration: ''[c]onsider using sleeve covers if there is a gap between the gown and the glove.''

Public comment: One commenter suggested that NIOSH state that gowns be shown to resist permeation by hazardous drugs. Another reviewer suggested that information about the frequency of changing gowns be added.

NIOSH response: NIOSH has added language clarifying that gowns should be shown ''to resist permeation by the types of hazardous drugs used'' to Sec. 6.4, Gowns. Language has also been added to recommend changing gowns after one use or at a frequency determined by the employer and immediately after a spill or splash and disposing of in an appropriate waste container.

Public comment: One commenter suggested that NIOSH should define the term ''face shield'' to reduce the risk of confusion.

NIOSH response: Because face shields are very common in healthcare (and the general public) the term is generally understood and no further definition was required. No change to *Managing Exposures* has been made in response to this comment.

Use of Respirators

Public comment: Five comments were received on respirator use. Some requested detailed guidance for spill and cleaning activities. Other comments included a request for guidance during compounding and clarification on respirator selection when using volatile hazardous drugs. One comment suggested that the powered air-purifying respirator (PAPR) depicted in Figure 6 is not appropriate for use with drugs that are volatile.

NIOSH response: Regarding the comments for specific guidance, NIOSH reiterates that each facility should conduct its own risk assessment and develop SOPs for specific scenarios. NIOSH has clarified its guidance on respirator use with volatile hazardous drugs by adding the recommendation: ''[u]se a full-facepiece combination particulate/chemical cartridge-type respirator or a powered air-purifying respirator (PAPR) whenever handling volatile hazardous drugs or aerosolizing hazardous drugs for inhalation or nebulized therapy.'' The images in Figure 6 were used as examples of the types of respirators that could be used. to protect workers from hazardous drug exposures. The type of PAPR in Figure 6 may not be the correct PAPR for every situation. Facilities should choose the correct device that fits their specific needs and as stated in the disclaimer, ''[m]ention of any company or product does not constitute endorsement by the National Institute for Occupational Safety and Health (NIOSH).'' Changes were made to the text to indicate a variety of potential respirators for different needs.

d. Section 6.5 Surface Contamination

Public comment: One comment suggested expanding the section on monitoring surface contamination. Another noted that there was no mention of assessing environmental contamination by surface wipe sampling, and that this technique has become a sophisticated and useful tool in other countries but not yet adopted by U.S. facilities handling hazardous drugs.

NIOSH response: NIOSH has revised the document to include additional references to support the recommendations on wipe testing for contamination.

e. Section 6.6 Medical Surveillance

Public comment: NIOSH received several comments on medical surveillance. Two comments mentioned the difficulty and burden of instituting a medical surveillance program in a mobile workforce and in small businesses. Another asked for clarity on the recommended frequency of clinical follow-up. One commenter stated that clinical exams and labs for medical surveillance of workers exposed to hazardous drugs be curtailed until positive evidence was available to demonstrate the usefulness of the practice. Conversely, a different commenter called for the establishment of a national registry to capture the exposures and outcomes from exposure to hazardous drugs.

NIOSH response: Regarding the difficulty, burden, and potential lack of data showing the efficacy of a medical surveillance program, NIOSH notes that ONS, OSHA, and USP all recommend medical surveillance for workers in contact with hazardous drugs. Surveillance can identify sentinel adverse health effects among workers suggesting failures in controlling exposures and thus identify the need for improvements in workplace controls, such as engineering or administrative controls or personal protective equipment. Also, individual workers may benefit from detection of disease in early stages when it may be more treatable with better clinical outcomes. No change has been made to *Managing Exposures* in response to this comment. NIOSH has no plans to recommend a national registry at this time.

4. Chapter 7.0 Waste and Spill Control

a. Section 7.1 Hazardous Drug Waste and Section 7.2 Spill Control

Waste Designation and Handling

Public comment: One commenter requested clarification of the difference between trace and overtly contaminated items and the procedures for disposal of contaminated items.

NIOSH response: A new Sec. 7.1, Hazardous Drug Waste, has been added which describes the 3 types of waste streams: hazardous waste, as defined by the Resource Conservation and Recovery Act (RCRA);[12] trace chemotherapy waste; and nonhazardous pharmaceutical waste. The new section also includes a description of disposal containers. A site-specific assessment of risk should be performed to determine facility SOPs.

Public comment: NIOSH received eight comments on waste designation

[12] 42 U.S.C. 6901 *et seq.,* 40 CFR 261.

and handling. Several specific recommendations were offered on how to handle waste contaminated with hazardous drugs. Several commenters asked for clarification of terms, specifically differentiating between waste contaminated with trace amounts of hazardous drugs and hazardous waste.

NIOSH response: NIOSH appreciates the clarification and suggestions regarding waste management. Several revisions to address these comments have been made throughout the document. However, a comprehensive list of waste handling procedures is beyond the scope of this document. The narrative section on waste handling was expanded to clarify trace waste from hazardous waste to address some of these concerns.

5. Section 8.0 Control Approaches for Safe Handling of Hazardous Drugs by Activity and Formulation

a. Section 8.1 Introduction to Table of Control Approaches

Public comment: One commenter suggested deleting the Table of Control Approaches, noting that it was unnecessary and overly conservative. In particular, the table does not appropriately differentiate between control measures (*e.g.,* ventilation, respiratory protection) based on factors such as dosage forms of hazardous drugs (*e.g.,* intact tablet and capsules vs. bulk active pharmaceutical ingredients), types of hazardous drugs (antineoplastic vs. non-antineoplastic), and other important factors that affect how medications are handled in healthcare facilities and the degree to which workers may be exposed. In this way, the Table of Control Approaches is inconsistent with the risk assessment procedures outlined in USP <800>.

NIOSH response: NIOSH disagrees, finding that the Table of Control Approaches has broad support among peer reviewers and public commenters who provided input on the May 2020 draft and is foundational to this activity. *Managing Exposures* lays out information regarding risk management strategies. Exposure assessments that include consideration of many facilities' specific factors such as dosage forms and each individual drug's potential hazards to determine the best control measures are part of the strategies discussed in this document. The table represents common handling situations in healthcare workplaces and should be considered within the broader framework the document provides. While NIOSH is independent from USP, the use of the Table of Control Approaches within the framework of this document is consistent with the use of risk assessment procedures laid out in USP <800>. No change has been made to *Managing Exposures* in response to this comment.

Public comment: One commenter suggested considering reformatting the Table of Control Approaches. Another commenter suggested that gloves should be American Society for Testing and Materials (ASTM) rated and that gowns should be impervious and single use.

NIOSH response: In response to the comment, NIOSH revised the table to clarify that gloves should be ASTM rated and gowns should be impervious and single use. A new line was added to the table to include the headers Engineering Controls and PPE.

b. Section 8.2 Control Approaches by Activity and Formulation

Receiving and Packaging

Public comment: Two comments were received on recommendations surrounding receiving and packaging, discussed in Sec. 8.2. One comment suggested that single gloves were appropriate for unpacking, and the other asked if repackaging was considered compounding.

NIOSH response: NIOSH agrees that single gloves for receiving and unpacking were appropriate and has changed the recommendations in Sec. 8.2 and in the Table of Control Approaches accordingly. Repackaging would not typically be considered compounding if it does not change the final dosage form.

Transportation

Public comment: One commenter suggested that gloves did not provide protection during transportation, but that they could actually increase the hazard by spreading potential exposure.

NIOSH response: NIOSH has retained the recommendation, discussed in Sec. 8.2, that gloves should be worn during transport of hazardous drugs in a facility. Each facility should conduct its own risk assessment and develop SOP specific to its use of hazardous drugs. No change has been made to *Managing Exposures* in response to this comment.

Compounding of Drugs

Public comment: Four commenters commented on the recommendations regarding drug compounding, discussed in Sec. 8.2. Commenters requested that tablet or capsule crushing not be included in compounding, questioned whether prefilled IV bags needed to have tubing attached and be primed, and requested guidance on pouring liquids from one container to another.

NIOSH response: In *Managing Exposures,* NIOSH has moved tablet crushing to the administration recommendations to be consistent with USP guidance which does not consider crushing or splitting tablets as ''compounding.''

Regarding precautions with IV bags, this would not be considered compounding under the FDA definition, as the final formulation is unchanged. Pouring from one container to another also would not be considered compounding under the FDA definition. No change has been made to *Managing Exposures* in response to these comments.

Administration

Public comment: Six comments were received on administering drugs in the Table of Control Approaches. Two commenters questioned the distinction between prefilled and in-house prepared syringes. Other commenters asked about vented filters to remove bubbles in IV tubing, ophthalmologic application, and procedures to minimize risks from crushing tablets.

NIOSH response: An in-house prepared syringe may contain trace contamination and a manufacturer's prefilled syringe can be assumed to be clean. Accordingly, NIOSH has maintained the subsections of the Table of Control Approaches distinguishing between prefilled and in-house prepared syringes. The use of vented filters allows bubbles to be eliminated from infusion lines. When inline vented filters use is suggested for compounds prone to outgassing, an assessment of the risk of exposure would be appropriate. It is expected that the level of drug vapor released during infusion will be miniscule and the level of dilution once passing through the vent into the room air would limit the hazard posed by outgassing during infusion.

Regarding ophthalmic application, NIOSH agrees with the commenter and has added information on ophthalmologic applications to the Table of Control Approaches and Sec. 8.2. Regarding minimizing risks to workers for specific scenarios, an intact coated tablet or capsule will have a coating preventing the release of dusts/powders or liquids; and a cut, crushed or uncoated tablet will provide a possible source of dusts/powders or liquids that could expose the workers. Similarly, an in-house prepared syringe may contain trace contamination and a manufacturer's prefilled syringe can be assumed to be clean and would have less likelihood of exposing the worker to hazardous drugs. Each facility needs to conduct its own risk assessment and

develop SOPs specific to its use of hazardous drugs.

6. USP <800>

Public comment: Several commenters offered suggestions on the document's use of USP <800>. Most were concerned that USP should be cited more often.

NIOSH response: In response to commenters, USP <800> has been cited in the document where it could be determined that it could provide new information that did not originate with NIOSH (thus avoiding circular references).

Public comment: NIOSH should be differentiating between controls for antineoplastics and other hazardous drugs.

NIOSH response: NIOSH reaffirms that this document is intended to apply to all drugs on the 2023 *List* and not just antineoplastics. No change to *Managing Exposures* has been made in response to this comment.

Public comment: One commenter suggested that guidance on performing an individual drug risk assessment that meets the USP <800> standard would be helpful as alternative containment strategies and/or work practices for specific dosage forms weren't included.

NIOSH response: NIOSH disagrees with providing guidance for ''specific dosage forms'' as that is beyond the scope of this general guidance document. However, the text ''[t]he risk assessment should include evaluating the dosage form and identifying the probability of exposure'' has been added to Sec. 5.0 Risk Assessment, for clarity.

7. Other Topics

Public comment: One commenter noted that the term ''pills'' is referred throughout the document, for example, on pages 38 and 66. According to the commenter, ''pill'' is a nonspecific, outdated term and should be replaced with the word ''tablet'' instead.

NIOSH response: NIOSH agrees and has made this change throughout the final *Managing Exposures.*

Public comment: Several commenters noted spelling mistakes, errors in tables, and other editorial improvements.

NIOSH response: NIOSH thanks the commenters for pointing out these errors. NIOSH has accepted all appropriate editorial, spelling, and correction comments in its revision of *Managing Exposures.*

V. Summary of Changes to Documents

A. Procedures for Developing the NIOSH List of Hazardous Drugs in Healthcare Settings

As described in the responses to comments above, only limited clarifications were made in the *Procedures* document. Notable changes include a revision to footnote 12 to clarify that only CDER-approved drugs are included on the *List* and the addition of a new footnote 29 to clarify NIOSH's intent regarding drugs with insufficient information in the package insert to determine whether the drug meets the NIOSH definition of a hazardous drug. Other changes comprised only minor editorial improvements.

B. Managing Hazardous Drug Exposures: Information for Healthcare Settings

Changes were made to the document, *Managing Exposures,* in response to comments received. There were some reorganizations, added references and information, and clarification of recommendations, as follows:

- In response to commenters, USP <800> was cited in document where it could be determined that it had new information that did not originate with NIOSH (thus avoiding circular references). ONS 2018 was cited and listed as an additional resource.
- The language in the document was clarified to specify that each facility should conduct their own risk assessment and develop SOPs specific to their use of hazardous drugs.
- Under Administrative Control recommendations, the language was clarified that automated counting machines should be prohibited unless the automated counting machine has been evaluated and found to not release powders.
- In the recommendations on PPE, several changes were made in response to comments:
  - Gloving recommendations for receiving and unpacking were changed to a single glove.
  - Recommendation to ''spray'' sterile alcohol on gloves was removed.
  - Recommendation for the use of sleeves was changed to ''Consider using sleeve covers if there is a gap between the gown and the glove.''
- In the Table of Control Approaches:
  - Ophthalmologic administration guidance was added.
  - Recommendation for double flushing of toilets in homes was removed and replaced with new guidance that states ''Close toilet lid or use a plastic-backed absorbent pad placed over the toilet without a lid during flushing.''
  - ''Crushing or manipulating tablets or capsules'' was moved from the compounding activity formulation column to the administering activity formulation column.
- The document was edited to highlight the potential risk from exposure to human waste products (urine, feces, vomit). The topic of Medical Surveillance was moved forward in the document under Risk Management for clarity. Three new sections were added to increase the clarity and utility of the recommendations:
  - Section 6.5 Surface Contamination
  - Section 7.1 Hazardous Waste
  - Section 7.2 Spill Control
- Chapter 9 was created to reorganize information in the previous draft for clarity:
  - Chapter 9.0 Additional Considerations for Handling Hazardous Drugs
  - Section 9.1 Home Healthcare
  - Section 9.2 Veterinary Clinics (formerly Section 8.3 Steps to reduce potential exposure to hazardous drugs)

Additional references were added as suggested by commenters and peer reviewers to provide additional resources for readers.

John J. Howard,

Director, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, Department of Health and Human Services.

[FR Doc. 2023–08900 Filed 4–26–23; 8:45 am]

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

[CFDA Number: 93.647]

Announcement of the Intent To Award Single-Source Cooperative Agreements to Approved but Unfunded Diaper Distribution Pilot Applications From FY2022

AGENCY: Office of Community Services (OCS), Administration for Children and Families (ACF), Department of Health and Human Services (HHS).

ACTION: Notice of issuance of single-source awards.

SUMMARY: The ACF, OCS, Division of Community Discretionary and Demonstration Programs (DCDDP) announces the intent to award seven single-source cooperative agreements in the aggregate amount of up to $8,181,779 to approved but unfunded applications submitted to the Diaper Distribution Demonstration and Research Pilot (DDDRP) Notice of Funding Opportunity HHS–2022–ACF–OCS–EDA–0161.

The purpose of these awards is to evaluate the ability of community action agencies, social services agencies, and other non-profit community organizations to provide diapers and diapering supplies on a consistent basis through diaper distribution programs, while also offering support services for families with low incomes. Recipients will operate and expand diaper distribution programs for families with low incomes.

DATES: The proposed period of performance is May 1, 2023, to April 30, 2025.

FOR FURTHER INFORMATION CONTACT: Thom Campbell, Office of Community Services, 330 C Street SW, Washington, DC 20201. Telephone: 202–401–5455; Email: *thom.campbell@acf.hhs.gov.*

SUPPLEMENTARY INFORMATION: The above-mentioned awards will be made pursuant to Congressional intent as reflected in the Explanatory Statement (p. S8891) accompanying the Consolidated Appropriations Act, 2023:

Social Services Research and Demonstration.—The agreement continues funding for the Diaper Distribution Demonstration and Research Pilot and expects that $10,000,000 of the funds made available for awards for direct services be made to approved but unfunded applicants of funding opportunity HHS–2022–ACF–OCS–EDA–0161, as well as technical assistance and evaluation activities for such grants.

OCS announces the intent to award the following single-source awards:

Recipient	Award amount
Massachusetts Association of Community Action Programs, Boston, MA	$1,200,000.00
California Community Action Partnership Association, Sacramento, CA	1,200,000.00
Ohio Community Action Training Organization, Columbus, OH	1,200,000.00
Maryland Community Action Partnership, Annapolis, MD	1,200,000.00
Utah Community Action Partnership Association Inc, Layton, UT	1,101,779.00
Community Action Association of Alabama, Birmingham, AL	1,200,000.00
Sisseton-Wahpeton Oyate of the Lake Traverse Reservation, Agency Village, SD	1,080,000.00

Statutory Authority

The DDDRP is authorized under section 1110 of the Social Security Act; 42 U.S.C. 1310. This program was first funded by Div. H, Title II of the Consolidated Appropriations Act, 2022 (Pub. L. 117–103) as a non-statutory earmark for the Social Services Research and Demonstration.

Karen D. Shields,

Senior Grants Policy Specialist, Office of Grants Policy, Office of Administration.

BILLING CODE 4184–XX–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2020–N–0145]

Agency Information Collection Activities; Proposed Collection; Comment Request; Reporting Associated With Animal Drug and Animal Generic Drug User Fees

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on the information collection provisions of FDA's animal drug and animal generic drug user fee programs.

DATES: Either electronic or written comments on the collection of information must be submitted by June 26, 2023.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of June 26, 2023. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2020–N–0145 for ''Reporting Associated With Animal Drug and Animal Generic Drug User Fees.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Domini Bean, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–5733, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Animal Drug and Animal Generic Drug User Fee Programs

OMB Control Number 0910–0540—Extension

This information collection helps support implementation of the Animal Drug User Fee Act of 2003 (ADUFA) (Pub. L. 108–130) and Animal Generic Drug User Fee Act of 2008 (AGDUFA) (Pub. L. 110–316), established in sections 740 and 741 of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 379j–12 and 21 U.S.C. 379j–21), respectively. Under ADUFA, FDA assesses and collects user fees for certain new animal drug applications and supplements, products, establishments, and sponsors of new animal drug applications and/or investigational new animal drug file submissions. The ADUFA program is currently reauthorized through September 30, 2023, and FDA efforts to engage interested stakeholders in the 2023 reauthorization is ongoing. More information regarding the ADUFA program can be found at *https://www.fda.gov/industry/fda-user-fee-programs/animal-drug-user-fee-act-adufa,* including current user fee rates applicable to animal drug submissions. Under AGDUFA, FDA assesses and collects user fees for certain abbreviated (generic) new animal drug applications and supplements, products, and sponsors of generic new animal drug applications and/or generic investigational new animal drug file submissions. The AGDUFA program is currently reauthorized through September 30, 2023, and FDA efforts to engage interested stakeholders in the 2023 reauthorization is ongoing. More information regarding the AGDUFA program can be found at *https://www.fda.gov/industry/fda-user-fee-programs/animal-generic-drug-user-fee-act-agdufa,* including current user fee rates applicable to generic animal drug submissions.

These user fee program resources support FDA's responsibilities to ensure that new animal drugs are safe and effective for animals, as well as ensuring the safety of food from treated animals.

Sponsors of new animal drug applications complete a user fee cover sheet and submit it through CVM's eSubmitter. The Animal Drug User Fee cover sheet (Form FDA 3546) is designed to collect the minimum necessary information to determine whether a fee is required for the review of an application or supplement or whether an application fee waiver was granted, to determine the amount of the fee required, and to ensure that each animal drug user fee payment is appropriately linked to the animal drug application for which payment is made. The form, when completed electronically, results in the generation of a unique payment identification number used by FDA to track the payment. The information collected is used by FDA's Center for Veterinary Medicine (CVM, the Center) to initiate the administrative screening of new animal drug applications and supplements.

Similarly, sponsors of abbreviated new animal drug applications also complete a user fee cover sheet and submit it through CVM's eSubmitter. The AGDUFA cover sheet (Form FDA 3728) is also designed to collect the minimum necessary information to determine whether a fee is required for review of an application, to determine the amount of the fee required, and to ensure that each animal generic drug user fee payment is appropriately linked to the abbreviated new animal drug application for which payment is made. The form, when completed electronically, results in the generation of a unique payment identification number used by FDA to track the payment. The information collected is used by CVM to initiate the administrative screening of abbreviated new animal drug applications.

Both sections 740 and 741 of the FD&C Act provide for waivers, reductions, and exemptions of fees. To assist respondents with submitting

requests for waivers or reductions of ADUFA user fees, we developed guidance for industry (GFI) #170 entitled ''Animal Drug User Fees and Fee Waivers and Reductions'' (April 2023), available at *https://www.fda.gov/regulatory-information/search-fda-guidance-documents/cvm-gfi-170-animal-drug-user-fees-and-fee-waivers-and-reductions.* This document discusses the types of fees FDA is authorized to collect under section 740 of the FD&C Act, and how to request waivers or reductions from these fees. Further, this guidance also describes what information FDA recommends be submitted in support of a request for a fee waiver or reduction, a request for reconsideration of denial of a fee waiver or reduction request, or an appeal of the denial decision in accordance with 21 CFR 10.75; how to submit such a request or appeal; and FDA's process for reviewing such requests or appeals.

Similarly, we developed guidance for industry (GFI) #199 entitled ''Animal Generic Drug User Fees and Fee Waivers and Reductions'' (May 2009), available at *https://www.fda.gov/regulatory-information/search-fda-guidance-documents/cvm-gfi-199-animal-generic-drug-user-fees-and-fee-waivers-and-reductions.* This document discusses the types of fees FDA is authorized to collect under section 741(a)(1) of the FD&C Act, and how to request waivers or reductions from these fees. Further, this guidance also describes what information FDA recommends be submitted in support of a request for a fee waiver or reduction, a request for reconsideration of denial of a fee waiver or reduction request, or an appeal of the denial decision in accordance with 21 CFR 10.75; how to submit such a request or appeal; and FDA's process for reviewing such requests or appeals.

We use the information submitted by respondents to determine whether requests for waiver or reduction of user fees, reconsideration requests, or appeals may be granted.

We estimate the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

FD&C Act section; activity	FDA form No.	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
User fee cover sheets, by type						
740(a)(1); Animal Drug User Fee cover sheet.	FDA 3546	15	1	15	1	15
741(a)(1); Animal Generic Drug User Fee cover sheet.	FDA 3728	22	2	44	.08 (5 minutes)	3.5
Waiver and other requests, by type						
740(d)(1)(A); significant barrier to innovation.	N/A	65	1	65	2	130
740(d)(1)(B); fees exceed cost	N/A	8	3.75	30	0.5 (30 minutes)	15
740(d)(1)(C); free choice feeds	N/A	4	1	4	2	8
740(d)(1)(D); minor use or minor species.	N/A	73	1	73	2	146
740(d)(1)(E); small business	N/A	1	1	1	2	2
741(d)(1); minor use or minor species.	N/A	2	1	2	2	4
Request for reconsideration of a decision.	N/A	1	1	1	2	2
21 CFR 10.75; Appeal of a decision.	N/A	1	1	1	2	2
Total						327.5

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Our estimated burden for the information collection reflects an overall increase. We attribute this adjustment to an increase in the number of submissions we have received since our last evaluation. The total number of annual responses is based on the average number of submissions received by FDA in fiscal years 2019 to 2021. The estimated time we attribute to the hours per response is based on our experience with the various submissions and reflects the average burden we attribute to all respondents.

Dated: April 24, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–0894]

Agency Information Collection Activities; Proposed Collection; Comment Request; The Real Cost Monthly Implementation Assessment

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency.

Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish a notice in the **Federal Register** concerning each proposed collection of information and to allow 60 days for public comment in response to the notice. This notice solicits comments on a proposed information collection entitled ''The Real Cost Monthly Implementation Assessment.''

DATES: Either electronic or written comments on the collection of information must be submitted by June 26, 2023.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of June 26, 2023. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2023–N–0894 for ''The Real Cost Monthly Implementation Assessment.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: JonnaLynn Capezzuto, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–3794, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

The Real Cost Monthly Implementation Assessment

OMB Control Number 0910–NEW

This information collection supports the development and implementation of FDA public education campaigns related to tobacco use. To reduce the public health burden of tobacco use in the United States and educate the public—especially young people—about the dangers of tobacco use, the FDA Center for Tobacco Products (CTP) is developing and implementing multiple public education campaigns.

FDA launched ''The Real Cost'' in February 2014, seeking to reduce tobacco use among at-risk youth ages 12 to 17 in the United States who are open

to smoking cigarettes and/or using electronic nicotine delivery systems (ENDS) products, or who have already experimented with cigarettes and/or ENDS products. Complementary evaluation studies, including the ''Evaluation of FDA's Public Education Campaign on Teen Tobacco (ExPECTT),'' were implemented to measure awareness of ''The Real Cost'' paid media campaign among youth ages 12 to 17 in the United States, and to understand how awareness is related to change in key outcomes.

Although outcome evaluation studies of ''The Real Cost'' have and continue to assess the impact of awareness on outcomes, no studies have sought to assess the implementation of ''The Real Cost.'' As FDA continues to increase the presence of ''The Real Cost'' on digital channels (*e.g.,* Hulu, YouTube, Instagram), the need for an implementation evaluation has become clear as these messages are received by the target audience on digital channels differently compared to how the messages are received on broadcast channels. Before the migration of campaign ads to digital channels, ads from ''The Real Cost'' were primarily aired on broadcast TV. In the broadcast space, for people to avoid receiving the message, they needed to be proactive (*e.g.,* finding the remote to change the channel or leaving the room). In the digital space, however, people need to be proactive to watch the full message, like stopping scrolling on social media or skipping the ad on YouTube. Assessment of this information is integral to understanding self-reported ad awareness levels, as well as how our audience experiences and processes the ads as they are airing in a digital, real-world setting.

Therefore, we propose a study to help us understand, in a digital setting, how youth experience the messages, how they engage with messages, the extent to which youth report being exposed to messages, and how youth process the messages. Studying exposure to ad messages as it naturally occurs in the real world can help us understand the points of connection—or disconnection—between the results of copy testing studies (which assess responses to the ads with forced exposure to them) and outcome evaluation findings (which are based on natural exposure to ads in the real world). Data gathered from this assessment will also provide the necessary and timely information to optimize campaign messages, the digital media buy (*i.e.,* where, how, and when ads are shown), and creative rotations (*i.e.,* which ads are shown).

''The Real Cost'' Monthly Implementation Assessment is a repeated cross-sectional survey that will be conducted using web-based surveys that are self-administered on personal computers or web enabled mobile devices to collect rapid data on ''The Real Cost'' ads. Data from up to 2,000 youth in the United States will be collected each month for up to 24 months. To be eligible, youth and young adults must be between the ages of 12 to 20 and have not taken ''The Real Cost'' Monthly Implementation Assessment survey within the past 3 months. We will use an Ipsos Knowledge Networks Panel to collect data on ''The Real Cost'' ads. This design offers flexibility to assess new ad messages, as they air across various digital platforms, examine their performance over time, as well as the ability to pivot and add new survey measures as necessary. Monthly data will also allow us to obtain timely information on ad awareness, perceived effectiveness, as well as on youth attention and processing of the ads.

The purpose of FDA's ''The Real Cost'' Monthly Implementation Assessment is to evaluate the following key components about ''The Real Cost'' ads:

- Awareness of ''The Real Cost'' ads.
- Attention behaviors when seeing ''The Real Cost'' ads.
- Processing of ''The Real Cost'' ads, including:
  - Engagement with the ads.
  - Main message comprehension.
  - Acceptance and/or rejection of the ads.
- Perceived effectiveness of ''The Real Cost'' ads.
- Belief and knowledge tracking of ''The Real Cost'' ads.

In addition to the above components, the survey will ask participants to report on tobacco use and other psychographic and demographic items. The time frame that the survey items will ask about for ad awareness (*i.e.,* past 30 days or past week) will depend on several factors, including how long the ad was on air. The survey will take an average of approximately 25 minutes to complete per participant. As the survey items are tested, any irrelevant items will be cut as necessary. Ad creative for both vaping and cigarette products will be assessed; therefore, two similar surveys (one on ENDS-focused ads and one on cigarette-focused ads) will be fielded as appropriate, but not within the same month. In support of the provisions of the Tobacco Control Act that require FDA to protect the public health and to reduce tobacco use by minors, FDA requests OMB approval to collect information to evaluate CTP's public education campaign ''The Real Cost'' through the Monthly Implementation Assessment.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Type of respondent/activity	Number of respondents	Number of responses per respondent	Total responses	Average burden per response	Total hours
Parent/Young Adult Screener	2,688,000	1	2,688,000	0.05 (3 minutes)	134,400
Parent Permission	2,016,000	1	2,016,000	0.05 (3 minutes)	100,800
Youth Screener	2,016,000	1	2,016,000	0.05 (3 minutes)	100,800
Youth Assent	36,000	1	36,000	0.05 (3 minutes)	1,800
Young Adult Consent	12,000	1	12,000	0.05 (3 minutes)	600
Online Survey	48,000	1	48,000	0.42 (25 minutes)	20,160
Invitation Email/Reminder Emails/Thank you Email	48,000	1	48,000	0.42 (25 minutes)	20,160
Total					378,720

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Data collection for the Monthly Implementation Assessment will consist of administering a monthly survey to participants aged 12 to 20 over the course of 2 years (24 months). We expect the screening process (3 minutes

per response) to yield an approximate 2.3 to one ratio of eligible participants. We will need to screen approximately 112,000 potential parents and young adults each month (resulting in 2,688,000 screeners) over the study period. Since the eligible age for data collection is 12 to 20 years old, we intend to screen parents of eligible youth, as well as young adults. Parents of the youth participants determined to be eligible through the screener will provide parent permission (3 minutes per response). We estimate that 2,016,000 of the parents who complete the screener will provide their permission for their youth to complete the online survey (approximately 75 percent of the 2,688,000 screened). Eligible youth (2,016,000) will provide their assent (3 minutes per response) to participate in the online survey (25 minutes per response). Participants that are 18 to 20 (19 to 20 in Alabama and Nebraska in accordance with state law) will complete the screener for themselves and provide their consent (3 minutes per response) to participate in the online survey. We estimate that approximately 25 percent of the 48,000 completed surveys will come from young adults aged 18 to 20 (19 to 20 in Alabama and Nebraska).

Over the course of the study period, we intend to survey approximately 2,000 youth and young adults ages 12 to 20 per month for 24 months. From these completed screeners, we estimate that we will obtain data from 36,000 youth and 12,000 young adults. This will give us a total of 48,000 participants for the study. The survey will be repeated with a new cross-sectional sample approximately every month over a period of 24 months; however, some participants will complete more than one wave. These 48,000 respondents will receive an invitation email with a link to take the survey (4 minutes), six reminder emails (3 minutes each), and a thank you email (3 minutes) upon completion of the study for a total of 25 minutes for respondents to read and respond to the emails.

Dated: April 20, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–1466]

Good Manufacturing Practices for Cosmetic Products Listening Session; Public Meeting; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public meeting; request for comments.

SUMMARY: The Food and Drug Administration (FDA, the Agency, or we) is announcing a virtual listening session entitled ''Good Manufacturing Practices for Cosmetic Products Listening Session.'' The purpose of the listening session is to consult cosmetics manufacturers, including smaller businesses, consumer organizations, and other experts, to inform Agency efforts to develop regulations to establish good manufacturing practices for facilities that manufacture or process cosmetic products distributed in the United States.

DATES: The virtual listening session will be held on June 1, 2023, from 10 a.m. to 1 p.m. Eastern Daylight Time (EDT) or until after the last public commenter has spoken, whichever occurs first. Submit requests to make oral presentations at the listening session by 6 p.m. EDT, May 18, 2023. Either electronic or written comments on this listening session must be submitted to the docket by July 3, 2023. See the **SUPPLEMENTARY INFORMATION** section for registration date and information.

ADDRESSES: Additional details, such as registration information, are available at *https://www.fda.gov/cosmetics/cosmetics-news-events/public-meeting-good-manufacturing-practices-cosmetic-products-06012023.*

FDA is establishing a public docket for this listening session. You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. EDT at the end of July 3, 2023. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2023–N–1466 for ''Good Manufacturing Practices for Cosmetic Products Listening Session.'' Received comments, those filed in a timely manner (see ADDRESSES), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The

second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Deborah Smegal, Office of Cosmetics and Colors, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 5001 Campus Dr., Rm. 1037 (HFS–125), College Park, MD 20740, 240–402–1130, (this is not a toll-free number), email: *MoCRAGMPMeeting@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

On December 29, 2022, the President signed the Consolidated Appropriations Act, 2023 (Pub. L. 117–328) into law, which included the Modernization of Cosmetics Regulation Act of 2022 (MoCRA). Among other provisions, MoCRA added section 606 to the Federal Food, Drug, and Cosmetic Act (FD&C Act), requiring FDA to establish by regulation good manufacturing practices (GMPs) for facilities that manufacture or process cosmetic products distributed in the United States. MoCRA specifies that these GMPs are to be consistent, to the extent practicable, and appropriate, with national and international standards, in accordance with section 601 of the FD&C Act (21 U.S.C. 361). Any such regulations shall be intended to protect the public health and ensure that cosmetic products are not adulterated. As required by MoCRA, before issuing rulemaking, FDA must consult with cosmetics manufacturers, including smaller businesses, consumer organizations, and other experts selected by FDA. Further, FDA must take into account the size and scope of the businesses engaged in the manufacture of cosmetics, and the risks to public health posed by such cosmetics and provide sufficient flexibility to be practicable for all sizes and types of facilities to which such regulations will apply. Such regulations must include simplified good manufacturing practice requirements for smaller businesses, as appropriate, to ensure that such regulations do not impose undue economic hardship for smaller businesses and may include longer compliance times for smaller businesses. In addition, MoCRA added section 612 of the FD&C Act, which exempts certain small businesses from the GMP requirements.

FDA issued a draft guidance, entitled ''Draft Guidance for Industry: Cosmetic Good Manufacturing Practices,'' (available at *https://www.fda.gov/regulatory-information/search-fda-guidance-documents/draft-guidance-industry-cosmetic-good-manufacturing-practices*) in 2013. We intend to withdraw or revise and reissue this draft guidance, as appropriate, based on the GMP rulemaking.

II. Topics for Comment

To facilitate input on good manufacturing practices for cosmetic products, FDA has developed a series of topics covering the types of information that we are interested in obtaining. In all cases, FDA encourages stakeholders to provide the specific rationale and basis for their comments, including any available supporting data and information.

Respondents need not reply to all topics listed. Please identify your answers as responses to a specific topic.

Topics Related to Good Manufacturing Practices

1. Identify any national or international standard (*e.g.,* International Organization for Standardization (ISO) standard 22716:2007) and the extent to which it would be practicable for good manufacturing practice regulations for cosmetic products to be consistent with such standard. Please include whether there are specific items in the standard which are perceived to be burdensome or for which a less burdensome alternative exists that would protect the public health and ensure that cosmetic products are not adulterated.

2. Describe what constitutes sufficient flexibility within good manufacturing practices for cosmetic products to ensure regulations are practicable for all sizes and types of facilities to which such practices may apply. Please take into account the size and scope of the businesses engaged in the manufacture of cosmetic products and the risks to public health posed by cosmetic products.

3. Describe what constitutes simplified good manufacturing practices requirements for cosmetic products for smaller businesses to ensure regulations do not impose undue economic hardship.

4. Describe appropriate compliance times for good manufacturing practices regulations.

Topics Related to Economic Impact

5. To what extent are manufacturers of cosmetic products already following a national or international standard for good manufacturing practices? For manufacturers of cosmetic products that are not currently following such a national or international standard, what would it cost to implement good manufacturing practices consistent with such a standard?

6. Please provide reports or examples of adverse events or recalls associated with a cosmetic product that were linked to manufacturing practices. How would implementing good manufacturing practices impact the likelihood of recall of cosmetics products? How would implementing good manufacturing practices impact the likelihood of consumers experiencing adverse events from the use of cosmetics products? How would these impacts differ by type of cosmetic product?

III. Participating in the Listening Session

Registration: To register for the free virtual listening session, please visit the following website: *https://www.fda.gov/cosmetics/cosmetics-news-events/public-meeting-good-manufacturing-practices-cosmetic-products-06012023.* Registration may be performed at any time before or during the listening session.

Information on requests for special accommodations due to a disability will be provided during registration.

Requests to Provide Oral Presentations: During online registration you may indicate if you wish to present during the listening session. Requests to provide public comments during the listening session should be submitted by 6 p.m. EDT, May 18, 2023. We will do our best to accommodate requests to

make public comments. Individuals and organizations with common interests are urged to consolidate or coordinate their presentations, and request time for a joint presentation, or submit requests for designated representatives to participate in the focused sessions. Based on the number of requests we receive, we will determine the amount of time allotted to each presenter (which we expect to be approximately 3 minutes) and the approximate time each oral presentation is to begin. We will select and notify participants at the time of registration, or by May 19, 2023. If selected for presentation, participants must email presentation materials to *MoCRAGMPMeeting@fda.hhs.gov* no later than May 22, 2023, 11:59 p.m. EDT. No commercial or promotional material will be permitted to be presented or distributed at the public workshop.

Streaming Webcast of the Listening Session: This listening session will be webcast. Please register online (as described above). Registrants will receive a hyperlink that provides access to the webcast.

FDA has verified the website addresses in this document, as of the date this document publishes in the **Federal Register,** but websites are subject to change over time.

Transcripts: Please be advised that as soon as a transcript of the listening session is available, it will be accessible at *https://www.regulations.gov.* It may be viewed at the Dockets Management Staff (see **ADDRESSES**).

Dated: April 24, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

Agency Father Generic Information Collection Request. 30-Day Public Comment Request

AGENCY: Office of the Secretary, Health and Human Service, HHS.

ACTION: Notice and request for comments. Office of the Assistant Secretary for Public Affairs is requesting OMB approval for a new father generic clearance.

SUMMARY: In compliance with the requirement of the Paperwork Reduction Act of 1995, the Office of the Secretary (OS), Department of Health and Human Services, is publishing the following summary of a proposed collection for public comment.

DATES: Comments on the ICR must be received on or before May 29, 2023.

ADDRESSES: Submit your comments to *OIRA_submission@omb.eop.gov* or via facsimile to (202) 395–5806.

FOR FURTHER INFORMATION CONTACT: Sherrette Funn, *Sherrette.Funn@hhs.gov* or (202) 264–0041. When requesting information, please include the document identifier 0990–0390–30D and project title for reference.

SUPPLEMENTARY INFORMATION: Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Title of the Collection: Challenge and Prize Competition Solicitations.

Type of Collection: Extension OMB No. 0990–0390—Office of the Assistant Secretary for Health (OASH).

Abstract: The Office of the Secretary (OS), Department of Health & Human Services (HHS) requests that the Office of Management and Budget (OMB) approve a request for an extension of generic clearance approval of the information collected for challenge and prize competition solicitations. Burden hours were increased from 333 to 558.3 total burden hours to provide more time for respondents to complete forms that may include more questions.

Challenges and prize competitions enable HHS to tap into the expertise and creativity of the public in new ways as well as extend awareness of HHS programs and priorities. Within HHS, the Office of the Assistant Secretary for Health (OASH) has taken lead responsibility in coordinating challenges and prize competitions and implementing policies regarding the use of these tools. HHS's goal is to engage a broader number of stakeholders who are inspired to work on some of our most pressing health issues, thus supporting a new ecosystem of scientists, developers, and entrepreneurs who can continue to innovate for public health.

The generic clearance is necessary for HHS to launch several challenges or prize competitions annually in a short turnaround. The information collected for these challenges and prize competitions will generally include the submitter's or other contact person's first and last name, organizational affiliation and role in the organization (for identification purposes); email address or other contact information (to follow up if the submitted solution is selected as a finalist or winner); street address (to confirm that the submitter or affiliated organization is located in the United States, for eligibility purposes); information confirming whether the submitter's age is 13 years or older (to ensure compliance with the Children's Online Privacy Protection Act of 1998, 15 U.S.C. 6501–6505 (COPPA)) or 18 years or older (to ensure necessary consents are obtained); and a narrative description of the solution. HHS may also request information indicating the submitter's technical background, educational level, ethnicity, age range, gender, and race (to evaluate entrants' diversity and backgrounds), how the submitter learned about the challenge or prize competition and what the submitter currently understands about the HHS agency hosting the challenge or prize competition (to gauge the effect of the challenge or prize competition on increasing public awareness of HHS programs and priorities, and generally to enable HHS to improve its outreach strategies to ensure a diverse and broad innovator constituency is fostered through the use of challenges and prize competitions). Finally, HHS may ask for additional information tailored to the challenge or prize competition through structured questions. This information will enable HHS to create and administer challenges and prize competitions more effectively.

Upon entry or during the judging process, solvers under the age of 18 will be asked to confirm parental consent, which will require them to obtain and provide a parent or guardian signature in a format outlined in the specific criteria of each challenge or prize competition in order to qualify for the contest. To protect online privacy of minors, birthdate may be required by the website host to ensure the challenge platform meets the requirements of COPPA. Eligibility to win a cash prize will be outlined in the specific criteria of each contest and will only apply to U.S. citizens, permanent residents, or private entities incorporated in and maintaining a primary place of business in the U.S. To administer the cash prize, HHS will need to collect additional relevant payment information—such as Social Security Number and/or Taxpayer ID and information regarding the winners' financial institutions—in

order to comply with financial accounting and income tax reporting processes.

Likely Respondents: Likely respondents include individuals, businesses, and state and local governments who choose to participate in a challenge or prize competition hosted or overseen (*i.e.,* via contract, etc.) by HHS.

ESTIMATED ANNUALIZED BURDEN TABLE

Respondent (if necessary)	Number of respondents	Number of responses per respondent	Average burden per response (hours)	Total burden hours
Individuals or Households	1,500	1	10/60	250
Organizations	750	1	10/60	125
Businesses	1,000	1	10/60	166.7
State, territory, tribal or local governments	100	1	10/60	16.7
Total				558.3

Agency Information Collection Request. 30-Day Public Comment Request

AGENCY: Office of the Secretary, HHS.

ACTION: Notice.

SUMMARY: In compliance with the requirement of the Paperwork Reduction Act of 1995, the Office of the Secretary (OS), Department of Health and Human Services, is publishing the following summary of a proposed collection for public comment.

DATES: Comments on the ICR must be received on or before May 30, 2023.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Sherrette Funn, *Sherrette.Funn@hhs.gov* or (202) 264–0041, or *PRA@HHS.GOV.* When submitting comments or requesting information, please include the document identifier 0990–New–30D and project title for reference.

SUPPLEMENTARY INFORMATION: Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Title of the Collection: Research Complaint Form.

Type of Collection: New.

OMB No.: 0990–new.

Abstract: The Office of the Assistant Secretary for Health, Office for Human Research Protections (OHRP), is requesting a new approval from the Office of Management and Budget of OHRP's Research Complaint Form. This form will provide a simplified standardized format for submitting to OHRP allegations of noncompliance involving human subject research conducted or supported by HHS, which should significantly improve OHRP's capacity to review and process these allegations. The information collected will help OHRP ensure the rights of human subjects involved in such research and that OHRP-assured institutions are complying with the HHS Protection of Human Subjects regulations.

Type of Respondent: IRB members, IRB Administrators, Research Coordinators, and the Public.

ESTIMATED ANNUALIZED BURDEN TABLE

Type of respondent	Number of respondents	Number responses per respondent	Average burden per response (in hours)	Total burden hours
IRB members, IRB Administrators, Research Coordinators, the Public	500	1	30/60	250
IRB members, IRB Administrators, Research Coordinators, the Public	400	2	30/60	400
IRB members, IRB Administrators, Research Coordinators, the Public	100	3	30/60	150
Total				800

National Institute of Nursing Research; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Advisory Council for Nursing Research.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting. The open session will be videocast and can be accessed from the NIH Videocasting website *https://videocast.nih.gov/watch=49200.*

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Advisory Council for Nursing Research.

Date: May 23, 2023.

Open: 10:00 a.m. to 12:30 p.m.

Agenda: Call to Order and Opening Remarks; NINR Director's Report; NINR DEIA Update; The Digital NIH strategy and a glimpse at ChatGPT.

Open: 1:00 p.m. to 2:00 p.m.

Agenda: ScHARe: Science Collaborative for Health disparities and Artificial intelligence bias Reduction; IDeA: NIH Institutional

Development Award Program; Council Open Discussion.

Place: National Institutes of Health, Building 31, C-Wing, Sixth Floor, Conference Rooms F & G, 31 Center Drive, Bethesda, MD 20892, *https://videocast.nih.gov/watch=49200* (Hybrid Meeting).

Closed: 2:15 p.m. to 3:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Building 31, C-Wing, Sixth Floor Conference Rooms F & G, 31 Center Drive, Bethesda, MD 20892.

Contact Person: Elizabeth Tarlov, Ph.D., RN, Director, Division of Extramural Science Programs (DESP), National Institute of Nursing Research, Bethesda, MD 20892, (301) 594–1580, *elizabeth.tarlov@nih.gov.*

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

In the interest of security, NIH has procedures at *https://www.nih.gov/about-nih/visitor-information/campus-access-security* for entrance into on-campus and off-campus facilities. All visitor vehicles, including taxicabs, hotel, and airport shuttles will be inspected before being allowed on campus. Visitors attending a meeting on campus or at an off-campus federal facility will be asked to show one form of identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit.

Information is also available on the Institute's/Center's home page: *https://www.ninr.nih.gov/aboutninr/nacnr,* where an agenda and any additional information for the meeting will be posted when available.

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[1651–0080]

Deferral of Duty on Large Yachts Imported for Sale

AGENCY: U.S. Customs and Border Protection (CBP), Department of Homeland Security.

ACTION: 30-Day notice and request for comments; extension of an existing collection of information.

SUMMARY: The Department of Homeland Security, U.S. Customs and Border Protection will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). The information collection is published in the **Federal Register** to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and must be submitted (no later than May 30, 2023) to be assured of consideration.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Requests for additional PRA information should be directed to Seth Renkema, Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection, Office of Trade, Regulations and Rulings, 90 K Street NE, 10th Floor, Washington, DC 20229–1177, telephone number 202–325–0056 or via email *CBP_PRA@cbp.dhs.gov.* Please note that the contact information provided here is solely for questions regarding this notice. Individuals seeking information about other CBP programs should contact the CBP National Customer Service Center at 877–227–5511, (TTY) 1–800–877–8339, or CBP website at *https://www.cbp.gov/.*

SUPPLEMENTARY INFORMATION: CBP invites the general public and other Federal agencies to comment on the proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). This proposed information collection was previously published in the **Federal Register** (88 FR 9890) on February 15, 2023, allowing for a 60-day comment period. This notice allows for an additional 30 days for public comments. This process is conducted in accordance with 5 CFR 1320.8. Written comments and suggestions from the public and affected agencies should address one or more of the following four points: (1) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) suggestions to enhance the quality, utility, and clarity of the information to be collected; and (4) suggestions to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. The comments that are submitted will be summarized and included in the request for approval. All comments will become a matter of public record.

Overview of This Information Collection

Title: Deferral of Duty on Large Yachts Imported for Sale.

OMB Number: 1651–0080.

Form Number: N/A.

Current Actions: CBP proposes to extend the expiration date of this information collection with no change to the estimated burden hours or to the information collected.

Type of Review: Extension (without change).

Affected Public: Businesses and Individuals.

Abstract: This collection of information is required to ensure compliance with 19 U.S.C. 1484b, which provides that an otherwise dutiable yacht that exceeds 79 feet in length, is used primarily for recreation or pleasure, and had been previously sold by a manufacturer or dealer to a retail customer, may be imported without the payment of duty if the yacht is imported with the intention to offer it for sale at a boat show in the United States. The statute provides for the deferral of payment of duty until the yacht is sold but specifies that the duty deferral period may not exceed 6 months. This collection of information is provided for by 19 CFR 4.94a and 19 CFR 4.95, which requires the submission of information to CBP such as the name and address of the owner of the yacht, the dates of cruising in the waters of the United States, information about the yacht, and the ports of arrival and departure.

Type of Information Collection: Deferral of Duty on Large Yachts Imported for Sale.

Estimated Number of Respondents: 50.

Estimated Number of Annual Responses per Respondent: 1.

Estimated Number of Total Annual Responses: 50.

Estimated Time per Response: 1 hour.

Estimated Total Annual Burden Hours: 50 hours.

Dated: April 24, 2023.

Seth D. Renkema,

Branch Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection.

[1651–0NEW]

Death Gratuity Information Sheet

AGENCY: U.S. Customs and Border Protection (CBP), Department of Homeland Security.

ACTION: 30-Day notice and request for comments; a new collection of information.

SUMMARY: The Department of Homeland Security, U.S. Customs and Border Protection will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). The information collection is published in the **Federal Register** to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and must be submitted (no later than May 30, 2023) to be assured of consideration.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Requests for additional PRA information should be directed to Seth Renkema, Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection, Office of Trade, Regulations and Rulings, 90 K Street NE, 10th Floor, Washington, DC 20229–1177, Telephone number 202–325–0056 or via email *CBP_PRA@cbp.dhs.gov.* Please note that the contact information provided here is solely for questions regarding this notice. Individuals seeking information about other CBP programs should contact the CBP National Customer Service Center at 877–227–5511, (TTY) 1–800–877–8339, or CBP website at *https://www.cbp.gov/.*

SUPPLEMENTARY INFORMATION: CBP invites the general public and other Federal agencies to comment on the proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). This proposed information collection was previously published in the **Federal Register** (87 FR 55016) on September 08, 2022, allowing for a 60-day comment period. This notice allows for an additional 30 days for public comments. This process is conducted in accordance with 5 CFR 1320.8. Written comments and suggestions from the public and affected agencies should address one or more of the following four points: (1) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) suggestions to enhance the quality, utility, and clarity of the information to be collected; and (4) suggestions to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. The comments that are submitted will be summarized and included in the request for approval. All comments will become a matter of public record.

Overview of This Information Collection

Title: Death Gratuity Information Sheet.

OMB Number: 1651–0NEW.

Form Number: N/A.

Current Actions: New collection of information.

Type of Review: New collection of information.

Affected Public: Individuals/households.

Abstract: When the U.S. Customs and Border Protection (CBP) Commissioner has made the determination that the death of a CBP employee is to be classified as a line-of-duty death (LODD), a Death Gratuity (DG) may become payable to the personal representative of the deceased. After the LODD determination is made, CBP will send the potential personal representative of the deceased a DG Information Sheet. This information sheet aids the involved CBP offices in establishing who the personal representative of the deceased is, approving DG, and subsequently, getting the payment paid to the correct person after CBP Commissioner approval.

Potential personal representatives are provided by/from the deceased CBP employee, through their executed beneficiary forms. However, if there are no beneficiary forms on file, next of kin will be identified via the emergency contact information listed with the agency for that employee in WebTele. Potential personal representatives will be required to provide the following data elements on the DG information sheet:

- Name of Deceased CBP Employee
- Date of Death
- Location of Death
- Name of Claimant/personal representative
- Address of Claimant/personal representative (for payment)
- Phone Number and Email Address of Claimant/personal representative
- Relationship to Employee (*i.e.,* spouse, child, parent, etc.)
- If spouse, date of marriage
- If child or parent, date of birth
- First page of will, if applicable
- Contact information for Executor of Estate, if applicable
- Copy of Marriage Certificate, if applicable
- Copy of Letters of Administration, if applicable

CBP is authorized to collect the information requested on this form pursuant to Public Law 104–208 which allows the agency to pay a DG in some situations of LODD. 110 Stat. 3009–368, Sept. 30, 1996; 5 U.S.C. 8133 note. In order to make this payment, CBP must first identify and obtain the information from the personal representative so it can be known where and to whom the payment should be sent. CBP Retirement and Benefits Advisory Services (RABAS) has the authority designated by the Office of Personnel Management (OPM) to provide retirement, benefits, and survivor counselling and processing. This authority is outlined in detail in the Civil Service Retirement System/Federal Employee Retirement System (CSRS/FERS) Handbook, Federal Employees Group Life Insurance (FEGLI) Handbook, and Federal Employee Health Benefits (FEHB) Handbook.

Type of Information Collection: Death Gratuity Information Sheet.

Estimated Number of Respondents: 33.

Estimated Number of Annual Responses per Respondent: 1.

Estimated Number of Total Annual Responses: 33.

Estimated Time per Response: 15 minutes.

Estimated Total Annual Burden Hours: 8.

Dated: April 24, 2023.

Seth D. Renkema,

Branch Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection.

SUPPLEMENTARY INFORMATION: CBP invites the general public and other Federal agencies to comment on the proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). This proposed information collection was previously published in the **Federal Register** (88 FR 9889) on February 15, 2023, allowing for a 60-day comment period. This notice allows for an additional 30 days for public comments. This process is conducted in accordance with 5 CFR 1320.8. Written comments and suggestions from the public and affected agencies should address one or more of the following four points: (1) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) suggestions to enhance the quality, utility, and clarity of the information to be collected; and (4) suggestions to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. The comments that are submitted will be summarized and included in the request for approval. All comments will become a matter of public record.

Overview of This Information Collection

Title: Declaration of Owner and Declaration of Consignee When Entry is made by an Agent.

OMB Number: 1651–0093.

Form Number: CBP Form 3347, 3347A.

Current Actions: CBP proposes to extend the expiration date of this information collection with no change to the estimated burden hours or to the information collected.

Type of Review: Extension (without change).

Affected Public: Businesses and Individuals.

Abstract: CBP Form 3347, *Declaration of Owner,* is a declaration from the owner of imported merchandise stating that he/she agrees to pay additional and increased duties, therefore releasing the importer of record from paying such duties. This form must be filed within 90 days after the date of entry. CBP Form 3347 is provided for by 19 CFR 24.11 and 141.20.

When entry is made in a consignee's name by an agent who has knowledge of the facts and who is authorized under a proper power of attorney by that consignee, a declaration from the consignee on CBP Form 3347A, *Declaration of Consignee When Entry is Made by an Agent,* shall be filed with the entry documentation or entry summary. If this declaration is filed, then no bond to produce a declaration of the consignee is required. CBP Form 3347A is provided for by 19 CFR 141.19(b)(2).

CBP Forms 3347 and 3347A are authorized by 19 U.S.C. 1485(d) and are accessible at *http://www.cbp.gov/newsroom/publications/forms.*

Type of Information Collection: Declaration of Owner (Form 3347).

Estimated Number of Respondents: 900.

Estimated Number of Annual Responses per Respondent: 6.

Estimated Number of Total Annual Responses: 5,400.

Estimated Time per Response: 6 minutes.

Estimated Total Annual Burden Hours: 540.

Type of Information Collection: Declaration of Importer Form (3347A).

Estimated Number of Respondents: 50.

Estimated Number of Annual Responses per Respondent: 6.

Estimated Number of Total Annual Responses: 300.

Estimated Time per Response: 6 minutes.

Estimated Total Annual Burden Hours: 30.

Dated: April 24, 2023.

Seth D. Renkema,

Branch Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection.

BILLING CODE 9111–14–P

DEPARTMENT OF HOMELAND SECURITY

[Docket No. CISA–2023–0001]

Agency Information Collection Activities: Request for Comment on Secure Software Development Attestation Common Form

AGENCY: Cybersecurity and Infrastructure Security Agency (CISA), Department of Homeland Security (DHS).

ACTION: 60-Day notice and request for comments; new collection (request for a new OMB control number).

SUMMARY: In accordance with the requirements of the Paperwork Reduction Act (PRA) of 1995, the Cybersecurity and Infrastructure Security Agency (CISA) of the Department of Homeland Security (DHS), is soliciting public comment on a self-attestation form to be used by software producers in accordance with the Executive Order on Improving the Nation's Cybersecurity and the Office of Management and Budget's guidance in OMB M–22–18, *Enhancing the Security of the Software Supply Chain through Secure Software Development Practices.* In accordance with OMB M–22–18, Section III.C, CISA has agreed to serve as steward for this collection. After obtaining and considering public comment, CISA will prepare the submission requesting clearance of this collection as a Common Form to permit other agencies beyond DHS to use this form in order to streamline the information collection process in coordination with OMB.

DATES: Comments are encouraged and will be accepted until June 26, 2023.

ADDRESSES: You may submit comments, identified by docket number Docket # CISA–2023–0001, at:

○ *Federal eRulemaking Portal: https://www.regulations.gov.* Please follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name and docket number Docket # CISA–2023–0001. All comments received will be posted without change to *https://www.regulations.gov,* including any contact information provided.

Docket: For access to the docket to read background documents or comments received, go to *https://www.regulations.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

In response to incidents such as the Colonial Pipeline and Solar Winds attacks, on May 12, 2021, President Biden signed E.O. 14028,[1] Improving the Nation's Cybersecurity. This order outlines over 55 actions. This Executive order addresses seven key points:

- Remove barriers to cyber threat information sharing between government and the private sector
- Modernize and implement more robust cybersecurity standards in the Federal Government
- Improve software supply chain security
- Establish a Cybersecurity Safety Review Board
- Create a standard playbook for responding to cyber incidents
- Improve detection of cybersecurity incidents on Federal Government networks
- Improve investigative and remediation capabilities

Section 4, Enhancing Software Supply Chain Security, observed, ''The development of commercial software often lacks transparency, sufficient focus on the stability of the software to resist attack, and adequate controls to prevent tampering by malicious actors.'' To address these concerns, the Executive order required the National Institute of Standards and Technology (NIST) to issue guidance including standards, procedures, or criteria to strengthen the security of the software supply chain.

To put this guidance into practice, the Executive order, through the Office of Management and Budget (OMB), requires agencies to only use software provided by software producers who can attest to complying with Federal Government-specified secure software development practices, as described in NIST Special Publication (SP) 800–218 Secure Software Development Framework.[2] OMB implemented this requirement through OMB memorandum M–22–18 dated September 14, 2022.[3] Specifically, M–22–18 requires agencies to ''obtain a self-attestation from the software producer before using the software.'' This requirement applies to new software developed after the date of memo issuance (September 14, 2022) as well as existing software that is modified by major version changes after the date of memo issuance. OMB M–22–18 brings into existence a new and sizeable conformity assessment community. The memorandum introduces conformity assessment expectations and activities for the supply chain starting with the software producer and ending with the federal agency putting the software in to use. CISA's common self-attestation form does not preclude agencies from adding agency-specific requirements to the minimum requirements in CISA's common self-attestation form. However, any agency specific attestation requirements, modification and/or supplementation of these common forms will require clearance by OMB/OIRA under the PRA process and are not covered by this notice.

II. Invitation to Comment

The following analysis of the burden associated with this proposed information collection is specific to DHS as the agency sponsoring the common form. For the purposes of estimating the number of respondents, DHS has made the following assumptions and welcomes comments on all assumptions.

1. DHS is assuming vendors would have 2,689 initial form submissions and 1,345 resubmissions of the form, due to major software changes, per year. This estimate applies across DHS, including all component agencies. DHS based this estimate on initial contract award data for Fiscal Years 2019 through 2022 from DHS's Federal Procurement Data System (FPDS). DHS utilized data for contract awards that could, in the future, include a response to this collection based on FPDS Product and Service Code (PSC) of ''D'' Automatic Data Processing and Telecommunication and ''R'' Professional, Administrative and Management Support.

Time burden for the attestation form includes time to review the form and understand requirements, gather information, review, and approve the release of information and submission. DHS assumes a three-hour burden per initial submission[4] for a software quality assurance analyst or tester and an additional 20 minutes per initial submission for a Chief Information Security Officer (CISO). Vendors would have to resubmit the attestation form for major software changes, and DHS assumes half the number of initial submissions will result in a resubmission. DHS assumes that resubmissions would take 1 hour and 30 minutes for a software quality assurance analyst or tester and retains 20 minutes for a CISO. DHS acknowledges the information collection request allows for a vendor to use a prior submitted form for multiple agencies. DHS welcomes public comment on how frequently this might happen and how

[2] Nat'l. Institute of Standards & Tech., SP 800–218, Secure Software Development Framework (SSDF) Version 1.1 (2002), available at *https://csrc.nist.gov/publications/detail/sp/800-218/final.*

[3] Off. of Mgmt. & Budget, Exec. Off. of the President, M–22–18, Enhancing the Security of the Software Supply Chain through Secure Software Development Practices (2022), available at *https://www.whitehouse.gov/wp-content/uploads/2022/09/M-22-18.pdf.*

[4] DHS based the estimated 3 hours on an information collection request related to contractor information security for certain telecommunications and video surveillance services or equipment. While not exactly the same requirements or scope, DHS found the burdens of 0199 collection to be similar to the burden in this proposed new collection. For more information, see Supporting Statement for OMB Control Number 9000–0199. *https://www.reginfo.gov/public/do/PRAViewDocument?ref_nbr=202009-9000-002.*

to reduce respondent burdens due to this collection, where feasible.

To estimate opportunity costs, DHS uses an hourly compensation rate of $67.90 for a software quality assurance analyst or tester and $177.66 for a CISO.[5] DHS estimates software quality assurance analyst or tester annual hours would be 10,084 for initial and resubmissions by multiplying $67.90 compensation rate to estimate the opportunity cost of $684,733. DHS estimates CISO annual hourly burden of 1,345 hours and multiplying $177.66 compensation rate to a CISO estimate the opportunity cost of $238,890. DHS combines these two opportunity costs to calculate a total opportunity cost for the collection of $923,623.

2. DHS is assuming if a vendor needs to provide any additional attestation artifacts or documentation, including a Software Bill of Materials (SBOMs), that this information would be readily available and would not have to be generated specifically for doing business with the government. DHS is interested in comments on the burden and costs if SBOMs or additional artifacts materials need to be generated or reformatted to fulfill an agency/component request.

3. For the purposes of this initial collection, DHS is proposing the common form be a fillable/fileable PDF form. Vendors could access the form on the DHS/CISA website and submit via the DHS website OR email the completed form to *CSCRM_PMO@cisa.dhs.gov.* Other agencies will be required to seek approval to use the common form by submitting their agency-specific burden and cost analyses to OMB.

Input is requested on any aspect of the proposed common form including the instructions. DHS/CISA is particularly interested in

1. If the proposed collection of information to implement requirements of both the E.O. and the OMB guidance will have practical utility;

2. If DHS has accurately estimated the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Other ways for DHS to enhance the quality, utility, and clarity of the information to be collected; and

4. How DHS could minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses.

Analysis

Agency: Cybersecurity and Infrastructure Security Agency (CISA), Department of Homeland Security (DHS).

Title: Secure Software Development Attestation.

OMB Control Number: [Insert DHS/CISA 4 Digit Prefix Then XXX].

Type of Review: Request for a new OMB Control Number, New Common Form.

Expiration Date of Approval: Not Applicable.

Frequency: Annually.

Affected Public: Business—Software Producers.

Estimated Number of Respondents: 2,689.

Estimated Number of Responses per Respondent: 1.5.

Estimated Number of Responses: 4,034.

Estimated Time for Initial Submission per Respondent: 3 hours and 20 minutes.

Estimated Time for Resubmission per Respondent: 1 hour and 50 minutes.

Total Annualized Burden Hours for Initial Submissions: 8,963 hours.

Total Annualized Burden Hours for Resubmissions: 2,466 hours.

Total Annualized Burden Hours: 11,429 hours.

Total Annualized Respondent Opportunity Cost: $923,623.

Robert J. Costello,

Chief Information Officer, Department of Homeland Security, Cybersecurity and Infrastructure Security Agency.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–R4–ES–2023–0060; FXES11140400000–234–FF04EF4000]

Receipt of Incidental Take Permit Application and Proposed Habitat Conservation Plan for the Sand Skink; Orange County, FL; Categorical Exclusion

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for comments and information.

SUMMARY: We, the Fish and Wildlife Service (Service), announce receipt of an application from Ashton Orlando Residential, LLC (applicant; Lake Dennis project) for an incidental take permit (ITP) under the Endangered Species Act. The applicant requests the ITP to take the federally listed sand skink (*Neoseps reynoldsi*) incidental to the construction of a residential development in Orange County, Florida. We request public comment on the application, which includes the applicant's proposed habitat conservation plan (HCP), and on the Service's preliminary determination that the proposed permitting action may be eligible for a categorical exclusion pursuant to the Council on Environmental Quality's National Environmental Policy Act (NEPA) regulations, the Department of the Interior's (DOI) NEPA regulations, and the DOI Departmental Manual. To make this preliminary determination, we prepared a draft environmental action statement and low-effect screening form, both of which are also available for public review. We invite comment from the public and local, State, Tribal, and Federal agencies.

DATES: We must receive your written comments on or before May 30, 2023.

ADDRESSES:

Obtaining Documents: You may obtain copies of the documents online in Docket No. FWS–R4–ES–2023–0060; at *https://www.regulations.gov.*

Submitting Comments: If you wish to submit comments on any of the documents, you may do so in writing by one of the following methods:

- *Online: https://www.regulations.gov.* Follow the instructions for submitting comments on Docket No. FWS–R4–ES–2023–0060;
- *U.S. Mail:* Public Comments Processing, Attn: Docket No. FWS–R4–ES–2023–0060; U.S. Fish and Wildlife Service, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041–3803.

FOR FURTHER INFORMATION CONTACT: Erin Gawera, by U.S. mail (see **ADDRESSES**), by telephone at 904–731–3121 or via email at *erin_gawera@fws.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: We, the Fish and Wildlife Service (Service), announce receipt of an application from Ashton Orlando Residential, LLC (applicant; Lake Dennis project) for an incidental take permit (ITP) under the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*). The applicant requests the ITP to take the federally listed sand skink (*Neoseps reynoldsi*) (skink) incidental to the construction and operation of a residential development in Orange County, Florida. We request public comment on the application, which includes the applicant's habitat conservation plan (HCP), and on the Service's preliminary determination that this proposed ITP qualifies as ''low effect,'' and may qualify for a categorical exclusion pursuant to the Council on Environmental Quality's National Environmental Policy Act (NEPA) regulations (40 CFR 1501.4), the Department of the Interior (DOI) NEPA regulations (43 CFR 46), and the DOI Departmental Manual (516 DM 8.5(C)(2)). To make this preliminary determination, we prepared a draft environmental action statement and low-effect screening form, both of which are also available for public review.

Proposed Project

The applicant requests a 5-year ITP to take skinks via the conversion of approximately 4.90 acres (ac) of occupied nesting, foraging, and sheltering skink habitat incidental to the construction and operation of a residential development on a 45.19-ac parcel in Section 18, Township 24 South, Range 27 East, Orange County, Florida. The applicant proposes to mitigate for take of the skinks by purchasing credits equivalent to 9.80 ac of skink-occupied habitat within the Lake Wales Ridge Conservation Bank or another Service-approved conservation bank. The Service would require the applicant to purchase the credits prior to engaging in any construction phase of the project.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, be aware that your entire comment, including your personal identifying information, may be made available to the public. While you may request that we withhold your personal identifying information, we cannot guarantee that we will be able to do so.

Our Preliminary Determination

The Service has made a preliminary determination that the applicant's proposed project—including the construction of multiple single-family residences, driveways, parking spaces, green areas, stormwater ponds, and associated infrastructure (*e.g.,* electric, water, and sewer lines)—would individually and cumulatively have a minor effect on the human environment. We have preliminarily determined that the proposed ESA section 10(a)(1)(B) permit would be a ''low-effect'' ITP that individually or cumulatively would have a minor effect on the sand skink and may qualify for application of a categorical exclusion pursuant to the Council on Environmental Quality's NEPA regulations (40 CFR 1501.4), DOI's NEPA regulations, and the DOI Departmental Manual (516 DM 8.5(C)(2)). A ''low-effect'' incidental take permit is one that would result in (1) minor or negligible effects on species covered in the HCP; (2) nonsignificant effects on the human environment; and (3) impacts that, when added together with the impacts of other past, present, and reasonably foreseeable actions, would not result in significant cumulative effects to the human environment.

Next Steps

The Service will evaluate the application and the comments to determine whether to issue the requested permit. We will also conduct an intra-Service consultation pursuant to section 7 of the ESA to evaluate the effects of the proposed take. After considering the preceding and other matters, we will determine whether the permit issuance criteria of section 10(a)(1)(B) of the ESA have been met. If met, the Service will issue ITP number PER 0055690 to Ashton Orlando Residential, LLC.

Authority

The Service provides this notice under section 10(c) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and its implementing regulations (50 CFR 17.32) and the National Environmental Policy Act (42 U.S.C. 4321 *et seq.*) and its implementing regulations (40 CFR 1500–1508 and 43 CFR 46).

Robert L. Carey,

Division Manager, Environmental Review, Florida Ecological Services Office.

Endangered and Threatened Species; Receipt of Recovery Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit applications; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, have received applications for permits to conduct activities intended to enhance the propagation or survival of endangered or threatened species under the Endangered Species Act. We invite the public and local, State, Tribal, and Federal agencies to comment on these applications. Before issuing any of the requested permits, we will take into consideration any information that we receive during the public comment period.

DATES: We must receive your written comments on or before May 30, 2023.

ADDRESSES:

Document availability and comment submission: Submit requests for copies of the applications and related documents and submit any comments by one of the following methods. All requests and comments should specify the applicant name(s) and application number(s) (*e.g.,* XXXXXX or PER0001234).

- *Email: permitsR8ES@fws.gov.*
- *U.S. Mail:* Susie Tharratt, Regional Recovery Permit Coordinator, U.S. Fish and Wildlife Service, 2800 Cottage Way, Room W–2606, Sacramento, CA 95825.

FOR FURTHER INFORMATION CONTACT: Susie Tharratt, via phone at 916–414–6561, or via email at *permitsR8ES@fws.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: We, the U.S. Fish and Wildlife Service, invite the public to comment on applications for permits under section 10(a)(1)(A) of the Endangered Species Act, as amended (ESA; 16 U.S.C. 1531 *et seq.*). The requested permits would allow the applicants to conduct activities intended to promote recovery of species that are listed as endangered or threatened under the ESA.

Background

With some exceptions, the ESA prohibits activities that constitute take of listed species unless a Federal permit is issued that allows such activity. The ESA's definition of ''take'' includes such activities as pursuing, harassing, trapping, capturing, or collecting, in addition to hunting, shooting, harming, wounding, or killing.

A recovery permit issued by us under section 10(a)(1)(A) of the ESA authorizes the permittee to conduct activities with endangered or threatened species for scientific purposes that promote recovery or for enhancement of propagation or survival of the species. These activities often include such prohibited actions as capture and collection. Our regulations implementing section 10(a)(1)(A) for these permits are found in the Code of Federal Regulations at 50 CFR 17.22 for endangered wildlife species, 50 CFR 17.32 for threatened wildlife species, 50 CFR 17.62 for endangered plant species, and 50 CFR 17.72 for threatened plant species.

Permit Applications Available for Review and Comment

Proposed activities in the following permit requests are for the recovery and enhancement of propagation or survival of the species in the wild. The ESA requires that we invite public comment before issuing these permits. Accordingly, we invite local, State, Tribal, and Federal agencies and the public to submit written data, views, or arguments with respect to these applications. The comments and recommendations that will be most useful and likely to influence agency decisions are those supported by quantitative information or studies.

[Docket No. FWS–R4–ES–2023–0059; FXES11140400000–234–FF04EF4000]

Receipt of Incidental Take Permit Application and Proposed Habitat Conservation Plan for the Sand Skink; Lake County, FL; Categorical Exclusion

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for comments.

SUMMARY: We, the Fish and Wildlife Service (Service), announce receipt of an application from Lake County (Hooks Street Extension) (applicant) for an incidental take permit (ITP) under the Endangered Species Act. The applicant requests the ITP to take the federally listed sand skink (*Neoseps reynoldsi*) incidental to the construction of a roadway in Lake County, Florida. We request public comment on the application, which includes the applicant's proposed habitat conservation plan (HCP), and on the Service's preliminary determination that the proposed permitting action may be eligible for a categorical exclusion pursuant to the Council on Environmental Quality's National Environmental Policy Act (NEPA) regulations, the Department of the Interior's (DOI) NEPA regulations, and the DOI Departmental Manual. To make this preliminary determination, we prepared a draft environmental action statement and low-effect screening form, both of which are also available for public review. We invite comment from the public and local, State, Tribal, and Federal agencies.

DATES: We must receive your written comments on or before May 30, 2023.

ADDRESSES:

Obtaining Documents: You may obtain copies of the documents online in Docket No. FWS–R4–ES–2023–0059; at *https://www.regulations.gov.*

Submitting Comments: If you wish to submit comments on any of the documents, you may do so in writing by one of the following methods:

- *Online: https://www.regulations.gov.* Follow the instructions for submitting comments on Docket No. FWS–R4–ES–2023–0059;
- *U.S. mail:* Public Comments Processing, Attn: Docket No. FWS–R4–ES–2023–0059; U.S. Fish and Wildlife Service, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041–3803.

FOR FURTHER INFORMATION CONTACT: Erin Gawera, by U.S. mail (see **ADDRESSES**), by telephone at 904–731–3121 or via email at *erin_gawera@fws.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: We, the Fish and Wildlife Service (Service), announce receipt of an application from Lake County (applicant) for an incidental take permit (ITP) under the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*). The applicant requests the ITP to take the federally listed sand skink (*Neoseps reynoldsi*) (skink) incidental to the construction and operation of a roadway (Hooks Street Extension) in Lake County, Florida. We request public comment on the application, which includes the applicant's habitat conservation plan (HCP), and on the Service's preliminary determination that this proposed ITP qualifies as ''low effect,'' and may qualify for a categorical exclusion pursuant to the Council on Environmental Quality's National Environmental Policy Act (NEPA) regulations (40 CFR 1501.4), the Department of the Interior's (DOI) NEPA regulations (43 CFR 46), and the DOI's Departmental Manual (516 DM 8.5(C)(2)). To make this preliminary determination, we prepared a draft environmental action statement and low-effect screening form, both of which are also available for public review.

Proposed Project

The applicant requests a 10-year ITP to take skinks via the conversion of approximately 1.63 acres (ac) of occupied nesting, foraging, and sheltering skink habitat incidental to the construction and operation of a roadway on a 17.0-ac in Sections 9 and 27, Township 22 South, Range 26 East, Lake County, Florida. The applicant proposes to mitigate for take of the skinks by purchasing credits equivalent to 3.26 ac of skink-occupied habitat from the Lake Livingston Conservation Bank or another Service-approved conservation bank. The Service would require the applicant to purchase the credits prior to engaging in any construction phase of the project.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, be aware that your entire comment, including your personal identifying information, may be made available to the public. While you may request that we withhold your personal identifying information, we cannot guarantee that we will be able to do so.

Our Preliminary Determination

The Service has made a preliminary determination that the applicant's proposed project—including the construction of the roadway and associated infrastructure—would individually and cumulatively have a minor or negligible effect on the skinks and the environment. Therefore, we have preliminarily determined that the proposed ESA section 10(a)(1)(B) permit would be a ''low-effect'' ITP that individually or cumulatively would have a minor effect on the sand skink and may qualify for application of a categorical exclusion pursuant to the Council on Environmental Quality's NEPA regulations, DOI's NEPA regulations, and the DOI Departmental

Manual. A ''low-effect'' incidental take permit is one that would result in (1) minor or negligible effects on species covered in the HCP; (2) nonsignificant effects on the human environment; and (3) impacts that, when added together with the impacts of other past, present, and reasonable foreseeable actions, would not result in significant cumulative effects to the human environment.

Next Steps

The Service will evaluate the application and the comments to determine whether to issue the requested ITP. We will also conduct an intra-Service consultation pursuant to section 7 of the ESA to evaluate the effects of the proposed take. After considering the preceding and other matters, we will determine whether the permit issuance criteria of section 10(a)(1)(B) of the ESA have been met. If met, the Service will issue ITP number PER 0124344 to Lake County.

Authority

The Service provides this notice under section 10(c) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and its implementing regulations (50 CFR 17.32) and the National Environmental Policy Act (42 U.S.C. 4321 *et seq.*) and its implementing regulations (40 CFR 1500–1508 and 43 CFR 46).

Robert L. Carey,

Division Manager, Environmental Review, Florida Ecological Services Office.

Endangered and Threatened Species; Receipt of Recovery Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit applications; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, have received applications for permits to conduct activities intended to enhance the propagation or survival of endangered or threatened species under the ESA. We invite the public and local, State, Tribal, and Federal agencies to comment on these applications. Before issuing any of the requested permits, we will take into consideration any information that we receive during the public comment period.

DATES: We must receive your written comments on or before May 30, 2023.

ADDRESSES: *Document availability and comment submission:* Submit requests for copies of the applications and related documents, as well as any comments, by one of the following methods. All requests and comments should specify the applicant name(s) and application number(s) (*e.g.,* ESXXXXXX; see table in (**SUPPLEMENTARY INFORMATION**):

- *Email (preferred method): permitsR3ES@fws.gov.* Please refer to the respective application number (*e.g.,* Application No. ESXXXXXX) in the subject line of your email message.
- *U.S. Mail:* Regional Director, Attn: Nathan Rathbun, U.S. Fish and Wildlife Service, Ecological Services, 5600 American Blvd. West, Suite 990, Bloomington, MN 55437–1458.

FOR FURTHER INFORMATION CONTACT: Nathan Rathbun, 612–713–5343 (phone); *permitsR3ES@fws.gov* (email). Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: We, the U.S. Fish and Wildlife Service, invite review and comment from the public and local, State, Tribal, and Federal agencies on applications we have received for permits to conduct certain activities with endangered and threatened species under section 10(a)(1)(A) of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), and our regulations in the Code of Federal Regulations (CFR) at 50 CFR part 17. Documents and other information submitted with the applications are available for review, subject to the requirements of the Privacy Act and the Freedom of Information Act.

Background

The Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), prohibits certain activities with endangered and threatened species unless authorized by a Federal permit. The ESA and our implementing regulations in part 17 of title 50 of the Code of Federal Regulations (CFR) provide for the issuance of such permits and require that we invite public comment before issuing permits for activities involving endangered species.

A recovery permit issued by us under section 10(a)(1)(A) of the ESA authorizes the permittee to conduct activities with endangered species for scientific purposes that promote recovery or for enhancement of propagation or survival of the species. Our regulations implementing section 10(a)(1)(A) for these permits are found at 50 CFR 17.22 for endangered wildlife species, 50 CFR 17.32 for threatened wildlife species, 50 CFR 17.62 for endangered plant species, and 50 CFR 17.72 for threatened plant species.

Permit Applications Available for Review and Comment

The ESA requires that we invite public comment before issuing these permits. Accordingly, we invite local, State, Tribal, and Federal agencies and the public to submit written data, views, or arguments with respect to these applications. The comments and recommendations that will be most useful and likely to influence agency decisions are those supported by quantitative information or studies. Proposed activities in the following permit requests are for the recovery and enhancement of propagation or survival of the species in the wild.

Application No.	Applicant	Species	Location	Activity	Type of take	Permit action
PER1896698	Caleb Knerr, Jefferson City, MO.	Eleven species of freshwater mussels.	AR, IA, IL, KS, KY, MO, NE, OK, TN.	Conduct presence/absence surveys, document habitat use, conduct population monitoring, and evaluate impacts.	Capture, handle, release, and relocate due to stranding.	New.

Application No.	Applicant	Species	Location	Activity	Type of take	Permit action
PER2362555	Daniel Symonds, Orient, OH.	Twenty-two species of freshwater mussels.	AL, AR, GA, IL, IN, IA, KS, KY, LA, MI, MO, MN, MS, NE, NY, NC, OK, OH, PA, TN, VA, VT, WV, WI.	Conduct presence/absence surveys, document habitat use, conduct population monitoring, and evaluate impacts.	Capture, handle, release, collect tissue samples, and relocate due to stranding.	New.
PER0009122	Emily Grossman, O'Fallon, MO.	Add new species:—round hickorynut (*Obovaria subrotunda*) and longsolid (*Fusconaia subrotunda*)—to existing authorized 22 species of freshwater mussels.	AR, IL, IN, IA, KS, KY, LA, MI, MN, MO, MS, NE, NY, NC, OK, OH, PA, SD, WV, WI.	Conduct presence/absence surveys, document habitat use, conduct population monitoring, and evaluate impacts.	Capture, handle, release, and relocate due to stranding.	Amend.
ES194099	Michael Hoggarth, Galena, OH.	Add new species:—round hickorynut (*Obovaria subrotunda*) and longsolid (*Fusconaia subrotunda*)—to existing 30 authorized of freshwater mussels.	IN, KY, MI, NY, OH, PA, WV.	Conduct presence/absence surveys, document habitat use, conduct population monitoring, and evaluate impacts.	Capture, handle, release, and relocate.	Amend.
PER2372507	Matthew Gilkay, Kent, OH.	Twelve species of freshwater mussels.	IA, MI, MN, NY, OH, PA, WV, WI.	Conduct presence/absence surveys, document habitat use, conduct population monitoring, and evaluate impacts.	Capture, handle, release, and relocate due to stranding.	New.
ES38821A	Stantec Consulting Services, Louisville, KY.	Add new species:—round hickorynut (*Obovaria subrotunda*), longsolid (*Fusconaia subrotunda*), and Cumberland darter (*Etheostoma susanae*)—to existing authorized species: 41 freshwater mussel species, 6 freshwater fish species, 5 bat species, copperbelly water snake (*Nerodia erythrogaster neglecta*), and Big Sandy River crayfish (*Cambarus callianus*).	AL, AR, CO, CT, DE, GA, IL, IN, IA, KS, KY, LA, ME, MD, MA, MI, MN, MO, MS, MT, NE, NH, NJ, NY, NC, ND, OK, OH, PA, RI, SC, SD, TN, TX, VT, VA, WV, WI, WY.	Conduct presence/absence surveys, document habitat use, conduct population monitoring, and evaluate impacts.	Capture, handle, tag, radio track, release, relocate due to stranding.	Amend.

Public Availability of Comments

Written comments we receive become part of the administrative record associated with this action. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can request in your comment that we withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so. Moreover, all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be made available for public disclosure in their entirety.

Next Steps

If we decide to issue permits to any of the applicants listed in this notice, we will publish a notice in the **Federal Register**.

Authority

We publish this notice under section 10(c) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Lori Nordstrom,

Assistant Regional Director, Ecological Services, USFWS Region 3.

Public Land Order No. 7921; Withdrawal of Public Land for Satellite Calibration in Railroad Valley; Nye County, Nevada

AGENCY: Bureau of Land Management, Interior.

ACTION: Public Land Order.

SUMMARY: This Public Land Order (PLO) withdraws 22,684.07 acres of public lands within the Railroad Valley (RRV) area, Nye County, Nevada, from settlement, sale, location, or entry under the public land laws, including location and entry under the United States mining laws, leasing under the mineral and geothermal leasing laws, and disposal of mineral materials under the Materials Act of 1947, subject to valid existing rights, for a period of 20 years, and reserves them for National Aeronautics and Space Administration (NASA) satellite calibration activities. Jurisdiction over the public lands remains with the Bureau of Land Management (BLM).

DATES: This PLO takes effect on April 27, 2023.

FOR FURTHER INFORMATION CONTACT: Edison Garcia, Land Law Examiner, BLM, by telephone at (775) 861–6530; by email: *edisongarcia@blm.gov,* during regular business hours, 8:00 a.m. to 4:00 p.m., Monday through Friday, except holidays. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services for contacting Mr. Garcia. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-

contact in the United States. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The purpose of the withdrawal and reservation is to maintain the physical integrity of the surface and subsurface environment to ensure NASA satellite calibration activities are not invalidated or otherwise adversely affected.

Order

By virtue of the authority vested in the Secretary of the Interior by Section 204 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714, it is ordered as follows:

1. Subject to valid existing rights, the following described public lands are hereby withdrawn from settlement, sale, location, or entry under the public land laws, including location and entry under the United States mining laws, leasing under the mineral and geothermal leasing laws, and disposal of mineral materials under the Materials Act of 1947 (30. U.S.C. 601–604) and reserved for NASA's satellite calibration activities within Railroad Valley, Nye County, Nevada.

Mount Diablo Meridian, Nevada

T. 7 N., R. 56 E.,
Secs. 2 thru 17 and secs. 20 thru 27.
T. 8 N., R. 56 E.,
sec. 19, E½;
secs. 20 and 21 and secs. 27 thru 35.

The area described contains 22,684.07 acres of public lands in Nye County.

2. This withdrawal will expire 20 years from the effective date of this Order, unless, as a result of a review conducted before the expiration date pursuant to Section 204(f) of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714(f), the Secretary determines that the withdrawal shall be extended.

(Authority: 43 U.S.C. 1714)

Tommy P. Beaudreau,

Deputy Secretary.

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Tramroads and Logging Roads

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (PRA), the Bureau of Land Management (BLM) proposes to renew an information collection.

DATES: Interested persons are invited to submit comments on or before May 29, 2023.

ADDRESSES: Written comments and recommendations for this information collection request (ICR) should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Jessica LeRoy by email at *jrleroy@blm.gov,* or by telephone at (971) 439–5054. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: In accordance with the PRA (44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we invite the public and other Federal agencies to comment on new, proposed, revised and continuing collections of information. This helps the BLM assess impacts of its information collection requirements and minimize the public's reporting burden. It also helps the public understand BLM information collection requirements and ensure requested data are provided in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on December 20, 2022 (87 FR 77878). No comments were received in response to this notice.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again inviting the public and other Federal agencies to comment on the proposed ICR described below. The BLM is especially interested in public comment addressing the following:

(1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility.

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used.

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments submitted in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The BLM Oregon State Office has authority under the Oregon and California Revested Lands Sustained Yield Management Act of 1937 (43 U.S.C. 2601 and 2602) and subchapter V of the Federal Land Policy and Management Act (43 U.S.C. 1761–1771) to grant rights-of-way to private landowners to transport their timber over roads controlled by the BLM. This information collection enables the BLM to calculate and collect appropriate fees for this use of public lands. This OMB Control Number is currently scheduled to expire on August 31, 2023. The BLM request that OMB renew this OMB Control Number for an additional three years.

Title of Collection: Tramroads and Logging Roads (43 CFR part 2810).

OMB Control Number: 1004–0168.

Form Numbers: OR–2812–6.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Private landowners who hold rights-of-way for the use of BLM-controlled roads in western Oregon.

Total Estimated Number of Annual Respondents: 1,088.

Total Estimated Number of Annual Responses: 1,088.

Estimated Completion Time per Response: 8 hours.

Total Estimated Number of Annual Burden Hours: 8,704.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: Annually, biannually, quarterly, or monthly, depending on the terms of the pertinent right-of-way.

Total Estimated Annual Nonhour Burden Cost: None.

An agency may not conduct or sponsor and, notwithstanding any other provision of law, a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Darrin King,

Information Collection Clearance Officer.

BILLING CODE 4310–84–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_Wyoming_FRN_MO4500168505]

Notice of Termination of Preparation of Environmental Impact Statement for the Hiawatha Regional Energy Development Project, Wyoming

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of termination.

SUMMARY: The preparation of an Environmental Impact Statement (EIS) for Hiawatha Regional Energy Development Project is no longer required, and the process is hereby terminated.

DATES: The EIS development process for Hiawatha Regional Energy Development Project is terminated immediately.

FOR FURTHER INFORMATION CONTACT: T.J. Franklin, Supervisory Natural Resource Specialist, Rock Springs Field Office, *tjfranklin@blm.gov,* 307–352–0318. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services for contacting Mr. Franklin. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: On September 6, 2006, the BLM initiated analysis of the Hiawatha Regional Energy Development Project by publishing in the **Federal Register** a Notice of Intent to prepare an EIS and hold an associated scoping period (71 FR 52571). The EIS would have analyzed the No Action Alternative and three action alternatives, focused on achieving full field development in line with resource concerns.

The original Hiawatha Regional Energy Development Project proposal, submitted by Questar Exploration and Production Company and Wexpro Company, involved drilling about 4,208 wells and associated infrastructure such as well pads, production and storage equipment, and access roads on approximately 157,361 acres of existing oil and gas leases managed by BLM Wyoming and BLM Colorado, the States of Wyoming and Colorado, and private landowners in both states over a 20- to 30-year time period. The BLM administers approximately 143,159 surface acres of the original proposed project area. The State of Wyoming manages 6,338 acres, the State of Colorado manages 4,806 acres, and private landowners manage 3,058 surface acres.

In 2014, the original proponents revised their proposal downward to 2,200 vertically, directionally, and horizontally drilled wells on the same surface area over a 27- to 81-year period. Approximately two-thirds of the total proposed wells would have been in the Wyoming portion of the project area, and one-third would have been in the Colorado portion. In 2016, the proponents further reduced the proposal to 449 wells, with all oil and gas operations located on 47,407 acres in Wyoming.

The BLM was preparing the Draft EIS for the Hiawatha Regional Energy Development Project as revised in 2014, but halted work when the current proponents elected to temporarily stop funding the analysis in 2016. The proponents canceled the proposal by letter dated February 5, 2019. Any new proposal for development in the area will be subject to National Environmental Policy Act analysis, and the existing Hiawatha Programmatic Agreement for cultural resources would be amended accordingly. Because the proponents notified the BLM Rock Springs Field Office of their decision to cancel the proposal, the BLM is canceling the planning process and terminating its preparation of the Draft EIS.

(Authority: 40 CFR 1506.6, 40 CFR 1506.10)

Andrew Archuleta,

Wyoming State Director.

Notice of Public Meeting, Bears Ears National Monument Advisory Committee, Utah

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Land Policy and Management Act, as amended, the Federal Advisory Committee Act, and the Federal Lands Recreation Enhancement Act, the U.S. Department of the Interior, Bureau of Land Management's (BLM's) Bears Ears National Monument Advisory Committee will meet as indicated below.

DATES: The Bears Ears National Monument Advisory Committee will hold an in-person field tour on June 22, 2023, and an in-person meeting with a virtual participation option on Nov. 8, 2023. The meeting and field tour are open to the public, but advance registration is required to attend the June 22 field tour.

ADDRESSES: The June field tour will include stops at multiple locations within Bears Ears National Monument. Members of the public who register in advance and Committee members will meet at the USDA Forest Service Monticello Ranger Station located at 397 North Main in Monticello, UT 84535, at 7:30 a.m. on June 22, 2023. The field tour will end at approximately 5 p.m. The Nov. 8, 2023, meeting will be held in-person at the Hideout located at 648 South Hideout Way, Monticello, UT 84535. The meeting will take place from 9 a.m. to approximately 4 p.m. Agendas and virtual meeting access information will be announced on the Bears Ears National Monument Advisory Committee web page 30 days before the meeting at *www.blm.gov/benm-mac.*

FOR FURTHER INFORMATION CONTACT: Rachel Wootton, Canyon Country

District Public Affairs Officer, P.O. Box 7, Monticello, Utah 84535, via email with the subject line ''BENM MAC'' to *blm_ut_mt_mail@blm.gov,* or by calling the Monticello Field Office at (435) 587–1500. Members of the public planning to attend the June 22, 2023, meeting must register in advance by emailing *BLM_UT_Monticello_Monuments@blm.gov* at least seven calendar days prior to the meeting stating their interest. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: Presidential Proclamation 9558 and Presidential Proclamation 10285 established the Bears Ears National Monument Advisory Committee to provide advice and information to the Secretary of the Interior through the Director of the BLM, and to the Secretary of the U.S. Department of Agriculture (USDA) through the Chief of the USDA Forest Service, to consider for managing the Bears Ears National Monument. The 15-member Committee represents a wide range of interests including State and local government, paleontological and archaeological expertise, the conservation community, livestock grazing permittees, Tribal members, developed and dispersed recreation interests, private landowners, local business owners, and the public at large.

Planned agenda items for the June field tour include visits to multiple locations within Bears Ears National Monument to discuss site conditions, history, monument resources, and management. Attendance will be limited to the first 20 members of the public who register. Participating members of the public must provide their own transportation, water, food, and any other necessary items to participate in outdoor activities safely and comfortably. Members of the public are also encouraged to carpool. Visit locations may change depending on weather and other conditions.

Planned agenda items for the November meeting include an overview of the planning efforts to-date, discussion of management alternatives included in the draft Bears Ears National Monument Resource Management Plan, and general management and administrative updates.

A public comment period will be offered during the November meeting at 1:15 p.m. Depending on the number of people wishing to comment and the time available, the time for individual comments may be limited. Written comments may also be sent to the Monticello Field Office at the address listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice. All comments received prior to the meeting will be provided to the Committee.

Please make requests in advance for sign language interpreter services, assistive listening devices, or other reasonable accommodations. We ask that you contact the person listed under **FOR FURTHER INFORMATION CONTACT**, at least seven days prior to the meeting to give the Department of the Interior sufficient time to process your request. All reasonable accommodation requests are managed on a case-by-case basis.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Detailed minutes for Bears Ears National Monument Advisory Committee meetings will be maintained in the Canyon Country District Office and will be available for public inspection and reproduction during regular business hours within 90 days following the meeting. Minutes will also be posted to the Committee's web page.

Authority: 5 U.S.C. ch. 10.

Gregory Sheehan,

State Director.

Bureau of Land Management

[LLHQ320000 L13300000.EP0000; OMB Control Number 1004–0103]

Agency Information Collection Activities; Mineral Materials Disposal

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the Bureau of Land Management (BLM) proposes to renew an information collection.

DATES: Interested persons are invited to submit comments on or before June 26, 2023.

ADDRESSES: Send your written comments on this information collection request (ICR) by mail to Darrin King, Information Collection Clearance Officer, U.S. Department of the Interior, Bureau of Land Management, Attention PRA Office, 440 W 200 S #500, Salt Lake City, UT 84101; or by email to *BLM_HQ_PRA_Comments@blm.gov.* Please reference Office of Management and Budget (OMB) Control Number 1004–0103 in the subject line of your comments. Please note that the electronic submission of comments is recommended.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Timothy L. Barnes by email at *tbarnes@blm.gov,* or by telephone at 541–416–6858. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), all information collections require approval under the PRA. We may not conduct or sponsor, and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are especially interested in public comment addressing the following:

(1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How the agency might minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The BLM is required by the Materials Act of 1947 (30 U.S.C. 601 and 602) and section 302 of the Federal Land Policy and Management Act (43 U.S.C. 1732) to manage the sale and free use of mineral materials that are not subject to mineral leasing or location under the mining laws (*e.g.,* common varieties of sand, stone, gravel, pumice, pumicite, clay, and rock). The Materials Act authorizes the BLM to sell these mineral materials at fair market value and to grant free-use permits to government agencies and nonprofit organizations. To obtain a sales contract or free-use permit, an applicant must submit information to identify themselves, the location of the site, and the proposed method to remove the mineral materials. The BLM uses the information to process each request for disposal, determine whether the request to dispose of mineral materials meets statutory requirements, and whether to approve the request. This OMB Control Number is currently scheduled to expire on February 29, 2024. The BLM plans to request that OMB renew this OMB Control Number for an additional three years.

Title of Collection: Mineral Materials Disposal (43 CFR part 3600).

OMB Control Number: 1004–0103.

Form Numbers: Form 3600–9, *Contract for the Sale of Mineral Materials.*

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: An estimated 265 businesses annually submit applications to purchase or use mineral materials from public lands.

Total Estimated Number of Annual Respondents: 265.

Total Estimated Number of Annual Responses: 4,912.

Estimated Completion Time per Response: Varies from 30 minutes to 30 hours.

Total Estimated Number of Annual Burden Hours: 6,392.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Nonhour Burden Cost: $126,024.

An agency may not conduct or sponsor and, notwithstanding any other provision of law, a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Darrin A. King,

Information Collection Clearance Officer.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–NAGPRA–NPS0035721; PPWOCRADN0–PCU00RP14.R50000]

Notice of Inventory Completion: Rochester Museum & Science Center, Rochester, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Rochester Museum & Science Center has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice. The human remains were removed from Delaware County, NY.

DATES: Repatriation of the human remains in this notice may occur on or after May 30, 2023.

ADDRESSES: Kathryn Murano Santos, Rochester Museum & Science Center, 657 East Avenue, Rochester, NY 14607, telephone (585) 697–1929, *email kmurano@rmsc.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Rochester Museum & Science Center. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, one individual were removed from the Hilltop Site (Dhi 001) in Delaware County, NY. The individual was excavated by the Rochester Museum on an unknown date. No known individual was identified. No associated funerary objects are present.

Cultural Affiliation

The human remains in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following type of information was used to reasonably trace the relationship: geographical.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of one individual of Native American ancestry.
- There is a relationship of shared group identity that can be reasonably traced between the human remains described in this notice and the Delaware Nation, Oklahoma; Delaware Tribe of Indians; Oneida Indian Nation; Oneida Nation; Saint Regis Mohawk Tribe; and the Stockbridge Munsee Community, Wisconsin.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization

not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains in this notice to a requestor may occur on or after May 30, 2023. If competing requests for repatriation are received, the Rochester Museum & Science Center must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The Rochester Museum & Science Center is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.9, 10.10, and 10.14.

Dated: April 19, 2023.

Melanie O'Brien,

Manager, National NAGPRA Program.

The human remains and associated funerary objects were removed from Chenango, Jefferson, Madison, and Oneida Counties, NY.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 29, 2023.

ADDRESSES: Kathryn Murano Santos, Rochester Museum & Science Center, 657 East Avenue, Rochester, NY 14607, telephone (585) 697–1929, email *kmurano@rmsc.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Rochester

Museum & Science Center. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, two individuals were removed from the Partridge Site (Una 001) in Chenango County, NY. These human remains were excavated by the RMSC in 1935. No known individuals were identified. No associated funerary objects are present.

Human remains representing, at minimum, two individuals were removed from the Hunter Site (Hmd 002) in Jefferson County, NY. The human remains of one individual were collected near the outlet of Red Lake by Earl Abbott and donated to the RMSC in 1946. The human remains of a second individual were removed by an unknown individual on an unknown date. No known individuals were identified. No associated funerary objects are present.

Human remains representing, at minimum, one individual were removed from the Muskalonge Lake Site (Hmd 001) in Jefferson County, NY. These human remains were excavated by W.A. Ritchie for the RMSC sometime between 1932 and 1933. No known individual was identified. No associated funerary objects are present.

Human remains representing, at minimum, two individuals were removed from the town of Cazenovia in Madison County, NY. These human remains were acquired by an unknown collector around 1919, and they were purchased by the RMSC from Alvin H. Dewey sometime between 1928 and 1929. No known individuals were identified. The one associated funerary object is a necklace with animal and human teeth. It is currently missing.

Human remains representing, at minimum, one individual were removed from the west bank of Oneida Creek in Madison County, NY. These human remains were collected by Henry Wemple of Vernon Center in 1958, and they were donated to the RMSC in 1961. No known individual was identified. The one associated funerary object is an animal bone.

Human remains representing, at minimum, four individuals were removed from the Sherril Site in Oneida County, NY. These human remains were collected by Herbert Bigford, and they were then donated to the RMSC in 1941. No known individuals were identified. No associated funerary objects are present.

Human remains representing, at minimum, two individuals were removed from Teelins Site in Oneida County, NY. These human remains were collected by Gilbert Hagerty, and they were donated to the RMSC in 1979. No known individuals were identified. Of the nine associated funerary objects, eight are present and accounted for in the RMSC collections and one object is currently missing. The eight present associated funerary objects are one flint chunk; one lot of faunal remains; three lots of body sherds; two clam shells; and one broken projectile point. The currently missing associated funerary object is one lot of soil.

Cultural Affiliation

The human remains and associated funerary objects in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following type of information was used to reasonably trace the relationship: geographical.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of 14 individuals of Native American ancestry.
- The 11 objects described in this notice are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a relationship of shared group identity that can be reasonably traced between the human remains and associated funerary objects described in this notice and the Oneida Indian Nation and the Oneida Nation.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the Responsible Official identified in **ADDRESSES.** Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 29, 2023. If competing requests for repatriation are received, the Rochester Museum & Science Center must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Rochester Museum & Science Center is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.9, 10.10, and 10.14.

Dated: April 19, 2023.

Notice of Inventory Completion: Rochester Museum & Science Center, Rochester, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Rochester Museum & Science Center (RMSC) has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice. The human remains and associated funerary objects were removed from Ulster County, NY.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 30, 2023.

ADDRESSES: Kathryn Murano Santos, Rochester Museum & Science Center, 657 East Avenue, Rochester, NY 14607,

telephone (585) 697–1929, email *kmurano@rmsc.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Rochester Museum & Science Center. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, two individuals were removed near the town of Kingston in Ulster County, NY. The individuals were collected by James Shafer and donated to the RMSC in 1947. No known individuals were identified. The one associated funerary object is one lot of soil with inclusions (possibly bone fragments).

Cultural Affiliation

The human remains and associated funerary objects in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following type of information was used to reasonably trace the relationship: geographical.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- The one object described in this notice is reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a relationship of shared group identity that can be reasonably traced between the human remains and associated funerary objects described in this notice and the Delaware Nation, Oklahoma; Delaware Tribe of Indians; Saint Regis Mohawk Tribe; and the Stockbridge Munsee Community, Wisconsin.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 30, 2023. If competing requests for repatriation are received, the Rochester Museum & Science Center must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Rochester Museum & Science Center is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.9, 10.10, and 10.14.

Dated: April 19, 2023.

Notice of Inventory Completion: Rochester Museum & Science Center, Rochester, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Rochester Museum & Science Center (RMSC) has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice. The human remains and associated funerary objects were removed from Broome County, NY.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 30, 2023.

ADDRESSES: Kathryn Murano Santos, Rochester Museum & Science Center, 657 East Avenue, Rochester, NY 14607, telephone (585) 697–1929, email *kmurano@rmsc.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Rochester Museum & Science Center. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, 21 individuals were removed from the Castle Creek Site (Bgh 001) in Broome County, NY. The human remains of 17 individuals and four associated funerary objects were collected by the Broome County Historical Society and they were donated to the RMSC by Foster Disinger in 1940. The human remains of two individuals were donated to the RMSC by Clarence Alhart, through W.A. Ritchie, in June of 1933. The human remains of one individual and two associated funerary objects were removed during an excavation conducted by the Rochester Museum of Arts and Sciences (the predecessor of the RMSC) sometime between 1931 and 1933. The human remains of one individual were removed by an unknown person on an unknown date. No known individuals were identified. The six associated funerary objects are one deer vertebra; three faunal bone fragments; and two worked bone fragments. The two worked bone fragments, which were collected during the Rochester Museum expedition, are currently missing.

Cultural Affiliation

The human remains and associated funerary objects in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of

shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following types of information were used to reasonably trace the relationship: geographical and expert opinion.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of 21 individuals of Native American ancestry.
- The six objects described in this notice are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a relationship of shared group identity that can be reasonably traced between the human remains and associated funerary objects described in this notice and the Onondaga Nation.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 30, 2023. If competing requests for repatriation are received, the Rochester Museum & Science Center must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Rochester Museum & Science Center is responsible for sending a copy of this notice to the Indian Tribe identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.9, 10.10, and 10.14.

Dated: April 19, 2023.

Notice of Inventory Completion: Rochester Museum & Science Center, Rochester, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Rochester Museum & Science Center has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice. The human remains and associated funerary objects were removed from Jefferson County, NY.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 30, 2023.

ADDRESSES: Kathryn Murano Santos, Rochester Museum & Science Center, 657 East Avenue, Rochester, NY 14607, telephone (585) 697–1929, email *kmurano@rmsc.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Rochester Museum & Science Center. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, one individual were removed from a farm in the Chaumont Bay area in Jefferson County, NY. These human remains were purchased by the Rochester Museum & Science Center (RMSC) from Alvin H. Dewey sometime between 1928 and 1929. No known individual was identified. No associated funerary objects are present.

Human remains representing, at minimum, four individuals were removed from the Long Bay Ossuary 3 Site (Cln 003) in Jefferson County, NY. These human remains were excavated by W.A. Ritchie on behalf of the RMSC in 1932 and 1933. No known individuals were identified. The four associated funerary objects are one lot of flint flakes; one antler projectile point; one scraper blade; and one lot of sherds. These funerary objects are currently missing.

Human remains representing, at minimum, 17 individuals were removed from a location near Cape Vincent in Jefferson County, NY. These human remains were collected by J.B. Nichols and donated to RMSC in 1948. The one associated funerary object is a pottery sherd.

Human remains representing, at minimum, one individual were removed from the Pillar Point Site (Skh 001) in Jefferson County, NY. These human remains were excavated by W.A. Ritchie on behalf of the RMSC in 1936. No known individual was identified. No associated funerary objects are present.

Cultural Affiliation

The human remains and associated funerary objects in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following type of information was used to reasonably trace the relationship: geographical.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of 23 individuals of Native American ancestry.
- The five objects described in this notice are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a relationship of shared group identity that can be reasonably traced between the human remains and associated funerary objects described in this notice and the Oneida Indian

Nation; Oneida Nation; Onondaga Nation; and the Wyandotte Nation.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 29, 2023. If competing requests for repatriation are received, the Rochester Museum & Science Center must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Rochester Museum & Science Center is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.9, 10.10, and 10.14.

The determinations in this notice are the sole responsibility of the Rochester Museum & Science Center. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, two individuals were removed from the Blake Farm Site in Allegany County, NY. In 1937, the human remains were excavated during a Rochester Museum & Science Center expedition. No known individuals were identified. No associated funerary objects are present.

Human remains representing, at minimum, one individual were removed from the Saunders Site (Blt 001) in Allegany County, NY. In 1930, the human remains were excavated during a Rochester Museum & Science Center expedition. No known individual was identified. No associated funerary objects are present.

Cultural Affiliation

The human remains in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following type of information was used to reasonably trace the relationship: geographical.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of three individuals of Native American ancestry.
- There is a relationship of shared group identity that can be reasonably traced between the human remains described in this notice and the Sac & Fox Nation of Missouri in Kansas and Nebraska; Sac & Fox Nation, Oklahoma; Sac & Fox Tribe of the Mississippi in Iowa; Seneca Nation of Indians; Seneca-Cayuga Nation; and the Tonawanda Band of Seneca.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains in this notice to a requestor may occur on or after May 30, 2023. If competing requests for repatriation are received, the Rochester Museum & Science Center must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The Rochester Museum & Science Center is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.9, 10.10, and 10.14.

Notice of Inventory Completion: Rochester Museum & Science Center, Rochester, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Rochester Museum & Science Center has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice. The human remains and associated funerary objects were removed from Jefferson and St. Lawrence Counties, NY.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 29, 2023.

ADDRESSES: Kathryn Murano Santos, Rochester Museum & Science Center, 657 East Avenue, Rochester, NY 14607, telephone (585) 697–1929, email *kmurano@rmsc.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Rochester Museum & Science Center. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, one individual were removed from Nobby Island on the St. Lawrence River in Jefferson County, NY. The Rochester Museum & Science Center acquired these human remains from Alvin H. Dewey sometime between 1928 and 1929. No known individual was identified. No associated funerary objects are present.

Human remains representing, at minimum, one individual were removed from Old Fort on Carlton Island, on the St. Lawrence River, in Jefferson County, NY. These human remains were removed in 1877, and they were acquired by the Rochester Museum & Science Center from Alvin H. Dewey sometime between 1928 and 1929. No known individual was identified. No associated funerary objects are present.

At an unknown date, human remains representing, at minimum, one individual were removed from the Long Sault Islands (Msa 002?) in St. Lawrence County, NY. No known individual was identified. The one associated funerary object is one lot of soil.

Cultural Affiliation

The human remains and associated funerary objects in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following type of information was used to reasonably trace the relationship: geographical.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of three individuals of Native American ancestry.
- The one object described in this notice is reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a relationship of shared group identity that can be reasonably traced between the human remains and associated funerary objects described in this notice and the Oneida Indian Nation; Oneida Nation; Onondaga Nation; Saint Regis Mohawk Tribe; and the Wyandotte Nation.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 29, 2023. If competing requests for repatriation are received, the Rochester Museum & Science Center must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Rochester Museum & Science Center is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.9, 10.10, and 10.14.

Notice of Inventory Completion: Rochester Museum & Science Center, Rochester, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Rochester Museum & Science Center (RMSC) has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice. The human remains and associated funerary objects were removed from Cayuga County, NY.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 29, 2023.

ADDRESSES: Kathryn Murano Santos, Rochester Museum & Science Center, 657 East Avenue, Rochester, NY 14607, telephone (585) 697–1929, email *kmurano@rmsc.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Rochester Museum & Science Center. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, 23 individuals were removed from the Backus site (Aub 002) in Cayuga County, NY. The human remains of twenty-two individuals and one associated funerary object were excavated by H.C. Follette during an RMSC expedition in 1929, and the human remains of one individual were gifted to the RMSC by an unknown individual and are part of the Greene Collection. No known individuals were identified. The one associated funerary object is one lot of soil.

Human remains representing, at minimum, four individuals were removed from the Bluff Pointe site (Wpt 010) in Cayuga County, NY. The human remains of an individual were acquired by C. Armbruster in 1938, the human remains of an individual were collected by Harold Secor and donated to the RMSC in 1948, and the human remains of two individuals and two associated funerary objects were acquired through an RMSC expedition in 1939. No known individuals were identified. The two associated funerary objects are one flint scraper and one unworked flint chip.

Human remains representing, at minimum, five individuals were removed from the David Meyers site in Cayuga County, NY. In 1935 and 1974, these human remains were donated to the RMSC as part of the Greene Collection. No known individuals were identified. No associated funerary objects are present.

Human remains representing, at minimum, 140 individuals were removed from the Frontenac Island Site (Aub 004 LR) in Cayuga County, NY. W.A. Ritchie removed the human remains of 136 individuals and 227 associated funerary objects during an RMSC expedition in 1939, and the human remains of four individuals collected by David W. Chase were acquired by W. Cornwell and subsequently donated to the RMSC on November 27, 1962. No known individuals were identified. Of the 227 funerary objects listed, 96 objects are present and accounted for in the RMSC collections and 131 are currently missing. The 96 present associated funerary objects are one imperforate, flat bone awl or needle; eight bone awls; one bone awl from the humerus of an eagle (?); one notched bone awl; one perforated bone awl; two scapula awls; one bone splinter awl; two lots of bone awls; one lot of bear claw cores; one bone; eight bone fragments; one lot of bones; one lot of cremated faunal remains and charcoal; one lot of deer metatarsal splints; one lot of deer teeth; one lot of deer tooth fragments and part of a turtle shell; three chert drills; one chert drill with a missing tip; one faunal bag; one faunal bone; one lot of wild turkey wing faunal bones; four bone fishhooks; one bone fishhook with a missing point; five antler flaking tools; two bone flaking tools; one bone flute with perforations; one bone hair ornament; two perforated bone hair ornaments; one perforated bone hair ornament with a missing tip; one harpoon fragment; three bone harpoons; one lot of bone harpoons; one lot of double-pointed bone implements; one ulna deer awl; one perforated needle; one imperforate antler pendant(?); one perforated bear or wolf canine; one perforated canine tooth; one perforated elk canine; one lot of perforated wolf canines; one side-notched projectile point; five stemmed chert projectile points; one lot of stemmed chert projectile points; one lot of archaic type projectile points; two turtle shell rattles; one scapula scraper; one lot of soil; one lot of unworked long bone splinters; one lot of bird bone splinters; one antler spoon handle fragment(?) of a bird effigy; one lot of teeth; one lot of perforated elk canine teeth; one lot of flint tool blanks; one dull pointed bone tool; one trimmed chert flake or point reject; one bone tube or whistle fragment; two bone tubes; one lot of unworked bone splinters; one bone whistle fragment; and two bone whistles. The 131 missing associated funerary objects are one beveled(?) adze; one Plano convex adze; one antler tine; one antler awl; two scapula awl; one splinter bone awl; one lunate limestone banner stone; one lot of marginella shell beads; three beaver incisors; one split and ground beaver incisor; one schist celt; three sandstone choppers; one shale chopper; one antler effigy comb of two birds with touching beaks; one elk antler cup; one bone dagger; one bone dagger with red paint stripes; one restored conch shell dish; one dog burial; one dog mandible; five partial dog skeletons; one double pointed bone artifact; one chert flake knife; one antler flaking tool; one circular bone flute with oval perforations; one lot of bone gorges; one bone gouge; one perforated bone hair ornament(?); two harpoon bones; one paint stone hematite; one lot of carbonized hickory nut(?) fragments; one lot of decomposed lumps of iron pyrites; one lot of decomposed iron pyrites; two bone knives(?); one marine shell fragment; one unworked limestone (toy?) pebble; one lot of marine shell pendants; one lot of perforated bear canines; one perforated oyster shell; one pitted sandstone hammerstone; three limestone plummets; one corner-notched chert projectile point base; one ground slate projectile point; 17 lots of side-notched chert projectile points; one stemmed projectile point; 21 lots of chert stemmed projectile points; two chert projectile point tips; one lot of side-notched, stemmed chert, projectile points; one lot of side-notched, triangular chert projectile points; one lot of stemmed projectile points; one retouched chert tabular piece; one fragmentary scapula; one fragmentary scapula scraper; five scapula scrapers; one damaged scapula scraper; one fragmentary scapula scraper; one serrated, split antler; one lot of chert spalls; one antler spoon with a restored perforated base; two whetstones; three sandstone whetstones; one intaglio decorated bone whistle; one lot of wolf jaw fragments; one lot of wolf jaws with bases ground away; one ground wolf tooth; one worked antler; six worked beaver incisors; one lot of worked beaver incisors; and one worked conch shell.

Human remains representing, at minimum, two individuals were removed from the Levanna Village (Aub 001) in Cayuga County, NY. The human remains of one individual were collected by George S. Brooks in 1935, and they were purchased by the Rochester Museum & Science Center (the successor of the Rochester Museum of Art and Sciences) on September 24, 1961. The human remains of a second individual were collected by Clayton Mau, and they were donated to the RMSC by Edward Mau on October 24, 1966. No known individuals were identified. No associated funerary objects are present.

Human remains representing, at minimum, one individual were removed from the Meyers Station Site in Cayuga County, NY. In 1991, these human remains were acquired as part of the Greene collection. No known individual was identified. No associated funerary objects are present.

Human remains representing, at minimum, 11 individuals were removed from the Rene Menard Bridge Site (Aub 005) in Cayuga County, NY. The human remains of seven individuals were collected by C. Armbruster in 1939. The human remains of one individual were collected by Harry Schoff, and they were purchased by the RMSC, through E.B. Meader & E.K. Meacham, in 1967. The human remains of two individuals were acquired by the RMSC as part of the Greene collection. The human remains of one individual and 15 associated funerary objects were collected in 1938, and they were purchased by the RMSC from H. Bigford

in 1947. No known individuals were identified. The 15 associated funerary objects are one lot of splinter awls; one lot of bone splinter awls; one lot of beads; one lot of copper beads and human tooth (incorporated as a bead); one lot of discoidal shell beads; one lot of chert drill fragments; one lot of sandstone pestle; one lot of chert projectile points; one lot of conical bone projectile points; one lot of red pigment; one lot of deer scapula scrapers; one lot of beaver incisors; one lot of dog teeth; one lot of turtle shell fragments; and one lot of worked beaver incisors.

Human remains representing, at minimum, one individual were removed from an unknown geographic location in Cayuga County, NY. These human remains were collected by Henry Schoff, and they were purchased by the RMSC from E.B. Meader & E.K. Meacham in 1967. No known individual was identified. No associated funerary objects are present.

Cultural Affiliation

The human remains and associated funerary objects in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following type of information was used to reasonably trace the relationship: geographical.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of 187 individuals of Native American ancestry.
- The 245 objects described in this notice are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a relationship of shared group identity that can be reasonably traced between the human remains and associated funerary objects described in this notice and the Cayuga Nation; Oneida Indian Nation; Oneida Nation; Onondaga Nation; Sac & Fox Nation of Missouri in Kansas and Nebraska; Sac & Fox Nation, Oklahoma; Sac & Fox Tribe of the Mississippi in Iowa; Saint Regis Mohawk Tribe; Seneca Nation of Indians; Seneca-Cayuga Nation; Tonawanda Band of Seneca; Tuscarora Nation; and the Wyandotte Nation.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 29, 2023. If competing requests for repatriation are received, the Rochester Museum & Science Center must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Rochester Museum & Science Center is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.9, 10.10, and 10.14.

Dated: April 19, 2023.

Notice of Inventory Completion: Rochester Museum & Science Center, Rochester, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Rochester Museum & Science Center (RMSC) has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice. The human remains and associated funerary objects were removed from Onondaga County, NY, and from the vicinity of Seneca Lake, which lies within Schuyler, Seneca, Yates, Ontario Counties, NY.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 30, 2023.

ADDRESSES: Kathryn Murano Santos, Rochester Museum & Science Center, 657 East Avenue, Rochester, NY 14607, telephone (585) 697–1929, email *kmurano@rmsc.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Rochester Museum & Science Center. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, one individual were removed from the Amber Site in Onondaga County, NY. These human remains were gifted to the RMSC by the Paleontological Research Institute in 1992. No known individual was identified. The five funerary objects are two pieces of hematite; two tube pipe fragments; and one piece of white clay.

Human remains representing, at minimum, one individual were removed from the Felix Site/Jack's Reef Site (Bwv 001) in Onondaga County, NY. These human remains were removed during an RMSC expedition in 1947. No known individual was identified. The two funerary objects are one chert projectile point and one Vinette rim sherd.

Human remains representing, at minimum, four individuals were removed from the Robinson Site (Syr 005; Syr 005–1) in Onondaga County, NY. These human remains were excavated by the RMSC in 1937 and 1938. No known individuals were identified. The six associated funerary objects are one beaver incisor engraver; one section of a clay pipe stem; three notched chert projectile points; and one quartzite scraper.

Human remains representing, at minimum, three individuals were removed from Smith's Island (Syr 007) in Onondaga County, NY. In 1942, the

human remains of two individuals and 11 associated funerary objects were collected by W.A. Ritchie during an RMSC expedition. In May of 1947, the human remains of one individual and one combined lot of associated funerary objects were collected by C.A. Denman and acquired by the RMSC. No known individuals were identified. Of the 12 associated funerary objects, nine are present in the RMSC collections and three are currently missing. The nine present associated funerary objects are one chert projectile point; the faunal remains of two dogs; one granite pebble muller; one ceramic pipe bowl fragment; one side-notched projectile point base; one bone projectile point; one piece of carbonized wood; and one combined lot of tubular copper beads, a copper earring, discoidal shell beads, fragmentary conch shell pendants, and a shroud made from tree bark and animal hides. The three associated funerary objects currently missing are the faunal remains of one dog; one bone projectile point; and one lot of pottery sherds. The RMSC continues to look for the missing objects.

At an unknown date, human remains representing, at minimum, one individual were removed from the vicinity of Seneca Lake, which lies within Schuyler, Seneca, Yates, Ontario Counties, NY. No known individual was identified. No associated funerary objects are present.

Cultural Affiliation

The human remains and associated funerary objects in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following type of information was used to reasonably trace the relationship: geographical.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of 10 individuals of Native American ancestry.
- The 25 objects described in this notice are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a relationship of shared group identity that can be reasonably traced between the human remains and associated funerary objects described in this notice and the Cayuga Nation; Oneida Indian Nation; Oneida Nation; Onondaga Nation; Sac & Fox Nation of Missouri in Kansas and Nebraska; Sac & Fox Nation, Oklahoma; Sac & Fox Tribe of the Mississippi in Iowa; Saint Regis Mohawk Tribe; Seneca Nation of Indians; Seneca-Cayuga Nation; Tonawanda Band of Seneca; and the Tuscarora Nation.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 30, 2023. If competing requests for repatriation are received, the Rochester Museum & Science Center must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Rochester Museum & Science Center is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.9, 10.10, and 10.14.

Dated: April 19, 2023.

Notice of Inventory Completion: Rochester Museum & Science Center, Rochester, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Rochester Museum & Science Center (RMSC) has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice. The human remains were removed from an unknown location in New York.

DATES: Repatriation of the human remains in this notice may occur on or after May 29, 2023.

ADDRESSES: Kathryn Murano Santos, Rochester Museum & Science Center, 657 East Avenue, Rochester, NY 14607, telephone (585) 697–1929, email *kmurano@rmsc.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Rochester Museum & Science Center. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, three individuals were removed from an unknown location in New York. The human remains of one of these individuals were purchased by the RMSC from A.H. Dewey in 1925. The human remains of a second individual were collected by Harry Schoff, and they were purchased by the RMSC from E.B. Meader and E.K. Meacham in November of 1967. The human remains of a third individual were removed by an unknown individual on an unknown date. No known individuals were identified. No associated funerary objects are present.

Cultural Affiliation

The human remains in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following type of information was used to reasonably trace the relationship: geographical.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of three individuals of Native American ancestry.
- There is a relationship of shared group identity that can be reasonably traced between the human remains described in this notice and the Cayuga Nation; Delaware Nation, Oklahoma; Delaware Tribe of Indians; Mashantucket Pequot Indian Tribe; Mohegan Tribe of Indians of Connecticut; Narragansett Indian Tribe; Oneida Indian Nation; Oneida Nation; Onondaga Nation; Sac & Fox Nation of Missouri in Kansas and Nebraska; Sac & Fox Nation, Oklahoma; Sac & Fox Tribe of the Mississippi in Iowa; Saint Regis Mohawk Tribe; Seneca Nation of Indians; Seneca-Cayuga Nation; Shinnecock Indian Nation; Stockbridge Munsee Community, Wisconsin; Tonawanda Band of Seneca; Tuscarora Nation; and the Wyandotte Nation.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains in this notice to a requestor may occur on or after May 29, 2023. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the Rochester Museum & Science Center.

Description

Human remains representing, at minimum, two individuals were removed from the Candee Farm (Bwv 005) in Oswego County, NY. These human remains were collected by William H. Jennings and George Flansburg, and they were acquired by the RMSC in 1937. No known individuals were identified. The four associated funerary objects are two worked flint tools and two unfinished projectile points.

Human remains representing, at minimum, four individuals were removed from the Luke Site (Bwv 017) in Oswego County, NY. These human remains were collected by Charles Denman, and they were donated to the RMSC in 1947. No known individuals were identified. No associated funerary objects are present.

Human remains representing, at minimum, 11 individuals were removed from the Oberlander 1 Site (Syr 004) in Oswego County, NY. These human remains were acquired during RMSC expeditions conducted from 1937 to 1938. No known individuals were identified. The 20 associated funerary objects are one chert; one lot of faunal bones; one lot of soil refuse; one lot of chert flakes and biface fragments; two lots of chert flakes; one piece of charred material; two pieces of charcoal; one biface; one lot of biface fragments; two pieces of charred wood; three lots of pottery sherds; one pottery sherd; one lot of pottery sherd pieces; one lot of mixed soil and bones; and one chert cache blade.

Human remains representing, at minimum, 19 individuals were removed from the Oberlander 2 Site (Syr 003) in Oswego County, NY. These human remains were excavated during an RMSC expedition conducted in 1938. No known individuals were identified. Of the 223 associated funerary objects, 204 are present in the RMSC collections and 19 are currently missing. The 204 present associated funerary objects are one lot of pipe fragments; one lot of chert flakes; three lots of charred material; one lot of grey ash samples; one lot of charred wood; one lot of charred wood and faunal bone; one lot of charcoal, bone, flint; two lots of native copper awls; one lot of worked wood fragments; one antler tip; one lot of projectile point fragments; one triangular chert scraper/perforator; one side-notched base; six side-notched chert projectile points with missing tip; one side-notched projectile point; one

stemmed chert projectile point with missing tip and side; one side-notched chert projectile point with a broken base; one triangular chert blade; one chert perforator with a missing base; one lot of sherd pieces; two chert and sherd blades; one copper awl; one notched sandstone chopper; one chert knife; five notched chert projectile points; one chert knife base; one sandstone hammerstone; one beaver incisor knife; one broken bone harpoon; three bone awls; one half of a schist gorget; one sandstone anvil stone; five chert perforators; one Plano convex granite gneiss adze; one chert pecking hammer; one sandstone waterworn pebble; two broken chert blades; six chert end scrapers; three chert blade fragments; one stemmed chert projectile point base; one retouched flake chert blade; one lot of chert scrapers and sherds; one lot of native copper awl fragments; two reworked slate gorget fragments; one end scraper; one chert perforator base; one broken chert perforator; one broken chert projectile point; one lot of bone implement; one bone harpoon; one chert perforator with missing tip; one broken side-notched chert projectile point; one whetstone; one broken perforator; one anvil stone; one broken burnt bone implement; one steatite sherd; 12 lots of side-notched chert projectile points; one triangular chert projectile point; one chert projectile point; one chert perforator/scraper; one chert cache blade base; one stemmed chert base; one burnt bone implement; one burnt worked antler fragment; one slate whetstone; one sandstone whetstone; two celts; two pyrites strike-a-lights; two chert flint strikers; six lots of triangular chert scrapers; one chert projectile point with missing base; one burnt bone needle fragment; one burnt antler engraver handle(?); one lot of fragmentary burnt bone awls; two burnt bone awl tip & fragments; two shale gorget fragments; one banded slate bird stone with a broken nose; one semi lozenge projectile point with missing tip; one chert cache blade with missing tip and base; two chert cache blades with missing tip; one sandstone bird stone; one pottery tube fragment; one notched chert projectile point base; three lots of sherds; three slate gorget fragments; one lot of hematite pieces; three lots of cache blades; one side-notched chert projectile point fragment; 31 lots of chert cache blades; three broken chert cache blades; one semi lozenge chert projectile point with missing tip; six chert projectile point tips; one chert blade tip; one schist adze(?) fragment; one chert blade or reject fragment; one burnt bone awl tip; one slate gorget; one schist adze bit fragment; one burnt bone awl fragment; one hammerstone; one slightly notched chert projectile point with missing tip; one stemmed chert scraper or base; one Plano convex schistose material adze; one steatite rim sherd; one schistose material tool fragment; one stemmed chalcedonous chert spearhead; one worked slate; one broken bone implement; one sandstone chopper; and one charred bark and leather. The 19 associated funerary objects currently missing are one notched barbed chert projectile point; three side-notched chert projectile points; one perforator fragment; one broken chert scraper; one triangular chert scraper; three lots of sherds; one worked hematite; one celt; one chert blade tip; one stemmed chalcedonous chert projectile point; one stemmed chert scraper; one chert blade fragment; one chert cache blade; one chert perforator; and one lot of soil. The RMSC continues to look for the missing objects.

Human remains representing, at minimum, one individual were removed from the Wickham Site (Syr 001) in Oswego County, NY. These human remains were collected by W.A. Ritchie during an RMSC expedition conducted in 1945. No known individual was identified. No associated funerary objects are present.

Human remains representing, at minimum, one individual were removed from an unknown location in western New York. These human remains were collected by S.P. Moulthrup on an unknown date. No known individual was identified. No associated funerary objects are present.

Cultural Affiliation

The human remains and associated funerary objects in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following type of information was used to reasonably trace the relationship: geographical.

Determinations

Pursuant to NAGPRA and its implementing regulations, and after consultation with the appropriate Indian Tribes and Native Hawaiian organizations, the Rochester Museum & Science Center has determined that:

- The human remains described in this notice represent the physical remains of 38 individuals of Native American ancestry.
- The 247 objects described in this notice are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a relationship of shared group identity that can be reasonably traced between the human remains and associated funerary objects described in this notice and the Cayuga Nation; Oneida Indian Nation; Oneida Nation; Onondaga Nation; Sac & Fox Nation of Missouri in Kansas and Nebraska; Sac & Fox Nation, Oklahoma; Sac & Fox Tribe of the Mississippi in Iowa; Saint Regis Mohawk Tribe; Seneca Nation of Indians; Seneca-Cayuga Nation; Tonawanda Band of Seneca; Tuscarora Nation; and the Wyandotte Nation.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 29, 2023. If competing requests for repatriation are received, the Rochester Museum & Science Center must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Rochester Museum & Science Center is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.9, § 10.10, and § 10.14.

INTERNATIONAL TRADE COMMISSION

[USITC SE–23–021]

Sunshine Act Meetings

AGENCY HOLDING THE MEETING: United States International Trade Commission.

TIME AND DATE: May 4, 2023 at 11:00 a.m.

PLACE: Room 101, 500 E Street SW, Washington, DC 20436, Telephone: (202) 205–2000.

STATUS: Open to the public.

MATTERS TO BE CONSIDERED:

1. Agendas for future meetings: none.
2. Minutes.
3. Ratification List.
4. Commission vote on Inv. No. 731–TA–683 (Fifth Review)(Fresh Garlic from China). The Commission currently is scheduled to complete and file its determinations and views of the Commission on May 12, 2023.
5. Outstanding action jackets: none.

CONTACT PERSON FOR MORE INFORMATION: Sharon Bellamy, Acting Hearings and Information Officer, 202–205–2000.

The Commission is holding the meeting under the Government in the Sunshine Act, 5 U.S.C. 552(b). In accordance with Commission policy, subject matter listed above, not disposed of at the scheduled meeting, may be carried over to the agenda of the following meeting.

By order of the Commission.

Issued: April 25, 2023.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 2210–55–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. 1187]

Bulk Manufacturer of Controlled Substances Application: Bulk Manufacturer of Marihuana: Royal Dynastic Organics

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: The Drug Enforcement Administration (DEA) is providing notice of an application it has received from an entity applying to be registered to manufacture in bulk basic class(es) of controlled substances listed in schedule I. DEA intends to evaluate this and other pending applications according to its regulations governing the program of growing marihuana for scientific and medical research under DEA registration.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before June 26, 2023.

ADDRESSES: DEA requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment.''

SUPPLEMENTARY INFORMATION: The Controlled Substances Act (CSA) prohibits the cultivation and distribution of marihuana except by persons who are registered under the CSA to do so for lawful purposes. In accordance with the purposes specified in 21 CFR 1301.33(a), DEA is providing notice that the entity identified below has applied for registration as a bulk manufacturer of schedule I controlled substances. In response, registered bulk manufacturers of the affected basic class(es), and applicants therefor, may submit electronic comments on or objections of the requested registration, as provided in this notice. This notice does not constitute any evaluation or determination of the merits of the application submitted.

The applicant plans to manufacture bulk active pharmaceutical ingredients (APIs) for product development and distribution to DEA registered researchers. If the application for registration is granted, the registrant would not be authorized to conduct other activity under this registration aside from those coincident activities specifically authorized by DEA regulations. DEA will evaluate the application for registration as a bulk manufacturer for compliance with all applicable laws, treaties, and regulations and to ensure adequate safeguards against diversion are in place.

As this applicant has applied to become registered as a bulk manufacturer of marihuana, the application will be evaluated under the criteria of 21 U.S.C. 823(a). DEA will conduct this evaluation in the manner described in the rule published at 85 FR 82333 on December 18, 2020, and reflected in DEA regulations at 21 CFR part 1318.

In accordance with 21 CFR 1301.33(a), DEA is providing notice that on March 8, 2023, Royal Dynastic Organics, 865 Hogbin Road, Millville, New Jersey 08332–7608, applied to be registered as a bulk manufacturer of the following basic class(es) of controlled substances:

Controlled substance	Drug code	Schedule
Marihuana Extract	7350	I
Marihuana	7360	I
Tetrahydrocannabinols	7370	I

Matthew Strait,

Deputy Assistant Administrator.

BILLING CODE P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1183]

Importer of Controlled Substances Application: Research Triangle Institute

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Research Triangle Institute has applied to be registered as an importer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before May 30, 2023. Such persons may also file a written request for a hearing on the application on or before May 30, 2023.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment. All requests for a hearing must be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/OALJ, 8701 Morrissette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrissette Drive, Springfield, Virginia 22152. All requests for a hearing should also be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrissette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.34(a), this is notice that on March 14, 2023, Research Triangle Institute, 3040 East Cornwallis Road, Hermann Building, Room 106, Research Triangle Park, North Carolina 27709–0000, applied to be registered as an importer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
Amineptine (7-[(10,11-dihydro-5H-dibenzo[a,d]cyclohepten-5-yl)amino]heptanoic acid)	1219	I
Mesocarb (N-phenyl-N′-(3-(1-phenylpropan-2-yl)-1,2,3-oxadiazol-3-ium-5-yl)carbamimidate)	1227	I
Methiopropamine (N-methyl-1-(thiophen-2-yl)propan-2-amine)	1478	I
3-Fluoro-N-methylcathinone (3-FMC)	1233	I
Cathinone	1235	I
Methcathinone	1237	I
4-Fluoro-N-methylcathinone (4-FMC)	1238	I
Para-Methoxymethamphetamine (PMMA), 1-(4-1245IN methoxyphenyl)-N-methylpropan-2-amine	1245	I
Pentedrone (α-methylaminovalerophenone)	1246	I
Mephedrone (4-Methyl-N-methylcathinone)	1248	I
4-Methyl-N-ethylcathinone (4-MEC)	1249	I
Naphyrone	1258	I
N-Ethylamphetamine	1475	I
N,N-Dimethylamphetamine	1480	I
Fenethylline	1503	I
Aminorex	1585	I
4-Methylaminorex (cis isomer)	1590	I
4,4′-Dimethylaminorex (4,4′-DMAR; 4,5-dihydro-4-1595 I N methyl-5-(4-methylphenyl)-2-oxazolamine; 4-methyl-5-(4-methylphenyl)-4,5-dihydro-1,3-oxazol-2-amine).	1595	I
Gamma Hydroxybutyric Acid	2010	I

The company plans to import small quantities of the listed controlled substances for the National Institute on Drug Abuse for research activities. The company plans to import analytical reference standards for distribution to its customers for research and analytical purposes. No other activity for this drug code is authorized for this registration.

Approval of permit applications will occur only when the registrant's business activity is consistent with what is authorized under 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food and Drug Administration-approved or non-approved finished dosage forms for commercial sale.

Matthew Strait,

Deputy Assistant Administrator.

BILLING CODE 4410–09–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1186]

Bulk Manufacturer of Controlled Substances Application: Pisgah Laboratories Inc.

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Pisgah Laboratories Inc., has applied to be registered as a bulk

manufacturer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before June 26, 2023. Such persons may also file a written request for a hearing on the application on or before June 26, 2023.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.33(a), this is notice that on March 13, 2023, Pisgah Laboratories Inc., 3222 Old Hendersonville Highway, Pisgah Forest, North Carolina 28768, applied to be registered as a bulk manufacturer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
4-Bromo-2,5-dimethoxyphenethylamine	7392	I
Methylone (3,4-Methylenedioxy-N-methylcathinone)	7540	I
Difenoxin	9168	I
Amphetamine	1100	II
Lisdexamfetamine	1205	II
Methylphenidate	1724	II
Diphenoxylate	9170	II
Meperidine	9230	II
Methadone	9250	II

The company plans to bulk manufacture the above-listed controlled substances in bulk for internal research purposes and distribution to its customers. No other activities for these drug codes are authorized for this registration.

Matthew Strait,

Deputy Assistant Administrator.

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1182]

Importer of Controlled Substances Application: AndersonBrecon, Inc.

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: AndersonBrecon, Inc. has applied to be registered as an importer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before May 30, 2023. Such persons may also file a written request for a hearing on the application on or before May 30, 2023.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment. All requests for a hearing must be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/OALJ, 8701 Morrissette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrissette Drive, Springfield, Virginia 22152. All requests for a hearing should also be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrissette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.34(a), this is notice that on March 7, 2023, AndersonBrecon, Inc., 4545 Assembly Drive, Rockford, Illinois 61109–3081, applied to be registered as an importer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
Tetrahydrocannabinols	7370	I
3,4-Methylenedioxymethamphetamine	7405	I

The company plans to import the listed controlled substances for clinical trials studies only. No other activities for these drug codes are authorized for this registration.

Approval of permit applications will occur only when the registrant's business activity is consistent with what is authorized under 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food and Drug Administration-approved or

non-approved finished dosage forms for commercial sale.

BILLING CODE 4410–09–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree under the Clean Air Act

On April 20, 2023 the Department of Justice lodged a proposed consent decree with the United States District Court for the District of Utah in the lawsuit entitled *United States, State of North Dakota, and State of Wyoming* v. *MPLX, LP,* Civil Action No. 2:23–cv–00252–RJS.

The United States, State of North Dakota and State of Wyoming filed this lawsuit under the Clean Air Act. The complaint alleges multiple violations of the Leak Detection and Repair provisions and other requirements in the Clean Air Act's New Source Performance Standards and National Emissions Standards for Hazardous Air Pollutants. The consent decree will require defendant to take specified actions to come into compliance with the Clean Air Act, pay a civil penalty of $2 million, and take several pollution mitigation actions to reduce volatile organic compound emissions.

The publication of this notice opens a period for public comment on the proposed consent decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States, State of North Dakota, and State of Wyoming* v. *MPLX, LP,* D.J. Ref. No. 90–5–2–1–11374/2. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	*Send them to:*
By email	*pubcomment-ees.enrd@usdoj.gov.*
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

During the public comment period, the proposed consent decree may be examined and downloaded at this Justice Department website: *http://www.justice.gov/enrd/consent-decrees.* We will provide a paper copy of the proposed consent decree upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Please enclose a check or money order for $41.00 (25 cents per page reproduction cost) payable to the United States Treasury.

Jeffrey Sands,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

[FR Doc. 2023–08838 Filed 4–26–23; 8:45 am]

BILLING CODE 4410–15–P

DEPARTMENT OF JUSTICE

[OMB Number 1140–0070]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Revision of a Previously Approved Collection Application for Explosives License or Permit—ATF Form 5400.13/5400.16

AGENCY: Bureau of Alcohol, Tobacco, Firearms and Explosives, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Bureau of Alcohol, Tobacco, Firearms and Explosives, U.S. Department of Justice, is submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: The Department of Justice encourages public comment and will accept input until June 26, 2023.

FOR FURTHER INFORMATION CONTACT: If you have additional comments including on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Shawn Stevens, Explosives Industry Liaison, Federal Explosives Licensing Center, either by mail at 244 Needy Road, Martinsburg, WV 25405, by email at *Shawn.Stevens@atf.gov,* or by telephone at 304–616–4400.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the National Security Division, including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Evaluate whether and if so, how the quality, utility, and clarity of the information to be collected can be enhanced; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Abstract: Per 18 U.S.C. 845 (Licenses and user permits) applicants must submit ATF Form 5400.13/5400.16 to determine if the applicant is qualified to be a licensee or permittee under the provisions of the statute. The form will be submitted to ATF to determine whether the person who provided the information, is qualified to be issued a license or permit. The information collection (IC) OMB 1140–0070 (Application for Explosives License or Permit—ATF F 5400.13/5400.16) is being revised due to material changes to the form, such as a revised format and layout to improve user experience, removal of the Responsible Persons List along with accompanying sections, removal of the Explosives Storage Magazine Description Worksheet and replaced with a condensed version as a question.

Overview of This Information Collection

(1) *Type of Information Collection:* Revision of a currently approved collection.

(2) *The Title of the Form/Collection:* Application for Explosives License or Permit—ATF F 5400.13/5400.16

(3) *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* Form number (if applicable): ATF F 5400.13/5400.16. Component: Bureau of Alcohol, Tobacco, Firearms and Explosives, U.S. Department of Justice.

(4) *Affected public who will be asked or required to respond as well as the obligation:* Private Sector—business or other for-profit, not-for-profit institutions and individuals or households. The obligation to respond is required to obtain or retain a benefit.

(5) *An estimate of the total number of respondents, frequency of responses and the amount of time estimated for an average respondent to respond:* An estimated 10,200 respondents will complete this form once annually, and it will take each respondent approximately 1.5 hours to complete their responses.

(6) *An estimate of the total public burden (in hours) and annual cost burden associated with the collection:* The estimated annual public burden associated with this collection is 15,300 hours which is equal to 10,200 (total respondents) * 1(# of response per respondent) * 1.5 hours (total time taken to prepare each response). The annual cost burden for this collection is $51,600 as the fee associated with the collection ranges between $12–200 per applicant.

TOTAL ANNUAL BURDEN

Activity	Number of respondents	Frequency	Total annual responses	Time per response	Total annual burden (hours)	Rate for collection	Annual cost burden
ATF Form 5400.13/ 5400.16	10,200	1	10,200	1.5	15,300	$12–200	$51,600
Unduplicated Totals	10,200		10,200		15,300		51,600

If additional information is required contact: John R. Carlson, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 4W–218, Washington, DC 20530.

Dated: April 24, 2023.

John R. Carlson,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410–PF–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Under the Clean Air Act

On April 20, 2023 the Department of Justice lodged a proposed consent decree with the United States District Court for the District of Colorado in the lawsuit entitled *United States et al.* v. *Williams Companies, Inc. et al.,* Civil Action No. 1:23-cv-00994–KLM.

The United States, the Southern Ute Indian Tribe, the States of Alabama, Colorado, West Virginia, and Wyoming, and the Louisiana Department of Environmental Quality filed this lawsuit under the Clean Air Act. The complaint alleges multiple violations of the Leak Detection and Repair provisions and other requirements in the Clean Air Act's New Source Performance Standards and National Emissions Standards for Hazardous Air Pollutants. The consent decree requires the defendants to take specified actions to address the alleged violations, pay a civil penalty of $3,750,000, and take several pollution mitigation actions to reduce volatile organic compound emissions.

The publication of this notice opens a period for public comment on the proposed consent decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States et al.* v. *Williams Companies, Inc. et al.,* D.J. Ref. No. 90–5–2–1–06938/5. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	*Send them to:*
By email	*pubcomment-ees.enrd@usdoj.gov.*
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

During the public comment period, the proposed consent decree may be examined and downloaded at this Justice Department website: *http://www.justice.gov/enrd/consent-decrees.* We will provide a paper copy of the proposed consent decree upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Please enclose a check or money order for $66.00 (25 cents per page reproduction cost) payable to the United States Treasury.

Jeffrey Sands,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–15–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

Petition for Modification of Application of Existing Mandatory Safety Standards

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Notice.

SUMMARY: This notice is a summary of a petition for modification submitted to the Mine Safety and Health Administration (MSHA) by the party listed below.

DATES: All comments on the petition must be received by MSHA's Office of Standards, Regulations, and Variances on or before May 30, 2023.

ADDRESSES: You may submit comments identified by Docket No. MSHA–2023–0012 by any of the following methods:

1. *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments for MSHA–2023–0012.
2. *Fax:* 202–693–9441.
3. *Email: petitioncomments@dol.gov.*
4. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, 201 12th Street South, Suite 4E401, Arlington, Virginia 22202–5452.

Attention: S. Aromie Noe, Director, Office of Standards, Regulations, and Variances. Persons delivering documents are required to check in at the receptionist's desk in Suite 4E401. Individuals may inspect copies of the petition and comments during normal business hours at the address listed above. Before visiting MSHA in person, call 202–693–9455 to make an appointment, in keeping with the Department of Labor's COVID–19 policy. Special health precautions may be required.

FOR FURTHER INFORMATION CONTACT: S. Aromie Noe, Office of Standards, Regulations, and Variances at 202–693–9440 (voice), *Petitionsformodification@dol.gov* (email), or 202–693–9441 (fax). [These are not toll-free numbers.]

SUPPLEMENTARY INFORMATION: Section 101(c) of the Federal Mine Safety and Health Act of 1977 and Title 30 of the Code of Federal Regulations (CFR) part 44 govern the application, processing, and disposition of petitions for modification.

I. Background

Section 101(c) of the Federal Mine Safety and Health Act of 1977 (Mine Act) allows the mine operator or representative of miners to file a petition to modify the application of any mandatory safety standard to a coal or other mine if the Secretary of Labor determines that:

1. An alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded the miners of such mine by such standard; or
2. The application of such standard to such mine will result in a diminution of safety to the miners in such mine.

In addition, sections 44.10 and 44.11 of 30 CFR establish the requirements for filing petitions for modification.

II. Petition for Modification

Docket Number: M–2023–007–C.

Petitioner: Marfork Coal Company, LLC, P.O. Box 457, Whitesville, WV 25209.

Mine: Glen Alum Tunnel Mine, MSHA ID No. 46–09375, located in Raleigh County, West Virginia.

Regulation Affected: 30 CFR 75.1700, Oil and gas wells.

Modification Request: The petitioner requests a modification of 30 CFR 75.1700 as it relates to oil and gas wells. Specifically, the petitioner is proposing to mine through or near (within the 300 feet diameter safety barrier) plugged oil or gas wells.

The petitioner states that:

(a) The Glen Alum Tunnel Mine extracts coal from the Glen Alum Tunnel coal seam. The mine operates one continuous mining machine section producing coal. Future workplans include adding an additional continuous mining machine.

(b) The mine will use a room and pillar method of mining.

(c) In the reserve area of the mine, many oil and gas wells exist.

The petitioner proposes the following alternative method:

(a) Prior to plugging an oil or gas well, the following procedures shall be followed:

(1) A diligent effort shall be made to clean the well to the original total depth. The mine operator shall contact the District Manager prior to stopping the operation to pull casing or clean out the total depth of the well.

(2) If this depth cannot be reached, and the total depth if the well is less than 4,000 feet, the operator shall completely clean out the well from the surface to at least 200 feet below the base of the lowest mineable coal seam, unless the District Manager requires cleaning to a greater depth based on the geological strata or pressure within the well.

(3) The operator shall provide the District Manager with all information it possesses concerning the geological nature of the strata and the pressure of the well. If the total depth of the well is 4,000 feet or greater, the operator shall completely clean out the well from the surface to at least 400 feet below the base of the lowest mineable coal seam. The operator shall remove all material from the entire diameter of the well, wall to wall. If the total depth of the well is unknown and there is no historical information, the mine operator must contact the District Manager before proceeding.

(4) The operator shall prepare down-hole logs for each well. Logs shall consist of a caliper survey, a gamma log, a bond log, and deviation survey for determining the top, bottom, and thickness of all coal seams down to the lowest mineable coal seam, potential hydrocarbon producing strata, and the

location for a bridge plug. In addition, a journal shall be maintained describing: the depth of each material encountered; the nature of each material encountered; bit size and type used to drill each portion of the hole; length and type of each material used to plug the well; length of casing(s) removed, perforated, ripped, or left in place; any sections where casing was cut or milled; and other pertinent information concerning the cleaning and sealing the well. Invoices, work-orders, and other records relating to all work on the well shall be maintained as part of the logs and provided to MSHA upon request.

(5) When cleaning out the well as described in alternative method section (a), the operator shall make a diligent effort to remove all of the casing in the well. After the well is completely cleaned out and all the casing removed, the well shall be plugged to the total depth by pumping cement slurry and pressurizing to at least 200 pounds per square inch (psi). If the casing cannot be removed, it shall be cut, milled, perforated, or ripped at all mineable coal seam levels to facilitate the removal of any remaining casing in the coal seam by the mining equipment. Any casing which remains shall be perforated of ripped to permit the injection of cement into voids within and around the well.

(6) All casing remaining at mineable coal seam levels shall be perforated or ripped at least every 5 feet from 10 feet below the coal seam to 10 feet above the coal seam. Perforations or rips are required at least every 50 feet from 200 feet (400 feet if the total well depth is 4,000 feet or greater) below the base of the lowest mineable coal seam up to 100 feet above the uppermost mineable coal seam. The mine operator shall take appropriate steps to ensure that the annulus between the casing and the well walls are filled with expanding (minimum 0.5 percent expansion upon setting) cement and contain no voids.

(7) If it is not possible to remove all of the casing, the operator shall notify the District Manager before any other work is performed. If the well cannot be cleaned out or the casing removed, the operator shall prepare the well as described from the surface to at least 200 feet below the base of the lowest mineable coal seam for wells 4,000 feet or greater, unless the District Manger requires cleaning out and removal of casing to a greater depth based on the geological strata or pressure within the well.

(8) If the District Manager concludes that the completely cleaned out well is emitting excessive amounts of gas, the operator shall place a mechanical bridge plug in the well. It shall be placed in a competent stratum at least 200 feet (400 feet if the total well depth is 4,000 feet or greater) below the base of the lowest mineable coal seam, but above the top of the uppermost hydrocarbon producing stratum, unless the District Manager requires a greater distance based on the geological strata or the pressure within the well. The operator shall provide the District Manager with all information it possesses concerning the geological nature of the strata and the pressure of the well. If it is not possible to set a mechanical bridge plug, an appropriately sized packer may be used. The mine operator shall document what has been done to ''kill the well'' and plug the hydrocarbon producing strata. If the upper-most hydrocarbon producing stratum is within 300 feet of the base of the lowest minable coal seam, the operator shall properly place mechanical bridge plugs as described in alternative method section (a) to isolate the hydrocarbon producing stratum from the expanding cement plug. The operator shall place a minimum of 200 feet (400 feet if the total well depth is 4,000 feet or greater) of expanding cement below the lowest mineable coal seam, unless the District Manager requires a greater distance based on the geological strata or the pressure within the well.

(b) The following procedures shall be followed for plugging or re-plugging oil or gas wells to the surface after completely cleaning out the well as previously specified:

(1) The operator shall pump expanding cement slurry down the well to form a plug which runs from at least 200 feet (400 feet if the total well depth is 4,000 feet or greater) below the base of the lowest mineable coal seam (or lower if required by the District Manager based on the geological strata or the pressure within the well) to the surface. The expanding cement will be placed in the well under a pressure of at least 200 psi. Portland cement or a lightweight cement mixture may be used to fill the area from 100 feet above the top of the uppermost mineable coal seam (or higher if required by the District Manager based on the geological strata or the pressure within the well) to the surface.

(2) The operator shall embed steel turnings or other small magnetic particles in the top of the cement near the surface to serve as a permanent magnetic monument of the well. In the alternative, a 4 inch or larger diameter casing, set in cement, shall extend at least 36 inches above the ground level with the American Petroleum Institute (API) well number engraved or welded on the casing. When the hole cannot not be marked with a physical monument (*e.g.,* prime farmland), high-resolution GPS coordinates (one-half meter resolution) shall be required.

(c) The following procedures shall be followed for plugging or re-plugging oil and gas wells that are to be used as degasification boreholes after completely cleaning out the well as previously specified:

(1) The operator shall set a cement plug in the well by pumping an expanding cement slurry down the tubing to provide at least 200 feet (400 feet if the total well depth is 4,000 feet of greater) of expanding cement below the lowest mineable coal seam, unless the District Manager requires a greater depth based on the geological strata or the pressure within the well. The expanding cement will be placed in the well under a pressure of at least 200 psi. The top of the expanding cement shall extend at least 50 feet above the top of the coal seam being mined, unless the District Manager requires a greater distance based on the geological strata or the pressure within the well.

(2) The operator shall securely grout into the bedrock of the upper portion of the degasification well a suitable casing to protect it. The remainder of the well may be cased or uncased.

(3) The operator shall fit the top of the degasification casing with a wellhead equipped as required by the District Manager in the approved ventilation plan. Such equipment may include check valves, shut-in valves, sampling ports, flame arrestor equipment, and security fencing.

(4) Operation of the degasification well shall be addressed in the approved ventilation plan. This may include periodic tests of methane levels and limits on the minimum methane concentrations that may be extracted.

(5) After the area of the coal mine that is degassed by a well is sealed or the coal mine is abandoned, the operator shall plug all degasification wells using the following procedures:

(i) The operator shall insert a tube to the bottom of the well or, if not possible, to at least 100 feet above the coal seam being mined. Any blockage must be removed to ensure that the tube can be inserted to this depth.

(ii) The operator shall set a cement plug in the well by pumping Portland cement or a lightweight cement mixture down the tubing until the well is filled to the surface.

(iii) The operator shall embed steel turnings or other small magnetic particles in the top of the cement near the surface to serve as a permanent magnetic monument of the well. In the alternative, a 4 inch or larger casing, set in cement, shall extend at least 36 inches above the ground level with the API well number engraved or welded on the casing.

(d) The following provisions shall apply to all wells which the operator determines, and the MSHA District Manager agrees, cannot be completely cleaned out due to damage to the well caused by subsidence, caving, or other factors.

(1) The operator shall drill a hole adjacent and parallel to the well to a depth of at least 200 feet (400 feet if the total well depth is 4,000 feet or greater) below the lowest mineable coal seam, unless the District Manager requires a greater depth based on the geological strata or the pressure within the well.

(2) The operator shall use a geophysical sensing device to locate any casing which may remain in the well.

(3) If the well contains casings, the operator shall drill into the well from the parallel hole. From 10 feet below the coal seam to 10 feet above the coal seam, the operator shall perforate or rip all casings at intervals of at least every 5 feet. Beyond this distance, the operator shall perforate or rip at least every 50 feet from at least 200 feet (400 feet if the total well depth is 4,000 feet or greater) below the base of the lowest mineable coal seam up to 100 feet above the seam being mined, unless the District Manager requires a greater distance based on the geological strata or the pressure within the well. The operator shall fill the annulus between the casings and the well wall with expanding (minimum 0.5 percent expansion upon setting) cement and shall ensure that these areas contain no voids. If the operator, using a casing bond log, can demonstrate to the satisfaction of the District Manager that the annulus of the well is adequately sealed with cement, the operator shall not be required to perforate or rip the casing for that particular well or fill these areas with cement. When multiple casing and tubing strings are present in the coal horizon(s), any remaining casing shall be ripped or perforated and filled with expanding cement. An acceptable casing bond log for each casing and tubing string can be used in lieu of ripping or perforating multiple strings.

(4) Where the operator determines, and the District Manager agrees, that there is insufficient casing in the well to allow the methods previously outlined to be used, the operator shall use a horizontal hydraulic fracturing technique to intercept the original well. From at least 200 feet (400 feet if the total well depth is 4,000 feet or greater) below the base of the lowest mineable seam to a point at least 50 feet above the seam being mined, the operator shall fracture in at least 6 places at intervals to be agree upon by the operator and the District Manager after considering the geological strata and the pressure within the well. The operator shall pump expanding cement into the fractured well in sufficient quantities and in a manner which fills all intercepted voids.

(5) The operator shall prepare down-hole logs for each well. Logs shall consist of a caliper survey, gamma log, a bond log, and a deviation survey for determining the top, bottom, and thickness of all coal seams down to the lowest mineable coal seam, potential hydrocarbon producing strata, and the location of any existing bridge plug. The operator shall obtain the logs from the adjacent hole rather than the well if the condition of the well makes it impractical to insert the equipment necessary to obtain the log.

(6) A journal shall be maintained describing: the depth of each material encountered; the nature of each material encountered; bit size and type used to drill each portion of the hole; length and type of each material used to plug the well; length of casing(s) removed, perforated, or ripped, or left in place; any sections where casing was cut or milled; and other pertinent information concerning sealing the well. Invoices, work-orders, and other records relating to all work on the well shall be maintained as part of this journal and provided to MSHA upon request.

(7) After the operator has plugged the well, the operator shall plug the adjacent hole, from the bottom to the surface, with Portland cement or a lightweight cement mixture. The operator shall embed steel turnings or other small magnetic particles in the top of the cement near the surface to serve as a permanent magnetic monument of the well. In the alternative, a 4 inch or larger casing, set in cement, shall extend at least 36 inches above the ground level. A combination of the methods outlined previously may have to be used in a single well, depending upon the conditions of the hole and the presence of casings. The operator and the District Manager shall discuss the nature of each hole and if the District Manager requires more than one method be utilized. The mine operator may submit an alternative plan to the District Manager for approval to use different methods to address wells that cannot be completely cleaned out. Additional documentation and certification by a registered petroleum engineer to support the proposed alternative methods shall be submitted if required by the District Manager.

(e) The following procedures shall be followed after approval has been granted by the District Manager to mine within the safety barrier established by 30 CFR 75.1700 or to mine through a plugged or re-plugged well.

(1) A representative of the operator, a representative of the miners, the appropriate State agency, or the MSHA District Manager may request that a conference be conducted prior to intersecting through any plugged or re-plugged well. The party requesting the conference shall notify all other parties listed above within a reasonable time prior to the conference to provide opportunity for participation. The purpose of the conference shall be to review, evaluate, and accommodate any abnormal or unusual circumstance related to the condition of the well or surrounding strata when such conditions are encountered.

(2) The operator shall intersect a well on a shift approved by the District Manager. The operator shall notify the District Manager and the miners' representative in sufficient time prior to intersecting a well to provide an opportunity to have representatives present.

(3) When using continuous mining methods, the operator shall install drivage sights at the last open crosscut near the place to be mined to ensure intersection of the well. The drivage sites shall not be more than 50 feet from the well.

(4) When using longwall mining methods, distance markers shall be installed on 5-foot centers for a distance of 50 feet in advance of the well in the headgate entry and in the tailgate entry.

(5) The operator shall ensure that fire-fighting equipment including fire extinguishers, rock dust, and sufficient fire hose to reach the working face area of the well intersection (when either the conventional or continuous mining method is used) is available and operable during all well intersections. The fire hose shall be located in the last open crosscut of the entry or room. The operator shall maintain the water line to the belt conveyor tailpiece along with a sufficient amount of fire hose to reach the farthest point of penetration on the section. When the longwall mining method is used, a hose to the longwall water supply is sufficient.

(6) The operator shall ensure that sufficient supplies of roof support and ventilation materials shall be available and located at the last open crosscut. In addition, emergency plugs and suitable sealing materials shall be available in the immediate area of the well intersection.

(7) On the shift prior to intersecting the well, the operator shall test all equipment and check it for permissibility. Water sprays, water

pressures, and water flow rates used for dust and spark suppression shall be examined and any deficiencies corrected.

(8) The operator shall calibrate the methane monitor(s) on the longwall, continuous mining machine, or cutting machine and loading machine on the shift prior to intersecting the well.

(9) When mining is in progress, the operator shall perform tests for methane with a handheld methane detector at least every 10 minutes from the time that mining with the continuous mining machine or longwall face is within 30 feet of the well until the well is intersected. During the actual cutting process, no individual shall be allowed on the return side until the well intersection has been completed, and the area has been examined and declared safe. All workplace examinations on the return side of the shearer will be conducted while the shearer is idle. The operator's most current approved ventilation plan will be followed at all times unless the District Manager requires a greater air velocity for the intersect.

(10) When using continuous or conventional mining methods, the working place shall be free from accumulations of coal dust and coal spillages, and rock dust shall be placed on the roof, rib, and floor to within 20 feet of the face when intersecting the well. On longwall sections, rock dusting shall be conducted and placed on the roof, rib, and floor up to both the headgate and tailgate gob.

(11) When the well is intersected, the operator shall de-energize all equipment and thoroughly examine and determine the area is safe before permitting mining to resume.

(12) After a well has been intersected and the working place determined to be safe, mining shall continue inby the well a sufficient distance to permit adequate ventilation around the area of the well.

(13) When necessary, torches shall be used for inadequately or inaccurately cut or milled casings. No open flame shall be permitted in the area until adequate ventilation has been established around the well bore and methane levels of less than 1.0 percent are present in all areas that will be exposed to flames and sparks from the torch. The operator shall apply a thick layer of rock dust to the roof, face, floor, ribs and any exposed coal within 20 feet of the casing prior to any use of torches.

(14) Non-sparking (brass) tools shall be located on the working section and shall be used exclusively to expose and examine cased wells.

(15) No person shall be permitted in the area of the well intersection except those engaged in the operation, including company personnel, representatives of the miners, MSHA personnel, and personnel from the appropriate State agency.

(16) The operator shall alert all personnel in the mine to the planned intersection of the well prior to their going underground if the planned intersection is to occur during their shift. This warning shall be repeated for all shifts until the well has been mined through.

(17) The well intersection shall be under the direct supervision of a certified individual. Instructions concerning the well intersection shall be issued only by the certified individual in charge.

(18) If the mine operator cannot find the well in the middle of the panel or a gate section misses the anticipated intersection, mining shall cease and the District Manager shall be notified.

(f) A copy of the PDO shall be maintained at the mine and be available to the miners.

(g) If the well is not plugged to the total depth of all mineable coal seams identified in the core hole logs, any coal seams beneath the lowest plug shall remain subject to the barrier requirements of 30 CFR 75.1700.

(h) All necessary safety precautions and safe practices required by MSHA regulations and State regulatory agencies with jurisdiction over the plugging site shall be followed.

(i) All miners involved in the plugging or re-plugging operations shall be trained on the contents of the PDO prior to starting the process.

(j) Mechanical bridge plugs shall incorporate the best available technologies required or recognized by the State regulatory agency and/or oil and gas industry.

(k) Within 30 days after the PDO becomes final, the operator shall submit proposed revisions for its approved 30 CFR part 48 training plan to the District Manager. These proposed revisions shall include initial and refresher training on compliance with the terms and conditions stated in the PDO. The operator shall provide all miners involved in well intersection with training on the requirements of the PDO prior to mining within 150 feet of the next well intended to be mined through.

(l) The responsible person required under 30 CFR 75.1501 shall be responsible for well intersection emergencies. The well intersection procedures shall be reviewed by the responsible person prior to any planned intersection.

(m) Within 30 days after the PDO becomes final, the operator shall submit proposed revisions for its approved mine emergency evacuation and firefighting program of instruction required under 30 CFR 75.1502. The operator shall revise the program of instruction to include the hazards and evacuation procedures to be used for well intersections. All underground miners will be trained in this revised plan within 30 days of the submittal.

In support of the proposed alternative method, the petitioner submitted a map of well locations.

The petitioner asserts that the alternate method proposed will at all times guarantee no less than the same measure of protection afforded the miners under the mandatory standard.

Song-ae Aromie Noe,

Director, Office of Standards, Regulations, and Variances.

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket No. OSHA–2023–0003]

National Advisory Committee on Occupational Safety and Health (NACOSH): Notice of Meeting

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Notice of NACOSH meeting.

SUMMARY: The National Advisory Committee on Occupational Safety and Health (NACOSH) will meet Wednesday, May 31, 2023, in a hybrid format. Committee members will meet in person; the public is invited to participate either in person or virtually via WebEx.

DATES: The NACOSH will meet from 9:00 a.m. to 4:00 p.m., ET, Wednesday, May 31, 2023.

ADDRESSES:

Submission of comments and requests to speak: Comments and requests to speak at the NACOSH meeting, including attachments, must be submitted electronically at *www.regulations.gov,* the Federal eRulemaking Portal by May 15, 2023. Comments must identify the docket number for this **Federal Register** notice (Docket No. OSHA–2023–0003). Follow the online instructions for submitting comments.

Registration: All persons wishing to attend the meeting in-person or virtually must register via the registration link on

the NACOSH web page at *https://www.osha.gov/advisorycommittee/nacosh.* Upon registration, in-person attendees will receive directions for participation and virtual attendees will receive a WebEx link for remote access to the meeting. At this time, OSHA is limiting in-person attendance to 25 members of the public, to be determined based on the time requests are made via the registration link.

Requests for special accommodations: Submit requests for special accommodations, including translation services for this NACOSH workgroup meeting by May 15, 2023, to Ms. Christie Garner, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor; telephone: (202) 693–2246; email: *garner.christie@dol.gov.*

Instructions: All submissions must include the agency name and the OSHA docket number for this **Federal Register** notice (Docket No. OSHA–2023–0003). OSHA will place comments and requests to speak, including personal information, in the public docket, which may be available online. Therefore, OSHA cautions interested parties about submitting personal information such as Social Security numbers and birthdates.

Docket: To read or download documents in the public docket for this NACOSH meeting, go to *www.regulations.gov.* All documents in the public docket are listed in the index; however, some documents (*e.g.,* copyrighted material) are not publicly available to read or download through *www.regulations.gov.* All submissions, including copyrighted material, are available for inspection through the OSHA Docket Office. Contact the OSHA Docket Office at (202) 693–2350 (TTY (877) 889–5627) for assistance in locating docket submissions.

FOR FURTHER INFORMATION CONTACT:

For press inquiries: Mr. Frank Meilinger, Director, OSHA Office of Communications, U.S. Department of Labor; telephone: (202) 693–1999; email: *meilinger.francis2@dol.gov.*

For general information about NACOSH: Ms. Lisa Long, Deputy Director, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor; telephone: (202) 693–2409; email: *long.lisa@dol.gov.*

Telecommunication requirements: For additional information about the telecommunication requirements for the meeting, please contact Ms. Christie Garner, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor; telephone: (202) 693–2246; email: *garner.christie@dol.gov.*

For copies of this ***Federal Register*** *Notice:* Electronic copies of this **Federal Register** notice are available at *www.regulations.gov.* This notice, as well as news releases and other relevant information, are also available at OSHA's web page at *https://www.osha.gov/advisorycommittee/nacosh.*

SUPPLEMENTARY INFORMATION:

I. Background

NACOSH was established by Section 7(a) of the Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651, 656) to advise, consult with, and make recommendations to the Secretary of Labor and the Secretary of Health and Human Services on matters relating to the administration of the OSH Act. NACOSH is a continuing advisory committee of indefinite duration.

NACOSH operates in accordance with the Federal Advisory Committee Act (FACA) (5 U.S.C. App.2), its implementing regulations (41 CFR part 102–3), and OSHA's regulations on NACOSH (29 CFR 1912.5 and 29 CFR part 1912a).

II. Meeting Information

Public attendance will be in a hybrid format, either in person or virtually via WebEx. Meeting information will be posted in the Docket (Docket No. OSHA–2023–0003) and on the NACOSH web page, *https://www.osha.gov/advisorycommittee/nacosh,* prior to the meeting.

The NACOSH will meet from 9:00 a.m. to 4:00 p.m., ET on May 31, 2023.

Meeting agenda: The tentative agenda for this meeting includes:

- Introduction of new members;
- NACOSH membership update;
- OSHA Update;
- The National Institute for Occupational Safety and Health (NIOSH) Update;
- Report and discussion from Heat Injury and Illness Prevention Work Group on Potential Elements of a Proposed Heat Injury and Illness Prevention Standard; and
- Whistleblower Discussion.

Authority and Signature

James S. Frederick, Deputy Assistant Secretary of Labor for Occupational Safety and Health, authorized the preparation of this notice under the authority granted by 29 U.S.C. 655(b)(1) and 656(b), 5 U.S.C. App. 2, 29 CFR parts 1912 and 1912a, and Secretary of Labor's Order No. 8–2020 (85 FR 58393).

Signed at Washington, DC, on April 20, 2023.

James S. Frederick,

Deputy Assistant Secretary for Occupational Safety and Health.

[FR Doc. 2023–08902 Filed 4–26–23; 8:45 am]

BILLING CODE 4510–26–P

OFFICE OF MANAGEMENT AND BUDGET

Executive Order 14081 Advancing Biotechnology and Biomanufacturing Innovation for a Sustainable, Safe, and Secure American Bioeconomy—Request for Information; National Biotechnology and Biomanufacturing Initiative—Measuring the Bioeconomy

AGENCY: Office of Information and Regulatory Affairs, Office of Management and Budget, Executive Office of the President.

ACTION: Request for information.

SUMMARY: The Chief Statistician of the United States (CSOTUS) in the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs, was charged in the Executive Order (E.O. 14081), ''Advancing Biotechnology and Biomanufacturing Innovation for a Sustainable, Safe, and Secure American Bioeconomy,'' with improving and enhancing Federal statistical data collection designed to characterize and measure the economic value of the U.S. bioeconomy. The CSOTUS was also charged with establishing an Interagency Technical Working Group to recommend bioeconomy-related revisions for the North American Industry Classification System (NAICS) and the North American Product Classification System (NAPCS).[1] The bioeconomy refers to a segment of the total economy utilizing or derived from biological resources, and includes manufacturing processes, technologies, products and services. These may encompass, wholly or in part, industries and products including fuel, food, medicine, chemicals, and technology. This **Federal Register** Notice (FRN) is a Request for Information (RFI) seeking public input on existing or potential bioeconomy-related industries and products that are established, emerging, or currently embedded in existing industry/manufacturing processes.

[1] Executive Order 14081 of September 12, 2022 (Advancing Biotechnology and Biomanufacturing Innovation for a Sustainable, Safe, and Secure American Bioeconomy)—*See https://www.federalregister.gov/documents/2022/09/15/2022-20167/advancing-biotechnology-and-biomanufacturing-innovation-for-a-sustainable-safe-and-secure-american.*

DATES: To ensure consideration of comments on potential bioeconomy-related industries and products solicited in this notice, please submit all comments in writing as soon as possible, but no later than 45 days from the publication date of this RFI. Send comments on or before June 12, 2023. Because of delays in the receipt of regular mail related to security screening, respondents are encouraged to send comments electronically (see **ADDRESSES** section, below).

ADDRESSES: Submit comments through *www.regulations.gov,* a Federal E-Government website that allows the public to find, review, and submit comments on documents that agencies have published in the **Federal Register** and that are open for comment. Enter ''OMB–2023–0012'' (in quotes) in the Comment or Submission search box, click Go and follow the instructions for submitting comments.

Comments received by the date specified above will be included as part of the official record. Please include the Docket ID (OMB–2023–0012) and the phrase ''National Biotechnology and Biomanufacturing Initiative—Measuring the Bioeconomy'' at the beginning of your comments. Due to time constraints, electronic submissions received after the deadline cannot be ensured to be incorporated or taken into consideration.

Please indicate which questions in the **SUPPLEMENTARY INFORMATION** section you are responding to.

Privacy Notice: Information submitted in response to this RFI will be maintained in the OMB Public Input System of Records, OMB/INPUT/01 88 FR 20913. OMB generally makes comments received from members of the public available for public viewing on the Federal Rulemaking Portal at *https://www.regulations.gov.* As such, commenters should not include information that they do not wish to make publicly available, including information of a confidential nature, such as sensitive personal information or proprietary information. Please note that if you submit your email address, it will be automatically captured and included as part of the comment that is placed in the public docket; however, *www.regulations.gov* does include the option of commenting anonymously. For more detail about how OMB may maintain and disclose submitted information, please review the System of Records Notice at 88 FR 20913.

Electronic Availability: **Federal Register** notices are available electronically at *http://www.regulations.gov.* The NAICS website at *www.census.gov/naics* contains NAICS United States **Federal Register** notices, Economic Classification Policy Committee (ECPC) Issues Papers, ECPC Reports, the structures, industry definitions, and related documents for all versions of NAICS United States.

Public Review Procedure: All comments and proposals received in response to this notice will be available for public inspection.

Instructions: Response to this RFI is voluntary. Respondents may provide input on any aspects of this solicitation. OMB is particularly interested in receiving comments on the questions posed by the Bioeconomy Interagency Technical Working Group (Working Group) tasked with developing recommendations for revisions to the NAICS, and/or the NAPCS. OMB's established process for updating existing Statistical Policy Directives includes technical evaluation of the current standard by an interagency working group composed of career Federal subject matter experts; additional technical research, testing, and analysis to close identified gaps; and solicitation and consideration of public comment on ways to improve the standard.

The final decisions regarding any changes to the standards are made by OMB. To provide useful information to the Working Group in their ongoing deliberations and ultimately to OMB in reviewing the Working Group's final recommendations, responders should acquaint themselves with current NAICS [2] and NAPCS [3] structure and current classifications. A brief description of the NAICS and NAPCS classification processes, structures and uses, as well as a description of this Interagency Technical Working Group (ITWG) are included in the **SUPPLEMENTARY INFORMATION** section.

An effective response should be concise, and if summarizing or depending on published works, please include citations and electronic links to reference materials, studies, research, and other empirical data that are not widely available. Questions posed below are those the Working Group deemed most significant and relevant to the its recommendations. and do not necessarily reflect or represent the positions of OMB or the agencies participating in the Working Group. The questions have been sorted into broad categories for ease of review.

Any information obtained from this RFI is intended to be used by the Government on a non-attribution basis for planning and strategy development. OMB will not respond to individual submissions. A response to this RFI will not be viewed as a binding commitment to develop or pursue the project or ideas discussed. This RFI is not accepting applications for financial assistance or financial incentives.

FOR FURTHER INFORMATION CONTACT: For information about this request for comments, contact Anthony Nerino, Office of Management and Budget, 9215 New Executive Office Building, 725 17th St. NW, Washington, DC 20503, telephone (202) 395–1128.

SUPPLEMENTARY INFORMATION:

I. Background

The bioeconomy refers to a segment of the total economy utilizing and/or derived from biological resources, and includes manufacturing processes, technologies, products, and services. These may encompass, wholly or in part, industries and products including fuel, food, medicine, chemicals, and technology. Advances in biotechnology and biomanufacturing play a substantial role in addressing a range of issues including health, climate change, energy, food security, agriculture, labor opportunities and economic growth.

E.O. 14081 directed Federal agencies to foster innovative solutions in health, climate change, energy, food security, agriculture, supply chain resilience, and national and economic security. A critical component of this broad effort is an accurate measurement of the bioeconomy. Accurate data on bioeconomic manufacturing, industrial, and service activities may be used to assess growth across industrial sectors, inform Federal investments in research and development, guide private sector investments for scaling manufacturing efforts, assess emerging national and international economic opportunities, and foster the equitable distribution of health, food, and labor opportunities. Measuring U.S. industrial outputs and products provides critical information to a wide variety of private sector and Federal government stakeholders and requires accurate, reliable, independent measures that are also congruent with international measurements.

As part of its role as coordinator of the Federal statistical system under the

[2] North American Industrial Classification System—See *http://www.census.gov/naics.*

[3] North American Product Classification System—*See https://www.census.gov/naics/napcs.*

authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3504(e)) (PRA), OMB, through the Chief Statistician of the United States (CSOTUS), must ensure the efficiency and effectiveness of the system as well as the integrity, objectivity, impartiality, utility, and confidentiality of information collected for statistical purposes.[4] This statute also charges OMB with developing and overseeing the implementation of Government-wide principles, policies, standards, and guidelines concerning the development, presentation, and dissemination of statistical information.[5] OMB maintains a set of statistical policy directives to implement these requirements and the NAICS is required by Statistical Policy Directive #8, North American Industrial Classification System: Classification of Establishments.[6]

II. NAICS and NAPCS

Recommendations to the Working Group on potential revisions to the NAICS and NAPCS requires some insight into what these classification systems are and how they are used. The NAICS is used to generate statistics on the U.S. and North American Economy. Additional information and updates for 2022 can be found in the **Federal Register** Notice (86 FR 35350, pp 35350–35365, Doc# 2021–14249).[7]

NAICS: NAICS is a system for classifying establishments (individual business locations) by type of economic activity. Its purposes are: (1) to facilitate the collection, tabulation, presentation, and analysis of data relating to establishments, and (2) to promote uniformity and comparability in the presentation and analysis of statistical data describing the North American economy. Federal statistical agencies use NAICS to collect and/or publish data by industry. It is also widely used by State agencies, trade associations, private businesses, and other organizations.

Mexico's Instituto Nacional de Estadística y Geografía (INEGI), Statistics Canada, and the United States Office of Management and Budget (OMB), through the ECPC, collaborated on NAICS to make the industry statistics produced by the three countries comparable. NAICS is the first industry classification system developed in accordance with a single principle of aggregation (*i.e.,* producing units that use similar production processes should be grouped together in the classification). NAICS also reflects changes in technology and in the growth and diversification of services in recent decades. Industry statistics presented using NAICS are extensively comparable with statistics compiled according to the latest revision of the United Nation's International Standard Industrial Classification of All Economic Activities (ISIC, Revision 4).

For these three North American countries, NAICS provides a consistent framework for the collection, tabulation, presentation, and analysis of industry statistics used by government policy analysts, academics, researchers, the business community, and the public. Please note that NAICS is designed and maintained solely for statistical purposes to improve and keep current this Federal statistical standard. Consequently, although the classification may also be used for various nonstatistical purposes (*e.g.,* for administrative, regulatory, or taxation functions), the requirements of government agencies or private users that choose to use NAICS for nonstatistical purposes play no role in its development or revision.

Four principles that guide NAICS development are:

(1) NAICS is erected on a production-oriented conceptual framework. This means that producing units that use the same or similar production processes are grouped together in NAICS.

(2) NAICS gives special attention to developing production-oriented classifications for: (a) new and emerging industries, (b) service industries in general, and (c) industries engaged in the production of advanced technologies.

(3) Time series continuity is maintained to the extent possible.

(4) The system strives for compatibility with the two-digit level of the International Standard Industrial Classification of All Economic Activities (ISIC, Revision 4) of the United Nations.

NAICS uses a hierarchical structure to classify establishments from the broadest level to the most detailed level using the following format:

Sector	2-digit	Sectors represent the highest level of aggregation. There are 20 sectors in NAICS.
Subsector	3-digit	Subsectors represent the next, more detailed level of aggregation. There are 96 subsectors in NAICS 2022.
Industry Group	4-digit	Industry groups are more detailed than subsectors. There are 308 industry groups in NAICS 2022.
NAICS Industry	5-digit	NAICS industries, in most cases, represent the lowest level of three-country comparability. There are 698 five-digit industries in NAICS 2022.
Sector	2-digit	Sectors represent the highest level of aggregation. There are 20 sectors in NAICS.
National Industry	6-digit	National industries are the most detailed level and represent the national level detail. There are 1,012 national industries in NAICS United States 2022.

To ensure the accuracy, timeliness, and relevance of the classification, NAICS is reviewed every five years to determine what, if any, changes are required.

NAICS 2022 is the fifth revision since OMB adopted NAICS in 1997. In response to public proposals during the NAICS 2022 revision process, the ECPC considered the feasibility, value, and impact of including new industries for the bioeconomy. In its final set of recommendations to OMB, the ECPC did not include bioeconomy revisions in NAICS 2022, but indicated that NAPCS 2022 could be used to identify new products of the bioeconomy, such as biobased chemical inputs, and to inform future revision cycles on significant emerging industries of the bioeconomy.

The ECPC cites concerns regarding the availability of data for emerging bioeconomy industries due in part to disclosure considerations. ''However, the ECPC recognized that economic, statistical, and policy implications can arise when the industry classification system does not identify and account for important economic developments. The ECPC acknowledged that balancing the

[5] Paperwork Reduction Act 1995 44I.S.C. 3504(e)(3)—*See USCODE-2021-title44-chap35-subchapI-sec3504.pdf* (*govinfo.gov*).

[6] Statistical Policy Directive #8—*See 2021-27536.pdf* (*govinfo.gov*).

[7] NAICS *See*—**Federal Register**: North American Industry Classification System (NAICS) Updates for 2022; Update of Statistical Policy Directive No. 8, Standard Industrial Classification of Establishments; and Elimination of Statistical Policy Directive No. 9, Standard Industrial Classification of Enterprises.

costs of change against the potential for more accurate and relevant economic statistics will require significant input from data producers, data providers, and data users.'' [8] OMB accepted the recommendations of the ECPC, and in its final decision, OMB noted the ''importance of continued research and stakeholder engagement on [the bioeconomy] toward maintaining a relevant and objective statistical classification standard.'' [9]

NAPCS: NAPCS is a comprehensive, market- or demand-based, hierarchical classification system for products (goods and services) that: (a) is not industry-of-origin based, but can be linked to the NAICS industry structure, (b) is consistent across the three North American countries, and (c) promotes improvements in the identification and classification of service products across international classification systems, such as the Central Product Classification System of the United Nations.

NAPCS, a product classification system, and NAICS, an industry classification system, are independent but complementary. A product produced by multiple industries carries the same title, definition, and code in NAPCS, regardless of its industries of origin. Products can be linked to the industries that produce them, and industries can be linked to the products they produce.

The NAPCS structure comprises six hierarchical levels. At the highest level of the structure, there are 24 sections. Each section consists of subsections, divisions, groups, subgroups, and trilateral products.

NAPCS Level

Section—Two digits
Subsection—Three digits
Division—Five digits
Group—Seven digits
Subgroup—Nine digits
Trilateral Product—11 digits

NAPCS provides a comprehensive list of products adopted by the U.S., Canada, and Mexico, and will be incrementally implemented into economic statistics programs. These detailed product data will provide policymakers and the business community with the information needed to understand our ever-changing economies. NAPCS provides useful information to industry analysts to estimate market share for their firm or to investigate the growth of demand for the products of their firm with: (a) those for the industry as a whole, or (b) those that compete with or are closely associated with the products produced by the firm.[10]

III. ECPC

The ECPC is a standing committee responsible for the maintenance of NAICS and NAPCS. The ECPC follows a robust review process, inclusive of public comment, trilateral negotiations among the U.S., Canada and Mexico, and expert engagement across Federal agency staff.

The results of the ECPC's robust process are recommendations for proposed revisions to NAICS and NAPCS to CSOTUS. CSOTUS holds the responsibility of reviewing the recommendations and issuing final decisions for any revisions to the NAICS and NAPCS, per statutory authority in the PRA.

IV. Interagency Technical Working Group

The Office of the Chief Statistician of the United States (CSOTUS) convened an Interagency Technical Working Group on the Bioeconomy (Working Group) to provide recommendations on bioeconomy-related revisions for NAICS and NAPCS to the ECPC. Agency participation was solicited from the Interagency Council on Statistical Policy (ICSP). The ICSP comprises 13 Principal Statistical Agencies,[11] and 24 Chief Financial Officer (CFO) agencies [12] as well as agencies that are NAICS data users/stakeholders. The Working Group members were nominated by their agency Statistical Official. The Working Group is comprised of career staff from Federal agencies representing OMB, Department of Agriculture, Department of Energy, Small Business Administration, Bureau of Census, Bureau of Economic Analysis, Environmental Protection Agency, National Science Foundation, Bureau of Labor Statistics, and the Department of Defense.

The Working Group is charged with developing bioeconomy-related recommendations for revisions to NAICS and NAPCS that would promote accurate and reliable measurement of the bioeconomy, and maintain the integrity of federal statistical products. Upon completion, these recommendations will be provided to OMB and the ECPC. The ECPC will consider these recommendations in the development of proposed revisions for the 2027 NAICS and NAPCS.

V. Considerations for the Working Group

The Working Group, through OMB, is seeking input on how to best identify, classify, and measure bioeconomy manufacturing, technology, and products, including those that are primarily or exclusively: (a) biobased, (b) components of traditional manufacturing processes, and (c) nascent biobased processes and products. Importantly, input should include information on how particular industries or products are linked to the bioeconomy, and where appropriate and available, evidence to support your input should be provided. This will afford the Working Group the opportunity to use existing evidence to inform its recommendations.

To restate, the bioeconomy refers to a segment of the total economy utilizing and/or derived from biological resources, and includes manufacturing processes, technologies, products, and services. These may encompass, wholly or in part, industries and products including fuel, food, medicine, chemicals, and technology.[13]

Examples within these domains include: Energy (fuel, biomass), Agriculture (food, genetically modified plants), Health (medicine, genetic products), Manufacturing (biomaterials/chemicals, biobased industrial equipment), Technology (bio-related software, products) and Services (bio-based research and development, production, bio-based waste management, biobased resource management).

The Working Group will use these comments to inform their recommendations to OMB and ECPC as describes earlier.

V. Questions

1. What information and what high priority concerns should the Working Group consider in making these

recommendations for potential revisions to the NAICS and NAPCS that would enable characterization of the economic value of the U.S. bioeconomy?

2. Which quantitative economic indicators and processes are currently used to measure the contributions of the U.S. bioeconomy? Are these indicators reasonably accurate measures of the product components, scope, and value, of the bioeconomy; and, please explain why?

3. Which industries not currently measured as a unique classification in NAICS related to the bioeconomy should be considered? Similarly, which products not currently measured as a unique classification in NAPCS related to the bioeconomy should be considered? Please describe how a unique classification for such industry or product would meet the principles of NAICS and NAPCS. Please also include a description of the industry or product, with specific examples. Please also provide an explanation of how such industry or product would advance understanding of measuring the bioeconomy.

4. How might potential changes to the NAICS impact existing industry measurements, such as assessing changes in the economic output across current industries, time series measures, or data accuracy?

5. What role can the NAPCS fill in order to advance measurement of biomanufacturing and biotechnology?

6. Biobased processes and products that are embedded in traditional industries pose challenges for differentiation and measurement. Are there methodologies that can differentiate these bioeconomy processes from current manufacturing processes to enable measurement? If yes, please explain.

7. What potential bioeconomy measurement strategies might be considered other than revisions to and inclusion in the NAICS or NAPCS? For example, are there ways the Federal Government could better collect information to provide better measurement on biobased processes or products in current industries?

Karen A. Orvis,

Chief Statistician of the United States, Chief, Statistical and Science Policy Branch, Office of Information and Regulatory Affairs.

BILLING CODE 3110–01–P

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice: 23–036]

NASA Advisory Council; Technology, Innovation and Engineering Committee; Meeting

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, as amended, the National Aeronautics and Space Administration (NASA) announces a meeting of the Technology, Innovation, and Engineering Committee of the NASA Advisory Council (NAC). This Committee reports to the NAC.

DATES: Tuesday, May 16, 2023, 9:00 a.m.–4:30 p.m. eastern time.

ADDRESSES: Meeting will be virtual. See dial-in and Webex information below under **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Mr. Mike Green, Designated Federal Officer, Space Technology Mission Directorate, NASA Headquarters, Washington, DC 20546, via email at *g.m.green@nasa.gov* or (202) 358–4710.

SUPPLEMENTARY INFORMATION: This meeting will only be available by Webex or telephonically for members of the public. If dialing in via toll number, you must use a touch-tone phone to participate in this meeting. Any interested person may join via Webex at *https://nasaenterprise.webex.com,* the meeting number is 2764 623 6438, and the password is n@cTIE051623. The toll number to listen by phone is +1–415–527–5035. To avoid using the toll number, after joining the Webex meeting, select the audio connection option that says, ''Call Me'' and enter your phone number. If using the desktop or web app, check the ''Connect to audio without pressing 1 on my phone'' box to connect directly to the meeting.

Note: If dialing in, please mute your telephone.

The agenda for the meeting includes the following topics:

—Space Technology Mission Directorate (STMD) FY 2024 Budget Update
—NASA Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) Program Overview
—NASA Chief Technologist Introduction
—NASA Commercial Lunar Payload Services (CLPS) Program Update
—Early Career Initiative presentations from the NASA Johnson Space Center

It is imperative that this meeting be held on this day to accommodate the scheduling priorities of the key participants.

Patricia Rausch,

Advisory Committee Management Officer, National Aeronautics and Space Administration.

BILLING CODE 7510–13–P

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2023–138 and CP2023–140]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* May 1, 2023.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the Market Dominant or the Competitive product list, or the modification of an existing product currently appearing on the Market Dominant or the Competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent

the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.[1]

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern Market Dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern Competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s).:* MC2023–138 and CP2023–140; *Filing Title:* USPS Request to Add Priority Mail Contract 779 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* April 21, 2023; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Christopher C. Mohr; *Comments Due:* May 1, 2023.

This Notice will be published in the **Federal Register**.

Erica A. Barker,

Secretary.

RAILROAD RETIREMENT BOARD

Actuarial Advisory Committee With Respect to the Railroad Retirement Account; Notice of Public Meeting

Notice is hereby given in accordance with Public Law 92–463 that the Actuarial Advisory Committee will hold a virtual meeting on May 10, 2023, at 12:00 p.m. (Central Daylight Time) on the conduct of the 2023 Annual Report Required by the Railroad Retirement Act of 1974 and the Railroad Retirement Solvency Act of 1983. The agenda for this meeting will include a discussion of the assumptions to be used in the Annual Report. A report containing recommended assumptions and the experience on which the recommendations are based will have been sent by the Chief Actuary to the Committee before the meeting.

The meeting will be open to the public. Persons wishing to submit written statements, make oral presentations, or attend the meeting should address their communications or notices to Patricia Pruitt (*Patricia.Pruitt@rrb.gov*) so that information on how to join the virtual meeting can be provided.

Dated: April 24, 2023.

SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270–281, OMB Control No. 3235–0316]

Submission for OMB Review; Comment Request; Extension: Form N–3

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (the ''Commission'') has submitted to the Office of Management and Budget a request for extension of the previously approved collection of information discussed below.

The title for the collection of information is ''Form N–3 (17 CFR 239.17a and 274.11b) under the Securities Act of 1933 (15 U.S.C. 77) and under the Investment Company Act of 1940 (15 U.S.C. 80a), Registration Statement of Separate Accounts Organized as Management Investment Companies.'' Form N–3 is the form used by separate accounts offering variable annuity contracts which are organized as management investment companies to register under the Investment Company Act of 1940 (''Investment Company Act'') and/or to register their securities under the Securities Act of 1933 (''Securities Act''). Form N–3 is also the form used to file a registration statement under the Securities Act (and any amendments thereto) for variable annuity contracts funded by separate accounts which would be required to be registered under the Investment Company Act as management investment companies except for the exclusion provided by Section 3(c)(11) of the Investment Company Act (15 U.S.C. 80a–3(c)(11)). Section 5 of the Securities Act (15 U.S.C. 77e) requires the filing of a registration statement prior to the offer of securities to the public and that the statement be effective before any securities are sold, and Section 8 of the Investment Company Act (15 U.S.C. 80a–8) requires a separate account to register as an investment company.

Form N–3 also permits separate accounts offering variable annuity contracts which are organized as investment companies to provide investors with a prospectus and a statement of additional information covering essential information about the separate account when it makes an initial or additional offering of its securities. Section 5(b) of the Securities Act requires that investors be provided with a prospectus containing the information required in a registration statement prior to the sale or at the time of confirmation or delivery of the securities. The form also may be used by the Commission in its regulatory review, inspection, and policy-making roles.

Commission staff estimates that there will be 1 initial registration statement over the next three years and 6 insurer separate accounts that file post-effective amendments on Form N–3 per year, with an average of 3 investment options per post-effective amendment. The Commission further estimates that the hour burden for preparing and filing a post-effective amendment on Form N–3 is 157.55 hours per portfolio. The total annual hour burden for preparing and filing post-effective amendments is 2,836 hours (6 post-effective amendments × 3 investment options per post-effective amendment × 157.55 hours per portfolio). The estimated annual hour burden for preparing and filing initial registration statements is 309 hours. The total annual hour burden for Form N–3, therefore, is estimated to be 3,145 hours (2,836 hours + 309 hours). Respondents may rely on outside counsel or auditors in connection with the preparation and filing of Form N–3. Commission staff estimates that the annual cost burden associated with preparing and filing Form N–3 is $139,696.

The information collection requirements imposed by Form N–3 are mandatory. Responses to the collection of information will not be kept confidential. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid control number.

The public may view background documentation for this information collection at the following website: *www.reginfo.gov.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice by May 30, 2023 to (i) *MBX.OMB.OIRA.SEC_desk_officer@omb.eop.gov* and (ii) David Bottom, Director/Chief Information Officer, Securities and Exchange Commission, c/o John Pezzullo, 100 F Street NE, Washington, DC 20549, or by sending an email to: *PRA_Mailbox@sec.gov.*

Dated: April 24, 2023.

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97348; File No. SR–ICC–2023–002]

Self-Regulatory Organizations; ICE Clear Credit LLC; Notice of Designation of Longer Period for Commission Action on Proposed Rule Relating to the Clearance of Additional Credit Default Swap Contracts

April 21, 2023.

On February 28, 2023, ICE Clear Credit LLC (''ICC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change SR–ICC–2023–002 (''Proposed Rule Change'') pursuant to Section 19(b) of the Securities Exchange Act of 1934 (''Exchange Act'') [1] and Rule 19b–4 [2] thereunder a proposed rule change to clear additional credit default swap contracts.[3] The Proposed Rule Change was published for public comment in the **Federal Register** on March 15, 2023.[4] The Commission has not received comments regarding the proposal described in the Proposed Rule Change.

Section 19(b)(2) of the Exchange Act [5] provides that, within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding, or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the Notice of Filing is April 29, 2023. The Commission is extending this 45-day time period.

In order to provide the Commission with sufficient time to consider the Proposed Rule Change, the Commission

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Notice of Filing *infra* note 4, 88 FR at 16042.

[4] Self-Regulatory Organizations; ICE Clear Credit LLC; Notice of Filing of Proposed Rule Change Relating to the Clearance of Additional Credit Default Swap Contracts; Exchange Act Release No. 97094 (Mar. 9, 2023), 88 FR 16042 (Mar. 15, 2023) (File No. SR–ICC–2023–002) (''Notice'').

[5] 15 U.S.C. 78s(b)(2).

finds that it is appropriate to designate a longer period within which to take action on the Proposed Rule Change.

Accordingly, the Commission, pursuant to Section 19(b)(2) of the Exchange Act,[6] designates June 13, 2023 as the date by which the Commission shall either approve, disapprove, or institute proceedings to determine whether to disapprove proposed rule change SR–ICC–2023–002.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[7]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97346; File No. SR–LTSE–2023–02]

Self-Regulatory Organizations; Long-Term Stock Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Extend the Term That Newly and Currently Listed Companies May Receive Capital Markets Solutions on a Complimentary Basis Under LTSE Rule 14.602

April 21, 2023.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 12, 2023, Long-Term Stock Exchange, Inc. (''LTSE'' or the ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

LTSE proposes to extend from one year, to three-years, the term that newly and currently listed Companies may receive Capital Markets Solutions on a complimentary basis under LTSE Rule 14.602.

The text of the proposed rule change is available at the Exchange's website at *https://longtermstockexchange.com/,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement on the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

In March 2022, LTSE began offering complimentary Capital Markets Solutions to newly listed and currently listed Companies following the Commission's approval of relevant amendments to Rule 14.602.[3] Based on LTSE's experience with offering Capital Markets Solutions, as well as in response to changes in the competitive landscape and market conditions, the Exchange proposes to extend from one year, to a three-year term, the period that newly listed Companies and currently listed Companies may receive the complimentary Capital Markets Solutions under LTSE Rule 14.602. This proposed change impacts the duration for which Capital Markets Solutions are to be provided and does not otherwise impact the nature or substance of the offerings under LTSE Rule 14.602.

As described in the prior approval order by the Commission,[4] the Capital Markets Solutions has two components: (i) an Investor Alignment Solution, and (ii) the Long-Term Investor Platform (''LTIP''). The Investor Alignment Solution provides Companies with detailed institutional investor analytics and insights into investor behavior to enable them to evaluate the behaviors of select investors and provide them with a deeper understanding of the ESG landscape and their positioning. For each receiving Company, the Exchange's affiliate company, LTSE Services, Inc. (''LTSE Services'')[5] analyzes the ESG profile of institutional investors in order to understand and identify relevant sources of capital to aid the Company in honing and achieving strategic priorities. A highly-experienced, multi-disciplinary team is deployed to support this long-term governance and capital markets strategy. The Exchange believes that the Investor Alignment Solution furthers the Exchange's goal of facilitating long-term focus and value creation for companies and investors. The nature or substance of this offering under LTSE Rule 14.602 is not impacted by the proposed rule change.

The LTIP is a platform that provides listed Companies with a means to upload and effectively manage and utilize their registered shareholder data received from their transfer agent. For example, the LTIP allows Companies to more easily track, analyze and utilize registered shareholder data in support of their investor relations, strategic initiatives, board review and governance functions. Additionally, as part of the LTIP, LTSE Services will assist[6] Companies with methods of outreach to and education of existing or potential investors regarding the process for becoming a registered shareholder, including the need for investors to work with their broker-dealer to complete a submission to the DRS Profile System maintained by the DTC.[7]

Proposed Rule 14.602(b)(2)(A) would provide that within 90 days of listing on the Exchange, a Company has the option to request and commence receiving the Capital Markets Solutions on a complimentary basis for a three-year term. As is the case in the current rule text, the three-year term will begin from the date of first use of the Capital Markets Solutions by the newly-listed Company, subject to the 90-day period from the date of listing to request and begin receiving the service. The only

[4] *Id.*

[5] As noted in the Commission's order approving LTSE as a national securities exchange, LTSE maintains a commercial relationship with LTSE Services to leverage the company's technological expertise to support the Exchange's software needs. *See* In the Matter of the Application of Long Term Stock Exchange, Inc.; for Registration as a National Securities Exchange; Findings, Opinion, and Order of the Commission, Securities Exchange Act Release No. 85828 (May 10, 2019), 84 FR 21841, 21842 (May 15, 2019). LTSE Services also provides communications and marketing services to the Exchange.

[6] The registered shareholder information in LTIP is proprietary to the Company and viewable only by the Company and its authorized agent.

[7] Any outreach to existing or potential investors is entirely at the discretion of the Company and will be conducted exclusively by the Company; no personnel from LTSE Services or LTSE will have any role in communicating with investors on behalf of the Company. The LTIP also will, based on customer demand, provide a means for the Company to communicate with registered shareholders who choose to participate on the Company's LTIP account.

proposed change in Rule 14.602(b)(2)(A) is changing the duration of the period during which a Company may receive the Capital Markets Solutions on a complimentary basis from one year to three years.

The Exchange is proposing an amendment to Rule 14.602(b)(2)(B), providing a currently listed Company that has already commenced receiving the services as of the effective date of this filing SR–LTSE–2023–02 the option to request to continue receiving such services on a complimentary basis for an additional two-year term. This two-year term will begin from the one-year anniversary of the date the Company initially commenced receiving the Capital Markets Solutions. The Exchange is also proposing to delete the following language: ''Within 90 days of the effectiveness of this rule,'' because it is no longer applicable. The Exchange is proposing no other substantive changes to Rule 14.602(b)(2)(B).

The Exchange believes extending the period for Companies to receive Capital Markets Solutions on a complimentary basis aligns with LTSE's objective of supporting long-term value creation for listed Companies and their investors. Additionally, by offering such services on a complimentary basis for a longer term—*i.e.,* three years—LTSE is able to enhance the value Companies receive by listing on the Exchange. However, no Company is required to use these services as a condition of initial or continued listing. All such services are optional for listed Companies and they may choose to cease receiving services at any point during the proposed three-year period. At the end of the proposed three-year term, Companies may choose to renew these services on a contractual basis with LTSE Services and pay for them in regular course, or discontinue them. If a Company chooses to discontinue the services, there would be no effect on the Company's continued listing on the Exchange. LTSE notes that no other Company will be required to pay higher fees as a result of the proposed amendments and represents that extending the term of these complimentary services will have no impact on the resources available for its regulatory programs. LTSE also represents that no confidential trading or regulatory information generated or received by the Exchange will be shared with LTSE Services or leveraged for the provision of its products and services.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[8] in general, and furthers the objectives of Section 6(b)(4) of the Act,[9] in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees, and other charges among the Exchange's members and issuers and other persons using its facilities. The Exchange also believes that the proposed rule change is consistent with Section 6(b)(5) of the Act [10] in that it is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that it is fair and reasonable to offer products and services to companies. The Exchange believes that the existing U.S. exchange listing market for operating companies is essentially a duopoly with the vast majority of operating companies listed on U.S. securities exchanges listing on the New York Stock Exchange (''NYSE'') or Nasdaq Stock Market LLC (''Nasdaq''). The Exchange faces competition from NYSE and Nasdaq as a new entrant into the exchange listing market as both offer complimentary services to newly and currently listed companies in order to attract and retain listings.[11] Similarly, the Exchange believes that offering such products and services to newly and currently listed Companies would enhance the value proposition for listing, allow the Exchange to more effectively attract companies to list on the Exchange and retain its current listings. Equally important, LTSE believes that the Capital Markets Services will support Companies in identifying investors who are aligned with their long-term business, vision and policies.

The Exchange also believes that to the extent the Exchange's listing program is successful, it will provide a competitive alternative, which will thereby benefit companies and investors, and remove impediments to and perfect the mechanism of a free and open market and a national market system, consistent with the protection of investors and the public interest. Other exchanges also acknowledge the competition in the market for listing services and they compete, in part, by offering products and services to companies. Like other exchanges, LTSE also believes that it is fair and reasonable to offer complimentary services to attract new listings and retain current listings as part of this competition.[12] For example, Nasdaq, through its affiliate Nasdaq Corporate Solutions, LLC, or a selected third-party, offers an ''Eligible New Listing'' or ''Eligible Switch'' access to complimentary services for at least three years.[13] Similarly, NYSE offers complimentary services to ''Eligible New Listings'' and ''Eligible Transfer Companies'' for a period of 48 calendar months.[14] As noted above, the proposed rule change would provide all current and newly LTSE-listed Companies the Capital Markets Solutions for three years.

LTSE believes extending the term that all newly listed and currently listed Companies receive Capital Markets Solutions on a complimentary basis is consistent with just and equitable principles of trade and the protection of investors and the public interest because it has the potential to enhance current and newly listed companies' engagement and alignment with shareholders for the purpose of long-term value creation. These services are also a reflection of the Exchange's differentiated listing standards, which are explicitly designed to promote long-term focus and value creation,[15] and are central to LTSE's mission of reducing short-termism in the capital markets.[16] Additionally, LTSE is not differentiating the complimentary services offered among listed Companies based on the number of shares outstanding or market capitalization; the Capital Markets Solutions are made available to all listed Companies for the same period of time.

[15] *See* Policies and Principles noted in LTSE Rule 14.425.

[16] *See* Securities Exchange Act Release No. 86327 (July 8, 2019), 84 FR 33293 (July 12, 2019) File No. SR–LTSE–2019–01 (notice of filing of proposed rule change to adopt LTSE Rule 14.425).

Finally, the Exchange believes it is reasonable to balance its need to remain competitive with other listing venues, while at the same time ensuring adequate revenue to meet its regulatory responsibilities. The Exchange notes that no Company will be required to pay higher fees because of this proposal, and it represents that providing the proposed services will have no impact on the resources available for its regulatory programs.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. To the contrary, and as discussed in the Statutory Basis section, LTSE believes that the proposed rule change will enhance competition by facilitating LTSE's listing program which will allow the Exchange to provide companies with another listing option, thereby promoting intermarket competition between exchanges in furtherance of the principles of Section 11A(a)(1) of the Act [17] in that it is designed to promote fair competition between exchange markets by offering a new listing market. As noted above, LTSE faces competition in the market for listing services, and aims to compete by offering valuable services to listed Companies. The proposed rule change reflects that competition, but does not impose any burden on the competition with other exchanges. Other exchanges also offer similar services to companies for similar time frames as this proposed rule change,[18] thereby increasing competition to the benefit of those companies and their stakeholders. Moreover, as a dual listing venue, LTSE expects to face competition from existing exchanges because companies have a choice to list their securities solely on a primary listing venue. Consequently, the degree to which LTSE's products and services could impose any burden on intermarket competition is extremely limited, and LTSE does not believe that such offerings would impose any burden on competing venues that is not necessary or appropriate in furtherance of the purposes of the Act.

LTSE also does not believe that the proposed rule change will result in any burden on intramarket competition since all currently listed Companies will be able to receive the Capital Markets Services for the proposed three-year term. Moreover, the extension of these complimentary services to three years does not remove the requirement under the existing rule that a Company requesting such services must do so within 90 days of listing on the Exchange. Consequently, LTSE does not believe that the proposal will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act [19] and subparagraph (f)(6) of Rule 19b–4 thereunder.[20]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii) [21] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Exchange asserts that waiver of the operative delay would be consistent with the protection of investors and the public interest because it would allow the Exchange to immediately extend the term of services being provided to currently listed Companies and permit uninterrupted continuation of services. In addition, the Exchange states that extending the period for Companies to receive Capital Markets Solutions on a complimentary basis aligns with its objective of supporting long-term value creation for listed Companies and their investors. For these reasons, and because the proposal raises no novel legal or regulatory issues, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change operative upon filing.[22]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–LTSE–2023–02 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–LTSE–2023–02. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97342; File No. SR–FICC–2023–003]

Self-Regulatory Organizations; Fixed Income Clearing Corporation; Order Granting Proposed Rule Change To Revise the Description of the Stressed Period Used To Calculate the Value-at-Risk Charge and Make Other Changes

April 21, 2023.

On February 17, 2023, the Fixed Income Clearing Corporation (''FICC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change SR–FICC–2023–003 pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder.[2] The proposed rule change was published for comment in the **Federal Register** on March 7, 2023.[3] The Commission has received no comments regarding the proposed rule change. For the reasons discussed below, the Commission is approving the proposed rule change.

I. Description of the Proposed Rule Change

FICC operates two divisions: the Government Securities Division (''GSD'') and the Mortgage Backed Securities Division (''MBSD''). GSD provides trade comparison, netting, risk management, settlement, and central counterparty services for the U.S. Government securities market. MBSD provides the same services for the U.S. mortgage-backed securities market. GSD and MBSD maintain separate sets of rules, margin models, and clearing funds.

A key tool that FICC uses to manage its credit exposures to its members is the daily collection of margin from each member. A member's margin is designed to mitigate potential losses associated with liquidation of the member's portfolio in the event of that member's default. The aggregated amount of all GSD and MBSD members' margin constitutes the GSD Clearing Fund and MBSD Clearing Fund, which FICC would be able to access should a defaulted member's own margin be insufficient to satisfy losses to FICC caused by the liquidation of that member's portfolio. Each member's margin consists of a number of applicable components, including a the value-at-risk (''VaR'') charge (''VaR Charge'') designed to capture the potential market price risk associated with the securities in a member's portfolio. The VaR Charge is typically the largest component of a member's margin requirement. The VaR Charge is designed to cover FICC's projected liquidation losses with respect to a defaulted member's portfolio at a 99% confidence level.

FICC states that it has observed significant volatility in the U.S. government securities market due to tightening monetary policy, increasing inflation, and recession fears, and that this volatility has led to greater risk exposures for FICC.[4] FICC represents that, in order to mitigate the increased risk exposures, FICC has to quickly and timely respond to rapidly changing market conditions.[5] For example, in order to respond to rapidly changing market conditions, FICC states that it may need to quickly adjust the look-back period that FICC uses for purposes of calculating the VaR Charge with an appropriate stressed period, as needed, to enable FICC to calculate and collect adequate margin from members.[6]

Accordingly, FICC is proposing to amend the GSD Quantitative Risk Management (''QRM'') Methodology Document—GSD Initial Market Risk Margin Model (''GSD QRM Methodology Document'')[7] and the MBSD Methodology and Model Operations Document—MBSD Quantitative Risk Model (''MBSD QRM Methodology Document,''[8] and collectively with the GSD QRM Methodology Document, the ''QRM Methodology Documents'') to revise the description of the stressed period used to calculate the VaR Charge in order to help FICC quickly and timely adjust the look-back period used for calculating the VaR Charge with an appropriate stressed period, as needed. FICC states that adjustments to the look-back period could affect the amount of the VaR Charge that members are assessed by either increasing or decreasing such charge to reflect the level of risk the activities of the members presented to FICC.[9] FICC is also proposing to amend the GSD QRM Methodology Document to clarify the language describing the parameters used to calculate the VaR Floor.[10] Finally, FICC is proposing to

[10] Capitalized terms used herein and not defined shall have the meaning assigned to such terms in the FICC's GSD Rulebook (''GSD Rules'') and MBSD Clearing Rules (''MBSD Rules''), *available at http://www.dtcc.com/legal/rules-and-procedures.aspx.*

amend the GSD QRM Methodology Document to make certain technical changes described in greater detail below.

A. Revising the Description of the Stressed Period Used To Calculate the VaR Charge

FICC calculates VaR Charge by using a methodology referred to as the sensitivity approach. The sensitivity approach allows FICC to adjust the look-back period that FICC uses for purposes of calculating the VaR Charge. In particular, the sensitivity approach leverages external vendor data [11] to incorporate a look-back period of 10 years, which allows the GSD and MBSD models to capture periods of historical volatility. In the event FICC observes that the 10-year look-back period does not contain a sufficient number of stressed market events, FICC will include an additional period of historically observed stressed market events to the 10-year look-back period.[12]

The QRM Methodology Documents currently describe the additional stressed period as a configurable continuous period (typically one year). The GSD QRM Methodology Document further specifies the duration of the stressed period as one-year of stressed market events. FICC states that it regularly reviews metrics from various assessments to ensure the GSD and MBSD models are performing as designed.

In order to provide FICC with more flexibility with respect to the inclusion of sufficient number of stressed market events in the look-back period so FICC can respond to rapidly changing market conditions more quickly and timely, FICC is proposing to eliminate this detailed description of the stressed period from the GSD QRM Methodology Document (in Sections 2.10.1 (The list of key parameters) and A4.5.16.1 (Stressed VaR Calculation)), as well as the MBSD QRM Methodology Document (Section 5.17.1 (Stressed VaR Calculation)), and replace it with a more general description. Specifically, the proposed new description of the stressed period would provide in the GSD QRM Methodology Document (Section A4.5.16.1) and the MBSD QRM Methodology Document (Section 5.17.1) that the ''stressed period'' shall be a period of time that FICC may add, in its sole discretion, to the 10-year historical look-back period that includes stressed market events that are not otherwise captured in the look-back period.

The proposed new description would also provide that a stressed period, if added to the look-back period, shall be no shorter than 6 months and no longer than 36 months, and comprised of either one continuous period specified by a start date and an end date or comprised of more than one non-continuous period. FICC states that it is currently contemplating changing the stressed period at GSD from one year to 1.5 years while keeping the current one-year stressed period at MBSD unchanged.[13]

In addition, the proposed new description would provide that, when determining whether it is necessary to add a stressed period to the 10-year historical look-back period (and the appropriate length of an added stressed period), FICC would review all relevant information available to it at the time of such determination, including, for example, (1) the nature of the stressed market events in the current 10-year historical look-back period, (2) backtesting coverage ratios, and (3) market volatility observed by FICC. Further, the proposed new description would provide that changes to the stressed period shall be approved through FICC's model governance process set forth in the Clearing Agency Model Risk Management Framework (''Framework''),[14] and any current stressed period shall be documented and published to FICC members at the time such stressed period becomes effective.[15]

FICC believes that having a more general description would enable FICC to adjust the stressed period more quickly and timely because the adjustment process, such as constructing a stressed period comprised of more than one year's historical data that may not be continuous,[16] would be more streamlined and not require a rule change.[17] By being able to quickly and timely make adjustments to the stressed period, FICC states that it would have the flexibility to respond to rapidly changing market conditions more quickly and timely, which would, in turn, help better ensure that FICC calculates and collects adequate margin from members and risk manages its credit exposures to its members.[18] The look-back period would continue to be tracked in the monthly model parameter report, pursuant to the QRM Methodology Documents, and any changes to the look-back period [19] would continue to be subject to the internal model governance process of the Depository Trust and Clearing Corporation (''DTCC''), as described in the Framework.[20]

FICC conducted an impact study for the period from January 2021 to October 2022 (''Impact Study''), which reviewed the overall impact of the contemplated change to the stressed period (*i.e.,* changing the current stressed period of one year (September 2008 to August 2009) to a stressed period of 1.5 years (January 2008 to June 2009) on the GSD VaR model backtesting coverage and VaR Charge amounts, as well as the effect on the GSD Members during the Impact Study period. The results of the Impact Study indicate that, if a stressed period of 1.5 years had been in place for GSD,[21] the GSD's rolling 12-month VaR model backtesting coverage ratio would have improved by 29 bps (from 98.52%

[11] FICC states that the sensitivity approach leverages external vendor expertise in supplying the market risk attributes, which would then be incorporated by FICC into the GSD and MBSD models to calculate the VaR Charge. Specifically, FICC sources security-level risk sensitivity data and relevant historical risk factor time series from an external vendor for all eligible securities. The sensitivity data is generated by a vendor based on its econometric, risk, and pricing models. *See* Notice, *supra* note 3, 88 FR at 14189–90.

[12] *See* Notice, *supra* note 3, 88 FR at 14190.

[13] *Id.*

[14] The Framework sets forth the model risk management practices that FICC and its affiliates The Depository Trust Company (''DTC'') and National Securities Clearing Corporation (''NSCC,'' and together with FICC and DTC, the ''Clearing Agencies'') follow to identify, measure, monitor, and manage the risks associated with the design, development, implementation, use, and validation of quantitative models. The Framework is filed as a rule of the Clearing Agencies. *See* Securities Exchange Act Release Nos. 81485 (Aug. 25, 2017), 82 FR 41433 (Aug. 31, 2017) (File Nos. SR–DTC–2017–008; SR–FICC–2017–014; SR–NSCC–2017–008), 88911 (May 20, 2020), 85 FR 31828 (May 27, 2020) (File Nos. SR–DTC–2020–008; SR–FICC–2020–004; SR–NSCC–2020–008), 92380 (Jul. 13, 2021), 86 FR 38140 (Jul. 19, 2021) (File No. SR–FICC–2021–006), 92381 (Jul. 13, 2021), 86 FR 38163 (Jul. 19, 2021) (File No. SR–NSCC–2021–008), 92379 (Jul. 13, 2021), 86 FR 38143 (Jul. 19, 2021) (File No. SR–DTC–2021–003), 94271 (Feb. 17, 2022), 87 FR 10411 (Feb. 24, 2022) (File No. SR–FICC–2022–001), 94272 (Feb. 17, 2022) 87 FR 10419 (Feb. 24, 2022) (File No. SR–NSCC–2022–001), and 94273 (Feb. 17, 2022), 87 FR 10395 (Feb. 24, 2022) (File No. SR–DTC–2022–001).

[15] *See* Notice, *supra* note 3, 88 FR at 14190.

[16] FICC believes constructing a longer than one-year stressed period, or a stressed period that may not be continuous, would enable FICC to (i) better cope with market volatility spikes by increasing the calibrated volatility level of the VaR models, *i.e.,* longer stressed periods generally result in higher calibrated volatility levels, and (ii) capture a sufficient number of stressed market events. *Id.*

[17] Pursuant to Section 806(e)(1) of Title VIII of the Dodd-Frank Wall Street Reform and Consumer Protection Act and Rule 19b–4(n)(1)(i) under the Act, if a change materially affects the nature or level of risks presented by FICC, then FICC is required to file an advance notice filing. 12 U.S.C. 5465(e)(1) and 17 CFR 240.19b–4(n)(1)(i).

[18] *See* Notice, *supra* note 3, 88 FR at 14190.

[19] The look-back period includes the stressed period, if any. *Id.*

[20] *See supra* note 14.

[21] As noted above, FICC states that it is currently contemplating changing the stressed period at GSD from one year to 1.5 years while keeping the current one-year stressed period at MBSD unchanged. *See* Notice, *supra* note 3, 88 FR at 14190.

to 98.81%) as of October 2022 and the associated VaR Charge increase for GSD would be approximately $387 million (or 2.1%) on average during that period.[22]

The Impact Study further indicated that the three GSD Members with the largest average daily VaR Charge increases in dollar amount during the Impact Study period would have had increases of approximately $43.7 million, $43.24 million, and $39.55 million, representing an average daily increase for such Members of 3.4%, 4.4%, and 2.8%, respectively. The three GSD Members with the largest average daily VaR Charge increases as a percentage of VaR Charges paid by such Members during the Impact Study period would have had an average daily increase of 16.6%, 15.7% and 12.7%, respectively, had the contemplated stressed period been in place.

The three GSD Members with the largest average daily VaR Charge decreases in dollar amount during the Impact Study period would have had decreases of approximately $8.59 million, $7.93 million, and $7.24 million representing an average daily decrease for such Members of 4.3%, 1.3%, and 2.9%, respectively. The three GSD Members with the largest average daily VaR Charge decreases as a percentage of VaR Charges paid by such Members during the Impact Study period would have had an average daily decrease of 4.3%, 4.0% and 3.4%, respectively, had the contemplated stressed period been in place.

B. Clarifying the VaR Floor Parameter Language

The VaR Charge is subject to a minimum amount (the ''VaR Floor'') that FICC employs as an alternative to the amount calculated by the VaR model for portfolios where the VaR Floor [23] is greater than the model-based charge amount. A VaR Floor addresses the risk that the VaR model may calculate too low a VaR Charge for certain portfolios where the VaR model applies substantial risk offsets among long and short positions in different classes of securities that have a high degree of historical correlation. Because this high degree of historical price correlation may not apply in future changing market conditions, FICC applies a VaR Floor to protect FICC against such risk in the event that FICC is required to liquidate a large securities portfolio in stressed market conditions.[24]

VaR Floor at GSD is determined by multiplying the absolute value of the sum of the Net Long Positions and Net Short Positions of Eligible Securities, grouped by product and remaining maturity, by a percentage designated by FICC from time to time for such group. Currently, the GSD Rules provide that for (i) U.S. Treasury and agency securities, such percentage shall be a fraction, no less than 10%, of the historical minimum volatility of a benchmark fixed income index (*i.e.,* haircut rate) for such group by product and remaining maturity and (ii) mortgage-backed securities, such percentage shall be a fixed percentage that is no less than 0.05%.[25] However, the GSD QRM Methodology Document specifies these percentages (referred to as floor parameters therein) for government bond and MBS Pool as simply 10% and 5 Bps, respectively.

To avoid inconsistency with the GSD Rules, FICC is proposing clarifying changes to the floor parameter language in Section 2.10.1 of the GSD QRM Methodology Document. Specifically, FICC is proposing to revise the description of the floor parameter for government bond by deleting the reference to 10% and adding language that state the parameter is a percentage as designated by FICC from time to time pursuant to the GSD Rules and applied to the haircut rate of the respective government bonds. Similarly, for the description of the floor parameter for MBS Pool, FICC is proposing to revise it by deleting the reference to 5 Bps and adding language that state the parameter is a percentage as designated by FICC from time to time pursuant to the GSD Rules.

In addition, FICC is proposing to add a sentence making it clear that the floor parameters are tracked in the monthly model parameter report and that any future changes to the floor parameters would be subject to DTCC's internal model governance process set forth in the Framework.[26]

Lastly, consistent with the proposed changes to the floor parameters described above, FICC is proposing to delete from the GSD QRM Methodology Document the language in Sections 3.2.2 (Calculation of haircut of Treasury and Agency bonds without sensitivity analytics data) and 3.5 (Total VaR, Core Charge and Standalone VaR) that references the floor parameters for government bond and MBS pool positions being tentatively set to 10% and 0.05%, respectively.

C. Technical Changes

FICC is proposing to make certain technical changes to the GSD QRM Methodology Document. Specifically, FICC proposes to clarify in Sections 1.1 (Purpose and scope), A4.5.16 (Stressed VaR), and A4.5.16.1 (Stressed VaR Calculation) of the GSD QRM Methodology Document that ''SVaR'' refers to sensitivity VaR and not stressed VaR. In addition, FICC is also proposing to fix typographical errors in Sections 2.10.1 (The list of key parameters) and A4.5.16.1 (Stressed VaR Calculation) of the GSD QRM Methodology Document.

II. Discussion and Commission Findings

Section 19(b)(2)(C) of the Act directs the Commission to approve a proposed rule change of a self-regulatory organization if it finds that such proposed rule change is consistent with the requirements of the Act and rules and regulations thereunder applicable to such organization. After careful consideration, the Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to FICC.[27] In particular, the Commission finds that the proposed rule change is consistent with Sections 17A(b)(3)(F) and (b)(3)(I) of the Act,[28] as well as Rules 17Ad–22(e)(4) and (e)(6) thereunder.[29]

A. Consistency With Section 17A(b)(3)(F) of the Act

Section 17A(b)(3)(F) of the Act requires, in part, that the rules of a clearing agency be designed to, among other things, promote the prompt and accurate clearance and settlement of securities transactions and assure the safeguarding of securities and funds which are in the custody or control of the clearing agency or for which it is responsible.[30]

As described in Section I.A above, FICC proposes replacing the current detailed description of the stressed period in the QRM Methodology

[22] FICC filed a summary of the Impact Study as confidential Exhibit 3 to this proposed rule change. Exhibit 3 provides more granular data concerning these results, including comparisons of the GSD VaR model backtesting coverage ratios for the current stressed period against the contemplated 1.5 year stressed period on a monthly basis, as well as comparisons of member-level VaR Charge amounts under those two stressed periods. FICC requested confidential treatment of Exhibit 3 pursuant to 17 CFR 240.24–b2.

[23] *See* definition of ''VaR Charge'' in GSD Rule 1 (Definitions), *supra* note 10.

[24] *See* Securities Exchange Act Release Nos. 83362 (Jun. 1, 2018), 83 FR 26514 (Jun. 7, 2018) (SR–FICC–2018–001) and 83223 (May 11, 2018), 83 FR 23020 (May 17, 2018) (SR–FICC–2018–801).

[25] *See* definition of ''VaR Charge'' in GSD Rule 1 (Definitions), *supra* note 10.

[26] *See supra* note 14.

[27] 15 U.S.C. 78s(b)(2)(C).

[28] 15 U.S.C. 78q–1(b)(3)(F) and (b)(3)(I).

[29] 17 CFR 240.17Ad–22(e)(4)(i), (e)(6)(i), and (e)(6)(v).

[30] 15 U.S.C. 78q–1(b)(3)(F).

Documents with a more general description, so FICC would have the flexibility to quickly adjust the look-back period FICC uses for purposes of calculating the VaR Charge with an appropriate stressed period, as needed, to enable FICC to calculate and collect adequate margin from members. Specifically, the proposal would change the current description of the stressed period in the QRM Methodology Documents from a configurable continuous period that is typically one year to a continuous period, or more than one non-continuous period, that would be no shorter than 6 months and no longer than 36 months.

As described above in Section I.A and in the Notice, FICC has provided data demonstrating that if FICC had changed the current stressed period of one year (September 2008 to August 2009) to a stressed period of 1.5 years (January 2008 to June 2009), GSD's rolling 12-month VaR model backtesting coverage ratio would have increased from 98.52% to 98.81% during the period of January 2021 to October 2022.[31] The Commission has reviewed FICC's data and agrees that its results indicate that the proposed changes should help FICC generate margin amounts that more effectively cover its credit exposures than under the current rule.

Accordingly, the Commission believes that the proposed change to the description of the stressed period should provide FICC with more flexibility to quickly adjust the stressed period, which should enhance FICC's ability to collect margin that better reflects the risks and particular attributes of its members' portfolios during periods rapidly changing market conditions. For these reasons, the Commission believes that implementing this change should help ensure that, in the event of a member default, FICC's operation of its critical clearance and settlement services would not be disrupted because of insufficient financial resources. Accordingly, the Commission finds that the change to the description of the stressed period should help FICC to continue providing prompt and accurate clearance and settlement of securities transactions in the event of a member default, consistent with Section 17A(b)(3)(F) of the Act.

Moreover, as described above in Section I, in the event of a clearing member default, FICC would access the mutualized the Clearing Fund should a defaulted member's own margin be insufficient to satisfy losses to FICC caused by the liquidation of that member's portfolio. The proposed change to the description of the stressed period should help FICC collect sufficient margin from members, thereby limiting non-defaulting members' exposure to mutualized losses in the event of a member default. The Commission believes that by helping to limit the exposure of FICC's non-defaulting members to mutualized losses, the proposed changes should help FICC assure the safeguarding of securities and funds which are in its custody or control, consistent with Section 17A(b)(3)(F) of the Act.

In addition to the proposed changes to the stressed period, FICC proposes several technical and conforming changes, described above in Sections I.B and I.C, to enhance the clarity of the GSD QRM Methodology Document. For example, for consistency with the GSD Rules, FICC would clarify in the GSD QRM Methodology Document that the floor parameters used for the calculation of the VaR Floor would be specified in the GSD Rules, that those floor parameters would be tracked in the monthly model parameter report, and that any future changes to the floor parameters would be subject to DTCC's internal model governance process. The Commission believes that greater clarity of the GSD QRM Methodology Document should better enable FICC to effectively implement the document's provisions. Accordingly, the Commission believes that these proposed changes should better enable FICC to assess and collect sufficient margin from its members, thereby assuring the safeguarding of securities and funds that are in FICC's custody or control, consistent with Section 17A(b)(3)(F) of the Act.

B. Consistency With Rule 17Ad–22(e)(4) Under the Act

Rule 17Ad–22(e)(4)(i) under the Act requires a covered clearing agency [32] to establish, implement, maintain and enforce written policies and procedures reasonably designed to effectively identify, measure, monitor, and manage its credit exposures to participants and those exposures arising from its payment, clearing, and settlement processes by maintaining sufficient financial resources to cover its credit exposure to each participant fully with a high degree of confidence.[33]

As described in Section I.A above, FICC's proposal to change the description of the stressed period in the QRM Methodology Documents should enhance FICC's ability to calculate and collect sufficient margin from its members. For example, the results of FICC's Impact Study demonstrate that during the period of January 2021 to October 2022, GSD's rolling 12-month VaR model backtesting coverage ratio would have improved by 29 bps (from 98.52% to 98.81%) by increasing the look-back period to 1.5 years.[34] The added flexibility from the more general description of the stressed period under the proposal should also provide FICC with the ability to quickly adjust the stress period in response to rapidly changing market conditions, which in turn, should better enable FICC to risk manage its members' positions and collect sufficient margin to effectively cover FICC's credit exposures.

Because the foregoing proposed changes should better enable FICC to collect sufficient margin from members, the Commission believes that the proposed changes should enhance FICC's ability to maintain sufficient financial resources to cover its credit exposures to applicable member portfolios fully with a high degree of confidence, consistent with Rule 17Ad–22(e)(4)(i) under the Act.

C. Consistency With Rule 17Ad–22(e)(6) Under the Act

Rule 17Ad–22(e)(6)(i) under the Act requires a covered clearing agency to establish, implement, maintain, and enforce written policies and procedures reasonably designed to cover its credit exposures to its participants by establishing a risk-based margin system that, at a minimum, considers, and produces margin levels commensurate with, the risks and particular attributes of each relevant product, portfolio, and market.[35] Rule 17Ad–22(e)(6)(v) under the Act requires a covered clearing agency to establish, implement, maintain and enforce written policies and procedures reasonably designed to cover its credit exposures to its participants by establishing a risk-based margin system that, at a minimum, uses an appropriate method for measuring credit exposure that accounts for relevant product risk factors and portfolio effects across products.[36]

[31] *See* Notice, *supra* note 3, 88 FR at 14191.

[32] A ''covered clearing agency'' means, among other things, a clearing agency registered with the Commission under Section 17A of the Act (15 U.S.C. 78q–1 *et seq.*) that is designated systemically important by Financial Stability Oversight Council (''FSOC'') pursuant to the Clearing Supervision Act (12 U.S.C. 5461 *et seq.*). *See* 17 CFR 240.17Ad–22(a)(5) and (a)(6). Because FICC is a registered clearing agency with the Commission that has been designated systemically important by FSOC, FICC is a covered clearing agency.

[33] 17 CFR 240.17Ad–22(e)(4)(i).

[34] *See supra* note 22.

[35] 17 CFR 240.17Ad–22(e)(6)(i).

[36] 17 CFR 240.17Ad–22(e)(6)(v).

As described in Section I.A above, FICC's proposal to replace the current detailed description of the stressed period with a more general description should give FICC more flexibility to respond to rapidly changing market conditions more quickly because FICC would be able to make adjustments to the stressed period without a rule change. As a result, this flexibility should enable FICC to better risk manage its credit exposure by enhancing FICC's ability to calculate and collect margin commensurate with the risks and particular attributes of each member's portfolio.

For these reasons, the Commission believes that the proposed changes should help ensure that FICC produces margin levels commensurate with the risks and particular attributes of its members' portfolios by adding flexibility to parameters for the stressed period to help ensure that the look-back period captures a sufficient number of stressed market events, and allowing FICC to make timely adjustments to the stressed period in response to rapidly changing market conditions. Accordingly, the Commission believes that the proposed changes would enhance FICC's risk-based margin system to better enable FICC to cover its credit exposures to its members because the proposed changes consider the risks and particular attributes of the relevant products, portfolios, and markets, consistent with the requirements of Rule 17Ad–22(e)(6)(i).[37] Similarly, the Commission believes that the proposed changes are reasonably designed to cover FICC's credit exposures to its members because the proposed changes would enhance FICC's risk-based margin system using appropriate methods for measuring credit exposures that account for relevant product risk factors and portfolio effects, consistent with the requirements of Rule 17Ad–22(e)(6)(v).[38]

III. Conclusion

On the basis of the foregoing, the Commission finds that the proposed rule change is consistent with the requirements of the Act and in particular with the requirements of Section 17A of the Act[39] and the rules and regulations promulgated thereunder. *It is therefore ordered*, pursuant to Section 19(b)(2) of the Act[40] that proposed rule change SR–FICC–2023–003, be, and hereby are, *approved*.[41]

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[42]

Sherry R. Haywood,

Assistant Secretary.

DEPARTMENT OF STATE

[Public Notice: 12062]

Notice of Determinations; Culturally Significant Objects Being Imported for Exhibition—Determinations: ''Edvard Munch: Trembling Earth'' Exhibition

SUMMARY: Notice is hereby given of the following determinations: I hereby determine that certain objects being imported from abroad pursuant to agreements with their foreign owners or custodians for temporary display in the exhibition ''Edvard Munch: Trembling Earth'' at the Sterling and Francine Clark Art Institute, Williamstown, Massachusetts, and at possible additional exhibitions or venues yet to be determined, are of cultural significance, and, further, that their temporary exhibition or display within the United States as aforementioned is in the national interest. I have ordered that Public Notice of these determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Elliot Chiu, Attorney-Adviser, Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6471; email: *section2459@state.gov*). The mailing address is U.S. Department of State, L/PD, 2200 C Street NW (SA–5), Suite 5H03, Washington, DC 20522–0505.

SUPPLEMENTARY INFORMATION: The foregoing determinations were made pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.;* 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236–3 of August 28, 2000, and Delegation of Authority No. 523 of December 22, 2021.

Scott Weinhold,

Principal Deputy Assistant Secretary for Educational and Cultural Affairs, Bureau of Educational and Cultural Affairs, Department of State.

BILLING CODE 4710–05–P

TENNESSEE VALLEY AUTHORITY

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Tennessee Valley Authority (TVA).

ACTION: 30-Day notice of submission of information collection reinstatement approval request to OMB.

SUMMARY: Tennessee Valley Authority (TVA) provides notice of submission of this information clearance request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). The general public and other federal agencies are invited to comment. TVA previously published a 60-day notice of the proposed information collection reinstatement for public review February 22, 2023 and no comments were received.

DATES: The OMB will consider all written comments received on or before May 30, 2023.

ADDRESSES: Written comments for the proposed information collection reinstatement should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

SUPPLEMENTARY INFORMATION:

Type of Request: Reinstatement, with minor modification, of a previously approved information collection for which approval has expired.

Title of Information Collection: Land Use Survey Questionnaire—Vicinity of Nuclear Power Plants.

OMB Control Number: 3316–0016.

Current Expiration Date: 01/30/2023.

Frequency of Use: Annually.

Type of Affected Public: Individuals or Households, farms and business and other for-profit.

Small Businesses or Organizations Affected: Yes.

Federal Budget Functional Category Code: 455.

Estimated Number of Annual Responses: 150.

Estimated Total Annual Burden Hours: 75.

Estimated Average Burden Hours per Response: 0.5.

Need For and Use of Information: This survey is used to locate, for monitoring purposes, rural residents, home gardens, and milk animals within a five-mile radius of a nuclear power plant. The monitoring program is a mandatory requirement of the Nuclear Regulatory Commission set out in the technical specifications when the plants were licensed. The ICR previously approved by OMB expired on January 31, 2023.

Rebecca L. Coffey,

Agency Records Officer.

BILLING CODE 8120–08–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Regulations Governing Certain Positive Train Control System Outages

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice.

SUMMARY: The purpose of this notice is to inform the public about FRA's regulations that currently govern certain outages of positive train control (PTC) systems during, for example, infrastructure upgrades and capital projects. This notice also contains information about the process a railroad must follow to obtain FRA's approval before temporarily disabling its PTC system for such purposes.

FOR FURTHER INFORMATION CONTACT: For technical questions, please contact Gabe Neal, Staff Director, Signal, Train Control, and Crossings Division, telephone: 816–516–7168, email: *Gabe.Neal@dot.gov.* For legal questions, please contact Stephanie Anderson, Attorney Adviser, telephone: 202–834–0609, email: *Stephanie.Anderson@dot.gov.*

SUPPLEMENTARY INFORMATION: By law, PTC systems must govern operations on PTC-mandated main lines, which currently encompass approximately 58,000 route miles, and include Class I railroads' main lines over which poison- or toxic-by-inhalation hazardous materials are transported and any railroads' main lines over which intercity or commuter rail passenger transportation is regularly provided.[1]

Previously, FRA's regulations permitted railroads to temporarily disable PTC systems where necessary to perform PTC system repair or maintenance.[2] That temporary flexibility expired, by regulation, on December 31, 2022.[3] Under that temporary provision, railroads were required only to notify to FRA; seeking FRA's approval was not necessary.

FRA appreciates that several types of PTC systems can be upgraded seamlessly, without necessitating an interruption of PTC system service. FRA also recognizes, however, that in limited cases, even those types of PTC systems might experience temporary outages for a short period during certain infrastructure upgrades.[4] In addition, FRA understands that the design of certain PTC systems, including the Advanced Civil Speed Enforcement System II on the Northeast Corridor, may require more extended periods of outages to facilitate ongoing capital projects. FRA expects that, in such a case, a railroad would schedule the temporary disabling of its PTC system for the time posing the least risk to railroad safety and for the minimum time necessary to complete the capital project and recommission its PTC system.[5]

As noted above, 49 CFR 236.1029(g)(3) previously permitted railroads to temporarily disable their PTC systems, with just notification to FRA; however, that provision expired on December 31, 2022, and is therefore no longer available for railroads to utilize. Now, if a railroad needs to disable its PTC system temporarily for maintenance or upgrade purposes, a railroad must obtain FRA's approval under 49 CFR 236.1021, *Discontinuances, material modifications, and amendments,* before temporarily disabling its PTC system or

[1] Title 49 United States Code (U.S.C.) 20157; Title 49 Code of Federal Regulations (CFR) 236.1005(b), 236.1006(a). This requirement does not apply, however, to a railroad's controlling locomotives that are subject to either a temporary or permanent exception under 49 U.S.C. 20157(j)–(k) or 49 CFR 236.1006(b).

[2] 49 CFR 236.1029(g)(3).

[3] *Id.*

[4] For example, FRA is aware of multiple railroads' electrical infrastructure upgrade projects that involved disabling the PTC system for a maximum period of four hours.

[5] *See* 49 CFR 236.1029(g)(3)(ii), 236.1033(f).

initiating a PTC system service outage. To obtain FRA's approval in this context, a railroad must submit a request to amend its FRA-certified PTC system pursuant to 49 CFR 236.1021(m), which outlines the process, content requirements, and FRA decision deadline (*i.e.,* 45 days) for this specific type of request for amendment (RFA).

Under 49 CFR 236.1021(e), FRA's regulations provide that FRA will publish a notice in the **Federal Register** and invite public comment, if an RFA includes a request for approval of a material modification or discontinuance of a PTC system. During FRA's review of a railroad's RFA, FRA will consider any comments or data submitted within the timeline specified in the notice and to the extent practicable, without delaying implementation of valuable or necessary safety and functional modifications to a PTC system. *See* 49 CFR 236.1021; *see also* 49 CFR 236.1011(e).

In addition, 49 CFR 236.1021(f) specifies that FRA will review the RFA, including the proposed temporary outage, and determine whether granting the request is ''in the public interest and consistent with railroad safety, taking into consideration all changes in the method of operation and system functionalities, both within normal PTC system availability and in the case of a system failed state (unavailable).'' If FRA approves the railroad's request to amend its FRA-certified PTC system, involving a limited outage period, FRA may attach conditions to that approval, which may include, for example, the following types of conditions, among other reporting requirements:

(1) The host railroad and its applicable tenant railroads must comply with the operating rules specified in the host railroad's FRA-approved PTCSP that would otherwise apply when a PTC system is temporarily disabled;

(2) The host railroad shall make reasonable efforts to schedule the temporary disabling of its PTC system for times posing the least risk to railroad safety;

(3) The host railroad shall notify FRA (via *PTC.Correspondence@dot.gov*) and each applicable tenant railroad at least 7 days before the host railroad temporarily disables its PTC system. In its notification, the host railroad must include the exact date and period of time during which the PTC system will be disabled, and explain how that date and period of time pose the least risk to railroad safety;

(4) The host railroad shall notify all applicable train crews, including tenant railroads' train crews, about the PTC system outage, including in accordance with the host railroad's operating rules and practices, which may require, for example, such information to be provided via track bulletins, dispatcher bulletins, or special instructions;

(5) The host railroad shall place its PTC system back into service without undue delay, and the PTC system may not be disabled longer than the approved timeframe; and

(6) During the period in which the PTC system is temporarily disabled, the host railroad and its tenant railroads must comply with the operating restrictions under 49 CFR 236.1029(b), including the applicable speed limitations.

Please be advised that this notice focuses on outages resulting from infrastructure upgrades or capital projects and does not address all types of PTC system outages. Other provisions in FRA's PTC regulations may instead apply and govern, depending on the exact circumstances. For example, please see 49 CFR 236.1005(g) through (k) for the requirements and procedures associated with temporary rerouting for emergencies or planned maintenance. In addition, please see 49 CFR 236.1029(b), which outlines the requirements that apply when a railroad's PTC system experiences an *en route* failure, including a cut out or malfunction.

FRA remains available to provide technical assistance to railroads and other stakeholders and to advise about any railroad-specific scenarios that may arise. FRA appreciates railroads' commitment to operating their FRA-certified, interoperable PTC systems on PTC-mandated main lines, as generally required by law, outside these special, limited circumstances.

Issued in Washington, DC.

John Karl Alexy,

Associate Administrator for Railroad Safety, Chief Safety Officer.

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket No. MARAD–2023–0087]

Coastwise-Qualified Launch Barges: 46 CFR 389.3(a) Notifications

AGENCY: Maritime Administration (MARAD), Department of Transportation (DOT).

ACTION: Notice and request for comments.

SUMMARY: To maximize the use of coastwise-qualified vessels, in January of each calendar year, MARAD requests owners and operators of coastwise-qualified launch barges or other interested parties to notify the Agency of their interest in, and provide certain information relating to, the transportation, installation, or launching of platform jackets. MARAD publishes the notifications as a resource to companies contemplating these operations on the outer continental shelf. The notifications should include information set forth in the Supplementary Information section below.

DATES: Submit comments on or before May 30, 2023.

ADDRESSES: You may submit comments identified by DOT Docket Number MARAD–2023–0087 by any of the following methods:

- *Website/Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Search ''MARAD–2023–0087'' and follow the instructions for submitting comments on the electronic docket site.
- *Mail or Hand Delivery:* Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except on Federal holidays.

Note: All submissions must include the agency name and docket number for this notice. All comments received will be posted without change to *http://www.regulations.gov* including any personal information provided.

Docket: For access to the docket to read comments received, go to *http://www.regulations.gov* and search using ''MARAD–2023–0087.''

FOR FURTHER INFORMATION CONTACT: Jennifer Meurer, U.S. Department of Transportation, Maritime Administration, 1200 New Jersey Avenue SE, Room W23–453, Washington, DC 20590. Telephone: (202) 731–6220. Email: *Jennifer.Meurer@dot.gov.*

SUPPLEMENTARY INFORMATION: Pursuant to 46 U.S.C. 55108, the Secretary of Transportation has the authority to adopt procedures that timely provide information that would maximize the use of coastwise-qualified vessels for the transportation of platform jackets between U.S. coastwise points and the outer continental shelf. This authority has been delegated to MARAD. The regulations promulgated under the authority of 46 U.S.C. 55108 and 46 CFR 389.3(a), require that MARAD publish a notice in the **Federal Register** requesting notification from owners, operators, or potential operators of coastwise-qualified launch barges, or

other interested parties, of: (1) their interest in participating in the transportation and, if needed, the launching or installation of offshore platform jackets; (2) the contact information for their company; and (3) the specifications of any currently owned or operated coastwise-qualified launch barges or plans to construct such a vessel. The notification should indicate that the vessel's certificate of documentation has a coastwise endorsement. The information provided in the notifications will be published at *http://MARAD.dot.gov.* 46 CFR 389.3(e).

Privacy Act

In accordance with 5 U.S.C. 553(c), MARAD solicits comments from owners and operators of coastwise-qualified launch barges to compile a list of vessels that could potentially be available to transport, and if necessary, launch or install platform jackets. All timely comments will be considered; however, to facilitate comment tracking, commenters should provide their name or the name of their organization. If comments contain proprietary or confidential information, commenters may contact the agency for alternate submission instructions. Anyone can search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). For information on DOT's compliance with the Privacy Act, please visit *https://www.transportation.gov/privacy.*

(Authority: 46 U.S.C. 55108, 49 CFR 1.93(a), 46 CFR 389.)

By Order of the Maritime Administrator.

T. Mitchell Hudson, Jr.,

Secretary, Maritime Administration.

[FR Doc. 2023–08910 Filed 4–26–23; 8:45 am]

BILLING CODE 4910–81–P

DEPARTMENT OF TRANSPORTATION

Regional Infrastructure Accelerator Demonstration Program

AGENCY: Build America Bureau, U.S. Department of Transportation (DOT).

ACTION: Notice of Funding Opportunity (NOFO).

SUMMARY: The Build America Bureau (the Bureau) is issuing this NOFO to solicit applications from eligible parties for $24 million in Regional Infrastructure Accelerator (RIA) grants. RIA grants assist entities in developing improved infrastructure priorities and financing strategies for the accelerated development of a project that is eligible for funding under the Transportation Infrastructure Finance and Innovation Act (TIFIA) Credit Program under Chapter 6 of Title 23, United States Code. These grants are intended to support RIAs that: (1) serve a defined geographic area; (2) act as a resource to qualified entities in the geographic area; and (3) demonstrate the effectiveness of the RIA to expedite the delivery of projects eligible for the TIFIA credit program. Projects are not required to apply for or receive TIFIA credit assistance to be eligible; however, applicants who are considering the appropriateness of innovative financing methods to accelerate the delivery of eligible projects are strongly encouraged to apply.

SUPPLEMENTARY INFORMATION: Each section of this notice contains information and instructions relevant to the application process for the RIA grants. All applicants should read this notice in its entirety so that they have the information they need to submit eligible and competitive applications.

Table of Contents

A. Program Description

1. *Background:* The Bureau is responsible for driving transportation infrastructure development projects in the United States through innovative financing programs. Its mission is to provide access to the Bureau's credit programs in a streamlined, expedient, and transparent manner. In accomplishing its mission, the Bureau also provides technical assistance and encourages innovative best practices in project planning, financing, delivery, and monitoring. The Bureau draws upon the full resources of DOT to best utilize the expertise of DOT's Operating Administrations while promoting a culture of innovation and customer service. Section 1441 of the FAST Act [1] authorized the Program. In 2021, the Bureau selected the first five Regional Infrastructure Accelerators: (1) Fresno Council of Governments, (2) Chicago Metropolitan Agency for Planning, (3) Northeast Ohio Areawide Coordinating Agency (4), San Diego Association of Governments, and (5) Pacific Northwest Economic Region. In 2022, five additional Regional Infrastructure Accelerators were selected: (1) Central Ohio Transit Authority (COTA), (2) Dona Ana County, New Mexico, (3) Panhandle Regional Planning Commission, Texas, (4) Resilient SR 37 Program, California and, (5) Suffolk County, New York Midway Crossing Project. The Consolidated Appropriations Act, 2022,[2] appropriated $12 million for the Program and the Consolidated Appropriations Act, 2023,[3] appropriated an additional $12 million for the Program, which are collectively the source of funding for this NOFO.

The intent of this Program is to demonstrate and evaluate the viability and effectiveness of a small number of accelerators in expediting the development and delivery of specific transportation projects within the geographic area of each RIA designated by the Bureau. It is the intent of the Bureau to expand the Program coverage building on the earlier designation of RIAs. Therefore, the Bureau continues to be keenly interested in testing several RIA models to address needs based on common transportation infrastructure make-up and challenges within regions, particularly those with less capacity or experience in using innovative financing and project delivery methods, and those supporting eligible entities that are likely to be first time users of the Bureau's credit programs, such as the TIFIA credit program. The Bureau plans to select between six and ten RIAs for awards under this program based on proposals submitted by eligible applicants in response to this notice. Ideally, when considering both the first and the second rounds of awards under this program, there will be a diversity of RIAs selected for awards based on geography (*e.g.,* rural, urban, disadvantaged community), organizational structure (*e.g.,* within a State or Metropolitan Planning Organization), operational business model and focus.

2. *Regional Designation:* For the purpose of this Program, the Bureau will consider regional designation as broadly defined in the following categories:

a. *State or Multi-State:* An RIA that serves one State or a group of State entities with common interest in transportation projects being delivered.

b. *Urban or Metropolitan Planning Organization (MPO):* An RIA that serves a local government or group of local jurisdictions with transportation functions within a metropolitan area.

[1] Public Law 114–94, 129 Stat. 1312, 1435 (Dec. 4, 2015).

[2] Public Law 117–103, div. L, tit. I, 136 Stat. 49, 699 (Mar. 15, 2022).

[3] Public Law 117–328, div. L, tit. I (Dec. 29, 2022).

For this Program, if the RIA serves MPOs sharing State boundaries, it would be considered under this category.

c. *Rural:* An RIA that serves a region of rural communities as defined in this notice. An RIA serving multiple rural communities across state lines would be considered under this category. To be considered a rural RIA, most of the projects listed in the proposal must meet the definition of rural in Section C.5 of this notice.

d. *Other:* Any proposal that includes multiple jurisdictions with shared priorities and interest, such as a river basin, transportation corridor, etc.

3. *Program Goals:* The primary intent for the Program is to establish regional infrastructure accelerators to assist entities in accelerating TIFIA-eligible projects through innovative financing strategies. This assistance can be in the form of any of the following, based on the needs of the project(s) that the applicant proposes to assist:

a. Project planning;

b. Studies and analysis, including feasibility, market analysis, project costs, cost-benefit analysis, value for money, public benefit, economic assessments, and environmental reviews;

c. Revenue forecasting, funding and financing options analyses, application of best practices, innovative financing/procurement, and public-private partnerships, where appropriate;

d. Preliminary engineering and design work;

e. Statutory and regulatory compliance analyses;

f. Evaluation of opportunities for private financing, project bundling and/or phasing;

g. Enhancement of rural project sponsors' capacity to use the TIFIA credit program and to the extent applicable, the RRIF credit program, PABs, and other innovative financing methods, helping to bundle projects across multiple smaller jurisdictions to create a project at a scale that is more appropriate for the Bureau's credit assistance, and pool the jurisdictions' resources to apply for TIFIA credit assistance and, to the extent applicable, RRIF credit assistance and PABs, as well as leveraging DOT's Rural Opportunities to Use Transportation for Economic Success (ROUTES) Initiatives' [4] products and offerings; and

h. Other direct, project-specific support as appropriate.

Funding, in the form of and pursuant to a cooperative agreement, will be provided for a period of two years, with an option for a third year for an RIA that meets or exceeds agreed-upon performance targets and subject to the availability of funding. Competitive proposals that demonstrate long-term self-sustainability will be given greater consideration. The Bureau intends to work closely with grant recipients in developing and, as applicable, financing projects within the RIA's geographic area.

4. *Changes from the FY 2022 NOFO:* This FY 2023 Regional Infrastructure Accelerator Demonstration Program NOFO updates the FY 2022 NOFO to further reflect this Administration's priorities for creating good-paying jobs, improving safety, applying transformative technology, and explicitly addressing climate change and advancing racial equity. Therefore, the Bureau added transit-oriented development (TOD) as an additional point of consideration under the Transformative Projects criterion to clarify how the long-term project outcomes should align with the Administration's priorities in a competitive application. While the Program is not exclusive to TOD projects, proposals to aid projects that incorporate (1) economic development and related infrastructure activities and (2) public infrastructure/joint development opportunities will be more competitive than those that do not. Applicants should refer to Section E of this NOFO for descriptions of the selection criteria, including the new Transformative Projects criterion. Additionally, this NOFO clarifies what would be required of the Applicant to receive a STRONG rating for evaluation Criteria, where applicable, as further described in Section E.1.

B. Federal Award Information

The Bureau hereby requests applications from all interested parties to result in the award of between six and ten cooperative agreement(s), each containing substantial involvement on the part of the Federal government in accordance with 31 U.S.C. 6305. The Bureau anticipates substantial involvement between it and the recipient during this Program, which will include:

- Technical assistance and guidance to the recipients;
- Close monitoring of performance;
- Involvement in technical decisions; and
- Participation in status meetings including kick off meeting and annual technical and budget reviews.

1. *Program Funding and Awards:*

a. Number of Awards: The Bureau intends to select between six and ten RIAs, based on the number and viability of applications.

b. Size of Award: A total of $24 million is available for this Program. The size of individual awards will be determined by the number of RIAs selected and the funding needed for each to meet the Program objectives. Depending on the strength of applications and total amount requested, the Bureau anticipates providing grants in the range of $2 million to $4 million to establish between six and ten new RIAs. However, the Bureau may make smaller or larger awards depending on the applications received.

2. *Funding Period:* The Bureau intends to award funds on a yearly basis for a base period of two years under a cooperative agreement. A third option year of funding may be provided subject to RIA performance and the availability of funds.

C. Eligibility Information

1. *Eligible Applicants:* To be selected as an RIA, an applicant must be an eligible applicant. An eligible applicant is: A U.S. public entity, including a state, multi-state or multi-jurisdictional group, municipality, county, a special purpose district or public authority with a transportation function including a port authority, a tribal government or consortium of tribal governments, MPO, regional transportation planning organization (RTPO), Regional Transportation Commission, or a political subdivision of a State or local government, or combination of two or more of the foregoing.

If more than one public entity is applying in a single proposal, one of the entities must be designated as the lead applicant. Such applicant will be authorized to negotiate and enter into a cooperative agreement with the Government on behalf of the entities, will be responsible for performance, and will be accountable for Federal funds. Applications will be accepted from a partnership between one or more eligible applicants and another U.S. party, such as a private entity, consulting or engineering firms, etc., as long as one of the eligible public entities is designated as the lead applicant and that entity will enter into the cooperative agreement, with the shared goal of establishing and operating the RIA. The location of all RIA application parties, their entire jurisdictions and all proposed projects must be located solely in the United States and its territories. Proposed projects and project sponsors must meet the eligibility requirements for TIFIA credit assistance as further defined in Chapter 3 of the Bureau's

[4] *https://www.transportation.gov/rural.*

Credit Program Guide (*https://www.transportation.gov/sites/buildamerica.dot.gov/files/2019-08/Bureau%20Credit%20Programs%20Guide_March_2017.pdf#page=29*). In addition, the Bureau will consider the extent to which an applicant demonstrates the capacity to accelerate projects eligible for the TIFIA credit program using innovative financing strategies, including but not limited to the TIFIA and RRIF credit programs, PABs, project bundling, and private investment. Further, the Bureau will consider applications from any RIA that was designated pursuant to the prior NOFO to the extent that funding is available, and only after giving primary consideration to applicants who have not received any funding under this Program.

2. *Cost sharing or Matching:* There is no requirement for cost sharing or matching the grant funds.

3. *Other:* For the purposes of this Program, the following terms apply:

a. *Rural Infrastructure Project:* Consistent with the definition of ''rural infrastructure project'' for the TIFIA credit program, ''rural'' for the purposes of this notice is defined as a surface transportation infrastructure project located outside of an urban area with a population greater than 150,000 individuals, as determined by the Bureau of the Census in the 2020 decennial Census (*https://www.census.gov/programs-surveys/geography/guidance/geo-areas/urban-rural.html*).

b. A proposed region whose geographic authority is in both an urban and a rural area will be designated as urban if the majority of the projects listed in the proposal are in urban areas. Conversely, a proposed region located in both an urban area and a rural area will be designated as rural if the majority of the projects listed in the proposal are in rural areas.

c. *Urban/Rural Project determination:* A project located in both an urban and a rural area will be designated as urban if less than ½ of the project's costs are spent in a rural area. If ⅔ or more of a project's costs are spent in a rural area, the project will be designated as rural. For projects where between ½ and ⅔ of their costs are in a rural area, the project will be designated as rural if the applicant demonstrates that ⅔ or more of the project's benefits accrue to users in rural areas; if the applicant does not make such demonstration, the project will be designated as urban.

D. Application and Submission Information

1. *Address to Request Application Package:* Applicants must submit all applications through *www.Grants.gov.* Instructions for submitting applications can be found at *https://www.transportation.gov/buildamerica/financing/tifia/regional-infrastructure-accelerators-program.*

2. *Content and Form of Application Submission:* The application must include the Standard Form 424 (Application for Federal Assistance), cover page, and the application narrative.

a. *Cover Page:* Each application should include a cover page that contains, at minimum, name of the applicant and sponsor, if applicable, the location; the region of designation; category of designation for which the applicant is to be considered; and RIA budget amount.

b. *Application Narrative:* The application narrative should follow the basic outline below to address the Program requirements and assist evaluators in locating relevant information.

Section	Section explained
(1) Applicant	See D.2.c(1).
(2) Description of Proposed Geographic/Jurisdictional Region.	See D.2.c(2).
(3) Accelerator Proposal	See D.2.c(3).
(4) Budget, Sources and Uses for Full Accelerator Funds.	See D.2.c(4).
(5) Selection Criteria	See D.2.c(5).

The application narrative should include the information necessary for the Bureau to determine that the applicant(s) proposed regional focus, the overall accelerator proposal, list of intended projects, budget, and other information satisfy the eligibility requirements set forth in this notice as described in Section C and to assess the selection criteria specified in Section E.1. To the extent practicable, applicants should provide supporting data and documentation in a form that is directly verifiable by the Bureau. The Bureau may ask any applicant to supplement data in its application but expects applications to be complete upon submission.

c. *Additional Application Requirements:* In addition to the information requested elsewhere in this notice, the proposal should include a table of contents, maps, and graphics, as appropriate, to make the information easier to review. The Bureau recommends that the proposal be prepared with standard formatting preferences (a single-spaced document, using a standard 12-point font such as Times New Roman, with 1-inch margins). The proposal narrative should not exceed 30 pages in length, excluding cover pages and table of contents. The only substantive portions that may exceed the 30-page limit are documents supporting assertions or conclusions made in the 30-page project narrative. If possible, applicants should provide website links to supporting documentation rather than copies of these supporting materials. If supporting documents are submitted, applicants should clearly identify within the project narrative the relevant portion of the project narrative that each supporting document supports. The Bureau recommends using appropriately descriptive file names (*e.g.,* ''Project Narrative,'' ''Maps,'' ''Memoranda of Understanding'' and ''Letters of Support,'' etc.) for all attachments.

(1) *Applicant:* This section of the narrative should include information describing the organizational structure and formal/informal relationships between parties associated with the RIA application. It should directly address the eligibility requirements discussed in section C.1 of this notice. The applicant should use this section to explain the organization's history, qualifications, and experience of key individuals who will be working in the proposed RIA. This section should also include descriptions of previous projects relevant to the RIA's activities envisioned in this notice that the organization or its individuals completed. The narrative should place the projects into a broader context of transportation infrastructure investments being pursued by the proposed RIA and its sponsors, and how it will benefit communities within the region.

(2) *Description of Proposed Geographic/Jurisdictional Region:* This portion of the narrative should precisely identify the geographic region, the jurisdictions, and the agencies the RIA would serve and identify which of the four categories of RIA identified in Section A.2 that this proposal falls under and explain why. The narrative should explain the commonalities and shared interests of parties in the proposed region as the rationale for establishing a region of this construct, along with the affiliations within the proposed region. Consistent with the Department's ROUTES Initiative (*https://www.transportation.gov/rural*), the Department encourages applicants to describe how activities proposed in their application would address the unique challenges facing rural transportation networks, regardless of

the geographic location of those activities.

(3) *Accelerator Proposal:* This section of the narrative should explain how the applicant(s) propose to establish the RIA and the concept of how it would operate and provide the project-specific services identified in Section A of this notice, along with a proposed timeline for establishing the RIA, with key milestones and suggested performance targets during its operational phase. The applicant should describe, in sufficient detail, the applicant's approach to identifying and building the pipeline of projects to be undertaken and how they will develop such projects utilizing their experience and expertise and identify an initial pipeline of projects that are eligible for TIFIA credit assistance and, to the extent applicable, RRIF credit assistance, PABs, and other innovative financing methods. The narrative should also contain a list of projects that the applicant(s) propose to assist under the RIA. This list, to the extent possible, should include, at a minimum:

- Project name and location;
- Project sponsor;
- Description;
- Bureau program most likely to apply (TIFIA, RRIF, PABs);
- Support activities the applicant envisions the RIA would provide
- Project costs; and
- Project timeline.

(4) *Budget, Sources, and Uses for Full Accelerator Funds:* The applicant should include a proposed financial plan and budget including the Federal grant amount requested, non-Federal matching funds, in-kind contributions, and other sources. The proposed plan should also include a list of activities and projects as well as all associated costs of the proposed RIA. For non-Federal matching funds, the application should identify the sources as well as supporting documentation indicating the degree to which those funds are committed and dates of their availability. If the applicant proposes that the RIA will reach a point of long-term self-sustainability, the narrative should include a description of how this would happen, and where the long-term funds would be generated.

(5) *Selection Criteria:* This section of the application should demonstrate how the application aligns with the criteria described in Section E.1 of this notice. The Bureau intends to select and designate RIA that demonstrate in their proposal the ability to effectively assist entities in developing improved infrastructure priorities and financing strategies for the accelerated development of one or more projects eligible for funding under the TIFIA program. DOT will consider the extent to which an RIA is likely to effectively promote investment in eligible projects, develop a pipeline of regional transportation projects, and result in the implementation of projects with innovative financing methods.

The Bureau encourages applicants to either address each criterion or expressly state that the project does not address the criterion. Applicants are not required to follow a specific format, but the outline suggested addresses each criterion separately and promotes a clear discussion that assists project evaluators. To minimize redundant information in the application, the Bureau encourages applicants to cross-reference from this section of their application to relevant substantive information in other sections of the application. The guidance in this section is about how the applicant should organize their application. Guidance describing how the Bureau will evaluate projects against the Selection Criteria is in Section E.1 of this notice. Applicants also should review that section before considering how to organize their application.

Executive Order 13858 directs the Executive Branch Departments and agencies to maximize the use of goods, products, and materials produced in the United States through the terms and conditions of Federal financial assistance awards. If selected for an award, grant recipients must be prepared to demonstrate how they will maximize the use of domestic goods, products, and materials, as applicable, in establishing and operating the RIA. Additionally, recipients should be prepared to demonstrate in their application how the RIA addresses the goals and priorities of the Department's strategic plan (*https://www.transportation.gov/dot-strategic-plan*). These include: (1) Safety, (2) Economic Strength and Global Competitiveness, (3) Climate and Sustainability, (4) Transformation, and (5) Organizational Excellence. These can include projects that: (1) Are consistent with the National Roadway Safety Strategy, (2) Improves access or provides economic growth opportunities for underserved, overburdened, or rural communities, (3) Considers climate change and sustainability impacts in its planning and construction, (4) Have innovative approaches or delivery methods, and (5) Support Organizational Excellence.

3. *Unique Entity Identifier (UEI) and System for Award Management (SAM):* Each applicant must: (1) be registered in SAM before submitting its application; (2) provide a valid UEI in its application; and (3) maintain an active SAM registration with current information at all times during which it has an active Federal award or an application or plan under consideration by a Federal awarding agency. The Department may not make an RIA grant to an applicant until the applicant has complied with all applicable UEI and SAM requirements and, if an applicant has not fully complied with the requirements by the time the Department is ready to make a grant, the Department may determine that the applicant is not qualified to receive a grant and use that determination as a basis for making a grant to another applicant.

4. *Submission Dates and Timelines:*

a. *Deadline:* Applications in response to this NOFO must be submitted through *Grants.gov* by 11:59 p.m. EST 30 days after publication. The *Grants.gov* ''Apply'' function will open on the date of publication. The Bureau may hold NOFO information session(s) before the due date.

To apply through *Grants.gov,* applicants must:

(1) Obtain a Unique Entity Identifier (UEI);

(2) Register with SAM at *www.sam.gov;* and

(3) Create a *Grants.gov* username and password; and

(4) The E-business Point of Contact (POC) at the applicant's organization must also respond to the registration email from *Grants.gov* and login at *Grants.gov* to authorize the POC as an Authorized Organization Representative (AOR). Please note that there can only be one AOR per organization.

Please note that the *Grants.gov* registration process usually takes 4–6 weeks to complete, and that the Department will not consider late applications that are the result of failure to register or comply with *Grants.gov* applicant requirements in a timely manner. For information and instruction on each of these processes, please see instructions a *https://www.grants.gov/web/grants/applicants/applicant-faqs.html.* If interested parties experience difficulties at any point during the registration or application process, please call the *Grants.gov* Customer Service Support Hotline at 1(800) 518–4726, Monday–Friday from 7:00 a.m. to 9:00 p.m. EST.

5. *Intergovernmental Review:* Applications under this NOFO are not subject to the State review under E.O. 12372.

6. *Funding Restrictions:* The DOT will not reimburse any pre-award costs or application preparation costs under this

proposed agreement. Construction of any project being contemplated or aided by the proposed RIA is not an allowable activity under this grant. All non-domestic travel must be approved in writing by the DOT designated agreement officer prior to incurring costs. Travel requirements under the cooperative agreement will be met using the most economical form of transportation available. If economy class transportation is not available, the request for payment vouchers must be submitted with justification for use of higher-class travel indicating dates, times, and flight numbers.

7. *Other Submission Requirements:*

a. *Submission Location:* Application must be submitted to *Grants.gov*.

b. *Consideration of Application:* Only applicants who comply with all submission deadlines described in this notice and submit applications through *Grants.gov* will be eligible for award. Applicants are strongly encouraged to make submissions in advance of the deadline.

c. *Civil Rights:* Applications should demonstrate that the recipient has a plan for compliance with civil rights obligations and nondiscrimination laws, including Title VI of the Civil Rights Act of 1964 and implementing regulations (49 CFR 21), the Americans with Disabilities Act of 1990 (ADA), and Section 504 of the Rehabilitation Act, and accompanying regulations. This may include, as applicable, providing a Title VI plan, community participation plan, and other information about the communities that will be benefited and impacted by the project. The Department's and DOT Offices of Civil Rights may provide resources and technical assistance to recipients to ensure full and sustainable compliance with Federal civil rights requirements.

d. *Late Applications:* Applicants experiencing technical issues with *Grants.gov* that are beyond the applicant's control must contact *RIA@dot.gov* prior to the application deadline with the username of the registrant and details of the technical issue experienced. The applicant must provide:

- Details of the technical issue experienced;
- Screen capture(s) of the technical issues experienced along with corresponding
- *Grants.gov* ''Grant tracking number'';
- The ''Legal Business Name'' for the applicant that was provided in the SF–424;
- The AOR name submitted in the SF–424;
- The UEI number associated with the application; and
- The *Grants.gov* Help Desk Tracking Number.

To ensure a fair competition of limited discretionary funds, the following conditions are not valid reasons to permit late submissions: (1) failure to complete the registration process before the deadline; (2) failure to follow *Grants.gov* instructions on how to register and apply as posted on its website; (3) failure to follow all the instructions in this notice of funding opportunity; and (4) technical issues experienced with the applicant's computer or information technology environment. After the Department reviews all information submitted and contacts the *Grants.gov* Help Desk to validate reported technical issues, USDOT staff will contact late applicants to approve or deny a request to submit a late application through *Grants.gov*. If the reported technical issues cannot be validated, late applications will be rejected as untimely.

E. Application Review Information

1. *Criteria:* This section specifies the criteria that the Bureau will use to evaluate and award applications for Program grants. The criteria incorporate statutory eligibility requirements. For each proposed RIA, the Bureau will review the application for the criteria described in this section. The Bureau does not consider any criterion more important than the others.

The Bureau does not consider cost sharing as an independent criterion, and proposed cost sharing is considered in an application's merit evaluation only to the extent it is relevant to the criteria enumerated below in sections E.1.a–k, including Partnerships, Business Model, Readiness, Value, Equity and Accessibility, and Self-Sustainability.

a. *Experience/Qualifications:* The Bureau will assess whether and to what extent the applicant(s):

- Possess the ability to evaluate and promote innovative financing methods for local projects including the use of TIFIA and RRIF and other Federal assistance programs where applicable;
- Possess the ability to provide technical assistance on best practices with respect to financing projects;
- Have experience in increasing transparency with respect to infrastructure project analysis and using innovative financing for public infrastructure projects;
- Have experience in deploying predevelopment capital programs designed to facilitate the creation of a pipeline of infrastructure projects available for investment;
- Have a history of successfully bundling smaller-scale and rural projects into larger proposals that may be more attractive for private investment;
- Have demonstrated success in reducing transaction costs for public project sponsors;
- Demonstrate the capacity to accelerate projects eligible for the TIFIA credit program through the use of innovative financing strategies such as the TIFIA and RRIF credit programs, and PABs, but also other strategies such as project bundling, grant anticipation revenue vehicles, and incorporating private capital;
- Have experience in the development of project financial plans, including developing capital structures and identifying funding and financing sources, as well as a demonstrated track record for achieving financial close; and
- Have experience in working with private sector project sponsors and disadvantaged communities, including but not limited to rural and low resources communities, as well as working on revitalization projects.

An applicant that demonstrates substantial experience of 10 years or more in the development and delivery of projects, including the use of alternative delivery methods such as design-build and/or public-private partnerships as related to the items above, and innovative financing particularly the use of TIFIA, RRIF, or PABs will receive a STRONG rating in this criterion. Those who demonstrate between 5 and 9 years or more in the development and delivery of projects will receive a MODERATE rating in this category and those who demonstrate less than 5 years of experience in the development and delivery of projects will received a MARGINAL in this rating category.

b. *Partnerships:* The Bureau will consider the extent to which applicant(s) demonstrate strong collaboration among a broad range of stakeholders in the proposed geographic area of the RIA. Applications with strong partnerships typically involve multiple partners in project development, funding, and finance. The Bureau will consider applicants that partner with State, local, and private entities for the development, funding, financing, and delivery of transportation projects to have strong partnerships. Evaluators will also consider the relationship of the RIA with its constituencies and authorities granted by them. The Bureau will assess the ability of the proposed RIA to develop projects quickly and effectively by having the support of its members and

working across jurisdictions. An applicant that can demonstrate effective partnerships with the public sector, the private sector, and academic entities will receive a STRONG rating in this criterion. Partnerships that include participation in other Federal technical assistance and capacity building programs as part of the Thriving Communities Network, which includes DOT and HUD's Thriving Communities Programs, USDA's Rural Partners Network, and the Department of Commerce Economic Recovery Corps (*https://www.transportation.gov/federal-interagency-thriving-communities-network*) will receive a STRONG rating. An applicant that can demonstrate an effective partnership with at least one of the aforementioned entities (public, private, academic) will receive a MODERATE rating in this criterion and those who cannot demonstrate any partnerships will receive a MARGINAL rating. For some best practices on establishing partnerships, please see DOT's Promising Practices for Meaningful Public Involvement in Transportation Decision-Making at *https://www.transportation.gov/priorities/equity/promising-practices-meaningful-public-involvement-transportation-decision-making.*

c. *Business Model:* The Bureau will assess the thoroughness, viability, and efficiency that the applicant(s) can establish the RIA, commence operations, and deliver project-specific outcomes. In conducting this assessment, evaluators will consider:

- The effort, cost, and actions necessary to initially establish the proposed RIA, including workspaces, fixed and variable costs, staffing, and the development of relationships necessary to function effectively in the proposed region.
- How the proposed RIA will operate once established, including costs, organization, efficiency, availability of the technical expertise and resources needed to accelerate project delivery, work plan, and time required to achieve operational status.

An applicant that can demonstrate the ability to stand up the RIA and achieve operations status within 6 months of executing a cooperative agreement will receive a STRONG rating in this criterion. Those who can demonstrate the ability to begin operations within 9 months will receive a MODERATE rating in this criterion and those who cannot demonstrate that the RIA will be operational within 9 months will receive a MARGINAL.

d. *Pipeline:* The Bureau will consider the proposed pipeline of projects and assess whether and to what extent they are likely to be eligible projects and appropriate for development activities as set forth in this notice. The proposed pipeline must include one or more projects likely to be eligible for TIFIA credit assistance. In evaluating this criterion, the Bureau will consider the number of eligible projects in the pipeline, the degree of local/regional support of the projects, and the project status and timeline as they relate to the likelihood the RIA can impact the project during the performance period of the cooperative agreement. Evaluators will also assess the degree to which the skills/experience of the applicant(s) are appropriate for the proposed projects. The Bureau will also evaluate the viability and proposed approach the applicant(s) have developed for attracting new projects into the RIA's pipeline of projects and how they propose to assist and monitor the development of those projects. An applicant that can demonstrate one or more projects in their pipeline that are likely eligible for TIFIA credit assistance, provide at least two letters indicating the degree of local/regional support for the projects and demonstrate a timeline that makes receipt of TIFIA credit assistance likely within the RIA performance period will receive a STRONG rating in this criterion. Those who can demonstrate at least one or more projects in their pipeline that are likely eligible for TIFIA credit assistance and provide at least one letter indicating the degree of local/regional support for the project(s), but whose likelihood of receipt of TIFIA credit assistance is not within the RIA performance period will receive a MODERATE rating in this criterion. Those who can demonstrate at least one or more projects in their pipeline that are likely eligible for TIFIA credit assistance but cannot provide any documentation indicating the degree of local/regional support for the project(s) or any likelihood of receipt of TIFIA credit assistance at any point during the RIA performance period will receive a MARGINAL rating.

e. *Readiness:* The Bureau will consider the extent to which the proposed RIA is prepared to commence operations and begin achieving project-specific results. Evaluators will also assess the viability of the proposed budget as it relates to the establishment and successful operations of the RIA as proposed. In considering this criterion, evaluators will also determine the likelihood that proposed milestones will be subject to delay and/or cost overruns and the risk that key milestones might be missed due to internal or external factors. Evaluators will also consider the readiness of the proposed RIA to commence operations, including but not limited to:

- Availability of facilities and equipment necessary to function;
- Existing governance structure as compared to proposed future structure; and
- Ability of existing relationships to rapidly deliver results.

An applicant that can demonstrate an effective plan to commence operations in at least the three aforementioned categories will receive a STRONG rating in this criterion. Those who can demonstrate an effective plan to commence operations in at least two will receive a MODERATE and those who cannot demonstrate an effective plan to commence operations in any of the above three categories will receive a MARGINAL rating.

f. *Underserved Communities:* In support of Executive Order 13985, *Advancing Racial Equity and Support for Underserved Communities Through the Federal Government* (86 FR 7009), the Department encourages applicants to consider how the project will address the challenges faced by individuals and underserved communities, including rural areas and other areas of persistent poverty.

Where applicable, the Bureau will evaluate the degree to which the proposal can support individual rural project sponsors. The Bureau will consider opportunities proposed to overcome common barriers to using TIFIA and RRIF credit assistance and other innovative financing methods for rural project sponsors, such as project size or type, financial or institutional capabilities, and other issues. Consistent with the Department's ROUTES Initiative (*https://www.transportation.gov/rural*), the Department recognizes that rural transportation networks face unique challenges. To the extent that those challenges are reflected in the merit criteria listed in this section, the Department will consider how the activities proposed in the application will address those challenges, regardless of the geographic location of those activities. This can include delivering innovative technical assistance and leveraging the DOT ROUTES Initiative to provide user-friendly information and other assistance to rural project sponsors. An applicant that can demonstrate an effective plan to support a rural project sponsor in overcoming common barriers to using federal credit assistance and innovative finance methods in at least one proposed project will receive a STRONG rating in this criterion. An applicant that can

demonstrate a plan to support rural project sponsors who are not immediately in their pipeline will receive a MODERATE rating in this criterion and those who cannot demonstrate a plan to support rural sponsors will receive a MARGINAL rating.

g. *Self-Sustainability:* The Bureau will consider whether and to what extent the proposed RIA will achieve self-sustainability during the proposed award's 2-year base period of performance. If a proposed RIA does not anticipate achieving self-sustainability, the Bureau will evaluate the extent to which the execution of a cooperative agreement for the RIA might deliver long-term benefits as the result of projects delivered during the 2-year base funding period.

An applicant that can demonstrate a model of self-sustainability and continued benefits beyond the base 2-year period of Federal funding will receive a STRONG rating in this criterion. An applicant that can demonstrate a plan to achieve self-sustainability within the base 2-year period of funding based on measurable milestones will receive a MODERATE in this rating criterion and those who present no plan for self-sustainability will receive a MARGINAL in this rating.

h. *Risk:* The Bureau will assess the risks to successful implementation and operation of the proposed RIA, and the degree to which proposed mitigation activities might address/offset those risks. Evaluators will also assess the practicality of proposed mitigation activities in terms of cost, complexity, and time required to implement the actions.

An applicant that can demonstrate the development of, at minimum, qualitative risk assessments of proposed projects in meeting Federal eligibility requirements (see Chapter 3 of the Bureau Credit Programs Guide: *https://www.transportation.gov/sites/buildamerica.dot.gov/files/2019-08/Bureau%20Credit%20Programs%20Guide_March_2017.pdf#page=29*) will receive a STRONG rating in this criterion. An applicant that can demonstrate a plan to develop, at minimum, qualitative risk assessments of proposed projects within the base 2-year period of funding will receive a MODERATE rating in this criterion and those that demonstrate no risk assessments or plans to develop them will receive a MARGINAL rating.

i. *Alignment with Department Priorities:* The Bureau will consider the extent to which each proposed project to be aided by the RIA will address the following Department priorities:

(1) *Safety:* DOT will assess the project's ability to foster a safe transportation system for the movement of goods and people, consistent with the Department's strategic goal to reduce transportation-related fatalities and serious injuries across the transportation system.

(2) *Environmental Sustainability:* DOT will consider the extent to which the project incorporates considerations of climate change, resilience, and environmental justice in the planning stage and in project delivery, such as through incorporation of specific design elements that address climate change impacts.

(3) *Equity and Accessibility:* DOT will consider the extent to which the project: (i) increases transportation choices and equity for individuals; (ii) expands access to essential services for communities across the United States, particularly for underserved or disadvantaged communities; (iii) improves connectivity for citizens to jobs, health care, and other critical destinations, or (iv) proactively addresses racial equity [5] and barriers to opportunity, through the planning process or through incorporation of design elements.

(4) *Innovative Technology:* Consistent with DOT's objectives to encourage transformative projects that take the lead in deploying innovative technologies and practices that drive outcomes in terms of safety, environmental sustainability, quality of life, and state of good repair, DOT will assess the extent to which the applicant uses innovative strategies, including: (i) innovative technologies, (ii) innovative project delivery, or (iii) innovative financing.

(5) *State of Good Repair:* Consistent with the Department's strategic objective to maintain and upgrade existing transportation systems, DOT will assess whether and to what extent: (i) the project is consistent with relevant plans to maintain transportation facilities or systems in a state of good repair and address current and projected vulnerabilities; (ii) if left unimproved, the poor condition of the asset will threaten future transportation network efficiency, mobility of goods or accessibility and mobility of people, or economic growth; (iii) the project is appropriately capitalized, including whether project sponsor has conducted scenario planning and/or fiscal impact analysis to understand the future impact on public finances; (iv) a sustainable source of revenue is available for operations and maintenance of the project and the project will reduce overall life-cycle costs; (v) the project will maintain or improve transportation infrastructure that supports border security functions; and (vi) the project includes a plan to maintain the transportation infrastructure in a state of good repair. DOT will prioritize projects that ensure the good condition of transportation infrastructure, including rural transportation infrastructure, that support commerce and economic growth. Transit Oriented Development: The Bureau will consider the extent to which the proposed project addresses Departmental priorities to improve transportation systems, including: (i) Project Types: DOT will consider whether the project incorporates economic development and related infrastructure activities. Additionally, DOT will consider whether the project supports safety, environmental-sustainability, equity, and accessibility in a mix of commercial, residential, office, and entertainment uses; and (ii) Transportation Access: DOT will consider if the project is accessible to one or more: (a) fixed guideway transit facilities, (b) passenger rail stations, (c) intercity bus stations, and (d) intermodal facilities (transit, freight transfer, etc.).

An applicant that can demonstrate a pipeline of projects that address the TOD elements described in item (6) above and four others of the above-listed Department priorities in this Section E.1(j) (Transformative Projects) will receive a STRONG rating in this criterion. An applicant that does not address the TOD elements described in item (6) but does address at least four of the other Department priorities listed above in this Section E.1(j) will receive a MODERATE rating in this criterion and an applicant that does not address the TOD elements and addresses four or fewer of other Department priorities listed above in this Section E.1(j) will receive a MARGINAL rating.

2. *Review and Selection Process:* A Review Team will review all eligible applications received by the deadline. This Review Team will consist of Modal Liaisons from the Federal Highway Administration (FHWA), Federal Railroad Administration (FRA) and Federal Transit Administration (FTA) and Bureau employees designated by the Executive Director. The Program application review and selection process consists of two steps: (1) the Review Team will evaluate each proposal and determine eligibility based on criteria outlined in Section C.1 of

[5] Definitions for ''racial equity'' and ''underserved communities'' are found in Executive Order 13985, Advancing Racial Equity and Support for Underserved Communities Through the Federal Government, Sections 2 (a) and (b).

this notice and, if deemed eligible; and (2) the Review Team will evaluate the proposal based on the Selection Criteria in Section E.1 of this notice. In reviewing the application, each criterion will be given one of the following qualitative ratings: STRONG, MODERATE, or MARGINAL. These ratings are based on the proposal's alignment with the criteria. No one criterion is weighted higher or lower than the others. A collective overall assessment rating will be assigned to each application based on the qualitative ratings assigned for each evaluation criterion. The collective overall assessment will ultimately reflect how well the proposal meets the goals of the Program as stated in Section A.3. of the NOFO. Each application will be given an overall assessment rating of ''high'' if it receives a rating of STRONG in at least 6 of the evaluation criteria; an overall assessment rating of ''medium'' if it receives a rating of MODERATE or a combination of STRONG and MODERATE in at least 6 of the evaluation criteria; and an overall assessment rating of ''low'' if it receives a MARGINAL in 6 or more categories. The Review Team will present its findings to the Senior Review Team, which consists of Bureau Leadership, including the Executive Director. The Executive Director will finalize recommendations and present them to the Secretary. The final award decisions will be made by the Secretary of Transportation.

3. *Additional Information:* Prior to award, each selected applicant will be subject to a risk assessment as required by 2 CFR 200.205. The Department must review and consider any information about the applicant that is in the designated integrity and performance system accessible through SAM (currently the Federal Awardee Performance and Integrity Information System (FAPIIS)). An applicant may review information in FAPIIS and comment on any information about itself. The Department will consider comments by the applicant, in addition to the other information in FAPIIS, in making a judgment about the applicant's integrity, business ethics, and record of performance under Federal awards when completing the review of risk posed by applicants.

F. Federal Award Administration Information

1. Federal Award Notice

Following the evaluation process outlined in Section E.2, the Secretary will announce awarded projects by posting a list of selected RIA at *https://www.transportation.gov/buildamerica/financing/tifia/regional-infrastructure-accelerators-program.* Notice of selection is not authorization to begin performance or to incur costs for the proposed RIA. Following that announcement, the Bureau will contact the point of contact listed in the SF 424 to initiate negotiation of the cooperative agreement.

2. Administration and National Policy Requirements

Performance under the cooperative agreement will be governed by and in compliance with the following requirements as applicable to the type of organization of the recipient and any applicable sub-recipients:

All awards will be administered pursuant to the Uniform Administrative Requirements, Cost Principles and Audit Requirements for Federal Awards found in 2 CFR part 200, as adopted by DOT at 2 CFR part 1201.

Other terms and condition as well as performance requirements will be addressed in the cooperative agreement with the recipient. The full terms and conditions of the resulting cooperative agreements may vary and are subject to discussions and negotiations.

In connection with any program or activity conducted with or benefiting from funds awarded under this notice, recipients of funds must comply with all applicable requirements of Federal law, including, without limitation, the Constitution of the United States, statutory, regulatory, and public policy requirements, including without limitation, those protecting free speech, religious liberty, public welfare, the environment, and prohibiting discrimination; the conditions of performance, non-discrimination requirements, and other assurances made applicable to the award of funds in accordance with regulations of the Department of Transportation; and applicable Federal financial assistance and contracting principles promulgated by the Office of Management and Budget. In complying with these requirements, recipients must ensure that no concession agreements are denied, or other contracting decisions made based on speech or other activities protected by the First Amendment. If the Bureau determines that a recipient has failed to comply with applicable Federal requirements, the Bureau may terminate the award of funds and disallow previously incurred costs, requiring the recipient to reimburse any expended award funds.

Executive Order 13858 directs the Executive Branch Departments and agencies to maximize the use of goods, products, and materials produced in the United States through the terms and conditions of Federal financial assistance awards. If selected for an award, grant recipients must be prepared to demonstrate how they will maximize the use of domestic goods, products, and materials, as applicable, in establishing and operating the RIA. Additionally, recipients should be prepared to demonstrate in their application how the RIA addresses the goals and priorities of the Department's new strategic plan. These include: (1) Safety, (2) Economic Strength and Global Competitiveness, (3) Climate and Sustainability, (4) Transformation, and (5) Organizational Excellence. These can include projects that: (1) Are consistent with the National Roadway Safety Strategy, (2) Improves access or provides economic growth opportunities for underserved, overburdened, or rural communities, (3) Considers climate change and sustainability impacts in its planning and construction, (4) Have innovative approaches or delivery methods, and (5) Support Organizational Excellence.

As a condition of grant award, grant recipients may be required to participate in an evaluation undertaken by DOT or another agency or partner. The evaluation may take different forms such as an implementation assessment across grant recipients, an impact and/or outcomes analysis of all or selected sites within or across grant recipients, or a benefit/cost analysis or assessment of return on investment. DOT may require applicants to collect data elements to aid the evaluation and/or use information available through other reporting. As a part of the evaluation, as a condition of award, grant recipients must agree to: (1) make records available to the evaluation contractor or DOT staff; (2) provide access to program records, and any other relevant documents to calculate costs and benefits; (3) in the case of an impact analysis, facilitate the access to relevant information as requested; and (4) follow evaluation procedures as specified by the evaluation contractor or DOT staff.

Recipients and subrecipients are also encouraged to incorporate program evaluation including associated data collection activities from the outset of their program design and implementation to meaningfully document and measure their progress towards meeting an agency priority goal(s). Title I of the Foundations for Evidence-Based Policymaking Act of 2018 (Evidence Act), Public Law No. 115–435 (2019) urges Federal awarding agencies and Federal assistance recipients and subrecipients to use

program evaluation as a critical tool to learn, to improve equitable delivery, and to elevate program service and delivery across the program lifecycle. Evaluation means ''an assessment using systematic data collection and analysis of one or more programs, policies, and organizations intended to assess their effectiveness and efficiency.'' 5 U.S.C. 311. Credible program evaluation activities are implemented with relevance and utility, rigor, independence and objectivity, transparency, and ethics (OMB Circular A–11, Part 6 Section 290).

For grant recipients receiving an award, evaluation costs are allowable costs (either as direct or indirect), unless prohibited by statute or regulation, and such costs may include the personnel and equipment needed for data infrastructure and expertise in data analysis, performance, and evaluation. (2 CFR part 200).''

3. Reporting

a. Progress Reporting on Grant Activities

Each applicant selected for RIA grant funding must submit semi-annual progress reports as agreed to in the cooperative agreement to monitor RIA progress and ensure accountability and financial transparency in the RIA grant program.

b. Performance Reporting

Each applicant selected for RIA grant funding must collect and report to the Bureau information on the RIA's performance. The specific performance information and reporting period will be determined on an individual basis. It is anticipated that the Bureau and the grant recipient will hold monthly progress meetings or calls during which the Bureau will review project activities, schedule, and progress toward mutually agreed upon performance targets in the cooperative agreement. If the award is greater than $500,000 over the period of performance, applicants must adhere to the post award reporting requirements reflected in 2 CFR part 200 Appendix XII—Award Term and Condition for Recipient Integrity and Performance Matters.

c. Reporting of Matters Related to Recipient Integrity and Performance

If the total value of a selected applicant's currently active grants, cooperative agreements, and procurement contracts from all Federal awarding agencies exceeds $10,000,000 for any period of time during the period of performance of this Federal award, then the applicant during that period of time must maintain the currency of information reported to the SAM that is made available in the designated integrity and performance system (currently FAPIIS) about civil, criminal, or administrative proceedings described in paragraph 2 of this award term and condition. This is a statutory requirement under section 872 of Public Law 110–417, as amended (41 U.S.C. 2313). As required by section 3010 of Public Law 111–212, all information posted in the designated integrity and performance system on or after April 15, 2011, except past performance reviews required for Federal procurement contracts, will be publicly available.

G. Federal Awarding Agency Contacts

For further information concerning this notice please contact the Bureau via email at *RIA@dot.gov* or call Carl Ringgold at 202–366–2750 or *Carl.Ringgold@dot.gov.* A TDD is available for individuals who are deaf or hard of hearing at 202–366–3993. In addition, the Bureau will post answers to questions and requests for clarifications on the Bureau's website at *https://www.transportation.gov/buildamerica/financing/tifia/regional-infrastructure-accelerators-program.* To ensure applicants receive accurate information about eligibility or the Program, the applicant is encouraged to contact the Bureau directly, rather than through intermediaries or third parties, with questions. Bureau staff may also conduct briefings on the Program grant selection and award process upon request.

H. Other Information

1. *Protection of Confidential Business Information:* All information submitted as part of or in support of any application shall use publicly available data or data that can be made public and methodologies that are accepted by industry practice and standards, to the extent possible. If the applicant submits information that the applicant considers to be a trade secret or confidential commercial or financial information, the applicant must provide that information in a separate document, which the applicant may cross-reference from the application narrative or other portions of the application. For the separate document containing confidential information, the applicant must do the following: (1) State on the cover of that document that it ''Contains Confidential Business Information (CBI)''; (2) mark each page that contains confidential information with ''CBI''; (3) highlight or otherwise denote the confidential content on each page; and (4) at the end of the document, indicate whether the CBI is information the applicant keeps private and is of the type of information the applicant regularly keeps private. The Bureau/DOT will protect confidential information complying with these requirements to the extent required under applicable law. If the Bureau receives a Freedom of Information Act (FOIA) request for the information that the applicant has marked in accordance with this section, the Bureau will follow the procedures described in its FOIA regulations at 49 CFR 7.29.

2. *Publication/Sharing of Application Information:* Following the completion of the selection process and announcement of awards, the Bureau intends to publish a list of all applications received along with the names of the applicant organizations and funding amounts requested. Except for the information properly marked as described in Section H.1, the Bureau may make application narratives publicly available or share application information within DOT or with other Federal agencies if DOT determines that sharing is relevant to the respective program's objectives.

3. *Department Feedback on Application:* The Bureau strives to provide as much information as possible to assist applicants with the application process. The Bureau will not review applications in advance, but Bureau staff are available for technical questions and assistance.

4. *Rural Opportunities:* User-friendly information and resources regarding DOT's discretionary grant programs relevant to rural applicants can be found on the Rural Opportunities to Use Transportation for Economic Success (ROUTES) website at *transportation.gov/rural.*

Issued in Washington, DC.

Peter Paul Montgomery Buttigieg,

Secretary of Transportation.

[FR Doc. 2023–08907 Filed 4–26–23; 8:45 am]

BILLING CODE 4910–9X–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Actions

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of persons that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List (SDN List) based on OFAC's determination that one

or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons are blocked, and U.S. persons are generally prohibited from engaging in transactions with them.

DATES: See **SUPPLEMENTARY INFORMATION** section for applicable date(s).

FOR FURTHER INFORMATION CONTACT: OFAC: Andrea Gacki, Director, tel.: 202–622–2490; Associate Director for Global Targeting, tel.: 202–622–2420; Assistant Director for Licensing, tel.: 202–622–2480; Assistant Director for Regulatory Affairs, tel.: 202–622–4855; or Assistant Director for Sanctions Compliance & Evaluation, tel.: 202–622–2490.

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available on OFAC's website (*www.treasury.gov/ofac*).

Notice of OFAC Actions

On April 24, 2023, OFAC determined that the property and interests in property subject to U.S. jurisdiction of the following persons are blocked under the relevant sanctions authorities listed below.

Individuals

1. WU, Huihui (a.k.a. ''FAST4RELEASE''; a.k.a. ''WAKEMEUPUPUP''), China; DOB 15 Dec 1988; POB Shandong, China; nationality China; Gender Male; Digital Currency Address—XBT 1986rYHckYbJpGQJy6ornu MyD2N5MTqwDt; alt. [CMS–9899–F]

RIN 0938–AU97

Patient Protection and Affordable Care Act, HHS Notice of Benefit and Payment Parameters for 2024

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This final rule includes payment parameters and provisions related to the HHS-operated risk adjustment and risk adjustment data validation programs, as well as 2024 user fee rates for issuers offering qualified health plans (QHPs) through Federally-facilitated Exchanges (FFEs) and State-based Exchanges on the Federal platform (SBE–FPs). This final rule also has requirements related to updating standardized plan options and reducing plan choice overload; the automatic re-enrollment hierarchy; plan and plan variation marketing name requirements for QHPs; essential community providers (ECPs) and network adequacy; failure to file and reconcile; special enrollment periods (SEPs); the annual household income verification; the deadline for QHP issuers to report enrollment and payment inaccuracies; requirements related to the State Exchange improper payment measurement program; and requirements for agents, brokers, and web-brokers assisting FFE and SBE–FP consumers.

DATES: These regulations are effective on June 18, 2023.

FOR FURTHER INFORMATION CONTACT: Jeff Wu, (301) 492–4305, Rogelyn McLean, (301) 492–4229, Grace Bristol, (410) 786–8437, for general information.

Joshua Paul, (301) 492–4347, Jacquelyn Rudich, (301) 492–5211, John Barfield, (301) 492–4433, or Bryan Kirk, (443) 745–8999, for matters related to HHS-operated risk adjustment.

Leanne Klock, (410) 786–1045, or Joshua Paul, (301) 492–4347, for matters related to risk adjustment data validation (HHS–RADV).

John Barfield, (301) 492–4433, or Leanne Klock, (410) 786–1045, for matters related to FFE and SBE–FP user fees.

Jacob LaGrand, (301) 492–4400, for matters related to actuarial value (AV).

Brian Gubin, (410) 786–1659, for matters related to agent, broker, and web-broker guidelines.

Claire Curtin, (301) 492–4400 or Marisa Beatley, (301) 492–4307, for matters related to failure to file and reconcile.

Grace Bridges, (301) 492–5228, or Natalie Myren, (667) 290–8511, for matters related to the verification process related to eligibility for insurance affordability programs.

Carolyn Kraemer, (301) 492–4197, for matters related to auto re-enrollment in the Exchanges.

Nicholas Eckart, (301) 492–4452, for matters related to termination of Exchange enrollment or coverage for qualified individuals.

Marisa Beatley, (301) 492–4307, or Dena Nelson, (240) 401–3535, for matters related to qualified individuals losing minimum essential coverage (MEC) and qualifying for SEPs.

Samantha Nguyen Kella, (816) 426–6339, for matters related to plan display error SEPs.

Eva LaManna, (301) 492–5565, or Ellen Kuhn, (410) 786–1695, for matters related to the eligibility appeals requirements.

Linus Bicker, (803) 931–6185, for matters related to State Exchange improper payment measurement.

Alexandra Gribbin, (667) 290–9977, for matters related to stand-alone dental plans.

Nikolas Berkobien, (667) 290–9903, for matters related to standardized plan options.

Carolyn Kraemer, (301) 492–4197, for matters related to plan and plan variation marketing name requirements for QHPs.

Emily Martin, (301) 492–4423, or Deborah Hunter, (443) 386–3651, for matters related to network adequacy and ECPs.

Rebecca Braun-Harrison, (667) 290–8846 for matters related to reporting enrollment and payment inaccuracies and administrative appeals.

Jenny Chen, (301) 492–5156, or Shilpa Gogna, (301) 492–4257, for matters related to State Exchange Blueprint approval timelines.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Executive Summary

We are finalizing changes to the provisions and parameters implemented through prior rulemaking to implement the Patient Protection and Affordable Care Act (ACA).[1] These requirements are published under the authority granted to the Secretary by the ACA and the Public Health Service (PHS) Act.[2] In this final rule, we are finalizing changes related to some of the ACA provisions and parameters we previously implemented and are implementing new provisions. Our goal with these requirements is providing quality,

[1] The Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted on March 23, 2010. The Healthcare and Education Reconciliation Act of 2010 (Pub. L. 111–152), which amended and revised several provisions of the Patient Protection and Affordable Care Act, was enacted on March 30, 2010. In this rulemaking, the two statutes are referred to collectively as the ''Patient Protection and Affordable Care Act,'' ''Affordable Care Act,'' or ''ACA.''

[2] See sections 1311, 1312, 1313, 1321, and 1343 of the ACA and section 2792 of the PHS Act.

affordable coverage to consumers while minimizing administrative burden and ensuring program integrity. The changes finalized in this rule are also intended to help advance health equity and mitigate health disparities.

II. Background

A. Legislative and Regulatory Overview

Title I of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) added a new title XXVII to the PHS Act to establish various reforms to the group and individual health insurance markets.

These provisions of the PHS Act were later augmented by other laws, including the ACA.

Subtitles A and C of title I of the ACA reorganized, amended, and added to the provisions of part A of title XXVII of the PHS Act relating to group health plans and health insurance issuers in the group and individual markets. The term ''group health plan'' includes both insured and self-insured group health plans.

Section 2702 of the PHS Act, as added by the ACA, establishes requirements for guaranteed availability of coverage in the group and individual markets.

Section 1301(a)(1)(B) of the ACA directs all issuers of QHPs to cover the essential health benefit (EHB) package described in section 1302(a) of the ACA, including coverage of the services described in section 1302(b) of the ACA, adherence to the cost-sharing limits described in section 1302(c) of the ACA, and meeting the AV levels established in section 1302(d) of the ACA. Section 2707(a) of the PHS Act, which is effective for plan or policy years beginning on or after January 1, 2014, extends the requirement to cover the EHB package to non-grandfathered individual and small group health insurance coverage, irrespective of whether such coverage is offered through an Exchange. In addition, section 2707(b) of the PHS Act directs non-grandfathered group health plans to ensure that cost-sharing under the plan does not exceed the limitations described in section 1302(c)(1) of the ACA.

Section 1302 of the ACA provides for the establishment of an EHB package that includes coverage of EHBs (as defined by the Secretary of HHS), cost-sharing limits, and AV requirements. The law directs that EHBs be equal in scope to the benefits provided under a typical employer plan, and that they cover at least the following 10 general categories: ambulatory patient services; emergency services; hospitalization; maternity and newborn care; mental health and substance use disorder services, including behavioral health treatment; prescription drugs; rehabilitative and habilitative services and devices; laboratory services; preventive and wellness services and chronic disease management; and pediatric services, including oral and vision care. Section 1302(d) of the ACA describes the various levels of coverage based on their AV. Consistent with section 1302(d)(2)(A) of the ACA, AV is calculated based on the provision of EHB to a standard population. Section 1302(d)(3) of the ACA directs the Secretary of HHS to develop guidelines that allow for de minimis variation in AV calculations. Sections 1302(b)(4)(A) through (D) of the ACA establish that the Secretary must define EHB in a manner that: (1) Reflects appropriate balance among the 10 categories; (2) is not designed in such a way as to discriminate based on age, disability, or expected length of life; (3) takes into account the health care needs of diverse segments of the population; and (4) does not allow denials of EHBs based on age, life expectancy, disability, degree of medical dependency, or quality of life.

Section 1311(c) of the ACA provides the Secretary the authority to issue regulations to establish criteria for the certification of QHPs. Section 1311(c)(1)(B) of the ACA requires, among the criteria for certification that the Secretary must establish by regulation that QHPs ensure a sufficient choice of providers. Section 1311(e)(1) of the ACA grants the Exchange the authority to certify a health plan as a QHP if the health plan meets the Secretary's requirements for certification issued under section 1311(c) of the ACA, and the Exchange determines that making the plan available through the Exchange is in the interests of qualified individuals and qualified employers in the State. Section 1311(c)(6)(C) of the ACA directs the Secretary of HHS to require an Exchange to provide for special enrollment periods and section 1311(c)(6)(D) of the ACA directs the Secretary of HHS to require an Exchange to provide for a monthly enrollment period for Indians, as defined by section 4 of the Indian Health Care Improvement Act.

Section 1311(d)(3)(B) of the ACA permits a State, at its option, to require QHPs to cover benefits in addition to EHB. This section also requires a State to make payments, either to the individual enrollee or to the issuer on behalf of the enrollee, to defray the cost of these additional State-required benefits.

Section 1312(c) of the ACA generally requires a health insurance issuer to consider all enrollees in all health plans (except grandfathered health plans) offered by such issuer to be members of a single risk pool for each of its individual and small group markets. States have the option to merge the individual and small group market risk pools under section 1312(c)(3) of the ACA.

Section 1312(e) of the ACA provides the Secretary with the authority to establish procedures under which a State may allow agents or brokers to (1) enroll qualified individuals and qualified employers in QHPs offered through Exchanges and (2) assist individuals in applying for advance payments of the premium tax credit (APTC) and cost-sharing reductions (CSRs) for QHPs sold through an Exchange.

Sections 1313 and 1321 of the ACA provide the Secretary with the authority to oversee the financial integrity of State Exchanges, their compliance with HHS standards, and the efficient and non-discriminatory administration of State Exchange activities. Section 1313(a)(5)(A) of the ACA provides the Secretary with the authority to implement any measure or procedure that the Secretary determines is appropriate to reduce fraud and abuse in the administration of the Exchanges. Section 1321 of the ACA provides for State flexibility in the operation and enforcement of Exchanges and related requirements.

Section 1321(a) of the ACA provides broad authority for the Secretary to establish standards and regulations to implement the statutory requirements related to Exchanges, QHPs and other components of title I of the ACA, including such other requirements as the Secretary determines appropriate. When operating an FFE under section 1321(c)(1) of the ACA, HHS has the authority under sections 1321(c)(1) and 1311(d)(5)(A) of the ACA to collect and spend user fees. Office of Management and Budget (OMB) Circular A–25 Revised establishes Federal policy regarding user fees and specifies that a user charge will be assessed against each identifiable recipient for special benefits derived from Federal activities beyond those received by the general public.

Section 1321(d) of the ACA provides that nothing in title I of the ACA must be construed to preempt any State law that does not prevent the application of title I of the ACA. Section 1311(k) of the ACA specifies that Exchanges may not establish rules that conflict with or prevent the application of regulations issued by the Secretary.

Section 1343 of the ACA establishes a permanent risk adjustment program to provide payments to health insurance issuers that attract higher-than-average risk populations, such as those with chronic conditions, funded by payments from those that attract lower-than-average risk populations, thereby reducing incentives for issuers to avoid higher-risk enrollees. Section 1343(b) of the ACA provides that the Secretary, in consultation with States, shall establish criteria and methods to be used in carrying out the risk adjustment activities under this section. Consistent with section 1321(c) of the ACA, the Secretary is responsible for operating the risk adjustment program in any State that fails to do so.[3]

Section 1401(a) of the ACA added section 36B to the Internal Revenue Code (the Code), which, among other things, requires that a taxpayer reconcile APTC for a year of coverage with the amount of the premium tax credit (PTC) the taxpayer is allowed for the year.

Section 1402 of the ACA provides for, among other things, reductions in cost-sharing for EHB for qualified low- and moderate-income enrollees in silver level QHPs offered through the individual market Exchanges. This section also provides for reductions in cost-sharing for Indians enrolled in QHPs at any metal level.

Section 1411(c) of the ACA requires the Secretary to submit certain information provided by applicants under section 1411(b) of the ACA to other Federal officials for verification, including income and family size information to the Secretary of the Treasury. Section 1411(d) of the ACA provides that the Secretary must verify the accuracy of information provided by applicants under section 1411(b) of the ACA, for which section 1411(c) of the ACA does not prescribe a specific verification procedure, in such manner as the Secretary determines appropriate.

Section 1411(f) of the ACA requires the Secretary, in consultation with the Treasury and Homeland Security Department Secretaries and the Commissioner of Social Security, to establish procedures for hearing and making decisions governing appeals of Exchange eligibility determinations. Section 1411(f)(1)(B) of the ACA requires the Secretary to establish procedures to redetermine eligibility on a periodic basis, in appropriate circumstances, including eligibility to purchase a QHP through the Exchange and for APTC and CSRs.

Section 1411(g) of the ACA allows the use of applicant information only for the limited purposes of, and to the extent necessary to, ensure the efficient operation of the Exchange, including by verifying eligibility to enroll through the Exchange and for APTC and CSRs, and limits the disclosure of such information.

Section 5000A of the Code, as added by section 1501(b) of the ACA, requires individuals to have minimum essential coverage (MEC) for each month, qualify for an exemption, or make an individual shared responsibility payment. Under the Tax Cuts and Jobs Act, which was enacted on December 22, 2017, the individual shared responsibility payment is reduced to $0, effective for months beginning after December 31, 2018. Notwithstanding that reduction, certain exemptions are still relevant to determine whether individuals age 30 and above qualify to enroll in catastrophic coverage under §§ 155.305(h) and 156.155(a)(5).

1. Premium Stabilization Programs

The premium stabilization programs refer to the risk adjustment, risk corridors, and reinsurance programs established by the ACA.[4] For past rulemaking, we refer readers to the following rules:

- In the March 23, 2012 **Federal Register** (77 FR 17219) (Premium Stabilization Rule), we implemented the premium stabilization programs.
- In the March 11, 2013 **Federal Register** (78 FR 15409) (2014 Payment Notice), we finalized the benefit and payment parameters for the 2014 benefit year to expand the provisions related to the premium stabilization programs and set forth payment parameters in those programs.
- In the October 30, 2013 **Federal Register** (78 FR 65046), we finalized the modification to the HHS-operated methodology related to community rating States.
- In the November 6, 2013 **Federal Register** (78 FR 66653), we published a correcting amendment to the 2014 Payment Notice final rule to address how an enrollee's age for the risk score calculation would be determined under the HHS-operated risk adjustment methodology.
- In the March 11, 2014 **Federal Register** (79 FR 13743) (2015 Payment Notice), we finalized the benefit and payment parameters for the 2015 benefit year to expand the provisions related to the premium stabilization programs, set forth certain oversight provisions, and established payment parameters in those programs.
- In the May 27, 2014 **Federal Register** (79 FR 30240), we announced the 2015 fiscal year sequestration rate for the risk adjustment program.
- In the February 27, 2015 **Federal Register** (80 FR 10749) (2016 Payment Notice), we finalized the benefit and payment parameters for the 2016 benefit year to expand the provisions related to the premium stabilization programs, set forth certain oversight provisions, and established the payment parameters in those programs.
- In the March 8, 2016 **Federal Register** (81 FR 12203) (2017 Payment Notice), we finalized the benefit and payment parameters for the 2017 benefit year to expand the provisions related to the premium stabilization programs, set forth certain oversight provisions, and established the payment parameters in those programs.
- In the December 22, 2016 **Federal Register** (81 FR 94058) (2018 Payment Notice), we finalized the benefit and payment parameters for the 2018 benefit year, added the high-cost risk pool parameters to the HHS risk adjustment methodology, incorporated prescription drug factors in the adult models, established enrollment duration factors for the adult models, and finalized policies related to the collection and use of enrollee-level External Data Gathering Environment (EDGE) data.
- In the April 17, 2018 **Federal Register** (83 FR 16930) (2019 Payment Notice), we finalized the benefit and payment parameters for 2019 benefit year, created the State flexibility framework permitting States to request a reduction in risk adjustment State transfers calculated by HHS, and adopted a new methodology for HHS–RADV adjustments to transfers.
- In the May 11, 2018 **Federal Register** (83 FR 21925), we published a correction to the 2019 risk adjustment coefficients in the 2019 Payment Notice final rule.
- On July 27, 2018, consistent with 45 CFR 153.320(b)(1)(i), we updated the 2019 benefit year final risk adjustment model coefficients to reflect an additional recalibration related to an update to the 2016 enrollee-level EDGE data set.[5]

[3] In the 2014 through 2016 benefit years, HHS operated the risk adjustment program in every State and the District of Columbia, except Massachusetts. Beginning with the 2017 benefit year, HHS has operated the risk adjustment program in all 50 States and the District of Columbia.

[4] See ACA section 1341 (transitional reinsurance program), ACA section 1342 (risk corridors program), and ACA section 1343 (risk adjustment program).

[5] CMS. (2018, July 27). *Updated 2019 Benefit Year Final HHS Risk Adjustment Model Coefficients. https://www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/2019-Updtd-Final-HHS-RA-Model-Coefficients.pdf.*

• In the July 30, 2018 **Federal Register** (83 FR 36456), we adopted the 2017 benefit year risk adjustment methodology as established in the final rules published in the March 23, 2012 (77 FR 17220 through 17252) and March 8, 2016 editions of the **Federal Register** (81 FR 12204 through 12352). The final rule set forth an additional explanation of the rationale supporting the use of Statewide average premium in the HHS-operated risk adjustment State payment transfer formula for the 2017 benefit year, including the reasons why the program is operated in a budget-neutral manner. The final rule also permitted HHS to resume 2017 benefit year risk adjustment payments and charges. HHS also provided guidance as to the operation of the HHS-operated risk adjustment program for the 2017 benefit year in light of the publication of the final rule.

• In the December 10, 2018 **Federal Register** (83 FR 63419), we adopted the 2018 benefit year HHS-operated risk adjustment methodology as established in the final rules published in the March 23, 2012 (77 FR 17219) and the December 22, 2016 (81 FR 94058) editions of the **Federal Register**. In the rule, we set forth an additional explanation of the rationale supporting the use of Statewide average premium in the HHS-operated risk adjustment State payment transfer formula for the 2018 benefit year, including the reasons why the program is operated in a budget-neutral manner.

• In the April 25, 2019 **Federal Register** (84 FR 17454) (2020 Payment Notice), we finalized the benefit and payment parameters for 2020 benefit year, as well as the policies related to making the enrollee-level EDGE data available as a limited data set for research purposes and expanding the HHS uses of the enrollee-level EDGE data, approval of the request from Alabama to reduce risk adjustment transfers by 50 percent in the small group market for the 2020 benefit year, and updates to HHS–RADV program requirements.

• On May 12, 2020, consistent with § 153.320(b)(1)(i), we published the 2021 Benefit Year Final HHS Risk Adjustment Model Coefficients on the Center for Consumer Information and Insurance Oversight (CCIIO) website.[6]

• In the May 14, 2020 **Federal Register** (85 FR 29164) (2021 Payment Notice), we finalized the benefit and payment parameters for 2021 benefit year, as well as adopted updates to the risk adjustment models' hierarchical condition categories (HCCs) to transition to International Classification of Diseases, Tenth Revision (ICD–10) codes, approved the request from Alabama to reduce risk adjustment transfers by 50 percent in small group market for the 2021 benefit year, and modified the outlier identification process under the HHS–RADV program.

• In the December 1, 2020 **Federal Register** (85 FR 76979) (Amendments to the HHS-Operated Risk Adjustment Data Validation Under the Patient Protection and Affordable Care Act's HHS-Operated Risk Adjustment Program (2020 HHS–RADV Amendments Rule)), we adopted the creation and application of Super HCCs in the sorting step that assigns HCCs to failure rate groups, finalized a sliding scale adjustment in HHS–RADV error rate calculation, and added a constraint for negative error rate outliers with a negative error rate. We also established a transition from the prospective application of HHS–RADV adjustments to apply HHS–RADV results to risk scores from the same benefit year as that being audited.

• In the September 2, 2020 **Federal Register** (85 FR 54820), we issued an interim final rule containing certain policy and regulatory revisions in response to the COVID–19 public health emergency (PHE), wherein we set forth risk adjustment reporting requirements for issuers offering temporary premium credits in the 2020 benefit year.

• In the May 5, 2021 **Federal Register** (86 FR 24140), we issued part 2 of the 2022 Payment Notice final rule (2022 Payment Notice) finalizing a subset of proposals from the 2022 Payment Notice proposed rule, including policy and regulatory revisions related to the risk adjustment program, finalization of the benefit and payment parameters for the 2022 benefit year, and approval of the request from Alabama to reduce risk adjustment transfers by 50 percent in the individual and small group markets for the 2022 benefit year. In addition, this final rule established a revised schedule of collections for HHS–RADV and updated the provisions regulating second validation audit (SVA) and initial validation audit (IVA) entities.

• On July 19, 2021, consistent with § 153.320(b)(1)(i), we released Updated 2022 Benefit Year Final HHS Risk Adjustment Model Coefficients on the CCIIO website, announcing some minor revisions to the 2022 benefit year final risk adjustment adult model coefficients.[7]

• In the May 6, 2022 **Federal Register** (87 FR 27208) (2023 Payment Notice), we finalized revisions related to the risk adjustment program, including the benefit and payment parameters for the 2023 benefit year, risk adjustment model recalibration, and collection and extraction of enrollee-level EDGE data. We also finalized the adoption of the interacted HCC count specification for the adult and child models, along with modified enrollment duration factors for the adult model models, beginning with the 2023 benefit year.[8] We also repealed the ability for States, other than prior participants, to request a reduction in risk adjustment State transfers starting with the 2024 benefit year. In addition, we approved a 25 percent reduction to 2023 benefit year transfers in Alabama's individual market and a 10 percent reduction to 2023 benefit year transfers in Alabama's small group market. We also finalized further refinements to the HHS–RADV error rate calculation methodology beginning with the 2021 benefit year and beyond.

2. Program Integrity

We have finalized program integrity standards related to the Exchanges and premium stabilization programs in two rules: the ''first Program Integrity Rule'' published in the August 30, 2013 **Federal Register** (78 FR 54069), and the ''second Program Integrity Rule'' published in the October 30, 2013 **Federal Register** (78 FR 65045). We also refer readers to the 2019 Patient Protection and Affordable Care Act; Exchange Program Integrity rule published in the December 27, 2019 **Federal Register** (84 FR 71674).

3. Market Rules

For past rulemaking related to the market rules, we refer readers to the following rules:

• In the April 8, 1997 **Federal Register** (62 FR 16894), HHS, with the Department of Labor and Department of the Treasury, published an interim final rule relating to the HIPAA health insurance reforms. In the February 27, 2013 **Federal Register** (78 FR 13406) (2014 Market Rules), we published the health insurance market rules.

[8] On May 6, 2022, we also published the *2023 Benefit Year Final HHS Risk Adjustment Model Coefficients* at *https://www.cms.gov/files/document/2023-benefit-year-final-hhs-risk-adjustment-model-coefficients.pdf.*

• In the May 27, 2014 **Federal Register** (79 FR 30240) (2015 Market Standards Rule), we published the Exchange and Insurance Market Standards for 2015 and Beyond.

• In the December 22, 2016 **Federal Register** (81 FR 94058), we provided additional guidance on guaranteed availability and guaranteed renewability.

• In the April 18, 2017 **Federal Register** (82 FR 18346) (Market Stabilization final rule), we further interpreted the guaranteed availability provision.

• In the April 17, 2018 **Federal Register** (83 FR 17058) (2019 Payment Notice final rule), we clarified that certain exceptions to the special enrollment periods only apply to coverage offered outside of the Exchange in the individual market.

• In the June 19, 2020 **Federal Register** (85 FR 37160) (2020 section 1557 final rule), in which HHS discussed section 1557 of the ACA, HHS removed nondiscrimination protections based on gender identity and sexual orientation from the guaranteed availability regulation.

• In part 2 of the 2022 Payment Notice final rule in the May 5, 2021 **Federal Register** (86 FR 24140), we made additional amendments to the guaranteed availability regulation regarding special enrollment periods and finalized new special enrollment periods related to untimely notice of triggering events, cessation of employer contributions or government subsidies to COBRA continuation coverage, and loss of APTC eligibility.

• In the September 27, 2021 **Federal Register** (86 FR 53412) (part 3 of the 2022 Payment Notice final rule), which was published by HHS and the Department of the Treasury, we finalized additional amendments to the guaranteed availability regulations regarding special enrollment periods.

• In the May 6, 2022 **Federal Register** (87 FR 27208), we finalized a revision to our interpretation of the guaranteed availability requirement to prohibit issuers from applying a premium payment to an individual's or employer's past debt owed for coverage and refusing to effectuate enrollment in new coverage.

4. Exchanges

We published a request for comment relating to Exchanges in the August 3, 2010 **Federal Register** (75 FR 45584). We issued initial guidance to States on Exchanges on November 18, 2010. In the March 27, 2012 **Federal Register** (77 FR 18309) (Exchange Establishment Rule), we implemented the Affordable Insurance Exchanges (''Exchanges''), consistent with title I of the ACA, to provide competitive marketplaces for individuals and small employers to directly compare available private health insurance options on the basis of price, quality, and other factors. This included implementation of components of the Exchanges and standards for eligibility for Exchanges, as well as network adequacy and ECP certification standards.

In the 2014 Payment Notice and the Amendments to the HHS Notice of Benefit and Payment Parameters for 2014 interim final rule, published in the March 11, 2013 **Federal Register** (78 FR 15541), we set forth standards related to Exchange user fees. We established an adjustment to the FFE user fee in the Coverage of Certain Preventive Services under the Affordable Care Act final rule, published in the July 2, 2013 **Federal Register** (78 FR 39869) (Preventive Services Rule).

In the 2016 Payment Notice, we also set forth the ECP certification standard at § 156.235, with revisions in the 2017 Payment Notice in the March 8, 2016 **Federal Register** (81 FR 12203) and the 2018 Payment Notice in the December 22, 2016 **Federal Register** (81 FR 94058).

In an interim final rule, published in the May 11, 2016 **Federal Register** (81 FR 29146), we made amendments to the parameters of certain special enrollment periods (2016 Interim Final Rule). We finalized these in the 2018 Payment Notice final rule, published in the December 22, 2016 **Federal Register** (81 FR 94058).

In the April 18, 2017 Market Stabilization final rule **Federal Register** (82 FR 18346), we amended standards relating to special enrollment periods and QHP certification. In the 2019 Payment Notice final rule, published in the April 17, 2018 **Federal Register** (83 FR 16930), we modified parameters around certain special enrollment periods. In the April 25, 2019 **Federal Register** (84 FR 17454), the final 2020 Payment Notice established a new special enrollment period.

We published the final rule in the May 14, 2020 **Federal Register** (85 FR 29164) (2021 Payment Notice).

In the January 19, 2021 **Federal Register** (86 FR 6138), we finalized part 1 of the 2022 Payment Notice final rule that finalized only a subset of the proposals in the 2022 Payment Notice proposed rule. In the May 5, 2021 **Federal Register** (86 FR 24140), we published part 2 of the 2022 Payment Notice final rule. In the September 27, 2021 **Federal Register** (86 FR 53412) part 3 of the 2022 Payment Notice final rule, in conjunction with the Department of the Treasury, we finalized amendments to certain policies in part 1 of the 2022 Payment Notice final rule.

In the May 6, 2022 **Federal Register** (87 FR 27208), we finalized changes to maintain the user fee rate for issuers offering plans through the FFEs and maintain the user fee rate for issuers offering plans through the SBE–FPs for the 2023 benefit year. We also finalized various policies to address certain agent, broker, and web-broker practices and conduct. We also finalized updates to the requirement that all Exchanges conduct special enrollment period verifications.

5. Essential Health Benefits

On December 16, 2011, HHS released a bulletin that outlined an intended regulatory approach for defining EHB, including a benchmark-based framework. We established requirements relating to EHBs in the Standards Related to Essential Health Benefits, Actuarial Value, and Accreditation final rule, which was published in the February 25, 2013 **Federal Register** (78 FR 12833) (EHB Rule). In the 2019 Payment Notice, published in the April 17, 2018 **Federal Register** (83 FR 16930), we added § 156.111 to provide States with additional options from which to select an EHB-benchmark plan for plan years (PYs) 2020 and beyond.

B. Summary of Major Provisions

The regulations outlined in this final rule will be codified in 45 CFR parts 153, 155, and 156.

1. 45 CFR part 153

In accordance with the OMB Report to Congress on the Joint Committee Reductions for Fiscal Year 2023, the permanent risk adjustment program is subject to the fiscal year 2023 sequestration.[9] Therefore, the risk adjustment program will be sequestered at a rate of 5.7 percent for payments made from fiscal year 2023 resources (that is, funds collected during the 2023 fiscal year). The funds that are sequestered in fiscal year 2023 from the risk adjustment program will become available for payment to issuers in fiscal year 2024 without further congressional action. We did not receive any requests from States to operate risk adjustment for the 2024 benefit year; therefore, HHS will operate risk adjustment in every

[9] OMB. (2022, March 28). OMB Report to the Congress on the BBEDCA 251A Sequestration for Fiscal Year 2023. *https://www.whitehouse.gov/wpcontent/uploads/2022/03/BBEDCA_251A_Sequestration_Report_FY2023.pdf.*

State and the District of Columbia for the 2024 benefit year.

We will recalibrate the 2024 benefit year risk adjustment models using the 2018, 2019, and 2020 benefit year enrollee-level EDGE data, with no exceptions. For the 2024 benefit year, we will continue to apply a market pricing adjustment to the plan liability associated with Hepatitis C drugs in the risk adjustment models (see, for example, 84 FR 17463 through 17466). We will also continue to maintain the CSR adjustment factors finalized in the 2019, 2020, 2021, 2022, and 2023 Payment Notices.[10]

We are finalizing the repeal of the ability under § 153.320(d) for prior participant States to request reductions of State risk adjustment transfers calculated by HHS under the State payment transfer formula in all State market risk pools for the 2025 benefit year and beyond. We are approving Alabama's requests to reduce risk adjustment State transfers in its individual and small group markets by 50 percent for the 2024 benefit year.

Additionally, we are finalizing, beginning with the 2023 benefit year, the proposal to collect and extract from issuers' EDGE servers through issuers' EDGE Server Enrollment Submission (ESES) files and risk adjustment recalibration enrollment files a new data element, a Qualified Small Employer Health Reimbursement Arrangement (QSEHRA) indicator. In addition, we are finalizing our proposal to extract the plan identifier and rating area data elements from issuers' EDGE servers for certain benefit years prior to the 2021 benefit year. We are finalizing the proposed risk adjustment user fee for the 2024 benefit year of $0.21 per member per month (PMPM).

Beginning with the 2022 benefit year HHS–RADV, we are changing the materiality threshold established under § 153.630(g)(2) for random and targeted sampling from $15 million in total annual premiums Statewide to 30,000 total billable member months (BMM) Statewide, calculated by combining an issuer's enrollment in a State's individual non-catastrophic, catastrophic, small group, and merged markets, as applicable, in the benefit year being audited.

Beginning with the 2021 benefit year of HHS–RADV, we are no longer exempting exiting issuers from adjustments to risk scores and risk adjustment transfers when they are negative error rate outliers in the applicable benefit year's HHS–RADV. Thus, we are applying HHS–RADV results to adjust the plan liability risk scores of all exiting and non-exiting issuers identified as outliers in the benefit year being audited.

Beginning with the 2022 benefit year of HHS–RADV, we announce that we are discontinuing the use of the lifelong permanent condition list and the use of non-EDGE claims in HHS–RADV. Additionally, beginning with the 2022 benefit year of HHS–RADV, we are finalizing the shortening of the window to confirm the findings of the second validation audit (SVA) (if applicable),[11] or file a discrepancy report to dispute the SVA findings, to within 15 calendar days of the notification by HHS.

We are amending the EDGE discrepancy materiality threshold set forth at § 153.710(e) to align with and mirror the policy finalized in preamble in part 2 of the 2022 Payment Notice (86 FR 24194 through 24195). That is, the materiality threshold at § 153.710(e) will be revised to provide that the amount in dispute must equal or exceed $100,000 or one percent of the total estimated transfer amount in the applicable State market risk pool, whichever is less.

2. 45 CFR part 155

In part 155, we are finalizing the revision of the Exchange Blueprint approval timelines for States transitioning from either a FFE to a SBE–FP or to a State-based Exchange (SBE), or from a SBE–FP to a SBE. We are finalizing the removal of the existing deadlines for when we provide approval, or conditional approval, on an Exchange Blueprint, and instead will require that such approval be provided at some point prior to the date on which the Exchange proposes to begin open enrollment either as a SBE or SBE–FP.

We are finalizing the proposal to address the standards applicable to Navigators and other assisters and their consumer service functions. At § 155.210(d)(8), we are finalizing the removal of the prohibition on Navigators from going door-to-door or using other unsolicited means of direct contact to provide application or enrollment assistance. This will also apply to non-Navigator assistance personnel in FFEs and in State Exchanges if funded with section 1311(a) Exchange Establishment grants, through the reference to § 155.210(d) in § 155.215(a)(2)(i). In § 155.225(g)(5), we are finalizing the removal of the prohibition on certified application counselors from going door-to-door or using unsolicited means of direct contact to provide application or enrollment assistance. We believe policies as finalized will allow Navigators and other assisters in the FFEs to help more consumers.

In part 155, we are finalizing changes to address certain agent, broker, and web-broker practices. We are finalizing the proposal to allow HHS up to an additional 15 calendar days to review evidence submitted by agents, brokers, or web-brokers to rebut allegations that led to the suspension of their Exchange agreement(s). We also are finalizing the proposal to allow HHS up to an additional 30 calendar days to review evidence submitted by agents, brokers, or web-brokers that led to the termination of their Exchange agreement(s). The amendments adopted in this final rule will provide HHS with up to 45 or 60 calendar days to review and respond to such evidence or requests for reconsideration submitted by agents, brokers, or web-brokers stemming from the suspension or termination of their Exchange agreement(s), respectively.

Further, we are finalizing the proposal to require agents, brokers, or web-brokers assisting consumers with completing eligibility applications through the FFEs and SBE–FPs or assisting an individual with applying for APTC and CSRs for QHPs to document that eligibility application information has been reviewed by and confirmed to be accurate by the consumer or their authorized representative prior to application submission. We are finalizing the proposal that the documentation will be required to include: the date the information was reviewed; the name of the consumer or their authorized representative; an explanation of the attestations at the end of the eligibility application; and the name of the assisting agent, broker, or web-broker. Furthermore, the agent, broker, or web-broker will be required to maintain the documentation for a minimum of 10 years and produce it upon request in response to monitoring, audit, and enforcement activities.

We also are finalizing the proposal to require agents, brokers, or web-brokers assisting consumers with applying and enrolling through FFEs and SBE–FPs, making updates to an existing application, or assisting an individual with applying for APTC and CSRs for QHPs to document the receipt of consent from the consumer seeking assistance or their authorized

[10] See 83 FR 16930 at 16953; 84 FR 17454 at 17478 through 17479; 85 FR 29164 at 29190; 86 FR 24140 at 24181; and 87 FR 27208 at 27235 through 27235.

[11] Only those issuers who have insufficient pairwise agreement between the Initial Validation Audit (IVA) and SVA receive SVA findings. See 84 FR 17495; 86 FR 24201.

representative prior to providing assistance. We are finalizing the proposal that the documentation will be required to include: a description of the scope, purpose, and duration of the consent provided by the consumer or their authorized representative; the date consent was given; name of the consumer or their authorized representative; the name of the agent, broker, web-broker, or agency being granted consent; and the process by which the consumer or their authorized representative may rescind consent. Further, we are finalizing the requirement that agents, brokers, or web-brokers will be required to maintain the consent documentation for a minimum of 10 years and produce it upon request in response to monitoring, audit, and enforcement activities.

We are finalizing the revisions to the failure to file and reconcile (FTR) process at § 155.305(f)(4). First, we are finalizing the proposal to amend the FTR process described in § 155.305(f)(4) so that an Exchange may only determine enrollees ineligible for APTC after a taxpayer (or a taxpayer's spouse, if married) has failed to file a Federal income tax return and reconcile their past APTC for two consecutive years (specifically, years for which tax data will be utilized for verification of household income and family size). In the proposed rule (87 FR 78256), we proposed that this policy would be effective January 1, 2024, with the intent that the proposed rule would apply to eligibility determinations made in 2024 for PY 2025 (and beyond). We are clarifying in the final rule that this will become effective on the general effective date of the final rule. Second, we are finalizing the proposal to continue to pause FTR operations until HHS and the Internal Revenue Service (IRS) will be able to implement the new FTR policy.

We are finalizing revisions to § 155.320, which will require Exchanges to accept an applicant's attestation of projected annual household income when the Exchanges request tax return data from the IRS to verify attested projected annual household income, but the IRS confirms there is no such tax return data available. Further, we are finalizing revisions to § 155.315, which will require that an enrollee with a household income inconsistency receive a 60-day extension to present satisfactory documentary evidence to resolve a data matching issue (DMI) in addition to the 90 days currently provided in § 155.315(f)(2)(ii). These changes will ensure consumers are treated equitably, ensure continuous coverage, and strengthen the risk pool.

We are finalizing amendments and additions to § 155.335(j), including the clarification that when an enrollee is determined upon annual redetermination eligible for income-based CSRs, is currently enrolled in a bronze level QHP, and would be re-enrolled in a bronze level QHP, then to the extent permitted by applicable State law, unless the enrollee terminates coverage, including termination of coverage in connection with voluntarily selecting a different QHP, in accordance with § 155.430, at the option of the Exchange, the Exchange may re-enroll such enrollee in a silver level QHP within the same product, with the same provider network, and with a lower or equivalent premium after the application of APTC as the bronze level QHP into which the Exchange would otherwise re-enroll the enrollee. We are also finalizing modifications to the proposed policy to specify that Exchanges implementing this policy may auto re-enroll enrollees from a bronze QHP to a silver QHP provided that the net monthly silver plan premium for the future year is not more than the net monthly bronze plan premiums for the future year, as opposed to comparing net monthly bronze plan premiums for the current year with future year silver plan premiums. Lastly, for enrollees whose current QHP or product will no longer be available in the coming year, we are finalizing the policy to require Exchanges to incorporate network similarity into auto re-enrollment criteria.

We are finalizing the proposed changes related to SEPs at § 155.420. First, we are finalizing two technical corrections to § 155.420(a)(4)(ii)(A) and (B) to align the text with § 155.420(a)(d)(6)(i) and (ii). The revisions will clarify that only one person in a household applying for coverage or financial assistance through the Exchange must qualify for a SEP in order for the entire household to qualify for the SEP. Second, we are finalizing the change to the current coverage effective date requirements at § 155.420(b)(2)(iv) to permit Exchanges to offer earlier coverage effective dates for consumers attesting to a future loss of MEC. This change will ensure qualifying individuals are able to seamlessly transition from other forms of coverage to Exchange coverage as quickly as possible with minimal coverage gaps.

Third, to mitigate coverage gaps, we are finalizing the proposed new rule at § 155.420(c)(6) with a modification that will give Exchanges the option to allow consumers who are eligible for a SEP under § 155.420(d)(1)(i) due to loss of Medicaid or Children's Health Insurance Program (CHIP) coverage up to 90 days after their loss of Medicaid or CHIP coverage to select a plan and enroll in coverage through the Exchange. The modification will grant an Exchange the option to provide more than 90 days to select a plan and enroll in coverage through the Exchange up to the length of the applicable Medicaid or CHIP redetermination period if the State Medicaid Agency allows or provides for a Medicaid or CHIP reconsideration period greater than 90 days. Fourth, we are finalizing § 155.420(d)(12) to align the policy of the Exchanges on the Federal platform for granting SEPs to consumers who enrolled in a plan influenced by a material plan display error with current plan display error SEP operations. The proposal will remove the burden from the consumer to solely demonstrate to the Exchange that a material plan display error has influenced the consumer's decision to purchase a QHP through the Exchange.

We are finalizing § 155.430(b)(3) to explicitly prohibit issuers participating in Exchanges on the Federal platform from terminating coverage for a dependent child prior to the end of the plan year because the dependent child has reached the applicable maximum age. This change will clarify to issuers participating in Exchanges on the Federal platform their obligation to maintain coverage for dependent children, as well as to enrollees regarding their ability to maintain coverage for dependent children. This change is optional for State Exchanges.

We are finalizing § 155.505(g), which acknowledges the ability of the CMS Administrator to review Exchange eligibility appeals decisions prior to judicial review. This change will provide appellants and other parties with accurate information about the availability of administrative review by the CMS Administrator if they are dissatisfied with their eligibility appeal decision.

We are finalizing the Improper Payment Pre-Testing and Assessment (IPPTA) program under which SBEs will be required to participate in pre-audit activities that will prepare SBEs for complying with audits required under the Payment Integrity Information Act of 2019 (PIIA). Activities under the proposed IPPTA program will provide SBEs experience helpful to preparing for future PIIA audits and will help HHS design and refine appropriate requirements for future PIIA audits of SBEs.

3. 45 CFR part 156

In part 156, after revising our projections based on newly available data that impacted enrollment projections, we are finalizing for the 2024 benefit year a user fee rate for all issuers offering QHPs through an FFE of 2.2 percent of the monthly premium charged by issuers for each policy under plans where enrollment is through an FFE, and a user fee rate for all issuers offering QHPs through an SBE–FP of 1.8 percent of the monthly premium charged by issuers for each policy under plans offered through an SBE–FP.

We are also finalizing the proposal to maintain a large degree of continuity with our approach to standardized plan options finalized in the 2023 Payment Notice, making only minor updates to each set of plan designs. In particular, for PY 2024 and subsequent PYs, we are finalizing two sets of plan designs that, in contrast to the policy finalized in the 2023 Payment Notice (87 FR 28278 through 28279), no longer include a standardized plan option for the non-expanded bronze metal level, mainly due to AV constraints.

Thus, for PY 2024 and subsequent PYs, we are finalizing revisions to § 156.201 to require issuers to offer standardized plan options for the following metal levels throughout every service area that they also offer non-standardized plan options: one bronze plan that meets the requirement to have an AV up to five percentage points above the 60 percent standard, as specified in § 156.140(c) (known as an expanded bronze plan); one standard silver plan; one version of each of the three income-based silver CSR plan variations; one gold plan; and one platinum plan.

We also will continue to differentially display standardized plan options, including those standardized plan options required under State action that took place on or before January 1, 2020, on *HealthCare.gov,* and continue enforcement of the standardized plan options display requirements for approved web-brokers and QHP issuers using a direct enrollment pathway to facilitate enrollment through an FFE or SBE–FP—including both the Classic Direct Enrollment (Classic DE) and Enhanced Direct Enrollment (EDE) Pathways.

To mitigate the risk of plan choice overload, we are finalizing § 156.202, which limits the number of non-standardized plan options that QHP issuers may offer through the Exchanges using the Federal platform to four non-standardized plan options per product network type, metal level (excluding catastrophic plans), and inclusion of dental and/or vision benefit coverage, in any service area for PY 2024, and to two non-standardized plan options per product network type, metal level (excluding catastrophic plans), and inclusion of dental and/or vision benefit coverage, in any service area for PY 2025 and subsequent PYs.

We are finalizing new § 156.210(d)(1) to require stand-alone dental plan (SADP) issuers to use an enrollee's age at the time of policy issuance or renewal (referred to as age on effective date) as the sole method to calculate an enrollee's age for rating and eligibility purposes, as a condition of QHP certification, beginning with Exchange certification for PY 2024. We believe requiring SADPs to use the age on effective date methodology to calculate an enrollee's age as a condition of QHP certification, and consequently removing the less commonly used and more complex age calculation methods, will reduce consumer confusion and promote operational efficiency. This policy will apply to Exchange-certified SADPs, whether they are sold on- or off-Exchange.

In addition, we are finalizing new § 156.210(d)(2) to require SADP issuers to submit guaranteed rates as a condition of QHP certification, beginning with Exchange certification for PY 2024. We believe this change will help reduce the risk of incorrect APTC calculation for the pediatric dental EHB portion of premiums, thereby reducing the risk of consumer harm. This policy will apply to Exchange-certified SADPs, whether they are sold on- or off-Exchange.

We are finalizing a new rule at § 156.225(c) to require that plan and plan variation marketing names for QHPs include correct information, without omission of material fact, and not include content that is misleading. We will review plan and plan variation marketing names during the annual QHP certification process in close collaboration with State regulators in States with Exchanges on the Federal platform.

We are finalizing revisions to the network adequacy and ECP standards at §§ 156.230 and 156.235 to provide that all individual market QHPs, including individual market SADPs, and all Small Business Health Options Program (SHOP) QHPs, including SHOP SADPs, across all Exchanges must use a network of providers that complies with the network adequacy and ECP standards in those sections, and to remove the exception that these sections do not apply to plans that do not use a provider network. However, we are finalizing a limited exception at § 156.230(a)(4) for certain SADP issuers that sell plans in areas where it is prohibitively difficult for the issuer to establish a network of dental providers. Specifically, under this exception, an area is considered ''prohibitively difficult'' for the SADP issuer to establish a network of dental providers based on attestations from State departments of insurance in States with at least 80 percent of their counties classified as Counties with Extreme Access Considerations (CEAC) that at least one of the following factors exists in the area of concern: a significant shortage of dental providers, a significant number of dental providers unwilling to contract with Exchange issuers, or significant geographic limitations impacting consumer access to dental providers.

To expand access to care for low-income and medically underserved consumers, we are finalizing our proposal to establish two additional stand-alone ECP categories at § 156.235(a)(2)(ii)(B) for PY 2024 and subsequent PYs, Mental Health Facilities and Substance Use Disorder Treatment Centers, and adding rural emergency hospitals (REHs) as a provider type in the Other ECP Providers category. In addition, we are finalizing our proposed revisions to § 156.235(a)(2)(i) to require QHPs to contract with at least a minimum percentage of available ECPs in each plan's service area within certain ECP categories, as specified by HHS. Specifically, we will require that QHPs contract with at least 35 percent of available Federally Qualified Health Centers (FQHCs) that qualify as ECPs in the plan's service area and at least 35 percent of available Family Planning Providers that qualify as ECPs in the plan's service area for PY 2024 and subsequent PYs. Furthermore, we are finalizing revisions to § 156.235(a)(2)(i) to clarify that these threshold requirements will be in addition to the existing provision that QHPs must satisfy the overall 35 percent ECP threshold requirement in the plan's service area. In addition, we revised § 156.235(b)(2)(i) to reflect that these policies would also affect issuers subject to the Alternate ECP Standard under § 156.235(b).

We are finalizing revisions to § 156.270(f) to require QHP issuers in Exchanges operating on the Federal platform to send enrollees a notice of payment delinquency promptly and without undue delay. Specifically, we will require QHP issuers in Exchanges operating on the Federal platform to send such notices within 10 business days of the date the issuer should have

discovered the delinquency. This requirement will help ensure that enrollees are aware they are at risk of losing coverage and can avoid losing coverage by paying any outstanding premium amounts promptly.

We are finalizing the proposal to revise the final deadline in § 156.1210(c) for issuers to report data inaccuracies identified in payment and collections reports for discovered underpayments of APTC to the issuer and user fee overpayments to HHS. Specifically, we will retain only the deadline at § 156.1210(c)(1), which requires that issuers describe all inaccuracies identified in a payment and collections report within 3 years of the end of the applicable plan year to which the inaccuracy relates to be eligible to receive an adjustment to correct an underpayment of APTC to the issuer and user fee overpayments to HHS. Under this policy, beginning with the 2015 PY coverage, we will not pay additional APTC payments or reimburse user fee payments for FFE, SBE–FP, and SBE issuers for data inaccuracies reported after the 3-year deadline. Further, for PYs 2015 through 2019, to be eligible for resolution, an issuer must describe before January 1, 2024, all inaccuracies identified in a payment and collections report for these PYs that relate to discovered underpayments to the issuer of APTC or user fee overpayments to HHS, thus allowing issuers additional time to submit and seek resolution of such inaccuracies for the 2015 through 2019 PY coverage. These policies will better align with the existing limitation under the Code on amending a Federal income tax return and reduce administrative and operational burden on issuers, State Exchanges, and HHS when handling payment and enrollment disputes.

III. Provisions of the Proposed Regulations

A. Part 153—Standards Related to Reinsurance, Risk Corridors, and Risk Adjustment

In subparts A, D, G, and H of part 153, we established standards for the administration of the risk adjustment program. The risk adjustment program is a permanent program created by section 1343 of the ACA that transfers funds from lower-than-average risk, risk adjustment covered plans to higher-than-average risk, risk adjustment covered plans in the individual, small group markets, or merged markets, inside and outside the Exchanges. In accordance with § 153.310(a), a State that is approved or conditionally approved by the Secretary to operate an Exchange may establish a risk adjustment program, or have HHS do so on its behalf.[12] We did not receive any requests from States to operate a risk adjustment program for the 2024 benefit year. Therefore, we will operate risk adjustment in every State and the District of Columbia for the 2024 benefit year.

1. Sequestration

In accordance with the OMB Report to Congress on the Joint Committee Reductions for Fiscal Year 2023, the permanent risk adjustment program is subject to the fiscal year 2023 sequestration.[13] The Federal Government's 2023 fiscal year began on October 1, 2022. Therefore, the risk adjustment program will be sequestered at a rate of 5.7 percent for payments made from fiscal year 2023 resources (that is, funds collected during the 2023 fiscal year).

HHS, in coordination with OMB, has determined that, under section 256(k)(6) of the Balanced Budget and Emergency Deficit Control Act of 1985,[14] as amended, and the underlying authority for the risk adjustment program, the funds that are sequestered in fiscal year 2023 from the risk adjustment program will become available for payment to issuers in fiscal year 2024 without further Congressional action. If Congress does not enact deficit reduction provisions that replace the Joint Committee reductions, the program will be sequestered in future fiscal years, and any sequestered funding will become available in the fiscal year following that in which it was sequestered.

Additionally, we note that the Infrastructure Investment and Jobs Act[15] amended section 251A(6) of the Balanced Budget and Emergency Deficit Control Act of 1985 and extended sequestration for the risk adjustment program through fiscal year 2031 at a rate of 5.7 percent per fiscal year.[16] [17]

We received no comments on the fiscal year 2023 sequestration rate for risk adjustment.

2. HHS Risk Adjustment (§ 153.320)

The HHS risk adjustment models predict plan liability for an average enrollee based on that person's age, sex, and diagnoses (also referred to as hierarchical condition categories (HCCs)), producing a risk score. The HHS risk adjustment methodology utilizes separate models for adults, children, and infants to account for clinical and cost differences in each age group. In the adult and child models, the relative risk assigned to an individual's age, sex, and diagnoses are added together to produce an individual risk score. Additionally, to calculate enrollee risk scores in the adult models, we added enrollment duration factors beginning with the 2017 benefit year,[18] and prescription drug categories (RXCs) beginning with the 2018 benefit year.[19] Starting with the 2023 benefit year, we added interacted HCC count factors to the adult and child models applicable to certain severity and transplant HCCs.

Infant risk scores are determined by inclusion in one of 25 mutually exclusive groups, based on the infant's maturity and the severity of diagnoses. If applicable, the risk score for adults, children, or infants is multiplied by a cost-sharing reduction (CSR) factor. The enrollment-weighted average risk score of all enrollees in a particular risk adjustment covered plan (also referred to as the plan liability risk score (PLRS)) within a geographic rating area is one of the inputs into the risk adjustment State payment transfer formula,[20] which determines the State transfer payment or charge that an issuer will receive or be required to pay for that plan for the applicable State market risk pool. Thus, the HHS risk adjustment models predict average group costs to account for risk across plans, in keeping with the Actuarial Standards Board's Actuarial

[12] See also 42 U.S.C. 18041(c)(1).

[14] Public Law 99–177 (1985).

[15] Public Law 117–58, 135 Stat. 429 (2021).

[16] 2 U.S.C. 901a.

[17] The Coronavirus Aid, Relief, and Economic Security (CARES) Act previously amended section 251A(6) of the Balanced Budget and Emergency Deficit Control Act of 1985 and extended sequestration for the risk adjustment program through fiscal year 2023 at a rate of 5.7 percent per fiscal year. Section 4408 of the CARES Act, Public Law 116–136, 134 Stat. 281 (2020).

[18] For the 2017 through 2022 benefit years, there is a set of 11 binary enrollment duration factors in the adult models that decrease monotonically from one to 11 months, reflecting the increased annualized costs associated with fewer months of enrollments. See, for example, 81 FR 94071 through 94074. These enrollment duration factors were replaced beginning with the 2023 benefit year with HCC-contingent enrollment duration factors for up to 6 months in the adult models. See, for example, 87 FR 27228 through 27230.

[19] For the 2018 benefit year, there were 12 RXCs, but starting with the 2019 benefit year, the two severity-only RXCs were removed from the adult risk adjustment models. See, for example, 83 FR 16941.

[20] The State payment transfer formula refers to the part of the HHS risk adjustment methodology that calculates payments and charges at the State market risk pool level prior to the calculation of the high-cost risk pool payment and charge terms that apply beginning with the 2018 benefit year (BY). See, for example, 81 FR 94080.

Standards of Practice for risk classification.

a. Data for Risk Adjustment Model Recalibration for 2024 Benefit Year

In the HHS Notice of Benefit and Payment Parameters for 2024 proposed rule (87 FR 78206, 78214), we proposed to use 2018, 2019, and 2020 benefit year enrollee-level EDGE data to recalibrate the 2024 benefit year risk adjustment models with an exception to exclude the 2020 benefit year data from the blending of the age-sex coefficients for the adult models. However, after consideration of comments, we are not finalizing the 2024 benefit year model recalibration approach as proposed. Instead, based on our analysis and in response to comments, we are finalizing the use of 2018, 2019 and 2020 benefit year enrollee-level EDGE data for recalibration of the 2024 benefit year risk adjustment models for all model coefficients, including the adult age-sex coefficients, with no exceptions.

In accordance with § 153.320, HHS develops and publishes the risk adjustment methodology applicable in States where HHS operates the program, including the draft factors to be employed in the models for the benefit year. This includes information related to the annual recalibration of the risk adjustment models using data from the most recent available prior benefit years trended forwarded to reflect the applicable benefit year of risk adjustment.

Our proposed approach for 2024 recalibration aligns with the approach finalized in the 2022 Payment Notice (86 FR 24151 through 24155) and reiterated in the 2023 Payment Notice (87 FR 27220 through 27221), that involves use of the 3 most recent consecutive years of enrollee-level EDGE data that are available at the time we incorporate the data in the draft recalibrated coefficients published in the proposed rule for the applicable benefit year, and not updating the coefficients between the proposed and final rules if an additional year of enrollee-level EDGE data becomes available for incorporation.

We proposed to determine coefficients for the 2024 benefit year based on a blend of separately solved coefficients from the 2018, 2019, and 2020 benefit years of enrollee-level EDGE data, with an exception to exclude the 2020 benefit year data from the blending of the age-sex coefficients for the adult models. For all adult model age-sex coefficients, we proposed to use only 2018 and 2019 benefit year enrollee-level EDGE data in recalibration to account for the observed anomalous decreases in the unconstrained coefficients [21] for the 2020 benefit year enrollee-level EDGE data for older adult enrollees, especially older adult female enrollees.

To further explain, due to the potential impact of the COVID–19 PHE on costs and utilization of services in 2020, we considered whether the 2020 enrollee-level EDGE data was appropriate for use in the annual model recalibration for the HHS-operated risk adjustment program applicable to the individual and small group (including merged) markets. As part of this analysis, we considered: (1) comments received in response to the 2023 Payment Notice proposed rule (87 FR 598); (2) the current policy that involves using the 3 most recent years of EDGE data available as of the proposed rule for the annual risk adjustment model recalibration which promotes stability and ensures the models reflect the year-over-year changes to the markets' patterns of utilization and spending without over-relying on any factors unique to one particular year; and (3) our experience that every year of data can be unique and therefore some level of deviation from year to year is expected.[22] All of these general considerations weigh in favor of including the 2020 benefit year data in the recalibration of the risk adjustment models.

However, we recognized that if a benefit year has significant changes that differentially impact certain conditions or populations relative to others, or is sufficiently anomalous relative to expected future patterns of care, we should carefully consider what impact that benefit year of data could have if it is used in the annual model recalibration for the HHS-operated risk adjustment program. This includes consideration of whether to exclude or adjust that benefit year of data to increase the models' predictive validity or otherwise limit the impact of anomalous trends. The situation presented by the COVID–19 PHE and its potential impact on utilization and costs in the 2020 benefit year is an example [23] of a situation that requires this additional consideration. Thus, to help further inform our decision on whether it is appropriate to use 2020 enrollee-level EDGE data to calibrate the risk adjustment coefficients, we analyzed the 2020 benefit year enrollee-level EDGE recalibration data to assess how it compares to 2019 benefit year enrollee-level EDGE recalibration data. For more information on our analysis of the 2020 benefit year enrollee-level EDGE recalibration data see the proposed rule (87 FR 78215 through 78218). Based on this analysis, we determined that on many key dimensions, the 2019 benefit year and 2020 benefit year enrollee-level EDGE data recalibration were largely comparable. However, there were some observed anomalous decreases in the unconstrained age-sex coefficients in the 2020 benefit year data for older adult enrollees, especially older female enrollees.

With this analysis in mind, and based on the comments received in response to the 2023 Payment Notice proposed rule,[24] we outlined six different options the Department considered for handling the 2020 benefit year enrollee-level EDGE recalibration data for purposes of the annual recalibration of the HHS risk adjustment models for the 2024 benefit year.[25] Four options involved the use of 2020 benefit year enrollee-level EDGE recalibration data in the risk adjustment

[21] HHS constrains the risk adjustment models in multiple distinct ways during model recalibration. These include (1) coefficient estimation groups, also referred to as G-Groups in the Risk Adjustment Do It Yourself (DIY) Software, (2) a priori stability constraints, and (3) hierarchy violation constraints. Of these, coefficient estimation groups and a priori stability constraints are applied prior to model fitting. The hierarchy violation constraints are applied after the initial estimates of coefficients are produced. We refer to the models and coefficients prior to the application of hierarchy violation constraints as the ''unconstrained models'' and ''unconstrained coefficients,'' respectively. For a description of the various constraints we apply to the risk adjustment models, see, CMS' ''Potential Updates to HHS–HCCs for the HHS-operated Risk Adjustment Program'' (the ''2019 White Paper'') (June 17, 2019). *https://www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/Potential-Updates-to-HHS-HCCs-HHS-operated-Risk-Adjustment-Program.pdf.*

[22] Every year we expect some shifting in treatment and cost patterns, for example as new drugs come to market. Our goal in using multiple years of data for model calibration is to capture some degree of year-to-year cost shifting without over-relying on any factors unique to one particular year.

[23] In the 10 years since the start of model calibration for the HHS-operated risk adjustment program, which began with benefit year 2014, the COVID–19 PHE has been the only such situation to date. Other events and policy changes have not risen to the same level of uniqueness or potential impact.

[24] These comments offered a variety of perspectives with some commenters stating that 2020 enrollee-level EDGE data should be used for model recalibration as normal, a few commenters suggesting that 2020 enrollee-level EDGE data should be excluded entirely, one commenter recommending that 2020 enrollee-level EDGE data should be used with a different weight assigned, and several commenters suggesting HHS release a technical paper on the use of 2020 enrollee-level EDGE data, with several suggesting HHS do a comparison of coefficients with and without the 2020 enrollee-level EDGE data to review relative changes in coefficients, and evaluate changes for clinical reasonability and consistency with 2018 and 2019 enrollee-level EDGE data. See 87 FR 27220 through 27221.

[25] See 87 FR 78214 through 78218.

model recalibration, and two involved the exclusion of the 2020 benefit year data. These six options were as follows:

- *Option 1:* Maintain the current policy, recalibrating the 2024 benefit year risk adjustment models using 2018, 2019, and 2020 enrollee-level EDGE data with no exceptions or modifications.
- *Option 2:* Maintain the current policy, recalibrating the 2024 benefit year risk adjustment models using 2018, 2019, and 2020 benefit year enrollee-level EDGE recalibration data, but assign a lower weight to 2020 data.
- *Option 3:* Utilize 4 years of enrollee-level EDGE data, instead of three, to recalibrate the 2024 benefit year risk adjustment models using 2017, 2018, 2019, and 2020 benefit year data.
- *Option 4:* Maintain the current policy, recalibrating the 2024 benefit year risk adjustment models using 2018, 2019, and 2020 enrollee-level EDGE recalibration data with an exception to exclude the 2020 benefit year data from the blending of the age-sex coefficients for the adult models. Under this option, we would have determined coefficients for the 2024 benefit year based on a blend of separately solved coefficients from the 2018, 2019, and 2020 benefit years of enrollee-level EDGE recalibration data and would exclude the 2020 benefit year from the blending of the adult models' age-sex coefficients. Instead, only 2018 and 2019 benefit year enrollee-level EDGE recalibration data would be used in blending the adult risk adjustment models age-sex coefficients.
- *Option 5:* Exclude the 2020 benefit year enrollee-level EDGE recalibration data and instead use the 2017, 2018, and 2019 benefit year enrollee-level EDGE recalibration data, trended forward to the 2024 benefit year, in recalibration of the risk adjustment models for the 2024 benefit year, or use the final 2023 risk adjustment model coefficients for the 2024 benefit year without trending the data to account for inflation and changes in costs and utilization between the 2023 and 2024 benefit years.
- *Option 6:* Exclude the 2020 benefit year enrollee-level EDGE recalibration data and instead use only 2 years of enrollee-level EDGE data for recalibration—that is, use only 2018 and 2019 benefit year data to recalibrate the 2024 risk adjustment models.

As noted above, we proposed to use the 3 most recent available consecutive benefit year data sets (the 2018, 2019, and 2020 benefit year enrollee-level EDGE recalibration data), with a narrowly tailored exception to exclude the 2020 benefit year data from the blending of the age-sex coefficients for the adult models (Option 4).

After reviewing the public comments, we are finalizing the use of 2018, 2019, and 2020 enrollee-level EDGE data with no exceptions or modifications for recalibration of the risk adjustment models for the 2024 benefit year (Option 1). Consistent with prior benefit model recalibrations and the proposed adoption of Option 4 to recalibrate the HHS risk adjustment models for the 2024 benefit year, this will involve the use of the 3 most recent consecutive years of enrollee-level EDGE data that were available for the applicable benefit year and not updating the coefficients between the proposed and final rules if an additional year of enrollee-level EDGE data becomes available for incorporation. The coefficients listed in Tables 1 through 6 of this final rule reflect the use of 2018, 2019, and 2020 benefit year enrollee-level EDGE recalibration data for all coefficients, including adult age-sex coefficients, as well as the pricing adjustment for Hepatitis C drugs finalized in this final rule.[26] [27] We summarize and respond to public comments received on the proposed approach to recalibration of the HHS risk adjustment models for the 2024 benefit year below.

Comment: Several commenters supported our proposal to recalibrate the 2024 risk adjustment models with 2018, 2019, and 2020 enrollee-level EDGE data, except for the age-sex coefficients, which would be calculated by blending the age-sex coefficients from the 2018 and 2019 enrollee-level EDGE data only. One of these commenters stated that, of the options presented by HHS, Option 4 struck the best balance between maintaining HHS's established practice of recalibrating the models based on the 3 most recent years of available EDGE data while also accounting for the anomalous decreases in the age-sex coefficients observed in the 2020 benefit year enrollee-level EDGE recalibration data. Another commenter stated that using 2017, 2018, and 2019 enrollee-level EDGE data for recalibration (Option 5), or using only 2018 and 2019 enrollee-level EDGE data (Option 6) would also be reasonable approaches. One commenter supported the proposal to adopt Option 4, but generally objected to the use of age-sex factors in the HHS-operated risk adjustment program due to concerns about discrimination.

However, several commenters opposed the finalization of Option 4, objecting to the use of different data years to recalibrate different coefficients for the same benefit year of the HHS-operated risk adjustment program (that is, blending benefit year 2024 adult age-sex coefficients using 2018 and 2019 enrollee-level EDGE data, and blending all other benefit year 2024 coefficients using 2018, 2019, and 2020 enrollee-level EDGE data) on the grounds that model coefficients are interrelated, so the 2020 enrollee-level EDGE data adult age-sex coefficients that were excluded from blending had an influence during initial model fitting on 2020 enrollee-level EDGE data adult model coefficients that were used in blending. One commenter urged HHS to include 2020 enrollee-level EDGE data, but to weight that data year less than other data years (Option 2).

Several other commenters supported using the 2017, 2018, and 2019 enrollee-level EDGE data for the 2024 benefit year model recalibration (Option 5). One commenter suggested that HHS might identify fixable anomalies in the 2020 enrollee-level EDGE recalibration data prior to model fitting and then refit the models as an alternative option to use 2018, 2019 and 2020 data for all coefficients across all models.

Response: In light of our analysis and further consideration of the previously identified model recalibration options along with the benefit of interested party comments on the six options, we are finalizing the use of 2018, 2019, and 2020 enrollee-level EDGE data to recalibrate the 2024 risk adjustment models for all model coefficients, with no exceptions (Option 1). As stated in the proposed rule, although our analyses found that the 2019 and 2020 benefit year enrollee-level EDGE data were largely comparable, there were observed anomalous decreases in the unconstrained age-sex coefficients for the 2020 benefit year enrollee-level

[26] Similar to recalibration of the 2023 risk adjustment adult models and consistent with the policies adopted in the 2023 Payment Notice, the 2024 benefit year factors in this rule also reflect the removal of the mapping of hydroxychloroquine sulfate to RXC 09 (Immune Suppressants and Immunomodulators) and the related RXC 09 interactions (RXC 09 x HCC056 or 057 and 048 or 041; RXC 09 x HCC056; RXC 09 x HCC 057; RXC 09 x HCC048, 041) from the 2018 and 2019 benefit year enrollee-level EDGE data sets for purposes of recalibrating the 2024 benefit year adult models. See 87 FR 27232 through 27235. Additionally, the factors for the adult models reflect the use of the final, fourth quarter (Q4) RXC mapping document that was applicable for each benefit year of data included in the current year's model recalibration (except under extenuating circumstances that can result in targeted changes to RXC mappings). See 87 FR 27231 through 27232.

[27] The adult, child and infant models have been truncated to account for the high-cost risk pool payment parameters by removing 60 percent of costs above the $1 million threshold. We did not propose changes to the high-cost risk pool parameters for the 2024 benefit year. See 87 FR 78237. Therefore, as detailed below, we are maintaining the $1 million threshold and 60 percent coinsurance rate.

EDGE data for older adult enrollees, especially older female enrollees. Therefore, our proposed adoption of Option 4 included an exception narrowly tailored to account for the observed anomalous decreases in the unconstrained coefficients for the 2020 benefit year enrollee-level EDGE data. At the same time, as explained in the proposed rule (87 FR 78215 through 78216), our analysis generally found that the 2020 enrollee-level EDGE data were anomalous primarily in the volume and frequencies of certain types of claims, but that the relative costs of specific services, at least those associated with payment HCCs in the HHS risk adjustment models, were largely unaffected. Because the risk adjustment models predict relative costs of care for specific conditions on an enrollee-level basis and tend not to rely on overall patterns of utilization, the minimal impacts to relative costs of care for payment HCCs likewise resulted in minimal impacts on the coefficients fitted by the 2020 enrollee-level EDGE recalibration data.

Although we found anomalous trends in the adult age-sex factors, they were limited to the direction of coefficient changes. Specifically, age and sex in the adult models seemed to be predictive of whether an age-sex coefficient would go up or down with older female enrollees more likely to see a decrease in their age-sex coefficient fit to 2020 enrollee-level EDGE data relative to their age-sex coefficient fit to 2019 enrollee-level EDGE data, and younger male enrollees more likely to see an increase in the coefficient fit to 2020 data relative to the coefficient fit with 2019 data. To put these directional changes into perspective, the magnitudes of these changes were small and did not appear as anomalous when further compared to previous benefit years. Specifically, as part of our consideration of comments we further investigated these anomalies and found that:

- For the risk adjustment model coefficients from the 2016 through the 2023 benefit years, the adult age-sex factors varied in magnitude from their prior benefit year by a historic median value of 16.1 percent.
- Using only 2018 and 2019 data to blend the adult age-sex factors (as in our proposed approach, Option 4,[28]) across metal levels, the median change in magnitude between the 2023 final adult age-sex coefficients [29] and the 2024 proposed adult age-sex coefficients was 2.0 percent and the maximum change in magnitude was 12.0 percent.
- Using all 3 years of enrollee-level EDGE data (2018, 2019, and 2020), the median change in magnitude between the 2023 final adult age-sex coefficients and the 2024 adult age-sex coefficients was 3.6 percent and the maximum change in magnitude was 13.2 percent.
- The median magnitude of the differences between the proposed age-sex coefficients, and blended age-sex coefficients using 2018, 2019, and 2020 enrollee-level EDGE data [30] was 2.7 percent.

These values show that although the pattern of the direction of the changes in adult age-sex coefficients might appear to be anomalous, with older female enrollees showing more decreases than expected, the coefficients were actually more consistent between the 2023 final risk adjustment models and those proposed or explored as alternatives for the 2024 benefit year than we have seen in previous benefit years. As noted in the proposed rule (78 FR 78217), we know from our experience that every year of data can be unique and therefore some level of deviation from year to year is expected. Although the adult age-sex trends may have displayed a systematic effect such that older female enrollees were more likely to see lower coefficients, the magnitude of this effect appears very small and does not rise above what we have seen in prior year-to-year variation.

Moreover, the intent of the established policy to use the 3 most recent consecutive years of enrollee-level EDGE data for recalibration of the risk adjustment models is to provide stability within the HHS-operated risk adjustment program and minimize volatility in changes to risk scores between benefit years due to differences in the data set's underlying populations, while reflecting the most recent years' claims experience available.[31] Given that the magnitude of differences in the coefficients between separately solved models from the 2019 and 2020 enrollee-level EDGE data sets are similar in magnitude to the normal variation we see between data years, despite the initially observed anomalous trends, after review of comments and further consideration and analysis of the options presented, we now believe that the blending of 3 years of data for all coefficients, including the adult model age-sex coefficients, is the better approach for recalibration of the 2024 benefit year risk adjustment models, because we continued to find that there may not be a sufficient justification to exclude 2020 benefit year enrollee-level EDGE data in the recalibration of the risk adjustment models. Additionally, this approach will continue to serve the purpose of providing stability in risk scores by maintaining the policy to use the 3 most recent consecutive years of enrollee-level data available at the time we incorporated the data in the draft recalibrated coefficients published in the proposed rule and will update the models to reflect the most recent year's claims experience available.

Additionally, we agree with commenters and recognize there are disadvantages with Option 4 and the use of different benefit years to recalibrate the adult model age-sex coefficients because model coefficients are interdependent. For example, if the 2020 data differed from the 2019 data in that some risk had shifted from an HCC to an age-sex category for which that HCC was common, the removal of the age-sex category from blending would result in that HCC being slightly underpredicted relative to its predicted value if all three benefit years of data were used because the shifted risk would not be captured in the blended age-sex coefficient with that benefit year of data being included. Another example may include vaccinations. Costs associated with vaccinations have an impact on age-sex coefficients because they are not associated with a diagnosis that would be captured by an HCC. As such, if there were changes in the relative costs of common vaccinations between the 2019 and 2020 years of enrollee-level EDGE data, removing the 2020 enrollee-level EDGE data age-sex coefficients from blending would prevent the models from capturing these changes.

We also continue to believe that the COVID–19 PHE is an example of the type of situation that requires a close examination of the potential impact on utilization and costs to identify whether there are sufficiently anomalous trends relative to expected future patterns of care or significant changes that differentially impact certain conditions or populations relative to others that could impact the use of that benefit year in the annual recalibration of the HHS risk adjustment models. HHS intends to similarly examine 2021 enrollee-level EDGE data, which will be available for use in recalibration of the 2025 benefit

[28] See the 2024 Payment Notice proposed rule, Table 2 at 87 FR 78220.

[29] See the 2023 Benefit Year Final HHS Risk Adjustment Model Coefficients, Table 1, available at *https://www.cms.gov/files/document/2023-benefit-year-final-hhs-risk-adjustment-model-coefficients.pdf.*

[30] See the 2024 Payment Notice proposed rule, Table 1 at 87 FR 78218.

[31] For a discussion of the established policy governing the data used for the annual risk adjustment model recalibration, see 86 FR 24151 through 24155.

year HHS risk adjustment models,[32] and would propose any changes to current policies for recalibration of the models in future benefit years through notice-and-comment rulemaking.

We recognize that some commenters preferred alternative options that would use 2017, 2018, and 2019 enrollee-level EDGE data (Option 5) or only 2018 and 2019 enrollee-level EDGE data (Option 6). We remain concerned about these options, which would completely exclude 2020 enrollee-level EDGE data, because these options would result in the HHS risk adjustment models reflecting older costs and utilization trends than would be desirable. As previously stated, our analyses of the 2020 benefit year enrollee-level EDGE recalibration data found that it was largely comparable to the 2019 benefit year data set and we did not identify other major anomalous trends in our comparison of the unconstrained HCC coefficients in the 2019 and 2020 enrollee-level EDGE recalibration data sets. This raises the question about whether there is a sufficient justification to completely exclude 2020 benefit year enrollee-level EDGE data in the recalibration of the HHS risk adjustment models. Beyond the concern about using older data and the question about the justification to completely exclude 2020 benefit year data, Option 6 has the additional drawback of decreasing the stabilizing effect of using multiple years of data. As our goal in using the 3 most recent consecutive years of data that are available at the time we incorporate data to recalibrate the models and determine draft coefficients based on a blend of equally-weighted, separately solved coefficients from each year is to capture some degree of year-to-year cost shifting without over-relying on any factors unique to one particular year. When using 2 years of data under this approach, each year is weighted at 50 percent, but with 3 years of data, each year is weighted at 33.3 percent. As such, a change in a coefficient occurring in 1 year of the data that is actually included in recalibration would have a greater impact on the HHS risk adjustment model coefficients if only using 2 years of data rather than 3 years, due to the increase in the reliance of the blended coefficients on the remaining 2 years of data.

Option 2, which was supported by one commenter and would have weighted 2020 enrollee-level EDGE data less than the other two benefit years (2018 and 2019 enrollee-level EDGE data) used in recalibration while continuing to include it in the blended coefficients, would represent a middle ground between Option 1 and Option 6. However, we continue to be concerned that this approach would require identifying an appropriate weighting methodology other than the equal weighting that we generally use to blend coefficients from the 3 data years, and we do not believe there is a self-evident method of weighting 2020 data differently for this purpose. Furthermore, although Option 2 would not completely eliminate the effect of the 2020 benefit year data in all of the models for all factors (as opposed to just the age-sex factors in the adult models), this option would dampen the effect of 2020 benefit year data, raising similar concerns as Options 5 and 6 in that Option 2 would also, to some extent, prevent the models from reflecting changes in utilization and cost of care that are unrelated to the impact of the COVID–19 PHE.

Regarding the recommendation to identify and address fixable anomalies in the underlying data and then refit the models using the modified data, we do not believe this recommendation is feasible or prudent. Although it may be possible to identify an increase or a decrease in the frequency of particular diagnosis or service codes, these checks and procedures do not presently allow HHS to identify whether a diagnosis or service code on a given enrollee's record was directly attributable to the COVID–19 PHE. We are also presently unable to determine whether an enrollee had care deferred due to office closures or other logistical issues or what care would have been provided in the absence of the PHE. We generally consider this sort of enrollee-level adjustment to be out of scope for model calibration unless there is a clear data error. As such, we generally [33] use the data as is, with only some basic trending assumptions [34] to ensure the costs are measured for the year in which the coefficients will be used. Furthermore, as previously stated, the HHS risk adjustment models rely more on relative cost of care for a given diagnosis than they do on how many such diagnoses are present in the underlying data.

Regarding the general concerns about use of age-sex factors in the HHS risk adjustment models, HHS takes very seriously our obligation to protect individuals from discrimination and generally disagrees that the use of these factors in risk adjustment is inappropriate. Consistent with section 1343 of the ACA, the HHS-operated risk adjustment program reduces the incentives for issuers to avoid higher-than-average risk enrollees, such as those with chronic conditions, by using charges collected from issuers that attract lower-than-average risk enrollees to provide payments to health insurance issuers that attract higher-than-average risk enrollees. The ACA also prohibits issuers from establishing or charging premiums on the basis of sex,[35] and limits issuers ability to do so on the basis of age.[36] However, the cost of care for and actuarial risk of enrollees is, in part, predicted by their age and sex. As such, without the inclusion of age-sex factors in the HHS risk adjustment models, some issuers would be incentivized to design plans that are less attractive to potential enrollees whose age-sex category is predicted to create a higher liability for the issuer. The age-sex factors in the HHS risk adjustment models help alleviate this incentive by ensuring issuers whose enrollees' actuarial risk is greater than the average actuarial risk of all enrollees in the State market risk pool, such as issuers that enroll a higher-than-average proportion of enrollees who fall into a high-cost age-sex category, are appropriately compensated. The use of age and sex factors in the HHS risk adjustment models is therefore necessary, appropriate, and helps reduce the likelihood that discrimination based on age or sex will occur with respect to health insurance coverage issued or renewed in the individual and small group (including merged) markets.

After review of comments and further consideration of the options presented, for the reasons outlined above, we are finalizing adoption of Option 1 for recalibrating the HHS risk adjustment models for the 2024 benefit year. The

[32] Consistent with the policies finalized in the 2022 Payment Notice, use of the 3 most recent consecutive years of enrollee-level EDGE data would result in the use of 2019, 2020, and 2021 enrollee-level EDGE data for recalibration of the 2024 benefit year models; the use of 2020, 2021, and 2022 enrollee-level EDGE data for recalibration of the 2025 benefit year models; and the use of 2021, 2022, and 2023 enrollee-level EDGE data for recalibration of the 2026 benefit year models. See 86 FR 24151 through 24155.

[33] As previously stated in the March 2016 Risk Adjustment Methodology White Paper (March 24, 2016; available at *https://www.cms.gov/CCIIO/Resources/Forms-Reports-and-Other-Resources/Downloads/RA-March-31-White-Paper-032416.pdf*), we exclude enrollees with capitated claims from the recalibration sample due to concerns that methods for computing and reporting derived amounts from capitated claims would not result in reliable data for recalibration or analysis. See also 87 FR 27227.

[34] These trending assumptions include the pricing adjustment for Hepatitis C drugs. See 84 FR 17463 through 17466. See also 87 FR 78218.

[35] See section 2701 of the Public Health Service Act (42 U.S.C. 300gg) as amended by section 1201 of the ACA.

[36] Ibid. See also the Market Rules and Rate Review final rule (78 FR 13411 through 13413).

model coefficients for the 2024 benefit year listed in Tables 1 through 6 of this final rule are based on a blend of equally-weighted, separately solved coefficients from the 2018, 2019, and 2020 benefit years of enrollee-level EDGE data for all coefficients.[37] [38] [39]

Comment: Several commenters were concerned about some of the proposed RXC adult model coefficients, in particular RXCs 1 (Anti-HIV Agents), 8 (Multiple Sclerosis Agents), and 9 (immune suppressants and immunomodulators), for which the majority of filled prescriptions fall into the category of specialty drugs. As a result, many of these commenters supported Option 5, described above, for addressing 2020 enrollee-level EDGE data in model recalibration and recommended that the 2017, 2018 and 2019 enrollee-level EDGE data not be trended forward to the 2024 benefit year (that is, that HHS should use the 2023 final model coefficients for the 2024 benefit year). These commenters also requested that HHS publish additional information on these coefficients, including the separately solved model coefficients from each data year, the trending methodology, and how these trend factors were applied as part of the 2024 benefit year risk adjustment model recalibration. Some of these commenters questioned whether the changes for these coefficients were due to anomalies in the 2020 enrollee-level EDGE data or, as others suggested, if the changes may be due to the trending methodology applied. One of these commenters suggested different trend factors may need to be applied differently for different RXCs, noting that market patterns for non-RXC specialty drugs may not align with market patterns for specialty drugs included in the affected RXCs.

Response: We are finalizing the RXC coefficients as proposed because we believe the 2024 risk adjustment models' RXCs are accurately predicting the costs of RXCs in the market for the applicable benefit year. Although there are RXC coefficients changes between the 2023 and 2024 benefit year models, these changes are not due to anomalies in the 2020 enrollee-level EDGE data and are of a similar magnitude to RXC changes found in previous benefit years. The change in these RXC coefficients relative to the previous benefit year are due to decisions HHS made in trending costs for traditional and specialty drugs, as suggested by some commenters.

To explain, we analyzed separately solved model coefficients from each data year used in the proposed 2024 risk adjustment model recalibration and found that all 3 data years used for 2024 model recalibration exhibited similar changes in these RXC coefficients. This indicates that the 2020 enrollee-level EDGE data (or any potential anomalies related to that data year) were not driving the decrease. Although we understand the importance of transparency, we do not believe it is necessary to release the separately solved model coefficients from each data year.

However, we appreciate it is important to share more information about the RXC coefficients identified by commenters and generally note that, between benefit years, the RXC coefficients are typically less stable than HCC coefficients in the HHS risk adjustment models due to smaller sample sizes than their corresponding HCC coefficients, and multicollinearity with HCC coefficients and HCC–RXC interaction factors. In addition, as part of our consideration of these comments and to investigate whether the 2020 enrollee-level EDGE data coefficients for these three RXCs were substantially different from the 2018 and 2019 years of enrollee-level EDGE data coefficients, we engaged in a further analysis of the differences between coefficients solved from each year of enrollee-level EDGE data (2018, 2019, and 2020 enrollee-level EDGE data) for these three RXCs and found:

- In the HHS risk adjustment adult model coefficients from the 2018 through the 2023 benefit years, across the five metal levels, the distance between RXC coefficient values from the 2 most dissimilar data years used in the annual model recalibration for RXC 1 have ranged between 9.2 percent and 40.7 percent. Across the five metal levels, the median distance between RXC 1 coefficients from the 2 most dissimilar data years for the 2024 benefit year risk adjustment adult models is 30.9 percent.
- For RXC 8, the distance between values from the 2 most dissimilar data years used in the annual model recalibration for this adult model coefficient across the 2018 through 2023 benefit years ranged from between 5.1 percent and 28.4 percent, with the median value for the 2024 benefit year risk adjustment adult models at 7.0 percent across metal levels.
- For RXC 9, the range of distance between values from the 2 most dissimilar data years used in the annual model recalibration for this adult model coefficient across the 2018 through 2023 benefit years has fallen between 1.6 percent and 60.1 percent, with the median value for the proposed and final 2024 risk adjustment adult models at 4.7 percent across the five metal levels.

Although coefficients for these three RXCs decreased between the 2023 and 2024 benefit year risk adjustment adult models, the similarity of the coefficients among the 3 data years used to fit the 2024 benefit year risk adjustment models and the consistency of the dispersion between data years with the range of dispersion observed for previous benefit years' HHS risk adjustment models demonstrates that these decreases are not due to any anomalous patterns in the 2020 enrollee-level EDGE data. As noted above, in past benefit years, we have attributed the lower level of stability among RXC and RXC–HCC interaction factors to the high level of collinearity between these variables. Due to their close association with one another, the models may fit coefficients that divide risk between an interaction factor and its related RXC and HCC(s) differently for different years of enrollee-level EDGE data.

However, the change in these RXC coefficients relative to the previous benefit year are due to decisions we made in trending costs for traditional and specialty drugs, as suggested by some commenters, which have been trended separately from medical expenditures since the 2017 benefit year.[40] More specifically, in our annual assessment of the trending factors for the 2024 HHS risk adjustment models, we determined that the trend factors used for specialty drugs was higher than the market data supported. Therefore,

[37] The coefficients listed in Tables 1 through 6 of this final rule also reflect the pricing adjustment for Hepatitis C drugs finalized in this rule. In addition, the factors in this rule also reflect the removal of the mapping of hydroxychloroquine sulfate to RXC 09 (Immune Suppressants and Immunomodulators) and the related RXC 09 interactions (RXC 09 x HCC056 or 057 and 048 or 041; RXC 09 x HCC056; RXC 09 x HCC 057; RXC 09 x HCC048, 041) from the 2018 and 2019 benefit year enrollee-level EDGE data sets for purposes of recalibrating the 2024 benefit year adult models. See 87 FR 27232 through 27235. Additionally, the factors for the adult models reflect the use of the final, fourth quarter (Q4) RXC mapping document that was applicable for each benefit year of data included in the current year's model recalibration (except under extenuating circumstances that can result in targeted changes to RXC mappings). See 87 FR 27231 through 27232.

[38] The adult, child and infant models have also been truncated to account for the high-cost risk pool payment parameters by removing 60 percent of costs above the $1 million threshold.

[39] Starting with the 2024 risk adjustment adult models, HHS will group HCC 18 Pancreas Transplant Status and CC 83 Kidney Transplant Status/Complications to reflect that these transplants frequently co-occur for clinical reasons and to reduce volatility of coefficients across benefit years due to the small sample size of HCC 18. This change will also be reflected in the DIY Software for the 2024 benefit year.

[40] See 81 FR 12218.

for the 2024 benefit year, we used trend factors for specialty drugs that aligned with the market data rather than continuing the historical, higher trend factors. In determining these trend factors, we consulted our actuarial experts, reviewed relevant Unified Rate Review Template (URRT) submission data, analyzed multiple years of enrollee-level EDGE data, and consulted National Health Expenditure Accounts (NHEA) data as well as external reports and documents [41] published by third parties. In this process, we also ensured that the trends we use reflect changes in cost of care rather than gross growth in expenditures. As such, we believe the trend factors we used for specialty drugs are appropriate for the most recent trends we have seen in the market and the proposed RXC coefficient values that we finalize in this rule reflect the appropriate amount of growth between the data years used to fit the model and the 2024 benefit year. As part of our annual model recalibration activities, we intend to continue to reassess the trend factors used to update the HHS risk adjustment models in future benefit years. Consistent with § 153.320(b)(1), we will also continue to include and solicit comments on the draft model factors to be employed in the HHS risk adjustment models for a given benefit year, including but not limited to the proposed coefficients, as part of the applicable benefit year's Payment Notice proposed rule.

b. Pricing Adjustment for the Hepatitis C Drugs

In the HHS Notice of Benefits and Payment Parameters for 2024 proposed rule (87 FR 78206, 78218), for the 2024 benefit year, we proposed to continue applying a market pricing adjustment to the plan liability associated with Hepatitis C drugs in the risk adjustment models.[42]

Since the 2020 benefit year risk adjustment models, we have been making a market pricing adjustment to the plan liability associated with Hepatitis C drugs to reflect future market pricing prior to solving for coefficients for the models.[43] The purpose of this market pricing adjustment is to account for significant pricing changes associated with the introduction of new and generic Hepatitis C drugs between the data years used for recalibrating the models and the applicable recalibration benefit year.[44]

We have committed to reassessing this pricing adjustment with additional years of enrollee-level EDGE data, as data become available. As part of the 2024 benefit year model recalibration, we reassessed the cost trend for Hepatitis C drugs using available enrollee-level EDGE data (including 2020 benefit year data) to consider whether the adjustment was still needed and if it is still needed, whether it should be modified. We found that the data for the Hepatitis C RXC that will be used for the 2024 benefit year recalibration [45] still do not account for the significant pricing changes due to the introduction of new Hepatitis C drugs, and therefore, do not precisely reflect the average cost of Hepatitis C treatments applicable to the benefit year in question.

Specifically, generic Hepatitis C drugs did not become available on the market until 2019, and we proposed to use 2018 benefit year EDGE data in the 2024 benefit year model recalibration.[46] Due to the lag between the data years used to recalibrate the risk adjustment models and the applicable benefit year of risk adjustment, as well as the expectation that the costs for Hepatitis C drugs will not increase at the same rate as other drug costs between the data year and the applicable benefit year of risk adjustment, we do not believe that the trends used to reflect growth in the cost of prescription drugs due to inflation and related factors for recalibrating the models will appropriately reflect the average cost of Hepatitis C treatments expected in the 2024 benefit year. Therefore, we continue to believe a market pricing adjustment specific to Hepatitis C drugs in our models for the 2024 benefit year is necessary to account for the significant pricing changes associated with the introduction of new and generic Hepatitis C drugs between the data years used for recalibrating the models and the applicable recalibration benefit year. As noted in the proposed rule, we intend to continue to assess this pricing adjustment in future benefit year recalibrations using additional years of enrollee-level EDGE data.

We sought comment on this proposal. After reviewing the public comments, we are finalizing this proposal to continue applying a market pricing adjustment to the plan liability associated with Hepatitis C drugs in the 2024 benefit year HHS risk adjustment models as proposed. We summarize and respond to public comments received on the proposed pricing adjustment for Hepatitis C drugs below.

Comment: Most commenters supported the continued use of the pricing adjustment for Hepatitis C drugs with one commenter stating that the proposed Hepatitis C pricing adjustment seems reasonably well calibrated to reduce the incentives for issuers to create discriminatory plans that would drive away enrollees with Hepatitis C.

Some commenters expressed concern about the Hepatitis C pricing adjustment. These commenters cautioned against reducing the Hepatitis C RXC coefficient more than the expected decrease in cost as that may incentivize issuers to reduce the availability of treatment. These commenters were also concerned about undercompensating issuers for enrollees with serious chronic conditions, which they stated would incentivize issuers to avoid these enrollees. One commenter asserted that the professional independence and ethical standards of providers would prevent providers from prescribing drugs that they did not believe were medically necessary and appropriate, reducing the potential for issuers to game the program.

Response: We believe that continuing to apply the Hepatitis C pricing adjustment in the 2024 benefit year HHS risk adjustment models is appropriate at this time. This pricing adjustment will help avoid perverse incentives and will

AbbVie Receives U.S. FDA Approval of MAVYRET™ (glecaprevir/pibrentasvir) for the Treatment of Chronic Hepatitis C in All Major Genotypes (GT 1–6) in as Short as 8 Weeks. Abbvie. *https://news.abbvie.com/news/abbvie-receives-us-fda-approval-mavyret-glecaprevirpibrentasvir-for-treatment-chronic-hepatitis-c-in-all-major-genotypes-gt-1-6-in-as-short-as-8-weeks.htm.*

lead to Hepatitis C RXC coefficients that better reflect anticipated actual 2024 benefit year plan liability associated with Hepatitis C drugs. Specifically, the purpose of the Hepatitis C pricing adjustment is to address the significant pricing changes associated with the introduction of new and generic Hepatitis C drugs between the data years used for recalibrating the models and the applicable recalibration benefit year that present a risk of creating perverse incentives by overcompensating issuers. We reassessed the pricing adjustment for the Hepatitis C RXC for the 2024 benefit year model recalibration and found that the data used for the 2024 benefit year risk adjustment model recalibration (that is, 2018, 2019, and 2020 enrollee-level EDGE data) still do not account for the significant pricing changes that we have observed for the Hepatitis C drugs due to the introduction of newer and cheaper Hepatitis C drugs. Therefore, the data that will be used to recalibrate the models needs to be adjusted because it does not precisely reflect the average cost of Hepatitis C treatments expected in the 2024 benefit year.

In making this determination, we consulted our clinical and actuarial experts, and analyzed the most recent enrollee-level EDGE data available to further assess the changing costs associated with Hepatitis C enrollees. Due to the high cost of these drugs reflected in the 2018, 2019, and 2020 enrollee-level EDGE data, without a pricing adjustment to plan liability, issuers would be overcompensated for the Hepatitis C RXC in the 2024 benefit year, and issuers could be incentivized to encourage overprescribing practices and game risk adjustment such that their risk adjustment payment is increased or risk adjustment charge is decreased. We also recognize concerns that applying a pricing adjustment that would reduce the coefficient for the Hepatitis C RXC by more than the expected decrease in costs could incentivize issuers to reduce the availability of the treatment. However, we believe that the Hepatitis C pricing adjustment we are finalizing accurately captures the costs of Hepatitis C drugs for the 2024 benefit year using the most recently available data, balances the need to deter gaming practices with the need to ensure that issuers are adequately compensated, and does not undermine recent progress in the treatment of Hepatitis C. Nevertheless, we intend to continue to reassess this pricing adjustment as part of future benefit years' model recalibrations using additional years of available enrollee-level EDGE data.

We appreciate commenters' concerns about undercompensating issuers for enrollees with serious chronic conditions. We note that HHS, in the 2023 Payment Notice (87 FR 27221 through 27230), finalized several risk adjustment model changes to address the adult and child models' underprediction for enrollees with many HCCs. Specifically, we finalized the interacted HCC counts and HCC-contingent enrollment duration factor model specifications to improve model prediction for the higher risk enrollees and ensure that issuers are being accurately compensated for these enrollees. As such, the potential for underprediction or overprediction in the HHS risk adjustment models is an area that we are consistently monitoring and addressing as needed and will continue to monitor and address in the future as part of our ongoing efforts to continually improve the HHS risk adjustment models.

Additionally, we recognize the important role that the ethical standards of providers play in preventing overprescribing of drugs that they do not believe are medically necessary and appropriate, but we believe that the Hepatitis C pricing adjustment is the most effective way to protect against perverse incentives that could affect prescribing patterns.

Comment: One commenter urged HHS to expand the pricing adjustment to other drugs, noting that biosimilar versions of *adalimumab* (Humira®), a drug that is currently classified in RXC 9 *Immune suppressants and Immunomodulators* in the adult risk adjustment models, will soon enter the market and the logic for applying a market pricing adjustment to the plan liability associated with Hepatitis C drugs may be extended to these biosimilar drugs.

Response: We did not propose or solicit comments on extending a pricing adjustment to drugs treating conditions other than Hepatitis C. As such, at this time, we will not be finalizing any pricing adjustments for the RXC 9 drug *adalimumab* or other specialty drugs with alternatives (whether generic or biosimilar) entering the market in the coming year. In the 2023 Payment Notice (87 FR 27231 through 27235), we explained our criteria for inclusion and exclusion of drugs in RXC mapping and recalibration. We stated that in extenuating circumstances where HHS believes there will be a significant impact from a change in an RxNorm Concept Unique Identifiers (RXCUI) to RXC mapping, such as: (1) evidence of significant off-label prescribing (as was the case with hydroxychloroquine sulfate);[47] (2) abnormally large changes in clinical indications or practice patterns associated with drug usage; or (3) certain situations in which the cost of a drug (or biosimilars) become much higher or lower than the typical cost of drugs in the same prescription drug category, HHS will consider whether changes to the RXCUI to RXC mapping from the applicable data year crosswalk (or, in this case, pricing adjustments) are needed for future benefit year recalibrations.

Although making a pricing adjustment due to the introduction of new drugs in a market is not the same as adjusting the RXC mappings, we take a similar approach in considering whether a pricing adjustment for new drugs in a market is needed. We do not believe there is evidence at this time that the introduction of biosimilar alternatives to *adalimumab* will create market patterns that meet any of these three criteria. Our current understanding is that the biosimilar alternatives to *adalimumab* entering the market are not analogous to the generic versions of drugs used to treat Hepatitis C. Biosimilars, in general, differ from common generic drugs and their market behaviors are expected to be distinct. Because biosimilars are made from living material (which is not the case with common generic drugs), they differ in their interchangeability and manufacturing cost savings from common generics.[48] Furthermore, although costs are expected to be lower for *adalimumab* biosimilars due to lower costs of development, the nature of the different production process for biologic drugs means that the price reductions are expected to be much smaller with biosimilars than we see with the introduction of generic medications.[49] As such, we also do not believe that the costs and prescribing patterns of *adalimumab* (and its biosimilars) will be much higher or lower than the typical cost of drugs in the same prescription drug category in the near future. Nevertheless, we will continue to monitor the prescription drug market as part of our ongoing efforts to continually improve the HHS risk adjustment models.

c. Request for Information: Payment HCC for Gender Dysphoria

In the HHS Notice of Benefit and Payment Parameters for 2024 proposed rule (87 FR 78219), HHS requested information on adding a payment HCC for gender dysphoria to the HHS risk adjustment models for future benefit years. We thank commenters for their feedback and will take these comments into consideration if we pursue this potential risk adjustment model update for future benefit years through notice-and-comment rulemaking.

d. List of Factors To Be Employed in the Risk Adjustment Models (§ 153.320)

We are finalizing the 2024 benefit year risk adjustment model factors resulting from the equally weighted (averaged) blended factors from separately solved models using the 2018, 2019, and 2020 enrollee-level EDGE data in Tables 1 through 6. The adult, child, and infant models have been truncated to account for the high-cost risk pool payment parameters by removing 60 percent of costs above the $1 million threshold.[50] Table 1 contains factors for each adult model, including the age-sex, HCCs, RXCs, RXC–HCC interactions, interacted HCC counts, and enrollment duration coefficients. Table 2 contains the factors for each child model, including the age-sex, HCCs, and interacted HCC counts coefficients. Table 3 lists the HHS–HCCs selected for the interacted HCC counts factors that apply to the adult and child models. Table 4 contains the factors for each infant model. Tables 5 and 6 contain the HCCs included in the infant models' maturity and severity categories, respectively.

[50] We did not propose changes to the high-cost risk pool parameters for the 2024 benefit year. Therefore, we will maintain the $1 million threshold and 60 percent coinsurance rate.

BILLING CODE 4120–01–P

TABLE 1: Adult Risk Adjustment Model Factors for the 2024 Benefit Year

HCC or RXC No.	Factor	Platinum	Gold	Silver	Bronze	Catastrophic
Demographic Factors						
	Age 21-24, Male	0.189	0.121	0.080	0.052	0.051
	Age 25-29, Male	0.192	0.120	0.078	0.049	0.047
	Age 30-34, Male	0.223	0.145	0.097	0.062	0.061
	Age 35-39, Male	0.244	0.159	0.105	0.065	0.064
	Age 40-44, Male	0.280	0.189	0.129	0.083	0.082
	Age 45-49, Male	0.309	0.211	0.147	0.097	0.095
	Age 50-54, Male	0.391	0.284	0.213	0.157	0.155
	Age 55-59, Male	0.441	0.325	0.246	0.185	0.183
	Age 60-64, Male	0.493	0.366	0.279	0.211	0.209
	Age 21-24, Female	0.286	0.186	0.121	0.075	0.073
	Age 25-29, Female	0.307	0.199	0.129	0.078	0.076

RXC 09 x HCC056 or 057 and 048 or 041	Additional effect for enrollees with RXC 09 and (HCC 048 or 041) and (HCC 056 or 057)	0.287	0.347	0.387	0.425	0.426
RXC 09 x HCC056	Additional effect for enrollees with RXC 09 and HCC 056	-1.073	-0.964	-0.876	-0.795	-0.792
RXC 09 x HCC057	Additional effect for enrollees with RXC 09 and HCC 057	-0.467	-0.376	-0.280	-0.173	-0.168
RXC 09 x HCC048, 041	Additional effect for enrollees with RXC 09 and (HCC 048 or 041)	2.454	2.573	2.695	2.872	2.877
RXC 10 x HCC159, 158	Additional effect for enrollees with RXC 10 and (HCC 159 or 158)	41.353	41.406	41.472	41.618	41.623

a/ Starting with the 2024 risk adjustment adult models, HHS will group HCC 18 Pancreas Transplant Status and HCC 83 Kidney Transplant Status/Complications to reflect that these transplants frequently co-occur for clinical reasons and to reduce volatility of coefficients across benefit years due to the small sample size of HCC 18. This change will also be reflected in the DIY Software for the 2024 benefit year.

b/ HCC numbers that appear with an underscore in this document will appear without the underscore in the DIY Software. For example, HCC 35_1 in this table will appear as HCC 351 in the DIY Software.

c/ Starting with the 2024 risk adjustment adult models, HHS will group HCC 18 Pancreas Transplant Status and HCC 183 Kidney Transplant Status/Complications to reflect that these transplants frequently co-occur for clinical reasons and to reduce volatility of coefficients across benefit years due to the small sample size of HCC 18. This change will also be reflected in the DIY Software for the 2024 benefit year.

d/ We constrain RXC 03 to be equal to average plan liability for RXC 03 drugs, RXC 04 to be equal to the average plan liability for RXC 04 drugs, and we constrain RXC 03 x HCC142 and RXC 04 x HCC184, 183, 187, 188 to be equal to 0. See CMS. (2016, March 24). March 2016 Risk Adjustment Methodology Discussion Paper. *https://www.cms.gov/cciio/resources/forms-reports-and-other-resources/downloads/ra-march-31-white-paper-032416.pdf* (where we previously discussed the use of constraints in the risk adjustment models).

e/ Similar to recalibration of the 2023 risk adjustment adult models and consistent with the final policies adopted in the 2023 Payment Notice, the 2024 factors in this rule reflect the removal of the mapping of hydroxychloroquine sulfate to RXC 09 (Immune Suppressants and Immunomodulators) and the related RXC 09 interactions (RXC 09 x HCC056 or 057 and 048 or 041; RXC 09 x HCC056; RXC 09 x HCC 057; RXC 09x HCC048, 041) from the 2018 and 2019 benefit year enrollee-level EDGE data sets for purposes of recalibrating the 2024 benefit year adult models. See 87 FR 27232 through 27235. Additionally, the 2023 factors for the adult models reflect the use of the final, fourth quarter (Q4) RXC mapping document that was applicable for each benefit year of data included in the current year's model recalibration (except under extenuating circumstances that can result in targeted changes to RXC mappings), while continuing to engage in annual and quarterly review processes. See 87 FR 27231 through 27232.

TABLE 2: Child Risk Adjustment Model Factors for the 2024 Benefit Year

Factor	Platinum	Gold	Silver	Bronze	Catastrophic
Demographic Factors					
Age 2-4, Male	0.288	0.195	0.146	0.109	0.108
Age 5-9, Male	0.213	0.132	0.093	0.069	0.068
Age 10-14, Male	0.236	0.156	0.115	0.092	0.091
Age 15-20, Male	0.271	0.186	0.135	0.101	0.100
Age 2-4, Female	0.233	0.151	0.113	0.088	0.087
Age 5-9, Female	0.160	0.087	0.056	0.037	0.036
Age 10-14, Female	0.227	0.149	0.110	0.087	0.086
Age 15-20, Female	0.314	0.210	0.145	0.099	0.097
Diagnosis Factors					
HIV/AIDS	4.490	3.999	3.762	3.617	3.615
Septicemia, Sepsis, Systemic Inflammatory Response Syndrome/Shock	14.897	14.669	14.536	14.439	14.437
Central Nervous System Infections, Except Viral Meningitis	13.638	13.470	13.360	13.293	13.291
Viral or Unspecified Meningitis	11.963	11.850	11.768	11.643	11.642
Opportunistic Infections	17.169	17.088	16.997	16.907	16.904
Metastatic Cancer	33.749	33.464	33.322	33.262	33.261
Lung, Brain, and Other Severe Cancers, Including Pediatric Acute Lymphoid Leukemia	9.374	9.094	8.929	8.808	8.804
Non-Hodgkin Lymphomas and Other Cancers and Tumors	7.293	7.065	6.911	6.777	6.772
Colorectal, Breast (Age < 50), Kidney, and Other Cancers	4.615	4.450	4.331	4.221	4.217
Breast (Age 50+) and Prostate Cancer, Benign/Uncertain Brain Tumors, and Other Cancers and Tumors	4.615	4.450	4.331	4.221	4.217
Thyroid Cancer, Melanoma, Neurofibromatosis, and Other Cancers and Tumors	1.171	1.037	0.925	0.806	0.802
Pancreas Transplant Status	11.106	11.020	10.974	10.939	10.937
Diabetes with Acute Complications	2.624	2.312	2.075	1.754	1.745
Diabetes with Chronic Complications	2.624	2.312	2.075	1.754	1.745
Diabetes without Complication	2.624	2.312	2.075	1.754	1.745
Protein-Calorie Malnutrition	19.295	19.163	19.078	19.037	19.035
Mucopolysaccharidosis	39.965	39.679	39.551	39.501	39.500
Lipidoses and Glycogenosis	39.965	39.679	39.551	39.501	39.500
Congenital Metabolic Disorders, Not Elsewhere Classified	4.830	4.698	4.609	4.541	4.538
Amyloidosis, Porphyria, and Other Metabolic Disorders	4.830	4.698	4.609	4.541	4.538
Adrenal, Pituitary, and Other Significant Endocrine Disorders	5.553	5.285	5.146	5.079	5.078
Liver Transplant Status/Complications	11.106	11.020	10.974	10.939	10.937
Acute Liver Failure/Disease, Including Neonatal Hepatitis	9.767	9.619	9.551	9.525	9.524
Chronic Liver Failure/End-Stage Liver Disorders	9.286	9.131	9.047	8.983	8.980
Cirrhosis of Liver	4.128	3.990	3.907	3.848	3.849
Chronic Viral Hepatitis C	1.186	1.046	0.961	0.917	0.917
Chronic Hepatitis, Except Chronic Viral Hepatitis C	0.197	0.169	0.142	0.111	0.110
Intestine Transplant Status/Complications	13.858	13.756	13.667	13.582	13.579

Factor	Platinum	Gold	Silver	Bronze	Catastrophic
Peritonitis/Gastrointestinal Perforation/Necrotizing Enterocolitis	17.886	17.459	17.325	17.276	17.275
Intestinal Obstruction	4.767	4.582	4.446	4.332	4.329
Chronic Pancreatitis	11.778	11.601	11.522	11.476	11.476
Acute Pancreatitis	5.360	5.102	4.953	4.826	4.823
Inflammatory Bowel Disease	9.915	9.478	9.266	9.139	9.135
Necrotizing Fasciitis	3.684	3.449	3.308	3.207	3.204
Bone/Joint/Muscle Infections/Necrosis	3.684	3.449	3.308	3.207	3.204
Rheumatoid Arthritis and Specified Autoimmune Disorders	4.733	4.456	4.296	4.195	4.192
Systemic Lupus Erythematosus and Other Autoimmune Disorders	0.746	0.619	0.500	0.376	0.372
Osteogenesis Imperfecta and Other Osteodystrophies	1.389	1.262	1.168	1.085	1.082
Congenital/Developmental Skeletal and Connective Tissue Disorders	1.389	1.262	1.168	1.085	1.082
Cleft Lip/Cleft Palate	1.174	1.006	0.881	0.756	0.752
Hemophilia	67.994	67.478	67.248	67.166	67.164
Myelodysplastic Syndromes and Myelofibrosis	13.130	12.957	12.863	12.801	12.800
Aplastic Anemia	13.130	12.957	12.863	12.801	12.800
Acquired Hemolytic Anemia, Including Hemolytic Disease of Newborn	13.130	12.957	12.863	12.801	12.800
Sickle Cell Anemia (Hb-SS)	3.851	3.643	3.511	3.411	3.408
Beta Thalassemia Major	3.851	3.643	3.511	3.411	3.408
Combined and Other Severe Immunodeficiencies	4.918	4.760	4.660	4.582	4.580
Disorders of the Immune Mechanism	4.918	4.760	4.660	4.582	4.580
Coagulation Defects and Other Specified Hematological Disorders	4.218	4.082	3.982	3.897	3.894
Drug Use with Psychotic Complications	2.517	2.331	2.202	2.065	2.061
Drug Use Disorder, Moderate/Severe, or Drug Use with Non-Psychotic Complications	2.517	2.331	2.202	2.065	2.061
Alcohol Use with Psychotic Complications	1.203	1.031	0.894	0.740	0.734
Alcohol Use Disorder, Moderate/Severe, or Alcohol Use with Specified Non-Psychotic Complications	1.203	1.031	0.894	0.740	0.734
Schizophrenia	3.991	3.694	3.511	3.350	3.346
Delusional and Other Specified Psychotic Disorders, Unspecified Psychosis	3.395	3.122	2.941	2.760	2.755
Major Depressive Disorder, Severe, and Bipolar Disorders	2.638	2.413	2.243	2.082	2.077
Personality Disorders	0.378	0.270	0.155	0.042	0.038
Anorexia/Bulimia Nervosa	2.453	2.277	2.147	2.034	2.030
Prader-Willi, Patau, Edwards, and Autosomal Deletion Syndromes	11.637	11.535	11.450	11.378	11.376
Down Syndrome, Fragile X, Other Chromosomal Anomalies, and Congenital Malformation Syndromes	0.982	0.842	0.742	0.642	0.638
Autistic Disorder	2.638	2.413	2.243	2.082	2.077
Pervasive Developmental Disorders, Except Autistic Disorder	0.404	0.314	0.222	0.146	0.144
Traumatic Complete Lesion Cervical Spinal Cord	11.137	10.900	10.779	10.704	10.702

Chronic Ulcer of Skin, Except Pressure	2.144	2.023	1.933	1.863	1.861
Extensive Third-Degree Burns	22.431	22.185	22.041	21.957	21.952
Major Skin Burn or Condition	2.195	2.007	1.877	1.757	1.753
Severe Head Injury	22.431	22.185	22.041	21.957	21.952
Hip and Pelvic Fractures	4.771	4.510	4.344	4.242	4.239
Vertebral Fractures without Spinal Cord Injury	4.693	4.459	4.289	4.124	4.119
Traumatic Amputations and Amputation Complications	3.506	3.260	3.106	2.949	2.943
Stem Cell, Including Bone Marrow, Transplant Status/Complications	13.858	13.756	13.667	13.582	13.579
Artificial Openings for Feeding or Elimination	6.435	6.241	6.156	6.110	6.110
Amputation Status, Upper Limb or Lower Limb	3.506	3.260	3.106	2.949	2.943
Interacted HCC Counts Factors					
Severe illness, 1 payment HCC	-10.655	-10.694	-10.708	-10.737	-10.737
Severe illness, 2 payment HCCs	-10.570	-10.647	-10.680	-10.723	-10.724
Severe illness, 3 payment HCCs	-8.365	-8.447	-8.418	-8.359	-8.355
Severe illness, 4 payment HCCs	-7.724	-7.718	-7.590	-7.404	-7.396
Severe illness, 5 payment HCCs	-4.948	-4.829	-4.600	-4.291	-4.279
Severe illness, 6 or 7 payment HCCs	-0.619	-0.297	0.075	0.521	0.537
Severe illness, 8 or more payment HCCs	20.186	21.065	21.786	22.505	22.529
Transplant severe illness, 4 or more payment HCCs	16.793	16.848	16.877	16.897	16.899

TABLE 3: HCCs Selected for the HCC Interacted Counts Variables for the Adult and Child Models for the 2024 Benefit Year

Payment HCC	Severity Illness Indicator	Transplant Indicator
HCC 2 Septicemia, Sepsis, Systemic Inflammatory Response Syndrome/Shock	X	
HCC 3 Central Nervous System Infections, Except Viral Meningitis	X	
HCC 4 Viral or Unspecified Meningitis	X	
HCC 6 Opportunistic Infections	X	
HCC 23 Protein-Calorie Malnutrition	X	
HCC 34 Liver Transplant Status/Complications	X	X
HCC 41 Intestine Transplant Status/Complications	X	X
HCC 42 Peritonitis/Gastrointestinal Perforation/Necrotizing Enterocolitis	X	
HCC 96 Prader-Willi, Patau, Edwards, and Autosomal Deletion Syndromes	X	
HCC 121 Hydrocephalus	X	
HCC 122 Coma, Brain Compression/Anoxic Damage	X	
HCC 125 Respirator Dependence/Tracheostomy Status	X	
HCC 135 Heart Infection/Inflammation, Except Rheumatic	X	
HCC 145 Intracranial Hemorrhage	X	
HCC 156 Pulmonary Embolism and Deep Vein Thrombosis	X	
HCC 158 Lung Transplant Status/Complications	X	X
HCC 163 Aspiration and Specified Bacterial Pneumonias and Other Severe Lung Infections	X	
HCC 218 Extensive Third-Degree Burns	X	
HCC 223 Severe Head Injury	X	
HCC 251 Stem Cell, Including Bone Marrow, Transplant Status/Complications	X	X
G13 (Includes HCC 126 Respiratory Arrest and HCC 127 Cardio-Respiratory Failure and Shock, Including Respiratory Distress Syndromes)	X	
G14 (Includes HCC 128 Heart Assistive Device/Artificial Heart and HCC 129 Heart Transplant Status/Complications)	X	X
G24 (Includes HCC 18 Pancreas Transplant Status and HCC 183 Kidney Transplant Status/Complications)*	X	X

* Starting with the 2024 risk adjustment adult models, HHS will group HCC 18 Pancreas Transplant Status and HCC 183 Kidney Transplant Status/Complications to reflect that these transplants frequently co-occur for clinical reasons and to reduce volatility of coefficients across benefit years due to the small sample size of HCC 18. This change will also be reflected in the DIY Software for the 2024 benefit year and will be applied to the adult models only. In the child models, HCC 18 and HCC 183 are subject to an *a priori* constraint (S1) with HCC 34, also for sample size reasons. See, for example, Section 4.2.2 of the 2019 White Paper. (June 17, 2019) *https://www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/Potential-Updates-to-HHS-HCCs-HHS-operated-Risk-Adjustment-Program.pdf*. Nevertheless, in both the adult and child models, the presence of one of these HCCs either alone or in a group will trigger a severity illness indicator and/or a transplant indicator for the interacted counts model specification depending on the total number of HCCs the enrollee has.

TABLE 4: Infant Risk Adjustment Model Factors for the 2024 Benefit Year

Group	Platinum	Gold	Silver	Bronze	Catastrophic
Extremely Immature * Severity Level 5 (Highest)	225.754	224.102	223.390	223.190	223.189

TABLE 5: HHS HCCs Included in Infant Model Maturity Categories

Maturity Category	HCC/Description
Extremely Immature	Extremely Immature Newborns, Birth weight < 500 Grams
Extremely Immature	Extremely Immature Newborns, Including Birth weight 500-749 Grams
Extremely Immature	Extremely Immature Newborns, Including Birth weight 750-999 Grams
Immature	Premature Newborns, Including Birth weight 1000-1499 Grams
Immature	Premature Newborns, Including Birth weight 1500-1999 Grams
Premature/Multiples	Premature Newborns, Including Birth weight 2000-2499 Grams
Premature/Multiples	Other Premature, Low Birth weight, Malnourished, or Multiple Birth Newborns
Term	Term or Post-Term Singleton Newborn, Normal or High Birth weight
Age 1	All age 1 infants

TABLE 6: HHS HCCs Included in Infant Model Severity Categories

Severity Category	HCC/Description
Severity Level 5 (Highest)	Metastatic Cancer
Severity Level 5	Pancreas Transplant Status
Severity Level 5	Liver Transplant Status/Complications
Severity Level 5	Intestine Transplant Status/Complications
Severity Level 5	Peritonitis/Gastrointestinal Perforation/Necrotizing Enterocolitis
Severity Level 5	Respirator Dependence/Tracheostomy Status
Severity Level 5	Heart Assistive Device/Artificial Heart
Severity Level 5	Heart Transplant Status/Complications
Severity Level 5	Heart Failure
Severity Level 5	Hypoplastic Left Heart Syndrome and Other Severe Congenital Heart Disorders
Severity Level 5	Lung Transplant Status/Complications
Severity Level 5	Kidney Transplant Status/Complications
Severity Level 5	End Stage Renal Disease
Severity Level 5	Stem Cell, Including Bone Marrow, Transplant Status/Complications
Severity Level 4	Septicemia, Sepsis, Systemic Inflammatory Response Syndrome/Shock
Severity Level 4	Lung, Brain, and Other Severe Cancers, Including Pediatric Acute Lymphoid Leukemia
Severity Level 4	Mucopolysaccharidosis
Severity Level 4	Adrenal, Pituitary, and Other Significant Endocrine Disorders
Severity Level 4	Acute Liver Failure/Disease, Including Neonatal Hepatitis
Severity Level 4	Chronic Liver Failure/End-Stage Liver Disorders
Severity Level 4	Major Congenital Anomalies of Diaphragm, Abdominal Wall, and Esophagus, Age < 2
Severity Level 4	Myelodysplastic Syndromes and Myelofibrosis
Severity Level 4	Aplastic Anemia
Severity Level 4	Combined and Other Severe Immunodeficiencies
Severity Level 4	Traumatic Complete Lesion Cervical Spinal Cord
Severity Level 4	Quadriplegia
Severity Level 4	Amyotrophic Lateral Sclerosis and Other Anterior Horn Cell Disease
Severity Level 4	Quadriplegic Cerebral Palsy
Severity Level 4	Myasthenia Gravis/Myoneural Disorders and Guillain-Barre Syndrome/Inflammatory and Toxic Neuropathy
Severity Level 4	Coma, Brain Compression/Anoxic Damage
Severity Level 4	Respiratory Arrest
Severity Level 4	Cardio-Respiratory Failure and Shock, Including Respiratory Distress Syndromes
Severity Level 4	Acute Myocardial Infarction
Severity Level 4	Heart Infection/Inflammation, Except Rheumatic
Severity Level 4	Major Congenital Heart/Circulatory Disorders
Severity Level 4	Intracranial Hemorrhage
Severity Level 4	Ischemic or Unspecified Stroke
Severity Level 4	Vascular Disease with Complications
Severity Level 4	Pulmonary Embolism and Deep Vein Thrombosis
Severity Level 4	Aspiration and Specified Bacterial Pneumonias and Other Severe Lung Infections
Severity Level 4	Chronic Kidney Disease, Stage 5
Severity Level 4	Artificial Openings for Feeding or Elimination
Severity Level 3	HIV/AIDS
Severity Level 3	Central Nervous System Infections, Except Viral Meningitis
Severity Level 3	Opportunistic Infections
Severity Level 3	Non-Hodgkin Lymphomas and Other Cancers and Tumors
Severity Level 3	Colorectal, Breast (Age < 50), Kidney and Other Cancers
Severity Level 3	Breast (Age 50+) and Prostate Cancer, Benign/Uncertain Brain Tumors, and Other Cancers and Tumors

Severity Category	HCC/Description
Severity Level 3	Lipidoses and Glycogenosis
Severity Level 3	Intestinal Obstruction
Severity Level 3	Necrotizing Fasciitis
Severity Level 3	Bone/Joint/Muscle Infections/Necrosis
Severity Level 3	Osteogenesis Imperfecta and Other Osteodystrophies
Severity Level 3	Cleft Lip/Cleft Palate
Severity Level 3	Hemophilia
Severity Level 3	Disorders of the Immune Mechanism
Severity Level 3	Coagulation Defects and Other Specified Hematological Disorders
Severity Level 3	Drug Use with Psychotic Complications
Severity Level 3	Drug Use Disorder, Moderate/Severe, or Drug Use with Non-Psychotic Complications
Severity Level 3	Alcohol Use with Psychotic Complications
Severity Level 3	Alcohol Use Disorder, Moderate/Severe, or Alcohol Use with Specified Non-Psychotic Complications
Severity Level 3	Prader-Willi, Patau, Edwards, and Autosomal Deletion Syndromes
Severity Level 3	Traumatic Complete Lesion Dorsal Spinal Cord
Severity Level 3	Paraplegia
Severity Level 3	Spinal Cord Disorders/Injuries
Severity Level 3	Cerebral Palsy, Except Quadriplegic
Severity Level 3	Spina Bifida and Other Brain/Spinal/Nervous System Congenital Anomalies
Severity Level 3	Muscular Dystrophy
Severity Level 3	Parkinson's, Huntington's, and Spinocerebellar Disease, and Other Neurodegenerative Disorders
Severity Level 3	Hydrocephalus
Severity Level 3	Unstable Angina and Other Acute Ischemic Heart Disease
Severity Level 3	Atrial and Ventricular Septal Defects, Patent Ductus Arteriosus, and Other Congenital Heart/Circulatory Disorders
Severity Level 3	Specified Heart Arrhythmias
Severity Level 3	Cerebral Aneurysm and Arteriovenous Malformation
Severity Level 3	Hemiplegia/Hemiparesis
Severity Level 3	Cystic Fibrosis
Severity Level 3	Extensive Third-Degree Burns
Severity Level 3	Severe Head Injury
Severity Level 3	Hip and Pelvic Fractures
Severity Level 3	Vertebral Fractures without Spinal Cord Injury
Severity Level 2	Viral or Unspecified Meningitis
Severity Level 2	Thyroid Cancer, Melanoma, Neurofibromatosis, and Other Cancers and Tumors
Severity Level 2	Diabetes with Acute Complications
Severity Level 2	Diabetes with Chronic Complications
Severity Level 2	Diabetes without Complication
Severity Level 2	Protein-Calorie Malnutrition
Severity Level 2	Congenital Metabolic Disorders, Not Elsewhere Classified
Severity Level 2	Amyloidosis, Porphyria, and Other Metabolic Disorders
Severity Level 2	Cirrhosis of Liver
Severity Level 2	Chronic Pancreatitis
Severity Level 2	Acute Pancreatitis
Severity Level 2	Inflammatory Bowel Disease
Severity Level 2	Rheumatoid Arthritis and Specified Autoimmune Disorders
Severity Level 2	Systemic Lupus Erythematosus and Other Autoimmune Disorders
Severity Level 2	Congenital/Developmental Skeletal and Connective Tissue Disorders
Severity Level 2	Acquired Hemolytic Anemia, Including Hemolytic Disease of Newborn
Severity Level 2	Sickle Cell Anemia (Hb-SS)
Severity Level 2	Down Syndrome, Fragile X, Other Chromosomal Anomalies, and Congenital

Severity Category	HCC/Description
	Malformation Syndromes
Severity Level 2	Seizure Disorders and Convulsions
Severity Level 2	Monoplegia, Other Paralytic Syndromes
Severity Level 2	Atherosclerosis of the Extremities with Ulceration or Gangrene
Severity Level 2	Chronic Obstructive Pulmonary Disease, Including Bronchiectasis
Severity Level 2	Severe Asthma
Severity Level 2	Fibrosis of Lung and Other Lung Disorders
Severity Level 2	Chronic Kidney Disease, Severe (Stage 4)
Severity Level 2	Chronic Ulcer of Skin, Except Pressure
Severity Level 2	Major Skin Burn or Condition
Severity Level 1 (Lowest)	Chronic Viral Hepatitis C
Severity Level 1	Chronic Hepatitis, Except Chronic Viral Hepatitis C
Severity Level 1	Beta Thalassemia Major
Severity Level 1	Autistic Disorder
Severity Level 1	Pervasive Developmental Disorders, Except Autistic Disorder
Severity Level 1	Multiple Sclerosis
Severity Level 1	Asthma, Except Severe
Severity Level 1	Traumatic Amputations and Amputation Complications
Severity Level 1	Amputation Status, Upper Limb or Lower Limb

BILLING CODE 4120–01–C

After reviewing public comments, we are finalizing the list of factors to be employed in the HHS risk adjustment models with the following modifications. In the proposed rule (87 FR 78219 through 78226), the adult risk adjustment model factor coefficients reflected a blend of separately solved coefficients from the 2018, 2019, and 2020 benefit years of enrollee-level EDGE data, with an exception to exclude the 2020 benefit year data from the blending of the age-sex coefficients for the adult models. In this final rule, the adult risk adjustment model factor coefficients for the 2024 benefit year have been updated to reflect the finalization of the use of the 2018, 2019 and 2020 benefit year enrollee-level EDGE data for recalibration of the 2024 benefit year risk adjustment models for all model coefficients, including the adult age-sex coefficients, as detailed in an earlier section of this rule.

We summarize and respond to public comments received on the list of factors to be employed in the HHS risk adjustment models below.

Comment: One commenter stated that the enrollment duration factors do not fully capture the financial impact of enrollment duration for consumers who enroll during SEPs, and requested HHS further investigate how the HHS risk adjustment models can be updated and improved to reflect more recent changes to SEPs.

Response: In the 2023 Payment Notice (87 FR 27228 through 27230), we changed the enrollment duration factors in the adult risk adjustment models to improve prediction for partial-year adult enrollees with and without HCCs. As described in the 2021 Risk Adjustment (RA) Technical Paper,[51] we found that the previous adult model enrollment duration factors underpredicted plan liability for partial-year adult enrollees with HCCs and overpredicted plan liability for partial-year adult enrollees without HCCs. Therefore, beginning with the 2023 benefit year, we eliminated the enrollment duration factors of up to 11 months for all enrollees in the adult models, and replaced them with new monthly enrollment duration factors of up to 6 months that would apply only to adult enrollees with HCCs. HHS did not propose and is not finalizing any changes to the enrollment duration factors as part of this rulemaking. However, as more data years become available, we will continue to investigate the performance of the enrollment duration factors. Specifically, as the SEP landscape changes and we have new data to reflect those changes,[52] we will assess the extent to which the enrollment duration factors fully capture the financial impact of enrollment duration for enrollees who enroll during an SEP.

e. CSR Adjustments

In the HHS Notice of Benefit and Payment Parameters for 2024 proposed rule (87 FR 78206, 78235), we proposed to continue including an adjustment for the receipt of CSRs in the risk adjustment models in all 50 States and the District of Columbia. We explained that while we continue to study and explore a range of options to update the CSR adjustments to improve prediction for CSR enrollees and whether changes are needed to the risk adjustment transfer formula to account for CSR plans,[53] to maintain stability and certainty for issuers for the 2024 benefit year, we proposed to maintain the CSR adjustment factors finalized in the 2019, 2020, 2021, 2022, and 2023 Payment Notices.[54] See Table 7. We also proposed to continue to use a CSR adjustment factor of 1.12 for all Massachusetts wrap-around plans in the risk adjustment PLRS calculation, as all

of Massachusetts' cost-sharing plan variations have AVs above 94 percent (81 FR 12228).

We sought comment on these proposals. After reviewing the public comments, we are finalizing the CSR adjustment factors as proposed.

TABLE 7: Cost-Sharing Reduction Adjustment Factors

Household Income	Plan AV	Adjustment Factor
Silver Plan Variant Recipients		
100-150% of Federal Poverty Line (FPL)	Plan Variation 94%	1.12
150-200% of FPL	Plan Variation 87%	1.12
200-250% of FPL	Plan Variation 73%	1.00
>250% of FPL	Standard Plan 70%	1.00
Zero Cost Sharing Recipients		
<300% of FPL	Platinum (90%)	1.00
<300% of FPL	Gold (80%)	1.07
<300% of FPL	Silver (70%)	1.12
<300% of FPL	Bronze (60%)	1.15
Limited Cost Sharing Recipients		
>300% of FPL	Platinum (90%)	1.00
>300% of FPL	Gold (80%)	1.07
>300% of FPL	Silver (70%)	1.12
>300% of FPL	Bronze (60%)	1.15

We summarize and respond to public comments received on the proposed CSR adjustment factors below.

Comment: One commenter supported using the proposed CSR adjustment factors in the HHS-operated risk adjustment program. Another commenter supported continuing to apply an adjustment for Massachusetts wrap-around plans to account for its unique market dynamics. A few commenters supported further evaluation of the CSR adjustment factors. One commenter requested evaluation of the current CSR adjustment factors in light of an absence of funding of CSR subsidies and due to the potential socioeconomic health equity issues associated with lower-than-anticipated induced utilization levels in the CSR population.[55] Another commenter requested a technical paper before future proposed rulemaking with further CSR induced demand analysis.

One commenter stated that current CSR adjustment factors, specifically when applied to CSR 87 percent and 94 percent variants, do not accurately reflect population risk and another commenter requested the risk adjustment formula reflect actual costs incurred by 87 percent and 94 percent AV enrollees.

Response: We appreciate the comments in support of these proposals and are finalizing the 2024 benefit year CSR adjustment factors as proposed. While we have studied the CSR adjustment factors, we agree continued study of the CSR adjustment factors is warranted to further assess the different options outlined in the 2021 RA Technical Paper and other potential approaches before pursuing any changes.[56] However, at this time, we are not planning to publish another technical paper with additional CSR induced demand analysis prior to pursing changes to these factors in any future proposed rulemaking. We anticipate that between the 2021 RA Technical Paper and any future notice-and-comment rulemaking, sufficient analysis and justification for any proposed changes would be provided.

Additionally, we reiterate the findings from the 2021 RA Technical Paper that the current CSR adjustment factors are predicting actual plan liability relatively accurately on average, with the nationally-approximated risk term predictive ratios for CSR 87 percent and 94 percent variants both within +/-5 percent. We also believe that the collection and extraction of additional data elements from issuers' EDGE servers, including plan ID and rating area, will help further inform our study of the CSR adjustment factors and may allow us to further consider potential socioeconomic issues in the CSR populations. Therefore, HHS intends to review the enrollee-level EDGE data with the plan ID and rating area before proposing any changes to the CSR adjustment factors in future notice-and-comment rulemaking.

Comment: A few commenters were concerned about the underprediction of zero and limited sharing CSR plan variants for American Indian/Alaska Natives (AI/AN) in the risk term of the State payment transfer formula, as outlined in the 2021 RA Technical Paper,[57] particularly in States that have a high percentage of AI/AN enrollment, because competition for these enrollees may be discouraged by this underprediction.[58] These commenters were concerned that this market dynamic would result in issuers with fewer AI/AN enrollees having the ability to more aggressively price silver plan premiums, gaining competitive advantage and depressing premium tax credits for enrollees in that State's market. One commenter recommended that HHS reframe and recalibrate the CSR adjustment factors to fully eliminate the underprediction of liability for AI/AN enrollees to best capture actual CSR experience and mitigate any existing imbalances in risk adjustment State transfers across metal and CSR plan variants.

Response: As part of our overall analysis of the CSR adjustment factors,

[55] HHS published analysis of CSR population utilization in the HHS-Operated Risk Adjustment Technical Paper on Possible Model Changes. (2021, October 26). CMS. *https://www.cms.gov/files/document/2021-ra-technical-paper.pdf.*

[56] Ibid.

[57] Ibid.

[58] The CSR adjustment factors for zero cost sharing recipients (less than 300 percent of FPL) and limited cost sharing recipients (greater than 300 percent of FPL) for each metal level are included in Table 7 of this rule.

we will also continue to consider options for how to recalibrate and adjust the CSR adjustment factors for the zero and limited sharing CSR plan variants for future benefit years. In the 2021 RA Technical Paper, we provided an analysis that showed the underprediction of zero and limited sharing CSR plan variants for AI/AN in HHS risk adjustment and considered a variety of different options to adjust the CSR adjustment factors.[59] Because this analysis was conducted at the national level, we did not observe any trends of particular issuers, States or rating areas having a higher percentage of AI/AN enrollment as noted by the commenter. Specifically, we were extracting and using national enrollee-level EDGE data without issuer or geographic markers. Therefore, in the past and when we developed the proposed rule, we did not have the ability to analyze the distribution of the CSR populations at a more granular level (for example, at the issuer, State or rating area level) to see, for example, which issuers, States or rating areas have a high percentage of AI/AN enrollment. However, with policies finalized in the 2023 Payment Notice (87 FR 27241 through 27243) and this final rule, we will have the ability to extract and use multiple years of enrollee-level EDGE data with plan ID and rating area markers and will be able to further analyze the CSR populations at a more granular level, including analyzing whether incentives may exist in certain States with high proportions of AI/AN populations for issuers with fewer AI/AN enrollees to more aggressively price silver plan premiums in those States, to further consider potential changes to these factors for future benefit years. In the meantime, we are finalizing the CSR adjustment factors as proposed for the 2024 benefit year to maintain stability and certainty for issuers.

Comment: We also received several comments in response to a reference to the American Academy of Actuaries' letter on CSR loading in a footnote in the proposed rule.[60] These commenters objected to HHS considering any method of estimating CSR premium load factors that involves issuers using experience data or issuer pricing models to estimate the CSR load for silver plan variants. These commenters stated that they believed such a methodology is a violation of the ACA's single risk pool requirement, which requires issuers to treat all individual market enrollees as part of a single risk pool so that pricing reflects utilization of essential benefits by a standard population. These commenters shared their experience from Texas and New Mexico, where they claim aligning plan prices by AV when regulating the variation in metal level premiums resulted in large enrollment increases and enhanced affordability following premium realignment. One commenter expressed concern about using a nationally weighted CSR silver load in the rating term of the transfer formula due to variations in State CSR enrollment mixes or CSR loading requirement recommending the use of State-specific AV factors, as discussed in the 2021 RA Technical Paper. Another of these commenters suggested that anticipated premiums should instead reflect the average AV of all CSR variants.

Response: We appreciate the comments on potential approaches to change the current CSR adjustment factors and, as previously noted, are continuing to study these issues for potential updates to these factors in future benefit years. We did not propose and are not adopting any changes to the CSR adjustment factors. With policies finalized in the 2023 Payment Notice (87 FR 27241 through 27243), we have the ability to extract and use enrollee-level EDGE data with plan ID and rating area markers to further analyze the CSR populations at a more granular level to further consider potential changes to these factors for future benefit years, as well as other potential approaches. This includes consideration of the American Academy of Actuaries letter regarding accounting for the receipt of CSRs in the HHS-operated risk adjustment program and plan rating.[61] As part of this effort, we will also consider interested parties' analysis and comments on potential approaches under consideration, including the feedback provided by these commenters. We are aware of the interaction that potential future changes to the CSR adjustment factors may have with regard to the ACA's single risk pool requirement, and confirm that any changes to the CSR adjustment factors would be designed to align with other applicable Federal market reforms. We also affirm that interested parties will have an opportunity to comment on any potential changes to the CSR adjustment factors for future benefit years, as those updates would be pursued through notice-and-comment rulemaking.

f. Model Performance Statistics

Each benefit year, to evaluate risk adjustment model performance, we examine each model's R-squared statistic and predictive ratios (PRs). The R-squared statistic, which calculates the percentage of individual variation explained by a model, measures the predictive accuracy of the model overall. The PR for each of the HHS risk adjustment model is the ratio of the weighted mean predicted plan liability for the model sample population to the weighted mean actual plan liability for the model sample population. The PR represents how well the model does on average at predicting plan liability for that subpopulation.

A subpopulation that is predicted perfectly will have a PR of 1.0. For each of the current and proposed HHS risk adjustment models, the R-squared statistic and the PRs are in the range of published estimates for concurrent risk adjustment models.[62] Because we are finalizing a blend of coefficients from separately solved models based on the 2018, 2019, and 2020 benefit years' enrollee-level EDGE data, we are publishing the R-squared statistic for each model separately to verify their statistical validity. The R-squared statistics for the 2024 benefit models are shown in Table 8.

Catastrophic Infant	0.3055	0.3094	0.2816

3. Overview of the HHS Risk Adjustment Methodology (§ 153.320)

In part 2 of the 2022 Payment Notice (86 FR 24183 through 24186), we finalized the proposal to continue to use the State payment transfer formula finalized in the 2021 Payment Notice for the 2022 benefit year and beyond, unless changed through notice-and-comment rulemaking. We explained that under this approach, we will no longer republish these formulas in future annual HHS notice of benefit and payment parameter rules unless changes are being proposed. We did not propose any changes to the formula in the proposed rule, and therefore, are not republishing the formulas in this rule. We will continue to apply the formula as finalized in the 2021 Payment Notice (86 FR 24183 through 24186)[63] in the States where HHS operates the risk adjustment program in the 2024 benefit year. Additionally, as finalized in the 2020 Payment Notice (84 FR 17466 through 17468), we will maintain the high-cost risk pool parameters for the 2020 benefit year and beyond, unless amended through notice-and-comment rulemaking. We did not propose any changes to the high-cost risk pool parameters for the 2024 benefit year; therefore, we will maintain the $1 million threshold and 60 percent coinsurance rate.

We summarize and respond to public comments received on the HHS risk adjustment methodology below.

Comment: A few commenters asserted that using a population's history of health care utilization, as the HHS-operated risk adjustment program currently does, entrenches resource disparities and barriers to health care access, and shifts resources from issuers serving lower-income communities to issuers serving higher-income communities in the State of Massachusetts. These commenters also stated that they believe HHS should include social determinants of health (SDOH) as factors in the HHS risk adjustment models. The commenters stated that using the Statewide average premium as a scaling factor in the State payment transfer formula amplifies the transfer of funds away from issuers with low-priced provider networks, who disproportionately serve lower-income communities.

Response: We appreciate these comments, which were based on findings in a report released by the Massachusetts Attorney General's Office titled *Examination of Health Care Cost Trends and Cost Drivers 2022,*[64] but do not believe that changes to the HHS-operated risk adjustment program are warranted at this time based on this report, as the findings do not appear to be applicable to other States. Following the release of the report, we analyzed available enrollee-level EDGE data to investigate whether the findings of the report were applicable in other State markets. We found that the Massachusetts merged market exhibits a unique combination of characteristics, including a highly segmented market where some issuers serve primarily CSR enrollees while other issuers primarily serve off-Exchange enrollees, and a uniquely healthy CSR population, that create an environment in which issuers that serve low-income communities can be assessed charges in that State's market risk pools. In particular, because the HHS-operated risk adjustment program is intended to transfer funds from lower-than-average risk plans to higher-than-average risk plans, a plan with a uniquely healthy population, whether because it has a uniquely healthy CSR population or a healthy general population, can be assessed a risk adjustment charge.

No other State exhibits the same combination of unique characteristics discussed in this section as the State of Massachusetts. Therefore, we have concerns about proposing changes to the HHS-operated risk adjustment program, including changes with regard to the use of the Statewide average premium as a scaling factor in the State payment transfer formula, based on a report that is Massachusetts specific and reflects the unique market conditions of a single State. Furthermore, in light of the unique combination of characteristics of Massachusetts's CSR population discussed elsewhere in this section, we believe that under the existing HHS risk adjustment methodology, the transfer charges and payments assessed in the Massachusetts merged market risk pool reflect a reasonably accurate estimate for the relative risk incurred by issuers in that State. We also reiterate that HHS chose to use Statewide average premium and normalize the risk adjustment State payment transfer formula to reflect State average factors so that each plan's enrollment characteristics are compared to the State average and the calculated payment amounts equal calculated charges in each State market risk pool.

[63] Discussion provided an illustration and further details on the State payment transfer formula.

[64] See *Examination of Health Care Cost Trends and Cost Drivers 2022.* Available at *https://www.mass.gov/files/documents/2022/11/02/2022-11-2%20COST-TRENDS-REPORT_PUB_DRAFT4_HQ.pdf.*

Thus, each plan in the risk pool receives a risk adjustment payment or charge designed to compensate for risk for a plan with average risk in a budget-neutral manner. This approach supports the overall goals of the HHS-operated risk adjustment program, which are to encourage issuers to rate for the average risk in the applicable State market risk pool, to stabilize premiums, and to avoid the creation of incentives for issuers to operate less efficiently, set higher prices, or develop benefit designs or marketing strategies to avoid high-risk enrollees.[65]

We also appreciate the comments on including SDOH as factors in the HHS risk adjustment models. In the 2023 Payment Notice, HHS solicited comments on ways to incentivize issuers to design plans that improve health equity and health conditions in enrollees' environments, as well as sought comments on the potential future collection and extraction of z codes (particularly Z55–Z65), a subset of ICD–10–CM encounter reason codes used to identify, analyze, and document SDOH, as part of the required EDGE data submissions. We continue to review and consider the public comments related to the collection and extraction of z codes to inform analysis and policy development for the HHS-operated risk adjustment program. In the interim, we note that including SDOH in the HHS-operated risk adjustment models would require careful consideration because doing so could actually increase health disparities rather than reduce them. For example, if individuals who have a particular SDOH factor in risk adjustment tended to underutilize health care services relative to their health status, including that factor in the HHS-operated risk adjustment models could perpetuate, and possibly exacerbate, the under compensation of issuers for enrollees that receive that factor in risk adjustment. Such a dynamic may incentivize risk selecting behavior among issuers. Furthermore, we have concerns about the reliability of existing data for determining if an enrollee has SDOH and what documentation would be needed from the issuer to verify them.[66] We continue to analyze data in this area, especially as new enrollee-level EDGE data elements become available, and would propose any changes to the HHS risk adjustment models or HHS-operated risk adjustment program through notice-and-comment rulemaking.

4. Repeal of Risk Adjustment State Flexibility To Request a Reduction in Risk Adjustment State Transfers (§ 153.320(d))

In the HHS Notice of Benefit and Payment Parameters for 2024 proposed rule (87 FR 78206, 78237), we proposed to repeal the flexibility under § 153.320(d) for prior participant States[67] to request reductions of risk adjustment State transfers under the State payment transfer formula in all State market risk pools for the 2025 benefit year and beyond. We also solicited comment on Alabama's requests to reduce risk adjustment State transfers in the individual (including the catastrophic and non-catastrophic risk pools) and small group markets for the 2024 benefit year. After reviewing public comments, we are approving Alabama's requests for the 2024 benefit year and finalizing the proposal to repeal the flexibility for prior participant States to request transfer reductions for the 2025 benefit year and beyond.

a. Repeal of State Flexibility To Request Transfer Reductions

In the proposed rule (87 FR 78237 through 78238), we proposed to amend § 153.320(d) to repeal the ability for prior participant States to request a reduction in risk adjustment State transfers beginning with the 2025 benefit year. As part of this repeal, we proposed conforming amendments to the introductory text of § 153.320(d), which currently provides that prior participant States may request to reduce risk adjustment transfers in all State market risk pools by up to 50 percent beginning with the 2024 benefit year, to remove this flexibility for the 2025 benefit year and beyond and limit the timeframe available for prior participants to request reductions to the 2024 benefit year only. Similarly, we proposed conforming amendments to paragraphs (d)(1)(iv) and (d)(4)(i)(B), which describe the conditions for a prior participant State to request a reduction beginning with the 2024 benefit year, to also limit these requests to the 2024 benefit year only and to eliminate the ability for prior participant States to request a reduction for the 2025 benefit year and beyond. After reviewing public comments, we are finalizing these proposals as proposed.

In the 2019 Payment Notice (83 FR 16955 through 16960), we amended § 153.320 to add paragraph (d) to provide States the flexibility to request a reduction to the applicable risk adjustment State transfers calculated by HHS using the State payment transfer formula for the State's individual (catastrophic or non-catastrophic risk pools), small group, or merged market risk pool by up to 50 percent in States where HHS operates the risk adjustment program to more precisely account for differences in actuarial risk in the applicable State's markets beginning with the 2020 benefit year. We finalized that any requests we received would be published in the applicable benefit year's proposed HHS notice of benefit and payment parameters, and the supporting evidence provided by the State in support of its request would be made available for public comment.[68]

In the 2023 Payment Notice (87 FR 27236), we limited this flexibility by finalizing amendments to § 153.320(d) that repealed the State flexibility framework for States to request reductions in risk adjustment State transfer payments for the 2024 benefit year and beyond, with an exception for prior participants.[69] We also limited the options for prior participants to request reductions by finalizing that beginning with the 2024 benefit year, States submitting reduction requests must demonstrate that the requested reduction satisfies the *de minimis* standard—that is, the premium increase necessary to cover the affected issuer's or issuers' reduced risk adjustment payments does not exceed 1 percent in the relevant State market risk pool.[70] In the 2023 Payment Notice (87 FR 27239 through 27241), we also finalized conforming amendments to the HHS approval framework in § 153.320(d)(4) to reflect the changes to the applicable criteria (that is, only retaining the *de minimis* criterion) beginning with the 2024 benefit year, and we finalized the proposed definition of ''prior participant'' in § 153.320(d)(5). In

[67] Alabama is the only State that has previously requested a reduction in risk adjustment transfers through this flexibility, and therefore, is the only State considered a ''prior participant State''.

[68] If the State requests that HHS not make publicly available certain supporting evidence and analysis because it contains trade secrets or confidential commercial or financial information within the meaning of HHS' Freedom of Information Act regulations at 45 CFR 5.31(d), HHS will only make available on the CMS website the supporting evidence submitted by the State that is not a trade secret or confidential commercial or financial information by posting a redacted version of the State's supporting evidence. See § 153.320(d)(3).

[69] Section 153.320(d)(5) defines prior participants as States that submitted a State reduction request in the State's individual catastrophic, individual non-catastrophic, small group, or merged market risk pool in the 2020, 2021, 2022, or 2023 benefit year.

[70] 87 FR 27239 through 27241. See also 83 FR 16957.

addition, we indicated our intention to propose in future rulemaking to repeal the exception for prior participants beginning with the 2025 benefit year.[71]

Since finalizing the ability for States to request a reduction of risk adjustment transfers in the 2019 Payment Notice (83 FR 16955 through 16960), we received public comments on subsequent proposed rulemakings requesting that HHS repeal this policy, with several commenters noting that reducing risk adjustment transfers to plans with higher-risk enrollees could create incentives for issuers to avoid enrolling high-risk enrollees in the future by distorting plan offerings and designs, including by avoiding broad network plans, not offering platinum plans at all, and only offering limited gold plans. Commenters further stated that issuers could also distort plan designs by excluding coverage or imposing high cost-sharing for certain drugs or services. For example, one commenter stated that the risk adjustment State payment transfer formula already adjusts for differences in types of individuals enrolled in different States and aggregate differences in prices and utilization by using the Statewide average premium as a scaling factor, so State flexibility to account for State-specific factors is unnecessary.[72] In addition, we noted that since establishing this framework, we have observed a lack of interest from States in using this policy. Only one State (Alabama) has exercised this flexibility and requested reductions to transfers in its individual and/or small group markets.[73]

As discussed in the proposed rule, HHS believes the complete repeal of the option for States to request reductions in risk adjustment State transfers will align HHS policy with section 1 of E.O. 14009 (86 FR 7793), which prioritizes protecting and strengthening the ACA and making high-quality health care accessible and affordable for all individuals. Section 3 of E.O. 14009 directs HHS, and the heads of all other executive departments and agencies with authorities and responsibilities related to Medicaid and the ACA, to review all existing regulations, orders, guidance documents, policies, and any other similar agency actions to determine whether they are inconsistent with policy priorities described in section 1 of E.O. 14009. Consistent with this directive, we reviewed the risk adjustment State flexibility under § 153.320(d) and determined it is inconsistent with policies described in sections 1 and 3 of E.O. 14009. We noted that we believe a complete repeal of § 153.320(d) will prevent the potential negative outcomes of risk adjustment State flexibility identified through public comment, including the possibility of risk selection, market destabilization, increased premiums, smaller networks, and less-comprehensive plan options, the prevention of which will protect and strengthen the ACA and make health care more accessible and affordable. For all of these reasons, we proposed to amend § 153.320(d) to repeal the flexibility for prior participant States to request reductions of risk adjustment State transfers calculated by HHS under the State payment transfer formula in all State market risk pools beginning with the 2025 benefit year. We noted in the proposed rule that if these amendments are finalized, no State will be able to request a reduction in risk adjustment transfers calculated by HHS under the State payment transfer formula starting with the 2025 benefit year.

We summarize and respond to public comments received on the proposal to repeal the flexibility for prior participant States to request reductions of risk adjustment State transfers calculated by HHS under the State payment transfer formula in all State market risk pools beginning with the 2025 benefit year below.

Comment: Several commenters supported the proposal to repeal the ability for States to request a reduction in risk adjustment State transfers due to concerns that the reduction in transfers would contribute to adverse selection, increase premiums, and reduce plan options. Commenters stated that reducing risk adjustment State transfers incentivizes issuers to ''cherry-pick'' lower-risk enrollees as they would not have to contribute the full difference in risk to support the cost of higher-risk individuals enrolled by other issuers. Commenters also noted that the HHS risk adjustment methodology already accounts for differences in State market conditions and that States can run their own risk adjustment programs if they do not think the HHS-operated risk adjustment program works for their State. Some commenters expressed concerns about the potential negative impacts, such as reduced plan quality and increased risk selection, of allowing transfer reductions in the prior participant State's markets. One commenter stated that repealing this flexibility would provide stability and certainty for the markets.

Conversely, several commenters opposed the proposal, stating that they support the ability for States to make their own decisions about how best to address the unique circumstances of their insurance markets. Some commenters also noted that HHS has the ability to review and reject these requests, indicating that there are appropriate guardrails in place such that States should continue to be offered this flexibility. Additionally, some commenters asserted that other States may develop the same market dynamics as the one prior participating State and should have the same ability to request reductions. One commenter noted concerns with the ability for States to run their own risk adjustment programs, due to the costs to implement such a program within a State. Finally, one commenter stated that the prior participant State had not observed any of the concerns regarding market destabilization or reduced plan offerings as a result of the requests, so the prior participant State should continue to be permitted to request transfer reductions.

Response: We agree with the comments submitted in support of this proposal and are finalizing as proposed the repeal of the exception for prior participant States to request a reduction in risk adjustment State transfers of up to 50 percent in any State market risk pool beginning with the 2025 benefit year. We reiterate that a strong risk adjustment program is necessary to support stability and address adverse selection in the individual and small group markets. We are concerned that retaining the State flexibility framework could undermine these goals in the long-term. As explained in 2023 Payment Notice and the proposed rule, our further consideration of prior feedback from interested parties, along with consideration of the State flexibility framework under E.O. 14009 and the very low level of interest from States since the policy was adopted, resulted in an evaluation of whether this flexibility should continue and in what

[71] Ibid.

[72] See Fielder, M, & Layton, T. (2020, December 30). *Comment Letter on 2022 Payment Notice Proposed Rule.* Brookings. *https://www.brookings.edu/wp-content/uploads/2020/12/FiedlerLaytonCommentLetterNBPP2022.pdf.*

[73] For the 2020 and 2021 benefit years, Alabama submitted a 50 percent risk adjustment transfer reduction request for its small group market, which HHS approved in the 2020 Payment Notice (84 FR 17454) and in the 2021 Payment Notice (85 FR 29164). For the 2022 and 2023 benefit years, Alabama submitted 50 percent risk adjustment transfer reduction requests for its individual and small group markets. HHS approved the State's requests for the 2022 benefit year in part 2 of the 2022 Payment Notice final rule (86 FR 24140) and approved a 25 percent reduction for Alabama's individual market State transfers (including the catastrophic and non-catastrophic risk pools) and a 10 percent reduction for the State's small group market transfers for the 2023 benefit year in the 2023 Payment Notice (87 FR 27208).

manner.[74] In the 2023 Payment Notice, we finalized the proposed amendments to § 153.320(d) to repeal the State flexibility framework beginning with the 2024 benefit year, with an exception for prior participant States.[75] We also announced our intention to propose in future rulemaking to repeal the exception for prior participants beginning with the 2025 benefit year to provide impacted parties additional time to prepare for the potential elimination of this flexibility.[76] After reviewing public comments on the proposed repeal of the exception for prior participant States, we are finalizing the repeal of the prior participant exception, as proposed.

As noted above and in the proposed rule, we believe that a complete repeal of the State flexibility framework in § 153.320(d) by removing the prior participant exception beginning with the 2025 benefit year will prevent the potential negative outcomes of States' risk adjustment transfer reduction requests identified by several commenters, including the possibility of risk selection or ''cherry-picking'' lower-risk enrollees, market destabilization, increased premiums, smaller networks, and less-comprehensive plan options. The prevention of these potential negative outcomes would serve to further protect and strengthen the ACA, protect enrollees from potential ''cherry-picking'' practices, and make health care coverage more accessible and affordable. As such, despite our ability to review and reject risk adjustment transfer reduction requests, we are still of the view that the State flexibility framework is inconsistent with policies described in sections 1 and 3 of E.O. 14009 and a complete repeal would better support the goals of the HHS-operated risk adjustment program and ultimately the ACA.

With respect to the prior participant State, the State experienced new entrants to the individual market for the 2022 benefit year, but it has seen issuers both entering and exiting its markets for the 2023 benefit year, so it is not clear that the State has seen market stabilization or improved plan quality since its reduction requests have been approved. A more detailed discussion of the prior participant State's market dynamics appears in the section below regarding Alabama's 2024 risk adjustment transfer reduction requests.

We agree with commenters who noted that States are best able to make their own decisions about how to address the unique circumstances of their insurance markets and remain the primary regulators of their insurance markets. We also understand that it is possible that other States may develop the same market dynamics as the one prior participating State. At the same time, however, States have shown a low level of interest in submitting requests to reduce transfers calculated by HHS under the State payment transfer formula. Between the 2020 benefit year and 2023 benefit year, all States had the opportunity to submit reduction requests under § 153.320(d), and yet only one State did so.[77] As discussed in the 2023 Payment Notice (87 FR 27240), we believed it was appropriate to provide a transition for the prior participant State, starting with the policies and amendments finalized in the 2023 Payment Notice that apply beginning with the 2024 benefit year. However, we continue to be concerned about the potential long-term impact of allowing reductions to risk adjustment State transfers in any State market risk pool, including the potential negative impacts on the program's ability to mitigate adverse selection and support stability in the individual and small group (including merged) markets. We are therefore finalizing a full repeal of the State flexibility framework (for all States) beginning in the 2025 benefit year in this final rule.

Furthermore, since the 2014 benefit year, all States have had the opportunity to operate their own risk adjustment program and, to date, only one State has done so.[78] Despite a broad range of market conditions across the 50 States and the District of Columbia, only two States have expressed interest in tailoring risk adjustment to address the unique circumstances of their insurance markets, which suggests States generally do not want to operate their own risk adjustment program. It also offers evidence that the HHS-operated risk adjustment program works across a broad range of market conditions to mitigate adverse selection in the individual and small group (including merged) markets. We also agree with commenters that the HHS risk adjustment methodology already accounts for differences in State market conditions. For example, the use of the Statewide average premium in the risk adjustment State payment transfer formula accounts for differences in State market conditions by scaling a plan's transfer amount based on the determination of plan average risk within a State market risk pool. The State payment transfer formula also includes a geographic cost factor (GCF), which adjusts at the rating area level for the many costs, such as input prices and medical care utilization, that vary geographically and are likely to affect premiums.[79]

Commenters are also correct that States continue to have the option to operate their own risk adjustment program if the State believes the risk adjustment program for the individual and small group (including merged) markets should be tailored to capture its State-specific dynamics. At the same time, we appreciate there are a number of different factors States consider when weighing whether to operate a State-based risk adjustment program, including but not limited to the costs associated with establishing and maintaining such a program. We stand ready to work with any State that is interested in operating its own risk adjustment program for the individual and small group (including merged) markets. Furthermore, now that we are collecting and extracting additional data elements—like plan ID, Zip Code, and rating area—from issuers' EDGE servers, as finalized in the 2023 Payment Notice (87 FR 27244 through 27252), we are better equipped to further evaluate State market conditions at various levels as we consider future changes to the HHS-operated risk adjustment program, as applicable. We also remain committed to working with States and other interested parties to encourage new market participants, mitigate adverse selection, and promote stable insurance markets through strong risk adjustment programs.

b. Requests To Reduce Risk Adjustment Transfers for the 2024 Benefit Year

For the 2024 benefit year, HHS received requests from Alabama to reduce risk adjustment State transfers for its individual[80] and small group markets by 50 percent. As in previous years, Alabama asserted that the HHS-operated risk adjustment program does not work precisely in the Alabama market, clarifying that they do not assert

[74] See 87 FR 27239 through 27241. Also see 87 FR 78237 through 78238.

[75] 87 FR 27239 through 27241.

[76] Ibid.

[77] Alabama is the only State that has requested a reduction in risk adjustment transfers through this flexibility and therefore is the only State considered a ''prior participant State''.

[78] Massachusetts operated a State-based risk adjustment program for the 2014 through 2016 benefit years.

[79] See ''March 31, 2016 HHS-Operated Risk Adjustment Methodology Meeting Discussion Paper,'' CMS (2016, March 24), available at *https://www.cms.gov/cciio/resources/forms-reports-and-other-resources/downloads/ra-march-31-white-paper-032416.pdf* for more information on the GCF.

[80] Alabama's individual market request is for a 50 percent reduction to risk adjustment transfers for its individual market non-catastrophic and catastrophic risk pools.

that the risk adjustment formula is flawed, only that it produces imprecise results in Alabama, which has an ''extremely unbalanced market share.'' The State reported that its review of issuers' 2021 financial data suggested that any premium increase resulting from a reduction of 50 percent to the 2024 benefit year risk adjustment payments for the individual market would not exceed one percent, the *de minimis* premium increase threshold set forth in § 153.320(d)(1)(iv) and (d)(4)(i)(B). Additionally, the State reported that its review of issuers' 2021 financial data also suggested that any premium increase resulting from a 50 percent reduction to risk adjustment payments in the small group market for the 2024 benefit year would not exceed the *de minimis* threshold of one percent.

In the proposed rule (87 FR 782378), we sought comment on Alabama's requests to reduce risk adjustment State transfers in its individual and small group markets by 50 percent for the 2024 benefit year. The request and additional documentation submitted by Alabama were posted under the ''State Flexibility Requests'' heading at *https://www.cms.gov/cciio/programs-and-initiatives/premium-stabilization-programs* and under the ''Risk Adjustment State Flexibility Requests'' heading at *https://www.cms.gov/CCIIO/Resources/Regulations-and-Guidance#Premium-Stabilization-Programs.*

After reviewing the public comments, we are approving Alabama's requests to reduce risk adjustment State transfers in its individual and small group markets by 50 percent for the 2024 benefit year. We summarize and respond to public comments received on Alabama's reduction requests below.

Comment: A few commenters supported Alabama's requests to reduce risk adjustment State transfers in its individual and small group markets by 50 percent for the 2024 benefit year. These commenters stated that the HHS-operated risk adjustment program is not effective in Alabama due to its extreme market dynamics and that the State has not seen a loss of broad network, platinum, or gold plans as some interested parties had feared would result from the reductions in prior years.

However, other commenters opposed Alabama's 2024 benefit year reduction requests, stating that the requested reductions would diminish the effectiveness of the HHS-operated risk adjustment program. One commenter stated that there was no mathematical reason why the presence of one large issuer would preclude the HHS-operated risk adjustment program from functioning appropriately in Alabama.

Some commenters also asserted that the State did not meet its burden to substantiate the requests under the criteria established in § 153.320(d). These commenters argued that the State did not consider in its analysis changes to the risk adjustment models, issuer participation, market conditions, benefit design offerings, network breadth, premium changes, or consumer behavior. A few of these commenters suggested that the State be required to provide more detailed analysis with its requests about the impact of transfer reductions on premiums and issuer participation. One of these commenters provided detailed data it previously submitted in comments in response to Alabama's reduction requests for the 2023 benefit year, asserting the requested individual market transfer reduction would again increase premiums for one impacted Alabama issuer by an amount greater than the *de minimis* threshold (that is, more than 1 percent increase in its premiums) for the 2024 benefit year. This commenter noted that, based on their experience from the 2022 benefit year (the first year for which the State requested and HHS approved a 50 percent reduction in risk adjustment State transfers calculated by HHS for the individual market), the 50 percent reduction in Alabama individual market transfers for 2022 led to an approximately 2 percent increase in their premiums for that year, which exceeds the *de minimis* threshold and was approved by the State in the issuer's rate filings.[81] This commenter stated that they anticipated the impact for the 2024 benefit year, were HHS to approve Alabama's requests, would be similar.

Finally, a few commenters stated that if HHS were to approve Alabama's requests, it should approve percentage reductions no higher than what it approved for the 2023 benefit year; that is, 25 percent in the individual market and 10 percent in the small group market.[82]

Response: We appreciate the comments in support of HHS's approval of Alabama's 2024 benefit year reduction requests and are approving Alabama's requests to reduce risk adjustment transfers for the 2024 benefit year in the individual and small group markets by 50 percent, as Alabama met the criteria set forth in § 153.320(d)(4)(i)(B).

We continue to believe and recognize that risk adjustment is critical to the proper functioning of the individual and small group (including merged) markets, and we acknowledge commenters' concerns that approving requested reductions in risk adjustment transfers could impact the effectiveness of the HHS-operated risk adjustment program, which is why we are repealing the exception for prior participant States to request risk adjustment transfer reductions beginning with the 2025 benefit year, as discussed in detail in the preamble section above. However, under existing HHS regulations, Alabama was permitted to submit a reduction request for the 2024 benefit year,[83] and they did so in the manner set forth in § 153.320(d)(1).[84] As such, we are obligated to consider Alabama's request consistent with the regulatory framework applicable for the 2024 benefit year.

Our review and approval of the risk adjustment State transfer reduction requests submitted by Alabama for the 2024 benefit year are guided by the framework and criteria established in regulation under § 153.320(d) applicable to prior participants. Consistent with § 153.320(d)(1)(iv), prior participants are required to demonstrate their requests satisfy the *de minimis* impact standard. Under this standard, the requesting State is required to show that the requested transfer reduction would not cause premiums in the relevant market risk pool to increase by more than 1 percent. For the 2024 benefit year, § 153.320(d)(4) provides that we will approve State reduction requests if we determine, based on a review of the State's submission, along with other relevant factors, including the premium impact of the reduction, and relevant

[81] Blue Cross and Blue Shield of Alabama Comment Letter. (2023, January 27). CMS. *https://www.regulations.gov/comment/CMS-2022-0192-0100.*

[82] See 87 FR 27208 at 27236 through 27239.

[83] As explained in the 2023 Payment Notice, we finalized amendments to § 153.320(d), including the creation of the prior participant exception following our further consideration of the State flexibility framework under E.O, 14009. See 87 FR 27240. We also announced our intention to repeal the prior participant exception in future rulemaking beginning with the 2025 benefit year to provide impacted parties additional time to prepare for this change and potential elimination of this flexibility. Ibid.

[84] The State's request must also include supporting evidence and analysis demonstrating the State-specific factors that warrant any adjustment to more precisely account for the differences in actuarial risk in the applicable market risk pool, as well as identify the requested adjustment percentage of up to 50 percent for the applicable market risk pools. See 45 CFR 153.320(d)(1)(i) and (ii). In addition, the State must submit the request by August 1 of the benefit year that is 2 calendar years prior to the applicable benefit year, in the form and manner specified by HHS. See 45 CFR 153.320(d)(2).

public comments, that the requested reduction would have a *de minimis* impact on the necessary premium increase to cover the transfers for issuers that would receive reduced transfer payments.[85]

The evidence provided by Alabama in support of its requests to reduce risk adjustment State transfers by 50 percent in its individual and small group markets was sufficient to justify its request under the *de minimis* requirement for HHS approval under § 153.320(d)(4)(i)(B). We further note that Alabama requested that, consistent with § 153.320(d)(3), HHS not publish certain information in support of its request because it contained trade secrets or confidential commercial or financial information. If the State requests that HHS not make publicly available certain supporting evidence and analysis because it contains trade secrets or confidential commercial or financial information within the meaning of the HHS Freedom of Information Act (FOIA) regulations at 45 CFR 5.31(d), HHS will only make available on the CMS website the supporting evidence submitted by the State that is not a trade secret or confidential commercial or financial information by posting a redacted version of the State's supporting evidence.[86] Consistent with the State's request, we posted a redacted version of the supporting evidence for Alabama's request. However, when evaluating the State's reduction requests, we reviewed the State's un-redacted supporting analysis, along with other data available to HHS and the relevant public comments submitted within the applicable comment period for the proposed rule. We conducted a comprehensive analysis of the available information and found the supporting evidence submitted by Alabama to be sufficient to support its 2024 benefit year requests.

We recognize there is some level of uncertainty regarding future market dynamics, including their potential impact on future benefit year transfers. However, to align with the annual pricing cycle for health insurance coverage, the applicable risk adjustment parameters (including approval or denial of State flexibility reduction requests for the 2024 benefit year from prior participants) must generally be finalized sufficiently in advance of the applicable benefit year to allow issuers to consider such information when setting rates.[87] As such, there will always be an opportunity for some uncertainty regarding the precise impact of future methodological changes (such as the risk adjustment model changes applicable beginning with the 2023 benefit year) or unforeseen events (such as unwinding and its impact on enrollment and utilization).

With respect to Alabama's 2024 benefit year requests, our review of the evidence submitted by Alabama in support of its transfer reduction requests was sufficient, along with other information available to HHS and timely submitted comments, to confirm the requests meet the criteria for approval set forth in § 153.320(d)(4)(i)(B).

For the individual market, the State provided information in support of its 50 percent reduction request, including its analysis that the reduction requested would have a *de minimis* impact on necessary premium increases. In alignment with our approach in previous years' consideration of the reduction requests, we analyzed the information provided by the State in support of its request, along with additional data and information available to HHS, separately by market and found that the request meets the *de minimis* regulatory standard in the individual market.

More specifically, we began our review of the State's individual market request with consideration of available 2021 EDGE data[88] and the State's submitted analysis. Using the most recent 2021 plan-level data available to us,[89] we estimated transfer calculations as a percent of premiums, which indicated that the risk adjustment payment recipient would not have to increase premiums by 1 percent or more to cover a 50 percent reduction in individual market transfers. Therefore, our analysis of the 2021 EDGE data supports the State's submitted analysis that the 50 percent reduction in individual market transfers for the 2024 benefit year would meet the *de minimis* regulatory standard.

We also considered detailed comments that provided evidence of changing price and market share positions, using 2021 and 2022 data, that raised questions about the impact a 50 percent reduction in individual market transfers would have on premiums. One commenter (an issuer in Alabama's individual market) stated that the 50 percent reduction in individual market transfers approved by HHS for the 2022 benefit year caused them to increase premiums by more than 2 percent.[90] The commenter believed the 25 percent reduction in individual market transfers for the 2023 benefit year would also violate the *de minimis* standard but did not provide data to this effect. However, as discussed in the prior paragraph, our analysis of the 2021 EDGE data did not provide any evidence to support these commenters' claims.

Therefore, to further consider these comments, including the prior year premium analysis from an issuer in Alabama, we analyzed open enrollment plan selection and premium data for the individual market in Alabama for the 2023 benefit year. However, due to issuers entering and exiting the Alabama individual market between the 2022 and 2023 benefit years, we found the open enrollment data were not comparable between benefit years, and we were unable to reasonably determine the effects of the transfer reductions for the 2022 benefit year on the 2023 benefit year individual market dynamics. Therefore, similar to our analysis of the 2021 EDGE data, our analysis of the 2023 benefit year open enrollment data did not align with the commenter's analysis or otherwise confirm premiums would increase by more than one (1) percent and led us to have some concerns about the commenters' estimates using a previous year's analysis that did not take into consideration new data or recent

[85] HHS is also required to publish State reduction requests and to make the State's supporting evidence available to the public for the comment, with certain exceptions. See 45 CFR 153.320(d)(3). HHS must also publish any approved or denied State reduction requests. Ibid.

[86] See § 153.320(d)(3).

[87] See 45 CFR 153.320(d)(2) and (3). Also see the 2019 Payment Notice (83 FR 16955 through 16960), which explained the timing for this process was intended to permit plans to incorporate approved adjustments in their rates for the applicable benefit year.

[88] Similar to our approach in considering Alabama's reduction requests in previous years, we considered the most recent EDGE data available (for example, for the 2023 benefit year, we considered 2020 EDGE data as part of the analysis). This included consideration of available EDGE premium and risk adjustment transfer data.

[89] Issuer specific BY 2021 risk adjustment transfers can be found in *Summary Report on Permanent Risk Adjustment Transfers for the 2021 Benefit Year.* (2022, July 19). CMS. *https://www.cms.gov/CCIIO/Programs-and-Initiatives/Premium-Stabilization-Programs/Downloads/RA-Report-BY2021.pdf.* For BY 2021, the issuer specific EDGE premium and enrollment data used for this analysis have not been made public. However, plan-level QHP rates are available in the *Health Insurance Public Use Files.* (2021). CMS. *https://www.cms.gov/CCIIO/Resources/Data-Resources/marketplace-puf.*

[90] Commenter's analysis available at BCBSAL Comment Letter on 2024 NBPP AL RA Transfer Flexibility Request. (2023, January 27). CMS. *https://www.regulations.gov/comment/CMS-2022-0192-0100.* Issuer specific BY 2021 EDGE data and BY 2023 open enrollment data are not publicly available. However, plan-level QHP rates are available in the *Health Insurance Exchange Public Use Files* (2021, 2022, 2023). CMS. *https://www.cms.gov/CCIIO/Resources/Data-Resources/marketplace-puf.*

changes in market participation in Alabama's individual market.

For the small group market, the State provided information in support of its 50 percent reduction request, including its analysis that the reduction requested would have a *de minimis* impact on necessary premium increases. HHS also analyzed enrollment and plan-level data for Alabama's small group market for 2023 in reviewing Alabama's transfer reduction request for its small group market. Due to a lack of robust enrollment data for the small group market,[91] we considered the most recent available EDGE premium and enrollment plan-level data available for the small group market to further analyze the request, as in past years. Similar to the individual market analysis, our analysis of the 2021 EDGE data supports the State's submitted analysis that the 50 percent reduction in small group market transfers for the 2024 benefit year would meet the *de minimis* regulatory standard. Using the most recent 2021 plan-level data available to us,[92] we estimated transfer calculations as a percent of premiums, which indicated that the risk adjustment payment recipient would not have to increase premiums by 1 percent or more to cover a 50 percent reduction in small group market transfers.

Therefore, as the review of information has determined that Alabama's 2024 benefit year reduction requests for its individual and small group markets would not exceed the *de minimis* threshold, we will approve the amount of the reductions requested pursuant to § 153.320(d)(4)(i)(B). The data and analysis available to us do not support a reduction smaller than what was requested by the State.

In addition, the suggestion that the presence of one large issuer would not preclude the HHS-operated risk adjustment program from functioning as intended in the State's markets is not pertinent to HHS's determination on the reduction requests, as the sole criteria we have to evaluate the 2024 benefit year requests is the *de minimis* standard in § 153.320(d)(4)(i)(B).

Following our consideration of the State's submission and public comments, we are approving Alabama's requests to reduce risk adjustment State transfers by 50 percent in its individual and small group markets for the 2024 benefit year. With the repeal of the prior participant exception in § 153.320(d), the 2024 benefit year is the last year Alabama will be able to request reductions to HHS calculated transfers under the State payment transfer formula.

5. Risk Adjustment Issuer Data Requirements (§§ 153.610, 153.700, and 153.710)

In the HHS Notice of Benefit and Payment Parameters for 2024 proposed rule (87 FR 78206, 78238), we proposed, beginning with the 2023 benefit year, to collect and extract from issuers' EDGE servers through EDGE Server Enrollment Submission (ESES) files and risk adjustment recalibration enrollment files a new data element, a Qualified Small Employer Health Reimbursement Arrangement (QSEHRA) indicator, and to include this indicator in the enrollee-level EDGE Limited Data Set (LDS) made available to qualified researchers upon request once available. We also proposed to extract plan ID and rating area data elements issuers have submitted to their EDGE servers from certain benefit years prior to 2021. We sought comment on these proposals. After reviewing public comments, we are finalizing both proposals as proposed.

Section 153.610(a) requires that health insurance issuers of risk adjustment covered plans submit or make accessible all required risk adjustment data in accordance with the data collection approach established by HHS [93] in States where HHS operates the program on behalf of a State.[94] In the 2014 Payment Notice (78 FR 15497 through 15500; § 153.720), HHS established an approach for obtaining the necessary data for risk adjustment calculations in States where HHS operates the program through a distributed data collection model that prevented the transfer of individuals' personally identifiable information (PII). Then, in several subsequent rulemakings,[95] we finalized policies for the extraction and use of enrollee-level EDGE data. The purpose of collecting and extracting enrollee-level data is to provide HHS with more granular data to use for recalibrating the HHS risk adjustment models, informing updates to the AV Calculator, conducting policy analysis, and calibrating HHS programs in the individual and small group (including merged) markets and the PHS Act requirements enforced by HHS that are applicable market-wide,[96] as well as informing policy and improving the integrity of other HHS Federal health-related programs.[97] The use of enrollee-level data extracted from issuers' EDGE servers and summary level reports produced from remote command and ad hoc queries enhances HHS' ability to develop and set policy and limits the need to pursue alternative burdensome data collections from issuers. We also previously finalized policies related to creating on an annual basis an enrollee-level EDGE LDS using masked enrollee-level data submitted to EDGE servers by issuers of risk adjustment covered plans in the individual and small group (including merged) markets and making this LDS available to requestors who seek the data for research purposes.[98] [99]

a. Collection and Extraction of the QSEHRA Indicator

We are finalizing, as proposed, that beginning with the 2023 benefit year, issuers will be required to collect and submit a QSEHRA indicator as part of the required risk adjustment data that issuers make accessible to HHS from

[91] HHS does not have the same open enrollment plan selection and premium data on the small group market in Alabama as it does for the individual market in Alabama; therefore, EDGE premium and enrollment plan-level data were used for the small group market assessment.

[92] Issuer specific BY 2021 risk adjustment transfers can be found in *Summary Report on Permanent Risk Adjustment Transfers for the 2021 Benefit Year.* (2022, July 19). CMS. *https://www.cms.gov/CCIIO/Programs-and-Initiatives/Premium-Stabilization-Programs/Downloads/RA-Report-BY2021.pdf.* For BY 2021, the issuer specific EDGE premium and enrollment data used for this analysis have not been made public. However, plan-level QHP rates are available in the *Health Insurance Public Use Files.* (2021). CMS. *https://www.cms.gov/CCIIO/Resources/Data-Resources/marketplace-puf.*

Enrollee-Level External Data Gathering Environment (EDGE) Limited Data Set (LDS). *https://www.cms.gov/research-statistics-data-systems/limited-data-set-lds-files/enrollee-level-external-data-gathering-environment-edge-limited-data-set-lds.*

[99] As explained in the 2020 Payment Notice, we do not currently make the EDGE LDS available to requestors for public health or health care operation activities. See 84 FR 17488.

their respective EDGE servers in States where HHS operates the risk adjustment program. This new data element will be included as part of the enrollee-level EDGE data extracted from issuers' EDGE servers and summary level reports produced from remote command and ad hoc queries beginning with the 2023 benefit year.[100] We are also finalizing, as proposed, to include this indicator in the enrollee-level EDGE LDS made available to qualified researchers upon request once available (that is, beginning with 2023 benefit year data).

Beginning with the 2023 benefit year, we will provide additional operational and technical guidance on how issuers should submit this new data element to HHS through issuer EDGE servers via the applicable benefit year's EDGE Server Business Rules and the EDGE Server Interface Control Document, as may be necessary. HHS will also provide additional details on what constitutes a good faith effort to ensure collection and submission of the QSEHRA indicator in the future. HHS will seek input from issuers and other interested parties to inform development of the good faith standard and determine the most feasible methods for issuers to collect the information used to populate this data field.[101]

In the 2023 Payment Notice (87 FR 27241 through 27252), we finalized that we will collect and extract an individual coverage Health Reimbursement Arrangement (ICHRA) indicator and that we will make this indicator available in the enrollee-level EDGE LDS beginning with the 2023 benefit year. Since finalizing the collection of the ICHRA indicator as part of the enrollee-level EDGE data extracted from issuers' EDGE servers, we determined that also collecting and extracting a QSEHRA indicator would provide a more thorough picture of the actuarial characteristics of the Health Reimbursement Arrangement (HRA) population and how or whether HRA enrollment is impacting State individual and small group (including merged) market risk pools.

In the 2023 Payment Notice (87 FR 27248), we acknowledged that ICHRA information is collected by HHS from FFE or SBE–FP enrollees through the eligibility application process and from SBE enrollees through the State Exchange enrollment and payment files, as well as collected directly by issuers and their affiliated agents and brokers. We also noted the ICHRA indicator was intended to capture whether a particular enrollee's health care coverage involves (or does not involve) an ICHRA and that we will structure this data element for EDGE data submissions similar to current collections, where possible. Additionally, we explained that the collection and extraction of an ICHRA indicator as part of the required risk adjustment data submissions issuers make accessible to HHS through their respective EDGE servers provides more uniform and comprehensive information than what is submitted by FFE and SBE–FP enrollees on a QHP application and by SBE enrollees through enrollment and payment files, as it will capture both on and off Exchange enrollees.

The same is also true for QSEHRA information and we therefore proposed to apply the same approach for the QSEHRA indicator. Currently, the FFEs and SBE–FPs collect information about QSEHRAs from all applicants to determine whether they are eligible for an SEP, as individuals and their dependents who become newly eligible for a QSEHRA may be eligible for an SEP. SBEs also collect similar information from their applicants to determine SEP eligibility. This data may also be provided directly to issuers by consumers who seek to enroll in coverage directly with the issuer.

In addition, an issuer may currently have or collect information that could be used to populate the QSEHRA indicator in situations where the issuer is being paid directly by the employer through the QSEHRA for the individual market coverage. We therefore proposed to generally permit issuers to populate the required QSEHRA indicator with information from the FFE or SBE–FP enrollees or enrollees through SBEs, or from other sources for collecting this information. The QSEHRA indicator will be used to capture whether a particular enrollee's health care coverage involves (or does not involve) a QSEHRA, and we proposed to structure this data element for EDGE data submissions similar to current collections, where possible.

We also proposed, similar to the transitional approach for the ICHRA indicator finalized in the 2023 Payment Notice (87 FR 27241 through 27252), a transitional approach for the collection and extraction of the QSEHRA indicator. For the 2023 and 2024 benefit years, issuers would be required to populate the QSEHRA indicator using only data they already collect or have accessible regarding their enrollees. For example, when an FFE enrollee is using an SEP, information about QSEHRA provision is collected by the FFE, and the FFE may make these data available to issuers. In addition, as noted above, there may be situations where an issuer has or collects information that could be used to populate the QSEHRA indicator. Then, beginning with the 2025 benefit year, we proposed that the transitional approach would end, and issuers would be required to populate the QSEHRA field using available sources (for example, information from Exchanges, and requesting information directly from enrollees) and, in the absence of an existing source for particular enrollees, to make a good faith effort to ensure collection and submission of the QSEHRA indictor for these enrollees.

In conjunction with the proposal to collect and extract this new data element, we also proposed to include the QSEHRA indicator in the LDS containing enrollee-level EDGE data that HHS makes available to qualified researchers upon request once the QSEHRA indicator is available, beginning with the 2023 benefit year. We further noted that similar to the ICHRA indicator, the proposed QSEHRA indicator would not be a direct identifier that must be excluded from an LDS under the HIPAA Privacy Rule and thus would not add to the risk of enrollees being identified. As noted in the 2023 Payment Notice (87 FR 27245), only an LDS of certain masked enrollee-level EDGE data elements is made available and this LDS is available only to qualified researchers if they meet the requirements for access to such file(s), including entering into a data use agreement that establishes the permitted uses or disclosures of the information and prohibits the recipient from identifying the information.[102] [103] In addition, consistent with how we created the LDS in prior years, we would continue to exclude data from the LDS that could lead to identification of certain enrollees.[104]

[100] The deadline for submission of 2023 benefit year risk adjustment data is April 30, 2024. See § 153.730.

[101] If the burden estimate for collection of QSEHRA indicator changes beginning with the 2025 benefit year (after the transitional approach ends), the information collection under OMB control number 0938–1155 would be revised accordingly and interested parties would be provided the opportunity to comment through that process.

We summarize and respond to public comments received on the proposals related to the collection and extraction of a QSEHRA indicator below.

Comment: Several commenters supported the collection and extraction of a QSEHRA indicator, including the proposed transition for implementation. One commenter, while supporting the proposal, did not believe a QSEHRA indicator should factor into risk adjustment analyses or calculations, stating that issuers currently have limited information about HRA enrollment, and therefore should not be penalized for not submitting HRA data.

Many commenters opposed the proposal to collect and extract a QSEHRA indicator, citing significant operational concerns with collecting and reporting a QSEHRA indicator, including that the data are not currently or routinely collected, are difficult to obtain, are inconsistent, unreliable, and complex, and therefore, would provide little insight in policy analysis using these data, and would impose a significant burden on issuers to determine how to collect and report this data and then implement the required changes.

Response: We are finalizing, as proposed, the collection and extraction of a QSEHRA indicator, including the proposed transition for implementation. While we understand the concerns raised over the use of QSEHRA in risk adjustment, particularly that there is currently limited information about the population enrolled in QSEHRA and their associated risk, we continue to believe that it is important to collect this information to allow us to understand the associated risk profile of this population and inform our analysis about whether any refinements to the HHS risk adjustment methodology should be examined or proposed through notice- and- comment rulemaking. Consistent with the established policies governing the permitted uses of the enrollee-level EDGE data, the additional information collected through the QSEHRA indicator will also be used to inform policy analysis and potential updates to the AV Calculator, other HHS individual or small group (including merged) market programs, the PHS Act requirements enforced by HHS that are applicable market-wide, or other HHS Federal health-related programs.

To further explain, similar to the collection and reporting of an ICHRA indicator finalized in the 2023 Payment Notice, collection of a QSEHRA indicator will allow HHS to examine whether there are any unique actuarial characteristics of the QSEHRA population (such as the health status of participants), and provide a more thorough picture of the actuarial characteristics of the HRA population and how or whether HRA participation is impacting individual and small group (including merged) market risk pools. A QSEHRA indicator will also allow HHS to analyze whether the risk profile of participants in QSEHRAs differs from participants in ICHRAs as ICHRAs differ with respect to standards related to employer eligibility, employee eligibility, restrictions on allowance amounts, and eligibility for PTCs (among others). While data that may be used to populate a QSEHRA indicator may be limited or incomplete at this time, we continue to believe that collecting this information is valuable, will better inform potential refinements to the HHS-operated risk adjustment program in future years, and will improve our understanding of these markets. As occurs with any new data collection requirement, HHS expects that over time, collection and submission of a QSEHRA indicator will improve as issuers gain experience with and develop processes for collecting and reporting the indicator. In addition, we will not use the QSEHRA indicator or any analysis that relied upon the indicator to pursue changes to our policies until we conduct data quality checks and ensure the response rate is adequate to support any analytical conclusions. Therefore, we continue to believe that the benefits of finalizing the proposal related to the collection and extraction of a QSEHRA indicator outweigh potential concerns about reliability and consistency of data reporting.

Further, we proposed and are finalizing the adoption of a transitional approach for collecting the QSEHRA indicator under which issuers will be required to populate this new QSEHRA indicator using data they already have or collect for the 2023 and 2024 benefit years. This approach recognizes issuers may need time to develop processes for collection and validation of this new data element. Then, beginning with the 2025 benefit year, issuers will be required to populate the field using available sources and, in the absence of an existing source to populate the QSEHRA indicator for particular enrollees, issuers will be required to make a good faith effort to ensure collection of this data element. HHS will provide additional details on what constitutes a good faith effort to ensure collection and submission of the QSEHRA indicator in the future. Any issuers meeting this standard and making a good faith effort to ensure collection and submission of the QSEHRA indicator beginning with the 2025 benefit year data will not be penalized for being unable to submit this information for a particular individual. Similarly, HHS does not intend to penalize issuers who are unable to populate the QSEHRA indicator with existing data sources during the transitional approach for 2023 and 2024 benefit year data submissions.

We acknowledge concerns that the new data collection could impose additional administrative burden and may require operational changes to develop, test, and validate submission of these data elements. As further detailed in the section IV.C of this rule, we have estimated the burden and costs associated with this new data collection. Currently, all issuers that submit data to their EDGE servers have automated the creation of data files that are submitted to their EDGE servers for the existing required data elements, and each issuer will need to update their file creation process to include the new data element, which will require a one-time administrative cost. In addition to adding this one-time cost, we also estimate that collection and submission of the new data element will require an additional one hour of work by a management analyst on an annual basis. This estimate recognizes that information to populate the QSEHRA indicator data field is not routinely collected by all issuers at this time.

Because we are adopting a transitional approach, under which issuers will be required to populate the QSEHRA indicator data fields using data they already have or collect for the 2023 and 2024 benefit years, issuers are not required to make any changes to the manner in which they currently collect the QSEHRA data element for the 2023 and 2024 benefit year submissions. This transition period allows additional time for issuers to develop processes for collection and validation of the data required for the new data fields. We are further mitigating the burdens associated with the collection and submission of this new data element by structuring it similar to current collections, where possible. Similar to the ICHRA indicator, the QSEHRA indicator will capture whether a particular enrollee's health care coverage involves (or does not involve) a QSEHRA. HHS will provide additional operational and technical guidance on how issuers should submit this new data element to their respective EDGE servers via the applicable benefit year's EDGE Server Business Rules and the

EDGE Server Interface Control Document, as may be necessary. After consideration of comments, we continue to believe that the benefits of collecting and extracting this data element outweigh the burdens and costs associated with the new requirement.

Comment: Many commenters requested that HHS obtain QSEHRA information from other sources, such as plan administrators and/or employers.

Response: While we understand commenters' requests that we obtain QSEHRA information from other sources, such as plan administrators or employers, we decline to adopt this recommendation. We are finalizing the proposal to collect this new data element through issuers' EDGE server data to ensure that the QSEHRA data can be extracted and aggregated with other claims and enrollment information data made accessible to HHS by issuers of risk adjustment covered plans through their respective EDGE servers. This collection and extraction with claim data would not be possible if the QSEHRA data were collected from other sources, such as from plan administrators or employers.[105] As outlined in the proposed rule, similar to the ICHRA indicator, we considered that the FFEs and SBE–FPs collect information about QSEHRA from all applicants to determine whether they are eligible for an SEP, as individuals and their dependents who become newly eligible for a QSEHRA may be eligible for an SEP. We further recognize that SBEs also collect similar information from their applicants to determine SEP eligibility. However, because the enrollee-level EDGE data uses a masked enrollee ID, HHS similarly would not be able to match the QSEHRA data collected by Exchanges for SEP purposes and the enrollee-level EDGE data set. Relying on QSEHRA information provided by Exchanges also would not provide a complete picture of this HRA population as it would not include QSHERA enrollment associated with health insurance coverage purchased outside of Exchanges.

In addition, we understand an issuer may currently have or collect information that could be used to populate the QSEHRA indicator in situations where the issuer is being paid directly by the employer, through the QSEHRA, for the individual health insurance coverage. We proposed and are finalizing the policy to generally permit issuers to populate the required QSEHRA indicator with information from the FFE or SBE–FP enrollees or enrollees through SBEs, or from other sources for collecting this information. Some other sources that an issuer could use include information provided directly to issuers by consumers who seek to enroll in coverage directly with the issuer, as well as information provided to the issuer by employers or plan administrators. To limit the burden associated with populating this indicator, we will structure this data element for EDGE data submissions similar to current collections, where possible, and generally intend to use the same structure for the ICHRA and QSEHRA indicators. That is, similar to the ICHRA indicator, the QSEHRA indicator will capture whether a particular enrollee's health insurance coverage involves (or does not involve) a QSEHRA. HHS will provide additional operational and technical guidance on how issuers should submit this new data element to their respective EDGE servers, as may be necessary.

Comment: Many commenters indicated that low uptake of QSEHRAs make the data unnecessary to collect due to the limited impact these HRAs could have on risk adjustment, and that collecting and reporting of a QSEHRA indicator was generally inappropriate or unnecessary for risk adjustment purposes. Many commenters requested additional information on HHS' rationale for collecting QSEHRA data, and additional guidance on the collection and extraction of a QSEHRA indicator.

Response: We disagree with the comments that suggested it is inappropriate to consider the impact of the HRA population on the HHS-operated risk adjustment program, and those that similarly suggested low enrollment in QSEHRAs makes this proposal unnecessary. The purpose of collecting and extracting the QSEHRA indicator is to allow HHS to conduct analyses to examine whether there are any unique actuarial characteristics of this enrollee population and to investigate what impact (if any) QSEHRA participation is having on State individual and small group (including merged) market risk pools to inform risk adjustment policy development. As discussed above, the QSEHRA indicator will be used to capture whether a particular enrollee's health care coverage involves (or does not involve) a QSEHRA and will provide a more thorough picture of the actuarial characteristics of the HRA population and how or whether HRA participation is impacting individual and small group (including merged) market risk pools; and allow HHS to investigate whether the risk profile of enrollees with QSEHRAs differ from enrollees with ICHRAs. Currently, we do not have data on enrollment by individuals with QSEHRAs to analyze the risk associated with these enrollees and the impact this population may have on the individual and small group (including merged) market or the HHS-operated risk adjustment program. The rules regarding ICHRAs and QSEHRAs both became effective in 2020; thus, there is limited amount of data regarding the ICHRA and QSEHRA populations in general. Further, a recent report by HRA Council 2022 [106] highlighted that the number of both ICHRAs and QSEHRAs has increased substantially from 2020 to 2022. Therefore, including this data as part of the required EDGE data submissions will provide HHS with a more accurate and complete view and distribution of risk in the individual and small group (including merged) markets. The additional information collected through the QSEHRA indicator will be used to further analyze if any refinements to the HHS risk adjustment methodology should be examined or proposed through notice- and- comment rulemaking, such as examination of the risk profile of partial year enrollees with ICHRAs or QSEHRA given the potential for those populations to enroll through an SEP. Similarly, this information will also help inform policy analysis and potential updates to the AV Calculator, other HHS individual or small group (including merged) market programs, the PHS Act requirements enforced by HHS that are applicable market-wide or other HHS Federal health-related programs.

We also acknowledge commenters' request for additional information on submission of the QSEHRA indicator, and similar to the ICHRA indicator, we will provide additional operational and technical guidance on how issuers should submit this new data element to HHS through issuer EDGE servers via the applicable benefit year's EDGE Server Business Rules and the EDGE Server Interface Control Document, as may be necessary.

b. Extracting Plan ID and Rating Area

In addition to collecting and extracting a QSEHRA indicator, we proposed to extract the plan ID [107] and

[105] For information on the challenges associated with linking the extracted enrollee-level EDGE data to other sources, see 87 FR 631 through 632.

[106] For details of this report, see *https://hracouncil.wildapricot.org/resources/Documents/2022_HRAC_Data_FullReport_Final.pdf.*

[107] For details on the plan ID and its components, see p. 42 of the following: CMS. (2013, March 22). *CMS Standard Companion Guide Transaction Information: Instructions related to the ASC X12*

rating area data elements from the 2017, 2018, 2019, and 2020 benefit year data submissions that issuers already made accessible to HHS. In the 2023 Payment Notice (87 FR 27249), we finalized the proposal to extract these data elements beginning with the 2021 benefit year. However, we determined that to aid in annual model recalibration, as well as in our analyses of risk adjustment data, it would be beneficial to also include these two data elements as part of the enrollee-level EDGE data and reports extracted from issuers' EDGE servers for the 2017, 2018, 2019, and 2020 benefit years. Inclusion of plan ID and rating area in extractions of these additional benefit year data sets would also support analysis of other HHS individual and small group (including merged) market programs, the PHS Act requirements enforced by HHS that are applicable market-wide, as well as other HHS Federal health-related programs.

Moreover, since finalizing the 2023 Payment Notice, we have found that the analysis of risk adjustment data would be more valuable if we could compare historical trends, and access to these data elements for past years would further our ability to analyze and improve the risk adjustment program. For example, in assessing the 2020 enrollee-level EDGE data set for inclusion in the 2024 benefit year model recalibration, having access to plan ID and rating area would have allowed us to consider the different patterns of utilization and costs at a more granular level (for example, the State market risk pool level). Since issuers already collected and made available these data elements to HHS for the 2017, 2018, 2019 and 2020 benefit years,[108] we did not believe that this proposal would increase burden on issuers. We also did not propose any changes to the accompanying policies finalized in the 2023 Payment Notice with respect to these data elements and the enrollee-level EDGE Limited Data set (LDS). Although we recognized that including plan ID and rating area would enhance the usefulness of the LDS, we continue to believe it is appropriate to exclude these data elements from the LDS to mitigate the risk that entities that receive the LDS file could identify issuers based on these identifiers, particularly in areas with a small number of issuers. As such, HHS would not include these data elements (plan ID and rating area) in the LDS files made available to qualified researchers upon request.

We summarize and respond to public comments received on the proposed extraction of plan ID and rating area data elements for certain benefit years prior to 2021 below.

Comment: Many commenters supported the extraction of plan ID and rating area data elements for earlier benefit years of EDGE data and their use in risk adjustment. However, many commenters opposed the proposal to extract the plan ID and rating area data elements from issuers' EDGE servers for certain benefit years prior to 2021, citing concerns regarding privacy and security of patients' personally identifiable information (PII) and protected health information (PHI). One commenter requested that CMS reconsider their extraction altogether, as well as the extraction of zip code and subscriber ID data as finalized in the 2023 Payment Notice.

Response: We are finalizing, as proposed, the extraction of plan ID and rating area data elements for certain benefit years of EDGE data prior to 2021 as we believe that the collection of these additional data will allow HHS to better assess actuarial risk in the individual and small group (including merged) market risk pools, examine historical trends, and consider changes to improve the HHS-operated risk adjustment program. Consistent with previously finalized policies regarding the permitted uses of the enrollee-level EDGE data, HHS may also use these additional data to inform analysis and policy development for the AV Calculator and other HHS individual and small group (including merged) market programs, the PHS Act requirements enforced by HHS that are applicable market-wide, as well as other HHS Federal health-related programs.[109]

We acknowledge the concerns raised regarding the need to protect the privacy and security of patients' PII and PHI, however, we generally disagree that the extraction of plan ID and rating area data elements for these additional benefit years would increase risk of disclosure of enrollee PII, nor do they fall under the category of PHI according to the HIPAA Privacy Rule.[110] As noted in the 2023 Payment Notice (87 FR 27245), while we do not believe this data collection causes risk to the privacy or security of patients' PII, to mitigate the risk that entities that receive the LDS file could identify issuers based on these identifiers, particularly in areas with a small number of issuers, we continue to believe it is appropriate to exclude these data elements (plan ID and rating area) from the LDSs. As such, HHS will not include these data elements in the LDS files made available to qualified researchers upon request.

HHS remains committed to protecting the privacy and security of enrollees' sensitive data as initially outlined in the 2014 Payment Notice (77 FR 15434, 15471, 15498, 15500; § 153.720) regarding the risk adjustment data collection approach, which encompasses PII. As noted above, in the 2014 Payment Notice (78 FR 15497 through 15500; § 153.720), we established an approach for obtaining the necessary data for risk adjustment calculations in States where HHS operates the program through a distributed data collection model that prevented the transfer of individuals' sensitive data. We did not propose and are not finalizing any changes to the distributed data collection approach applicable to the HHS-operated risk adjustment program. As explained in the proposed 2014 Payment Notice (77 FR 73118), using a distributed data collection model[111] means HHS does not directly receive data from issuers,[112] which limits transmission of sensitive data.[113] This general framework remains unchanged. Issuers of risk adjustment covered plans will continue to provide HHS access to the applicable required risk adjustment data elements through the distributed data environment (that is, the issuer's secure EDGE server) in the HHS-specified electronic formats by the applicable deadline.[114] Issuers will continue to retain control over their data assets subject to the requirements of the HHS-operated risk adjustment program. HHS will also continue to require issuers to use a unique masked enrollee

Benefit Enrollment and Maintenance (834) transaction, based on the 005010X220 Implementation Guide and its associated 005010X220A1 addenda for the FFE. https://www.cms.gov/cciio/resources/regulations-and-guidance/downloads/companion-guide-for-ffe-enrollment-transaction-v15.pdf.

[108] As detailed in the 2023 Payment Notice, issuers have been required to submit these two data elements as part of the required risk adjustment data submissions to their respective EDGE servers to support HHS' calculation of risk adjustment transfers since the 2014 benefit year. See 87 FR 27243.

[109] See, for example, the 2018 Payment Notice, 81 FR 94101; the 2020 Payment Notice, 84 FR 17488; and the 2023 Payment Notice, 87 FR 27241–27252.

[110] 45 CFR 164.512(a).

[111] Under this model, each issuer submits to its EDGE server the required data in HHS-specified formats and must make these data accessible to HHS for use in the HHS-operated risk adjustment program. See 78 FR 15497.

[112] 77 FR 73162, 73182 through 73183. This policy was finalized in the 2014 Payment Notice final rule. See 78 FR 15497 through 15500.

[113] See 78 FR 15500. We explained that data are particularly vulnerable during transmission, and that the distributed data collection model eliminates this risk.

[114] See 45 CFR 153.610(a). See also 45 CFR 153.700 through 153.740.

identification number for each enrollee that cannot include PII and PHI,[115] along with maintaining the other existing data safeguards to protect enrollee PII and PHI.[116] [117] [118] [119] The policies finalized in this rule regarding the extraction of plan ID and rating area for certain benefit years prior to 2021 do not alter the distributed data collection approach or otherwise change any of the existing protections for enrollee PII and PHI under the HHS-operated risk adjustment program.

We also did not propose and are not finalizing any changes to the final policies adopted in the 2023 Payment Notice related to the collection and extraction of zip code and subscriber indicator.[120] The collection and extraction of these two data elements will begin with the 2023 benefit year. In addition, in the 2023 Payment Notice (87 FR 27249), we finalized the proposal to extract the plan ID and rating area data elements beginning with the 2021 benefit year. Since finalizing that proposal, we determined that to aid in annual model recalibration, as well as HHS' analyses of risk adjustment data, it would be beneficial to also include these two data elements as part of the enrollee-level EDGE data and reports extracted from issuers' EDGE servers for the 2017, 2018, 2019, and 2020 benefit years. For example, we found HHS collection and extraction of plan ID allows HHS to conduct deeper analyses when confronted with minor data anomalies to see if these trends are in fact reflective of the market or if targeted outreach to specific issuers is necessary to address data errors or potential misinterpretation of the EDGE server business rules and other applicable data requirements to improve the EDGE data quality for future benefit years. After considering comments, we are finalizing the proposals related to the collection and extraction of plan ID and rating area for the additional prior benefit years beginning with the 2017 benefit year enrollee-level EDGE data.

As previously explained, the collection and extraction of these data elements for the additional prior benefit years will help HHS further assess risk patterns and the impact of risk adjustment policies by providing valuable insight into historical trends. For example, rating area data for these additional benefit years will provide HHS with more granular data to examine and assess risk patterns and impacts based on geographic differences over time. These data will therefore be useful to examine whether changes should be proposed to the HHS risk adjustment methodology through notice-and-comment rulemaking, as well as to assist with analysis and policy development for the AV Calculator and other HHS individual and small group (including merged market) programs, the PHS Act requirements enforced by HHS that are applicable market-wide, and other HHS Federal health-related programs.

Comment: Some commenters opposed to the extraction of plan ID and rating area data elements questioned the appropriateness of using these data elements for purposes beyond the HHS-operated risk adjustment program and the AV Calculator.

Response: We acknowledge commenters concerns regarding use of the plan ID and rating area data elements use for purposes beyond the HHS-operated risk adjustment program and the AV Calculator. However, we disagree that the use of these data elements should be limited to only the HHS-operated risk adjustment program and the AV Calculator.

In several prior rulemakings,[121] we finalized policies for the extraction and use of enrollee-level EDGE data beginning with the 2016 benefit year. HHS began the collection and extraction of enrollee-level EDGE data to provide HHS with more granular data to use for recalibrating the HHS risk adjustment models and to use actual data from issuers' individual and small group (and merged) market populations, as opposed to the MarketScan® commercial database that approximates these populations, for model recalibration purposes.[122] We also previously finalized the use of the extracted masked enrollee-level EDGE data to inform updates to the AV Calculator and methodology,[123] conduct policy analysis and calibrate HHS programs in the individual and small group (including merged) markets and the PHS Act requirements enforced by HHS that are applicable market-wide,[124] [125] as well as informing policy and improving the integrity of other HHS Federal health-related programs.[126] The finalized policies related to the use of enrollee-level data extracted from issuers' EDGE servers and summary level reports produced from remote command and ad hoc queries enhance our ability to develop and set policy and limit the need to pursue alternative burdensome data collections from issuers. The use of plan ID and rating area from the 2017, 2018, 2019, and 2020 benefit year data sets beyond the risk adjustment program and AV Calculator is consistent with these previously finalized policies, including the use of these two data elements beginning with the 2021 benefit year data set for other HHS individual and small group (including merged) market programs, the PHS Act requirements enforced by HHS that are applicable market-wide, as well as other HHS Federal health-related programs.

Consistent with the use of these data elements to help further assess risk patterns for use in analysis and development of risk adjustment and AV Calculator policies, plan ID and rating area will also support HHS analysis and policy development for other HHS individual and small group (including merged) market programs, the PHS Act requirements enforced by HHS that are applicable market-wide, as well as other

[115] See 45 CFR 153.720. See also 78 FR 15509 and 81 FR 94101.

[116] As we explained in the 2018 Payment Notice, use of masked enrollee-level data safeguards enrollee privacy and security because masked enrollee-level data does not include PII. See 78 FR 15500.

[117] In addition to use of masked enrollee IDs and masked claims IDs, another protection for enrollee PII is the exclusion of enrollee date of birth from the data issuers must make accessible to HHS on their EDGE servers.

[118] The LDS policies are additional examples of protections for enrollee PII. Under these policies, HHS makes available only an LDS of certain masked enrollee-level EDGE data elements and only to qualified researchers if they meet the requirements for access to such file(s), including entering into a data use agreement that establishes the permitted uses or disclosure of the information and prohibits the recipient from identifying the information. See, for example, 84 FR 17486 through 17490 and 87 FR 27243 through 27252. Also see Data Use Agreement. CMS. *https://www.cms.gov/research-statistics-data-and-systems/files-for-order/data-disclosures-data-agreements/overview.* Further details on limited data set files available at *Limited Data Set (LDS) Files.* CMS. *https://www.cms.gov/research-statistics-data-and-systems/files-for-order/data-disclosures-data-agreements/dua_-_newlds.*

[119] The final policies to exclude plan ID, rating area and ZIP code from the LDS is also part of our commitment to protect enrollee PII to mitigate the risk that entities that receive the LDS could identify individual members, particularly in areas with a small number of issuers. See, for example, 87 FR 27243 through 27252.

[120] See 87 FR 27241 through 27252.

[121] See the 2018 Payment Notice, 81 FR 94101; the 2020 Payment Notice, 84 FR 17488; and the 2023 Payment Notice, 87 FR 27241.

[122] 81 FR 94101.

[123] Ibid.

[124] See, for example, 42 U.S.C. 300gg–300gg–28.

[125] See 81 FR 94101 and 84 FR 17488.

[126] As detailed in the 2023 Payment Notice, HHS can use the extracted EDGE data and reports to inform policy analyses and improve the integrity of other HHS Federal health-related programs outside the commercial individual and small group (including merged) markets to the extent such use of the data is otherwise authorized by, required under, or not inconsistent with applicable Federal law. See 87 FR 27243; 87 FR 630 through 631. Examples of other HHS Federal health-related programs include the programs in certain States to provide wrap-around QHP coverage through Exchanges to Medicaid expansion populations and coverage offered by non-Federal Governmental plans. Ibid.

HHS Federal health-related programs. In particular, extra benefit years of these data will be beneficial for testing policy options over multiple years of data. For example, we want to assess whether the scope of EHBs are equal to benefits provided under a typical employer plan under section 1302(b)(2)(A) of the ACA at the State level, and that analysis would benefit greatly from being tested on additional benefit years of data. As such, while we acknowledge the comments expressing concern over the use of this data for purposes beyond HHS risk adjustment and the AV Calculator, we decline to limit the use of these data to only those two areas. The utility of the plan ID and rating area data elements, along with zip code and subscriber indicator, in annual model recalibration and policy analysis to support HHS individual and small group (including merged) market programs, the PHS Act requirements enforced by HHS that are applicable market-wide, and other Federal-health related programs outweighs any gains from not finalizing the extraction of plan ID and rating area from certain prior benefit years as proposed or repealing the EDGE data extraction and permitted use policies finalized in the 2023 Payment Notice.

Comment: One commenter specifically requested that HHS consider releasing the plan ID and rating area data elements as part of the EDGE LDS by aggregating the information at the county level to assuage privacy and security concerns.

Response: While we recognize including the plan ID and rating area data elements may enhance the usefulness of the LDS for researchers, we continue to believe it is appropriate to exclude these data elements from the LDS to mitigate the risk that entities that receive the LDS file could identify issuers based on these identifiers, particularly in areas with a small number of issuers. While aggregating data at the county level, as suggested, could mitigate this concern in many cases, it would not completely eliminate the possibility that counties with small numbers of issuers could be identified by these data elements. We also did not propose to release these data as part of the LDS at the county level and decline to adopt the suggestion as part of this final rule.

6. Risk Adjustment User Fee for 2024 Benefit Year (§ 153.610(f))

HHS proposed a risk adjustment user fee for the 2024 benefit year of $0.21 PMPM. We sought comment on this proposal. After review of the comments received, we are finalizing the proposed risk adjustment user fee for the 2024 benefit year as proposed.

Under § 153.310, if a State is not approved to operate, or chooses to forgo operating, its own risk adjustment program, HHS will operate risk adjustment on its behalf. As noted previously in this final rule, for the 2024 benefit year, HHS will operate the risk adjustment program in every State and the District of Columbia. As described in the 2014 Payment Notice (78 FR 15416 through 15417), HHS' operation of risk adjustment on behalf of States is funded through a risk adjustment user fee. Section 153.610(f)(2) provides that, where HHS operates a risk adjustment program on behalf of a State, an issuer of a risk adjustment covered plan must remit a user fee to HHS equal to the product of its monthly billable member enrollment in the plan and the PMPM risk adjustment user fee specified in the annual HHS notice of benefit and payment parameters for the applicable benefit year.

OMB Circular No. A–25 established Federal policy regarding user fees, and specifies that a user charge will be assessed against each identifiable recipient for special benefits derived from Federal activities beyond those received by the general public.[127] The HHS-operated risk adjustment program provides special benefits as defined in section 6(a)(1)(B) of OMB Circular No. A–25 to issuers of risk adjustment covered plans because it mitigates the financial instability associated with potential adverse risk selection.[128] The risk adjustment program also contributes to consumer confidence in the health insurance industry by helping to stabilize premiums across the individual, merged, and small group markets.

In the 2023 Payment Notice (87 FR 27252), we calculated the Federal administrative expenses of operating the risk adjustment program for the 2023 benefit year to result in a risk adjustment user fee rate of $0.22 PMPM based on our estimated costs for risk adjustment operations and estimated BMM for individuals enrolled in risk adjustment covered plans. For the 2024 benefit year, HHS proposed to use the same methodology to estimate our administrative expenses to operate the risk adjustment program. These costs cover development of the models and methodology, collections, payments, account management, data collection, data validation, program integrity and audit functions, operational and fraud analytics, interested parties training, operational support, and administrative and personnel costs dedicated to risk adjustment program activities. To calculate the risk adjustment user fee, we divided HHS' projected total costs for administering the risk adjustment program on behalf of States by the expected number of BMM in risk adjustment covered plans in States where the HHS-operated risk adjustment program will apply in the 2024 benefit year.

We estimated that the total cost for HHS to operate the risk adjustment program on behalf of States for the 2024 benefit year will be approximately $60 million, which remains stable with the approximately $60 million estimated for the 2023 benefit year. We also projected higher enrollment than our prior estimates in the individual and small group (including merged) markets in the 2023 and 2024 benefit years based on the increased enrollment between the 2020 and 2021 benefit years, due to the increased PTC subsidies provided for in the American Rescue Plan Act of 2021 (ARP).[129] [130] In light of the passage of the Inflation Reduction Act of 2022 (IRA), in which section 12001 extended the enhanced PTC subsidies in section 9661 of the ARP through the 2025 benefit year, we projected increased 2021 enrollment levels to remain steady through the 2025 benefit year.[131] Because this provision of the IRA is expected to promote continued higher enrollment, we proposed a slightly lower risk adjustment user fee of $0.21 PMPM.

We summarize and respond to public comments received on the proposed 2024 benefit year risk adjustment user fee rate below.

Comment: We received a few comments in support of the 2024 benefit year risk adjustment user fee rate.

Response: We appreciate the support and are finalizing, as proposed, a risk adjustment user fee rate for the 2024 benefit year of $0.21 PMPM.

7. Risk Adjustment Data Validation Requirements When HHS Operates Risk Adjustment (HHS–RADV) (§§ 153.350 and 153.630)

HHS will conduct HHS–RADV under §§ 153.350 and 153.630 in any State

[127] OMB. (1993). *OMB Circular No. A–25 Revised, Transmittal Memorandum No. https://www.whitehouse.gov/wp-content/uploads/2017/11/Circular-025.pdf.*

[128] Ibid.

[129] ARP. Public Law 117–2 (2021).

[130] CMS. (2022, July 19). *Summary Report on Permanent Risk Adjustment Transfers for the 2021 Benefit Year.* (p. 9). *https://www.cms.gov/CCIIO/Programs-and-Initiatives/Premium-Stabilization-Programs/Downloads/RA-Report-BY2021.pdf.*

[131] Inflation Reduction Act. Public Law 117–169 (2022).

where HHS is operating risk adjustment on a State's behalf.[132] The purpose of HHS–RADV is to ensure issuers are providing accurate high-quality information to HHS, which is crucial for the proper functioning of the HHS-operated risk adjustment program. HHS–RADV also ensures that risk adjustment transfers reflect verifiable actuarial risk differences among issuers, rather than risk score calculations that are based on poor quality data, thereby helping to ensure that the HHS-operated risk adjustment program assesses charges to issuers with plans with lower-than-average actuarial risk while making payments to issuers with plans with higher-than-average actuarial risk. HHS–RADV consists of an initial validation audit (IVA) and a second validation audit (SVA). Under § 153.630, each issuer of a risk adjustment covered plan must engage an independent initial validation audit (IVA) entity. The issuer provides demographic, enrollment, and medical record documentation for a sample of enrollees selected by HHS to its IVA entity for data validation. Each issuer's IVA is followed by an SVA, which is conducted by an entity HHS retains to verify the accuracy of the findings of the IVA. Based on the findings from the IVA, or SVA (as applicable), HHS conducts error estimation to calculate an HHS–RADV error rate. The HHS–RADV error rate is then applied to adjust the plan liability risk scores of outlier issuers, as well as the risk adjustment transfers calculated under the State payment transfer formula for the applicable State market risk pools, for the benefit year being audited.[133]

a. Materiality Threshold for Risk Adjustment Data Validation

Beginning with 2022 benefit year HHS–RADV, we proposed to change the HHS–RADV materiality threshold definition, first implemented in the 2018 Payment Notice (81 FR 94104 through 94105), from $15 million in total annual premiums Statewide to 30,000 total BMM Statewide, calculated by combining an issuer's enrollment in a State's individual non-catastrophic, catastrophic, small group, and merged markets, as applicable, in the benefit year being audited.[134] We are finalizing the change to the HHS–RADV materiality threshold definition as proposed.

Consistent with the application of the current materiality threshold definition and accompanying exemption under § 153.630(g)(2), we proposed that issuers that fall below the new proposed materiality threshold would not be subject to the annual IVA (and SVA) audit requirements, but may be selected to participate in a given benefit year of HHS–RADV based on random sampling or targeted sampling due to the identification of any risk-based triggers that warrant more frequent audits. We did not propose any changes to the regulatory text at § 153.630(g)(2) or to the other accompanying policies. We solicited comments on this proposal as well as sought comments on whether we should increase the materiality threshold to $17 million in total annual premiums Statewide instead of switching to 30,000 BMM Statewide and on the applicability date for when a new HHS–RADV materiality threshold definition should begin to apply.

In the 2020 Payment Notice (84 FR 17508 through 17511), HHS established § 153.630(g) to codify exemptions to HHS–RADV requirements, including an exemption for issuers that fell below a materiality threshold, as defined by HHS, to ease the burden of annual audit requirements for smaller issuers of risk adjustment covered plans that do not materially impact risk adjustment transfers.[135] This materiality threshold was first implemented and defined in the 2018 Payment Notice (81 FR 94104 through 94105), where HHS finalized a policy that issuers with total annual premiums at or below $15 million (calculated based on the Statewide premiums of the benefit year being validated) would not be subject to annual IVA requirements, but would still be subject to random and targeted sampling.[136] Issuers below the materiality threshold are subject to an IVA approximately every 3 years, barring any risk-based triggers that warrant more frequent audits.

Under the new materiality threshold definition, beginning with the 2022 benefit year of HHS–RADV, issuers that fall below 30,000 BMM Statewide will be exempt from participating in the annual HHS–RADV IVA and SVA audit requirements if not otherwise selected by HHS to participate under random and targeted sampling conducted approximately every 3 years (barring any risk-based triggers based on experience that will warrant more frequent audits). To determine whether an issuer falls under the materiality threshold, its BMM will be calculated Statewide, that is, by combining an issuer's enrollment in a State's individual non-catastrophic, catastrophic, small group, and merged markets, as applicable, in the benefit year being audited. Issuers that qualify for the exemption under § 153.630(g)(2) from HHS–RADV requirements for a particular benefit year must continue to maintain their risk adjustment documents and records consistent with § 153.620(b) and may be required to make those documents and records available for review or to comply with an audit by the Federal Government.[137] If an issuer of a risk adjustment covered plan that falls within the materiality threshold is not exempt from HHS–RADV for a given benefit year (for example, if the issuer is selected as part of random or targeted sampling), and fails to engage an IVA or submit IVA results to HHS, the issuer will be subject to the default data validation charge in accordance with § 153.630(b)(10) and may be subject to other enforcement action. Lastly, an issuer that qualifies for an exemption under § 153.630(g)(2) from HHS–RADV requirements for a particular benefit year will not have its risk scores and State transfers adjusted due to its own risk score error rate(s), but its risk scores and State transfers could be adjusted if other issuers in the applicable State market risk pools were identified as outliers in that benefit year of HHS–RADV.

We summarize and respond to public comments received on the proposed change to the HHS–RADV materiality threshold definition from $15 million in total annual premiums Statewide to 30,000 total BMM Statewide beginning

[132] HHS has operated the risk adjustment program in all 50 States the District of Columbia since the 2017 benefit year.

[133] HHS transitioned from a prospective application of HHS–RADV error rates for non-exiting issuers to apply HHS–RADV error rates to the risk scores and risk adjustment State transfers of the benefit year being audited for all issuers beginning with the 2020 benefit year of HHS–RADV. See 85 FR 77002–77005.

[134] Activities related to the 2022 benefit year of HHS–RADV generally began in March 2023, when issuers could start selecting their IVA entity, and IVA entities could start electing to participate in HHS–RADV for the 2022 benefit year. See, for example, the 2021 Benefit Year HHS–RADV Activities Timeline (May 3, 2022), available at *https://regtap.cms.gov/uploads/library/HRADV_2021Timeline_5CR_050322.pdf* and the 2022 Benefit Year HHS–RADV Timeline (March 1, 2023), available at *https://regtap.cms.gov/uploads/library/HRADV_2022_timeline_5CR_022323.pdf*.

[135] Additionally, in the 2019 Payment Notice (83 FR 16966), we finalized an exemption from HHS–RADV for issuers with 500 or fewer BMM Statewide in the benefit year being audited. This very small issuer exemption is codified at § 153.630(g)(1). Issuers with 500 or fewer BMM Statewide are not subject to random or targeted sampling.

[136] While the 2018 Payment Notice (81 FR 94104 through 94105) provided an applicability date for the materiality threshold that began with the 2017 benefit year of HHS–RADV, we postponed the application of the materiality threshold to the 2018 benefit year in the 2019 Payment Notice (83 FR 16966 through 16967).

[137] See § 153.620(b) and (c).

with the 2022 benefit year of HHS–RADV below.

Comment: Most commenters supported the proposal to change the HHS–RADV materiality threshold definition from $15 million in total annual premiums Statewide to 30,000 total BMM, calculated by combining an issuer's enrollment in a State's individual non-catastrophic, catastrophic, small group, and merged markets, as applicable, in the benefit year being audited. One commenter agreed that the proposed change to the materiality threshold definition will continue to ease the administrative burden associated with HHS–RADV audits.

Many of these commenters asserted that a BMM-based threshold would be more consistent over time and across geographies as the threshold would not be impacted by premium increases or variation in health care costs. Another commenter stated that the proposed BMM-based threshold would eliminate the need for the materiality threshold to be updated over time. One commenter agreed that shifting the materiality threshold to a BMM basis would align with the 500 BMM threshold used to exempt very small issuers from HHS–RADV. This commenter also noted that the alternative proposal to increase the threshold from $15 million in total annual premiums Statewide to $17 million in total annual premiums indicates that a non-indexed dollar threshold could increase the number of issuers subject to annual HHS–RADV audits over time.

However, one commenter opposed changing the materiality threshold to 30,000 BMM and stated that allowing some issuers to be exempt for annual HHS–RADV audit requirements reduces accountability and transparency. One commenter encouraged HHS to consider changing the materiality threshold for HHS–RADV to a percentage of Statewide member months to reduce the burden of HHS–RADV on issuers that do not materially impact a State's risk adjustment transfers. Another commenter asked that HHS investigate how to balance the frequency of issuers randomly sampled each year within a parent company and stated that historical random samples have not produced a balanced volume of issuers year to year.

Response: After considering comments, we are finalizing this policy as proposed to change the HHS–RADV materiality threshold definition from $15 million in total annual premiums Statewide to 30,000 total BMM Statewide beginning with the 2022 benefit year of HHS–RADV. Consistent with the original adoption of the materiality threshold for HHS–RADV, we believe that this policy and updated definition will continue to ease the administrative burden of annual HHS–RADV requirements for smaller issuers of risk adjustment covered plans that do not materially impact risk adjustment transfers. We also continue to believe that this exemption will have a minimal impact on HHS–RADV as issuers of risk adjustment covered plans below the 30,000 BMM threshold are estimated to represent less than 1.5 percent of enrollment in risk adjustment covered plans nationally. We believe that continuing to use a threshold representing risk adjustment covered plans that cover less than 1.5 percent of membership nationally promotes the goals of HHS–RADV while also considering the burden of such a process on smaller issuers.

As explained in the proposed rule (87 FR 78242 through 78243), since we established the materiality threshold definition of $15 million in total premiums, the estimated costs to complete the IVA have increased, especially with the addition of prescription drug categories to the adult models starting with the 2018 benefit year. Therefore, we believe that it is necessary and appropriate to update the materiality threshold definition to better align with current costs to complete an IVA. We estimated the current cost of the IVA to be approximately $170,000 per an issuer. To continue the overall design of the materiality threshold policy and effectively limit the proportion of an issuer's premiums that will be used to cover IVA costs to one (1) percent, we would need to increase the materiality threshold to $17 million in total annual premiums Statewide. While we considered using another dollar value to update the materiality threshold definition, we believe that using BMMs instead of a dollar threshold ensures that the materiality threshold definition under § 153.630(g)(2) will continue to exempt small issuers that face a disproportionally higher burden for conducting HHS–RADV audit, even in situations where PMPM premiums grow overtime. We therefore proposed and are finalizing a materiality threshold of 30,000 BMM Statewide, which translates to approximately $17 million in total annual premiums Statewide on average across markets.

Shifting the materiality threshold under § 153.630(g)(2) to a BMM basis will also align with the threshold established in § 153.630(g)(1), which exempts issuers with 500 or fewer BMM Statewide in the benefit year being audited from HHS–RADV requirements, including random and targeted sampling. As part of this change, we considered whether the new BMM-based threshold would significantly impact other issuers of risk adjustment covered plans. We analyzed historical data on issuers of risk adjustment covered plans and found that the pool of issuers falling below a 30,000 BMM Statewide threshold does not significantly differ from the current pool of issuers falling below a $15 million total annual premiums Statewide threshold.[138] Therefore, we do not anticipate that the new materiality threshold definition will change the current estimated burdens of the annual HHS–RADV requirements or significantly impact other issuers of risk adjustment covered plans. While we would expect the number of issuers falling under a premium-dollar-based materiality threshold to decrease overtime as PMPM premiums grow, we expect the BMM-based threshold to produce a consistent pool of issuers subject to random and targeted sampling over time and across State market risk pools.

We did not consider using a percentage of Statewide member months as the metric for the materiality threshold as that metric does not have a relationship with the costs to conduct HHS–RADV. As such, after considering comments, we are finalizing the new materiality threshold definition of 30,000 BMM as proposed, beginning with the 2022 benefit year of HHS–RADV. As noted above, the materiality threshold was initially set after considering the fixed costs associated with hiring an IVA entity and submitting results to HHS, which may represent a large portion of some issuers' administrative costs. We estimated that 30,000 BMM Statewide translates to approximately $17 million in total annual premiums Statewide on average across markets, and therefore anticipate that issuers above this threshold will not spend more than one (1) percent of their premiums on covering the estimated $170,000 cost of the initial validation audit.

Finally, we do not believe that it is necessary to investigate the balance of the frequency of issuers randomly sampled each year within a parent company. The purpose of conducting random audits is for these audits to be random and not controlled to limit the frequency that specific issuers, including issuers within a particular parent company, are selected. We also note that in addition to conducting

[138] See 87 FR 78242 through 78243.

random audits of issuers of risk adjustment covered plans that fall below the materiality threshold definition, issuers that fall below the materiality threshold definition can be selected to participate in HHS–RADV due to the targeted sampling based on the identification of risk-based triggers that warrant more frequent audits.[139]

b. HHS–RADV Adjustments for Issuers That Have Exited the Market

Beginning with 2021 benefit year HHS–RADV, we proposed to remove the policy to only apply an exiting issuer's HHS–RADV results if that issuer is a positive error rate outlier.[140] We proposed to change this policy because it is no longer necessary to treat exiting issuers differently from non-exiting issuers when they are negative error rate outliers in the applicable benefit year's HHS–RADV given the transition to the concurrent application of HHS–RADV results for all issuers. We solicited comments on this proposal. After reviewing the public comments, we are finalizing the removal of this policy as proposed.
