FEDERAL REGISTER

Vol. 88 Monday,

No. 83 May 1, 2023

Pages 26467–27394

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 88 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

The President

Memorandum of April 19, 2023

Delegation of Authority Under Section 506(a)(1) of the Foreign Assistance Act of 1961

Memorandum for the Secretary of State

By the authority vested in me as President by the Constitution and the laws of the United States of America, including section 621 of the Foreign Assistance Act of 1961 (FAA), I hereby delegate to the Secretary of State the authority under section 506(a)(1) of the FAA to direct the drawdown of up to $325 million in defense articles and services of the Department of Defense, and military education and training, to provide assistance to Ukraine and to make the determinations required under such section to direct such a drawdown.

You are authorized and directed to publish this memorandum in the *Federal Register*.

Executive Order 14097 of April 27, 2023

Authority To Order the Ready Reserve of the Armed Forces to Active Duty To Address International Drug Trafficking

By the authority vested in me as President by the Constitution and the laws of the United States of America, including the National Emergencies Act (50 U.S.C. 1601 *et seq.*), and in furtherance of Executive Order 14059 of December 15, 2021 (Imposing Sanctions on Foreign Persons Involved in the Global Illicit Drug Trade), which declared a national emergency to address the unusual and extraordinary threat to the national security, foreign policy, and economy of the United States posed by international drug trafficking, it is hereby ordered as follows:

Section 1. *Emergency Authority*. To provide additional authority to the Secretary of Defense and the Secretary of Homeland Security to respond to the national emergency declared in Executive Order 14059, the authority under section 12302 of title 10, United States Code, is invoked and made available, according to its terms, to the Secretary of Defense and the Secretary of Homeland Security. The Secretaries of the Army, Navy, and Air Force, at the direction of the Secretary of Defense, and the Secretary of Homeland Security with respect to the Coast Guard when it is not operating as a service in the Navy, are authorized to order to active duty such units and individual members of the Ready Reserve under the jurisdiction of the Secretary concerned as the Secretary concerned considers necessary, consistent with the terms of section 12302 of title 10, United States Code.

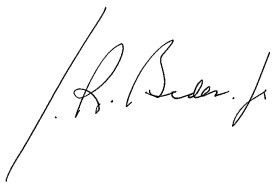
Sec. 2. *General Provisions*. (a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.



THE WHITE HOUSE,
April 27, 2023.

Proclamation 10557 of April 26, 2023

70th Anniversary of the Lavender Scare

By the President of the United States of America

A Proclamation

Our Nation has made tremendous progress in advancing the cause of equality for LGBTQI+ Americans. To keep building on that progress, we must reflect honestly on the darkest chapters of our story and on how far we have come. Seventy years ago, as the Cold War set in, President Eisenhower signed an Executive Order banning LGBTQI+ Americans from serving in the Federal Government. This action codified a shameful chapter in our Nation's history known as the ''Lavender Scare.'' It was a decades-long period when 5,000 to 10,000 LGBTQI+ Federal employees were investigated, were interrogated, and lost their jobs simply because of who they were and whom they loved.

On this anniversary, we acknowledge the importance of telling the complete history of our Nation, reflecting on the lives changed by this discrimination, honoring the courageous Americans who fought to end this injustice, and celebrating the contributions of today's proud LGBTQI+ public servants—including members of our Armed Forces.

Our Nation was founded on the sacred idea that all of us are created equal and deserve to be treated equally under our laws. But for so many members of the LGBTQI+ community, hate, discrimination, and isolation throughout our country's history have denied them the full promise of America. The Lavender Scare epitomized—and institutionalized—this injustice. As LGBTQI+ employees were forced out of the workforce, the Federal Government attempted to defend its policies by propagating false and hateful stereotypes—accusing this community of being a threat to our national security and unworthy of public trust. Employees who were fired under these policies often lost future employment, other opportunities, and even relationships with their own families. Many endured poverty and public disgrace. Some took their own lives as a result of the trauma they had to bear.

While this is a story of profound injustice, it is also a story of remarkable bravery. From seeking relief in the courts to picketing in front of the White House, activists stood up for their rights and helped lay the foundation for the modern-day LGBTQI+ civil rights movement. One such trailblazer was Franklin Kameny, an Army astronomer, who after being fired because he was gay, dedicated over 50 years of his life to activism and helping LGBTQI+ workers stand up for their rights. In 2009, I was proud to meet Frank Kameny in the Oval Office as President Obama and I officially expanded many Federal benefits to same-sex partners of Government employees.

I am equally proud to have mandated additional protections for the fundamental rights of LGBTQI+ Americans. I have appointed barrier-breaking LGBTQI+ leaders to the highest levels of Government, including the first openly gay Senate-confirmed Cabinet Secretary, the first two openly transgender Americans to be confirmed by the United States Senate, and the first open lesbian to achieve the rank of Ambassador. When Americans tune in to the daily White House press briefing, they see the first openly gay White House Press Secretary representing my Administration on the world stage.

But this is just the beginning. I rescinded the discriminatory ban on transgender service members, paving the way for these brave Americans to once again serve openly in the United States military. I signed an Executive Order on Advancing Diversity, Equity, Inclusion, and Accessibility in the Federal Workforce, taking additional steps to ensure that LGBTQI+ public servants are treated with dignity and respect. I also signed a landmark Executive Order charging the Federal Government to prevent and combat discrimination on the basis of sexual orientation and gender identity. Federal agencies have since strengthened or clarified protections for LGBTQI+ Americans in housing, health care, education, employment, credit and lending services, and the criminal justice system. Just last year, I proudly signed the Respect for Marriage Act to defend the rights of LGBTQI+ and interracial couples.

The struggle for equal justice is not over. Today and in each generation, we must rededicate ourselves to ending the hatred and discrimination that LGBTQI+ Americans continue to face. That includes addressing a wave of discriminatory laws that target them—especially transgender children—and that echo the hateful stereotypes and stigma of the Lavender Scare. My Administration is standing firmly with brave LGBTQI+ Americans to push back against these injustices.

Great nations face their history openly and honestly: the good, the bad, and the truth. Today, we make our message simple to every public servant who suffered from the un-American policies and discrimination of the Lavender Scare: We see your sacrifices. We acknowledge what you lost and what you wrongfully endured. I have mandated my Administration to do all we can to write a new chapter of our American story that will demonstrate our abiding commitment to equal rights, respect for human dignity, and limitless opportunity for all.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim April 27, 2023, as the 70th Anniversary of the Lavender Scare. I call upon government officials and the people of the United States of America to honor the contributions of LGBTQI+ public servants, to recognize the lives impacted by the Lavender Scare, and to celebrate the great diversity of the American people.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-sixth day of April, in the year of our Lord two thousand twenty-three, and of the Independence of the United States of America the two hundred and forty-seventh.

CONSUMER FINANCIAL PROTECTION BUREAU

12 CFR Part 1006

Fair Debt Collection Practices Act (Regulation F); Time-Barred Debt

AGENCY: Consumer Financial Protection Bureau.

ACTION: Advisory opinion.

SUMMARY: The Consumer Financial Protection Bureau (CFPB) is issuing this advisory opinion to affirm that the Fair Debt Collection Practices Act (FDCPA) and its implementing Regulation F prohibit a debt collector, as that term is defined in the statute and regulation, from suing or threatening to sue to collect a time-barred debt. Accordingly, an FDCPA debt collector who brings or threatens to bring a State court foreclosure action to collect a time-barred mortgage debt may violate the FDCPA and Regulation F.

DATES: This advisory opinion is effective on May 1, 2023.

FOR FURTHER INFORMATION CONTACT: Seth Caffrey, Courtney Jean, or Kristin McPartland, Senior Counsels, Office of Regulations at (202) 435–7700 or *https://reginquiries.consumerfinance.gov/.* If you require this document in an alternative electronic format, please contact *CFPB_Accessibility@cfpb.gov.*

SUPPLEMENTARY INFORMATION: The CFPB is issuing this advisory opinion through the procedures for its Advisory Opinions Policy.[1] Refer to those procedures for more information.

I. Advisory Opinion

A. Background

Leading up to the 2008 financial crisis, many lenders originated mortgages to consumers without considering their ability to repay the loans.[2] These practices, which harmed millions of people, included in some cases originating products such as ''piggyback'' mortgages in which high-interest second mortgages were issued simultaneously with the origination of the first mortgage. One common piggyback mortgage product, known as an 80/20 loan, involved a first lien loan for 80 percent of the value of the home and a second lien loan for the remaining 20 percent of the valuation. Some consumers in these loans found themselves unable to make full payments on their first and second mortgages, and when housing prices began to decline in 2005, refinancing became more difficult.[3]

When a borrower defaults on a second mortgage, the mortgage holder may be able to initiate a foreclosure even if the borrower is current on the first mortgage. However, the second mortgage holder only receives proceeds from the foreclosure sale if there are any funds left after paying off the first mortgage. As a result, many second mortgage holders of piggyback loans, recognizing that a foreclosure would not generate enough money to cover even the first mortgage, charged their defaulted loans off as uncollectible and ceased communicating with the borrowers. Some sold the loans to debt buyers, often for pennies on the dollar. Such sales often occurred unbeknownst to borrowers, who continued to receive no communications regarding the loans. Many borrowers, having not received any notices or periodic statements for years, concluded that their second mortgages had been modified along with the first mortgage, discharged in bankruptcy, or forgiven.

In recent years, as home prices have increased and borrowers have paid down their first mortgages, after years of silence, some borrowers are hearing from companies that claim to own or have the right to collect on their long-dormant second mortgages.[4] These companies often demand the outstanding balance on the second mortgage, plus fees and interest, and threaten to foreclose if the borrower does not or cannot pay. The CFPB is concerned about homeowners who survived the 2008 financial crisis but who are now facing foreclosure threats and other collection activity because of long-dormant second mortgages. These borrowers are often told that they face a choice between entering into onerous payment plans or losing their homes and the equity they have diligently built since the financial crisis.

Because of the amount of time that has lapsed on these long-dormant loans, some have likely become time barred under State law. Time-barred debts are debts for which the applicable statute of limitations has expired.[5] Statutes of limitation are, typically, State laws that provide time limits for bringing suit on legal claims.[6] In most States the expiration of the applicable statute of limitations, if raised by the consumer as an affirmative defense, precludes the debt collector from recovering on the debt using judicial processes.[7] In many jurisdictions, State court (*i.e.,* judicial) foreclosure actions are subject to a statute of limitations.

The CFPB understands that some debt collectors collecting on long-dormant second mortgages may have filed or have threatened to file judicial foreclosure actions even though the underlying debt is time barred. The CFPB is issuing this advisory opinion to affirm that: (1) the FDCPA and its implementing Regulation F prohibit a debt collector, as that term is defined in the statute and regulation, from suing or threatening to sue to collect a time-barred debt; and (2) this prohibition applies even if the debt collector neither knows nor should know that the debt is time barred. Accordingly, an FDCPA debt collector who brings or threatens to bring a State court foreclosure action to collect a time-barred mortgage debt may violate the FDCPA and Regulation F.

B. Coverage

This advisory opinion applies to debt collectors as defined in section 803(6) of the FDCPA and implemented in Regulation F, 12 CFR 1006.2(i).

C. Legal Analysis

The FDCPA [8] and its implementing Regulation F [9] govern the conduct of ''debt collectors'' when they collect ''debt.'' The statute and regulation generally define a debt collector as ''any person who uses any instrumentality of interstate commerce or the mails in any business the principal purpose of which is the collection of any debts, or who regularly collects or attempts to collect, directly or indirectly, debts owed or due or asserted to be owed or due another.'' [10] Many individuals and entities that seek to collect defaulted mortgage loans, and many of the attorneys that bring foreclosure actions on their behalf, are FDCPA debt collectors.

The FDCPA and Regulation F define ''debt'' as ''any obligation or alleged obligation of a consumer to pay money arising out of a transaction in which the money, property, insurance, or services which are the subject of the transaction are primarily for personal, family, or household purposes, whether or not such obligation has been reduced to judgment.'' [11] A consumer's payment obligation arising from a mortgage transaction primarily for personal, family, or household purposes, such as the purchase of the consumer's residence, falls within the plain language of this definition.[12] It follows that State court foreclosure proceedings often constitute the collection of ''debt'' under the FDCPA,[13] and debt collectors who engage in such debt collection activity are subject to the requirements and prohibitions of the FDCPA and Regulation F.

Regulation F prohibits a debt collector from suing or threatening to sue to collect a time-barred debt.[14] As the CFPB explained in finalizing this prohibition, ''a debt collector who sues or threatens to sue a consumer to collect a time-barred debt explicitly or implicitly misrepresents to the consumer that the debt is legally enforceable, and that misrepresentation is material to consumers because it may affect their conduct with regard to the collection of that debt, including whether to pay it.'' [15] Regulation F's prohibition on suits and threats of suit on time-barred debt is subject to a strict liability standard.[16] That is, a debt collector who sues or threatens to sue to collect a time-barred debt violates the prohibition ''even if the debt collector neither knew nor should have known that a debt was time barred.'' [17] Accordingly, a debt collector who brings or threatens to bring a State court foreclosure action with respect to a time-barred mortgage debt may violate the FDCPA and Regulation F. This is true even if the debt collector neither knew nor should have known that the debt was time barred.

The CFPB also notes that a broad range of non-foreclosure debt collection-related activity, such as communicating with consumers about defaulted mortgages, can be covered by the FDCPA. FDCPA debt collectors undertaking such activity are subject to the other requirements and prohibitions of the statute and Regulation F when collecting debt [18] whether or not that debt is time-barred. These include, for example, the prohibition on debt collectors: falsely representing the character, amount, or legal status of any debt; [19] threatening to take any action that cannot legally be taken or that is not intended to be taken; [20] and selling, transferring for consideration, or placing for collection a debt that the debt collector knows or should know has been paid or settled or discharged in bankruptcy.[21] They also include, for example, the requirement that debt collectors: identify themselves as a debt collector in all communications with the consumer (except formal pleadings in connection with a legal action); [22] provide the consumer with validation information in certain circumstances; [23] and respond to consumer disputes adequately before continuing to collect.[24] Finally, even if an FDCPA debt collector engages only in actions necessary to undertake a nonjudicial foreclosure action, the debt collector is still subject to FDCPA section 808(6) [25] and Regulation F, 12 CFR 1006.22(e),[26] which generally prohibit taking or threatening to take any nonjudicial action to effect dispossession or disablement of property if the debt collector has no present right or intention to do so.[27]

Although not the focus of this advisory opinion, the CFPB also notes that entities selling or collecting on these second mortgages who are mortgage servicers may also be subject to certain requirements under the Real Estate Settlement Procedures Act,[28] the Truth in Lending Act,[29] and the CFPB's mortgage servicing regulations.[30] For example, unless an exemption applies, the CFPB's mortgage servicing regulations require servicers to provide periodic statements to consumers.[31]

II. Regulatory Matters

This advisory opinion is issued under the CFPB's authority to interpret the FDCPA, including under section 1022(b)(1) of the Consumer Financial Protection Act of 2010,[32] which authorizes guidance as may be necessary or appropriate to enable the CFPB to administer and carry out the purposes and objectives of Federal consumer financial laws.[33]

An advisory opinion is a type of interpretive rule. As an interpretive rule, this advisory opinion is exempt from the notice-and-comment rulemaking requirements of the Administrative Procedure Act.[34] Because no notice of proposed rulemaking is required, the Regulatory Flexibility Act does not require an initial or final regulatory flexibility analysis.[35] The CFPB has also

BILLING CODE 4810–AM–P

DEPARTMENT OF DEFENSE

Office of the Secretary

32 CFR Part 158

[Docket ID: DOD–2020–OS–0015]

RIN 0790–AK81

Operational Contract Support (OCS) Outside the United States

AGENCY: Office of the Under Secretary of Defense for Acquisition and Sustainment, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: The DoD is updating the policies and procedures for operational contract support (OCS) outside the United States. These changes include broadening the range of applicable operational scenarios, eliminating content internal to the Department designating contractor personnel as part of the DoD total force, incorporating requirements for accountability and reporting, and clarifying responsibilities. With these updates, the Department addresses open recommendations from the Government Accountability Office (GAO).

DATES: This rule is effective May 31, 2023.

FOR FURTHER INFORMATION CONTACT: Ms. Donna M. Livingston, 703–692–3032, *donna.m.livingston.civ@mail.mil.*

SUPPLEMENTARY INFORMATION: OCS is a segment of the GAO High Risk Area of DoD Contract Management, and while the latest update in March 2021, GAO–21–119SP, ''High-Risk Series: Dedicated Leadership Needed to Address Limited Progress in Most High-Risk Areas'' (available at: *https://www.gao.gov/products/gao-21-119sp*) acknowledged progress, GAO cited the need to revise and reissue guidance to address five open recommendations.

Legal Authority

Section 861 of the *National Defense Authorization Act for Fiscal Year 2008* (Pub. L. 110–181) requires the DoD, Department of State, and the United States Agency for International Development to enter into an agreement regarding contracting matters in Iraq and Afghanistan and identify a common database to serve as a repository of information on contracts and contractor personnel supporting these operations. Section 854 of the *Duncan Hunter National Defense Authorization Act for Fiscal Year 2009* (Pub. L. 110–417) requires mechanisms for ensuring contractors are required to report specified offenses that are alleged to have been committed by or against contractor personnel to the appropriate authorities.

Discussion of Comments

The Department of Defense published a proposed rule titled ''Operational Contract Support (OCS) Outside the United States'' (32 CFR part 158) in the **Federal Register** on January 7, 2021 (86 FR 1063–1080). Fourteen comments were received from eight respondents and a summary of the comments and the Department's responses as follows.

Comment: The Department received five comments from respondents recommending the addition of requirements for defense contractor personnel to report information on gross violations of human rights (GVHRs). In general, all five comments regarding GVHR reporting recommended that the rule include a ''duty to report'' GVHRs for defense contractors. Several respondents noted that the proposed rule missed an opportunity to address the requirements of Section 888 of the National Defense Authorization Act for Fiscal Year 2020 to ''monitor and report allegations of gross violations of internationally recognized human rights.''

Response: The DoD acknowledges the requirement, however the policy and processes to support the requirements for reporting allegations of gross violations of human rights are still being developed and are not final. When those actions are completed, the DoD will initiate actions to update this rule as needed to comply with the established policy.

Comment: The Department received a comment objecting to requiring the people of the United States to provide proof of vaccination for the coronavirus disease 2019 (COVID–19) prior to any travel.

Response: The rule does not address requirements related to any specific vaccination requirement for contractor personnel. The provisions in the rule regarding immunizations and deployment health activities ensure that contractor personnel are medically ready to deploy and protect the health of the total force in deployed environments.

Comment: The DoD received a comment recognizing the significant role defense contractors play in support of military operations overseas and the costs born in terms of injury and death that have resulted. The commenter recommended DoD make a more robust effort to collect, analyze, and publicly share data with regard to contractor personnel fatalities and injuries.

Response: The Department appreciates the commenter's understanding of the key role defense contractors play in supporting the DoD. While the DoD does collect data on contractor personnel wounded and killed while performing their duties, this data is not made publicly available. The Synchronized Predeployment and Operational Tracker—Enterprise Suite (SPOT–ES) is the common joint database used to maintain accountability and visibility of contractors supporting applicable operations. In accordance with the SPOT Business Rules, referenced in this rule, it is the responsibility of the contractor's employer to close out the individual's deployment record in SPOT–ES following a death and to update the records when an injury occurs. The DoD is reviewing how to improve contractors' compliance with these procedures and to respectfully encourage more comprehensive reporting to the DoD without impacting legal and privacy issues.

Comment: The DoD received one comment regarding the types of support contractors are generally required to provide their employees while deployed. The commenter asserted that in austere environments, it is common for the U.S. Government to provide life support to contractor personnel when those personnel are located at U.S. military facilities; however, contractor personnel may need to transit through other military facilities before reaching

[36] 44 U.S.C. 3501–3521.

[37] 5 U.S.C. 801 *et seq.*

smaller or more remote military facilities. The commenter recommended that the final rule clarify, in § 158.4(d) or elsewhere, that the contract should specify who will be responsible for providing this support during transit between military facilities, and if it is the responsibility of the contractor, then the contract should include additional resources needed to support that function.

Response: The DoD appreciates the comment; however, the paragraph referenced does not delineate or specify a specific location for treatment or when or where these services might be provided by the Government. In the case of contractor personnel authorized to accompany the Military Services in deployed settings, care at MTFs may be provided consistent with DoDI 6025.23, ''Health Care Eligibility Under the Secretarial Designee (SECDES) Program and Related Special Authorities'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/602523p.pdf?ver=2019-03-22-095347-850*).

Comment: The Department received one comment specific to § 158.5(a), ''Planning considerations and requirements; requirements for publication.'' The commenter recommended management policies take into account the manner in which ''contractor personnel'' are defined in contract requirements. The rationale was that such distinctions may allow for more accurate policies to account for differences that exist within the contractor labor pool from which contractors authorized to accompany the force (CAAF) may be recruited, and also permit contractors to more readily and competitively respond to those requirements.

Response: The rule is written to be sufficiently broad to permit all Commanders, regardless of their location outside the United States and in a variety of scenarios, to tailor specific policies and procedures to best meet their operational and mission needs.

Comment: The DoD received one comment regarding emergency medical care for contractor personnel. The commenter asserted that in austere environments, there can be challenges in providing basic medical care below the ''life and limb'' medical services provided by the military. The recommendation was that the final rule require the contracting officer to evaluate whether or not to grant ''primary care'' in the letter of authorization, and that additional scope be added to the contract to address basic medical care.

Response: The rule includes provisions in § 158.4(d) regarding the contracting officer's latitude, consistent with DoDI 3020.41, ''Operational Contract Support (OCS)'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/302041p.pdf?ver=2019-02-25-133949-097*) to allow for selected life, mission, medical, logistics, and administrative support to be provided in certain austere, hostile, and/or non-permissive environments. No changes to the proposed rule were required to address this comment.

Comment: The DoD received a comment regarding the significant delays at deployment processing facilities due to the COVID–19 global pandemic and the impacts of these delays on contractor personnel deployment. The commenter noted significant wait times created staffing shortages on overseas contracts because replacement personnel could not be deployed in a timely manner. The commenter recommended the final rule clarify contracting officers have the authority to modify contracts and permit contractor-performed deployment processing when necessary to maintain continuity of services.

Response: Section 158.5(i)(1) of the rule establishes a process through which the contract can stipulate an alternative, Government-approved deployment/redeployment processing center. No changes to the proposed rule were required to address this comment.

Comment: The DoD received a comment that the proposed rule only differentiated between CAAF and non-CAAF in terms of medical and dental fitness requirements, while the U.S. Central Command medical standard ''Mod 15'' differentiates requirements for U.S. citizen, third country nationals, and local national contractor personnel. The commenter recommended that the final rule defer to any regional medical standards as the governing medical standard.

Response: The rule is purposefully written to provide sufficient latitude for Commanders to make decisions that are in the best interests of all personnel serving in the area of operation. The proposed rule addressed the requirements and procedures for communicating Command-specific policies and requirements to contractor personnel in § 158.5(a) and (b).

Comment: The DoD received one comment related to the requirement for CAAF to complete a post-deployment health assessment in the Defense Medical Surveillance System. The commenter noted that DoDI 6490.03, ''Deployment Health'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/649003p.pdf?ver=2019-06-19-134540-850*) states that post-deployment medical screenings ''are the responsibility of the contractor'' and that, unless contractor personnel re-deploy via a DoD deployment center, contractors may have little or no ability to conduct these medical screenings for personnel who are ending their employment. The commenter recommended that the final rule clarify that contractor personnel cannot be compelled to participate in post-deployment screenings.

Response: This recommendation is addressed in the proposed rule § 158.6(b) by reference to DoD Instruction 6490.03, ''Deployment Health.'' Per DoD Instruction 6490.03, ''all pre-, during-, and post-deployment medical assessments, examinations, treatments, and preventive measures are the responsibility of the contractor unless otherwise stated in the contract.'' Contracts may require post-deployment assessments for the benefit of deploying contractor personnel, and contractors should review the requirements in their contracts for such screenings.

Comment: The DoD received one comment regarding medical waivers. The commenter noted the proposed rule indicates waivers should be submitted through the contracting officer; however, within the U.S. Central Command, requests for waivers can be sent directly to the combatant commander, rather than through the contracting officer. The commenter recommends that the final rule be amended to align with the U.S. Central Command procedures.

Response: The policy described in the rule and the companion DoD Instruction 3020.41, ''Operational Contract Support,'' is meant to be applied broadly across the Military Departments and Combatant Commands. Commanders have the authority to tailor these processes to best meet the unique nature of operations in their areas of operation as stated in § 158.6(a)(2) of the proposed rule.

Changes From the Proposed Rule

Based on public comment and final internal coordination, several substantive changes were made to the rule. This final rule:

(1) broadens the types of operations when this rule applies to contracted support supporting operations beyond contingency operations;

(2) describes and clarifies contractors' responsibilities related to theater admission requirements for their

personnel deploying in support of operations outside the United States;

(3) clarifies contractors' responsibilities to provide personnel who meet specific medical and dental fitness standards;

(4) provides clarity regarding the services the U.S. Government is authorized to provide to contractors; and

(5) removes all internally facing information to promote efficiency and streamline communication with the public.

These changes are explained in detail below.

• Language was added to § 158.4(g) (Policy) during internal coordination to specify that the Under Secretary of Defense for Acquisition and Sustainment will coordinate with the Under Secretary of Defense for Intelligence and Security on requests to waive the requirements of this rule for highly sensitive, classified, cryptologic, or intelligence projects and programs.

• A new paragraph including references regarding policy and reporting procedures on combating trafficking in persons was added to § 158.5(d) as a result of internal coordination.

• Additional language was added to §§ 158.3 and 158.5(e) to support compliance with DoD Directive 2311.01, ''DoD Law of War Program'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodd/231101p.pdf?ver=2020-07-02-143157-007*) reissued on July 2, 2020.

• To address five GAO recommendations across four reports, GAO–16–105 ''Operational Contract Support: Additional Actions Needed to Manage, Account for, and Vet Defense Contractors in Africa'' (available at *https://www.gao.gov/products/gao-16-105*), GAO–15–243 ''Operational Contract Support: Actions Needed to Enhance the Collection, Integration, and Sharing of Lessons Learned'' (available at *https://www.gao.gov/products/gao-15-243*), GAO–15–250 ''Contingency Contracting: Contractor Personnel Tracking System Needs Better Plans and Guidance'' (available at *https://www.gao.gov/products/gao-15-250*), and GAO–17–428 ''Operational Contract Support: Actions Needed to Enhance Capabilities in the Pacific Region'' (available at *https://www.gao.gov/products/gao-17-428*), to improve the ability to account for and maintain visibility of contractor personnel in contingency and other operations, ensure DoD possesses the capability to collect and report statutorily required information, and clarify responsibilities and procedures, § 158.5(h) was updated to address SPOT–ES minimum reporting requirements, system requirements, and includes references to the SPOT–ES business rules that include area specific requirements.

Expected Impact of the Final Rule

Community Impact. The existing rule provides information relevant to contractors and their personnel who may provide contracted support to the DoD during applicable operations outside the United States. The primary stakeholder populations impacted by this rulemaking are contractor personnel and the companies or organizations that employ these personnel in support of DoD contracts. There are no impacts to State or local governments.

Contractor personnel—Provides information and describes the requirements the DoD imposes on employees of commercial industry partners who may be employed in support of DoD operations conducted outside the United States.

Companies or organizations—Provides information for commercial industry partners to understand how contractor personnel are managed and accounted for and includes deployment requirements necessary to provide support to DoD in applicable operations. A negligible burden reduction to the public may be achieved by the clarifications and increased transparency provided by this revision. Contractors may save time by having increased access to DoD policy requirements and in avoiding unnecessary duplication or providing personnel not suitable or prepared to support applicable operations outside the United States.

A negligible burden reduction to the public may be achieved by the clarifications and increased transparency provided by this revision. Contractors may save time by having increased access to DoD policy requirements and in avoiding unnecessary duplication or providing personnel not suitable or prepared to support applicable operations outside the United States.

The changes implemented by this rule are not expected to alter significantly the baseline burden that was calculated as part of the most recent SPOT–ES system collection, Control Number 0704–0460, approved by the OMB in 2019 in accordance with the Public Law 96–511, ''Paperwork Reduction Act.'' This total burden was calculated to be $1,197,077 annually.

Benefits. Operational contract support, when properly planned for and integrated into operations, can be leveraged to support the Secretary of Defense's objective of restoring military readiness and to close any gaps in fulfilling requirements associated with maintenance, material, intelligence information, or translation services, which can be filled by either short- or long-term commercial capabilities. This rule most significantly improves and refines DoD policy for planning and integrating contracted support in applicable operations. The Department has been working for more than a decade to establish OCS as a core defense capability; one that minimizes risk, increases readiness and flexibility, and improves effectiveness. This rule codifies policy that implements a programmatic approach and improves oversight of contracted support, reducing the likelihood that historical instances of waste, fraud, and abuse will be repeated. This rule furthermore ensures contractors supporting applicable operations are fully prepared to meet the requirements necessary to support operations outside the United States.

TOTAL COSTS FOR NON-GOVERNMENT

Collection instrument (SPOT database)	2016 Approved estimates	2019 Approved estimates
Estimation of Respondent Burden Hours

Labor Burden per Response (Response Time multiplied by Respondent Hourly Wage).	$18.00	$16.06.
Total Labor Burden (Number of Respondents multiplied by Response Time multiplied by Respondent Hourly Wage).	$1,683,360	$1,197,077 (decrease of $486,283).

Regulatory Compliance Analysis

A. Executive Order 12866, ''Regulatory Planning and Review,'' and Executive Order 13563, ''Improving Regulation and Regulatory Review''

These Executive orders direct agencies to assess all costs, benefits, and available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, safety effects, distributive impacts, and equity). These Executive orders emphasize the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has been designated as significant under E.O. 12866.

B. Congressional Review Act (5 U.S.C. 801 et seq.)

Pursuant to the Congressional Review Act, this rule has not been designated a major rule, as defined by 5 U.S.C. 804(2).

C. Public Law 96–354, ''Regulatory Flexibility Act'' (5 U.S.C. 601)

The Under Secretary of Defense for Acquisition and Sustainment certifies that this rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. Based on data from the Federal Procurement Data System—Next Generation for contract actions for fiscal year 2019 with a place of performance outside the United States, approximately 15,742 of 2.4 million (or 1 percent), are to small businesses. This amounts to $2,438,406,319 of $36,747,264,771 (or less than 8 percent) of contracts obligated to small businesses worldwide. Therefore, the Regulatory Flexibility Act, as amended, does not require us to prepare a regulatory flexibility analysis.

D. Sec. 202, Public Law 104–4, ''Unfunded Mandates Reform Act''

Section 202 of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532) requires agencies to assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. This rule will not mandate any requirements for State, local, or tribal governments, and will not affect private sector costs.

E. Public Law 96–511, ''Paperwork Reduction Act'' (44 U.S.C. Chapter 35)

This rule imposes reporting and recordkeeping requirements under the Paperwork Reduction Act of 1995 under OMB Control Number 0704–0460, *Synchronized Predeployment Operational Tracker-Enterprise Suite (SPOT–ES).* The Department does not anticipate any changes to the cost or burden associated with collection with the publication of this final rule.

The applicable System of Records Notice (SORN) and Privacy Impact Assessments (PIA) are available at *https://www.dmdc.osd.mil/appj/dwp/documents.jsp*) under SORN Identifier DMDC 18 DoD (available at *https://dpcld.defense.gov/Privacy/SORNsIndex/DOD-wide-SORN-Article-View/Article/570569/dmdc-18-dod/*), ''Synchronized Predeployment and Operational Tracker—Enterprise Suite.''

F. Executive Order 13132, ''Federalism''

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. This rule will not have a substantial effect on State and local governments.

G. Executive Order 13175, ''Consultation and Coordination With Indian Tribal Governments''

Executive Order 13175 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct compliance costs on one or more Indian Tribes, preempts Tribal law, or effects the distribution of power and responsibilities between the Federal Government and Indian Tribes. This rule will not have a substantial effect on Indian Tribal governments.

List of Subjects in 32 CFR Part 158

Accountability/visibility, Accounting, Armed forces, Combating trafficking in persons, Deployment and redeployment, Government contracts, Medical clearances, Passports and visas, Planning, Security measures, Support to contractors, Transportation.

■ Accordingly, 32 CFR part 158 is revised to read as follows:

PART 158—OPERATIONAL CONTRACT SUPPORT (OCS) OUTSIDE THE UNITED STATES

Sec.

158.1 Purpose.
158.2 Applicability.
158.3 Definitions.
158.4 Policy.
158.5 Procedures.
158.6 Guidance for contractor medical and dental fitness.
Appendix A to Part 158—Related Policies

Authority: Pub. L. 110–181; Pub. L. 110–417.

§ 158.1 Purpose.

This part establishes policy, assigns responsibilities, and provides procedures for operational contract support (OCS), including contract support integration, contracting support,

management, and deployment of defense contractor personnel in applicable operations outside the United States.

§ 158.2 Applicability.

This part applies to contracts and contractor personnel supporting DoD Components operating outside the United States in contingency operations, humanitarian assistance, or peace operations and other activities, including operations and exercises as determined by a Combatant Commander or as directed by the Secretary of Defense.

§ 158.3 Definitions.

Unless otherwise noted, the following terms and their definitions are for the purposes of this part.

Acquisition. The acquiring by contract with appropriated funds of supplies or services (including construction) by and for the use of the Federal Government through purchase or lease, whether the supplies or services are already in existence or must be created, developed, demonstrated, and evaluated. Acquisition begins at the point when agency needs are established and includes the description of requirements to satisfy agency needs, solicitation and selection of sources, award of contracts, contract financing, contract performance, contract administration, and those technical and management functions directly related to the process of fulfilling agency needs by contract.

Applicable operations. Contingency operations, humanitarian assistance, or peace operations conducted outside the United States and other activities, including operations and exercises outside the United States as determined by a combatant commander (CCDR) or as directed by the Secretary of Defense.

Austere environment. Areas where applicable operations may be conducted that are in remote, isolated locations, where access to modern comforts and resources may be limited or non-existent.

Civil augmentation program. External support contracts designed to augment Military Department logistics capabilities with contracted support in both preplanned and short-notice operations.

Contingency contract. A legally binding agreement for supplies, services, and/or construction let by a U.S. Government contracting officer in the operational area, or that has a prescribed area of performance within an operational area.

Contingency operation. A military operation that is either designated by the Secretary of Defense as a contingency operation or becomes a contingency operation as a matter of law as defined in 10 U.S.C. 101(a)(13).

Contract administration. The processes and procedures of contracting, from contract award through closeout, that includes oversight efforts by contracting professionals and designated non-contracting personnel to ensure that supplies, services, and/or construction are delivered and/or performed in accordance with the terms and conditions of the contract.

Contract support integration. The coordination and synchronization of contracted support executed in a designated operational area in support of military operations.

Contracting. Purchasing, renting, leasing, or otherwise obtaining supplies or services from nonfederal sources. Contracting includes description (but not determination) of supplies and services required, selection, and solicitation of sources, preparation and award of contracts, and all phases of contract administration. It does not include making grants or cooperative agreements.

Contracting officer. A person with the authority to enter into, administer, and/or terminate contracts and make related determinations and findings. The term includes certain authorized representatives of the contracting officer acting within the limits of their authority as delegated by the contracting officer. ''Administrative contracting officer (ACO)'' refers to a contracting officer who is administering contracts. ''Termination contracting officer (TCO)'' refers to a contracting officer who is settling terminated contracts. A single contracting officer may be responsible for duties in any or all of these areas.

Contracting Officer's Representative (COR). An individual, including a contracting officer's technical representative (COTR), designated and authorized in writing by the contracting officer to perform specific technical or administrative functions.

Contracting support. The coordination of contracts and execution of contracting authority by a warranted contracting officer that legally binds commercial entities to perform contractual requirements in support of DoD operational requirements.

Contractor management. The oversight and integration of contractor personnel and associated equipment providing support to military operations.

Contractor personnel. Any individual, employed by a firm, corporation, partnership, or association, employed under contract with the DoD to furnish services, supplies, or construction. Contractor personnel may include U.S. citizens and host nation and third country national (TCN) individuals.

Contractor personnel accountability. The process of identifying, capturing, and recording the personally identifiable information and assigned permanent duty location of an individual contractor employee through the use of a designated database.

Contractor personnel visibility. Information on the daily location, movement, status, and identity of contractor personnel.

Contractors Authorized to Accompany the Force (CAAF). Contractor personnel and all tiers of subcontractor personnel authorized to accompany U.S. Armed Forces in applicable operations outside of the United States who have been afforded this status through the issuance of a Letter of Authorization (LOA). CAAF generally include all U.S. citizen and TCN employees not normally residing within the operational area whose area of performance is in the direct vicinity of the U.S. Armed Forces and who are routinely co-located with the U.S. Armed Forces. In some cases, CCDR subordinate commanders may designate mission-essential host nation (HN) or local national (LN) contractor personnel (*e.g.,* interpreters) as CAAF. CAAF includes contractor personnel previously identified as contractors deploying with the force. CAAF status does not apply to contractor personnel within U.S. territory working in support of contingency operations outside the United States.

Defense contractor. Any individual, firm, corporation, partnership, association, or other legal non-Federal entity that enters into a contract directly with the DoD to furnish services, supplies, or construction.

DoD Components. Includes the Office of the Secretary of Defense, the Military Departments, the Office of the Chairman of the Joint Chiefs of Staff (CJCS) and the Joint Staff, the Combatant Commands (CCMDs), the Office of the Inspector General of the Department of Defense, the Defense Agencies, and the DoD Field Activities.

Essential contractor service. A service provided by a firm or an individual under contract to the DoD to support mission-essential functions, such as support of vital systems, including ships owned, leased, or operated in support of military missions or roles at sea; associated support activities, including installation, garrison, and base support services; and similar services provided to foreign military sales customers under the Security Assistance Program. Services are essential if the effectiveness

of defense systems or operations has the potential to be seriously impaired by the interruption of these services, as determined by the appropriate functional commander or civilian equivalent.

Expeditionary Contract Administration (ECA). Contract administration conducted during joint or other expeditionary operations. Formerly known as the Contingency Contract Administrative Services or CCAS.

Expeditionary operations. Activities organized to achieve a specific objective in a foreign country.

External support contracts. Contracts awarded by contracting organizations whose contracting authority does not derive directly from the theater support contracting head(s) of contracting activity or from systems support contracting authorities.

Host nation (HN). A nation that permits, either in writing or through other official provision of consent, government representatives or agencies and/or agencies of another nation to operate, under specified conditions, within its territory.

Hostile environment. Operational environment in which local government forces, whether opposed to or receptive to operations that a unit intends to conduct, do not have control of the territory and population in the intended operational area.

Isolated personnel. U.S. military, DoD civilians, and contractor personnel (and others designated by the President or Secretary of Defense) who are unaccounted for as an individual or a group while supporting an applicable operation and are, or may be, in a situation where they must survive, evade, resist, or escape.

Law of war. The treaties and customary international law binding on the United States that regulate: the resort to armed force; the conduct of hostilities and the protection of war victims in international and non-international armed conflict; belligerent occupation; and the relationships between belligerent, neutral, and non-belligerent States. Sometimes also called the ''law of armed conflict'' or ''international humanitarian law,'' the law of war is specifically intended to address the circumstances of armed conflict. Consult the DoD Law of War Manual (available at *https://dod.defense.gov/Portals/1/Documents/pubs/DoD%20Law%20of%20War%20Manual%20-%20June%202015%20Updated%20Dec%202016.pdf?ver=2016-12-13-172036-190*) for an authoritative statement on the law of war.

Letter of authorization (LOA). A document issued by a contracting officer or his or her designee that authorizes contractor personnel to accompany the force to travel to, from, and within an operational area, and outlines U.S. Government authorized support authorizations within the operational area, as agreed to under the terms and conditions of the contract. For more information, see 48 CFR subpart 225.3.

Local national (LN). An individual who is a permanent resident of the nation in which the United States is conducting operations.

Long-term care. A variety of services that help a person with comfort, personal, or wellness needs. These services assist in the activities of daily living, including such things as bathing and dressing. Sometimes known as custodial care.

Mission-essential functions. Those organizational activities that must be performed under all circumstances to achieve DoD component missions or responsibilities, as determined by the appropriate functional commander or civilian equivalent. Failure to perform or sustain these functions would significantly affect the DoD's ability to provide vital services or exercise authority, direction, and control.

Non-CAAF. Personnel who are not designated as CAAF, such as LN employees and non-LN employees who are permanent residents in the operational area or TCNs not routinely residing with the U.S. Armed Forces (and TCN expatriates who are permanent residents in the operational area), who perform support functions away from the close proximity of, and do not reside with, the U.S. Armed Forces. U.S. Government-furnished support to non-CAAF is typically limited to force protection, emergency medical care, and basic human needs (*e.g.,* bottled water, latrine facilities, security, and food when necessary) when performing their jobs in the direct vicinity of the U.S. Armed Forces.

Operational area. An overarching term encompassing more descriptive terms (such as area of responsibility and joint operations area) for geographic areas where military operations are conducted.

Operational contract support (OCS). The ability to orchestrate and synchronize the provision of integrated contract support and management of contractor personnel providing support to command-directed operations within a designated operational area.

Operationally critical support. A critical source of supply for airlift, sealift, intermodal transportation services, or logistical support that is essential to the mobilization, deployment, or sustainment of the U.S. Armed Forces in applicable operations.

Prime contractor. Any supplier, distributor, vendor, or firm that has entered into a contract with the United States government.

Replacement centers. Centers at selected installations that ensure necessary accountability, training, and processing actions are taken to prepare personnel for onward movement and deployment to a designated operational area.

Requiring activity. A military or other designated supported organization that identifies the need for and receives contracted support to meet mission requirements during military operations.

Subcontractor. Any supplier, distributor, vendor, or firm that furnishes supplies or services to or for a prime contractor or another subcontractor.

Synchronized Predeployment and Operational Tracker-Enterprise Suite (SPOT–ES). A common joint database used to maintain contractor personnel visibility and accountability in applicable operations. References to SPOT–ES in this part will refer to that system or any database system that supersedes it.

Systems support contract. Contracts awarded by Military Service acquisition program management offices that provide fielding support, technical support, maintenance support, and, in some cases, repair parts support, for selected military weapon and support systems.

Theater business clearance. A CCDR policy or process to ensure visibility of and control over systems support and external support contracts executing or delivering support in designated areas of operations.

Theater support contract. A type of contract awarded by contracting officers deployed to an operational area serving under the direct contracting authority of the Military Service component, special operations force command, or designated joint contracting authority for the designated operation.

Total force. The organizations, units, and individuals that comprise the DoD resources for implementing the National Security Strategy. It includes DoD Active and Reserve Component military personnel, military retired members, DoD civilian personnel (including foreign national direct- and indirect-hires, as well as nonappropriated fund employees), contractor personnel, and host-nation support personnel. (For source information, see paragraph (a) of appendix A to this part.)

Uncertain environment. Operational environment in which host government forces, whether opposed to or receptive to operations that a unit intends to conduct, do not have totally effective control of the territory and population in the intended operational area.

§ 158.4 Policy.

It is DoD policy that:

(a) Defense contractor personnel are part of the total force. (See paragraph (a) of appendix A of this part).

(b) DoD Components implement OCS functions, including contract support integration, contracting support, and contractor management, during applicable operations.

(c) DoD Components will use contracted support only in appropriate situations, consistent with 48 CFR subpart 7.5, 48 CFR subpart 207.5, and Office of Federal Procurement Policy (OFPP) Policy Letter 11–01 (available at *https://www.federalregister.gov/documents/2011/09/12/2011-23165/publication-of-the-office-of-federal-procurement-policy-ofpp-policy-letter-11-01-performance-of*), and paragraph (b) of appendix A to this part.

(d) Generally, contractors are responsible for providing their employees with all life, mission, medical, logistics, and administrative support necessary to perform the contract. However, in many operations, especially in those in which conditions are austere, hostile, and/or non-permissive, the decision may be made that it is in the interest of the U.S. Government to allow for selected life, mission, medical, logistics, and administrative support to be provided to contractor personnel to ensure continuation of essential contractor services, consistent with DoD regulations. Contractors authorized to accompany the force (CAAF) may receive U.S. Government-furnished support commensurate with the operational situation in accordance with the terms of the contract.

(e) A common joint database (*i.e.,* the Synchronized Predeployment and Operational Tracker-Enterprise Suite (SPOT–ES) or its successor) will be used to maintain contractor personnel visibility and accountability in applicable operations. References to SPOT–ES in this part will refer to that system or any database system that supersedes it for contractor personnel visibility and accountability.

(f) Solicitations and contracts will:

(1) Require defense contractors to provide personnel who are ready to perform contract duties in applicable operations and environments by verifying the medical, dental, and psychological fitness of their employees and, if applicable, by ensuring currency of any professional qualifications and associated certification requirements needed for employees to perform contractual duties.

(2) Incorporate contractual terms and clauses into the contract that are consistent with applicable host nation (HN) laws and agreements or designated operational area performance considerations.

(g) Contracts for highly sensitive, classified, cryptologic, or intelligence projects and programs must implement this rule to the maximum extent possible, consistent with applicable laws, Executive orders, presidential directives, and relevant DoD issuances. To the extent that contracting activities are unable to comply with this rule, they should submit a request for a waiver to the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)). Waiver requests should include specific information providing the rationale regarding the inability to comply with this rule. The USD(A&S) will consider these requests in coordination with the Under Secretary of Defense for Intelligence and Security.

§ 158.5 Procedures.

(a) *Planning considerations and requirements; requirements for publication.* CCDRs will make management policies and specific OCS requirements for contractual support available to affected contractor personnel. The Geographic Combatant Commander (GCC) OCS web page will set forth the following:

(1) Theater business clearance (TBC) requirements for contracts currently being performed and delivering contracted support in the CCDR's AOR.

(2) Restrictions imposed by applicable local laws, international law, status of forces agreements (SOFAs), and other agreements with the HN.

(3) CAAF-related deployment requirements, including, but not limited to:

(i) Pre-deployment and required individual protective equipment (IPE) training.

(ii) Physical health standards.

(iii) Immunization and medical requirements.

(iv) Deployment procedures and theater reception.

(4) Reporting requirements for accountability and visibility of contractor personnel and associated contracts.

(5) Operational security (OPSEC) plans and restrictions.

(6) Force protection policies.

(7) Personnel recovery procedures.

(8) Availability of medical and other authorized U.S. Government support (AGS).

(9) Redeployment procedures, including disposition of U.S. Government-furnished equipment.

(b) *Contractual relationships.* The contract provides the only legal basis for the contractual relationship between the DoD and the contractor. The contracting officer is the only individual with the legal authority to enter into such a binding relationship with the contractor.

(1) Commanders have the ability to restrict installation access, and contractor personnel must comply with applicable CCDR and local commander force protection policies. However, military commanders or unit personnel do not have contracting authority over contractors or contractor personnel and may not direct contractors or contractor personnel to perform contractual tasks. Moreover, the contract does not provide a basis for commanders to exercise operational control or tactical control over contractors or their personnel or to assign or attach contractors or their personnel to a command or organization.

(2) The contract must specify:

(i) The terms and conditions under which the contractor is to perform, including minimum acceptable professional and technical standards.

(ii) The method by which the contracting officer will notify the contractor of the deployment procedures to process contractor personnel who are deploying to the operational area.

(iii) The specific contractual support terms and agreement between the contractor and DoD.

(iv) The appropriate flow-down of provisions and clauses to subcontractors and state that the service performed by contractor personnel is not considered to be active duty or active service. For more information, see paragraph (c) in appendix A to this part, and 38 U.S.C. 106, ''Active Duty Service Determinations for Civilian or Contractual Groups.''

(3) The contract must contain applicable clauses to ensure efficient deployment, accountability, visibility, protection, and redeployment of contractor personnel and detail authorized levels of health service, sustainment, and other support that is authorized to be provided to contractor personnel supporting applicable operations outside the United States.

(c) *Restrictions on contractors performing inherently governmental functions.* (1) Paragraph (b) of appendix

A of this part, 48 CFR subpart 7.5, 48 CFR subpart 207.5; Public Law 105–270 and Office of Management and Budget Circular No. A–76 (available at *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/circulars/A76/a76_incl_tech_correction.pdf*) bar inherently governmental functions and duties from private sector performance.

(2) Contractor personnel may provide support during applicable operations, including, but not limited to:

(i) Transporting munitions and other supplies.

(ii) Providing communications support.

(iii) Performing maintenance functions for military equipment.

(iv) Providing force protection and private security services.

(v) Providing foreign language interpretation and translation services.

(vi) Providing logistics services, such as billeting and messing.

(vii) Intelligence surveillance and reconnaissance support.

(viii) Commercial air assets.

(3) The requiring official will review each service performed by contractor personnel in applicable operations on a case-by-case basis to ensure compliance with paragraph (b) of appendix A of this part and applicable laws and international agreements.

(4) Restrictions on use of contractor personnel for private security services. A contractor may be authorized to provide private security services only if such authorization is consistent with applicable U.S., local, and international law, including applicable agreements with the HN or other applicable international agreements, and 32 CFR part 159. For more information, see paragraph (b) of appendix A of this part and 48 CFR subpart 252.2, which provide specific procedures and guidance.

(d) *Combating trafficking in persons.* Trafficking in persons is a violation of U.S. law and internationally recognized human rights, and is incompatible with DoD core values.

(1) 48 CFR subpart 222.17 and 48 CFR 52.222–50 also known and referred to as Combating Trafficking in Persons, describe how contractors, contracting officers and their representatives, and commanders must deter activities such as prostitution, forced labor, and other related activities contributing to trafficking in persons. For more information, see paragraph (d) of appendix A to this part.

(2) Contracts in support of applicable operations will include terms and provisions that require that the contractor remove personnel from the performance of the contract and return any of its personnel who have been determined to have engaged in any of the activities mentioned in paragraph (h)(4)(v)(H) of this section from the operational area to the home of record, point of origin, or an authorized location at the end of contract performance or sooner as directed by the contracting officer. Once notified of such an incident, the contracting officer will notify the commander responsible in the AOR and provide any information required to support an investigation. For more information, see 48 CFR subpart 222.17 and 48 CFR subpart 42.15.

(e) *Law of war compliance.* Contract work statements for contractors and their subcontractors must comply with the policies in paragraph (gg) of appendix A to this part and require contractors that engage in activities governed by the law of war to implement effective programs to prevent violations of the law of war by their employees and subcontractors, including programs for law of war dissemination and periodic training commensurate with each individual's duties and responsibilities. Paragraph (gg) of appendix A includes, among others, DoD policy that ''[a]ll military and U.S. civilian employees, contractor personnel, and subcontractors assigned to or accompanying a DoD Component must report through their chain of command all reportable incidents, including those involving allegations of non-DoD personnel having violated the law of war.'' Contracts in support of applicable operations must include provisions to require contractor employees to report reportable incidents as defined in paragraph (gg) of appendix A to this part to the appropriate Commander (*e.g.,* the commander of the unit they are accompanying or the installation to which they are assigned) or command-designated office.

(f) *CAAF designation, legal status, credentialing, and security clearance requirements*—(1) *CAAF designation.* (i) CAAF designation is provided to contractor personnel, including all tiers of subcontractor personnel, through a letter of authorization (LOA). CAAF generally include all U.S. citizen and third country national (TCN) employees not normally residing within the operational area whose area of performance is in the direct vicinity of the U.S. Armed Forces and who routinely are co-located with the U.S. Armed Forces, especially in non-permissive environments. Personnel co-located with the U.S. Armed Forces will be afforded CAAF status through an LOA.

(ii) In some cases, CCDRs or subordinate commanders may designate mission-essential HN or LN contractor personnel as CAAF unless otherwise precluded by HN law, a SOFA, or other agreement. In general, LNs are only afforded CAAF status when they assume great personal risk to perform an essential function.

(iii) Personnel who do not receive a CAAF designation are referred to as non-CAAF. Individuals' CAAF status may change depending on where their employers or the provisions of their contract details them to work. CAAF designation may affect, but does not necessarily affect, a person's legal status under the law of war and the treatment to which that person is entitled under the 1949 Geneva Conventions if that person falls into the power of the enemy during international armed conflict. Although CAAF are regarded as ''persons authorized to accompany the armed forces,'' personnel who are not CAAF may also receive this status under the law of war. For more information, see section 4.15 of paragraph (e) of appendix A of this part. In addition, although CAAF designation and access to AGS often coincide, CAAF status does not determine AGS provided.

(2) *Legal status.* In implementing this part, the DoD Component heads must abide by applicable laws, regulations, international agreements, and DoD policy as they relate to contractor personnel performing contractual support in support of applicable operations.

(i) *HN and third country laws.* All contractor personnel must comply with applicable HN and third country laws. The applicability of HN and third country laws may be affected by international agreements (*e.g.,* agreements between the United States and the HN) and customary international law (*e.g.,* limits imposed by customary international law on the reach of third country laws).

(A) The United States, HN, or other countries may hire contractor personnel whose status may change (*e.g.,* from non-CAAF to CAAF) depending on where in the operational AOR their employers or the provisions of their contracts detail them to work.

(B) CCDRs, as well as subordinate commanders, Military Service Component commanders, the Directors of the Defense Agencies, and Directors of DoD Field Activities should recognize limiting factors regarding the employment of LN and TCN personnel. Limiting factors include, but are not limited to:

(*1*) Imported labor worker permits.

(*2*) Workforce and hour restrictions.

(*3*) Medical, life, and disability insurance coverage.

(*4*) Taxes, customs, and duties.
(*5*) Cost of living allowances.
(*6*) Hardship differentials.
(*7*) Access to classified information.
(*8*) Hazardous duty pay.

(ii) *U.S. laws.* U.S. citizens and CAAF, with some exceptions, are subject to U.S. laws and U.S. Government regulations.

(A) All U.S. citizen and TCN CAAF are subject to potential prosecutorial action under the criminal jurisdiction of the United States, including, but not limited to, 18 U.S.C. 3261, also known and referred to in this part as the Military Extraterritorial Jurisdiction Act of 2000 (MEJA). MEJA extends U.S. federal criminal jurisdiction to certain contractor personnel for offenses committed outside U.S. territory.

(B) The March 10, 2008, Secretary of Defense Memorandum states that contractor personnel are subject to prosecution pursuant to 10 U.S.C. Chapter 47, also known and referred to in this part as the Uniform Code of Military Justice (UCMJ), when serving overseas in support of a declared war or contingency, and provides guidance to commanders on the exercise of this UCMJ jurisdiction.

(C) Other U.S. law may allow prosecution of offenses by contractor personnel (*e.g.,* 18 U.S.C. 7).

(3) *1949 Geneva Conventions.* The 1949 Geneva Conventions, including the Geneva Convention Relative to the Treatment of Prisoners of War, may be applicable to certain contractor personnel who fall into the power of the enemy during international armed conflict.

(i) All contractor personnel may be at risk of injury or death incidental to enemy actions while supporting military operations.

(ii) Contractor personnel with CAAF status and other contractor personnel who have been authorized to accompany the U.S. Armed Forces and who are at risk of capture and detention by the enemy as prisoners of war will receive an appropriate identification card required by the Geneva Convention Relative to the Treatment of Prisoners of War, consistent with paragraph (f) of appendix A to this part.

(iii) CAAF may be used in support of applicable operations, consistent with the terms of U.S. Government authorization. If they fall into the power of the enemy during international armed conflict, contractor personnel with CAAF status are entitled to prisoner of war status.

(4) *Credentialing.* Contracts must require CAAF to receive an identification card with the Geneva Convention's category of persons authorized to accompany the armed forces. For more information, see paragraphs (f) through (h) of appendix A to this part. At the time of identification card issuance, CAAF must present their SPOT–ES-generated LOA as proof of eligibility.

(i) Sponsorship must incorporate the processes for confirming eligibility for an identification card. The sponsor is the person affiliated with the DoD or another Federal agency that takes responsibility for verifying and authorizing an applicant's need for a Geneva Convention identification card. A DoD official or employee must sponsor applicants for a common access card (CAC).

(ii) Individuals who have multiple DoD personnel category codes (*e.g.,* an individual who is both a reservist and a contractor) will receive a separate identification card in each personnel category for which they are eligible. Individuals under a single personnel category code may not hold multiple current identification cards of the same form.

(5) *Security clearance requirements.* To the extent necessary, the contract must require the contractor to provide personnel who have the appropriate security clearance or who are able to satisfy the appropriate background investigation requirements to obtain access required to perform contractual requirements in support of the applicable operation.

(g) *Considerations for support to contractors*—(1) *U.S. Government support.* Generally, contracts supporting applicable operations must require contractors to provide to their personnel all life, mission, medical, and administrative support necessary to perform the contractual requirements and meet CCDR guidance posted on the GCC OCS web page. In some operations, especially those in which conditions are austere, uncertain, or non-permissive, the CCDR may decide it is in the U.S. Government's interest for the DoD to allow contractor personnel access, consistent with DoD regulations, to selected AGS. The contract must state the level of access to AGS in its terms and conditions.

(i) In operations where conditions are austere, uncertain, or non-permissive, the contracting officer will consult with the requiring activity to determine if it is in the U.S. Government's interests to allow for selected life, mission, medical, and administrative support to certain contractor personnel.

(ii) The solicitation and contract must specify the level of AGS that the U.S. Government will provide to contractor personnel and what support provided to the contractor personnel is reimbursable to the U.S. Government.

(iii) Access to DoD benefits facilitated by the identification card may be granted to contractors under certain circumstances. For more information, see paragraph (i) of appendix A to this part.

(2) *IPE.* When necessary or directed by the CCDR, the contracting officer will include language in the contract authorizing the issuance of military IPE (*e.g.,* chemical, biological, radiological, nuclear (CBRN) protective ensemble, body armor, ballistic helmet) to contractor personnel as part of AGS.

(i) Typically, IPE will be issued by the central issue facility at the deployment center before deployment to the designated operational area and must be accounted for and returned to the U.S. Government or otherwise accounted for, in accordance with appropriate DoD Component regulations, directives, and instructions.

(ii) Contractor personnel deployment training will include training on the proper care, fitting, and maintenance of protective equipment, whether issued by the U.S. Government or provided by the contractor in accordance with the contractual requirements. This training will include practical exercises within mission-oriented protective posture levels.

(iii) When the terms and conditions of a contract require a contractor to provide IPE, such IPE must meet minimum standards as defined by the contract.

(3) *Clothing.* Contractors, or their personnel, must provide their own personal clothing, including casual and work clothing required to perform the contract requirements.

(i) Generally, CCDRs will not authorize the issuance of military clothing to contractor personnel or will not allow the wearing of military or military look-alike uniforms. Contractor personnel are prohibited from wearing military clothing unless specifically authorized in writing by the CCDR. However, a CCDR or subordinate joint force commander (JFC) deployed forward may authorize contractor personnel to wear standard uniform items for operational reasons. Contracts must include terms and clauses that require that this authorization be provided in writing by the CCDR and that the uniforms are maintained in the possession of authorized contractor personnel at all times.

(ii) When commanders issue any type of standard uniform item to contractor personnel, care must be taken to ensure that contractor personnel are distinguishable from military personnel

through the use of distinctive patches, arm bands, nametags, or headgear, consistent with force protection measures, and that contractor personnel carry the CCDR's written authorization with them at all times.

(4) *Weapons.* Contractor personnel are not authorized to possess or carry firearms or ammunition during applicable operations, except as provided in paragraph (h)(2)(ii) of this section and 32 CFR part 159. The contract will provide the terms and conditions governing the possession of firearms by contractor personnel. Information on all weapons authorized for contractors and their personnel will be entered into the SPOT–ES database.

(5) *Mortuary affairs.* The DoD Mortuary Affairs Program, as described in paragraph (j) of appendix A to this part, covers all CAAF who die while performing contractual requirements in support of the U.S. Armed Forces. Mortuary affairs support and transportation will be provided on a reimbursable basis for the recovery, identification, and disposition of remains and personal effects of CAAF.

(i) Every effort must be made to identify remains and account for un-recovered remains of contractor personnel and their dependents who die in military operations, training accidents, and other incidents. The remains of contractor personnel who die as the result of an incident in support of military operations are afforded the same dignity and respect afforded to remains of service members. For more information, see paragraph (k) of appendix A to this part.

(ii) The DoD may provide mortuary affairs support and transportation on a reimbursable basis for the recovery, identification, and disposition of remains and personal effects of non-CAAF at the request of the Department of State (DOS) and in accordance with this rule, applicable agreements with the HN, and applicable contract provisions. The Under Secretary of Defense for Personnel and Readiness (USD(P&R)) will coordinate this support with the DOS, including for cost reimbursement to the DoD Component for the provision of this support.

(iii) The responsibility for coordinating the transfer of non-CAAF remains to the HN or affected nation resides with the GCC in coordination with the DOS, through the respective embassies, or through the International Committee of the Red Cross, the International Federation of the Red Cross or Red Crescent Societies, as appropriate, and in accordance with applicable contract clauses.

(6) *Medical support and evacuation.* Generally, the DoD will provide only resuscitative care, stabilization, and hospitalization at military medical treatment facilities (MTFs) and assistance with patient movement in emergencies where loss of life, limb, or eyesight could occur. The DoD Foreign Clearance Guide (FCG) and the GCC OCS web pages contain theater-specific contract language to provide contract terms to clarify available healthcare for contractor personnel. During operations in austere, uncertain, or hostile environments, CAAF may encounter situations in which they cannot access adequate medical support in the local area.

(i) All costs associated with the treatment and transportation of contractor personnel to the selected civilian facility are reimbursable to the U.S. Government and are the responsibility of contractor personnel, their employers, or their health insurance providers. For more information, see paragraph (l) of appendix A to this part. Nothing in this paragraph is intended to affect the allowability of costs incurred under a contract.

(ii) Medical support and evacuation procedures:

(A) All CAAF will normally be afforded emergency medical and dental care if injured while supporting applicable operations. Additionally, non-CAAF who are injured while in the vicinity of the U.S. Armed Forces while supporting applicable operations also normally will receive emergency medical and dental care. Emergency medical and dental care includes medical care situations in which life, limb, or eyesight is jeopardized. Examples of emergency medical and dental care include:

(*1*) Examination and initial treatment of victims of sexual assault.

(*2*) Refills of prescriptions for life-dependent drugs.

(*3*) Repair of broken bones, lacerations, and infections.

(*4*) Traumatic injuries to the teeth.

(B) MTFs normally will not authorize or provide primary medical or dental care to CAAF. When required and authorized by the CCDR or subordinate JFC, this support must be specifically authorized under the terms and conditions of the contract and detailed in the corresponding LOA. Primary care is not authorized for non-CAAF. Primary care includes:

(*1*) Routine inpatient and outpatient services.

(*2*) Non-emergency evacuation.

(*3*) Pharmaceutical support (with the exception of emergency refills of prescriptions for life-dependent drugs).

(*4*) Non-emergency dental services.

(*5*) Other medical support, as determined by the CCDR or JFC based on recommendations from the cognizant medical authority and the existing capabilities of the forward-deployed MTFs.

(C) The DoD will not provide long-term care to contractor personnel.

(D) The CCDR or subordinate commander has the authority to quarantine or restrict movement of contractor personnel. For more information, see paragraph (m) of appendix A to this part.

(E) When CAAF are evacuated for medical reasons from the designated operational area to MTFs funded by the Defense Health Program, normal reimbursement policies will apply for services rendered by the facility. If CAAF require medical evacuation outside the United States, the sending MTF staff will assist the CAAF in making arrangements for transfer to a civilian facility of the CAAF's choice. When U.S. forces provide emergency medical care to LN contractor personnel, these patients will use HN transportation means, when possible, for evacuation or transportation to their local medical systems. For more information, see paragraph (n) of appendix A to this part.

(7) *Other AGS.* 48 CFR subpart 225.3 lists types of support that may be authorized for contractor personnel who are deployed with or otherwise provide support to applicable operations, which may include transportation to and within the operational area, mess operations, quarters, phone service, religious support, and laundry.

(i) Contractor personnel of U.S. owned-contractors who are supporting DoD activities may be authorized the use of the military postal service. For more information, see paragraph (o) of appendix A to this part. The extent of postal support will be set forth in the contract. The provisions for postal support in such contracts must be reviewed and approved by the applicable CCDR, or the designated representative, and the Military Department concerned before execution of the contract.

(ii) Morale, welfare, and recreation and exchange services are authorized for contractor personnel who are U.S. citizens supporting DoD activities outside the United States. For more information, see paragraphs (p) and (q) of appendix A to this part.

(h) *Accountability and visibility of contracts and contractor personnel.* (1)

During applicable operations, contractors will use SPOT–ES as follows:

(i) All CAAF will register in SPOT–ES by name.

(ii) Non-CAAF will be registered in SPOT–ES by name if they are performing on a DoD contract for at least 30 consecutive days unless a lesser number of days is requested by the CCDR or if they require access to a U.S. or coalition-controlled installation. Contracting officers will ensure non-CAAF who require access to U.S. or coalition-controlled installations are registered in SPOT–ES before requesting or receiving installation access.

(iii) All private security contractor personnel and all other contractor personnel authorized to carry weapons, regardless of the length of the performance or contract value, will register in SPOT–ES by name.

(iv) During operations other than contingency operations, humanitarian assistance, or peace operations, contractors will use SPOT–ES in situations required by the CCDR and as follows:

(2) To account for:

(i) All U.S. citizen and TCN contractor personnel.

(ii) All private security contractor personnel and all other contractor personnel authorized to carry weapons, where the designated area and place of performance are outside the United States, regardless of the length of performance or contract value.

(3) The contracting officer will account for an estimated total number of LNs employed under the contract, by country or on a monthly basis.

(4) Contract linguists will register in SPOT–ES in the same manner as other contractor personnel and will also be tracked using the Contract Linguist Enterprise-wide Database. For more information, see paragraph (r) of appendix A to this part.

(5) LNs should be registered in SPOT–ES by name to improve data quality and reduce confusion during a transition to accountability requirements during a contingency operation, which will require by-name accountability.

(6) The DoD has designated SPOT–ES as the joint web-based database to assist the CCDRs in maintaining awareness of the nature, extent, and potential risks and capabilities associated with contracted support for contingency operations, humanitarian assistance, and peacekeeping operations, or military exercises designated by the CCDR. To facilitate integration of contractors and other personnel, as directed by the USD(A&S) or the CCDR, and to ensure the accurate forecasting and provision of accountability, visibility, force protection, medical support, personnel recovery, and other related support, the following procedures will help establish, maintain, and validate the accuracy of information in the database.

(i) SPOT–ES will:

(A) Serve as the central repository for deployment status and reporting on the contractor personnel as well as other U.S. Government agency contractor personnel, as applicable. For additional information, see paragraph (s) of appendix A to this part.

(B) Track information for all DoD contracts that are awarded in support of applicable operations outside of the United States, in accordance with the SPOT Business Rules and as directed by the USD(A&S), 48 CFR subpart 225.3, or the CCDR. SPOT–ES will collect and report on:

(*1*) The total number of contractor personnel working under contracts entered into as of the end of each calendar quarter.

(*2*) The total number of contractor personnel performing security functions under contracts entered into with the DoD.

(*3*) The total number of contractor personnel killed or wounded who were performing under any contracts entered into with the DoD.

(C) Provide personnel accountability via unique identifier (*e.g.,* Electronic Data Interchange Personnel Identifier or Foreign Identification Number) of contractor personnel and other personnel, as directed by the USD(A&S), 48 CFR subpart 225.3, or the CCDR.

(D) Contain, or link to, minimum contract information necessary to:

(*1*) Establish and maintain accountability of the personnel in paragraph (g) of this section.

(*2*) Maintain information on specific equipment related to the performance of private security contracts.

(*3*) Maintain oversight information on the contracted support in applicable operations.

(E) Comply with:

(*1*) The personnel identity protection program requirements found in paragraphs (t) and (u) of appendix A to this part.

(*2*) The DoD Information Enterprise architecture. For more information, see paragraph (v) of appendix A to this part.

(*3*) The interoperability and secure sharing of information requirements found in paragraphs (w) through (y) of appendix A to this part.

(ii) Before registering in SPOT–ES, contracting officers, company administrators, and U.S. Government administrators or authorities must meet minimum training requirements in the SPOT Business Rules.

(iii) The contractor must enter all required data into SPOT–ES before its employees may deploy to or enter a theater of operations, and maintain such data, as directed by the USD(A&S), 48 CFR subpart 225.3, or the CCDR.

(iv) The contracting officer will enter the DoD contract services or capabilities for all contracts that are awarded in support of applicable operations, including theater support, external support, and systems support contracts, into SPOT–ES consistent with 48 CFR 252.225–7040.

(v) In accordance with applicable acquisition policy and regulations and under the terms and conditions of each affected contract, all contractors awarded contracts that support applicable operations must input employee data and maintain accountability, by name, of designated contractor personnel in SPOT–ES as required by 48 CFR 252.225–7040.

(A) Contractors must maintain current status of the daily location of their employees and, when requested, submit to the COR up-to-date, real-time information reflecting all personnel deployed or to be deployed in support of applicable operations.

(B) Prime contractors must enter up-to-date information regarding their subcontractors at all tiers into SPOT–ES.

(vi) In all cases, users providing classified information in response to the requirements of this part must report and maintain that information on systems approved for the level of classification of the information provided.

(7) The contracting officer or his or her designee will ensure a SPOT–ES-generated LOA has been issued to all CAAF who are approved to deploy, as required by 48 CFR 252.225–7040, and selected non-CAAF (*e.g.,* LN and non-LN employees who are permanent residents in the operational area, or TCNs not routinely residing with the U.S. Armed Forces who perform support functions away from the close proximity of, and do not reside with, the U.S. Armed Forces, and private security contractors), pursuant to 48 CFR subpart 225.3, or as otherwise designated by the CCDR.

(i) The contract will require that all contractor personnel issued an LOA carry the LOA with them at all times.

(ii) [Reserved].

(i) *Theater admission requirements.* Special area, country, and theater personnel clearance documents must be current, in accordance with the DoD FCG, and coordinated with affected agencies to ensure that entry

requirements do not adversely affect accomplishment of mission requirements.

(1) CAAF employed in support of DoD missions are considered DoD-sponsored personnel for DoD FCG purposes.

(2) Contracting officers must ensure contracts include a requirement for contractor personnel to meet theater personnel clearance requirements and obtain personnel clearances through the Aircraft and Personnel Automated Clearance System before entering a designated theater of operations. For more information, see paragraph (z) of appendix A to this part.

(3) Contracts must require contractor personnel to obtain proper identification credentials, such as passports, visas, and other documents required to enter and exit a designated operational area, and have a required Geneva Conventions identification card, or other appropriate DoD credential from the deploying center.

(j) *Deployment procedures.* Contracts must contain terms and conditions that detail the need for contractors to follow these credentialing requirements, as required by 48 CFR subpart 225.3, 48 CFR 252.225–7040, and as outlined in the DoD FCG. At a minimum, contracting officers must ensure that contracts address operational area-specific contract requirements and the means by which the DoD will inform contractor personnel of the requirements and procedures applicable to their deployment.

(1) *Deployment center designation.* A formally designated group, joint, or Military Department deployment center will be used to conduct deployment and redeployment processing for CAAF, unless contractor-performed theater admission preparation is authorized or waived by the CCDR or designee pursuant to DoDI 3020.41, ''Operational Contract Support (OCS).'' If the contract contains clauses that specify another U.S. Government-authorized process that incorporates all the functions of a deployment center, such process may also be used by a contractor to conduct deployment and redeployment processing for CAAF.

(2) *Medical preparation.* (i) In accordance with § 158.6, contracts must require that contractors provide medically and physically qualified contractor personnel to perform duties in applicable operations, as outlined in the contract.

(A) Any CAAF deemed unsuitable to deploy during the deployment process due to medical or dental reasons will not be authorized to deploy.

(B) The Secretary of Defense may direct immunizations as mandatory for CAAF performing essential contractor services.

(C) For contracts that employ CAAF who are U.S. citizens, the contract must require that contractors make available the medical and dental records of deploying employees who authorize release for this purpose based on this section, applicable cognizant medical authority guidance, and relevant Military Department policy. These records should include current panographic x-rays. For more information, see paragraph (aa) of appendix A to this part.

(ii) U.S. Government personnel may not involuntarily immunize contractor personnel or require contractor personnel to involuntarily disclose their medical records. Therefore, the contracting officer will provide contractors time to notify and/or hire employees who voluntarily consent to U.S. Government medical requirements, including to receiving U.S. Government-required immunizations and disclosing their private medical information to the U.S. Government.

(iii) All CAAF will receive medical threat pre-deployment briefings at the deployment center to communicate health risks and countermeasures in the designated operational area. For more information, see paragraph (bb) of appendix A to this part.

(A) In accordance with GCC or JFC plans and orders, contracts must include terms and conditions that fully specify health readiness and force health protection capability, either as a responsibility of the contractor or the DoD Components, to ensure appropriate medical staffing in the operational area.

(B) Health surveillance activities must include plans for CAAF. For more information, see paragraphs (bb) and (cc) of appendix A to this part. Section 158.6 of this rule further addresses deoxyribonucleic acid (DNA) collection and other medical requirements.

(3) *Training.* Joint training policy and guidance applies to both members of the Military Services and contractor personnel. For more information, see paragraph (dd) of appendix A to this part. CCDRs will place standing training requirements on the GCC OCS web pages for reference by contractors. Other training requirements that are specific to an applicable operation will be placed on the GCC OCS web pages shortly after identifying the requirement so that contracting officers can incorporate the training requirement into the appropriate contracts as soon as possible. Training requirements:

(i) Must be included, or incorporated by reference, in contracts employing contractor personnel supporting applicable operations.

(ii) Include specific requirements established by the CCDR and training required in accordance with this rule, 32 CFR part 159, and paragraphs (ee) through (hh) of appendix A to this part.

(4) *Deployment center procedures.* Affected contracts must require that all CAAF deploying from outside the operational area process through a designated deployment center or a U.S. Government-authorized, contractor-performed deployment processing facility before deploying to an applicable operation and redeploy in the same manner. Upon receiving the contracted company's certification that employees meet deployability requirements, the contracting officer or representative will digitally sign the LOA, which CAAF will then present to officials at the deployment center. The deployment process includes, but is not limited to:

(i) Verifying registration in SPOT–ES.

(ii) Issuing applicable U.S. Government-furnished equipment.

(iii) Verifying the completion of medical and dental screening before arrival.

(iv) Administering required theater-specific immunizations and medications not available through healthcare providers in the general public.

(v) Verifying and, when necessary, providing required training, country and cultural awareness briefings, and other training and briefings, as required by the CCDR. Examples of required training include, but are not limited to:

(A) Law of war, including the 1949 Geneva Conventions and DoD policy to implement the law of war.

(B) Law and policy applicable to detainee operations and intelligence interrogation operations, as appropriate.

(C) General orders.

(D) Standards of conduct.

(E) Force protection.

(F) Personnel recovery.

(G) First aid.

(H) Combating trafficking in persons.

(I) OPSEC.

(J) Anti-terrorism.

(K) Counterintelligence reporting.

(L) The use of CBRN protective ensemble.

(M) Deployment health threats briefing.

(5) *Certification.* Contracts supporting applicable operations must include terms and conditions requiring contractors to certify to the authorized U.S. Government representative, before deployment, that each individual has completed all required deployment processing actions.

(6) *Legal.* Contractor personnel are not entitled to military legal assistance in-

theater or at the deployment center. Individual contractor personnel must have their personal legal affairs in order (*e.g.,* preparing and completing powers of attorney, wills, trusts, and estate plans) before reporting to deployment centers.

(7) *Waivers.* For required contracted support of 17 days or less in an operational area, the CCDR or designee may waive a portion of the formal procedural requirements pursuant to DoDI 3020.41, ''Operational Contract Support (OCS),'' which may include the CCDR or designee waiving the requirement in writing for processing through a deployment center. However, the CCDR or designee may not waive the requirements to possess proper identification cards and to establish and maintain accountability for all contractor personnel, or any medical requirement without the prior approval of the cognizant medical authority or their designee. If a contract authorizes contractor personnel to be armed, the requirements of paragraphs (c)(4) and (k)(2) of this section may not be waived.

(k) *Reception*—(1) *Designated reception site.* In applicable operations, all CAAF must enter into the operational area through a designated reception site.

(i) Based upon a visual inspection of the LOA, the site will verify that contractor personnel are entered in SPOT–ES and meet theater-specific entry requirements.

(ii) Contractor personnel already in the designated operational area when a contingency is declared must report to the designated reception site as soon as it is operational based on the terms and conditions of the contract.

(iii) When entering a designated reception site for theater entry processing, if any CAAF does not have the proper documentation to perform in an area, he or she will be refused entry into the theater, and the contracting officer will notify the contractor to take the necessary action to resolve the issue. Should the contractor fail to take action, the CAAF individual will be sent back to his or her departure point, or directed to report to the Military Service Component command or Defense Agency responsible for that specific contract, for theater entrance processing.

(2) *Contractor integration.* It is critical that CAAF brought into an operational area are properly integrated into the military operation through a formal reception process. At a minimum, they will:

(i) Meet theater entry requirements and be authorized to enter the theater.

(ii) Be accounted for in SPOT–ES.

(iii) Possess any required IPE, including CBRN protective ensemble.

(iv) Be authorized any contractually required AGS and force protection.

(l) *In-theater management*—(1) *Conduct and discipline.* Contract terms and conditions must require that CAAF comply with CCDR theater orders, applicable directives, laws, and regulations. Non-CAAF who require base access to perform contractual requirements must follow base force protection and security-related procedures, as applicable.

(i) The contracting officer may appoint a designee (usually a COR) as a liaison between the contracting officer and the contractor and requiring activity. This designee monitors and reports contractor performance and requiring activity concerns to the contracting officer. In emergency situations (*e.g.,* enemy or terrorist actions or natural disaster), the cognizant military commander may recommend or issue warnings or messages urging contractor personnel to take emergency actions to remove themselves from harm's way or to take other appropriate self-protective measures. During armed conflict, contractor personnel are not exempt from the authority that commanders may exercise to control the movement of persons and vehicles within the immediate vicinity of operations. For more information, see sections 5.2.2.1, 13.8, and 14.6 of paragraph (e) of appendix A to this part.

(ii) The contractor is responsible for disciplining contractor personnel, as necessary and appropriate. However, in accordance with 48 CFR 252.225–7040(h)(1), the contracting officer may direct the contractor, at its own expense, to remove and replace any contractor personnel who jeopardize or interfere with mission accomplishment, who threaten force protection measures, or who fail to comply with or violate applicable requirements of the contract. Such action may:

(A) Include contractor personnel whose actual field performance (certification or professional standard) is below the contractual requirement.

(B) Be taken at U.S. Government discretion without prejudice to the contractor's rights under any other provision of the contract. A commander also has the authority to take certain actions affecting contractor personnel, such as the ability to revoke or suspend security access or impose restrictions from access to military installations or specific worksites.

(iii) CAAF, or individuals employed by or accompanying the Military Services outside the United States, are subject to potential prosecutorial action under the criminal jurisdiction of the United States, pursuant to sections 7, 2441, 2442, or 3261 of Title 18, U.S.C., or other provisions of U.S. law, including the UCMJ.

(A) Commanders possess significant authority to act whenever criminal acts are committed by anyone subject to the MEJA and UCMJ that relates to or affects the commander's responsibilities. This includes situations in which the alleged offender's precise identity or actual affiliation is undetermined. The March 10, 2008, Secretary of Defense Memorandum provides guidance to commanders on the exercise of this UCMJ jurisdiction over DoD contractor personnel serving with or accompanying the U.S. Armed Forces overseas during declared war and in contingency operations.

(B) Contracting officers will ensure that contractors are aware of their employees' status and liabilities as CAAF and the required training associated with this status.

(C) CCDRs retain authority to respond to an incident, restore safety and order, investigate, apprehend suspected offenders, and otherwise address the immediate needs of the situation.

(iv) The Department of Justice may prosecute misconduct under applicable Federal laws, including MEJA and 18 U.S.C. 2441. Contractor personnel also are normally subject to the domestic criminal law of the local country. When confronted with disciplinary problems involving contractor personnel, commanders should seek the assistance of their legal staff, the contracting officer responsible for the contract, and the contractor's management team.

(v) In the event of an investigation of reported offenses allegedly committed by or against contractor personnel, appropriate investigative authorities will keep the contracting officer informed, to the extent possible without compromising the investigation, if the alleged offense has a potential contract performance implication.

(2) *Force protection and weapons issuance.* CCDRs must include contractor personnel in their force protection planning and communicate the results to contracting activities and contractors via the GCC OCS web page. In general, contractors are responsible for the security of their own personnel. Contractor personnel working within a U.S. military facility or in close proximity to the U.S. Armed Forces may receive incidentally the benefits of measures taken to protect the U.S. Armed Forces. For more information, see paragraph (ee) of appendix A to this part. However, where additional

security is needed to achieve force protection, and it is not operationally or cost effective for contractors to do so individually, the commander may determine it is in the interests of the U.S. Government to provide security for contractor personnel. When security is provided through military means, contractor personnel should receive a level of force protection equal to that of DoD civilian employees.

(i) When the CCDR deems military force protection and legitimate civil authority are unavailable or insufficient, he or she may authorize, in writing, contractor personnel to be armed for self-defense purposes only. In authorizing contractor personnel to be armed, the contractor, the armed contractor personnel, and the U.S. military must adhere to:

(A) Applicable U.S., HN, and international law;

(B) Relevant SOFAs and other agreements;

(C) Other arrangements with local authorities; and

(D) The rules for the use of force, and guidance and orders regarding the possession, use, safety, accountability of weapons and ammunition that are issued by the CCDR.

(ii) Depending on the operational situation and the specific circumstances of contractor personnel, the contractor may apply for its personnel to be armed for self-defense purposes on a case-by-case basis. The appropriate Staff Judge Advocate (or their designee) to the CCDR will review all applications to ensure there is a legal basis for approval. In reviewing applications, CCDRs will apply the criteria mandated for arming contractor personnel for private security services consistent with 32 CFR part 159.

(A) In such cases, the contractor will validate to the contracting officer, or designee, that the contractor personnel have received weapons familiarization, qualification, and briefings regarding the rules for the use of force, in accordance with CCDR policies.

(B) Acceptance of weapons by contractor personnel is voluntary. In accordance with paragraph (j) of 48 CFR 252.225–7040, the contract must require contractors to ensure that applicable U.S. law does not prohibit personnel from possessing firearms.

(C) Contracts must require all contractor personnel to comply with applicable CCDR and local commander force protection policies. When armed for personal protection, the contract may only authorize contractor personnel to use force for self-defense and must require contractors to ensure that U.S. law does not prohibit its personnel from possessing firearms, in accordance with 48 CFR 252.225–7040(j). Unless not subject to local laws or HN jurisdiction by virtue of an international agreement or customary international law, the contract must include terms and conditions setting forth that the inappropriate use of force could subject contractor personnel to U.S. and/or local or HN prosecution and civil liability.

(3) *Personnel recovery, missing persons, and casualty reporting.* (i) The DoD personnel recovery program applies to all CAAF regardless of their citizenship. For more information, see paragraph (ii) of appendix A to this part. If a CAAF individual becomes isolated or unaccounted for, the contractor must promptly file a search and rescue incident report to the theater's personnel recovery architecture (*e.g.,* the component personnel recovery coordination cell or the CCMD joint personnel recovery center).

(ii) Upon recovery following an isolating event, a CAAF returnee must enter the first of the three phases of reintegration. For more information, see paragraph (jj) of appendix A to this part. The contractor must offer the additional phases of reintegration to the returnee to ensure his or her physical and psychological well-being while adjusting to the post-captivity environment.

(iii) The contractor must report all CAAF and non-CAAF casualties. For more information, see paragraph (s) of appendix A to this part.

(m) *Redeployment procedures.* The considerations in this section apply during the redeployment of CAAF. At the end of the performance period of a contract, or in cases of early redeployment, CAAF must complete the redeployment process to adjust AGS requirements and turn in U.S. Government-provided equipment.

(1) *Preparation for redeployment.* CAAF must complete intelligence out-briefs and customs and immigration briefings and inspections in accordance with CCDR policy and applicable HN law. CAAF are subject to customs and immigration processing procedures at all designated stops and their final destination during their redeployment. CAAF returning to the United States are subject to U.S. reentry customs requirements in effect at the time of reentry.

(2) *Transportation out of theater.* The terms and conditions of the contract will state whether the U.S. Government will provide transportation out of theater.

(i) Upon completion of the deployment or other authorized release, the U.S. Government must provide contractor personnel transportation from the theater of operations to the location from which they deployed, in accordance with each individual's LOA and unless otherwise directed. If commercial transportation is not available, it should be stated in the LOA in accordance with paragraph (l) of appendix A to this part. CAAF are also required to depart from the operational area through the designated reception site.

(ii) Before redeployment, the contractor personnel, through his or her contractor, will coordinate exit times and transportation with the continental U.S. replacement center or designated reception site.

(3) *Redeployment center procedures.* In most instances, the deployment center or site that prepared the CAAF for deployment will serve as the return processing center. As part of CAAF redeployment processing, the designated reception site personnel will screen contractor records, recover U.S. Government-issued identification cards and equipment, and conduct debriefings, as appropriate. The returning CAAF will spend the minimum amount of time possible at the return processing center in order to complete the necessary administrative procedures.

(i) Contractor personnel must return all U.S. Government-issued identification and access badges (*e.g.,* badges, key cards, and other access devices, including CACs).

(ii) Contractor personnel must return any issued clothing and equipment and report any lost, damaged, or destroyed clothing and equipment in accordance with procedures of the issuing facility. Contractor personnel also will receive a post-deployment medical briefing on signs and symptoms of potential diseases (*e.g.,* tuberculosis (TB)). As some countries hosting an intermediate staging base may not permit certain items to enter their territory, certain clothing and equipment, whether issued by the contractor, purchased by the employee, or provided by the DoD, may not be permitted to be removed from the AOR. In this case, CCDR or JFC guidance and contract terms and conditions will provide alternate methods of accounting for U.S. Government-issued equipment and clothing.

(4) *Update to SPOT–ES.* Contracting officers or their designated representatives must verify that contractors have updated SPOT–ES to reflect their employee's change in status within three days of a contractor employee's redeployment, close out the

deployment, and collect or revoke the LOA.

(5) *Transportation to home destination.* Transportation of CAAF from the deployment center or site to their home destinations is the employer's responsibility.

§ 158.6 Guidance for contractor medical and dental fitness.

(a) *General.* (1) DoD contracts requiring the deployment of CAAF must include medical and dental fitness standards as specified in this section. Under the terms and conditions of their contracts, contractors will employ personnel who meet such medical and dental fitness standards. With respect to contractor personnel covered by the Rehabilitation Act of 1973, as amended, 29 U.S.C. 791, *et seq.* or the Americans with Disabilities Act of 1990, as amended, 29 U.S.C. 12101, *et seq.,* these medical and dental fitness standards do not alter the legal obligations of DoD Components and contractors (as employers). Replacement of non-medically qualified contractor personnel already deployed to theater will be at the contractor's cost.

(2) The GCC concerned will establish force health protection policies and programs for the protection of all forces assigned or attached to the command in accordance with applicable force health protection (FHP) requirements and medical and dental fitness standards in order to promote and sustain a healthy and ready force. For more information, see paragraph (kk) of appendix A to this part. The GCC concerned will establish a process for reviewing requests for exceptions to such requirements, on an individualized basis, and will ensure that a mechanism is in place to appropriately maintain records related to all approved and denied waivers, including any medical records.

(3) The GCC concerned will ensure that medical fitness processes and procedures, to include those pertaining to removal of contractor personnel from the theater who are no longer medically qualified, at the contractor's expense, are posted on the GCC OCS web page. Contracting officers will incorporate the language concerning these processes and procedures into clauses for all contracts for performance in the AOR.

(4) Unless otherwise stated in the contract terms and conditions, all medical evaluations and treatment are the contractor's responsibility.

(b) *Medical and dental evaluations.* (1) All CAAF deploying in support of an applicable operation are subject to medical and dental fitness standards pursuant to paragraph (kk) of appendix A to this part and CCDR guidance. Fitness standards pertain to the individual's ability to accomplish the tasks and duties unique to a particular operation and the ability to tolerate the environmental and operational conditions of the deployed location.

(2) All CAAF must undergo a screening medical and dental assessment within 12 months before arrival at the designated deployment center or U.S. Government-authorized contractor-performed deployment processing facility. This screening assessment, conducted by the contractor's medical health provider, should emphasize diagnosing system disease conditions (*e.g.,* cardiovascular, pulmonary, orthopedic, neurologic, endocrinologic, dermatologic, psychological, visual, auditory, dental) that may preclude the CAAF from performing the functional requirements of the contract, especially in the austere work environments encountered in some applicable operations.

(3) CAAF will receive a health threat and countermeasures briefing from the applicable Military Service before deployment to the operational area. For more information, see paragraph (bb) of appendix A to this part.

(4) CAAF whose initial screening assessment or subsequent medical evaluation identifies any of the medical conditions listed in paragraph (j) of this section or identifies a requirement for extensive preventive dental case (see paragraph (j)(2)(xxv) of this section) are considered ''not medically fit'' for deployment unless their deployment is approved by a waiver.

(5) Individuals who are deemed ''not medically fit,'' including those whose request for a waiver has been denied, following an individual assessment by a licensed medical provider are not authorized to deploy.

(6) Non-CAAF shall be medically screened by a U.S. Government designee when required by the requiring activity and the contract, for the class of labor under consideration (*e.g.,* LNs working in a dining facility).

(7) Contracts will require contractors to replace individuals who develop conditions that cause them to become medically unqualified to perform contractual requirements at any time during contract performance.

(8) Contracts will require that CAAF complete a post-deployment health assessment in the Defense Medical Surveillance System at the end of their deployment or within 30 days of redeployment. For more information, see paragraph (bb) of appendix A to this part.

(c) *Glasses and contact lenses.* (1) If contractor personnel require vision correction, they must have two pairs of glasses, and if applicable, eyeglass inserts for a chemical protective mask. The contractor personnel may also provide a written prescription to the supporting military medical component in order to prepare eyeglass inserts for use in a compatible chemical protective mask. If the type of protective mask to be issued is known and time permits, the military medical component should attempt to complete the preparation of eyeglass inserts before deployment.

(2) Wearing contact lenses in a field environment is not recommended and is at the contractor personnel's own risk due to the potential for irreversible eye damage caused by debris, chemical or other hazards present, and the lack of ophthalmologic care in a field environment.

(d) *Medications.* Other than those force health protection prescription products provided by the U.S. Government to CAAF and selected non-CAAF, contracts must require that contractor personnel deploy with a minimum 90-day supply of any required medications obtained at their own expense. For more information, see paragraph (bb) of appendix A to this part.

(1) Contractor personnel must be informed that deployed medical units are equipped and staffed to provide emergency care to healthy adults and are unable to provide or replace many medications required for routine treatment of chronic medical conditions, such as high blood pressure, heart conditions, and arthritis.

(2) The contract must require contractor personnel to review both the amount of the medication and its suitability in the foreign area with their personal physician and make any necessary adjustments before deploying. The contract must also hold the contractor personnel responsible for the re-supply of required medications.

(e) *Comfort items.* The contract must require that contractor personnel take spare hearing-aid batteries, sunglasses, insect repellent, sunscreen, and any other supplies related to their individual physical requirements. DoD sources will not provide these items.

(f) *Immunizations.* A list of immunizations, including those required for entry into the designated area of operations and those recommended by medical authorities, will be produced by the cognizant medical authority for each deployment; posted to the GCC OCS web page and DoD FCG; and incorporated in contracts for performance in the designated AOR.

(1) The GCC, upon the recommendation of the cognizant

medical authority, will provide contractor personnel who are deploying to the applicable theater of operation a list of the immunizations necessary to protect against the communicable diseases assessed to be a potential hazard in the applicable theater. The cognizant medical authority will prepare and maintain this list.

(2) The contract must require that CAAF complete any mandatory immunizations, subject to any legally required exemptions, to complete the pre-deployment process.

(3) During pre-deployment processing, the DoD will provide contractor personnel, at no cost to the contractor, any theater-specific immunizations and medications not available to the general public. Contractor personnel must obtain all other immunizations before arrival at the deployment center, documented on the International Certificate of Vaccinations of Prophylaxis as approved by the World Health Organization or the Department of Health and Human Services Centers for Disease Control and Prevention Form 731. However, the contract must stipulate that CAAF and selected non-CAAF obtain all other necessary immunizations before their arrival at the deployment center. The TB skin test is required for all contractor personnel within three months before they are deployed.

(4) The DoD will provide theater-specific medical supplies and force health protection prescription products to CAAF and selected non-CAAF. Additionally, these personnel will receive deployment medication information sheets for all vaccines or deployment-related medications that are to be dispensed or administered.

(5) Contractors will ensure that individuals with a positive TB skin test be evaluated for targeted diagnosis and treatment of latent TB infection in accordance with the procedures outlined in the World Health Organization Guidelines on the Management of Latent Tuberculosis Infection.

(6) The contract must stipulate that CAAF and selected non-CAAF bring a current copy of the International Certificate of Vaccination or Prophylaxis to the pre-deployment processing center and to the operational area.

(g) *Human Immunodeficiency Virus (HIV) Testing.* HIV testing is not mandatory for contractor personnel unless specified by the GCC CCDR or by host nation requirements. HIV testing, if required, must occur within one year before deployment.

(h) *Armed Forces Repository of Specimen Samples for the Identification of Remains (AFRSSIR).* For identification of remains purposes, contractors whose CAAF members are U.S. citizens will obtain a dental panograph and will forward a specimen sample suitable for DNA analysis to, and ensure it is on file with, the AFRSSIR before or during deployment processing and recorded in SPOT–ES. The DoD Components must ensure that all contracts require CAAF who are U.S. citizens to provide DNA specimen samples for AFRSSIR as a condition of deployment. For more information, see paragraph (ll) of appendix A to this part.

(1) All CAAF who are U.S. citizens processing through a deployment center will have a DNA specimen sample collected and forwarded to the AFRSSIR for storage. Contracts must require contractors to verify in SPOT–ES or its successor that AFRSSIR has received the DNA specimen sample or that the contractor has collected the DNA specimen sample.

(2) If CAAF who are U.S. citizens do not process through a deployment center, or the contractor is authorized to process its own personnel, the contract must require that the contractor collect and forward DNA specimen samples for all contractor personnel who are deployed as CAAF to the AFRSSIR. Regardless of what specimen collection and storage arrangements are made, all contractors deploying CAAF who are U.S. citizens must provide the CAAF's name and Social Security number, location of the DNA specimen sample, facility contact information, and retrieval plan to AFRSSIR. If the AFRSSIR is not used and a CAAF who is a U.S. citizen becomes a casualty, the contractor must be able to retrieve identification media for use by the Armed Forces Medical Examiner (AFME) or other competent authority to conduct a medical-legal investigation of the incident and identification of the victim or victims. These records must be retrievable within 24 hours for forwarding to the AFME when there is a reported incident that would necessitate their use for identifying human remains. The contractor shall have access to the location of its employees' fingerprint, medical, and dental records, including panographs.

(3) AFRSSIR is responsible for implementing special rules and procedures to ensure the protection of privacy interests in regards to the specimen samples and any DNA analysis of those samples. Specimen samples shall only be used for the purposes outlined in paragraph (ll) of appendix A to this part.

(i) *Waivers related to medical and dental fitness standards.* Based on an individualized assessment, waivers may be appropriate for contractor personnel who have potentially disqualifying medical conditions if, with or without a reasonable accommodation:

(1) The condition is not of such a nature it is likely to have a medically grave outcome or a negative impact on mission execution if it unexpectedly worsens.

(2) The condition is stable and reasonably anticipated by the medical evaluator not to worsen during the deployment under contractor-provided medical care in-theater in light of the physical, physiological, psychological, environmental, and nutritional effects of the duties and location.

(3) Any required ongoing health care or medications must be available or accessible to contractor personnel, independent of the military health system, and not be subject to special handling, storage, or other requirements (*e.g.,* refrigeration requirements and/or cold chain, electrical power requirements) that cannot be met in the specific theater of operations.

(4) The condition does not and is not anticipated to require duty limitations that would preclude performance of contractual requirements or to require accommodation by the DoD component or requiring activity. When necessary, the cognizant medical authority (or delegated representative) is the appropriate authority to evaluate the suitability of an individual's limitations in theater.

(5) There is no need for routine out-of-theater evacuation for continuing diagnostics or other evaluations.

(j) *Conditions usually precluding medical clearance.* This section is not intended to be comprehensive. A list of all possible diagnoses would be too expansive to list in this part. These are minimum requirements. Contractor personnel may have additional medical clearance requirements based on their occupation and local laws. It is the responsibility of the contractor to ensure that its employees' medical clearances comply with any applicable local occupation-specific medical requirements.

(1) In general, the conditions in paragraph (b) of this section, based on an individual assessment pursuant to paragraph (bb) of appendix A to this part, are disqualifying. The medical evaluator will carefully consider whether climate; altitude; the nature of available food and housing available; the nature of medical, behavioral health, and dental services; or other environmental or operational factors

may prove hazardous to the deploying person's heath because of a known physical or mental condition.

(2) Medical clearance for deployment of persons with any of the conditions in this section may be granted by the contracting officer only after consultation with and approval of a waiver by the appropriate cognizant medical authority on behalf of the CCDR. The cognizant medical authority makes recommendations and serves as the CCDR's advisor on conditions precluding the medial clearance of deploying personnel; however, the CCDR is the final approval or disapproval authority except as provided in paragraph (k)(3) of this section. The cognizant medical authority or designated representative may determine if adequate treatment facilities and specialist support are available at the duty station for:

(i) Physical or psychological conditions resulting in the inability to wear IPE effectively, if wearing IPE may be reasonably anticipated or required in the deployed location.

(ii) Conditions that prevent safe administration of applicable immunizations, prescription products, or other health protection measures, including atropine, epinephrine, and/or 2-pam chloride auto-injectors, certain antimicrobials, antimalarials, and/or pyridostigmine bromide.

(iii) Any chronic medical conditions that require frequent clinical visits, fail to respond to adequate conservative treatment, or necessitate significant limitation of physical activity.

(iv) Any medical conditions that require durable medical equipment or appliances or periodic evaluation or treatment by medical specialists not readily available in theater (*e.g.,* Continuous Positive Airway Pressure (CPAP) machine for sleep apnea).

(v) Any unresolved acute or chronic illness or injuries that would impair duty performance in a deployed environment during the duration of the deployment.

(vi) Active TB or known blood-borne diseases that may be transmitted to others in a deployed environment. (For HIV infections, see paragraph (j)(2)(xvii) of this section.)

(vii) An acute exacerbation of a physical or mental health condition that could affect duty performance.

(viii) Recurrent loss of consciousness for any reason.

(ix) Any medical condition that could result in sudden incapacitation including a history of stroke within the last 24 months, seizure disorders, and diabetes mellitus type I or II, treated with insulin or oral hypoglycemic agents.

(x) Hypertension not controlled with medication or that requires frequent monitoring to achieve control.

(xi) Pregnancy.

(xii) Cancers for which individuals are receiving continuing treatment or that require periodic specialty medical evaluations during the anticipated duration of the deployment.

(xiii) Precancerous lesions that have not been treated or evaluated and that require treatment or evaluation during the anticipated duration of the deployment.

(xiv) Any medical conditions that require surgery or for which surgery has been performed that requires rehabilitation or additional surgery to remove devices.

(xv) Asthma that has a Forced Expiratory Volume-1 (FEV–1) of less than or equal to 50 percent of predicted FEV–1 despite appropriate therapy, that has required hospitalization at least two times in the last 12 months, or that requires daily systemic oral or injectable steroids.

(xvi) Any musculoskeletal conditions that significantly impair performance of duties in a deployed environment.

(xvii) HIV antibody positive with the presence of progressive clinical illness or immunological deficiencies. The contracting officer should consult the cognizant medical authority in all instances of HIV seropositivity before medical clearance for deployment.

(xviii) Hearing loss. The requirement for use of a hearing aid does not necessarily preclude deployment. However, the individual must have sufficient unaided hearing to perform duties safely.

(xix) Loss of vision. Best corrected visual acuity must meet job requirements to perform duties safely.

(xx) Symptomatic coronary artery disease.

(xxi) History of myocardial infarction within one year of deployment.

(xxii) History of coronary artery bypass graft, coronary artery angioplasty, carotid endarterectomy, other arterial stenting, or aneurysm repair within one year of deployment.

(xxiii) Cardiac dysrhythmias or arrhythmias, either symptomatic or requiring medical or electrophysiologic control, such as the presence of an implanted defibrillator and/or pacemaker.

(xxiv) Heart failure.

(xxv) Individuals without a dental exam within the last 12 months or who are likely to require dental treatment or reevaluation for oral conditions that are likely to result in dental emergencies within 12 months.

(xxvi) Psychotic and/or bipolar disorders. For detailed guidance on deployment-limiting psychiatric conditions or psychotropic medications, see paragraph (mm) of appendix A to this part.

(xxvii) Psychiatric disorders under treatment with fewer than three months of demonstrated stability.

(xxviii) Clinical psychiatric disorders with residual symptoms that impair duty performance.

(xxix) Mental health conditions that pose a substantial risk for deterioration or recurrence of impairing symptoms in the deployed environment.

(xxx) Chronic medical conditions that require ongoing treatment with antipsychotics, lithium, or anticonvulsants.

(k) *Exceptions to medical standards (waivers).* If a contractor believes an individual CAAF with one of the conditions listed in paragraphs (j)(2)(i) through (xxx) of this section can, with or without reasonable accommodation, accomplish the essential duties of his or her tasks and duties and tolerate the environmental and operational conditions of the deployed location, the contractor may request a waiver for that individual through the contracting officer, using the process and procedures established by the GCC.

(1) Contractors will include a summary of a detailed medical evaluation or consultation concerning the medical condition or conditions in the requests for waivers. Since maximization of mission accomplishment and the protection of the health of personnel are the ultimate goals, justification for the waiver will include:

(i) Statement indicating the CAAF individual's qualifications and experience.

(ii) The position the CAAF individual will occupy and the nature and scope of contractual duties assigned.

(iii) Any known specific hazards of the position.

(iv) Anticipated availability and need for care while deployed.

(2) Waivers to deploy or permit continued service in a deployed environment by persons with any of the conditions in paragraphs (j)(2)(i) through (xxx) of this section require an individualized assessment and a recommendation from a cognizant medical authority. The GCC, or designee, is the final decision authority for medical waiver requests, except as provided in paragraph (k)(3) of this section.

(3) For CAAF individuals working with Special Operations Forces personnel, the Theater Special

Operations Command Commander is the final decision authority for medical waiver requests.

Appendix A to Part 158—Related Policies

The Operational Contract Support Outside the United States Program is supported by the following policies:

(a) DoD Directive 5124.02, ''Under Secretary of Defense for Personnel and Readiness (USD(P&R))'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodd/512402p.pdf*).

(b) DoD Instruction 1100.22, ''Policy and Procedures for Determining Workforce Mix'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/110022p.pdf*).

(c) DoD Directive 1000.20, ''Active Duty Service Determinations for Civilian or Contractual Groups'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodd/100020p.pdf*).

(d) DoD Instruction 2200.01, ''Combating Trafficking in Persons (CTIP)'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/220001p.pdf*).

(e) DoD Law of War Manual (June 2015, Updated Dec. 2016) (available at *https://dod.defense.gov/Portals/1/Documents/pubs/DoD%20Law%20of%20War%20Manual%20-%20June%202015%20Updated%20Dec%202016.pdf?ver=2016-12-13-172036-190*).

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2023–09020 Filed 4–28–23; 8:45 am]

BILLING CODE 5001–06–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2022–0596; FRL–10910–01–OCSPP]

Poly (oxy-1,2-ethanediyl), α,α′-[[[4-[2-(4-methyl-2-benzothiazolyl)diazenyl] phenyl]imino]di-2,1-ethanediyl]bis[ω-hydroxy- in Pesticide Formulations; Tolerance Exemption

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes an exemption from the requirement of a tolerance for residues of poly (oxy-1,2-ethanediyl), α,α′-[[[4-[2-(4-methyl-2-benzothiazolyl)diazenyl] phenyl]imino]di-2,1-ethanediyl]bis[ω-hydroxy- (CAS Reg. No. 158172–12–4), herein referred to as polymeric red, when used as an inert ingredient (colorant) on growing crops and raw agricultural commodities pre- and post-harvest. Milliken Chemical submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting establishment of an exemption from the requirement of a tolerance. This regulation eliminates the need to establish a maximum permissible level for residues of polymeric red, when used in accordance with the terms of the exemption.

DATES: This regulation is effective May 1, 2023. Objections and requests for hearings must be received on or before June 30, 2023 and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2022–0596, is available at *https://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room and the OPP docket is (202) 566–1744. For the latest status information on EPA/DC services, docket access, visit *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Charles Smith, Director, Registration Division (7505T), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (202) 566–2427; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 180 through the Office of the Federal Register's e-CFR site at *https://www.ecfr.gov/current/title-40.*

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2022–0596 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before June 30, 2023. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2022–0596, by one of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *https://www.epa.gov/dockets/where-send-comments-epa-dockets#express.*

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

II. Petition for Exemption

In the **Federal Register** of August 30, 2022 (87 FR 52868) (FRL–9410–04), EPA issued a document pursuant to FFDCA section 408, 21 U.S.C. 346a, announcing the filing of a pesticide petition (PP IN–11672) by Milliken Chemical, 920 Milliken Road, M–209, Spartanburg, South Carolina 29303. The petition requested that 40 CFR 180.910 be amended by establishing an exemption from the requirement of a tolerance for residues of polymeric red (CAS Reg. No. 158172–12–4) when used as an inert ingredient (colorant) in pesticide formulations applied to growing crops or raw agricultural commodities pre- and post-harvest. That document referenced a summary of the petition prepared by Milliken Chemical, which is available in the docket, *https://www.regulations.gov.* A comment was received on the notice of filing. EPA's response to the comment is discussed in Unit V.B.

III. Inert Ingredient Definition

Inert ingredients are all ingredients that are not active ingredients as defined in 40 CFR 153.125 and include, but are not limited to, the following types of ingredients (except when they have a pesticidal efficacy of their own): solvents such as alcohols and hydrocarbons; surfactants such as polyoxyethylene polymers and fatty acids; carriers such as clay and diatomaceous earth; thickeners such as carrageenan and modified cellulose; wetting, spreading, and dispersing agents; propellants in aerosol dispensers; microencapsulating agents; and emulsifiers. The term ''inert'' is not

intended to imply nontoxicity; the ingredient may or may not be chemically active. Generally, EPA has exempted inert ingredients from the requirement of a tolerance based on the low toxicity of the individual inert ingredients.

IV. Aggregate Risk Assessment and Determination of Safety

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is ''safe.'' Section 408(c)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings but does not include occupational exposure. When making a safety determination for an exemption from the requirement of a tolerance, FFDCA section 408(c)(2)(B) directs EPA to take into account the considerations in section 408(b)(2)(C) and (D). Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. . . .'' Section 408(b)(2)(D) lists other factors for EPA's consideration in making safety determinations, *e.g.,* the validity, completeness, and reliability of available data, nature of toxic effects, available information concerning the cumulative effects of the pesticide chemical and other substances with a common mechanism of toxicity, and available information concerning aggregate exposure levels to the pesticide chemical and other related substances, among other factors.

EPA establishes exemptions from the requirement of a tolerance only in those cases where it can be clearly demonstrated that the risks from aggregate exposure to pesticide chemical residues under reasonably foreseeable circumstances will pose no harm to human health. In order to determine the risks from aggregate exposure to pesticide inert ingredients, the Agency considers the toxicity of the inert in conjunction with possible exposure to residues of the inert ingredient through food, drinking water, and through other exposures that occur as a result of pesticide use in residential settings. If EPA is able to determine that a finite tolerance is not necessary to ensure that there is a reasonable certainty that no harm will result from aggregate exposure to the inert ingredient, an exemption from the requirement of a tolerance may be established.

Consistent with FFDCA section 408(c)(2)(A), and the factors specified in FFDCA section 408(c)(2)(B), EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for polymeric red, including exposure resulting from the exemption established by this action. EPA's assessment of exposures and risks associated with polymeric red follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered their validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. Specific information on the studies received and the nature of the adverse effects caused by polymeric red as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies are discussed in this unit.

Polymeric red exhibits low levels of acute toxicity via the oral route of exposure. Based on physical and chemical properties, it is not expected to be of concern via the acute dermal and inhalation routes of exposure. It is not a skin or eye irritant and it is not expected to be a dermal sensitizer. No adverse effects were reported in the combined 28-day oral with reproduction/developmental toxicity screening study in rats. No adverse maternal, reproduction or offspring effects were found in this study. No oral chronic or carcinogenicity studies are available for review, and structural alerts for potential carcinogenicity due to the formation of aromatic amines were identified. However, the concern is low for carcinogenicity based on negative results in a modified Ames test designed to identify mutagenicity due to the formation of aromatic amines, and the lack of toxicity in the available studies. No evidence of neurotoxicity or immunotoxicity was seen in the database.

B. Toxicological Points of Departure/ Levels of Concern

Once a pesticide's toxicological profile is determined, EPA identifies toxicological points of departure (POD) and levels of concern to use in evaluating the risk posed by human exposure to the pesticide. For hazards that have a threshold below which there is no appreciable risk, the toxicological POD is used as the basis for derivation of reference values for risk assessment. PODs are developed based on a careful analysis of the doses in each toxicological study to determine the dose at which no adverse effects are observed (the NOAEL) and the lowest dose at which adverse effects of concern are identified (the LOAEL). Uncertainty/ safety factors are used in conjunction with the POD to calculate a safe exposure level—generally referred to as a population-adjusted dose (PAD) or a reference dose (RfD)—and a safe margin of exposure (MOE). For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability of an occurrence of the adverse effect expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see *https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/assessing-human-health-risk-pesticides.*

The hazard profile of polymeric red is adequately defined. Overall, polymeric red is of low acute, subchronic, and developmental toxicity. No systemic toxicity is observed up to 1,000 mg/kg/day. Since signs of toxicity were not observed, no toxicological endpoints of concern or PODs were identified. Therefore, a qualitative risk assessment for polymeric red can be performed.

C. Exposure Assessment

1. *Dietary exposure.* In evaluating dietary exposure to polymeric red, EPA considered exposure under the proposed exemption from the requirement of a tolerance. EPA assessed dietary exposures from polymeric red in food and drinking water as follows:

Dietary exposure (food and drinking water) to polymeric red may occur following ingestion of drinking water or foods with residues of this chemical from their use in accordance with this exemption. However, a quantitative dietary exposure assessment was not conducted since a toxicological endpoint for risk assessment was not identified.

2. *From non-dietary exposure.* The term ''residential exposure'' is used in this document to refer to non-occupational, non-dietary exposure (*e.g.,* textiles (clothing and diapers), carpets, swimming pools, and hard surface disinfection on walls, floors, tables).

Polymeric red may be present in pesticide products that may be used in and around the home. However, a quantitative residential exposure assessment was not conducted since a toxicological endpoint for risk assessment was not identified.

3. *Cumulative effects from substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider ''available information'' concerning the cumulative effects of a particular pesticide's residues and ''other substances that have a common mechanism of toxicity.''

Based on the lack of toxicity in the available database, EPA has not found polymeric red to share a common mechanism of toxicity with any other substances, and polymeric red does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance exemption, therefore, EPA has assumed that polymeric red does not have a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA's website at *https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/cumulative-assessment-risk-pesticides*.

D. Additional Safety Factor for the Protection of Infants and Children

Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the Food Quality Protection Act safety factor. In applying this provision, EPA either retains the default value of 10X, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor.

Based on an assessment of polymeric red, EPA has concluded that there are no toxicological endpoints of concern for the U.S. population, including infants and children. Because there are no threshold effects associated with polymeric red, EPA conducted a qualitative assessment. As part of that assessment, the Agency did not use safety factors for assessing risk, and no additional safety factor is needed for assessing risk to infants and children.

E. Aggregate Risks and Determination of Safety

Because no toxicological endpoints of concern were identified, EPA concludes that there is a reasonable certainty that no harm will result to the general population, or to infants and children from aggregate exposure to polymeric red residues.

V. Other Considerations

A. Analytical Enforcement Methodology

An analytical method is not required for enforcement purposes since the Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation.

B. Response to Comment

EPA received one comment in response to the notice of filing. The comment concerns pesticide use generally and advocates for ''natural'' alternatives to chemicals. While the Agency recognizes that some people oppose the use of chemicals in or on food commodities, the FFDCA allows EPA to establish tolerances and exemptions for residues of pesticides in or on food as long as the Agency can determine they are safe. The Agency has evaluated the aggregate exposures of polymeric red and has determined that there is a reasonable certainty that no harm will result to the general population, or to infants and children, from aggregate exposure to polymeric red residues. The commenter has provided no information to support a conclusion that the exemption from the requirement of a tolerance is not safe.

VI. Conclusions

Therefore, an exemption from the requirement of a tolerance is established for residues of poly (oxy-1,2-ethanediyl), α,α′-[[[4-[2-(4-methyl-2-benzothiazolyl)diazenyl] phenyl]imino]di-2,1-ethanediyl]bis[ω-hydroxy- (CAS Reg. No. 158172–12–4) when used as an inert ingredient (colorant) in pesticide formulations applied to growing crops and raw agricultural commodities after harvest under 40 CFR 180.910.

VII. Statutory and Executive Order Reviews

This action establishes an exemption from the requirement of a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), nor does it require any special considerations under Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the exemption in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or Tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or Tribal Governments, on the relationship between the National Government and the States or Tribal Governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian Tribes. Thus, the Agency has determined that Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose

any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VIII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: April 25, 2023.

Charles Smith,

Director, Registration Division, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, EPA is amending 40 CFR chapter I as follows:

PART 180—TOLERANCES AND EXEMPTIONS FOR PESTICIDE CHEMICAL RESIDUES IN FOOD

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. In § 180.910, amend table 1 to 180.910 by adding, in alphabetical order, an entry for ''Poly (oxy-1,2-ethanediyl), α,α′-[[[4-[2-(4-methyl-2-benzothiazolyl)diazenyl] phenyl]imino]di-2,1-ethanediyl]bis[ω-hydroxy- (CAS Reg. No. 158172–12–4)'' to read as follows:

§ 180.910 Inert ingredients used pre- and post-harvest; exemptions from the requirement of a tolerance.

* * * * *

TABLE 1 TO 180.910

Inert ingredients	Limits	Uses
* * * * *	*	*
Poly (oxy-1,2-ethanediyl), α,α′-[[[4-[2-(4-methyl-2-benzothiazolyl)diazenyl]phenyl]imino]di-2,1-ethanediyl]bis[ω-hydroxy- (CAS Reg. No. 158172–12–4).	.....	Colorant.

[FR Doc. 2023–09121 Filed 4–28–23; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2021–0273, EPA–HQ–OPP–2022–0841 and EPA–HQ–OPP–2022–0844; FRL–10877–01–OCSPP]

Starch, 1-Octenylbutanedioate, Aluminum Salt; Dextrin, Hydrogen 1-Octenylbutanedioate; and Amylopectin, 2-Hydroxypropyl Ether, Acid-; Exemption From the Requirement of a Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes exemptions from the requirement of a tolerance for residues of starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- when used as inert ingredients (for seed treatment only) in pesticide formulations applied pre-harvest. Ingredion Incorporated submitted petitions to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting establishment of exemptions from the requirement of a tolerance. This regulation eliminates the need to establish maximum permissible levels for residues of starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- when used in accordance with the terms of the exemptions.

DATES: This regulation is effective May 1, 2023. Objections and requests for hearings must be received on or before June 30, 2023 and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The dockets for these actions, identified by docket identification (ID) numbers EPA–HQ–OPP–2021–0273, EPA–HQ–OPP–2022–0841 and EPA–HQ–OPP–2022–0844, are available at *https://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room and the OPP docket is (202) 566–1744. For the latest status information on EPA/DC services, docket access, visit *https://www.epa.gov/dockets*.

FOR FURTHER INFORMATION CONTACT: Charles Smith, Director, Registration Division (7505T), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (202) 566–1030; email address: *RDFRNotices@epa.gov*.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 180 through the Office of the Federal Register's e-CFR site at *https://www.ecfr.gov/current/title-40*.

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID numbers EPA–HQ–OPP–2021–0273, EPA–HQ–OPP–2022–0841 and EPA–HQ–OPP–2022–0844 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before June 30, 2023. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID numbers EPA–HQ–OPP–2021–0273, EPA–HQ–OPP–2022–0841 and EPA–HQ–OPP–2022–0844, by one of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov*. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *https://www.epa.gov/dockets/where-send-comments-epa-dockets*.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets*.

II. Petitions for Exemption

In the **Federal Register** of June 1, 2021 (86 FR 29229) (FRL–10023–95), EPA issued a document pursuant to FFDCA section 408, 21 U.S.C. 346a, announcing the filing of pesticide petition PP IN–11458 by Ingredion Incorporated, 5 Westbrook Corporate Center, Westchester, IL 60154. The petition requested that 40 CFR 180.920 be amended by establishing an exemption from the requirement of a tolerance for residues of starch, 1-octenylbutanedioate, aluminum salt (CAS Reg. No. 9087–61–0) when used as an inert ingredient in pesticide formulations applied ''in or on raw agricultural commodities pre-harvest and as a seed treatment.'' A summary of the petition prepared by Ingredion Incorporated is available in the docket at *https://www.regulations.gov*. Ingredion Incorporated subsequently clarified that the word ''and'' should not have been included in the request and that they were requesting an exemption under 40 CFR 180.920 for seed treatment use only. Therefore, a use pattern limitation for seed treatment use is being established for this exemption.

In the **Federal Register** of November 17, 2022 (87 FR 68959) (FRL–9410–07–OCSPP), EPA issued documents pursuant to FFDCA section 408, 21 U.S.C. 346a, announcing the filing of pesticide petitions PP IN–11699 and PP IN–11715 by Ingredion Incorporated, 5 Westbrook Corporate Center, Westchester, IL 60154. The petitions requested that 40 CFR 180.920 be amended by establishing exemptions from the requirement of a tolerance for residues of dextrin, hydrogen 1-octenylbutanedioate (CAS Reg. No. 68070–94–0) and amylopectin, 2-hydroxypropyl ether, acid- (CAS Reg. No. 2756130–86–4) when used as inert ingredients (for seed treatment only) in pesticide formulations applied pre-harvest. Summaries of the petitions prepared by Ingredion Incorporated are available in the dockets at *https://www.regulations.gov*.

There were no comments received in response to the notices of filing.

III. Inert Ingredient Definition

Inert ingredients are all ingredients that are not active ingredients as defined in 40 CFR 153.125 and include, but are not limited to, the following types of ingredients (except when they have a pesticidal efficacy of their own): solvents such as alcohols and hydrocarbons; surfactants such as polyoxyethylene polymers and fatty acids; carriers such as clay and diatomaceous earth; thickeners such as carrageenan and modified cellulose; wetting, spreading, and dispersing agents; propellants in aerosol dispensers; microencapsulating agents; and emulsifiers. The term ''inert'' is not intended to imply nontoxicity; the ingredient may or may not be chemically active. Generally, EPA has exempted inert ingredients from the requirement of a tolerance based on the low toxicity of the individual inert ingredients.

IV. Aggregate Risk Assessment and Determination of Safety

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is ''safe.'' Section 408(c)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings but does not include occupational exposure. When making a safety determination for an exemption from the requirement of a tolerance, FFDCA section 408(c)(2)(B) directs EPA to account for the considerations in section 408(b)(2)(C) and (D). Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing an exemption and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. . . .'' Section 408(b)(2)(D) lists other factors for EPA's consideration in making safety determinations, *e.g.,* the validity, completeness, and reliability of available data, nature of toxic effects, available information concerning the cumulative effects of the pesticide chemical and other substances with a common mechanism of toxicity, and available information concerning aggregate exposure levels to the pesticide chemical and other related substances, among other factors.

EPA establishes exemptions from the requirement of a tolerance only in those cases where it can be clearly demonstrated that the risks from aggregate exposure to pesticide chemical residues under reasonably foreseeable circumstances will pose no harm to human health. In order to determine the risks from aggregate exposure to pesticide inert ingredients,

the Agency considers the toxicity of the inert in conjunction with possible exposure to residues of the inert ingredient through food, drinking water, and through other exposures that occur as a result of pesticide use in residential settings. If EPA is able to determine that a finite tolerance is not necessary to ensure that there is a reasonable certainty that no harm will result from aggregate exposure to the inert ingredient, an exemption from the requirement of a tolerance may be established.

Consistent with FFDCA section 408(c)(2)(A), and the factors specified in FFDCA section 408(c)(2)(B), EPA has reviewed the available scientific data and other relevant information in support of these actions. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid-, including exposure resulting from the exemptions established by this action. EPA's assessment of exposures and risks associated with starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered their validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. Specific information on the studies received and the nature of the adverse effects caused by starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies are discussed in this unit.

The toxicological database for starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid-, all of which are modified starches, is supported by data regarding amylopectin, acid-hydrolyzed, 1-octenylbutanedioate (CAS Reg. No. 113894–85–2); amylopectin, hydrogen 1-octadecenylbutanedioate (CAS Reg. No. 125109–81–1); and 2-hydroxypropyl starch (CAS Reg. No. 9049–76–7), which are three other modified starches previously reviewed by the Agency. EPA has determined that it is appropriate to bridge amylopectin, acid-hydrolyzed, 1-octenylbutanedioate; amylopectin, hydrogen 1-octadecenylbutanedioate; and 2-hydroxypropyl starch data to assess starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- due to similarities in the manufacturing processes, functional groups/structure, composition, and physical/chemical properties of these modified starches.

In acute studies, the oral lethal dose, LD_{50} of the modified starches was > 7,000 milligrams/kilogram (mg/kg). Various modified starches were tested in repeat dose studies, and no toxicity was observed at doses as high as 9,000 mg/kg/day. No fetal, parental, or reproductive toxicity was seen in any of the multi-generational reproduction toxicity studies at dietary levels up to 62% (*i.e.,* 31,000 mg/kg/day).

B. Toxicological Points of Departure/Levels of Concern

Once a pesticide's toxicological profile is determined, EPA identifies toxicological points of departure (POD) and levels of concern to use in evaluating the risk posed by human exposure to the pesticide. For hazards that have a threshold below which there is no appreciable risk, the toxicological POD is used as the basis for derivation of reference values for risk assessment. PODs are developed based on a careful analysis of the doses in each toxicological study to determine the dose at which no adverse effects are observed (the NOAEL) and the lowest dose at which adverse effects of concern are identified (the LOAEL). Uncertainty/safety factors are used in conjunction with the POD to calculate a safe exposure level—generally referred to as a population-adjusted dose (PAD) or a reference dose (RfD)—and a safe margin of exposure (MOE). For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability of an occurrence of the adverse effect expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see *https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/overview-risk-assessment-pesticide-program*.

The hazard profile of these modified starches is adequately defined. Overall, they show low acute, subchronic, and developmental toxicity. No systemic toxicity is observed up to the limit dose of 1,000 mg/kg/day and as high as 31,000 mg/kg/day. Since signs of toxicity were not observed, no toxicological endpoints of concern or PODs were identified. Therefore, a qualitative risk assessment for starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- can be performed.

C. Exposure Assessment

1. *Dietary exposure from food and feed uses.* In evaluating dietary exposure to starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid-, EPA considered exposure under the proposed exemptions from the requirement of a tolerance and from existing uses. EPA assessed dietary exposures from starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- in food as follows:

Modified food starches are approved (21 CFR 172.892) by the U.S. Food and Drug Administration (FDA) as food additives and are used in a wide range of food products. In addition, dietary (food and drinking water) exposure is possible from the use of modified starches when used as food use inert ingredients in pesticide products. However, a quantitative dietary exposure assessment was not conducted since a toxicological endpoint for risk assessment was not identified.

2. *From non-dietary exposure.* The term ''residential exposure'' is used in this document to refer to non-occupational, non-dietary exposure (*e.g.,* textiles (clothing and diapers), carpets, swimming pools, and hard surface disinfection on walls, floors, tables). Starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- are not currently proposed for pesticide residential uses; however, future uses may include uses in and around the home. Residential exposure is also possible from the use of modified starches in non-pesticidal products such as cosmetics. However, a quantitative residential exposure assessment was not conducted since a toxicological

endpoint for risk assessment was not identified.

3. *Cumulative effects from substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider ''available information'' concerning the cumulative effects of a particular pesticide's residues and ''other substances that have a common mechanism of toxicity.'' Based on the lack of toxicity in the available database, EPA has not found starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- to share a common mechanism of toxicity with any other substances, and these modified starches do not appear to produce a toxic metabolite produced by other substances. For the purposes of these tolerance exemptions, therefore, EPA has assumed that starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- do not have a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA's website at *https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/cumulative-assessment-risk-pesticides.*

D. Additional Safety Factor for the Protection of Infants and Children

Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the Food Quality Protection Act safety factor. In applying this provision, EPA either retains the default value of 10X, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor. Based on an assessment of starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid-, EPA has concluded that there are no toxicological endpoints of concern for the U.S. population, including infants and children. Because there are no threshold effects associated with these chemicals, EPA conducted a qualitative assessment. As part of that assessment, the Agency did not use safety factors for assessing risk, and no additional safety factor is needed for assessing risk to infants and children.

E. Aggregate Risks and Determination of Safety

Because no toxicological endpoints of concern were identified, EPA concludes that there is a reasonable certainty that no harm will result to the general population, or to infants and children, from aggregate exposure to starch, 1-octenylbutanedioate, aluminum salt; dextrin, hydrogen 1-octenylbutanedioate; and amylopectin, 2-hydroxypropyl ether, acid- residues.

V. Analytical Enforcement Methodology

An analytical method is not required for enforcement purposes since the Agency is establishing exemptions from the requirement of a tolerance without any numerical limitation.

VI. Conclusions

Therefore, exemptions from the requirement of a tolerance are established for residues of starch, 1-octenylbutanedioate, aluminum salt (CAS Reg. No. 9087–61–0); dextrin, hydrogen 1-octenylbutanedioate (CAS Reg. No. 68070–94–0); and amylopectin, 2-hydroxypropyl ether, acid- (CAS Reg. No. 2756130–86–4) when used as inert ingredients (for seed treatment only) in pesticide formulations applied pre-harvest under 40 CFR 180.920.

VII. Statutory and Executive Order Reviews

This action establishes exemptions from the requirement of a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), nor does it require any special considerations under Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the exemptions in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or Tribal Governments, on the relationship between the National Government and the States or Tribal Governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VIII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure,

Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: April 25, 2023.

Charles Smith,

Director, Registration Division, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, EPA is amending 40 CFR chapter I as follows:

PART 180—TOLERANCES AND EXEMPTIONS FOR PESTICIDE CHEMICAL RESIDUES IN FOOD

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. In § 180.920, amend table 1 to the section by adding, in alphabetical order, entries for ''Amylopectin, 2-hydroxypropyl ether, acid- (CAS Reg. No. 2756130–86–4)''; ''Dextrin, hydrogen 1-octenylbutanedioate (CAS Reg. No. 68070–94–0)''; and ''Starch, 1-octenylbutanedioate, aluminum salt (CAS Reg. No. 9087–61–0)'' to read as follows:

§ 180.920 Inert ingredients used pre-harvest; exemptions from the requirement of a tolerance.

* * * * *

TABLE 1 TO 180.920

Inert ingredients	Limits	Uses
* * *	* *	* *
Amylopectin, 2-hydroxypropyl ether, acid- (CAS Reg. No. 2756130–86–4).	For seed treatment use only	Binder, carrier, film-former.
* * *	* *	* *
Dextrin, hydrogen 1-octenylbutanedioate (CAS Reg. No. 68070–94–0)	For seed treatment use only	Binder, carrier, film-former.
* * *	* *	* *
Starch, 1-octenylbutanedioate, aluminum salt (CAS Reg. No. 9087–61–0).	For seed treatment use only	Flow aid, flow enhancer, anti-caking agent
* * *	* *	* *

BILLING CODE 6560–50–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 230425–0113]

RTID 0648–XC579

Magnuson-Stevens Act Provisions; Fisheries of the Northeastern United States; Northeast Multispecies Fishery; Approval of 2023 and 2024 Sector Operations Plans and Allocation of 2023 Northeast Multispecies Annual Catch Entitlements

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: This final rule approves sector operations plans and contracts, including 18 regulatory exemptions for fishing years 2023 and 2024. This final rule also allocates Northeast multispecies annual catch entitlements to approved groundfish sectors for fishing year 2023; this includes default specifications for nine stocks. This action is intended to allow limited access permit holders to continue to operate sectors, as authorized under the Northeast Multispecies Fishery Management Plan, and to exempt sectors from certain effort control regulations to improve the efficiency and economics of sector vessels. Approval of sector operations plans and contracts is necessary to allocate annual catch entitlements to the sectors in order for sectors to operate.

DATES: Sector operations plans and regulatory exemptions are effective May 1, 2023, through April 30, 2025. Northeast multispecies annual catch entitlements for sectors are effective May 1, 2023, through April 30, 2024. Default catch limits are effective May 1, 2023, through October 31, 2023, or until the final rule for Framework 65 is implemented, if that final rule is implemented prior to October 31, 2023. If Framework 65 is not implemented on or before October 31, 2023, all fishing for these stocks would be prohibited beginning November 1, 2023.

ADDRESSES: Copies of each sector's operations plan and contract are available from the NMFS Greater Atlantic Regional Fisheries Office (GARFO): Contact Samantha Tolken at *Samantha.Tolken@noaa.gov.* These documents are also accessible via the GARFO website. To view these documents and the **Federal Register** documents referenced in this rule, you can visit: *https://www.fisheries.noaa.gov/management-plan/northeast-multispecies-management-plan.*

FOR FURTHER INFORMATION CONTACT: Samantha Tolken, Fishery Management Specialist, (978) 675–2176.

SUPPLEMENTARY INFORMATION:

Background

The Northeast Multispecies Fishery Management Plan (FMP) defines a sector as a group of persons holding limited access Northeast multispecies permits that has voluntarily entered into a contract and agree to certain fishing restrictions for a specified period of time, and that has been granted a portion of the total allowable catch (TAC) in order to achieve objectives consistent with applicable FMP goals and objectives. A sector must be comprised of at least three Northeast multispecies permits issued to at least three different persons, none of whom have any common ownership interest in the permits, vessels, or businesses associated with the permits issued to the other two or more persons in that sector. Sectors are self-selecting, meaning each sector can choose its members.

The Northeast multispecies sector management system allocates a portion of the Northeast multispecies stocks to each sector. These annual sector allocations are known as annual catch entitlements (ACE) and are based on the collective fishing history of a sector's members. Sectors may receive

allocations of large-mesh Northeast multispecies stocks with the exception of Atlantic halibut, windowpane flounder, Atlantic wolffish, and ocean pout, which are non-allocated species managed under separate effort controls. ACEs are portions of a stock's annual catch limit (ACL) available to commercial Northeast multispecies vessels. A sector determines how to harvest its ACE.

Because sectors elect to receive an allocation under a quota-based system, the FMP grants sector vessels several universal exemptions (*i.e.,* exemptions from certain Northeast multispecies regulations that are granted to all sectors) from the FMP's effort controls. These universal exemptions apply to: Trip limits on allocated stocks; Northeast multispecies days-at-sea (DAS) restrictions; the requirement to use a 6.5-inch (16.5-cm) mesh codend when fishing with selective gear on Georges Bank (GB); and portions of the Gulf of Maine (GOM) Cod Protection Closures. The FMP prohibits sectors from requesting exemptions from permitting restrictions, gear restrictions designed to minimize habitat impacts, and most reporting requirements.

In addition to the approved sectors, there are several state-operated permit banks, which receive allocations based on the history of the permits owned by the states. The final rule implementing Amendment 17 to the FMP allowed a state-operated permit bank to receive an allocation without needing to comply with the administrative and procedural requirements for sectors (77 FR 16942; March 23, 2012). Instead, permit banks are required to submit a list of participating permits to us, as specified in the permit bank's Memorandum of Agreement, to determine the ACE allocated to the permit bank. These allocations may be leased to fishermen enrolled in sectors. State-operated permit banks are no longer approved through the sector approval process, but current state-operated permit banks contribute to the total allocation under the sector system.

We received operations plans and preliminary contracts for fishing years 2023 and 2024 from 15 sectors. One additional sector that was active in fishing year 2022 submitted an initial operations plan, but later notified us that it does not intend to operate in fishing year 2023. This sector did not submit a final operations plan for approval. The operations plans for the 15 sectors included 18 exemptions previously requested by sectors, and approved by NMFS, in fishing years 2021 and 2022. These sectors did not request any new regulatory exemptions. We have determined that the 15 sector operations plans and contracts that we received, and that the 18 previously approved regulatory exemptions requested, are consistent with the FMP's goals and objectives and meet sector requirements outlined in the regulations at 50 CFR 648.87. Consequently, in this final rule we are approving the 15 sector operations plans, as well as the 18 previously approved regulatory exemptions requested. No new regulatory exemptions are approved as none were requested for fishing year 2023. Copies of the operations plans and contracts, and the environmental assessment (EA), are available at: *http://www.regulations.gov* and from NMFS (see **ADDRESSES**).

Catch Limits for Fishing Year 2023

Previously Established Catch Limits

Last year, Framework Adjustment 63 (Framework 63) (87 FR 42375; July 15, 2022) set fishing years 2022–2023 catch limits for two groundfish stocks: GOM cod and GB yellowtail flounder. Additionally, Framework 61 (86 FR 33191; July 9, 2021) set fishing years 2021–2023 catch limits for nine groundfish stocks: GB winter flounder; GOM Winter flounder; Southern New England/Mid-Atlantic (SNE/MA) winter flounder; redfish; northern windowpane flounder; southern windowpane flounder; ocean pout; Atlantic halibut; and wolffish. Frameworks 61 and 63 did not, however, specify a 2023 catch limit for nine stocks: GB cod; GB haddock; GOM haddock; SNE/MA yellowtail flounder; Cape Cod/GOM yellowtail flounder; American plaice; witch flounder; white hake; and pollock. Framework 65 would set catch limits for these nine stocks (and seven other stocks). However, Framework 65 will not be in place by the May 1, 2023, start of the fishing year. To prevent disruption to the groundfish fishery while Framework 65 is finalized, this final rule announces default catch limits that will be in effect for these nine stocks until Framework 65 is finalized and goes into effect.

As a result, the sector and common pool allocations in this rule are based on the 2023 catch limits set in Framework 61, Framework 63 or default catch limits that will be effective on May 1, 2023, and preliminary 2023 fishing year rosters (Table 1). If we approve Framework 65, the 2023 catch limits for 16 (out of 20) groundfish stocks announced in this rule will change when Framework 65 measures become effective.

Default Catch Limits

This rule announces default catch limits for GB cod; GB haddock; GOM haddock; SNE/MA yellowtail flounder; Cape Cod/GOM yellowtail flounder; American plaice; witch flounder; white hake; and pollock (Table 1). These stocks do not already have a catch limit in place for fishing year 2023. The groundfish regulations implement default catch limits for any stock for which final specifications are not in place by the beginning of the fishing year on May 1. The FMP's default specifications provision in the regulations sets catch limits at 75 percent of the previous year's (2022) catch limits, except in instances where the default catch limit would exceed the Council's recommendation for the final specifications. The default catch limits are effective from May 1 through October 31, or until the final rule for Framework 65 is implemented if that final rule is implemented prior to October 31. We are announcing these default specifications to comply with the FMP as set out in these regulations and to minimize impacts on the fishery that would occur if no catch limits are specified. If Framework 65 is not implemented on or before October 31, all fishing for these stocks would be prohibited beginning November 1.

TABLE 1—NORTHEAST MULTISPECIES CATCH LIMITS FOR 2023

Stock	Total U.S. ABC (mt)	Commercial groundfish sub-ACL (mt)
GB Cod #	257	182.9
GOM Cod *	551	269.9
GB Haddock #	11,901	11,079.8
GOM Haddock #	1,936	1,148.6
GB Yellowtail Flounder *	122	97.0

TABLE 1—NORTHEAST MULTISPECIES CATCH LIMITS FOR 2023—Continued

Stock	Total U.S. ABC (mt)	Commercial groundfish sub-ACL (mt)
SNE/MA Yellowtail Flounder #	17	11.7
CC/GOM Yellowtail Flounder #	617	518.9
American Plaice #	2,119	1,972.6
Witch Flounder #	1,112	988.0
GB Winter Flounder *	608	563.2
GOM Winter Flounder *	497	280.9
SNE/MA Winter Flounder *	456	288.1
Redfish *	9,967	9,468.7
White Hake #	1,587	1,492.6
Pollock #	12,609	10,601.0
N. Windowpane Flounder *	160	107.9
S. Windowpane Flounder *	384	42.9
Ocean Pout *	87	49.8
Atlantic Halibut *	101	73.4
Atlantic Wolffish *	92	85.6

* These catch limits are based on fishing year 2023 Frameworks 61 or 63 and will be replaced when the final rule for Framework 65 becomes effective, if approved.

These catch limits are based on default specifications and will be replaced when the final rule for Framework 65 becomes effective, if approved. If Framework 65 is not implemented on or before October 31, all fishing for these stocks would be prohibited beginning November 1.

Sector Allocations

This rule allocates ACE to sectors based on the preliminary fishing year 2023 sector rosters and the 2023 catch limits established in Framework 61, Framework 63, or default specifications, as shown in Table 1. Any permits that change ownership after the enrollment deadline established by the Regional Administrator (April 3 for fishing year 2023) retain the ability to join a sector through April 30, 2023. All permit holders who have joined a sector for fishing year 2023 have until April 30, 2023, to withdraw and elect to fish in the common pool, although sectors may specify a more restrictive withdrawal date for their members. As a result, the total permits enrolled in sectors for fishing year 2023 could change from the preliminary rosters, although such changes are expected to be minimal based on past fishing years. For fishing year 2024, we will set similar roster deadlines, notify permit holders of the fishing year 2024 deadlines, and allow permit holders to change sectors separate from the annual sector operations plans approval process.

We calculate a sector's allocation for each stock by summing its members' potential sector contributions (PSC) for a stock and then multiplying that total percentage by the available commercial sub-ACL for that stock. Table 2 shows the preliminary total PSCs for each sector for fishing year 2023. Tables 3 and 4 show the initial allocations that each sector is allocated, in pounds and metric tons, respectively, for fishing year 2023 based on their preliminary fishing year 2023 rosters and the fishing year 2023 catch limits established in Framework 61, Framework 63, or default specifications. At the start of the 2023 fishing year, we provide final allocations, to the nearest pound, to each sector based on their final May 1 rosters. We use these final allocations, along with later adjustments for ACE transfers, reductions for overages, or increases for carryover from fishing year 2022, to monitor sector catch. We have included the preliminary common pool sub-ACLs in tables 2 through 4 for comparison.

These tables do not represent the final allocations for the 2023 fishing year. One additional sector, Northeast Fishery Sector VII (NEFS 7), that was active in fishing year 2022, did not submit a final operations plan and will not operate in fishing year 2023. As a result, NEFS 7 is not included in tables 2 through 4. We expect the permits initially enrolled in NEFS 7 for fishing year 2023 to enroll in a different sector or join the common pool for fishing year 2023. ACE attributable to those permits will be allocated to whichever sector(s) those permits enroll in for 2023, or to the common pool.

We do not assign each permit separate PSCs for Eastern GB cod or Eastern GB haddock; instead, we assign each permit a PSC for the GB cod stock and GB haddock stock. Each sector's GB cod and GB haddock allocations are then divided into an Eastern ACE and a Western ACE, based on each sector's percentage of the GB cod and GB haddock ACLs. For example, if a sector is allocated 4 percent of the GB cod ACL and 6 percent of the GB haddock ACL, the sector is allocated 4 percent of the commercial Eastern U.S./Canada Area GB cod TAC and 6 percent of the commercial Eastern U.S./Canada Area GB haddock TAC as its Eastern GB cod and haddock ACEs. These amounts are then subtracted from the sector's overall GB cod and haddock allocations to determine its Western GB cod and haddock ACEs. A sector may only harvest its Eastern GB cod and haddock ACEs in the Eastern U.S./Canada Area, but may ''convert,'' or transfer, its Eastern GB cod or haddock allocation into Western GB allocation and fish that converted ACE outside the Eastern GB area.

We expect to finalize 2022 catch information in summer 2023. We allow sectors to trade fishing year 2022 ACE for 2 weeks upon our completion of year-end catch accounting to reduce or eliminate any fishing year 2022 overages. If necessary, we reduce any sector's fishing year 2023 allocation to account for a remaining overage in fishing year 2022. Each year of the operations plans, we notify the Council and sector managers of this deadline in writing and announce our final ACE determination on our website at: *https://www.greateratlantic.fisheries.noaa.gov/ro/fso/reports/h/groundfish_catch_accounting.*

^ The data in the table represent the preliminary total allocations to each sector. Final allocations will be determined using final fishing year 2023 rosters.

Sector Operations Plans and Contracts

We are approving 15 sector operations plans and contracts for fishing years 2023 and 2024. All 15 sectors were active in fishing years 2021 and 2022. One sector, NEFS 7, submitted an initial operations plan, but later notified us that they would not be operating in fishing year 2023, and did not submit a final operations plan for approval. In order to approve a sector's operations plan for fishing years 2023 and 2024, we consider whether a sector's plan is consistent with regulatory requirements and FMP objectives, and whether it has been compliant with reporting requirements from previous years, including the year-end reporting requirements found at § 648.87(b)(1)(v). Approved operations plans contain the rules under which each sector will fish, and also provide the legal contract that binds each member to the sector for the length of the sector's operations plan. Each sector's operations plan, and each sector's members, must comply with the regulations governing sectors, found at § 648.87. In addition, each sector must conduct fishing activities as detailed in its approved operations plan.

Participating vessels are required to comply with all pertinent Federal fishing regulations, except as specifically exempted in the letter of authorization (LOA) issued by the Regional Administrator, which details any approved sector exemptions from the regulations. If, during a fishing year, or between fishing years 2023 and 2024, a sector requests an exemption that we have already granted, or proposes a change to administrative provisions, we may amend the sector operations plans. Should any such amendments require modifications to LOAs, we will include these changes in updated LOAs and provide them to the appropriate sectors.

We may revoke exemptions in-season if: We determine that the exemption jeopardizes management measures, FMP objectives, or rebuilding efforts; the exemption results in unforeseen negative impacts on other managed fish stocks, habitat, or protected resources; the exemption causes enforcement concerns; catch from trips using the exemption cannot be adequately monitored; or a sector is not meeting certain administrative or operational requirements. If it becomes necessary to revoke an exemption, we will do so through a process consistent with the existing regulations or in a separate rulemaking action, as appropriate.

Each sector is required to ensure that it does not exceed its ACE during the fishing year. Sector vessels are required to retain all legal-sized allocated Northeast multispecies stocks, unless a sector is granted an exemption allowing its member vessels to discard legal-sized unmarketable fish at sea. Catch (defined as landings and discards) of all allocated Northeast multispecies stocks by a sector's vessels count against the sector's allocation. Groundfish catch from a sector trip targeting non-groundfish species will be deducted from the sector's ACE because these are groundfish trips using gear capable of catching groundfish. Catch from a non-sector trip in an exempted fishery does not count against a sector's allocation and is assigned to a separate ACL sub-component to account for any groundfish bycatch that occurs in non-groundfish fisheries.

Each sector operations plan submitted for fishing years 2023 and 2024 states that the sector may withhold an initial reserve from the sector's ACE sub-allocation to each individual member to prevent the sector from exceeding its ACE. A sector and sector members can be held jointly and severally liable for ACE overages, discarding legal-sized fish, and/or misreporting catch (landings or discards). Each sector contract provides procedures for sector enforcement of its rules, explains sector monitoring and reporting requirements, provides sector managers with the authority to issue stop fishing orders to sector members who violate provisions of the operations plan and contract, and presents a schedule of penalties that managers may levy on members for sector plan violations.

Sectors are required to monitor their allocations and catch. To help ensure that a sector does not exceed its ACE, each sector operations plan explains sector monitoring and reporting requirements, including a requirement to submit weekly catch reports to us. If a sector reaches an ACE threshold (specified in the operations plan), the sector must provide us with sector allocation usage reports on a daily basis. Once a sector's allocation for a particular stock is caught, that sector is required to cease all sector fishing operations in that stock area until it acquires more ACE, likely by an ACE transfer between sectors. Within 60 days of when we complete year-end catch accounting, each sector is required to submit an annual report detailing the sector's catch (landings and discards), sector enforcement actions, and pertinent information necessary to evaluate the biological, economic, and social impacts of each sector.

Industry-Funded Monitoring Programs

Sectors are responsible for developing and implementing a monitoring program that must be approved by NMFS as both sufficient to monitor catch, discards, and use of ACE, and consistent with the sector monitoring program goals and objectives. Amendment 23 (87 FR 75852; December 9, 2022) replaced the previous method for determining the at-sea monitoring (ASM) coverage target with a fixed coverage target as a percentage of trips, dependent on Federal funding. Each year, NMFS will evaluate available Federal funding. NMFS will determine how much Federal funding is available for the groundfish sector monitoring program and then use that in conjunction with other available information (*e.g.,* recent monitoring costs, estimate of the number of vessels choosing electronic monitoring (EM)) to calculate the human ASM coverage target between 40 and 100 percent for the coming fishing year. This funding-based determination replaces the former annual process for determining the ASM coverage target for the sector monitoring program.

For fishing year 2023, sector vessels may choose to use ASM, the audit model EM, or the maximized retention EM program to meet monitoring requirements, provided that the sector has a corresponding monitoring program approved as part of its operations plan. On March 16, 2023, we announced a preliminary monitoring coverage level of 90 percent of all sector groundfish trips for the 2023 fishing year. The preliminary coverage level was announced to facilitate preparations by industry members and monitoring companies ahead of the 2023 fishing year. The final ASM coverage level will be announced when the ASM spend plan is approved. Vessels that choose to use ASM to meet monitoring requirements will be assigned monitors based on the target coverage level set for all sector groundfish trips. Vessels that choose to use EM to meet monitoring coverage requirements must use cameras and adhere to catch handling protocols as described in their vessel monitoring plans for all groundfish trips. Only a subset of the submitted trips will be selected for review to monitor groundfish discards for catch accounting. A subset of the selected EM trips will also undergo editing by NMFS to monitor the third-party service provider's performance. The vessel owner or operator and the third-party service provider must provide the EM data for any given trip to NMFS, and its authorized officers and designees, upon request including, but not limited to, trips selected for NMFS review. For fishing year 2023, the audit model EM

video footage review rate will be calculated for each active EM vessel based on each vessel's performance in 2022. The minimum possible EM video footage review rate will be 35 percent of sector trips for audit model vessels. The EM video footage review rate remains at 50 percent for all maximized retention EM vessels in fishing year 2023. Vessels that are new to EM will have a 50-percent video footage review rate in 2023 to allow more opportunities for feedback on their catch handling and reporting performance.

The operations plans submitted by sectors include industry-funded monitoring plans for fishing year 2023. As in previous years, we gave sectors the option to design their own monitoring program(s) in compliance with regulations or elect to adopt the NMFS-designed ASM and/or EM audit model and maximized retention program(s). In the event that we cannot approve a proposed monitoring program, we asked all sectors to include an option to select a current NMFS-designed monitoring program as a fail-safe.

All active sectors submitted an ASM plan as part of their operations plans. Sectors that operate only as permit banks, and explicitly prohibit fishing in their operations plans, are not required to include provisions for an ASM program. Similar to previous years, some sectors chose to use the NMFS-designed ASM program while others proposed programs of their own design. The NMFS-designed ASM program is the same program that we have used in previous fishing years. Sector-designed ASM programs for fishing years 2023 and 2024 were materially the same as those approved in past years. We reviewed all sector-proposed ASM programs for consistency with ASM requirements.

Sustainable Harvest Sectors 1, 2, and 3; the GB Cod Fixed Gear Sector; the Maine Coast Community Sector; and NEFS 5, 10, 11, and 13 will use the NMFS-designed ASM program. NEFS 2, 6, 8, and 12 will use a sector-designed ASM program, which states that they will: Contract with a NMFS-approved ASM provider; meet the specified coverage level; and utilize the Pre-Trip Notification System for random selection of monitored trips and notification to providers. These ASM programs also include additional protocols for ASM coverage waivers, incident reporting, and safety requirements for their sector managers and members. We are approving these programs because they are consistent with the goals and objectives of ASM and regulatory requirements.

Thirteen sectors also submitted an EM plan as part of their operations plans. Sustainable Harvest Sectors 1, 2, and 3; the GB Cod Fixed Gear Sector; the Maine Coast Community Sector; and NEFS 2, 5, 6, 8, 10, 11, 12, and 13 included the NMFS-designed audit model EM program in their operations plans. Sustainable Harvest Sectors 1, 2, and 3; the GB Cod Fixed Gear Sector; the Maine Coast Community Sector; and NEFS 2, 6, 8, 10, 12, and 13 also included the NMFS-designed maximized retention EM program in their operations plans.

Approved Exemptions for Fishing Years 2023 and 2024

We are granting exemptions from the following requirements for fishing years 2023 and 2024, all of which have been requested and granted in previous years:

(1) 120-day block out of the fishery required for Day gillnet vessels;

(2) 20-day spawning block out of the fishery required for all vessels;

(3) Limits on the number of gillnets for Day gillnet vessels outside the GOM;

(4) Prohibition on a vessel hauling another vessel's gillnet gear;

(5) Limits on the number of gillnets that may be hauled on GB when fishing under a Northeast multispecies/monkfish DAS;

(6) Limits on the number of hooks that may be fished;

(7) DAS Leasing Program length and horsepower restrictions;

(8) Prohibition on discarding;

(9) Gear requirements in the Eastern U.S./Canada Management Area;

(10) Prohibition on a vessel hauling another vessel's hook gear;

(11) The requirement to declare an intent to fish in the Eastern U.S./Canada Special Access Program (SAP) and the Closed Area (CA) II Yellowtail Flounder/Haddock SAP prior to leaving the dock;

(12) Seasonal restrictions for the Eastern U.S./Canada Haddock SAP;

(13) Seasonal restrictions for the CA II Yellowtail Flounder/Haddock SAP;

(14) Sampling exemption;

(15) Prohibition on combining small-mesh exempted fishery and sector trips in southern New England (SNE);

(16) Extra-large mesh requirement to target dogfish on trips excluded from ASM in SNE and Inshore GB;

(17) Requirement that Handgear A vessels carry a Vessel Monitoring System (VMS) unit when fishing in a single broad stock area; and

(18) Limits on the number of gillnets for Day gillnet vessels in the GOM.

Exemption Requests in Fishing Year 2023

For fishing year 2023, sectors did not request any novel exemptions.

Comments and Responses

We received no comments on the proposed rule.

Changes From the Proposed Rule

The 16 sector operations plans published in the proposed rule were based on sectors' submissions of initial operations plans for fishing years 2023 and 2024. NEFS 7 was approved for operation in fishing year 2022. However, NEFS 7 did not submit a final operations plan and will not operate in fishing year 2023. Therefore, the final rule approves 15 sector operations plans for fishing years 2023 and 2024.

The allocations published in the proposed rule were based on final fishing year 2022 sector rosters because we had not yet processed preliminary rosters for the 2023 fishing year. The deadline for preliminary sector roster submissions was April 3, 2023. The ACE allocated to each sector is updated in this final rule to reflect preliminary sector enrollment for fishing year 2023. ACE attributable to those permits enrolled in NEFS 7 for fishing year 2022 will be allocated to whichever sector(s) those permits enroll in for 2023, or to the common pool.

Sector ACEs published in the proposed rule were based on the New England Fishery Management Council's preferred catch limits in Framework 65. Framework 65 would set catch limits for 16 (out of 20) groundfish stocks. However, Framework 65 will not be in place by the May 1, 2023, start of the fishing year. As a result, to authorize fishing at the beginning of this fishing year, this rule implements allocations based on catch limits previously set in Frameworks 61 and 63 to the FMP. In addition, ACE is based on default specifications for the following stocks which do not already have catch limits set for fishing year 2023: GB cod; GB haddock; GOM haddock; SNE/MA yellowtail flounder; Cape Cod/GOM yellowtail flounder; American plaice; witch flounder; white hake; and pollock. The final rule for Framework 65 will include updated sector allocations for relevant stocks, and account for any changes from preliminary sector rosters if needed.

No other changes from the proposed action were made in this final rule.

Classification

NMFS is issuing this rule pursuant to section 305(d) of the Magnuson-Stevens Fishery Conservation and Management

Act (Magnuson-Stevens Act). Consistent with Magnuson-Stevens Act section 305(d), this action is necessary to carry out the Northeast Multispecies FMP in accordance with the FMP's implementing regulations. These regulations require Regional Administrator approval of operations plans for sectors to receive their ACE for specific groundfish stocks. The NMFS Assistant Administrator has determined that this final rule is consistent with the Northeast Multispecies FMP, other provisions of the Magnuson-Stevens Act, and other applicable law.

There is good cause pursuant to 5 U.S.C. 553(d)(3) to waive the 30-day delay in effective date for this final rule. This action approves fishing years 2023 and 2024 operations plans for 15 groundfish sectors in the Northeast multispecies fishery and allocates ACE for fishing year 2023. This rulemaking was required to be delayed to accommodate the sector roster deadline (April 3, 2023). We must have preliminary sector rosters for the upcoming fishing year in order to allocate preliminary ACE to sectors. Sectors are prohibited from fishing without an approved operations plan and ACE allocations; as such, timely implementation is necessary to ensure that sectors may fish at the start of the 2023 fishing year on May 1, 2023. If sectors were prohibited from fishing while waiting for the rule to take effect, there would be significant disruption to the fishery along with negative economic impacts, thus undermining the intent of the rule. The approval of sector operations plans occurs annually. Industry members and other stakeholders are aware of and familiar with these proceedings and expect them to occur in a timely manner.

This final rule is exempt from review under Executive Order 12866 because it contains no implementing regulations. This final rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration at the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. No comments were received regarding this certification. In addition, the changes from the proposed rule do not affect the factual basis for the certification. The factual basis for the certification was published in the proposed rule and is not repeated here. As a result, a final regulatory flexibility analysis was not required and none was prepared.

Dated: April 25, 2023

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

Proposed Rules

Federal Register
Vol. 88, No. 83
Monday, May 1, 2023

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF ENERGY

10 CFR Part 430

[EERE–2017–BT–STD–0014]

RIN 1904–AD98

Energy Conservation Program: Energy Conservation Standards for Residential Clothes Washers; Extension of Public Comment Period

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Notice of proposed rulemaking; extension of public comment period.

SUMMARY: On March 3, 2023, the U.S. Department of Energy (''DOE'') published a notice of proposed rulemaking (''NOPR'') and announcement of public meeting proposing amended energy conservation standards for residential clothes washers (''RCWs'') and announcing a public meeting to receive comment on the proposed standards and associated analyses and results. (''March 2023 NOPR'') The notice provided an opportunity for submitting written comments, data, and information by May 2, 2023. On April 15, 2023, DOE received a request from the Association of Home Appliance Manufacturers (''AHAM'') to extend the written comment period. DOE has reviewed this request and is granting a 15-day extension of the public comment period to allow comments to be submitted until May 17, 2023.

DATES: The comment period for the NOPR published on March 3, 2023 (88 FR 13520) is extended. Written comments and information regarding the NOPR will be accepted on or before May 17, 2023.

ADDRESSES: Interested persons are encouraged to submit comments using the Federal eRulemaking Portal at *www.regulations.gov* under docket number EERE–2017–BT–STD–0014. Follow the instructions for submitting comments. Alternatively, interested persons may submit comments, identified by docket number EERE–2017–BT–STD–0014, by any of the following methods:

Email: ConsumerClothesWasher2017STD0014@ee.doe.gov. Include the docket number EERE–2017–BT–STD–0014 in the subject line of the message.

Postal Mail: Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, Mailstop EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. If possible, please submit all items on a compact disc (''CD''), in which case it is not necessary to include printed copies.

Hand Delivery/Courier: Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, 950 L'Enfant Plaza SW, 6th Floor, Washington, DC 20024. Telephone: (202) 287–1445. If possible, please submit all items on a CD, in which case it is not necessary to include printed copies.

No telefacsimiles (''faxes'') will be accepted.

Docket: The docket for this activity, which includes **Federal Register** notices, public meeting attendee lists and transcripts (if a public meeting is held), comments, and other supporting documents/materials, is available for review at *www.regulations.gov.* All documents in the docket are listed in the *www.regulations.gov* index. However, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

The docket web page can be found at *www.regulations.gov/docket/EERE-2017-BT-STD-0014.* The docket web page contains instructions on how to access all documents, including public comments, in the docket.

FOR FURTHER INFORMATION CONTACT:

Dr. Carl Shapiro, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, Mailstop EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 287–5649. Email: *ApplianceStandardsQuestions@ee.doe.gov.*

Ms. Melanie Lampton, U.S. Department of Energy, Office of the General Counsel, Mail Stop GC–33, Forrestal Building, 1000 Independence Avenue SW, Washington, DC 20585–0103. Telephone: (240) 751–5157. Email: *Melanie.Lampton@hq.doe.gov.*

For further information on how to submit a comment, review other public comments and the docket, or participate in the public meeting, contact the Appliance and Equipment Standards Program staff at (202) 287–1445 or by email: *ApplianceStandardsQuestions@ee.doe.gov.*

SUPPLEMENTARY INFORMATION: On September 29, 2021, DOE published a notification of the availability of a preliminary technical support document for RCWs (''September 2021 Preliminary Analysis''). 86 FR 53886. In that notification, DOE sought comment on the analytical framework, models, and tools that DOE used to evaluate potential standards for RCWs. *Id.* On October 29, 2021, DOE extended the comment period for the September 2021 Preliminary Analysis by an additional 45 days. 86 FR 59889. DOE subsequently published a notification of data availability (''NODA'') on April 13, 2022, presenting the results of additional testing conducted in furtherance of the development of the translations between the current test procedure and the proposed new test procedure. 87 FR 21816 (''April 2022 NODA''). On May 19, 2022, DOE reopened the comment period for the April 2022 NODA and provided additional information in response to stakeholder questions. 87 FR 30433. On March 3, 2023, the DOE published a NOPR proposing amended energy conservation standards for residential clothes washers. 88 FR 13520. The March 2023 NOPR announced a public meeting to receive comment on the proposed standards and provided for the written submission of comments by May 2, 2023. *Id.*

On April 15, 2023, DOE received a request from AHAM to extend the written comment period on the March 2023 NOPR by 20 days. AHAM stated that it was reviewing DOE's responses to other stakeholders' comments, including comments requesting that DOE consider an equation-based approach for energy conservation standards. AHAM noted that while DOE did not propose such an approach, DOE indicated a willingness to consider it, and AHAM requires additional time to review and analyze how such an approach could work and provide DOE

with substantive feedback. (AHAM, No. 89).

In response to the September 2021 Preliminary Analysis, the California investor-owned utilities (''CA IOUs'') stated that they were supportive of an equation-based metric that can account for the efficiency differences related to capacity. (CA IOUs, No. 43 at pp. 3–4). In the March 2023 NOPR, DOE did not propose equation-based standards, but noted that given the close relationship between efficiency and capacity, DOE continues to consider whether to specify an equation-based standard for the top-loading standard-size product class. 88 FR 13540.

DOE has reviewed the request and considered the benefit of allowing interested parties additional time to submit comments regarding the March 2023 NOPR, including feedback on an equation-based approach for energy conservation standards, for DOE's consideration. Accordingly, DOE has determined that an extension of the public comment period is appropriate, and is hereby extending the comment period by 15 days, until May 17, 2023.

Signing Authority

This document of the Department of Energy was signed on April 25, 2023, by Francisco Alejandro Moreno, Acting Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on April 25, 2023.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

RIN 1545–BQ40

Superfund Chemical Taxes; Correction

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking; correction.

SUMMARY: This document contains corrections to a notice of proposed rulemaking (REG–105954–22) that was published in the **Federal Register** on Wednesday, March 29, 2023. The proposed rulemaking published in March contains proposed regulations relating to the excise taxes imposed on certain chemicals and certain imported substances, effective July 1, 2022. Such taxes are known as the Superfund chemical taxes.

DATES: Written or electronic comments and requests for a public hearing are still being accepted and must be received by May 30, 2023.

ADDRESSES: Commenters are strongly encouraged to submit public comments electronically. Submit electronic submissions via the Federal eRulemaking Portal at *www.regulations.gov* (indicate IRS and REG–105954–22) by following the online instructions for submitting comments. Once submitted to the Federal eRulemaking Portal, comments cannot be edited or withdrawn. The Department of the Treasury (Treasury Department) and the IRS will publish for public availability any comment submitted electronically and on paper, to its public docket. Send paper submissions to: CC:PA:LPD:PR (REG–120653–22), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044.

FOR FURTHER INFORMATION CONTACT: Concerning the proposed regulations, Stephanie Bland or Amanda Dunlap at (202) 317–6855 (not a toll-free number); concerning submissions of comments and requests for a public hearing, call Vivian Hayes (202) 317–5306 (not a toll-free number) or by email to *publichearings@irs.gov* (preferred).

SUPPLEMENTARY INFORMATION:

Background

The notice of proposed rulemaking that is the subject of this document is under sections 4661, 4662, 4671 and 4672 of the Internal Revenue Code.

Need for Correction

As published, the notice of proposed rulemaking (REG–105954–22) (FR 2023–06278), beginning on page 18446 in the issue of March 29, 2023, contains errors that need to be corrected.

■ 1. On page 18453, in the second column, the heading ''*VII. Definitions Relating to Sections 4671*'' is corrected to read ''*VII. Definitions Relating to Sections 4671 and 4672*''.

§ 52.4662–2 [Corrected]

■ 2. On page 18462, in the first column, in paragraph (g)(3)(iii) of § 52.4662–2, the language ''refinery grade'' is corrected to read ''refinery-grade'', wherever it appears.

Oluwafunmilayo A. Taylor,

Branch Chief, Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel (Procedure and Administration).

Coast Guard

33 CFR Part 165

[Docket Number USCG–2023–0342]

RIN 1625–AA00

Safety Zone; Graduate Boat Parade, Sturgeon Bay, WI

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard is proposing to establish a temporary safety zone for certain waters of Sturgeon Bay, WI. This action is necessary to provide for the safety of life on these navigable waters during the boat parade for the Graduates of Sturgeon Bay High School on June 3, 2023. This proposed rulemaking would restrict usage by persons and vessels within the safety zone. At no time during the effective period may non-parade vessels transit the waters of Sturgeon Bay between the Highway 42 Bridge and Michigan Street Bridge. These restrictions would apply to all vessels during the effective period unless authorized by the Captain of the Port Lake Michigan or a designated representative. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must be received by the Coast Guard on or before May 16, 2023.

ADDRESSES: You may submit comments identified by docket number USCG–

2023–0342 using the Federal eRulemaking Portal at *https://www.regulations.gov.* See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email Chief Petty Officer Jeromy Sherrill, Sector Lake Michigan Waterways Management Division, U.S. Coast Guard; telephone 414–747–7148, email *Jeromy.N.Sherrill@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

On April 10, 2023, the principal of Sturgeon Bay High School notified the Coast Guard that they will be conducting a boat parade for graduates of the Class of 2023 on June 3, 2023 from 11:15 a.m. through 1 p.m. The boat parade will begin at Madelyn Marine, NW of Highway 42 bridge, proceed NW to the Michigan Street Bridge, cross the channel towards the Maritime Museum, then proceed SE, crossing back across the channel and ending at Madelyn Marine. The Captain of the Port has determined that potential hazards associated with the boat parade would be a safety concern for anyone within the safety zone that is not participating in the boat parade.

The purpose of this rulemaking is to ensure the safety of vessels and the navigable waters of Sturgeon Bay between the Highway 42 Bridge and Michigan Street Bridge during the event. The Coast Guard is proposing this rulemaking under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231).

III. Discussion of Proposed Rule

The Captain of the Port is proposing to establish a safety zone from 10 a.m. through 2 p.m. on June 3, 2023. The safety zone would cover all navigable waters of Sturgeon Bay between the Highway 42 Bridge and Michigan Street Bridge. The duration of the zone is intended to ensure the safety of vessels and these navigable waters before, during, and after the boat parade event. No vessels or person would be permitted to enter the safety zone without obtaining permission from the Captain of the Port or a designated representative. The regulatory text we are proposing appears at the end of this document.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This NPRM has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the characteristics of the safety zone. The safety zone created by this proposed rule will relatively small and is designed to minimize its impact on navigable waters. This proposed rule will prohibit entry into certain navigable waters of Sturgeon Bay, WI, and it is not anticipated to exceed 2 hours in duration. Thus, restrictions on vessel movement within that particular area are expected to be minimal. Moreover, under certain conditions vessels may still transit through the safety zone when permitted by the Captain of the Port Lake Michigan.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section IV.A above, this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this proposed rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the rulemaking would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In

particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this rulemaking elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves a safety zone lasting 4 hours that would prohibit entry within a relatively small portion of Sturgeon Bay. Normally such actions are categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A preliminary Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

We encourage you to submit comments through the Federal eRulemaking Portal at *https://www.regulations.gov.* If your material cannot be submitted using *https://www.regulations.gov,* call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

We accept anonymous comments. All comments received will be posted without change to *https://www.regulations.gov* and will include any personal information you have provided. For more about privacy and submissions in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

Documents mentioned in this NPRM as being available in the docket, and all public comments, will be in our online docket at *https://www.regulations.gov* and can be viewed by following that website's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted or a final rule is published.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.T09–0342 to read as follows:

§ 165.T09–0342 Safety Zone; Graduate Boat Parade, Sturgeon Bay, WI

(a) *Location.* All navigable waters of Sturgeon Bay between the Highway 42 Bridge and Michigan Street Bridge.

(b) *Enforcement Period.* The safety zone described in paragraph (a) would be effective on June 3, 2023 from 10 a.m. through 2 p.m.

(c) *Regulations.*

(1) In accordance with the general regulations in section 165.23, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the Captain of the Port Lake Michigan (COTP) or a designated representative.

(2) This safety zone is closed to all vessel traffic, except as may be permitted by the COTP or a designated representative.

(3) The ''designated representative'' of the COTP is any Coast Guard commissioned, warrant, or petty officer who has been designated by the COTP to act on his or her behalf.

(4) Persons and vessel operators desiring to enter or operate within the safety zone during the boat parade must contact the COTP or an on-scene representative to obtain permission to do so. The COTP or an on-scene representative may be contacted via VHF Channel 16. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the COTP or an on-scene representative.

Dated: April 25, 2023.

Doreen McCarthy,

Commander, U.S. Coast Guard, Alternate Captain of the Port Lake Michigan.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 90

[WP Docket No. 07–100; Report No. 3194; FR ID 138356]

Petition for Reconsideration of Action in Rulemaking Proceeding

AGENCY: Federal Communications Commission.

ACTION: Petition for reconsideration.

SUMMARY: Petition for Reconsideration (Petition) has been filed in the Federal Communications Commission's (Commission) proceeding the American Association of State Highway and Transportation Officials.

DATES: Oppositions to the Petition must be filed on or before May 16, 2023. Replies to oppositions must be filed on or before May 26, 2023.

ADDRESSES: Federal Communications Commission, 45 L Street NE, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: For additional information on this proceeding, contact Jon Markman of the Wireless Telecommunications Bureau, Mobility Division, at (202) 418–7090 or *Jonathan.Markman@fcc.gov* or Brian Marenco of the Public Safety and Homeland Security Bureau at (202) 418–0838 or *Brian.Marenco@fcc.gov.*

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's document, Report No. 3194, released April 19, 2023. The full text of the Petition can be accessed online via the Commission's Electronic Comment Filing System at: *https://apps.fcc.gov/ecfs/.* The Commission will not send a Congressional Review Act (CRA) submission to Congress or the Government Accountability Office pursuant to the CRA, 5 U.S.C. 801(a)(1)(A), because no rules are being adopted by the Commission.

Subject: Improving Public Safety Communications in the 4.9 GHz Band (WP Docket No. 07–100).

Number of Petitions Filed: 1.

Federal Communications Commission.

Notices

Federal Register
Vol. 88, No. 83
Monday, May 1, 2023

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

AGENCY FOR INTERNATIONAL DEVELOPMENT

Notice of Advisory Committee Public Meeting

AGENCY: Agency for International Development (USAID).

ACTION: Notice of advisory committee public meeting and request for public comment.

SUMMARY: Pursuant to the Federal Advisory Committee Act (FACA), notice is hereby given of Advisory Committee on Voluntary Foreign Aid (ACVFA) public meeting on Wednesday, May 24, 2023.

ADDRESSES: To view additional information related to ACVFA please visit *http://www.usaid.gov/who-we-are/organization/advisory-committee.*

This event will feature remarks by the USAID Administrator and the ACVFA Chair, as well as two discussion panels featuring ACVFA members on key Agency priorities such as food security, climate change, democratic governance, private sector engagement, and inclusive development.

You may submit comments regarding the work of ACVFA to *acvfa@usaid.gov* OR the committee's public comment form at: *https://www.usaid.gov/who-we-are/organization/advisory-committee/acvfa-contact-us.* Include ''Public Comment, ACVFA Meeting, May 24 2023'' in the subject line. All public comments and questions will be included in the official record of the meeting and posted publicly on the USAID website.

American Sign Language interpretation will be provided during the public meeting. If you require a reasonable accommodation, please email *reasonableaccommodations@usaid.gov.* Include ''Request for Reasonable Accommodation, ACVFA Meeting, May 24'' in the subject line.

The entirety of this meeting is open to the public. You may register to watch the live public meeting at this link: *https://usaid.zoomgov.com/webinar/register/WN_4DaAIfWTTgG5x0Tof8G8YA.*

FOR FURTHER INFORMATION CONTACT: Sophia Lajaunie, Designated Federal Officer for ACVFA, at *slajaunie@usaid.gov* or 202–531–9819.

SUPPLEMENTARY INFORMATION: ACVFA is USAID's external advisory committee, bringing together representatives from private voluntary organizations, nongovernmental organizations (NGOs), academia, civil society, and the private sector. Its membership of internationally recognized leaders represent a broad range of sectors who support the Agency's mission and goals by advising on key development challenges and priorities.

Pursuant to its charter, ACVFA is holding an annual public meeting on May 24, 2023, from 9:00 a.m.–10:30 a.m. ET. This meeting is free and open to the public. The Committee welcomes public participation and comment before, during, and after the meeting via the web and/or email addresses provided above.

Sophia Lajaunie,

ACVFA Designated Federal Officer.

BILLING CODE 6116–01–P

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding; whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by May 31, 2023 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Animal and Plant Health Inspection Service

Title: Plum Pox Compensation.

OMB Control Number: 0579–0159.

Summary of Collection: Under the Plant Protection Act (7 U.S.C. 7701 *et seq.*), the Secretary of Agriculture is authorized to prohibit or restrict the importation, entry, or movement of plants and plant pests to prevent the introduction of plant pests into the United States or their dissemination within the United States. The regulations in 7 CFR 301.74–5 permit owners of commercial stone fruit orchards to receive compensation for losses associated with trees destroyed to control plum pox pursuant to an emergency action notification (EAN) issued by the Animal & Plant Health Inspection Service (APHIS). Plum Pox is an extremely serious viral disease of plants that can affect many stone fruit species, including plum, peach, apricot, almond, and nectarine. Owners of fruit tree nurseries may receive compensation for net revenue losses associated with movement or sale of nursery stock prohibited under an EAN issued by APHIS with respect to regulated articles within the nursery in order to control plum pox.

Need and Use of the Information: Compensation applications include information about the business such as

name and address, a description of the property, and a certification statement that the trees removed from the owner's property were stone fruit trees from commercial fruit orchards or fruit tree nurseries. For claims made by owners of stone fruit orchards, the completed application must be accompanied by a copy of the EAN ordering the destruction of their trees, the notification's accompanying inventory describing the acreage and ages of trees removed and documentation verifying that the destruction of the trees have been completed and the date of that completion. For claims made by owners of fruit tree nurseries, the completed application must be accompanied by a copy of the EAN prohibiting the same or movement of the nursery stock, the notification's accompanying inventory describing the total number of trees covered by the EAN, their age and variety, and documentation indicating the final disposition of the nursery stock. Applicants may also need to apply for a DUNS number and provide direct deposit information for payments. Without the information APHIS would be unable to compensate eligible grove and nursery owners for their losses.

Description of Respondents: State Plant Health Officials; Business or other for-profit; Farm.

Number of Respondents: 2.

Frequency of Responses: Reporting, Recordkeeping: On occasion.

Total Burden Hours: 5.

Ruth Brown,

Departmental Information Collection Clearance Officer.

Animal and Plant Health Inspection Service

[Docket No. APHIS–2023–0023]

Notice of Availability of a Pest Risk Analysis for the Importation of Fresh Ginseng Roots (Panax ginseng C.A. Mey.) From the Republic of Korea Into the United States

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice of availability.

SUMMARY: We are advising the public that we have prepared a pest risk analysis that evaluates the risks associated with importation of fresh ginseng roots (*Panax ginseng* C.A. Mey.) from the Republic of Korea into the United States. Based on the analysis, we have determined that the application of one or more designated phytosanitary measures will be sufficient to mitigate the risks of introducing or disseminating plant pests or noxious weeds via the importation of fresh ginseng roots (*Panax ginseng* C.A. Mey.) from the Republic of Korea. We are making the pest risk analysis available to the public for review and comment.

DATES: We will consider all comments that we receive on or before June 30, 2023.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to *www.regulations.gov*. Enter APHIS–2023–0023 in the Search field. Select the Documents tab, then select the Comment button in the list of documents.
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS–2023–0023, Regulatory Analysis and Development, PPD, APHIS, Station 3A–03.8, 4700 River Road, Unit 118, Riverdale, MD 20737–1238.

Supporting documents and any comments we receive on this docket may be viewed at *www.regulations.gov* or in our reading room, which is located in room 1620 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799–7039 before coming.

FOR FURTHER INFORMATION CONTACT: Mr. Hesham Abuelnaga, Senior Regulatory Policy Specialist, Regulatory Coordination and Compliance, PPQ, APHIS, 4700 River Road, Unit 133, Riverdale, MD 20737–1231; (301) 851–2010; email: *Hesham.A.Abuelnaga@usda.gov.*

SUPPLEMENTARY INFORMATION:

Background

Under the regulations in ''Subpart L—Fruits and Vegetables'' (7 CFR 319.56–1 through 319.56–12, referred to below as the regulations), the Animal and Plant Health Inspection Service (APHIS) prohibits or restricts the importation of fruits and vegetables into the United States from certain parts of the world to prevent plant pests from being introduced into or disseminated within the United States.

Section 319.56–4 contains a performance-based process for approving the importation of fruits and vegetables that, based on the findings of a pest risk analysis, can be safely imported subject to one or more of the five designated phytosanitary measures listed in paragraph (b) of that section.

APHIS received a request from the national plant protection organization (NPPO) of the Republic of Korea to allow the importation of fresh ginseng roots (*Panax ginseng* C.A. Mey.) from the Republic of Korea into the United States. As part of our evaluation of the Republic of Korea's request, we have prepared a pest risk assessment to identify the pests of quarantine significance that could follow the pathway of the importation of fresh ginseng roots into the United States from the Republic of Korea. Based on the pest risk assessment, a risk management document (RMD) was prepared to identify phytosanitary measures that could be applied to the fresh ginseng roots to mitigate the pest risk.

Therefore, in accordance with § 319.56–4(c), we are announcing the availability of our pest risk assessment and RMD for public review and comment. Those documents, as well as a description of the economic considerations associated with the importation of fresh ginseng roots from the Republic of Korea, may be viewed on the *Regulations.gov* website or in our reading room (see **ADDRESSES** above for a link to *Regulations.gov* and information on the location and hours of the reading room). You may request paper copies of the pest risk assessment and RMD by calling or writing to the person listed under **FOR FURTHER INFORMATION CONTACT**. Please refer to the subject of the analysis you wish to review when requesting copies.

After reviewing any comments we receive, we will announce our decision regarding the import status of fresh ginseng roots from the Republic of Korea in a subsequent notice. If the overall conclusions of our analysis and the Administrator's determination of risk remain unchanged following our consideration of the comments, then we will authorize the importation of fresh ginseng roots from the Republic of Korea into the United States subject to the requirements specified in the RMD.

Authority: 7 U.S.C. 1633, 7701–7772, and 7781–7786; 21 U.S.C. 136 and 136a; 7 CFR 2.22, 2.80, and 371.3.

Done in Washington, DC, this 24th day of April 2023.

Michael Watson,

Acting Administrator, Animal and Plant Health Inspection Service.

[Docket No. APHIS–2023–0027]

Notice of Request for Revision to and Extension of Approval of an Information Collection; National Veterinary Services Laboratories; Bovine Spongiform Encephalopathy Surveillance Program

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Revision to and extension of approval of an information collection; comment request.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Animal and Plant Health Inspection Service's intention to request a revision to and extension of approval of an information collection associated with National Veterinary Services Laboratories diagnostic support for the bovine spongiform encephalopathy surveillance program.

DATES: We will consider all comments that we receive on or before June 30, 2023.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to *www.regulations.gov.* Enter APHIS–2023–0027 in the Search field. Select the Documents tab, then select the Comment button in the list of documents.
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS–2023–0027, Regulatory Analysis and Development, PPD, APHIS, Station 3A–03.8, 4700 River Road, Unit 118, Riverdale, MD 20737–1238.

Supporting documents and any comments we receive on this docket may be viewed at *www.regulations.gov* or in our reading room, which is located in Room 1620 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799–7039 before coming.

FOR FURTHER INFORMATION CONTACT: For information on the regulations to prevent the introduction of bovine spongiform encephalopathy into the United States, contact Dr. Christina Loiacono, Coordinator, National Animal Health Laboratory Network, Veterinary Services, APHIS, USDA, 1920 Dayton Road, Ames, IA 50010; (515) 231–2515; *christina.m.loiacono@usda.gov.* For information on the information collection process, contact Mr. Joseph Moxey, APHIS' Paperwork Reduction Act Coordinator, at (301) 851–2483; *joseph.moxey@usda.gov.*

SUPPLEMENTARY INFORMATION:

Title: National Veterinary Services Laboratories; Bovine Spongiform Encephalopathy Surveillance Program.

OMB Control Number: 0579–0409.

Type of Request: Revision to and extension of approval of an information collection.

Abstract: Under the Animal Health Protection Act (7 U.S.C. 8301 *et seq.*), the Animal and Plant Health Inspection Service (APHIS) of the U.S. Department of Agriculture (USDA) is authorized, among other things, to carry out activities to detect, control, and eradicate pests and diseases of livestock within the United States. APHIS' National Veterinary Services Laboratories (NVSL) safeguard U.S. animal health and contribute to public health by ensuring that timely and accurate laboratory support is provided by their nationwide animal health diagnostic system.

USDA complies with the standard set by the World Organization for Animal Health (WOAH) for bovine spongiform encephalopathy (BSE) surveillance. This compliance is critical for maintaining our BSE-risk status with the WOAH. Our BSE surveillance program requires information collection activities, such as completing the USDA BSE Surveillance Submission form and the USDA BSE Surveillance Data Collection form.

We are asking the Office of Management and Budget (OMB) to approve our use of these information collection activities, as described, for an additional 3 years.

The purpose of this notice is to solicit comments from the public (as well as affected agencies) concerning our information collection. These comments will help us:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of our estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies; *e.g.,* permitting electronic submission of responses.

Estimate of burden: The public burden for this collection of information is estimated to average 0.159 hours per response.

Respondents: Slaughter establishments, offsite collection facilities for condemned slaughter cattle, rendering 3D/4D facilities, State animal health personnel, veterinary diagnostic laboratories, and accredited veterinarians.

Estimated annual number of respondents: 178.

Estimated annual number of responses per respondent: 121.

Estimated annual number of responses: 21,568.

Estimated total annual burden on respondents: 3,421 hours. (Due to averaging, the total annual burden hours may not equal the product of the annual number of responses multiplied by the reporting burden per response.)

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Done in Washington, DC, this 24th day of April 2023.

Michael Watson,

Acting Administrator, Animal and Plant Health Inspection Service.

[FR Doc. 2023–09140 Filed 4–28–23; 8:45 am]

BILLING CODE 3410–34–P

DEPARTMENT OF AGRICULTURE

Food Safety and Inspection Service

[Docket No. FSIS–2023–0014]

National Advisory Committee on Microbiological Criteria for Foods; Notice of Public Meeting

AGENCY: Food Safety and Inspection Service (FSIS), U.S. Department of Agriculture (USDA).

ACTION: Notice of public meeting.

SUMMARY: The National Advisory Committee on Microbiological Criteria for Foods (NACMCF) will hold a public meeting of the full Committee and Subcommittees from May 16, 2023 to May 18, 2023. The Committee will provide updates on the charges *related to Cyclospora cayetanensis* in produce and *Cronobacter* spp. in Powdered Infant Formula.

DATES: The full Committee will hold an in-person and virtual public meeting on Tuesday, May 16, 2023, from 10 a.m. to 12 p.m. The Subcommittees on *Cyclospora cayetanensis* in produce and on *Cronobacter* spp. in Powdered Infant Formula will hold concurrent Subcommittee meetings on Tuesday,

May 16, 2023, from 1 to 5 p.m., as well as on Wednesday, May 17, 2023, and Thursday, May 18, 2023, from 9 a.m. to 5 p.m., respectively. The deadline to register to provide verbal comments is May 8, 2023.

FSIS invites interested persons to submit written comments on the *Cyclospora cayetanensis* in produce and on the *Cronobacter* spp. in Powdered Infant Formula charges. The deadline to submit comments is May 8, 2023.

ADDRESSES: The meetings will be held in the USDA South Building, 1400 Independence Ave. SW, Washington, DC 20250. Room locations will be provided the day of the meeting. Virtual attendees will be provided details on how to access the full Committee and Subcommittee meetings upon registration.

In-person attendees must show valid photo identification and will be required to pass through the security screening systems and escorted to the respective conference rooms. Please allow adequate time for this process.

Attendance is free. Attendees must pre-register at *https://ems8.intellor.com/?do=register&t=1&p=847719.* FSIS requests that those interested in providing public comments at the May 16, 2023, full Committee session indicate this when registering. Comments will be limited to three minutes per speaker. FSIS will do its best to accommodate all registered persons who request to provide verbal comments at the plenary meeting.

Comments may be submitted by one of the following methods:

- *Federal eRulemaking Portal:* This website provides the ability to type short comments directly into the comment field on this web page or attach a file for lengthier comments. Go to *https://www.regulations.gov.* Follow the on-line instructions at that site for submitting comments.
- *Mail:* Send to Docket Clerk, U.S. Department of Agriculture, Food Safety and Inspection Service, 1400 Independence Avenue SW, Mailstop 3758, Washington, DC 20250–3700.
- *Hand- Or Courier-Delivered Submittals:* Deliver to 1400 Independence Avenue SW, Jamie L. Whitten Building, Room 350–E, Washington, DC 20250–3700.

Instructions: All items submitted by mail or electronic mail must include the Agency name and docket number FSIS–2023–0014. Comments received in response to this docket will be made available for public inspection and posted without change, including any personal information, to *https://www.regulations.gov.*

Docket: For access to background documents or comments received, call (202) 937–4272 to schedule a time to visit the FSIS Docket Room at 1400 Independence Avenue SW, Washington, DC 20250–3700.

Agenda: FSIS will finalize an agenda on or before the meeting date and post it on FSIS' website at *https://www.fsis.usda.gov/news-events/events-meetings.*

Please note that the meeting agenda is subject to change and sessions could end earlier or later than anticipated. Please plan accordingly if you would like to attend this meeting or participate in the public comment period.

The official transcript of the May 16, 2023 Committee meeting, when it becomes available, will also be posted on FSIS' website at *https://www.fsis.usda.gov/news-events/events-meetings.*

FOR FURTHER INFORMATION CONTACT: Dr. Kristal Southern, USDA, FSIS, Office of Public Health Science, 1400 Independence Avenue SW, Room 1128, Washington, DC 20250; Phone: (202) 937–4171 or Email: *NACMCF@usda.gov.*

Persons requiring a sign language interpreter or other special accommodations should notify Dr. Southern by May 5, 2023.

SUPPLEMENTARY INFORMATION:

Background

The NACMCF was established in 1988, in response to a recommendation of the National Academy of Sciences for an interagency approach to microbiological criteria for foods, and in response to a recommendation of the U.S. House of Representatives Committee on Appropriations, as expressed in the Rural Development, Agriculture, and Related Agencies Appropriation Bill for fiscal year 1988. The charter for the NACMCF is available on FSIS' website at *https://www.fsis.usda.gov/policy/advisory-committees/national-advisory-committee-microbiological-criteria-foods-nacmcf.* The NACMCF provides scientific advice and recommendations to the Secretary of Agriculture and the Secretary of Health and Human Services on public health issues relative to the safety and wholesomeness of the U.S. food supply, including development of microbiological criteria and review and evaluation of epidemiological and risk assessment data and methodologies for assessing microbiological hazards in foods. The Committee also provides scientific advice and recommendations to the Departments of Commerce and Defense. The Committee reports to the Secretary of Agriculture through the Under Secretary for Food Safety, the Committee's Chair, and to the Secretary of Health and Human Services through the Assistant Secretary for Health, the Committee's Vice-Chair. Currently, Dr. José Emilio Esteban, Under Secretary for Food Safety, USDA, is the Committee Chair; Dr. Susan T. Mayne, Director of the Food and Drug Administration's Center for Food Safety and Applied Nutrition (CFSAN), is the Vice-Chair; and Dr. Kristal Southern, FSIS, is the Director of the NACMCF Secretariat and Designated Federal Officer.

NACMCF documents and comments posted on the FSIS website are electronic conversions from a variety of source formats. In some cases, document conversion may result in character translation or formatting errors. The original document is the official, legal copy. To meet the electronic and information technology accessibility standards in Section 508 of the Rehabilitation Act, NACMCF may add alternate text descriptors for non-text elements (graphs, charts, tables, multimedia, etc.). These modifications only affect the internet copies of the documents. Copyrighted documents will not be posted on FSIS' website but will be available for inspection in the FSIS Docket Room.

Additional Public Notification

Public awareness of all segments of rulemaking and policy development is important. Consequently, FSIS will announce this **Federal Register** publication through the FSIS website located at *https://www.fsis.usda.gov/policy/federal-register-rulemaking/federal-register-notices.* FSIS also will make copies of this publication available through the FSIS *Constituent Update,* which is used to provide information regarding FSIS policies, procedures, regulations, **Federal Register** notices, FSIS public meetings, and other types of information that could affect or would be of interest to our constituents and stakeholders. The *Constituent Update* is available on the FSIS web page. Through the web page, FSIS is able to provide information to a much broader, more diverse audience. In addition, FSIS offers an email subscription service which provides automatic and customized access to selected food safety news and information. This service is available at *https://www.fsis.usda.gov/news-events/news-press-releases/news-feeds-subscriptions.* Options range from recalls to export information, regulations, directives, and notices. Customers can add or delete subscriptions themselves and have the

option to password protect their accounts.

USDA Non-Discrimination Statement

In accordance with Federal civil rights law and USDA civil rights regulations and policies, USDA, its Mission Areas, agencies, staff offices, employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Program information may be made available in languages other than English. Persons with disabilities who require alternative means of communication to obtain program information (*e.g.,* Braille, large print, audiotape, American Sign Language) should contact the responsible Mission Area, agency, or staff office; the USDA TARGET Center at (202) 720–2600 (voice and TTY); or the Federal Relay Service at (800) 877–8339.

To file a program discrimination complaint, a complainant should complete a Form, AD–3027, *USDA Program Discrimination Complaint Form,* which can be obtained online at *https://www.usda.gov/forms/electronic-forms,* from any USDA office, by calling (866) 632–9992, or by writing a letter addressed to USDA. The letter must contain the complainant's name, address, telephone number, and a written description of the alleged discriminatory action in sufficient detail to inform the Assistant Secretary for Civil Rights about the nature and date of an alleged civil rights violation. The completed AD–3027 form or letter must be submitted to USDA by: (1) Mail: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410; (2) Fax: (833) 256–1665 or (202) 690–7442; or (3) Email: *program.intake@usda.gov.*

USDA is an equal opportunity provider, employer, and lender.

Dated: April 25 2023.

Cikena Reid,

Committee Management Officer, United States Department of Agriculture.

BILLING CODE 3410–DM–P

CHEMICAL SAFETY AND HAZARD INVESTIGATION BOARD

Agency Information Collection Activities; Accidental Release Reporting Form

AGENCY: U.S. Chemical Safety and Hazard Investigation Board (CSB).

ACTION: 30-Day notice of submission of information collection request (ICR) renewal approval and request for comments.

SUMMARY: The proposed information collection request (ICR) renewal described below will be submitted to the Office of Management and Budget (OMB) for review and approval, as required by the Paperwork Reduction Act of 1995. The Chemical Safety Board (CSB) is soliciting public comments on this proposed collection renewal. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: Comments should be sent no later than 5 p.m. EDT on Tuesday, May 30, 2023.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. When commenting on the proposed information collections, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be received by the OMB desk officer via one of the following transmissions within 30 days of publication of this notice: OMB, Office of Information and Regulatory Affairs, Attention: Chemical Safety Board Desk Officer, Fax Number: (202) 395–5806 *OR,* Email: *OIRA_submission@omb.eop.gov.*

Additionally, written comments and recommendations for the proposed information collection can be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* To find this particular information collection request, select ''Currently under 30-day Review—Open for Public Comments'' or use the search function.

Requests for information, including copies of the information collection proposed and supporting documentation should be directed to: Tamara Qureshi, Assistant General Counsel, U.S. Chemical Safety and Hazard Investigation Board, at *report@csb.gov.*

FOR FURTHER INFORMATION CONTACT: Tamara Qureshi, Assistant General Counsel, U.S. Chemical Safety and Hazard Investigation Board, 1750 Pennsylvania Ave. NW, Suite 910, Washington, DC 20006, *report@csb.gov* or 202–261–7600.

SUPPLEMENTARY INFORMATION:

Title: CSB Accidental Release Reporting Form.

OMB Control Number: 3301–0001.

Expiration Date of Approval: 04–30–2023.

Type of Request: Renewal.

Abstract: The enabling statute of the Chemical Safety and Hazard Investigation Board (CSB) provides that the CSB shall establish by regulation requirements binding on persons for reporting accidental releases into the ambient air subject to the Board's investigative jurisdiction. The CSB published its Accidental Release Reporting Rule (40 CFR part 1604) on February 21, 2020. This final rule is intended to satisfy the CSB's statutory requirement. The rule describes when an owner or operator is required to file a report of an accidental release, and the required content of such a report. The purpose of the rule is to ensure that the CSB receives rapid, accurate reports of any accidental release that meets established statutory criteria.

In conjunction with the Accidental Release Reporting Rule, the CSB also developed a form to capture the information necessary to initially assess an accidental release. The form is located on CSB's website: *https://www.csb.gov/news/incident-report-rule-form-/.*

Type of Respondents: The vast majority of respondents will be private sector businesses involved in the production, storage or handling of regulated substances or extremely hazardous substances.

Estimate Annual Number of Respondents: 100.

Frequency of Use: On occasion. Most respondents will only submit a response if an accidental release within the scope of the rule occurs during a given year. For the vast majority of potential respondents, the frequency of responses will likely be ''none'' in a given year.

Small Businesses or Organizations Affected: No. At the time of the rulemaking, the CSB determined that the rule would not have an impact on businesses, including small businesses. Furthermore, there have been even less reports than originally predicted.

Estimated Number of Annual Responses: 100.

Estimated Average Burden Hours per Response: 0.25 hour. The CSB acknowledges that there may be additional burdens on the public that are not quantifiable.

Estimated Total Annual Burden Hours: 25 hours.

Need for and Use of Information: The CSB is required by law to issue an accidental release reporting rule. The

CSB intends to use the information to learn of any accidental release within its jurisdiction and to plan how to respond to that accidental release.

Comment is Invited: Comment is invited on: (1) Whether this collection of information is necessary for the stated purposes and the proper performance of the functions of the Agency, including whether the information will have practical or scientific utility; (2) the accuracy of the Agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

All comments received in response to this notice, including names and addresses when provided, will be a matter of public record. Comments will be summarized and included in the submission request toward Office of Management and Budget approval.

The CSB is still accepting comments under its 60-day notice at *report@csb.gov* or 202–261–7600 until 5 p.m. EDT April 28, 2023.

Dated: April 26, 2023.

Tamara Qureshi,

Assistant General Counsel, Chemical Safety and Hazard Investigation Board.

BILLING CODE 6350–01–P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Colorado Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: U.S. Commission on Civil Rights.

ACTION: Notice of public meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act, that the Colorado Advisory Committee (Committee) to the U.S. Commission on Civil Rights will hold a public briefing in Boulder. The purpose of the briefing is to hear testimony from experts, government officials, advocates, academics and others on public school attendance zones in Colorado. There will be an opportunity for the public to comment at the conclusion of the scheduled testimony.

DATES: Monday, May 15, 2023; from 10 a.m. to 5 p.m. Mountain Time.

ADDRESSES: The briefing will be held at the Colorado University of Colorado Law School, Wolf Law Building, Wittemeyer Court Room, 2450 Kittredge Loop Drive, Boulder, CO 80309.

FOR FURTHER INFORMATION CONTACT: Barbara Delaviez, Designated Federal Official at *ero@usccr.gov.*

SUPPLEMENTARY INFORMATION: The briefing is free of charge and is open to the public. Interested members of the public may sign up any time during the briefing and may make comments on the topic towards the end of the briefing. Per the Federal Advisory Committee Act, public minutes of the briefing will include a list of persons who are present at the briefing. Persons with hearing impairments, please request accommodations at least 10 business days prior to the briefing at: *ebohor@usccr.gov.*

Members of the public are entitled to submit written comments; the comments must be received in the regional office within 30 days following the briefing. Written comments may be emailed to Barbara Delaviez at *ero@usccr.gov.* Persons who desire additional information may contact the Regional Programs Coordination Unit at 1–312–353–8311.

Records generated from this briefing may be inspected and reproduced at the Regional Programs Coordination Unit Office, as they become available, both before and after the briefing. Records of all committee meetings will be available via the *www.facadatabase.gov* under the Commission on Civil Rights, Colorado Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Coordination Unit at 1–312–353–8311.

Agenda

I. Welcome & Chair Remarks
II. Briefing on Public School Attendance Zones in Colorado
III. Public Comment
IV. Next Steps
V. Adjournment

Dated: April 25, 2023.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE 6335–01–P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Puerto Rico Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission), and the Federal Advisory Committee Act (FACA), that a meeting of the Puerto Rico Advisory Committee to the Commission will convene by virtual web conference on Monday, May 22, 2023, at 3:30 p.m. Atlantic Time/Eastern Time. The purpose is to continue discussion on their project on the civil rights impacts of the Insular Cases in Puerto Rico.

DATES: May 22, 2023, Monday, at 3:30 p.m. (AT and ET)

ADDRESSES: Meeting will be held via Zoom.

Registration Link (Audio/Visual): https://tinyurl.com/2s434xas.

Join by Phone (Audio Only): 1–551–285–1373; Meeting ID: 161 620 4980#.

FOR FURTHER INFORMATION CONTACT: Email Victoria Moreno, Designated Federal Officer at *vmoreno@usccr.gov,* or by phone at 434–515–0204.

SUPPLEMENTARY INFORMATION: This meeting will take place in Spanish with English interpretation. This committee meeting is available to the public through the registration link above. Any interested member of the public may listen to the meeting. An open comment period will be provided to allow members of the public to make a statement as time allows. Per the Federal Advisory Committee Act, public minutes of the meeting will include a list of persons who are present at the meeting. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Closed captioning will be available for individuals who are deaf, hard of hearing, or who have certain cognitive or learning impairments. To request additional accommodations, please email *ebohor@usccr.gov* at least 10 business days prior to the meeting.

Members of the public are entitled to submit written comments; the comments must be received in the regional office within 30 days following

the meeting. Written comments may be emailed to Victoria Moreno at *vmoreno@usccr.gov.* Persons who desire additional information may contact the Regional Programs Coordination Unit at 1–312–353–8311.

Records generated from this meeting may be inspected and reproduced at the Regional Programs Coordination Unit Office, as they become available, both before and after the meeting. Records of the meetings will be available via *www.facadatabase.gov* under the Commission on Civil Rights, Puerto Rico Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Coordination Unit at *ebohor@usccr.gov.*

Agenda

1. Welcome & Roll Call
2. Committee Discussion on Project Regarding the Civil Rights Impacts of the Insular Cases in Puerto Rico
3. Next Steps
4. Public Comment
5. Other Business
6. Adjourn

Dated: April 25, 2023.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE P

DEPARTMENT OF COMMERCE

International Trade Administration

Initiation of Five-Year (Sunset) Reviews

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: In accordance with the Tariff Act of 1930, as amended (the Act), the Department of Commerce (Commerce) is automatically initiating the five-year reviews (Sunset Reviews) of the antidumping and countervailing duty (AD/CVD) order(s) and suspended investigation(s) listed below. The International Trade Commission (ITC) is publishing concurrently with this notice its notice of *Institution of Five-Year Reviews* which covers the same order(s) and suspended investigation(s).

DATES: Applicable May 1, 2023.

FOR FURTHER INFORMATION CONTACT: Commerce official identified in the *Initiation of Review* section below at AD/CVD Operations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230. For information from the ITC, contact Mary Messer, Office of Investigations, U.S. International Trade Commission at (202) 205–3193.

SUPPLEMENTARY INFORMATION:

Background

Commerce's procedures for the conduct of Sunset Reviews are set forth in its *Procedures for Conducting Five-Year (Sunset) Reviews of Antidumping and Countervailing Duty Orders,* 63 FR 13516 (March 20, 1998) and 70 FR 62061 (October 28, 2005). Guidance on methodological or analytical issues relevant to Commerce's conduct of Sunset Reviews is set forth in *Antidumping Proceedings: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Duty Proceedings; Final Modification,* 77 FR 8101 (February 14, 2012).

Initiation of Review

In accordance with section 751(c) of the Act and 19 CFR 351.218(c), we are initiating the Sunset Reviews of the following antidumping and countervailing duty order(s) and suspended investigation(s):

DOC case No.	ITC case No.	Country	Product	Commerce contact
A–570–806	731–TA–472	China	Silicon Metal (5th Review)	Thomas Martin, (202) 482–3936.
A–570–064	731–TA–1383	China	Stainless Steel Flanges (1st Review)	Thomas Martin, (202) 482–3936.
A–533–877	731–TA–1384	India	Stainless Steel Flanges (1st Review)	Thomas Martin, (202) 482–3936.
C–570–065	701–TA–585	China	Stainless Steel Flanges (1st Review)	Thomas Martin, (202) 482–3936.
C–533–878	701–TA–586	India	Stainless Steel Flanges (1st Review)	Thomas Martin, (202) 482–3936.

Filing Information

As a courtesy, we are making information related to sunset proceedings, including copies of the pertinent statute and Commerce's regulations, Commerce's schedule for Sunset Reviews, a listing of past revocations and continuations, and current service lists, available to the public on Commerce's website at the following address: *https://enforcement.trade.gov/sunset/.* All submissions in these Sunset Reviews must be filed in accordance with Commerce's regulations regarding format, translation, and service of documents. These rules, including electronic filing requirements via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS), can be found at 19 CFR 351.303.

In accordance with section 782(b) of the Act, any party submitting factual information in an AD/CVD proceeding must certify to the accuracy and completeness of that information. Parties must use the certification formats provided in 19 CFR 351.303(g). Commerce intends to reject factual submissions if the submitting party does not comply with applicable revised certification requirements.

Letters of Appearance and Administrative Protective Orders

Pursuant to 19 CFR 351.103(d), Commerce will maintain and make available a public service list for these proceedings. Parties wishing to participate in any of these five-year reviews must file letters of appearance as discussed at 19 CFR 351.103(d). To facilitate the timely preparation of the public service list, it is requested that those seeking recognition as interested parties to a proceeding submit an entry of appearance within 10 days of the publication of the Notice of Initiation. Because deadlines in Sunset Reviews can be very short, we urge interested parties who want access to proprietary information under administrative protective order (APO) to file an APO application immediately following publication in the **Federal Register** of this notice of initiation. Commerce's regulations on submission of proprietary information and eligibility to receive access to business proprietary information under APO can be found at 19 CFR 351.304–306. Note that Commerce has temporarily modified certain of its requirements for serving documents containing business

proprietary information, until further notice.[1]

Information Required From Interested Parties

Domestic interested parties, as defined in section 771(9)(C), (D), (E), (F), and (G) of the Act and 19 CFR 351.102(b), wishing to participate in a Sunset Review must respond not later than 15 days after the date of publication in the **Federal Register** of this notice of initiation by filing a notice of intent to participate. The required contents of the notice of intent to participate are set forth at 19 CFR 351.218(d)(1)(ii). In accordance with Commerce's regulations, if we do not receive a notice of intent to participate from at least one domestic interested party by the 15-day deadline, Commerce will automatically revoke the order without further review.[2]

If we receive an order-specific notice of intent to participate from a domestic interested party, Commerce's regulations provide that *all parties* wishing to participate in a Sunset Review must file complete substantive responses not later than 30 days after the date of publication in the **Federal Register** of this notice of initiation. The required contents of a substantive response, on an order-specific basis, are set forth at 19 CFR 351.218(d)(3). Note that certain information requirements differ for respondent and domestic parties. Also, note that Commerce's information requirements are distinct from the ITC's information requirements. Consult Commerce's regulations for information regarding Commerce's conduct of Sunset Reviews. Consult Commerce's regulations at 19 CFR part 351 for definitions of terms and for other general information concerning antidumping and countervailing duty proceedings at Commerce.

This notice of initiation is being published in accordance with section 751(c) of the Act and 19 CFR 351.218(c).

Dated: April 17, 2023.

James Maeder,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XC965]

New England Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: The New England Fishery Management Council (Council) is scheduling a joint public meeting of its Monkfish and Dogfish Advisory Panels via webinar to consider actions affecting New England fisheries in the exclusive economic zone (EEZ). Recommendations from this group will be brought to the full Council for formal consideration and action, if appropriate.

DATES: This webinar will be held on Tuesday, May 16, 2023, at 3 p.m. Webinar registration URL information: *https://attendee.gotowebinar.com/register/5909621442701126236.*

ADDRESSES:

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.

FOR FURTHER INFORMATION CONTACT: Thomas A. Nies, Executive Director, New England Fishery Management Council; telephone: (978) 465–0492.

SUPPLEMENTARY INFORMATION:

Agenda

The Monkfish and Dogfish Advisory Panels will meet to discuss recommendations from the Sturgeon Bycatch Fishery Management Action Team/Plan Development Team. They will also discuss potential measures to reduce bycatch of Atlantic sturgeon in the monkfish and spiny dogfish gillnet fisheries, developed from the recommendations in NOAA's Action Plan to Reduce Atlantic Sturgeon Bycatch in Federal Large-Mesh Gillnet Fisheries. The panels will discuss the range of alternatives recommended to the Joint Monkfish and Dogfish Committee to be considered for reducing bycatch of Atlantic sturgeon in the monkfish and spiny dogfish gillnet fisheries. Other business may be discussed, as necessary.

Although non-emergency issues not contained on the agenda may come before this Council for discussion, those issues may not be the subject of formal action during this meeting. Council action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council's intent to take final action to address the emergency. The public also should be aware that the meeting will be recorded. Consistent with 16 U.S.C. 1852, a copy of the recording is available upon request.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Thomas A. Nies, Executive Director, at (978) 465–0492, at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 26, 2023.

Rey Israel Marquez,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

National Oceanic and Atmospheric Administration

[RTID 0648–XC967]

Endangered Species; File No. 24016–01

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application for a permit modification.

SUMMARY: Notice is hereby given that Jason Kahn, Ph.D., National Marine Fisheries Service, 1315 East-West Highway, Silver Spring, MD 20910, has applied in due form for a permit modification to take Atlantic (*Acipenser oxyrinchus*) and shortnose (*A. brevirostrum*) sturgeon for purposes of scientific research.

DATES: Written, telefaxed, or emailed comments must be received on or before May 31, 2023.

ADDRESSES: The application request and related documents are available for review by selecting ''Records Open for Public Comment'' from the Features box on the Applications and Permits for Protected Species (APPS) home page, *https://apps.nmfs.noaa.gov,* and then selecting File No. 20416–01 from the list of available applications. These documents are also available upon written request via email to *NMFS.Pr1Comments@noaa.gov.*

Written comments on this application should be submitted via email to *NMFS.Pr1Comments@noaa.gov.* Please include File No. 20416–01 in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request via email to *NMFS.Pr1Comments@noaa.gov.* The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Malcolm Mohead or Erin Markin, Ph.D. at (301) 427–8401.

SUPPLEMENTARY INFORMATION: The subject permit modification to Permit No. 24016, issued on January 28, 2021 (86 FR 13700, March 10, 2021), is requested under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226).

Permit No. 24016 currently authorizes the permit holder to conduct scientific research on Atlantic and shortnose sturgeon in freshwater and estuary areas of the Chesapeake Bay and other coastal rivers, assessing sturgeon population and reproductive capacity, as well as monitoring spawning activity, movement, and habitat through telemetry. Atlantic and shortnose sturgeon life stages may be captured using gill or trammel nets, trawls, and trapping nets (*e.g.,* fyke, or other trap nets). All animals are marked with passive integrated transponder (PIT) and Floy tags, genetic tissue sampled, measured, weighed, photographed and released. Subsets of animals are also anesthetized, and internally or externally acoustically tagged, biologically sampled (*i.e.,* fin ray, blood, gametes), endoscoped and ultrasounded. Larvae and eggs are currently collected with D-nets, trawls (*i.e.,* epibenthic sleds), and egg mats. The applicant anticipates that up to one adult/sub-adult and one juvenile Atlantic sturgeon may be killed annually. The proposed modification focuses on activities designed to stage the reproductive status of eggs collected from female sturgeon captured from the York River (Virginia) and its tributaries. To understand sturgeon egg development and spawning characteristics in the York River, the Permit Holder is requesting to directly sample an additional 800 eggs using an approved egg extraction device. The permit is valid through January 31, 2031.

Dated: April 25, 2023.

Amy Sloan,

Deputy Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

Fisheries of the South Atlantic; Southeast Data, Assessment, and Review (SEDAR); Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of SEDAR 82 South Atlantic Gray Triggerfish Assessment Webinar 2.

SUMMARY: The SEDAR 82 assessment of the South Atlantic stock of gray triggerfish will consist of a data workshop, a series of assessment webinars, and a review workshop. A SEDAR 82 Assessment Webinar 2 is scheduled for May 18, 2023. See **SUPPLEMENTARY INFORMATION**.

DATES: The SEDAR 82 South Atlantic Gray Triggerfish Assessment Webinar 2 is scheduled for May 18, 2023, from 9 a.m. to 12 p.m., Eastern. The established times may be adjusted as necessary to accommodate the timely completion of discussion relevant to the assessment process. Such adjustments may result in the meeting being extended from or completed prior to the time established by this notice.

ADDRESSES:

Meeting address: The meeting will be held via webinar. The webinar is open to members of the public. Registration for the webinar is available by contacting the SEDAR coordinator via email at *Kathleen.Howington@safmc.net.*

SEDAR address: South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, N Charleston, SC 29405; *www.sedarweb.org.*

FOR FURTHER INFORMATION CONTACT: Kathleen Howington, SEDAR Coordinator, 4055 Faber Place Drive, Suite 201, North Charleston, SC 29405; phone: (843) 571–4371; email: *Kathleen.Howington@safmc.net.*

SUPPLEMENTARY INFORMATION: The Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils, in conjunction with NOAA Fisheries and the Atlantic and Gulf States Marine Fisheries Commissions, have implemented the Southeast Data, Assessment and Review (SEDAR) process, a multi-step method for determining the status of fish stocks in the Southeast Region. SEDAR is a three-step process including: (1) Data Workshop; (2) Assessment Process utilizing webinars; and (3) Review Workshop. The product of the Data Workshop is a data report which compiles and evaluates potential datasets and recommends which datasets are appropriate for assessment analyses. The product of the Assessment Process is a stock assessment report which describes the fisheries, evaluates the status of the stock, estimates biological benchmarks, projects future population conditions, and recommends research and monitoring needs. The assessment is independently peer reviewed at the Review Workshop. The product of the Review Workshop is a Summary documenting panel opinions regarding the strengths and weaknesses of the stock assessment and input data. Participants for SEDAR Workshops are appointed by the Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils and NOAA Fisheries Southeast Regional Office, Highly Migratory Species Management Division, and Southeast Fisheries Science Center. Participants include: data collectors and database managers; stock assessment scientists, biologists, and researchers; constituency representatives including fishermen, environmentalists, and non-governmental organizations (NGOs); international experts; and staff of Councils, Commissions, and state and federal agencies.

The items of discussion at the SEDAR 82 South Atlantic Gray Triggerfish Assessment Webinar 2 are as follows: Discuss any leftover data issues that were not cleared up during the data process, answer any questions that the analysts have, and introduce/discuss model development and model setup.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

This meeting is accessible to people with disabilities. Requests for auxiliary aids should be directed to the South Atlantic Fishery Management Council office (see **ADDRESSES**) at least 10 business days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

ACTION: Notice of solicitation for members of the NOAA Science Advisory Board.

SUMMARY: NOAA is soliciting nominations for members of the NOAA Science Advisory Board (SAB). The SAB is the only Federal Advisory Committee with the responsibility to advise the Under Secretary of Commerce for Oceans, Atmosphere, and NOAA Administrator on long and short range strategies for research, education, and application of science to resource management and environmental assessment and prediction. The SAB consists of approximately fifteen members reflecting the full breadth of NOAA's areas of responsibility and assists NOAA in maintaining a complete and accurate understanding of scientific issues critical to the agency's missions.

DATES: Nominations should be sent to the web address specified below and must be received by June 15, 2023.

ADDRESSES: Applications should be submitted electronically to *noaa.scienceadvisoryboard@noaa.gov.*

FOR FURTHER INFORMATION CONTACT: Dr. Cynthia Decker, Executive Director, Science Advisory Board, NOAA, Rm. 11230, 1315 East-West Highway, Silver Spring, Maryland 20910. (Phone: 301–734–1156), Fax: 301–713–1459, Email: *Cynthia.Decker@noaa.gov*); or visit the NOAA SAB website at *http://www.sab.noaa.gov.*

SUPPLEMENTARY INFORMATION: At this time, individuals are sought with expertise in an artificial intelligence and machine learning in the fields of weather and climate; environmental remote sensing; engineering for coastal resilience; social and behavioral sciences; and tropical cyclones. Individuals with expertise in other NOAA mission areas are also welcome to apply.

NOAA is also interested in expanding the diversity of expertise represented on the SAB in order to reflect better the viewpoints of the United States population. The agency welcomes scientists in the listed areas of expertise and can also provide insights and experiences derived from their ethnic, gender, and racial backgrounds and races, native- and tribal-based traditions, and experiences of those who are differently abled. Composition and Points of View: The board will consist of approximately fifteen members including a Chair, designated by the Under Secretary in accordance with FACA requirements.

Members will be appointed for three-year terms, renewable once, and serve at the discretion of the Under Secretary.

Members will be appointed as special government employees (SGEs) and will be subject to the ethical standards applicable to SGEs. Members are reimbursed for actual and reasonable travel and per diem expenses incurred in performing such duties but will not

be reimbursed for their time. As a Federal Advisory Committee, the Board's membership is required to be balanced in terms of viewpoints represented and the functions to be performed as well as the interests of geographic regions of the country and the diverse sectors of U.S. society.

The SAB meets in person three times each year, exclusive of teleconferences or subcommittee, task force, and working group meetings. Board members must be willing to serve as liaisons to SAB working groups and/or participate in periodic reviews of the NOAA Cooperative Institutes and overarching reviews of NOAA's research enterprise.

Nominations: Interested persons may nominate themselves or third parties.

Applications: An application is required to be considered for board membership, regardless of whether a person is nominated by a third party or self-nominated. The application package must include: (1) the nominee's full name, title, institutional affiliation, and contact information, including mailing address; (2) the nominee's area(s) of expertise; (3) a short description of their qualifications relative to the kinds of advice being solicited by NOAA in this Notice; and (4) a current resume (maximum length four [4] pages).

David Holst,

Chief Financial Officer/Administrative Officer, Office of Oceanic and Atmospheric Research, National Oceanic and Atmospheric Administration.

BILLING CODE 3510–KD–P

DEPARTMENT OF COMMERCE

National Telecommunications and Information Administration

[Docket Number: 230412–0099]

RIN 0660–XC058

Introduction of Accountable Measures Regarding Access to Personal Information of .us Registrants

AGENCY: National Telecommunications and Information Administration, Department of Commerce.

ACTION: Request for comments.

SUMMARY: The United States Department of Commerce's (Department) National Telecommunications and Information Administration (NTIA) administers the contract for the country code top-level domain (ccTLD) for the United States, ''.us'' (usTLD). NTIA seeks input from interested parties on the introduction of accountability measures regarding access to the personal information of usTLD registrants. NTIA's policy goal regarding access to domain registration data is to ensure that the usTLD protects the privacy of its usTLD registrants while also enabling third parties to access usTLD domain registration data for legitimate purposes.

DATES: Submit comments on or before May 31, 2023.

ADDRESSES: You may submit comments, identified by docket number and/or RIN number, by any of the following methods:

Federal Rulemaking website: Go to *https://www.regulations.gov* and search for Docket ID NTIA–2023–0006.

Email comments to: usTLD@ntia.gov.

Mail comments to: National Telecommunications and Information Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Room 4701, Attn: Susan Chalmers, Washington, DC 20230. Comments submitted by mail may be in hard copy (paper) or electronic (*e.g.,* CD–ROM, disk, or thumb drive).

FOR FURTHER INFORMATION CONTACT: Please direct questions regarding this Notice to Susan Chalmers, Telecommunications Policy Specialist, at the address listed in the **ADDRESSES** section of this notice by electronic or regular mail as listed above, or by telephone (202) 281–5218. Please direct media inquiries to NTIA's Office of Public Affairs, *press@ntia.gov* or (202) 482–7002.

SUPPLEMENTARY INFORMATION: The usTLD serves as an online home for American business, individuals, and localities for the benefit of the nation's internet community. NTIA administers the contract governing the operation of the usTLD, the most recent of which was awarded in 2019 to Registry Services, LLC (the Contractor).

NTIA requires the Contractor to maintain a publicly accessible registration database of usTLD domain name registrations.[1] The Contractor currently provides a WHOIS directory service [2] that allows users to retrieve usTLD domain name registration data directly and without any form of authentication from its comprehensive central usTLD registrant database of real usTLD registrant data.[3] This data includes important contact information: individual names, physical addresses, telephone numbers, and email addresses of all usTLD registrants.

Historically, NTIA has authorized public access to the usTLD registration data (WHOIS service) permitting internet users to retrieve the usTLD registrant data for legitimate purposes (*e.g.,* law enforcement investigations, consumer protection, cybersecurity research, intellectual property rights protection and enforcement). In addition, the usTLD registrant data is accessible on an anonymous basis. The data (especially the personal information) may be accessed and used for abusive purposes (*e.g.,* to spam, phish, harass, dox, or otherwise cause the registrant harm).[4]

In response to concerns about the potential for abuse of usTLD registrant data, NTIA is considering a proposal from its Contractor to create an Accountable WHOIS Gateway System (the System) to provide public access to usTLD registrant information. This proposal was created based upon recommendations developed by the usTLD community. Under the Contractor's proposal, the System would be designed to reduce the potential for abuse by eliminating anonymous and unaccountable access to usTLD registrant data. The System would require those seeking access to the usTLD registration data to provide their name, an email address, and to accept the Terms of Service (TOS). The TOS would require the user to agree not to misuse the data. Users would also be required to identify, from a pre-selected list, a legitimate, non-marketing purpose for accessing the information. This list would be developed according to industry best practice in consultation with the usTLD community and approved by NTIA. Unredacted WHOIS data would then automatically be returned in near-real-time to the user via email. Queries would be rejected only if the user did not provide a name and email address or failed to select (or provide) a legitimate purpose and accept the TOS.

The System would also permit users to identify a legitimate purpose outside of the pre-selected list. The Contractor using usTLD community developed and NTIA approved standards would manually review these requests and deliver, via email, unredacted data within two (2) business days for any non-abusive purpose unrelated to

[1] .us Contract, C.4.2(iv), page 11, available at: *https://ntia.gov/files/ntia/publications/us_contract_june_28_2019.pdf.*

[2] A WHOIS directory is a database of all the registered domains in a particular zone. It contains information about the domain name registrant including the registrant contact information such as address, email, phone number, etc.

[3] Under this proposal privacy and proxy services would remain prohibited under the usTLD as currently required by the .us contract.

[4] *See e.g.,* Andrew Alleman, *Reminder: there's no Whois privacy for .us domain names—Domain Name Wire | Domain Name News*at. The Contractor has also received a number of complaints outlining these issues.

marketing. The System would also provide a mechanism to expedite emergency requests.

The Contractor would maintain auditable records of its receipt of and response to WHOIS access requests for personal data, including the number of access requests received, and the declared legitimate purposes. The Contractor would also maintain records to audit complaints of technical abuse or TOS violations. These audit records would be made publicly available in fully de-identified and aggregated form for analysis, enabling additional data driven policy development by NTIA and the usTLD community.

Non-personal information relating to the domain name would remain available for retrieval via anonymous query. This information includes domain name and ID, registrar WHOIS server, registrar URL, updated date, creation date, registry expiry date, registrar, registrar IANA ID, and registrar abuse contact (email and phone number).

To address the unique needs of law enforcement and other similarly situated entities, the Contractor would establish a portal for authenticated law enforcement users, which would grant such users near real-time access to personal information. The Contractor would continue to work with law enforcement authorities and others to ensure that investigatory confidentiality and unique other needs with respect to access and confidentiality are fully met.

Request for Comment

NTIA seeks public comments regarding the proposed Accountable WHOIS Gateway System (System). Comments that contain references, studies, research, or other empirical evidence or data that are not widely published should include copies of the referenced materials with the submitted comments. While the public is welcome to submit comments regarding the questions below and other issues relating to the proposal, we ask that comments generally be limited to issues regarding access to WHOIS in the usTLD. Specifically, NTIA seeks input on the following questions:

1. In general, what are your views on the public availability of the usTLD domain name registration data to anonymous users? Has public access by anonymous users to usTLD registration data, especially personal information, resulted in exposing registrants to spam, phishing, doxxing, identity theft and other online/offline harms? If such abuses have occurred, please provide illustrative examples. And, whether or not you are aware of examples of such abuse, do you believe that there is a significant risk of such abuse occurring in the future, if the current system remains unchanged (and if so, why)?

2. Do you believe the current system of anonymous access to usTLD domain name registration data should remain unchanged? If so, why?

3. What legitimate purposes for access to usTLD domain name registration data should be included in the System's pre-defined list? Please provide a rationale for each category recommended.

4. Are there policies and practices developed or employed by other ccTLDs regarding WHOIS access that could be incorporated into the usTLD space? Please be specific in your response.

5. Should the System distinguish between personal and non-personal registration data, and if so, how?

6. Should usTLD registrants be notified when their data is accessed through the System? If so, why, when or in what circumstances?

7. Under what circumstances, if any, should the Contractor require certain requestors to furnish a warrant when requesting access to usTLD registration data?

8. The Contractor has proposed that the System provide special access to recognized and authenticated law enforcement and similar entities. Please provide feedback on this concept. If this proposal is adopted, how should it work? Are there best practices in other similar situations or other TLDs that could be used for such a special access portal? What steps should be taken, if any, to ensure the confidentiality of law enforcement requests through the System?

9. What entities in addition to law enforcement, if any, should have special access to usTLD registration data through an authenticated portal? Why?

10. What accountability and/or enforcement mechanisms should be put in place in the case of breach of the System's TOS by those that access the registration data?

11. Do you foresee any challenges to implementation of the System, or elements thereof, for example in distinguishing between personal and non-personal registration data, enforcement of System misuse, etc? If so, how might these challenges be addressed?

12. Should the Accountable WHOIS Gateway System be offered as an opt-in or opt-out service for current and new usTLD domain name registrants?

Stephanie Weiner,

Acting Chief Counsel.

BILLING CODE 3510–60–P

CONSUMER FINANCIAL PROTECTION BUREAU

Combined Community Bank Advisory Council and Credit Union Advisory Council Meeting

AGENCY: Consumer Financial Protection Bureau.

ACTION: Notice of public meeting.

SUMMARY: Under the Federal Advisory Committee Act (FACA), this notice sets forth the announcement of a public combined meeting of the Community Bank Advisory Council (CBAC or Council) and the Credit Union Advisory Council (CUAC or Council) of the Consumer Financial Protection Bureau (CFPB or Bureau). The notice also describes the functions of the Councils.

DATES: The meeting date is Wednesday, May 17, 2023, from approximately 1:00 p.m. to 2:30 p.m., eastern daylight time. This meeting will be held virtually and is open to the general public. Members of the public will receive the agenda and dial-in information when they RSVP.

FOR FURTHER INFORMATION CONTACT: Kim George, Outreach and Engagement Associate, Section for Advisory Board and Councils, Office of Stakeholder Management, at 202–450–8617, or email: *CFPB_CABandCouncilsEvents@cfpb.gov*. If you require this document in an alternative electronic format, please contact *CFPB_Accessibility@cfpb.gov*.

SUPPLEMENTARY INFORMATION:

I. Background

Section 2 of the CBAC and CUAC charters provides that pursuant to the executive and administrative powers conferred on the CFPB by Section 1012 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), the Director of the CFPB renews the discretionary Community Bank Advisory Council and the Credit Union Advisory Council under agency authority in accordance with the provisions of the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. 10.

Section 3 of the CBAC and CUAC charters states that the purpose of the CBAC and the CUAC is to advise the CFPB in the exercise of its functions under the Federal consumer financial laws as they pertain to community banks and credit unions with total assets of $10 billion or less.

II. Agenda

The CBAC and the CUAC will discuss broad policy matters related to the

Bureau's Unified Regulatory Agenda and general scope of authority.

If you require any additional reasonable accommodation(s) in order to attend this event, please contact the Reasonable Accommodations team at *CFPB_ReasonableAccommodations@cfpb.gov,* 48 business hours prior to the start of this event.

Written comments will be accepted from interested members of the public and should be sent to *CFPB_CABandCouncilsEvents@cfpb.gov,* a minimum of seven (7) days in advance of the meeting. The comments will be provided to the CBAC and CUAC members for consideration. Individuals who wish to join this meeting must RSVP via this link *https://surveys.consumerfinance.gov/jfe/form/SV_bwnwpzsDsARDZxY.*

III. Availability

The Councils' agenda will be made available to the public on Monday, May 1, 2023, via *consumerfinance.gov.*

A recording and summary of this combined meeting will be available after the meeting on the Bureau's website *consumerfinance.gov.*

Emily Ross,

Acting Deputy Chief of Staff, Consumer Financial Protection Bureau.

[FR Doc. 2023–08797 Filed 4–28–23; 8:45 am]

BILLING CODE 4810–AM–P

CONSUMER FINANCIAL PROTECTION BUREAU

Consumer Advisory Board Meeting

AGENCY: Consumer Financial Protection Bureau.

ACTION: Notice of public meeting.

SUMMARY: Under the Federal Advisory Committee Act (FACA), this notice sets forth the announcement of a public meeting of the Consumer Advisory Board (CAB or Board) of the Consumer Financial Protection Bureau (CFPB or Bureau). The notice also describes the functions of the Board.

DATES: The meeting date is Tuesday, May 16, 2023, from approximately 1:45 p.m. to 3:30 p.m., eastern daylight time. This meeting will be held virtually and is open to the general public. Members of the public will receive the agenda and dial-in information when they RSVP.

FOR FURTHER INFORMATION CONTACT: Kim George, Outreach and Engagement Associate, Section for Advisory Board and Councils, Office of Stakeholder Management, at 202–450–8617, or email: *CFPB_CABandCouncilsEvents@cfpb.gov.* If you require this document in an alternative electronic format, please contact *CFPB_Accessibility@cfpb.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 3 of the Charter of the Board states that: The purpose of the CAB is outlined in section 1014(a) of the Dodd-Frank Act, which states that the CAB shall ''advise and consult with the Bureau in the exercise of its functions under the Federal consumer financial laws'' and ''provide information on emerging practices in the consumer financial products or services industry, including regional trends, concerns, and other relevant information.''

To carry out the CAB's purpose, the scope of its activities shall include providing information, analysis, and recommendations to the CFPB. The CAB will generally serve as a vehicle for trends and themes in the consumer finance marketplace for the CFPB. Its objectives will include identifying and assessing the impact on consumers and other market participants of new, emerging, and changing products, practices, or services.

II. Agenda

The CAB will discuss broad policy matters related to the Bureau's Unified Regulatory Agenda and general scope of authority.

If you require any additional reasonable accommodation(s) in order to attend this event, please contact the Reasonable Accommodations team at *CFPB_ReasonableAccommodations@cfpb.gov* 48 hours prior to the start of this event.

Written comments will be accepted from interested members of the public and should be sent to *CFPB_CABandCouncilsEvents@cfpb.gov,* a minimum of seven (7) days in advance of the meeting. The comments will be provided to the CAB members for consideration. Individuals who wish to join this meeting must RSVP via this link *https://surveys.consumerfinance.gov/jfe/form/SV_9nW7knutk20UH8G.*

III. Availability

The Board's agenda will be made available to the public on May 1, 2023, via *consumerfinance.gov.*

A recording and summary of this meeting will be available after the meeting on the Bureau's website *consumerfinance.gov.*

Emily Ross,

Acting Deputy Chief of Staff, Consumer Financial Protection Bureau.

CONSUMER FINANCIAL PROTECTION BUREAU

Academic Research Council Meeting

AGENCY: Consumer Financial Protection Bureau.

ACTION: Notice of public meeting.

SUMMARY: Under the Federal Advisory Committee Act (FACA), this notice sets forth the announcement of a public meeting of the Academic Research Council (ARC or Council) of the Consumer Financial Protection Bureau (CFPB or Bureau). The notice also describes the functions of the Council.

DATES: The meeting date is Friday, May 19, 2023, from approximately 1 to 3:15 p.m., eastern daylight time. This meeting will be held virtually and is open to the general public. Members of the public will receive the agenda and dial-in information when they RSVP.

FOR FURTHER INFORMATION CONTACT: Kim George, Outreach and Engagement Associate, Section for Advisory Board and Councils, Office of Stakeholder Management, at 202–450–8617, or email: *CFPB_CABandCouncilsEvents@cfpb.gov.* If you require this document in an alternative electronic format, please contact *CFPB_Accessibility@cfpb.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 2 of the of the ARC Charter provides that pursuant to the executive and administrative powers conferred on the CFPB by section 1012 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), the Director of the CFPB renews the discretionary Academic Research Council under agency authority in accordance with the provisions of the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. 10.

Section 3 of the ARC Charter states: ''The committee will (1) provide the CFPB with advice about its strategic research planning process and research agenda, including views on the research that the CFPB should conduct relating to consumer financial products or services, consumer behavior, cost-benefit analysis, or other topics to enable the agency to further its statutory

purposes and objectives; and (2) provide the Office of Research with technical advice and feedback on research methodologies, data collection strategies, and methods of analysis, including methodologies and strategies for quantifying the costs and benefits of regulatory actions; and (3) serve as peer reviewers of policy-determinative research conducted by the CFPB.''

II. Agenda

The ARC will discuss broad policy matters related to the Bureau's Research Agenda and general scope of authority.

If you require any additional reasonable accommodations(s) in order to attend this event, please contact the Reasonable Accommodations team at *CFPB_ReasonableAccommodations@cfpb.gov* 48 hours prior to the start of this event.

Written comments will be accepted from interested members of the public and should be sent to *CFPB_CABandCouncilsEvents@cfpb.gov,* a minimum of seven (7) days in advance of the meeting. The comments will be provided to the ARC members for consideration. Individuals who wish to attend this meeting must RSVP via this link *https://surveys.consumerfinance.gov/jfe/form/SV_cIvDn6CqQQWh2zI.*

III. Availability

The Council's agenda will be available on Monday, May 1, 2023, and meeting presentations will be made available to the public on Friday, May 19, 2023, at noontime, both via *consumerfinance.gov.*

A recording and summary of this meeting will be available after the meeting on the Bureau's website, *consumerfinance.gov.*

Emily Ross,

Acting Deputy Chief of Staff, Consumer Financial Protection Bureau.

BILLING CODE 4810–AM–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Science Board; Notice of Federal Advisory Committee Meeting

AGENCY: Under Secretary of Defense for Research and Engineering, Department of Defense (DoD).

ACTION: Notice of federal advisory committee meeting.

SUMMARY: The DoD is publishing this notice to announce that the following Federal Advisory Committee meeting of the Defense Science Board (DSB) will take place.

DATES: Closed to the public Wednesday, May 10, 2023 from 8:15 a.m. to 5:00 p.m. and Thursday, May 11, 2023 from 8:15 a.m. to 4:00 p.m.

ADDRESSES: The address of the closed meeting is the Executive Conference Center, 4075 Wilson Blvd., Floor 3, Arlington, VA 22203.

FOR FURTHER INFORMATION CONTACT: Mr. Kevin Doxey, Designated Federal Officer (DFO), (703) 571–0081 (Voice), (703) 697–1860 (Facsimile), *kevin.a.doxey.civ@mail.mil* (Email). Mailing address is Defense Science Board, 3140 Defense Pentagon, Room 3B888A, Washington, DC 20301–3140. Website: *http://www.acq.osd.mil/dsb/.* The most up-to-date changes to the meeting agenda can be found on the website.

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of title 5 United States Code (U.S.C.) chapter 10 (commonly known as the ''Federal Advisory Committee Act (FACA)''), 5 U.S.C. 552b(c) (commonly known as the ''Government in the Sunshine Act''), and sections 102–3.140 and 102–3.150 of title 41, Code of Federal Regulations (CFR).

Due to circumstances beyond the control of the Designated Federal Officer, the Defense Science Board was unable to provide public notification required by 41 CFR 102–3.150(a) concerning its May 10–11, 2023 meeting. Accordingly, the Advisory Committee Management Officer for the Department of Defense, pursuant to 41 CFR 102–3.150(b), waives the 15-calendar day notification requirement.

Purpose of the Meeting: The mission of the DSB is to provide independent advice and recommendations on matters relating to the DoD's scientific and technical enterprise. The objective of the meeting is to obtain, review, and evaluate classified information related to the DSB's mission. DSB membership will meet to discuss the 2023 DSB Summer Study on Climate Change and Global Security (''the DSB Summer Study'').

Agenda: The meeting will begin on Wednesday, May 10, 2023 at 8:15 a.m. with administrative opening remarks from Mr. Kevin Doxey, DFO and Executive Director, and a classified overview of the objectives of the Summer Study from Dr. Eric Evans, the DSB Chair. Next, the DSB members will meet in a plenary session to discuss classified strategies for anticipating the global stresses and possible conflict due to climate change. Following break, the DSB members will meet in a plenary session to discuss classified strategies for anticipating the global stresses and possible conflict due to climate change. Next, members will meet in a breakout session to discuss classified strategies for anticipating the global stresses and possible conflict due to climate change. The meeting will adjourn at 5:00 p.m. On Thursday, May 11, 2023, the DSB members will meet in a breakout session to discuss classified strategies for anticipating the global stresses and possible conflict due to climate change. Next, the DSB members will meet in a plenary session to discuss classified strategies for anticipating the global stresses and possible conflict due to climate change. Following break, the DSB members will meet in a plenary session to discuss classified strategies for anticipating the global stresses and possible conflict due to climate change. The meeting will adjourn at 4:00 p.m.

Meeting Accessibility: In accordance with 5 U.S.C. 1009(d) and 41 CFR 102–3.155, the DoD has determined that the DSB meeting will be closed to the public. Specifically, the Under Secretary of Defense for Research and Engineering, in consultation with the DoD Office of the General Counsel, has determined in writing that the meeting will be closed to the public because it will consider matters covered by 5 U.S.C. 552b(c)(1). The determination is based on the consideration that it is expected that discussions throughout will involve classified matters of national security concern. Such classified material is so intertwined with the unclassified material that it cannot reasonably be segregated into separate discussions without defeating the effectiveness and meaning of the overall meetings. To permit the meeting to be open to the public would preclude discussion of such matters and would greatly diminish the ultimate utility of the DSB's findings and recommendations to the Secretary of Defense and to the Under Secretary of Defense for Research and Engineering.

Written Statements: In accordance with 5 U.S.C. 1009(a)(3) and 41 CFR 102–3.105(j) and 102–3.140, interested persons may submit a written statement for consideration by the DSB at any time regarding its mission or in response to the stated agenda of a planned meeting. Individuals submitting a written statement must submit their statement to the DSB DFO at the email address provided in the **FOR FURTHER INFORMATION CONTACT** section at any point; however, if a written statement is not received at least three calendar days prior to the meeting, which is the subject of this notice, then it may not be

provided to or considered by the DSB until a later date.

Dated: April 26, 2023.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2023–09174 Filed 4–28–23; 8:45 am]

BILLING CODE 5001–06–P

DEPARTMENT OF EDUCATION

National Assessment Governing Board; Meeting

AGENCY: National Assessment Governing Board, Department of Education.

ACTION: Notice of open and closed meetings.

SUMMARY: This notice sets forth the agenda, time, and instructions to access or participate in the National Assessment Governing Board (hereafter referred to as Governing Board or Board) meetings scheduled for May 18–19, 2023, in Los Angeles, CA. This is a hybrid meeting, accessible both in person and virtually by advance registration 5 working days prior to each meeting via *www.nagb.gov.* This notice provides information about the meetings to members of the public who may be interested in attending the meetings and/or providing written comments related to the work of the Governing Board. Notice of the meetings is required under section 1009(a)(2) of 5 U.S.C. chapter 10 (Federal Advisory Committees).

ADDRESSES: Doubletree by Hilton Los Angeles Downtown, 120 South Los Angeles Street, Los Angeles, CA 90012.

DATES: The Quarterly Board Meeting will be held on the following dates:

- May 18, 2023, from 12:30 p.m. to 5:45 p.m., PDT
- May 19, 2023, from 8:45 a.m. to 2:45 p.m., PDT

FOR FURTHER INFORMATION CONTACT: Munira Mwalimu, Executive Officer/Designated Federal Official for the Governing Board, 800 North Capitol Street NW, Suite 825, Washington, DC 20002, telephone: (202) 357–6906, fax: (202) 357–6945, email: *Munira.Mwalimu@ed.gov.*

SUPPLEMENTARY INFORMATION:

Statutory Authority and Function: The Governing Board is established under the National Assessment of Educational Progress Authorization Act, Title III of Public Law 107–279 (20 U.S.C. 9621). Information on the Governing Board and its work can be found at *www.nagb.gov.* The Governing Board formulates policy for the National Assessment of Educational Progress (NAEP) administered by the National Center for Education Statistics (NCES). The Governing Board's responsibilities include:

''(1) selecting the subject areas to be assessed; (2) developing appropriate student achievement levels; (3) developing assessment objectives and testing specifications that produce an assessment that is valid and reliable, and are based on relevant widely accepted professional standards; (4) developing a process for review of the assessment which includes the active participation of teachers, curriculum specialists, local school administrators, parents, and concerned members of the public; (5) designing the methodology of the assessment to ensure that assessment items are valid and reliable, in consultation with appropriate technical experts in measurement and assessment, content and subject matter, sampling, and other technical experts who engage in large scale surveys; (6) measuring student academic achievement in grades 4, 8, and 12 in the authorized academic subjects; (7) developing guidelines for reporting and disseminating results; (8) developing standards and procedures for regional and national comparisons; (9) taking appropriate actions needed to improve the form, content use, and reporting of results from an assessment; and (10) planning and executing the initial public release of NAEP reports.''

Standing Committee Meetings

The Governing Board's standing committees will meet to conduct regularly scheduled work planned for the quarterly Board meeting and any items undertaken by standing committees for consideration by the full Governing Board. (Please see standing committee meeting minutes for previous meetings, available at *https://www.nagb.gov/governing-board/quarterly-board-meetings.html).* Standing committees will meet in advance of the May 2023 quarterly Board meeting. Standing committee meeting agendas and meeting materials will be posted on the Governing Board's website, *www.nagb.gov,* no later than five business days prior to the committee meetings.

Standing Committee Meetings

Tuesday, May 2, 2023

Nominations Committee (Closed Session)

5 p.m.–6 p.m. (ET), Virtual Meeting.

The Nominations Committee will meet virtually in closed session on Tuesday, May 2, 2023, from 5 p.m. to 6 p.m. to receive an update on nominations for Board terms beginning on October 1, 2023. The committee will discuss the internal nominations process and plans for the 2024 nominations cycle. These discussions pertain solely to internal personnel rules and practices of an agency and information of a personal nature where disclosure would constitute a clearly unwarranted invasion of personal privacy. As such, the discussions are protected by exemptions 2 and 6 of the Government Sunshine Act, 5 U.S.C. 552b(c).

Thursday, May 4, 2023

Executive Committee Meeting (Closed Session)

3 p.m.–4:30 p.m. (ET), Virtual Meeting.

The Executive Committee will meet virtually in closed session on Thursday, May 4, 2023, from 3:00 p.m. until 4:30 p.m. to discuss the NAEP and Governing Board's budgets, planned procurements and the NAEP Assessment Schedule. These discussions must be kept confidential to maintain the integrity of the federal budgeting and acquisition processes. Public disclosure of this confidential information would significantly impede implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of the Government Sunshine Act, 5 U.S.C. 552b(c).

Monday, May 8, 2023

Reporting and Dissemination Committee (Open Session)

12:30 p.m.–2:30 p.m. (ET), Virtual Meeting.

The Reporting and Dissemination Committee will meet virtually on Monday, May 8, 2023, to receive a debriefing on the NAEP Civics and U.S. History release; results are planned to be released on May 3. The Committee will discuss the release plan for the Long-Term Trend results and how NAEP conducts and reports tests of statistical significance.

Wednesday, May 17, 2023

Assessment Development Committee (Hybrid Meeting)

10:30 a.m.–4:45 p.m. (PDT)
10:30 a.m.–11:45 a.m. (Open Session, hybrid session)
11:45 a.m.–12:15 p.m. (Closed Session, in person meeting)
1:30 p.m.–2:15 p.m. (Open Session, hybrid meeting)
2:15 p.m.–4:45 p.m. (Closed Session, in person meeting)

The Assessment Development Committee will meet in open session on Wednesday, May 17, 2023, at the Doubletree by Hilton Los Angeles Downtown from 10:30 a.m. to 4:45 p.m. From 10:30 a.m. to 11:45 a.m., the committee will meet in open session to discuss commissioned papers on the 2030 NAEP Writing Assessment Framework and potential updates to the Assessment Framework Development Policy.

From 11:45 a.m. until 12:15 p.m. the committee will meet in closed session to discuss independent cost estimates and budget matters related to framework updates. These discussions must be kept confidential to maintain the integrity of the federal budgeting and acquisition processes. Public disclosure of this confidential information would significantly impede implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of the Government Sunshine Act, 5 U.S.C. 552b(c).

Following a break, the committee will reconvene in open session from 1:30 p.m. until 2:15 p.m. to discuss feedback from public comment on the NAEP Science Assessment Framework. From 2:15 p.m. until 4:45 p.m. the committee will meet in closed session to review secure and confidential pilot assessment items for 2024 Mathematics and Reading at grades 4 and 8. Public disclosure of this confidential information would significantly impede implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of the Government Sunshine Act, 5 U.S.C. 552b(c).

Thursday, May 25, 2023

Committee on Standards, Design and Methodology (Open Session)

10 a.m.–12 p.m. (ET), Virtual

The Committee on Standards, Design and Methodology will meet virtually in open session on Thursday, May 25, 2023, from 10:00 a.m. until 12:00 p.m. to receive general updates on the committee's ongoing work, discuss Effect Sizes on NAEP, and responses to the Achievement Levels Communications Plans.

Quarterly Governing Board Meeting

The plenary sessions of the Governing Board's May 2023 quarterly meeting will be held on the following dates and times (PDT):

Thursday, May 18, 2023:

Open Meeting: 12:30 p.m.–3:30 p.m.;
Closed Meeting: 3:45 p.m.–5:45 p.m.

Friday, May 19, 2023

Closed Meeting: 8:45 a.m.–9:45 a.m.;
Open Meeting: 9:45 a.m.–11:45 a.m.;
Closed Meeting: 11:45 a.m.–1:15 p.m.;
Open Meeting: 1:15 p.m.–2:45 p.m.

Thursday, May 18, 2023

Plenary Session (Hybrid)

12:30–5:45 p.m. (PDT)
12:30–3:30 p.m. (Open Session)
3:45 p.m.–5:45 p.m. (Closed Session)

On Friday, May 18, 2023, the plenary session of the Governing Board meeting will convene in open session from 12:30 p.m. to 3:30 p.m. in open session. Governing Board Chair Beverly Perdue, will welcome members, followed by motions to approve the meeting agenda for the May 18–19, 2023, and meeting minutes from the March 2–3, 2023, Governing Board meeting. Thereafter, from 12:45 p.m. to 1:15 p.m., Lesley Muldoon, Executive Director of the Governing Board, will update members on ongoing work followed by an update from Mark Schneider, Director, Institute of Education Sciences (IES) from 1:15 p.m. until 1:45 p.m. From 1:45 p.m. until 2:15 p.m. the Board will receive updates from Peggy Carr, Commissioner, NCES, on NAEP activities. From 2:15 p.m. to 3:30 p.m. the Board will receive a briefing on Measuring Socioeconomic Status.

After a 15 minutes break, the meeting will re-convene in closed session from 3:45 p.m. to 5:45 p.m. to receive an update on the NAEP Budget and Assessment Schedule from NCES Commissioner Peggy Carr. These discussions must be kept confidential to maintain the integrity of the federal budgeting and acquisition processes. Public disclosure of this confidential information would significantly impede implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of the Government Sunshine Act, 5 U.S.C. 552b(c). The May 18, 2023, session of the Board meeting will adjourn at 5:45 p.m.

Friday, May 19, 2023

Plenary Session (Hybrid)—8:45 a.m.–2:45 p.m. (PDT)

8:45 a.m.–9:45 a.m. (Closed Session)
9:45 a.m.–11:45 a.m. (Open Session)
11:45 a.m.–1:15 p.m. (Closed Session)
1:15 p.m.–2:45 p.m. (Open Session)

On May 19, 2023, the Governing Board will meet in closed session from 8:45 a.m. to 9:45 a.m. to continue discussion on the NAEP Budget and Assessment Schedule. These discussions must be kept confidential to maintain the integrity of the federal budgeting and acquisition processes. Public disclosure of this confidential information would significantly impede implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of the Government Sunshine Act, 5 U.S.C. 552b(c).

The meeting will then transition to an open session from 9:45 a.m. to 11:15 a.m. to discuss public comment and recommendations on the Science Assessment Framework Update. From 11:15 a.m. until 11:45 a.m. the Board will engage in open discussion on future topics for consideration and ongoing work.

From 11:45 a.m. until 1:15 p.m., the Board will receive a briefing in a closed session on the embargoed results from the 2022 Long-Term Trend—age 13 assessment. These results have not been released to the public. Disclosure of this confidential information would significantly impede implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of the Government Sunshine Act, 5 U.S.C. 552b(c).

Members then will then convene in open session from 1:15 p.m. until 2:45 p.m. to discuss the release plan for NAEP Long-Term Trend and Linking Studies. The May 19, 2023, session of the Governing Board meeting will adjourn at 2:45 p.m.

The quarterly Board meeting and standing committee meeting agendas, along with the meeting materials, will be posted on the Governing Board's website at *www.nagb.gov* no later than five working days prior to each meeting.

Instructions for Participating in the Meetings

Registration: Members of the public may attend all open sessions of the Governing Board's May 18–19, 2023, meetings in-person or virtually. A link to register for both the in-person and virtual attendance for the open sessions and instructions for how to register will be posted on the Governing Board's website at *www.nagb.gov* no later than 5 business days prior to each meeting. Registration is required to join the meeting virtually.

Public Comment: Written comments related to the work of the Governing Board and its committees may be submitted electronically or in hard copy to the attention of the Executive Officer/Designated Federal Official (DFO) via email at *Munira.Mwalimu@ed.gov* no later than 10 business days prior to the meeting. Written comments should be directed to the DFO as they relate to committee and Board meeting work and

should reference the relevant agenda item.

Access to Records of the Meeting: Pursuant to 5 U.S.C. 1009(b), the public may inspect the meeting materials at *www.nagb.gov,* which will be made available no later than five business days prior to each meeting. The public may also inspect the meeting materials and other Governing Board records at 800 North Capitol Street NW, Suite 825, Washington, DC 20002, by emailing *Munira.Mwalimu@ed.gov* to schedule an appointment. The official verbatim transcripts of the open meeting sessions will be available for public inspection no later than 30 calendar days following each meeting and will be posted on the Governing Board's website. Requests for the verbatim transcriptions may be made via email to the DFO noted above.

Reasonable Accommodations: The meeting location is accessible to individuals with disabilities. If you will need an auxiliary aid or service to participate in the meeting (*e.g.,* interpreting service, assistive listening device, or materials in an alternate format), notify the DFO listed in this notice no later than ten working days prior to each meeting date.

Electronic Access to this Document: The official version of this document is the document published in the **Federal Register**. Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the Adobe website. You may also access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Authority: Public Law 107–279, Title III, 301—National Assessment of Educational Progress Authorization Act (20 U.S.C. 9621).

Lesley Muldoon,

Executive Director, National Assessment Governing Board (NAGB), U.S. Department of Education.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2023–SCC–0074]

Agency Information Collection Activities; Comment Request; HEERF No Cost Extension (NCE) Request Form

AGENCY: Office of Postsecondary Education (OPE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is requesting the Office of Management and Budget (OMB) to conduct an emergency review of a new information collection.

DATES: The Department requested emergency processing from OMB for this information collection request on ED–2023–SCC–0074 by May 3, 2023. As a result, the Department is providing the public with the opportunity to comment under the full comment period. Interested persons are invited to submit comments on or before June 30, 2023.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2023–SCC–0074. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the *regulations.gov* site is not available to the public for any reason, the Department will temporarily accept comments at *ICDocketMgr@ed.gov.* Please include the docket ID number and the title of the information collection request when requesting documents or submitting comments. Please note that comments submitted after the comment period will not be accepted. Written requests for information or comments submitted by postal mail or delivery should be addressed to the Manager of the Strategic Collections and Clearance Governance and Strategy Division, U.S. Department of Education, 400 Maryland Ave. SW, LBJ, Room 6W203, Washington, DC 20202–8240.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Karen Epps, 202–453–6337.

SUPPLEMENTARY INFORMATION: The Department, in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. The Department is soliciting comments on the proposed information collection request (ICR) that is described below. The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: HEERF No Cost Extension (NCE) Request Form.

OMB Control Number: 1840–NEW.

Type of Review: A new ICR.

Respondents/Affected Public: State, Local, and Tribal Governments; Private Sector.

Total Estimated Number of Annual Responses: 720.

Total Estimated Number of Annual Burden Hours: 360.

Abstract: The Higher Education Emergency Relief Fund (HEERF) authorizes the Secretary of Education to allocate formula grant funds to participating institutions of higher education (IHEs) to address impacts of COVID–19. To date, the Department has made over 18,000 awards to over 5,100 IHEs totaling $76.3 billion. In both volume of grants and amount of funding, HEERF is one of the largest grant programs in agency history. On June 30, 2023, the project period for most HEERF grants will end and any remaining unliquidated grant funds will be returned to Treasury. Pursuant to 2 CFR 200.308(e)(2) and 34 CFR 75.261(a), grantees have the option to receive up to a twelve-month No-Cost Extension (NCE) of their grant project periods. The Department is requesting emergency approval of a new information collection to allow for HEERF grantees to request an extension beyond June 30, 2023 and ensure that grantees have a thought-out plan for using their remaining HEERF grant funds to address the lingering effects and impacts related

to COVID–19. In addition, the Department is requesting emergency clearance and OMB approval by May 3, 2023 in order to streamline the review and approval process as well as ensure that the reasons for requesting an extension of the HEERF project period beyond June 30, 2023 meet the applicable legal requirements. As such, the Department has created a data collection form for HEERF grantees to provide the information required to request NCEs for up to an additional twelve months to spend their remaining HEERF grant balances. The form requests information that is required under 2 CFR 200.308(e)(2) and 34 CFR 75.261(a) to grant NCEs. The Department has attempted to reduce burden on grantees by requesting, prospectively, much of the same information that grantees report on in their HEERF annual performance reports. Providing a streamlined process for NCE requests will speed the process of reviewing and approving NCE requests and help ensure grantees are able to spend down their funds in a reasonable timeframe while focusing on the pressing needs of their students and institutions.

Dated: April 26, 2023.

Kun Mullan,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

DEPARTMENT OF EDUCATION

[Docket No.: ED–2023–SCC–0017]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Evaluation of Full-Service Community Schools: Early Implementation Data Collection

AGENCY: Institute of Education Sciences (IES), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing a new information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before May 31, 2023.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be submitted within 30 days of publication of this notice. Click on this link *www.reginfo.gov/public/do/PRAMain* to access the site. Find this information collection request (ICR) by selecting ''Department of Education'' under ''Currently Under Review,'' then check the ''Only Show ICR for Public Comment'' checkbox. *Reginfo.gov* provides two links to view documents related to this information collection request. Information collection forms and instructions may be found by clicking on the ''View Information Collection (IC) List'' link. Supporting statements and other supporting documentation may be found by clicking on the ''View Supporting Statement and Other Documents'' link.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Erica Johnson, (202) 245–7676.

SUPPLEMENTARY INFORMATION: The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Evaluation of Full-Service Community Schools: Early Implementation Data Collection.

OMB Control Number: 1850–NEW.

Type of Review: New ICR.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 14.

Total Estimated Number of Annual Burden Hours: 4.

Abstract: The Full-Service Community Schools program seeks to improve student outcomes by helping schools expand and enrich learning opportunities, provide integrated student support services, strengthen family and community engagement, and adopt collaborative leadership practices that include families and community organizations. Congress has invested $180 million in Full-Service Community Schools grants and mandated an evaluation of the program.

This package requests approval to conduct a survey of Full-Service Community Schools 2022 grantees. These data will be used to study the early implementation of the Full-Service Community Schools program.

Dated: April 25, 2023.

Juliana Pearson,

PRA Coordinator, Strategic Collections and Clearance Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

[Docket No. 14–96–LNG]

Alaska LNG Project LLC; Order Affirming and Amending DOE/FE Order No. 3643–A Following Partial Grant of Rehearing

AGENCY: Office of Fossil Energy and Carbon Management, Department of Energy.

ACTION: Amended record of decision.

SUMMARY: The Office of Fossil Energy and Carbon Management (FECM) of the Department of Energy (DOE) gives notice of an Amended Record of Decision (ROD) published under the National Environmental Policy Act of 1969 (NEPA) and implementing regulations. This Amended ROD is an Appendix to DOE/FECM Order No. 3643–C, an order that affirms and amends the previously-issued DOE/FE Order No. 3643–A, an order authorizing Alaska LNG Project LLC to export domestically-produced liquefied natural gas (LNG) to non-free trade agreement countries under section 3(a) of the Natural Gas Act (NGA).

FOR FURTHER INFORMATION CONTACT:

Brian Lavoie, U.S. Department of Energy (FE–34), Office of Regulation, Analysis, and Engagement, Office of Resource Sustainability, Office of Fossil Energy and Carbon Management, Forrestal Building, Room 3E–042, 1000 Independence Avenue SW, Washington, DC 20585, (202) 586–2459, *brian.lavoie@hq.doe.gov*

Cassandra Bernstein, U.S. Department of Energy (GC–76), Office of the Assistant General Counsel for Energy Delivery and Resilience, Forrestal Building, Room 6D–033, 1000 Independence Avenue SW, Washington, DC 20585, (202) 586–9793, *cassandra.bernstein@hq.doe.gov*.

SUPPLEMENTARY INFORMATION: On April 13, 2023, DOE issued Order No. 3643–C to Alaska LNG Project LLC (Alaska LNG) under NGA section 3(a), 15 U.S.C.

717b(a). This Order affirms and amends Order No. 3643–A, previously issued to Alaska LNG on August 20, 2020, under NGA section 3(a). Order No. 3643–A authorized Alaska LNG to export LNG produced from Alaskan sources by vessel to any country with which the United States has not entered into a free trade agreement (FTA) requiring national treatment for trade in natural gas, and with which trade is not prohibited by U.S. law or policy (non-FTA countries). On April 15, 2021, DOE issued Order No. 3643–B, which granted rehearing of Order No. 3643–A for the purpose of conducting two Alaska-specific environmental studies. DOE issued Order No. 3643–C following its evaluation of the additional studies.

Under Order No. 3643–C, Alaska LNG is authorized to export LNG in a volume equivalent to 929 billion cubic feet (Bcf) per year of natural gas (2.55 Bcf/day) to non-FTA countries from the proposed Alaska LNG Project (Project) to be located in the Nikiski area of the Kenai Peninsula, Alaska. The Order reaffirms and maintains all obligations, rights, responsibilities, and deadlines established in Order No. 3643–A. In addition, it requires Alaska LNG to certify monthly to DOE that, except under strictly limited circumstances, the natural gas produced for export in the form of LNG in the prior month did not result in the venting of byproduct carbon dioxide into the atmosphere.

DOE conducted the additional environmental studies in the rehearing process through preparation of a Supplemental Environmental Impact Statement (SEIS). DOE had participated as a cooperating agency with the Federal Energy Regulatory Commission in preparing an environmental impact statement (EIS) analyzing the potential environmental impacts of the proposed Project (including an LNG export terminal, along with the associated facilities and pipeline) that would be used to support the export authorization Alaska LNG sought from DOE. DOE adopted the EIS and prepared a ROD, which is attached as an appendix to Order No. 3643–A. The Amended ROD is based on the SEIS and is attached as an appendix to Order No. 3643–C. The Amended ROD can be found here: *www.energy.gov/sites/default/files/2023–04/ord3643–C.pdf.*

Signed in Washington, DC, on April 26, 2023.

Amy Sweeney,

Director, Office of Regulation, Analysis, and Engagement, Office of Resource Sustainability.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Paducah

AGENCY: Office of Environmental Management, Department of Energy.

ACTION: Notice of open meeting: correction.

SUMMARY: On April 24, 2023, the Department of Energy published a notice of open meeting announcing a meeting on May 18, 2023, of the Environmental Management Site-Specific Advisory Board, Paducah, in the April 24, 2023 **Federal Register**. This document makes a correction to that notice.

FOR FURTHER INFORMATION CONTACT: Eric Roberts, Board Support Manager, by Phone: (270) 554–3004 or Email: *eric@pgdpcab.org.*

Corrections

In the **Federal Register** of April 24, 2023, in FR Doc. 2023–08520, on page 24785, please make the following corrections:

In that notice under **DATES**, third column, second paragraph, the meeting date has been changed. The original date was May 18, 2023. The new date is May 25, 2023.

In that notice under **ADDRESSES**, third column, third paragraph, the meeting room has been changed. The original address and meeting room was West Kentucky Community and Technical College, Emerging Technology Center, Room 109, 5100 Alben Barkley Drive, Paducah, Kentucky 42001. The new meeting room is Room 216.

The reason for the corrections is a scheduling conflict with the original meeting date.

Signed in Washington, DC, on April 26, 2023.

LaTanya Butler,

Deputy Committee Management Officer.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

[Docket No. 13–132–LNG]

Magnolia LNG LLC; Order Amending Long-Term Authorization To Export Liquefied Natural Gas to Non-Free Trade Agreement Nations

AGENCY: Office of Fossil Energy and Carbon Management, Department of Energy.

ACTION: Amended record of decision.

SUMMARY: The Office of Fossil Energy and Carbon Management (FECM) of the Department of Energy (DOE) gives notice of an Amended Record of Decision (ROD) published under the National Environmental Policy Act of 1969 (NEPA) and implementing regulations. This Amended ROD is an Appendix to DOE/FECM Order No. 3909–C, an order that amends the previously-issued DOE/FE Order No. 3909, an opinion and order authorizing Magnolia LNG LLC to export domestically-produced liquefied natural gas (LNG) to non-free trade agreement countries under section 3(a) of the Natural Gas Act (NGA).

FOR FURTHER INFORMATION CONTACT:

Brian Lavoie, U.S. Department of Energy (FE–34), Office of Regulation, Analysis, and Engagement, Office of Resource Sustainability, Office of Fossil Energy and Carbon Management, Forrestal Building, Room 3E–042, 1000 Independence Avenue SW, Washington, DC 20585, (202) 586–2459, *brian.lavoie@hq.doe.gov*.

Cassandra Bernstein, U.S. Department of Energy (GC–76), Office of the Assistant General Counsel for Energy Delivery and Resilience, Forrestal Building, Room 6D–033, 1000 Independence Avenue SW, Washington, DC 20585, (202) 586–9793, *cassandra.bernstein@hq.doe.gov*.

SUPPLEMENTARY INFORMATION: On April 27, 2022, DOE issued Order No. 3909–C to Magnolia LNG LLC (Magnolia LNG) under NGA section 3(a), 15 U.S.C. 717b(a). This Order further amends Order No. 3909, previously issued to Magnolia LNG on November 30, 2016, under NGA section 3(a). Order No. 3909, as amended, authorized Magnolia LNG to export domestically-produced LNG by vessel to any country with which the United States has not entered into a free trade agreement (FTA) requiring national treatment for trade in natural gas, and with which trade is not prohibited by U.S. law or policy (non-FTA countries).

Order No. 3909–C authorizes an increase in the volume of exports previously authorized in the amended Order No. 3909. Under Order No. 3909–C, Magnolia LNG is authorized to export LNG in a volume equivalent to 449 billion cubic feet (Bcf) per year of natural gas (approximately 1.23 Bcf per day) to non-FTA countries from the proposed Magnolia LNG Terminal, to be located near Lake Charles, Calcasieu Parish, Louisiana.

DOE participated as a cooperating agency with the Federal Energy Regulatory Commission (FERC) in preparing a supplemental

environmental impact statement (SEIS) analyzing the potential environmental impacts of the proposed increase in authorized export capacity. DOE adopted the SEIS and reviewed FERC's order authorizing the volume increase, under NEPA. DOE also supplemented FERC's environmental review with its own additional environmental studies, as well as the Marine Transport Technical Support Document prepared by DOE to consider the potential effects associated with transporting natural gas, including LNG, on marine vessels. On the basis of this record, DOE issued an Amended ROD, which is attached as an appendix to the Order. The Amended ROD can be found here: *www.energy.gov/sites/default/files/2022-04/ord3909c.pdf.*

Signed in Washington, DC, on April 26, 2023.

Amy Sweeney,

Director, Office of Regulation, Analysis, and Engagement, Office of Resource Sustainability.

Description: Supplement to Aron Energy Prepay 23 LLC submits tariff filing per 35.12: Baseline new to be effective 5/9/2023.

Filed Date: 3/28/23.

Accession Number: 20230328–5303.

Comment Date: 5 p.m. ET 5/5/23.

Docket Numbers: ER23–1700–000.

Applicants: PJM Interconnection, L.L.C.

Description: § 205(d) Rate Filing: Update Default Gross Cost of New Entry & Default Gross Avoidable Cost Rate to be effective 6/23/2023.

Filed Date: 4/24/23.

Accession Number: 20230424–5203.

Comment Date: 5 p.m. ET 5/15/23.

Docket Numbers: ER23–1701–000.

Applicants: PacifiCorp.

Description: § 205(d) Rate Filing: Tri-State Master Installation, O&M Agmt for Metering (Rev 5) to be effective 6/25/2023.

Filed Date: 4/25/23.

Accession Number: 20230425–5091.

Comment Date: 5 p.m. ET 5/16/23.

Docket Numbers: ER23–1702–000.

Applicants: Alabama Power Company, Georgia Power Company, Mississippi Power Company.

Description: Tariff Amendment: Alabama Power Company submits tariff filing per 35.15: Columbiana PV II LGIA Termination Filing to be effective 4/25/2023.

Filed Date: 4/25/23.

Accession Number: 20230425–5144.

Comment Date: 5 p.m. ET 5/16/23.

Docket Numbers: ER23–1703–000.

Applicants: Stanton Battery Energy Storage, LLC.

Description: Baseline eTariff Filing: Application for Market Based Rate Authority to be effective 6/5/2023.

Filed Date: 4/25/23.

Accession Number: 20230425–5174.

Comment Date: 5 p.m. ET 5/16/23.

Docket Numbers: ER23–1704–000.

Applicants: WGP Redwood Holdings, LLC.

Description: § 205(d) Rate Filing: Updated Market Based Rate Tariff to be effective 4/26/2023.

Filed Date: 4/25/23.

Accession Number: 20230425–5176.

Comment Date: 5 p.m. ET 5/16/23.

Docket Numbers: ER23–1705–000.

Applicants: PJM Interconnection, L.L.C.

Description: § 205(d) Rate Filing: Original NSA, Service Agreement No. 6884; Queue No. AC1–074/AC2–075 to be effective 6/26/2023.

Filed Date: 4/25/23.

Accession Number: 20230425–5191.

Comment Date: 5 p.m. ET 5/16/23.

Docket Numbers: ER23–1706–000.

Applicants: PJM Interconnection, L.L.C.

Description: § 205(d) Rate Filing: Original NSA, SA No. 6869; Queue No. AE2–071/AF1–203 to be effective 4/26/2023.

Filed Date: 4/25/23.

Accession Number: 20230425–5192.

Comment Date: 5 p.m. ET 5/16/23.

Docket Numbers: ER23–1707–000.

Applicants: PJM Interconnection, L.L.C.

Description: § 205(d) Rate Filing: Amendment to ISA, Service Agreement No. 6436; Queue No. AE2–224 to be effective 6/26/2023.

Filed Date: 4/25/23.

Accession Number: 20230425–5197.

Comment Date: 5 p.m. ET 5/16/23.

Docket Numbers: ER23–1708–000.

Applicants: Florida Power & Light Company.

Description: § 205(d) Rate Filing: FPL 2021 True-Up Revisions to Appendix B of Rate Schedule No. 317 to be effective 1/1/2021.

Filed Date: 4/25/23.

Accession Number: 20230425–5229.

Comment Date: 5 p.m. ET 5/16/23.

Docket Numbers: ER23–1709–000.

Applicants: Florida Power & Light Company.

Description: § 205(d) Rate Filing: FPL 2021 True-Up Revisions to Appendix B of Rate Schedule No. 322 to be effective 1/1/2021.

Filed Date: 4/25/23.

Accession Number: 20230425–5231.

Comment Date: 5 p.m. ET 5/16/23.

Docket Numbers: ER23–1710–000.

Applicants: El Paso Electric Company.

Description: § 205(d) Rate Filing: Concurrence of EPE to APS Service Agreement No. 387, Sonoran Solar Energy to be effective 5/7/2023.

Filed Date: 4/25/23.

Accession Number: 20230425–5265.

Comment Date: 5 p.m. ET 5/16/23.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: April 25, 2023.

Debbie-Anne A. Reese,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2853–073]

Montana Department of Natural Resources and Conservation; Notice of Application Accepted for Filing and Soliciting Motions To Intervene and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* New Major License.

b. *Project No.:* 2853–073.

c. *Date Filed:* June 30, 2022.

d. *Applicant:* Montana Department of Natural Resources and Conservation (Montana DNRC).

e. *Name of Project:* Broadwater Hydroelectric Project (project).

f. *Location:* On the Missouri River near the town of Toston in Broadwater County, Montana. The project is adjacent to and includes federal lands administered by the Bureau of Land Management.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* David Lofftus, Hydro Power Program Manager, Montana Department of Natural Resources and Conservation, 1424 9th Avenue, P.O. Box 201601, Helena, Montana 59620; Phone at (406) 444–6659; or email at *dlofftus@mt.gov.*

i. *FERC Contact:* Ingrid Brofman at (202) 502–8347, or *ingrid.brofman@ferc.gov.*

j. *Deadline for filing motions to intervene and protests:* June 24, 2023.

The Commission strongly encourages electronic filing. Please file motions to intervene and protests using the Commission's eFiling system at *https://ferconline.ferc.gov/FERCOnline.aspx.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. All filings must clearly identify the project name and docket number on the first page: Broadwater Hydroelectric Project (P–2853–073).

The Commission's Rules of Practice and Procedure require all interveners filing documents with the Commission to serve a copy of that document on each person on the official service list for the project. Further, if an intervener files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. This application has been accepted for filing, but is not ready for environmental analysis at this time.

l. The existing Broadwater Hydroelectric Project consists of: (1) a 630-foot-long, 24-foot-high concrete gravity dam with a 360-foot-long spillway containing seven inflatable rubber gates capable of raising the dam's crest elevation by 11 feet; (2) a 275-acre, 9-mile-long reservoir; (3) a 160-foot long rock jetty that extends upstream into the reservoir that serves to separate inflow to the powerhouse from the headworks of the non-project irrigation canal adjacent to the dam; (4) an intake integral with the powerhouse and covered by two inclined trashracks, each 20 feet wide and 40 feet high, with a clear bar spacing of 3 inches; (5) a 160-foot-long, 46-foot-wide, 64-foot high powerhouse containing a single Kaplan turbine with a rated capacity of 9.66 megawatts; (6) a 100-kilovolt, 2.8-mile-long transmission line; and (7) appurtenant facilities.

The project is operated in a run-of-river mode and generates an estimated average of 40,669 megawatt-hours per year.

Montana DNRC proposes to remove the jetty that separates the hydropower intake and the irrigation canal intake and install two parallel 100-foot-long, 10-foot-wide by 10-foot-high box culverts within the irrigation intake canal and a bulkhead near the current irrigation headworks. Once these facilities are installed, any water diverted for irrigation first pass through a new angled screen with 6-inch spacing between the bars and then pass through the two new box culverts before entering the existing irrigation intake at the dam. The existing irrigation intake and facilities at the dam conveying water to the Broadwater-Missouri irrigation canal system would remain in place. Montana DNRC proposes to include the new tilted screen and box culverts as licensed project facilities.

Montana DNRC also proposes to modernize the project trash rake (*i.e.,* replace and recalibrate sensors on the rake) to minimize debris buildup on the dam intake and to upgrade its SCADA monitoring system (*i.e.,* improving connectivity to the substation, protective relaying, and automation upgrades).

Montana DNRC proposes to continue to operate the project in an automated run-of-river mode throughout the year where outflow from the project approximates inflow (minus flows diverted for irrigation). Montana DNRC proposes to modify its procedures for responding to an unplanned unit trip to reduce the potential for fish stranding downstream of the project.

m. A copy of the application is available for review via the internet through the Commission's Home Page (*http://www.ferc.gov*), using the ''eLibrary'' link. Enter the docket number, excluding the last three digits in the docket number field, to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll free, (886) 208–3676 or TTY (202) 502–8659.

You may also register online at *https://ferconline.ferc.gov/FERCOnline.aspx* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

n. Anyone may submit a protest or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, 385.211, and 385.214. In determining the appropriate action to take, the Commission will consider all protests filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any protests or motions to intervene must be received on or before the specified deadline date for the particular application.

When the application is ready for environmental analysis, the Commission will issue a public notice requesting comments, recommendations, terms and conditions, or prescriptions.

All filings must (1) bear in all capital letters the title ''PROTEST'' or ''MOTION TO INTERVENE;'' (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. Agencies may obtain copies of the application directly from the applicant.

A copy of any protest or motion to intervene must be served upon each representative of the applicant specified in the particular application.

o. *Procedural schedule:* The application will be processed according to the following schedule. Revisions to the schedule will be made as appropriate.

Issue Notice of Ready for Environmental Analysis: June 2023.

Deadline for Filing Comments, Recommendations, and Agency Terms and Conditions/Prescriptions: July 2023.

Deadline for Filing Reply Comments: September 2023.

Dated: April 25, 2023.

Debbie-Anne A. Reese,

Deputy Secretary.

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas & Oil Pipeline Rate and Refund Report filings:

Filings Instituting Proceedings

Docket Numbers: RP23–700–000.

Applicants: ANR Pipeline Company.

Description: Compliance filing: 2023 Operational Purchases and Sales Report to be effective N/A.

Filed Date: 4/24/23.

Accession Number: 20230424–5142.

Comment Date: 5 p.m. ET 5/8/23.

Docket Numbers: RP23–701–000.

Applicants: ANR Storage Company.

Description: Compliance filing: 2023 Operational Purchases and Sales Report to be effective N/A.

Filed Date: 4/24/23.

Accession Number: 20230424–5150.

Comment Date: 5 p.m. ET 5/8/23.

Docket Numbers: RP23–702–000.

Applicants: Transcontinental Gas Pipe Line Company, LLC.

Description: § 4(d) Rate Filing: Rate Schedule GSS/LSS Fuel Retention Percentage Tracker Filing to be effective 5/1/2023.

Filed Date: 4/24/23.

Accession Number: 20230424–5156.

Comment Date: 5 p.m. ET 5/8/23.

Docket Numbers: RP23–703–000.

Applicants: Bison Pipeline LLC.

Description: Compliance filing: 2023 Operational Purchases and Sales Report to be effective N/A.

Filed Date: 4/24/23.

Accession Number: 20230424–5159.

Comment Date: 5 p.m. ET 5/8/23.

Docket Numbers: RP23–704–000.

Applicants: Blue Lake Gas Storage Company.

Description: Compliance filing: 2023 Operational Purchases and Sales Report to be effective N/A.

Filed Date: 4/24/23.

Accession Number: 20230424–5168.

Comment Date: 5 p.m. ET 5/8/23.

Docket Numbers: RP23–705–000.

Applicants: Ruby Pipeline, L.L.C.

Description: § 4(d) Rate Filing: RP 2023–04–24 GT&C Revisions to be effective 5/22/2023.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OLEM–2023–0244, FRL–10921–01–OLEM]

Agency Information Collection Activities; Proposed Collection; Comment Request; Disposal of Coal Combustion Residuals From Electric Utilities, EPA ICR No. 2609.03, OMB Control No. 2050–0223

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) is planning to submit the information collection request (ICR), Disposal of Coal Combustion Residuals from Electric Utilities, EPA ICR No. 2609.03, OMB Control No. 2050–0223 to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (PRA). Before doing so, the EPA is soliciting public comments on specific aspects of the proposed information collection as described in **SUPPLEMENTARY INFORMATION**. This is a proposed extension of the ICR, which is currently approved through December 31, 2023. An Agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Comments must be submitted on or before June 30, 2023.

ADDRESSES: Submit your comments, referencing by Docket ID No. EPA–HQ–OLEM–2023–0244, at *https://www.regulations.gov* (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For

additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov//dockets.*

FOR FURTHER INFORMATION CONTACT: Peggy Vyas, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 202–566–0453; *vyas.peggy@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov.* Materials can also be viewed at the Reading Room located at the EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004. The Docket Center's hours of operations are 8:30 a.m.–4:30 p.m., Monday–Friday (except Federal Holidays). The telephone number for the Docket Center is 202–566–1744.

Pursuant to section 3506(c)(2)(A) of the PRA, the EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. The EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, the EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract: The EPA published a final rule to regulate the disposal of coal combustion residuals (CCR) from electric utilities as solid waste under RCRA Subtitle D (see 80 FR 21302, April 17, 2015). EPA established national minimum criteria for existing and new CCR landfills and CCR surface impoundments and all lateral expansions to include location restrictions, design and operating criteria, groundwater monitoring and corrective action, closure requirements and post-closure care, and recordkeeping, notification, and internet posting requirements. Since the final rule, several court decisions have required accelerated closure timelines for many units and forced closures for many units previously categorized as lined. In 2020, EPA published the ''Hazardous and Solid Waste Management System: Disposal of CCR; A Holistic Approach to Closure Part B: Alternate Demonstration for Unlined Surface Impoundments Rule'' which allows for units to receive variances for unlined surface impoundments (see 85 FR 72506, November 12, 2020). This ICR includes the voluntary action that states may take to obtain permit program approval. With this renewal, this ICR also incorporates the burden currently covered by OMB Control No. 2050–0053.

Form Numbers: None.

Respondents/affected entities: Business and other for-profit as well as States, Local and Tribal governments.

Respondent's obligation to respond: Required to obtain or retain a benefit (RCRA Sections 1008, 4004, 4005(a)).

Estimated number of respondents: 730.

Frequency of response: On occasion.

Total estimated burden: 177,498 hours. Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $18,347,854, which includes $10,024,078 annualized labor costs and $8,323,776 annualized capital or O&M costs.

Changes in estimates: The burden hours are likely to stay substantially the same.

Carolyn Hoskinson,

Director, Office of Resource Conservation and Recovery.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9542–04–OAR]

Final Allocations of Cross-State Air Pollution Rule Allowances From New Unit Set-Asides for 2022 Control Periods

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of data availability.

SUMMARY: The Environmental Protection Agency (EPA) is providing notice of the availability of data on emission allowance allocations to certain units under the Cross-State Air Pollution Rule (CSAPR) trading programs. EPA has completed final calculations for the allocations of allowances from the CSAPR new unit set-asides (NUSAs) for the 2022 control periods and has posted spreadsheets containing the calculations on EPA's website. EPA has also completed calculations for allocations of the remaining 2022 NUSA allowances to existing units and has posted spreadsheets containing those calculations on EPA's website as well.

DATES: May 1, 2023.

FOR FURTHER INFORMATION CONTACT: Questions concerning this action should be addressed to Jason Kuhns at (202) 564–3236 or *kuhns.jason@epa.gov* or Andrew Reighart at (202) 564–0418 or *reighart.andrew@epa.gov.*

SUPPLEMENTARY INFORMATION: Under each CSAPR trading program where EPA is responsible for determining emission allowance allocations, a portion of each state's emissions budget for the program for each control period is reserved in a NUSA (and in an additional Indian country NUSA in the case of states with Indian country within their borders) for allocation to certain units that would not otherwise receive allowance allocations. The procedures for identifying the eligible units for each control period and for allocating allowances from the NUSAs and Indian country NUSAs to these units are set forth in the CSAPR trading program regulations at 40 CFR 97.411(b) and 97.412 (NO_X Annual), 97.511(b) and 97.512 (NO_X Ozone Season Group 1), 97.611(b) and 97.612 (SO_2 Group 1), 97.711(b) and 97.712 (SO_2 Group 2), 97.811(b) and 97.812 (NO_X Ozone Season Group 2), and 97.1011(b) and 97.1012 (NO_X Ozone Season Group 3). Each NUSA allowance allocation process involves allocations to eligible units, termed ''new'' units, followed by the allocation to ''existing'' units of any allowances not allocated to new units.

In a notice of data availability (NODA) published in the **Federal Register** on February 27, 2022 (88 FR 12356), EPA provided notice of the preliminary calculations of NUSA allowance allocations for the 2022 control periods and described the process for submitting any objections. EPA received no objections in response to the February 27, 2022 NODA. This NODA concerns the final NUSA allowance allocations, which are unchanged from the preliminary calculations.

The detailed unit-by-unit data and final allowance allocation calculations are set forth in Excel spreadsheets titled

''CSAPR_NUSA_2022_NOx_Annual_Final_Data_New_Units,'' ''CSAPR_NUSA_2022_NOx_OS_Final_Data_New_Units,'' ''CSAPR_NUSA_2022_SO2_Final_Data_New_Units,'' ''CSAPR_NUSA_2022_NOx_Annual_Final_Data_Existing_Units,'' ''CSAPR_NUSA_2022_NOx_OS_Final_Data_Existing_Units,'' and ''CSAPR_NUSA_2022_SO2_Final_Data_Existing_Units'', available on EPA's website at *https://www.epa.gov/csapr/csapr-compliance-year-2022-nusa-nodas.*

EPA notes that an allocation or lack of allocation of allowances to a given unit does not constitute a determination that CSAPR does or does not apply to the unit. EPA also notes that, under 40 CFR 97.411(c), 97.511(c), 97.611(c), 97.711(c), 97.811(c), and 97.1011(c), allocations are subject to potential correction if a unit to which allowances have been allocated for a given control period is not actually an affected unit as of the start of that control period.

(Authority: 40 CFR 97.411(b), 97.511(b), 97.611(b), 97.711(b), 97.811(b), and 97.1011(b).)

Rona Birnbaum,

Director, Clean Air Markets Division, Office of Atmospheric Protection, Office of Air and Radiation.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OAR–2022–0706; FRL–10934–01–OMS]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Production, Import, Export, Recycling, Destruction, Transhipment, and Feedstock Use of Ozone-Depleting Substances (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Production, Import, Export, Recycling, Destruction, Transhipment, and Feedstock Use of Ozone-Depleting Substances (EPA ICR Number 1432.38, OMB Control Number 2060–0170) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through April 30, 2023. Public comments were previously requested via the **Federal Register** on August 24, 2022 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

DATES: Comments may be submitted on or before May 31, 2023.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OAR–2022–0706, to EPA online using *www.regulations.gov* (our preferred method), by email to *a-and-r-docket@epa.gov,* or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Robert Burchard, Stratospheric Protection Division, (6205A), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 343–9126; email address: *burchard.robert@epa.gov.*

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through April 30, 2023. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Public comments were previously requested via the **Federal Register** on August 24, 2022, during a 60-day comment period (87 FR 51976). This notice allows for an additional 30 days for public comments. Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: This ICR covers provisions under the Montreal Protocol on Substances that Deplete the Ozone Layer (Montreal Protocol) and Title VI of the CAA that establish limits on total U.S. production, import, and export of class I and class II ozone-depleting substances (or controlled substances). Production and import of class I controlled substances (chlorofluorocarbons and others) was phased out in the United States. The phaseout includes exceptions for essential uses, critical uses of methyl bromide, quarantine and pre-shipment uses of methyl bromide, previously used material, and material that will be transformed or destroyed. There are also regulations that restrict the use of class II controlled substances and require a gradual reduction in the production and consumption of these chemicals leading to their eventual phaseout. The class II controlled substance phaseout regulations include exceptions for previously used material and material that will be transformed or destroyed.

Form Numbers: 5900–137, 5900–136, 5900–149, 5900–150, 5900–153, 5900–151, 5900–199, 5900–202, 5900–200, 5900–201, 5900–205, 5900–155, 5900–140, 5900–144, 5900–142, 5900–141, 5900–148, 5900–147, 5900–473, 5900–138, 5900–139, 5900–152, 5900–472, 5900–154, 5900–146.

Respondents/affected entities: Producers, importers, exporters, and certain users of ozone-depleting substances; methyl bromide applicators, distributors, and end users including commodity storage and quarantine users.

Respondent's obligation to respond: Mandatory (CAA sections 114, 603(b), and 604(d)(6)).

Estimated number of respondents: 1,174 (total).

Frequency of response: Quarterly, annually, as needed.

Total estimated burden: 3,022 hours (per year). Burden is defined at 5 CFR 1320.03(b)

Total estimated cost: $375,086 (per year), includes $8,250 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is an increase of 83 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This increase is a result of updated assumptions associated with recordkeeping requirements that are more consistent with other ICRs that cover similar recordkeeping activities (*e.g.,* the HFC Allowance Allocation

Program ICR, OMB Control No. 2060–0734).

Courtney Kerwin,

Director, Regulatory Support Division.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–1161; FR ID 138217]

Information Collection Being Reviewed by the Federal Communications Commission Under Delegated Authority

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act of 1995 (PRA), the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before June 30, 2023. If you anticipate that you will be submitting comments but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email to *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–1161.

Title: Construction requirements; Interim reports—Sections 27.14(g)–(l).

Form Number: N/A.

Type of Review: Extension of currently approved information collection.

Respondents: Business or other for-profit entities.

Number of Respondents: 168 respondents; 168 responses.

Estimated Time per Response: 15 hours.

Frequency of Response: One-time reporting requirement and on occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for, these collections are contained in 47 U.S.C. 154, 301, 302(a), 303, 309, 332, 336, and 337 unless otherwise noted.

Total Annual Burden: 2,265 hours.

Total Annual Cost: $214,950.

Needs and Uses: The information collection requirements contained in this collection are as follows: a. 700 MHz Construction Notification—47 CFR 27.14(k). 47 CFR 27.14(k) requires certain 700 MHz licensees to file a construction notification with the Commission within 15 days of the expiration of the relevant benchmark in accordance with the provisions set forth in 47 CFR 1.946(d), demonstrating compliance with performance requirements or, if they have not met the performance requirements, a description and certification of the areas for which they are providing service. In the construction notification, a licensee must certify whether it has met the applicable performance requirement as set forth below. The licensee must file a description and certification of the areas for which it is providing service, using electronic coverage maps, supporting technical documentation and other information as the Wireless Telecommunications Bureau may prescribe by Public Notice.

47 CFR 27.14(g). 47 CFR 27.14(g) requires 700 MHz licensees holding EA authorizations for Block A in the 698–704/728–734 MHz bands (''Block A''), CMA authorizations for Block B in the 704–710/734–740 MHz bands (''Block B''), and EA authorizations for Block E in the 722–728 MHz band (''Block E''), where the results of the first auction in which licenses for such authorizations were offered satisfy the reserve price for the applicable block, to file construction notifications with the Commission within 15 days after:

(1) June 12, 2013, or the fourth anniversary of initial license grant if the initial authorization in a market is granted after June 12, 2009. In the construction notification, licensees must certify and demonstrate that they are providing signal coverage and offering service over at least 35 percent of the geographic area of each of their license authorizations.

(2) The end of the applicable license term. In the construction notification, licensees must certify and demonstrate that they are providing such service over at least 70 percent of the geographic area of each of these authorizations.

47 CFR 27.14(h). 700 MHz licensees holding REAG authorizations for Block C in the 746–757/776–787 MHz bands (''Block C''), as well as 700 MHz licensees holding REAG authorizations for Block C2 in the 752–757/782–787 MHz bands (C2), must file construction notifications with the Commission within 15 days after:

(1) June 12, 2013, or the fourth anniversary of initial license grant if the initial authorization in a market is granted after June 12, 2009. In the construction notification, licensees must certify and demonstrate that they are providing signal coverage and offering service over at least 40 percent of the population in each EA comprising the REAG license area.

(2) The end of the applicable license term. In the construction notification, licensees must certify and demonstrate that they are providing such service over at least 75 percent of the population of each of these EAs.

47 CFR 27.14(i). 700 MHz licensees holding EA authorizations for Block A, CMA authorizations for Block B, and EA authorizations for Block E where the results of the first auction in which licenses for such authorizations in Blocks A, B, and E were offered did not satisfy the reserve price for the applicable block, as well as EA authorizations for Block C1 in the 746–752/776–782 MHz bands (''Block C1'') must file construction notifications with the Commission within 15 days after:

(1) June 12, 2013, or the fourth anniversary of initial license grant if the initial authorization in a market is granted after June 12, 2009. In the construction notification, licensees must certify and demonstrate that they are providing signal coverage and offering service over at least 40 percent of the population in each license area.

(2) The end of the applicable license term. In the construction notification, licensees must certify and demonstrate that they are providing such service over at least 75 percent of the population of the areas.

47 CFR 27.14(j). 47 CFR 27.14(j) provides that, in the event that a licensee's authority to operate in an area terminates automatically for failure to comply with the applicable construction requirements identified in 47 CFR 27.14(g), (h), or (i), the unserved area will become available for relicensing to third parties. A 700 MHz licensee holding an authorization granted pursuant to the unserved area licensing procedures set forth in 47 CFR 27.14(j) must file a construction notification with the Commission within 15 days after the one-year anniversary of initial license grant. In the construction notification, a licensee must certify and demonstrate that it is providing signal coverage and offering service over 100 percent of the geographic area of the new license area.

700 MHz Interoperability Order. Pursuant to the 700 MHz Interoperability Order, the interim construction deadline for Block A and Block B licensees was extended to December 13, 2016. The 700 MHz Interoperability Order waived the interim construction requirement for certain Block A licensees due to technical issues arising from their proximity to Television Channel 51 stations. Further, the interim construction deadline for Block E was extended to March 7, 2017, and the final Block E construction deadline was moved to March 7, 2021.

b. 700 MHz Interim Reporting Requirement—47 CFR 27.14(l). Pursuant to 47 CFR 27.14(l), 700 MHz licensees with authorizations in the spectrum blocks identified above (Blocks A, B, E, C, C1 and C2), excluding any licensee that obtained its license pursuant to the procedures set forth in 47 CFR 27.14(j), must file interim reports with the Commission that provide the Commission, at a minimum, with information concerning the status of their efforts to meet the performance requirements applicable to their authorizations in such spectrum blocks and the manner in which that spectrum is being utilized.

Required Information. Licensees must identify the date the license term commenced, and provide a description of the steps the licensee has taken toward meeting its construction obligations in a timely manner, including the technology or technologies and service(s) being provided, as well as the areas within their license areas in which those services are available.

Deadlines. Pursuant to 47 CFR 27.14(l), licensees were required to file their first interim report with the Commission no later than June 12, 2011 and no sooner than 30 days prior to this date. Licensees that meet their interim construction benchmarks must file a second interim report with the Commission no later than June 12, 2016, and no sooner than 30 days prior to this date. Licensees that do not meet their interim construction benchmarks must file their second interim report no later than on June 12, 2015, and no sooner than 30 days prior to this date.

However, the 700 MHz Interoperability Order waived the second interim report requirement for Lower 700 MHz band A and B Block licensees subject to the extended interim construction benchmark deadline. The 700 MHz Interoperability Order did not waive the reporting requirement for Lower 700 MHz band A Block licensees subject to a waiver of the interim construction benchmark deadline because of Channel 51 interference protection requirements. That order also extended the deadline until March 7, 2019, for Lower 700 MHz band E Block licensees to file a second status report regarding the licensees' efforts to meet their performance requirements.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–0346; FR ID 138253]

Information Collection Being Reviewed by the Federal Communications Commission Under Delegated Authority

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act of 1995 (PRA), the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before June 30, 2023. If you anticipate that you will be submitting comments but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email to *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov*.

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0346.

Title: Section 78.27, License Conditions.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business and other for-profit entities; not-for-profit institutions.

Frequency of Response: Annual reporting requirement; on occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 Section 154(i) of the Communications Act of 1934, as amended.

Number of Respondents and Responses: 4 respondents; 4 responses.

Estimated Time per Response: 10 mins. (0.166 hrs.).

Total Annual Burden: 1 hour.

Total Annual Cost: None.

Needs and Uses: The information collection requirements contained in 47 CFR 78.27(b)(1) require the licensee of a Cable Television Relay Service (CARS)

station to notify the Commission in writing when the station commences operation. Such notification shall be submitted on or before the last day of the authorized one year construction period; otherwise, the station license shall be automatically forfeited. The information collection requirements contained in 47 CFR 78.27(b)(2) require CARS licensees needing additional time to complete construction of the station and commence operation shall request an extension of time 30 days before the expiration of the one year construction period. Exceptions to the 30-day advance filing requirement may be granted where unanticipated delays occur.

Federal Communications Commission.

No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

DATES: Written PRA comments should be submitted on or before June 30, 2023. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicole Ongele, FCC, via email *PRA@fcc.gov* and to *nicole.ongele@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Nicole Ongele, (202) 418–2991.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–XXXX.

Title: Section 90.175(g)(2), Amendment of Part 90 of the Commission's Rules.

Form Number: N/A.

Type of Review: New information collection.

Respondents: State, Local or Tribal Government.

Number of Respondents and Responses: 213 respondents, 213 responses.

Estimated Time per Response: 1 hour.

Frequency of Response: On occasion reporting requirement.

Obligation to Respond: Required to retain or retain benefits. Statutory authority for this collection is contained in 47 U.S.C. 154(i), 161, 303(g), 303(r), 332(c)(7), and 1401–1473 of the Communications Act of 1934.

Total Annual Burden: 213 hours.

Total Annual Cost: $234,300.

Needs and Uses: This collection will be submitted as a new collection after this 60-day comment period to the Office of Management and Budget (OMB) in order to obtain the full three-year clearance.

Section 90.175(g)(2) adopted in the Commission's Report and Order FCC 23–3 requires public safety applicants seeking to license new or modify existing facilities in the 4.9 GHz band to obtain a frequency recommendation from the nationwide Band Manager before the application is filed with the Commission.

The purpose of requiring each public safety applicant to obtain a frequency recommendation from the nationwide Band Manager is to ensure that public safety entities seeking to license new or modify existing facilities in the 4.9 GHz band cause no interference to incumbent licensees or previously filed applicants.

OMB Control Number: 3060–XXXX.

Title: Sections 90.1207(e)–(f), Amendment of Part 90 of the Commission's Rules.

Form Number: N/A.

Type of Review: New information collection.

Respondents: State, Local or Tribal Government.

Number of Respondents and Responses: 3,871 respondents, 3,871 responses.

Estimated Time per Response: 16–160 hours.

Frequency of Response: On occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this collection is contained in 47 U.S.C. 154(i), 161, 303(g), 303(r), 332(c)(7), and 1401–1473 of the Communications Act of 1934.

Total Annual Burden: 592,288 hours.

Total Annual Cost: $14,882,400.

Needs and Uses: This collection will be submitted as a new collection after this 60-day comment period to the Office of Management and Budget (OMB) in order to obtain the full three-year clearance.

Section 90.1207(e) adopted in the Commission's Report and Order FCC 23–3 requires public safety applicants seeking to license new or modify existing facilities in the 4.9 GHz band to submit granular technical data on their proposed operations into ULS. Section 90.1207(f), also adopted in the Commission's Report and Order FCC 23–3, requires incumbent public safety licensees to perform a one-time submission into ULS of the granular data specified in paragraph (e) for their existing operations and gives incumbent licensees at least a one-year period to complete this one-time collection.

The purpose of requiring incumbent public safety licensees and public safety applicants in the 4.9 GHz band to submit granular technical data into ULS is to enable the Band Manager at 4.9 GHz to use the granular technical data on public safety deployments to perform its frequency coordination duties and facilitate non-public safety access to the band.

Sunshine Act Meetings

TIME AND DATE: Thursday, May 4, 2023 at 12:45 p.m.

PLACE: Hybrid meeting: 1050 First Street NE, Washington, DC (12th floor) and virtual.

Note: For those attending the meeting in person, current Covid–19 safety protocols for visitors, which are based on the CDC Covid–19 community level in Washington, DC, will be updated on the commission's contact page by the Monday before the meeting. See the contact page at *https://www.fec.gov/contact/.* If you would like to virtually access the meeting, see the instructions below.

STATUS: This meeting will be open to the public, subject to the above-referenced guidance regarding the Covid–19 community level and corresponding health and safety procedures. To access the meeting virtually, go to the commission's website *www.fec.gov* and click on the banner to be taken to the meeting page.

MATTERS TO BE CONSIDERED:

Draft Advisory Opinion 2023–03: Colorado Republican State Central Committee.

Audit Division Recommendation Memorandum on Latinos for America First (A21–12).

Revised Audit Procedures.

Management and Administrative Matters.

CONTACT PERSON FOR MORE INFORMATION: Judith Ingram, Press Officer, Telephone: (202) 694–1220

Individuals who plan to attend in person and who require special assistance, such as sign language interpretation or other reasonable accommodations, should contact Laura E. Sinram, Secretary and Clerk, at (202) 694–1040, at least 72 hours prior to the meeting date.

(Authority: Government in the Sunshine Act, 5 U.S.C. 552b)

Laura E. Sinram,

Secretary and Clerk of the Commission.

GENERAL SERVICES ADMINISTRATION

[Notice–MA–2023–01; Docket No. 2023–0002; Sequence No. 1]

Revision to Foreign Gift Minimal Value—Correction

AGENCY: Office of Acquisition Policy, General Services Administration (GSA).

ACTION: Notice of GSA bulletin; correction.

SUMMARY: The General Services Administration (GSA) is issuing a correction to Notice–MA–2023–01: Revision to Foreign Gift Minimal Value. The document contained an incorrect bulletin number. This document contains the correct bulletin number.

DATES: The subject bulletin continues to be applicable as of January 1, 2023.

FOR FURTHER INFORMATION CONTACT: For clarification of content, contact Mr. William Garrett, Director, Personal Property Policy, Office of Government-wide Policy, Office of Asset and Transportation Management, at 202–368–8163, or by email at *william.garrett@gsa.gov.* Please cite Notice of GSA Bulletin FMR B–54.

SUPPLEMENTARY INFORMATION:

Correction

In the **Federal Register** of March 13, 2023, at 88 FR 15398, correct the following:

a. On page 15398, in the third column, correct the Action to read ''Notice of GSA Bulletin FMR B–54, Foreign Gift and Decoration Minimal Value.''.

b. On page 15399, in the first column, correct the last sentence of the Contact section to read ''Please cite Notice of GSA Bulletin FMR B–54.''.

c. On page 15399, in the second column, correct the last paragraph of the Background to read ''FMR Bulletin B–54 is available at *https://www.gsa.gov/policy-regulations/regulations/federal-management-regulation/federal-management-regulation-fmr-related-files#PersonalPropertyManagement.*''.

Krystal J. Brumfield,

Associate Administrator, Office of Government-wide Policy.

BILLING CODE 6820–14–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Advisory Board on Radiation and Worker Health, Subcommittee for Procedure Reviews, National Institute for Occupational Safety and Health

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: In accordance with regulatory provisions, the Centers for Disease Control and Prevention (CDC) announces a meeting of the Subcommittee on Procedures Reviews (SPR) of the Advisory Board on Radiation and Worker Health (ABRWH or the Advisory Board). This meeting is open to the public, but without an oral public comment period. The public is welcome to submit written comments in advance of the meeting, to the contact person below. Written comments received in advance of the meeting will be included in the official record of the meeting. The public is also welcomed to listen to the meeting by joining the teleconference (information below). The audio conference line has 150 ports for callers.

DATES: The meeting will be held on June 21, 2023, from 11 a.m. to 4:30 p.m., EDT. Written comments must be received on or before June 14, 2023.

ADDRESSES: You may submit comments by mail to: Rashaun Roberts, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, 1090 Tusculum Avenue, MS C–24, Cincinnati, Ohio 45226.

Meeting Information: Audio Conference Call via FTS Conferencing. The USA toll-free dial-in number is 1–866–659–0537; the pass code is 9933701.

FOR FURTHER INFORMATION CONTACT: Rashaun Roberts, Ph.D., Designated Federal Officer, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, 1090 Tusculum Avenue, Mailstop C–24, Cincinnati, Ohio 45226, Telephone: (513) 533–6800; Email: *ocas@cdc.gov.*

SUPPLEMENTARY INFORMATION:

Background: The Advisory Board was established under the Energy Employees Occupational Illness Compensation Program Act of 2000 to advise the President on a variety of policy and technical functions required to implement and effectively manage the new compensation program. Key functions of the Advisory Board include providing advice on the development of probability of causation guidelines that have been promulgated by the Department of Health and Human Services (HHS) as a final rule; advice on methods of dose reconstruction, which have also been promulgated by HHS as a final rule; advice on the scientific validity and quality of dose estimation and reconstruction efforts being performed for purposes of the compensation program; and advice on petitions to add classes of workers to the Special Exposure Cohort (SEC). In December 2000, the President delegated responsibility for funding, staffing, and operating the Advisory Board to HHS, which subsequently delegated this authority to CDC. NIOSH implements this responsibility for CDC.

The charter was issued on August 3, 2001, renewed at appropriate intervals, and rechartered under Executive Order 13889 on March 22, 2022, and will terminate on March 22, 2024.

Purpose: The Advisory Board is charged with (a) providing advice to the Secretary, HHS, on the development of guidelines under Executive Order 13179; (b) providing advice to the Secretary, HHS, on the scientific validity and quality of dose reconstruction efforts performed for this program; and (c) upon request by the Secretary, HHS, advise the Secretary on whether there is a class of employees at any Department of Energy facility who were exposed to radiation but for whom it is not feasible to estimate their radiation dose, and on whether there is reasonable likelihood that such radiation doses may have endangered the health of members of this class. SPR is responsible for overseeing, tracking, and participating in the reviews of all procedures used in the dose reconstruction process by the NIOSH Division of Compensation Analysis and Support (DCAS) and its dose reconstruction contractor (Oak Ridge Associated Universities—ORAU).

Matters To Be Considered: The agenda will include discussions on the following: (a) ORAUT–OTIB–0052, DCAS–PER–049, DCAS–PER–092, Peek Street; DCAS–PER–073 (Birdsboro), Battelle-TBD–5000, and example of a ''not suitable closeout for matrix'' presentation, (b) Newly issued Sandford Cohen & Associates reviews, (c) Preparation for August 2023 full ABRWH meeting, and (d) Newly issued Guidance Documents and Supplemental Topics. Agenda items are subject to change as priorities dictate. For additional information, please contact Toll Free 1(800) 232–4636.

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[Docket No. CDC–2023–0031; NIOSH 232]

Board of Scientific Counselors, National Institute for Occupational Safety and Health, National Firefighter Registry Subcommittee

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting and request for comment.

SUMMARY: In accordance with regulatory provisions, the Centers for Disease

Control and Prevention (CDC) announces the following meeting of the Board of Scientific Counselors, National Institute for Occupational Safety and Health (BSC, NIOSH), National Firefighter Registry Subcommittee. This is a virtual meeting. It is open to the public, limited only by the number of web conference lines (500 web conference lines are available). Time will be available for public comment.

DATES: The meeting will be held on June 13, 2023, from 9 a.m. to 4:15 p.m., EDT.

Written comments must be received on or before June 6, 2023.

ADDRESSES: If you wish to attend the meeting, please register at the NIOSH website at *https://www.cdc.gov/niosh/bsc/nfrs/registration.html* or by telephone at (404) 498–2581 no later than June 6, 2023.

You may submit comments, identified by Docket No. CDC–2023–0031; NIOSH–232, by either of the methods listed below. CDC does not accept comments by email.

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Ms. Sherri Diana, NIOSH Docket Office, National Institute for Occupational Safety and Health, 1090 Tusculum Avenue, Mailstop C–34, Cincinnati, Ohio 45226. Attn: Docket No. CDC–2023–0031; NIOSH–232.

Instructions: All submissions received must include the Agency name and docket number. Docket number CDC–2023–0031; NIOSH–232 will close June 6, 2023.

FOR FURTHER INFORMATION CONTACT: Emily J.K. Novicki, M.A., M.P.H., Designated Federal Officer, Board of Scientific Counselors, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, 1600 Clifton Road NE, Mailstop V24–4, Atlanta, Georgia 30329–4027. Telephone: (404) 498–2581; Email: *ENovicki@cdc.gov.*

SUPPLEMENTARY INFORMATION:

Background: The Secretary of Health and Human Services, the Assistant Secretary for Health, and by delegation, the Director, Centers for Disease Control and Prevention (CDC), are authorized under Sections 301 and 308 of the Public Health Service Act to conduct directly, or by grants or contracts, research, experiments, and demonstrations relating to occupational safety and health and to mine health.

The Board of Scientific Counselors, National Institute for Occupational Safety and Health (BSC, NIOSH) provides advice to the NIOSH Director on NIOSH research and prevention programs. The Board also provides guidance on the Institute's research activities related to developing and evaluating hypotheses, systematically documenting findings, and disseminating results. In addition, the Board evaluates the degree to which the activities of NIOSH: (1) conform to those standards of scientific excellence appropriate for federal scientific institutions in accomplishing objectives in occupational safety and health; (2) address currently relevant needs in the fields of occupational safety and health either alone or in conjunction with other known activities inside and outside of NIOSH; and (3) produce their intended results in addressing important research questions in occupational safety and health, both in terms of applicability of the research findings and dissemination of the findings.

Purpose: The BSC, NIOSH National Firefighter Registry Subcommittee provides scientific expertise to the Board that assists the BSC, NIOSH in advising the NIOSH Director about the Institute's efforts to establish and operate the National Firefighter Registry. Specifically, the Subcommittee advises the Board on the following issues pertaining to the ''required strategy'' as mandated by the Firefighter Cancer Registry Act of 2018 (the Act): (1) increase awareness of the National Firefighter Registry and encourage participation among all groups of firefighters; (2) consider data collection needs; (3) consider data storage and electronic access of health information; and (4) in consultation with subject matter experts, develop a method for estimating the number and type of fire incidents attended by a firefighter. Additional responsibilities of the Subcommittee are to provide guidance to the Board regarding the inclusion and maintenance of data on firefighters as required by the Act.

Matters To Be Considered: The agenda for the meeting includes the National Firefighter Registry project overview, status, national launch and updates, communication strategies, targeted enrollment approach, follow-up questionnaire planning, and future planning applicable to stakeholders. Agenda items are subject to change as priorities dictate.

The agenda is also posted on the NIOSH website at *https://www.cdc.gov/niosh/bsc/nfrs/.*

Public Participation

Written Public Comment: Written comments will be accepted per the instructions provided in the addresses section above. Comments received in advance of the meeting are part of the public record and are subject to public disclosure. The comments will be included in the official record of the meeting. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure. If you include your name, contact information, or other information that identifies you in the body of your comments, that information will be on public display. CDC will review all submissions and may choose to redact, or withhold, submissions containing private or proprietary information such as Social Security numbers, medical information, inappropriate language, or duplicate/near-duplicate examples of a mass-mail campaign. CDC will carefully consider all comments submitted into the docket.

Written comments received by June 6, 2023, will be provided to the Subcommittee prior to the meeting.

Oral Public Comment: The public is welcome to participate during the public comment period, from 11:45 a.m. to 12 p.m., EDT, June 13, 2023. Each commenter will be provided up to five minutes for comment. A limited number of time slots are available and will be assigned on a first-come, first-served basis. Members of the public who wish to address the Subcommittee are requested to contact the Designated Federal Officer for scheduling purposes (see **FOR FURTHER INFORMATION CONTACT** above).

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Board of Scientific Counselors, National Center for Injury Prevention and Control

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of closed meeting.

SUMMARY: In accordance with regulatory provisions, the Centers for Disease Control and Prevention (CDC) announces the following meeting for the Board of Scientific Counselors, National Center for Injury Prevention and Control (BSC, NCIPC or Board). This meeting is closed to the public.

DATES: The meeting will be held on June 8, 2023, from 1 p.m. to 3:30 p.m., EDT (CLOSED).

ADDRESSES: Webinar, Atlanta, Georgia.

FOR FURTHER INFORMATION CONTACT: Christopher R. Harper, Ph.D., Designated Federal Officer, National Center for Injury Prevention and Control, Centers for Disease Control and Prevention, 4770 Buford Highway NE, Mailstop S–1069, Atlanta, Georgia 30341. Telephone: (404) 718–8330; Email: *ncipcbsc@cdc.gov.*

SUPPLEMENTARY INFORMATION: The meeting referenced above will be closed to the public in accordance with provisions set forth in Section 552b(c)(4) and (6), Title 5 U.S.C., and the Determination of the Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, CDC, pursuant to 5 U.S.C. 1009 (Pub. L. 92–463, as amended).

Purpose: The Board of Scientific Counselors, National Center for Injury Prevention and Control (BSC, NCIPC or Board) will: (1) conduct, encourage, cooperate with, and assist other appropriate public health authorities, scientific institutions, and scientists in the conduct of research, investigations, experiments, demonstrations, and studies relating to the causes and strategies related to the prevention of injury and violence; (2) assist States and other entities in preventing intentional and unintentional injuries, and to promote health and well-being; and (3) make recommendations of grants and cooperative agreements for research and prevention activities related to injury and violence. The BSC, NCIPC makes recommendations regarding policies, strategies, objectives, and priorities and reviews progress toward injury and violence prevention. The Board also provides advice on the appropriate balance of intramural and extramural research and provides guidance on the needs, structure, progress, and performance of intramural programs. The Board also provides guidance on extramural scientific program matters. The Board provides second-level scientific and programmatic review for applications for research grants, cooperative agreements, and training grants related to injury and violence prevention, and recommends approval of projects that merit further consideration for funding support. The Board also recommends areas of research to be supported by contracts and cooperative agreements and provides concept reviews of program proposals and announcements.

Matters To Be Considered: The closed meeting will focus on the Secondary Peer Review of extramural research grant applications received in response to five (5) Notices of Funding Opportunity: RFA–CE–23–002—''Grants to Support New Investigators in Conducting Research Related to Understanding Polydrug Use Risk and Protective Factors''; RFA–CE–23–003—''Grants to Support New Investigators in Conducting Research Related to Preventing Interpersonal Violence Impacting Children and Youth''; RFA–CE–23–004—''Research Grants for Preventing Violence and Violence Related Injury (R01)''; RFA–CE–23–005—''Research Grants to Inform Firearm-Related Violence and Injury Prevention Strategies (R01)''; and RFA–CE–23–006—''Research Grants to Rigorously Evaluate Innovative and Promising Strategies to Prevent Firearm-Related Violence and Injuries (R01).'' Agenda items are subject to change as priorities dictate.

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[60Day–23–23EH; Docket No. CDC–2023–0030]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other federal agencies the opportunity to comment on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project titled Public Health Emergency Management Capacity Assessment Tool (PHEM Tool). The Center for Disease Control and Prevention's (CDC) Global Emergency Management Capacity Development (GEMCD) team will use the PHEM Tool to assess the public health emergency management (PHEM) program and Public Health Emergency Operations Center (PHEOC) capacity of Global Health Security Agenda (GHSA) countries.

DATES: CDC must receive written comments on or before June 30, 2023.

ADDRESSES: You may submit comments, identified by Docket No. CDC–2023–0030 by either of the following methods:

- *Federal eRulemaking Portal: www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H21–8, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. CDC will post, without change, all relevant comments to *www.regulations.gov.*

Please note: Submit all comments through the Federal eRulemaking portal (*www.regulations.gov*) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger,

Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H21–8, Atlanta, Georgia 30329; Telephone: 404–639–7570; Email: *omb@cdc.gov.*

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

The OMB is particularly interested in comments that will help:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected;

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses; and

5. Assess information collection costs.

Proposed Project

Public Health Emergency Management Capacity Assessment Tool (PHEM Tool)—New—Office of Readiness and Response (ORR), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The Center for Disease Control and Prevention's (CDC) Global Emergency Management Capacity Development (GEMCD) team strengthens emergency management capacity development globally. It helps countries to prepare for, anticipate, and respond to all forms of public health threats. GEMCD's mission is to build resilient Public Health Emergency Management (PHEM) programs throughout the world.

The GEMCD team's Emergency Management Technical Advisors (EMTAs) will use the PHEM Tool to guide an in-person interview with GHSA countries Ministry of Health, Public Health Emergency Operations Center (PHEOC) Manager, and optional additional staff, to characterize the country's PHEM program and capabilities. EMTAs will document responses in an excel based form that will be entered into and maintained in the CDCReady data base. Collected data will identify strengths and weaknesses, capabilities, and gaps in PHEM programs and PHEOCs in GHSA countries. Findings will guide GEMCD team program planning initiatives and determine appropriate technical assistance (TA) for GHSA countries. Data will be analyzed to identify the presence or absence of specific PHEM and PHEOC requirements, such as plans, policies, and procedures, etc. Additional analysis will focus upon the status of PHEM and PHEOC plans, policies, and procedures (*e.g.,* date of publication, relevance). The survey will be conducted annually to identify progress and document changes from one year to the next in terms of PHEM program and PHEOC capabilities.

OMB approval is requested for three years. The estimated annualized burden for this information collection is 72 hours. There is no cost to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
Ministry of Health personnel responsible for Public Health Emergency Management (PHEM) Program in participating GHSA countries.	PHEM Tool	12	1	6	72
Total					72

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Healthcare Infection Control Practices Advisory Committee

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: In accordance with regulatory provisions, the Centers for Disease Control and Prevention (CDC) announces the following meeting for the Healthcare Infection Control Practices Advisory Committee (HICPAC). This virtual meeting is open to the public, limited only by room seating available (120). The public is also welcomed to listen to the meeting via Zoom; 500 teleconference lines are available. Time will be available for public comment. Registration is required.

DATES: The meeting will be held on June 8, 2023, 9 a.m. to 5 p.m., EDT, and June 9, 2023, 9 a.m. to 12 p.m., EDT.

ADDRESSES: Registration is required to attend in person or on the phone. Interested parties must be processed in accordance with established federal policies and procedures and may

register at *https://www.cdc.gov/hicpac.* All registered participants will receive instructions shortly before the meeting. Please click first link for day one and the second link for day two to join the webinar:

https://cdc.zoomgov.com/j/1616828862?pwd=N3hmSTEvQjQ3ZHFScVMyM1k2Mk8yUT09.

Meeting ID: 161 682 8862.

Passcode: 74249065.

https://cdc.zoomgov.com/j/1614944394?pwd=UWdBRDNNK2pDdS9PMjlMZzYvRVFzZz09.

Meeting ID: 161 494 4394.

Passcode: 26658671.

FOR FURTHER INFORMATION CONTACT: Sydnee Byrd, M.P.A., HICPAC, National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention, l600 Clifton Road NE, Mailstop H16–3, Atlanta, Georgia 30329. Telephone (404) 718–8039; Email: *hicpac@cdc.gov.*

SUPPLEMENTARY INFORMATION:

Purpose: The Committee is charged with providing advice and guidance to the Director, Division of Healthcare Quality Promotion, the Director, NCEZID, the Director, CDC, and the Secretary, Health and Human Services, regarding (1) the practice of healthcare infection prevention and control; (2) strategies for surveillance, prevention, and control of infections, antimicrobial resistance, and related events in settings where healthcare is provided; and (3) periodic updating of CDC guidelines and other policy statements regarding prevention of healthcare-associated infections and healthcare-related conditions.

Matters To Be Considered: The agenda will include updates on CDC's activities for prevention of healthcare-associated infections. It will also include updates from the following HICPAC workgroups: the Isolation Precautions Guideline workgroup, the Dental Unit Waterline Guideline Workgroup, the Healthcare Personnel Guideline Workgroup, the Neonatal Intensive Care Unit Guideline Workgroup, and the National Healthcare Safety Network Workgroup. The agenda also includes updates on CDC and DHQP activities. Agenda items are subject to change as priorities dictate.

Public Participation

Oral Public Comment: Time will be available for public comment. Members of the public who wish to provide public comments should plan to attend the public comment session at the start time listed. Please note that the public comment period may end before the time indicated, following the last call for comments.

Written Public Comment: The public is welcomed to submit written comments in advance of the meeting. Comments should be submitted in writing by email to the contact person listed above. The deadline for receipt of written public comment is May 26, 2023. All requests must contain the name, address, and organizational affiliation of the speaker, as well as the topic being addressed. Written comments should not exceed one single-spaced typed page in length and delivered in 3 minutes or less. Written comments received in advance of the meeting will be included in the official record of the meeting.

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Mine Safety and Health Research Advisory Committee

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: In accordance with regulatory provisions, the Centers for Disease Control and Prevention (CDC) announces the following meeting for the Mine Safety and Health Research Advisory Committee (MSHRAC). This is a hybrid meeting, accessible both in person and virtually. It is open to the public and limited only by the space available and the number of web conference lines available. Time will be available for public comment.

DATES: The meeting will be held on May 24, 2023, from 8:30 a.m. to 4:25 p.m., PDT.

ADDRESSES: Centers for Disease Control and Prevention, National Institute for Occupational Safety and Health, Spokane Campus, 315 East Montgomery Avenue, Spokane, Washington 99207–2291. The conference room space accommodates approximately 49 people.

Please note that the meeting location is a federal facility, and in-person access is limited to United States citizens unless prior authorizations, taking up to 30 days, have been made.

If you wish to attend the meeting, either in person or virtually, please contact Ms. Berni Metzger by email at *Metzger@cdc.gov* or by phone at (412) 386–4541 at least 5 business days in advance of the meeting. If you are

attending virtually, she will provide you with the Zoom web conference access information (500 web conference lines are available).

FOR FURTHER INFORMATION CONTACT: George W. Luxbacher, PE, Ph.D., Designated Federal Officer, Mine Safety and Health Research Advisory Committee, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, 1600 Clifton Road NE, Mailstop V24–4, Atlanta, Georgia 30329–4027. Telephone: (404) 498–2808; Email: *GLuxbacher@cdc.gov.*

SUPPLEMENTARY INFORMATION:

Purpose: The Mine Safety and Health Research Advisory Committee (MSHRAC) is charged with providing advice to the Secretary, Department of Health and Human Services; the Director, Centers for Disease Control and Prevention; and the Director, National Institute for Occupational Safety and Health (NIOSH), on priorities in mine safety and health research, including grants and contracts for such research, 30 U.S.C. 812(b)(2), Section 102(b)(2).

Matters To Be Considered: The agenda will include presentations of and discussions on current NIOSH mining safety and health research projects, focusing on the Spokane Mining Research Division. Agenda items are subject to change as priorities dictate.

Public Participation

Written Public Comment: The public may submit written comments or questions in advance of the meeting, to the Designated Federal Officer (see **FOR FURTHER INFORMATION CONTACT** above). Written comments received in advance of the meeting will be included in the official record of the meeting, and questions will be answered during the oral comment period open to public participation.

Oral Public Comment: The meeting will include time for members of the public to make an oral comment. The public comment session will be held on May 24, 2023, at 3:15 p.m., PDT, or at the conclusion of the presentations and discussion, and will conclude at 3:45 p.m., PDT, or following the final call for public comment, whichever comes first.

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[60Day–23–0106; Docket No. CDC–2023–0029]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other federal agencies the opportunity to comment on a continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project titled Preventive Health and Health Services Block Grant. CDC will use the Block Grant Information System to collect recipient data, monitor awardees' progress, identify activities and personnel supported with Block Grant funding, conduct compliance reviews of Block Grant recipients, and promote the use of evidence-based guidelines and interventions in accordance with legislative mandates.

DATES: CDC must receive written comments on or before June 30, 2023.

ADDRESSES: You may submit comments, identified by Docket No. CDC–2023–0029 by either of the following methods:

- *Federal eRulemaking Portal: www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H21–8, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. CDC will post, without change, all relevant comments to *www.regulations.gov.*

Please note: Submit all comments through the Federal eRulemaking portal (*www.regulations.gov*) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H21–8, Atlanta, Georgia 30329; Telephone: 404–639–7570; Email: *omb@cdc.gov.*

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

The OMB is particularly interested in comments that will help:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected;

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses; and

5. Assess information collection costs.

Proposed Project

Preventive Health and Health Services Block Grant (OMB Control No. 0920–0106, Exp. 02/29/2024)—Extension—National Center for State, Tribal, Local and Territorial Public Health Infrastructure and Workforce (NCSTLTPHIW), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The CDC's National Center for State, Tribal, Local and Territorial Public Health Infrastructure and Workforce (NCSTLTPHIW) plays a vital role in helping health agencies work to enhance their capacity and improve their performance to strengthen the public health system on all levels. NCSTLTPHIW is CDC's primary connection to health officials and leaders of state, tribal, local, and territorial public health agencies, as well as other government leaders who work with health departments.

NCSTLTPHIW administers the Preventive Health and Health Services Block Grant (PHHSBG) funding for health promotion and disease prevention programs. Sixty-one awardees (50 states, the District of Columbia, two American Indian Tribes, five U.S. territories, and three freely associated states) receive Block Grant funds to address locally-defined public health needs in innovative ways. The PHHS Block Grant allows awardees to prioritize the use of funds to fill funding gaps in programs that deal with leading causes of death and disability, as well as the ability to respond rapidly to emerging health issues, including outbreaks of food-borne infections and water-borne diseases. NCSTLTPHIW ensures that the CDC PHHS Block Grant Program Managers and recipients account for funds in accordance with legislative mandates. Each awardee is required to submit a work plan with its selected health outcome objectives, as well as descriptions of the health problems, identified target populations (including portions of those populations disproportionately affected by the health problems), and activities to be addressed in the planned work. The CDC will use the Block Grant Information System to collect recipient data, monitor awardees' progress, identify activities and personnel supported with Block Grant funding, conduct compliance reviews of Block Grant recipients, and promote the use of evidence-based guidelines and interventions.

CDC requests OMB approval for this Extension to an existing information collection request. As specified in the authorizing legislation, CDC currently collects information from Block Grant awardees to monitor their objectives and activities. Awardees will submit information on the following:

- Recipient information: collects unique identifying information about each recipient.
- Work plan: collects information about objectives, activities, and the populations to be addressed each year.
- Annual Progress Report: collects information about success and progress toward meeting health objectives.

Since 2021, CDC has collected this information using a web-based electronic system, the Block Grant Information System (BGIS). The respondent universe will include PHHSBG program Block Grant Coordinators. All modules will be accessed electronically through the BGIS system. CDC requests OMB approval for an estimated 1,464 annual burden hours.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
PHHS Block Grant Coordinator	Workplan start and advisory committee questions worksheet.	61	1	2	122
PHHS Block Grant Coordinator	Workplan program questions worksheet.	61	1	11	671
PHHS Block Grant Coordinator	Combined Annual Progress Report template.	61	1	11	671
Total					1,464

Jeffrey M. Zirger,

Lead, Information Collection Review Office, Office of Scientific Integrity, Office of Science, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Solicitation of Nominations for Appointment to the Healthcare Infection Control Practices Advisory Committee

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), within the Department of Health and Human Services (HHS), is seeking nominations for membership on the Healthcare Infection Control Practices Advisory Committee (HICPAC). The HICPAC consists of 14 experts in fields including but not limited to, infectious diseases, infection prevention, healthcare epidemiology, nursing, clinical microbiology, surgery, hospitalist medicine, internal medicine, epidemiology, health policy, health services research, public health, and related medical fields.

DATES: Nominations for membership on the HICPAC must be received no later than September 29, 2023. Packages received after this time will not be considered for the current membership cycle.

ADDRESSES: All nominations should be emailed to HICPAC, Division of Healthcare Quality Promotion, National Center for Emerging and Zoonotic Infectious Diseases, CDC, l600 Clifton Road NE, Mailstop H16–3, Atlanta, Georgia 30329, emailed (recommended) to *hicpac@cdc.gov,* or faxed to (404) 639–4043.

FOR FURTHER INFORMATION CONTACT: Sydnee Byrd, MPA, Healthcare Infection Control Practices Advisory Committee, Division of Healthcare Quality Promotion, NCEZID, Centers for Disease Control and Prevention, l600 Clifton Road NE, Mailstop H16–3, Atlanta, Georgia 30329–4027. Telephone (404) 718–8039; Email: *hicpac@cdc.gov.*

SUPPLEMENTARY INFORMATION: The Healthcare Infection Control Practices Advisory Committee shall provide advice and guidance to the Secretary, Department of Health and Human Services (HHS); the Director, Centers for Disease Control and Prevention (CDC); the Director, National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), CDC; and the Director, Division of Healthcare Quality Promotion (DHQP), NCEZID, CDC; and the Director, Division of Healthcare Quality Promotion (DHQP), NCEZID, CDC, regarding the practice of infection control and strategies for surveillance, prevention, and control of healthcare-associated infections antimicrobial resistance and related events in settings where healthcare is provided, including hospitals, outpatient settings, long-term care facilities, and home health agencies.

Nominations are being sought for individuals who have expertise and qualifications necessary to contribute to the accomplishments of the committee's objectives. Nominees will be selected based on expertise in the fields of infectious diseases, infection prevention, healthcare epidemiology, nursing, environmental and clinical microbiology, surgery, internal medicine, and public health. Federal employees will not be considered for membership. Members may be invited to serve for four-year terms. Selection of members is based on candidates' qualifications to contribute to the accomplishment of HICPAC objectives.

HHS policy stipulates that committee membership be balanced in terms of points of view represented, and the committee's function. Appointments shall be made without discrimination on the basis of age, race, ethnicity, gender, sexual orientation, gender identity, HIV status, disability, and cultural, religious, or socioeconomic status. Nominees must be U.S. citizens and cannot be full-time employees of the U.S. Government. Current participation on federal workgroups or prior experience serving on a federal advisory committee does not disqualify a candidate; however, HHS policy is to avoid excessive individual service on advisory committees and multiple committee memberships. Committee members are Special Government Employees, requiring the filing of financial disclosure reports at the beginning of and annually during their terms. CDC reviews potential candidates for HICPAC membership each year and provides a slate of nominees for consideration to the Secretary of HHS for final selection. HHS notifies selected candidates of their appointment near the start of the term in July 2023, or as soon as the HHS selection process is completed. Note that the need for different expertise varies from year to year and a candidate who is not selected in one year may be reconsidered in a subsequent year. Candidates should submit the following items:

- Current curriculum vitae, including complete contact information (telephone numbers, mailing address, email address).
- At least one letter of recommendation from person(s) not employed by the U.S. Department of Health and Human Services. (Candidates may submit letter(s) from current HHS employees if they wish, but at least one letter must be submitted by a person not employed by an HHS agency (*e.g.,* CDC, NIH, FDA, etc.).

Nominations may be submitted by the candidate him- or herself, or by the person/organization recommending the candidate.

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier CMS–10717]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (the PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are

invited to send comments regarding our burden estimates or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by June 30, 2023.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to *http://www.regulations.gov.* Follow the instructions for ''Comment or Submission'' or ''More Search Options'' to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number:__, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, please access the CMS PRA website by copying and pasting the following web address into your web browser: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing.*

FOR FURTHER INFORMATION CONTACT: William N. Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS–10717 Medicare Part C and Part D Program Audit and Industry-Wide Part C Timeliness Monitoring Project (TMP) Protocols

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Medicare Part C and Part D Program Audit and Industry-Wide Part C Timeliness Monitoring Project (TMP) Protocols; *Use:* Under the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 and implementing regulations at 42 CFR parts 422 and 423, Medicare Part D plan sponsors and Medicare Advantage organizations are required to comply with all Medicare Parts C and D program requirements. CMS' annual audit plan ensures that we evaluate sponsoring organizations' compliance with these requirements by conducting program audits that focus on high-risk areas that have the greatest potential for beneficiary harm. As such, CMS has developed the following audit protocols for use by sponsoring organizations to prepare for their audit:

- Compliance Program Effectiveness (CPE)
- Part D Formulary and Benefit Administration (FA)
- Part D Coverage Determinations, Appeals, and Grievances (CDAG)
- Part C Organization Determinations, Appeals, and Grievances (ODAG)
- Special Needs Plans Care Coordination (SNPCC)

CMS generally conducts program audits at the parent organization level in an effort to reduce burden and, for routine audits, subjects each sponsoring organization to all applicable program area protocols. For example, if a sponsoring organization does not offer a special needs plan, or an accrediting organization has deemed a special needs plan compliant with CMS regulations and standards, CMS would not apply the SNPCC protocol. Likewise, CMS would not apply the ODAG audit protocol to an organization that offers only a standalone prescription drug plan since that organization does not offer the MA benefit. Conversely, ad hoc audits resulting from referral may be limited in scope and, therefore, all program area protocols may not be applied.

The information gathered during this program audit will be used by the Medicare Parts C and D Oversight and Enforcement Group (MOEG) within the Center for Medicare (CM) and CMS Regional Offices to assess sponsoring organizations' compliance with Medicare program requirements. If outliers or other data anomalies are detected, Regional Offices will work in collaboration with MOEG and other divisions within CMS for follow-up and resolution. Additionally, MA and Part D organizations will receive the audit results and will be required to implement corrective action to correct any identified deficiencies. *Form Number:* CMS–10717 (OMB control number: 0938–1395); *Frequency:* Yearly; *Affected Public:* Private Sector, State, Local, or Tribal Governments, Federal Government, Business or other for-profits, Not-for-Profit Institutions; *Number of Respondents:* 182; *Total Annual Responses:* 182; *Total Annual Hours:* 36,444. (For policy questions regarding this collection contact Matthew Guerand at 303–844–7120.)

Dated: April 26, 2022.

William N. Parham, III,

Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

Editorial Note: This document arrived at the Office of the Federal Register on April 26, 2023.

[FR Doc. 2023–09142 Filed 4–28–23; 8:45 am]

BILLING CODE P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2022–N–0081]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Tradeoff Analysis of Prescription Drug Product Claims in Direct-to-Consumer and Healthcare Provider Promotion

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the

Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments (including recommendations) on the collection of information by May 31, 2023.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. The title of this information collection is ''Tradeoff Analysis of Prescription Drug Product Claims in Direct-to-Consumer and Healthcare Provider Promotion.'' Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Jonna Capezzuto, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–3794, *PRAStaff@fda.hhs.gov.*

For copies of the questionnaire, contact: Office of Prescription Drug Promotion (OPDP) Research Team, *DTCresearch@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Tradeoff Analysis of Prescription Drug Product Claims in Direct-to-Consumer and Healthcare Provider Promotion

OMB Control Number 0910–NEW

I. Background

Section 1701(a)(4) of the Public Health Service Act (42 U.S.C. 300u(a)(4)) authorizes FDA to conduct research relating to health information. Section 1003(d)(2)(C) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 393(d)(2)(C)) authorizes FDA to conduct research relating to drugs and other FDA-regulated products in carrying out the provisions of the FD&C Act.

The OPDP's mission is to protect the public health by helping to ensure that prescription drug promotion is truthful, balanced, and accurately communicated. OPDP's research program provides scientific evidence to help ensure that our policies related to prescription drug promotion will have the greatest benefit to public health. Toward that end, we have consistently conducted research to evaluate the aspects of prescription drug promotion that are most central to our mission. Our research focuses in particular on three main topic areas: (1) advertising features, including content and format; (2) target populations; and (3) research quality. Through the evaluation of advertising features, we assess how elements such as graphics, format, and disease and product characteristics impact the communication and understanding of prescription drug risks and benefits. Focusing on target populations allows us to evaluate how understanding of prescription drug risks and benefits may vary as a function of audience, and our focus on research quality aims at maximizing the quality of research data through analytical methodology development and investigation of sampling and response issues. This study will inform the first and second topic areas, advertising features and target populations.

Because we recognize that the strength of data and the confidence in the robust nature of the findings are improved by using the results of multiple converging studies, we continue to develop evidence to inform our thinking. We evaluate the results from our studies within the broader context of research and findings from other sources, and this larger body of knowledge collectively informs our policies as well as our research program. Our research is documented on our home page, which can be found at: *https://www.fda.gov/about-fda/center-drug-evaluation-and-research-cder/office-prescription-drug-promotion-opdp-research*. The website includes links to the latest **Federal Register** notices and peer-reviewed publications produced by our office.

The proposed research examines the relative importance of prescription drug product information such as prescription drug efficacy, risk, adherence, and patient preference claims in two medical conditions (type 2 diabetes and psoriasis) in consumer and physician samples. When confronted with an important decision, people tend to make choices that reflect a series of tradeoffs between certain desirable and undesirable attributes of a product, service, or experience. Pharmaceutical manufacturers provide information about prescription drug products, including side effects, contraindications, and effectiveness, through product labeling and promotional materials (21 CFR 202.1(e)). The treatment choices of diagnosed consumers and treating physicians have been shown to be influenced by certain characteristics, such as the drug's perceived impact on quality of life, complexity of dosage regimens, mode of administration, cost to family and self, and marketing claims unrelated to medicinal properties (Refs. 1 to 5). Although diagnosed consumers may weigh the risks, benefits, or other salient characteristics of prescription drug products differently than physicians, little research directly compares the treatment preferences of these two groups (Ref. 6). Understanding the tradeoffs among drug product characteristics diagnosed consumers make—and how the tradeoffs could potentially differ from the tradeoffs made by physicians—will provide valuable insight into the relevance and impact of various product attributes and promotional claims on informed choices and treatment decisions.

We intend to examine these tradeoffs using a choice-based conjoint analysis, also known as a discrete choice experiment. Conjoint analysis is a broad class of survey-based techniques used to estimate how attractive or influential different features of choice options or product attributes are in determining purchase behavior or treatment choices (Ref. 7). Conjoint analysis can be used to examine the joint effects and tradeoffs of multiple variables or product attributes on decisions. A choice-based conjoint analysis is based on the principle that products are composed of a set of attributes, and each attribute can be described using a finite number of levels. In the proposed research, participants will be shown a carefully designed sequence of choice tasks containing up to five hypothetical product attributes—in this case, profiles describing fictitious prescription drug products for either type 2 diabetes or psoriasis. Using data from the choices that participants make across these tasks, we can use statistical techniques to draw inferences about the relative value they place on different product attributes, estimate the relative importance of different attributes, explore the tradeoffs that consumers and physicians are willing to make to avoid or accept specific attribute levels, and compare the preferences of these two groups (Ref. 8).

We estimate that participation in the study will take approximately 20 minutes. Adult participants aged 18 years or older will be recruited by email through an internet panel, and participant eligibility will be determined with a screener at the beginning of the online survey. The consumer sample will consist of adults who self-report as having been diagnosed by a healthcare provider with either psoriasis or type 2 diabetes. For the consumer sample, we will exclude

individuals who work in healthcare settings because their knowledge and experiences may not reflect those of the average consumer. The physician sample will consist of primary care physicians and specialists who report treating patients with psoriasis or type 2 diabetes. For the physician sample, we will exclude individuals who spend less than 50 percent of their time on direct patient care. Department of Health and Human Services employees and individuals who work in the marketing, advertising, or pharmaceutical industries will be excluded from both respondent groups. Respondents will receive a survey invitation with a unique password-protected link. All panel members are recruited following a double opt-in process. Sample sizes were estimated by combining approaches for conjoint analysis suggested by Orme (Ref. 9) and Johnson et al. (Ref. 10).

The target sample size for the main study is 800 physicians and 800 consumers, with half of each cohort focusing on treatments for psoriasis and the other half focusing on treatments for type 2 diabetes. Prior to conducting the main study, we will conduct at least one pretest. If the first pretest reveals that changes to the measurement instruments, stimuli, or procedures are required, a second pretest will be conducted with revised materials. The target sample size for each wave of pretests is 60 physicians and 60 consumers.

In the **Federal Register** of April 25, 2022 (87 FR 24313), FDA published a 60-day notice requesting public comment on the proposed collection of information. Two submissions (*https://www.regulations.gov* tracking numbers l3s–66ri–uyh2 and l2z–6w2l–mpk1) were outside the scope of the research and are not addressed further.

FDA received eight comments that were PRA-related. Within those submissions, FDA received multiple comments that the Agency has addressed. For brevity, some public comments are paraphrased and therefore may not state the exact language used by the commenter. We assure the commenter that the entirety of their comments was considered even if not fully captured by our paraphrasing in this document. Comments and responses are numbered here for organizational purposes only.

(Comment 1) Five comments expressed support for the study.

(Response 1) We acknowledge and appreciate the support of this study.

(Comment 2) One comment stated the collection of information is not necessary for the proper performance of FDA functions and questioned the practical utility of the study. Another comment asked for clarification about how the results would be applied to OPDP decision making. The first of these comments suggests that an alternate approach would be to dedicate resources to enforcing heavier penalties for misleading, incomplete, or false information.

(Response 2) The OPDP's mission is to protect the public health by helping to ensure that prescription drug promotion is truthful, balanced, and accurately communicated. Understanding the tradeoffs among drug product characteristics diagnosed consumers make—and how the tradeoffs could potentially differ from the tradeoffs made by physicians—will provide OPDP valuable insight into the relevance and impact of various product attributes and promotional claims on informed choices and treatment decisions. Gaining a better understanding of what information has the most meaning and impact for audiences informs OPDP's approach to ensuring that promotional communications are truthful, balanced, and accurately communicated.

(Comment 3) One comment expressed concern that results of the study possibly could inform potential guidance on patient-focused drug development.

(Response 3) The purpose of this research is to examine the tradeoffs that consumers and physicians make when considering product claims that may appear in promotional communications. The fact that FDA is conducting research does not create any requirements.

(Comment 4) One comment asked how adherence and patient preference claims would be included in drug product information, as the commenter does not believe there is currently a patient preference claim or adherence data in FDA-approved prescription drug information for any product in either of the two conditions proposed in this study.

(Response 4) Prescription drug promotion often includes information beyond what is contained in the FDA-approved prescription information for the product. The attributes that make up the ''additional information about the drug'' are example marketing claims that have been used in product promotion. We will test reasonable scenarios based on realistic examples.

(Comment 5) One comment suggested clarification of the sentence, ''The treatment preferences of diagnosed consumers and treating physicians have been shown to be influenced by certain characteristics, such as the drug's perceived impact on quality of life, complexity of dosage regimens, mode of administration, cost to family and self, and marketing claims unrelated to medicinal properties (Refs. 1 to 5)'' (87 FR 24313 at 24315). The comment asserts that it is inaccurate to state that ''preferences'' are influenced by the characteristics of alternatives, when it is actually ''choice'' that is a reflection of the characteristics or attributes.

(Response 5) We have revised the sentence in question, as suggested, to make it clear that treatment choices are influenced by these example characteristics. The revised sentence reads, ''The treatment choices of diagnosed consumers and treating physicians have been shown to be influenced by certain characteristics, such as the drug's perceived impact on quality of life, complexity of dosage regimens, mode of administration, cost to family and self, and marketing claims unrelated to medicinal properties.''

(Comment 6) Two comments asked for clarification on the guidelines that will be used to determine the attributes and levels in the experiment.

(Response 6) We selected attributes and attribute levels based on information gathered through: (1) a systematic literature review of preference elicitation studies targeted toward prescription pharmacological treatments for psoriasis or type 2 diabetes among diagnosed consumers or healthcare providers (HCPs) reported in peer-reviewed journal articles or book chapters published in English through the end of September 2020 and (2) semistructured, one-on-one interviews with physicians and diagnosed consumers conducted as part of the formative work for this project.

The systematic literature review focused on research examining preferences for attributes and characteristics of prescription drug products indicated for psoriasis and type 2 diabetes. The review addressed two research questions with an emphasis on informing our choice of elicitation method for the main study and identifying characteristics of prescription drug products relating to risk, burden, adherence, and benefits that physicians and consumers who have been diagnosed with the target medical conditions consider when choosing among treatment options. After screening candidate articles against our eligibility criteria, we retained and extracted information from 30 articles related to psoriasis and 28 articles for type 2 diabetes that informed our choice of attributes and levels. Our aim with the one-on-one interviews was

to better understand how physicians and diagnosed consumers navigate decision making related to prescription drug products and to verify that attributes identified through the systematic literature review corresponded with the characteristics that physicians and consumers care about when making prescription drug choices. In all, we conducted 35 interviews with physicians who treat psoriasis or type 2 diabetes and 70 interviews with consumers who self-reported that they have been diagnosed with one of the two chronic conditions (n = 35 per condition). We asked specific questions about attributes and attribute levels found in the literature review. We also used the interviews to elicit additional characteristics that may not have been represented in the literature.

(Comment 7) One comment suggests use of an opt-out (*i.e.,* decline therapy) or status quo (*i.e.,* no change) option in the questionnaires.

(Response 7) There can be benefits to including an ''opt-out'' or ''status quo'' option in choice experiments, depending on the goals of the research. For example, if one is interested in estimating treatment uptake, the inclusion of an ''opt-out'' option may be helpful. However, estimating treatment uptake is not a goal of this study, and we believe the limitations of including an ''opt-out'' or ''status quo'' option outweigh the benefits in this instance. One limitation is the potential for satisficing—participants choosing the ''opt-out'' or ''status quo'' option because it requires less effort than reflecting on the option that best aligns with their preferences (Ref. 11). Additionally, in the context of this study, the status quo will differ among participants, raising the issue of how to interpret findings from diagnosed consumers who choose that option.

(Comment 8) Two comments question the decision to employ a discrete choice experiment (DCE) method and the number of attributes chosen, with one comment noting that there are other methods that may allow for a higher number of attributes to be tested. One of the comments noted the existence of other DCE studies conducted in similar treatment populations and requested clarification about how this study would differ from prior research.

(Response 8) One of the goals of the systematic literature review we conducted as part of the formative work for this study was to examine methods that have been used to elicit consumer or HCP preferences regarding treatment options for psoriasis and type 2 diabetes. An overarching observation from the systematic literature review is that there is a gap in the literature for studies that directly compare treatment preferences of diagnosed consumers and HCPs. There is also a lack of studies that examine the relative importance of marketing claims versus other types of promotional claims. This study will help fill these gaps. A DCE was the most common methodology used in prior research, and it has clear advantages over other methods for the purposes of the proposed study. Perhaps the most relevant benefits of the method are the flexibility to efficiently estimate the overall utility of different treatment profiles, the relative importance of attributes, and the preference weights for specific attribute levels all within the same design (see Ref. 12 for an analysis that covers all three of these aspects). Moreover, tradeoffs that diagnosed consumers and HCPs are willing to make between attributes can be estimated from DCE data by calculating the marginal rate of substitution or the ratio of relative importance scores for pairs of attributes (Refs. 12 to 15).

In designing the DCE for this project, we aim to conduct subgroup analyses comparing these research populations. Generally, this requires using the same attributes and levels for both research populations, though some degree of latitude is required to tailor the wording of background information, questions, and stimuli to match the target audience (*e.g.,* plain language for consumers, medical terminology when appropriate for HCPs).

For planning purposes and in order to establish target sample sizes, in the 60-day **Federal Register** notice for this study, we assumed a design with 5 attributes, 2 to 4 levels per attribute, 10 choice tasks per participant, and 2 options per task square. Our review revealed that these assumptions are well within the median design parameters used in prior studies.

We will include methodological details concerning the experimental design in the report of results. Finally, while the comment did not identify any specific ongoing research as overlapping, we note that in general, in any event, OPDP may conduct concurrent or overlapping studies on similar topics.

(Comment 9) One comment suggested use of an efficient design, including blocking, as a way to minimize the burden of collection on respondents.

(Response 9) We intend to use an efficient design to reduce the number of choice tasks and have noted it as a burden reduction strategy in the information collection submission to OMB.

(Comment 10) One comment asserted that internet panels are prone to selection bias and suggested the study address this potential limitation.

(Response 10) Participants in the proposed studies will be convenience samples rather than probability-based samples of diagnosed consumers and physicians. The strength of the experimental design used in this study lies in its internal validity, on which meaningful estimates of differences across manipulated attributes can be produced and generalized. This is a counterpoint to observational survey methodologies, where estimating population parameters is the primary focus of statistical analysis. The recruitment procedures in this study are not intended to meet criteria used in survey sampling, where each unit in the sampling frame has an equal probability of being selected to participate. In a representative, observational survey study, response rates are often used as a proxy measure for survey quality, with lower response rates indicating poorer quality. Nonresponse bias analysis is also commonly used to determine the potential for nonresponse sampling error in survey estimates. However, concerns about sampling error do not generally apply to experimental designs, where the parameters of interest are under the control of the researcher—rather than being pre-established characteristics of the participants. Participants will be recruited through online panels, which include a diverse range of participants in regard to age, race/ethnicity, income, education, and employment. We also have proposed the use of soft quotas to further ensure that we will recruit a diverse sample. See Response 12 for a more detailed description of the panels to be used in this research.

(Comment 11) Two comments questioned the Agency's methods for ensuring it is selecting patients as study participants.

(Response 11) Our eligibility criteria involve a self-reported diagnosis of plaque psoriasis or type 2 diabetes, which appropriately reflects the audience for DTC promotion where a verified diagnosis is not a criterion. The screener includes a question (screening question 5 (S5)) that asks whether a doctor, nurse, or other health professional has ever told the respondent they had at least one of seven health conditions. Participants who do not select plaque psoriasis or type 2 diabetes will be flagged as ineligible for the study. The other conditions are included as response

options to help disguise eligibility criteria from respondents as they complete the screener.

(Comment 12) One comment stated it is unclear how physicians will be recruited, and one comment asserted that how consumers will be identified is not mentioned.

(Response 12) For the pretests and main study, participants will be drawn from participant panels managed by Dynata. Dynata recruits panel members through a combination of email and online marketing and by invitation, with over 300 diverse online and offline affiliate partners and targeted website advertising. By using multiple recruitment methods, Dynata is able to recruit a diverse set of consumers and decision makers to participate in their panels and will ensure demographic diversity of participants' genders, ages, and education levels. Panel inclusion is by invitation only, and Dynata invites only pre-validated individuals with known characteristics to participate in the consumer panels. The physician sample for the pretest and main study will be drawn from Dynata's Healthcare Panel, which is a physician panel used exclusively for healthcare research. Dynata's Healthcare Panel uses a multimode approach that combines email, fax, and direct mail to recruit HCPs to participate in online surveys. Additionally, Dynata purchases professional association and governmental databases to verify an HCP's practicing status. These verification resources include the Drug Enforcement Agency number (DEA#) and the American Medical Association Medical Education Number (ME#).

(Comment 13) One comment suggested that the samples should be prepared for heterogeneity of preference.

(Response 13) We agree that our modeling approach is to account for potential preference heterogeneity. At the design phase, we are intentionally setting up the study to allow us to compare preference weights between diagnosed consumers and physicians within each health condition. Additionally, we intend to analyze the data using several modeling approaches with other sources of preference heterogeneity in mind.

(Comment 14) One comment suggested the study collect respondents' demographic information, including race/ethnicity, income, geographical region, educational attainment, and healthcare system experiences, particularly negative experiences with an HCP due to their race; two comments suggested the study collect additional data on participants' baseline HbA1c status.

(Response 14) We will measure several demographic variables about respondents, including race/ethnicity, educational attainment, gender, age, geographical location, health literacy, and numeracy. We will also collect information about time since diagnosis, perceived severity of their health condition, and experience/familiarity with prescription drugs to treat the condition. Based on prior experience, we expect these variables to have a direct or indirect effect on our measures. See also Response 13 regarding preference heterogeneity (*i.e.,* the extent to which tastes and preferences vary across participants and/or groups). We are avoiding requesting potentially sensitive personal information from respondents. Although we agree that information about consumers' A1C status could be useful for explaining preference heterogeneity that we may observe, collecting data at that level of personal detail is not warranted given the goals of the research. Instead, we have included a less intrusive perceived severity measure.

(Comment 15) One comment requested clarification of the rationale for determining the study's sample size (800 consumers and 800 physicians). Another comment questioned whether the sample size per demographic may be insufficient to understand how these conditions affect different populations.

(Response 15) The proposed sample size in the two main studies is $n = 400$ participants for each subgroup of interest (diagnosed consumers and physicians), for a total combined $N = 1600$. For our power estimates, we assumed an experimental design with no less than 5 conjoint questions per participant ($t = 5$), 2 alternatives per question ($a = 2$), and 4 levels per attribute ($c = 4$). This implies a sample of 400 participants per subgroup per study.

(Comment 16) One comment asked that a Spanish-language version of the survey be included to ensure that the experiences of this population are included.

(Response 16) We are limiting the survey to the English language, as the majority of advertising for these products is disseminated in English at this time.

(Comment 17) One comment encouraged FDA to broadly and systematically disseminate all final results of completed research related to this topic.

(Response 17) The Agency anticipates disseminating the results of the study after the final analyses of the data are completed, reviewed, and cleared. The exact timing and nature of any such dissemination has not been determined but may include presentations at trade and academic conferences, publications, articles, and posting on FDA's website.

(Comment 18) One comment asserted that access to the choice tasks and proposed questions, including content-specific language and terms, would allow a more substantive review of the proposed research.

(Response 18) Our questionnaires were made available during the public comment process. Our full stimuli are under development during the PRA process. We do not make draft stimuli public during this time because of concerns that this may contaminate our participant pool and compromise our research. In our research proposals, we describe the purpose of the study, the design, the population of interest, and the estimated burden.

(Comment 19) One comment suggested considering adding a ''don't know'' response option throughout the questionnaire, where appropriate.

(Response 19) We understand the value of providing such responses for items of a factual nature. The drawback to providing such response options to these questions, however, is that we may lose information by allowing respondents to choose an easy response instead of giving the item some thought. Research has demonstrated that providing ''no opinion'' options likely results in the loss of data without any corresponding increase in the quality of the data. Thus, we prefer not to add these options to the survey.

(Comment 20) One comment suggested revising S5 to read ''are you currently being treated for the following conditions . . .''

(Response 20) The current wording of S5 is consistent with the eligibility criterion that consumers self-identify as having been diagnosed with plaque psoriasis or type 2 diabetes. We will maintain this wording.

(Comment 21) One comment noted that it is unclear what method will be used to achieve the literacy goal of screening question 11.

(Response 21) The programming note for question S11 indicates that participants would count toward the low health literacy quota if the numeral value assigned to their response is greater than or equal to 3, where 3 = ''Sometimes,'' 4 = ''Often,'' and 5 = ''Always.''

(Comment 22) Two comments expressed confusion about whether question A2 is measuring severity from the patient's or physician's perspective

and recommended clarifying the question or replacing it.

(Response 22) We have revised question A2, as suggested, to clarify that we are asking about the perceived severity of the condition from the participant's perspective.

(Comment 23) One comment recommended rephrasing question A6 to specify ''forms'' rather than ''types'' and to clarify the difference between a prefilled pen and a syringe (diabetes questionnaire).

(Response 23) We have reworded question A6, replacing the term ''types'' with ''forms.'' In the one-on-one interviews, none of the participants expressed confusion about the two terms.

(Comment 24) One comment recommended revising the patient profile in the physician survey to reflect that most patients are diagnosed with type 2 diabetes in their 50s or 60s.

(Response 24) We appreciate your recommendations concerning the realism of the patient profile. In consultation with a medical advisor, we have maintained the patient profile age of 57 years but have changed the diabetes duration in the patient profile from 14 years to 4 years to reflect more standard disease state information.

(Comment 25) One comment suggested adding context to the diabetes questionnaire instructions to reduce ambiguity and facilitate comparisons between the physician and consumer surveys. Specifically, the comment suggests adding more information to the consumer survey about the baseline and changed A1C levels in the introduction (Section B).

(Response 25) Section B introduces each attribute that will be varied in the DCE. The language in the Section B introduction in the physician and consumer questionnaires is tailored to the audience but has the same information about the A1C goal and point reductions that will be examined in the study, which will facilitate comparisons between the two samples. Section C provides the patient profile that will be used as the basis for the DCE. For physicians, the profile is for a hypothetical patient. For consumers, the instructions ask the participant to imagine their doctor recommends they try a prescription drug to help lower their A1C. The change in A1C levels used in the choice tasks for both consumers and physicians includes examples that are anchored to an A1C of 8.5.

(Comment 26) One comment suggested adding itch (pruritis) as an attribute.

(Response 26) In choosing and defining product attributes to include in the study, we selected characteristics based on evidence that they will impact choice. Itch relief didn't feature prominently in the results of our literature review or in the one-on-one interviews with consumers or physicians. In comparison, effectiveness at achieving skin clearance was an attribute in every DCE study included in our literature review, had the greatest relative importance in many of those studies, and was mentioned as an important consideration in open-ended comments and ranked among the three most important characteristics by most participants in our one-on-one interviews.

(Comment 27) One comment recommended adding more description, using both simple text and simple graphics, to the ''serious side effects'' to depict the chance of experiencing a serious side effect, and it recommended adding definitions for the additional attributes.

(Response 27) Rare but serious adverse reactions/side effects will be presented to participants as a single attribute but may be treated as a set of dichotomous attributes for study design and analysis purposes (*e.g.,* each side effect will be either present or absent in a profile). Varying more than one factor at a time within an attribute makes it difficult to distinguish the effect of each factor separately.

The ''additional information'' attributes are essentially marketing claims; however, we have labeled the attribute ''additional information about the drug'' to avoid eliciting reactance from participants in response to the term ''marketing.'' Marketing claims are not typically presented with definitions, so we do not provide definitions for the levels of this attribute.

(Comment 28) One comment suggested replacing ''adherence'' with ''usage'' in the consumer questionnaires and standardizing preference description across the patient and physician questionnaires.

(Response 28) We will assess participant comprehension of the term ''adherence'' during cognitive interviews, and we can make changes, if indicated.

Descriptions of the preference attribute are the same in the physician and consumer questionnaires within each health condition. The attributes for each health condition are designed to be relevant to that particular health condition. We do not intend to make formal comparisons between health conditions.

(Comment 29) One comment suggested revising questions B1 to B5 from ''how important is it'' to instead obtain information about prior experience with each attribute.

(Response 29) The purpose of questions B1 to B5 is to collect self-report ratings of how important each attribute is to participants, which we may use to validate the relative importance scores derived from the DCE. We derived these questions from similar questions included in Janssen et al. (Ref. 17), a study that was conducted to illustrate how DCE could be conducted when following International Society for Pharmacoeconomics and Outcomes Research (ISPOR) recommendations for good research practices.

(Comment 30) One comment asserted that most current diabetes drugs are not associated with heart disease and suggested removing that attribute and adding questions related to weight loss and potential cardiovascular benefits.

(Response 30) We agree that cardiovascular mortality is not an adverse reaction associated with most diabetes drugs; however, there is evidence of increased risk of cardiovascular mortality for some oral antidiabetic agents (*e.g.,* sulfonylureas, thiazolidinediones, and dipeptidyl peptidase 4 inhibitors (Refs. 18 and 19); we are not examining use of insulin in this study). Our approach with the serious adverse reactions/side effects attribute is to present a range of category-appropriate adverse reactions that differ greatly in terms of severity. The reasoning is similar to that behind manipulating extremes in an experimental study in order to increase variance, even if the resulting attributes do not reflect what is typical for the category.

(Comment 31) One comment asserted that the planned data analysis and how data between consumers and physicians would be compared is unclear.

(Response 31) We will use a variety of statistical techniques to analyze the data, adapting our modeling approach to the specific research questions and observed characteristics of the data. A variety of modeling approaches can be used to estimate preference weights in choice-based conjoint studies (Ref. 14)—including conditional logit, mixed logit, Bayesian latent utility, and latent class conditional logistic regression models. The results of the statistical analysis will be used to: (1) identify which attributes of prescription drug products diagnosed consumers and physicians value most, (2) calculate the relative importance of attributes, (3) identify differences in preferences between the

two subgroups (*e.g.,* by including interaction terms in the model), and (4) determine how participants make tradeoffs among attributes to make treatment choices. We intend to examine responses within medical conditions. Where commonalities in survey questions exist, we may compare the consumer and physician responses. Details of our research questions are included as part of the information collection submission to OMB.

(Comment 32) One comment suggested that physicians review the patient survey during pretesting to ensure that the physician and patient surveys are aligned.

(Response 32) Although some wording may differ between the physician and consumer questionnaires to reflect the knowledge and expertise of each sample, we have endeavored to ensure that the concepts are equally represented in the questionnaires across samples. Additionally, we have solicited peer review feedback on the questionnaires from experts in the field. We will also conduct cognitive interviews and pretests to help identify areas where the materials are ambiguous or confusing for participants and make any necessary refinements.

(Comment 33) Three comments had questions about the purpose of the pretesting and the accuracy of the burden estimation for the pretesting, and one comment stated that the burden estimate seemed reasonable.

(Response 33) We will conduct both cognitive interviews and pretests. The burden chart reflects both the cognitive interviews and the pretesting. Qualitative, one-on-one cognitive testing will be used to help identify areas where the materials would benefit from refinements. Additionally, up to two rounds of quantitative pretesting per study will be employed to evaluate the procedures and measures used in the main study. We will balance various factors that affect study completion time and limit the questionnaire to a mean of 20 minutes or less.

The way attribute levels are combined to form hypothetical choice options in a choice-based conjoint analysis, or DCE, are determined by the study's experimental design. Although the number of possible combinations is often too large for each participant to evaluate them all, we will generate a statistically efficient design that reduces the number of choice tasks participants must complete while maintaining sufficient balance and orthogonality for reliable parameter estimation.

(Comment 34) One comment referred to an abstract describing a DCE examining patients' preferences for newer second-line antihyperglycemic agents.

(Response 34) We appreciate bringing the abstract to our attention.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response [1]	Total hours
Cognitive Interview Screener, Consumers	150	1	150	0.08 (5 min)	12
Cognitive Interviews, Consumers	9	1	9	1	9
Pretest 1 Screener, Physicians [2]	95	1	95	0.08 (5 min)	8
Pretest 1 Screener, Consumers [3]	95	1	95	0.08 (5 min)	8
Physician Pretest 1	66	1	66	0.33 (20 min)	22
Consumer Pretest 1	66	1	66	0.33 (20 min)	22
Pretest 2 Screener, Physicians [2 3]	95	1	95	0.08 (5 min)	8
Pretest 2 Screener, Consumers [2 3]	95	1	95	0.08 (5 min)	8
Physician Pretest 2 [2]	66	1	66	0.33 (20 min)	22
Consumer Pretest 2 [2]	66	1	66	0.33 (20 min)	22
Physician Main Study Screener [2]	1,258	1	1,258	0.08 (5 min)	101
Physician Main Study	880	1	880	0.33 (20 min)	290
Consumer Main Study Screener [2]	1,258	1	1,258	0.08 (5 min)	101
Consumer Main Study	880	1	880	0.33 (20 min)	290
Total			5,079		923

[1] Burden estimates of less than 1 hour are expressed as a fraction of an hour in decimal format.
[2] Number of screener respondents assumes a 70 percent eligibility rate with targeted recruitment.
[3] Pretest 2 will be conducted only if changes to study materials are made in response to the findings of Pretest 1.

As with most online and mail surveys, it is always possible that some participants will be in the process of completing the survey when the target number is reached and that those surveys will be completed and received before the survey is closed out. To account for this, we have estimated approximately 10 percent overage for both samples in the pretest and main study.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2019–D–0297]

Smoking Cessation and Related Indications: Developing Nicotine Replacement Therapy Drug Products; Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a final guidance for industry entitled ''Smoking Cessation and Related Indications: Developing Nicotine Replacement Therapy Drug Products; Guidance for Industry.'' The document provides guidance to assist sponsors in the clinical development of nicotine replacement therapy (NRT) drug products, including but not limited to those intended for smoking cessation and related chronic indications. This guidance finalizes the draft guidance of the same title issued on February 22, 2019.

DATES: The announcement of the guidance is published in the **Federal Register** on May 1, 2023.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2019–D–0297 for ''Smoking Cessation and Related Indications: Developing Nicotine Replacement Therapy Drug Products.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9

a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of this guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT: Heather Dorsey, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Silver Spring, MD 20903–0002, 240–429–4192, *heather.dorsey@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry entitled ''Smoking Cessation and Related Indications: Developing Nicotine Replacement Therapy Drug Products.'' This guidance reflects the FDA's current thinking regarding overall development programs to support the approval of NRT drug products for smoking cessation and related chronic indications. There are several FDA-approved prescription and nonprescription NRT drug products for cessation of smoking cigarettes, but the Agency encourages the development of additional NRT drug products, which could help more smokers quit.

The guidance focuses on drug development and trial design issues that are specific to the study of NRT drug products. NRT drug products are typically studied and labeled for use as adjuncts to behavioral self-help materials and to date have involved single treatment regimens that begin on the patient's quit day (first day without a cigarette). Alternate treatment regimens (*e.g.,* pretreatment before quit day, quitting by gradual reduction (reduce to quit), using multiple NRT drug products together) are discussed in the guidance.

As outlined in the guidance, NRT drug products can be developed for smoking cessation and/or reduction in risk of relapse. NRT drug products that first have demonstrated efficacy for at least one of these indications can also include additional information in labeling by demonstrating efficacy in certain secondary endpoints. Sponsors can evaluate reduction in the urge to smoke or relief of cue-induced craving in former smokers as secondary endpoints. Additionally, sponsors that can demonstrate, via a secondary endpoint, that the drug product provides relief of withdrawal symptoms in smokers *who are not trying to quit smoking* may be able to include labeling instructions to address situations when such individuals are required to abstain and therefore experience withdrawal symptoms (*e.g.,* while traveling on an airplane).

FDA is aware of the serious risks associated with smoking and is committed to facilitating the development of therapies to support smoking cessation efforts. Both the regulatory pathway for an NRT drug product and the amount of nonclinical or clinical data needed to support approval will depend on the characteristics of the proposed NRT drug product relative to an approved NRT drug product. This guidance outlines general considerations for NRT drug development and trial design, and FDA encourages sponsors to contact FDA for feedback on their proposed development plans. Sponsors developing nonprescription drug product should bear in mind that it is often not possible to answer all regulatory questions in a single trial, and additional sequential steps may be needed.

This guidance finalizes the draft guidance entitled ''Smoking Cessation and Related Indications: Developing Nicotine Replacement Therapy Drug Products'' issued on February 22, 2019 (84 FR 5693). FDA considered comments received on the draft guidance as the guidance was finalized. Changes from the draft to the final guidance include clarification that the document does not address the development of NRT to aid in the cessation of non-combustible tobacco products (*e.g.,* e-cigarettes); information regarding the pathway described in section 505(b)(2) (21 U.S.C. 355(b)(2)) of the Federal Food, Drug, and Cosmetic Act and reliance on published literature; and clarification regarding mode of administration and route of administration. In addition, editorial changes were made to improve clarity. This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on ''Smoking Cessation and Related Indications: Developing Nicotine Replacement Therapy Drug Products.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. Therefore, clearance by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521) is not required for this guidance. The previously approved collections of information are subject to review by OMB under the PRA. The collections of information in 21 CFR part 312 pertaining to the submissions of investigational new drug applications, including clinical trial design and study protocols, have been approved under OMB control number 0910–0014. The

collections of information in 21 CFR part 314 regarding the submission of new drug applications including formal meetings with sponsors and applicants for Prescription Drug User Fee Act products, abbreviated new drug applications and supplemental applications have been approved under OMB control number 0910–0001. The collections of information in 21 CFR part 601 pertaining to the submission of biologics license applications have been approved under OMB control number 0910–0338. The collections of information relating to expedited program for serious conditions for drug and biological product development programs have been approved under OMB control number 0910–0765. The collections of information pertaining to the submission of special protocol assessments have been approved under OMB control number 0910–0470. The collections of information in 21 CFR 201.56 and 201.57 for the submission of certain prescription drug product labeling have been approved under OMB control number 0910–0572. The collections of information in 21 CFR parts 50 and 56 (Protection of Human Subjects: Informed Consent; Institutional Review Boards) have been approved under OMB control number 0910–0130. The collections of information pertaining to good clinical practice have been approved under OMB control number 0910–0843. The collections of information pertaining to adverse events reporting have been approved under OMB control number 0910–0291.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–D–0451]

Labeling of Plant-Based Milk Alternatives and Voluntary Nutrient Statements; Draft Guidance for Industry; Availability; Agency Information Collection Activities; Proposed Collection; Comment Request; Reopening of the Comment Period

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability; reopening of the comment period.

SUMMARY: The Food and Drug Administration (FDA or we) is reopening the comment period for the draft guidance entitled ''Labeling of Plant-Based Milk Alternatives and Voluntary Nutrient Statements; Guidance for Industry,'' which was announced in the **Federal Register** of February 23, 2023. We are taking this action in response to requests for an extension to allow interested persons additional time to submit comments.

DATES: FDA is reopening the comment period on the draft guidance published February 23, 2023 (88 FR 11449). Submit either electronic or written comments on the draft guidance by July 31, 2023, to ensure that we consider your comment on the draft guidance before we begin work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2023–D–0451 for ''Labeling of Plant-Based Milk Alternatives and Voluntary Nutrient Statements; Draft Guidance for Industry; Availability; Agency Information Collection Activities; Proposed Collection; Comment Request.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' We will review this copy, including the claimed confidential information, in our consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For

more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Jeanmaire Hryshko, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240–402–2371; or Philip Chao, Center for Food Safety and Applied Nutrition, Office of Regulations and Policy (HFS–024), Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240–402–2378.

SUPPLEMENTARY INFORMATION: In the **Federal Registe**r of February 23, 2023 (88 FR 11449), we published a notice of availability for a draft guidance entitled ''Labeling of Plant-Based Milk Alternatives and Voluntary Nutrient Statements; Draft Guidance for Industry; Availability; Agency Information Collection Activities; Proposed Collection; Comment Request.'' This action opened a docket with a 60-day comment period.

We have received requests for a 90-day extension of the comment period for the draft guidance. We have concluded that it is reasonable to reopen the comment period for 90 days, until July 31, 2023. We are reopening the comment period because the request for an extension of the comment period arrived too late for us to extend the comment period. We believe that an additional 90 days allows adequate time for interested persons to submit comments.

Dated: April 26, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2021–D–0875]

S12 Nonclinical Biodistribution Considerations for Gene Therapy Products; International Council for Harmonisation; Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a final guidance for industry entitled ''S12 Nonclinical Biodistribution Considerations for Gene Therapy Products.'' The guidance was prepared under the auspices of the International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH). The final guidance provides harmonized recommendations for the conduct and overall design of nonclinical biodistribution (BD) studies for gene therapy (GT) products. The recommendations in the guidance endeavor to facilitate the development of investigational GT products, while avoiding unnecessary use of animals, in accordance with the 3Rs (reduce/refine/replace) principles. The final guidance replaces the draft guidance entitled ''S12 Nonclinical Biodistribution Considerations for Gene Therapy Products'' issued on September 9, 2021.

DATES: The announcement of the guidance is published in the **Federal Register** on May 1, 2023.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked, and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2021–D–0875 for ''S12 Nonclinical Biodistribution Considerations for Gene Therapy Products.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For

more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of this guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002, or the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research (CBER), Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. The guidance may also be obtained by mail by calling CBER at 1–800–835–4709 or 240–402–8010. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT:

Regarding the guidance: Alyssa Galaro, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 6260, Silver Spring, MD, 20993–0002, 301–796–6589.

Regarding the ICH: Jill Adleberg, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6364, Silver Spring, MD 20993–0002, 301–796–5259, *Jill.Adleberg@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry entitled ''S12 Nonclinical Biodistribution Considerations for Gene Therapy Products.'' The guidance was prepared under the auspices of ICH. ICH has the mission of achieving greater regulatory harmonization worldwide to ensure that safe, effective, high-quality medicines are developed, registered, and maintained in the most resource-efficient manner.

By harmonizing the regulatory requirements in regions around the world, ICH guidelines enhance global drug development, improve manufacturing standards, and increase the availability of medications. For example, ICH guidelines have substantially reduced duplicative clinical studies, prevented unnecessary animal studies, standardized the reporting of important safety information, and standardized marketing application submissions.

The six Founding Members of the ICH are FDA; the Pharmaceutical Research and Manufacturers of America; the European Commission; the European Federation of Pharmaceutical Industries Associations; the Japanese Ministry of Health, Labour, and Welfare; and the Japanese Pharmaceutical Manufacturers Association. The Standing Members of the ICH Association include Health Canada and Swissmedic. ICH membership continues to expand to include other regulatory authorities and industry associations from around the world (refer to *https://www.ich.org/*).

ICH works by engaging global regulatory and industry experts in a detailed, science-based, and consensus-driven process that results in the development of ICH guidelines. The regulators around the world are committed to consistently adopting these consensus-based guidelines, realizing the benefits for patients and for industry.

As a Founding Regulatory Member of ICH, FDA plays a major role in the development of each of the ICH guidelines, which FDA then adopts and issues as guidance for industry. FDA's guidance documents do not establish legally enforceable responsibilities. Instead, they describe the Agency's current thinking on a topic and should be viewed only as recommendations, unless specific regulatory or statutory requirements are cited.

In the **Federal Register** of September 9, 2021 (86 FR 50536), FDA published a notice announcing the availability of a draft guidance entitled ''S12 Nonclinical Biodistribution Considerations for Gene Therapy Products.'' The notice gave interested persons an opportunity to submit comments by November 8, 2021.

After consideration of the comments received and revisions to the guideline, a final draft of the guideline was submitted to the ICH Assembly and endorsed by the regulatory agencies on March 14, 2023.

This guidance finalizes the draft guidance of the same title issued on September 9, 2021. The guidance is intended to promote harmonization of recommendations for the BD assessment for investigational GT products and facilitate a more efficient and timely nonclinical development program. The revisions to the draft guidance aimed to clarify key elements of the BD assessment by providing additional information on selecting dose levels and identifying a biologically relevant model. Additional details were provided on what product and study characteristics should be considered to determine if previous BD data can be leveraged.

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on ''S12 Nonclinical Biodistribution Considerations for Gene Therapy Products.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

This guidance contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

III. Electronic Access

Persons with access to the internet may obtain the final guidance at *https://www.regulations.gov, https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances.*

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–1029]

Agency Information Collection Activities; Proposed Collection; Comment Request; Cosmetic Labeling Requirements and Facility Registration and Cosmetic Product Listing Program

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, the Agency, or we) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on information collection provisions in FDA's cosmetic labeling regulations and new statutory provisions for cosmetic labeling, facility registration, and products listing.

DATES: Either electronic or written comments on the collection of information must be submitted by June 30, 2023.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of June 30, 2023. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2023–N–1029 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; Cosmetic Labeling Requirements and Facility Registration and Cosmetic Product Listing Program.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Amber Sanford, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–8867, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the

information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Cosmetic Labeling Requirements and Facility Registration and Cosmetic Product Listing Program

OMB Control Number 0910–0599—Revision

This information collection supports FDA's cosmetic labeling regulations and new statutory provisions for cosmetic labeling, facility registration, and products listing. On December 29, 2022, the President signed into law the Consolidated Appropriations Act, 2023 (Pub. L. 117–328), which included the Modernization of Cosmetics Registration Act of 2022 (MoCRA). MoCRA amended the Federal Food, Drug, and Cosmetic Act (FD&C Act) by requiring, among other requirements, manufacturers of cosmetic products to label products intended for use only by licensed professionals to bear a label that the product must be administered or used only by licensed professionals, in addition to providing the same information on the label that is required of cosmetic products intended for consumers. MoCRA also added the requirement for cosmetic product labels to include contact information through which the responsible person can receive adverse event reports. Other requirements introduced by MoCRA include facility registration and cosmetic product listing.

Cosmetic Labeling Requirements

The FD&C Act and the Fair Packaging and Labeling Act (the FPLA) require that cosmetic manufacturers, packers, and distributors disclose information about themselves or their products on the labels or labeling of their products. Sections 201, 301, 502, 601, 602, 603, 701, and 704 of the FD&C Act (21 U.S.C. 321, 331, 352, 361, 362, 363, 371, and 374) and sections 4 and 5 of the FPLA (15 U.S.C. 1453 and 1454) provide authority to FDA to regulate the labeling of cosmetic products. Failure to comply with the requirements for cosmetic labeling may render a cosmetic adulterated under section 601 of the FD&C Act or misbranded under section 602 of the FD&C Act.

FDA's cosmetic labeling regulations are codified in part 701 (21 CFR part 701). Section 701.3 (21 CFR 701.3) requires the label of a cosmetic product to bear a declaration of the ingredients in descending order of predominance. Section 701.11 (21 CFR 701.11) requires the principal display panel of a cosmetic product to bear a statement of the identity of the product. Section 701.12 (21 CFR 701.12) requires the label of a cosmetic product to specify the name and place of business of the manufacturer, packer, or distributor. Section 701.13 (21 CFR 701.13) requires the label of a cosmetic product to declare the net quantity of contents of the product.

MoCRA amended the FD&C Act by requiring, among other requirements, manufacturers of cosmetic products to label products intended for use only by licensed professionals to bear a label that the product must be administered or used only by licensed professionals, in addition to providing the same information on the label that is required of cosmetic products intended for consumers. MoCRA also added the requirement for cosmetic product labels to include contact information (domestic address, phone number, or electronic contact information that may include a website) through which the responsible person can receive adverse event reports.

Facility Registration and Cosmetic Product Listing Program

MoCRA amended the FD&C Act by requiring, among other requirements, operators and owners of facilities manufacturing or processing cosmetic products to register with FDA and renew such registrations biennially. Facilities will also need to notify FDA of any changes to information that was required as part of registration. FDA may suspend registration if we determine that a cosmetic product manufactured or processed by a registered facility has a reasonable probability of causing serious adverse health consequences or death. Upon notice that FDA intends to suspend registration, the responsible person for the facility may submit a corrective action plan for addressing the reasons for possible suspension of the facility registration. MoCRA also added the requirement for responsible persons to submit a product listing for each of their cosmetic products to FDA.

As we develop a process to accept submissions for registrations and product listings consistent with the provisions in MoCRA, we have discontinued use of Forms FDA 2511, 2512, and 2512a, previously used for voluntary registration activities and have stopped accepting new submissions to the Voluntary Cosmetic Registration Program (VCRP).

Description of Respondents: Respondents to this collection of information include cosmetic manufacturers and processors. Respondents are from the private sector (for-profit businesses).

We estimate the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL THIRD-PARTY DISCLOSURE BURDEN [1]

21 CFR or FD&C Act section; activity	Number of respondents	Number of disclosures per respondent	Total annual disclosures	Average burden per disclosure	Total hours	Total capital costs [2]
§ 701.3; ingredients in order of predominance	1,518	21	31,878	1	31,878	.....
§ 701.11; statement of identity	1,518	24	36,432	1	36,432	.....
§ 701.12; name and place of business	1,518	24	36,432	1	36,432	.....
§ 701.13; net quantity of contents	1,518	24	36,432	1	36,432	.....
Sec. 609(a) of the FD&C Act (MoCRA); contact information to send adverse event reports	1,518	24	36,432	1	36,432	$91,080,000
Sec. 609(c) of the FD&C Act (MoCRA); professional use only	100	12	1,200	1	1,200	3,000,000
Total	.....	.....	.....	.....	178,806	$94,080,000

[1] There are no operating and maintenance costs associated with this collection of information.
[2] One-time burden for capital costs.

The estimated annual third-party disclosure burden for labeling is based on data available to the Agency, our knowledge of and experience with cosmetics, and informal communications with industry. The hour burden is the additional or incremental time that establishments need to design and print labeling that includes the following required elements: a declaration of ingredients in decreasing order of predominance, a statement of the identity of the product, a specification of the name and place of business of the establishment, and a declaration of the net quantity of contents. These requirements increase the time establishments needed to design labels because they increase the number of label elements that establishments must consider when designing labels. These requirements do not generate any recurring burden per label because establishments must already print and affix labels to cosmetic products as part of normal business practices. Regarding the new statutory labeling requirements for products intended for professional use only and contact information for manufacturers to receive reports of adverse events, we estimate that there will be a capital cost of $94,080,000 associated with relabeling. This is the cost of designing a revised label and incorporating it into the manufacturing process. We believe that this will be a one-time cost. We estimate that the total third-party disclosure burden is 178,806 hours.

TABLE 2—ESTIMATED ANNUAL REPORTING BURDEN [1]

MoCRA citation; activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Sec. 607(a)(1) of the FD&C Act; initial registrations	3,400	1	3,400	1	3,400
Sec. 607(a)(2) and (5) of the FD&C Act; biennial registration renewals.	1,700	1	1,700	0.25 (15 minutes)	425
Sec. 607(a)(4) of the FD&C Act; registration updates ..	100	1	100	0.25 (15 minutes)	25
Sec. 607(f) of the FD&C Act; post-hearing corrective action plan.	5	1	5	10	50
Sec. 607(c)(1) and (2) of the FD&C Act; cosmetic product listing.	3,400	5	17,000	0.50 (30 minutes)	8,500
Sec. 607(c)(3) of the FD&C Act; product listing renewals.	3,400	5	17,000	0.25 (15 minutes)	4,250
Sec. 607(c)(5) of the FD&C Act; product listing updates.	200	1	200	0.25 (15 minutes)	50
Total	.....	.....	.....	.....	16,700

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

We base our estimate of reporting burden hours on information from the VCRP, because it provided the best available data to FDA in terms of the number of respondents and responses. We believe that the VCRP reflected less than half of cosmetic manufacturers and processors because it was a voluntary system. Accordingly, we doubled our estimate for the number of respondents registering and used this number to estimate other activities related to facility registration and cosmetic product listing. Based on a review of the information collection since our last request for OMB approval, we have increased our estimate to account for an anticipated increase in respondents resulting from new statutory requirements.

Dated: April 26, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–1052]

Food and Drug Administration Data and Technology Strategic Plan; Request for Information and Comments; Extension of Comment Period

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; request for information and comments; extension of comment period.

SUMMARY: The Food and Drug Administration (FDA or the Agency) is extending the comment period for the notice announcing a request for information and comments that appeared in the **Federal Register** of April 13, 2023. In that notice, FDA requested information and comments on the FDA Data and Technology Strategic Plan. The Agency is taking this action to allow interested persons additional time to submit comments.

DATES: FDA is extending the comment period on the notice published April 13, 2023 (88 FR 22453). Either electronic or written comments must be submitted by June 12, 2023, to ensure that the Agency considers your comment on this request for information and comments before it begins work on the strategic plan.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of June 12, 2023. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a

third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2023–N–1052 for ''FDA Data and Technology Strategic Plan.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Casi Alexander, Office of Digital Transformation, Food and Drug Administration, FDA Library, 5630 Fishers Lane, Rm. 1087, Rockville, MD 20857, 240–402–5171, *Casi.Alexander@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In the **Federal Register** of April 13, 2023, FDA published a notice announcing a request for information and comments entitled ''FDA Data and Technology Strategic Plan; Request for Information and Comments.'' Interested persons were originally given until May 15, 2023, to comment on the document. The Agency has elected to extend the comment period so that all interested parties are able to more thoroughly consider the request for input. FDA is extending the comment period for 30 days, until June 12, 2023. The Agency believes that this 30-day extension allows adequate time for interested persons to submit comments.

Dated: April 26, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–1443]

Draft Pharmaceutical Quality/Chemistry Manufacturing and Controls Data Elements and Terminologies; Establishment of a Public Docket; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; establishment of a public docket; request for comments.

SUMMARY: The Food and Drug Administration (FDA or Agency) is requesting comment on the draft Pharmaceutical Quality/Chemistry Manufacturing and Controls (PQ/CMC) Data Elements and Terminologies for the electronic submission of PQ/CMC data. Building on the Agency's previous **Federal Register** notices published on July 11, 2017, and March 18, 2022, requesting comments on PQ/CMC data elements and controlled terminology, the Agency is continuing to seek comment on the accuracy, suitability, and appropriateness of revised and/or new data elements and terminologies for submission of PQ/CMC data. In addition, the progress toward the establishment of standardized pharmaceutical data elements and terminologies will require further interactions between the Agency and interested parties and various stakeholders, including industry. Accordingly, FDA is planning to request comment on additional PQ/CMC data elements and terminologies over time. FDA is establishing an open docket to facilitate efficient receipt of comments and public posting of updated draft documents on PQ/CMC data elements and terminologies.

DATES: Comments may be submitted to this docket at any time.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

• *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted,

such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2023–N–1443 for ''Draft Pharmaceutical Quality/Chemistry Manufacturing and Controls Data Elements and Terminologies; Request for Comments.'' Received comments filed in a timely manner will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Scott Gordon, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 1192, Silver Spring, MD 20993–0002, *Gideon.Gordon@fda.hhs.gov,* 240–402–8560; Diane Maloney, Center for Biologics Evaluation and Research, Food and Drug Administration, Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911; or Norman Gregory, Center for Veterinary Medicine, Food and Drug Administration, 7500 Standish Pl., HFV–143, Rockville, MD 20855, *Norman.Gregory@fda.hhs.gov,* 240–402–0684.

SUPPLEMENTARY INFORMATION:

I. Background

PQ/CMC is a term used to describe manufacturing and testing data of pharmaceutical products. PQ/CMC encompasses topics such as drug stability, quality specification, batch formula, and batch analysis, which are important aspects of drug development and manufacturing. PQ/CMC plays an integral part in the regulatory review process and life-cycle management of pharmaceutical products. The development of a structured format for PQ/CMC data will enable consistency in the content and format of PQ/CMC data submitted, thus providing a harmonized language for submission content, allowing reviewers to query the data, and, in general, contributing to a more efficient and effective regulatory decision-making process by creating a standardized data dictionary.

The impetus for this standardization effort was the provisions from the 2012 Food and Drug Administration Safety and Innovation Act (Pub. L. 112–144), which authorized the Agency to require certain submissions to be submitted in a specified electronic format. PQ/CMC standardization supports FDA's regulatory needs in receiving structured and standardized pharmaceutical quality data and includes two objectives: (1) to standardize the pharmaceutical quality data that is currently received by FDA in electronic common technical document (eCTD) Module 3 (and relevant sections of Module 2) from the sponsoring organizations, and (2) to use these structured elements and develop a Health Level 7 Fast Health Interoperability Resources data exchange solution.

On July 11, 2017, FDA published a **Federal Register** notice requesting comment on a draft PQ/CMC Data Elements and Controlled Terminology document (82 FR 32003). That document proposed structured data standards for a set of eCTD Module 3 content. Based on a range of public feedback, FDA published a **Federal Register** notice on March 18, 2022 (87 FR 15435), requesting comment on a significantly revised and expanded set of data elements and terminologies, including additional subject areas of Module 3. The information released for public comment is not intended to be comprehensive in covering all eCTD product quality information, only those concepts that were considered amenable to structuring and would bring value to the quality review process. This information should not be viewed as guidance, technical specification, or an implementation guide, as it is meant solely for comment.

Through this notice, the Agency is continuing to seek comment on the accuracy, suitability, and appropriateness of revised and/or new data elements and terminologies for submission of PQ/CMC data. The Agency intends to issue guidance on the standardization of PQ/CMC data elements and terminologies for electronic submissions.

II. Establishment of a Docket

FDA is establishing an open docket on matters related to PQ/CMC Data Elements and Controlled Terminologies. Coinciding with publication of this notice, a document will be available at FDA's PQ/CMC web page designated as ''Chapters,'' each of which will cover information relevant to selected parts of eCTD Module 3 and/or Module 2.3. The first Chapter, Chapter 1, is provided solely for context as it is a reiteration of content previously released for

comment. FDA is not seeking comment on the content of Chapter 1. Chapter 2 in this document is the first new Chapter, which provides draft designs of data elements and terminologies, in some cases new and in other cases updated from Chapter 1, associated with PQ/CMC subject areas and concepts and scoped to some of what is currently submitted in Module 3 of the eCTD submission. Since the data elements and terminologies in Chapter 2 are new and/or updated, review of Chapter 1, solely as a reference, is highly recommended.

After publication of this notice with Chapter 2 of the PQ/CMC Data Elements and Terminologies document, subsequent Chapters will be posted on FDA's PQ/CMC web page (*https://www.fda.gov/industry/fda-data-standards-advisory-board/pharmaceutical-quality-chemistry-manufacturing-controls-pqcmc*). Public comments, specifying to which Chapter the comments are submitted, can be made to the open docket. Comments may be submitted to this docket at any time, but comments should be submitted on new Chapters within 60 days of being posted on FDA's PQ/CMC web page to ensure that the Agency considers your comment before it begins work on the final version of the Chapter. FDA will aim to provide a new Chapter of the PQ/CMC Data Elements and Terminologies periodically. FDA is targeting posting updates to this content to FDA's PQ/CMC web page by the end of the calendar months of March, June, September, and December of each year. This update may consist of a note that there is no new content for review in this period or, alternatively, that there is new content to be reviewed for comment, along with a link to the relevant documentation, background, and instructions on submitting comments.

III. Electronic Access

Persons with access to the internet may obtain the draft data elements and terminologies at either *https://www.fda.gov/industry/fda-data-standards-advisory-board/pharmaceutical-quality-chemistry-manufacturing-controls-pqcmc* or *https://www.regulations.gov.*

Dated: April 26, 2023.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–1358]

FDA Science Forum 2023; Public Workshop

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public workshop.

SUMMARY: The Food and Drug Administration (FDA, the Agency, or we) is announcing the following public workshop entitled ''FDA Science Forum 2023.'' The purpose of the public workshop is to inform the public about the breadth of research underway at the Agency, and to show how cutting-edge science informs FDA's regulatory decision-making to protect and promote public health.

DATES: The public workshop will be held on June 13, 2023 (Day 1), from 9 a.m. to 3:30 p.m. Eastern Time, and June 14, 2023 (Day 2), from 9 a.m. to 2 p.m. Eastern Time. See the **SUPPLEMENTARY INFORMATION** section for registration date and information.

ADDRESSES: The public workshop will be held via webcast.

FOR FURTHER INFORMATION CONTACT: Rokhsareh Shahidzadeh, Office of Scientific Professional Development, Office of the Chief Scientist, Office of the Commissioner, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 32, Rm. 2383, Silver Spring, MD 20993, 301–796–8740, *FDASciProDev@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

The FDA Science Forum is held biennially to inform the public about the groundbreaking science conducted at the Agency, and to show how scientific research is used in FDA's regulatory decisions to protect and promote public health. Open to the public, industry, academia, patient advocates, government agencies, and current and potential collaborators, the 2-day event offers an opportunity to hear FDA scientific experts and nationally renowned scientists speak on a range of topics associated with regulatory science.

II. Topics for Discussion at the Public Workshop

The theme for the 2023 FDA Science Forum, ''Advancing Regulatory Science Through Innovation,'' will highlight areas of FDA research, including: (1) improving clinical and postmarket evaluation, (2) tools to effectively use big data, (3) product development tools and manufacturing, and (4) medical countermeasures (MCMs), infectious disease and pathogen reduction technologies.

III. Participating in the Public Workshop

Registration: To register for the public workshop, please visit the following website: *https://www.fda.gov/scienceforum.*

Registration is free. Persons interested in attending this public workshop must register by June 12, 2023, at 5 p.m. Eastern Time. Registrants will receive confirmation when they have been accepted.

If you need special accommodations due to a disability, please contact Rokhsareh Shahidzadeh (see **FOR FURTHER INFORMATION CONTACT**) no later than June 5, 2023, by 5 p.m. Eastern Time.

Streaming Webcast of the public workshop: This public workshop will be webcast. To register, please visit the following website: *https://www.fda.gov/scienceforum.* Participants interested in viewing via webcast must register by June 12, 2023, at 5 p.m. Eastern Time.

Dated: April 26, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Indian Health Service

Tribal Self-Governance Negotiation Cooperative Agreement Program

Announcement Type: New.

Funding Announcement Number: HHS–2023–IHS–TSGN–0001.

Assistance Listing (Catalog of Federal Domestic Assistance or CFDA) Number: 93.444.

Key Dates

Application Deadline Date: May 1, 2023.

Earliest Anticipated Start Date: July 31, 2023.

I. Funding Opportunity Description

Statutory Authority

The Indian Health Service (IHS) is accepting applications for cooperative agreements for the Tribal Self-Governance Negotiation Cooperative Agreement Program. This program is authorized under the Snyder Act, 25 U.S.C. 13; the Transfer Act, 42 U.S.C.

2001(a); and Title V of the Indian Self-Determination and Education Assistance Act (ISDEAA), 25 U.S.C. 5383(e). The Assistance Listings section of *SAM.gov* (*https://same.gov/content/home*) describes this program under 93.444.

Background

The Tribal Self-Governance Program (TSGP) is more than an IHS program; it is an expression of the government-to-government relationship between the United States (U.S.) and Indian Tribes. Through the TSGP, Tribes negotiate with the IHS to assume Programs, Services, Functions, and Activities (PSFAs), or portions thereof, which gives Tribes the authority to manage and tailor health care programs in a manner that best fits the needs of their communities.

Participation in the TSGP affords Tribes the most flexibility to tailor their health care needs by choosing one of three ways to obtain health care from the Federal government for their citizens. Specifically, Tribes can choose to: (1) receive health care services directly from the IHS; (2) contract with the IHS to administer individual programs and services the IHS would otherwise provide (referred to as Title I Self-Determination Contracting); and (3) compact with the IHS to assume control over health care programs the IHS would otherwise provide (referred to as Title V Self-Governance Compacting or the TSGP). These options are not exclusive and Tribes may choose to combine options based on their individual needs and circumstances.

The TSGP is a tribally-driven initiative and strong Federal-Tribal partnerships are essential to the program's success. The IHS established the Office of Tribal Self-Governance (OTSG) to implement the Tribal Self-Governance authorities under the ISDEAA. The primary OTSG functions are to: (1) serve as the primary liaison and advocate for Tribes participating in the TSGP; (2) develop, direct, and implement TSGP policies and procedures; (3) provide information and technical assistance to Self-Governance Tribes; and (4) advise the IHS Director on compliance with TSGP policies, regulations, and guidelines. Each IHS Area has an Agency Lead Negotiator (ALN), designated by the IHS Director to act on his or her behalf, who has authority to negotiate Self-Governance Compacts and Funding Agreements (FA). Tribes interested in participating in the TSGP should contact their respective ALN to begin the Self-Governance planning and negotiation process. Tribes currently participating in the TSGP that are interested in expanding existing or adding new PSFAs should also contact their respective ALN to discuss the best methods for expanding or adding new PSFAs.

Purpose

The purpose of this Negotiation Cooperative Agreement is to provide Tribes with resources to help defray the costs associated with preparing for and engaging in TSGP negotiations. TSGP negotiations are a dynamic, evolving, and tribally-driven process that requires careful planning, preparation, and sharing of precise, up-to-date information by both Tribal and Federal parties. Because each Tribal situation is unique, a Tribe's successful transition into the TSGP, or expansion of their current program, requires focused discussions between the Federal and Tribal negotiation teams about the Tribe's specific health care concerns and plans. One of the hallmarks of the TSGP is the collaborative nature of the negotiations process, which is designed to: (1) enable a Tribe to set its own priorities when assuming responsibility for IHS PSFAs; (2) observe and respect the government-to-government relationship between the U.S. and each Tribe; and (3) involve the active participation of both Tribal and IHS representatives, including the OTSG. Negotiations are a method of determining and agreeing upon the terms and provisions of a Tribe's Compact and FA, the implementation documents required for the Tribe to enter into the TSGP. The Compact sets forth the general terms of the government-to-government relationship between the Tribe and the Secretary of the U.S. Department of Health and Human Services (HHS). The FA: (1) describes the length of the agreement (whether it will be annual or multi-year); (2) identifies the PSFAs, or portions thereof, the Tribe will assume; (3) specifies the amount of funding associated with the Tribal assumption; and (4) includes terms required by Federal statutes and other terms agreed to by the parties. Both documents are required to participate in the TSGP and they are mutually negotiated agreements that become legally binding and mutually enforceable after both parties sign the documents. Either document can be renegotiated at the request of the Tribe.

The negotiation process has four major stages, including: (1) planning; (2) pre-negotiations; (3) negotiations; and (4) post-negotiations. Title V of the ISDEAA requires that a Tribe or Tribal Organization (T/TO) complete a planning phase to the satisfaction of the Tribe. The planning phase must include legal and budgetary research and internal Tribal government planning and organizational preparation relating to the administration of health care programs. See 25 U.S.C. 5383(d). The planning phase is critical to the negotiation process and assists Tribes with making informed decisions about which PSFAs to assume and what organizational changes or modifications are necessary to support those PSFAs. A thorough planning phase improves timeliness and efficient negotiations and ensures that the Tribe is fully prepared to assume the transfer of IHS PSFAs to the Tribal health program.

During pre-negotiations, the Tribal and Federal negotiation teams review and discuss issues identified during the planning phase. Pre-negotiations provide an opportunity for the Tribe and the IHS to identify and discuss issues directly related to the Tribe's Compact, FA, and Tribal shares.

In advance of final negotiations, the Tribe should work with the IHS to secure the following: (1) program titles and descriptions; (2) financial tables and information; (3) information related to the identification and justification of residuals; and (4) the basis for determining Tribal shares (distribution formula). The Tribe may also wish to discuss financial materials that show estimated funding for next year and the increases or decreases in funding it may receive in the current year, as well as the basis for those changes.

During the final negotiation, both the Federal and Tribal negotiation teams work together in good faith to determine and agree upon the terms and provisions of the Tribe's Compact and FA. Negotiations are not an allocation process; they provide an opportunity to mutually review and discuss budget and program issues to reach agreement and finalize documents.

There are various entities involved throughout the negotiation process. For example, a Tribal government selects its representative(s) for the Tribal negotiation team, which may include a Tribal leader from the governing body, a Tribal health director, technical and program staff, legal counsel, and other consultants. Regardless of the composition of the Tribal team, Tribal representatives must have decision-making authority from the Tribal governing body to successfully negotiate and agree to the provisions within the agreements. The Federal negotiation team is led by the ALN and may include area and headquarters subject matter experts, OTSG staff, the Office of Finance and Accounting, and the Office

of the General Counsel. The ALN is the only member of the Federal negotiation team with delegated authority to negotiate on behalf of the IHS Director. The ALN is the designated official that provides Tribes with Self-Governance information, assists Tribes in planning, organizes meetings between the Tribe and the IHS, and coordinates the agency's response to Tribal questions during the negotiation process. The ALN role requires detailed knowledge of the IHS, awareness of current policy and practice, and understanding of the rights and authorities available to a Tribe under Title V of the ISDEAA.

In post-negotiations, the mutually agreed to and negotiated Compact and FA are signed by the authorizing Tribal official and submitted to the OTSG in preparation for the IHS Director's signature. Once the Compact and FA have been signed by both parties, they become legally binding and enforceable agreements. A signed Compact and FA are necessary for the payment process to begin. The negotiating Tribe then becomes a ''Self-Governance Tribe'' and a participant in the TSGP.

Acquiring a Negotiation Cooperative Agreement is not a prerequisite to enter the TSGP. A Tribe may use other resources to develop and negotiate its Compact and FA. See 42 CFR 137.26. Tribes that receive a Negotiation Cooperative Agreement are not obligated to participate in Title V and may choose to delay or decline participation or expansion in the TSGP.

II. Award Information

Funding Instrument—Cooperative Agreement

Estimated Funds Available

The total funding identified for fiscal year (FY) 2023 is approximately $420,000. The IHS anticipates individual award amounts will be $84,000. The funding available for competing awards issued under this announcement is subject to the availability of appropriations and budgetary priorities of the Agency. The IHS is under no obligation to make awards to applicants selected for funding under this announcement.

Anticipated Number of Awards

The IHS anticipates issuing approximately five awards under this program announcement.

Period of Performance

The period of performance is for 1 year.

Cooperative Agreement

Cooperative agreements awarded by the Department of Health and Human Services (HHS) are administered under the same policies as grants. However, the funding agency, IHS, is anticipated to have substantial programmatic involvement in the project during the entire period of performance. Below is a detailed description of the level of involvement required of the IHS.

Substantial Agency Involvement Description for Cooperative Agreement

A. Provide descriptions of PSFAs and associated funding at all organizational levels (service unit, area, and headquarters) including funding formulas and methodologies related to determining Tribal shares.

B. Meet with Negotiation Cooperative Agreement recipients to provide program information and discuss methods currently used to manage and deliver health care.

C. Identify and provide statutes, regulations, and policies that provide authority for administering IHS programs.

D. Provide technical assistance on the IHS budget, Tribal shares, and other topics as needed.

III. Eligibility Information

1. Eligibility

To be eligible for this opportunity, an applicant must meet the following criteria:

- Applicant must be an ''Indian Tribe'' as defined in 25 U.S.C. 5304(e); a ''Tribal Organization'' as defined in 25 U.S.C. 5304(l); or an ''Inter-Tribal Consortium'' as defined at 42 CFR 137.10. Please note that Tribes prohibited from contracting pursuant to the ISDEAA are not eligible. See section 424(a) of the Consolidated Appropriations Act, 2014, Public Law 113–76, as amended by section 445 of the Consolidated Appropriations Act, 2023, Public Law 117–328.
- Pursuant to 25 U.S.C. 5383(c)(1)(B), applicant must request participation in self-governance by resolution or other official action by the governing body of each Indian Tribe to be served.
- Pursuant to 25 U.S.C. 5383(c)(1)(C), applicant must demonstrate financial stability and financial management capability for 3 fiscal years.

Meeting the eligibility criteria for a Negotiation Cooperative Agreement does not mean that a T/TO is eligible for participation in the IHS TSGP under Title V of the ISDEAA. See 25 U.S.C. 5383, 42 CFR 137.15–23. For additional information on the eligibility for the IHS TSGP, please visit the ''Eligibility and Funding'' page on the OTSG website located at *https://www.ihs.gov/SelfGovernance.* The Division of Grants Management (DGM) will notify any applicants deemed ineligible.

2. Additional Information on Eligibility

The IHS does not fund concurrent projects. If an applicant is successful under this announcement, any subsequent applications in response to other Tribal Self-Governance Negotiation Cooperative Agreement Program announcements from the same applicant will not be funded. Applications on behalf of individuals (including sole proprietorships) and foreign organizations are not eligible and will be disqualified from competitive review and funding under this funding opportunity.

Note: Please refer to Section IV.2 (Application and Submission Information/ Subsection 2, Content and Form of Application Submission) for additional proof of applicant status documents required, such as Tribal Resolutions, proof of nonprofit status, etc.

3. Cost Sharing or Matching

The IHS does not require matching funds or cost sharing for grants or cooperative agreements.

4. Other Requirements

Applications with budget requests that exceed the highest dollar amount outlined under Section II Award Information, Estimated Funds Available, or exceed the period of performance outlined under Section II Award Information, Period of Performance, are considered not responsive and will not be reviewed. The DGM will notify the applicant.

Additional Required Documentation

Tribal Resolution

The DGM must receive an official, signed Tribal Resolution prior to issuing a Notice of Award (NoA) to any T/TO selected for funding. An applicant that is proposing a project affecting another Indian Tribe must include resolutions from all affected Tribes to be served. However, if an official signed Tribal Resolution cannot be submitted with the application prior to the application deadline date, a draft Tribal Resolution must be submitted with the application by the deadline date in order for the application to be considered complete and eligible for review. The draft Tribal Resolution is not in lieu of the required signed resolution but is acceptable until a signed resolution is received. If an application without a signed Tribal Resolution is selected for funding, the applicant will be contacted by the

Grants Management Specialist (GMS) listed in this funding announcement and given 90 days to submit an official signed Tribal Resolution to the GMS. If the signed Tribal Resolution is not received within 90 days, the award will be forfeited.

Applicants organized with a governing structure other than a Tribal council may submit an equivalent document commensurate with their governing organization.

IV. Application and Submission Information

Grants.gov uses a Workspace model for accepting applications. The Workspace consists of several online forms and three forms in which to upload documents—Project Narrative, Budget Narrative, and Other Documents. Give your files brief descriptive names. The filenames are key in finding specific documents during the merit review and in processing awards. Upload all requested and optional documents individually, rather than combining them into a single file. Creating a single file creates confusion when trying to find specific documents. Such confusion can contribute to delays in processing awards, and could lead to lower scores during the merit review.

1. Obtaining Application Materials

The application package and detailed instructions for this announcement are available at *https://www.Grants.gov.*

Please direct questions regarding the application process to *DGM@ihs.gov.*

2. Content and Form Application Submission

Mandatory documents for all applicants include:

- Application forms:

1. SF–424, Application for Federal Assistance.

2. SF–424A, Budget Information—Non-Construction Programs.

3. SF–424B, Assurances—Non-Construction Programs.

4. Project Abstract Summary form.

- Project Narrative (not to exceed 10 pages). See Section IV.2.A, Project Narrative for instructions.

1. Background information on the organization.

2. Proposed scope of work, objectives, and activities that provide a description of what the applicant plans to accomplish.

- Budget Narrative (not to exceed 5 pages). See Section IV.2.B, Budget Narrative for instructions.
- One-page Timeframe of award activities.
- Tribal Resolution(s) as described in Section III, Eligibility.
- Biographical sketches for all Key Personnel.
- Contractor/Consultant resumes or qualifications and scope of work.
- Disclosure of Lobbying Activities (SF–LLL), if applicant conducts reportable lobbying.
- Certification Regarding Lobbying (GG-Lobbying Form).
- Copy of current Negotiated Indirect Cost (IDC) rate agreement (required in order to receive IDC).
- Organizational Chart (optional).
- Documentation sufficient to demonstrate financial stability and financial management capability for 3 fiscal years. The Indian Tribe must provide evidence that, for the 3 fiscal years prior to requesting participation in the TSGP, the Indian Tribe has had no uncorrected significant and material audit exceptions in the required annual audit of the Indian Tribe's Self-Determination Contracts or Self-Governance Funding Agreements with any Federal agency. See 25 U.S.C. 5383, 42 CFR 137.15–23. For T/TO that expended $500,000 or more in Federal awards, the OTSG shall retrieve the audits directly from the Federal Audit Clearinghouse. For T/TO that expended less than $500,000 in Federal awards, the T/TO must provide evidence of the program review correspondence from the IHS or Bureau of Indian Affairs officials. See 42 CFR 137.21–23.
- Documentation of current Office of Management and Budget (OMB) Financial Audit.

Acceptable forms of documentation include:

1. Email confirmation from Federal Audit Clearinghouse (FAC) that audits were submitted; or

2. Face sheets from audit reports. Applicants can find these on the FAC website at *https://facdissem.census.gov/.*

Public Policy Requirements

All Federal public policies apply to IHS grants and cooperative agreements. Pursuant to 45 CFR 80.3(d), an individual shall not be deemed subjected to discrimination by reason of their exclusion from benefits limited by Federal law to individuals eligible for benefits and services from the IHS. See *https://www.hhs.gov/grants/grants/grants-policies-regulations/index.html.*

Requirements for Project and Budget Narratives

A. *Project Narrative:* This narrative should be a separate document that is no more than 10 pages and must: (1) have consecutively numbered pages; (2) use black font 12 points or larger (applicants may use 10-point font for tables); (3) be single-spaced; and (4) be formatted to fit standard letter paper (8½ x 11 inches). Do not combine this document with any others.

Be sure to succinctly answer all questions listed under the evaluation criteria (refer to Section V.1, Evaluation Criteria), and place all responses and required information in the correct section noted below or they will not be considered or scored. If the narrative exceeds the overall page limit, the reviewers will be directed to ignore any content beyond the page limit. The 10-page limit for the project narrative does not include the work plan, standard forms, Tribal Resolutions, budget, budget narratives, and/or other items. Page limits for each section within the project narrative are guidelines, not hard limits.

There are three parts to the project narrative: Part 1—Program Information; Part 2—Program Planning and Evaluation; and Part 3—Program Report. See below for additional details about what must be included in the narrative.

The page limits below are for each narrative and budget submitted.

Part 1: Program Information (Limit—4 Pages)

Section 1: Needs

Demonstrate that the Tribe has conducted previous Self-Governance planning activities by clearly stating the results of what was learned during the planning process. Explain how the Tribe has determined it has the knowledge and expertise to assume or expand PSFAs and the administrative infrastructure to support the assumption of PSFAs. Identify the need for assistance and how the Negotiation Cooperative Agreement would benefit the health activities the Tribe is preparing to assume or expand.

Part 2: Program Planning and Evaluation (Limit—4 Pages)

Section 1: Program Plans

State in measurable terms the objectives and appropriate activities to achieve the following Negotiation Cooperative Agreement recipient award activities:

(A) Determine the PSFAs that will be negotiated into the Tribe's Compact and FA. Prepare and discuss each PSFA in comparison to the current level of services provided so that an informed decision can be made on new or expanded program assumption.

(B) Identify Tribal shares associated with the PSFAs that will be included in the FA.

(C) Develop the terms and conditions that will be set forth in both the

Compact and FA to submit to the ALN prior to negotiations.

Describe fully and clearly how the Tribe's proposal will result in an improved approach to managing the PSFAs to be assumed or expanded. Include how the Tribe plans to demonstrate improved health services to the community and incorporate the proposed timelines for negotiations.

Section 2: Program Evaluation

Describe fully and clearly how the goals and proposed activities will improve the health care system and identify the anticipated or expected benefits for the Tribe. Define the criteria to be used to evaluate objectives associated with the project using a model for tracking.

Part 3: Program Report (Limit—2 Pages)

Section 1

Describe your organization's significant program activities and accomplishments over the past several years associated with the goals of this announcement and leading up to the negotiation phase.

Please identify and describe significant program activities and achievements associated with the delivery of quality health services. Provide a comparison of the actual accomplishments to the goals established for the project period or, if applicable, provide justification for the lack of progress.

B. Budget Narrative (Limit—5 Pages)

Provide a budget narrative that explains the amounts requested for each line item of the budget from the SF–424A (Budget Information for Non-Construction Programs) for the project. The applicant can submit with the budget narrative a more detailed spreadsheet than is provided by the SF–424A (the spreadsheet will not be considered part of the budget narrative). The budget narrative should specifically describe how each item would support the achievement of proposed objectives. Be very careful about showing how each item in the ''Other'' category is justified. Do NOT use the budget narrative to expand the project narrative.

3. Submission Dates and Times

Applications must be submitted through *Grants.gov* by 11:59 p.m. Eastern Time on the Application Deadline Date. Any application received after the application deadline will not be accepted for review. *Grants.gov* will notify the applicant via email if the application is rejected.

If technical challenges arise and assistance is required with the application process, contact *Grants.gov* Customer Support (see contact information at *https://www.Grants.gov*). If problems persist, contact Mr. Paul Gettys, Deputy Director, DGM, by email at *DGM@ihs.gov.* Please be sure to contact Mr. Gettys at least 10 days prior to the application deadline. Please do not contact the DGM until you have received a *Grants.gov* tracking number. In the event you are not able to obtain a tracking number, call the DGM as soon as possible.

The IHS will not acknowledge receipt of applications.

4. Intergovernmental Review

Executive Order 12372 requiring intergovernmental review is not applicable to this program.

5. Funding Restrictions

- Pre-award costs are not allowable.
- The available funds are inclusive of direct and indirect costs.
- Only one cooperative agreement may be awarded per applicant.

6. Electronic Submission Requirements

All applications must be submitted via *Grants.gov*. Please use the *https://www.Grants.gov* website to submit an application. Find the application by selecting the ''Search Grants'' link on the homepage. Follow the instructions for submitting an application under the Package tab. No other method of application submission is acceptable.

If you cannot submit an application through *Grants.gov*, you must request a waiver prior to the application due date. You must submit your waiver request by email to *DGM@ihs.gov.* Your waiver request must include clear justification for the need to deviate from the required application submission process. The IHS will not accept any applications submitted through any means outside of *Grants.gov* without an approved waiver.

If the DGM approves your waiver request, you will receive a confirmation of approval email containing submission instructions. You must include a copy of the written approval with the application submitted to the DGM. Applications that do not include a copy of the waiver approval from the DGM will not be reviewed. The Grants Management Officer of the DGM will notify the applicant via email of this decision. Applications submitted under waiver must be received by the DGM no later than 5:00 p.m. Eastern Time on the Application Deadline Date. Late applications will not be accepted for processing. Applicants that do not register for both the System for Award Management (SAM) and *Grants.gov* and/or fail to request timely assistance with technical issues will not be considered for a waiver to submit an application via alternative method.

Please be aware of the following:

- Please search for the application package in *https://www.Grants.gov* by entering the Assistance Listing number or the Funding Opportunity Number. Both numbers are located in the header of this announcement.
- If you experience technical challenges while submitting your application, please contact *Grants.gov* Customer Support (see contact information at *https://www.Grants.gov*).
- Upon contacting *Grants.gov,* obtain a tracking number as proof of contact. The tracking number is helpful if there are technical issues that cannot be resolved and a waiver from the agency must be obtained.
- Applicants are strongly encouraged not to wait until the deadline date to begin the application process through *Grants.gov* as the registration process for SAM and *Grants.gov* could take up to 20 working days.
- Please follow the instructions on *Grants.gov* to include additional documentation that may be requested by this funding announcement.
- Applicants must comply with any page limits described in this funding announcement.
- After submitting the application, you will receive an automatic acknowledgment from *Grants.gov* that contains a *Grants.gov* tracking number. The IHS will not notify you that the application has been received.

System for Award Management

Organizations that are not registered with the System for Award Management (SAM) must access the SAM online registration through the SAM home page at *https://sam.gov.* Organizations based in the U.S. will also need to provide an Employer Identification Number from the Internal Revenue Service that may take an additional 2–5 weeks to become active. Please see *SAM.gov* for details on the registration process and timeline. Registration with the SAM is free of charge but can take several weeks to process. Applicants may register online at *https://sam.gov.*

Unique Entity Identifier

Your *SAM.gov* registration now includes a Unique Entity Identifier (UEI), generated by *SAM.gov,* which replaces the DUNS number obtained from Dun and Bradstreet. *SAM.gov* registration no longer requires a DUNS number.

Check your organization's *SAM.gov* registration as soon as you decide to apply for this program. If your *SAM.gov*

registration is expired, you will not be able to submit an application. It can take several weeks to renew it or resolve any issues with your registration, so do not wait.

Check your *Grants.gov* registration. Registration and role assignments in *Grants.gov* are self-serve functions. One user for your organization will have the authority to approve role assignments, and these must be approved for active users in order to ensure someone in your organization has the necessary access to submit an application.

The Federal Funding Accountability and Transparency Act of 2006, as amended (''Transparency Act''), requires all HHS recipients to report information on sub-awards. Accordingly, all IHS recipients must notify potential first-tier sub-recipients that no entity may receive a first-tier sub-award unless the entity has provided its UEI number to the prime recipient organization. This requirement ensures the use of a universal identifier to enhance the quality of information available to the public pursuant to the Transparency Act.

Additional information on implementing the Transparency Act, including the specific requirements for SAM, are available on the DGM Grants Management, Policy Topics web page at *https://www.ihs.gov/dgm/policytopics/.*

V. Application Review Information

Possible points assigned to each section are noted in parentheses. The project narrative and budget narrative should include only the first year of activities. The project narrative should be written in a manner that is clear to outside reviewers unfamiliar with prior related activities of the applicant. It should be well organized, succinct, and contain all information necessary for reviewers to fully understand the project. Attachments requested in the criteria do not count toward the page limit for the narratives. Points will be assigned to each evaluation criteria adding up to a total of 100 possible points. Points are assigned as follows:

1. Evaluation Criteria

A. Introduction and Need for Assistance (25 Points)

Demonstrate that the Tribe has conducted previous Self-Governance planning activities by clearly stating the results of what was learned during the planning process. Explain how the Tribe has determined it has the knowledge and expertise to assume or expand PSFAs and the administrative infrastructure to support the assumption of PSFAs. Identify the need for assistance and how the Negotiation Cooperative Agreement would benefit the health activities the Tribe is preparing to assume or expand.

B. Project Objective(s), Work Plan and Approach (25 Points)

State in measurable terms the objectives and appropriate activities to achieve the following Negotiation Cooperative Agreement recipient award activities:

1. Determine the PSFAs that will be negotiated into the Tribe's Compact and FA. Prepare and discuss each PSFA in comparison to the level of services provided so that an informed decision can be made on new or expanded program assumption.

2. Identify Tribal shares associated with the PSFAs that will be included in the FA.

3. Develop the terms and conditions that will be set forth in both the Compact and FA to submit to the ALN prior to negotiations. Clearly describe how the Tribe's proposal will result in an improved approach to managing the PSFAs to be assumed or expanded. Include how the Tribe plans to demonstrate improved health care services to the community and incorporate the proposed timelines for negotiations.

C. Program Evaluation (25 Points)

Describe fully the improvements that will be made by the Tribe to manage the health care system and identify the anticipated or expected benefits for the Tribe. Define the criteria to be used to evaluate objectives associated with the project and how they will be measured.

D. Organizational Capabilities, Key Personnel, and Qualifications (15 Points)

Describe the organizational structure of the Tribe and its ability to manage the proposed project. Include resumes or position descriptions of key staff showing requisite experience and expertise. If applicable, include resumes and scope of work for consultants that demonstrate experience and expertise relevant to the project.

E. Categorical Budget and Budget Justification (10 Points)

Submit a budget with a narrative describing the budget request and matching the scope of work described in the project narrative. Justify all expenditures identifying reasonable and allowable costs necessary to accomplish the goals and objectives as outlined in the project narrative.

Additional documents can be uploaded as Other Attachments in *Grants.gov.*

These can include:

- Work plan, logic model, and/or timeline for proposed objectives.
- Position descriptions for key staff.
- Resumes of key staff that reflect current duties.
- Consultant or contractor proposed scope of work and letter of commitment (if applicable).
- Current Indirect Cost Rate Agreement.
- Organizational chart.
- Map of area identifying project location(s).
- Additional documents to support narrative (*i.e.,* data tables, key news articles, etc.).

2. Review and Selection

Each application will be prescreened for eligibility and completeness as outlined in the funding announcement. Applications that meet the eligibility criteria shall be reviewed for merit by the Review Committee (RC) based on the evaluation criteria. Incomplete applications and applications that are not responsive to the administrative thresholds (budget limit, period of performance limit) will not be referred to the RC and will not be funded. The DGM will notify the applicant of this determination.

Applicants must address all program requirements and provide all required documentation.

3. Notifications of Disposition

All applicants will receive an Executive Summary Statement from the OTSG within 30 days of the conclusion of the RC outlining the strengths and weaknesses of their application. The summary statement will be sent to the Authorizing Official identified on the face page (SF–424) of the application.

A. Award Notices for Funded Applications

The NoA is the authorizing document for which funds are dispersed to the approved entities and reflects the amount of Federal funds awarded, the purpose of the award, the terms and conditions of the award, the effective date of the award, the budget period, and period of performance. Each entity approved for funding must have a user account in GrantSolutions in order to retrieve the NoA. Please see the Agency Contacts list in Section VII for the systems contact information.

B. Approved but Unfunded Applications

Approved applications not funded due to lack of available funds will be

held for 1 year. If funding becomes available during the course of the year, the application may be reconsidered.

Note: Any correspondence, other than the official NoA executed by an IHS grants management official announcing to the project director that an award has been made to their organization, is not an authorization to implement their program on behalf of the IHS.

VI. Award Administration Information

1. Administrative Requirements

Awards issued under this announcement are subject to, and are administered in accordance with, the following regulations and policies:

A. The criteria as outlined in this program announcement.

B. Administrative Regulations for Awards:

- Uniform Administrative Requirements, Cost Principles, and Audit Requirements for HHS Awards currently in effect or implemented during the period of award, other Department regulations and policies in effect at the time of award, and applicable statutory provisions. At the time of publication, this includes 45 CFR part 75, at *https://www.govinfo.gov/content/pkg/CFR-2021-title45-vol1/pdf/CFR-2021-title45-vol1-part75.pdf.*
- Please review all HHS regulatory provisions for Termination at 45 CFR 75.372, at the time of this publication located at *https://www.govinfo.gov/content/pkg/CFR-2021-title45-vol1/pdf/CFR-2021-title45-vol1-sec75-372.pdf.*

C. Grants Policy:

- HHS Grants Policy Statement, Revised January 2007, at *https://www.hhs.gov/sites/default/files/grants/grants/policies-regulations/hhsgps107.pdf.*

D. Cost Principles:

- Uniform Administrative Requirements for HHS Awards, ''Cost Principles,'' at 45 CFR part 75 subpart E, at the time of this publication located at *https://www.govinfo.gov/content/pkg/CFR-2021-title45-vol1/pdf/CFR-2021-title45-vol1-part75-subpartE.pdf.*

E. Audit Requirements:

- Uniform Administrative Requirements for HHS Awards, ''Audit Requirements,'' at 45 CFR part 75 subpart F, at the time of this publication located at *https://www.govinfo.gov/content/pkg/CFR-2021-title45-vol1/pdf/CFR-2021-title45-vol1-part75-subpartF.pdf.*

F. As of August 13, 2020, 2 CFR part 200 was updated to include a prohibition on certain telecommunications and video surveillance services or equipment. This prohibition is described in 2 CFR part 200.216. This will also be described in the terms and conditions of every IHS grant and cooperative agreement awarded on or after August 13, 2020.

2. Indirect Costs

This section applies to all recipients that request reimbursement of IDC in their application budget. In accordance with HHS Grants Policy Statement, Part II–27, the IHS requires applicants to obtain a current IDC rate agreement and submit it to the DGM prior to the DGM issuing an award. The rate agreement must be prepared in accordance with the applicable cost principles and guidance as provided by the cognizant agency or office. A current rate covers the applicable award activities under the current award's budget period. If the current rate agreement is not on file with the DGM at the time of award, the IDC portion of the budget will be restricted. The restrictions remain in place until the current rate agreement is provided to the DGM.

Per 2 CFR 200.414(f) Indirect (F&A) costs,

> any non-Federal entity (NFE) [*i.e.,* applicant] that does not have a current negotiated rate, . . . may elect to charge a de minimis rate of 10 percent of modified total direct costs which may be used indefinitely. As described in Section 200.403, costs must be consistently charged as either indirect or direct costs, but may not be double charged or inconsistently charged as both. If chosen, this methodology once elected must be used consistently for all Federal awards until such time as the NFE chooses to negotiate for a rate, which the NFE may apply to do at any time.

Electing to charge a de minimis rate of 10 percent can be used by applicants that have received an approved negotiated indirect cost rate from HHS or another cognizant Federal agency. Applicants awaiting approval of their indirect cost proposal may request the 10 percent de minimis rate. When the applicant chooses this method, costs included in the indirect cost pool must not be charged as direct costs to the award.

Available funds are inclusive of direct and appropriate indirect costs. Approved indirect funds are awarded as part of the award amount, and no additional funds will be provided.

Generally, IDC rates for IHS recipients are negotiated with the Division of Cost Allocation at *https://rates.psc.gov/* or the Department of the Interior (Interior Business Center) at *https://ibc.doi.gov/ICS/tribal.* For questions regarding the indirect cost policy, please write to *DGM@ihs.gov.*

3. Reporting Requirements

The recipient must submit required reports consistent with the applicable deadlines. Failure to submit required reports within the time allowed may result in suspension or termination of an active award, withholding of additional awards for the project, or other enforcement actions such as withholding of payments or converting to the reimbursement method of payment. Continued failure to submit required reports may result in the imposition of special award provisions and/or the non-funding or non-award of other eligible projects or activities. This requirement applies whether the delinquency is attributable to the failure of the recipient organization or the individual responsible for preparation of the reports. Per DGM policy, all reports must be submitted electronically by attaching them as a ''Grant Note'' in GrantSolutions. Personnel responsible for submitting reports will be required to obtain a login and password for GrantSolutions. Please use the form under the Recipient User section of *https://www.grantsolutions.gov/home/getting-started-request-a-user-account/.* Download the Recipient User Account Request Form, fill it out completely, and submit it as described on the web page and in the form.

The reporting requirements for this program are noted below.

A. Progress Reports

Program progress reports are required semi-annually. The progress reports are due within 30 days after the reporting period ends (specific dates will be listed in the NoA Terms and Conditions). These reports must include a brief comparison of actual accomplishments to the goals established for the period, a summary of progress to date or, if applicable, provide sound justification for the lack of progress, and other pertinent information as required. A final report must be submitted within 120 days of the period of performance end date.

B. Financial Reports

Federal Financial Reports are due 90 days after the end of each budget period, and a final report is due 120 days after the end of the period of performance.

Recipients are responsible and accountable for reporting accurate information on all required reports: the Progress Reports and the Federal Financial Report.

Failure to submit timely reports may result in adverse award actions blocking access to funds.

C. Federal Sub-Award Reporting System (FSRS)

This award may be subject to the Transparency Act sub-award and executive compensation reporting requirements of 2 CFR part 170.

The Transparency Act requires the OMB to establish a single searchable database, accessible to the public, with information on financial assistance awards made by Federal agencies. The Transparency Act also includes a requirement for recipients of Federal awards to report information about first-tier sub-awards and executive compensation under Federal assistance awards.

The IHS has implemented a Term of Award into all IHS Standard Terms and Conditions, NoAs, and funding announcements regarding the FSRS reporting requirement. This IHS Term of Award is applicable to all IHS grant and cooperative agreements issued on or after October 1, 2010, with a $25,000 sub-award obligation threshold met for any specific reporting period.

For the full IHS award term implementing this requirement and additional award applicability information, visit the DGM Grants Management website at *https://www.ihs.gov/dgm/policytopics/.*

D. Non-Discrimination Legal Requirements for Recipients of Federal Financial Assistance (FFA)

The recipient must administer the project in compliance with Federal civil rights laws, where applicable, that prohibit discrimination on the basis of race, color, national origin, disability, age, and comply with applicable conscience protections. The recipient must comply with applicable laws that prohibit discrimination on the basis of sex, which includes discrimination on the basis of gender identity, sexual orientation, and pregnancy. Compliance with these laws requires taking reasonable steps to provide meaningful access to persons with limited English proficiency and providing programs that are accessible to and usable by persons with disabilities. The HHS Office for Civil Rights provides guidance on complying with civil rights laws enforced by HHS. See *https://www.hhs.gov/civil-rights/for-providers/provider-obligations/index.html* and *https://www.hhs.gov/civil-rights/for-individuals/nondiscrimination/index.html.*

- Recipients of FFA must ensure that their programs are accessible to persons with limited English proficiency. For guidance on meeting your legal obligation to take reasonable steps to ensure meaningful access to your programs or activities by limited English proficiency individuals, see *https://www.hhs.gov/civil-rights/for-individuals/special-topics/limited-english-proficiency/fact-sheet-guidance/index.html* and *https://www.lep.gov.*
- For information on your specific legal obligations for serving qualified individuals with disabilities, including reasonable modifications and making services accessible to them, see *https://www.hhs.gov/civil-rights/for-individuals/disability/index.html.*
- HHS funded health and education programs must be administered in an environment free of sexual harassment. See *https://www.hhs.gov/civil-rights/for-individuals/sex-discrimination/index.html.*
- For guidance on administering your program in compliance with applicable Federal religious nondiscrimination laws and applicable Federal conscience protection and associated anti-discrimination laws, see *https://www.hhs.gov/conscience/conscience-protections/index.html* and *https://www.hhs.gov/conscience/religious-freedom/index.html.*
- Pursuant to 45 CFR 80.3(d), an individual shall not be deemed subjected to discrimination by reason of their exclusion from benefits limited by Federal law to individuals eligible for benefits and services from the IHS.

E. Federal Awardee Performance and Integrity Information System (FAPIIS)

The IHS is required to review and consider any information about the applicant that is in the FAPIIS at *https://www.fapiis.gov/fapiis/#/home* before making any award in excess of the simplified acquisition threshold (currently $250,000) over the period of performance. An applicant may review and comment on any information about itself that a Federal awarding agency previously entered. The IHS will consider any comments by the applicant, in addition to other information in FAPIIS, in making a judgment about the applicant's integrity, business ethics, and record of performance under Federal awards when completing the review of risk posed by applicants, as described in 45 CFR 75.205.

As required by 45 CFR part 75 Appendix XII of the Uniform Guidance, NFEs are required to disclose in FAPIIS any information about criminal, civil, and administrative proceedings, and/or affirm that there is no new information to provide. This applies to NFEs that receive Federal awards (currently active grants, cooperative agreements, and procurement contracts) greater than $10 million for any period of time during the period of performance of an award/project.

Mandatory Disclosure Requirements

As required by 2 CFR part 200 of the Uniform Guidance, and HHS implementing regulations at 45 CFR part 75, the IHS must require an NFE or an applicant for a Federal award to disclose, in a timely manner, in writing to the IHS or pass-through entity all violations of Federal criminal law involving fraud, bribery, or gratuity violations potentially affecting the Federal award.

All applicants and recipients must disclose in writing, in a timely manner, to the IHS and to the HHS Office of Inspector General all information related to violations of Federal criminal law involving fraud, bribery, or gratuity violations potentially affecting the Federal award. 45 CFR 75.113.

Disclosures must be sent in writing to:

U.S. Department of Health and Human Services, Indian Health Service, Division of Grants Management, ATTN: Marsha Brookins, Director, 5600 Fishers Lane, Mail Stop: 09E70, Rockville, MD 20857, (Include ''Mandatory Grant Disclosures'' in subject line), Office: (301) 443–5204, Fax: (301) 594–0899, Email: *DGM@ihs.gov*

AND

U.S. Department of Health and Human Services, Office of Inspector General, ATTN: Mandatory Grant Disclosures, Intake Coordinator, 330 Independence Avenue SW, Cohen Building, Room 5527, Washington, DC 20201, URL: *https://oig.hhs.gov/fraud/report-fraud/,* (Include ''Mandatory Grant Disclosures'' in subject line), Fax: (202) 205–0604 (Include ''Mandatory Grant Disclosures'' in subject line) or, Email: *MandatoryGranteeDisclosures@oig.hhs.gov*

Failure to make required disclosures can result in any of the remedies described in 45 CFR 75.371 Remedies for noncompliance, including suspension or debarment (see 2 CFR part 180 and 2 CFR part 376).

VII. Agency Contacts

1. *Questions on the program matters may be directed to:* Roxanne Houston, Program Officer, Indian Health Service, Office of Tribal Self-Governance, 5600 Fishers Lane, Mail Stop: 08E09B, Rockville, MD 20857, Phone: (301) 443–7821, Email: *Roxanne.Houston@ihs.gov,* Website: *https://www.ihs.gov/SelfGovernance/.*

2. *Questions on awards management and fiscal matters may be directed to:*

Indian Health Service, Division of Grants Management, 5600 Fishers Lane, Mail Stop: 09E70, Rockville, MD 20857, Email: *DGM@ihs.gov.*

3. For technical assistance with *Grants.gov,* please contact the *Grants.gov* help desk at 800–518–4726, or by email at *support@grants.gov.*

4. For technical assistance with GrantSolutions, please contact the GrantSolutions help desk at (866) 577–0771, or by email at *help@grantsolutions.gov.*

VIII. Other Information

The Public Health Service strongly encourages all grant, cooperative agreement, and contract recipients to provide a smoke-free workplace and promote the non-use of all tobacco products. In addition, Public Law 103–227, the Pro-Children Act of 1994, prohibits smoking in certain facilities (or in some cases, any portion of the facility) in which regular or routine education, library, day care, health care, or early childhood development services are provided to children. This is consistent with the HHS mission to protect and advance the physical and mental health of the American people.

P. Benjamin Smith,

Deputy Director, Indian Health Service.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Center for Advancing Translational Sciences; Notice of Closed Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Center for Advancing Translational Sciences Special Emphasis Panel; Basket Clinical Trial U44.

Date: May 5, 2023.

Time: 12:00 p.m. to 2:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Center for Advancing Translational Sciences, National Institutes of Health, 6701 Democracy Boulevard, Room 1080, Bethesda, MD 20892 (Virtual Meeting).

Contact Person: Jing Chen, Ph.D., Scientific Review Officer, Office of Scientific Review, National Center for Advancing Translational Sciences, National Institutes of Health, 6701 Democracy Boulevard, Room 1080, Bethesda, MD 20892–4874, *chenjing@mail.nih.gov,* (301) 827–3268.

This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.

(Catalogue of Federal Domestic Assistance Program Nos. 93.859, Pharmacology, Physiology, and Biological Chemistry Research; 93.350, B—Cooperative Agreements; 93.859, Biomedical Research and Research Training, National Institutes of Health, HHS)

Dated: April 26, 2023.

National Institutes of Health

National Institute of Biomedical Imaging and Bioengineering; Notice of Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Advisory Council for Biomedical Imaging and Bioengineering.

The meeting will be open to the public, with attendance limited to space available. Individuals who plan to attend in person should register at (*https://www.nibib.nih.gov/about-nibib/advisory-council/registration*) in advance of the meeting so that the meeting organizers can plan accordingly.

The meeting will be videocast and can be accessed from the NIH Videocasting website at (*https://videocast.nih.gov/watch=49359*).

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications and/or contract proposals, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Advisory Council for Biomedical Imaging and Bioengineering NACBIB, May 2023.

Date: May 16, 2023.

Open: 09:00 a.m. to 12:30 p.m.

Agenda: Report from the Institute Director, Council Members and other Institute Staff.

Place: William F. Bolger Center, 9600 Newbridge Drive, Franklin Building, Classroom 1, Potomac, MD 20854.

Closed: 2:15 p.m. to 3:30 p.m.

Agenda: To review and evaluate grant applications and/or proposals.

Place: William F. Bolger Center, 9600 Newbridge Drive, Franklin Building, Classroom 1, Potomac, MD 20854.

Contact Person: David T. George, Ph.D., Associate Director for Research Administration, Office of Research Administration, National Institute of Biomedical Imaging and Bioengineering, 6707 Democracy Boulevard, Room 920, Bethesda, MD 20892, *georged@mail.nih.gov*.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute's/Center's home page: *https://www.nibib.nih.gov/about-nibib/advisory-council* where an agenda and any additional information for the meeting will be posted when available.

Dated: April 25, 2023.

National Library of Medicine Notice of Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the Literature Selection Technical Review Committee.

The meeting is devoted to the review and evaluation of journals for potential indexing by the National Library of Medicine and will be closed to the public in accordance with the provisions set forth in section 552b(c)(9)(B), Title 5 U.S.C., as amended. Premature disclosure of the titles of the journals as potential titles to be indexed by the National Library of Medicine, the discussions, and the presence of individuals associated with these publications could significantly frustrate the review and evaluation of individual journals.

Name of Committee: Literature Selection Technical Review Committee.

Date: June 22–23, 2023.

Closed: 10:00 a.m. to 1:30 p.m.

Agenda: To review and evaluate journals as potential titles to be indexed by the National Library of Medicine.

Place: Virtual Meeting.

Open: June 22, 2023, 1:30 p.m. to 2:30 p.m.

Agenda: Administrative.

Place: Virtual Meeting.

Closed: June 22, 2023, 2:30 p.m. to 4:30 p.m.

Agenda: To review and evaluate journals as potential titles to be indexed by the National Library of Medicine.

Place: Virtual Meeting.

Closed: June 23, 2023, 8:30 a.m. to 12:00 p.m.

Agenda: To review and evaluate journals as potential titles to be indexed by the National Library of Medicine.

Place: Virtual Meeting.

Contact Person: Dianne Babski, Associate Director, Division of Library Operations, National Library of Medicine, 8600 Rockville Pike, Bethesda, MD 20894, 301–827–4729, *babskid@mail.nih.gov.*

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice at least 7 days prior to the meeting to be considered. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

(Catalogue of Federal Domestic Assistance Program No. 93.879, Medical Library Assistance, National Institutes of Health, HHS).

Dated: April 25, 2023.

Miguelina Perez,

Program Analyst, Office of Federal Advisory Committee Policy.

Center for Scientific Review; Notice of Closed Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Member Conflicts: Bioengineering, Biodata, and Biomodeling Technologies.

Date: May 31, 2023.

Time: 11:00 a.m. to 2:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892, (Virtual Meeting).

Contact Person: David R. Filpula, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 6181, MSC 7892, Bethesda, MD 20892, 301–435–2902, *filpuladr@mail.nih.gov.*

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Current List of HHS-Certified Laboratories and Instrumented Initial Testing Facilities Which Meet Minimum Standards To Engage in Urine and Oral Fluid Drug Testing for Federal Agencies

AGENCY: Substance Abuse and Mental Health Services Administration, HHS.

ACTION: Notice.

SUMMARY: The Department of Health and Human Services (HHS) notifies federal agencies of the laboratories and Instrumented Initial Testing Facilities (IITFs) currently certified to meet the standards of the Mandatory Guidelines for Federal Workplace Drug Testing Programs using Urine or Oral Fluid (Mandatory Guidelines).

FOR FURTHER INFORMATION CONTACT: Anastasia Donovan, Division of Workplace Programs, SAMHSA/CSAP, 5600 Fishers Lane, Room 16N06B, Rockville, Maryland 20857; 240–276–2600 (voice); *Anastasia.Donovan@samhsa.hhs.gov* (email).

SUPPLEMENTARY INFORMATION: In accordance with Section 9.19 of the Mandatory Guidelines, a notice listing all currently HHS-certified laboratories and IITFs is published in the **Federal Register** during the first week of each month. If any laboratory or IITF certification is suspended or revoked, the laboratory or IITF will be omitted from subsequent lists until such time as it is restored to full certification under the Mandatory Guidelines.

If any laboratory or IITF has withdrawn from the HHS National Laboratory Certification Program (NLCP) during the past month, it will be listed at the end and will be omitted from the monthly listing thereafter.

This notice is also available on the internet at *https://www.samhsa.gov/workplace/resources/drug-testing/certified-lab-list.*

The Department of Health and Human Services (HHS) notifies federal agencies of the laboratories and Instrumented Initial Testing Facilities (IITFs) currently certified to meet the standards of the Mandatory Guidelines for Federal Workplace Drug Testing Programs (Mandatory Guidelines) using Urine and of the laboratories currently certified to meet the standards of the Mandatory Guidelines using Oral Fluid.

The Mandatory Guidelines using Urine were first published in the **Federal Register** on April 11, 1988 (53 FR 11970), and subsequently revised in the **Federal Register** on June 9, 1994 (59 FR 29908); September 30, 1997 (62 FR 51118); April 13, 2004 (69 FR 19644); November 25, 2008 (73 FR 71858); December 10, 2008 (73 FR 75122); April 30, 2010 (75 FR 22809); and on January 23, 2017 (82 FR 7920).

The Mandatory Guidelines using Oral Fluid were first published in the **Federal Register** on October 25, 2019 (84 FR 57554) with an effective date of January 1, 2020.

The Mandatory Guidelines were initially developed in accordance with Executive Order 12564 and section 503 of Public Law 100–71 and allowed urine drug testing only. The Mandatory Guidelines using Urine have since been revised, and new Mandatory Guidelines allowing for oral fluid drug testing have been published. The Mandatory Guidelines require strict standards that laboratories and IITFs must meet in order to conduct drug and specimen validity tests on specimens for federal agencies. HHS does not allow IITFs to conduct oral fluid testing.

To become certified, an applicant laboratory or IITF must undergo three rounds of performance testing plus an on-site inspection. To maintain that certification, a laboratory or IITF must participate in a quarterly performance testing program plus undergo periodic, on-site inspections.

Laboratories and IITFs in the applicant stage of certification are not to be considered as meeting the minimum requirements described in the HHS Mandatory Guidelines using Urine and/or Oral Fluid. An HHS-certified laboratory or IITF must have its letter of certification from HHS/SAMHSA (formerly: HHS/NIDA), which attests that the test facility has met minimum standards. HHS does not allow IITFs to conduct oral fluid testing.

HHS-Certified Laboratories Approved To Conduct Oral Fluid Drug Testing

In accordance with the Mandatory Guidelines using Oral Fluid dated October 25, 2019 (84 FR 57554), the following HHS-certified laboratories meet the minimum standards to conduct drug and specimen validity tests on oral fluid specimens:

At this time, there are no laboratories certified to conduct drug and specimen validity tests on oral fluid specimens.

HHS-Certified Instrumented Initial Testing Facilities Approved To Conduct Urine Drug Testing

In accordance with the Mandatory Guidelines using Urine dated January 23, 2017 (82 FR 7920), the following HHS-certified IITFs meet the minimum standards to conduct drug and specimen validity tests on urine specimens:

Dynacare, 6628 50th Street NW, Edmonton, AB Canada T6B 2N7, 780–784–1190 (Formerly: Gamma-Dynacare Medical Laboratories)

HHS-Certified Laboratories Approved To Conduct Urine Drug Testing

In accordance with the Mandatory Guidelines using Urine dated January 23, 2017 (82 FR 7920), the following HHS-certified laboratories meet the minimum standards to conduct drug and specimen validity tests on urine specimens:

Alere Toxicology Services, 1111 Newton St., Gretna, LA 70053, 504–361–8989/800–433–3823 (Formerly: Kroll Laboratory Specialists, Inc., Laboratory Specialists, Inc.)

* The Standards Council of Canada (SCC) voted to end its Laboratory Accreditation Program for Substance Abuse (LAPSA) effective May 12, 1998. Laboratories certified through that program were accredited to conduct forensic urine drug testing as required by U.S. Department of Transportation (DOT) regulations. As of that date, the certification of those accredited Canadian laboratories will continue under DOT authority. The responsibility for conducting quarterly performance testing plus periodic on-site inspections of those LAPSA-accredited laboratories was transferred to the U.S. HHS, with the HHS' NLCP contractor continuing to have an active role in the performance testing and laboratory inspection processes. Other Canadian laboratories wishing to be considered for the NLCP may apply directly to the NLCP contractor just as U.S. laboratories do.

Upon finding a Canadian laboratory to be qualified, HHS will recommend that DOT certify the laboratory (**Federal Register**, July 16, 1996) as meeting the minimum standards of the Mandatory Guidelines published in the **Federal Register** on January 23, 2017 (82 FR 7920). After receiving DOT certification, the laboratory will be included in the monthly list of HHS-certified laboratories and participate in the NLCP certification maintenance program.

Alicia Broadus,

Public Health Advisor.

BILLING CODE 4162–20–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Fiscal Year (FY) 2023 Notice of Supplemental Funding Opportunity

AGENCY: Substance Abuse and Mental Health Services Administration, Department of Health and Human Services (HHS).

ACTION: Notice of intent to award supplemental funding.

SUMMARY: This notice is to inform the public that the Substance Abuse and Mental Health Services Administration (SAMHSA) is supporting an administrative supplement in scope of the parent award for the one grant recipient funded in fiscal year (FY) 2020 under the Suicide Prevention Resource Center (SPRC) Notice of Funding Opportunity (NOFO) SM–20–011. The grant recipient may receive up to $2,817,614. The recipient's project period will be extended by 12 months until August 30, 2025. The supplemental funding will be used to develop the new National Strategy for Suicide Prevention, which sets the direction of the field to prioritize suicide prevention activities. This is being requested by the White House Domestic Policy Council.

FOR FURTHER INFORMATION CONTACT: Brandon J. Johnson, Substance Abuse and Mental Health Services Administration, 5600 Fishers Lane, Rockville, MD 20857, telephone (240) 276–1222; email: *brandon.johnson1@samhsa.hhs.gov*.

SUPPLEMENTARY INFORMATION:

Funding Opportunity Title: FY 2020 Suicide Prevention Resource Center SM–20–011.

Assistance Listing Number: 93.243.

Authority: Section 520A and 520C of the Public Health Service Act, as amended.

Justification: Eligibility for this supplemental funding is limited to the University of Oklahoma Health Sciences Center which was funded in FY 2020 under the Suicide Prevention Resource Center grant. The University of Oklahoma Health Sciences Center has special expertise completing activities and developing previous versions of the National Strategy for Suicide Prevention.

This is not a formal request for application. Assistance will only be provided to the sole SPRC grant recipient funded in FY 2020 under SM–20–011 based on the receipt of a satisfactory application and associated budget that is approved by a review group.

Dated: April 26, 2023.

Ann Ferrero,

Public Health Analyst.

BILLING CODE 4162–20–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Fiscal Year (FY) 2023 Notice of Supplemental Funding Opportunity

AGENCY: Substance Abuse and Mental Health Services Administration, Department of Health and Human Services (HHS).

ACTION: Notice of intent to award supplemental funding.

SUMMARY: This notice is to inform the public the Substance Abuse and Mental Health Services Administration (SAMHSA) is supporting a supplement

in scope of the original award to the University of North Carolina funded in FY 2018 under the National Center of Excellence for Eating Disorders (NCEED), Notice of Funding Opportunity (NOFO) SM–18–021. The recipient may receive up to $747,646. The supplemental funding will extend the project period by 12-months until September 29, 2024 and will: continue to develop and disseminate high-quality training and technical assistance to healthcare practitioners on issues related to eating disorders; facilitate the identification of model eating disorder programs; provide the most up-to-date information on eating disorders; and promote public awareness of eating disorders.

FOR FURTHER INFORMATION CONTACT: Nancy Kelly, Chief, Mental Health Prevention Branch, Substance Abuse and Mental Health Services Administration, 5600 Fishers Lane, Rockville, MD 20857, telephone 240–276–1143; email: *nancy.kelly@samhsa.hhs.gov.*

SUPPLEMENTARY INFORMATION:

Funding Opportunity Title: FY 2018 Center of Excellence for Eating Disorders (NCEED) Notice of Funding Opportunity SM–18–021.

Assistance Listing Number: 93.243.

Authority: The NCEED is authorized under section 520A (290bb–32) of the Public Health Service Act, as amended.

Justification: Eligibility for this supplemental funding is limited to the University of North Carolina, which was funded in FY 2018 under the NCEED NOFO SM–18–021. The University of North Carolina has special expertise to develop and disseminate training and technical assistance for healthcare practitioners on issues related to addressing eating disorders.

This is not a formal request for application. Assistance will only be provided to NCEED recipient (University of North Carolina) funded in FY 2018 based on the receipt of a satisfactory application and associated budget that is approved by a review group.

BILLING CODE 4162–20–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2023–0245]

National Commercial Fishing Safety Advisory Committee; May 2023 Meetings

AGENCY: Coast Guard, Department of Homeland Security.

ACTION: Notice of federal advisory committee meeting.

SUMMARY: The National Commercial Fishing Safety Advisory Committee (Committee) will conduct a series of meetings over three days to review, discuss, and make recommendations to the Secretary on matters relating to Marine Casualty investigation cases related to Personal Flotation Devices (PFD), Cold Water, and Falls Overboard. The meetings will be open to the public.

DATES:

Meetings: The Committee will hold a meeting on Tuesday, May 23, 2023, from 8 a.m. until 5 p.m. Eastern Daylight Time (EDT), Wednesday, May 24, 2023, from 8 a.m. until 5 p.m. EDT, and Thursday, May 25, 2023, from 8 a.m. until 5 p.m. EDT. The Committee meeting on Tuesday, May 23, 2023, from 8 a.m. until 9 a.m. will be dedicated to an administrative meeting (Committee members only). Please note these meetings may close early if the Committee has completed its business.

Comments and supporting documentation: To ensure your comments are received before the meeting, please submit your written comments no later than May 18, 2023.

ADDRESSES: The meeting will be held at the Norfolk Waterside Marriott, 235 East Main Street, Norfolk, Virginia 23510, *Hotel in Downtown Norfolk, VA | Norfolk Waterside Marriott.*

The National Commercial Fishing Safety Advisory Committee is committed to ensuring all participants have equal access regardless of disability status. If you require reasonable accommodation due to a disability to fully participate, please email Mr., Jonathan Wendland at *Jonathan.G.Wendland@uscg.mil* or call at 202–372–1245 as soon as possible.

Instructions: You are free to submit comments at any time, including orally at the meeting as time permits, but if you want your comment reviewed before the meeting, please submit your comments no later than May 18, 2023. We are particularly interested in comments regarding the topics in the ''Agenda'' section below. We encourage you to submit comments through Federal eRulemaking Portal at *https://www.regulations.gov.* If your material cannot be submitted using *https://www.regulations.gov,* call or email the individual in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. You must include the docket number [USCG–2023–0245]. Comments received will be posted without alteration at *https://www.regulations.gov* including any personal information provided. You may wish to review the Privacy and Security notice available on the homepage of *https://www.regulations.gov,* and DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020). If you encounter technical difficulties with comment submission, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice.

Docket Search: Documents mentioned in this notice as being available in the docket, and all public comments, will be in our online docket at *https://www.regulations.gov,* and can be viewed by following that website's instructions. Additionally, if you go to the online docket and sign-up for email alerts, you will be notified when comments are posted.

FOR FURTHER INFORMATION CONTACT: Mr. Jonathan Wendland, Alternate Designated Federal Officer (ADFO) of the National Commercial Fishing Safety Advisory Committee, 2703 Martin Luther King Jr Ave. SE, Stop 7509, Washington, DC 20593–7509, telephone 202–372–1245 or *Jonathan.G.Wendland@uscg.mil.*

SUPPLEMENTARY INFORMATION: Notice of this meeting is in compliance with the *Federal Advisory Committee Act,* (Pub. L. 117–286, 5 U.S.C., ch. 10). The National Commercial Fishing Safety Advisory Committee is authorized by section 601 of the *Frank LoBiondo Coast Guard Authorization Act of 2018,* (Pub. L. 115–282, 132 Stat. 4190), and is codified in 46 U.S.C. 15102. The Committee operates under the provisions of the *Federal Advisory Committee Act* and 46 U.S.C. 15109. The National Commercial Fishing Safety Advisory Committee provides advice and recommendations to the Secretary of Homeland Security through the Commandant of the U. S. Coast Guard, on matters relating to the safe operation of vessels including the matters of:

(A) navigation safety;

(B) safety equipment and procedures;

(C) marine insurance;

(D) vessel design, construction, maintenance, and operation; and

(E) personnel qualifications and training;

Additionally, the Committee will review regulations proposed under chapter 45 of Title 46 of U.S Code (during preparation of the regulations) and review marine casualties and investigations of vessels covered by chapter 45 of Title 46 U.S. Code and make recommendations to the Secretary to improve safety and reduce vessel casualties.

Agenda

Day 1

The agenda for the National Commercial Fishing Safety Advisory Committee is as follows:

I. Opening
- a. Call to Order/Designated Federal Officer (DFO) Remarks.
- b. Roll Call/Determination of Quorum.
- c. Swear in New Members.
- d. U.S. Coast Guard Leadership Remarks.

II. Administration
- a. Review and Adoption of Meeting Agenda.
- b. Meeting Goals.
- c. Roberts Rules.

III. General Updates
- a. Regulatory Status.
- b. U.S. Coast Guard Authorization Act.

IV. Information Session
- a. USCG District Presentations.
- b. NIOSH Data Presentation.
- c. NIOSH Grant(s) Fishing Vessel Training & Research.
- d. NIOSH Grant(s) Project Presentation.
- e. Marine Casualty Initiatives.
- f. Marine Casualties Presentation (CG–INV).
- g. Marine Casualty Case Familiarization.

V. Public Comment period.
VI. Meeting Recess.

Day 2

VII. New Business
- a. Committee Elect Chair/Vice Chair.
- b. Assignment of Task #01–23: Review (11) Marine Casualty investigation cases related to Personal Flotation Devices (PFD) and make recommendations to the Secretary of Homeland Security.
- c. Assignment of Task #02–23: Review (9) Marine Casualty investigation cases related to Cold Water and make recommendations to the Secretary of Homeland Security.
- d. Assignment of Task #03–23: Review (2) Marine Casualty investigation cases related to Falls Overboard and make recommendations to the Secretary of Homeland Security.

VIII. Subcommittee Discussions
- a. Action Items.

IX. Public Comment Period.
X. Committee Discussion/Actions.
XI. Meeting Recess.

Day 3

XII. Discussion of Subcommittee recommendations and Committee Actions.
XIII. Full Committee Open Discussion.
XIV. Public comment period.
XV. Closing Remarks/Plans for Next Meeting.
XVI. Adjournment of Meeting.

A copy of pre-meeting documentation will be available at *https://www.dco.uscg.mil/NCFSAC2023/* no later than May 12, 2023. Alternatively, you may contact Mr. Jonathan Wendland as noted in the **FOR FURTHER INFORMATION CONTACT** section above.

There will be a public comment period scheduled each day of the meeting. Speakers are requested to limit their comments to 3 minutes. Please note that the public comment period may end before the period allotted, following the last call for comments. Please contact the individual listed in the **FOR FURTHER INFORMATION CONTACT SECTION** to register as a speaker.

Dated: April 19, 2023.

Andrew J. Meyers,

Captain, U.S. Coast Guard, Acting Director of Inspections and Compliance.

[FR Doc. 2023–09135 Filed 4–28–23; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID: FEMA–2022–0038; OMB No. 1660–NW144]

Agency Information Collection Activities: Submission for OMB Review, Comment Request; FEMA Region II Community and Faith-Based Organizations Needs/Capabilities and Continuity Program Survey

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: 30-Day notice of new collection and request for comments.

SUMMARY: The Federal Emergency Management Agency (FEMA) will submit the information collection abstracted below to the Office of Management and Budget for review and clearance in accordance with the requirements of the Paperwork Reduction Act of 1995. The submission seeks comments concerning a series of surveys on continuity planning and organizational needs and capabilities from various stakeholders.

DATES: Comments must be submitted on or before May 31, 2023.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection should be made to Director, Information Management Division, 500 C St. SW, Washington, DC 20472, email address: *FEMA-Information-Collections-Management@fema.dhs.gov* or Jeremy Brooks, Management and Program Analyst, at *jeremy.brooks@fema.dhs.gov* or 202–355–4981.

SUPPLEMENTARY INFORMATION: The legal basis for the collection off the following information includes Titles 6 and 42 of the United States Code. The sections in Title 6 include 313, 314, and 317, which provides legal authority and responsibilities to the Federal Emergency Management Agency (FEMA) and to its respective regional offices to work with state, local, territorial and Tribal (SLTT) governments and private non-profits (PNP) with disaster preparedness. The sections in Title 42 include 5131(a), 5131(b), 5195, 5196(e), and 5196(f). The identified sub sections of 5131 provides legal authority to FEMA Federal and state disaster preparedness programs via utilization of services of other agencies and technical assistance. Section 5195 stats that a purpose of 42 U.S.C. *et seq.* is to vest responsibility for emergency preparedness in the Federal Government. Section 5195a provides definitions for relevant terms. Sections 5196(e) and 5196(f) provide detailed functions of administration for emergency preparedness measures and training programs. All these legal authorities affirm the authority of FEMA Region II to collect this information and the critical need to do so.

Additionally, the Presidential Policy Directive (PPD–8)—National Preparedness, directed the development of the National Preparedness Goal that identifies core capabilities necessary for preparedness and a National Preparedness System to guide activities to reach the Goal. The proposed

collection works to improve tracking of core capabilities across FEMA Region II to most efficiently use resources to meet the National Preparedness Goal by utilizing elements of the 2018 FEMA text, *Engaging Community and Faith-based Organizations.*

The Federal Emergency Management Agency (FEMA) National Preparedness Division (NPD) is responsible for educating and securing the nation with the capabilities required across the whole community to prevent, protect against, mitigate, respond to, and recover from the threats and hazards that pose the greatest risk. One of the ways FEMA accomplishes this is through conducting exercises, trainings, and webinars where stakeholders like SLTT governments and PNP entities participate.

The delivery methodology of these programs to a variety of stakeholders are always evolving and continuously improving to meet stakeholder's needs. Likewise, as internal agency policy changes, so can delivery methods. Specifically for FEMA, this includes release of the 2022–2026 FEMA Strategic Plan. Strategic Goal #3 includes Promote and Sustain a Ready FEMA and Prepared Nation, and the objectives 3.1—Strengthen the Emergency Management Workforce and 3.2—Posture FEMA to Meet Current and Emergency Threats. This strategic goal and its associated objectives are well aligned to priorities of FEMA Region II's National Preparedness Division, with internal goals of data-driven capacity building and a more equitable approach to program delivery.

By better gauging stakeholder capacity and needs at an organizational level we can better provide programs and services to our stakeholders to ultimately improve preparedness in FEMA Region II.

Authorities for the collection of information include the following: Presidential Policy Directive (PPD–8), National Preparedness; 6 U.S.C. 313, 314, 317(c); 42 U.S.C. 5195, 5196(e) and (f); 42 U.S.C. 5131(a) and (b).

This proposed information collection previously published in the **Federal Register** on January 3, 2023, at 88 FR 87 with a 60 day public comment period. One comment suggesting multiple detailed edits was received. The purpose of this notice is to notify the public that FEMA will submit the information collection abstracted below to the Office of Management and Budget for review and clearance.

Collection of Information

Title: FEMA Region II Community and Faith-Based Organizations Needs/Capabilities and Continuity Program Survey.

Type of Information Collection: New information collection.

OMB Number: 1660–NW144.

FEMA Forms: FEMA Form FF–008–FY–22–128, Region II Community and Faith-Based Organizations Needs/Capabilities Feedback Survey.

Abstract: FEMA Region II (NJ, NY, PR, VI) is working to better assess the ability of stakeholders' emergency response capabilities to better target program design and delivery in the future. These voluntary survey questions are designed to collect actionable data at the organizational level and allows for a better understanding of potential future collaborations.

Affected Public: Not-for-profit institutions; State, Local, or Tribal Government.

Estimated Number of Respondents: 1,862.

Estimated Number of Responses: 1,862.

Estimated Total Annual Burden Hours: 466.

Estimated Total Annual Respondent Cost: $19,086.

Estimated Respondents' Operation and Maintenance Costs: $0.

Estimated Respondents' Capital and Start-Up Costs: $0.

Estimated Total Annual Cost to the Federal Government: $9,878.

Comments

Comments may be submitted as indicated in the **ADDRESSES** caption above. Comments are solicited to (a) evaluate whether the proposed data collection is necessary for the proper performance of the agency, including whether the information shall have practical utility; (b) evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) enhance the quality, utility, and clarity of the information to be collected; and (d) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Millicent Brown Wilson,

Records Management Branch Chief, Office of the Chief Administrative Officer, Mission Support, Federal Emergency Management Agency, Department of Homeland Security.

BILLING CODE 9111–27–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–7065–N–01; OMB Control No. 2535–0102]

60-Day Notice of Proposed Information Collection: Electronic Line of Credit Control System (eLOCCS) System Access Authorization Form Collection

AGENCY: Office of the Chief Financial Officer, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* June 30, 2023.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Written comments and recommendations for the proposed information collection can be sent within 60 days of publication of this notice to *OIRA_submission@omb.eop.gov* or *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 60-day Review—Open for Public Comments'' or by using the search function. Interested persons are also invited to submit comments regarding this proposal by name and/or OMB Control Number and can be sent to: Colette Pollard, Reports Management Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Room 8210, Washington, DC 20410–5000; telephone 202–402–3400 for Colette (this is not a toll-free number) or email at *PaperworkReductionActOffice@hud.gov* for a copy of the proposed forms or other available information.

FOR FURTHER INFORMATION CONTACT: Anna P. Guido, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410; email Anna P. Guido at *Anna.P.Guido@hud.gov* or telephone 202–402–5535. This is not a toll-free number.

HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit *https://www.fcc.gov/consumers/guides/*

telecommunications-relay-service-trs. Copies of available documents submitted to OMB may be obtained from Ms. Guido.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: Electronic Line of Credit Control System (eLOCCS) System Access Authorization Form.

OMB Approval Number: 2535–0102.

Type of Request: Reinstatement with change.

Form Number: HUD–27054e.

Description of the need for the information and proposed use: Establish access to the eLOCCS payment system.

Respondents: State or Local Government; Public Housing Authorities (PHAs), Individuals or Households.

Information collection	Number of respondents	Frequency of response	Responses per annum	Burden hour per response	Annual burden hours	Hourly cost per response	Annual cost
HUD—27054e	2,420.00	1.00	2,420.00	0.17	411.00	$24.29	$9,992.91
Total	.....	.....	.....	.....	411.00	$24.29	$9,992.91

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

C. Authority

Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

George J. Tomchick,

Deputy Chief Financial Officer.

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_HQ_FRN_MO4500170190]

Notice of Intent To Prepare an Environmental Impact Statement To Analyze the Potential Environmental Effects From Maintaining Secretary Jewell's Coal Leasing Moratorium

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of intent.

SUMMARY: In compliance with the National Environmental Policy Act of 1969, as amended (NEPA), and consistent with direction from the U.S. District Court of Montana, the Bureau of Land Management (BLM) intends to prepare an environmental impact statement (EIS) to analyze the potential environmental effects from maintaining or revoking former Secretary of the Interior Sally Jewell's coal leasing moratorium. This notice begins the process of defining the scope of the EIS by providing background on the Federal coal program and the direction received from the United States District Court for the District of Montana in *Citizens for Clean Energy,* v. *U.S. Dep't of the Interior.* With this notice, the BLM also solicits public comments for consideration in establishing the scope and content of the EIS.

DATES: The BLM invites interested agencies, States, Tribes, local governments, industry, organizations, and members of the public to submit comments or suggestions to assist in identifying significant issues that should be included in the scope of BLM's review of the potential environmental impacts from maintaining or revoking former Secretary Jewell's coal leasing moratorium.

The BLM will consider all written comments received or postmarked during the public comment period, which will close on June 15, 2023.

ADDRESSES: You may submit written comments by the following methods:

- *Website: https://eplanning.blm.gov/eplanning-ui/project/2024545/510.* This is the preferred method of commenting.
- *Email: BLM_HQ_320_CoalProgramReview@blm.gov.*
- *Mail, personal, or messenger delivery:* National Coal Program Review, 1849 C Street NW, Room 5622, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Timothy Barnes, Acting Chief, Division of Solid Minerals, telephone: 541–416–6858, email: *tbarnes@blm.gov.*

Individuals in the United States who are deaf, blind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The BLM will prepare an EIS to analyze the potential environmental effects from maintaining or revoking former Secretary Jewell's coal leasing moratorium, as ordered by the U.S. District Court for the District of Montana in *Citizens for Clean Energy,* v. *U.S. Dep't of the Interior,* 4:17–cv–00042–BMM (D. Mont. 2022).[1] The court's decision is related to the environmental analysis that the BLM previously prepared to assess lifting a Federal coal leasing moratorium established on January 15, 2016, by then Secretary of the Interior Sally Jewell. Secretary Jewell established the moratorium through Secretary's Order No. 3338

[1] The Intervenor-Appellants, the National Mining Association, State of Wyoming and State of Montana, appealed this decision on October 7, 2022, and October 11, 2022, respectively. *Citizens for Clean Energy* v. *Dep't of the Interior,* Civ. No. 22–35789 (9th Cir.).

(Jewell Order), which directed the BLM to conduct a programmatic review of the Federal coal program through preparation of an EIS under NEPA. On March 29, 2017, then former Secretary of the Interior Ryan Zinke issued Secretary's Order No. 3348 (Zinke Order), which revoked the Jewell Order, halted preparation of the EIS, and lifted the moratorium on Federal coal leasing.

Background

Under the Mineral Leasing Act of 1920 (MLA), as amended, 30 U.S.C. 181 *et seq.,* and the Mineral Leasing Act for Acquired Lands of 1947 (MLAAL), as amended, 30 U.S.C. 351 *et seq.,* the BLM is responsible for leasing Federal coal and regulation of the development of that coal on approximately 570 million acres of the 700 million acres of mineral estate that is owned by the Federal Government. This responsibility encompasses Federal mineral rights on Federal lands and Federal mineral rights located under surface lands with non-Federal ownership. Under the authority of the MLA and MLAAL, the BLM administers leasing and monitors coal production. Other Departmental bureaus, in particular the Office of Surface Mining Reclamation and Enforcement (OSMRE) and the Office of Natural Resources Revenue (ONRR), also take actions related to coal mining on Federal lands. The OSMRE, and those States that have regulatory primacy under the Surface Mining Control and Reclamation Act of 1977, permit coal mining and reclamation activities, and monitor reclamation and reclamation bonding actions. The ONRR collects and audits all payments required under the lease, including bonus bids, royalties, and rental payments, and distributes those funds between the Federal Treasury and the States where coal resources are located.

The Jewell Order imposed a moratorium on the issuance of new Federal coal leases for thermal coal, with limited exceptions, until completion of the EIS.

On March 29, 2017, the Zinke Order implemented Executive Order (E.O.) 13783, which was entitled, ''Promoting Energy Independence and Economic Security,'' by rescinding the Jewell Order. Immediately thereafter, Citizens for Clean Energy, Ecocheyenne, Montana Environmental Information Center, Center for Biological Diversity, Defenders of Wildlife, Sierra Club, WildEarth Guardians, and the Northern Cheyenne Tribe filed a lawsuit in the U.S. District Court for the District of Montana asserting that the issuance of the Zinke Order required an environmental analysis in compliance with NEPA. Additionally, the States of California, New York, New Mexico, and Washington also filed suit and the Court consolidated the cases. The National Mining Association and the States of Wyoming and Montana intervened.

On April 19, 2019, the Court held that the Zinke Order was a final agency action that triggered the need to comply with NEPA, requiring the Department to conduct an appropriate environmental review of that action. To comply with the Court's Order, the BLM released an environmental assessment (EA) for public comment on May 22, 2019, and published the final EA and a Finding of No Significant Impact (FONSI) on its website on February 26, 2020. Shortly thereafter, the Plaintiffs amended their complaints to challenge the scope and content of the EA.

On January 20, 2021, President Biden issued E.O. 13990, entitled, ''Executive Order on Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis,'' revoking E.O. 13783. On April 16, 2021, Secretary Haaland rescinded the Zinke Order through Secretary's Order 3398, but did not reinstate the Federal coal leasing moratorium.

On August 12, 2022, the Court vacated and remanded the EA and associated FONSI and reinstated ''[t]he coal leasing program moratorium established by the Jewell Order . . . until the completion of sufficient NEPA review analyzing revocation of the moratorium.'' Order at 19. The Court determined that the EA's analysis failed ''to consider all direct, indirect, and cumulative impacts of re-starting the Federal coal-leasing program.'' Order at 13. Further, the Court held that the BLM should have considered ''a potential alternative that provided a baseline of an indefinite moratorium'' rather than limiting the EA's analysis to those leases granted during the estimated Programmatic EIS timeline providing that the ''BLM's analysis should have considered the effect of restarting coal leasing from a forward-looking perspective, including connected actions.'' *Id.* The Court directed the ''BLM [to] perform NEPA analysis that considers the full scope of the Zinke Order's effect on all then-pending lease applications, and other connected, cumulative, or similar actions.'' Order at 17. In October 2022, Intervenor-Defendants appealed the decision to the U.S. Court of Appeals for the Ninth Circuit.

Public Scoping Process

All public scoping comments must be submitted by email or by mail to the addresses listed under **ADDRESSES**. Before including you address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made public at any time. While you may request in your comment to have your personal identifying information withheld from public review, the BLM cannot guarantee that this will occur. The BLM will review and consider all public scoping comments received and will prepare a Scoping Summary Report. The Scoping Summary Report will be used by the BLM to identify issues to be included in the environmental analysis in the EIS, resources and issues that can be dismissed from detailed analysis because they are not present or not affected, and potential alternatives to be analyzed.

Request for Identification of Potential Alternatives, Information, and Analyses Relevant to the Scope of the Analysis of the Potential Environmental Effects From Maintaining Secretary Jewell's Coal Leasing Moratorium on Pending Federal Coal Lease Applications

In addition to comments concerning the scope of the environmental analysis, commenters are encouraged to identify relevant information, studies, and analyses that would assist the BLM in taking further action on the moratorium instituted by the Jewell Order and identifying potential alternatives.

Lead and Cooperating Agencies

The BLM is the lead agency for this EIS. Other Federal agencies, State, Tribal, and local governments with special expertise that are interested in participating in the preparation of this EIS should contact the previously mentioned Acting Chief of the Division of Solid Minerals.

Decision Maker

Director, Bureau of Land Management.

Nature of Decision To Be Made

Informed by the environmental analysis, the BLM will consider whether and to what extent to continue the coal leasing moratorium imposed by the Jewell Order on January 15, 2016, lifted by the Zinke Order on March 29, 2017, and reinstated by the U.S. District Court of Montana on August 12, 2022.

Land Exchange at Virgin Islands National Park; Correction

AGENCY: National Park Service, Interior.

ACTION: Notice of land exchange; correction.

SUMMARY: The National Park Service published a document in the **Federal Register** of April 25, 2023, concerning request for comments on a Notice of Land Exchange at the Virgin Islands National Park. The document contained a typographical error in the **DATES** section.

FOR FURTHER INFORMATION CONTACT: Russell Webb, Supervisory Realty Specialist, *russell_webb@nps.gov,* Land Resources Program Office—National Park Service, 2975 Horseshoe Dr. S, Suite 800, Naples, Florida 34104, telephone (239) 261–0865.

SUPPLEMENTARY INFORMATION:

Correction

In the **Federal Register** of April 25, 2023, in FR Doc. 2023–08623, on page 25014, in the third column, correct the **DATES** caption to read:

DATES: The effective date of this *Notice of land exchange* is April 25, 2023. Comments on the land exchange must be received by 11:59 p.m. ET on June 9, 2023.

Mark A. Foust,

Regional Director, Interior Region 2.

Bureau of Reclamation

[RR04093000, XXXR4081G3, RX.05940913. FY19400]

Public Meeting of the Glen Canyon Dam Adaptive Management Work Group

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act of 1972, the Bureau of Reclamation (Reclamation) is publishing this notice to announce that a Federal Advisory Committee meeting of the Glen Canyon Dam Adaptive Management Work Group (AMWG) will take place.

DATES: The meeting will be held virtually on Wednesday, May 17, 2023, beginning at 9 a.m. (MDT) and concluding four (4) hours later in the respective time zones.

ADDRESSES: The virtual meeting held on Wednesday, May 17, 2023, may be accessed at: *https://rec.webex.com/rec/j.php?MTID=m069d7dac9f042ce419b775a5d2b462ff*;

Meeting Number: 2763 284 1693, Password: May17;

Phone Number: (877) 932–7704; Passcode: 8410783.

FOR FURTHER INFORMATION CONTACT: Mr. William Stewart, Bureau of Reclamation, telephone (385) 622–2179, email at *wstewart@usbr.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The Glen Canyon Dam Adaptive Management Program (GCDAMP) was implemented as a result of the Record of Decision on the Operation of Glen Canyon Dam Final Environmental Impact Statement to comply with consultation requirements of the Grand Canyon Protection Act (Pub. L. 102–575) of 1992. The AMWG makes recommendations to the Secretary of the Interior concerning Glen Canyon Dam operations and other management actions to protect resources downstream of Glen Canyon Dam, consistent with the Grand Canyon Protection Act. The AMWG meets two to three times a year.

Agenda: The AMWG will meet to receive updates on: (1) current basin hydrology and water year 2023 operations; (2) experiments considered for implementation in 2023; and (3) long-term funding considerations. The AMWG will also discuss other administrative and resource issues pertaining to the GCDAMP. To view a final copy of the agenda and documents related to the May meeting, please visit Reclamation's website at *https://www.usbr.gov/uc/progact/amp/amwg.html.*

Meeting Accessibility/Special Accommodations: The meeting is open to the public. Please make requests in advance for sign language interpreter services, assistive listening devices, or other reasonable accommodations. We ask that you contact Mr. William Stewart (see **FOR FURTHER INFORMATION CONTACT**) section of this notice at least seven (7) business days prior to the meeting to give the Department of the Interior sufficient time to process your request. All reasonable accommodation requests are managed on a case-by-case basis.

Public Disclosure of Comments: Time will be allowed for any individual or organization wishing to make extemporaneous and/or formal oral comments. To allow for full consideration of information by the AMWG members, written notice should be provided to Mr. William Stewart (see **FOR FURTHER INFORMATION CONTACT**) prior to the meeting. Depending on the number of persons wishing to speak, and the time available, the time for individual comments may be limited. Any written comments received will be provided to the AMWG members.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 5 U.S.C. appendix 10.

William Stewart,

Adaptive Management Group Chief, Resources Management Division, Upper Colorado Basin—Interior Region 7.

BILLING CODE 4332–90–P

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Complaint; Solicitation of Comments Relating to the Public Interest

AGENCY: International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has received a complaint entitled *Certain Blood Flow Restriction Devices with Rotatable Windlasses and*

Components Thereof, DN 3676; the Commission is soliciting comments on any public interest issues raised by the complaint or complainant's filing pursuant to the Commission's Rules of Practice and Procedure.

FOR FURTHER INFORMATION CONTACT: Lisa R. Barton, Secretary to the Commission, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000. The public version of the complaint can be accessed on the Commission's Electronic Document Information System (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.*

General information concerning the Commission may also be obtained by accessing its internet server at United States International Trade Commission (USITC) at *https://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's Electronic Document Information System (EDIS) at *https://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission has received a complaint and a submission pursuant to § 210.8(b) of the Commission's Rules of Practice and Procedure filed on behalf of Composite Resources, Inc. and North American Rescue, LLC on April 24, 2023. The complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain blood flow restriction devices and components thereof. The complaint names as respondents: Anping Longji Medical Equipment Factory of China; Chaozhou Jiduo Trading Co., Ltd. of China; Dongguan Hongsui Electronic Commerce Co., Ltd. of China; Dongguanwin Si Hai Precision Mold Co., Ltd. of China; Eiffel Medical Supplies Co., Ltd. of China; Empire State Distributors Inc. of Brooklyn, NY; EMRN Medical Equipment of Canada; Express Companies, Inc. of Oceanside, CA; Fuzhou Meirun Medical Equipment Technology Co., Ltd. of China; GD Tianwu New Material Tech Co., Ltd. of China; Henan Eyocean E-Commerce Co., Ltd. of China; Hengshui Runde Medical Instruments Co., Ltd. of China; Huang Xia of China; Jingcai Jiang of China; Putian Dima Trading Co., Ltd. of China; Rhino Inc. of Lewes, DE; Shanghai Sixu International Freight Agent Co., Ltd. of China; Shen YI of China; Shenzhen Anben E-Commerce Co., Ltd. of China; Shenzhen Janxle E E Commerce Co., Ltd. of China; Shenzhen Smart Medical Co. Ltd. of China; Shenzhen TMI Medical Supplies Co., Ltd. of China; Shenzhen Yujie Commercial and Trading Co., Ltd. of China; Sun Minghui of China; SZY Holdings LLC of Brooklyn, NY; Wuxi Emsrun Technology Co., Ltd. of China; Wuxi Golden Hour Medical Technology Co., Ltd. of China; Wuxi Puneda Technology Co., Ltd. of China; Xia Guo Long of China; and Yinping Yin of China. The complainant requests that the Commission issue a general exclusion order, cease and desist orders, and impose a bond upon respondent alleged infringing articles during the 60-day Presidential review period pursuant to 19 U.S.C. 1337(j).

Proposed respondents, other interested parties, and members of the public are invited to file comments on any public interest issues raised by the complaint or § 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the complainant in this investigation would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

(i) explain how the articles potentially subject to the requested remedial orders are used in the United States;

(ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;

(iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;

(iv) indicate whether complainant, complainant's licensees, and/or third party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and

(v) explain how the requested remedial orders would impact United States consumers.

Written submissions on the public interest must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the **Federal Register**. There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation. Any written submissions on other issues must also be filed by no later than the close of business, eight calendar days after publication of this notice in the **Federal Register**. Complainant may file replies to any written submissions no later than three calendar days after the date on which any initial submissions were due, notwithstanding § 201.14(a) of the Commission's Rules of Practice and Procedure. No other submissions will be accepted, unless requested by the Commission. Any submissions and replies filed in response to this Notice are limited to five (5) pages in length, inclusive of attachments.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above. Submissions should refer to the docket number (''Docket No. 3676) in a prominent place on the cover page and/or the first page. (*See* Handbook for Electronic Filing Procedures, Electronic Filing Procedures [1]). Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov.*) No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice. Persons with questions regarding filing should contact the Secretary at *EDIS3Help@usitc.gov.*

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this Investigation may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract

[1] Handbook for Electronic Filing Procedures: *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf.*

personnel,[2] solely for cybersecurity purposes. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.[3]

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of §§ 201.10 and 210.8(c) of the Commission's Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

By order of the Commission.

Issued: April 25, 2023.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2023–09115 Filed 4–28–23; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1333]

Certain Automated Put Walls and Automated Storage and Retrieval Systems, Associated Vehicles, Associated Control Software, and Component Parts Thereof (II); Notice of Commission Determination Not To Review an Initial Determination Terminating the Investigation Based on Withdrawal of the Complaint; Termination of the Investigation

AGENCY: International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review an initial determination (''ID'') (Order No. 7) issued by the presiding Chief Administrative Law Judge (''CALJ'') in the above-captioned investigation and terminating the investigation in its entirety based on the complainant's withdrawal of the complaint. The investigation is terminated.

FOR FURTHER INFORMATION CONTACT: Robert Needham, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 708–5468. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: On October 18, 2022, the Commission instituted this investigation based on a complaint, as amended, filed on behalf of OPEX Corporation of Moorestown, New Jersey (''OPEX''). 87 FR 63089 (Oct. 18, 2022). The complaint alleged violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain automated put walls and automated storage and retrieval systems, associated vehicles, associated control software, and components parts thereof by reason of infringement of certain claims of U.S. Patent Nos. 11,192,144 and 11,358,175. *Id.* The Commission's notice of investigation names as respondents HC Robotics (a.k.a. Huicang Information Technology Co., Ltd.) of Hangzhou City, China; and Invata, LLC (d/b/a Invata Intralogistics) of Conshohocken, Pennsylvania. *Id.* The Office of Unfair Import Investigations is not participating in this investigation. *Id.*

On March 20, 2023, OPEX filed an unopposed motion to terminate the investigation based on its withdrawal of the complaint. On March 27, 2023, the CALJ denied the motion based on excessive redaction in the motion's attached agreement. *See* Order No. 6 (Mar. 27, 2023). On March 28, 2023, OPEX filed a renewed unopposed motion to terminate the investigation based on a withdrawal of the complaint and containing fewer redactions.

On March 29, 2023, the CALJ issued the subject ID (Order No. 7) pursuant to Commission Rule 210.21(a)(1) (19 CFR 210.21(a)(1)), granting the motion and terminating the investigation. The ID finds that the motion complies with Commission Rule 210.21(a)(1) and that there are no extraordinary circumstances that would prevent the requested relief. No party petitioned for review of the subject ID.

The Commission has determined not to review the subject ID. This investigation is hereby terminated in its entirety.

The Commission vote for this determination took place on April 26, 2023.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: April 26, 2023.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2023–09163 Filed 4–28–23; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–585–586 and 731–TA–1383–1384 (Review)]

Stainless Steel Flanges From China and India; Institution of Five-Year Reviews

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice that it has instituted reviews pursuant to the Tariff Act of 1930 (''the Act''), as amended, to determine whether revocation of the antidumping and countervailing duty orders on stainless steel flanges from China and India would be likely to lead to continuation or recurrence of material injury. Pursuant to the Act, interested parties are requested to respond to this notice by submitting the information specified below to the Commission.

DATES: Instituted May 1, 2023. To be assured of consideration, the deadline for responses is May 31, 2023. Comments on the adequacy of responses may be filed with the Commission by July 13, 2023.

FOR FURTHER INFORMATION CONTACT: Nitin Joshi (202–708–1669), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for this proceeding may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION:

Background.—On June 5, 2018, the Department of Commerce (''Commerce'')

[2] All contract personnel will sign appropriate nondisclosure agreements.

[3] Electronic Document Information System (EDIS): *https://edis.usitc.gov.*

issued a countervailing duty order on imports of stainless steel flanges from China (83 FR 26006). On August 1, 2018, Commerce issued an antidumping duty order on imports of stainless steel flanges from China (83 FR 37468). On October 5, 2018, Commerce issued a countervailing duty order on imports of stainless steel flanges from India (83 FR 50336). On October 9, 2018, Commerce issued an antidumping duty order on imports of stainless steel flanges from India (83 FR 50639). The Commission is conducting reviews pursuant to section 751(c) of the Act, as amended (19 U.S.C. 1675(c)), to determine whether revocation of the orders would be likely to lead to continuation or recurrence of material injury to the domestic industry within a reasonably foreseeable time. Provisions concerning the conduct of this proceeding may be found in the Commission's Rules of Practice and Procedure at 19 CFR part 201, subparts A and B, and 19 CFR part 207, subparts A and F. The Commission will assess the adequacy of interested party responses to this notice of institution to determine whether to conduct full or expedited reviews. The Commission's determinations in any expedited reviews will be based on the facts available, which may include information provided in response to this notice.

Definitions.—The following definitions apply to these reviews:

(1) *Subject Merchandise* is the class or kind of merchandise that is within the scope of the five-year reviews, as defined by Commerce.

(2) The *Subject Countries* in these reviews are China and India.

(3) The *Domestic Like Product* is the domestically produced product or products which are like, or in the absence of like, most similar in characteristics and uses with, the *Subject Merchandise.* In its original determinations, the Commission defined a single *Domestic Like Product* consisting of finished and unfinished stainless steel flanges, coextensive with Commerce's scope.

(4) The *Domestic Industry* is the U.S. producers as a whole of the *Domestic Like Product,* or those producers whose collective output of the *Domestic Like Product* constitutes a major proportion of the total domestic production of the product. In its original determinations, the Commission defined the *Domestic Industry* to be all U.S. producers of stainless steel flanges, including both integrated domestic producers and non-integrated domestic producers that engage in only finishing operations.

(5) The *Order Dates* are the dates that the orders became effective. In these reviews, the *Order Dates* are as follows: June 5, 2018 (countervailing duty order concerning China); August 1, 2018 (antidumping duty order concerning China); October 5, 2018 (countervailing duty order concerning India); and October 9, 2018 (antidumping duty order concerning India).

(6) An *Importer* is any person or firm engaged, either directly or through a parent company or subsidiary, in importing the *Subject Merchandise* into the United States from a foreign manufacturer or through its selling agent.

Participation in the proceeding and public service list.—Persons, including industrial users of the *Subject Merchandise* and, if the merchandise is sold at the retail level, representative consumer organizations, wishing to participate in the proceeding as parties must file an entry of appearance with the Secretary to the Commission, as provided in § 201.11(b)(4) of the Commission's rules, no later than 21 days after publication of this notice in the **Federal Register**. The Secretary will maintain a public service list containing the names and addresses of all persons, or their representatives, who are parties to the proceeding.

Former Commission employees who are seeking to appear in Commission five-year reviews are advised that they may appear in a review even if they participated personally and substantially in the corresponding underlying original investigation or an earlier review of the same underlying investigation. The Commission's designated agency ethics official has advised that a five-year review is not the same particular matter as the underlying original investigation, and a five-year review is not the same particular matter as an earlier review of the same underlying investigation for purposes of 18 U.S.C. 207, the post-employment statute for Federal employees, and Commission rule 201.15(b) (19 CFR 201.15(b)), 79 FR 3246 (Jan. 17, 2014), 73 FR 24609 (May 5, 2008). Consequently, former employees are not required to seek Commission approval to appear in a review under Commission rule 19 CFR 201.15, even if the corresponding underlying original investigation or an earlier review of the same underlying investigation was pending when they were Commission employees. For further ethics advice on this matter, contact Charles Smith, Office of the General Counsel, at 202–205–3408.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and APO service list.—Pursuant to § 207.7(a) of the Commission's rules, the Secretary will make BPI submitted in this proceeding available to authorized applicants under the APO issued in the proceeding, provided that the application is made no later than 21 days after publication of this notice in the **Federal Register**. Authorized applicants must represent interested parties, as defined in 19 U.S.C. 1677(9), who are parties to the proceeding. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Certification.—Pursuant to § 207.3 of the Commission's rules, any person submitting information to the Commission in connection with this proceeding must certify that the information is accurate and complete to the best of the submitter's knowledge. In making the certification, the submitter will acknowledge that information submitted in response to this request for information and throughout this proceeding or other proceeding may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements.

Written submissions.—Pursuant to § 207.61 of the Commission's rules, each interested party response to this notice must provide the information specified below. The deadline for filing such responses is May 31, 2023. Pursuant to § 207.62(b) of the Commission's rules, eligible parties (as specified in Commission rule 207.62(b)(1)) may also file comments concerning the adequacy of responses to the notice of institution and whether the Commission should conduct expedited or full reviews. The deadline for filing such comments is July 13, 2023. All written submissions must conform with the provisions of § 201.8 of the Commission's rules; any submissions that contain BPI must also conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures,* available on the Commission's website at *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf,* elaborates upon the Commission's procedures with respect to filings. Also,

in accordance with §§ 201.16(c) and 207.3 of the Commission's rules, each document filed by a party to the proceeding must be served on all other parties to the proceeding (as identified by either the public or APO service list as appropriate), and a certificate of service must accompany the document (if you are not a party to the proceeding you do not need to serve your response).

Please note the Secretary's Office will accept only electronic filings at this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov*). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

No response to this request for information is required if a currently valid Office of Management and Budget (''OMB'') number is not displayed; the OMB number is 3117 0016/USITC No. 23–5–567, expiration date June 30, 2023. Public reporting burden for the request is estimated to average 15 hours per response. Please send comments regarding the accuracy of this burden estimate to the Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436.

Inability to provide requested information.—Pursuant to § 207.61(c) of the Commission's rules, any interested party that cannot furnish the information requested by this notice in the requested form and manner shall notify the Commission at the earliest possible time, provide a full explanation of why it cannot provide the requested information, and indicate alternative forms in which it can provide equivalent information. If an interested party does not provide this notification (or the Commission finds the explanation provided in the notification inadequate) and fails to provide a complete response to this notice, the Commission may take an adverse inference against the party pursuant to § 776(b) of the Act (19 U.S.C. 1677e(b)) in making its determinations in the reviews.

Information To Be Provided in Response to This Notice of Institution: If you are a domestic producer, union/worker group, or trade/business association; import/export *Subject Merchandise* from more than one *Subject Country;* or produce *Subject Merchandise* in more than one *Subject Country,* you may file a single response. If you do so, please ensure that your response to each question includes the information requested for each pertinent *Subject Country.* As used below, the term ''firm'' includes any related firms.

Those responding to this notice of institution are encouraged, but not required, to visit the USITC's website at *https://usitc.gov/reports/response_noi_worksheet,* where one can download and complete the ''NOI worksheet'' Excel form for the subject proceeding, to be included as attachment/exhibit 1 of your overall response.

(1) The name and address of your firm or entity (including World Wide Web address) and name, telephone number, fax number, and Email address of the certifying official.

(2) A statement indicating whether your firm/entity is an interested party under 19 U.S.C. 1677(9) and if so, how, including whether your firm/entity is a U.S. producer of the *Domestic Like Product,* a U.S. union or worker group, a U.S. importer of the *Subject Merchandise,* a foreign producer or exporter of the *Subject Merchandise,* a U.S. or foreign trade or business association (a majority of whose members are interested parties under the statute), or another interested party (including an explanation). If you are a union/worker group or trade/business association, identify the firms in which your workers are employed or which are members of your association.

(3) A statement indicating whether your firm/entity is willing to participate in this proceeding by providing information requested by the Commission.

(4) A statement of the likely effects of the revocation of the antidumping and countervailing duty orders on the *Domestic Industry* in general and/or your firm/entity specifically. In your response, please discuss the various factors specified in § 752(a) of the Act (19 U.S.C. 1675a(a)) including the likely volume of subject imports, likely price effects of subject imports, and likely impact of imports of *Subject Merchandise* on the *Domestic Industry.*

(5) A list of all known and currently operating U.S. producers of the *Domestic Like Product.* Identify any known related parties and the nature of the relationship as defined in § 771(4)(B) of the Act (19 U.S.C. 1677(4)(B)).

(6) A list of all known and currently operating U.S. importers of the *Subject Merchandise* and producers of the *Subject Merchandise* in each *Subject Country* that currently export or have exported *Subject Merchandise* to the United States or other countries since the *Order Date.*

(7) A list of 3–5 leading purchasers in the U.S. market for the *Domestic Like Product* and the *Subject Merchandise* (including street address, World Wide Web address, and the name, telephone number, fax number, and Email address of a responsible official at each firm).

(8) A list of known sources of information on national or regional prices for the *Domestic Like Product* or the *Subject Merchandise* in the U.S. or other markets.

(9) If you are a U.S. producer of the *Domestic Like Product,* provide the following information on your firm's operations on that product during calendar year 2022, except as noted (report quantity data in pounds and value data in U.S. dollars, f.o.b. plant). If you are a union/worker group or trade/business association, provide the information, on an aggregate basis, for the firms in which your workers are employed/which are members of your association.

(a) Production (quantity) and, if known, an estimate of the percentage of total U.S. production of the *Domestic Like Product* accounted for by your firm's(s') production;

(b) Capacity (quantity) of your firm to produce the *Domestic Like Product* (that is, the level of production that your establishment(s) could reasonably have expected to attain during the year, assuming normal operating conditions (using equipment and machinery in place and ready to operate), normal operating levels (hours per week/weeks per year), time for downtime, maintenance, repair, and cleanup, and a typical or representative product mix);

(c) the quantity and value of U.S. commercial shipments of the *Domestic Like Product* produced in your U.S. plant(s);

(d) the quantity and value of U.S. internal consumption/company transfers of the *Domestic Like Product* produced in your U.S. plant(s); and

(e) the value of (i) net sales, (ii) cost of goods sold (COGS), (iii) gross profit, (iv) selling, general and administrative (SG&A) expenses, and (v) operating income of the *Domestic Like Product* produced in your U.S. plant(s) (include both U.S. and export commercial sales, internal consumption, and company transfers) for your most recently completed fiscal year (identify the date on which your fiscal year ends).

(10) If you are a U.S. importer or a trade/business association of U.S. importers of the *Subject Merchandise* from any *Subject Country,* provide the following information on your firm's(s') operations on that product during calendar year 2022 (report quantity data in pounds and value data in U.S. dollars). If you are a trade/business association, provide the information, on an aggregate basis, for the firms which are members of your association.

(a) The quantity and value (landed, duty-paid but not including antidumping or countervailing duties) of U.S. imports and, if known, an estimate of the percentage of total U.S. imports of *Subject Merchandise* from each *Subject Country* accounted for by your firm's(s') imports;

(b) the quantity and value (f.o.b. U.S. port, including antidumping and/or countervailing duties) of U.S. commercial shipments of *Subject Merchandise* imported from each *Subject Country;* and

(c) the quantity and value (f.o.b. U.S. port, including antidumping and/or countervailing duties) of U.S. internal consumption/company transfers of *Subject Merchandise* imported from each *Subject Country.*

(11) If you are a producer, an exporter, or a trade/business association of producers or exporters of the *Subject Merchandise* in any *Subject Country,* provide the following information on your firm's(s') operations on that product during calendar year 2022 (report quantity data in pounds and value data in U.S. dollars, landed and duty-paid at the U.S. port but not including antidumping or countervailing duties). If you are a trade/business association, provide the information, on an aggregate basis, for the firms which are members of your association.

(a) Production (quantity) and, if known, an estimate of the percentage of total production of *Subject Merchandise* in each *Subject Country* accounted for by your firm's(s') production;

(b) Capacity (quantity) of your firm(s) to produce the *Subject Merchandise* in each *Subject Country* (that is, the level of production that your establishment(s) could reasonably have expected to attain during the year, assuming normal operating conditions (using equipment and machinery in place and ready to operate), normal operating levels (hours per week/weeks per year), time for downtime, maintenance, repair, and cleanup, and a typical or representative product mix); and

(c) the quantity and value of your firm's(s') exports to the United States of *Subject Merchandise* and, if known, an estimate of the percentage of total exports to the United States of *Subject Merchandise* from each *Subject Country* accounted for by your firm's(s') exports.

(12) Identify significant changes, if any, in the supply and demand conditions or business cycle for the *Domestic Like Product* that have occurred in the United States or in the market for the *Subject Merchandise* in each *Subject Country* since the *Order Date,* and significant changes, if any, that are likely to occur within a reasonably foreseeable time. Supply conditions to consider include technology; production methods; development efforts; ability to increase production (including the shift of production facilities used for other products and the use, cost, or availability of major inputs into production); and factors related to the ability to shift supply among different national markets (including barriers to importation in foreign markets or changes in market demand abroad). Demand conditions to consider include end uses and applications; the existence and availability of substitute products; and the level of competition among the *Domestic Like Product* produced in the United States, *Subject Merchandise* produced in each *Subject Country,* and such merchandise from other countries.

(13) (OPTIONAL) A statement of whether you agree with the above definitions of the *Domestic Like Product* and *Domestic Industry;* if you disagree with either or both of these definitions, please explain why and provide alternative definitions.

Authority: This proceeding is being conducted under authority of Title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.61 of the Commission's rules.

By order of the Commission.

Issued: April 25, 2023.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2023–09026 Filed 4–28–23; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 731–TA–472 (Fifth Review)]

Silicon Metal From China; Institution of a Five-Year Review

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice that it has instituted a review pursuant to the Tariff Act of 1930 (''the Act''), as amended, to determine whether revocation of the antidumping duty order on silicon metal from China would be likely to lead to continuation or recurrence of material injury. Pursuant to the Act, interested parties are requested to respond to this notice by submitting the information specified below to the Commission.

DATES: Instituted May 1, 2023. To be assured of consideration, the deadline for responses is May 31, 2023. Comments on the adequacy of responses may be filed with the Commission by July 13, 2023.

FOR FURTHER INFORMATION CONTACT: Charles Cummings (202–708–1666), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for this proceeding may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION:

Background.—On June 10, 1991, the Department of Commerce (''Commerce'') issued an antidumping duty order on imports of silicon metal from China (56 FR 26649). Commerce issued a continuation of the antidumping duty order on imports of silicon metal from China following Commerce's and the Commission's first five-year reviews, effective February 16, 2001 (66 FR 10669), second five-year reviews, effective December 21, 2006 (71 FR 76636), third five-year reviews, effective April 20, 2012 (77 FR 23660), and fourth five-year reviews, effective June 4, 2018 (83 FR 25644). The Commission is now conducting a fifth review pursuant to section 751(c) of the Act, as amended (19 U.S.C. 1675(c)), to determine whether revocation of the order would be likely to lead to continuation or recurrence of material injury to the domestic industry within a reasonably foreseeable time. Provisions concerning the conduct of this proceeding may be found in the Commission's Rules of Practice and Procedure at 19 CFR part 201, subparts A and B, and 19 CFR part 207, subparts A and F. The Commission will assess the adequacy of interested party responses to this notice of institution to determine whether to conduct a full review or an expedited review. The Commission's determination in any expedited review will be based on the facts available, which may include information provided in response to this notice.

Definitions.—The following definitions apply to this review:

(1) *Subject Merchandise* is the class or kind of merchandise that is within the

scope of the five-year review, as defined by Commerce.

(2) The *Subject Country* in this review is China.

(3) The *Domestic Like Product* is the domestically produced product or products which are like, or in the absence of like, most similar in characteristics and uses with, the *Subject Merchandise.* In its original determination, the Commission defined the *Domestic Like Product* as all silicon metal, regardless of grade, having a silicon content of at least 96.00 percent but less than 99.99 percent of silicon by weight, and excluding semiconductor grade silicon, corresponding to Commerce's scope. In its full first and second five-year review determinations, its expedited third five-year review determination, and its full fourth five-year review determination, the Commission defined the *Domestic Like Product* as all silicon metal, regardless of grade, corresponding to Commerce's scope of the order.

(4) The *Domestic Industry* is the U.S. producers as a whole of the *Domestic Like Product,* or those producers whose collective output of the *Domestic Like Product* constitutes a major proportion of the total domestic production of the product. In its original determination, its full first and second five-year review determinations, its expedited third five-year review determination, and its full fourth five-year review determination, the Commission defined the *Domestic Industry* as all domestic producers of silicon metal.

(5) An *Importer* is any person or firm engaged, either directly or through a parent company or subsidiary, in importing the *Subject Merchandise* into the United States from a foreign manufacturer or through its selling agent.

Participation in the proceeding and public service list.—Persons, including industrial users of the *Subject Merchandise* and, if the merchandise is sold at the retail level, representative consumer organizations, wishing to participate in the proceeding as parties must file an entry of appearance with the Secretary to the Commission, as provided in § 201.11(b)(4) of the Commission's rules, no later than 21 days after publication of this notice in the **Federal Register**. The Secretary will maintain a public service list containing the names and addresses of all persons, or their representatives, who are parties to the proceeding.

Former Commission employees who are seeking to appear in Commission five-year reviews are advised that they may appear in a review even if they participated personally and substantially in the corresponding underlying original investigation or an earlier review of the same underlying investigation. The Commission's designated agency ethics official has advised that a five-year review is not the same particular matter as the underlying original investigation, and a five-year review is not the same particular matter as an earlier review of the same underlying investigation for purposes of 18 U.S.C. 207, the post-employment statute for Federal employees, and Commission rule 201.15(b) (19 CFR 201.15(b)), 79 FR 3246 (Jan. 17, 2014), 73 FR 24609 (May 5, 2008). Consequently, former employees are not required to seek Commission approval to appear in a review under Commission rule 19 CFR 201.15, even if the corresponding underlying original investigation or an earlier review of the same underlying investigation was pending when they were Commission employees. For further ethics advice on this matter, contact Charles Smith, Office of the General Counsel, at 202–205–3408.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and APO service list.—Pursuant to § 207.7(a) of the Commission's rules, the Secretary will make BPI submitted in this proceeding available to authorized applicants under the APO issued in the proceeding, provided that the application is made no later than 21 days after publication of this notice in the **Federal Register**. Authorized applicants must represent interested parties, as defined in 19 U.S.C. 1677(9), who are parties to the proceeding. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Certification.—Pursuant to § 207.3 of the Commission's rules, any person submitting information to the Commission in connection with this proceeding must certify that the information is accurate and complete to the best of the submitter's knowledge. In making the certification, the submitter will acknowledge that information submitted in response to this request for information and throughout this proceeding or other proceeding may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements.

Written submissions.—Pursuant to § 207.61 of the Commission's rules, each interested party response to this notice must provide the information specified below. The deadline for filing such responses is May 31, 2023. Pursuant to § 207.62(b) of the Commission's rules, eligible parties (as specified in Commission rule 207.62(b)(1)) may also file comments concerning the adequacy of responses to the notice of institution and whether the Commission should conduct an expedited or full review. The deadline for filing such comments is July 13, 2023. All written submissions must conform with the provisions of § 201.8 of the Commission's rules; any submissions that contain BPI must also conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures,* available on the Commission's website at *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf,* elaborates upon the Commission's procedures with respect to filings. Also, in accordance with §§ 201.16(c) and 207.3 of the Commission's rules, each document filed by a party to the proceeding must be served on all other parties to the proceeding (as identified by either the public or APO service list as appropriate), and a certificate of service must accompany the document (if you are not a party to the proceeding you do not need to serve your response).

Please note the Secretary's Office will accept only electronic filings at this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov*). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

No response to this request for information is required if a currently valid Office of Management and Budget (''OMB'') number is not displayed; the OMB number is 3117 0016/USITC No. 23–5–566, expiration date June 30, 2023. Public reporting burden for the request is estimated to average 15 hours per response. Please send comments regarding the accuracy of this burden estimate to the Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436.

Inability to provide requested information.—Pursuant to § 207.61(c) of the Commission's rules, any interested party that cannot furnish the

information requested by this notice in the requested form and manner shall notify the Commission at the earliest possible time, provide a full explanation of why it cannot provide the requested information, and indicate alternative forms in which it can provide equivalent information. If an interested party does not provide this notification (or the Commission finds the explanation provided in the notification inadequate) and fails to provide a complete response to this notice, the Commission may take an adverse inference against the party pursuant to § 776(b) of the Act (19 U.S.C. 1677e(b)) in making its determination in the review.

Information To Be Provided in Response to This Notice of Institution: As used below, the term ''firm'' includes any related firms.

Those responding to this notice of institution are encouraged, but not required, to visit the USITC's website at *https://usitc.gov/reports/response_noi_worksheet,* where one can download and complete the ''NOI worksheet'' Excel form for the subject proceeding, to be included as attachment/exhibit 1 of your overall response.

(1) The name and address of your firm or entity (including World Wide Web address) and name, telephone number, fax number, and Email address of the certifying official.

(2) A statement indicating whether your firm/entity is an interested party under 19 U.S.C. 1677(9) and if so, how, including whether your firm/entity is a U.S. producer of the *Domestic Like Product,* a U.S. union or worker group, a U.S. importer of the *Subject Merchandise,* a foreign producer or exporter of the *Subject Merchandise,* a U.S. or foreign trade or business association (a majority of whose members are interested parties under the statute), or another interested party (including an explanation). If you are a union/worker group or trade/business association, identify the firms in which your workers are employed or which are members of your association.

(3) A statement indicating whether your firm/entity is willing to participate in this proceeding by providing information requested by the Commission.

(4) A statement of the likely effects of the revocation of the antidumping duty order on the *Domestic Industry* in general and/or your firm/entity specifically. In your response, please discuss the various factors specified in section 752(a) of the Act (19 U.S.C. 1675a(a)) including the likely volume of subject imports, likely price effects of subject imports, and likely impact of imports of *Subject Merchandise* on the *Domestic Industry.*

(5) A list of all known and currently operating U.S. producers of the *Domestic Like Product.* Identify any known related parties and the nature of the relationship as defined in § 771(4)(B) of the Act (19 U.S.C. 1677(4)(B)).

(6) A list of all known and currently operating U.S. importers of the *Subject Merchandise* and producers of the *Subject Merchandise* in the *Subject Country* that currently export or have exported *Subject Merchandise* to the United States or other countries after 2016.

(7) A list of 3–5 leading purchasers in the U.S. market for the *Domestic Like Product* and the *Subject Merchandise* (including street address, World Wide Web address, and the name, telephone number, fax number, and Email address of a responsible official at each firm).

(8) A list of known sources of information on national or regional prices for the *Domestic Like Product* or the *Subject Merchandise* in the U.S. or other markets.

(9) If you are a U.S. producer of the *Domestic Like Product,* provide the following information on your firm's operations on that product during calendar year 2016, except as noted (report quantity data in short tons and value data in U.S. dollars, f.o.b. plant). If you are a union/worker group or trade/business association, provide the information, on an aggregate basis, for the firms in which your workers are employed/which are members of your association.

(a) Production (quantity) and, if known, an estimate of the percentage of total U.S. production of the *Domestic Like Product* accounted for by your firm's(s') production;

(b) Capacity (quantity) of your firm to produce the *Domestic Like Product* (that is, the level of production that your establishment(s) could reasonably have expected to attain during the year, assuming normal operating conditions (using equipment and machinery in place and ready to operate), normal operating levels (hours per week/weeks per year), time for downtime, maintenance, repair, and cleanup, and a typical or representative product mix);

(c) the quantity and value of U.S. commercial shipments of the *Domestic Like Product* produced in your U.S. plant(s);

(d) the quantity and value of U.S. internal consumption/company transfers of the *Domestic Like Product* produced in your U.S. plant(s); and

(e) the value of (i) net sales, (ii) cost of goods sold (COGS), (iii) gross profit, (iv) selling, general and administrative (SG&A) expenses, and (v) operating income of the *Domestic Like Product* produced in your U.S. plant(s) (include both U.S. and export commercial sales, internal consumption, and company transfers) for your most recently completed fiscal year (identify the date on which your fiscal year ends).

(10) If you are a U.S. importer or a trade/business association of U.S. importers of the *Subject Merchandise* from the *Subject Country,* provide the following information on your firm's(s') operations on that product during calendar year 2022 (report quantity data in short tons and value data in U.S. dollars). If you are a trade/business association, provide the information, on an aggregate basis, for the firms which are members of your association.

(a) The quantity and value (landed, duty-paid but not including antidumping duties) of U.S. imports and, if known, an estimate of the percentage of total U.S. imports of *Subject Merchandise* from the *Subject Country* accounted for by your firm's(s') imports;

(b) the quantity and value (f.o.b. U.S. port, including antidumping duties) of U.S. commercial shipments of *Subject Merchandise* imported from the *Subject Country;* and

(c) the quantity and value (f.o.b. U.S. port, including antidumping duties) of U.S. internal consumption/company transfers of *Subject Merchandise* imported from the *Subject Country.*

(11) If you are a producer, an exporter, or a trade/business association of producers or exporters of the *Subject Merchandise* in the *Subject Country,* provide the following information on your firm's(s') operations on that product during calendar year 2022 (report quantity data in short tons and value data in U.S. dollars, landed and duty-paid at the U.S. port but not including antidumping duties). If you are a trade/business association, provide the information, on an aggregate basis, for the firms which are members of your association.

(a) Production (quantity) and, if known, an estimate of the percentage of total production of *Subject Merchandise* in the *Subject Country* accounted for by your firm's(s') production;

(b) Capacity (quantity) of your firm(s) to produce the *Subject Merchandise* in the *Subject Country* (that is, the level of production that your establishment(s) could reasonably have expected to attain during the year, assuming normal operating conditions (using equipment and machinery in place and ready to operate), normal operating levels (hours per week/weeks per year), time for

downtime, maintenance, repair, and cleanup, and a typical or representative product mix); and

(c) the quantity and value of your firm's(s') exports to the United States of *Subject Merchandise* and, if known, an estimate of the percentage of total exports to the United States of *Subject Merchandise* from the *Subject Country* accounted for by your firm's(s') exports.

(12) Identify significant changes, if any, in the supply and demand conditions or business cycle for the *Domestic Like Product* that have occurred in the United States or in the market for the *Subject Merchandise* in the *Subject Country* after 2016, and significant changes, if any, that are likely to occur within a reasonably foreseeable time. Supply conditions to consider include technology; production methods; development efforts; ability to increase production (including the shift of production facilities used for other products and the use, cost, or availability of major inputs into production); and factors related to the ability to shift supply among different national markets (including barriers to importation in foreign markets or changes in market demand abroad). Demand conditions to consider include end uses and applications; the existence and availability of substitute products; and the level of competition among the *Domestic Like Product* produced in the United States, *Subject Merchandise* produced in the *Subject Country,* and such merchandise from other countries.

(13) (OPTIONAL) A statement of whether you agree with the above definitions of the *Domestic Like Product* and *Domestic Industry;* if you disagree with either or both of these definitions, please explain why and provide alternative definitions.

Authority: This proceeding is being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.61 of the Commission's rules.

By order of the Commission.

Issued: April 25, 2023.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2023–09023 Filed 4–28–23; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 731–1330 (Review)]

Dioctyl Terephthalate From South Korea; Cancellation of Hearing for Full Five-Year Review

AGENCY: International Trade Commission.

ACTION: Notice.

DATES: April 25, 2023.

FOR FURTHER INFORMATION CONTACT: Christopher Robinson ((202) 205–2602), Office of Industry and Competitive Analysis, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*http://www.usitc.gov*). The public record for this review may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION: On December 16, 2022, the Commission established a schedule for the conduct of the full five-year review (87 FR 78708, December 22, 2022). On April 18, 2023, counsel for Eastman Chemical Company filed a request that the Commission cancel the scheduled hearing for this review given the lack of respondent interested party participation. On April 21, 2023, counsel for Eastman Chemical Company filed a request to appear at the hearing, contingent on the Commission's response to the request to cancel the hearing. Counsel indicated a willingness to respond to any Commission questions. No other party submitted a request to appear at the hearing. Consequently, the public hearing in connection with this review, scheduled to begin at 9:30 a.m. on Thursday, April 27, 2023, is cancelled. Parties to this review should respond to any written questions posed by the Commission in their posthearing briefs, which are due to be filed on May 5, 2023.

For further information concerning this review see the Commission's notice cited above and the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A, D, E, and F (19 CFR part 207).

Authority: This review is being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to section 207.62 of the Commission's rules.

By order of the Commission.

Issued: April 26, 2023.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

[OMB Number 1121–0064]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Revision of a Currently Approved Collection; Annual Surveys of Probation and Parole

AGENCY: Bureau of Justice Statistics, Department of Justice.

ACTION: 60-day notice.

SUMMARY: The Department of Justice (DOJ), Office of Justice Programs, Bureau of Justice Statistics, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 60 days until June 30, 2023.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Danielle Kaeble, Bureau of Justice Statistics, 810 Seventh Street NW, Washington, DC 20531 (email: *Danielle.Kaeble@usdoj.gov;* telephone: 202–598–1024).

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Bureau of Justice Statistics, including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information,

including the validity of the methodology and assumptions used;
—Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Abstract: These establishment surveys provide BJS with the capacity to report annually on changes in the size and composition of the community corrections populations in the United States. The surveys also track key outcomes of offenders on probation or parole, such as completion of supervision terms and return to incarceration (or recidivism). Data are collected from the known universe of probation and parole supervising agencies, using central reporters wherever possible to minimize burden the public. The ASPP provides the only national level, regularly collected, data on the community corrections populations, and, as such, they inform this key stage of the criminal justice process. Revisions include an updated frame of probation agencies including additional misdemeanor only supervising agencies, as well changes to the probation survey forms (CJ–8 and CJ–8M) to collect information separately for felony and misdemeanant probation.

Overview of this information collection:

1. *Type of Information Collection:* Revision of a previously approved collection.

2. *The Title of the Form/Collection:* Annual Surveys of Probation and Parole.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* The Annual Surveys of Probation and Parole (ASPP) contain three forms: CJ–7: Annual Parole Survey CJ–8: Annual Probation Survey and CJ–8M: Annual Probation Survey (Misdemeanant Supervision Only). The applicable component within the Department of Justice is the Bureau of Justice Statistics (BJS), in the Office of Justice Programs.

4. *Affected public who will be asked or required to respond as well as the obligation:* The affected public is Federal Government. The obligation to respond is voluntary.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The ASPP will collect data from approximately 860 supervising agencies. The ASPP will collect data from approximately 860 supervising agencies. For each data collection cycle, we estimate an average burden of 96 minutes for the survey form CJ–7, 150 minutes for the updated survey form CJ–8, and 20 minutes for the updated survey form CJ–M. If needed, respondents to the CJ–7 and CJ–8 will be contacted by email or telephone to verify data quality issues. We estimate that data quality follow-up is needed for 70% of the CJ–7 and CJ–8 respondents (213) in each cycle and will run an average of 15 minutes for each respondent. We estimate a 10-minute follow-up for half (304) of the CJ–8M respondents.

6. *An estimate of the total public burden (in hours) associated with the collection:* There are approximately 3,015 hours, annual burden, associated with this information collection (1,005 per three years).

TOTAL BURDEN HOURS

Activity	Number of respondents	Frequency	Total annual responses	Time per response	Total annual burden (hours)
Survey	860	1	860	3.506	3,015
Unduplicated Totals	860		860	3,015	3,015

If additional information is required contact: John R. Carlson, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 4W–218, Washington, DC 20530.

Dated: April 25, 2023.

John R. Carlson,

Department Clearance Officer for PRA, U.S. Department of Justice.

[FR Doc. 2023–09190 Filed 4–28–23; 8:45 am]

BILLING CODE 4410–18–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Claim for Reimbursement of Benefit Payments and Claims Expense Under the War Hazards Compensation Act

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Office of Workers' Compensation Programs (OWCP)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before May 31, 2023.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of

automated collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT: Nicole Bouchet by telephone at 202–693–0213, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: Information collected using OWCP Form CA–278, Claim for Reimbursement of Benefit Payments and Claims Expense Under the War Hazards Compensation Act, will allow OWCP to consider requests filed by insurance carriers and self-insured that have paid benefits to workers injured due to a war-risk hazard to be reimbursed for such benefits out of the Employees' Compensation Fund. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on January 30, 2023 (88 FR 5926).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–OWCP.

Title of Collection: Claim for Reimbursement of Benefit Payments and Claims Expense Under the War Hazards Compensation Act.

OMB Control Number: 1240–0006.

Affected Public: Private Sector—Businesses or other for-profits.

Total Estimated Number of Respondents: 7.

Total Estimated Number of Responses: 1,264.

Total Estimated Annual Time Burden: 632 hours.

Total Estimated Annual Other Costs Burden: $2,427.

(Authority: 44 U.S.C. 3507(a)(1)(D))

Nicole Bouchet,

Senior PRA Analyst.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket No. OSHA–2023–0004]

Traylor Bros., Inc.; Application for Modification of Permanent Variance and Interim Order; Grant of Interim Order

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Notice; request for comments.

SUMMARY: In this notice, OSHA announces an application for modification of a permanent variance and for an interim order submitted by Traylor Bros., Inc. (Traylor). The application seeks to modify a permanent variance relating to work in compressed-air environments previously granted to Traylor to add Traylor-Sundt Joint Venture (SUNDTJV) as an additional employer and to add the Integrated Pipeline Tunnel Project. Traylor also requests an interim order to be effective until OSHA issues a final decision on the application. This notice presents the agency's preliminary findings on Traylor's application and announces the granting of an interim order. OSHA invites the public to submit comments on the variance modification application to assist the agency in determining whether to grant the applicant a modified permanent variance based on the conditions specified in this application.

DATES: Submit comments, information, documents in response to this notice, and request for a hearing on or before May 31, 2023. The Interim Order described in this notice will become effective on May 1, 2023, and shall remain in effect until the completion of the Integrated Pipeline Tunnel Project, the interim order is modified or revoked, or OSHA makes a final decision on the application for a modified permanent variance.

ADDRESSES:

Electronically: You may submit comments and attachments electronically at: *http://www.regulations.gov,* which is the Federal eRulemaking Portal. Follow the instructions online for submitting comments.

Facsimile: If your comments, including attachments, are not longer than 10 pages, you may fax them to the OSHA Docket Office at (202) 693–1648.

Instructions: All submissions must include the agency name and OSHA docket number (OSHA–2023–0004). All comments, including any personal information you provide, are placed in the public docket without change, and may be made available online at *http://www.regulations.gov.*

Docket: To read or download comments or other material in the docket, go to *http://www.regulations.gov* or the OSHA Docket Office. All documents in the docket (including this **Federal Register** notice) are listed in the *http://www.regulations.gov* index; however, some information (*e.g.,* copyrighted material) is not publicly available to read or download through the website. All submissions, including copyrighted material, are available for inspection at the OSHA Docket Office. Contact the OSHA Docket Office at (202) 693–2350 (TTY (877) 889–5627) for assistance in locating docket submissions.

FOR FURTHER INFORMATION CONTACT: Information regarding this notice is available from the following sources:

Press inquiries: Contact Mr. Frank Meilinger, Director, OSHA Office of Communications, U.S. Department of Labor; telephone: (202) 693–1999; email: *meilinger.francis2@dol.gov.*

General and technical information: Contact Mr. Kevin Robinson, Director, Office of Technical Programs and Coordination Activities, Directorate of Technical Support and Emergency Management, Occupational Safety and Health Administration, U.S. Department of Labor; telephone: (202) 693–2110; email: *robinson.kevin@dol.gov.*

Copies of this ***Federal Register*** *notice:* Electronic copies of this **Federal Register** notice are available at *http://www.regulations.gov.* This **Federal Register** notice, as well as news releases and other relevant information, also are available at OSHA's web page at *http://www.osha.gov.*

Hearing Requests: According to 29 CFR 1905.15, hearing requests must include: (1) a concise statement of facts detailing how the proposed variance modification would affect the requesting party; (2) a specification of any statement or representation in the variance application that the commenter denies, and a concise summary of the evidence offered in support of each denial; and (3) any views or arguments on any issue of fact or law presented in the variance application.

SUPPLEMENTARY INFORMATION:

I. Notice of Application

This notice addresses Traylor's application by letter dated April 20, 2022, to modify the permanent variance granted to Traylor on March 11, 2016 (2016 Variance) (81 FR 12954), to include an additional employer, the

Traylor-Sundt Joint Venture (SUNDTJV), which is a joint venture made up of two construction companies, Traylor and Sundt Construction, Inc. (Sundt). Traylor also requested an interim order while OSHA evaluates the application (OSHA–2023–0004–0002). Because the joint venture includes an additional employer not covered by the 2016 Variance, OSHA will evaluate SUNDTJV's modification request as an application for a new permanent variance.

SUNDTJV was awarded the tunneling contract for the Integrated Pipeline Tunnel Project in Dallas, Texas (OSHA–2023–0004–0001). The Integrated Pipeline Tunnel Project includes two tunnels, the Cedar Creek Tunnel, and the Hollywood Lake Tunnel, which require two separate tunnel drives. This notice covers the Integrated Pipeline Tunnel Project only and is not applicable to future tunneling projects by Traylor, Sundt, or SUNDTJV.

Specifically, this notice addresses the application by Traylor (the applicant) for a permanent variance and interim order from the provisions of the standard governing compressed air work that: (1) prohibit compressed-air worker exposure to pressures exceeding 50 pounds per square inch (p.s.i.) except in an emergency (29 CFR 1926.803(e)(5)); [1] (2) require the use of the decompression values specified in decompression tables in Appendix A of the compressed-air standard for construction (29 CFR 1926.803(f)(1)); and (3) require the use of automated operational controls and a special decompression chamber (29 CFR 1926.803(g)(1)(iii) and .803(g)(1)(xvii), respectively).

OSHA has previously approved nearly identical provisions when granting several other very similar variances, as discussed in more detail in section II. OSHA preliminarily concludes that the variance is appropriate, grants an interim order temporarily allowing the proposed activity, and seeks comment on the variance application.

A. Background

The variance application seeks a permanent variance for Traylor-Sundt Joint Venture (SUNDTJV)'s work on the Integrated Pipeline Tunnel Project. SUNDTJV is a contractor that works on complex tunnel projects using innovations in tunnel-excavation methods. SUNDTJV's workers engage in the construction of tunnels using advanced shielded mechanical excavation techniques in conjunction with an earth pressure balance tunnel boring machine (TBM). Using shielded mechanical excavation techniques, in conjunction with precast concrete tunnel liners and backfill grout, TBMs provide methods to achieve the face pressures required to maintain a stabilized tunnel face through various geologies and isolate that pressure to the forward section (the working chamber) of the TBM.

SUNDTJV asserts that it bores tunnels using TBM at levels below the water table through soft soils consisting of clay, silt, and sand. TBMs are capable of maintaining pressure at the tunnel face, and stabilizing existing geological conditions, through the controlled use of a mechanically driven cutter head, bulkheads within the shield, ground-treatment foam, and a screw conveyor that moves excavated material from the working chamber. The forward-most portion of the TBM is the working chamber, and this chamber is the only pressurized segment of the TBM. Within the shield, the working chamber consists of two sections: the forward working chamber and the staging chamber. The forward working chamber is immediately behind the cutter head and tunnel face. The staging chamber is behind the forward working chamber and between the man-lock door and the entry door to the forward working chamber.

The TBM has twin man-locks located between the pressurized working chamber and the non-pressurized portion of the machine. Each man-lock has two compartments. This configuration allows workers to access the man-locks for compression and decompression, and medical personnel to access the man-locks if required in an emergency.

SUNDTJV's Hyperbaric Operations Manual (HOM) for the Integrated Pipeline Tunnel Project (OSHA–2023–0004–0003) indicates that the maximum pressure to which it is likely to expose workers during project interventions for the two tunnel drives (Cedar Creek Tunnel and Hollywood Lake Tunnel) associated with the Integrated Pipeline Tunnel Project is 58 p.s.i. Therefore, to work effectively, SUNDTJV must perform hyperbaric interventions in compressed air at pressures nearly 15% higher than the maximum pressure specified by the existing OSHA standard, 29 CFR 1926.803(e)(5), which states: ''No employee shall be subjected to pressure exceeding 50 pounds per square inch except in emergency'' (see footnote 1).

SUNDTJV employs specially trained personnel for the construction of the tunnel. To keep the machinery working effectively, SUNDTJV asserts that these workers must periodically enter the excavation working chamber of the TBM to perform hyperbaric interventions during which workers would be exposed to air pressures up to 58 p.s.i., which exceeds the maximum pressure specified by the existing OSHA standard at 29 CFR 1926.803(e)(5). These interventions consist of conducting inspections or maintenance work on the cutter-head structure and cutting tools of the TBM, such as changing replaceable cutting tools and disposable wear bars, and, in rare cases, repairing structural damage to the cutter head. These interventions are the only time that workers are exposed to compressed air. Interventions in the working chamber (the pressurized portion of the TBM) take place only after halting tunnel excavation and preparing the machine and crew for an intervention.

During interventions, workers enter the working chamber through one of the twin man-locks that open into the staging chamber. To reach the forward part of the working chamber, workers pass through a door in a bulkhead that separates the staging chamber from the forward working chamber. The man-locks and the working chamber are designed to accommodate three people, which is the maximum crew size allowed under the proposed variance. When the required decompression times are greater than work times, the twin man-locks allow for crew rotation. During crew rotation, one crew can be compressing or decompressing while the second crew is working. Therefore, the working crew always has an unoccupied man-lock at its disposal.

SUNDTJV asserts that these innovations in tunnel excavation have greatly reduced worker exposure to hazards of pressurized air work because they have eliminated the need to pressurize the entire tunnel for the project and would thereby reduce the number of workers exposed, as well as the total duration of exposure, to hyperbaric pressure during tunnel construction. These advances in technology substantially modified the methods used by the construction industry to excavate subaqueous tunnels compared to caisson work.

In addition to the reduced exposures resulting from the innovations in tunnel-excavation methods, SUNDTJV asserts that innovations in hyperbaric medicine and technology improve the

[1] The decompression tables in Appendix A of subpart S express the maximum working pressures as pounds per square inch gauge (p.s.i.g.), with a maximum working pressure of 50 p.s.i.g. Therefore, throughout this notice, OSHA expresses the 50 p.s.i. value specified by 29 CFR 1926.803(e)(5) as 50 p.s.i.g., consistent with the terminology in Appendix A, Table 1 of subpart S.

safety of decompression from hyperbaric exposures. These procedures, however, would deviate from the decompression process that OSHA requires for construction in 29 CFR 1926.803(e)(5) and (f)(1) and the decompression tables in Appendix A of 29 CFR 1926, subpart S. Nevertheless, according to SUNDTJV, their use of decompression protocols incorporating oxygen is more efficient, effective, and safer for tunnel workers than compliance with the decompression tables specified by the existing OSHA standard.

SUNDTJV therefore believes its workers will be at least as safe under its proposed alternatives as they would be under OSHA's standard because of the reduction in number of workers and duration of hyperbaric exposures, better application of hyperbaric medicine, and the development of a project-specific HOM that requires specialized medical support and hyperbaric supervision to provide assistance to a team of specially trained man-lock attendants and hyperbaric or compressed-air workers (CAWs).

Based on an initial review of the application for a permanent variance and interim order for the construction of the Integrated Pipeline Tunnel Project in Dallas, Texas, OSHA has preliminarily determined that Traylor has proposed an alternative that would provide a workplace at least as safe and healthful as that provided by the standard.

II. The Variance Application

Pursuant to the requirements of OSHA's variance regulations (29 CFR part 1905), the applicant has certified that it notified its workers [2] of the variance modification application and request for interim order by posting, at prominent locations where it normally posts workplace notices, a summary of the application and information specifying where the workers can examine a copy of the application.

A. OSHA History of Approval of Nearly Identical Variance Requests

OSHA has previously approved several nearly identical variances involving the same types of tunneling equipment used for similar projects (tunnel construction variances). OSHA notes that it granted seven subaqueous tunnel construction permanent variances from the same provisions of OSHA's compressed-air standard (29 CFR 1926.803(e)(5), (f)(1), (g)(1)(iii), and (g)(1)(xvii)) that are the subject of the present application: (1) Impregilo, Healy, Parsons, Joint Venture (IHP JV) for the completion of the Anacostia River Tunnel in Washington, DC (80 FR 50652, August 20, 2015); (2) Traylor JV for the completion of the Blue Plains Tunnel in Washington, DC (80 FR 16440, March 27, 2015); (3) Tully/OHL USA Joint Venture for the completion of the New York Economic Development Corporation's New York Siphon Tunnel project (79 FR 29809, May 23, 2014); (4) Salini-Impregilo/Healy Joint Venture for the completion of the Northeast Boundary Tunnel in Washington, DC (85 FR 27767, May 11, 2020); (5) Traylor-Shea Joint Venture for the completion of the Alexandria RiverRenew Tunnel Project in Alexandria, Virginia and Washington, DC (88 FR 15090, March 10, 2023); and (6) McNally/Kiewit Joint Venture for the completion of the Shoreline Storage Tunnel Project in Cleveland, Ohio (88 FR 15080, September 25, 2022). OSHA also granted an interim order to Ballard Marine for the Suffolk County Outfall Tunnel project in West Babylon, New York (86 FR 5253, January 19, 2021). The proposed alternate conditions in this notice are nearly identical to the alternate conditions of the previous permanent variances. OSHA is not aware of any injuries or other safety issues that arose from work performed under these conditions in accordance with the previous variances.

B. Variance From Paragraph (e)(5) of 29 CFR 1926.803, Prohibition of Exposure to Pressure Greater Than 50 p.s.i.

The applicant states that it may perform hyperbaric interventions at pressures up to 58 p.s.i. in the working chamber of the TBM; this pressure exceeds the pressure limit of 50 p.s.i. specified for nonemergency purposes by 29 CFR 1926.803(e)(5). The TBM has twin man-locks, with each man-lock having two compartments. This configuration allows workers to access the man-locks for compression and decompression, and medical personnel to access the man-locks if required in an emergency.

TBMs are capable of maintaining pressure at the tunnel face, and stabilizing existing geological conditions, through the controlled use of a mechanically driven cutter head, bulkheads within the shield, ground-treatment foam, and a screw conveyor that moves excavated material from the working chamber. As noted earlier, the forward-most portion of the TBM is the working chamber, and this chamber is the only pressurized segment of the TBM. Within the shield, the working chamber consists of two sections: the staging chamber and the forward working chamber. The staging chamber is the section of the working chamber between the man-lock door and the entry door to the forward working chamber. The forward working chamber is immediately behind the cutter head and tunnel face.

SUNDTJV will pressurize the working chamber to the level required to maintain a stable tunnel face. Pressure in the staging chamber ranges from atmospheric (no increased pressure) to a maximum pressure equal to the pressure in the working chamber. The applicant asserts that they may have to perform interventions at pressures up to 58 p.s.i.

During interventions, workers enter the working chamber through one of the twin man-locks that open into the staging chamber. To reach the forward part of the working chamber, workers pass through a door in a bulkhead that separates the staging chamber from the forward working chamber. The maximum crew size allowed in the forward working chamber is three. At certain hyperbaric pressures (*i.e.,* when decompression times are greater than work times), the twin man-locks allow for crew rotation. During crew rotation, one crew can be compressing or decompressing while the second crew is working. Therefore, the working crew always has an unoccupied man-lock at its disposal.

Further, the applicant has developed a project-specific HOM (OSHA–2023–0004–0003) that describes in detail the hyperbaric procedures, the required medical examination used during the tunnel-construction project, the standard operating procedures and the emergency and contingency procedures. The procedures include using experienced and knowledgeable man-lock attendants who have the training and experience necessary to recognize and treat decompression illnesses and injuries. The attendants are under the direct supervision of the hyperbaric supervisor (competent person experienced and trained in hyperbaric operations, procedures and safety) and attending physician. In addition, procedures include medical screening and review of prospective CAWs. The purpose of this screening procedure is to vet prospective CAWs with medical conditions (*e.g.,* deep vein thrombosis, poor vascular circulation, and muscle cramping) that could be aggravated by sitting in a cramped space (*e.g.,* a man-lock) for extended periods or by exposure to elevated pressures and compressed gas mixtures. A transportable recompression chamber (shuttle) is available to extract workers from the hyperbaric working chamber

[2] See the definition of ''Affected employee or worker'' in section V.D of this notice.

for emergency evacuation and medical treatment; the shuttle attaches to the topside medical lock, which is a large recompression chamber. The applicant believes that the procedures included in the HOM provide safe work conditions when interventions are necessary, including interventions above 50 p.s.i. or 50 p.s.i.g.

OSHA comprehensively reviewed the project-specific HOM and determined that the safety and health instructions and measures it specifies are appropriate and adequately protect the safety and health of the CAWs.

C. Variance From Paragraph (f)(1) of 29 CFR 1926.803, Requirement To Use OSHA Decompression Tables

OSHA's compressed-air standard for construction requires decompression in accordance with the decompression tables in Appendix A of 29 CFR 1926, subpart S (see 29 CFR 1926.803(f)(1)). As an alternative to the OSHA decompression tables, the applicant proposes to use newer decompression schedules (the 1992 French Decompression Tables) that rely on staged decompression and supplement breathing air used during decompression with air or oxygen (as appropriate).[3] The applicant asserts decompression protocols using the 1992 French Decompression Tables for air or oxygen as specified by the Integrated Pipeline Tunnel Project-specific HOM are safer for tunnel workers than the decompression protocols specified in Appendix A of 29 CFR 1926, subpart S. Accordingly, the applicant would commit to following the decompression procedures described in that HOM, which would require it to follow the 1992 French Decompression Tables to decompress CAWs after they exit the hyperbaric conditions in the working chamber.

Depending on the maximum working pressure and exposure times, the 1992 French Decompression Tables provide for air decompression with or without oxygen. Traylor asserts that oxygen decompression has many benefits, including (1) keeping the partial pressure of nitrogen in the lungs as low as possible; (2) keeping external pressure as low as possible to reduce the formation of bubbles in the blood; (3) removing nitrogen from the lungs and arterial blood and increasing the rate of nitrogen elimination; (4) improving the quality of breathing during decompression stops so that workers are less tired and to prevent bone necrosis; (5) reducing decompression time by about 33 percent as compared to air decompression; and (6) reducing inflammation.

In addition, the project-specific HOM requires a physician certified in hyperbaric medicine, to manage the medical condition of CAWs during hyperbaric exposures and decompression. A trained and experienced man-lock attendant is also required to be present during hyperbaric exposures and decompression. This man-lock attendant is to operate the hyperbaric system to ensure compliance with the specified decompression table. A hyperbaric supervisor, who is trained in hyperbaric operations, procedures, and safety, directly oversees all hyperbaric interventions and ensures that staff follow the procedures delineated in the HOM or by the attending physician.

D. Variance From Paragraph (g)(1)(iii) of 29 CFR 1926.803, Automatically Regulated Continuous Decompression

The applicant is applying for a permanent variance from the OSHA standard at 29 CFR 1926.803(g)(1)(iii), which requires automatic controls to regulate decompression. As noted above, the applicant is committed to conducting the staged decompression according to the 1992 French Decompression Tables under the direct control of the trained man-lock attendant and under the oversight of the hyperbaric supervisor.

Breathing air under hyperbaric conditions increases the amount of nitrogen gas dissolved in a CAW's tissues. The greater the hyperbaric pressure under these conditions and the more time spent under the increased pressure, the greater the amount of nitrogen gas dissolved in the tissues. When the pressure decreases during decompression, tissues release the dissolved nitrogen gas into the blood system, which then carries the nitrogen gas to the lungs for elimination through exhalation. Releasing hyperbaric pressure too rapidly during decompression can increase the size of the bubbles formed by nitrogen gas in the blood system, resulting in decompression illness (DCI), commonly referred to as ''the bends.'' This description of the etiology of DCI is consistent with current scientific theory and research on the issue.

The 1992 French Decompression Tables proposed for use by the applicant provide for stops during worker decompression (*i.e.,* staged decompression) to control the release of nitrogen gas from tissues into the blood system. Studies show that staged decompression, in combination with other features of the 1992 French Decompression Tables such as the use of oxygen, result in a lower incidence of DCI than the use of automatically regulated continuous decompression.[4] In addition, the applicant asserts that staged decompression administered in accordance with its HOM is at least as effective as an automatic controller in regulating the decompression process because the HOM includes a hyperbaric supervisor who directly supervises all hyperbaric interventions and ensures that the man-lock attendant, who is a competent person in the manual control of hyperbaric systems, follows the schedule specified in the decompression tables, including stops.

E. Variance From Paragraph (g)(1)(xvii) of 29 CFR 1926.803, Requirement of Special Decompression Chamber

The OSHA compressed-air standard for construction requires employers to use a special decompression chamber of sufficient size to accommodate all CAWs being decompressed at the end of the shift when total decompression time exceeds 75 minutes (see 29 CFR 1926.803(g)(1)(xvii)). Use of the special decompression chamber enables CAWs to move about and flex their joints to prevent neuromuscular problems during decompression.

Space limitations in the TBM do not allow for the installation and use of an

[3] In 1992, the French Ministry of Labour replaced the 1974 French Decompression Tables with the 1992 French Decompression Tables, which differ from OSHA's decompression tables in Appendix A by using: (1) staged decompression as opposed to continuous (linear) decompression; (2) decompression tables based on air or both air and pure oxygen; and (3) emergency tables when unexpected exposure times occur (up to 30 minutes above the maximum allowed working time).

[4] See, *e.g.,* Dr. Eric Kindwall, EP (1997), Compressed air tunneling and caisson work decompression procedures: development, problems, and solutions. *Undersea and Hyperbaric Medicine,* 24(4), pp. 337–345. This article reported 60 treated cases of DCI among 4,168 exposures between 19 and 31 p.s.i.g. over a 51-week contract period, for a DCI incidence of 1.44% for the decompression tables specified by the OSHA standard. Dr. Kindwall notes that the use of automatically regulated continuous decompression in the Washington State safety standards for compressed-air work (from which OSHA derived its decompression tables) was at the insistence of contractors and the union, and against the advice of the expert who calculated the decompression table and recommended using staged decompression. Dr. Kindwall then states, ''Continuous decompression is inefficient and wasteful. For example, if the last stage from 4 p.s.i.g. . . . to the surface took 1h, at least half the time is spent at pressures less than 2 p.s.i.g. . . ., which provides less and less meaningful bubble suppression. . . .'' In addition, Dr. Kindwall addresses the continuous-decompression protocol in the OSHA compressed-air standard for construction, noting that ''[a]side from the tables for saturation diving to deep depths, no other widely used or officially approved diving decompression tables use straight line, continuous decompressions at varying rates. Stage decompression is usually the rule, since it is simpler to control.''

additional special decompression lock or chamber. The applicant proposes that it be permitted to rely on the man-locks and staging chamber in lieu of adding a separate, special decompression chamber. Because only a few workers out of the entire crew are exposed to hyperbaric pressure, the man-locks (which, as noted earlier, connect directly to the working chamber) and the staging chamber are of sufficient size to accommodate all of the exposed workers during decompression. The applicant uses the existing man-locks, each of which adequately accommodates a three-member crew for this purpose when decompression lasts up to 75 minutes. When decompression exceeds 75 minutes, crews can open the door connecting the two compartments in each man-lock (during decompression stops) or exit the man-lock and move into the staging chamber where additional space is available. The applicant asserts that this alternative arrangement is as effective as a special decompression chamber in that it has sufficient space for all the CAWs at the end of a shift and enables the CAWs to move about and flex their joints to prevent neuromuscular problems.

III. Agency Preliminary Determinations

After reviewing the proposed alternatives, OSHA has preliminarily determined that the applicant's proposed alternatives on the whole, subject to the conditions in the request and imposed by this interim order, provide measures that are as safe and healthful as those required by the cited OSHA standards addressed in section II of this notice.

In addition, OSHA has preliminarily determined that each of the following alternatives are at least as effective as the specified OSHA requirements:

A. 29 CFR 1926.803(e)(5)

SUNDTJV has developed, and proposed to implement, effective alternative measures to the prohibition of using compressed air under hyperbaric conditions exceeding 50 p.s.i. The proposed alternative measures include use of engineering and administrative controls of the hazards associated with work performed in compressed-air conditions exceeding 50 p.s.i. while engaged in the construction of a subaqueous tunnel using advance shielded mechanical-excavation techniques in conjunction with the TBM. Prior to conducting interventions in the TBM's pressurized working chamber, SUNDTJV halts tunnel excavation and prepares the machine and crew to conduct the interventions. Interventions involve inspection, maintenance, or repair of the mechanical-excavation components located in the working chamber.

B. 29 CFR 1926.803(f)(1)

SUNDJV has proposed to implement equally effective alternative measures to the requirement in 29 CFR 1926.803(f)(1) for compliance with OSHA's decompression tables. The project-specific HOM specifies the procedures and personnel qualifications for performing work safely during the compression and decompression phases of interventions. The HOM also specifies the decompression tables the applicant proposes to use (the 1992 French Decompression Tables). Depending on the maximum working pressure and exposure times during the interventions, the tables provide for decompression using air, pure oxygen, or a combination of air and oxygen. The decompression tables also include delays or stops for various time intervals at different pressure levels during the transition to atmospheric pressure (*i.e.,* staged decompression). In all cases, a physician certified in hyperbaric medicine will manage the medical condition of CAWs during decompression. In addition, a trained and experienced man-lock attendant, experienced in recognizing decompression sickness or illnesses and injuries, will be present. Of key importance, a hyperbaric supervisor, trained in hyperbaric operations, procedures, and safety, will directly supervise all hyperbaric operations to ensure compliance with the procedures delineated in the project-specific HOM or by the attending physician.

Prior to granting the seven previous permanent variances to IHP JV, Traylor JV, Tully JV, Salini-Impregilo Joint Venture, Traylor-Shea JV and McNally/Kiewit JV and Ballard, OSHA conducted a review of the scientific literature and concluded that the alternative decompression method (*i.e.,* the 1992 French Decompression Tables) SUNDTJV proposed would be at least as safe as the decompression tables specified by OSHA when applied by trained medical personnel under the conditions that would be imposed by the proposed variance.

Some of the literature indicates that the alternative decompression method may be safer, concluding that decompression performed in accordance with these tables resulted in a lower occurrence of DCI than decompression conducted in accordance with the decompression tables specified by the standard. For example, H. L. Anderson studied the occurrence of DCI at maximum hyperbaric pressures ranging from 4 p.s.i.g. to 43 p.s.i.g. during construction of the Great Belt Tunnel in Denmark (1992–1996).[5] This project used the 1992 French Decompression Tables to decompress the workers during part of the construction. Anderson observed 6 DCI cases out of 7,220 decompression events and reported that switching to the 1992 French Decompression tables reduced the DCI incidence to 0.08% compared to a previous incidence rate of 0.14%. The DCI incidence in the study by H. L. Andersen is substantially less than the DCI incidence reported for the decompression tables specified in Appendix A.

OSHA found no studies in which the DCI incidence reported for the 1992 French Decompression Tables were higher than the DCI incidence reported for the OSHA decompression tables.[6]

OSHA's experience with the previous seven variances, which all incorporated nearly identical decompression plans and did not result in safety issues, also provide evidence that the alternative procedure as a whole is at least as effective for this type of tunneling project as compliance with OSHA's decompression tables. The experience of State Plans[7] that either granted variances (Nevada, Oregon and Washington)[8] or promulgated a new standard (California)[9] for hyperbaric exposures occurring during similar subaqueous tunnel-construction work, provide additional evidence of the effectiveness of this alternative procedure.

C. 29 CFR 1926.803(g)(1)(iii)

SUNDTJV developed, and proposed to implement, an equally effective

[5] Anderson HL (2002). Decompression sickness during construction of the Great Belt tunnel, Denmark. *Undersea and Hyperbaric Medicine,* 29(3), pp. 172–188.

[6] Le Péchon JC, Barre P, Baud JP, Ollivier F (September 1996). Compressed air work—French Tables 1992—operational results. *JCLP Hyperbarie Paris, Centre Medical Subaquatique Interentreprise, Marseille: Communication a l'EUBS,* pp. 1–5 (see Ex. OSHA–2012–0036–0005).

[7] Under section 18 of the OSH Act, Congress expressly provides that States and U.S. territories may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards. OSHA refers to such States and territories as ''State Plan States'' Occupational safety and health standards developed by State Plan States must be at least as effective in providing safe and healthful employment and places of employment as the Federal standards (29 U.S.C. 667).

[8] These state variances are available in the docket for the 2015 Traylor JV variance: Exs. OSHA–2012–0035–0006 (Nevada), OSHA–2012–0035–0005 (Oregon), and OSHA–2012–0035–0004 (Washington).

[9] See California Code of Regulations, Title 8, Subchapter 7, Group 26, Article 154, available at *http://www.dir.ca.gov/title8/sb7g26a154.html.*

alternative to 29 CFR 1926.803(g)(1)(iii), which requires the use of automatic controllers that continuously decrease pressure to achieve decompression in accordance with the tables specified by the standard. The applicant's alternative includes using the 1992 French Decompression Tables for guiding staged decompression to achieve lower occurrences of DCI, using a trained and competent attendant for implementing appropriate hyperbaric entry and exit procedures, and providing a competent hyperbaric supervisor and attending physician certified in hyperbaric medicine to oversee all hyperbaric operations.

In reaching this preliminary conclusion, OSHA again notes the experience of previous nearly identical tunneling variances, the experiences of State Plan States, and a review of the literature and other information noted earlier.

D. 29 CFR 1926.803(g)(1)(xvii)

SUNDTJV developed, and proposed to implement, an effective alternative to the use of the special decompression chamber required by 29 CFR 1926.803(g)(1)(xvii). The TBM's man-lock and working chamber appear to satisfy all of the conditions of the special decompression chamber, including that they provide sufficient space for the maximum crew of three CAWs to stand up and move around, and safely accommodate decompression times up to 360 minutes. Therefore, again noting OSHA's previous experience with nearly identical variances including the same alternative, OSHA preliminarily determined that the TBM's man-lock and working chamber function as effectively as the special decompression chamber required by the standard.

Pursuant to section 6(d) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 655), and based on the record discussed above, the agency preliminarily finds that when the employer complies with the conditions of the proposed modified variance, the working conditions of the employer's workers would be at least as safe and healthful as if the employer complied with the working conditions specified by paragraphs (e)(5), (f)(1), (g)(1)(iii), and (g)(1)(xvii) of 29 CFR 1926.803.

IV. Grant of Interim Order, Proposal for Permanent Variance, and Request for Comment

OSHA hereby announces the preliminary decision to grant an interim order to SUNDTJV for the Integrated Pipeline Tunnel Project in Dallas, Texas. This interim order permits SUNDTJV's CAWs to perform interventions in hyperbaric conditions not exceeding 58 p.s.i.g. during the Integrated Pipeline Tunnel Project, subject to the conditions that follow in this document. This interim order will remain in effect until completion of the Integrated Pipeline Tunnel Project or until the agency modifies or revokes the interim order or makes a final decision on the application for a permanent variance. During the period starting with the publication of this notice until completion of the Integrated Pipeline Tunnel Project, or until the agency modifies or revokes the interim order or makes a final decision on the application for a permanent variance, SUNDTJV is required to comply fully with the conditions of the interim order as an alternative to complying with the following requirements of 29 CFR 1926.803 (hereafter, ''the standard'') that:

1. Prohibit exposure to pressure greater than 50 p.s.i. (29 CFR 1926.803(e)(5));
2. Require the use of decompression values specified by the decompression tables in Appendix A of the compressed-air standard (29 CFR 1926.803(f)(1));
3. Require the use of automated operational controls (29 CFR 1926.803(g)(1)(iii)); and
4. Require the use of a special decompression chamber (29 CFR 1926.803(g)(1)(xvii)).

In order to avail itself of the interim order, SUNDTJV must: (1) comply with the conditions listed in the interim order for the period starting with the grant of the interim order and ending with SUNDTJV's completion of the Integrated Pipeline Tunnel Project (or until the agency modifies or revokes the interim order or makes a decision on its application for a modified permanent variance); (2) comply fully with all other applicable provisions of 29 CFR part 1926; and (3) provide a copy of this **Federal Register** notice to all employees affected by the proposed conditions, including the affected employees of other employers, using the same means it used to inform these employees of its application for a modified permanent variance.

OSHA is also proposing that the same requirements (see above section III, parts A through D) would apply to a permanent variance if OSHA ultimately issues one for this project. OSHA requests comment on those conditions as well as OSHA's preliminary determination that the specified alternatives and conditions would provide a workplace as safe and healthful as those required by the standard from which a variance is sought. After reviewing comments, OSHA will publish in the **Federal Register** the agency's final decision granting or denying a permanent variance.

V. Description of the Specified Conditions of the Interim Order and the Application for a Permanent Variance

This section describes the alternative means of compliance with 29 CFR 1926.803(e)(5), (f)(1), (g)(1)(iii), and (g)(1)(xvii) and provides additional detail regarding the proposed conditions that form the basis of Traylor's application for an interim order and for a modified permanent variance. The conditions are listed in section VI of this notice. For brevity, the discussion that follows refers only to the permanent variance, but the same conditions apply to the interim order.

Proposed Condition A: Scope

The scope of the proposed permanent variance would limit coverage to the work situations specified. Clearly defining the scope of the proposed permanent variance provides Traylor, SUNDTJV's employees, potential future applicants, other stakeholders, the public, and OSHA with necessary information regarding the work situations in which the proposed permanent variance would apply. To the extent that Traylor or SUNDTJV exceeds the defined scope of this variance, it would be required to comply with OSHA's standards.

Pursuant to 29 CFR 1905.11, an employer (or class or group of employers) [10] may request a permanent variance for a specific workplace or workplaces. If OSHA approves a permanent variance, it would apply only to the specific employer(s) that submitted the application and only to the specific workplace or workplaces designated as part of the project. In this instance, if OSHA were to grant a modified permanent variance, it would apply to only the applicant, SUNDJV, and only the Integrated Pipeline Tunnel Project.

Proposed Condition B: Duration

The interim order is only intended as a temporary measure pending OSHA's decision on the permanent variance, so this condition specifies the duration of the Order. If OSHA approves a permanent variance, it would specify

[10] A class or group of employers (such as members of a trade alliance or association) may apply jointly for a variance provided an authorized representative for each employer signs the application and the application identifies each employer's affected facilities.

the duration of the modified permanent variance as the remainder of the Integrated Pipeline Tunnel Project.

Proposed Condition C: List of Abbreviations

The proposed condition defines a number of abbreviations used in the proposed modified permanent variance. OSHA believes that defining these abbreviations serve to clarify and standardize their usage, thereby enhancing the applicant's and its employees' understanding of the conditions specified by the proposed permanent variance.

Proposed Condition D: Definitions

The proposed condition defines a series of terms, mostly technical terms, used in the proposed modified permanent variance to standardize and clarify their meaning. OSHA believes that defining these terms serves to enhance the applicant's and its employees' understanding of the conditions specified by the proposed permanent variance.

Proposed Condition E: Safety and Health Practices

This proposed condition requires the applicant to develop and submit to OSHA a HOM specific to the Integrated Pipeline Tunnel Project at least six months before using the TBM for tunneling operations. The applicant must also submit, at least six months before using the TBM, proof that the TBM's hyperbaric chambers have been designed, fabricated, inspected, tested, marked, and stamped in accordance with the requirements of ASME PVHO–1.2019 (or the most recent edition of *Safety Standards for Pressure Vessels for Human Occupancy*). These requirements ensure that the applicant develops hyperbaric safety and health procedures suitable for the project.

The submission of the HOM to OSHA, which SUNDTJV has already completed, enables OSHA to determine whether the safety and health instructions and measures it specifies are appropriate to the field conditions of the tunnel (including expected geological conditions), conform to the conditions of the variance, and adequately protect the safety and health of the CAWs. It also facilitates OSHA's ability to ensure that the applicant is complying with these instructions and measures. The requirement for proof of compliance with ASME PVHO–1.2019 is intended to ensure that the equipment is structurally sound and capable of performing to protect the safety of the employees exposed to hyperbaric pressure.

Additionally, the proposed condition includes a series of related hazard prevention and control requirements and methods (*e.g.,* decompression tables, job hazard analyses (JHA), operations and inspections checklists, incident investigation, and recording and notification to OSHA of recordable hyperbaric injuries and illnesses) designed to ensure the continued effective functioning of the hyperbaric equipment and operating system.

Proposed Condition F: Communication

This proposed condition requires the applicant to develop and implement an effective system of information sharing and communication. Effective information sharing and communication are intended to ensure that affected workers receive updated information regarding any safety-related hazards and incidents, and corrective actions taken, prior to the start of each shift. The proposed condition also requires the applicant to ensure that reliable means of emergency communications are available and maintained for affected workers and support personnel during hyperbaric operations. Availability of such reliable means of communications would enable affected workers and support personnel to respond quickly and effectively to hazardous conditions or emergencies that may develop during TBM operations.

Proposed Condition G: Worker Qualification and Training

This proposed condition requires the applicant to develop and implement an effective qualification and training program for affected workers. The proposed condition specifies the factors that an affected worker must know to perform safely during hyperbaric operations, including how to enter, work in, and exit from hyperbaric conditions under both normal and emergency conditions. Having well-trained and qualified workers performing hyperbaric intervention work is intended to ensure that they recognize, and respond appropriately to, hyperbaric safety and health hazards. These qualification and training requirements enable affected workers to cope effectively with emergencies, as well as the discomfort and physiological effects of hyperbaric exposure, thereby preventing worker injury, illness, and fatalities.

Paragraph (2)(e) of this proposed condition requires the applicant to provide affected workers with information they can use to contact the appropriate healthcare professionals if the workers believe they are developing hyperbaric-related health effects. This requirement provides for early intervention and treatment of DCI and other health effects resulting from hyperbaric exposure, thereby reducing the potential severity of these effects.

Proposed Condition H: Inspections, Tests, and Accident Prevention

Proposed Condition H requires the applicant to develop, implement, and operate a program of frequent and regular inspections of the TBM's hyperbaric equipment and support systems, and associated work areas. This condition would help to ensure the safe operation and physical integrity of the equipment and work areas necessary to conduct hyperbaric operations. The condition would also enhance worker safety by reducing the risk of hyperbaric-related emergencies.

Paragraph (3) of this proposed condition requires the applicant to document tests, inspections, corrective actions, and repairs involving the TBM, and maintain these documents at the jobsite for the duration of the job. This requirement would provide the applicant with information needed to schedule tests and inspections to ensure the continued safe operation of the equipment and systems, and to determine that the actions taken to correct defects in hyperbaric equipment and systems were appropriate, prior to returning them to service.

Proposed Condition I: Compression and Decompression

This proposed condition would require the applicant to consult with the designated medical advisor regarding special compression or decompression procedures appropriate for any unacclimated CAW and then implement the procedures recommended by the medical consultant. This proposed provision would ensure that the applicant consults with the medical advisor, and involves the medical advisor in the evaluation, development, and implementation of compression or decompression protocols appropriate for any CAW requiring acclimation to the hyperbaric conditions encountered during TBM operations. Accordingly, CAWs requiring acclimation would have an opportunity to acclimate prior to exposure to these hyperbaric conditions. OSHA believes this condition would prevent or reduce adverse reactions among CAWs to the effects of compression or decompression associated with the intervention work they perform in the TBM.

Proposed Condition J: Recordkeeping

Under OSHA's existing recordkeeping requirements in 29 CFR part 1904

regarding Recording and Reporting Occupational Injuries and Illnesses, the employer must maintain a record of any recordable injury, illness, or fatality (as defined by 29 CFR part 1904) resulting from exposure of an employee to hyperbaric conditions by completing the OSHA Form 301 Incident Report and OSHA Form 300 Log of Work Related Injuries and Illnesses. The applicant did not seek a variance from this standard and therefore SUNDTJV must comply fully with those requirements.

Examples of important information to include on the OSHA Form 301 Injury and Illness Incident Report (along with the corresponding questions on the form) are:

Q14

- the task performed;
- the composition of the gas mixture (*e.g.,* air or oxygen);
- an estimate of the CAW's workload;
- the maximum working pressure;
- temperature in the work and decompression environments;
- unusual occurrences, if any, during the task or decompression

Q15

- time of symptom onset;
- duration between decompression and onset of symptoms

Q16

- type and duration of symptoms;
- a medical summary of the illness or injury

Q17

- duration of the hyperbaric intervention;
- possible contributing factors;
- the number of prior interventions completed by the injured or ill CAW; and the pressure to which the CAW was exposed during those interventions.[11]

Proposed Condition J would add additional reporting responsibilities, beyond those already required by the OSHA standard. The applicant would be required to maintain records of specific factors associated with each hyperbaric intervention. The information gathered and recorded under this provision, in concert with the information provided under proposed Condition K (using OSHA Form 301 Injury and Illness Incident Report to investigate and record hyperbaric recordable injuries as defined by 29 CFR 1904.4, 1904.7, 1904.8–1904.12), would enable the applicant and OSHA to assess the effectiveness of the permanent variance in preventing DCI and other hyperbaric-related effects.

Proposed Condition K: Notifications

Under the proposed condition, the applicant is required, within specified periods of time, to notify OSHA of: (1) any recordable injury, illness, in-patient hospitalization, amputation, loss of an eye, or fatality that occurs as a result of hyperbaric exposures during TBM operations within 8 hours; (2) provide OSHA a copy of the hyperbaric exposures incident investigation report (using OSHA Form 301 Injury and Illness Incident Report) of these events within 24 hours of the incident; (3) include on OSHA Form 301 Injury and Illness Incident Report information on the hyperbaric conditions associated with the recordable injury or illness, the root-cause determination, and preventive and corrective actions identified and implemented; (4) provide the certification along with the OSHA Form 310, that affected workers were informed of the incident and the results of the incident investigation; (5) notify OSHA's Office of Technical Programs and Coordination Activities (OTPCA) and the OSHA Area Office in Dallas, Texas within 15 working days should the applicant need to revise the HOM to accommodate changes in its compressed-air operations that affect SUNDTJV's ability to comply with the conditions of the proposed modified permanent variance; and (6) provide OTPCA and the OSHA Area Office in Dallas, Texas, at the end of the project, with a report evaluating the effectiveness of the decompression tables within 30 days of the completion of the Integrated Pipeline Tunnel Project.

It should be noted that the requirement for completing and submitting the hyperbaric exposure-related (recordable) incident investigation report (OSHA 301 Injury and Illness Incident Report) is more restrictive than the current recordkeeping requirement of completing OSHA Form 301 Injury and Illness Incident Report within 7 calendar days of the incident (1904.29(b)(3)). This modified, more stringent incident investigation and reporting requirement is restricted to intervention-related hyperbaric (recordable) incidents only. Providing rapid notification to OSHA is essential because time is a critical element in OSHA's ability to determine the continued effectiveness of the variance conditions in preventing hyperbaric incidents, and the applicant's identification and implementation of appropriate corrective and preventive actions.

Further, these notification requirements also enable the applicant, its employees, and OSHA to assess the effectiveness of the permanent variance in providing the requisite level of safety to the applicant's workers and, based on this assessment, whether to revise or revoke the conditions of the proposed permanent variance. Timely notification permits OSHA to take whatever action may be necessary and appropriate to prevent possible further injuries and illnesses. Providing notification to employees informs them of the precautions taken by the applicant to prevent similar incidents in the future.

Additionally, this proposed condition requires the applicant to notify OSHA no later than seven (7) days of having knowledge that it will cease to do business, have a new address or location for the main office, or transfer the operations covered by the proposed permanent variance to a successor company. In addition, the condition specifies that the transfer of the permanent variance to a successor company must be approved by OSHA. These requirements allow OSHA to communicate effectively with the applicant regarding the status of the proposed permanent variance, and expedite the agency's administration and enforcement of the permanent variance. Stipulating that an applicant is required to have OSHA's approval to transfer a variance to a successor company provides assurance that the successor company has knowledge of, and will comply with, the conditions specified by the proposed permanent variance, thereby ensuring the safety of workers involved in performing the operations covered by the proposed permanent variance.

VI. Specific Conditions of the Interim Order and the Proposed Permanent Variance

The following conditions apply to the interim order OSHA is granting to SUNDTJV for the Integrated Pipeline Tunnel Project. These conditions specify the alternative means of compliance with the requirements of paragraphs 29 CFR 1926.803(e)(5), (f)(1), (g)(1)(iii), and (g)(1)(xvii). In addition, these conditions are specific to the alternative means of compliance with these requirements that OSHA is proposing for SUNDTJV's permanent variance. To simplify the presentation of the conditions, OSHA generally refers only to the conditions of the proposed permanent variance, but the same

[11] See 29 CFR 1904 Recording and Reporting Occupational Injuries and Illnesses (*http://www.osha.gov/pls/oshaweb/owadisp.show_document?p_table=STANDARDS&p_id=9631*); recordkeeping forms and instructions (*http://www.osha.gov/recordkeeping/RKform300pkg-fillable-enabled.pdf*); and OSHA Recordkeeping Handbook (*http://www.osha.gov/recordkeeping/handbook/index.html*).

conditions apply to the interim order except where otherwise noted.[12]

The conditions would apply with respect to all employees of SUNDTJV exposed to hyperbaric conditions. These conditions are outlined in this section:

A. Scope

The interim order applies, and the permanent variance would apply, only when SUNDTJV stops the tunnel-boring work, pressurizes the working chamber, and the CAWs either enter the working chamber to perform an intervention (*i.e.,* inspect, maintain, or repair the mechanical-excavation components), or exit the working chamber after performing interventions.

The interim order and proposed permanent variance apply only to work:

1. That occurs in conjunction with construction of the Integrated Pipeline Tunnel Project, a tunnel constructed using advanced shielded mechanical-excavation techniques and involving operation of an TBM;

2. In the TBM's forward section (the working chamber) and associated hyperbaric chambers used to pressurize and decompress employees entering and exiting the working chamber; and

3. Performed in compliance with all applicable provisions of 29 CFR part 1926 except for the requirements specified by 29 CFR 1926.803(e)(5), (f)(1), (g)(1)(iii), and (g)(1)(xvii).

B. Duration

The interim order granted to Traylor will remain in effect until SUNDTJV completes the Integrated Pipeline Tunnel Project, OSHA modifies or revokes this interim order, or OSHA grants Traylor's request for a permanent variance. The proposed permanent variance, if granted, would remain in effect until the completion of SUNDTJV's Integrated Pipeline Tunnel Project or until modified or revoked by OSHA pursuant to 29 CFR 1905.13(a)(2).

C. List of Abbreviations

Abbreviations used throughout this proposed permanent variance would include the following:

1. CAW—Compressed-air worker
2. CFR—Code of Federal Regulations
3. DCI—Decompression Illness
4. DMT—Diver Medical Technician
5. TBM—Earth Pressure Balanced Tunnel Boring Machine
6. HOM—Hyperbaric Operations Manual
7. JHA—Job hazard analysis
8. OSHA—Occupational Safety and Health Administration
9. OTPCA—Office of Technical Programs and Coordination Activities

D. Definitions

The following definitions would apply to this proposed permanent variance. These definitions would supplement the definitions in SUNDTJV's project-specific HOM.

1. *Affected employee or worker*—an employee or worker who is affected by the conditions of this proposed modified permanent variance, or any one of his or her authorized representatives. The term ''employee'' has the meaning defined and used under the Occupational Safety and Health Act of 1970 (29 U.S.C. 651 *et seq.*).

2. *Atmospheric pressure*—the pressure of air at sea level, generally 14.7 pounds per square inch absolute (p.s.i.a)., 1 atmosphere absolute, or 0 p.s.i.g.

3. *Compressed-air worker*—an individual who is specially trained and medically qualified to perform work in a pressurized environment while breathing air at pressures not exceeding 58 p.s.i.g.

4. *Competent person*—an individual who is capable of identifying existing and predictable hazards in the surroundings or working conditions that are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.[13]

5. *Decompression illness*—an illness (also called decompression sickness or ''the bends'') caused by gas bubbles appearing in body compartments due to a reduction in ambient pressure. Examples of symptoms of decompression illness include, but are not limited to: joint pain (also known as the ''bends'' for agonizing pain or the ''niggles'' for slight pain); areas of bone destruction (termed dysbaric osteonecrosis); skin disorders (such as cutis marmorata, which causes a pink marbling of the skin); spinal cord and brain disorders (such as stroke, paralysis, paresthesia, and bladder dysfunction); cardiopulmonary disorders, such as shortness of breath; and arterial gas embolism (gas bubbles in the arteries that block blood flow).[14]

Note: Health effects associated with hyperbaric intervention, but not considered symptoms of DCI, can include: barotrauma (direct damage to air-containing cavities in the body such as ears, sinuses, and lungs); nitrogen narcosis (reversible alteration in consciousness that may occur in hyperbaric environments and is caused by the anesthetic effect of certain gases at high pressure); and oxygen toxicity (a central nervous system condition resulting from the harmful effects of breathing molecular oxygen (O_2) at elevated partial pressures).

6. *Diver Medical Technician*—Member of the dive team who is experienced in first aid.

7. *Earth Pressure Balanced Tunnel Boring Machine*—the machinery used to excavate a tunnel.

8. *Hot work*—any activity performed in a hazardous location that may introduce an ignition source into a potentially flammable atmosphere.[15]

9. *Hyperbaric*—at a higher pressure than atmospheric pressure.

10. *Hyperbaric intervention*—a term that describes the process of stopping the TBM and preparing and executing work under hyperbaric pressure in the working chamber for the purpose of inspecting, replacing, or repairing cutting tools and/or the cutterhead structure.

11. *Hyperbaric Operations Manual*—a detailed, project-specific health and safety plan developed and implemented by SUNDTJV for working in compressed air during the Integrated Pipeline Tunnel Project.

12. *Job hazard analysis*—an evaluation of tasks or operations to identify potential hazards and to determine the necessary controls.

13. *Man-lock*—an enclosed space capable of pressurization, and used for compressing or decompressing any employee or material when either is passing into, or out of, a working chamber.

14. *Medical Advisor*—medical professional experienced in the physical requirements of compressed air work and the treatment of decompression illness.

15. *Pressure*—a force acting on a unit area. Usually expressed as pounds per square inch (p.s.i.).

16. *p.s.i.a.*—pounds per square inch absolute, or absolute pressure, is the sum of the atmospheric pressure and gauge pressure. At sea-level, atmospheric pressure is approximately 14.7 p.s.i.a. Adding 14.7 to a pressure expressed in units of p.s.i.g. will yield the absolute pressure, expressed as p.s.i.a.

17. *p.s.i.g.*—pounds per square inch gauge, a common unit of pressure;

[12] In these conditions, OSHA is using the future conditional form of the verb (*e.g.,* ''would''), which pertains to the application for a permanent variance (designated as ''Permanent Variance'') but the conditions are mandatory for purposes of the interim order.

[13] Adapted from 29 CFR 1926.32(f).

[14] See Appendix 10 of ''A Guide to the Work in Compressed-Air Regulations 1996,'' published by the United Kingdom Health and Safety Executive available from NIOSH at *http://www.cdc.gov/niosh/docket/archive/pdfs/NIOSH-254/compReg1996.pdf.*

[15] Also see 29 CFR 1926.1202 for examples of hot work.

pressure expressed as p.s.i.g. corresponds to pressure relative to atmospheric pressure. At sea-level, atmospheric pressure is approximately 14.7 p.s.i.a Subtracting 14.7 from a pressure expressed in units of p.s.i.a. yields the gauge pressure, expressed as p.s.i.g. At sea level the gauge pressure is 0 psig.

18. *Qualified person*—an individual who, by possession of a recognized degree, certificate, or professional standing, or who, by extensive knowledge, training, and experience, successfully demonstrates an ability to solve or resolve problems relating to the subject matter, the work, or the project.[16]

19. *Working chamber*—an enclosed space in the TBM in which CAWs perform interventions, and which is accessible only through a man-lock.

E. Safety and Health Practices

1. SUNDTJV would have to adhere to the project-specific HOM submitted to OSHA as part of the application (see OSHA–2023–0004–0003). The HOM provides the minimum requirements regarding expected safety and health hazards (including anticipated geological conditions) and hyperbaric exposures during the tunnel-construction project.

2. SUNDTJV would have to demonstrate that the TBM on the project is designed, fabricated, inspected, tested, marked, and stamped in accordance with the requirements of ASME PVHO–1.2019 (or most recent edition of *Safety Standards for Pressure Vessels for Human Occupancy*) for the TBM's hyperbaric chambers.

3. SUNDTJV would have to implement the safety and health instructions included in the manufacturer's operations manuals for the TBM, and the safety and health instructions provided by the manufacturer for the operation of decompression equipment.

4. SUNDTJV would have to ensure that there are no exposures to pressures greater than 58 p.s.i.g.

5. SUNDTJV would have to ensure that air or oxygen is the only breathing gas in the working chamber.

6. SUNDTJV would have to follow the 1992 French Decompression Tables for air or oxygen decompression as specified in the HOM; specifically, the extracted portions of the 1992 French Decompression tables titled, ''French Regulation Air Standard Tables.''

7. SUNDTJV would have to equip man-locks used by employees with an air or oxygen delivery system, as specified by the HOM for the project. SUNDTJV would be prohibited from storing in the tunnel any oxygen or other compressed gases used in conjunction with hyperbaric work.

8. Workers performing hot work under hyperbaric conditions would have to use flame-retardant personal protective equipment and clothing.

9. In hyperbaric work areas, SUNDTJV would have to maintain an adequate fire-suppression system approved for hyperbaric work areas.

10. SUNDTJV would have to develop and implement one or more Job Hazard Analysis (JHA) for work in the hyperbaric work areas, and review, periodically and as necessary (*e.g.,* after making changes to a planned intervention that affects its operation), the contents of the JHAs with affected employees. The JHAs would have to include all the job functions that the risk assessment [17] indicates are essential to prevent injury or illness.

11. SUNDTJV would have to develop a set of checklists to guide compressed-air work and ensure that employees follow the procedures required by the proposed modified permanent variance and this interim order (including all procedures required by the HOM approved by OSHA for the project, which this proposed variance would incorporate by reference). The checklists would have to include all steps and equipment functions that the risk assessment indicates are essential to prevent injury or illness during compressed-air work.

12. SUNDTJV would have to ensure that the safety and health provisions of this project-specific HOM adequately protect the workers of all contractors and subcontractors involved in hyperbaric operations for the project to which the HOM applies.

F. Communication

SUNDTJV would have to:

1. Prior to beginning a shift, implement a system that informs workers exposed to hyperbaric conditions of any hazardous occurrences or conditions that might affect their safety, including hyperbaric incidents, gas releases, equipment failures, earth or rock slides, cave-ins, flooding, fires, or explosions.

2. Provide a power-assisted means of communication among affected workers and support personnel in hyperbaric conditions where unassisted voice communication is inadequate.

(a) Use an independent power supply for powered communication systems, and these systems would have to operate such that use or disruption of any one phone or signal location will not disrupt the operation of the system from any other location.

(b) Test communication systems at the start of each shift and as necessary thereafter to ensure proper operation.

G. Worker Qualifications and Training

SUNDTJV would have to:

1. Ensure that each affected worker receives effective training on how to safely enter, work in, exit from, and undertake emergency evacuation or rescue from, hyperbaric conditions, and document this training.

2. Provide effective instruction on hyperbaric conditions, before beginning hyperbaric operations, to each worker who performs work, or controls the exposure of others, and document this instruction. The instruction would need to include:

(a) The physics and physiology of hyperbaric work;

(b) Recognition of pressure-related injuries;

(c) Information on the causes and recognition of the signs and symptoms associated with decompression illness, and other hyperbaric intervention-related health effects (*e.g.,* barotrauma, nitrogen narcosis, and oxygen toxicity);

(d) How to avoid discomfort during compression and decompression;

(e) Information the workers can use to contact the appropriate healthcare professionals should the workers have concerns that they may be experiencing adverse health effects from hyperbaric exposure; and

(f) Procedures and requirements applicable to the employee in the project-specific HOM.

3. Repeat the instruction specified in paragraph (G) of this proposed condition periodically and as necessary (*e.g.,* after making changes to its hyperbaric operations).

4. When conducting training for its hyperbaric workers, make this training available to OSHA personnel and notify the OTPCA at OSHA's national office and OSHA's Dallas Area Office before the training takes place.

H. Inspections, Tests, and Accident Prevention

1. SUNDTJV would have to initiate and maintain a program of frequent and regular inspections of the TBM's hyperbaric equipment and support systems (such as temperature control, illumination, ventilation, and fire-prevention and fire-suppression systems), and hyperbaric work areas, as required under 29 CFR 1926.20(b)(2), including:

[16] Adapted from 29 CFR 1926.32(m).

[17] See ANSI/AIHA Z10–2012, American National Standard for Occupational Health and Safety Management Systems, for reference.

(a) Developing a set of checklists to be used by a competent person in conducting weekly inspections of hyperbaric equipment and work areas; and

(b) Ensuring that a competent person conducts daily visual checks and weekly inspections of the TBM.

2. Remove from service any equipment that constitutes a safety hazard until it corrects the hazardous condition and has the correction approved by a qualified person.

3. SUNDTJV would have to maintain records of all tests and inspections of the TBM, as well as associated corrective actions and repairs, at the job site for the duration of the tunneling project and for 90 days after the final project report is submitted to OSHA.

I. Compression and Decompression

SUNDTJV would have to consult with its attending physician concerning the need for special compression or decompression exposures appropriate for CAWs not acclimated to hyperbaric exposure.

J. Recordkeeping

In addition to completing OSHA Form 301 Injury and Illness Incident Report and OSHA Form 300 Log of Work-Related Injuries and Illnesses, SUNDTJV would have to maintain records of:

1. The date, times (*e.g.,* time compression started, time spent compressing, time performing intervention, time spent decompressing), and pressure for each hyperbaric intervention.

2. The names of all supervisors and DMTs involved for each intervention.

3. The name of each individual worker exposed to hyperbaric pressure and the decompression protocols and results for each worker.

4. The total number of interventions and the amount of hyperbaric work time at each pressure.

5. The results of the post-intervention physical assessment of each CAW for signs and symptoms of decompression illness, barotrauma, nitrogen narcosis, oxygen toxicity or other health effects associated with work in compressed air for each hyperbaric intervention.

K. Notifications

1. To assist OSHA in administering the conditions specified herein, SUNDTJV would have to:

(a) Notify the OTPCA and the OSHA Area Office in Dallas, Texas at *www.osha.gov/contactus/byoffice* of any recordable injury, illness, or fatality (by submitting the completed OSHA Form 301 Injuries and Illness Incident Report) resulting from exposure of an employee to hyperbaric conditions, including those that do not require recompression treatment (*e.g.,* nitrogen narcosis, oxygen toxicity, barotrauma), but still meet the recordable injury or illness criteria of 29 CFR 1904. The notification would have to be made within 8 hours of the incident or 8 hours after becoming aware of a recordable injury, illness, or fatality; a copy of the incident investigation (OSHA Form 301 Injuries and Illness Incident Report) must be submitted to OSHA within 24 hours of the incident or 24 hours after becoming aware of a recordable injury, illness, or fatality. In addition to the information required by OSHA Form 301 Injuries and Illness Incident Report, the incident-investigation report would have to include a root-cause determination, and the preventive and corrective actions identified and implemented.

(b) Provide certification to the OSHA Area Office in Dallas, Texas within 15 working days of the incident that SUNDTJV informed affected workers of the incident and the results of the incident investigation (including the root-cause determination and preventive and corrective actions identified and implemented).

(c) Notify the OTPCA and the OSHA Area Office in Dallas, Texas within 15 working days and in writing, of any change in the compressed-air operations that affects SUNDTJV's ability to comply with the proposed conditions specified herein.

(d) Upon completion of the Integrated Pipeline Tunnel Project, evaluate the effectiveness of the decompression tables used throughout the project, and provide a written report of this evaluation to the OTPCA and the OSHA Area Office in Dallas, Texas within 30 days after the workers final day onsite.

Note: The evaluation report would have to contain summaries of: (1) The number, dates, durations, and pressures of the hyperbaric interventions completed; (2) decompression protocols implemented (including composition of gas mixtures (air and/or oxygen), and the results achieved; (3) the total number of interventions and the number of hyperbaric incidents (decompression illnesses and/or health effects associated with hyperbaric interventions as recorded on OSHA Form 301 Injuries and Illness Incident Report and OSHA Form 300 Log of Work-Related Injuries and Illnesses, and relevant medical diagnoses, and treating physicians' opinions); and (4) root causes of any hyperbaric incidents, and preventive and corrective actions identified and implemented.

(e) To assist OSHA in administering the proposed conditions specified herein, inform the OTPCA and the OSHA Area Office in Dallas, Texas as soon as possible, but no later than seven (7) days, after it has knowledge that it will:

(i) Cease doing business;

(ii) Change the location and address of the main office for managing the tunneling operations specified herein; or

(iii) Transfer the operations specified herein to a successor company.

(f) Notify all affected employees of this proposed modified permanent variance by the same means required to inform them of its application for a modified permanent variance.

2. OSHA would have to approve the transfer of the proposed modified permanent variance to a successor company through a new application for a modified variance.

VII. Authority and Signature

James S. Frederick, Deputy Assistant Secretary of Labor for Occupational Safety and Health, 200 Constitution Avenue NW, Washington, DC 20210, authorized the preparation of this notice. Accordingly, the agency is issuing this notice pursuant to 29 U.S.C. 655(6)(d), Secretary of Labor's Order No. 8–2020 (85 FR 58393, Sept. 18, 2020), and 29 CFR 1905.11.

Signed at Washington, DC, on April 24, 2023.

James S. Frederick,

Deputy Assistant Secretary of Labor for Occupational Safety and Health.

[FR Doc. 2023–09118 Filed 4–28–23; 8:45 am]

BILLING CODE 4510–26–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–0320; NRC–2023–0042]

TMI–2 Solutions, LLC; Three Mile Island Nuclear Station, Unit No. 2

AGENCY: Nuclear Regulatory Commission.

ACTION: Environmental assessment and finding of no significant impact; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is considering an exemption for license no. DPR–73, issued on February 8, 1978, and held by TMI–2 Solutions, LLC for the operation of Three Mile Island Nuclear Station, Unit No. 2, located in Dauphin County, Commonwealth of Pennsylvania. The NRC is issuing an environmental assessment (EA) and finding of no significant impact (FONSI) associated with the proposed action.

DATES: The EA and FONSI referenced in this document are available on April 24, 2023.

ADDRESSES: Please refer to Docket ID NRC–2023–0042 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2023–0042. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *PDR.Resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.
- *NRC's PDR:* You may examine and purchase copies of public documents, by appointment, at the NRC's PDR, Room P1 B35, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Amy M. Snyder, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, telephone: 301–415–6822; email: *Amy.Snyder@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is considering issuance of an exemption for license no. DPR–73, issued to TMI–2 Solutions, LLC (TMI–2 Solutions, the licensee), from section 70.24 of title 10 of the *Code of Federal Regulations* (CFR), ''Criticality accident requirements.'' The proposed action would exempt TMI–2 Solutions from the requirement to maintain a radiation monitoring system in each area where licensed special nuclear material (SNM) is handled, used, or stored that will energize clearly audible alarm signals if accidental criticality occurs during decommissioning.

As required by 10 CFR part 51, ''Domestic Licensing of Production and Utilization Facilities,'' the NRC prepared an EA documenting its environmental review (ADAMS Accession No. ML23026A348). Based on the results of the EA and the summary that follows, the NRC has determined not to prepare an environmental impact statement (EIS) for the exemption and is issuing a FONSI in accordance with 10 CFR 51.32 ''Finding of no significant impact.''

TMI–2 Solutions requested an exemption from 10 CFR 70.24 requirements. In its exemption application, TMI–2 Solutions states that criticality is not credible at TMI–2, and therefore it considers an exemption to 10 CFR 70.24 for a criticality monitoring system to be appropriate under the decommissioning licensing basis. The licensee stated that this is because of its updated Spent Fuel Mass Limit (SFML). Specifically, TMI–2 Solutions asserts that it arrived at this updated SFML by taking credit for impurities and actual enrichment based on the results of physical samples taken during the defueling effort in 1993. In its application, TMI–2 Solutions also asserts that administrative controls for geometric spacing are not necessary to further preclude a criticality accident because there is not enough Uranium Oxide (UO2) at TMI–2 to assemble an optimal critical configuration. Regardless, TMI–2 Solutions states that, as part of its Fuel Bearing Material Management Program, it will be implementing local administrative controls for the purpose of defense in depth of the activities which will handle the highest quantities of fuel bearing material.

II. Summary of Environmental Assessment

Description of the Proposed Action

The proposed action that is being considered by the Commission is an exemption during decommissioning from the requirements of 10 CFR 70.24 for a monitoring system capable of detecting a criticality accident.

The proposed action is in accordance with the licensee's application dated September 29, 2022 (ADAMS Accession No. ML22276A024).

Need for the Proposed Action

The proposed action would exempt the licensee from the requirements of 10 CFR 70.24, which, in relevant part, requires that each licensee authorized to possess SNM in certain quantities maintain a monitoring system that will energize clear audible alarms if accidental criticality occurs in each area in which SNM is handled, used, or stored. The proposed action would also exempt the licensee from the requirements to maintain emergency procedures for each area in which this licensed SNM is handled, used, or stored to ensure that all personnel withdraw to an area of safety upon the sounding of the alarm, to familiarize personnel with the evacuation plan, and to designate responsible individuals for determining the cause of the alarm, and to place radiation survey instruments in accessible locations for use in such an emergency.

Environmental Impacts of the Proposed Action

The NRC staff assessed the impacts of the proposed action on land use; visual and scenic resources/aesthetics; climatology; meteorology; air quality; noise; geology and soil; water; ecological resources; historical and cultural resources; socioeconomics; transportation and traffic; waste generation; and public and occupational health and safety. Approval of the proposed action would not result in an increased radiological risk to public health or the environment.

Environmental Impacts of the Alternatives to the Proposed Action

As an alternative to the proposed action, the staff considered denial of the proposed action (*i.e.,* the ''no-action'' alternative). Under the No-Action Alternative, the NRC would deny the requested action. Denying the action would have a larger environmental impact because occupational radiation exposure would increase due to personnel using radiation sources to calibrate criticality monitors during decommissioning.

Alternative Use of Resources

This action does not involve the use of any resources not previously considered in Supplement 3 to the Programmatic Environmental Impact Statement for TMI–2, dated August 1989, NUREG–0683. Additionally, the proposed action does not involve any environmental resources beyond those previously considered in the exemption for the 1992 Criticality Monitoring (57 FR 26668).

Agencies and Persons Consulted

On April 4, 2023, the NRC staff consulted with Commonwealth of Pennsylvania regarding the environmental impact of the proposed

action. On April 14, 2023 (ADAMS Accession No. ML23107A223), the state official concurred with the draft environmental assessment and finding of no significant impact.

III. Finding of No Significant Impact

On the basis of the EA referenced in Section II of this notice and incorporated by reference in this finding, the NRC finds that the proposed action will not have a significant environmental impact and that preparation of EIS is not warranted. Accordingly, the NRC has determined that a FONSI (ADAMS Accession No. ML23026A348) is appropriate.

Dated: April 26, 2023.

For the Nuclear Regulatory Commission.

Shaun M. Anderson,

Chief, Reactor Decommissioning Branch, Division of Decommissioning, Uranium Recovery, and Waste Programs, Office of Nuclear Material Safety and Safeguards.

BILLING CODE 7590–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97375; File No. SR–NYSEARCA–2023–33]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To List and Trade Shares of the Veridien Climate Action ETF Under Rule 8.900–E (Managed Portfolio Shares)

April 25, 2023.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 18, 2023, NYSE Arca, Inc. (''NYSE Arca'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to list and trade shares of the following under Rule 8.900–E (Managed Portfolio Shares): Veridien Climate Action ETF. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

NYSE Arca Rule 8.900–E permits the listing and trading, or trading pursuant to unlisted trading privileges, of Managed Portfolio Shares, which are securities issued by an actively managed open-end investment management company.[4] Rule 8.900–E(b)(1) requires the Exchange to file separate proposals under Section 19(b) of the Act before listing and trading any series of Managed Portfolio Shares on the Exchange. Therefore, the Exchange is submitting this proposal in order to list and trade Managed Portfolio Shares of the Veridien Climate Action ETF (the ''Fund''), a series of the Tidal Trust II (the ''Trust''), under Rule 8.900–E.

The Commission has previously approved or noticed for immediate effectiveness the listing and trading on the Exchange of Managed Portfolio Shares under NYSE Arca Rule 8.900–E.[5]

Description of the Fund and the Trust

The shares of the Fund (the ''Shares'') will be issued by the Trust, a statutory trust organized under the laws of the state of Delaware and registered with the Commission as an open-end management investment company.[6] The investment adviser to the Fund will be Toroso Investments, LLC (the ''Adviser''). Veridien Global Investors LLC will be the sub-adviser (the ''Sub-Adviser'') for the Fund. Foreside Fund Services, LLC (the ''Distributor'') will serve as the distributor for the Fund's Shares. U.S. Bank Global Fund Services will serve as the transfer agent for the Fund (the ''Transfer Agent''). U.S. Bank National Association will be the Fund's custodian (the ''Custodian''). All statements and representations made in this filing regarding (a) the description

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] Rule 8.900–E(c)(1) provides that the term ''Managed Portfolio Share'' means a security that (a) represents an interest in an investment company registered under the Investment Company Act of 1940 (''Investment Company'') organized as an open-end management investment company that invests in a portfolio of securities selected by the Investment Company's investment adviser consistent with the Investment Company's investment objectives and policies; (b) is issued in a Creation Unit, or multiples thereof, in return for a designated portfolio of instruments (and/or an amount of cash) with a value equal to the next determined net asset value and delivered to the Authorized Participant (as defined in the Investment Company's Form N–1A filed with the Commission) through a Confidential Account; (c) when aggregated into a Redemption Unit, or multiples thereof, may be redeemed for a designated portfolio of instruments (and/or an amount of cash) with a value equal to the next determined net asset value delivered to the Confidential Account for the benefit of the Authorized Participant; and (d) the portfolio holdings for which are disclosed within at least 60 days following the end of every fiscal quarter.

[5] *See* Securities Exchange Act Release Nos. 89663 (August 25, 2020), 85 FR 53868 (August 31, 2020) (SR–NYSEArca–2020–48) (Order Approving a Proposed Rule Change, as Modified by Amendment No. 1, To List and Trade Shares of Gabelli ETFs Under Rule 8.900–E, Managed Portfolio Shares); 90528 (November 30, 2020), 85 FR 78389 (December 4, 2020) (SR–NYSEArca–2020–80) (Order Approving a Proposed Rule Change, as Modified by Amendment No. 2, To List and Trade Shares of Alger Mid Cap 40 ETF and Alger 25 ETF Under Rule 8.900–E); 90683 (December 16, 2020), 85 FR 83665 (December 22, 2020) (SR–NYSEArca–2020–94) (Order Approving a Proposed Rule Change, as Modified by Amendments No. 1 and No. 2, To List and Trade Shares of the AdvisorShares Q Portfolio Blended Allocation ETF and AdvisorShares Q Dynamic Growth ETF Under NYSE Arca Rule 8.900–E); 92349 (July 19, 2021), 86 FR 39084 (July 23, 2021) (SR–NYSEArca–2021–54) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to List and Trade Shares of the Cambiar Large Cap ETF, Cambiar Small Cap ETF and Cambiar SMID ETF) (the ''Cambiar Notice''); 94629 (April 7, 2022), 87 FR 21993 (April 13, 2022) (SR–NYSEArca–2022–17) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to List and Trade Shares of the FMC Excelsior Focus Equity ETF under Rule 8.900–E (Managed Portfolio Shares)) (the ''FMC Notice'').

[6] The Trust is registered under the Investment Company Act of 1940 (the ''1940 Act''). On October 14, 2022, the Trust filed a registration statement on Form N–1A under the Securities Act of 1933 (the ''1933 Act'') and the 1940 Act for the Fund (File Nos. 333–264478 and 811–23793) (''Registration Statement''). The Trust subsequently filed Post-Effective Amendment No. 74 to the Registration Statement. *See* Post-Effective Amendment No. 74 to Registration Statement on Form N–1A for the Trust, dated April 21, 2023 (File Nos. 333–264478 and 811–23793). The Commission issued an order granting exemptive relief to the Trust (''Exemptive Order'') under the 1940 Act on March 21, 2023 (Investment Company Act Release No. 34863). The Exemptive Order was granted in response to the Trust's application for exemptive relief (the ''Exemptive Application'') (File No. 812–15411). The description of the operation of the Trust and the Fund herein is based, in part, on the Registration Statement. The Exchange will not commence trading in Shares of the Fund until the Registration Statement is effective.

of the portfolio or reference assets, (b) limitations on portfolio holdings or reference assets, or (c) the applicability of Exchange rules shall constitute continued listing requirements for listing the Shares on the Exchange, as provided under Rule 8.900–E(b)(1).

Rule 8.900–E(b)(4) provides that, if the investment adviser to the Investment Company issuing Managed Portfolio Shares is registered as a broker-dealer or is affiliated with a broker-dealer, such investment adviser will erect and maintain a ''fire wall'' between the investment adviser and personnel of the broker-dealer or broker-dealer affiliate, as applicable, with respect to access to information concerning the composition of and/or changes to such Investment Company portfolio and/or the Creation Basket.[7] Any person related to the investment adviser or Investment Company who makes decisions pertaining to the Investment Company's portfolio composition or has access to information regarding the Investment Company's portfolio composition or changes thereto or the Creation Basket must be subject to procedures designed to prevent the use and dissemination of material non-public information regarding the applicable Investment Company portfolio or changes thereto or the Creation Basket.

Rule 8.900–E(b)(4) is similar to Commentary .03(a)(i) and (iii) to Rule 5.2–E(j)(3); however, Commentary .03(a) in connection with the establishment of a ''fire wall'' between the investment adviser and the broker-dealer reflects the applicable open-end fund's portfolio, not an underlying benchmark index, as is the case with index-based funds.[8] Rule 8.900–E(b)(4) is also similar to Commentary .06 to Rule 8.600–E related to Managed Fund Shares, except that Rule 8.900–E(b)(4) relates to establishment and maintenance of a ''fire wall'' between the investment adviser and personnel of the broker-dealer or broker-dealer affiliate, as applicable, with respect to an Investment Company's portfolio and Creation Basket, and not just to the underlying portfolio, as is the case with Managed Fund Shares. The Adviser is not registered as a broker-dealer but is affiliated with a broker-dealer. The Adviser has implemented and will maintain a ''fire wall'' with respect to such broker-dealer affiliate regarding access to information concerning the composition of and/or changes to the Fund's portfolio and/or Creation Basket. The Sub-Adviser is not registered as a broker-dealer or affiliated with a broker-dealer.

In the event (a) the Adviser or Sub-Adviser becomes registered as a broker-dealer or becomes newly affiliated with a broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer, or becomes affiliated with a broker-dealer, it will implement and maintain a fire wall with respect to personnel of the broker-dealer or broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio and/or Creation Basket. Any person related to the Adviser, Sub-Adviser, or the Trust who makes decisions pertaining to the Fund's portfolio composition or that has access to information regarding the Fund's portfolio composition or that has access to information regarding the Fund's portfolio or changes thereto or the Creation Basket will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio or changes thereto and the Creation Basket.

Further, Rule 8.900–E(b)(5) requires that any person or entity, including an AP Representative (as defined below), custodian, Reporting Authority, distributor, or administrator, who has access to non-public information regarding the Investment Company's portfolio composition or changes thereto or the Creation Basket, must be subject to procedures reasonably designed to prevent the use and dissemination of material non-public information regarding the applicable Investment Company portfolio or changes thereto or the Creation Basket. Moreover, if any such person or entity is registered as a broker-dealer or affiliated with a broker-dealer, such person or entity will erect and maintain a ''fire wall'' between the person or entity and the broker-dealer with respect to access to information concerning the composition and/or changes to such Investment Company portfolio or Creation Basket.

Description of the Fund [9]

The Fund's holdings will conform to the permissible investments as set forth in the Exemptive Application and Exemptive Order, and the holdings will be consistent with all requirements in the Exemptive Application and Exemptive Order.[10]

The Fund's primary objective is to seek long-term growth of capital by investing in public companies with technologies and business models that contribute to climate change mitigation. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in equity securities of companies that the Adviser and/or Sub-Adviser believes are making a substantial contribution to mitigating climate change. The Fund's portfolio will generally hold the securities of between 35 and 50 companies.

[7] Rule 8.900–E(c)(5) provides that the term ''Creation Basket'' means, on any given business day, the names and quantities of the specified instruments (and/or an amount of cash) that are required for an AP Representative to deposit in-kind on behalf of an Authorized Participant in exchange for a Creation Unit and the names and quantities of the specified instruments (and/or an amount of cash) that will be transferred in-kind to an AP Representative on behalf of an Authorized Participant in exchange for a Redemption Unit, which will be identical and will be transmitted to each AP Representative before the commencement of trading.

[8] An investment adviser to an open-end fund is required to be registered under the Investment Advisers Act of 1940 (the ''Advisers Act''). As a result, the Adviser, Sub-Adviser, and their related personnel will be subject to the provisions of Rule 204A–1 under the Advisers Act relating to codes of ethics. This Rule requires investment advisers to adopt a code of ethics that reflects the fiduciary nature of the relationship to clients as well as compliance with other applicable securities laws. Accordingly, procedures designed to prevent the communication and misuse of non-public information by an investment adviser must be consistent with Rule 204A–1 under the Advisers Act. In addition, Rule 206(4)–7 under the Advisers Act makes it unlawful for an investment adviser to provide investment advice to clients unless such investment adviser has (i) adopted and implemented written policies and procedures reasonably designed to prevent violations, by the investment adviser and its supervised persons, of the Advisers Act and the Commission rules adopted thereunder; (ii) implemented, at a minimum, an annual review regarding the adequacy of the policies and procedures established pursuant to subparagraph (i) above and the effectiveness of their implementation; and (iii) designated an individual (who is a supervised person) responsible for administering the policies and procedures adopted under subparagraph (i) above. The Fund will also be required to comply with Exchange rules relating to disclosure, including Rule 5.3–E(i).

[9] The Exchange represents that, for initial and continued listing, the Fund will be in compliance with Rule 10A–3 under the Act. *See* 17 CFR 240.10A–3.

[10] Pursuant to the Exemptive Order, the only permissible investments for the Fund are the following that trade on a U.S. exchange contemporaneously with Shares of the Fund: exchange-traded funds (''ETFs''), exchange-traded notes, exchange-listed common stocks, exchange-traded preferred stocks, exchange-traded American Depositary Receipts, exchange-traded real estate investment trusts, exchange-traded commodity pools, exchange-traded metal trusts, exchange-traded currency trusts, and exchange-traded futures for which the reference asset is one in which the Fund may invest directly, in the case of an index future traded on a U.S. exchange, is based on an index, the components of which are a type of asset in which the Fund could invest directly, as well as cash and cash equivalents (which are short-term U.S. Treasury securities, government money market funds, and repurchase agreements). All of the equity instruments or futures held by the Fund will be traded on an exchange that is a member of the Intermarket Surveillance group (''ISG'') or affiliated with a member of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

Investment Restrictions

The Fund's holdings will be consistent with all requirements described in the Exemptive Application and Exemptive Order.[11]

The Fund's investments, including derivatives, will be consistent with its investment objective and will not be used to enhance leverage (although certain derivatives and other investments may result in leverage). That is, the Fund's investments will not be used to seek performance that is the multiple or inverse multiple (*e.g.,* 2X or –3X) of the Fund's primary broad-based securities benchmark index (as defined in Form N–1A).[12]

Creations and Redemptions of Shares

Creations and redemptions of Shares will take place as described in Rule 8.900–E. Specifically, in connection with the creation and redemption of Creation Units [13] the delivery or receipt of any portfolio securities in-kind will be required to be effected through a separate confidential brokerage account (a ''Confidential Account'').[14] An Authorized Participant (''AP''), as defined in the applicable Form N–1A filed with the Commission, will sign an agreement with an AP Representative [15] establishing the Confidential Account for the benefit of the AP. AP Representatives will be broker-dealers. An AP must be a participant in the Continuous Net Settlement System of the National Securities Clearing Corporation (''NSCC'') or a participant in the Depository Trust Company, and must have executed an authorized participant agreement (''Participant Agreement'') with the Distributor with respect to the creation and redemption of Creation Units and formed a Confidential Account for its benefit in accordance with the terms of the Participant Agreement. For purposes of creations or redemptions, all transactions will be effected through the respective AP's Confidential Account, for the benefit of the AP, without disclosing the identity of such securities to the AP.

Each business day, the Fund's Custodian will transmit the underlying securities of the Fund's Creation Basket (as described below) to each AP Representative. This information will permit an AP that has established a Confidential Account with an AP Representative to transact in the underlying securities of the Creation Basket through their AP Representatives, enabling them to engage in in-kind creation or redemption activity without knowing the identity or weighting of those securities. Fund Shares will be issued and redeemed in Creation Units of 25,000 Shares. The size of a Creation Unit is subject to change. The Fund will offer and redeem Creation Units on a continuous basis at the net asset value (''NAV'') per Share next determined after receipt of an order in proper form. The Fund's NAV will be determined as of the scheduled closing time of the regular trading session on the Exchange (ordinarily, 4:00 p.m. Eastern Time (''E.T.'')) on each day that it is open for business.

In order to keep costs low and permit the Fund to be as fully invested as possible, Shares will be purchased and redeemed in Creation Units and generally on an in-kind basis. The Fund will issue Creation Units in exchange for a ''Fund Deposit,'' which is either (i) the in-kind deposit of a designated portfolio of securities (the ''Deposit Securities'') and the amount of the ''Cash Component'' (as defined below) or (ii) the cash value of the Deposit Securities. The Fund may permit or require the substitution of a ''cash in lieu'' amount (the ''Deposit Cash'') to be added to the Cash Component to replace any Deposit Security. The Cash Component is an amount equal to the difference between the NAV of the Shares (per Creation Unit) and the value of the Deposit Securities or Deposit Cash, as applicable. The Cash Component serves the function of compensating for any differences between the NAV per Creation Unit and the value of the Deposit Securities or Deposit Cash, as applicable. The Fund will redeem Creation Units either in-kind or in cash, or combination thereof, as determined by the Trust. Redemption proceeds may consist of a designated portfolio of securities (the ''Fund Securities'') plus cash in an amount equal to the difference between the NAV of Shares being redeemed, as next determined after a receipt of a redemption request in proper form, or the cash value of the Fund Securities (the ''Cash Redemption Amount''). In addition, at the Trust's discretion, an AP may receive the corresponding cash value of the securities in lieu of the in-kind securities value representing one or more Fund Securities.

On each business day, prior to the opening of business on the Exchange (ordinarily, 9:30 a.m. E.T.), the Custodian will transmit to each AP Representative the list of names and quantities of each Deposit Security and the amount of the Cash Component (if any) to be included in the current Fund Deposit (based on information as of the ends of the previous business day). Such Fund Deposit is applicable to purchases of Creation Units until such time as the next-announced Fund Deposit is made available. On each business day, prior to the opening of business on the Exchange, the Custodian will also transmit to each AP Representative the list of the names and quantities of the Fund Securities that will be applicable to redemption requests received in proper form on that day. On any given business day, the names and quantities of the instruments that constitute the Deposit Securities and the names and quantities of the instruments that constitute the Fund Securities will correspond pro rata to the positions in the Fund's portfolio and, thus, will be identical. These instruments may be referred to, in the case of either a purchase or a redemption, as the ''Creation Basket.''

Placement of Purchase Orders

The Fund will issue Shares through the Transfer Agent on a continuous basis at NAV. The Exchange represents that the issuance of Shares will operate in a manner substantially similar to that of other ETFs, including transparent ETFs. The Fund will issue Shares only

[11] *See id.*

[12] The Fund's broad-based securities benchmark index will be identified in a future amendment to the Registration Statement following the Fund's first full calendar year of performance.

[13] Rule 8.900–E(c)(6) provides that the term ''Creation Unit'' means a specified minimum number of Managed Portfolio Shares issued by an Investment Company at the request of an Authorized Participant in return for a designated portfolio of instruments and/or cash. Rule 8.900–E(c)(7) provides that the term ''Redemption Unit'' means a specified minimum number of Managed Portfolio Shares that may be redeemed to an Investment Company at the request of an Authorized Participant in return for a portfolio of instruments and/or cash. For purposes of this filing, the terms ''Creation Unit'' means either a Creation Unit as defined in Rules 8.900–E(c)(6) or a Redemption Unit as defined in Rule 8.900–E(c)(7).

[14] Rule 8.900–E(c)(4) provides that the term ''Confidential Account'' means an account owned by an Authorized Participant and held with an AP Representative on behalf of the Authorized Participant. The account will be established and governed by contractual agreement between the AP Representative and the Authorized Participant solely for the purposes of creation and redemption, while keeping confidential the Creation Basket constituents of each series of Managed Portfolio Shares, including from the Authorized Participant. The books and records of the Confidential Account will be maintained by the AP Representative on behalf of the Authorized Participant.

[15] Rule 8.900–E(c)(3) provides that the term ''AP Representative'' means an unaffiliated broker-dealer, with which an Authorized Participant has signed an agreement to establish a Confidential Account for the benefit of such Authorized Participant, that will deliver or receive, on behalf of the Authorized Participant, all consideration to or from the Investment Company in a creation or redemption. An AP Representative will not be permitted to disclose the Creation Basket to any person, including the Authorized Participants.

at the NAV per Share next determined after an order in proper form is received.

The Transfer Agent will furnish acknowledgements to those placing such orders that the orders have been accepted, but the Transfer Agent may reject any order which is not submitted in proper form, as described in the Fund's prospectus or Statement of Additional Information (''SAI''). The NAV of the Fund is expected to be determined once each business day as of the close of the regular trading session on the Exchange (ordinarily, 4:00 p.m. E.T.). An AP generally must submit an irrevocable purchase order no later than 4:00 p.m. E.T. (the ''Cut-Off Time'') in order to receive that business day's NAV. The business day the order is deemed received by the Transfer Agent is referred to as the ''Order Placement Date.'' An order to create Creation Units is deemed received on a business day if (i) such order is received by the Cut-Off Time on such day and (ii) all other procedures set forth in the Participant Agreement are properly followed. In purchasing the necessary securities, the AP Representative will use methods, such as breaking the transaction into multiple transactions and transacting in multiple marketplaces, to avoid revealing the composition of the Creation Basket.

Purchases of Shares will be settled in-kind and/or in cash for an amount equal to the applicable NAV per Share purchased plus applicable transaction fees.[16]

Authorized Participant Redemption

The Shares may be redeemed to the Fund in Creation Unit size or multiples thereof as described below. Redemption orders of Creation Units must be placed by or through an AP. Creation Units of the Fund will be redeemable at their NAV per Share next determined after receipt of a redemption request by the Fund through the Transfer Agent. A fixed redemption transaction fee may be imposed to offset costs associated with redemption orders.

Orders to redeem Creation Units must be submitted in proper form to the Transfer Agent prior to the Order Cut-Off Time. A redemption request is deemed received on a business day if (i) such order is received by the Transfer Agent by the Cut-off Time on such day and (ii) all other procedures set forth in the Participant Agreement are properly followed. As with the purchase of securities, the AP Representative will use methods, such as breaking the transaction into multiple transactions and transacting in multiple marketplaces, to avoid revealing the composition of the Creation Basket.

Redemptions will occur primarily in-kind, although redemption payments may also be made partly or wholly in cash. In the case of full or partial cash redemptions, the AP will receive the cash equivalent of the Fund Securities it would otherwise receive through an in-kind redemption, plus the same Cash Redemption Amount to be paid to an in-kind redeemer. The Participant Agreement signed by each AP will require establishment of a Confidential Account to receive distributions of securities in-kind upon redemption. Each AP will be required to open a Confidential Account with an AP Representative in order to facilitate orderly processing of redemptions.

Net Asset Value

The NAV will be calculated for the Shares of the Fund on each business day. The Fund's NAV is determined as of the scheduled close of regular trading on the Exchange, normally 4:00 p.m. E.T., each day the Exchange is open for business. The NAV of the Fund's Shares is determined by dividing the total value of the Fund's assets, less any liabilities, by the total number of Shares outstanding of the Fund at the time the determination is made.

Generally, the Fund's portfolio securities are valued each day at the last quoted sales price on each security's primary exchange. Securities traded or dealt in upon one or more securities exchanges for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask prices on such exchange. Securities primarily traded in the NASDAQ National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. If market quotations are not readily available, securities will be valued at their fair market value as determined in good faith by the Fund's fair value committee in accordance with procedures approved by the Board. Securities that are not traded or dealt in any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the- counter market.

More information about the valuation of the Fund's holdings can be found in the SAI.

Information regarding the Fund's NAV and how often Shares of the Fund traded at a price above (*i.e.,* at a premium) or below (*i.e.,* at a discount) the Fund's NAV will be available on the Fund's website (*www.veridienglobalinvestors.com*).

Availability of Information

The Fund's website, *www.veridienglobalinvestors.com,* will include the prospectus for the Fund that may be downloaded. The Fund's website will include additional quantitative information updated on a daily basis, including the prior business day's NAV, market closing price or mid-point of the bid/ask spread at the time of calculation of such NAV (the ''Bid/Ask Price''),[17] and a calculation of the premium and discount of the market closing price or Bid/Ask Price against the NAV. The website and information will be publicly available at no charge.

Form N–PORT requires reporting of a Fund's complete portfolio holdings on a position-by-position basis on a quarterly basis within 60 days after fiscal quarter end. Investors can obtain a Fund's SAI, its shareholder reports, its Form N–CSR, filed twice a year, and its Form N–CEN, filed annually. The Fund's SAI and shareholder reports are available free upon request from the Fund, and those documents and the Form N–PORT, Form N–CSR, and Form N–CEN may be viewed onscreen or downloaded from the Commission's website at *www.sec.gov.*

Information regarding market price and trading volume of the Shares will be continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services. Information regarding the previous day's closing price and trading volume information for the Shares will be published daily in the financial section of newspapers. Quotation and last sale information for the Shares will be available via the Consolidated Tape Association (''CTA'') high-speed line. In addition, the Verified Intraday Indicative Value (''VIIV''), as defined in Rule 8.900–E(c)(2),[18] will be widely

[16] To the extent that the Fund allows creations or redemptions to be conducted in cash, such transactions will be effected in the same manner for all APs transacting in cash.

[17] The Bid/Ask Price of the Fund's Shares is determined using the mid-point between the current national best bid and offer at the time of calculation of the Fund's NAV. The records relating to Bid/Ask Prices will be retained by the Fund or its service providers.

[18] Rule 8.900–E(c)(2) provides that the term ''Verified Intraday Indicative Value'' is the indicative value of a Managed Portfolio Share based on all of the holdings of a series of Managed Portfolio Shares as of the close of business on the

Continued

disseminated by the Reporting Authority [19] and/or one or more major market data vendors in one second intervals during the Exchange's Core Trading Session and will be available to all market participants at the same time.

Dissemination of the VIIV

With respect to trading of the Shares, the ability of market participants to buy and sell Shares at prices near the VIIV is dependent upon their assessment that the VIIV is a reliable, indicative real-time value for the Fund's underlying holdings. Market participants are expected to accept the VIIV as a reliable, indicative real-time value because (1) the VIIV will be calculated and disseminated based on the Fund's actual portfolio holdings, (2) the securities in which the Fund plans to invest are generally highly liquid and actively traded and trade at the same time as the Fund and therefore generally have accurate real time pricing available, and (3) market participants will have a daily opportunity to evaluate whether the VIIV at or near the close of trading is indeed predictive of the actual NAV.

The VIIV will be widely disseminated to all market participants at the same time by the Reporting Authority and/or by one or more major market data vendors in one second intervals during the Exchange's Core Trading Session. The VIIV is based on the current market value of the securities in the Fund's portfolio that day. The methodology for calculating the Fund's VIIV is available on the Fund's website. The VIIV is intended to provide investors and other market participants with a highly correlated per Share value of the Fund's portfolio that can be compared to the current market price. Therefore, under normal circumstances the VIIV would be effectively a near real time approximation of the Fund's NAV, which is computed only once a day and is available free of charge from one or more market data vendors.

Trading Halts

With respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares of the Fund.[20] Trading in Shares of the Fund will be halted if the circuit breaker parameters in Rule 7.12–E have been reached. Trading also may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable. Trading in the Shares will be subject to Rule 8.900–E(d)(2)(C), which sets forth circumstances under which trading in the Shares of the Fund will be halted.

Specifically, Rule 8.900–E(d)(2)(C)(i) provides that the Exchange may consider all relevant factors in exercising its discretion to halt trading in a series of Managed Portfolio Shares. Trading may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the series of Managed Portfolio Shares inadvisable. These may include: (a) the extent to which trading is not occurring in the securities and/or the financial instruments composing the portfolio; or (b) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present.[21]

Rule 8.900–E(d)(2)(C)(ii) provides that, if the Exchange becomes aware that: (i) the VIIV of a series of Managed Portfolio Shares is not being calculated or disseminated in one second intervals, as required; (ii) the NAV with respect to a series of Managed Portfolio Shares is not disseminated to all market participants at the same time; (iii) the holdings of a series of Managed Portfolio Shares are not made available on at least a quarterly basis as required under the 1940 Act; or (iv) such holdings are not made available to all market participants at the same time (except as otherwise permitted under the currently applicable exemptive order or no-action relief granted by the Commission or Commission staff to the Investment Company with respect to the series of Managed Portfolio Shares), it will halt trading in such series until such time as the Verified Intraday Indicative Value, the NAV, or the holdings are available, as required.

Trading Rules

The Exchange deems the Shares to be equity securities, thus rendering trading in the Shares subject to the Exchange's existing rules governing the trading of equity securities. Shares will trade on the Exchange in all trading sessions in accordance with Rule 7.34–E(a). As provided in Rule 7.6–E, the minimum price variation (''MPV'') for quoting and entry of orders in equity securities traded on the NYSE Arca Marketplace is $0.01, with the exception of securities that are priced less than $1.00, for which the MPV for order entry is $0.0001. A minimum of 100,000 Shares of the Fund will be outstanding at the commencement of trading on the Exchange.

The Shares will conform to the initial and continued listing criteria under Rule 8.900–E, as well as all terms in the Exemptive Order. The Exchange will obtain a representation from the issuer of the Shares of the Fund that the NAV per Share of the Fund will be calculated daily and will be made available to all market participants at the same time.

Surveillance

The Exchange believes that its surveillance procedures are adequate to properly monitor the trading of Shares on the Exchange during all trading sessions and to deter and detect violations of Exchange rules and the applicable federal securities laws. Trading of Shares through the Exchange will be subject to the Exchange's surveillance procedures for derivative products. As part of these surveillance procedures and consistent with Rule 8.900–E(b)(3) and 8.900–E(d)(2)(B), the Adviser will upon request make available to the Exchange and/or the Financial Industry Regulatory Authority (''FINRA''), on behalf of the Exchange, the daily portfolio holdings of the Fund. The issuer of the Shares of the Fund will be required to represent to the Exchange that it will advise the Exchange of any failure by the Fund to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Exchange Act, the Exchange will surveil for compliance with the continued listing requirements. If the Fund is not

prior business day and, for corporate actions, based on the applicable holdings as of the opening of business on the current business day, priced and disseminated in one second intervals during the Exchange's Core Trading Session by the Reporting Authority.

[19] Rule 8.900–E(c)(8) provides that the term ''Reporting Authority'' in respect of a particular series of Managed Portfolio Shares means the Exchange, an institution, or a reporting service designated by the Exchange or by the exchange that lists a particular series of Managed Portfolio Shares (if the Exchange is trading such series pursuant to unlisted trading privileges), as the official source for calculating and reporting information relating to such series, including, but not limited to, the NAV, the VIIV, or other information relating to the issuance, redemption, or trading of Managed Portfolio Shares. A series of Managed Portfolio Shares may have more than one Reporting Authority, each having different functions.

[20] *See* Rule 7.12–E.

[21] The Exemptive Application provides that the Investment Company or their agent will request that the Exchange halt trading in the applicable series of Managed Portfolio Shares where: (i) the intraday indicative values calculated by the calculation engines differ by more than 25 basis points for 60 seconds in connection with pricing of the VIIV; or (ii) holdings representing 10% or more of a series of Managed Portfolio Shares' portfolio have become subject to a trading halt or otherwise do not have readily available market quotations. Any such requests will be one of many factors considered in order to determine whether to halt trading in a series of Managed Portfolio Shares and the Exchange retains sole discretion in determining whether trading should be halted. As provided in the Exemptive Application, each series of Managed Portfolio Shares would employ a pricing verification agent to continuously compare two intraday indicative values during regular trading hours in order to ensure the accuracy of the VIIV.

in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under Exchange Rule 5.5–E(m).

FINRA, on behalf of the Exchange, or the regulatory staff of the Exchange, or both, will communicate as needed regarding trading in the Shares and certain exchange-traded instruments with other markets and other entities that are members of the ISG, and FINRA, on behalf of the Exchange, or the regulatory staff of the Exchange, or both, may obtain trading information regarding trading such securities from such markets and other entities. In addition, the Exchange may obtain information regarding trading in the Shares and certain exchange-traded instruments from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

In addition, the Exchange also has a general policy prohibiting the distribution of material, non-public information by its employees.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[22] in general, and furthers the objectives of Section 6(b)(5) of the Act,[23] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Exchange believes that this proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Fund would meet each of the rules relating to listing and trading of Managed Portfolio Shares. To the extent that the Fund is not in compliance with such rules, the Exchange would either prevent the Fund from listing and trading on the Exchange or commence delisting procedures under Rule 8.900–E(d)(2)(B). Specifically, the Exchange would consider the suspension of trading, and commence delisting proceedings under Rule 8.900–E(d)(2)(B), of the Fund under any of the following circumstances: (a) if, following the initial twelve-month period after commencement of trading on the Exchange, there are fewer than 50 beneficial holders of the Fund; (b) if the Exchange has halted trading in the Fund because the VIIV is interrupted pursuant to Rule 8.900–E(d)(2)(C)(ii) and such interruption persists past the trading day in which it occurred or is no longer available; (c) if the Exchange has halted trading in the Fund because the NAV with respect to such Fund is not disseminated to all market participants at the same time, the holdings of such Fund are not made available on at least a quarterly basis as required under the 1940 Act, or such holdings are not made available to all market participants at the same time pursuant to Rule 8.900–E(d)(2)(C)(ii) and such issue persists past the trading day in which it occurred; (d) if the Exchange has halted trading in Shares of the Fund pursuant to Rule 8.900–E(d)(2)(C)(i) and such issue persists past the trading day in which it occurred; (e) if the Fund has failed to file any filings required by the Commission or if the Exchange is aware that the Fund is not in compliance with the conditions of any currently applicable exemptive order or no-action relief granted by the Commission or Commission staff with respect to the Fund; (f) if any of the continued listing requirements set forth in Rule 8.900–E are not continuously maintained; (g) if any of the statements of representations regarding (a) the description of the portfolio, (b) limitations on portfolio holdings, or (c) the applicability of Exchange listing rules as specified herein to permit the listing and trading of the Fund, are not continuously maintained; or (h) if such other event shall occur or condition exists which, in the opinion of the Exchange, makes further dealings on the Exchange inadvisable.

As discussed above, the Adviser is not registered as a broker-dealer but is affiliated with a broker-dealer and has implemented and will maintain a ''fire wall'' with respect to such affiliate broker-dealer regarding access to information concerning the composition and/or changes to the Fund's portfolio and Creation Basket. The Sub-Adviser is neither registered as a broker-dealer nor affiliated with a broker-dealer. In the event that (a) the Adviser or Sub-Adviser becomes registered as a broker-dealer or becomes newly affiliated with a broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer or becomes affiliated with a broker-dealer, the Adviser or Sub-Adviser, as applicable, will implement and maintain a fire wall with respect to personnel of the broker-dealer or broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio and/or Creation Basket. Any person related to the Adviser, Sub-Adviser, or the Trust who makes decisions pertaining to the Fund's portfolio composition or that has access to information regarding the Fund's portfolio or changes thereto or the Creation Basket will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio or changes thereto and the Creation Basket.

In addition, Rule 8.900–E(b)(5) requires that any person or entity, including an AP Representative, custodian, Reporting Authority, distributor, or administrator, who has access to non-public information regarding the Investment Company's portfolio composition or changes thereto or the Creation Basket, must be subject to procedures designed to prevent the use and dissemination of material non-public information regarding the applicable Investment Company portfolio or changes thereto or the Creation Basket. Moreover, if any such person or entity is registered as a broker-dealer or affiliated with a broker-dealer, such person or entity will erect and maintain a ''fire wall'' between the person or entity and the broker-dealer with respect to access to information concerning the composition and/or changes to such Investment Company portfolio or Creation Basket. Any person or entity who has access to information regarding the Fund's portfolio composition or changes thereto or the Creation Basket will be subject to procedures designed to prevent the use and dissemination of material nonpublic information regarding the portfolio or changes thereto or the Creation Basket.

The Exchange further believes that Rule 8.900–E is designed to prevent fraudulent and manipulative acts and practices related to the listing and trading of Shares of the Fund because it provides meaningful requirements about both the data that will be made publicly available about the Shares, as well as the information that will only be available to certain parties and the controls on such information. Specifically, the Exchange believes that the requirements related to information protection set forth in Rule 8.900–E(b)(5) will act as a safeguard against misuse and improper dissemination of information related to the Fund's portfolio composition, the Creation Basket, or changes thereto. The requirement that any person or entity implement procedures to prevent the use and dissemination of material non-public information regarding the portfolio or Creation Basket will act to prevent any individual or entity from

[22] 15 U.S.C. 78f(b).

[23] 15 U.S.C. 78f(b)(5).

sharing such information externally and the internal ''fire wall'' requirements applicable where an entity is a registered broker-dealer or affiliated with a broker-dealer will act to make sure that no entity will be able to misuse the data for their own purposes. Accordingly, the Exchange believes that this proposal is designed to prevent fraudulent and manipulative acts and practices.

The Exchange further believes that the proposal is designed to prevent fraudulent and manipulative acts and practices related to the listing and trading of Shares of the Fund and to promote just and equitable principles of trade and to protect investors and the public interest because the Exchange would halt trading under certain circumstances under which trading in the Shares of the Fund may be inadvisable. Specifically, trading in the Shares will be subject to Rule 8.900–E(d)(2)(C)(i), which provides that the Exchange may consider all relevant factors in exercising its discretion to halt trading in the Fund. Trading may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the series of Managed Portfolio Shares inadvisable. These may include: (a) the extent to which trading is not occurring in the securities and/or the financial instruments composing the portfolio; or (b) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present.[24] Additionally, trading in the Shares will be subject to Rule 8.900–E(d)(2)(C)(ii), which provides that the Exchange would halt trading where the Exchange becomes aware that: (a) the VIIV of a series of Managed Portfolio Shares is not being calculated or disseminated in one second intervals, as required; (b) the NAV with respect to a series of Managed Portfolio Shares is not disseminated to all market participants at the same time; (c) the holdings of a series of Managed Portfolio Shares are not made available on at least a quarterly basis as required under the 1940 Act; or (d) such holdings are not made available to all market participants at the same time (except as otherwise permitted under the currently applicable exemptive order or no-action relief granted by the Commission or Commission staff to the Investment Company with respect to the series of Managed Portfolio Shares). The Exchange would halt trading in such Shares until such time as the VIIV, the NAV, or the holdings are available, as required.

With respect to the proposed listing and trading of Shares of the Fund, the Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Shares will be listed and traded on the Exchange pursuant to the initial and continued listing criteria in Rule 8.900–E.[25] The Fund's holdings will conform to the permissible investments as set forth in the Exemptive Application and Exemptive Order.[26] As noted above, FINRA, on behalf of the Exchange, or the regulatory staff of the Exchange, or both, will communicate as needed regarding trading in the Shares and the underlying exchange-traded instruments with other markets and other entities that are members of the ISG, and FINRA, on behalf of the Exchange, or the regulatory staff of the Exchange, or both, may obtain trading information regarding trading such securities from such markets and other entities. In addition, the Exchange may obtain information regarding trading in the Shares and the underlying exchange-traded instruments from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

With respect to trading of Shares of the Fund, the ability of market participants to buy and sell Shares at prices near the VIIV is dependent upon their assessment that the VIIV is a reliable, indicative real-time value for the Fund's underlying holdings. Market participants are expected to accept the VIIV as a reliable, indicative real-time value because (1) the VIIV will be calculated and disseminated based on the Fund's actual portfolio holdings, (2) the securities in which the Fund plans to invest are generally highly liquid and actively traded and trade at the same time as the Fund and therefore generally have accurate real time pricing available, and (3) market participants will have a daily opportunity to evaluate whether the VIIV at or near the close of trading is indeed predictive of the actual NAV.

The proposed rule change is designed to promote just and equitable principles of trade and to protect investors and the public interest in that the Exchange will obtain a representation that the NAV per Share of the Fund will be calculated daily and that the NAV will be made available to all market participants at the same time. Investors can also obtain the Fund's SAI, its shareholder reports, its Form N–CSR (filed twice a year), and its Form N–CEN (filed annually). The Fund's SAI and shareholder reports will be available free upon request from the Fund, and those documents and the Form N–PORT, Form N–CSR, and Form N–CEN may be viewed on-screen or downloaded from the Commission's website at *www.sec.gov.* In addition, a large amount of information will be publicly available regarding the Fund and the Shares, thereby promoting market transparency. Quotation and last sale information for the Shares will be available via the CTA high-speed line. Information regarding the VIIV will be widely disseminated in one second intervals throughout the Exchange's Core Trading Session by the Reporting Authority and/or one or more major market data vendors. The website for the Fund will include a prospectus for the Fund that may be downloaded, and additional data relating to NAV and other applicable quantitative information, updated on a daily basis. Moreover, prior to the commencement of trading, the Exchange will inform its members in an Information Bulletin of the special characteristics and risks associated with trading the Shares.

In addition, as noted above, investors will have ready access to the VIIV, and quotation and last sale information for the Shares. The Shares will conform to the initial and continued listing criteria under Rule 8.900–E. The Fund's investments, including derivatives, will be consistent with its investment objective and will not be used to enhance leverage (although certain derivatives and other investments may result in leverage). That is, the Fund's investments will not be used to seek performance that is the multiple or inverse multiple (*e.g.,* 2X or –3X) of the Fund's primary broad-based securities benchmark index (as defined in Form N–1A).

The Exchange also believes that the proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that it will facilitate the listing and trading of actively-managed exchange-traded products that will enhance competition among market participants, to the benefit of investors and the marketplace. As noted above, the Exchange has in place surveillance procedures relating to trading in the Shares and may obtain information via ISG from other exchanges that are members of ISG or with which the Exchange has entered

[24] *See* note 20, *supra.*

[25] The Exchange represents that, for initial and continued listing, the Fund will be in compliance with Rule 10A–3 under the Act. *See* 17 CFR 240.10A–3.

[26] *See* note 9, *supra.*

into a comprehensive surveillance sharing agreement. In addition, as noted above, investors will have ready access to information regarding the VIIV and quotation and last sale information for the Shares.

For the above reasons, the Exchange believes that the proposed rule change is consistent with the requirements of Section 6(b)(5) of the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes the proposed rule change would permit the listing and trading of an additional actively-managed exchange-traded product, thereby promoting competition among exchange-traded products to the benefit of investors and the marketplace.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act [27] and Rule 19b–4(f)(6) thereunder.[28]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii) [29] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission notes it has approved, and noticed for immediate effectiveness, proposed rule changes to permit listing and trading on the Exchange of Managed Portfolio Shares similar to the Funds.[30] The proposed listing rule for the Fund raises no novel legal or regulatory issues. Therefore, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change operative upon filing.[31]

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NYSEARCA–2023–33 on the subject line.

Paper Comments

- Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEARCA–2023–33. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to File Number SR–NYSEARCA–2023–33 and should be submitted on or before May 22, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[32]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97373; File No. SR–NYSEARCA–2023–32]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Modify the NYSE ARCA Options Fee Schedule

April 25, 2023.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 18, 2023, NYSE Arca, Inc. (''NYSE Arca'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify the NYSE Arca Options Fee Schedule (''Fee Schedule'') regarding fees for equipment for the Trading Floor. The Exchange proposes to implement the fee change effective April 18, 2023.[4] The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this filing is to modify the Fee Schedule regarding Market Maker podium fees to reflect the availability of new equipment for Market Makers' use on the Trading Floor. The Exchange proposes to implement the rule change on April 18, 2023.

Currently, the Exchange equips each Market Maker podium with four 23″ monitors. Market Makers may request up to two additional monitors per podium for a monthly surcharge of $100. In addition, Market Makers currently have the option to upgrade the 23″ monitors provided by the Exchange to 25″ or 27″ monitors for a one-time surcharge of $200 or $300 per monitor, respectively.[5]

The Exchange now proposes to offer Market Makers an additional podium monitor upgrade option. Specifically, the Exchange proposes to modify the Fee Schedule to provide that Market Makers may upgrade their podium monitors to a 32″ size for a one-time surcharge of $600 per monitor. This proposed change would offer Market Makers the option to upgrade their podium monitors to a newly available larger size, which the Exchange believes would afford Market Makers additional flexibility in the configuration of their podia space. The Exchange notes that it established the current fees relating to Market Maker monitors in connection with the relocation of the Trading Floor to a new facility.[6] The proposed change would support fair and efficient use of Trading Floor space, as the Exchange believes that the available space on the Trading Floor can accommodate an additional monitor upgrade option for Market Makers.

The Exchange also proposes to amend the Fee Schedule to eliminate the current descriptions of the monitor sizes as ''standard,'' ''large,'' or ''extra-large'' and instead state the sizes of the available monitors (*e.g.,* 23″, 25″, and so forth). The Exchange believes this proposed change would add specificity and transparency to the Fee Schedule with respect to the sizes of the monitors available to Market Makers.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act, in general, and furthers the objectives of Sections 6(b)(4) and (5) of the Act, in particular, because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members, issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

The Exchange believes the proposed change is reasonable, equitable and not unfairly discriminatory for the following reasons. First, the proposed fee for the 32″ monitor upgrade is reasonable, as the Exchange believes it is relatively proportional to the current fees for upgrades to monitors of smaller sizes and would support the existing cost structure designed to provide Market Makers with flexibility in configuring their Floor space consistent with their own business needs (*i.e.,* the cost structure will continue to allow a Market Maker to utilize only one podium with additional and/or upgraded monitors to facilitate additional personnel operating in the podium, as opposed to paying for multiple podia). Second, the proposed change is equitable because it would provide for the same fee for all Market Makers that wish to exercise the option to upgrade their podium monitors to the newly available 32″ size. Market Makers are not required to upgrade their podium equipment, but all those that choose to do so will be subject to the same fees. The Exchange also notes that the proposed fee for the newly available 32″ monitor would not impact any of the existing podium fees. Finally, the Exchange believes the proposed change is not unfairly discriminatory because it would apply to all Market Makers on an equal and non-discriminatory basis. Any Market Maker can choose to upgrade its podium monitors as suits its business needs, and the same surcharge, based on the size of the upgraded monitor, would apply to any such Market Maker. The Exchange further believes that the proposed change to replace the monitor size descriptors with the monitors' dimensions is reasonable, equitable, and not unfairly discriminatory because the change would add specificity and transparency to the Fee Schedule and would apply equally to all similarly situated market participants.

The Exchange also believes the proposed Floor Fees are reasonable, equitable, and not unfairly discriminatory because OTP Holders can choose whether to participate on the Exchange solely through electronic means, or with a presence on the Trading Floor. The proposed change, which would offer Market Makers added flexibility with respect to the configuration of their podium monitors, is designed to continue to encourage market participants to conduct business on the Trading Floor. Orders brought to the Trading Floor could benefit all market participants by facilitating more trading opportunities.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act, the Exchange does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed change does not raise any competitive issues, as it is designed to

[4] The Exchange originally filed to amend the Fee Schedule on April 6, 2023 (SR–NYSEARCA–2023–21) and withdrew such filing on April 18, 2023.

[5] *See* Fee Schedule, NYSE Arca OPTIONS: FLOOR and EQUIPMENT, MARKET MAKER PODIUM FEES. The Fee Schedule also provides that podia are only available to Market Makers with an active OTP (*i.e.,* Market Makers that have only a Reserve OTP are ineligible for podia). In addition, each Market Maker on the Trading Floor may have no more than four (4) total podia and, each Market Maker in a given Trading Crowd, may have not more than two (2) podia, or eight (8) monitors. *Id.* The Exchange does not propose any changes to these aspects of Market Maker podium fees.

[6] *See* Securities Exchange Act Release No. 84874 (December 19, 2018), 83 FR 66818 (December 27, 2018) (SR–NYSEArca–2018–90) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Modify the NYSE Arca Options Fee Schedule in Conjunction with Relocating the Trading Floor to a New Trading Facility).

reflect the availability of optional new equipment for Market Maker use on the Exchange Trading Floor. Market Makers already have the option to upgrade their podium monitors from those provided by the Exchange to a larger size, and the proposed change would simply offer Market Makers an additional upgrade option that would, like the current upgrade options, be subject to a one-time surcharge. The Exchange believes the proposed change would afford Market Makers greater flexibility with respect to the configuration of their podia and could allow them to make more efficient use of their Trading Floor space.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A)[7] of the Act and subparagraph (f)(2) of Rule 19b–4[8] thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[9] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEARCA–2023–32 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEARCA–2023–32. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection.

All submissions should refer to File Number SR–NYSEARCA–2023–32, and should be submitted on or before May 22, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[10]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97371; File No. SR–CBOE–2023–020]

Self-Regulatory Organizations; Cboe Exchange, Inc.; Notice of Filing of a Proposed Rule Change To Make the Nonstandard Expirations Pilot Program Permanent

April 25, 2023.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 11, 2023, Cboe Exchange, Inc. (''Exchange'' or ''Cboe Options'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe Exchange, Inc. (the ''Exchange'' or ''Cboe Options'') proposes to make permanent the operation of its program that allows the Exchange to list broad-based index options with nonstandard expirations (''Nonstandard Expirations Pilot Program''). The text of the proposed rule change is provided below.

(additions are *italicized*; deletions are [bracketed])

* * * * *

Rules of Cboe Exchange, Inc.

* * * * *

Rule 4.13. Series of Index Options

(a)–(d) No change.

(e) Nonstandard Expirations [Pilot] Program.

(1)–(2) No change.

(3) [Duration of Nonstandard Expirations Pilot Program. The Nonstandard Expirations Pilot Program shall be through May 8, 2023.

(4)] Weekly Expirations and EOM Trading Hours on the Last Trading Day. On the last trading day, Regular Trading Hours for expiring Weekly Expirations and EOMs are from 9:30 a.m. and 4:00 p.m.

(f) No change.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

Interpretations and Policies

.01 The procedures for adding and deleting strike prices for index options are provided in Rule 4.5 and Interpretations and Policies related thereto, as otherwise generally provided by Rule 4.13, and include the following:

(a) No change.

(b) Notwithstanding the above paragraph, the interval between strike prices may be no less than $0.50 for options based on one-one hundredth of the value of the DJIA, including for series listed under either the Short Term Options Series Program in Rule 4.13(a)(2)(A) or the Nonstandard Expirations [Pilot] Program in Rule 4.13(e).

(c)–(h) No change.

(i) Notwithstanding Interpretation and Policies .01(a), .01(d) and .04 to Rule 4.13, the exercise prices for new and additional series of Mini-RUT options shall be listed subject to the following:

(1)–(2) No change.

(3) The lowest strike price interval that may be listed for standard Mini-RUT options, including LEAPS, is $1, and the lowest strike price interval that may be listed for series of Mini-RUT listed under the Nonstandard Expirations [Pilot] Program in Rule 4.13(e) and for QIX Mini-RUT options is $0.50.

* * * * *

.10 Notwithstanding Interpretations and Policies .01(a), .01(d) and .04 to Rule 4.13, the exercise prices for new and additional series of Mini-SPX options shall be listed subject to the following:

(a)–(b) No change.

(c) The lowest strike price interval that may be listed for standard Mini-SPX options is $1, including for LEAPS, and the lowest strike price interval that may be listed for series of Mini-SPX listed under either the Short Term Option Series Program in Rule 4.13(a)(2)(A) or the Nonstandard Expirations [Pilot] Program in Rule 4.13(e) is $0.50.

* * * * *

Rule 5.4. Minimum Increments for Bids and Offers

(a) Simple Orders for Equity and Index Options. The minimum increments for bids and offers on simple orders for equity and index options are as follows:

* * * * *

Class	Increment	Series trading price
* * * * *	*	*
Series of VIX options (if the Exchange does not list VIX on a group basis pursuant to Rule 4.13) and series of VIX Options not listed under the Nonstandard Expirations [Pilot] Program (if the Exchange lists VIX on a group basis pursuant to Rule 4.13).	$0.01.	Lower than $3.00.
	0.05	$3.00 and higher.
Series of VIX Options listed under the Nonstandard Expirations [Pilot] Program (if the Exchange lists VIX on a group basis pursuant to Rule 4.13).	0.01	All prices.

* * * * *

The text of the proposed rule change is also available on the Exchange's website (*http://www.cboe.com/AboutCBOE/CBOELegalRegulatoryHome.aspx*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to make permanent its Nonstandard Expirations Pilot Program. Specifically, the Exchanges proposes to be permitted to list P.M.-settled options on broad-based indexes that expire (1) on any Monday, Wednesday, or Friday (other than the third Friday-of-the-month or days that coincide with an end-of-month (''EOM'') expiration) and, with respect to options on the S&P 500 Index (''SPX options'') and the Mini-S&P 500 Index (''XSP options''), on any Tuesday or Thursday (other than days that coincide with an EOM expiration) (''Weekly Expirations'') and (2) on the last day of the trading month (''EOM Expirations'').[3] The Securities and Exchange Commission (the ''Commission'') approved a rule change that established a pilot program under which the Exchange is permitted to list P.M.-settled options on broad-based indexes to expire on (a) any Friday of the month, other than the third Friday-of-the-month, and (b) the last trading day of the month.[4] On January 14, 2016, the Commission approved a Cboe Options proposal to expand the pilot program to allow P.M.-settled options on broad-based indexes to expire on any Wednesday of month, other than those that coincide with an EOM.[5] On August 10, 2016, the Commission approved a Cboe Options proposal to expand the pilot program to allow P.M.-settled options on broad-based indexes to expire on any Monday of month, other than those that coincide with an EOM.[6] On April 12, 2022, the Commission approved a Cboe Options proposal to expand the pilot program to allow P.M.-settled SPX options to also expire on Tuesday or Thursday.[7] On September 15, 2022, the Commission approved a Cboe Options proposal to expand the pilot program to allow P.M.-settled XSP options to similarly expire on Tuesday or Thursday.[8] Under the terms of the Nonstandard Expirations Pilot Program, Weekly Expirations and EOMs are permitted on any broad-based index that is eligible for regular options trading. Weekly Expirations and EOMs are cash-settled and have European-style

[3] In addition to proposing to delete the language in Rule 4.13(e)(3) regarding the expiration date of the pilot program (and renumbering subparagraph (4) to be subparagraph (3)), the Exchange proposes to delete the word ''pilot'' from the heading of Rule 4.13(e)(3) and make corresponding changes to Rules 4.13, Interpretations and Policies .01(b) and (i)(3), .10(c), and 5.4(a).

[4] *See* Securities Exchange Act Release 62911 (September 14, 2010), 75 FR 57539 (September 21, 2010) (order approving SR–CBOE–2009–075).

[5] *See* Securities Exchange Act Release 76909 (January 14, 2016), 81 FR 3512 (January 21, 2016) (order approving SR–CBOE–2015–106).

[6] *See* Securities Exchange Act Release 78531 (August 10, 2016), 81 FR 54643 (August 16, 2016) (order approving SR–CBOE–2016–046).

[7] *See* Securities Exchange Act Release 94682 (April 12, 2022) (order approving SR–CBOE–2022–005).

[8] *See* Securities Exchange Act Release 95795 (September 21, 2022) (order approving SR–CBOE–2022–039).

exercise. The proposal became effective on a pilot basis for a period of fourteen months that commenced on the next full month after approval was received to establish the Program [9] and was subsequently extended.[10] Pursuant to Rule 4.13(e)(3), the Program is scheduled to expire on May 8, 2023. The Exchange hereby requests that the Commission approve the Nonstandard Expirations Pilot Program on a permanent basis.

By way of background, when cash-settled [11] index options were first introduced in the 1980s, settlement was based on the closing value of the underlying index on the option's expiration date. The Commission later became concerned about the impact of P.M.-settled, cash-settled index options on the markets for the underlying stocks at the close on expiration Fridays. Specifically, certain episodes of price reversals around the close on quarterly expiration dates attracted the attention of regulators to the possibility that the simultaneous expiration of index futures, futures options, and options might be inducing abnormal volatility in the index value around the close.[12] Academic research at the time provided at least some evidence suggesting that futures and options expirations contributed to excess volatility and reversals around the close on those days.[13] In light of the concerns with P.M. settlement and to help ameliorate the price effects associated with expirations of P.M.-settled, cash-settled index products, in 1987, the Commodity Futures Trading Commission (''CFTC'') approved a rule change by the Chicago Mercantile Exchange (''CME'') to provide for A.M. settlement [14] for index futures, including futures on the S&P 500.[15] The Commission subsequently approved a rule change by Cboe Options to list and trade A.M.-settled SPX options.[16] In 1992, the Commission approved Cboe Options' proposal to transition all of its European-style cash-settled options on the S&P 500 Index to A.M. settlement; [17] however, in 1993, the Commission approved a rule allowing Cboe Options to list P.M.-settled options on certain broad-based indices, including the S&P 500, expiring at the end of each calendar quarter (''Quarterly Index Expirations'') (since adopted as permanent).[18] Starting in 2006, the Commission approved numerous rule changes, on a pilot basis, permitting the Cboe Options to introduce other index options, including SPX options, with P.M.-settlement. These include P.M.-settled index options expiring weekly (other than the third Friday) and at the end of each month (''EOM''),[19] SPXPM, as well as P.M.-settled Mini-SPX Index (''XSP'') options and Mini-Russell 2000 Index (''MRUT'') options expiring on the third Friday.[20]

As stated above, since its inception in 2010, the Exchange has continuously extended the Nonstandard Expirations Pilot Program period and, during the course of the Nonstandard Expirations Pilot Program and in support of the extensions of the Nonstandard Expirations Pilot Program, the Exchange has submitted reports to the Commission regarding the Pilot Program that detail the Exchange's experience with the Pilot Program, pursuant to the Nonstandard Expirations Pilot Program Approval Order.[21] Specifically, the Exchange has submitted annual Pilot Program reports to the Commission that contain an analysis of volume, open interest, and trading patterns. In addition, for series that exceed certain minimum open interest parameters, the annual report would provide analysis of index price volatility and, if needed, share trading activity. The Exchange has also submitted periodic interim reports that contain some, but not all, of the information contained in the annual reports (together with the periodic interim reports, the ''pilot reports'').[22]

The pilot reports contained the following volume and open interest data:

(1) monthly volume aggregated for all Weekly and EOM trades;

(2) volume in Weekly and EOM series aggregated by expiration date;

(3) month-end open interest aggregated for all Weekly and EOM series;

(4) month-end open interest for EOM series aggregated by expiration date and week-ending open interest for Weekly series aggregated by expiration date;

(5) ratio of monthly aggregate volume in Weekly and EOM series to total monthly class volume; and

[22] In providing the pilot reports to the Commission, the Exchange previously requested confidential treatment of the pilot reports under the Freedom of Information Act (''FOIA''). *See* 5 U.S.C. 552.

(6) ratio of month-end open interest in EOM series to total month-end class open interest and ratio of week-ending open interest in EOW series to total week-ending open interest.

The annual reports also contained the information noted in Items (1) through (6) above for Expiration Friday, A.M.-settled series, if applicable, for the period covered in the pilot report as well as for the six-month period prior to the initiation of the pilot. Upon request by the Commission, the Exchange provided data files containing: (1) Weekly and EOM option volume data aggregated by series, and (2) Weekly week-ending open interest for expiring series and EOM month-end open interest for expiring series. In the annual reports, the Exchange also provided a monthly analysis of Weekly and EOM trading patterns by undertaking a time series analysis of open interest in Weekly and EOM series aggregated by expiration date compared to open interest in near-term standard Expiration Friday A.M.-settled series in order to determine whether users were shifting positions from standard series to Weekly and Monthly series.

Finally, for series that exceed certain minimum parameters,[23] the annual reports contained the following analysis related to index price changes and underlying share trading volume at the close on Expiration Fridays:

(1) a comparison of index price changes at the close of trading on a given expiration date with comparable price changes from a control sample. The data includes a calculation of percentage price changes for various time intervals and compare that information to the respective control sample. Raw percentage price change data as well as percentage price change data normalized for prevailing market volatility, as measured by the Cboe Volatility Index (VIX), is provided; and

(2) a calculation of share volume for a sample set of the component securities representing an upper limit on share trading that could be attributable to expiring in-the-money Weekly and EOM expirations. The data includes a comparison of the calculated share volume for securities in the sample set to the average daily trading volumes of those securities over a sample period.

Also, during the course of the Nonstandard Expirations Pilot Program, the Exchange provided the Commission with any additional data or analyses the Commission requested if it deemed such data or analyses necessary to determine whether the Nonstandard Expirations Pilot Program was consistent with the Exchange Act. The Exchange has made public on its website all data and analyses previously submitted to the Commission under the Nonstandard Expirations Pilot Program,[24] and will continue to make public any data and analyses it submits to the Commission while the Nonstandard Expirations Pilot Program is still in effect.

The Exchange has concluded that the Nonstandard Expirations Pilot Program does not negatively impact market quality or raise any unique or prohibitive regulatory concerns. The Exchange has not identified any evidence from the pilot data indicating that the trading of Weekly and EOM options has any adverse impact on fair and orderly markets on Expiration Fridays for the underlying indexes or the underlying securities comprising those indexes, nor have there been any observations of abnormal market movements attributable to Weekly and EOM options from any market participants that have come to the attention of the Exchange. Based on a study conducted by the Commission's Division of Economic and Risk Analysis (''DERA'') staff on the pilot data from 2006 through 2018,[25] and the Exchange's review of the pilot data from 2019 through 2021, the size of the market for P.M.-settled SPX options (including quarterly, weekly, EOM and third Friday expirations) since 2007 has grown from a trivial portion of the overall market to a substantial share (from around 0.1% of open interest in 2007 to 30% in 2021).[26] Notional value of open interest in P.M.-settled SPX options increased from approximately a median of $1.5 billion in 2007 to $1.9 trillion in 2021, approximately 1260 times its value in 2007. Notional open interest in A.M.-settled SPX options was already hovering around a median of $1.4 trillion in 2007, and it has since increased to approximately $4.4 trillion in 2021. It is also important to note that open interest on expiring P.M.-settled SPX options, as compared to A.M.-settled options, is spread out across a greater number of expiration dates, which results in a smaller percentage of open interest expiring on any one date, thus mitigating concerns that SPXPM option expiration may have a disruptive effect on the market.[27] Daily trading volume in P.M.-settled SPX options has increased from a median of about 700 contracts in 2007 to nearly 1.9 million contracts in 2021,[28] and now exceeds trading volume in A.M.-settled SPX options.

Moreover, the DERA staff study of the P.M.-settled SPX options pilot data (2006 through 2018) did not identify any significant economic impact on S&P 500 futures,[29] the S&P 500, or the underlying component securities of the S&P 500 surrounding the close. For purposes of the study, volatility was by and large measured by using the standard deviation [30] of one-minute returns of S&P 500 futures values and the index value during regular hours on each day reviewed (excluding the first and last 15 minutes of trading) and then compared with the standard deviation of one-minute returns (for S&P 500 futures, the S&P 500, and the underlying component securities of the S&P 500) over the last 15 minutes of a trading day.[31] Using this as a general measure,[32] the DERA staff study then reviewed

[23] The Exchange and the Commission determined the minimum open interest parameters, control sample, time intervals, method for randomly selecting the component securities, and sample periods.

[24] Available at *https://www.cboe.com/aboutcboe/legal-regulatory/national-market-system-plans/pm-settlement-spxpm-data*.

[25] *See* DERA Staff PM Pilot Memo, at 13 (''Option settlement quantity data for A.M.- and P.M.-settled options were obtained from the Cboe, including the number of contracts that settled in-the-money for each exchange-traded option series on the S&P 500 index. . .on expiration days from January 20, 2006 through December 31, 2018. Daily open interest and volume data for [SPX] option series were also obtained from Cboe, including open interest data from January 3, 2006 through December 31, 2018 and trading volume data from January 3, 2006 through December 31, 2018.'')

[26] The DERA staff study reviewed and provided statistics for market share, median notional value of open interest and median volume in 2007 and in 2018. The Exchange provides updated statistics for market share, median notional value of open interest and median volume in 2021, replacing the 2018 statistics provided in the Commission staff study.

[27] *See* DERA Staff PM Pilot Memo, at 2.

[28] The Exchange notes that the DERA staff study used two-sided volume data for the median volume in 2007 and in 2018; therefore, the Exchange provides two-sided volume data for the median volume in 2021.

[29] Futures on the S&P 500 experience high volume and liquidity both before and after the close of the underlying market. Therefore, futures are a useful measure of abnormal volatility surrounding the close and the open. *See* DERA Staff PM Pilot Memo, at 14. The Exchange agrees with this approach.

[30] Standard deviation applied to a rate of return (in this case, one-minute) of an instrument can indicate that instrument's historical volatility. The greater the standard deviation, the greater the variance between price and the mean, which indicates a larger price range, *i.e.,* higher volatility.

[31] For example, if on a particular day the standard deviation of one-minute returns between 3:45 p.m. ET and 4:00 p.m. ET is 0.004 and the standard deviation of returns from 9:45 a.m. ET to 3:45 p.m. ET is 0.002, this metric would take on a value of 2 for that day, indicating that volatility during the last 15 minutes of the trading day was twice as high as it was during the rest of the trading day. *See* DERA Staff PM Pilot Memo, at 15; *see also* DERA Staff PM Pilot Memo, at Section V, which discusses in detail the metrics used to measure, for the purposes of the study, the extent to which the market may experience abnormal volatility surrounding SPXPM option settlement.

[32] *See* DERA Staff PM Pilot Memo, at Section V, which discusses in detail the metrics used to measure, for the purposes of the study, the extent to which the market may experience abnormal volatility surrounding SPXPM option settlement.

whether, and to what extent, the settlement quantity of SPXPM options and the levels of open interest in SPXPM options on expiration days (as compared to non-expiration days) may be associated with general price volatility and price reversals for S&P 500 futures, the S&P 500, and the underlying component securities of the S&P 500 near the close. From its review of the study, the Exchange agrees that, although volatility before the market close is generally higher than during the rest of the trading day, there is no evidence of any significant adverse economic impact to the futures, index, or underlying index component securities markets as a result of the quantity of P.M.-settled SPX options that settle at the close or the amount of expiring open interest in P.M.-settled SPX options. For example, the largest settlement event that occurred during the time period of the study (a settlement of $100.4 billion of notional on December 29, 2017) had an estimated impact on the futures price of only approximately 0.02% (a predicted impact of $0.54 relative to a closing futures price of $2,677).

In particular, the DERA staff study found that an additional P.M.-settled SPX options settlement quantity equal to $10 billion in notional value is associated with a marginal impact on futures prices during the last 15 minutes of the trading day of only about $0.06 (where the hypothetical index level is 2,500), additional expiring open interest in P.M.-settled SPX options equal to $10 billion in notional value is associated with a marginal impact on futures prices during the last 15 minutes of the trading day of only about $0.05 (assumed index level is 2,500). Also, an additional increase in settlement quantity or in expiring open interest, each equal to $20 million in notional value, did not result in any meaningful futures price reversals near the close (neither was found to cause a price reversal of over one standard deviation [33]).

Likewise, the study identified that an additional total P.M.-settled SPX options settlement quantity equal to $10 billion in notional value corresponds to price movement in the S&P 500 of only about $0.08 (assuming an index level of 2,500) during the last 15 minutes of the trading day, and that additional expiring open interest equal to $10 billion in notional value corresponds to a price movement in the S&P 500 of only about $0.06 (assuming an index level of 2,500) during the last 15 minutes of the trading day. The study also identified that it would take an increase of $34 billion in notional value of total settlement quantity and of expiring open interest for one additional S&P 500 price reversal of greater than two standard deviations to occur in the last 15 minutes before the market close. Also, regarding potential impact to S&P 500 component securities, it would take an increase in total P.M.-settled SPX options settlement quantity equal to $20 billion to effect a price movement of only approximately $0.03 for a $200 stock, an increase in expiring open interest in P.M.-settled SPX options equal to $10 billion to effect a price movement less than half a standard deviation, and an increase in total P.M.-settled SPX settlement quantity equal to $7 billion to achieve a price reversal greater two standard deviations.

The study employed the same metrics to determine whether there is greater price volatility for S&P 500 futures, the S&P 500, and the component securities of the S&P 500 related to SPXPM option settlements during an environment of high market volatility (*i.e.,* on days in which the VIX Index was in the top 10% of closing index values) and did not identify indicators of any significant economic impact on these markets near the close as a result of the P.M.-settled SPX options settlement.[34] In addition to this, the DERA staff study, applying the same metrics and analysis as for P.M.-settled SPX options to A.M.-settled SPX options, did not identify any evidence of a statistically significant relationship between settlement quantity or expiring open interest of A.M.-settled options and volatility near the open.

Upon review of the results of the DERA staff study, the Exchange agrees that each of the above-described marginal price movements in S&P 500 futures, the S&P 500, and the S&P 500 component securities affected by increases in P.M.-settled SPX options settlement quantity and expiring open interest appear to be de minimis pricing changes from those that occur over regular trading hours (outside of the last 15 minutes of the trading day). Further, the Exchange has not observed any significant economic impact or other adverse effects on the market from similar reviews of its pilot reports and data submitted after 2018.[35] In its review of a sample of the pilot data from 2019 through 2021, the Exchange similarly measured volatility over the final fifteen minutes of each trading day by taking the standard deviation of rolling one-minute returns of the S&P 500 level (excluding the first and last fifteen minutes of trading) and comparing such with the standard deviation of one-minute returns [36] of the S&P 500 level, over the last 15 minutes of a trading day. The Exchange identified an average standard deviation ratio of 1.42 for the S&P 500 on non-expiration days and an average standard deviation ratio of 1.54 for the S&P 500 on expiration days (a ratio between expiration days and non-expiration days of 1.09). The Exchange also notes that, using the same methodology, it observed that, from 2015 through 2019,[37] the average standard deviation ratio for the S&P 500 on non-expiration days was 1.11 and the average standard deviation ratio for the S&P 500 on expiration days was 1.22 (a ratio between expiration days and non-expiration days of 1.10). While the average standard deviation ratio on both expiration and non-expiration days was higher in 2019 through 2021 due to overall market volatility, the ratios between the standard deviation ratios on expiration days and non-expirations days remained nearly identical between the 2015 through 2019 timeframe and the 2019 through 2021. This shows that, in cases where overall market volatility may increase, the normalized impact on expiration days to non-expiration days generally remains consistent.

In addition to this, the Exchange notes that the S&P 500 Index is rebalanced quarterly. The changes resulting from each rebalancing coincide with the third-Friday of the quarterly rebalancing month (*i.e.,* March, June, September, October and December) [38] and generally drive an increase in trading activity from investors that seek to track the S&P 500. As such, The Exchange measured volatility on quarterly rebalancing dates and found that the average standard deviation ratio was 1.62, which suggests more closing volatility on quarterly rebalance dates compared to non-quarterly expiration dates (for which the average standard deviation ratio was 1.22), thus indicating that the impact rebalancing may have on the S&P 500 is greater than any impact that P.M.-settled SPX options may have on the S&P 500.

The Exchange additionally focused its study of the post-2018 sample pilot data

[33] *See supra* note 26.

[34] The Exchange also notes that the study did not identify any evidence that less liquid S&P 500 constituent securities experienced any greater impact from the settlement of P.M.-settled SPX options.

[35] Total SPX open interest volumes were examined for expiration dates over a roughly two-year period between October 2019 and November 2021.

[36] Calculated at every tick for the prior minute.

[37] November 2015 through November 2021.

[38] *See* S&P Dow Jones Indices, Equity Indices Policies & Practices, Methodology (August 2021), at 15, available at *https://www.spglobal.com/spdji/en/documents/methodologies/methodology-sp-equity-indices-policies-practices.pdf.*

on reviewing for potential correlation between excess market volatility and price reversals and the hedging activity of liquidity providers. As explained in the DERA staff study, potential impact of P.M.-settled SPX options on the correlated equity markets is thought to stem from the hedging activity of liquidity providers in such options.[39] To determine any such potential correlation, the Exchange studied the expected action of liquidity providers that are the primary source of the hedging on settlement days. These liquidity providers generally delta-hedge their S&P 500 index exposure via S&P 500 futures and on settlement day unwind their futures positions that correspond with the delta of their in-the-money (ITM) expiring P.M.-settled SPX options. Assuming such behavior, the Exchange estimated the Market-On-Close (''MOC'')[40] volume for the shares of the S&P 500 component securities (*i.e.,* ''MOC share volume'') that could ultimately result from the unwinding of the liquidity providers' futures positions by equating the notional value of the futures positions that correspond to expiring ITM open interest to the number S&P 500 component security contracts (based on the weight of each S&P 500 component security). That is, the Exchange calculated (an estimate) of the amount of MOC volume in the S&P 500 component markets attributable hedging activity as a result of expiring ITM P.M.-settled SPX options (*i.e.,* ''hedging MOC''). The Exchange then: (1) compared the hedging MOC share volume to all MOC share volume on expiration days and non-expiration trading days; and (2) compared the notional value of the hedging futures positions (*i.e.,* that correspond to expiring ITM P.M.-settled SPX options open interest) to the notional value of expiring ITM P.M.-settled SPX options open interest, the notional value of all expiring P.M.-settled SPX options open interest and the notional value of all P.M.-settled SPX options open interest.

The Exchange observed that, on average, there were approximately 25% more MOC shares executed on expiration days (332 expiration days) than non-expiration days (209 non-expiration days). While, at first glance, the volume of MOC shares executed on expiration days seems much greater than the volume executed on non-expiration days, the Exchange notes that much of this difference is attributable to just eight expiration days—the quarterly index rebalancing dates captured within the scope of the post-2018 sample pilot data. The average MOC share volume on the eight quarterly rebalancing dates was approximately 4.8 times the average MOC share volume on the non-quarterly rebalancing expiration dates; again, indicating that the impact rebalancing may have on the S&P 500 Index is greater than any impact that P.M.-settled SPX options may have on the S&P 500 Index. That is, the Exchange observed that the majority of closing volume on quarterly rebalance dates is driven by rebalancing of shares in in the S&P 500, and not by P.M.-settled SPX options expiration-related hedging activity. Notwithstanding the MOC share volume on quarterly rebalancing dates, the volume of MOC shares executed on expiration days (324 expiration days) was only approximately 13% more than that on non-expiration days, substantially less than the increase in volume over non-expiration days wherein the eight index rebalancing dates are included in expiration day volume. In addition to this, the Exchange observed that the hedging MOC share volume (*i.e.,* the expected MOC share volume resulting from hedging activity in connection with expiring ITM P.M.-settled SPX options) was, on average, less than the MOC share volume on non-expiration days, and was only approximately 20% of the total MOC share volume on expiration days, indicating that other sources of MOC share volume generally exceed the volume resulting from hedging activity of expiring ITM P.M.-settled SPX options and would more likely be a source of any potential market volatility.

The Exchange also observed that, across all third-Friday expirations, the notional value of the hedging futures positions was approximately 25% of the notional value of expiring ITM P.M.-settled SPX options, approximately 3.8% of the notional value of all expiring P.M.-settled SPX options, and approximately only 0.5% of the notional value of all P.M.-settled SPX options. As such, the estimated hedging activity from liquidity providers on expiration days is a fraction of the expiring open interest in P.M.-settled SPX options, which, the Exchange notes, is only 14% of the total open interest in P.M.-settled SPX options; thus, indicating negligible capacity for hedging activity to increase volatility in the underlying markets.

While unrelated to the initial concerns of P.M.-settlement as described above, at the request of the Commission, the Exchange recently completed an analysis intended to evaluate whether the SPXPM Program impacted the quality of the SPX option market. Specifically, the Exchange compared values of key market quality indicators (specifically, the bid-ask spread[41] and effective spread[42]) in SPXW options both before and after the introduction of Tuesday expirations and Thursday expirations for SPXW options on April 18 and May 11, 2022, respectively.[43] Options on the Standard & Poor's Depositary Receipts S&P 500 ETF (''SPY'') were used as a control group to account for any market factors that might influence key market quality indicators. The Exchange used data from January 3, 2022 through March 4, 2022 (the two-month period prior to the introduction of SPXW options with Tuesday expirations) and data from May 11, 2022 to July 10, 2022 (the two-month period following the introduction of SPXW options with Thursday expirations).[44]

Given the time that as passed since the introduction of Weekly and EOM options, the Exchange is unable to analyze whether the introduction of Weekly and EOM options significantly impacted the market quality of corresponding A.M.-settled options. The Exchange believes analyzing whether the introduction of new SPXW P.M.-settled expirations (*i.e.,* SPXW options with Tuesday and Thursday expirations) impacted the market quality of then-existing SPXW P.M.-settled expirations (*i.e.,* SPXW options with Monday, Wednesday, and Friday expirations) provides a reasonable substitute to evaluate whether the introduction of Weekly and EOM options impacted the market quality of any corresponding A.M.-settled options when the pilot began.[45]

As a result of this analysis, the Exchange believes the introduction of

[39] *See* DERA Staff PM Pilot Memo, at 10–12.

[40] MOC orders allow a market participant to trade at the closing price. Market participants generally utilize MOC orders to ensure they exit positions at the end of the trading day.

[41] The Exchange calculated for each of SPXW options (with Monday, Wednesday, and Friday expirations) and SPY Weekly options (with Monday, Wednesday, and Friday expirations) the daily time-weighted bid-ask spread on the Exchange during its regular trading hours session, adjusted for the difference in size between SPXW options and SPY options (SPXW options are approximately ten times the value of SPY options).

[42] The Exchange calculated the volume-weighted average daily effective spread for simple trades for each of SPXW options (with Monday, Wednesday, and Friday expirations) and SPY Weekly options (with Monday, Wednesday, and Friday expirations) as twice the amount of the absolute value of the difference between an order execution price and the midpoint of the national best bid and offer at the time of execution, adjusted for the difference in size between SPXW options and SPY options.

[43] For purposes of comparison, the Exchange paired SPXW options and SPY options with the same moneyness and same days to expiration.

[44] The Exchange observed comparable market volatility levels during the pre-intervention and post-intervention time ranges.

[45] The full analysis is included in Exhibit 3 of this rule filing.

SPX options with Tuesday and Thursday options had no significant impact on the market quality of SPXW options with Monday, Wednesday, and Friday expirations. With respect to the majority of series analyzed, the Exchange observed no statistically significant difference in the bid-ask spread or the effective spread of the series in the period prior to introduction of the Tuesday and Thursday expirations and the period following the introduction of the Tuesday and Thursday expirations. While statistically insignificant, the Exchange notes that in many series, particularly as they were closer to expiration, the Exchange observed that the values of these spreads decreased during the period following the introduction of the Tuesday and Thursday expirations.[46]

To further note, given the significant changes in the closing procedures of the primary markets in recent decades, including considerable advances in trading systems and technology, the Exchange believes that the risks of any potential impact of Weekly and EOM options on the underlying cash markets are also de minimis.

The Exchange proposes to make the Nonstandard Expirations Pilot Program permanent as P.M.-settled index products, particularly Weekly and EOM options, have become an integral part of the Exchange's product offerings, providing investors with greater trading opportunities and flexibility. As indicated by the significant growth in the size of the market for P.M.-settled Weekly and EOM options, such options have been, and continue to be, well-received and widely used by market participants. Therefore, the Exchange wishes to be able to continue to provide investors with the ability to trade Weekly and EOM options on a permanent basis. The Exchange believes that the permanent continuation of the Nonstandard Expirations Pilot Program will serve to maintain the status quo by continuing to offer a product to which investors have become accustomed and have incorporated into their business models and day-to-day trading methodologies for approximately 13 years. As such, the Exchange also believes that ceasing to offer Weekly and EOM options may result in significant market disruption and investor confusion. The Exchange has not identified any significant impact on market quality nor any unique or prohibitive regulatory concerns as a result of the Nonstandard Expirations Pilot Program, and, as such, the Exchange believes that the continuation of the Nonstandard Expirations Pilot Program as a pilot, including the use of time and resources to compile and analyze quarterly and annual pilot reports and pilot data, is no longer necessary and that making the Nonstandard Expirations Pilot Program permanent will allow the Exchange to otherwise allocate time and resources to other industry initiatives.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[47] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[48] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

In particular, the Exchange believes that the making the Nonstandard Expirations Pilot Program permanent will allow the Exchange to be able to continue to offer Weekly and EOM options—a product of which has become an integral part of the Exchange's offerings—on a continuous and permanent basis. Since their reintroduction beginning in 2006,[49] P.M.-settled options have been, and continue to be, well-received and widely used by market participants, providing investors with greater trading opportunities and flexibility. The Exchange believes that the permanent continuation of the Nonstandard Expirations Pilot Program will remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, protect investors and the public interest by continuing to offer a product to which investors have become accustomed and have incorporated into their business models and day-to-day trading strategies for approximately 13 years. As indicated by the significant growth in the size of the market for P.M.-settled options, such options have been, and continue to be, well-received and widely used by market participants. Conversely, the Exchange believes ceasing to offer the Nonstandard Expirations Pilot Program may result in significant market disruption and investor confusion, as P.M.-settled index products, particularly Weekly and EOM options, have become an integral part of the Exchange's product offerings, providing investors with greater trading opportunities and flexibility.

The Exchange further believes that making the Nonstandard Expirations Pilot Program permanent will remove impediments to and perfect the mechanism of a free and open market and a national market system and protect investors, while maintaining a fair and orderly market, as the Exchange believes that previous concerns (arising in the 1980s) regarding options expirations potentially contributing to excess volatility and reversals around the close have been adequately diminished. As described in detail above, the Exchange has observed no significant adverse market impact or identified any meaningful regulatory concerns during the approximately 13-year operation of the Nonstandard Expirations Pilot Program as a pilot nor during the 15 years since P.M.-settled SPX options were reintroduced to the marketplace.[50] Notably, the Exchange did not identify any significant economic impact (including on pricing or volatility or in connection with reversals) on related futures, the underlying indexes, or the underlying component securities of the underlying indexes surrounding the close as a result of the quantity of Weekly and EOM options that settle at the close or the amount of expiring open interest in Weekly and EOM options, nor any demonstrated capacity for options hedging activity to impact volatility in the underlying markets. While the DERA staff study and corresponding Exchange study described above specifically evaluated SPX options, because Weekly and EOM options may only overly broad-based index options, the Exchange believes it is appropriate to extrapolate the data to apply to the Weekly and EOM options (which include SPX options). This is particularly true given that the reports submitted by the Exchange during the pilot period have similarly demonstrated no significant economic

[46] In any series in which the Exchange observed an increase in the market quality indicators, the Exchange notes any such increase was also statistically insignificant.

[47] 15 U.S.C. 78f(b).

[48] 15 U.S.C. 78f(b)(5).

[49] *See supra* notes 27–39. As described above, the Exchange's conclusion is consistent with the analysis in the DERA Staff PM Pilot Memo.

[50] *See supra* notes 26–39.

impact on the respective underlying indexes or other products.

The Exchange also believes the introduction of Weekly and EOM options had no significant impact on the market quality of corresponding A.M.-settled options or other options. The Exchange believes this as a result of its analysis conducted after the introduction of SPXW options with Tuesday and Thursday expirations, which demonstrated no statistically significant impact on the bid-ask or effective spreads of SPXW options with Monday, Wednesday, and Friday expirations after trading in the SPXW options with Tuesday and Thursday expirations began. While SPXW options are P.M.-settled and SPX options are A.M.-settled, they are otherwise nearly identical products. As noted above, Weekly and EOM options may only overly broad-based indexes, including the S&P 500. Therefore, the Exchange believes analyzing the impact of new SPXW options on then-existing SPXW options permit the Exchange to extrapolate from this data that it is unlikely the introduction of any other Weekly or EOM options significantly impacted the market quality of corresponding A.M.-settled SPX options when the pilot began. Additionally, the significant changes in the closing procedures of the primary markets in recent decades, including considerable advances in trading systems and technology, has significantly minimized risks of any potential impact of Weekly or EOM options on the underlying cash markets. As such, the Exchange believes that a permanent Nonstandard Expirations Pilot Program does not raise any unique or prohibitive regulatory concerns and that such trading has not, and will not, adversely impact fair and orderly markets on Expiration Fridays for the underlying indexes and their component securities. Further, as the Exchange has not identified any significant impact on market quality or any unique or prohibitive regulatory concerns as a result of offering Weekly and EOM options, the Exchange believes that the continuation of the Nonstandard Expirations Pilot Program as a pilot, including the gathering, submission and review of the pilot reports and data, is no longer necessary and that making the Nonstandard Expirations Pilot Program permanent will allow the Exchange to otherwise allocate time and resources to other industry initiatives.

B. Self-Regulatory Organization's Statement on Burden on Competition

Cboe Options does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that making the Nonstandard Expirations Pilot Program permanent will impose any unnecessary or inappropriate burden on intramarket competition because Weekly and EOM options will continue to be available to all market participants who wish to participate in the Weekly and EOM options market. The Exchange believes that the significant and sustained growth the Weekly and EOM options market has experienced since their reintroduction through pilot programs indicates strong, continued investor interest and demand, warranting a permanent Nonstandard Expirations Pilot Program. The Exchange believes that, for the period that Weekly and EOM options have been in operation as pilot programs, they have provided investors with a desirable product with which to trade and wishes to permanently offer this product to investors. Furthermore, during the pilot period, the Exchange has not observed any significant adverse market effects nor identified any regulatory concerns as a result of the Weekly and EOM Program, and, as such, the continuation of the Nonstandard Expirations Pilot Program as a pilot, including the gathering, submission and review of the pilot reports and data, is no longer necessary—a permanent Nonstandard Expirations Pilot Program will allow the Exchange to otherwise allocate time and resources to other industry initiatives.

The Exchange further does not believe that making the Nonstandard Expirations Pilot Program permanent will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because it applies to a class of options listed only for trading on Cboe Options. The Exchange notes that other exchanges are free to and do offer competing products. To the extent that the permanent offering and continued trading of Weekly and EOM options may make Cboe Options a more attractive marketplace to market participants at other exchanges, such market participants may elect to become Cboe Options market participants.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will:

A. by order approve or disapprove such proposed rule change, or

B. institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–CBOE–2023–020 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–CBOE–2023–020. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for

inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to File Number SR–CBOE–2023–020, and should be submitted on or before May 22, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[51]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

Sunshine Act Meetings

TIME AND DATE: 2 p.m. on Thursday, May 4, 2023.

PLACE: The meeting will be held via remote means and/or at the Commission's headquarters, 100 F Street NE, Washington, DC 20549.

STATUS: This meeting will be closed to the public.

MATTERS TO BE CONSIDERED: Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the closed meeting. Certain staff members who have an interest in the matters also may be present.

In the event that the time, date, or location of this meeting changes, an announcement of the change, along with the new time, date, and/or place of the meeting will be posted on the Commission's website at *https://www.sec.gov*.

The General Counsel of the Commission, or his designee, has certified that, in his opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(3), (5), (6), (7), (8), 9(B) and (10) and 17 CFR 200.402(a)(3), (a)(5), (a)(6), (a)(7), (a)(8), (a)(9)(ii) and (a)(10), permit consideration of the scheduled matters at the closed meeting.

The subject matter of the closed meeting will consist of the following topics:

Institution and settlement of injunctive actions;

Institution and settlement of administrative proceedings;

Resolution of litigation claims; and

Other matters relating to examinations and enforcement proceedings.

At times, changes in Commission priorities require alterations in the scheduling of meeting agenda items that may consist of adjudicatory, examination, litigation, or regulatory matters.

CONTACT PERSON FOR MORE INFORMATION: For further information; please contact Vanessa A. Countryman from the Office of the Secretary at (202) 551–5400.

Authority: 5 U.S.C. 552b.

Dated: April 27, 2023.

Vanessa A. Countryman,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97372; File No. SR–NYSEAMER–2023–28]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Modify the NYSE American Options Fee Schedule

April 25, 2023.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 18, 2023, NYSE American LLC (''NYSE American'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify the NYSE American Options Fee Schedule (''Fee Schedule'') regarding routing fees and Floor Broker rebates and to delete text relating to discontinued programs. The Exchange proposes to implement the fee change effective April 18, 2023.[4] The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this filing is to amend the Fee Schedule to (1) delete text relating to fees and credits for NYSE FANG+ Index (''FAANG'') transactions, (2) simplify the Routing Surcharge applied to orders routed to other markets, (3) eliminate the introductory pricing currently offered for Market Maker ATP fees and Premium Product fees, and (4) add a Floor Broker rebate program. The Exchange believes that the proposed changes would promote clarity and transparency in the Fee Schedule by eliminating fees and credits relating to programs that the Exchange proposes to discontinue and simplifying the fees charged for routed orders. The Exchange proposes to implement the rule change on April 18, 2023.

FAANG Transactions

Footnote 7 to Section I.A. of the Fee Schedule (Rates for Options transactions) currently provides for fees and credits relating to FAANG transactions. The Fee Schedule provides for a $0.35 per contract, per side fee for Non-Customer FAANG transactions, whether executed manually or electronically. FAANG transactions (i) on behalf of Customers or (ii) by NYSE American Options Market Makers, Specialists, e-Specialists or DOMMs do not incur a fee. Marketing Charges are not applied to FAANG transactions. Volume in FAANG transactions is included in the calculations to qualify

[51] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] The Exchange originally filed to amend the Fee Schedule on March 1, 2023 (SR–NYSEAMER–2023–18), withdrew such filing and amended the Fee Schedule on March 15, 2023 (SR–NYSEAMER–2023–21), withdrew such filing and amended the Fee Schedule on March 28, 2023 (SR–NYSEAMER–2023–24), and then withdrew such filing and amended the Fee Schedule on April 10, 2023 (SR–NYSEAMER–2023–26), which latter filing the Exchange withdrew on April 18, 2023.

for any volume-based incentives currently offered on the Exchange.

The Fee Schedule also provides for a credit to any firm that is an NYSE American Options Market Maker, Specialist, e-Specialist or DOMM that executes a specified minimum number of total monthly contract sides that open a position in FAANG on the Exchange (''eligible contract sides''), as set forth below (''MM FAANG Credit''):

- A credit of $5,000 for a minimum of 500 eligible contract sides; provided, however, that if more than five firms qualify for this MM FAANG Credit in a calendar month, the $5,000 MM FAANG Credit for each qualifying firm will be a pro rata share of $25,000; or
- A credit of $10,000 for a minimum of 2,000 eligible contract sides; provided, however, that if more than two firms qualify for this MM FAANG Credit in a calendar month, the $10,000 MM FAANG Credit for each qualifying firm will be a pro rata share of $25,000. A firm that qualifies for the $10,000 credit will not be eligible for the $5,000 credit.

Because FAANG options were delisted after monthly expiration in February 2023, the Exchange now proposes to delete the current text of Footnote 7 to Section I.A. to remove references to fees and credits relating to FAANG transactions, which would no longer be applicable for any market participants, and designate Footnote 7 as Reserved. The Exchange also proposes a conforming change to Section I.D. (Prepayment Program) of the Fee Schedule to delete the reference in that section to ''Section 1.A., note 7,'' to reflect the proposed deletion of the fees and credits relating to FAANG transactions. The Exchange believes this proposed change, which would remove text relating to a discontinued program, would promote clarity in the Fee Schedule.

Routing Surcharge

As set forth in Section I.L. of the Fee Schedule, the Exchange currently assesses a routing surcharge on all non-Customer orders routed to away markets and on Customer orders including Professional Customer orders that are charged transaction fees at another exchange. If the executing exchange does not charge a transaction fee for the execution of the Customer order, the Routing Surcharge will be waived. Currently, the Routing Surcharge is $0.11 per contract plus (i) any transaction fees assessed by the away exchange(s) (calculated on an order-by-order basis since different away exchanges charge different amounts) or (ii) if the actual transaction fees assessed by the away exchange(s) cannot be determined prior to the execution, the highest per contract charge assessed by the away exchange(s) for the relevant option class and type of market participant (*e.g.,* Customer, Firm, Broker/Dealer, Professional Customer or Market Maker). The Exchange applies the Routing Surcharge in addition to any customary execution fees applicable to the order.

The Exchange now proposes to modify the Routing Surcharge to be based on whether the routed order is in a Penny or non-Penny issue and to establish a single fee that would be applicable to all routed orders in Penny issues, and a single fee for all routed orders in non-Penny issues. Specifically, the Exchange proposes that the fee for routed orders would be set at a fixed amount intended to counterbalance the internal resources required to support the handling of orders routed away from the Exchange. The Exchange proposes to implement a flat fee structure for routing fees, which the Exchange believes would streamline the process of calculating fees applied to orders routed away from the Exchange because it would, among other things, reduce the administrative burden of recalibrating routing fees each time an away exchange modifies its relevant transaction fees. Accordingly, the Exchange proposes a Routing Surcharge of $0.61 in Penny issues, and $1.21 in non-Penny issues. The Exchange believes that having a single published rate for all routed orders in Penny issues and a single published rate for all routed orders in non-Penny issues would also reduce potential confusion relating to the amount of the surcharge for a given routed order (particularly in light of the variability in transaction fees across other options markets) and would permit market participants to determine execution costs at the time of order entry, thereby promoting clarity and transparency in the Fee Schedule. The Exchange believes the proposed routing fee structure is not novel, as at least one other options exchange similarly applies fixed routing fees based on whether the routed order is in a Penny or non-Penny issue, and that the proposed amounts of the fees are within the range of fees applied by other markets to routed orders.[5]

Introductory Pricing for Newly Enrolled Market Makers

Section III.A. of the Fee Schedule provides for monthly ATP fees. Footnote 2 of Section III.A. further provides that an ATP Holder that newly enrolls to operate as a Market Maker may be entitled to introductory pricing on ATP fees for up to six months.[6] The Exchange similarly offers newly enrolled Market Makers introductory pricing on Premium Product Fees for up to six months, as set forth in Section III.B, Footnote 1.[7]

The Exchange now proposes to delete Section III.A., Footnote 2 and Section III.B., Footnote 1 to eliminate the introductory pricing for newly enrolled Market Makers on ATP fees and Premium Product Fees, respectively, as no ATP Holders have qualified for this pricing in the last few years. The Exchange adopted this introductory pricing to encourage ATP Holders to enroll as Market Makers. However, because these pricing incentives have been underutilized (and therefore did not achieve their intended effect), the Exchange proposes to eliminate such pricing from the Fee Schedule and believes that ATP Holders would not be impacted by its removal.

Floor Broker Grow With Me Program

The Exchange proposes to add the Floor Broker Grow With Me program,

[5] *See, e.g.,* BOX Options Exchange Fee Schedule, *available at: https://boxexchange.com/assets/BOX-Fee-Schedule-as-of-March-6-2023.pdf* (providing for fixed routing fees of $0.60 per contract fee for customer orders in Penny classes and $0.85 per contract fee for customer orders in non-Penny class); Cboe Exchange, Inc. Options Fee Schedule, *available at: https://cdn.cboe.com/resources/membership/Cboe_FeeSchedule.pdf* (providing, for example, Customer routing fees of $0.75 for orders in Penny issues or $1.25 for orders in non-Penny issues routed to certain away markets and Non-Customer routing fees of $1.17 for all orders in Penny issues or $1.45 for all orders in non-Penny issues routed away).

[6] A newly enrolled Market Maker on the Exchange may be entitled to introductory pricing on its ATP Fees for up to six months, beginning the first month in which it registers. For the first three months (*i.e.,* months 1–3), the Exchange waives the ATP fees, and for the latter three months (*i.e.,* months 4–6), the Exchange discounts such ATP fees by 50%, unless the Market Maker achieves a monthly ADV equal to at least 0.05% of TCADV, at which time the Exchange would charge the Market Maker 100% of its ATP Fees for the remaining months, regardless of its monthly ADV in subsequent months. An ATP Holder may qualify for this introductory pricing only once in a 24-month period, which period begins in the first month the ATP Holder registers on the Exchange.

[7] A newly enrolled Market Maker on the Exchange may be entitled to introductory pricing on its Premium Product Fees for up to six months, beginning the first month in which it registers. For the first three months (*i.e.,* months 1–3), the Exchange waives Premium Product Fees, and for the latter three months (*i.e.,* months 4–6), the Exchange discounts such Premium Product Fees by 50%, unless the Market Maker achieves a monthly ADV equal to at least 0.05% of TCADV, at which time the Exchange would charge the Market Maker 100% of its Premium Product Fees for the remaining months, regardless of its monthly ADV in subsequent months. An ATP Holder may qualify for this introductory pricing only once in a 24-month period, which period begins in the first month the ATP Holder registers on the Exchange.

through which Floor Broker organizations (''Floor Brokers'') may earn a ($0.05) rebate on manual billable volume. The Exchange proposes to add this program in Section III.E.2. of the Fee Schedule, which is currently designated as Reserved. The Exchange proposes that the Floor Broker Grow With Me program would provide Floor Brokers with an opportunity to earn a rebate on manual billable volume based on demonstrated growth as compared to the Floor Brokers' manual billable volume ADV in January 2023 (the ''base period''). The Exchange proposes that Floor Brokers that achieve (1) manual billable contracts volume of 100% over their base period volume in a month or (2) an ADV of 25,000 manual billable contracts in a month, whichever is greater, would be eligible for a rebate of ($0.05) per billable side. The Exchange proposes that Floor Brokers new to the Exchange would be eligible to qualify for the program by achieving the second qualifying criteria, which is not tied to base period volume. The Exchange further proposes that the Floor Broker Grow With Me program would be in place with these qualifying criteria until July 31, 2023, which would allow the Exchange a period to evaluate such criteria and to submit a proposed rule change regarding qualifications for the program beyond that date.

Although the Exchange cannot predict with certainty whether the proposed change would encourage Floor Brokers to increase their manual billable volume on the Exchange, the proposed change is designed to continue to incentivize Floor Brokers to do so by offering a rebate on manual billable volume. All Floor Brokers, including new Floor Brokers, would be eligible to earn a rebate through the Floor Broker Grow With Me program, as proposed.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[8] in general, and furthers the objectives of Sections 6(b)(4) and (5) of the Act,[9] in particular, because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members, issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

The Proposed Rule Change Is Reasonable

The Exchange operates in a highly competitive market. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [10]

There are currently 16 registered options exchanges competing for order flow. Based on publicly-available information, and excluding index-based options, no single exchange has more than 16% of the market share of executed volume of multiply-listed equity and ETF options trades.[11] Therefore, no exchange possesses significant pricing power in the execution of multiply-listed equity and ETF options order flow. More specifically, in January 2023, the Exchange had less than 8% market share of executed volume of multiply-listed equity and ETF options trades.[12]

The Exchange believes that the ever-shifting market share among the exchanges from month to month demonstrates that market participants can shift order flow, or discontinue or reduce use of certain categories of products, in response to fee changes. Accordingly, competitive forces constrain options exchange transaction fees. Stated otherwise, changes to exchange transaction fees can have a direct effect on the ability of an exchange to compete for order flow.

The Exchange believes the proposed change to the Routing Surcharge is reasonable because it would establish a single fee that would be applicable to all routed orders in Penny issues and a single fee that would be applicable to all routed orders in non-Penny issues, and such fees would be applicable to all market participants equally. In addition, the Exchange believes the proposed change is reasonable because it would provide for routing fees that would counterbalance the internal resources required to support the handling of orders routed away from the Exchange and would streamline the process of calculating routing fees by obviating the need to recalibrate fees based on individual away market fees (which are variable and subject to frequent change) and eliminating any potential confusion as to routing fees applicable to a given order. The Exchange also notes that a fixed fee structure for routing fees is not novel and that the amounts of the proposed Routing Surcharge amounts are within the range of routing fees currently charged by other options exchanges.[13]

The Exchange believes that the proposed change to delete FAANG transaction fees and credits is reasonable because FAANG options were delisted after monthly expiration in February 2023, and such fees and credits are no longer applicable to any market participants. The Exchange believes that the proposed change to eliminate certain introductory pricing for newly enrolled Market Makers is reasonable because these programs have not served to encourage ATP Holders to enroll as Market Makers on the Exchange. Accordingly, the Exchange believes that the proposed changes to eliminate text from the Fee Schedule relating to discontinued or underutilized programs would promote clarity in the Fee Schedule, to the benefit of all market participants.

The Exchange believes that the proposed Floor Broker Grow With Me Program is reasonable because it is designed to continue to incent Floor Brokers to increase their manual billable volume executed on the Exchange and provides Floor Brokers with two ways to earn the additional rebate offered by the program. The Exchange also believes that using a Floor Broker organization's January 2023 manual billable volume ADV as a basis for measuring growth is reasonable because it reflects each organization's recent volumes and that the 25,000 manual billable contracts alternative requirement is reasonable because it would permit new Floor Brokers without base period volume to qualify for the program by meeting a requirement that also applies to current Floor Brokers. The Exchange also believes that it is reasonable to implement the program with the proposed qualifying criteria through July 31, 2023, as the Exchange would be able to further evaluate such criteria in the interim period and prepare a proposed rule change regarding appropriate qualifying criteria for the program beyond such date.

[10] *See* Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005) (S7–10–04) (''Reg NMS Adopting Release'').

[11] The OCC publishes options and futures volume in a variety of formats, including daily and monthly volume by exchange, *available here: https://www.theocc.com/Market-Data/Market-Data-Reports/Volume-and-Open-Interest/Monthly-Weekly-Volume-Statistics.*

[12] Based on a compilation of OCC data for monthly volume of equity-based options and monthly volume of ETF-based options, *see id.,* the Exchange's market share in equity-based options was 7.03% for the month of January 2022 and 7.96% for the month of January 2023.

[13] *See* note 5, *supra.*

To the extent that the proposed changes improve the clarity and transparency of the Fee Schedule, the Exchange believes they would continue to make the Exchange a more competitive venue for order execution, which, in turn, promotes just and equitable principles of trade and removes impediments to and perfects the mechanism of a free and open market and a national market system. The Exchange notes that all market participants stand to benefit from any increase in volume, which could promote market depth, facilitate tighter spreads and enhance price discovery, particularly to the extent the proposed change encourages market participants to utilize the Exchange as a primary trading venue, and may lead to a corresponding increase in order flow from other market participants.

Finally, to the extent the proposed change continues to attract greater volume and liquidity, the Exchange believes the proposed change would improve the Exchange's overall competitiveness and strengthen its market quality for all market participants. In the backdrop of the competitive environment in which the Exchange operates, the proposed rule change is a reasonable attempt by the Exchange to increase the depth of its market and improve its market share relative to its competitors. The Exchange's fees are constrained by intermarket competition, as market participants can choose to direct their order flow to any of the 16 options exchanges The Exchange believes that proposed rule change is designed to continue to incent market participants to direct liquidity to the Exchange, and, to the extent they continue to be incentivized to aggregate their trading activity at the Exchange, that increased liquidity could promote market depth, price discovery and improvement, and enhanced order execution opportunities for all market participants.

The Proposed Rule Change Is an Equitable Allocation of Fees and Credits

The Exchange believes the proposed rule change is an equitable allocation of its fees and credits. The proposed change to the Routing Surcharge is equitable because the proposed single fee for all routed orders in Penny issues and single fee for all routed orders in non-Penny issues would apply to all market participants equally and the proposed amounts are designed to offset internal resources necessary to support the handling of orders routed away from the Exchange. The proposed change would also streamline the process of calculating routing fees for all market participants and provide increased clarity regarding execution costs at the time of order entry. The proposed change to delete fees and credits relating to FAANG transactions is also equitable because their elimination would likewise apply to all market participants equally. The Exchange also believes that the proposed changes to eliminate introductory pricing for newly enrolled Market Makers in ATP fees and Premium Product Fees are equitable because the pricing programs would no longer be available to any ATP Holders, and, moreover, no ATP Holders have qualified for the introductory pricing in recent years. The Exchange believes that the proposed rebate for Floor Brokers through the Floor Broker Grow With Me Program is an equitable allocation of fees and credits because the rebate would be available to all qualifying Floor Brokers equally, and Floor Brokers may qualify for the rebate based on either growth over their own base period volume or an alternative that would permit new Floor Brokers that do not have base period volume to qualify for the program on a basis that is also applicable to current Floor Brokers. The Exchange also believes that the proposal to offer the Floor Broker Grow With Me program with the current qualifying criteria through July 31, 2023 is equitable because the intervening period would provide the Exchange an opportunity to evaluate the parameters of the program and to submit a proposed rule change regarding the criteria for the program going forward. The Exchange further believes that the proposed change is equitable because it is intended to encourage the role performed by Floor Brokers in facilitating the execution of orders via open outcry, a function which the Exchange wishes to support for the benefit of all market participants.

To the extent that the proposed changes continue to incent ATP Holders to utilize the Exchange as a primary execution venue and attract more volume on the Exchange, this increased order flow would continue to make the Exchange a more competitive venue for, among other things, order execution. Thus, the Exchange believes the proposed rule change would improve market quality for all market participants on the Exchange and, as a consequence, attract more order flow to the Exchange, thereby improving market-wide quality and price discovery.

The Proposed Rule Change Is Not Unfairly Discriminatory

The Exchange believes the proposed change is not unfairly discriminatory. The proposed change to the Routing Surcharge is not unfairly discriminatory because the proposed fees are intended to assess streamlined routing fees in amounts that would appropriately account for the internal resources necessary to support orders routed away from the Exchange and would apply equally to all market participants' routed orders, based on whether such order is in a Penny or non-Penny issue. The proposed change would simplify the calculation of routing fees for all market participants and add clarity and transparency to the Fee Schedule regarding the fees applicable to routed orders. The proposed change to delete fees and credits relating to FAANG transactions is not unfairly discriminatory because they are no longer applicable to any market participants following the delisting of FAANG options. The Exchange also believes that the proposed changes to eliminate introductory pricing for new Market Makers in ATP fees and Premium Product Fees are equitable because the pricing programs would be eliminated in their entirety and would no longer be available to any ATP Holders. Finally, the Exchange believes that the proposed Floor Broker Grow With Me Program is not unfairly discriminatory because current and new Floor Brokers alike are eligible to qualify for the rebate and is not unfairly discriminatory to non-Floor Brokers because Floor Brokers serve an important function in facilitating the execution of orders on the Exchange, which the Exchange wishes to encourage and support to promote price improvement opportunities for all market participants.

Thus, the Exchange believes that, to the extent the proposed rule change would continue to improve market quality for all market participants on the Exchange by promoting clarity and transparency in the Fee Schedule and attract more order flow to the Exchange, thereby improving market-wide quality and price discovery, the resulting increased volume and liquidity would provide more trading opportunities and tighter spreads to all market participants and thus would promote just and equitable principles of trade, remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, protect investors and the public interest.

Finally, the Exchange believes that it is subject to significant competitive forces, as described below in the Exchange's statement regarding the burden on competition.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act, the Exchange does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Instead, as discussed above, the Exchange believes that the proposed changes would encourage the submission of additional liquidity to a public exchange, thereby promoting market depth, price discovery and transparency and enhancing order execution opportunities for all market participants. As a result, the Exchange believes that the proposed change furthers the Commission's goal in adopting Regulation NMS of fostering integrated competition among orders, which promotes ''more efficient pricing of individual stocks for all types of orders, large and small.'' [14]

Intramarket Competition. The proposed change is designed to improve the clarity and transparency of the Fee Schedule and to continue to attract order flow to the Exchange. The proposed change to offer Floor Brokers a rebate on manual billable volume through the Floor Broker Grow With Me program is intended to attract additional order flow to the Exchange, which could increase the volumes of contracts traded on the Exchange. Greater liquidity benefits all market participants on the Exchange, and increased manual billable transactions could increase opportunities for execution of other trading interest. The Exchange believes that the proposed change to the Routing Surcharge would not impose any burden on competition that is not necessary or appropriate because it is intended to simplify the calculation of fees for routed orders and to continue to incent Firms to direct order flow to the Exchange, thereby promoting liquidity on the Exchange to the benefit of all market participants. The Exchange does not believe that the proposed changes relating to FAANG transactions or introductory pricing for newly enrolled Market Makers would impose any burden on competition that is not necessary or appropriate because the changes would apply equally to all ATP Holders and would add clarity to the Fee Schedule, to the benefit of all market participants.

Intermarket Competition. The Exchange operates in a highly competitive market in which market participants can readily favor one of the 16 competing option exchanges if they deem fee levels at a particular venue to be excessive. In such an environment, the Exchange must continually adjust its fees to remain competitive with other exchanges and to attract order flow to the Exchange. Based on publicly-available information, and excluding index-based options, no single exchange has more than 16% of the market share of executed volume of multiply-listed equity and ETF options trades.[15] Therefore, no exchange possesses significant pricing power in the execution of multiply-listed equity and ETF options order flow. More specifically, in January 2023, the Exchange had less than 8% market share of executed volume of multiply-listed equity and ETF options trades.[16]

The Exchange believes that the proposed rule change reflects this competitive environment because it modifies the Exchange's fees and credits in a manner designed to continue to incent Floor Brokers to direct trading interest (particularly manual billable volume) to the Exchange, to provide liquidity, and to attract order flow. In addition, to the extent that the proposed change to simplify the Routing Surcharge incentivizes ATP Holders to utilize the Exchange as a primary trading venue for all transactions, all of the Exchange's market participants should benefit from the improved market quality and increased opportunities for price improvement. The Exchange also believes that the proposed rule change reflects this competitive environment because it removes underutilized programs from the Fee Schedule that did not achieve their intended purpose. The Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues, including one that offers similarly structured routing fees.[17] In such an environment, the Exchange must continually review, and consider adjusting, its fees and credits to remain competitive with other exchanges.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

[14] *See* Reg NMS Adopting Release, *supra* note 9, at 37499.

[15] *See* note 11, *supra.*

[16] *See* note 12, *supra.*

[17] *See* note 5, *supra.*

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A) [18] of the Act and subparagraph (f)(2) of Rule 19b–4 [19] thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B) [20] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEAMER–2023–28 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEAMER–2023–28. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97374; File No. SR–NYSEAMER–2023–27]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing of Proposed Change To Amend Rule 915 (Criteria for Underlying Securities) To Accelerate the Listing of Options on Certain IPOs

April 25, 2023

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 21, 2023, NYSE American LLC (''NYSE American'' or the ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 915 (Criteria for Underlying Securities). The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend Rule 915 (Criteria for Underlying Securities) (the ''Rule'') as set forth below. Following discussions with other exchanges and a cross-section of industry participants and in coordination with the Listed Options Market Structure Working Group (''LOMSWG'') (collectively, the ''Industry Working Group''), the Exchange proposes to modify the standard set forth in the Rule for the listing and trading of options on ''covered securities'' to reduce the time to market.

Commentary .01(4)(a) to Rule 915 sets forth the guidelines to be considered in evaluating for option transactions underlying securities that are ''covered securities,'' as defined in Section 18(b)(1)(A) of the Securities Act of 1933 (hereinafter ''covered security'' or ''covered securities'').[4] Currently, the Exchange permits the listing of an option on an underlying covered security that, amongst other things, has a market price of at least $3.00 per share for the previous three consecutive business days preceding the date on which the Exchange submits a certificate to The Options Clearing Corporation (''OCC'') to list and trade options on the underlying security (the ''three-day lookback period'').[5] Under the current rule, if an initial public offering (''IPO'') occurs on a Monday, the earliest date the Exchange could submit its listing certificate to OCC would be on Thursday, with the market price determined by the closing price over the three-day lookback period from Monday through Wednesday. The option on the IPO'd security would then be eligible for trading on the Exchange on Friday (*i.e.,* within four business days of the IPO inclusive of the day the listing certificate is submitted to OCC).[6]

The Exchange notes that the three-day look back period helps ensure that options on underlying securities may be listed and traded in a timely manner while also allowing time for OCC to accommodate the certification request. However, there are certain large IPOs that issue high-priced securities—well above the $3.00 per share threshold—that would obviate the need for the three-day lookback period. In this regard, the Industry Working Group has recently identified proposed changes to Commentary .01(4)(a) to Rule 915 that would help options on covered securities that have a market capitalization of at least $3 billion based upon the offering price of its IPO come to market earlier. The proposed change, which is intended to be harmonized across options exchanges, is designed to provide investors the opportunity to hedge their interest in IPO investments in a shorter amount of time than what is currently permitted.[7] The Exchange believes that options serve a valuable tool to the trading community and help markets function efficiently by mitigating risk. To that end, the Exchange believes that the absence of options in the early days after an IPO

[21] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] Rule 915(a) requires that, for underlying securities to be eligible for option transactions, such securities must be duly registered and be an ''NMS stock'' as defined in Rule 600 of Regulation NMS under the Act and will be characterized by a substantial number of outstanding shares which are widely held and actively traded. *See* Rule 915(a)(1) and (2).

[5] *See* Commentary .01(4)(a) to Rule 915. The Exchange is not proposing to make any changes to the guidelines for listing securities that are not a ''covered security.'' *See* Commentary .01(4)(b) to Rule 915.

[6] *See* proposed Commentary .01(4)(a)(ii) to Rule 915. The Exchange proposes a non-substantive change to number the existing and proposed criteria for covered securities as (i) and (ii) of paragraph (4)(a). *See* proposed Commentary .01(4)(a)(i) to Rule 915.

[7] While the Exchange acknowledges that market participants may utilize options for speculative purposes (in addition to as a hedging tool), the Exchange believes (as set forth below) that its existing surveillance technologies and procedures adequately address potential violations of exchange rules and federal securities laws applicable to trading on the Exchange.

may heighten volatility in the trading of IPO'd securities.

Accordingly, the Exchange proposes to modify Rule 915 to waive the three-day lookback period for covered securities that have a market capitalization of at least $3 billion based upon the offering price of the IPO of such securities and to allow options on such securities to be listed and traded starting on or after the second business day following the initial public offering day (*i.e.,* not inclusive of the day of the IPO).[8] The Exchange has reviewed trading data for IPO'd securities dating back to 2017 and is unaware of any such security that achieved a market capitalization of $3 billion based upon the offering price of its IPO that would not have also qualified for listing options based on the three-day lookback requirement. Specifically, the Exchange has determined that 202 of the 1,179 IPOs that took place between January 1, 2017, and October 21, 2022, met the $3 billion market capitalization/IPO offering price threshold. Options on all 202 of those IPO shares subsequently satisfied the three-day lookback requirement for listing and trading, *i.e.,* none of these large IPOs closed below the $3.00/share threshold during its first three days of its trading. As such, the Exchange believes the proposed capitalization threshold of $3 billion based upon the offering price of its IPO is appropriate.

Under the proposed rule, if an IPO for a company with a market capitalization of $3 billion based upon the offering price of its IPO occurs on a Monday, the Exchange could submit its listing certificate to OCC (to list and trade options on the IPO'd security) as soon as all the other requirements for listing are satisfied. If, on Tuesday, all requirements are deemed satisfied, the IPO'd security could then be eligible for trading on the Exchange on Wednesday (*i.e.,* starting on or after the second business day following the IPO day). Thus, the proposal could potentially accelerate the listing of options on IPO'd securities by two days.

The Exchange believes the proposed change would allow options on IPO'd securities to come to market sooner without sacrificing investor protection. The Exchange represents that trading in IPO'd securities—like all other securities traded on the Exchange—is subject to surveillances administered by the Exchange and to cross-market surveillances administered by FINRA on behalf of the Exchange. Those surveillances are designed to detect violations of Exchange rules and applicable federal securities laws.[9] The Exchange represents that those surveillances are adequate to reasonably monitor Exchange trading of IPO'd securities in all trading sessions and to reasonably deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange.[10] As such, the Exchange believes that its existing surveillance technologies and procedures, coupled with its findings related to the IPOs reviewed as described herein, adequately address potential concerns regarding possible manipulation or price stability.

Implementation Date

The proposed rule change will become operative within six months following the approval of the proposed Rule change to coincide with implementation on other options exchanges. The Exchange will announce the effective date of the proposed change by Trader Update distributed to all ATP Holders.[11]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[12] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [13] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

In particular, the Exchange believes the proposed change would facilitate options transactions and would remove impediments to and perfect the mechanism of a free and open market and a national market system, which would, in turn, protect investors and the public interest by providing an avenue for options on IPO'd securities to come to market earlier. The Exchange notes that the three-day look back period helps ensure that options on underlying securities may be listed and traded in a timely manner while also allowing time for OCC to accommodate the certification request. However, there are certain large IPOs that issue high-priced securities—well above the $3.00 per share threshold—that would obviate the need for the three-day lookback period. As noted above, the Exchange has reviewed trading data for IPO'd securities dating back to 2017 and is unaware of an IPO'd security with a market capitalization of $3 billion or more (based upon the offering price of its IPO) that subsequently would have failed to qualify for listing and trading as options under the three-day lookback requirement. The Exchange believes that the proposed amendment, which would be harmonized across options exchanges, would remove impediments to and perfect the mechanism of a free and open market and a national market system by providing an avenue for investors to hedge their interest in IPO investments in a shorter amount of time than what is currently permitted. The Exchange believes that options serve a valuable tool to the trading community and help markets function efficiently by mitigating risk. To that end, the Exchange believes that the absence of options in the early days after an IPO may heighten volatility to IPO'd securities.[14]

Further, as noted herein, the Exchange believes the proposed change would allow options on IPO'd securities to come to market sooner (*i.e.,* at least two business days post-IPO not inclusive of the day of the IPO) without sacrificing investor protection. The Exchange represents that trading in IPO'd securities—like all other securities traded on the Exchange—is subject to surveillances administered by the Exchange and to cross-market surveillances administered by FINRA on behalf of the Exchange. Those surveillances are designed to detect

[8] The Exchange acknowledges that the Options Listing Procedures Plan (or ''OLPP'') requires that the listing certificate be provided to OCC no earlier than 12:01 a.m. and no later than 11 a.m. (Chicago time) on the trading day prior to the day on which trading is to begin. *See* the OLPP, at p. 3, *available here: https://ncuoccblobdev.blob.core.windows.net/media/theocc/media/clearing-services/services/options_listing_procedures_plan.pdf.* The OLPP is a national market system plan that, among other things, sets forth procedures governing the listing of new options series.

[9] FINRA conducts cross-market surveillances on behalf of the Exchange pursuant to a regulatory services agreement. The Exchange is responsible for FINRA's performance under this regulatory services agreement.

[10] *See supra* note 7.

[11] An ''ATP Holder'' refers to a natural person, sole proprietorship, partnership, corporation, limited liability company or other organization, in good standing that has been issued an ATP. *See* Rule 900.2NY. An ''ATP'' is an American Trading Permit issued by the Exchange for effecting approved securities transactions on the Exchange. *See id.*

[12] 15 U.S.C. 78f(b).

[13] 15 U.S.C. 78f(b)(5).

[14] *See supra* note 7.

violations of Exchange rules and applicable federal securities laws.[15] The Exchange represents that those surveillances are adequate to reasonably monitor Exchange trading of IPO'd securities in all trading sessions and to reasonably deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange, including wrongful efforts to manipulate the prices of those securities in order to bring them in compliance with the $3.00/share threshold for the listing of options. As such, the Exchange believes that its existing surveillance technologies and procedures, coupled with its findings related to the IPOs reviewed as described herein, would adequately address potential concerns regarding possible manipulation or price stability.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

The Exchange anticipates that the other options exchanges will adopt substantively similar proposals, such that there would be no burden on intermarket competition from the Exchange's proposal. Accordingly, the proposed change is not meant to affect competition among the options exchanges. For these reasons, the Exchange believes that the proposed rule change reflects this competitive environment and does not impose any undue burden on intermarket competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) by order approve or disapprove the proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml);* or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEAMER–2023–27 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEAMER–2023–27. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml).* Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to File Number SR–NYSEAMER–2023–27 and should be submitted on or before May 22, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[16]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97378; File No. SR–NYSEARCA–2023–34]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Certain Representations Relating to the Hennessy Stance ESG Large Cap ETF

April 25, 2023.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 21, 2023, NYSE Arca, Inc. (''NYSE Arca'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to make changes to certain representations made in the proposed rule change previously filed with the Securities and Exchange Commission (the ''Commission'' or ''SEC'') pursuant to Rule 19b–4 relating to the Hennessy Stance ESG Large Cap ETF, shares of which are currently listed and traded on the Exchange under NYSE Arca Rule 8.601–E. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of,

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Commission has approved the listing and trading on the Exchange of shares (''Shares'') of the Hennessy Stance ESG Large Cap ETF (the ''Fund''),[3] under NYSE Arca Rule 8.601–E, which governs the listing and trading of Active Proxy Portfolio Shares, which are securities issued by an actively managed open-end investment management company.[4] Shares of the Fund are currently listed and traded on the Exchange under NYSE Arca Rule 8.601–E.[5] The Shares of the Fund are issued by Hennessy Funds Trust (the ''Issuer''), a statutory trust organized under the laws of the State of Delaware and registered with the Commission as an open-end management investment company. The Fund's investment adviser is Hennessy Advisors, Inc. (the ''Adviser'').

The Releases stated that the Fund will invest primarily in exchange-traded equity securities of U.S. large capitalization issuers by investing mainly in companies that meet environmental, social and governance (''ESG'') standards, as determined by the Adviser. The Exchange proposes to update the investment strategy employed by the Fund to provide that the Fund may invest in exchange-traded equity securities of U.S. small- and medium-capitalization issuers that meet ESG standards, as determined by the Adviser, while continuing to invest primarily in exchange-traded equity securities of U.S. large-capitalization issuers that meet ESG standards, as determined by the Adviser.[6]

The Adviser believes the change to the Fund's investment strategy (as described herein) is appropriate and consistent with the best interest of the Fund and Fund shareholders. In connection with the change, the Fund's investment objective and principal investment strategies will remain substantially the same. While the Fund will have an increased ability to focus on investing in exchange-traded equity securities of U.S. small- and medium-capitalization issuers that meet ESG standards, the Fund will continue to invest primarily in exchange-traded equity securities of U.S. large-capitalization issuers that meet ESG standards, as determined by the Adviser. The Adviser further believes that this strategy change is not material because (1) the investment objective will remain the same and the principal investment strategies will remain substantially the same; (2) the Fund will continue to primarily invest in equity securities of large-capitalization companies; and (3) the principal investment risks are substantially the same.

As of the close of business on April 27, 2023, the Fund's non-material strategy change will be effected to allow the Fund an increased ability to focus on investing in exchange-traded equity securities of U.S. small- and medium-capitalization issuers that meet ESG standards, while continuing to invest primarily in exchange-traded equity securities of U.S. large-capitalization issuers that meet ESG standards, as determined by the Adviser. Accordingly, as of the close of business on April 27, 2023, the name of the Fund will change from Hennessy Stance ESG Large Cap ETF to Hennessy Stance ESG ETF.

The investment objective of the Fund, which is to seek long-term capital appreciation, will remain unchanged.

Except for the changes noted above, all other representations made in the Releases remain unchanged.[7] The Fund will comply with all continued listing requirements under Rule 8.601–E, including all other requirements and conditions set forth in the applicable exemptive order.

2. Statutory Basis

The basis under the Act for this proposed rule change is the requirement under Section 6(b)(5)[8] that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices, and is designed to promote just and equitable principles of trade and to protect investors and the

[3] *See* Securities Exchange Act Release No. 96559 (December 21, 2022), 87 FR 79919 (December 28, 2022) (SR–NYSEARCA–2022–84) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Amend Certain Representations) (Renaming the Fund from Stance Equity ESG Large Cap Core ETF to Hennessy Stance ESG Large Cap ETF).

[4] *See* Securities Exchange Act Release No. 89185 (June 29, 2020), 85 FR 40328 (July 6, 2020) (SR–NYSEArca–2019–95) (Approval of a Proposed Rule Change To Adopt NYSE Arca Rule 8.601–E To Permit the Listing and Trading of Active Proxy Portfolio Shares and To List and Trade Shares of the Natixis U.S. Equity Opportunities ETF Under Proposed NYSE Arca Rule 8.601–E). Rule 8.601–E(c)(1) provides that ''[t]he term ''Active Proxy Portfolio Share'' means a security that (a) is issued by a investment company registered under the Investment Company Act of 1940 (''Investment Company'') organized as an open-end management investment company that invests in a portfolio of securities selected by the Investment Company's investment adviser consistent with the Investment Company's investment objectives and policies; (b) is issued in a specified minimum number of shares, or multiples thereof, in return for a deposit by the purchaser of the Proxy Portfolio and/or cash with a value equal to the next determined net asset value (''NAV''); (c) when aggregated in the same specified minimum number of Active Proxy Portfolio Shares, or multiples thereof, may be redeemed at a holder's request in return for the Proxy Portfolio and/or cash to the holder by the issuer with a value equal to the next determined NAV; and (d) the portfolio holdings for which are disclosed within at least 60 days following the end of every fiscal quarter.'' Rule 8.601–E(c)(2) provides that ''[t]he term ''Actual Portfolio'' means the identities and quantities of the securities and other assets held by the Investment Company that shall form the basis for the Investment Company's calculation of NAV at the end of the business day.'' Rule 8.601–E(c)(3) provides that ''[t]he term ''Proxy Portfolio'' means a specified portfolio of securities, other financial instruments and/or cash designed to track closely the daily performance of the Actual Portfolio of a series of Active Proxy Portfolio Shares as provided in the exemptive relief pursuant to the Investment Company Act of 1940 applicable to such series.''

[5] The Commission previously approved the listing and trading of the shares of the Fund. *See* Securities Exchange Act Nos. 91266 (March 5, 2021) 86 FR 13930 (March 11, 2021) (SR–NYSEArca–2020–104) (Order Approving a Proposed Rule Change, as Modified by Amendment No. 2, To List and Trade Shares of the Stance Equity ESG Large Cap Core ETF Under NYSE Arca Rule 8.601–E) (''Approval Order''); and 90665 (December 15, 2020) 85 FR 83129 (December 21, 2020) (SR–NYSEArca–2020–104) (Notice of Filing of Proposed Rule Change To List and Trade Shares of the Stance Equity ESG Large Cap Core ETF Under NYSE Arca Rule 8.601–E) (''Notice''). (The Approval Order and the Notice are referred to collectively herein as the ''Releases'').

[6] The Fund filed a registration statement on Form N–1A under the Securities Act of 1933 (File No. 033–52154) and the Investment Company Act of 1940 (File No. 811–07168), which became effective on December 23, 2022 (the ''Registration Statement''). The Fund's final, definitive prospectus, dated as of December 23, 2022, was filed pursuant to Rule 497(c) of the Securities Act of 1933 on December 28, 2022, and contains the current name and investment strategy of the Fund (the ''Final Prospectus''). A supplement to the Final Prospectus containing the new name and revised strategy, as described herein, was filed on February 27, 2023 pursuant to Rule 497(e) of the Securities Act of 1933 (the ''Supplement''). The description of the Fund and the Shares contained herein are based on the Registration Statement, the Final Prospectus and the Supplement. The change to the Fund's investment strategy as described herein will be implemented effective as of the close of business on April 27, 2023.

[7] *See supra* note 5.

[8] 15 U.S.C. 78f(b)(5).

public interest. Consistent with the representations in the Releases, the Fund will continue to seek its investment objective by investing in exchange-traded securities of issuers that meet ESG standards. As a result of the change to the Fund's investment strategy, the Exchange is proposing to amend certain representations in the Releases regarding the universe of securities in which the Fund may invest and consistent with that change, to rename the Fund.

The Adviser believes the change to the Fund's investment strategy is appropriate and consistent with the best interest of the Fund and Fund shareholders. In connection with the change, the Fund's investment objective and principal investment strategies will remain substantially the same. While the Fund will have an increased ability to focus on investing in exchange-traded equity securities of U.S. small- and medium-capitalization issuers that meet ESG standards, the Fund will continue to invest primarily in exchange-traded equity securities of U.S. large-capitalization issuers that meet ESG standards, as determined by the Adviser. The Adviser further believes that this strategy change is not material because (1) the investment objective will remain the same and the principal investment strategies will remain the substantially the same; (2) the Fund will continue to primarily invest in equity securities of large-capitalization companies; and (3) the principal investment risks are substantially the same. The proposed changes to the investment strategy will remain consistent with applicable requirements under the 1940 Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act. The Exchange believes the proposed rule change will not impose a burden on competition and will benefit investors and the marketplace by permitting continued listing and trading of Shares of the Fund following implementation of the changes described above, which changes would not impact the investment objective of the Fund.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act[9] and Rule 19b–4(f)(6) thereunder.[10]

A proposed rule change filed under Rule 19b–4(f)(6)[11] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[12] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest because the proposal does not raise any new or novel issues and doing so will allow the Shares to continue to be listed and traded on the Exchange without interruption in a manner that is consistent with the Commission's prior Approval Order and the applicable requirements under the Investment Company Act of 1940. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposal operative upon filing.[13]

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[14] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NYSEARCA–2023–34 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEARCA–2023–34. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange.

Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to File Number SR–NYSEARCA–2023–

[9] 15 U.S.C. 78s(b)(3)(A)(iii).

[10] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6) requires the Exchange to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[11] 17 CFR 240.19b–4(f)(6).

[12] 17 CFR 240.19b–4(f)(6)(iii).

[13] For purposes only of waiving the 30-day operative delay, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

BILLING CODE 8011–01–P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 55 (Sub-No. 811X)]

CSX Transportation, Inc.—Abandonment Exemption—in Bronx County, N.Y.

CSX Transportation, Inc. (CSXT), has filed a verified notice of exemption under 49 CFR part 1152 subpart F—*Exempt Abandonments* to abandon an approximately 0.77-mile rail line that runs between milepost Q## 3.79 and milepost Q## 4.5 on its Albany Division, New York Terminal, Putnam Branch, in Bronx County, N.Y. (the Line). The Line traverses U.S. Postal Service Zip Code 10463.

CSXT has certified that: (1) no local freight traffic has moved over the Line during the past two years; (2) any overhead traffic can be rerouted over other lines; (3) no formal complaint filed by a user of rail service on the Line (or by a state or local government on behalf of such user) regarding cessation of service over the Line either is pending with the Surface Transportation Board (Board) or has been decided in favor of a complainant within the two-year period; and (4) the requirements at 49 CFR 1105.7(b) and 1105.8(c) (notice of environmental and historic reports), 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to government agencies) have been met.

As a condition to this exemption, any employee adversely affected by the abandonment shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed.

Provided no formal expression of intent to file an offer of financial assistance (OFA) has been received,[1] this exemption will be effective on May 31, 2023, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues,[2] formal expressions of intent to file an OFA under 49 CFR 1152.27(c)(2), and interim trail use/rail banking requests under 49 CFR 1152.29 must be filed by May 11, 2023.[3] Petitions to reopen and requests for public use conditions under 49 CFR 1152.28 must be filed by May 22, 2023.

All pleadings, referring to Docket No. AB 55 (Sub-No. 811X), must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on CSXT's representative, Louis E. Gitomer, Law Offices of Louis E. Gitomer, LLC, 600 Baltimore Avenue, Suite 301, Towson, MD 21204.

If the verified notice contains false or misleading information, the exemption is void ab initio.

CSXT has filed a combined environmental and historic report that addresses the potential effects, if any, of the abandonment on the environment and historic resources. OEA will issue a Draft Environmental Assessment (Draft EA) by May 5, 2023. The Draft EA will be available to interested persons on the Board's website, by writing to OEA, or by calling OEA at (202) 245–0294. If you require an accommodation under the Americans with Disabilities Act, please call (202) 245–0245. Comments on environmental or historic preservation matters must be filed within 15 days after the Draft EA becomes available to the public.

Environmental, historic preservation, public use, or trail use/rail banking conditions will be imposed, where appropriate, in a subsequent decision.

Pursuant to the provisions of 49 CFR 1152.29(e)(2), CSXT shall file a notice of consummation with the Board to signify that it has exercised the authority granted and fully abandoned the Line. If consummation has not been effected by CSXT's filing of a notice of consummation by May 1, 2024, and there are no legal or regulatory barriers to consummation, the authority to abandon will automatically expire.

Board decisions and notices are available at *www.stb.gov.*

Decided: April 24, 2023.

By the Board, Mai T. Dinh, Director, Office of Proceedings.

Eden Besera,

Clearance Clerk.

BILLING CODE 4915–01–P

SURFACE TRANSPORTATION BOARD

60-Day Notice of Intent To Seek Extension of Approval: Classification Index Survey Form

AGENCY: Surface Transportation Board.

ACTION: Notice and request for comments.

SUMMARY: As required by the Paperwork Reduction Act of 1995 (PRA), the Surface Transportation Board (STB or Board) gives notice of its intent to seek approval from the Office of Management and Budget (OMB) for an existing collection without an OMB Control Number of a Classification Index Survey Form, as described below.

DATES: Comments on this information collection should be submitted by June 30, 2023.

ADDRESSES: Direct all comments to Chris Oehrle, Surface Transportation Board, 395 E Street SW, Washington, DC 20423–0001, or to *PRA@stb.gov.* When submitting comments, please refer to ''Paperwork Reduction Act Comments, Classification Index Survey Form.'' For further information regarding this collection, contact Pedro Ramirez at (202) 245–0333 or *pedro.ramirez@stb.gov.* Assistance for the hearing impaired is available through the Federal Relay Service at (800) 877–8339.

SUPPLEMENTARY INFORMATION: Comments are requested concerning: (1) the accuracy of the Board's burden estimates; (2) ways to enhance the quality, utility, and clarity of the information collected; (3) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology, when appropriate; and (4) whether the collection of information is necessary for the proper performance of the functions of the Board, including whether the collection has practical utility. Submitted comments will be summarized and included in the Board's request for OMB approval.

[15] 17 CFR 200.30–3(a)(12).

[1] Persons interested in submitting an OFA must first file a formal expression of intent to file an offer, indicating the type of financial assistance they wish to provide (*i.e.,* subsidy or purchase) and demonstrating that they are preliminarily financially responsible. *See* 49 CFR 1152.27(c)(2)(i).

[2] The Board will grant a stay if an informed decision on environmental issues (whether raised by a party or by the Board's Office of Environmental Analysis (OEA) in its independent investigation) cannot be made before the exemption's effective date. *See Exemption of Out-of-Serv. Rail Lines,* 5 I.C.C.2d 377 (1989). Any request for a stay should be filed as soon as possible so that the Board may take appropriate action before the exemption's effective date.

[3] Filing fees for OFAs and trail use requests can be found at 49 CFR 1002.2(f)(25) and (27), respectively.

Subjects: In this notice, the Board is requesting comments on the following information collection:

Description of Collection

Title: Classification Index Survey Form.

OMB Control Number: 2140–00XX.

Form Number: Classification Index Survey Form.

Type of Review: Existing Collection without an OMB Control Number.

Respondents: All railroad companies not required to file an Annual Report (Form R–1).

Number of Respondents: One per year.

Estimated Time per Response: Less than 24 hours. This estimate includes time spent reviewing instructions; searching existing data sources; gathering and maintaining the data needed; completing and reviewing the collection of information; and converting the data from the carrier's individual accounting system.

Frequency of Response: On occasion.

Total Annual Hour Burden: Less than 24 hours annually.

Total Annual ''Non-Hour Burden'' Cost: The Classification Index Survey Form may be submitted electronically without non-hourly costs.

Needs and Uses: Railroads are classified by size into groups of large, medium, and small carriers. The Board must determine the classification of each rail carrier as a Class I, Class II, or Class III railroad. Railroads with a Class I classification (large railroads) must file Annual Reports (Form R–1) under 49 U.S.C. 11145. See OMB Control Number 2140–0009 (Class I Railroad Annual Reports). These reports are used by the Board, other Federal agencies, and industry groups to monitor and assess railroad industry growth, financial stability, traffic, and operations, and to identify industry changes that may affect national transportation policy. All other railroads (those not required to file an (R–1) Annual Report) shall annually compute their adjusted revenues using the ''railroad revenue deflator formula,'' and, if the computation derived from that formula indicates a change in a carrier's classification, that carrier must submit a ''Classification Index Survey Form'' to the Board pursuant to 49 CFR 1201 General Instructions 1–1 and § 1241.15.

Under the PRA, a federal agency that conducts or sponsors a collection of information must display a currently valid OMB control number. A collection of information, which is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c), includes agency requirements that persons submit reports, keep records, or provide information to the agency, third parties, or the public. Under 44 U.S.C. 3506(c)(2)(A), federal agencies are required to provide, prior to an agency's submitting a collection to OMB for approval, a 60-day notice and comment period through publication in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information.

Dated: April 26, 2023.

Kenyatta Clay,

Clearance Clerk.

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. FAA–2023–0976]

Agency Information Collection Activities: Requests for Comments; Clearance of a Renewed Approval of Information Collection: National Air Tours Safety Standards

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The collection involves requirements in FAA regulations that set safety and oversight rules for a broad variety of sightseeing and commercial air tour flights to improve the overall safety of commercial air tours by requiring all air tours to submit information.

DATES: Written comments should be submitted by June 30, 2023.

ADDRESSES: Please send written comments:

By Electronic Docket: www.regulations.gov (Enter docket number into search field).

By mail: Sandra Ray, Federal Aviation Administration, Voluntary Programs and Rulemaking Section AFS–260, 1187 Thorn Run Road, Suite 200, Coraopolis, PA 15108.

By fax: 412–239–3063.

FOR FURTHER INFORMATION CONTACT: *Sandra.ray@faa.gov;* phone: 412–329–3088.

SUPPLEMENTARY INFORMATION:

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

OMB Control Number: 2120–0717.

Title: National Air Tours Safety Standards.

Form Numbers: None.

Type of Review: Renewal of an information collection.

Background: FAA regulations set safety and oversight rules for a broad variety of sightseeing and commercial air tour flights to improve the overall safety of commercial air tours by requiring all air tour operators to submit information. The FAA uses the information it collects and reviews to ensure compliance and adherence to regulations and, if necessary, take enforcement action on violators of the regulations.

Respondents: Commercial Air Tour Operators.

Frequency: Information is collected on occasion.

Estimated Average Burden per Response: Varies by Response.

Estimated Total Annual Burden: 1,400 Hours.

Issued in Washington, DC, on April 26, 2023.

Sandra L. Ray,

Aviation Safety Inspector, AFS–260.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Public Notice of ADAP/FAAP Property Release; Hillsboro Airport, Hillsboro, Oregon

AGENCY: Federal Aviation Administration, (FAA), DOT.

ACTION: Notice.

SUMMARY: Notice is being given that the FAA is considering a request from the Port of Portland, Oregon to waive the ADAP/FAAP property requirements and dispose of approximately 5.6 acres of airport property located at Hillsboro Airport, in Hillsboro, Oregon.

DATES: Comments are due within 30 days of the date of the publication of this notice in the **Federal Register**.

Emailed comments can be provided to Mr. Tim House, Lead Planner, Seattle Airports District Office, *timothy.a.house@faa.gov.*

FOR FURTHER INFORMATION CONTACT: Tim House, Lead Planner, Seattle Airports District Office, 2200 S 216 St., Des Moines, WA 98198, *timothy.a.house@faa.gov,* (206) 231–4248. Documents reflecting this FAA action may be reviewed at the above locations.

SUPPLEMENTARY INFORMATION: Under the provisions of Title 49, U.S.C. 47153(c), and 47107(h)(2), the FAA is considering a proposal from the Port of Portland, to release a portion of the Hillsboro Municipal Airport from aeronautical use to non-aeronautical use and dispose of the property. The property is separated from the aeronautical area of the airport by NE 25th Ave and has been determined through study that the subject parcel will not be needed for aeronautical purposes. The property will be utilized by the City of Hillsboro to develop a Public Safety Facility. There will be proceeds generated from the proposed release of this property. The Port will receive not less than fair market value for the property and the revenue generated from the sale will be used for airport purposes.

The proposal consists of 5.6 acres, on the northwest side of the airport. The parcels do not have airfield access. The FAA concurs that the parcel is no longer needed for aeronautical purposes. The proposed use of this property is compatible with other airport operations in accordance with FAA's Policy and Procedures Concerning the Use of Airport Revenue, published in **Federal Register** on February 16, 1999.

Issued in Des Moines, Washington, on April 25, 2023.

Warren D. Ferrell,

Manager, Seattle Airports District Office.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No.: FAA–2023–0855]

Request for Comments on the Federal Aviation Administration's Review of the Civil Aviation Noise Policy, Notice of Public Meeting

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of public meeting; Request for comments.

SUMMARY: The FAA invites public comments from interested individuals, entities, and other parties to review four key considerations of its civil aviation noise policy, in the context of noise metrics and noise thresholds. The civil aviation noise policy sets forth how the FAA analyzes, explains, and publicly presents changes in noise exposure from aviation activity: recreational and commercial fixed wing airplanes, helicopters, commercial space transportation vehicles, unmanned aircraft systems, as well as emerging technology vehicles (newer types of vehicles that will operate in U.S. airspace). The FAA will consider how changes to the civil aviation noise policy may better inform agency decisionmaking, the types of impacts it considers in making decisions (*e.g.,* community annoyance, certain types of adverse health impacts highly correlated with aviation noise exposure), and potential improvements to how the FAA analyzes, explains, and presents changes in exposure to civil aviation noise.

DATES:

Comments: Send comments on or before July 31, 2023.

Public Meetings:

1. Tuesday, May 16, 2023, 1 to 3:00 p.m. Eastern Time (ET), virtual;
2. Thursday, May 18, 2023, 6 to 8:00 p.m. ET, virtual;
3. Tuesday, May 23, 2023, 9 to 11:00 p.m. ET, virtual; and
4. Thursday, May 25, 2023, 3 to 5:00 p.m. ET, virtual.

ADDRESSES: Send comments identified by docket number FAA–2023–0855 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at 202–493–2251.

Instructions: For detailed instructions on submitting comments and additional information on the public meeting, see the Public Participation heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which you can review at *https://www.dot.gov/privacy.*

Docket: Background documents or comments received may be read at *https://www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT:

For questions concerning this action, contact Mr. Donald S. Scata, Jr. or Ms. Krystyna Bednarczyk, Federal Aviation Administration, 800 Independence Ave. SW, Washington, DC 20591; telephone (202) 267–6999; email *NoisePolicyReview@faa.gov.*

SUPPLEMENTARY INFORMATION:

First, the FAA is reviewing research on the effects of exposure to aviation noise, including the correlation of exposure to aviation noise with adverse health impacts, economic impacts, and annoyance.

Second, the FAA is reviewing its standard noise metric that describes exposure to aircraft noise, and potential revisions to the choice of standard metric(s).

Third, the FAA is reviewing its definition of the threshold of significant noise exposure for actions analyzed under the National Environmental Policy Act of 1969 to determine if that threshold remains appropriate or requires revision.

Last, the FAA is examining the level of aircraft noise exposure below which land uses are considered ''normally compatible'' with airport operations, as that term is defined in the regulations implementing the Aviation Safety and Noise Abatement Act of 1979. This includes consideration of the criteria for application of noise mitigation measures to address adverse noise exposure in areas that the FAA currently considers to be ''normally compatible'' with airport operations under FAA's regulations.

The FAA will consider how changes to the civil aviation noise policy may better inform agency decisionmaking, the types of impacts it considers in making decisions (*e.g.,* community annoyance, certain types of adverse health impacts highly correlated with aviation noise exposure), and potential improvements to how the FAA

analyzes, explains, and presents changes in exposure to civil aviation noise. Because the review addresses the technical elements of the FAA's civil aviation noise policy, this review will not itself reduce noise associated with aviation. The FAA will hold virtual webinars to provide background information regarding the noise policy review and respond to technical matters.

I. Background

A. FAA Actions With Respect to Civil Aviation Noise

Aircraft and vehicles make noise. More than 2.3 million passengers fly daily in U.S. airspace. Demand continues to grow for aviation passenger and cargo services. At the same time, new users seek to operate in U.S. airspace using different aircraft and vehicles that will change where and how communities are affected by aircraft noise. Commercial space rocket launches, unmanned aircraft systems (UAS or drones), and urban air mobility/advanced air mobility (UAM/AAM) vehicles will operate in ways that differ fundamentally from traditional fixed wing aircraft and helicopters that take off and land at airports. As a result, these operations will change the way communities interact with aircraft and experience noise exposure.

The FAA, air carriers, airports, aircraft manufacturers, other stakeholders and industry members, local communities, and elected officials share responsibility for addressing aircraft noise concerns. For example, FAA does not make decisions about flight times, number of operations, and aircraft type departing from or landing at airports. These decisions rest with private industry. Airport location and land uses surrounding airports are a function of local community zoning and land use planning. Runway alignment is determined by the prevailing winds at that specific location. The FAA is charged with controlling aircraft noise by regulating source emissions, designing flight operational procedures, and managing the air traffic control system and navigable airspace in ways that minimize, where appropriate, noise impacts on the ground consistent with the highest standards of safety.[1]

The FAA has long recognized that aircraft noise is a primary and pivotal concern of many stakeholders. Accordingly, the FAA strives to reduce noise in ways within its purview, but its ability to control the change in airport noise exposure is limited. The FAA has acted continuously and effectively within the bounds of its authority to improve the environmental effects of the aviation sector by better understanding, managing, and, where possible, reducing the adverse environmental impacts of global aviation through research and technological innovation, policy,[2] and outreach to the public.[3]

Over the last six decades, aircraft have gotten much quieter due in part to action by the FAA. The FAA has phased out operations by older, noisier aircraft and set more stringent aircraft certification noise standards to reduce the amount of noise they emit.[4] The FAA also established research and development partnership programs with academia and industry to develop quieter aircraft technology.[5] As a result, the noise produced from one flight by a Boeing 707–200 jet, a typical commercial aircraft that began to fly in 1957 is roughly equivalent to the noise produced from 30 flights by a typical Boeing 737–800 jet.[6] At the same time, the number of enplanements has increased from approximately 200 million in 1975 to over 850 million today. Enplanements are predicted to grow over the next twenty years, on average, by 4.7 percent annually.[7]

As operations have increased substantially since the mid-1970's, the number of people adversely exposed to aviation noise (levels above the Day Night Average Sound Level of 65 decibels) in the U.S. has declined dramatically from roughly 7 million to just over 400,000 today. This is significant improvement in environmental outcomes because the U.S. Census Bureau indicates that between 1970 and 2010, the percentage of the population living in dense urban areas increased from 73.6 percent to 80.7 percent. FAA regulation of noise at the source has improved environmental outcomes. In the eyes of the public, however, aircraft noise and its impact on people continues to be a major source of concern.

This perception was reinforced by results of a nationally scoped survey that updated FAA's understanding of the dose-response relationship between exposure to aircraft noise and community annoyance (Neighborhood Environmental Survey or NES).[8] On January 13, 2021, the FAA published in the **Federal Register** a notice and request for input on the FAA's research activities that would inform the FAA's aircraft noise policy and would inform the future direction of the FAA noise research portfolio.[9] In addition to setting forth the FAA aircraft noise policy and research efforts, the notice described the results of the NES and research into the societal benefits and costs of noise mitigation measures. The FAA explained that the Neighborhood Environmental Survey updated the FAA's understanding of the dose-response relationship between exposure to aircraft noise and community annoyance. The NES showed that a

[1] *See* 49 U.S.C. 40103(b), 44502, and 44721, which provide extensive and plenary authority to the FAA concerning use and management of the navigable airspace, air traffic control, and air navigation facilities. The FAA has implemented this authority by promulgating regulations at 14 CFR parts 71, 73, 75, 91, 93, 95, and 97. *See also* 49 U.S.C. 44715, which requires the FAA Administrator to prescribe noise standards for aircraft noise and sonic boom and to prescribe regulations to control and abate aircraft noise and sonic boom by promulgating aircraft noise regulations. FAA has implemented this authority by promulgating regulations at 14 CFR part 36, on source noise reduction and limits on noise emissions of large aircraft of new or modified design. Essentially, part 36 establishes the quietest uniform standard then possible, after taking into account safety, economic reasonableness, and technological feasibility. In addition, the FAA has phased out older aircraft to achieve noise reductions consistent with Congressional mandates and international standards. As of January 2016, all civilian transport category aircraft, regardless of weight, are required to meet Stage 3 requirements in order to operate in the continental U.S. and any air carrier aircraft manufactured today must meet Stage 5 requirements.

[2] FAA established noise certification standards for new and modified designs of civil subsonic aircraft in 14 CFR part 36. The FAA does not intend to consider changes to these regulations in the NPR.

[9] FAA, *Overview of FAA Aircraft Noise Policy and Research Efforts: Request for Input on Research Activities to Inform Aircraft Noise Policy,* 86 FR 2722 (January 13, 2021).

higher percentage of people were ''highly annoyed'' by aircraft noise across all levels of noise exposure that were studied.[10]

More than 4,100 comments were submitted in response to the FAA's January 13, 2021 **Federal Register** notice. Some commenters suggested additional topics for research, which the FAA has taken under consideration. Overwhelmingly, however, the public encouraged the FAA to revise its policy in light of its research findings rather than waiting for the results of the FAA's ongoing research.

In response to that feedback, the FAA initiated a review (noise policy review or NPR) of its civil aviation noise policy (policy). The FAA policy is set forth in various agency regulations, orders, guidance, and policy statements.[11] It identifies how the FAA analyzes, explains, and publicly presents changes in noise exposure from aviation activity: recreational and commercial fixed wing airplanes, helicopters, commercial space transportation vehicles, unmanned aircraft systems, as well as emerging technology vehicles (newer types of vehicles that will operate in U.S. airspace). It applies to actions the FAA regulates, conducts, authorizes, or funds.

As commenters on the January 13, 2021 notice pointed out, the current policy is based on research conducted many decades ago. Since the policy was first issued, additional research has been conducted into the effects of aircraft noise on individuals and communities. The research spans aviation noise topics such as the economic value of noise impacted property, community annoyance, children's learning, speech interference, sleep disturbance, and human health impacts such as cardiovascular health.[12] The NPR provides an opportunity to determine whether, and if so, how, to update the policy in response to these and other research findings described in the January 13, 2021 notice.

B. Effect of Changes in Aircraft and Vehicle Operations in U.S. Airspace.

As described in Section I.A., *infra,* the NPR will also consider how the noise environment is changing from newer users of the airspace using the airspace differently than operators of recreational or commercial fixed wing airplanes and helicopters. This includes newer users operating commercial space transportation vehicles (rocket launches and reentries), unmanned aircraft systems (also known as UAS or drones), and other emerging technology vehicles (newer types of vehicles that will operate in the U.S. airspace).

C. FAA Regulation of Noise Under the Aviation Safety and Noise Abatement Act of 1979 and Assessment of Changes in the Noise Environment Under the National Environmental Policy Act of 1969

In response to a law called the Aviation Safety and Noise Abatement Act of 1979,[13] the FAA took a series of actions related to aviation noise. First, the FAA established a system for measuring how aircraft noise is experienced on the ground. The experience of noise by people and other receptors on the ground is described in this notice as ''aircraft noise exposure.'' Currently, the FAA uses a single-metric system to analyze aircraft noise exposure. The noise metric [14] that is the heart of this single-metric system is called the Day-Night Average Sound Level (DNL).[15] Currently, DNL is the FAA's core metric for decisionmaking in situations involving aircraft noise exposure. This law requires the FAA to develop a single system for analyzing aircraft noise exposure; however, the system does not have to be composed of a single metric. Rather the system must have a high degree of correlation between the projected noise exposure levels and the surveyed reactions of people to those noise levels and must account for the intensity, duration, frequency, and tone of noise-producing activity, as well as the time of occurrence.[16]

Second, in response to that law, the FAA issued regulations (14 CFR part 150) to establish the requirements and the process and procedures for airport noise compatibility planning.[17]

Third, the regulations also identify land uses that are ''normally compatible'' with various noise exposure levels. These land use classifications were developed by the FAA based on its evaluation of the Federal land use compatibility guidelines established during the 1970s by a Federal interagency committee comprised of research agencies and agencies with expertise in aviation-related noise.[18] To the extent practicable, FAA's ''normally compatible'' and ''noncompatible'' land uses are comparable to and consistent with, although separate from, other Federal programs directed towards similar considerations of noise exposure.

As one of the four elements of the review, the FAA will consider how the agency's updated understanding of the effects of aircraft noise on individuals, communities, and noise-sensitive areas should be used to potentially revise the

[11] *See, e.g.,* 14 CFR part 36, *Noise Standards: Aircraft Type and Airworthiness Certification,* 34 FR 18364 (Nov. 18, 1969); 14 CFR part 150, *Airport Noise Compatibility Planning,* 49 FR 49269 (December 18, 1984); 14 CFR part 161, *Notice and Approval of Airport Noise and Access Restrictions,* 56 FR 48698 (Sept. 25, 1991); U.S. Department of Transportation and FAA, *The Aviation Noise Abatement Policy,* (Nov. 18, 1976) (ANAP) available at *https://www.faa.gov/regulations_policies/policy_guidance/envir_policy/;* FAA Order 1050.1F, *Environmental Policies and Procedures* (FAA Order 1050.1F), 80 FR 44209 (July 24, 2015); FAA Order 5050.4B, *National Environmental Policy Act (NEPA) Implementing Instructions for Airport Projects* (FAA Order 5050.4B); FAA Joint Order 7400.2N, *Procedures for Handling Airspace Matters* (Nov. 3, 2022) at Chapter 32. ''Environmental Matters and Appendix 9, Noise Policy for Management of Airspace Over Federally Managed Lands''; and FAA Order 1050.1F Desk Reference.

[12] Wolfe, Malina, Barrett & Waitz 2016, Cost and benefits of U.S. Aviation noise land-use policies, *Transportation Research Part D: Transport and Environment,* v. 44 (2016) 147–156, *https://dx.doi.org/10.1016/j.trd.2016.02.010* (assessed quantitatively the costs and health and public welfare benefits of noise mitigating land-use management practices at 16 U.S. airports, specifically housing insulation and property acquisition, as compared to control of noise at the source. This study estimated that reducing environmental noise exposure through local land-acquisition and soundproofing policies can provide health and welfare benefits from $10,000 per person when applied in low-income ($20,000 per capita) and low-noise-exposure (65 dB) communities and upwards of $25,000 per person in high-income ($60,000 per capita) and high-noise-exposure (75 dB) communities. However, the study concluded that the costs of these programs often exceed their benefits except for at the highest noise exposure levels.)

[13] Aviation Safety and Noise Abatement Act of 1979, codified at 49 U.S.C. 47501 *et seq.,* and implemented through 14 CFR part 150 (Part 150).

[14] A ''noise metric'' refers to the unit or quantity that quantitatively measures the exposure of individuals to noise.

[15] *See* 14 CFR 150.7. The Day-Night Average Sound Level (DNL) is the 24-hour average sound level, in decibels, for the period from midnight to midnight, obtained after the addition of ten decibels to sound levels for the periods between midnight and 7 a.m., and between 10 p.m., and midnight, local time. This is a cumulative noise metric.

[16] 49 U.S.C. 47502(2).

[17] This included procedures, standards, and methodology for airport development and submission, and FAA review of airport noise exposure maps and airport noise compatibility programs and the provision for using a single system to measure noise at airports and surrounding areas and determine exposure of individuals to noise that results from the operations of an airport when preparing these documents. *See* 14 CFR 150.1.

[18] The Federal agencies that are responsible for Federal programs in which noise exposure is a factor and which comprised the interagency committee that developed the Federal land use compatibility guidelines include, among others, the U.S. Department of Defense, U.S. Department of Housing and Urban Development, and the National Park Service.

definitions adopted by the FAA of land uses that are ''normally compatible'' with airport operations and associated with different levels of aviation noise exposure. This will include consideration of the criteria for application of noise mitigation measures to address adverse noise exposure in areas that the FAA currently considers to be ''normally compatible.'' In this notice, the FAA is focused on noise metrics and noise thresholds.[19] While the FAA will consider public comments regarding elements of the policy not related to noise metrics and noise thresholds, these comments will not be the agency's initial priority in the review.

The National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321 *et seq.,* requires Federal agencies to analyze the potentially significant environmental impacts of actions the FAA takes directly and to actions taken by a non-Federal entity where the FAA has authority to condition the permit, license, or other approval of the non-Federal entity's action (''Federal action'').[20] The FAA established through an agency order (FAA Order 1050.1F) the policies and procedures that implement the requirements of NEPA and the Council on Environmental Quality (CEQ) regulations implementing NEPA. While the significance of an impact may vary with the context and setting of a proposed Federal action, FAA Order 1050.1F established a quantitative limit to describe the significance of changes in aviation noise exposure (NEPA significance threshold) based on community annoyance.[21] The NEPA significance threshold is triggered if a proposed Federal action ''would increase noise by DNL 1.5 dB or more for a noise sensitive area as defined in part 150 that is exposed to noise at or above the DNL 65 dB noise exposure level, or that will be exposed at or above the DNL 65 dB level due to a DNL 1.5 dB or greater increase, when compared to the no action alternative for the same timeframe.'' [22] For example, an increase from DNL 65.5 dB to 67 dB would be considered a significant impact, as would an increase from DNL 63.5 dB to 65 dB.[23]

The FAA considers the significance of project impacts when determining the appropriate level of environmental review and the level of public involvement that may be required before a decision on a proposed Federal action is made. Finally, while NEPA does not require any particular outcome, its requirements ensure that FAA officials make informed decisions after considering the environmental consequences of proposed Federal actions. The FAA's determination to establish a NEPA significance threshold, the type of impact (community annoyance) that informed the selection of the limit of the NEPA significance threshold, and the noise metric (DNL) that quantitatively describes the impact of noise exposure are three of the four elements of the policy that are under review as part of the NPR. Specifically, this review will consider whether the FAA should continue to use the cumulative DNL metric as the sole basis for decisions made in the context of analyses prepared pursuant to NEPA and the Part 150 regulations or adopt a suite of metrics to address different scenarios based on the noise environment, source of noise, and other considerations.

The result of this review may include modifying the FAA's system for considering aviation noise. Modifications could include replacing DNL as the sole decisionmaking noise metric; incorporating new decisionmaking noise metrics into the system; identifying when the metrics that may comprise the system should be used alone or in combination; and revising the FAA policy [24] on the use of supplemental metrics. In addition, the FAA will consider how these metrics should be calculated.

D. Immediate Effect of the Noise Policy Review

The FAA notes that none of the changes currently being considered through this noise policy review will immediately affect the level of noise to which an individual, community, or noise-sensitive area (*e.g.,* park, school, hospital, etc.) is exposed. A downward adjustment to the definition of existing significant noise exposure will not change the actual noise environment. Nor will real-world noise experienced by individuals and communities be changed if the FAA changes its criteria for identifying significant new noise exposure associated with proposed actions being examined in an environmental review conducted pursuant to NEPA.[25] No policy change on its own will cap or reduce the levels of aviation noise. The FAA normally takes actions that enhance the safety, efficiency, and capacity of U.S. airspace while considering associated noise impacts. As these actions are proposed, the FAA analyzes and discloses publicly the modeled change in the noise environment to help the public understand how their experience of aviation noise will change over time.

E. Next Steps

The FAA intends to give serious consideration to stakeholder [26] input on the policy. If the FAA decides to revise the policy, any revisions will also consider modern aviation noise research and how the evolving use of the U.S. airspace affects experiences of aviation noise. Any revisions to the policy will also promote more effective public disclosure of noise impacts under NEPA. In summary, this review should improve implementation of the major tenets of the 1976 Aviation Noise Abatement Policy, which sets forth the goals, policies, and strategies the FAA should employ to reduce the impact of aviation noise.

F. Purpose of This Notice

The FAA invites comments through this notice to inform its consideration of these foundational elements of the policy. The FAA recognizes that

[19] When FAA refers to ''noise thresholds'' collectively, it means both the definition of the level of significant noise exposure for actions subject to environmental review requirements set out in FAA Order 1050.1F as well as the definitions of the levels of noise exposure that are deemed to be ''normally compatible'' with airport operations, as set forth in Table 1 of Appendix A to Part 150.

[20] FAA Order 1050.1F at Paragraph 1–9.

[21] FAA Order 1050.1F at Exhibit 4–1.

[22] *Id.*

[23] *Id.*

[24] The FAA's NEPA procedures address the use of supplemental noise metrics. *See* FAA Order 1050.1F, *Environmental Impacts: Policies and Procedures,* Appendix B, paragraph B–1.6; *1050.1F Desk Reference,* Section 11.4.

[25] *See* 42 U.S.C. 4321 *et seq.,* 40 CFR parts 1500–1508, and FAA Order 1050.1F. NEPA directs the Federal government to ensure that the likely significant environmental effects of proposed policies, plans, programs, projects or other actions are identified and assessed before the Federal agency makes a decision on whether the proposal should proceed. It also identifies certain procedures that must be followed regarding the level of environmental analysis to be conducted as well as ensures certain types of public disclosure and public involvement before the FAA makes a decision or takes an action. This does not mean, however, that the FAA must choose the most environmental favorable or most environmentally acceptable option.

[26] The FAA will continue to coordinate on matters related to aviation noise research and policy through the Federal Interagency Committee on Aviation Noise (FICAN), which provides a forum for Federal agencies to coordinate on future research needs to understand, predict, and better control the effects of aviation noise. FICAN comprises Federal agencies that conduct research on aviation-related noise as well as agencies that do not conduct research but that have broad policy roles with respect to aviation noise issues. Current member agencies include: the U.S. Departments of Defense, Transportation, Interior, Health and Human Services, Housing and Urban Development as well as the Environmental Protection Agency and NASA. In addition, in accordance with 40 CFR parts 1500–1508, the FAA will coordinate with the Council on Environmental Quality if the FAA recommends changes to its NEPA implementing procedures (FAA Order 1050.1F).

exposure to aviation noise is a pivotal quality-of-life issue for the public and welcomes input on how the FAA's assessment and disclosure of noise impacts may improve community understanding and expectations regarding future noise exposure. The most helpful comments would reference a specific recommendation, explain the reason for any recommended change, and include supporting information.

At this time, the FAA cannot predict how many comments will be received, whether requests to extend the comment period will be submitted, or how long it will take to review and respond to public comments. While the FAA will work expeditiously to review the input when the public comment period closes, the FAA cannot provide information regarding the timing of follow-on actions. However, following the FAA's consideration of comments, the FAA will publish in the **Federal Register** a subsequent notice to announce the input it received and how the FAA considered it in developing its recommended revisions to the policy. That notice will identify the elements of the policy that will be modified and explain how the FAA recommends revising the policy. The FAA will identify the subsequent actions it will take to implement the recommendation and whether the future change to the policy will be implemented through proposed rulemaking or other administrative actions. That notice will identify the FAA office that will be primarily responsible for implementing the recommended revision and identify, with specificity, the agency regulations, orders, guidance, or policy statements that will be modified. Finally, that notice will set forth how the public can continue to provide input when the FAA proposes revisions to relevant documents.

II. Request for Comments

The FAA seeks written public comments on the ways it describes potential impacts of aircraft noise as well as how the FAA defines the threshold of significant noise exposure for noise sensitive receivers. In addition, the FAA seeks public comment on the noise exposure limit that normally would be considered compatible for noise-sensitive land uses. To provide background information and context for the questions set forth below, the FAA invites the public to review a framing paper entitled, *The Foundational Elements of the Federal Aviation Administration Civil Aircraft Noise Policy: The Noise Measurement System, its Component Noise Metrics, and Noise Thresholds,* available at: *https://www.faa.gov/noisepolicyreview/NPR-framing.* The FAA welcomes any comments from the public on any of these issues and is particularly interested in the public's responses to the questions and information requested below.

The FAA maintains a robust program of activities related to aviation noise. The FAA's approach is multi-pronged, including research and development, regulatory control, and public and stakeholder outreach programs relating to the public's experience of aviation noise. In the next section of this notice, the FAA presents a series of questions designed to solicit public input that will supplement and augment the FAA's technical consideration of these issues. The FAA intentionally designed the questions below to seek written comment from a range of aviation stakeholders with varying levels of familiarity with the FAA, its role in addressing aircraft noise exposure, and the noise metrics the FAA uses to analyze, explain, and publicly present adverse noise exposure. One of the FAA's key goals in issuing this notice is to obtain stakeholder input on the information FAA develops and uses to make decisions that affect aviation noise. Public comments addressing potential improvements in how, where, and with whom the FAA communicates regarding changes in aircraft noise exposure will be particularly helpful as the FAA continues to develop a policy that will respond to affected communities' core interests, concerns, and needs.

Comments that focus on the issues and questions identified below will be most helpful. These questions are meant as a guide and commenters may provide their views or submit general comments related to how the FAA describes and discloses aviation noise impacts. The more specific the comments, the more useful they will be in agency deliberations. If relevant, commenters are requested to provide technical information, data, or other evidence to support the comment submission. Finally, the FAA requests that commenters identify the number of each question to which a response is submitted.

1. *Vehicle Type.* When the FAA published the ANAP [27] in 1976, the impacts of aviation noise were related to commercial jet service at or in the immediate vicinity of airports. What types or elements of current or future air vehicle activity (*e.g.,* unmanned aircraft systems (also known as UAS or drones), advanced air mobility, rotorcraft, subsonic fixed wing, supersonic, or commercial space) should the policy describe and disclose? How should this information be described using noise metrics? Should the FAA use this information to make decisions or for public disclosure only? Please explain your reasoning.

2. *Operations of Air Vehicles.*

a. What elements of aircraft operations (*e.g.,* en-route, takeoff, landing) should the noise metric evaluate and disclose? Should the FAA use this information to make decisions or disclose to the public noise impacts? Please explain your reasoning.

b. What interests or concerns do communities in the vicinity of airports have? How can these concerns be addressed using noise metrics? What noise metrics would address these concerns? Please explain your reasoning.

c. What interests or concerns do overflight communities [28] have? How can these concerns be addressed using noise metrics? What noise metrics would address these concerns? Please explain your reasoning.

d. What interests or concerns do communities in the vicinity of commercial space transportation operations have? How can these concerns be addressed using noise metrics? What noise metrics would address these concerns? Please explain your reasoning.

e. What interests or concerns do communities in the vicinity of UAS (drone) package delivery or other newly emerging technology operations have? How can these concerns be addressed using noise metrics? What noise metrics would address these concerns? Please explain your reasoning.

3. *DNL.* What views or comments do you have about the FAA's core decisionmaking metric, DNL? How would these views regarding DNL be resolved if the FAA employed another noise metric (either in addition to, or to replace DNL) or if the FAA calculated DNL differently? Please explain your reasoning.

4. *Averaging.* DNL provides a cumulative description of the noise events expected to occur over the course of an entire year averaged into a representative day, described as an Average Annual Day (AAD).

[27] The ANAP was issued by the Secretary of Transportation and the FAA Administrator on November 18, 1976. This document is available on the FAA website at *https://www.faa.gov/regulations_policies/policy_guidance/envir_policy/.*

[28] The phrase ''overflight communities'' in this Notice refers to communities located under the flight paths of aircraft and vehicles that are distressed by aircraft noise and are located outside of the DNL 65 dB contour.

a. Do you believe an AAD is an appropriate way to describe noise impacts? Please explain why or why not.

b. If not, what alternative averaging schemes to AAD should be considered and why? What information would the use of an alternative averaging scheme capture that AAD does not?

5. *Decisionmaking Noise Metrics.* The FAA currently uses DNL as its primary decisionmaking metric for actions subject to NEPA and airport noise compatibility planning studies prepared pursuant to 14 CFR part 150.

a. Should different noise metrics be used in different circumstances for decisionmaking?

b. If the answer to Question 5.a. is ''yes,'' please identify: the metric, the information it provides that DNL does not, and explain when and how it should be employed by the FAA in its system (*e.g.,* should the FAA use a noise metric other than DNL to evaluate noise exposure in quiet settings, such as national parks, national wildlife and waterfowl refuges, etc.)? Should this metric be used when the FAA is making decisions that affect noise in these settings? Should this metric be used alone or in combination with another metric?

c. If the metric should be used in combination with another metric, please describe how they should be used together for decisionmaking.

d. If the answer to Question 5.a is ''no,'' should DNL remain the core decisionmaking metric or should another metric be substituted in all circumstances?

e. How would the use of the metrics that you recommend support better agency decisionmaking? Please explain and illustrate with specific examples how the use of the recommended metric(s) would benefit agency decisionmaking.

6. *Communication.*

a. Please identify whether and how the FAA can improve communication regarding changes in noise exposure (*e.g.,* what information FAA communicates, where and with whom FAA communicates, what information methods FAA uses to communicate and the venues at which FAA shares this information). Please explain your reasoning.

b. Should the FAA consider revisions to its policy on the use of supplemental noise metrics in the FAA's NEPA procedures? Please explain how this policy should be modified to improve FAA communication of noise changes when the FAA is making decisions that affect noise. Please explain your reasoning.

c. What information about the change in noise resulting from civil aviation operations (*e.g.,* UAS or drones, helicopters, fixed wing aircraft, rockets/commercial space transportation vehicles, and new entrant technologies) should the noise metric communicate to the public? Please explain your reasoning.

d. Please explain how the public will benefit if the FAA implements your proposal in response to Questions 6.a and 6.b.

7. *NEPA and Land Use Noise Thresholds Established Using DNL or for Another Cumulative Noise Metric.* The FAA has several noise thresholds that are informed by a dose-response curve (Schultz Curve [29]), which historically provided a useful method for representing the community response to aircraft noise. Two of the noise thresholds informed by the Schultz Curve are the FAA's significant noise impact threshold for actions being reviewed under the National Environmental Policy Act and the land use compatibility standards established in 14 CFR part 150, Appendix A. Both of these rely on the cumulative noise metric DNL and are referred to collectively in this question and questions 8–10 as ''the FAA noise thresholds.'' On January 11, 2021, the FAA published the results of the Neighborhood Environmental Survey,[30] a nationally representative dataset on community annoyance in response to aircraft noise. The Neighborhood Environmental Survey results show higher percentage of people who self-identify as ''highly annoyed'' by aircraft noise across all DNL levels studied in comparison to the Schultz Curve.

a. How should the FAA consider this information (*i.e.,* the Schultz Curve and Neighborhood Environmental Survey findings) when deciding whether to retain or modify the FAA noise thresholds [31] established using the DNL metric or to establish new FAA noise thresholds using other cumulative noise metrics? Please explain your reasoning.

b. Should the FAA consider other or additional information when deciding whether to retain or modify the FAA noise thresholds that were established using the DNL metric or to establish new FAA noise thresholds using other cumulative noise metrics? Please describe the reason for the recommendation and identify the data, information, or evidence that supports the recommendation.

c. How should research findings on auditory or non-auditory effects (*e.g.,* speech interference, sleep disturbance, cardiovascular health effects) of noise exposure caused by civil aircraft and vehicles be considered by the FAA when it decides whether to retain or modify the FAA noise thresholds [32] that were established using the DNL metric? How should the FAA consider this same research when deciding whether to establish new FAA noise thresholds using other cumulative noise metrics? Please explain your response.

d. In examining whether to change its metrics and thresholds for noise, the FAA needs reliable information to support any changes. One type of information that the FAA can rely on is epidemiological evidence. This means the study (scientific, systematic, and data-driven) of the distribution (frequency, pattern) and determinants (causes, risk factors) of health-related states and events (not just diseases) in specified populations (neighborhood, school, city, state, country, global). What amount of epidemiological evidence is sufficient to provide the FAA with a sound basis for establishing or modifying the FAA noise thresholds [33] either using the DNL metric or another cumulative noise metric? Please explain your response.

e. Should the FAA consider using factors other than annoyance to establish FAA noise thresholds [34] using the DNL metric or other cumulative noise metrics? What revisions to existing FAA noise thresholds or new noise thresholds do you recommend be

[29] *See* Schultz, T.J. 1978, ''Synthesis of Social Surveys on Noise Annoyance,'' *Journal of the Acoustical Society of America* 64(2): 377–405. The Schultz Curve in this document refers to the curve generated from a meta-analysis of social surveys which set forth a widely accepted relationship between DNL and the percentage of the population who are highly annoyed by noise. This meta-analysis was later validated by interagency government committees focused on aircraft noise issues. *See, e.g.,* Federal Agency Review of Selected Airport Noise Analysis Issues, 1992.

[30] Miller, Nicholas P., et al. *Analysis of the neighborhood environmental survey.* No. DOT/FAA/TC–21/4. 2021 available at: *https://www.airporttech.tc.faa.gov/Products/Airport-Safety-Papers-Publications/Airport-Safety-Detail/ArtMID/3682/ArticleID/2845/Analysis-of-NES. See also* FAA, *Overview of FAA Aircraft Noise Policy and Research Efforts: Request for Input on Research Activities to Inform Aircraft Noise Policy,* 86 FR 2722 (Jan. 13, 2021).

[31] As explained in this Notice in footnote 24, *infra,* when FAA refers to ''noise thresholds'' collectively, it means both the definition of the level of significant noise exposure for actions subject to environmental review requirements set out in FAA Order 1050.1F as well as the definitions of the levels of noise exposure that are deemed to be ''normally compatible'' with airport operations, as set forth in Table 1 of Appendix A to Part 150.

[32] *Id.*

[33] *Id.*

[34] *Id.*

established and why? Please explain your response.

8. *FAA Noise Thresholds Using Single-Event or Operational Metrics.* As the FAA learned from the results of the NES, people are bothered by individual aircraft noise events, but their sense of annoyance increases with the number of those noise events. Should the FAA consider employing new FAA noise thresholds [35] using single-event or operational metrics? If the answer is ''yes,'' which metrics should be used to establish the FAA noise thresholds? What should be the relevant noise exposure level for the new noise thresholds you propose? Please explain your reasoning. If the answer is ''no,'' please explain your reasoning.

9. *FAA Noise Thresholds for Low-Frequency Events.* Should FAA establish noise thresholds [36] for low-frequency events, such as those associated with the launch and reentry of commercial space transportation vehicles authorized by the FAA Office of Commercial Space Transportation? If the answer is ''yes,'' which metrics should be used to establish the noise thresholds? What should be the relevant noise exposure level for the new noise thresholds you propose? Please explain your reasoning. If the answer is ''no,'' please explain your reasoning.

10. *Miscellaneous.* What other issues or topics should the FAA consider in this review regarding noise metrics, the method of calculating them, the establishment of noise thresholds,[37] or FAA's method of communicating the change in noise exposure? Please explain your response.

11. *Literature Review.* In this review, the FAA will examine the body of scientific and economic literature to understand how aviation noise correlates with annoyance as well as environmental, economic, and health impacts. The FAA also will evaluate whether any of these impacts are statistically significant and the metrics that may be best suited to disclose these impacts. A bibliography of this body of research is available for review in the Background Materials tab in the Docket and as Appendix 1 to the FAA framing paper entitled, *The Foundational Elements of the Federal Aviation Administration Civil Aircraft Noise Policy: The Noise Measurement System, its Component Noise Metrics, and Noise Thresholds.* This framing paper is available at: *https://www.faa.gov/noisepolicyreview/NPR-framing.* Please identify any studies or data regarding civil aviation noise not already identified by the FAA in the bibliography that you believe the FAA should evaluate. Please explain the relevance and significance of the study or evidence and how it should inform FAA decisions regarding the policy.

III. Public Participation

Virtual Webinars

The FAA recognizes that the noise policy is of interest to Federal agencies, project proponents, airport sponsors, airport and corridor communities, and the public generally. As a result, the FAA is taking steps to ensure stakeholders can request clarification, ask questions, and provide written feedback. The FAA will hold virtual webinars to provide background information regarding the review and respond to technical matters.

Participants may join the virtual webinars via telephone or virtually using Zoom. Access information and registration instructions will be made available on the FAA's Noise Policy Review website, located at *https://www.faa.gov/noisepolicyreview.*

If there is not sufficient time to respond to all questions asked, the FAA will make supplementary materials available on the FAA's website at a later date, located at *https://www.faa.gov/noisepolicyreview.* Further instructions on signing up and participating in the virtual webinars will be made available on the FAA's website at a later date, located at *https://www.faa.gov/noisepolicyreview.* Supporting materials and written feedback to questions to which the FAA was unable to respond during the virtual webinar will be submitted to the docket as described above and posted to the FAA's website at *https://www.faa.gov/noisepolicyreview.*

We request members of the press to RSVP to the person listed in the **FOR FURTHER INFORMATION CONTACT** section at least two weeks prior to the meeting that you plan to attend.

The U.S. Department of Transportation is committed to providing equal access to this meeting for all participants. If you need alternative formats or services because of a disability, such as sign language, interpretation, or other ancillary aids, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section at least two weeks prior to the meeting that you plan to attend.

How do I prepare and submit written comments?

To ensure that your comments are filed correctly in the docket, please include the docket number of this document in your comments. Please review information available at *https://www.faa.gov/noisepolicyreview* to assist you with submitting your comment to the docket using the instructions given above under **ADDRESSES**.

Please note, if you are submitting comments electronically as PDF (Adobe) file, the FAA asks that the documents submitted be scanned using an Optical Character Recognition (OCR) process, to allow the FAA to search and copy certain portions of your submissions.

The FAA will consider your comments and consider appropriate revisions to its policy. The FAA will publish in the **Federal Register** a notice announcing the revisions it expects to make to its policy and identify the relevant agency documents that will express the revised policy, which elements of the agency document it expects to modify, and the process the FAA will use to issue and implement the revised policy.

Will the FAA consider late comments?

The FAA will consider all comments received before the close of business on the comment closing date indicated above under **DATES**. To the extent possible, the FAA will also consider comments received after that date.

How can I read the comments submitted by others?

You may read the comments received on the internet, identified by the docket number at the heading of this notice, at *https://www.regulations.gov.* You may also read comments at the address given above under **ADDRESSES**.

Issued in Washington, DC.

Kevin Welsh,

Executive Director, Office of Environment and Energy.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2018–0054; FMCSA–2018–0057; FMCSA–2020–0045]

Qualification of Drivers; Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of renewal of exemptions; request for comments.

SUMMARY: FMCSA announces its decision to renew exemptions for three individuals from the requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) that interstate commercial motor vehicle (CMV) drivers have ''no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause loss of consciousness or any loss of ability to control a CMV.'' The exemptions enable these individuals who have had one or more seizures and are taking anti-seizure medication to continue to operate CMVs in interstate commerce.

DATES: The exemptions are applicable on May 15, 2023. The exemptions expire on May 15, 2025. Comments must be received on or before May 31, 2023.

ADDRESSES: You may submit comments identified by the Federal Docket Management System Docket No. FMCSA–2018–0054, Docket No. FMCSA–2018–0057, or Docket No. FMCSA–2020–0045 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *www.regulations.gov/,* insert the docket number (FMCSA–2018–0054, FMCSA–2018–0057, or FMCSA–2020–0045) in the keyword box and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, and click on the ''Comment'' button. Follow the online instructions for submitting comments.
- *Mail:* Dockets Operations; U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590–0001 between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal Holidays.
- *Fax:* (202) 493–2251.

To avoid duplication, please use only one of these four methods. See the ''Public Participation'' portion of the **SUPPLEMENTARY INFORMATION** section for instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, FMCSA, DOT, 1200 New Jersey Avenue SE, Room W64–224, Washington, DC 20590–0001, (202) 366–4001, *fmcsamedical@dot.gov.* Office hours are from 8:30 a.m. to 5 p.m. ET Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Dockets Operations, (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Submitting Comments

If you submit a comment, please include the docket number for this notice (Docket No. FMCSA–2018–0054, Docket No. FMCSA–2018–0057, or Docket No. FMCSA–2020–0045), indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to *www.regulations.gov/,* insert the docket number (FMCSA–2018–0054, FMCSA–2018–0057, or FMCSA–2020–0045) in the keyword box and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, click the ''Comment'' button, and type your comment into the text box on the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. FMCSA will consider all comments and material received during the comment period.

B. Viewing Comments

To view comments go to *www.regulations.gov.* Insert the docket number (FMCSA–2018–0054, FMCSA–2018–0057, or FMCSA–2020–0045) in the keyword box and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, and click ''Browse Comments.'' If you do not have access to the internet, you may view the docket online by visiting Dockets Operations in Room W12–140 on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

C. Privacy Act

In accordance with 49 U.S.C. 31315(b)(6), DOT solicits comments from the public on the exemption request. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov.* As described in the system of records notice DOT/ALL 14 (Federal Docket Management System), which can be reviewed at *https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices,* the comments are searchable by the name of the submitter.

II. Background

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the FMCSRs for no longer than a 5-year period if it finds such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The statutes also allow the Agency to renew exemptions at the end of the 5-year period. However, FMCSA grants medical exemptions from the FMCSRs for a 2-year period to align with the maximum duration of a driver's medical certification.

The physical qualification standard for drivers regarding epilepsy found in 49 CFR 391.41(b)(8) states that a person is physically qualified to drive a CMV if that person has no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause the loss of consciousness or any loss of ability to control a CMV.

In addition to the regulations, FMCSA has published advisory criteria [1] to assist Medical Examiners in determining whether drivers with certain medical conditions are qualified to operate a CMV in interstate commerce.

The three individuals listed in this notice have requested renewal of their exemptions from the epilepsy and seizure disorders prohibition in § 391.41(b)(8), in accordance with FMCSA procedures. Accordingly, FMCSA has evaluated these applications for renewal on their merits and decided to extend each exemption for a renewable 2-year period.

III. Request for Comments

Interested parties or organizations possessing information that would otherwise show that any, or all, of these drivers are not currently achieving the statutory level of safety should immediately notify FMCSA. The

[1] These criteria may be found in APPENDIX A TO PART 391—MEDICAL ADVISORY CRITERIA, section H. *Epilepsy:* § 391.41(b)(8), paragraphs 3, 4, and 5, which is available on the internet at *https://www.gpo.gov/fdsys/pkg/CFR-2015-title49-vol5/pdf/CFR-2015-title49-vol5-part391-appA.pdf.*

Agency will evaluate any adverse evidence submitted and, if safety is being compromised or if continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b), FMCSA will take immediate steps to revoke the exemption of a driver.

IV. Basis for Renewing Exemptions

In accordance with 49 U.S.C. 31136(e) and 31315(b), each of the three applicants has satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition. The three drivers in this notice remain in good standing with the Agency, have maintained their medical monitoring and have not exhibited any medical issues that would compromise their ability to safely operate a CMV during the previous 2-year exemption period. In addition, for commercial driver's license (CDL) holders, the Commercial Driver's License Information System and the Motor Carrier Management Information System are searched for crash and violation data. For non-CDL holders, the Agency reviews the driving records from the State Driver's Licensing Agency. These factors provide an adequate basis for predicting each driver's ability to continue to safely operate a CMV in interstate commerce. Therefore, FMCSA concludes that extending the exemption for each renewal applicant for a period of 2 years is likely to achieve a level of safety equal to that existing without the exemption.

As of May 15, 2023, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following three individuals have satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition in the FMCSRs for interstate CMV drivers:

Kevin Addington (PA); Jose F.J. Maciel (CA); and John Shainline (PA).

The drivers were included in docket number FMCSA–2018–0054, FMCSA–2018–0057, or FMCSA–2020–0045. Their exemptions are applicable as of May 15, 2023 and will expire on May 15, 2025.

V. Conditions and Requirements

The exemptions are extended subject to the following conditions: (1) each driver must remain seizure-free and maintain a stable treatment during the 2-year exemption period; (2) each driver must submit annual reports from their treating physicians attesting to the stability of treatment and that the driver has remained seizure-free; (3) each driver must undergo an annual medical examination by a certified ME, as defined by § 390.5; and (4) each driver must provide a copy of the annual medical certification to the employer for retention in the driver's qualification file, or keep a copy of his/her driver's qualification file if he/she is self-employed. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official. The exemption will be rescinded if: (1) the person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b).

VI. Preemption

During the period the exemption is in effect, no State shall enforce any law or regulation that conflicts with this exemption with respect to a person operating under the exemption.

VII. Conclusion

Based on its evaluation of the three exemption applications, FMCSA renews the exemptions of the aforementioned drivers from the epilepsy and seizure disorders prohibition in § 391.41(b)(8). In accordance with 49 U.S.C. 31136(e) and 31315(b), each exemption will be valid for 2 years unless revoked earlier by FMCSA.

Larry W. Minor,

Associate Administrator for Policy.

BILLING CODE 4910–EX–P

DEPARTMENT OF THE TREASURY

Bureau of the Fiscal Service

Proposed Collection of Information: Claim for Relief on Account of Loss, Theft, or Destruction of U.S. Registered Securities

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. Currently the Bureau of the Fiscal Service within the Department of the Treasury is soliciting comments concerning the Claim for Relief on Account of Loss, Theft, or Destruction of U.S. Registered Securities.

DATES: Written comments should be received on or before June 30, 2023 to be assured of consideration.

ADDRESSES: Direct all written comments and requests for additional information to Bureau of the Fiscal Service, Bruce A. Sharp, Room #4006–A, P.O. Box 1328, Parkersburg, WV 26106–1328, or *bruce.sharp@fiscal.treasury.gov.*

SUPPLEMENTARY INFORMATION:

Title: Claim for Relief on Account of Loss, Theft, or Destruction of U.S. Registered Securities.

OMB Number: 1530–0029.

Form Number: FS Form 1025.

Abstract: The information is requested to establish ownership and support a request for relief due to the loss, theft, or destruction of United States Registered Securities.

Current Actions: Extension of a currently approved collection.

Type of Review: Regular.

Affected Public: Individuals or Households.

Estimated Number of Respondents: 10.

Estimated Time per Respondent: 55 minutes.

Estimated Total Annual Burden Hours: 9.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: 1. Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; 2. the accuracy of the agency's estimate of the burden of the collection of information; 3. ways to enhance the quality, utility, and clarity of the information to be collected; 4. ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and 5. estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: April 26, 2023.

Bruce A. Sharp,

Bureau PRA Clearance Officer.

Proposed Collection of Information: Affidavit of Forgery for United States Bonds/Notes

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. Currently the Bureau of the Fiscal Service within the Department of the Treasury is soliciting comments concerning the Affidavit of Forgery for United States Bonds/Notes.

DATES: Written comments should be received on or before June 30, 2023 to be assured of consideration.

ADDRESSES: Direct all written comments and requests for additional information to Bureau of the Fiscal Service, Bruce A. Sharp, Room #4006–A, P.O. Box 1328, Parkersburg, WV 26106–1328, or *bruce.sharp@fiscal.treasury.gov.*

SUPPLEMENTARY INFORMATION:

Title: Affidavit of Forgery for United States Bonds/Notes.

OMB Number: 1530–0040.

Form Number: FS Form 0974.

Abstract: The information is requested to certify that the signatures to the requests for payment, form, or application related to United States Savings Securities were forged.

Current Actions: Extension of a currently approved collection.

Type of Review: Regular.

Affected Public: Individuals or Households.

Estimated Number of Respondents: 10.

Estimated Time per Respondent: 15 minutes.

Estimated Total Annual Burden Hours: 3.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: 1. Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; 2. the accuracy of the agency's estimate of the burden of the collection of information; 3. ways to enhance the quality, utility, and clarity of the information to be collected; 4. ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and 5. estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: April 26, 2023.

Bruce A. Sharp,

Bureau PRA Clearance Officer.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for the Advanced Manufacturing Production Credit

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning the advanced manufacturing production credit.

DATES: Written comments should be received on or before June 30, 2023 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *pra.comments@irs.gov.* Please reference the information collection's ''OMB number 1545–2306 or Form number 7207'' in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Sara Covington (202) 317–5744, at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet, at *sara.l.covington@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Advanced Manufacturing Production Credit.

OMB Number: 1545–2306.

Form Number: Form 7207.

Abstract: This form is used to claim the advanced manufacturing production credit under section 45x for eligible components produced by the taxpayer and sold during the tax year in the taxpayer's trade or business to an unrelated person.

Current Actions: IRS is making revisions to the form and instructions to include Inflation Reduction Act of 2022 provisions for Tax Year 2024.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 1,000.

Estimated Time per Respondent: 3 hrs and 56 mins.

Estimated Total Annual Burden Hours: 3,930 hours.

The following paragraph applies to all the collections of information covered by this notice.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained if their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: April 25, 2023.

Andres Garcia Leon,

Supervisory Tax Analyst.

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This FY 2024 IPPS/LTCH PPS proposed rule would make payment and policy changes under the Medicare inpatient prospective payment system (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it would make payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This proposed rule would also make policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs. In this FY 2024 proposed rule, we are proposing to continue policies to address wage index disparities impacting low wage index hospitals. We are also proposing to make changes relating to Medicare graduate medical education (GME) for teaching hospitals and new technology add-on payments.

We are proposing to establish new requirements and revise existing requirements for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

In the Hospital VBP Program, we are proposing to add one new measure, substantively modify two existing measures, add technical changes to the administration of the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey, and change the scoring policy to include a health equity scoring adjustment and modify the Total Performance Score (TPS) maximum to be 110, resulting in numeric score range of 0 to 110. We are also providing estimated and newly established performance standards for the FY 2026 through FY 2029 program years for the Hospital VBP Program. In the HAC Reduction Program, we are proposing to establish a validation reconsideration process for data validation and to add an additional targeting criterion for validation. We are not proposing any changes to the Hospital Readmissions Reduction Program.

In the Hospital IQR Program, we are proposing to add three new measures, to update three existing measures, and to remove three measures. We are proposing changes to the validation process. Additionally, we are seeking public comment on the potential future adoption of two measures.

In the PPS-Exempt Cancer Hospital Quality Reporting Program (PCHQR) we are proposing to add four new measures and to modify an existing measure.

In the LTCH QRP we are proposing new measures, modifying an existing measure, removing measures and proposing to increase the LTCH QRP data completion thresholds for LTCH Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS) items. Additionally, we are we are seeking information on principles for selecting and prioritizing LTCH QRP quality measures and concepts under consideration for future years and provide an update on CMS' continued efforts to close the health equity gap.

Under various statutory authorities, we either discuss continued program implementation or propose to make changes to the Medicare IPPS, the LTCH PPS, other related payment methodologies and programs for FY 2024 and subsequent fiscal years, and other policies and provisions included in this rule. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).
- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.
- Sections 123(a) and (c) of the Balanced Budget Refinement Act of 1999 (BBRA) (Public Law (Pub. L.) 106–113) and section 307(b)(1) of the Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554) (as codified under section 1886(m)(1) of the

Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.

- Section 1814(l)(4) of the Act requires downward adjustments to the applicable percentage increase, beginning with FY 2015, for CAHs that do not successfully demonstrate meaningful use of certified electronic health record technology (CEHRT) for an EHR reporting payment for a payment adjustment year.
- Section 1814(l)(3) of the Act offered incentive payments under Medicare for critical access hospitals (CAHs) for certain payment years, if they successfully adopted and demonstrated meaningful use of CEHRT during an electronic health record (EHR) reporting period.
- Section 1814(l)(4) of the Act authorized downward payment adjustments under Medicare, beginning with FY 2015, for CAHs that do not successfully demonstrate meaningful use of CEHRT for an EHR reporting payment for a payment adjustment year.
- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. Hospitals paid under the IPPS with approved GME programs are paid for the indirect costs of training residents in accordance with section 1886(d)(5)(B) of the Act.
- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.
- Section 1886(b)(3)(B)(ix) of the Act requires downward adjustments to the applicable percentage increase, beginning with FY 2015 (and beginning with FY 2022 for subsection (d) Puerto Rico hospitals), for eligible hospitals that do not successfully demonstrate meaningful use of CEHRT for an EHR reporting period for a payment adjustment year.
- Section 1866(k) of the Act, which provides for the establishment of a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as ''PPS-exempt cancer hospitals.''
- Section 1886(n) of the Act, which requires the Secretary to offered incentive payments under Medicare for eligible hospitals for certain payment years, if they successfully adopted and demonstrated meaningful use of CEHRT during an electronic health record (EHR) reporting period.
- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program, under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year.
- Section 1886(p) of the Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.
- Section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act, which establishes the Hospital Readmissions Reduction Program. Under the program, payments for discharges from an applicable hospital as defined under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act directs the Secretary to compare hospitals with respect to the number of their Medicare-Medicaid dual-eligible beneficiaries in determining the extent of excess readmissions.
- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for an additional uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under section 1886(d)(5)(F) of the Act for DSH (''the empirically justified amount''), and (2) an additional payment for the DSH hospital's proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured; and (3) a hospital's uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.
- Section 1886(m)(5) of the Act, which requires the Secretary to reduce by two percentage points the annual update to the standard Federal rate for discharges for a long-term care hospital (LTCH) during the rate year for LTCHs that do not submit data in the form, manner, and at a time, specified by the Secretary.
- Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS, with implementation beginning in FY 2016. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B) by adding new clause (iv), which specifies that the IPPS comparable amount defined in clause (ii)(I) shall be reduced by 4.6 percent for FYs 2018 through 2026.
- Section 1899B of the Act, as added by section 2(a) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185), which provides for the establishment of standardized data reporting for certain post-acute care providers, including LTCHs.
- Section 1861(kkk) of the Act requires the Secretary to establish the conditions REHs must meet in order to participate in the Medicare program and which are considered necessary to ensure the health and safety of patients receiving services at these entities.
- Section 1877(i) of the Act, as added by section 6001(a)(3) of the Patient Protection and Affordable Care Act of 2010 (Affordable Care Act) (Pub. L. 111–148) and amended by section 1106 of the Health Care and Education Reconciliation Act of 2010 (HCERA) (Pub. L. 111–152), which requires the Secretary to establish and implement a process under which a hospital that is an ''applicable hospital'' or a ''high Medicaid facility'' may apply for an exception from the prohibition on expansion of facility capacity.

2. Summary of the Major Provisions

The following is a summary of the major provisions in this proposed rule. In general, these major provisions are being proposed as part of the annual update to the payment policies and payment rates, consistent with the applicable statutory provisions. A general summary of the changes in this proposed rule is presented in section

I.D. of the preamble of this proposed rule.

a. Proposed Modification to the Rural Wage Index Calculation Methodology

As discussed in section III.G.1 of this proposed rule, CMS has taken the opportunity to revisit the case law, prior public comments, and the relevant statutory language with regard to its policies involving the treatment of hospitals that have reclassified as rural under section 1886(d)(8)(E) of the Act, as implemented in the regulations under 42 CFR 412.103. After doing so, CMS now agrees that the best reading of section 1886(d)(8)(E) is that it instructs CMS to treat § 412.103 hospitals the same as geographically rural hospitals. Therefore, we believe it is proper to include these hospitals in all iterations of the rural wage index calculation methodology included in section 1886(d) of the Act, including all hold harmless calculations in that provision. Beginning with FY 2024, we are proposing to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations, and to exclude ''dual reclass'' hospitals (hospitals with simultaneous § 412.103 and Medicare Geographic Classification Review Board (MGCRB) reclassifications) implicated by the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act.

b. Proposed Continuation of the Low Wage Index Hospital Policy

To help mitigate growing wage index disparities between high wage and low wage hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We also indicated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, in order to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. As discussed in section III.G.4. of the preamble of this proposed rule, as we only have 1 year of relevant data at this time that we could use to evaluate any potential impacts of this policy, we believe it is necessary to wait until we have useable data from additional fiscal years before making any decision to modify or discontinue the policy. Therefore, for FY 2024, we are proposing to continue the low wage index hospital policy and the related budget neutrality adjustment.

c. DSH Payment Adjustment and Additional Payment for Uncompensated Care

Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, Medicare disproportionate share hospitals (DSHs) receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, is paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH will receive an additional payment based on its share of the total amount of uncompensated care for all Medicare DSHs for a given time period.

In this proposed rule, we are proposing to update our estimates of the three factors used to determine uncompensated care payments for FY 2024. We are also proposing to continue to use uninsured estimates produced by CMS' Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA) in conjunction with more recently available data in the calculation of Factor 2. Consistent with the regulation at § 412.106(g)(1)(iii)(C)(*11*), which was adopted in the FY 2023 IPPS/LTCH PPS final rule, for FY 2024, we will use the 3 most recent years of audited data on uncompensated care costs from Worksheet S–10 of the FY 2018, FY 2019, and FY 2020 cost reports to calculate Factor 3 in the uncompensated care payment methodology for all eligible hospitals.

Beginning with FY 2023, we established a supplemental payment for IHS and Tribal hospitals and hospitals located in Puerto Rico, to help prevent undue long-term financial disruption to these hospitals due to discontinuing use of the low-income insured days proxy in the uncompensated care payment methodology for these providers.

d. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. In this proposed rule, we are proposing to adopt modified versions of: (1) the Medicare Spending Per Beneficiary (MSPB) Hospital measure beginning with the FY 2028 program year; and (2) the Hospital-level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure beginning with the FY 2030 program year. We are also proposing to adopt the Severe Sepsis and Septic Shock: Management Bundle measure in the Safety Domain beginning with the FY 2026 program year. We are also proposing to make technical changes to the form and manner of the administration of the HCAHPS Survey measure under the Hospital VBP Program beginning with the FY 2027 program year in alignment with the Hospital IQR Program. Additionally, we are proposing to adopt a health equity scoring change for rewarding excellent care in underserved populations beginning with the FY 2026 program year. We are also proposing to modify the Total Performance Score (TPS) maximum to be 110, such that the TPS numeric score range would be 0 to 110 in order to afford even top-performing hospitals the opportunity to receive the additional health equity bonus points under the proposed health equity scoring change. We are also requesting feedback on potential additional future changes to the Hospital VBP Program scoring methodology that would address health equity.

e. Proposed Modification of the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) Measure in the Hospital IQR Program, PCHQR Program, and LTCH QRP

In this FY 2024 IPPS/LTCH PPS proposed rule, we are proposing to modify the COVID–19 Vaccination Coverage among Health Care Personnel (HCP) measure to replace the term ''complete vaccination course'' with the term ''up to date'' with regard to recommended COVID–19 vaccines beginning with the Quarter 4 (Q4) calendar year (CY) 2023 reporting period/FY 2025 payment determination for the Hospital IQR Program, and the FY 2025 program year for the LTCH QRP and the PCHQR Program.

f. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase.

In this FY 2024 IPPS/LTCH PPS proposed rule, we are proposing several

changes to the Hospital IQR Program. We are proposing the adoption of three new measures: (1) Hospital Harm—Pressure Injury electronic clinical quality measure (eCQM) beginning with the CY 2025 reporting period/FY 2027 payment determination; (2) Hospital Harm—Acute Kidney Injury eCQM beginning with the CY 2025 reporting period/FY 2027 payment determination; and (3) Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Inpatient) eCQM beginning with the CY 2025 reporting period/FY 2027 payment determination. We are proposing the modification of three current measures: (1) Hybrid Hospital-Wide All-Cause Risk Standardized Mortality (HWM) measure beginning with the FY 2027 payment determination; (2) Hybrid Hospital-Wide All-Cause Readmission (HWR) measure beginning with the FY 2027 payment determination; and (3) COVID–19 Vaccination among Healthcare Personnel (HCP) measure beginning with the Quarter 4 CY 2023 reporting period/FY 2025 payment determination. We are proposing the removal of three current measures: (1) Hospital-level Risk-standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure beginning with the April 1, 2025–March 31, 2028 reporting period/FY 2030 payment determination; (2) Medicare Spending Per Beneficiary (MSPB)—Hospital measure beginning with the CY 2026 reporting period/FY 2028 payment determination; and (3) Elective Delivery Prior to 39 Completed Weeks Gestation: Percentage of Babies Electively Delivered Prior to 39 Completed Weeks Gestation (PC–01) measure beginning with the CY 2024 reporting period/FY 2026 payment determination. We are proposing to codify our Measure Removal Factors. We are requesting comment on the potential future inclusion of geriatric measures and a potential future public-facing geriatric hospital designation in the Hospital IQR Program.

We are proposing two changes to current policies related to data submission, reporting, and validation: (1) Modification of the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey Measure beginning with the CY 2025 reporting period/FY 2027 payment determination; and (2) Modification of the targeting criteria for hospital validation for extraordinary circumstances exceptions (ECEs) beginning with the FY 2027 payment determination.

g. PPS-Exempt Cancer Hospital Quality Reporting Program

Section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. There is no financial impact to PCH Medicare payment if a PCH does not participate.

In this FY 2024 IPPS/LTCH PPS proposed rule, we are proposing to adopt four new measures for the PCHQR Program: (i) three health equity-focused measures: the Facility Commitment to Health Equity measure, the Screening for Social Drivers of Health measure, and the Screen Positive Rate for Social Drivers of Health measure; and (ii) a patient preference-focused measure, the Documentation of Goals of Care Discussions Among Cancer Patients measure. We are proposing to adopt a modified version of the COVID–19 Vaccination Coverage among Health Care Personnel (HCP) measure beginning with the FY 2025 program year. We are also proposing to publicly report the Surgical Treatment Complications for Localized Prostate Cancer (PCH–37) measure beginning with data from the FY 2025 program year, and modified data submission and reporting requirements for the HCAHPS survey measure beginning with the FY 2027 program year.

h. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

We are proposing several proposed changes to the LTCH QRP. Specifically, we are: (1) proposing to adopt a modified version of the COVID–19 Vaccination Coverage among Healthcare Personnel measure beginning with the FY 2025 LTCH QRP; (2) proposing to adopt the Discharge Function Score measure beginning with the FY 2025 LTCH QRP; (3) proposing to remove the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function measure beginning with the FY 2025 LTCH QRP; (4) proposing to remove the Application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function measure beginning with the FY 2025 LTCH QRP; (5) proposing to adopt the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure beginning with the FY 2026 LTCH QRP; (6) proposing to increase the LTCH QRP data completion thresholds for the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS) beginning with the FY 2026 LTCH QRP; and (7) proposing to begin public reporting of the Transfer of Health (TOH) Information to the Patient-Post-Acute Care (PAC) and TOH Information to the Provider-PAC measures beginning with the FY 2025 LTCH QRP.

i. Medicare Promoting Interoperability Program

In this proposed rule, we are proposing several changes to the Medicare Promoting Interoperability Program. Specifically, we are proposing to: (1) amend the definition of ''EHR reporting period for a payment adjustment year'' at 42 CFR 495.4 for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program, to define the electronic health record (EHR) reporting period in CY 2025 as a minimum of any continuous 180-day period within CY 2025; (2) update the definition of ''EHR reporting period for a payment adjustment year'' at § 495.4 for eligible hospitals such that, beginning in CY 2025, those hospitals that have not successfully demonstrated meaningful use in a prior year will not be required to attest to meaningful use by October 1st of the year prior to the payment adjustment year; (3) modify our requirements for the Safety Assurance Factors for EHR Resilience (SAFER) Guides measure beginning with the EHR reporting period in CY 2024, to require eligible hospitals and CAHs to attest ''yes'' to having conducted an annual self-assessment of all nine SAFER Guides at any point during the calendar year in which the EHR reporting period occurs; (4) modify the way we refer to the calculation considerations related to unique patients or actions for Medicare Promoting Interoperability Program objectives and measures for which there is no numerator and denominator; and (5) adopt three new eCQMs beginning with the CY 2025 reporting period for eligible hospitals and CAHs to select as one of their three self-selected eCQMs: the Hospital Harm—Pressure Injury eCQM, the Hospital Harm—Acute Kidney Injury eCQM, and the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Inpatient) eCQM.

j. Hospital Readmissions Reduction Program

We are not proposing any changes to the Hospital Readmissions Reduction Program. We note that all previously

finalized policies under this program will continue to apply and refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 49081 through 49094) for information on these policies.

k. Hospital-Acquired Condition Reduction Program

Section 1886(p) of the Act establishes the HAC Reduction Program under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions. In this proposed rule, we are proposing to establish a validation reconsideration process for hospitals who fail data validation beginning with the FY 2025 program year, affecting calendar year 2022 discharges. We are also proposing modification of the validation targeting criteria for extraordinary circumstances exceptions (ECEs) beginning with the FY 2027 program year, affecting calendar year 2024 discharges. We are also requesting feedback on potential future measures to adopt in the HAC Reduction Program that would address patient safety and health equity.

l. Safety Net Hospitals—Request for Information

As discussed in section X.D. of the preamble of this proposed rule, under the Biden-Harris Administration, CMS has made advancing health equity the first pillar in its Strategic Plan. Among the goals of CMS's health equity pillar is to evaluate policies to determine how CMS can support safety-net providers, including acute care hospitals. Safety-net hospitals play a crucial role in the advancement of health equity by making essential services available to the uninsured, underinsured, and other populations that face barriers to accessing healthcare. Because they serve many low-income and uninsured patients, safety-net hospitals may experience greater financial challenges compared to other hospitals, and these challenges have been exacerbated by the impacts of the COVID–19 pandemic. As MedPAC noted in its June 2022 Report to Congress, the limited resources of many safety-net hospitals may make it difficult for them to compete with other hospitals for labor and technology, and in some cases may even lead to hospital closure.

We are interested in public feedback on the challenges faced by safety-net hospitals, and potential approaches to help safety-net hospitals meet those challenges. In section X.C. of the preamble of this proposed rule, we discuss the Safety-Net Index (SNI), which was developed by MedPAC as a potential measure of the degree to which a hospital functions as a safety-net hospital. In addition, we discuss a potential alternative to the SNI, in which safety-net hospitals would be identified using area-level indices. We seek public feedback and comment on whether either of these two approaches would serve as an appropriate basis for identifying safety-net hospitals for Medicare purposes.

m. Proposed Changes to the Severity Level Designation for Z Codes Describing Homelessness

As discussed in section II.C. of the preamble of this proposed rule, we are proposing to change the severity level designation for social determinants of health (SDOH) diagnosis codes describing homelessness from non-complication or comorbidity (NonCC) to complication or comorbidity (CC) for FY 2024. Consistent with our annual updates to account for changes in resource consumption, treatment patterns, and the clinical characteristics of patients, CMS is recognizing homelessness as an indicator of increased resource utilization in the acute inpatient hospital setting.

Consistent with the Administration's goal of advancing health equity for all, including members of historically underserved and under-resourced communities, as described in the President's January 20, 2021 Executive Order 13985 on ''Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,'' [1] we also continue to be interested in receiving feedback on how we might otherwise foster the documentation and reporting of the diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data including in support of efforts to advance health equity.

3. Summary of Costs and Benefits

The following table provides a summary of the costs, savings, and benefits associated with the major provisions described in section I.A.3. of the preamble of this proposed rule.

BILLING CODE 4120–01–P

[1] *Available at* 86 FR 7009 (January 25, 2021) (*https://www.federalregister.gov/documents/2021/01/25/2021-01753/advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government*).

Provision Description	Description of Costs, Transfers, Savings, and Benefits
Modification to the Rural Wage Index Calculation Methodology	Beginning with FY 2024, we are proposing to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations, and to exclude "dual reclass" hospitals (hospitals with simultaneous § 412.103 and MGCRB reclassifications) implicated by the hold-harmless provision at section 1886(d)(8)(C)(ii) of the Act. Changes to the rural wage index which affect the rural floor would be implemented in a budget neutral manner.
Continuation of the Low Wage Index Hospital Policy	For FY 2024, we are proposing to continue the low wage index hospital policy and the related budget neutrality adjustment.
Medicare DSH Payment Adjustment and Additional Payment for Uncompensated Care and Supplemental Payment	For FY 2024, we are proposing to update our estimates of the three factors used to determine uncompensated care payments. We are proposing to continue to use uninsured estimates produced by OACT as part of the development of the NHEA in conjunction with more recently available data in the calculation of Factor 2. As provided in the regulation at § 412.106(g)(1)(iii)(C)(*1*), for FY 2024, we will use the 3 most recent years of audited data on uncompensated care costs from Worksheet S–10 of the FY 2018, FY 2019, and FY 2020 cost reports to calculate Factor 3 in the uncompensated care payment methodology for all eligible hospitals. In addition, for FY 2024, we are proposing to follow the same overall methodological approach as was used to calculate Factor 3 for FY 2023. We project that the amount available to distribute as payments for uncompensated care for FY 2024 would decrease by approximately $161 million, as compared to our estimate of the uncompensated care payments that will be distributed in FY 2023. The uncompensated care payments have redistributive effects, based on a hospital's uncompensated care amount relative to the uncompensated care amount for all hospitals that are projected to be eligible to receive Medicare DSH payments, and the calculated payment amount is not directly tied to a hospital's number of discharges. The supplemental payment is not budget neutral and we estimate the impact for FY 2024 to be approximately $90.3 million, which would be an approximately $6 million decrease from our estimate of supplemental payments in FY 2023.
Update to the IPPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this proposed rule, acute care hospitals are estimated to experience an increase of approximately $2.7 billion in FY 2024, primarily driven by: (1) a combined $3.2 billion increase in FY 2024 operating payments and capital payments, as well as changes in DSH and uncompensated care payments, and (2) a decrease of $466 million resulting from estimated changes in new technology add-on payments, as modeled for this proposed rule.
Update to the LTCH PPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this proposed rule, based on the best available data for the 333 LTCHs in our database, we estimate that the proposed changes to the payment rates and factors that we present in the preamble of and Addendum to this proposed rule, which reflect the proposed update to the LTCH PPS standard Federal payment rate for FY 2024, would result in an estimated decrease in payments in FY 2024 of approximately $24 million.
Proposed Changes to the Value-Based Incentive Payments under the Hospital VBP Program	We estimate that there would be no net financial impact to the Hospital VBP Program for the FY 2024 program year in the aggregate because, by law, the amount available for value-based incentive payments under the

BILLING CODE 4120–01–C

Provision Description	Description of Costs, Transfers, Savings, and Benefits
	program in a given year must be equal to the total amount of base operating MS-DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating MS-DRG payment amount reductions for the FY 2024 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2024 discharges is approximately $1.7 billion.
Proposal to Modify the COVID-19 Vaccination Coverage among Healthcare Personnel Measure in the Hospital IQR Program, PCHQR Program, and LTCH QRP	We estimate that the proposed modified version of this measure will have no financial impact on the LTCH QRP, PCHQR Program, or Hospital IQR Program
Proposed Changes to the Hospital-Acquired Condition (HAC) Reduction Program	Across the 400 subsection (d) hospitals selected for validation each year from the HAC Reduction Program, we estimate that our proposed changes in this proposed rule would not result in a change in information collection burden for the FY 2025 program year and subsequent years.
Proposed Changes to the Hospital IQR Program	Across 3,150 IPPS hospitals, we estimate that our proposed changes for the Hospital IQR Program in this proposed rule would result in a total information collection burden decrease of 146,674 hours associated with our proposed policies, and updated burden estimates and a total cost decrease of approximately $6,748,067 across a 4-year period from the CY 2024 reporting period/FY 2026 payment determination through the CY 2027 reporting period/FY 2029 payment determination.
Proposed Changes to the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program	Across 11 PCHs, we estimate that our proposed changes for the PCHQR Program in this proposed rule would result in a total information collection burden increase of 187.2 hours at a cost increase of $6,232. We estimate additional costs of $416,815 annually associated with our proposal to adopt the Documentation of Goals of Care Discussions Among Cancer Patients measure beginning with the FY 2026 program year.
Proposed Changes to the LTCH QRP	Across 330 LTCHs, we estimate that our changes for the LTCH QRP in this proposed rule will result in a total information collection burden decrease of 1,292 hours associated with our proposed policies and updated burden estimates and a total cost decrease of approximately $127,421 across the FY 2025 and FY 2026 LTCH QRP program years.
Proposed Changes to the Medicare Promoting Interoperability Program	Across 4,500 eligible hospitals and CAHs, we estimate that our proposed changes for the Medicare Promoting Interoperability Program in this proposed rule would not result in a change to the information collection burden for the CY 2024 EHR Reporting Period and subsequent years. We estimate additional annual costs associated with our proposed modification to the SAFER Guides measure to range from a minimum of $8,916,278 to a maximum of $108,976,725 beginning with the CY 2024 EHR Reporting Period.

B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Act sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these ''subsection (d) hospitals.'' Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for an additional Medicare payment beginning on October 1, 2013, that considers the amount of uncompensated care furnished by the hospital relative to all other qualifying hospitals.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. In general, to qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment. In addition, certain transformative new devices and certain antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway by demonstrating that, absent an add-on payment, they would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments and, beginning in FY 2023 for IHS and Tribal hospitals and hospitals located in Puerto Rico, the new supplemental payment.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as an isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

Under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through FY 2024. For discharges occurring on or after October 1, 2007, but before October 1, 2024, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years).

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and

psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system, subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis, subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, effective for LTCH's cost reporting periods beginning in FY 2016 cost reporting period, LTCHs are generally paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS.

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413. Section 1886(d)(5)(B) of the Act provides that prospective payment hospitals that have residents in an approved GME program receive an additional payment for each Medicare discharge to reflect the higher patient care costs of teaching hospitals relative to non-teaching hospitals. The additional payment is based on the indirect medical education (IME) adjustment factor, which is calculated using a hospital's ratio of residents to beds and a multiplier, which is set by Congress. Section 1886(d)(5)(B)(ii)(XII) of the Act provides that, for discharges occurring during FY 2008 and fiscal years thereafter, the IME formula multiplier is 1.35. The regulations regarding the indirect medical education (IME) adjustment are located at 42 CFR 412.105.

C. Summary of Provisions of Recent Legislation That Would Be Implemented in This Proposed Rule

1. The Consolidated Appropriations Act, 2023 (CAA 2023; Pub. L. 117–328)

Section 4101 of the CAA 2023 extended through FY 2024 the modified definition of a low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals in effect for FYs 2019 through 2022. Specifically, under section 1886(d)(12)(C)(i) of the Act, as amended, for FYs 2019 through 2024, a subsection (d) hospital qualifies as a low-volume hospital if it is more than 15 road miles from another subsection (d) hospital and has less than 3,800 total discharges during the fiscal year. Under section 1886(d)(12)(D) of the Act, as amended, for discharges occurring in FYs 2019 through 2024, the Secretary determines the applicable percentage increase using a continuous, linear sliding scale ranging from an additional 25 percent payment adjustment for low-volume hospitals with 500 or fewer discharges to a zero percent additional payment for low-volume hospitals with more than 3,800 discharges in the fiscal year.

Section 4102 of the CAA 2023 amended sections 1886(d)(5)(G)(i) and 1886(d)(5)(G)(ii)(II) of the Act to provide for an extension of the MDH program through FY 2024.

Section 4143 of the CAA 2023 amended section 1886(l)(2)(B) of the Act to specify that for portions of cost reporting periods occurring in each of calendar years (CYs) 2010 through 2019, the $60 million payment limit specified in that subparagraph is not to apply to the total amount of additional payments for nursing and allied health education to be distributed to hospitals that, as of December 29, 2022, were operating a school of nursing, a school of allied health, or a school of nursing and allied health. In addition, section 4143 of the CAA 2023 provides that in addition to not applying the $60 million limit for each of years 2010 through 2019, the Secretary shall not reduce direct GME payments by such additional payment amounts for such nursing and allied health education for portions of cost reporting periods occurring in the year.

D. Summary of the Provisions of This Proposed Rule

In this proposed rule, we set forth proposed payment and policy changes to the Medicare IPPS for FY 2024 operating costs and capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2024.

The following is a general summary of the changes that we are proposing to make in this proposed rule.

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of this proposed rule, we include the following:

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2024.
- Proposed recalibration of the MS–DRG relative weights.
- A discussion of the proposed FY 2024 status of new technologies approved for add-on payments for FY 2023, a presentation of our evaluation and analysis of the FY 2024 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by

Pub. L. 108–173, obtained in a town hall meeting) for applications not submitted under an alternative pathway, and a discussion of the proposed status of FY 2024 new technology applicants under the alternative pathways for certain medical devices and certain antimicrobial products.

- Proposed modifications to the new technology add-on payment application eligibility requirements for technologies that are not already Food and Drug Administration (FDA) market authorized to require such applicants to have a complete and active FDA market authorization request at the time of new technology add-on payment application submission, to provide documentation of FDA acceptance or filing, and to move the FDA marketing authorization deadline from July 1 to May 1, beginning with applications for FY 2025 (as discussed in section II.E.8. of the preamble of this proposed rule).

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble of this proposed rule, we propose revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but are not limited to, the following:

- The proposed FY 2024 wage index update using wage data from cost reporting periods beginning in FY 2019.
- Calculation, analysis, and implementation of the proposed occupational mix adjustment to the wage index for acute care hospitals for FY 2024 based on the 2019 Occupational Mix Survey.
- Proposed application of the rural, imputed and frontier State floors, and continuation of the low wage index hospital policy.
- Proposed revisions to the wage index for acute care hospitals, based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.
- Proposed adjustment to the wage index for acute care hospitals for FY 2023 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.
- Proposed labor-related share for the proposed FY 2024 wage index.

3. Payment Adjustment for Medicare Disproportionate Share Hospitals (DSHs) for FY 2024

In section IV. of the preamble of this proposed rule, we discuss the following:

- Proposed calculation of Factor 1 and Factor 2 of the uncompensated care payment methodology.
- Proposed methodological approach for determining the additional payments for uncompensated care for FY 2024, which is the same overall approach as was for FY 2023.

4. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section V. of the preamble of this proposed rule, we discuss proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

- Proposed inpatient hospital update for FY 2024.
- Proposed change related to the effective date of sole community hospital (SCH) classification in cases that involve a merger.
- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.
- Proposed payment adjustment for low-volume hospitals for FY 2024.
- Discussion of statutory extension of the MDH program through FY 2024.
- Proposed requirements for payment adjustments to hospitals under the HAC Reduction Program for FY 2024.
- Proposed changes to the regulations for GME payments when training occurs in REHs.
- Discussion of and proposed changes relating to the implementation of the Rural Community Hospital Demonstration Program in FY 2024.
- Proposed nursing and allied health education program Medicare Advantage (MA) add-on rates and direct GME MA percent reductions for CY 2022.
- Proposal to implement section 4143 of the CAA 2023 which waives the $60 million limit on annual nursing and allied health education program MA payments.
- Proposed update to the payment adjustment for certain clinical trial and expanded access use immunotherapy cases.

4. Proposed FY 2024 Policy Governing the IPPS for Capital-Related Costs

In section VI. of the preamble to this proposed rule, we discuss the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2024. In addition, we discuss a proposed change to how hospitals with a rural reclassification are treated for capital DSH payments.

5. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VII. of the preamble of this proposed rule, we discuss the following:

- Proposed changes to payments to certain excluded hospitals for FY 2024.
- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

6. Proposed Changes to the LTCH PPS

In section VIII. of the preamble of this proposed rule, we set forth proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2024.

7. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section IX. of the preamble of this proposed rule, we address the following:

- Proposal to adopt a modified version of the COVID–19 Vaccination Among Healthcare Personnel Measure in the Hospital IQR Program, PCHQR Program, and LTCH QRP
- Proposed requirements for the Hospital Inpatient Quality Reporting (IQR) Program.
- Proposed changes to the requirements for the quality reporting program for PPS exempt cancer hospitals (PCHQR Program).
- Proposed changes to the requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP), and a request for information on principles for selecting and prioritizing LTCH QRP quality measures and concepts under consideration for future years. We also provide an update on health equity.
- Proposed changes to requirements pertaining to eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

8. Other Proposals and Comment Solicitations Included in the Proposed Rule

Section X. of the preamble to this proposed rule includes the following:

- Proposals to establish requirements for additional information that an eligible facility would be required to submit when applying for enrollment as an REH.
- Proposed changes pertaining to the process for hospitals requesting an exception from the prohibition against facility expansion and program integrity restrictions on approved facility expansion.
- Solicitation of comments on potential approaches to address the challenges faced by safety-net hospitals, including an appropriate mechanism for identifying safety-net hospitals for Medicare policy purposes.
- Proposals to apply certain definitions included in the Disclosures

of Ownership and Additional Disclosable Parties Information for Skilled Nursing Facilities proposed rule published in the February 15, 2023 **Federal Register** (88 FR 9820) to all provider types that complete the Form CMS–855–A enrollment application.

9. Other Provisions of the Proposed Rule

Section XI.A. of the preamble of this proposed rule includes our discussion of the MedPAC Recommendations.

Section XI.B. of the preamble to this proposed rule includes a descriptive listing of the public use files associated with this proposed rule.

Section XII. of the preamble to this proposed rule includes the collection of information requirements for entities based on our proposals.

Section XIII. of the preamble to this proposed rule includes information regarding our responses to public comments.

10. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In sections II. and III. of the Addendum to this proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2024 prospective payment rates for operating costs and capital-related costs for acute care hospitals. We are proposing to establish the threshold amounts for outlier cases. In addition, in section IV. of the Addendum to this proposed rule, we address the proposed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2024 for certain hospitals excluded from the IPPS.

11. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum to this proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2024 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2024. We are proposing to establish the adjustments for the wage index, labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

12. Impact Analysis

In Appendix A of this proposed rule, we set forth an analysis of the impact the proposed changes would have on affected acute care hospitals, CAHs, LTCHs and other entities.

13. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of this proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provide our recommendations of the appropriate percentage changes for FY 2024 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

14. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2023 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We address these recommendations in Appendix B of this proposed rule. For further information relating specifically to the MedPAC March 2023 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's website at *https://www.medpac.gov*.

E. Use of the Best Available Data for the FY 2024 IPPS and LTCH PPS Ratesetting

We primarily use two data sources in the IPPS and LTCH PPS ratesetting: claims data and cost report data. The claims data source is the Medicare Provider Analysis and Review (MedPAR) file, which includes fully coded diagnostic and procedure data for all Medicare inpatient hospital bills for discharges in a fiscal year. The cost report data source is the Medicare hospital cost report data files from the most recent quarterly Healthcare Cost Report Information System (HCRIS) release. Our goal is always to use the best available data overall for ratesetting. Ordinarily, the best available MedPAR data is the most recent MedPAR file that contains claims from discharges for the fiscal year that is 2 years prior to the fiscal year that is the subject of the rulemaking. Ordinarily, the best available cost report data is based on the cost reports beginning 3 fiscal years prior to the fiscal year that is the subject of the rulemaking. However, due to the impact of the COVID–19 public health emergency (PHE) on our ordinary ratesetting data, we finalized modifications to our usual ratesetting procedures in the FY 2022 and FY 2023 IPPS/LTCH PPS final rules.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44789 through 44793), we discussed that the FY 2020 MedPAR claims file and the FY 2019 HCRIS dataset (the most recently available data at the time of rulemaking) both contained data that was significantly impacted by the COVID–19 PHE, primarily in that the utilization of services at IPPS hospitals and LTCHs was generally markedly different for certain types of services in FY 2020 than would have been expected in the absence of the PHE. We stated that the most recent vaccination and hospitalization data from the Centers for Disease Control and Prevention (CDC) available at the time of development of that rule supported our belief at the time that the risk of COVID–19 in FY 2022 would be significantly lower than the risk of COVID–19 in FY 2020 and there would be fewer COVID–19 hospitalizations for Medicare beneficiaries in FY 2022 than there were in FY 2020. Therefore, we finalized our proposal to use FY 2019 data for the FY 2022 ratesetting for circumstances where the FY 2020 data was significantly impacted by the COVID–19 PHE, based on the belief that FY 2019 data from before the COVID–19 PHE would be a better overall approximation of the FY 2022 inpatient experience at both IPPS hospitals and LTCHs.

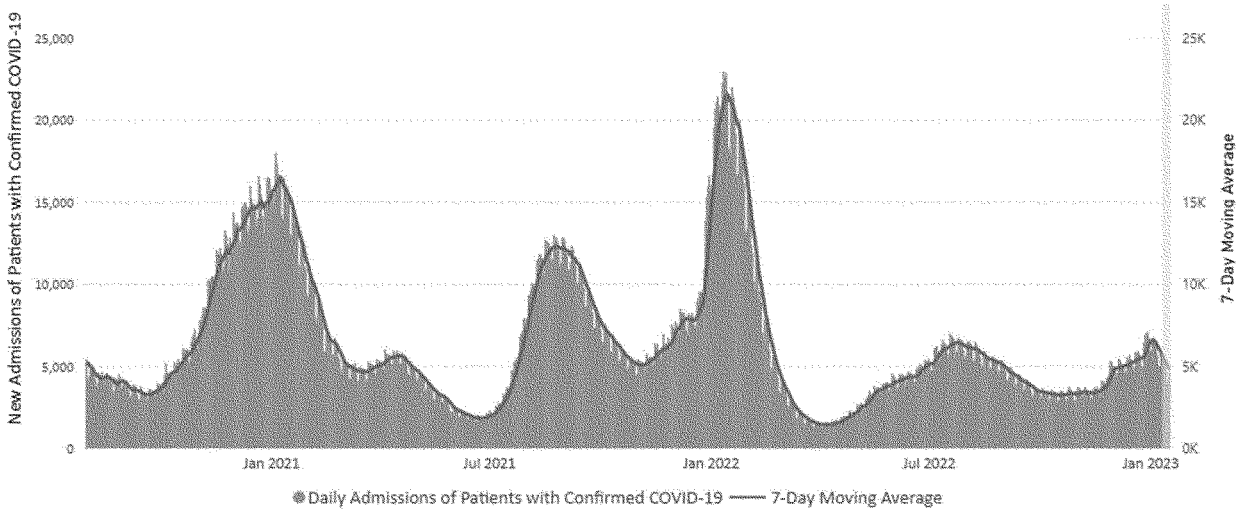
In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48795 through 48798), we discussed that the FY 2021 MedPAR claims file and the FY 2020 HCRIS dataset (the most recently available data at the time of rulemaking) both contain data that was significantly impacted by the COVID–19 PHE, primarily in that the utilization of services at IPPS hospitals and LTCHs was again generally markedly different for certain types of services in FY 2021 than would have been expected in the absence of the virus that causes COVID–19. Based on review of the most recent hospitalization data and information available from the CDC at the time of development of that rule, we stated our belief that it was reasonable to assume

that some Medicare beneficiaries would continue to be hospitalized with COVID–19 at IPPS hospitals and LTCHs in FY 2023. However, we also stated our belief that it would be reasonable to assume based on the information available at the time that there would be fewer COVID–19 hospitalizations in FY 2023 than in FY 2021. Accordingly, because we anticipated Medicare inpatient hospitalizations for COVID–19 would continue in FY 2023 but at a lower level, we finalized our proposal to use FY 2021 data for purposes of the FY 2023 IPPS and LTCH PPS ratesetting but with several modifications to our usual ratesetting methodologies to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries at IPPS hospitals and LTCHs as compared to FY 2021.

For this FY 2024 IPPS/LTCH PPS rulemaking, we have analyzed the FY 2022 MedPAR claims file and the FY 2021 HCRIS dataset, which are the most recently available data for FY 2024 ratesetting. We observed that certain shifts in inpatient utilization and costs that occurred in FY 2020 continued to persist in FY 2022. Specifically, the share of admissions at IPPS hospitals and LTCHs for MS–DRGs and MS–LTC–DRGs that are associated with the treatment of COVID–19 continued to remain at levels higher than those observed in the pre-pandemic data.

For example, in FY 2019, the share of IPPS cases grouped to MS–DRG 177 (Respiratory Infections and Inflammations with major complication or comorbidity (MCC)) was approximately 1 percent, while in FY 2022 the share of IPPS cases grouped to MS–DRG 177 was approximately 4 percent. Similarly, in FY 2019, the share of LTCH PPS standard Federal payment rate cases grouped to MS–LTC–DRG 207 (Respiratory System Diagnosis with Ventilator Support >96 Hours) was approximately 18 percent, while in FY 2022 the share of LTCH PPS standard Federal payment rate cases grouped to MS–LTC–DRG 207 was approximately 22 percent.

We have continued to monitor the latest COVID–19 related data and information released by the CDC. The CDC graph below illustrates new inpatient hospital admissions of patients with confirmed COVID–19 from August 1, 2020 through January 20, 2023. (*https://www.cdc.gov/coronavirus/2019-ncov/covid-data/covidview/01202023/images/hospitalizations.PNG?_=24630*, accessed January 20, 2023)



As seen in the graph, in the United States, patients continue to be hospitalized with the virus that causes COVID–19. The CDC has stated that new variants will continue to emerge. Viruses constantly change through mutation and sometimes these mutations result in a new variant of the virus. Some variants spread more easily and quickly than other variants, which may lead to more cases of COVID–19. Even if a variant causes less severe disease in general, an increase in the overall number of cases could cause an increase in hospitalizations.[2] Based on the information available at this time, we believe there will continue to be COVID–19 cases treated at IPPS hospitals and LTCHs in FY 2024, such that it is appropriate to use the FY 2022 data, as the most recent available data, for purposes of the FY 2024 IPPS and LTCH PPS ratesetting. However, based on the information available at this time, we do not believe there is a reasonable basis for us to assume that there will be a meaningful difference in the number of COVID–19 cases treated at IPPS hospitals and LTCHs in FY 2024 relative to FY 2022, such that modifications to our usual ratesetting methodologies would be warranted.

As such, we believe that FY 2022 data, as the most recent available data, is the best available data for approximating the inpatient experience at IPPS hospitals and LTCHs in FY 2024. Therefore, we are proposing to use the FY 2022 MedPAR claims file and the FY 2021 HCRIS dataset (which contains data from many cost reports ending in FY 2022 based on each hospital's cost reporting period) for purposes of the FY 2024 IPPS and LTCH PPS ratesetting. For the reasons discussed, we are not proposing any modifications to our usual ratesetting methodologies to account for the impact of COVID–19 on the ratesetting data.

II. Proposed Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis

[2] *https://www.cdc.gov/coronavirus/2019-ncov/variants/index.html*, accessed January 20, 2023.

that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. Adoption of the MS–DRGs and MS–DRG Reclassifications

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/rate year (RY) 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2023 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; 82 FR 38010 through 38085; 83 FR 41158 through 41258; 84 FR 42058 through 42165; 85 FR 58445 through 58596; 86 FR 44795 through 44961; and 87 FR 48800 through 48891, respectively).

For discussion regarding our previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case mix, we refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 48799 through 48800).

C. Proposed Changes to Specific MS–DRG Classifications

1. Discussion of Changes to Coding System and Basis for Proposed FY 2024 MS–DRG Updates

a. Conversion of MS–DRGs to the International Classification of Diseases, 10th Revision (ICD–10)

As of October 1, 2015, providers use the International Classification of Diseases, 10th Revision (ICD–10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS–DRG system instead of the ICD–9–CM coding system, which was used through September 30, 2015. The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the ICD–10–CM and ICD–10–PCS Official Guidelines for Coding and Reporting. For a detailed discussion of the conversion of the MS–DRGs to ICD–10, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56789).

b. Basis for Proposed FY 2024 MS–DRG Updates

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28127) and final rule (87 FR 48800 through 48801), beginning with FY 2024 MS–DRG classification change requests, we changed the deadline to request changes to the MS–DRGs to October 20 of each year to allow for additional time for the review and consideration of any proposed updates. We also described the new process for submitting requested changes to the MS–DRGs via a new electronic application intake system, Medicare Electronic Application Request Information System™ (MEARIS™), accessed at *https://mearis.cms.gov*. We stated that beginning with FY 2024 MS–DRG classification change requests, CMS will only accept requests submitted via MEARIS™ and will no longer consider requests sent via email. Additionally, we noted that within MEARIS™, we have built in several resources to support users, including a ''Resources'' section available at *https://mearis.cms.gov/public/resources* with technical support available under ''Useful Links'' at the bottom of the MEARIS™ site. Questions regarding the MEARIS™ system can be submitted to CMS using the form available under ''Contact'', also at the bottom of the MEARIS™ site.

We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the request for MS–DRG classification changes to CMS. The aforementioned burden is subject to the Paperwork Reduction Act (PRA) of 1995 and approved under Office of Management and Budget (OMB) control number 0938–1431 and has an expiration date of 09/30/2025.

As noted previously, interested parties had to submit MS–DRG classification change requests for FY 2024 by October 20, 2022. As we have discussed in prior rulemaking, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. We have found that, with the implementation of ICD–10, some types of requested changes to the MS–DRG classifications require more extensive research to identify and analyze all of the data that are relevant to evaluating the potential change. We note in the discussion that follows those topics for which further research and analysis are required, and which we will continue to consider in connection with future rulemaking. Interested parties should submit any comments and suggestions for FY 2025 by October 20, 2023 via MEARIS™ at: *https://mearis.cms.gov/public/home*.

As we did for the FY 2023 IPPS/LTCH PPS proposed rule, for this FY 2024 IPPS/LTCH PPS proposed rule we are providing a test version of the ICD–10 MS–DRG GROUPER Software, Version 41, so that the public can better analyze and understand the impact of the proposals included in this proposed rule. We note that this test software reflects the proposed GROUPER logic for FY 2024. Therefore, it includes the new diagnosis and procedure codes that are effective for FY 2024 as reflected in Table 6A.—New Diagnosis Codes—FY 2024 and Table 6B.—New Procedure Codes—FY 2024 associated with this proposed rule and does not include the diagnosis codes that are invalid beginning in FY 2024 as reflected in Table 6C.—Invalid Diagnosis Codes—FY 2024 associated with this proposed rule. We note that at the time of the development of this proposed rule there were no procedure codes designated as invalid for FY 2024, and therefore, there is no Table 6D—Invalid Procedure Codes—FY 2024 associated with this proposed rule. These tables are not published in the Addendum to this proposed rule, but are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to this proposed rule. Because the diagnosis codes no longer valid for FY 2024 are not reflected in the test software, we are making available a supplemental file in Table 6P.1a that includes the mapped Version 41 FY 2024 ICD–10–CM codes and the deleted Version 40.1 FY 2023 ICD–10–CM codes that should be used for testing purposes with users' available claims data. Therefore, users will have access to the

test software allowing them to build case examples that reflect the proposals included in this proposed rule. In addition, users will be able to view the draft version of the ICD–10 MS–DRG Definitions Manual, Version 41.

The test version of the ICD–10 MS–DRG GROUPER Software, Version 41, the draft version of the ICD–10 MS–DRG Definitions Manual, Version 41, and the supplemental mapping files in Table 6P.1a of the FY 2023 and FY 2024 ICD–10–CM diagnosis codes are available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

Following are the changes that we are proposing to the MS–DRGs for FY 2024. We are inviting public comments on each of the MS–DRG classification proposed changes, as well as our proposals to maintain certain existing MS–DRG classifications discussed in this proposed rule. In some cases, we are proposing changes to the MS–DRG classifications based on our analysis of claims data and clinical appropriateness. In other cases, we are proposing to maintain the existing MS–DRG classifications based on our analysis of claims data and clinical appropriateness. For this FY 2024 IPPS/LTCH PPS proposed rule, our initial MS–DRG analysis was based on ICD–10 claims data from the September 2022 update of the FY 2022 MedPAR file, which contains hospital bills received from October 1, 2021, through September 30, 2022. In our discussion of the proposed MS–DRG reclassification changes, we refer to these claims data as the ''September 2022 update of the FY 2022 MedPAR file.'' Separately, where otherwise indicated, additional analysis was based on ICD–10 claims data from the December 2022 update of the FY 2022 MedPAR file, which contains hospital bills received by CMS through December 31, 2022, for discharges occurring from October 1, 2021 through September 30, 2022. In our discussion of the proposed MS–DRG reclassification changes, we refer to these claims data as the ''December 2022 update of the FY 2022 MedPAR file.'' Specifically, as discussed further in this section, we used the additional claims data available in the December 2022 update of the FY 2022 MedPAR file to assess the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split, as well as to simulate restructuring of any proposed MS–DRGs, to assess the case counts and other criteria for determining whether a proposed new base MS–DRG would satisfy the criteria to create subgroups.

In deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We evaluate patient care costs using average costs and lengths of stay and rely on clinical factors to determine whether patients are clinically distinct or similar to other patients represented in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58448), we finalized our proposal to expand our existing criteria to create a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS–DRG. Specifically, we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. We stated we believed that applying these criteria to the NonCC subgroup would better reflect resource stratification as well as promote stability in the relative weights by avoiding low volume counts for the NonCC level MS–DRGs. We noted that in our analysis of MS–DRG classification requests for FY 2021 that were received by November 1, 2019, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups. We also noted that the application of the NonCC subgroup criteria going forward may result in modifications to certain MS–DRGs that are currently split into three severity levels and result in MS–DRGs that are split into two severity levels. We stated that any proposed modifications to the MS–DRGs would be addressed in future rulemaking consistent with our annual process and reflected in Table 5—Proposed List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay for the applicable fiscal year.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798), we finalized a delay in applying this technical criterion to existing MS–DRGs until FY 2023 or future rulemaking, in light of the PHE. Interested parties recommended that a complete analysis of the MS–DRG changes to be proposed for future rulemaking in connection with the expanded three-way severity split criteria be conducted and made available to enable the public an opportunity to review and consider the redistribution of cases, the impact to the relative weights, payment rates, and hospital case mix to allow meaningful comment prior to implementation.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48803), we also finalized a delay in application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split in light of the ongoing PHE and until such time additional analyses can be performed to assess impacts, as discussed in response to public comments in the FY 2022 and FY 2023 IPPS/LTCH PPS final rules.

In our analysis of the MS–DRG classification requests for FY 2024 that we received by October 20, 2022, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups, as described in the following table.

BILLING CODE 4120–01–P

Criteria Number and Description	Three-Way Split 123 (MCC vs CC vs NonCC)	Two-Way Split 1_23 MCC vs (CC+NonCC)	Two-Way Split 12_3 (MCC+CC) vs NonCC
1. At least 500 cases in the MCC/CC/NonCC group	500+ cases for MCC group; and 500+ cases for CC group; and 500+ cases for NonCC group	500+ cases for MCC group; and 500+ cases for (CC+NonCC) group	500+ cases for (MCC+CC) group; and 500+ cases for NonCC group
2. At least 5% of the patients are in the MCC/CC/NonCC group	5%+ cases for MCC group; and 5%+ cases for CC group; and 5%+ cases for NonCC group	5%+ cases for MCC group; and 5%+ cases for (CC+NonCC) group	5%+ cases for (MCC+CC) group; and 5%+ cases for NonCC group
3. There is at least a 20% difference in average cost between subgroups	20%+ difference in average cost between MCC group and CC group; and 20%+ difference in average cost between CC group and NonCC group	20%+ difference in average cost between MCC group and (CC+NonCC) group	20%+ difference in average cost between (MCC+ CC) group and NonCC group
4. There is at least a $2,000 difference in average cost between subgroups	$2,000+ difference in average cost between MCC group and CC group; and $2,000+ difference in average cost between CC group and NonCC group	$2,000+ difference in average cost between MCC group and (CC+ NonCC) group	$2,000+ difference in average cost between (MCC+ CC) group and NonCC group
5. The R2 of the split groups is greater than or equal to 3	R2 > 3.0 for the three way split within the base MS-DRG	R2 > 3.0 for the two way 1_23 split within the base MS-DRG	R2 > 3.0 for the two way 12_3 split within the base MS-DRG

In general, once the decision has been made to propose to make further modifications to the MS–DRGs as described previously, such as creating a new base MS–DRG, or in our evaluation of a specific MS–DRG classification request to split (or subdivide) an existing base MS–DRG into severity levels, all five criteria must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. We note that in our analysis of requests to create a new MS–DRG, we typically evaluate the most recent year of MedPAR claims data available. For example, we stated earlier that for this FY 2024 IPPS/LTCH PPS proposed rule, our initial MS–DRG analysis was generally based on ICD–10 claims data from the September 2022 update of the FY 2022 MedPAR file, with the additional claims data available in the December 2022 update of the FY 2022 MedPAR file used to assess the case counts and other criteria for determining whether a proposed new base MS–DRG would satisfy the criteria to create subgroups. However, in our evaluation of requests to split an existing base MS–DRG into severity levels, as noted in prior rulemaking (80 FR 49368), we typically analyze the most recent two years of data. This analysis includes 2 years of MedPAR claims data to compare the data results from 1 year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year's data fluctuation and also, to validate that the established severity levels within a base MS–DRG are supported. The first step in our process of evaluating if the creation of a new CC subgroup within a base MS–DRG is warranted is to determine if all the criteria is satisfied for a three-way split. In applying the criteria for a three-way split, a base MS–DRG is initially subdivided into the three subgroups: MCC, CC, and NonCC. Each subgroup is then analyzed in relation to the other two subgroups using the volume (Criteria 1 and 2), average cost (Criteria 3 and 4), and reduction in variance (Criteria 5). If the criteria fail, the next step is to determine if the criteria are satisfied for a two-way split. In applying the criteria for a two-way split, a base MS–DRG is initially subdivided into two subgroups: ''with MCC'' and ''without MCC'' (1_23) or ''with CC/MCC'' and ''without CC/MCC'' (12_3). Each subgroup is then analyzed in relation to the other using the volume (Criteria 1 and 2), average cost (Criteria 3 and 4), and reduction in variance (Criteria 5). If the criteria for both of the two-way splits fail, then a split (or CC subgroup) would generally not be warranted for that base MS–DRG. If the three-way split fails on any one of the five criteria and all five criteria for both two-way splits (1_23 and 12_3) are met, we would apply the two-way split with the highest R2 value. We note that if the request to split (or subdivide) an existing base MS–DRG into severity levels specifies the request is for either one of the two-way splits (1_23 or 12_3), in response to the specific request, we will evaluate the criteria for both of the two-way splits, however we do not also evaluate the criteria for a three-way split.

As previously noted, to validate whether the established severity levels within a base MS–DRG are supported, we typically analyze the most recent two years of MedPAR claims data. For this FY 2024 IPPS/LTCH PPS proposed rule, using the December 2022 update of the FY 2022 MedPAR file and the March 2022 update of the FY 2021 MedPAR file, we also analyzed how applying the

NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would potentially affect the MS–DRG structure in connection with the proposed FY 2024 MS–DRG classification changes. While, as previously noted, our MS–DRG analysis for this FY 2024 IPPS/LTCH PPS proposed rule was otherwise based on ICD–10 claims data from the September 2022 update of the FY 2022 MedPAR file, we utilized the additional claims data available from the December 2022 update of the FY 2022 MedPAR file for purposes of assessing the application of the NonCC subgroup criteria to these existing MS–DRGs as well as to determine whether a proposed new base MS–DRG satisfies the criteria to create subgroups. Findings from our analysis indicated that approximately 45 base MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. Specifically, we found that applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would result in the potential deletion of 135 MS–DRGs (45 MS–DRGs × 3 severity levels = 135) and the potential creation of 86 new MS–DRGs. We refer the reader to Table 6P.10—Potential MS–DRG Changes with Application of the NonCC Subgroup Criteria and Detailed Data Analysis- FY 2024 associated with this proposed rule and available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* for detailed information, including the criteria to create subgroups in Table 6P.10a (as also set forth in the preceding table) and the list of the 135 MS–DRGs that would potentially be subject to deletion and the list of the 86 MS–DRGs that would potentially be created in Table 6P.10b. We note that we also identified an additional 12 obstetric MS–DRGs (4 base MS–DRGs x 3 severity levels=12) that would be subject to change based on the application of the three-way severity level split criterion, as reflected in our data analysis in Table 6P.10c associated with this proposed rule. However, in response to prior public comments expressing concern about the historical low volume of the obstetric related MS–DRGs being subject to application of the NonCC subgroup criteria and consistent with our discussion in prior rulemaking regarding this population in our Medicare claims data and the development of these MS–DRGs (83 FR 41210), we believe it may be appropriate to exclude these MS–DRGs from application of the NonCC subgroup criteria. The list of 12 obstetric MS–DRGs is shown in the following table.

List of 12 Obstetric MS-DRGs to Potentially Exclude from Application of the NonCC Subgroup Criteria

MS-DRG	Description
783	Cesarean Section with Sterilization with MCC
784	Cesarean Section with Sterilization with CC
785	Cesarean Section with Sterilization without CC/MCC
796	Vaginal Delivery with Sterilization and/or D&C with MCC
797	Vaginal Delivery with Sterilization and/or D&C with CC
798	Vaginal Delivery with Sterilization and/or D&C without CC/MCC
817	Other Antepartum Diagnoses with O.R. Procedures with MCC
818	Other Antepartum Diagnoses with O.R. Procedures with CC
819	Other Antepartum Diagnoses with O.R. Procedures without CC/MCC
831	Other Antepartum Diagnoses without O.R. Procedures with MCC
832	Other Antepartum Diagnoses without O.R. Procedures with CC
833	Other Antepartum Diagnoses without O.R. Procedures without CC/MCC

BILLING CODE 4120–01–C

We also refer the reader to Table 6P.10d for the data analysis of all 49 base MS–DRGs that would be subject to change based on the application of the three-way severity level split criterion and to Table 6P.10e for the corresponding data dictionary that describes the meaning of the data elements and assists with interpretation of the data related to our analysis with application of the NonCC subgroup criteria. We note, in our analysis of the claims data and as reflected in Table 6P.10d, we identified four base MS–DRGs currently subdivided with a three-way severity level split (4 base MS–DRGs × 3 severity levels = 12 MS–DRGs) that result in the potential creation of a single, base MS–DRG when grouped under the proposed V41 GROUPER software with application of the NonCC subgroup criteria. As shown in Table 6P.10d, the four current base MS–DRGs (excluding the 4 obstetric related base DRGs) are base MS–DRGs 283, 296, 411 and 799. In addition to not satisfying the criterion that there be at least 500 cases in the NonCC subgroup for a three-way severity level split, these four base MS–DRGs also failed one or more of the other criteria to create subgroups. For example, our review of base MS–DRGs 283 and 296 showed they failed the criterion that there be at least 5% or more of the patient cases in the NonCC subgroup. For base MS–DRG 411, we found the criterion that there be at least 500 cases in each subgroup for a three-way severity level split, as well as in each subgroup for both of the two-way severity level splits, was not met. Lastly, for base MS–DRG 799, we found less than 500 cases in at least two of three subgroups for a three-way severity level split, as well as for at least one of the two subgroups for a two-way severity level split, and the R2 value was less than 3.0 for the two-way severity level split.

We also refer the reader to Table 6P.10f for the alternate cost weight analysis with application of the NonCC subgroup criteria that includes transfer-adjusted cases from the December 2022 update of the FY 2022 MedPAR file under the proposed V41 ICD–10 MS–

DRG GROUPER Software, the MS–DRG relative weights calculated under the proposed V41 ICD–10 MS–DRG GROUPER Software, the alternate MS–DRG relative weights calculated with application of the NonCC subgroup criteria using an alternate version of the ICD–10 MS–DRG GROUPER Software, Version 41.A (discussed in more detail in this section of this proposed rule), and the change in MS–DRG relative weights between those calculated under the proposed V41 GROUPER Software and those calculated under the alternate V41.A GROUPER Software. We note that to facilitate the structural comparison between the proposed V41 GROUPER and the alternate V41.A GROUPER, the relative weights calculated using the proposed V41 GROUPER Software (column F) do not reflect application of the 10-percent cap. We further note that changes in the status for transfer adjusted cases are reflected for the relative weights calculated using the proposed V41 GROUPER Software only and are not reflected for the alternate MS–DRG weights with application of the NonCC subgroup criteria. We note, as shown in Table 6P.10f, that we found five MS–DRGs for which there appears to be a greater than negative 10% change between the relative weight calculated under the proposed V41 GROUPER Software and the calculated alternate relative weight under the V41.A GROUPER Software with application of the NonCC subgroup criteria. As shown in Table 6P.10f, the five MS–DRGs are existing MS–DRG 021 (potential new MS–DRG 105), existing MS–DRG 411 (potential new MS–DRG 426), existing MS–DRG 573 (potential new MS–DRG 529), existing MS–DRG 574 (potential new MS–DRG 530), and existing MS–DRG 799 (potential new MS–DRG 649). Of the five existing MS–DRGs, two of the MS–DRGs are those for which a new single, base MS–DRG would potentially be created from the current three-way split, as previously described: MS–DRG 411 (potential new MS–DRG 426) and MS–DRG 799 (potential new MS–DRG 649). The findings are consistent with what we would expect given the low volume of cases in the NonCC subgroups compared to the volume of cases in the CC subgroups for these MS–DRGs.

As noted in prior rulemaking, any potential MS–DRG updates to be considered for a future proposal in connection with application of the NonCC subgroup criteria would also involve a redistribution of cases, which would impact the relative weights, and, thus, the payment rates proposed for particular types of cases. As such, and in response to prior public comments requesting that further analysis of the application of the NonCC subgroup criteria be made available, in addition to Table 6P.10f, we are making available additional files reflecting application of the NonCC subgroup criteria in connection with the proposed FY 2024 MS–DRG changes, using the December 2022 update of the FY 2022 MedPAR file. These additional files include an alternate Table 5—Alternate List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay, an alternate Length of Stay (LOS) Statistics file, an alternate Case Mix Index (CMI) file, and an alternate After Outliers Removed and Before Outliers Removed (AOR_BOR) file. The files are available in association with this proposed rule on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*.

For this FY 2024 IPPS/LTCH PPS proposed rule we are also providing an alternate test version of the ICD–10 MS–DRG GROUPER Software, Version 41.A, so that the public can better analyze and understand the impact on the proposals included in this proposed rule if the NonCC subgroup criteria were to be applied to existing MS–DRGs with a three-way severity level split. We note that this alternate test software reflects the proposed GROUPER logic for FY 2024 as modified by the application of the NonCC subgroup criteria. Therefore, it includes the new diagnosis and procedure codes that are effective for FY 2024 as reflected in Table 6A.—New Diagnosis Codes—FY 2024 and Table 6B.—New Procedure Codes—FY 2024 associated with this proposed rule and does not include the diagnosis codes that are invalid beginning in FY 2024 as reflected in Table 6C.—Invalid Diagnosis Codes—FY 2024 associated with this proposed rule. As previously noted, at the time of the development of this proposed rule there were no procedure codes designated as invalid for FY 2024, and therefore, there is no Table 6D– Invalid Procedure Codes—FY 2024 associated with this proposed rule. These tables are not published in the Addendum to this proposed rule, but are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to this proposed rule. Because the diagnosis codes no longer valid for FY 2024 are not reflected in the alternate test software, we are making available a supplemental file in Table 6P.1a that includes the mapped Version 41 FY 2024 ICD–10–CM codes and the deleted Version 40.1 FY 2023 ICD–10–CM codes that should be used for testing purposes with users' available claims data. Therefore, users will have access to the alternate test software allowing them to build case examples that reflect the proposals included in this proposed rule with application of the NonCC subgroup criteria. Because the potential MS–DRG changes with application of the NonCC subgroup criteria are available in Table 6P.10b associated with this proposed rule, an alternate version of the ICD–10 MS–DRG Definitions Manual was not developed.

The alternate test version of the ICD–10 MS–DRG GROUPER Software, Version 41.A, and the supplemental mapping files in Table 6P.1a of the FY 2023 and FY 2024 ICD–10–CM diagnosis codes are available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

After delaying the application of the NonCC subgroup criteria for two years, and in response to prior public comments, we are making available these additional analyses reflecting application of the criteria in connection with the proposed FY 2024 MS–DRG changes for public review and comment, to inform application of the NonCC subgroup criteria for FY 2025 rulemaking.

We are proposing to continue to delay application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split for FY 2024. We are interested in hearing feedback regarding the experience of large urban hospitals, rural hospitals, and other hospital types and will take commenters' feedback into consideration for our development of the FY 2025 proposed rule.

2. Major Diagnostic Category (MDC) 01: (Diseases and Disorders of the Nervous System): Epilepsy With Neurostimulator

The Responsive Neurostimulator (RNS®) System is a cranially implanted neurostimulator and is a treatment option for persons diagnosed with medically intractable epilepsy, a brain disorder characterized by persistent seizure activity which despite maximal medical treatment, remains sufficiently debilitating. Cases involving the use of the RNS® System are identified by the reporting of an ICD–10–PCS code combination capturing a neurostimulator generator inserted into the skull with the insertion of a

neurostimulator lead into the brain and the cases are assigned to MS–DRG 023 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator) when reported with a principal diagnosis of epilepsy. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 40.1, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*, for complete documentation of the GROUPER logic for MS–DRG 023.

As discussed in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38015 through 38019), we finalized our proposal to reassign all cases with a principal diagnosis of epilepsy and one of the following ICD–10–PCS code combinations capturing cases with a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) to MS–DRG 023 even if there is no MCC reported:

- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach);
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach); and
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H04MZ (Insertion of neurostimulator lead into brain, percutaneous endoscopic approach).

We also finalized our proposed change to the title of MS–DRG 023 from ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System (CNS) Principal Diagnosis (PDX) with MCC or Chemo Implant'' to ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System (CNS) Principal Diagnosis (PDX) with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator'' to reflect the modifications to the MS–DRG structure.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58459 through 58462), we discussed a request to reassign cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain from MS–DRG 023 to MS–DRG 021 (Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with CC) or to reassign these cases to another MS–DRG for more appropriate payment. We stated that while the results of our claims analysis indicated that the average costs of cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator), and a principal diagnosis of epilepsy are higher compared to the average costs for all cases in their assigned MS–DRG, we could not ascertain from the claims data the resource use specifically attributable to the procedure during a hospital stay. We stated that we believed that further analysis of cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator), and a principal diagnosis of epilepsy was needed prior to proposing any further reassignment of these cases to ensure clinical coherence between these cases and the other cases with which they may potentially be grouped and therefore did not propose to reassign cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) from MS–DRG 023 to MS–DRG 021. We also did not propose to reassign Responsive Neurostimulator (RNS®) System cases to another MS–DRG. We stated we expected that, in future years, we would have additional data that could be used to evaluate the potential reassignment of cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator), and a principal diagnosis of epilepsy.

For this FY 2024 IPPS/LTCH PPS proposed rule, we received a similar request to reassign cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain from MS–DRG 023 to MS–DRG 021 or reassign all cases currently assigned to MS–DRG 023 that involve a craniectomy or a craniotomy with the insertion of device implant and create a new MS–DRG for these cases. The requestor acknowledged both the refinements made to MS–DRG 023 effective for FY 2018 and the discussion in FY 2021 rulemaking, but stated that cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) are negatively impacted from a payment perspective in their current MS–DRG assignment due to the large number of cases, with a wide range of principal diagnoses, procedures, and procedure approaches, also assigned to MS–DRG 023 and MS–DRG 024 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC) and therefore continue to be underpaid. The requestor performed its own analysis of Medicare claims data and stated that it found that the average costs of cases describing the insertion of the RNS® neurostimulator were significantly higher than the average costs of all cases in their current assignment to MS–DRG 023, and as a result, cases describing the insertion of the RNS® neurostimulator are not being adequately reimbursed.

The requestor suggested the following two options for MS–DRG assignment updates: (1) reassign cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) from MS–DRG 023 to MS–DRG 021 with a change in title to ''Intracranial Vascular Procedures with PDX Hemorrhage with CC or Craniectomy with Neurostimulator;'' or (2) extract all cases from MS–DRG 023 involving a craniectomy/craniotomy with device implant and create a new MS–DRG for these cases.

The requestor acknowledged that the relatively low volume of cases that only involve the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain in the claims data is likely not sufficient to warrant the creation of a new MS–DRG. The requestor further stated given the limited options within the existing MS–DRG structure that fit from both a cost and clinical cohesiveness perspective, they believe that MS–DRG 021 is the most logical fit in terms of average costs and clinical coherence for reassignment of RNS® System cases even though, according to the requestor, the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain is technically more complex and involves a higher level of training, extreme precision and sophisticated technology than performing a craniectomy for hemorrhage.

As another option, the requestor identified procedures involving a craniectomy or craniotomy by searching for ICD–10–PCS codes that describe the

root operations ''Destruction'', ''Division'', ''Drainage'', ''Excision'', Extirpation'', or ''Insertion'' performed related to the brain or specific brain anatomy (for example, cerebral ventricle, cerebellum) with an ''Open Approach'' in the claims data. The requestor also said they identified claims involving a device implant by searching for ICD–10–PCS codes that describe the root operation ''Insertion'' and stated that they found that the claims they identified had average costs comparable to the average costs of RNS® cases and therefore creating a new MS–DRG for all cases involving a craniectomy/craniotomy with device implant was a reasonable alternative option.

To begin our analysis, we identified the ICD–10–CM diagnosis codes that describe a diagnosis of epilepsy. We refer the reader to Table 6P.2a associated with this proposed rule (and available at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*) for the list of the ICD–10–CM codes that we identified.

We then examined the claims data from the September 2022 update of the FY 2022 MedPAR file for all cases in MS–DRG 023 and compared the results to cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) that had a principal diagnosis of epilepsy in MS–DRG 023. The following table shows our findings:

BILLING CODE 4120–01–P

MS-DRG 023	Number of Cases	Average Length of Stay	Average Costs
All cases	11,602	10.4	$47,321
Cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	57	3.1	$58,676

As shown in the table, for MS–DRG 023, we identified a total of 11,602 cases, with an average length of stay of 10.4 days and average costs of $47,321. Of those 11,602 cases in MS–DRG 023, there were 57 cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) that had a principal diagnosis of epilepsy. We note that the 57 cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy have an average length of stay of 3.1 days and average costs of $58,676, as compared to the average length of stay of 10.4 days and average costs of $47,321 for all cases in MS–DRG 023. While these neurostimulator cases have average costs that are $11,355 higher than the average costs of all cases in MS–DRG 023, there were only a total of 57 cases. We reviewed these data, and agreed with the requestor that the number of cases continues to be too small to warrant the creation of a new MS–DRG for these cases, for the reasons discussed in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38015 through 38019) and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58459 through 58462).

We examined the reassignment of cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) to MS–DRGs 020, 021, and 022 (Intracranial Vascular Procedures with PDX Hemorrhage with MCC, with CC, and without CC/MCC, respectively). While the request was to reassign these cases to MS–DRG 021, MS–DRG 021 is specifically differentiated according to the presence of a secondary diagnosis with a severity level designation of a complication or comorbidity (CC). Cases with a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) do not always involve the presence of a secondary diagnosis with a severity level designation of a complication or comorbidity (CC), and therefore we reviewed data for all three MS–DRGs. The following table shows our findings:

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
020	2,016	13.9	$72,776
021	548	9.1	$53,973
022	270	3.9	$31,248

As shown in the table, for MS–DRG 020, there were a total of 2,016 cases with an average length of stay of 13.9 days and average costs of $72,776. For MS–DRG 021, there were a total of 548 cases with an average length of stay of 9.1 days and average costs of $53,973. For MS–DRG 022, there were a total of 270 cases with an average length of stay of 3.9 days and average costs of $31,248.

Because all cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) with a principal diagnosis of epilepsy are assigned MS–DRG 023 even if there is no MCC reported and there is a three-way split within MS–DRGs 020, 021, and 022, we also analyzed the cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain

(including cases involving the use of the RNS® neurostimulator) with a principal diagnosis of epilepsy for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC). The following table shows our findings:

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
023	Cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain with MCC	8	8.4	$68,486
	Cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain with CC	14	2.4	$60,799
	Cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain without CC/MCC	35	2.1	$55,585

This data analysis shows that, similar to our findings as summarized in the FY 2018 and FY 2021 IPPS/LTCH PPS final rules, on average, the cases in MS–DRG 023 describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy have average costs that are relatively more similar to the average costs of cases in MS–DRG 021 ($58,676 compared to $53,973), while the average length of stay is shorter (3.1 days compared to 9.1 days). However, when distributed based on the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC), the 57 cases in MS–DRG 023 reporting a principal diagnosis of epilepsy with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain have higher average costs and shorter lengths of stay than the cases in the FY 2022 MedPAR file for MS–DRGs 021 and 022 while having lower average costs and shorter lengths of stay than the cases in MS–DRG 020. We reviewed the clinical issues and the claims data, and continue to not support reassigning the cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy from MS–DRG 023 to MS–DRGs 020, 021 or 022. As also discussed in the FY 2018 and FY 2021 IPPS/LTCH PPS final rules, the cases in MS–DRGs 020, 021 and 022 have a principal diagnosis of a hemorrhage. The RNS® neurostimulator generators are not used to treat patients with diagnosis of a hemorrhage. We continue to believe that it is inappropriate to reassign cases representing a principal diagnosis of epilepsy to a MS–DRG that contains cases that represent the treatment of intracranial hemorrhage, as discussed in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38015 through 38019) and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58459 through 58462). The differences in average length of stay and average costs based on the more recent data continue to support this recommendation.

We note, as discussed in section II.C.1.b of this proposed rule, using the December 2022 update of the FY 2022 MedPAR file, we analyzed how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would affect the MS–DRG structure beginning in FY 2024. Findings from our analysis indicated that MS–DRGs 020, 021, and 022 as well as approximately 44 other base MS–DRGs would potentially be subject to change based on the three-way severity level split criterion finalized in FY 2021. We refer the reader to Table 6P.10b associated with this proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for the list of the 135 MS–DRGs that would be subject to deletion and the list of the 86 new MS–DRGs that would potentially be created if the NonCC subgroup criteria were applied.

We then explored alternative options, as was requested. We do not agree that searching for ICD–10–PCS codes that describe the root operations ''Destruction'', ''Division'', ''Drainage'', ''Excision'', Extirpation'', or ''Insertion'' performed related to the brain or specific brain anatomy as suggested by the requestor is a reasonable approach to find cases comparable to cases involving the use of the RNS® System as these root operations all describe procedures performed for distinct and differing objectives. Instead, to review for similar utilization of resources, we further analyzed the data to identify those cases currently reporting a procedure code combination representing neurostimulator generator and lead code combinations that are captured under the list referred to as ''Major Device Implant'' in the GROUPER logic for MS–DRGs 023 and 024 since the ICD–10–PCS code combinations that capture the use of the RNS® neurostimulator generator and leads that would determine an assignment of a case to MS–DRGs 023 are also found on the ''Major Device Implant'' list. The neurostimulator generators on this list are inserted into the skull, as well as into the subcutaneous areas of the chest, back, or abdomen. The leads are all inserted into

the brain. The following table shows our findings:

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
023	**All cases**	11,602	10.4	$47,321
	Cases with neurostimulators (Major Device Implant list cases)	90	7.3	$59,733
	Cases with neurostimulators (Major Device Implant list cases) *excluding* cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	33	14.6	$61,559
	Cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	57	3.1	$58,676
024	**All cases**	4,378	5.2	$32,613
	Cases with neurostimulators (Major Device Implant list cases)	395	1.6	$36,147
	Cases with neurostimulators (Major Device Implant list cases) *excluding* cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	395	1.6	$36,147
	Cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	0	0	$0

We note that the 90 Major Device Implant list cases involving a neurostimulator generator (including cases involving the use of the RNS® neurostimulator and a principal diagnosis of epilepsy) have an average length of stay of 7.3 days and average costs of $59,733 as compared to all 11,602 cases in MS–DRG 023, which have an average length of stay of 10.4 days and average costs of $47,321. In MS–DRG 024, we note that the 395 Major Device Implant list cases involving a neurostimulator generator have an average length of stay of 1.6 days and average costs of $36,147 as compared to all 4,378 cases in MS–DRG 024, which have an average length of stay of 5.2 days and average costs of $32,613. While these neurostimulator cases have average costs that are higher than the average costs of all cases in their respective MS–DRGs, it is difficult to detect patterns of complexity and resource intensity. Moreover, we are unable to identify another MS–DRG in MDC 01 that would be a more appropriate MS–DRG assignment for these cases based on the indication for and complexity of the procedure.

We note while our data findings demonstrate the average costs are higher for the 57 cases with a principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain when compared to all cases in MS–DRG 023, these cases represent a small percentage of the total number of cases reported in this MS–DRG. While we appreciate the requestors' concerns regarding the differential in average costs for cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain when compared to all cases in their

assigned MS–DRG, we believe additional time is needed to evaluate these cases as part of our ongoing examination of the case logic for MS–DRGs 023 through 027. As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48808 through 48820), in connection with our analysis of cases reporting LITT procedures performed on the brain or brain stem in MDC 01, we have started to examine the logic for case assignment to MS–DRGs 023 through 027 to determine where further refinements could potentially be made to better account for differences in the technical complexity and resource utilization among the procedures that are currently assigned to those MS–DRGs. Specifically, we are in the process of evaluating procedures that are performed using an open craniotomy (where it is necessary to surgically remove a portion of the skull) versus a percutaneous burr hole (where a hole approximately the size of a pencil is drilled) to obtain access to the brain in the performance of a procedure. We are also reviewing the indications for these procedures, for example, malignant neoplasms versus epilepsy to consider if there may be merit in considering restructuring the current MS–DRGs to better recognize the clinical distinctions of these patient populations in the MS–DRGs.

As part of this evaluation, we have begun to analyze the ICD–10 coded claims data from the September 2022 update of the FY 2022 MedPAR file to determine if the patients' diagnoses, the objective of the procedure performed, the specific anatomical site where the procedure is performed or the surgical approach used (for example, open, percutaneous, percutaneous endoscopic, among others) demonstrates a greater severity of illness and/or increased treatment difficulty as we consider restructuring MS–DRGs 023 through 027, including how to better align the clinical indications with the performance of specific intracranial procedures. We refer the reader to Tables 6P.2b through 6P.2f associated with this proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for data analysis findings of cases assigned to MS–DRGs 023 through 027 as we continue to look for patterns of complexity and resource intensity.

In summary, we believe that further analysis of cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy is needed in connection with our analysis of the claims data for MS–DRGs 023 through 027 prior to proposing any further reassignment of these cases, to ensure clinical coherence between these cases and the other cases with which they may potentially be grouped. Therefore, we are not proposing to reassign cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) from MS–DRG 023 to MS–DRG 021. We are also not proposing to create a new MS–DRG for cases involving a craniectomy/craniotomy with device implant at this time.

As we continue this analysis of the claims data with respect to MS–DRGs 023 through 027, we continue to seek public comments and feedback on other factors that should be considered in the potential restructuring of these MS–DRGs. As previously described, we are examining procedures by their approach (open versus percutaneous), clinical indications, and procedures that involve the insertion or implantation of a device. We recognize the logic for MS–DRGs 023 through 027 has grown more complex over the years and believe there is opportunity for further refinement. We refer the reader to the ICD–10 MS–DRG Definitions Manual, version 40.1, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*, for complete documentation of the GROUPER logic for MS–DRGs 023 through 027. Feedback and other suggestions may be submitted by October 20, 2023, and directed to the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™), discussed in section II.C.1.b of the preamble of this proposed rule, at: *https://mearis.cms.gov/public/home*.

3. MDC 02 (Diseases and Disorders of the Eye): Retinal Artery Occlusion

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48830 through 48835), we discussed a request we received to reassign cases reporting diagnosis codes describing central retinal artery occlusion, and the closely allied condition, branch retinal artery occlusion, from MS–DRG 123 (Neurological Eye Disorders) in MDC 02 (Diseases and Disorders of the Eye) to MS–DRGs 061, 062, and 063 (Ischemic Stroke Precerebral Occlusion or Transient Ischemia with Thrombolytic Agent with MCC, with CC, and without CC/MCC, respectively) in MDC 01 (Diseases and Disorders of the Nervous System).

Retinal artery occlusion refers to blockage of the retinal artery that carries oxygen to the nerve cells in the retina at the back of the eye, often by an embolus or thrombus. A blockage in the main artery in the retina is called central retinal artery occlusion (CRAO). A blockage in a smaller artery is called branch retinal artery occlusion (BRAO).

Based on the various data analyses we performed to explore the possible reassignment of cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or a procedure code describing hyperbaric oxygen therapy, and the clinical analysis discussed, for FY 2023 we did not propose any MS–DRG changes for cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or a procedure code describing hyperbaric oxygen therapy.

For this FY 2024 IPPS/LTCH PPS proposed rule, we received a request to again review the MS–DRG assignment of cases involving CRAO. According to the requestor, CRAO is a form of acute ischemic stroke which occurs when a vessel supplying blood to the brain is obstructed and there is growing recognition of this diagnosis as a vascular neurological problem. The requestor stated new evidence outlines treatment of patients with CRAO with acute stroke protocols, specifically with intravenous thrombolysis (IV tPA) or hyperbaric oxygen therapy (HBOT), to improve outcomes. The requestor performed an internal analysis of their claims data and found that the average costs of cases reporting a procedure code describing the administration of a thrombolytic agent with a principal diagnosis of CRAO were 2.5 times higher than the average costs of cases with a principal diagnosis of CRAO that did not report the administration of a thrombolytic agent. The requestor further stated the increased utilization of resources of these cases was isolated to be almost entirely due to the cost of the tPA itself based on this review of their internal cost level data. Consequently, the requestor stated the continued assignment of these conditions to MS–DRG 123 does not properly recognize disease complexity and understates the resource utilization associated with administering critical (potentially vision-saving) treatments for these cases.

The requestor suggested that the following three MS–DRGs be created to reflect current standard of care for these patients:

- Suggested New MS–DRG XXX—Neurological Eye Disorders with Thrombolytic Agent with MCC;
- Suggested New MS–DRG XXX—Neurological Eye Disorders with Thrombolytic Agent with CC; and
- Suggested New MS–DRG XXX—Neurological Eye Disorders with Thrombolytic Agent without CC/MCC.

In reviewing this issue, it is unclear why the requestor did not include branch retinal artery occlusion (BRAO) in their request for FY 2024 rulemaking. As discussed in the FY 2023 IPPS/LTCH PPS final rule, BRAO is a closely allied condition. Therefore, we identified the ICD–10–CM codes found in the following table that describe CRAO and BRAO.

ICD-10-CM Code	Description
H34.10	Central retinal artery occlusion, unspecified eye
H34.11	Central retinal artery occlusion, right eye
H34.12	Central retinal artery occlusion, left eye
H34.13	Central retinal artery occlusion, bilateral
H34.231	Retinal artery branch occlusion, right eye
H34.232	Retinal artery branch occlusion, left eye
H34.233	Retinal artery branch occlusion, bilateral
H34.239	Retinal artery branch occlusion, unspecified eye

Thrombolytic therapy is identified with the following ICD–10–PCS procedure codes.

ICD-10-PCS Code	Description
3E03017	Introduction of other thrombolytic into peripheral vein, open approach
3E03317	Introduction of other thrombolytic into peripheral vein, percutaneous approach
3E04017	Introduction of other thrombolytic into central vein, open approach
3E04317	Introduction of other thrombolytic into central vein, percutaneous approach
3E05017	Introduction of other thrombolytic into peripheral artery, open approach
3E05317	Introduction of other thrombolytic into peripheral artery, percutaneous approach
3E06017	Introduction of other thrombolytic into central artery, open approach
3E06317	Introduction of other thrombolytic into central artery, percutaneous approach

Our analysis of this grouping issue again confirmed that, when a procedure code describing the administration of a thrombolytic agent is reported with principal diagnosis code describing CRAO or BRAO, these cases group to medical MS–DRG 123. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 40.1, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software,* for complete documentation of the GROUPER logic for MS–DRGs 123.

To begin our analysis, we examined claims data from the September 2022 update of the FY 2022 MedPAR file for MS–DRG 123 to (1) identify cases reporting a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent and (2) identify cases reporting diagnosis codes describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent. Our findings are shown in the following table:

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
123	All cases	2,771	2.5	$6,720
	Cases reporting a principal diagnosis of CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent	839	2.2	$5,842
	Cases reporting a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent	38	3.3	$13,302
	All other cases	1,894	2.6	$6,977

As shown in the table, we identified a total of 2,771 cases within MS–DRG 123 with an average length of stay of 2.5 days and average costs of $6,720. Of these 2,771 cases, there are 839 cases that reported a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent with an average length of stay of 2.2 days and average costs of $5,842. There are 38 cases that reported a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent with an average length of stay of 3.3 days and average costs of $13,302.

The data analysis shows that the 839 cases in MS–DRG 123 reporting a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent have lower average costs as compared to all cases in MS–DRG 123 ($5,842 compared to $6,720), and a shorter average length of stay (2.2 days compared to 2.5 days). For the 38 cases in MS–DRG 123 reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent, however, the average length of stay is longer (3.3 days compared to 2.5 days) and the average costs are higher ($13,302 compared to $6,720) than the average length of stay and average costs compared to all cases in that MS–DRG.

We reviewed these data, and do not believe that the small subset of cases reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent warrants the creation of new MS–DRGs at this time. As stated in prior rulemaking, the MS–DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources. We generally seek to identify sufficiently large sets of claims data with a resource/cost similarity and clinical similarity in developing diagnostic-related groups rather than smaller subsets. Moreover, in response to the specific request to create new MS–DRGs subdivided into severity levels for the cases reporting a principal diagnosis code describing CRAO with a procedure code describing the administration of a thrombolytic agent, we only identified a total of 38 cases, so the criterion that there are at least 500 or more cases in each subgroup cannot be met. Therefore, for FY 2024, we are not proposing to create new MS–DRGs subdivided into severity levels for cases reporting a principal diagnosis code describing CRAO with a procedure code describing the administration of a thrombolytic agent.

We recognize however, that the average costs of the small number of cases reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent are greater when compared to the average costs of all cases in MS–DRG 123. To explore other mechanisms to address this request, we then reexamined the MS–DRGs within MDC 02 to consider the possibility of reassigning the cases with a principal diagnosis of CRAO or BRAO that receive the administration of a thrombolytic agent to other MS–DRGs within MDC 02. After further consideration, in reviewing the claims data from the September 2022 update of the FY 2022 MedPAR file and examining the clinical considerations, we believe that the cases reporting a principal diagnosis code describing CRAO or BRAO could more suitably group to MS–DRGs 124 and 125 (Other Disorders of the Eye with MCC, and without MCC, respectively), which contain diagnoses other than neurological conditions that affect the eye, noting the vascular involvement inherent to a diagnosis of CRAO or BRAO. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 40.1, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*, for complete documentation of the GROUPER logic for MS–DRGs 124 and 125.

To determine how the resources for this subset of cases compared to cases in MS–DRGs 124 and 125 as a whole, we examined the average costs and length of stay for cases in MS–DRGs 124 and 125. Our findings are shown in this table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 124--All cases	889	5.4	$11,922
MS-DRG 125--All cases	2,424	3.3	$7,425

For this subset of cases, the average costs of the 38 cases reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent are slightly higher ($13,302 compared to $11,922) and the average length of stay is shorter (3.3 days compared to 5.4 days) than for all cases in MS–DRGs 124. The 839 cases reporting a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent have lower average costs ($5,842 compared to $7,425) and a shorter average length of stay (2.2 compared to 3.3 days) than for cases in MS–DRG 125.

Our analysis demonstrates that while the volume of cases is small, the average costs for the cases reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent currently grouping to MS–DRG 123 are more aligned with the average costs for the cases currently grouping to MS–DRG 124. We reviewed these data and support the addition of the eight diagnosis codes listed previously to the GROUPER logic list for MS–DRGs 124 and 125. While the cases reporting a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent have lower costs and a shorter average length of stay than for cases in MS–DRG 125, we believe reassigning these diagnosis codes to MS–DRGs 124 and 125 will better account for the subset of patients who are treated with a thrombolytic agent, and will more appropriately reflect the resources involved in evaluating and treating these patients. We also support the assignment of the cases reporting procedure codes describing the administration of a thrombolytic agent to the higher (MCC) severity level MS–DRG 124 as an enhancement to better reflect the clinical severity and resource use involved in these cases.

Therefore, we are proposing to reassign ICD–10–CM diagnosis codes H34.10, H34.11, H34.12, H34.13, H34.231, H34.232, H34.233, and H34.239 from MDC 02 MS–DRG 123 to MS–DRGs 124 and 125, effective October 1, 2023 for FY 2024. We are also proposing to add the procedure codes describing the administration of a thrombolytic agent listed previously to MS–DRG 124. We note that the procedure codes describing the administration of a thrombolytic agent are not designated as operating room procedures for purposes of MS–DRG assignment (''non-O.R. procedures''), therefore, as part of the logic for MS–DRG 124, we are also proposing to designate these codes as non-O.R. procedures affecting the MS–DRG. Lastly, for consistency, we are also proposing to change the titles of MS–DRGs 124 and 125 from ''Other Disorders of the Eye, with and without MCC, respectively'' to ''Other Disorders of the Eye with MCC or Thrombolytic Agent, and without MCC, respectively'' to better reflect the assigned procedures.

4. MDC 04 (Diseases and Disorders of the Respiratory System)

a. Ultrasound Accelerated Thrombolysis for Pulmonary Embolism

We received a request to reassign cases reporting ultrasound accelerated thrombolysis (USAT) with the administration of thrombolytic(s) for the treatment of pulmonary embolism (PE) from MS–DRGs 166, 167, and 168 (Other Respiratory System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 163, 164, and 165 (Major Chest Procedures with MCC, with CC, and without CC/MCC, respectively).

A pulmonary embolism is an obstruction of pulmonary vasculature most commonly caused by a venous thrombus, and less commonly by fat or tumor tissue or air bubbles or both. Risk factors for a pulmonary embolism include prolonged immobilization from any cause, obesity, cancer, fractured hip or leg, use of certain medications such as oral contraceptives, presence of certain medical conditions such as heart failure, sickle cell anemia, or certain congenital heart defects. Common symptoms of pulmonary embolism include shortness of breath with or without chest pain, tachycardia, hemoptysis, low grade fever, pleural effusion, and depending on the etiology of the embolus, might include lower extremity pain or swelling, syncope, jugular venous distention. Alternatively, a pulmonary embolus could be asymptomatic.

Thrombolysis is a type of treatment where the infusion of thrombolytics (fibrinolytic or ''clot-busting'' drugs) is used to dissolve blood clots that form in the arteries or veins with the goal of improving blood flow and preventing long-term damage to tissues and organs. When a clot forms in the arteries of the lungs it is known as a pulmonary embolism. In addition, clots in the veins of the legs causing deep venous thrombosis (DVT) may also result in pulmonary embolism if a piece of the clot breaks off and travels to an artery in the lungs. Conventional catheter-directed thrombolysis (CDT) procedures generally rely on a multi-sidehole catheter placed adjacent to the thrombus through which thrombolytics are delivered directly to the thrombus, however, the EKOS™ EkoSonic® Endovascular System (EKOS™ System) employs ultrasound to assist in thrombolysis. The ultrasound does not itself dissolve the thrombus, but pulses of ultrasonic energy temporarily make the fibrin in the thrombus more porous and increase fluid flow within the thrombus. High frequency, low-intensity ultrasonic waves create a pressure gradient that drives the thrombolytic into the thrombus and keeps it in close proximity to the binding sites. USAT is also referred to as ultrasound-assisted thrombolysis or ultrasound-enhanced thrombolysis.

According to the requestor (the manufacturer of the EKOS™ device), USAT with the administration of thrombolytic(s) for the treatment of PE performed using the EKOS™ device utilizes more resources in comparison to other procedures that are currently assigned to MS–DRGs 166, 167, and 168 and is not clinically coherent with the other procedures assigned to those MS–DRGs. The requestor stated that the cases reporting USAT with the administration of thrombolytic(s) for PE are more comparable with and more clinically aligned with the procedures assigned to MS–DRGs 163, 164, and 165. The requestor stated they performed an analysis of cases reporting USAT for PE with the following ICD–10–PCS procedure codes.

ICD-10-PCS Code	Description
02FP3Z0	Fragmentation of pulmonary trunk, percutaneous approach, ultrasonic
02FQ3Z0	Fragmentation of right pulmonary artery, percutaneous approach, ultrasonic
02FR3Z0	Fragmentation of left pulmonary artery, percutaneous approach, ultrasonic
02FS3Z0	Fragmentation of right pulmonary vein, percutaneous approach, ultrasonic
02FT3Z0	Fragmentation of left pulmonary vein, percutaneous approach, ultrasonic
03F23Z0	Fragmentation of innominate artery, percutaneous approach, ultrasonic
03F33Z0	Fragmentation of right subclavian artery, percutaneous approach, ultrasonic
03F43Z0	Fragmentation of left subclavian artery, percutaneous approach, ultrasonic
03F53Z0	Fragmentation of right axillary artery, percutaneous approach, ultrasonic
03F63Z0	Fragmentation of left axillary artery, percutaneous approach, ultrasonic
03F73Z0	Fragmentation of right brachial artery, percutaneous approach, ultrasonic
03F83Z0	Fragmentation of left brachial artery, percutaneous approach, ultrasonic
03F93Z0	Fragmentation of right ulnar artery, percutaneous approach, ultrasonic
03FA3Z0	Fragmentation of left ulnar artery, percutaneous approach, ultrasonic
03FB3Z0	Fragmentation of right radial artery, percutaneous approach, ultrasonic
03FC3Z0	Fragmentation of left radial artery, percutaneous approach, ultrasonic
03FY3Z0	Fragmentation of upper artery, percutaneous approach, ultrasonic

We note that the requestor did not include a list of diagnosis codes describing PE or a list of procedure codes describing the administration of thrombolytic(s) in connection with its analysis.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58561 through 58579), we summarized and responded to public comments expressing concern with the proposed MS–DRG assignments for the newly created procedure codes describing USAT of several anatomic sites that were effective with discharges on and after October 1, 2020 (FY 2021). Similar to the current request for FY 2024, for FY 2021, the commenters recommended that USAT procedures performed with the EKOS™ device for the treatment of pulmonary embolism be assigned to MS–DRGs 163, 164, and 165 instead of MS–DRGs 166, 167, and 168. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58561 through 58579), available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*, for the detailed discussion.

We analyzed claims data from the September 2022 update of the FY 2022 MedPAR file for MS–DRGs 166, 167, and 168 for all cases reporting a principal diagnosis of PE and USAT procedure with and without the administration of thrombolytic(s). We identified claims reporting an USAT procedure, the administration of thrombolytic(s), and a diagnosis of PE with the listed codes shown in the following tables.

List of ICD-10-PCS Procedure Codes Describing Ultrasound Accelerated Thrombolysis (USAT)	
ICD-10-PCS Code	**Description**
02FP3Z0	Fragmentation of pulmonary trunk, percutaneous approach, ultrasonic
02FQ3Z0	Fragmentation of right pulmonary artery, percutaneous approach, ultrasonic
02FR3Z0	Fragmentation of left pulmonary artery, percutaneous approach, ultrasonic
02FS3Z0	Fragmentation of right pulmonary vein, percutaneous approach, ultrasonic
02FT3Z0	Fragmentation of left pulmonary vein, percutaneous approach, ultrasonic

List of ICD-10-PCS Procedure Codes Describing Administration of Thrombolytic(s)	
ICD-10-PCS Code	**Description**
3E03317	Introduction of other thrombolytic into peripheral vein, percutaneous approach
3E04317	Introduction of other thrombolytic into central vein, percutaneous approach
3E05317	Introduction of other thrombolytic into peripheral artery, percutaneous approach
3E06317	Introduction of other thrombolytic into central artery, percutaneous approach

List of ICD-10-CM Diagnosis Codes Describing Pulmonary Embolism	
ICD-10-CM Code	**Description**
I26.01	Septic pulmonary embolism with acute cor pulmonale
I26.02	Saddle embolus of pulmonary artery with acute cor pulmonale
I26.09	Other pulmonary embolism with acute cor pulmonale
I26.90	Septic pulmonary embolism without acute cor pulmonale
I26.92	Saddle embolus of pulmonary artery without acute cor pulmonale
I26.93	Single subsegmental pulmonary embolism without acute cor pulmonale
I26.94	Multiple subsegmental pulmonary emboli without acute cor pulmonale
I26.99	Other pulmonary embolism without acute cor pulmonale
I27.82	Chronic pulmonary embolism

We note that the listed procedure codes describing USAT identified for our claims analysis differ from the procedure codes identified by the requestor for its analysis. Clinically, we did not agree that thrombolysis of non-pulmonary anatomic sites (for example, subclavian artery, axillary artery, etc.) would be performed for the treatment of a PE. We also note that the procedure codes describing thrombolysis of non-pulmonary anatomic sites provided by the requestor are assigned to MDC 05 (Diseases and Disorders of the Circulatory System) and not to MDC 4 (Diseases and Disorders of the Respiratory System) where MS–DRGs 163, 164, 165, 166, 167, and 168 are assigned. The findings from our analysis are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
166 – All cases	8,318	11	$31,910
166 – Cases reporting a principal diagnosis of PE and USAT with thrombolytic(s)	826	5.4	$28,912
166 – Cases reporting principal diagnosis of PE and USAT without thrombolytic(s)	161	5.4	$27,897
167 – All cases	4,306	4.7	$16,290
167 – Cases reporting a principal diagnosis of PE and USAT with thrombolytic(s)	316	3.9	$23,240
167 – Cases reporting principal diagnosis of PE and USAT without thrombolytic(s)	52	3.7	$23,608
168 – All cases	1,441	2.3	$12,379
168 – Cases reporting a principal diagnosis of PE and USAT with thrombolytic(s)	65	2.8	$20,156
168 – Cases reporting principal diagnosis of PE and USAT without thrombolytic(s)	15	2.7	$20,112

As shown in the table, we identified a total of 8,318 cases in MS–DRG 166 with an average length of stay of 11 days and average costs of $31,910. Of the 8,318 cases, we found 826 cases reporting a principal diagnosis of PE and USAT with thrombolytic(s) with an average length of stay of 5.4 days and average costs of $28,912 and 161 cases reporting a principal diagnosis of PE and USAT without thrombolytic(s) with an average length of stay of 5.4 days and average costs of $27,897. The data demonstrates that the cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) have a shorter average length of stay compared to the average length of stay of all the cases in MS–DRG 166 (5.4 days and 5.4 days, respectively versus 11 days). Similarly, the average costs for the cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) are lower than the average costs of all the cases in MS–DRG 166 ($28,912 and $27,897, respectively versus $31,910). The data indicate that the cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) appear to be grouped and paid appropriately, despite the fact the logic for case assignment to MS–DRG 166 requires the reporting of at least one or more secondary MCC diagnoses, and it would not be unreasonable to expect these cases to be more expensive in comparison to all the cases in MS–DRG 166. As the average costs for these cases are lower than the average costs of all the cases in MS–DRG 166, the data appear to reflect that the reporting of at least one or more secondary MCC diagnoses and use of the EKOS™ device technology did not impact consumption of resources for these cases in MS–DRG 166.

For MS–DRG 167, we identified a total of 4,306 cases with an average length of stay of 4.7 days and average costs of $16,290. Of the 4,306 cases, we found 316 cases reporting a principal diagnosis of PE and USAT with thrombolytic(s) with an average length of stay of 3.9 days and average costs of $23,240 and 52 cases reporting a principal diagnosis of PE and USAT without thrombolytic(s) with an average length of stay of 3.7 days and average costs of $23,608. The data demonstrates that the cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) have a shorter average length of stay compared to the average length of stay of all the cases in MS–DRG 167 (3.9 days and 3.7 days, respectively versus 4.7 days). Conversely, the average costs for the cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) are higher than the average costs of all the cases in MS–DRG 167 ($23,240 and $23,608, respectively versus $16,290) with a corresponding difference in average costs of $6,950 and $7,318, respectively. The data indicate the cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) appear to consume more resources in comparison to the other cases in MS–DRG 167, although it is unclear if the higher resource consumption is a direct result of the EKOS™ device technology utilized in the performance of the thrombolysis procedure, or the fact that these cases also include the reporting of at least one or more secondary CC diagnoses, or a combination of both factors.

For MS–DRG 168, we identified a total of 1,441 cases with an average length of stay of 2.3 days and average costs of $12,379. Of the 1,441 cases, we found 65 cases reporting a principal diagnosis of PE and USAT with

thrombolytic(s) with an average length of stay of 2.8 days and average costs of $20,156 and 15 cases reporting a principal diagnosis of PE and USAT without thrombolytic(s) with an average length of stay of 2.7 days and average costs of $20,112. The data demonstrates that the cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) have a longer average length of stay compared to the average length of stay of all the cases in MS–DRG 168 (2.8 days and 2.7 days, respectively versus 2.3 days). Additionally, the average costs for the cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) are higher than the average costs of all the cases in MS–DRG 168 ($20,156 and $20,112, respectively versus $12,379) with a corresponding difference in average costs of $7,777 and $7,733, respectively. Similar to our findings for MS–DRG 167, the data for MS–DRG 168 indicate the cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) appear to consume more resources in comparison to the other cases in MS–DRG 168. However, it is unclear if the higher resource consumption is a direct result of the EKOS™ device technology utilized in the performance of the thrombolysis procedure alone, or if there are other contributing factors, since cases grouping to MS–DRG 168 do not include the reporting of at least one or more secondary CC or MCC diagnoses.

Based on our review of the data for MS–DRGs 166, 167, and 168 and our initial analysis for cases reporting a principal diagnosis of PE and USAT procedure with and without the administration of thrombolytic(s), the findings also suggest that the administration of thrombolytic(s) is not a significant factor in the consumption of resources for these cases in MS–DRGs 166, 167, and 168 where USAT is performed in the treatment of a PE. For example, in MS–DRG 166, there are 826 cases reporting a principal diagnosis of PE and USAT procedure with the administration of thrombolytic(s) and 161 cases reporting a principal diagnosis of PE and USAT procedure without the administration of thrombolytic(s), however, both subsets of cases have an equivalent average length of stay of 5.4 days and a difference in average costs of $1,015 ($28,912 − $27,897 = $1,015). For MS–DRG 167, there are 316 cases reporting a principal diagnosis of PE and USAT procedure with the administration of thrombolytic(s) and 52 cases reporting a principal diagnosis of PE and USAT procedure without the administration of thrombolytic(s), however, both subsets of cases have a similar average length of stay (3.9 days and 3.7 days, respectively) with a difference in average costs of $368 ($23,608 − $23,240 = $368). For MS–DRG 168, there are 65 cases reporting a principal diagnosis of PE and USAT procedure with the administration of thrombolytic(s) and 15 cases reporting a principal diagnosis of PE and USAT procedure without the administration of thrombolytic(s), however, both subsets of cases have a similar average length of stay (2.8 days and 2.7 days, respectively) with a difference in average costs of $44 ($20,156 − $20,112 = $44) . Because the administration of thrombolytic(s) would be expected to increase resource consumption, the small difference in average costs between these two sets of cases could also suggest that the administration of thrombolytic(s) was not consistently reported.

While the request we received was to reassign cases reporting ultrasound accelerated thrombolysis (USAT) with the administration of thrombolytic(s) for the treatment of pulmonary embolism (PE) from MS–DRGs 166, 167, and 168 to MS–DRGs 163, 164, and 165, based on our findings that suggest the administration of thrombolytic(s) is not a significant factor in the consumption of resources for those cases or that a code describing the administration of thrombolytic(s) may not have been consistently reported on a subset of claims that also reported a code identifying USAT was performed, we then analyzed claims data from the September 2022 update of the FY 2022 MedPAR file for all cases in MS–DRGs 163, 164, and 165 and compared it to the cases reporting a principal diagnosis of PE and USAT procedure with or without thrombolytic(s) in MS–DRGs 166, 167, and 168. The findings from our analysis are shown in the following tables.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
163 – All cases	10,697	10.3	$39,126
164 – All cases	13,384	4.7	$22,040
165 – All cases	6,301	2.7	$16,404

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
166 – All cases	8,318	11	$31,910
166 – Cases with principal diagnosis of PE and USAT with or without thrombolytic(s)	987	5.4	$28,746
167– All cases	4,306	4.7	$16,290
167 – Cases with principal diagnosis of PE and USAT with or without thrombolytic(s)	368	3.9	$23,292
168 – All cases	1,441	2.3	$12,379
168– Cases with principal diagnosis of PE and USAT with or without thrombolytic(s)	80	2.8	$20,148

The average costs of the 987 cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) in MS–DRG 166 are $10,380 less than the average costs of all cases in MS–DRG 163 ($39,126 − $28,746 = $10,380) and have an average length of stay that is approximately half the average length of stay of all cases in MS–DRG 163 (5.4 days versus 10.3 days). As stated previously, our analysis of these cases demonstrate they appear to be grouped and paid appropriately in MS–DRG 166. The 368 cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) in MS–DRG 167 have a shorter average length of stay (3.9 days versus 4.7 days) in comparison to all the cases in MS–DRG 164, however, the average costs of the 368 cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) in MS–DRG 167 are more comparable to the average costs of all the cases in MS–DRG 164 ($23,292 versus $22,040). Finally, the 80 cases reporting a principal diagnosis of PE and USAT with or without thrombolytic(s) in MS–DRG 168 have an average length of stay that is more comparable to all the cases in the MS–DRG 165 (2.8 days versus 2.7 days), however, the average costs for the 80 cases continue to be higher in comparison to all the cases in MS–DRG 165 ($20,148 versus $16,404).

Upon analysis of the claims data and our review of the request, we do not agree with reassigning cases reporting an USAT procedure with the administration of thrombolytic(s) and a principal diagnosis of PE from MS–DRGs 166, 167, and 168 to MS–DRGs 163, 164, and 165. As previously noted, the data do not support that cases reporting USAT (with or without thrombolytic(s)) for PE utilize similar resources when compared to other procedures currently assigned to MS–DRGs 163 and 165. Costs were only comparable with procedures currently assigned to MS–DRG 164. Further, we do not agree that cases reporting USAT (with or without thrombolytic(s)) are more comparable with and more clinically aligned with the procedures assigned to MS–DRGs 163, 164, and 165. The vast majority of procedures in these MS–DRGs describe procedures performed on the trachea, bronchus or lungs with either an open approach or a percutaneous endoscopic approach in contrast to the USAT endovascular (percutaneous) procedure performed on the pulmonary trunk, arteries or veins. In addition, the majority of procedures in MS–DRGs 163, 164, and 165 are performed on patients who are not clinically similar to patients who undergo USAT for PE since they describe procedures such as destruction (ablation) or excision performed for patients with conditions other than a PE, such as malignant neoplasm, pneumonia, or pulmonary fibrosis. Lastly, a number of procedures in these MS–DRGs also involve the use of a permanently implanted device while the procedures utilizing USAT do not. Therefore, we do not consider USAT procedures to be major chest procedures, nor do we believe the cases reporting USAT with (or without thrombolytic(s)) for PE utilize similar resources when compared to other procedures currently assigned to MS–DRGs 163, 164, and 165.

As stated previously, the findings from our analysis suggest that the administration of thrombolytic(s) is not a significant factor in the consumption of resources for cases in MS–DRGs 166, 167, and 168 reporting an USAT procedure performed for the treatment of a PE or that a code describing the administration of thrombolytic(s) may not have been consistently reported on a subset of claims that also reported a code t identifying USAT was performed, or a combination of both factors. Based on these findings related to the administration of thrombolytic(s), we believed it would also be beneficial to examine cases reporting standard CDT procedures with or without thrombolytic(s) for the treatment of PE in MS–DRGs 166, 167, and 168, and compare the findings to the cases reporting USAT with or without thrombolytic(s) for the treatment of PE.

Therefore, we conducted additional analyses to determine if there were significant differences in resource utilization for cases reporting standard CDT with or without thrombolytic(s) versus USAT procedures with or without thrombolytic(s) in the treatment of PE, since claims data to compare the two modalities is now available and studies have reported similar clinical outcomes in reducing PE regardless of which thrombolysis modality is utilized.[3] [4]

We analyzed claims data from the September 2022 update of the FY 2022 MedPAR file for all cases in MS–DRGs 166, 167, and 168 and cases reporting a standard CDT procedure with or without the administration of thrombolytic(s) and a principal diagnosis of PE. We utilized the previously listed procedure codes for the administration of thrombolytic(s) and the previously listed diagnosis codes for a principal diagnosis of PE. We identified cases describing standard CDT procedures performed in the treatment of PE with the following procedure codes.

List of ICD-10-PCS Procedure Codes Describing Standard Catheter-Directed Thrombolysis (CDT)

ICD-10-PCS Code	Description
02FP3ZZ	Fragmentation of pulmonary trunk, percutaneous approach
02FQ3ZZ	Fragmentation of right pulmonary artery, percutaneous approach
02FR3ZZ	Fragmentation of left pulmonary artery, percutaneous approach
02FS3ZZ	Fragmentation of right pulmonary vein, percutaneous approach
02FT3ZZ	Fragmentation of left pulmonary vein, percutaneous approach

The findings from our analysis are shown in the following table. We note that there were no cases found to report a principal diagnosis of PE and standard CDT with or without thrombolytic(s) in MS–DRGs 168.

[3] Rothschild DP, Goldstein JA, Ciacci J, Bowers TR. Ultrasound-accelerated thrombolysis (USAT) versus standard catheter-directed thrombolysis (CDT) for treatment of pulmonary embolism: A retrospective analysis. Vasc Med. 2019 Jun;24(3):234–240.

[4] Sista A, et al. Is it Time to Sunset Ultrasound-Assisted Catheter-Directed Thrombolysis for Submassive PE? J Am Coll Cardiol Intv. 2021 Jun, 14 (12) 1374–1375.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
166 – All cases	8,318	11	$31,910
166 – Cases with principal diagnosis of PE and CDT with or without thrombolytic(s)	7	3.3	$18,472
167– All cases	4,306	4.7	$16,290
167 – Cases with principal diagnosis of PE and CDT with or without thrombolytic(s)	6	3.5	$30,928
168 – All cases	1,441	2.3	$12,379

The data shows that the 7 cases reporting a principal diagnosis of PE and standard CDT with or without thrombolytic(s) in MS–DRG 166 have a shorter average length of stay compared to all cases in MS–DRG 166 (3.3 days versus 11 days) and lower average costs ($18,472 versus $31,910). For MS–DRG 167, the data shows that the 6 cases reporting a principal diagnosis of PE and CDT with or without thrombolytic(s) have a shorter average length of stay compared to all cases in MS–DRG 167 (3.5 days versus 4.7 days), however the average costs are higher ($30,928 versus $16,290).

In summary, based on our review and the claims data analysis for cases in MS–DRGs 163, 164, and 165, and for MS–DRGs 166, 167, and 168 and cases reporting standard CDT or USAT with or without thrombolytic(s) and a principal diagnosis of PE, we believe that while this subset of cases for patients undergoing a thrombolysis (CDT or USAT) procedure for PE does not clinically align with patients undergoing surgery for malignancy or treatment for infection and does not involve the same level of complexity, monitoring or support as cases grouping to MS–DRGs 163, 164 and 165, the differences in resource consumption warrant proposed reassignment of these cases. Specifically, we believe the clinical and data analyses support creating a new base MS–DRG to distinguish cases reporting a principal diagnosis of PE and USAT or standard CDT procedure with or without thrombolytic(s) from other cases currently grouping to MS–DRGs 166, 167, and 168. We believe a new MS–DRG would reflect more appropriate payment for USAT and standard CDT procedures in the treatment of PE.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the most recent claims data from the December 2022 update of the FY 2022 MedPAR file. The following table illustrates our findings for all 1,534 cases reporting procedure codes describing an USAT or CDT procedure with a principal diagnosis of PE.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	1,534	4.8	$26,802

Consistent with our established process as discussed in section II.C.1.b. of the preamble of this proposed rule, once the decision has been made to propose to make further modifications to the MS–DRGs, such as creating a new base MS–DRG, all five criteria to create subgroups must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. Therefore, we applied the criteria to create subgroups in a base MS–DRG. We note that, as shown in the table that follows, a three-way split of this base MS–DRG failed to meet the criterion that there be at least 500 cases in both the CC and the NonCC (without CC/MCC) subgroup and it also failed to meet the criterion that there be a 20% difference in average costs between the CC and NonCC subgroup.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	1,058	5.31	$28,618
With CC	393	3.85	$23,164
Without CC/MCC	83	2.88	$20,886

As discussed in section II.C.1.b. of the preamble of this proposed rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC and without MCC'' subgroups. We note that, as shown in the table that follows, a two-way split of this base MS–DRG failed to meet the criterion that there be at least 500 cases in the without MCC (CC+NonCC) subgroup. The following table illustrates our findings.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	1,058	5.31	$28,618
Without MCC	476	3.7	$22,767

We then applied the criteria for a two-way split for the ''with CC/MCC and without CC/MCC'' subgroups. As with the analysis of the three-way severity split as described previously, and as shown in the table that follows, a two-way split of this base MS–DRG failed to meet the criterion that there be at least 500 cases in the without CC/MCC (NonCC) subgroup.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With CC/MCC	1,451	4.9	$27,141
Without CC/MCC	83	2.88	$20,886

We note that because the criteria for both of the two-way splits failed, a split (or CC subgroup) is not warranted for the proposed new base MS–DRG. As a result, for FY 2024, we are proposing to create new base MS–DRG 173 (Ultrasound Accelerated and Other Thrombolysis with Principal Diagnosis Pulmonary Embolism). The following table reflects a simulation of the proposed new base MS–DRG.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed MS-DRG 173	1,534	4.8	$26,802

BILLING CODE 4120–01–C

We believe the resulting proposed MS–DRG better recognizes the consumption of resources and maintains clinical coherence for both USAT and CDT procedures performed for the treatment of PE.

We are proposing to define the logic for the proposed new MS–DRG using the previously listed diagnosis codes for PE and the previously listed procedure codes for USAT and CDT, as identified and discussed in our analysis of the claims data in this section of this proposed rule.

b. Respiratory Infections and Inflammations Logic

The logic for case assignment to MS–DRGs 177, 178, and 179 (Respiratory Infections and Inflammations with MCC, with CC, and without CC/MCC, respectively) as displayed in the ICD–10 MS–DRG V40.1 Definitions Manual (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) is comprised of two logic lists. The first logic list is entitled ''Principal Diagnosis with Secondary Diagnosis'' and is defined by a list of five ICD–10–CM diagnosis codes describing influenza due to other or unidentified influenza virus with pneumonia in combination with a separate list of ten diagnosis codes describing the specific pneumonia infection. When any one of the five listed diagnosis codes from the ''Principal Diagnosis'' logic list is reported as a principal diagnosis in combination with any one of the ten listed diagnosis code from the ''with Secondary Diagnosis'' logic list as a secondary diagnosis, the case results in assignment to MS–DRG 177, 178, or 179 depending on the presence of any additional MCC or CC secondary diagnoses. All 15 of the diagnosis codes included on the first logic list ''Principal Diagnosis with Secondary Diagnosis'' are designated as MCCs.

The second logic list is entitled ''or Principal Diagnosis'' and is defined by a list of 57 diagnosis codes describing various pulmonary infections. When any one of the 57 diagnosis codes from this list is reported as a principal diagnosis, the case results in assignment to MS–DRG 177, 178, or 179 depending on the presence of any additional MCC or CC secondary diagnoses.

Currently, when a diagnosis code from the second logic list ''or Principal Diagnosis'' is reported as the principal diagnosis and a diagnosis code from the first logic list ''Principal Diagnosis with Secondary Diagnosis'' is reported as a secondary diagnosis, the case is grouping to MS–DRG 177 (Respiratory Infections and Inflammations with MCC). Consistent with how other similar logic lists function in the ICD–10 Grouper software for case assignment to the ''with MCC'' MS–DRG, the logic for case assignment to MS–DRG 177 is intended to require any *other* diagnosis designated as an MCC and reported as a secondary diagnosis for appropriate assignment, and not the diagnoses currently listed in the logic for the definition of the MS–DRG.

Therefore, for FY 2024, we are proposing to correct the logic for case assignment to MS–DRG 177 by excluding the 15 diagnosis codes from the first logic list ''Principal Diagnosis with Secondary Diagnosis'' from acting as an MCC when any one of the listed codes is reported as a secondary diagnosis with a diagnosis code from the second logic list ''or Principal Diagnosis'' reported as the principal diagnosis.

5. MDC 05 (Diseases and Disorders of the Circulatory System)

a. Surgical Ablation

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44836 through 44848), we discussed a two-part request we received to review the MS–DRG assignments for cases involving the surgical ablation procedure for atrial fibrillation. The first part of the request

was to create a new classification of surgical ablation MS–DRGs to better accommodate the costs of open concomitant surgical ablations. The second part of the request was to reassign cases describing standalone percutaneous endoscopic surgical ablation. In the part of the request relating to the costs of open concomitant surgical ablations, the requestor identified the following potential procedure combinations that would comprise an ''open concomitant surgical ablation'' procedure.

- Open CABG + open surgical ablation
- Open MVR + open surgical ablation
- Open AVR + open surgical ablation
- Open MVR + open AVR + open surgical ablation
- Open MVR + open CABG + open surgical ablation
- Open MVR + open AVR + open CABG + open surgical ablation
- Open AVR + open CABG + open surgical ablation

As discussed in the FY 2022 IPPS/LTCH PPS final rule, we examined claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for cases reporting procedure code combinations describing open concomitant surgical ablations. We refer the reader to Table 6P.1o associated with the FY 2022 final rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for data analysis findings of cases reporting procedure code combinations describing open concomitant surgical ablations. We stated our analysis showed while the average lengths of stay and average costs of cases reporting procedure code combinations describing open concomitant surgical ablations are higher than all cases in their respective MS–DRG, we found variation in the volume, length of stay, and average costs of the cases. We also stated findings from our analysis indicated that MS–DRGs 216, 217, 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) as well as approximately 31 other MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021.

In the FY 2022 final rule, we finalized our proposal to revise the surgical hierarchy for the MS–DRGs in MDC 05 (Diseases and Disorders of the Circulatory System) to sequence MS–DRGs 231–236 (Coronary Bypass, with or without PTCA, with or without Cardiac Catheterization or Open Ablation, with and without MCC, respectively) above MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively), effective October 1, 2021. In addition, we also finalized the assignment of cases with a procedure code describing coronary bypass and a procedure code describing open ablation to MS–DRGs 233 and 234 and changed the titles of these MS–DRGs to ''Coronary Bypass with Cardiac Catheterization or Open Ablation with and without MCC, respectively'' to reflect this reassignment for FY 2022.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48845 through 48849), we discussed a request we received to again review the MS–DRG assignment of cases involving open concomitant surgical ablation procedures. The requestor stated they continue to believe that the average hospital costs for surgical ablation for atrial fibrillation demonstrates a cost disparity compared to all procedures within their respective MS–DRGs. The requestor suggested that when open surgical ablation is performed with MVR, or AVR or MVR/AVR + CABG that these procedures are either (1) assigned to a different family of MS–DRGs or (2) assigned to MS–DRGs 216 and 217 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC and with CC, respectively) similar to what CMS did with CABG and open ablation procedures in the FY 2022 rulemaking to better accommodate the added cost of open concomitant surgical ablation.

We stated our analysis using the September 2021 update of the FY 2021 MedPAR file reflected that the cases reporting an open concomitant surgical ablation code combination are predominately found in the higher (CC or MCC) severity level MS–DRGs of their current base MS–DRG assignment, suggesting that the patient's co-morbid conditions may also be contributing to the higher costs of these cases. Secondly, for the numerous procedure combinations that would comprise an ''open concomitant surgical ablation'' procedure, the increase in average costs appeared to directly correlate with the number of procedures performed. For example, cases that describe ''Open MVR + Open surgical ablation'' generally demonstrated costs that were lower than cases that describe ''Open MVR + Open AVR + Open CABG + Open surgical ablation.'' We also noted using the September 2021 update of the FY 2021 MedPAR file, we analyzed how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would affect the MS–DRG structure beginning in FY 2022. Similar to our findings discussed in the FY 2022 IPPS/LTCH final rule, findings from our analysis using the September 2021 update of the FY 2021 MedPAR file indicated that MS–DRGs 216, 217, 218 as well as approximately 40 other MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021.

Therefore, we stated we believe that additional time was needed to allow for further analysis of the claims data to determine to what extent the patient's co-morbid conditions are also contributing to higher costs and to identify other contributing factors that might exist with respect to the increased length of stay and costs of these cases in these MS–DRGs. For the reasons summarized, and after consideration of the public comments we received, we did not make any MS–DRG changes for cases involving the open concomitant surgical ablation procedures for FY 2023.

For this FY 2024 IPPS/LTCH PPS proposed rule, we again received a request to review the MS–DRG assignment of cases involving open concomitant surgical ablation procedures. The requestor recommended that CMS reassign open concomitant surgical ablation procedures for atrial fibrillation (AF) from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 216, 217 and 218. The requestor further recommended that if CMS does not reassign cases involving open concomitant surgical ablation procedures to MS–DRGs 216, 217 and 218, in the alternative, CMS should create new MS–DRGs for all open mitral or aortic valve repair or replacement procedures with concomitant surgical ablation for AF to improve clinical coherence when three to four open heart procedures are performed in one setting.

The requestor suggested that the following three MS–DRGs be created to reflect current standard of care for these patients:

- Suggested New MS–DRG XXX—2 procedures;
- Suggested New MS–DRG XXX—3 procedures; and
- Suggested New MS–DRG XXX—4+ procedures.

The requestor stated that cases reporting open surgical ablation procedures for AF performed during open valve repair/replacement procedures are typically assigned to MS–DRGs 216, 217, 218, 219, 220 and

221, with the majority of the cases being assigned to MS–DRGs 219, 220 and 221 because of the surgical hierarchy in MDC 05 and because there is less of a need for cardiac catheterization in these cases. The requestor performed its own data analysis, and stated their analysis showed that the data continues to demonstrate that claims with open surgical ablation procedures for AF are not clinically similar to the remaining cases in MS–DRGs 219, 220 and 221, and there are significant differences in resource utilization that reflect those clinical differences.

To explore mechanisms to address this request, we began our analysis by examining claims data from the September 2022 update of the FY 2022 MedPAR file for cases reporting procedure code combinations describing open concomitant surgical ablations assigned to MS–DRGs 216, 217, 218, 219, 220 and 221. We refer readers to Tables 6P.3a and 6P.3b associated with this proposed rule (which are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for the data analysis of cases reporting procedure code combinations describing open concomitant surgical ablations in the September 2022 update of the FY 2022 MedPAR file. Table 6P.3a associated with this proposed rule sets forth the list of ICD–10–PCS procedure codes reflecting mitral valve repair or replacement (MVR), aortic valve repair or replacement (AVR), coronary artery bypass grafting (CABG) and surgical ablation procedures that we examined in this analysis. Table 6P.3b associated with this proposed rule shows the data analysis findings of cases reporting procedure code combinations describing open concomitant surgical ablations assigned to MS–DRGs 216, 217, 218, 219, 220 and 221 from the September 2022 update of the FY 2022 MedPAR file.

As shown in Table 6P.3b associated with this proposed rule, while the average lengths of stay and average costs of cases reporting procedure code combinations describing open concomitant surgical ablations are higher than all cases in their respective MS–DRG, we found there is variation in the volume, length of stay, and average costs of the cases. For MS–DRG 216, we found 439 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 16.7 days to 20.3 days and average costs ranging from $78,586 to $111,439 for these cases. For MS–DRG 217, we found 92 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 8.5 days to 14 days and average costs ranging from $43,221 to $98,001 for these cases. For MS–DRG 218, we found 2 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay of 6.5 days and average cost of $38,519 for these cases. For MS–DRG 219, we found 1,136 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 9.5 days to 13.6 days and average costs ranging from $60,495 to $94,572 for these cases. For MS–DRG 220, we found 770 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 6.7 days to 9.6 days and average costs ranging from $49,900 to $84,293 for these cases. For MS–DRG 221, we found 38 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 4.5 days to 5.8 days and average costs ranging from $30,725 to $59,024 for these cases.

Similar to our analysis of the data as discussed in the FY 2023 IPPS/LTCH PPS final rule, this data analysis also shows for the numerous procedure combinations that would comprise an ''open concomitant surgical ablation'' procedure, the increase in average costs appears to directly correlate with the number of procedures performed. The data analysis reflects that cases that describe ''Open MVR + Open AVR'' in addition to other concomitant procedures generally demonstrate higher average costs in their respective MS–DRGs. In MS–DRG 216, we identified a total of 439 cases reporting procedure code combinations describing open concomitant surgical ablations with an average length of stay of 17.7 days and average costs of $89,877. Of those 439 cases, there were 40 cases reporting an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure with average costs of $106,301 and an average length of stay of 17.9 days. In MS–DRG 217, we identified a total of 92 cases reporting procedure code combinations describing open concomitant surgical ablations with an average length of stay of 10 days and average costs of $60,975. Of those 92 cases, there were 9 cases reporting an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure with average costs of $82,514 and an average length of stay of 12.5 days. In MS–DRG 219, we identified a total of 1,136 cases reporting procedure code combinations describing open concomitant surgical ablations with an average length of stay of 11.2 days and average costs of $70,693. Of those 1,136 cases, there were 102 cases reporting an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure with average costs of $85,537 and an average length of stay of 12.8 days. In MS–DRG 220, we identified a total of 770 cases reporting procedure code combinations describing open concomitant surgical ablations with an average length of stay of 7.3 days and average costs of $52,456. Of those 770 cases, there were 48 cases reporting an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure with average costs of $67,344 and an average length of stay of 8.4 days. For MS–DRG 218 and MS–DRG 221, we did not identify any cases reporting procedure code combinations describing open concomitant surgical ablations with an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure.

In examining this request, we note that the requestor suggested that CMS reassign open concomitant surgical ablation procedures for atrial fibrillation (AF) from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 216, 217 and 218 for FY 2024, however, as discussed in the FY 2023 IPPS/LTCH PPS final rule, MS–DRGs 216, 217 and 218 are defined by the performance of cardiac catheterization. We continue to be concerned about the effect on clinical coherence of assigning cases reporting procedure code combinations describing open concomitant surgical ablations that do not also have a cardiac catherization procedure reported to MS–DRGs that are defined by the performance of that procedure. We also note, as discussed in section II.C.1.b of this proposed rule, using the December 2022 update of the FY 2022 MedPAR file, we analyzed how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would affect the MS–DRG structure beginning in FY 2024. Similar to our findings discussed in the

FY 2022 and FY 2023 IPPS/LTCH PPS final rules, findings from our analysis indicate that MS–DRGs 216, 217, 218 as well as approximately 44 other base MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. Specifically, we note that the total number of cases in MS–DRG 218 is again below 500. We refer the reader to Table 6P.10b associated with this proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for the list of the 135 MS–DRGs that would potentially be subject to deletion and the list of the 86 new MS–DRGs that would potentially be created under this policy if the NonCC subgroup criteria was applied.

To further analyze the claims data to determine to what extent the performance of multiple procedures is contributing to higher costs and to identify other contributing factors that might exist with respect to the increased length of stay and costs of these cases in these MS–DRGs, we analyzed the cases reporting a concomitant procedure code combination without reporting a procedure code describing open surgical ablation assigned to MS–DRGs 216, 217, 218, 219, 220, and 221. We refer readers to Tables 6P.3c associated with this proposed rule (which are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for the data analysis of cases reporting a concomitant procedure code combination without reporting a procedure code describing open surgical ablation assigned to MS–DRGs 216, 217, 218, 219, 220, and 221 from the September 2022 update of the FY 2022 MedPAR file.

The data analysis similarly reflects that cases that report ''Open MVR + Open AVR'' in addition to other concomitant procedures generally demonstrate higher average costs in their respective MS–DRGs, even in instances where an open surgical ablation was not reported. In MS–DRG 216, we identified a total of 2,759 cases reporting a concomitant procedure code combination without reporting a procedure code describing open surgical ablation with an average length of stay of 17.5 days and average costs of $89,334. Of those 2,759 cases, there were 240 cases reporting an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure with average costs of $116,611 and an average length of stay of 22.7 days. In MS–DRG 217, we identified a total of 852 cases reporting a concomitant procedure code combination without reporting a procedure code describing open surgical ablation with an average length of stay of 10.7 days and average costs of $56,208. Of those 852 cases, there were 31 cases reporting an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure with average costs of $70,831 and an average length of stay of 12.6 days. In MS–DRG 218, we identified a total of 64 cases reporting a concomitant procedure code combination without reporting a procedure code describing open surgical ablation with an average length of stay of 6.5 days and average costs of $39,924, none of which reported an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure. In MS–DRG 219, we identified a total of 7,604 cases reporting a concomitant procedure code combination without reporting a procedure code describing open surgical ablation with an average length of stay of 11.1 days and average costs of $66,412. Of those 7,604 cases, there were 579 cases reporting an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure with average costs of $85,890 and an average length of stay of 13.7 days. In MS–DRG 220, we identified a total of 6,430 cases reporting a concomitant procedure code combination without reporting a procedure code describing open surgical ablation with an average length of stay of 6.5 days and average costs of $45,472. Of those 6,430 cases, there were 260 cases reporting an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure with average costs of $63,761 and an average length of stay of 7.8 days. In MS–DRG 221, we identified a total of 666 cases reporting a concomitant procedure code combination without reporting a procedure code describing open surgical ablation with an average length of stay of 5.0 days and average costs of $39,777. Of those 666 cases, there were 9 cases reporting an aortic valve repair/replacement procedure, a mitral valve repair/replacement procedure, and another concomitant procedure with average costs of $38,156 and an average length of stay of 5.6 days.

Analysis of the claims data suggests that it is the performance of an aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure plus another concomitant procedure that is associated with increased hospital resource utilization, not solely the performance of open surgical ablation as suggested by the requestor, when compared to other cases in their respective MS–DRGs. We reviewed these data and note, clinically, the management of mixed valve disease is challenging because patients with mixed valve disease are often frail, elderly, and present with multiple comorbidities. The combination of conditions in mixed valve disease, such as aortic stenosis and mitral stenosis, can result in a greater reduction of cardiac output than in isolated valvular stenosis. Patients requiring an aortic valve procedure and a mitral valve procedure in the same operative session are more complex cases and can be at significant risk for adverse events if there is moderate or severe disease of one or more cardiac valves. The data analysis clearly shows that cases reporting aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure and another concomitant procedure have higher average costs and generally longer lengths of stay compared to all the cases in their assigned MS–DRG. For these reasons, we are proposing to create a new MS–DRG for cases reporting an aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure, and another concomitant procedure.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the most recent claims data from the December 2022 update of the FY 2022 MedPAR file. The following table illustrates our findings for all 892 cases reporting procedure codes describing an aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure, and another concomitant procedure. We believe the resulting proposed MS–DRG assignment is more clinically homogeneous, coherent and better reflects hospital resource use.

BILLING CODE 4120–01–P

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Concomitant Aortic and Mitral Valve Procedures	892	15.7	$93,764

We applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of this FY 2024 IPPS/LTCH PPS proposed rule. As shown in the table that follows, a three-way split of the proposed new MS–DRG failed to meet the criterion that there be at least 500 or more cases in each subgroup.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	679	17.7	$102,194
With CC	207	9.4	$67,682
Without CC/MCC	6	5	$39,567

We then applied the criteria for a two-way split for the ''with CC/MCC'' and ''without CC/MCC'' subgroups and again found that the criterion that there be at least 500 or more cases in each subgroup could also not be met. The following table illustrates our findings.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With CC/MCC	886	15.7	$94,131
Without CC/MCC	6	5	$39,567

We also applied the criteria for a two-way split for the ''with MCC'' and ''without MCC'' subgroups and found that the criterion that there be at least 500 or more cases in each subgroup similarly could not be met. The following table illustrates our findings.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	679	17.7	$102,194
Without MCC	213	9.2	$66,890

Therefore, for FY 2024, we are not proposing to subdivide the proposed new MS–DRG for cases reporting procedure codes describing an aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure, and another concomitant procedure into severity levels.

In summary, for FY 2024, taking into consideration that it clinically requires greater resources to perform an aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure, and another concomitant procedure, we are proposing to create a new base MS–DRG for cases reporting an aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure, and another concomitant procedure in MDC 05. The proposed new MS–DRG is proposed new MS–DRG 212 (Concomitant Aortic and Mitral Valve Procedures). We refer the reader to Table 6P.4a associated with this proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*) for the list of procedure codes we are proposing to define in the logic for the proposed new MS–DRG. We note that discussion of the surgical hierarchy for the proposed modifications is discussed in section II.C.15. of this proposed rule.

b. External Heart Assist Device

Impella® Ventricular Support Systems are temporary heart assist devices intended to support blood pressure and provide increased blood flow to critical organs in patients with cardiogenic shock, by drawing blood out of the heart and pumping it into the aorta, partially or fully bypassing the left ventricle to provide adequate circulation of blood (replace or supplement left ventricle pumping) while also allowing damaged heart muscle the opportunity to rest and recover in patients who need short-term support.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44820 through 44831), we

discussed a request to reassign certain cases reporting procedure codes describing the insertion of a percutaneous short-term external heart assist device from MS–DRG 215 (Other Heart Assist System Implant) to MS–DRGs 216, 217, and 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively). We stated that our clinical advisors reviewed the clinical issues and the claims data and agreed that cases reporting a procedure code that describes the intraoperative insertion of a short-term external heart assist device are generally less resource intensive and are clinically distinct from other cases reporting procedure codes describing the insertion of other types of heart assist devices currently assigned to MS–DRG 215. We also stated that critically ill patients who are experiencing or at risk for cardiogenic shock from an emergent event such as heart attack or virus that impacts the functioning of the heart and requires longer heart pump support are different from those patients who require intraoperative support only. Patients receiving a short-term external heart assist device intraoperatively during coronary interventions often have an underlying disease pathology such as heart failure related to occluded coronary vessels that is broadly similar in kind to other patients also receiving these interventions without the need for an insertion of a short-term external heart assist device. In the post-operative period, these patients can recover and can be sufficiently rehabilitated prior to discharge. For these reasons, we finalized our proposal to assign ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ that describe the intraoperative insertion of a short-term external heart assist device to MS–DRGs 216, 217, 218, 219, 220 and 221.

For this FY 2024 IPPS/LTCH PPS proposed rule, we received a request to reassign certain cases reporting procedure codes describing the insertion of a short-term external heart assist device using an axillary artery conduit from MS–DRG 215 to MS–DRGs 001 and 002 (Heart Transplant or Implant of Heart Assist System with MCC and without MCC, respectively) and MS–DRG 003 (ECMO or Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedures).

The Impella® 5.5 with SmartAssist® System is designed for longer-duration support (up to 14 days) than other femoral access percutaneous ventricular assist devices (pVADs) that treat cardiogenic shock (up to 4 days) providing full cardiac and hemodynamic support with 5.5 liters of blood flow per minute. The Impella® 5.5 with SmartAssist® System is considered a hybrid procedure of an open vascular exposure and an endovascular procedure. The Impella® 5.5 with SmartAssist® System surgical pump can be inserted through an open chest for direct aortic access or a surgical incision that exposes the axillary artery. In the axillary artery approach, a surgical graft conduit is anastomosed to the axillary artery by a surgeon in the operating room. The device is positioned across the aortic valve, with the inlet located in the left ventricle and the outlet in the ascending aorta to allow the device to directly unload via the native pathway and to support coronary perfusion. According to the requestor, the Impella® 5.5 with SmartAssist® System is indicated for more complex patients than other femoral artery access pVADs, however the insertion of a short-term external heart assist device using an axillary artery conduit (such as the Impella® 5.5 with SmartAssist® System) is reported with the same ICD–10–PCS code that describes insertion of a percutaneous short-term external heart assist device and are therefore also assigned to MS–DRG 215. According to the requestor, Impella® 5.5 with SmartAssist® System is more clinically comparable to implantable heart assist systems, such as left ventricular assist devices (LVADs), and like LVADs, the insertion of a short-term external heart assist device using an axillary artery conduit must be performed by a surgeon in the operating room. The requestor performed its own data analysis, and stated their analysis showed a significant variation in the resource utilization for patients treated with the Impella® 5.5 with SmartAssist® System compared to patients treated with other femoral access pVADs assigned to MS–DRG 215.

Following the submission of the FY 2024 MS–DRG classification change request for certain cases reporting procedure codes describing the insertion of a short-term external heart assist device using an axillary artery conduit, this same requestor (the manufacturer of the Impella® Ventricular Support Systems) submitted a code proposal requesting a new ICD–10–PCS procedure code to describe the Impella® 5.5 with SmartAssist® System for consideration as an agenda topic to be discussed at the March 7–8, 2023 ICD–10 Coordination and Maintenance Committee meeting. The proposal was presented and discussed at the March 7–8, 2023 ICD–10 Coordination and Maintenance Committee meeting. We refer the reader to the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding the request, including a recording of the discussion and the related meeting materials. Public comments in response to the code proposal were due by April 7, 2023.

In reviewing this MS–DRG reclassification request, we note that we agree with the requestor that the insertion of a short-term external heart assist device using an axillary artery conduit (such as the Impella® 5.5 with SmartAssist® System) is not separately identifiable in the claims data. Therefore, in this section, we address the assignment of the existing procedure codes describing the insertion of short-term external heart assist devices, including our proposed reassignment of a subset of these cases for FY 2024.

The following ICD–10–PCS procedure codes describe the insertion of a short-term external heart assist device.

ICD-10-PCS Code	Description
02HA0RZ	Insertion of short-term external heart assist system into heart, open approach
02HA3RZ	Insertion of short-term external heart assist system into heart, percutaneous approach
02HA4RZ	Insertion of short-term external heart assist system into heart, percutaneous endoscopic approach

In the ICD–10 MS–DRG Definitions Manual Version 40.1, procedure codes 02HA0RZ, 02HA3RZ, and 02HA4RZ are currently recognized as extensive O.R. procedures assigned to MS–DRG 215 (Other Respiratory System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 05.

As stated previously, the request for FY 2024 rulemaking was to reassign certain cases reporting procedure codes describing the insertion of a short-term external heart assist device using an axillary artery conduit from MS–DRG 215 to MS–DRGs 001 and 002 (Heart Transplant or Implant of Heart Assist System with MCC and without MCC, respectively) and MS–DRG 003 (ECMO or Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedures). During our review of this request, we note that the current GROUPER logic for MS–DRGs 001 and 002 is comprised of two lists. The first list includes procedure codes identifying a heart transplant procedure, and the second list includes procedure codes identifying the implantation of a heart assist system (including short-term external heart assist systems) and includes code combinations or procedure code ''clusters'' that, when reported together, satisfy the logic for assignment to MS–DRGs 001 and 002. The code combinations are represented by two procedure codes and include either one code for the insertion of the device with one code for removal of the device or one code for the revision of the device with one code for the removal of the device.

We also note that the GROUPER logic for MS–DRG 003 is defined by a (1) procedure code for extracorporeal oxygenation (ECMO) (2) a procedure code for tracheostomy, mechanical ventilation and a procedure code further classified as extensive or (3) a procedure code for tracheostomy with a procedure code further classified as extensive and a principal diagnosis not assigned to MS–DRGs 011, 012 or 013 as reflected in the logic table:

ECMO	Tracheostomy	MV >96	PDx Except Face, Mouth, Neck	Major O.R. Procedure	MS-DRG
Yes	n/a	n/a	n/a	n/a	003 (ECMO or Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedures)
No	Yes	Yes		Yes	003 (ECMO or Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedures)
No	Yes		Yes	Yes	003 (ECMO or Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedures)
No	Yes	Yes		No	004 (Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck without Major O.R. Procedures)
No	Yes		Yes	No	004 (Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck without Major O.R. Procedures)

As procedure codes describing the insertion of a short-term external heart assist device are classified as extensive procedures in Version 40.1, specific assignment of these procedure codes to MS–DRG 003 is not required. When the other parameters of the GROUPER logic are met and procedure codes describing the insertion of a short-term external heart assist device are also reported, MS–DRG 003 will be assigned, therefore we did not include MS–DRG 003 in our analysis. We refer the reader to the ICD–10 MS–DRG Version 40.1 Definitions Manual (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*, for complete documentation of the GROUPER logic for the listed MS–DRGs and for Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index.

To begin our analysis, we examined claims data from the September 2022 update of the FY 2022 MedPAR file for MS–DRG 215 to identify cases reporting ICD–10–PCS codes 02HA0RZ, 02HA3RZ, and 02HA4RZ. Our findings are shown in the following table:

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
215	All cases	3,587	9	$86,774
	02HA0RZ	60	9.2	$130,153
	02HA3RZ	3,424	8.9	$86,640
	02HA4RZ	6	6.7	$63,923

As shown in the table, we identified a total of 3,587 cases within MS–DRG 215 with an average length of stay of 9 days and average costs of $86,774. Of these 3,587 cases, there are 60 cases reporting a procedure code describing the open insertion of a short-term external heart assist device with an average length of stay of 9.2 days and average costs of $130,153. There are 3,424 cases reporting a procedure code describing a percutaneous insertion of a short-term external heart assist device with an average length of stay of 8.9 days and average costs of $86,640. There are 6 cases reporting a procedure code describing a percutaneous endoscopic insertion of a short-term external heart assist device with an average length of stay of 6.7 days and average costs of $63,923. The data analysis shows that the average length of stay is longer and the average costs are higher for the cases reporting a procedure code describing the open insertion of a short-term external heart assist device compared to all cases in MS–DRG 215, while the average length of stay is shorter and the average costs are lower for the cases reporting a procedure code describing the percutaneous or percutaneous endoscopic insertion of a short-term external heart assist device compared to all cases in that MS–DRG.

We then examined claims data from the September 2022 update of the FY 2022 MedPAR for MS–DRGs 001 and 002. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
001	1,553	40.4	$235,135
002	28	18.3	$108,476

While the average costs for all cases in MS–DRG 001 are higher than the average costs of the cases reporting a procedure code describing the open insertion of a short-term external heart assist device, the data suggest that overall, cases reporting a procedure code describing the open insertion of a short-term external heart assist device may be more appropriately aligned with the average costs of the cases in MS–DRGs 001 and 002 in comparison to MS–DRG 215, even though the average length of stay is shorter.

We then reviewed the clinical considerations along with this data analysis and agreed that cases reporting a procedure code that describes the open insertion of a short-term external heart assist device are generally more resource intensive and are clinically distinct from other cases reporting procedure codes describing the insertion of short-term external heart devices by other approaches currently assigned to MS–DRG 215. The availability of mechanical circulatory support devices to provide acute hemodynamic support for cardiogenic shock or to support percutaneous coronary intervention (PCI) has expanded over the past decade. There is now a portfolio of short-term external heart assist devices available that each have different indications for use and techniques for implantation.

The percutaneous or percutaneous endoscopic insertion of a short-term external heart assist device involves standard catheterization techniques except for the requirement of a large-bore 13 or 14 Fr sheath. Short-term external heart assist devices inserted in this manner generally provide blood flow up to 2.5 L/min for systemic perfusion and are intended for temporary (≤ 4 days) use to maintain stable heart function. In contrast, the open insertion of a short-term external heart assist device or the insertion of short-term external heart assist devices using an axillary artery conduit requires a surgical cutdown of the axillary artery to place the larger 23 Fr sheaths of these devices. Short-term external heart assist devices that are inserted via an open approach or using an axillary artery conduit can provide blood flow up to 5.5 L/min for systemic perfusion and are intended for longer use (≤ 14 days). They are indicated for the treatment of ongoing cardiogenic shock that occurs less than 48 hours following acute myocardial infarction or open-heart surgery or in the setting of cardiomyopathy, including peripartum cardiomyopathy, or myocarditis as a result of isolated left ventricular failure that is not responsive to medical management and conventional treatment measures. We note the indications for the open insertion of a short-term external heart assist device or the insertion of short-term external heart assist devices using an axillary artery conduit are more closely aligned with MS–DRGs 001 and 002 as compared to MS–DRG 215. For these reasons, we believe reassigning ICD–10–PCS code 02HA0RZ that describes the open insertion of a short-term external heart assist device to Pre-MDC MS–DRGs 001 and 002 would improve clinical coherence in these MS–DRGs.

To compare and analyze the impact of these potential modifications, we ran a simulation using the claims data from the September 2022 update of the FY 2022 MedPAR file. The following table reflects our simulation for ICD–10–PCS procedure code 02HA0RZ that describes the open insertion of a short-term external heart assist device if it was moved to MS–DRGs 001 and 002.

MS-DRG		Number of Cases	Average Length of Stay	Average Cost
	All Cases	3,587	9	$86,774
215	without 02HA0RZ	3,534	9	$83,613
	All Cases	1,553	40.4	$235,135
001	with 02HA0RZ	1,606	39.4	$231,677
	All Cases	28	18.3	$108,476
002	with 02HA0RZ	35	15.3	$112,533

We believe that this simulation supports that the resulting MS–DRG assignments would be more clinically homogeneous, coherent and better reflect hospital resource use. A review of this simulation shows that this distribution of ICD–10–PCS code 02HA0RZ that describes the open insertion of a short-term external heart assist device if moved to MS–DRGs 001 and 002, slightly decreases the average costs of the cases remaining in MS–DRG 215 by about $3,000, while similarly having a limited effect on the average costs of MS–DRGS 001 and 002. Therefore, for FY 2024, we are proposing to reassign ICD–10–PCS code 02HA0RZ when reported as a standalone procedure from MDC 05 in MS–DRG 215 to Pre-MDC MS–DRGs 001 and 002. Under this proposal, procedure code 02HA0RZ will no longer need to be reported as part of a procedure code combination or procedure code ''cluster'' to satisfy the logic for assignment to MS–DRGs 001 and 002.

We will continue to monitor the clinical cohesiveness of the procedures assigned to MS–DRGs 001 and 002 to assess whether they continue to be aligned on resource use, as well as current shifts in treatment practices, to determine if additional refinements may be warranted in the future. The increased availability of short-term external heart assist devices and their development into low profile, high output pumps has shifted the management of cardiogenic shock that is unresponsive to other interventions in the years since these MS–DRGs were created. These short-term devices can now be used as a bridge to provide the time needed for clinical decision making, native heart recovery, or until another procedure can be performed, such as the insertion of a left ventricular assist device (LVAD) or cardiac transplantation.

As noted previously, this same requestor (the manufacturer of the Impella® Ventricular Support Systems) submitted a code proposal to be discussed at the March 7–8, 2023 ICD–10 Coordination and Maintenance Committee meeting to request a change to how the Impella® 5.5 with SmartAssist® System is coded within the ICD–10–PCS classification as there are no unique ICD–10–PCS codes to describe the insertion of a short-term external heart assist system using an axillary artery conduit. Because the decisions on the diagnosis and procedure code proposals that were presented at the March 7–8, 2023 ICD–10–CM Coordination and Maintenance Committee meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes in association with this FY 2024 IPPS/LTCH PPS proposed rule, as we have noted in prior rulemaking (86 FR 44805), we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code.

Under this established process, the MS–DRG assignment for any new procedure codes describing the Impella® 5.5 with SmartAssist® System, if finalized following the March meeting, would be reflected in Table 6B.—New Procedure Codes associated with the final rule for FY 2024. In the event there is not support for the new procedure code as presented at the March 7–8, 2023 ICD–10 Coordination and Maintenance Committee meeting to describe the insertion of a short-term external heart assist system using an axillary artery conduit, the procedure will be reported with current coding that is applicable within the classification as displayed in the ICD–10 Coordination and Maintenance Committee meeting materials (available on the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials*). We refer the reader to section II.C.14. of the preamble of this proposed rule for further information regarding Table 6B.

As discussed in prior rulemaking, interested parties may use current coding information to consider the potential MS–DRG assignments for procedure codes that may be finalized after the March meeting and submit public comments for consideration. Specifically, in the ICD–10 Coordination and Maintenance Committee meeting materials (available on the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials*), for each procedure code proposal we provide the current coding that is applicable within the classification and that should be reported in the absence of a more unique code, or until such time a new code is created and becomes effective. The procedure code(s) listed in current coding are generally, but not always, the same code(s) that are considered as the predecessor code(s) for purposes of MS–DRG assignment. As previously noted, our process for determining the MS–DRG assignment for a new procedure code does not automatically result in the new procedure code being assigned to the same MS–DRG or having the same designation (O.R. versus Non-O.R.) as the predecessor code. However, this current coding information can be used in conjunction with the GROUPER logic, as set forth in the ICD–10 MS–DRG Definitions Manual and publicly available on our CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* to review

the MS–DRG assignment of the current code(s) and examine the potential MS–DRG assignment of the proposed code(s), to assist in formulating any public comments for submission to CMS for consideration.

In summary, we are proposing to reassign ICD–10–PCS code 02HA0RZ (Insertion of short-term external heart assist system into heart, open approach) from MDC 05 in MS–DRG 215 to Pre-MDC MS–DRGs 001 and 002 for FY 2024. Separately, and as previously discussed, a code proposal was discussed at the March 7–8, 2023 ICD–10 Coordination and Maintenance Committee meeting to request a change to how the Impella® 5.5 with SmartAssist® System is coded within the ICD–10–PCS classification. If finalized, the new procedure code would be included in the FY 2024 code update files that are made available in late May/early June on the CMS website at: *https://www.cms.gov/medicare/coding/icd10*. In addition, using our established process, if finalized, the MS–DRG assignment for any new procedure codes describing the Impella® 5.5 with SmartAssist® System will be displayed in Table 6B.—New Procedure Codes in association with the FY 2024 IPPS/LTCH PPS final rule that will be made publicly available in association with the final rule on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*.

c. Ultrasound Accelerated Thrombolysis for Deep Venous Thrombosis

We received a request to reassign cases reporting ultrasound accelerated thrombolysis (USAT) of peripheral vascular structures procedures with the administration of thrombolytic(s) for deep venous thrombosis from MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 270, 271, and 272 (Other Major Cardiovascular Procedures with MCC, with CC, and without CC/MCC, respectively). Deep venous thrombosis (DVT) is caused when a blood clot (or thrombus) forms in a vein, primarily in large veins of the lower leg and thigh, but may also occur in the deep veins of the pelvis and less commonly, in the upper extremities. Risk factors for DVT are similar to those of pulmonary embolism as discussed in section II.C.4.a. of this proposed rule, and include prolonged immobilization from any cause, obesity, cancer, fractured hip or leg, use of certain medications such as oral contraceptives, and the presence of certain medical conditions such as heart failure. Common symptoms of DVT include leg (or arm) swelling, pain, cramping, or heaviness, skin discoloration, the feeling of warmth in the affected area, or there may not be any noticeable symptoms.

Thrombolysis is a type of treatment where the infusion of thrombolytics, (fibrinolytic or ''clot-busting'' drugs) is used to dissolve blood clots that form in the arteries or veins with the goal of improving blood flow and preventing long-term damage to tissues and organs. Conventional catheter-directed thrombolysis (CDT) procedures generally rely on a multi-sidehole catheter placed adjacent to the thrombus through which thrombolytics are delivered directly to the thrombus, however, the EKOS™ EkoSonic® Endovascular System (EKOS™ System) employs ultrasound to assist in thrombolysis. The ultrasound does not itself dissolve the thrombus, but pulses of ultrasonic energy temporarily make the fibrin in the thrombus more porous and increase fluid flow within the thrombus. High frequency, low-intensity ultrasonic waves create a pressure gradient that drives the thrombolytic into the thrombus and keeps it in close proximity to the binding sites. USAT is also referred to as ultrasound-assisted thrombolysis or ultrasound-enhanced thrombolysis.

According to the requestor (the manufacturer of the EKOS™ device), USAT of peripheral vascular structures with the administration of thrombolytic(s) for the treatment of DVT performed using the EKOS™ device utilizes more resources in comparison to other procedures that are currently assigned to MS–DRGs 252, 253, and 254 and is not clinically coherent with the other procedures assigned to those MS–DRGs. The requestor stated that the cases reporting USAT of peripheral vascular structures with the administration of thrombolytic(s) for DVT are more comparable with and more clinically aligned with the procedures assigned to MS–DRGs 270, 271, and 272. The requestor stated they performed an analysis of cases reporting USAT of peripheral vascular structures for DVT with the following ICD–10–PCS procedure codes.

ICD-10-PCS Code	Description
04FC3Z0	Fragmentation of right common iliac artery, percutaneous approach, ultrasonic
04FD3Z0	Fragmentation of left common iliac artery, percutaneous approach, ultrasonic
04FE3Z0	Fragmentation of right internal iliac artery, percutaneous approach, ultrasonic
04FF3Z0	Fragmentation of left internal iliac artery, percutaneous approach, ultrasonic
04FH3Z0	Fragmentation of right external iliac artery, percutaneous approach, ultrasonic
04FJ3Z0	Fragmentation of left external iliac artery, percutaneous approach, ultrasonic
04FK3Z0	Fragmentation of right femoral artery, percutaneous approach, ultrasonic
04FL3Z0	Fragmentation of left femoral artery, percutaneous approach, ultrasonic
04FM3Z0	Fragmentation of right popliteal artery, percutaneous approach, ultrasonic
04FN3Z0	Fragmentation of left popliteal artery, percutaneous approach, ultrasonic
04FP3Z0	Fragmentation of right anterior tibial artery, percutaneous approach, ultrasonic
04FQ3Z0	Fragmentation of left anterior tibial artery, percutaneous approach, ultrasonic
04FR3Z0	Fragmentation of right posterior tibial artery, percutaneous approach, ultrasonic
04FS3Z0	Fragmentation of left posterior tibial artery, percutaneous approach, ultrasonic
04FT3Z0	Fragmentation of right peroneal artery, percutaneous approach, ultrasonic
04FU3Z0	Fragmentation of left peroneal artery, percutaneous approach, ultrasonic
04FY3Z0	Fragmentation of lower artery, percutaneous approach, ultrasonic
05F33Z0	Fragmentation of right innominate vein, percutaneous approach, ultrasonic
05F43Z0	Fragmentation of left innominate vein, percutaneous approach, ultrasonic
05F53Z0	Fragmentation of right subclavian vein, percutaneous approach, ultrasonic
05F63Z0	Fragmentation of left subclavian vein, percutaneous approach, ultrasonic
05F73Z0	Fragmentation of right axillary vein, percutaneous approach, ultrasonic
05F83Z0	Fragmentation of left axillary vein, percutaneous approach, ultrasonic
05F93Z0	Fragmentation of right brachial vein, percutaneous approach, ultrasonic
05FA3Z0	Fragmentation of left brachial vein, percutaneous approach, ultrasonic
05FB3Z0	Fragmentation of right basilic vein, percutaneous approach, ultrasonic
05FC3Z0	Fragmentation of left basilic vein, percutaneous approach, ultrasonic
05FD3Z0	Fragmentation of right cephalic vein, percutaneous approach, ultrasonic
05FF3Z0	Fragmentation of left cephalic vein, percutaneous approach, ultrasonic
06FC3Z0	Fragmentation of right common iliac vein, percutaneous approach, ultrasonic
06FD3Z0	Fragmentation of left common iliac vein, percutaneous approach, ultrasonic
06FF3Z0	Fragmentation of right external iliac vein, percutaneous approach, ultrasonic
06FG3Z0	Fragmentation of left external iliac vein, percutaneous approach, ultrasonic
06FH3Z0	Fragmentation of right hypogastric vein, percutaneous approach, ultrasonic
06FJ3Z0	Fragmentation of left hypogastric vein, percutaneous approach, ultrasonic
06FM3Z0	Fragmentation of right femoral vein, percutaneous approach, ultrasonic
06FN3Z0	Fragmentation of left femoral vein, percutaneous approach, ultrasonic
06FP3Z0	Fragmentation of right saphenous vein, percutaneous approach, ultrasonic
06FQ3Z0	Fragmentation of left saphenous vein, percutaneous approach, ultrasonic
06FY3Z0	Fragmentation of lower vein, percutaneous approach, ultrasonic

We note that the requestor did not include a list of diagnosis codes describing DVT or a list of procedure codes describing the administration of thrombolytic(s) in connection with its analysis.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58561 through 58579), we summarized and responded to public comments expressing concern with the proposed MS–DRG assignments for the newly created procedure codes describing USAT of several anatomic sites that were effective with discharges on and after October 1, 2020 (FY 2021). Similar to the current request for FY 2024, for FY 2021, the commenters recommended that USAT procedures performed with the EKOS™ device for the treatment of DVT be assigned to MS–DRGs 270, 271, and 272 instead of MS–DRGs 252, 253, and 254. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58561 through 58579), available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*, for the detailed discussion.

We analyzed claims data from the September 2022 update of the FY 2022 MedPAR file for MS–DRGs 252, 253, and 254 and cases reporting a principal diagnosis of DVT and USAT of peripheral vascular structures procedure with and without the administration of thrombolytic(s). We identified claims reporting an USAT of peripheral vascular structures procedure, the administration of thrombolytic(s), and a diagnosis of DVT with the listed codes as shown in Table 6P.5a associated with this proposed rule (and available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*). The findings from our analysis are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
252 – All cases	20,939	8	$29,307
252 – Cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s)	51	6.4	$36,660
252 – Cases reporting principal diagnosis of DVT and USAT without thrombolytic(s)	10	6.7	$21,538
253 – All cases	16,650	5.2	$22,685
253 – Cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s)	80	5.2	$26,471
253 – Cases reporting principal diagnosis of DVT and USAT without thrombolytic(s)	11	3.8	$20,126
254 – All cases	6,707	2.4	$15,438
254 – Cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s)	22	3	$21,867
254 – Cases reporting principal diagnosis of DVT and USAT without thrombolytic(s)	9	2	$17,750

As shown in the table, we identified a total of 20,939 cases in MS–DRG 252 with an average length of stay of 8 days and average costs of $29,307. Of the 20,939 cases, we found 51 cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s) with an average length of stay of 6.4 days and average costs of $36,660 and 10 cases reporting a principal diagnosis of DVT and USAT without thrombolytic(s) with an average length of stay of 6.7 days and average costs of $21,538. The data demonstrates that the cases reporting a principal diagnosis of DVT and USAT with or without thrombolytic(s) have a shorter average length of stay compared to the average length of stay of all the cases in MS–DRG 252 (6.4 days and 6.7 days, respectively versus 8 days). However, the average costs for the cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s) are higher than the average costs of all the cases in MS–DRG 252 ($36,660 versus $29,307) and the average costs for the cases reporting a principal diagnosis of DVT and USAT without thrombolytic(s) are lower than the average costs of all the cases in MS–DRG 252 ($21,538 versus $29,307). The data indicate that the cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s) appear to consume more resources in comparison to the other cases in MS–DRG 252, although it is unclear if the higher resource consumption is a direct result of the EKOS™ device technology utilized in the performance of the thrombolysis procedure, or the fact that these cases also include the reporting of at least one or more secondary MCC diagnoses, or a combination of both factors. Conversely, the data indicate that the cases reporting a principal diagnosis of DVT and USAT without thrombolytic(s) appear to be less resource intensive with a difference in average costs of $7,769 ($29,307 − $21,538 = $7,769). Accordingly, the data appear to reflect that the cases reporting use of the EKOS™ device technology with thrombolytic(s) may have an impact on the consumption of resources when compared to all the cases in MS–DRG 252.

For MS–DRG 253, we identified a total of 16,650 cases with an average length of stay of 5.2 days and average costs of $22,685. Of the 16,650 cases, we found 80 cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s) with an average length of stay of 5.2 days and average costs of $26,471 and 11 cases reporting a principal diagnosis of DVT and USAT without thrombolytic(s) with an average length of stay of 3.8 days and average costs of $20,126. The data demonstrates that the average length of stay for cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s) is the same as the average length of stay for all the cases in MS–DRG 253 (5.2 days). Conversely, the average length of stay for the cases reporting a principal diagnosis of DVT and USAT without thrombolytic(s) is shorter than the average length of stay of all the cases in MS–DRG 253 (3.8 days versus 5.2 days). Similar to MS–DRG 252, the average costs for the cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s) are higher than the average costs of all the cases in MS–DRG 253 ($26,471 versus $22,685) and the average costs for the cases reporting a principal diagnosis of DVT and USAT without thrombolytic(s) are lower than the average costs of all the cases in MS–DRG 253 ($20,126 versus $22,685). The data indicate that the cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s) appear to consume more resources in comparison to the

other cases in MS–DRG 253, although it is unclear if the higher resource consumption is a direct result of the EKOS™ device technology utilized in the performance of the thrombolysis procedure, or the fact that these cases also include the reporting of at least one or more secondary CC diagnoses, or a combination of both factors.

For MS–DRG 254, we identified a total of 6,707 cases with an average length of stay of 2.4 days and average costs of $15,438. Of the 6,707 cases, we found 22 cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s) with an average length of stay of 3 days and average costs of $21,867 and 9 cases reporting a principal diagnosis of DVT and USAT without thrombolytic(s) with an average length of stay of 2 days and average costs of $17,750. The data demonstrates that the cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s) have a longer average length of stay compared to the average length of stay of all the cases in MS–DRG 254 (3 days versus 2.4 days), however, the cases reporting a principal diagnosis of DVT and USAT without thrombolytic(s) have a shorter but comparable average length of stay compared to the average length of stay of all the cases in MS–DRG 254 (2 days versus 2.4 days). Additionally, the average costs for the cases reporting a principal diagnosis of DVT and USAT with or without thrombolytic(s) are higher than the average costs of all the cases in MS–DRG 254 ($21,867 and $17,750 respectively versus $15,438) with a corresponding difference in average costs of $6,429 and $2,312 respectively. Similar to our findings for MS–DRGs 252 and 253, the data for MS–DRG 254 indicate the cases reporting a principal diagnosis of DVT and USAT with thrombolytic(s) appear to consume more resources in comparison to the other cases in their respective MS–DRG. In addition, as noted, for MS–DRG 254, the average costs of cases reporting a principal diagnosis of DVT and USAT without thrombolytic(s) are also higher than the average costs of all the cases in MS–DRG 254. However, it is unclear if the higher resource consumption is a direct result of the EKOS™ device technology utilized in the performance of the thrombolysis procedure alone, or if there are other contributing factors, since cases grouping to MS–DRG 254 do not include the reporting of at least one or more secondary CC or MCC diagnoses.

Our review of the data for MS–DRGs 252, 253, and 254 and our initial analysis for cases reporting a principal diagnosis of DVT and USAT procedure with and without the administration of thrombolytic(s) suggests that the administration of thrombolytic(s) may be considered a factor in the consumption of resources for these cases in MS–DRGs 252, 253, and 254 where USAT is performed in the treatment of a DVT. For example, in MS–DRG 252, there are 51 cases reporting a principal diagnosis of DVT and USAT procedure with the administration of thrombolytic(s) and 10 cases reporting a principal diagnosis of DVT and USAT procedure without the administration of thrombolytic(s), with both subsets of cases showing a comparable average length of stay of 6.4 and 6.7 days, respectively, however, the difference in average costs for cases with and without thrombolytic(s) is $15,122 ($36,660 − $21,538 = $15,122). For MS–DRG 253, there are 80 cases reporting a principal diagnosis of DVT and USAT procedure with the administration of thrombolytic(s) and 11 cases reporting a principal diagnosis of DVT and USAT procedure without the administration of thrombolytic(s), with both subsets of cases showing a difference in the average length of stay (5.2 days and 3.8 days, respectively) and a difference in average costs of $6,345 ($26,471 − $20,126 = $6,345). For MS–DRG 254, there are 22 cases reporting a principal diagnosis of DVT and USAT procedure with the administration of thrombolytic(s) and 9 cases reporting a principal diagnosis of DVT and USAT procedure without the administration of thrombolytic(s), however, both subsets of cases have a similar average length of stay (3 days and 2 days, respectively) with a difference in average costs of $4,117 ($21,867 − $17,750 = $4,117).

Since the request we received was to reassign cases reporting ultrasound accelerated thrombolysis (USAT) with the administration of thrombolytic(s) for the treatment of deep venous thrombosis (DVT) from MS–DRGs 252, 253, and 254 to MS–DRGs 270, 271, and 272, based on our approach utilized in our initial analysis of claims reporting USAT with a principal diagnosis for DVT in MS–DRGs 252, 253, and 254, we then analyzed claims data from the September 2022 update of the FY 2022 MedPAR file for all cases in MS–DRGs 270, 271, and 272 and compared it to the cases reporting a principal diagnosis of DVT and USAT procedure with or without thrombolytic(s) in MS–DRGs 252, 253, and 254. The findings from our analysis are shown in the following tables.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
270 – All cases	15,879	9.5	$42,517
271 – All cases	11,449	5.4	$30,030
272 – All cases	3,832	2.4	$21,556

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
252 – All cases	20,939	8	$29,307
252 – Cases with principal diagnosis of DVT and USAT with or without thrombolytic(s)	61	6.4	$34,181
253– All cases	16,650	5.2	$22,685
253 – Cases with principal diagnosis of DVT and USAT with or without thrombolytic(s)	91	5	$25,704
254 – All cases	6,707	2.4	$15,438
254– Cases with principal diagnosis of DVT and USAT with or without thrombolytic(s)	31	2.7	$20,672

The claims data show that the 61 cases reporting a principal diagnosis of DVT and USAT with or without thrombolytic(s) in MS–DRG 252 have average costs that are lower than the average costs of all cases in MS–DRG 270 ($34,181 versus $42,517) and have a shorter average length of stay compared to all the cases in MS–DRG 270 (6.4 days versus 9.5 days). The 91 cases reporting a principal diagnosis of DVT and USAT with or without thrombolytic(s) in MS–DRG 253 have a comparable average length of stay (5 days versus 5.4 days) in comparison to all the cases in MS–DRG 271 and lower average costs in comparison to all the cases in MS–DRG 271 ($25,704 versus $30,030) with a difference of $4,326. Finally, the 31 cases reporting a principal diagnosis of DVT and USAT with or without thrombolytic(s) in MS–DRG 254 have an average length of stay that is comparable to all the cases in the MS–DRG 272 (2.7 days versus 2.4 days) and comparable average costs ($20,672 versus $21,556) with a difference of $884.

Upon analysis of the claims data and our review of the request, we do not agree with reassigning cases reporting an USAT procedure with the administration of thrombolytic(s) and a principal diagnosis of DVT from MS–DRGs 252, 253, and 254 to MS–DRGs 270, 271, and 272. As previously noted, the data do not support that cases reporting USAT (with or without thrombolytic(s)) for DVT utilize similar resources when compared to other procedures currently assigned to MS–DRGs 270, 271, and 272. We do not agree that cases reporting USAT (with or without thrombolytic(s)) are more comparable with and more clinically aligned with the procedures assigned to MS–DRGs 270, 271, and 272 because the majority of procedures in these MS–DRGs describe procedures performed on the heart and great vessels with either an open or an endoscopic approach in contrast to the USAT endovascular (percutaneous) procedure performed on the peripheral vascular structures. In addition, the majority of procedures in MS–DRGs 270, 271, and 272 are performed on patients who are not clinically similar to patients who undergo USAT for DVT since they describe procedures such as bypass, occlusion, and restriction that are typically performed for patients with conditions other than a DVT, such as atherosclerosis, aneurysm, and acute myocardial infarction (AMI). Lastly, a number of procedures in these MS–DRGs also involve the use of a permanently implanted device while the procedures utilizing USAT do not. Therefore, we do not consider USAT procedures to be major cardiovascular procedures, nor do we believe the cases reporting USAT with (or without thrombolytic(s)) for DVT demonstrate a similar level of technical complexity when compared to other procedures currently assigned to MS–DRGs 270, 271, and 272.

As noted, while the average costs are higher for cases reporting the administration of a thrombolytic, we question whether the higher average costs may also reflect other factors, such as the use of the EKOS™ device or the performance of other O.R. procedures that also group to MS–DRGs 252, 253, and 254. Consistent with the analysis discussed in section II.C.4.a. of this proposed rule for a similar, but separate request related to thrombolysis procedures, we believed it would also be beneficial to examine cases reporting standard CDT procedures with or without thrombolytic(s) for the treatment of DVT in MS–DRGs 252, 253, and 254, and compare the findings to the cases reporting USAT with or without thrombolytic(s) for the treatment of DVT.

Therefore, we conducted additional analyses to determine if there were significant differences in resource utilization for cases reporting standard CDT with or without thrombolytic(s) versus USAT procedures with or without thrombolytic(s) in the treatment of DVT, since claims data to compare the two modalities is now available and studies have reported similar clinical outcomes in reducing DVT regardless of which thrombolysis modality is utilized.[5] We analyzed claims data from the September 2022 update of the FY 2022 MedPAR file for all cases in MS–DRGs 252, 253, and 254 and cases reporting a standard CDT procedure with or without the administration of thrombolytic(s) and a principal diagnosis of DVT. We utilized the previously listed procedure codes for the administration of thrombolytic(s) and the previously listed diagnosis codes for a principal diagnosis of DVT. We identified cases describing standard CDT procedures performed in the treatment of DVT with the procedure codes listed in Table 6P.5a. associated with this proposed rule and available on

[5] Engelberger, Rolf & Stuck, Anna K. & Spirk, David & Willenberg, Torsten & Haine, Axel & Périard, Daniel & Baumgartner, Iris & Kucher, Nils. (2017). Ultrasound-assisted versus conventional catheter-directed thrombolysis for acute ilio-femoral deep vein thrombosis: one-year follow-up data of a randomized-controlled trial. Journal of Thrombosis and Haemostasis. 15. 10.1111/jth.13709.

the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. The findings from our analysis are shown in the following table. We note there were no cases found to report a standard CDT procedure with or without thrombolytic(s) and a principal diagnosis of DVT in MS–DRGs 253 or 254.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
252 – All cases	20,939	8	$29,307
252 – Cases with principal diagnosis of DVT and CDT with or without thrombolytic(s)	3	2.3	$10,603
253– All cases	16,650	5.2	$22,685
254 – All cases	6,707	2.4	$15,438

The data shows that the 3 cases reporting a principal diagnosis of DVT and standard CDT with or without thrombolytic(s) in MS–DRG 252 have a shorter average length of stay compared to all cases in MS–DRG 252 (2.3 days versus 8 days) and lower average costs ($10,603 versus $29,307).

Overall, our analysis of the claims data for cases reporting a principal diagnosis of DVT and USAT or standard CDT, with or without thrombolytic(s), demonstrate a low volume of cases, however, the average costs of the cases reporting USAT with thrombolytic(s) reflect a significantly higher consumption of resources than all cases in MS–DRGs 252, 253, and 254. Because it is also possible that a patient may be admitted to a hospital and receive thrombolysis (USAT or CDT) with a principal diagnosis other than a DVT or the DVT condition may be reported as a secondary diagnosis, we believed additional analysis for cases reporting either USAT or CDT, regardless of the principal diagnosis would provide us with more beneficial information in our review of these cases.

Therefore, using the September 2022 update of the FY 2022 MedPAR file, we conducted an analysis of MS–DRGs 252, 253, and 254 for cases reporting either USAT or CDT with and without thrombolytic(s) with any principal diagnosis from MDC 5. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
252 – All cases	20,939	8	$29,307
252 – Cases with any MDC 05 principal diagnosis and USAT or CDT with or without thrombolytic(s)	468	8.6	$39,181
253– All cases	16,650	5.2	$22,685
253 – Cases with any MDC 05 principal diagnosis and USAT or CDT with or without thrombolytic(s)	722	4.9	$29,663
254 – All cases	6,707	2.4	$15,438
254 – Cases with any MDC 05 principal diagnosis and DVT or CDT with or without thrombolytic(s)	195	2.6	$22,487

The findings from our analysis show a larger volume of cases for each respective MS–DRG (252, 253, and 254) for cases reporting USAT or CDT procedures with any MDC 05 principal diagnosis versus the findings from our earlier analysis involving cases specifically reporting a principal diagnosis of DVT. The claims data also show that the 468 cases reporting any principal diagnosis from MDC 05 and USAT or CDT with or without thrombolytic(s) in MS–DRG 252 have average costs that are higher than the average costs of all cases in MS–DRG 252 ($39,181 versus $29,307) and have a comparable average length of stay (8.6 days versus 8.0 days). The 722 cases reporting any principal diagnosis from MDC 05 and USAT or CDT with or without thrombolytic(s) in MS–DRG 253 have a shorter average length of stay (4.9 days versus 5.2 days) in comparison to all the cases in MS–DRG 253 and higher average costs ($29,663 versus $22,685) with a difference of $6,978. Finally, the 195 cases reporting any principal diagnosis from MDC 05 and USAT or CDT with or without thrombolytic(s) in MS–DRG 254 have an average length of stay that is comparable to all the cases in the MS–DRG 272 (2.6 days versus 2.4 days) and higher average costs ($22,487 versus $15,438) with a difference of $7,049.

In summary, based on our review and the claims data analysis for cases in MS–DRGs 252, 253, and 254 and MS–DRGs 270, 271, and 272, and for cases reporting standard CDT or USAT with or without thrombolytic(s) regardless of the principal diagnosis reported from MDC 05, we believe that while the subset of cases for patients undergoing a thrombolysis (CDT or USAT)

procedure for DVT does not clinically align with patients undergoing surgery for acute myocardial infarction (AMI) and does not involve the same level of complexity as cases grouping to MS–DRGs 270, 271, and 272, the differences in resource consumption warrant reassignment of these cases. Specifically, we believe the clinical and data analyses support creating a new base MS–DRG to distinguish cases reporting USAT or standard CDT procedure of peripheral vascular structures with or without thrombolytic(s) from other cases currently grouping to MS–DRGs 252, 253, and 254. We believe a new MS–DRG would reflect more appropriate payment for USAT and standard CDT procedures of peripheral vascular structures.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the most recent claims data from the December 2022 update of the FY 2022 MedPAR file. The following table illustrates our findings for all 1,487 cases reporting procedure codes describing an USAT or CDT procedure with any principal diagnosis from MDC 05.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	1,487	5.8	$31,794

Consistent with our established process as discussed in section II.C.1.b. of the preamble of this proposed rule, once the decision has been made to propose to make further modifications to the MS–DRGs, such as creating a new base MS–DRG, all five criteria to create subgroups must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. Therefore, we applied the criteria to create subgroups in a base MS–DRG. We note that, as shown in the table that follows, a three-way split of this base MS–DRG failed to meet the criterion that there be at least 500 cases in the NonCC (without CC/MCC) subgroup.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	516	8.5	$38,904
With CC	768	4.8	$29,555
Without CC/MCC	203	2.5	$22,188

As discussed in section II.C.1.b. of the preamble of this proposed rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC and without MCC'' subgroups. We note that, as shown in the table that follows, a two-way split of this base MS–DRG met all five criteria. For the proposed MS–DRGs, there is at least (1) 500 or more cases in the MCC group and in the without MCC subgroup; (2) 5 percent or more of the cases in the MCC group and in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a $2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system. The following table illustrates our findings for the suggested MS–DRGs with a two-way severity level split.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	516	8.5	$38,904
Without MCC	971	4.3	$28,015

Accordingly, because the criteria for the two-way split were met, we believe a split (or CC subgroup) is warranted for the proposed new base MS–DRG. As a result, for FY 2024, we are proposing to create new MS–DRG 278 (Ultrasound Accelerated and Other Thrombolysis of Peripheral Vascular Structures with MCC) and new MS–DRG 279 (Ultrasound Accelerated and Other Thrombolysis of Peripheral Vascular Structures without MCC).

We are proposing to define the logic for the proposed new MS–DRGs using the previously listed procedure codes for USAT and CDT, as identified and discussed in our analysis of the claims data in Table 6P.5a associated with this proposed rule.

d. Coronary Intravascular Lithotripsy

We received a request to review the MS–DRG assignment of cases describing percutaneous coronary intravascular lithotripsy (IVL) involving the insertion of a coronary drug-eluting stent. Coronary IVL is utilized in a subset of percutaneous coronary interventions (PCI) procedures when the artery is severely calcified. The presence of

calcium can create various challenges in PCI procedures as it can prevent the optimal deployment of coronary stents and can negatively impact patient outcomes. To fully optimize the PCI for severely calcified arteries, advanced techniques, such as coronary IVL, that utilize specialty devices are often required. In coronary IVL, a lithotripsy device catheter is delivered from a small incision in the patient's arm or leg through to the coronary arterial system of the heart to reach the site of a severely calcified lesion. The lithotripsy emitters at the end of the catheter create acoustic pressure waves that are intended to break up the calcification that is restricting the blood flow in the vessels of the heart to help open the blood vessels when an angioplasty balloon is inflated. After the lithotripsy is performed, the provider can implant an intraluminal device, also called a stent, to keep the vessel open.

According to the requestor, PCIs involving coronary IVL are clinically more complex because coronary IVL is a therapy deployed exclusively in severely calcified coronary lesions, and these lesion types are associated with longer procedure times and increased utilization of hospital resources. The requestor performed its own analysis of claims data for cases reporting procedure codes describing coronary IVL in MS–DRGs 246 and 247 (Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Arteries or Stents and without MCC, respectively) and stated that their findings showed a significant disparity in total standardized costs for cases in MS–DRG 247. Therefore, according to the requestor, the reassignment of all cases reporting procedure codes describing percutaneous coronary IVL involving the insertion of a drug-eluting intraluminal device from the lower severity level MS–DRG 247 to the higher severity level MS–DRG 246 would be reasonable. The requestor also asked that CMS analyze the cases reporting procedure codes describing percutaneous coronary IVL involving the insertion of a non-drug-eluting intraluminal device to determine if reclassifying cases from the lower severity level MS–DRG 249 (Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent without MCC) to the higher severity level MS–DRG 248 (Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent with MCC or 4+ Arteries or Stents) would be warranted.

The four ICD–10–PCS procedure codes that describe percutaneous coronary IVL are shown in the following table.

ICD-10-PCS Code	Description
02F03ZZ	Fragmentation in coronary artery, one artery, percutaneous approach
02F13ZZ	Fragmentation in coronary artery, two arteries, percutaneous approach
02F23ZZ	Fragmentation in coronary artery, three arteries, percutaneous approach
02F33ZZ	Fragmentation in coronary artery, four or more arteries, percutaneous approach

The Shockwave C2 Intravascular Lithotripsy System, indicated for lithotripsy-enabled, low-pressure dilation of calcified, stenotic de novo coronary arteries prior to stenting, is identified by the reporting of an ICD–10–PCS code that describes percutaneous coronary IVL shown in the previous table. The Shockwave C2 Intravascular Lithotripsy System was approved for new technology add-on payments for FY 2022 (86 FR 45151 through 45153) and FY 2023 (87 FR 48913). We refer readers to section II.E.5 of the preamble of this proposed rule for a discussion regarding the proposed FY 2024 status of technologies approved for FY 2023 new technology add-on payments, including the Shockwave C2 Intravascular Lithotripsy System.

The requestor is correct that cases reporting procedure codes that describe percutaneous coronary IVL involving the insertion of a drug-eluting intraluminal device group to MS–DRGs 246 and 247. The requestor is also correct that cases reporting procedure codes that describe percutaneous coronary IVL involving the insertion of a non-drug-eluting intraluminal device group to MS–DRGs 248 and 249. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 40.1, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*, for complete documentation of the GROUPER logic for MS–DRGs 246, 247, 248, and 249.

In analyzing this request, we noted that coronary IVL is a vessel preparation technique and that there may be instances where an intraluminal device is unable to be inserted after the application of the IVL pulses. Therefore, in our analysis of cases reporting procedure codes describing percutaneous coronary IVL involving the insertion of a drug-eluting intraluminal device and non-drug-eluting intraluminal device that group to MS–DRGs 246, 247, 248, and 249, we included cases reporting percutaneous coronary IVL without procedure codes describing the insertion of a intraluminal device that group to MS–DRGs 250 and 251 (Percutaneous Cardiovascular Procedures without Coronary Artery Stent with MCC and without MCC, respectively) in our examination of claims data from the September 2022 update of the FY 2022 MedPAR file for cases reporting percutaneous coronary IVL and compared the results to all cases in their respective MS–DRG.

The following table shows our findings:

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
246	All cases	40,647	5.2	$25,630
	Cases reporting coronary IVL	2,359	5.7	$35,503
	All other cases	38,288	5.2	$25,022
247	All cases	54,671	2.4	$16,241
	Cases reporting coronary IVL	1,505	2.7	$24,141
	All other cases	53,166	2.4	$16,017
248	All cases	555	5.9	$25,740
	Cases reporting coronary IVL	13	7.2	$34,492
	All other cases	542	5.9	$25,530
249	All cases	604	2.5	$14,909
	Cases reporting coronary IVL	11	2.8	$18,648
	All other cases	593	2.5	$14,840
250	All cases	3,483	4.8	$20,634
	Cases reporting coronary IVL	201	4.4	$25,628
	All other cases	3,282	4.8	$20,328
251	All cases	3,199	2.5	$14,273
	Cases reporting coronary IVL	185	2.4	$20,289
	All other cases	3,014	2.5	$13,904

As shown by the table, in MS–DRG 246, we identified a total of 40,647 cases, with an average length of stay of 5.2 days and average costs of $25,630. Of those 40,647 cases, there were 2,359 cases reporting percutaneous coronary IVL, with higher average costs as compared to all cases in MS–DRG 246 ($35,503 compared to $25,630), and a longer average length of stay (5.7 days compared to 5.2 days). In MS–DRG 247, we identified a total of 54,671 cases with an average length of stay of 2.4 days and average costs of $16,241. Of those 54,671 cases, there were 1,505 cases reporting percutaneous coronary IVL, with higher average costs as compared to all cases in MS–DRG 247 ($24,141 compared to $16,241), and a longer average length of stay (2.7 days compared to 2.4 days). In MS–DRG 248, we identified a total of 555 cases with an average length of stay of 5.9 days and average costs of $25,740. Of those 555 cases, there were 13 cases reporting percutaneous coronary IVL, with higher average costs as compared to all cases in MS–DRG 248 ($34,492 compared to $25,740), and a longer average length of stay (7.2 days compared to 5.9 days). In MS–DRG 249, we identified a total of 604 cases with an average length of stay of 2.5 days and average costs of $14,909. Of those 604 cases, there were 11 cases reporting percutaneous coronary IVL, with higher average costs as compared to all cases in MS–DRG 249 ($18,648 compared to $14,909), and a longer average length of stay (2.8 days compared to 2.5 days). In MS–DRG 250, we identified a total of 3,483 cases with an average length of stay of 4.8 days and average costs of $20,634. Of those 3,483 cases, there were 201 cases reporting percutaneous coronary IVL, with higher average costs as compared to all cases in MS–DRG 250 ($25,628 compared to $20,634), and a shorter average length of stay (4.4 days compared to 4.8 days). In MS–DRG 251, we identified a total of 3,199 cases with an average length of stay of 2.5 days and average costs of $14,273. Of those 3,199 cases, there were 185 cases reporting percutaneous coronary IVL, with higher average costs as compared to all cases in MS–DRG 251 ($20,289 compared to $14,273), and a shorter average length of stay (2.4 days compared to 2.5 days). The data analysis shows that the average costs of cases reporting percutaneous coronary IVL, with or without involving the insertion of intraluminal device, are higher than for all cases in their respective MS–DRG.

The data analysis also shows that when the insertion of an intraluminal device was reported with percutaneous coronary IVL, average costs are generally similar without regard as to whether a drug-eluting or a non-drug-eluting intraluminal device was placed. In MS–DRG 246, there were 2,359 cases reporting percutaneous coronary IVL involving the insertion of a drug-eluting intraluminal device with average costs of $35,503 compared to 13 cases reporting percutaneous coronary IVL involving the insertion of a non-drug-eluting intraluminal device with average costs of $34,492 in MS–DRG 248. In MS–DRG 247, there were 1,505 cases reporting percutaneous coronary IVL involving the insertion of a drug-eluting intraluminal device with average costs of $24,141 compared to 11 cases reporting percutaneous coronary IVL involving the insertion of a non-drug-eluting intraluminal device with average costs of $18,648 in MS–DRG 249.

We reviewed this data analysis and agree that the performance of percutaneous coronary IVL contributes to increased resource consumption for these PCI procedures. We also agree that clinically, the presence of severe calcification can increase the treatment difficulty and complexity of service. The data analysis clearly shows that cases reporting percutaneous coronary IVL, with or without involving the insertion of intraluminal device, have higher average costs and generally longer lengths of stay compared to all the cases in their assigned MS–DRG. For these reasons, we are proposing to create new MS–DRGs for percutaneous coronary IVL involving the insertion of

an intraluminal device. While there is not a large number of cases reporting percutaneous coronary IVL without the insertion of an intraluminal device represented in the Medicare data, and we generally prefer not to create a new MS–DRG unless it would include a substantial number of cases, we believe creating a separate MS–DRG for these cases as well would appropriately address the differential in resource consumption. Therefore, we are also proposing to create a new MS–DRG for cases describing percutaneous coronary IVL without the insertion of an intraluminal device.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the most recent claims data from the December 2022 update of the FY 2022 MedPAR file. The following table illustrates our findings for all 4,238 cases reporting procedure codes describing percutaneous coronary IVL involving the insertion of an intraluminal device.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Coronary Intravascular Lithotripsy with Intraluminal Device	4,238	4.6	$31,115

We applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of this FY 2024 IPPS/LTCH PPS proposed rule. As shown, a three-way split of the proposed new MS–DRG failed to meet the criterion that there be at least a 20% difference in average costs between the CC and NonCC subgroup and also failed to meet the criterion that there be at least a $2,000 difference in average costs between the CC and NonCC subgroup.

Proposed new MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	2,079	6.3	$36,325
With CC	1,423	3.2	$26,707
Without CC/MCC	736	2.3	$24,924

We then applied the criteria for a two-way split for the ''with MCC'' and ''without MCC'' subgroups and found that all five criteria were met. The following table illustrates our findings.

Proposed new MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	2,079	6.3	$36,325
Without MCC	2,159	2.9	$26,099

For the proposed new MS–DRGs for cases reporting procedure codes describing percutaneous coronary IVL involving the insertion of an intraluminal device, there is at least (1) 500 cases in the MCC subgroup and 500 cases in the without MCC subgroup; (2) 5 percent of the cases in the MCC group and 5 percent in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a $2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

For the cases describing coronary intravascular lithotripsy without the insertion of an intraluminal device, we identified a total of 404 cases using the most recent claims data from the December 2022 update of the FY 2022 MedPAR file, so the criterion that there are at least 500 or more cases in each subgroup could not be met. Therefore, for FY 2024, we are not proposing to subdivide the proposed new MS–DRG for coronary intravascular lithotripsy without an intraluminal device into severity levels.

In summary, for FY 2024, taking into consideration that it clinically requires greater resources to perform coronary intravascular lithotripsy, we are proposing to create two new MS–DRGs with a two-way severity level split for cases describing coronary intravascular lithotripsy involving the insertion of an intraluminal device in MDC 05. We are also proposing to create a new MS–DRG for cases describing coronary intravascular lithotripsy without an intraluminal device. These proposed new MS–DRGs are proposed new MS–DRG 323 (Coronary Intravascular Lithotripsy with Intraluminal Device

with MCC), proposed new MS–DRG 324 (Coronary Intravascular Lithotripsy with Intraluminal Device without MCC) and proposed new MS–DRG 325 (Coronary Intravascular Lithotripsy without Intraluminal Device). We refer the reader to Table 6P.6a associated with this proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*) for the list of procedure codes we are proposing to define in the logic for each of the proposed new MS–DRGs. We note that discussion of the surgical hierarchy for the proposed modifications is discussed in section II.C.15. of this proposed rule.

In reviewing this issue, we noted that we received a separate but related request in FY 2022 rulemaking. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44848 through 44850), we discussed a request to review the MS–DRG assignments of claims involving the insertion of coronary stents in PCIs. The requestor suggested that CMS eliminate the distinction between drug-eluting and bare-metal coronary stents in the MS–DRG classification. According to the requestor, coated stents have a clinical performance comparable to drug-eluting stents however they are grouped with bare-metal stents because they do not contain a drug. The requestor asserted that this comingling muddies the clinical coherence of the MS–DRG structure, as one cannot infer distinctions in clinical performance or benefits among the groups and potentially creates a barrier (based on hospital decision-making) to patient access to modern coated stents. In response, we stated that based on a review of the procedure codes that are currently assigned to MS–DRGs 246, 247, 248, and 249, our clinical advisors agreed that further refinement of these MS–DRGs may be warranted. We noted that in the FY 2003 IPPS/LTCH PPS final rule (67 FR 50003 through 50005), although the FDA had not yet approved the technology for use, we created two new temporary CMS DRGs to reflect cases involving the insertion of a drug-eluting coronary artery stent as signified by the presence of code ICD–9–CM procedure code 36.07 (Insertion of drug-eluting coronary artery stent) in recognition of the potentially significant impact this technology may conceivably have on the treatment of coronary artery blockages, the predictions of its rapid, widespread use, and that the higher costs of this technology could create undue financial hardships for hospitals due to the high volume of stent cases. In the FY 2022 final rule, we noted that the distinction between drug-eluting and non-drug-eluting stents is found elsewhere in the ICD–10–PCS procedure code classification and stated evaluating this request required a more extensive analysis to assess potential impacts across the MS–DRGs. We also stated that we believed it would be more appropriate to consider this request further in future rulemaking.

As discussed earlier in this section of this proposed rule, our analysis of claims data from the September 2022 update of the FY 2022 MedPAR file indicates that in cases reporting percutaneous coronary IVL involving the insertion of an intraluminal device, average costs are generally similar without regard as to whether a drug-eluting or non-drug-eluting intraluminal device was inserted. Therefore, in consideration of the prior request discussed in FY 2022 rulemaking and to further explore this current finding, we examined claims data from the September 2022 update of the FY 2022 MedPAR file for MS–DRGs 246, 247, 248, and 249 for ''all other cases'' assigned to MS–DRGs 246, 247, 248, and 249 that did not report percutaneous coronary IVL as reflected in the previous table.

We again note that the data analysis shows that in percutaneous cardiovascular procedures involving the insertion of an intraluminal device, the average costs are generally similar without regard as to whether a drug-eluting or non-drug-eluting intraluminal device(s) was inserted. In MS–DRG 246, there were 38,288 cases reporting percutaneous cardiovascular procedures involving the insertion of a drug-eluting intraluminal device with an MCC or procedures involving four or more arteries or intraluminal devices with average costs of $25,022 compared to 542 cases reporting percutaneous cardiovascular procedures involving the insertion of a non-drug-eluting intraluminal device with an MCC or procedures involving four or more arteries or intraluminal devices with average costs of $25,530 in MS–DRG 248. In MS–DRG 247, there were 53,166 cases reporting percutaneous cardiovascular procedures involving the insertion of a drug-eluting intraluminal device without an MCC with average costs of $16,017 compared to 593 cases reporting percutaneous coronary IVL involving the insertion of a non-drug-eluting intraluminal device without an MCC with average costs of $14,840 in MS–DRG 249.

We reviewed these findings and believe that it may no longer be necessary to subdivide the MS–DRGs based on the type of coronary intraluminal device inserted. Drug-eluting intraluminal devices consist of a standard metallic stent, a polymer coating, and an anti-restenotic drug that is mixed within the polymer and released over time. In current practice, drug-eluting intraluminal devices are generally viewed as the default type of intraluminal device considered for patients undergoing PCI, although non-drug-eluting stents such as bare-metal coronary artery stents can also be used in PCI procedures for a range of indications, including stable and unstable angina, acute myocardial infarction (MI), and multiple-vessel disease. The related data analysis clearly shows that in the years since the MS–DRGs for cases involving the insertion of a drug-eluting coronary artery stent were created, cases reporting percutaneous cardiovascular procedures involving the insertion of a drug-eluting intraluminal device now demonstrate average costs and lengths of stays comparable to cases reporting percutaneous cardiovascular procedures involving the insertion of a non-drug-eluting intraluminal device. For these reasons, we are proposing the deletion of MS–DRGs 246, 247, 248, and 249, and the creation of new MS–DRGs.

We note that in the FY 2008 IPPS/LTCH PPS final rule (72 FR 47259 through 47260) we stated we found that percutaneous transluminal coronary angioplasties (PTCAs) with four or more vessels or four or more stents were more comparable in average charges to the higher weighted DRG in the group and made changes to the GROUPER logic. Claims containing ICD–9–CM procedure code 00.66 for PTCA, and code 36.07 (Insertion of drug-eluting coronary artery stent(s)), and code 00.43 (Procedure on four or more vessels) or code 00.48 (Insertion of four or more vascular stents) were assigned to MS–DRG 246. In addition, claims containing ICD–9–CM procedure code 00.66 for PTCA, and code 36.06 (Insertion of non-drug-eluting coronary artery stent(s)), and code 00.43 or code 00.48 were assigned to MS–DRG 248. We also made conforming changes to the MS–DRG titles as follows: MS–DRG 246 was titled ''Percutaneous Cardiovascular Procedures with Drug-Eluting Stent(s) with MCC or 4 or more Vessels/Stents''. MS–DRG 248 was titled ''Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent(s) with MCC or 4 or more Vessels/Stents''. In FY 2018 IPPS/LTCH PPS final rule (82 FR 38024), we finalized our proposal to revise the title of MS–DRG 246 to ''Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Arteries

or Stents'' and the title of MS–DRG 248 to ''Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent with MCC or 4+ Arteries or Stents'' to better reflect the ICD–10–PCS terminology of ''arteries'' versus ''vessels'' as used in the procedure code titles within the classification.

Recognizing that the current GROUPER logic for case assignment to MS–DRGs 246 or 248 continues to require at least one secondary diagnosis designated as an MCC or procedures involving four or more arteries or intraluminal devices, we examined claims data from the September 2022 update of the FY 2022 MedPAR file for cases reporting percutaneous cardiovascular procedures involving four or more arteries or intraluminal devices and compared these data to all cases in MS–DRGs 246 and 248.

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
246	All cases	40,647	5.2	$25,630
	Cases reporting percutaneous cardiovascular procedures involving four or more arteries or intraluminal devices	3,430	3.2	$27,397
248	All cases	555	5.9	$25,740
	Cases reporting percutaneous cardiovascular procedures involving four or more arteries or intraluminal devices	21	3.4	$28,251

In MS–DRG 246, we identified a total of 40,647 cases with an average length of stay of 5.2 days and average costs of $25,630. Of those 40,647 cases, there were 3,430 cases reporting percutaneous cardiovascular procedures involving four or more arteries or intraluminal devices, with higher average costs as compared to all cases in MS–DRG 246 ($27,397 compared to $25,630), and a shorter average length of stay (3.2 days compared to 5.2 days). In MS–DRG 248, we identified a total of 555 cases with an average length of stay of 5.9 days and average costs of $25,740. Of those 555 cases, there were 21 cases reporting percutaneous cardiovascular procedures involving four or more arteries or intraluminal devices, with higher average costs as compared to all cases in MS–DRG 248 ($28,251 compared to $25,740), and a shorter average length of stay (3.4 days compared to 5.9 days). This analysis demonstrates that cases reporting percutaneous procedures involving four or more arteries or intraluminal devices continue to be more comparable in average costs and resource consumption to the cases in the higher weighted MS–DRG in the group and indicates that maintaining the logic that recognizes the performance of percutaneous cardiovascular procedures involving four or more arteries or intraluminal devices that exists currently in MS–DRGs 246 and 248 in the proposed new MS–DRGs is warranted.

Presently, MS–DRGs 246 and 248 are defined as base MS–DRGs, each of which is split by a two-way severity level subgroup. Our proposal includes the creation of one base MS–DRG split also by a two-way severity level subgroup. To compare and analyze the impact of our suggested modifications, we ran a simulation using the most recent claims data from the December 2022 update of the FY 2022 MedPAR file. The following table illustrates our findings for all 97,338 cases reporting percutaneous cardiovascular procedures involving intraluminal devices.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Percutaneous Cardiovascular Procedures with Intraluminal Device	97,338	3.5	$19,766

We applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of this FY 2024 IPPS/LTCH PPS proposed rule. As shown in the table that follows, a three-way split of the proposed new MS–DRGs failed to meet the criterion that there be at least a 20% difference in average costs between the CC and NonCC subgroup and also failed to meet the criterion that there be at least a $2,000 difference in average costs between the CC and NonCC subgroup.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	37,604	5.3	$24,871
With CC	33,088	2.7	$17,407
Without CC/MCC	26,646	2	$15,492

We then applied the criteria for a two-way split for the ''with MCC'' and ''without MCC'' subgroups for the proposed new MS–DRGs and found that all five criteria were met. The following table illustrates our findings.

Proposed new MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC or 4+ Arteries/Intraluminal Devices	37,604	5.3	$24,871
Without MCC	59,734	2.4	$16,553

For the proposed new MS–DRGs, there is (1) at least 500 cases in the MCC subgroup and in the without MCC subgroup; (2) at least 5 percent of the cases are in the MCC subgroup and in the without MCC subgroup; (3) at least a 20 percent difference in average costs between the MCC subgroup and the without MCC subgroup; (4) at least a $2,000 difference in average costs between the MCC subgroup and the without MCC subgroup; and (5) at least a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

The proposed refinements for cases reporting percutaneous cardiovascular procedures with intraluminal devices represents the first step in investigating how we may evaluate the distinctions between drug-eluting and non-drug-eluting intraluminal devices found elsewhere in the ICD–10–PCS procedure code classification. We are making concerted efforts to continue refining the ICD–10 MS–DRGs and we believe the resulting MS–DRG assignments in our current proposal would be more clinically homogeneous, coherent and better reflect current trends and hospital resource use.

In summary, for FY 2024, taking into consideration it appears to no longer be necessary to subdivide the MS–DRGs for percutaneous cardiovascular procedures based on the type of coronary intraluminal device inserted, we are proposing to delete MS–DRGs 246, 247, 248, and 249, and create a new base MS–DRG with a two-way severity level split for cases describing percutaneous cardiovascular procedures with intraluminal device in MDC 05. These proposed new MS–DRGs are proposed new MS–DRG 321 (Percutaneous Cardiovascular Procedures with Intraluminal Device with MCC or 4+ Arteries/Intraluminal Devices) and proposed new MS–DRG 322 (Percutaneous Cardiovascular Procedures with Intraluminal Device without MCC). We are proposing to add the procedure codes from current MS–DRGs 246, 247, 248, and 249 to the proposed new MS–DRGs 321 and 322. We are also proposing to revise the titles for MS–DRGs 250 and 251 from ''Percutaneous Cardiovascular Procedures without Coronary Artery Stent with MCC, and without MCC, respectively'' to ''Percutaneous Cardiovascular Procedures without Intraluminal Device with MCC, and without MCC, respectively'' to better reflect the ICD–10–PCS terminology of ''intraluminal devices'' versus ''stents'' as used in the procedure code titles within the classification.

We note that discussion of the surgical hierarchy for the proposed modifications is discussed in section II.C.15. of this proposed rule.

e. Shock

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44831 through 44833), we discussed a request we received to review the MS–DRG assignment of ICD–10–CM diagnosis code I21.A1 (Myocardial infarction type 2). The requestor stated that when a type 2 myocardial infarction is documented, per coding guidelines, it is to be coded as a secondary diagnosis since it is due to an underlying cause. This requestor also noted that when a type 2 myocardial infarction is coded with a principal diagnosis in MDC 05 (Diseases and Disorders of the Circulatory System), the GROUPER logic assigns MS–DRGs 280 through 282 (Acute Myocardial Infarction, Discharged Alive with MCC, with CC, and without CC/MCC, respectively). The requestor questioned if this GROUPER logic was correct or if the logic should be changed so that a type 2 myocardial infarction, coded as a secondary diagnosis, does not result in the assignment of a MS–DRG that describes an acute myocardial infarction. During our review of this issue, we also noted that ICD–10–CM diagnosis code I21.A1 (Myocardial infarction type 2) was one of the listed principal diagnoses in the GROUPER logic for MS–DRGs 222 and 223 (Cardiac Defibrillator Implant with Cardiac Catheterization with Acute Myocardial Infarction (AMI), Heart Failure (HF), or Shock with and without MCC, respectively). However, code I21.A1 was not recognized in these same MS–DRGs when coded as a secondary diagnosis. Acknowledging that coding guidelines instruct to code I21.A1 after the diagnosis code that describes the underlying cause, we indicated our clinical advisors recommended adding special logic in MS–DRGs 222 and 223 to have code I21.A1 also qualify when coded as a secondary diagnosis in combination with a principal diagnosis in MDC 05 since these diagnosis code combinations also describe acute myocardial infarctions. In the FY 2022 final rule, after consideration of the public comment, we finalized our proposal to maintain the structure of MS–DRGs 280 through 285, without

modification, for FY 2022. We also finalized our proposal to modify the GROUPER logic to allow cases reporting diagnosis code I21.A1 (Myocardial infarction type 2) as a secondary diagnosis to group to MS–DRGs 222 and 223 when reported with qualifying procedures, effective October 1, 2021. Under this finalization, code I21.A1, as a secondary diagnosis, is used in the definition of the logic for assignment to MS–DRGs 222 and 223, and therefore does not act as an MCC in these MS–DRGs.

In response to this final policy, for this FY 2024 IPPS/LTCH PPS proposed rule, we received a related request to also add ICD–10–CM diagnosis code R57.0 (Cardiogenic shock) to the list of ''secondary diagnoses'' that group to MS–DRGs 222 and 223. Cardiogenic shock occurs when the heart cannot pump enough oxygen-rich blood to the brain and other vital organs resulting in inadequate tissue perfusion. The most common cause of cardiogenic shock is acute myocardial infarction. Other causes include myocarditis, endocarditis, papillary muscle rupture, left ventricular free wall rupture, acute ventricular septal defect, severe congestive heart failure, end-stage cardiomyopathy, severe valvular dysfunction, acute cardiac tamponade, cardiac contusion, massive pulmonary embolus, or the overdose of drugs such as beta blockers or calcium channel blockers.

Since the MS–DRG titles contain the word ''shock'', the requestor indicated that it seemed reasonable for the GROUPER logic to recognize cardiogenic shock when coded as a secondary diagnosis because, according to the requestor, the specific underlying cardiac condition responsible for causing the cardiogenic shock must always be sequenced first. The requestor further asserted that ICD–10–CM coding guidelines require codes from Chapter 18 (Symptoms, Signs, and Abnormal Clinical and Laboratory Findings) to be sequenced first, therefore when coding guidelines are followed, this code can never be an appropriate principal diagnosis. The requestor acknowledged that if code R57.0 were to be added to the list of ''secondary diagnoses'' that group to MS–DRGs 222 and 223, and therefore used in the definition of the logic for assignment, the code would no longer act as an MCC in MS–DRGs 222 and 223.

To begin our analysis, we reviewed the GROUPER logic. We note that ICD–10–CM diagnosis code R57.0 (Cardiogenic shock) is currently one of the listed principal diagnoses in the GROUPER logic for MS–DRGs 222 and 223. The requestor is correct that diagnosis code R57.0 is not currently recognized in these same MS–DRGs when coded as a secondary diagnosis. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 40.1, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*, for complete documentation of the GROUPER logic for MS–DRGs 222 and 223.

The requestor is also correct that the diagnosis code R57.0 is found in Chapter 18 (Symptoms, Signs and Abnormal Clinical and Laboratory Findings) of ICD–10–CM and that diagnosis code R57.0 has a current severity designation of MCC when reported as a secondary diagnosis. We disagree, however, that this code can never be an appropriate principal diagnosis. We note that according to the ICD–10–CM Official Guidelines for Coding and Reporting, diagnoses described by codes from Chapter 18 of ICD–10–CM, such as R57.0, are acceptable for reporting when a related definitive diagnosis has not been established (confirmed) by the provider. We also point out that a ''code first'' note appears at ICD–10–CM diagnosis code I21.A1 (Myocardial infarction type 2). The ''code first'' note is an etiology/manifestation coding convention (additional detail can be found in the ICD–10–CM Official Guidelines for Coding and Reporting), indicating that the condition has both an underlying etiology and manifestation due to the underlying etiology. No such ''code first'' notes appear at ICD–10–CM diagnosis code R57.0 (Cardiogenic shock). If providers have cases involving cardiogenic shock which they need ICD–10 coding assistance, we encourage them to submit their questions to the American Hospital Association's Central Office on ICD–10 at *https://www.codingclinicadvisor.com/*.

We then examined claims data from the September 2022 update of the FY 2022 MedPAR file for all cases in MS–DRGs 222 and 223 (Cardiac Defibrillator Implant with Cardiac Catheterization with AMI, HF or Shock, with and without MCC, respectively) and compared the results to cases that had a principal diagnosis or a secondary diagnosis of cardiogenic shock in these MS–DRGs. We also included MS–DRGs 224 and 225 (Cardiac Defibrillator Implant with Cardiac Catheterization without AMI, HF or Shock with and without MCC, respectively) and MS–DRGs 226 and 227 (Cardiac Defibrillator Implant without Cardiac Catheterization with and without MCC, respectively) in our analysis as the logic for these MS–DRGs is similar, differing only in the reporting of a diagnosis that describes acute myocardial infarction, heart failure or shock, or the performance of cardiac catheterization. The following table shows our findings:

MS-DRGs 222-227: All Cases and Cases with Principal or Secondary Diagnosis of Cardiogenic Shock				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
222	All cases	1,488	11	$64,794
	Cases with principal diagnosis of R57.0	6	13.5	$88,486
	Cases with secondary diagnosis of R57.0	322	15.1	$77,451
223	All cases	270	5.7	$43,500
	Cases with principal diagnosis of R57.0	0	0	$0
	Cases with secondary diagnosis of R57.0	0	0	$0
224	All cases	1,606	9.4	$60,583
	Cases with principal diagnosis of R57.0	0	0	$0
	Cases with secondary diagnosis of R57.0	268	12.9	$77,334
225	All cases	1,167	4.6	$42,442
	Cases with principal diagnosis of R57.0	0	0	$0
	Cases with secondary diagnosis of R57.0	0	0	$0
226	All cases	3,595	8.3	$53,706
	Cases with principal diagnosis of R57.0	4	14.3	$72,349
	Cases with secondary diagnosis of R57.0	325	12.5	$65,266
227	All cases	2,522	3.9	$41,636
	Cases with principal diagnosis of R57.0	0	0	$0
	Cases with secondary diagnosis of R57.0	0	0	$0

In MS–DRG 222, we identified a total of 1,488 cases with an average length of stay of 11 days and average costs of $64,794. Of those 1,488 cases, there were six cases reporting a principal diagnosis of R57.0, with higher average costs as compared to all cases in MS–DRG 222 ($88,486 compared to $64,794), and a longer average length of stay (13.5 days compared to 11 days). There were 322 cases reporting a secondary diagnosis of R57.0, with higher average costs as compared to all cases in MS–DRG 222 ($77,451 compared to $64,794), and a longer average length of stay (15.1 days compared to 11 days). In MS–DRG 224, we identified a total of 1,606 cases with an average length of stay of 9.4 days and average costs of $60,583. Of those 1,606 cases, there were zero cases reporting a principal diagnosis of R57.0. There were 268 cases reporting a secondary diagnosis of R57.0, with higher average costs as compared to all cases in MS–DRG 224 ($77,334 compared to $60,583), and a longer average length of stay (12.9 days compared to 9.4 days). In MS–DRG 226, we identified a total of 3,595 cases with an average length of stay of 8.3 days and average costs of $53,706. Of those 3,595 cases, there were four cases reporting a principal diagnosis of R57.0, with higher average costs as compared to all cases in MS–DRG 226 ($72,349 compared to $53,706), and a longer average length of stay (14.3 days compared to 8.3 days). There were 325 cases reporting a secondary diagnosis of R57.0, with higher average costs as compared to all cases in MS–DRG 226 ($65,266 compared to $53,706), and a longer average length of stay (12.5 days compared to 8.3 days). We found zero cases across MS–DRGs 223, 225, and 227 reporting R57.0 as principal or as a secondary diagnosis. Our analysis clearly shows that the cases reporting a secondary diagnosis of cardiogenic shock in MS–DRGs 222, 224 and 226 had higher average costs and longer average length of stay compared to all cases in their respective MS–DRGs.

We reviewed these data and do not recommend modifying the GROUPER logic to allow cases reporting diagnosis code R57.0 (Cardiogenic shock) as a secondary diagnosis to group to MS–DRGs 222 and 223 when reported with qualifying procedures. As noted by the requestor, and as discussed in FY 2022 IPPS/LTCH PPS final rule (86 FR 44831 through 44833), a diagnosis code may define the logic for a specific MS–DRG assignment in three different ways. Whenever there is a secondary diagnosis component to the MS–DRG logic, the diagnosis code can either be used in the logic for assignment to the MS–DRG or to act as a CC/MCC.

We believe that patients with cardiogenic shock as a secondary diagnosis tend to be more severely ill and these inpatient admissions are associated with greater resource utilization. Cardiogenic shock represents a life-threatening emergency that requires urgent treatment that focuses on getting blood flowing properly to prevent, and protect against, organ failure, brain injury or death. For clinical consistency, it is more appropriate for ICD–10–CM diagnosis code R57.0 to act as an MCC when cardiogenic shock is documented in the medical record and coded as a secondary diagnosis. Therefore, we are not proposing to modify the GROUPER logic to allow cases reporting diagnosis code R57.0 (Cardiogenic shock) as a secondary diagnosis to group to MS–DRGs 222 and 223 when reported with qualifying procedures.

During our review of this issue we noted that the data analysis shows that in procedures involving a cardiac defibrillator implant, the average costs and length of stay are generally similar

without regard to the presence of diagnosis codes describing AMI, HF or shock. In MS–DRG 222, there were 1,488 cases reporting cardiac defibrillator implant with cardiac catheterization with AMI, HF, or Shock with an MCC with average costs of $64,794 and an average length of stay of 11 days compared to 1,606 cases reporting cardiac defibrillator implant with cardiac catheterization without AMI, HF, or Shock with an MCC with average costs of $60,583 and an average length of stay of 9.4 days in MS–DRG 224. In MS–DRG 223, there were 270 cases reporting cardiac defibrillator implant with cardiac catheterization with AMI, HF or Shock without an MCC with average costs of $43,500 and an average length of stay of 5.7 days compared to 1,167 cases reporting cardiac defibrillator implant with cardiac catheterization without AMI, HF, or Shock without an MCC with average costs of $42,442 and an average length of stay of 4.6 days in MS–DRG 225.

The analysis of MS–DRGs 222, 223, 224, 225, 226, and 227 further demonstrates that the average length of stay and average costs for all cases are similar for each of the ''without MCC'' subgroups. As stated previously, for all of the cases in MS–DRG 223, we found that the average length of stay was 5.7 days with average costs of $43,500, and for all of the cases in MS–DRG 225, the average length of stay was 4.6 days with average costs of $42,442. Likewise, for all of the cases in MS–DRG 227, we found that the average length of stay was 3.9 days with average costs of $41,636.

We reviewed these findings and believe that it may no longer be necessary to subdivide these MS–DRGs based on the diagnosis codes reported. We note that in the FY 2004 IPPS/LTCH PPS final rule (68 FR 45356 through 45358), we stated we found that patients who are admitted with acute myocardial infarction, heart failure, or shock and have a cardiac catheterization are generally acute patients who require emergency implantation of the defibrillator. Thus, we stated there were very high costs associated with these patients. Therefore, we finalized the creation of new DRGs for patients receiving a cardiac defibrillator implant with cardiac catheterization and with a principal diagnosis of acute myocardial infarction, heart failure, or shock.

Our analysis of claims data from the September 2022 update of the FY 2022 MedPAR clearly shows that in the 20 years since the DRGs for cases involving a cardiac defibrillator implant with cardiac catheterization split based on the presence or absence of diagnosis codes describing acute myocardial infarction, heart failure, or shock were created, cases reporting a cardiac defibrillator implant with cardiac catheterization continue to demonstrate higher average costs and longer lengths of stays, however these increased costs appear to be more related to the procedures performed than to the diagnoses reported on the claim, and therefore we believe it is time to restructure these MS–DRGs accordingly.

We do note that when reviewing consumption of hospital resources for the cases reporting cardiac defibrillator implant with cardiac catheterization during a hospital stay, the claims data clearly shows that the cases reporting secondary diagnoses designated as MCCs are more resource intensive as compared to other cases reporting cardiac defibrillator implant. As noted previously, in MS–DRG 222, there were 1,488 cases reporting cardiac defibrillator implant with cardiac catheterization with AMI, HF, or Shock with an MCC with average costs of $64,794 and an average length of stay of 11 days. Similarly, in MS–DRG 224, there were 1,606 cases reporting cardiac defibrillator implant with cardiac catheterization without AMI, HF, or Shock with an MCC with average costs of $60,583 and an average length of stay of 9.4 days in MS–DRG 224. In comparison, there were 270 cases reporting cardiac defibrillator implant with cardiac catheterization with AMI, HF, or Shock without an MCC with average costs of $43,500 and an average length of stay of 5.7 days in MS–DRG 223, 1,167 cases reporting cardiac defibrillator implant with cardiac catheterization without AMI, HF, or Shock without an MCC with average costs of $42,442 and an average length of stay of 4.6 days in MS–DRG 225, 3,595 cases reporting cardiac defibrillator implant without cardiac catheterization with an MCC with average costs of $53,706 and an average length of stay of 8.3 days in MS–DRG 226, and 2,522 cases reporting cardiac defibrillator implant without cardiac catheterization without an MCC with average costs of $41,636 and an average length of stay of 3.9 days in MS–DRG 227.

Therefore, we support the removal of the special logic defined as ''Principal Diagnosis AMI/HF/SHOCK'' from the definition for assignment to any proposed modifications to the MS–DRGs, noting the cases can be appropriately grouped along with cases reporting any MDC 05 diagnosis when reported with qualifying procedures, in any restructured proposed MS–DRGs. For these reasons, we are proposing the deletion of MS–DRGs 222, 223, 224, 225, 226, and 227, and the creation of three new MS–DRGs. Our proposal includes the creation of one base MS–DRG for cases reporting a cardiac defibrillator implant with cardiac catheterization and a secondary diagnosis designated as an MCC and another base MS–DRG split by a two-way severity level subgroup for cases reporting a cardiac defibrillator implant without cardiac catheterization.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the most recent claims data from the December 2022 update of the FY 2022 MedPAR file. The following table illustrates our findings for all 3,467 cases reporting a cardiac defibrillator implant with cardiac catheterization and a secondary diagnosis designated as an MCC. We note that as discussed in prior rulemaking (86 FR 44831 through 44833), a diagnosis code may define the logic for a specific MS–DRG assignment in three different ways. The diagnosis code may be listed as principal or as any one of the secondary diagnoses, as a secondary diagnosis, or only as a secondary diagnosis. For this specific scenario, we propose that secondary diagnosis codes with a severity designation of MCC be used in the definition of the logic for assignment to the proposed base MS–DRG for cases reporting a cardiac defibrillator implant with cardiac catheterization and a secondary diagnosis designated as an MCC. Therefore, we did not apply the criteria to create further subgroups in a base MS–DRG for cases reporting a cardiac defibrillator implant with cardiac catheterization and a secondary diagnosis designated as an MCC as discussed in section II.C.1.b. of this FY 2024 IPPS/LTCH PPS proposed rule. We believe the resulting proposed MS–DRG assignment is more clinically homogeneous, coherent and better reflects hospital resource use.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Cardiac Defibrillator Implant with Cardiac Catheterization and MCC	3,467	10	$61,744

To further compare and analyze the impact of our suggested modifications, we then ran a simulation using the most recent claims data from the December 2022 update of the FY 2022 MedPAR file for cases reporting a cardiac defibrillator implant without additionally reporting both a cardiac catheterization and a secondary diagnosis designated as an MCC. The following table illustrates our findings for all 7,935 cases.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Cardiac Defibrillator Implant	7,935	6.2	47,822

We applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of this FY 2024 IPPS/LTCH PPS proposed rule. As shown in the table that follows, a three-way split of the proposed new MS–DRGs failed the criterion that there be at least 500 cases for each subgroup due to low volume. Specifically, for the ''without CC/MCC'' (NonCC) split, there were only 452 cases in the subgroup. The criterion that there be at least a 20% difference in average costs between the CC and NonCC subgroup also failed to be met.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	3,830	8.4	$53,924
With CC	3,653	4.3	$42,466
Without CC/MCC	452	3.2	$39,394

We then applied the criteria for a two-way split for the ''with MCC'' and ''without MCC'' subgroups for the proposed new MS–DRGs and found that all five criteria were met. The following table illustrates our findings.

Proposed new MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	3,830	8.4	$53,924
Without MCC	4,105	4.2	$42,128

For the proposed new MS–DRGs, there is (1) at least 500 cases in the MCC subgroup and in the without MCC subgroup; (2) at least 5 percent of the cases are in the MCC subgroup and in the without MCC subgroup; (3) at least a 20 percent difference in average costs between the MCC subgroup and the without MCC subgroup; (4) at least a $2,000 difference in average costs between the MCC subgroup and the without MCC subgroup; and (5) at least a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

In summary, for FY 2024, taking into consideration that it appears to no longer be necessary to subdivide the MS–DRGs for cases reporting a cardiac defibrillator implant based on the diagnosis code reported, we are proposing to delete MS–DRGs 222, 223, 224, 225, 226, and 227, and create a new MS–DRG for cases reporting a cardiac defibrillator implant with cardiac catheterization and a secondary diagnosis designated as an MCC in MDC 05. We are also proposing to create two new MS–DRGs with a two-way severity level split for cases reporting a cardiac defibrillator implant without additionally reporting both a cardiac catheterization and a secondary diagnosis designated as an MCC. These proposed new MS–DRGs are proposed new MS–DRG 275 (Cardiac Defibrillator Implant with Cardiac Catheterization and MCC), proposed new MS–DRG 276 (Cardiac Defibrillator Implant with MCC) and proposed new MS–DRG 277 (Cardiac Defibrillator Implant without MCC).

We note that the procedure codes describing cardiac catheterization are designated as non-O.R. procedures, therefore, as part of the logic for MS–DRG 275, we are also proposing to designate these codes as non-O.R. procedures affecting the MS–DRG. We refer the reader to Table 6P.7a and Table 6P.7b associated with this proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*) for the list of procedure codes we are proposing to define in the logic for each of the proposed new MS–DRGs. We note that discussion of the surgical hierarchy for the proposed modifications is discussed in section II.C.15. of this proposed rule.

6. MDC 06 (Diseases and Disorders of the Digestive System): Appendicitis

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28163 through 28165) and final rule (87 FR 48849 through 48850), we discussed a request related to the MS–DRG assignment of diagnosis codes describing acute appendicitis with generalized peritonitis, with and without perforation or abscess when reported with an appendectomy procedure. In that discussion, we stated that any future proposed changes to the MS–DRGs for appendectomy procedures would be dependent on the diagnosis code revisions that are finalized by the CDC/National Center for Health Statistics (NCHS) since the CDC/NCHS staff presented a proposal for further revisions to the diagnosis codes describing acute appendicitis with generalized peritonitis at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting. Specifically, the CDC/NCHS staff proposed to expand diagnosis codes K35.20 (Acute appendicitis with generalized peritonitis, without abscess) and K35.21 (Acute appendicitis with generalized peritonitis, with abscess), making them sub-categories and creating new diagnosis codes to identify and describe acute appendicitis with generalized peritonitis, with perforation and without perforation, and unspecified as to perforation. We noted that the deadline for submitting public comments on the diagnosis code proposals discussed at the March 8–9, 2022, ICD–10 Coordination and Maintenance Committee meeting was May 9, 2022, and according to the CDC/NCHS staff, the diagnosis code proposals were being considered for an October 1, 2023 implementation (FY 2024). We refer the reader to the CDC website at *https://www.cdc.gov/nchs/icd/icd10cm_maintenance.htm* for additional detailed information regarding the proposal, including a recording of the discussion and the related meeting materials.

As shown in Appendix B—Diagnosis Code/MDC/MS–DRG Index of the ICD–10 MS–DRG Definitions Manual V40.1 (available at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*), diagnosis codes K35.20 and K35.21 are currently assigned to medical MS–DRGs 371, 372, and 373 (Major Gastrointestinal Disorders and Peritoneal Infections with MCC, with CC, and without CC/MCC, respectively) in MDC 06. Diagnosis code K35.21 is also assigned to surgical MS–DRGs 338, 339, and 340 (Appendectomy with Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) in MDC 06 because diagnosis code K35.21 is defined as a complicated diagnosis in the GROUPER logic. Therefore, when a procedure code describing an appendectomy is reported with principal diagnosis code K35.21, the logic for case assignment to MS–DRGs 338, 339, or 340 is satisfied.

As discussed in section II.C.12. of the preamble of this proposed rule, Table 6C—Invalid Diagnosis Codes (available on the CMS website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*) lists the diagnosis codes that are no longer effective October 1, 2023. Included in this table are diagnosis codes K35.20 and K35.21. In addition, as shown in the following table and in Table 6A—New Diagnosis Codes associated with this proposed rule (available on the CMS website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*), six new diagnosis codes describing acute appendicitis with generalized peritonitis, with and without perforation or abscess were finalized and are effective with discharges on and after October 1, 2023. Consistent with our established process for assigning new diagnosis and procedure codes, we reviewed the predecessor codes (K35.20 and K35.21) to determine the MS–DRG assignment most closely associated with the new diagnosis codes. In addition, the proposed severity level designations for the new diagnosis codes are set forth in Table 6A. As shown, the new codes are proposed for assignment to medical MS–DRGs 371, 372, and 373 (Major Gastrointestinal Disorders and Peritoneal Infections with MCC, with CC, and without CC/MCC, respectively), in accordance with the assignment of predecessor codes K35.20 and K35.21.

ICD-10-CM Code	Description	Proposed MS-DRGs
K35.200	Acute appendicitis with generalized peritonitis, without perforation or abscess	371, 372, 373
K35.201	Acute appendicitis with generalized peritonitis, with perforation, without abscess	371, 372, 373
K35.209	Acute appendicitis with generalized peritonitis, without abscess, unspecified as to perforation	371, 372, 373
K35.210	Acute appendicitis with generalized peritonitis, without perforation, with abscess	371, 372, 373
K35.211	Acute appendicitis with generalized peritonitis, with perforation and abscess	371, 372, 373
K35.219	Acute appendicitis with generalized peritonitis, with abscess, unspecified as to perforation	371, 372, 373

As the acute appendicitis diagnosis code revisions have been finalized by the CDC/NCHS, we believe it is now appropriate to address the MS–DRG request for diagnosis code K35.20 describing acute appendicitis with generalized peritonitis when an appendectomy procedure is performed. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 40.1, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*, for complete documentation of the GROUPER logic for MS–DRGs 338, 339, and 340 (Appendectomy with Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) and MS–DRGs 341, 342, and 343 (Appendectomy without Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) that includes the procedure codes defined in the logic for an appendectomy.

We first analyzed claims data from the September 2022 update of the FY 2022 MedPAR file for MS–DRGs 338, 339, and 340 and cases reporting any one of the following diagnosis codes currently defined in the logic as a complicated principal diagnosis when reported as a principal diagnosis.

ICD-10-CM Code	Description
C18.1	Malignant neoplasm of appendix
C7A.020	Malignant carcinoid tumor of the appendix
K35.21	Acute appendicitis with generalized peritonitis, with abscess
K35.32	Acute appendicitis with perforation and localized peritonitis, without abscess
K35.33	Acute appendicitis with perforation and localized peritonitis, with abscess

Our findings are shown in the following table. We note that if a diagnosis is not listed it is because there were no cases found.

MS-DRG	ICD-10-CM Code	Number of Cases	Average Length of Stay	Average Costs
338	All Cases	579	7	$20,311
	C18.1	30	6.7	$20,285
	C7A.020	1	3	$20,984
	K35.21	20	8.5	$23,290
	K35.32	294	6.4	$19,743
	K35.33	234	7.7	$20,772
339	All Cases	2,018	4.7	$14,068
	C18.1	35	4	$13,855
	K35.21	47	6.4	$14,857
	K35.32	1,105	4.4	$13,370
	K35.33	831	5.1	$14,960
340	All Cases	1,437	2.7	$9,988
	C18.1	8	1.4	$11,529
	K35.21	26	4.1	$10,187
	K35.32	815	2.5	$9,670
	K35.33	588	2.9	$10,399

The data shows that overall, each of the ''complicated'' diagnoses appear to have a comparable average length of stay and similar average costs when compared to the average length of stay and average costs of all the cases in the respective MS–DRG, as well as, to each other.

Next, we analyzed claims data from the September 2022 update of the FY 2022 MedPAR file for MS–DRGs 341, 342, and 343 and cases reporting any one of the following diagnosis codes describing acute appendicitis.

ICD-10-CM Code	Description
K35.20	Acute appendicitis with generalized peritonitis, without abscess
K35.30	Acute appendicitis with localized peritonitis, without perforation or gangrene
K35.31	Acute appendicitis with localized peritonitis and gangrene, without perforation
K35.80	Unspecified acute appendicitis
K35.890	Other acute appendicitis without perforation or gangrene
K35.891	Other acute appendicitis without perforation, with gangrene

Our findings are shown in the following table.

MS-DRG	ICD-10-CM code	Number of cases	Average Length of Stay	Average Costs
341	All Cases	533	5.8	$19,080
	K35.20	30	6.6	$17,634
	K35.30	74	4.5	$16,483
	K35.31	21	4.7	$13,768
	K35.80	225	4.4	$16,427
	K35.890	9	5	$14,450
	K35.891	26	5.8	$20,554
342	All Cases	1,581	3.2	$12,309
	K35.20	82	4.5	$13,171
	K35.30	187	2.7	$10,540
	K35.31	64	2.7	$10,588
	K35.80	833	2.7	$11,678
	K35.890	33	2.6	$10,817
	K35.891	118	3.2	$11,896
343	All Cases	1,482	1.9	$9,596
	K35.20	61	2.4	$9,023
	K35.30	212	1.8	$8,433
	K35.31	59	2.1	$8,461
	K35.80	883	1.8	$9,651
	K35.890	39	1.5	$9,995
	K35.891	91	2.1	$9,587

Similar to the findings for the ''complicated'' diagnoses, the ''uncomplicated'' diagnoses also have a comparable average length of stay and similar average costs when compared to the average length of stay and average costs of all the cases in the respective MS–DRG.

Based on our analysis for both the ''complicated'' and ''uncomplicated'' diagnoses combined with our review of all the cases in the MS–DRGs, we believe the findings support a prior comment, as summarized in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48849), that clinically, both localized and generalized peritonitis in association with an appendectomy require the same level of patient care, including extensive intraoperative irrigation at the surgical site, direct inspection or imaging of the abdomen to identify possible abscess, use of intravenous antibiotics, and prolonged monitoring. In addition, localized peritonitis progresses to generalized peritonitis. In our direct comparison of the ''complicated'' versus

''uncomplicated'' MS–DRGs, we believe the distinction is no longer meaningful with regard to resource consumption. As shown in the following table, the ''with MCC'' MS–DRGs, the ''with CC'' MS–DRGs, and the ''without CC/MCC'' MS–DRGs all have a comparable average length of stay and similar average costs. For example, MS–DRG 338 has an average length of stay of 7 days with average costs of $20,311 and MS–DRG 341 has an average length of stay of 5.8 days and average costs of $19,080. The volume of cases for this MS–DRG pair is also similar with 579 cases in MS–DRG 338 and 533 cases in MS–DRG 341.

MS-DRG	Description	Number of cases	Average Length of Stay	Average costs
338	Appendectomy with Complicated Principal Diagnosis with MCC	579	7	$20,311
339	Appendectomy with Complicated Principal Diagnosis with CC	2,018	4.7	$14,068
340	Appendectomy with Complicated Principal Diagnosis without CC/ MCC	1,437	2.7	$9,988
341	Appendectomy without Complicated Principal Diagnosis with MCC	533	5.8	$19,080
342	Appendectomy without Complicated Principal Diagnosis with CC	1,581	3.2	$12,309
343	Appendectomy without Complicated Principal Diagnosis without CC/ MCC	1,482	1.9	$9,596

As a result of our analysis and review of this issue, we believe the findings support eliminating the logic for ''complicated'' and ''uncomplicated'' diagnoses and restructuring the six MS–DRGs. We also note that in our review of the logic for the appendectomy procedures, we identified procedures listed in the current logic that we did not agree reflect an actual appendectomy as suggested in the title of the current MS–DRGs, rather the logic describes various procedures performed on the appendix.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the most recent claims data from the December 2022 update of the FY 2022 MedPAR file. The following table illustrates our findings for all 8,060 cases reporting procedure codes describing a procedure performed on the appendix.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	8,060	3.7	$12,838

Consistent with our established process as discussed in section II.C.1.b. of the preamble of this proposed rule, once the decision has been made to propose to make further modifications to the MS–DRGs, all five criteria to create subgroups must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. Therefore, we applied the criteria to create subgroups in a base MS–DRG. We note that, as shown in the table that follows, a three-way split of this proposed new base MS–DRG was met. The following table illustrates our findings.

Proposed new MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	1,186	6.4	$19,584
With CC	3,813	4.0	$13,223
Without CC/MCC	3,061	2.3	$9,745

For the proposed new MS–DRGs, there is (1) at least 500 cases in the MCC subgroup, the CC subgroup, and in the without CC/MCC subgroup; (2) at least 5 percent of the cases are in the MCC subgroup, the CC subgroup, and in the without CC/MCC subgroup; (3) at least a 20 percent difference in average costs between the MCC subgroup and the CC subgroup and between the CC group and NonCC subgroup; (4) at least a $2,000 difference in average costs between the MCC subgroup and the with CC subgroup and between the CC subgroup and NonCC subgroup; and (5) at least a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

Therefore, we are proposing to delete MS–DRGs 338, 339, 340, 341, 342, and 343 and proposing to create new MS–DRGs 397 Appendix Procedures with MCC, MS–DRG 398 Appendix Procedures with CC, and MS–DRG 399 Appendix Procedures without CC/MCC for FY 2024. These proposed new MS–DRGs would no longer require a diagnosis in the definition of the logic for case assignment. We are also proposing to include the current list of appendectomy procedures in the logic for case assignment of appendix procedures for the proposed new MS–DRGs.

7. MDC 07 (Diseases and Disorders of the Hepatobiliary System and Pancreas): Alcoholic Hepatitis

We received a request to create new MS–DRGs with a two-way split (with MCC and without MCC) for cases reporting alcoholic hepatitis. Alcoholic hepatitis is identified with ICD–10–CM diagnosis codes K70.10 (Alcoholic hepatitis without ascites) and K70.11 (Alcoholic hepatitis with ascites) which are currently assigned to MS–DRGs 432, 433, and 434 (Cirrhosis and Alcoholic Hepatitis with MCC, with CC, and without CC/MCC, respectively) when reported as a principal diagnosis.

Alcoholic hepatitis is characterized as an inflammatory condition due to chronic, excessive alcohol use and is considered an acute form of alcohol-associated liver disease (ALD). Data suggests that ALD was responsible for over 100,000 hospitalizations in 2017 and admissions for ALD continued to increase during the COVID–19 public health emergency.[6] Data also suggest that ALD may be one of the leading causes of liver transplants in the U.S.

The requestor stated that currently there are no effective therapies available to treat alcoholic hepatitis and current treatment guidelines suggest corticosteroids, despite increased risk of infection and minimal impact on survival beyond 28 days. However, the requestor (manufacturer of Larsucosterol) also indicated that epigenetic therapy is currently being studied to address various types of acute and chronic organ injury and provided information related to its AHFIRM (*A*lcohol-associated *H*epatitis to evaluate sa*F*ety and eff*I*cacy of La*R*sucosterol (DUR–928) treat*M*ent) Phase 2b study for patients diagnosed with alcoholic hepatitis. The FDA granted Fast Track Designation to DUR–928 for the treatment of alcoholic hepatitis in 2020.

The requestor stated it performed its own analysis using two years of claims data, (calendar years 2018 and 2019), and its findings showed that the patients with alcoholic hepatitis are distinct from the typical Medicare beneficiary and that the condition disproportionately affects younger patients that represent a small proportion of the cases currently grouping to MS–DRGs 432, 433, and 434. According to the requestor, the low volume of cases reporting alcoholic hepatitis have little to no impact on the annual recalibration of the MS–DRG relative payment weights for MS–DRGs 432, 433, and 434, resulting in underpayments. The requestor stated its analysis of cases reporting alcoholic hepatitis showed higher resource utilization and a longer length of stay when compared to all cases in MS–DRGs 432, 433, and 434. The requestor stated it applied the criteria to create subgroups for the cases reporting alcoholic hepatitis currently grouping to MS–DRGs 432, 433, and 434 and found that the criteria for a two-way split (with MCC and without MCC) was met. The requestor further stated that splitting out the cases reporting alcoholic hepatitis from MS–DRGs 432, 433, and 434 would enable more accurate payment of these cases and support research that is specific to alcoholic hepatitis distinct from cirrhosis.

The logic for case assignment to MS–DRGs 432, 433, and 434 is comprised of the following diagnosis codes.

[6] Gonzalez HC, Zhou Y, Nimri FM, Rupp LB, Trudeau S, Gordon SC. Alcohol-related hepatitis admissions increased 50% in the first months of the COVID–19 pandemic in the USA. Liver Int. 2022 Apr;42(4):762–764.

ICD-10-CM Code	Description
K70.10	Alcoholic hepatitis without ascites
K70.11	Alcoholic hepatitis with ascites
K70.2	Alcoholic fibrosis and sclerosis of liver
K70.30	Alcoholic cirrhosis of liver without ascites
K70.31	Alcoholic cirrhosis of liver with ascites
K70.40	Alcoholic hepatic failure without coma
K70.41	Alcoholic hepatic failure with coma
K70.9	Alcoholic liver disease, unspecified
K74.00	Hepatic fibrosis, unspecified
K74.01	Hepatic fibrosis, early fibrosis
K74.02	Hepatic fibrosis, advanced fibrosis
K74.3	Primary biliary cirrhosis
K74.4	Secondary biliary cirrhosis
K74.5	Biliary cirrhosis, unspecified
K74.60	Unspecified cirrhosis of liver
K74.69	Other cirrhosis of liver

We analyzed claims data from the September 2022 update of the FY 2022 MedPAR file for MS–DRGs 432, 433, and 434 and cases reporting any one of the listed diagnoses as a principal diagnosis. We note that if a diagnosis code is not listed it is because there were no cases found reporting that code in the respective MS–DRG. The findings from our analysis are shown in the following table.

BILLING CODE 4120–01–P

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
432 – All cases	16,836	6.8	$16,532
432 – Cases reporting a principal diagnosis of K70.10 (Alcoholic hepatitis without ascites)	269	7.4	$14,710
432 – Cases reporting a principal diagnosis of K70.11 (Alcoholic hepatitis with ascites)	244	9.1	$20,727
432 – Cases reporting a principal diagnosis of K70.30 (Alcoholic cirrhosis of liver without ascites)	1,241	5.4	$14,136
432 – Cases reporting a principal diagnosis of K70.31 (Alcoholic cirrhosis of liver with ascites)	5,687	7.5	$17,694
432 – Cases reporting a principal diagnosis of K70.40 (Alcoholic hepatic failure without coma)	1,179	8.1	$19,277
432 – Cases reporting a principal diagnosis of K70.41 (Alcoholic hepatic failure with coma)	33	8.7	$22,530
432 – Cases reporting a principal diagnosis of K70.9 (Alcoholic liver disease, unspecified)	28	4.8	$12,708
432 – Cases reporting a principal diagnosis of K74.3 (Primary biliary cirrhosis)	244	7.3	$18,020
432 – Cases reporting a principal diagnosis of K74.4 (Secondary biliary cirrhosis)	11	7.5	$15,324
432 – Cases reporting a principal diagnosis of K74.5 (Biliary cirrhosis, unspecified)	15	8.2	$16,569
432 – Cases reporting a principal diagnosis of K74.60 (Unspecified cirrhosis of liver)	5,501	6	$15,120
432 – Cases reporting a principal diagnosis of K74.69 (Other cirrhosis of liver)	2,384	6.9	$16,501
433 – All cases	8,436	4.3	$9,007
433 – Cases reporting a principal diagnosis of K70.10 (Alcoholic hepatitis without ascites)	309	4.8	$8,436
433 – Cases reporting a principal diagnosis of K70.11 (Alcoholic hepatitis with ascites)	173	5	$10,085
433 – Cases reporting a principal diagnosis of K70.30 (Alcoholic cirrhosis of liver without ascites)	433	4.5	$9,343
433 – Cases reporting a principal diagnosis of K70.31 (Alcoholic cirrhosis of liver with ascites)	2,825	4.4	$9,548
433 – Cases reporting a principal diagnosis of K70.40 (Alcoholic hepatic failure with coma)	815	4.6	$9,066
433 – Cases reporting a principal diagnosis of K70.41 (Alcoholic hepatic failure with coma)	6	3.2	$5,853

433 – Cases reporting a principal diagnosis of K70.9 (Alcoholic liver disease, unspecified)	24	4.8	$11,893
433 – Cases reporting a principal diagnosis of K74.3 (Primary biliary cirrhosis)	121	4	$7,757
433 – Cases reporting a principal diagnosis of K74.4 (Secondary biliary cirrhosis)	4	3.3	$5,687
433 – Cases reporting a principal diagnosis of K74.5 (Biliary cirrhosis, unspecified)	12	2.2	$4,784
433 – Cases reporting a principal diagnosis of K74.60 (Unspecified cirrhosis of liver)	2,679	3.9	$8,482
433 – Cases reporting a principal diagnosis of K74.69 (Other cirrhosis of liver)	1,035	4.3	$8,855
434 – All cases	358	2.8	$5,825
434 – Cases reporting a principal diagnosis of K70.10 (Alcoholic hepatitis without ascites)	41	2.4	$5,784
434 – Cases reporting a principal diagnosis of K70.11 (Alcoholic hepatitis with ascites)	8	2.1	$4,316
434 – Cases reporting a principal diagnosis of K70.30 (Alcoholic cirrhosis of liver without ascites)	27	2.3	$4,624
434 – Cases reporting a principal diagnosis of K70.31 (Alcoholic cirrhosis of liver with ascites)	179	3	$6,348
434 – Cases reporting a principal diagnosis of K70.40 (Alcoholic hepatic failure with coma)	54	2.6	$4,803
434 – Cases reporting a principal diagnosis of K70.9 (Alcoholic liver disease, unspecified)	2	2.5	$5,351
434 – Cases reporting a principal diagnosis of K74.3 (Primary biliary cirrhosis)	6	4.2	$8,485
434 – Cases reporting a principal diagnosis of K74.60 (Unspecified cirrhosis of liver)	36	2.6	$5,862
434 – Cases reporting a principal diagnosis of K74.69 (Other cirrhosis of liver)	5	3	$4,122

BILLING CODE 4120–01–C

Based on our initial analysis for cases in MS–DRGs 432, 433, and 434, the data clearly demonstrate that there are several diagnoses, other than the two diagnoses identified by the requestor (codes K70.10 and K70.11) with increased resource utilization when compared to the average length of stay and average costs of all cases in MS–DRGs 432, 433, and 434.

The data show that the cases in MS–DRG 432 reporting diagnosis codes K70.11, K70.31, K70.40, K70.41, K74.3, or K74.5 as a principal diagnosis have a longer average length of stay (9.1 days, 7.5 days, 8.1 days, 8.7 days, 7.3 days, and 8.2 days, respectively versus 6.8 days) and higher average costs ($20,727, $17,694, $19,277, $22,530, $18,020, and $16,569, respectively versus $16,532) compared to the average length of stay and the average costs for all the cases in MS–DRG 432. We note that the cases reporting diagnosis codes K70.10, K74.4, or K74.69 as a principal diagnosis also have a longer average length of stay (7.4 days, 7.5 days, and 6.9 days, respectively versus 6.8 days) compared to all the cases in MS–DRG 432, however, the average costs of these cases are lower ($14,710, $15,324 and $16,501, respectively versus $16,532) compared to the average costs for all the cases.

For MS–DRG 433, the cases reporting diagnosis codes K70.11, K70.30, K70.31, K70.40, or K70.9 as a principal diagnosis have a longer average length of stay (5.0 days, 4.5 days, 4.4 days, 4.6 days, and 4.8 days, respectively versus 4.3 days) and comparable average costs ($10,085, $9,343, $9,548, $9,066, and $11,893, respectively versus $9,007) compared to the average length of stay and the average costs for all the cases in MS–DRG 433. We note that the cases reporting diagnosis code K70.10 as a principal diagnosis also have a longer average length of stay (4.8 days versus 4.3 days) compared to all the cases in MS–DRG 433, however, the average costs of these cases are lower ($8,436 versus $9,007) compared to the average costs for all the cases in the MS–DRG.

Lastly, for MS–DRG 434, the cases reporting diagnosis codes K70.31, K74.3, or K74.60 as a principal diagnosis have a longer average length of stay (3 days, 4.2 days, and 2.6 days, respectively versus 2.8 days) and higher average costs ($6,348, $8,485, and $5,862, respectively versus $5,825)

compared to the average length of stay and the average costs for all the cases in MS–DRG 434.

The data also show that there is significantly more case volume for several of the other diagnoses compared to the case volume of the two diagnoses (K70.10 and K70.11) associated with the request to create new MS–DRGs. We identified diagnosis code K70.31 (Alcoholic cirrhosis of liver with ascites) to be the most prevalent diagnosis with respect to case volume reported across MS–DRGs 432, 433, and 434. For example, as shown in the table, we found 5,687 cases in MS–DRG 432 reporting diagnosis code K70.31 as a principal diagnosis compared to 269 cases reporting diagnosis code K70.10 and 244 cases reporting diagnosis code K70.11. For MS–DRG 433, we found 2,825 cases reporting diagnosis code K70.31 as a principal diagnosis compared to 309 cases reporting diagnosis code K70.10 and 173 cases reporting diagnosis code K70.11. Lastly, for MS–DRG 434, we found 179 cases reporting diagnosis code K70.31 as a principal diagnosis compared to 41 cases reporting diagnosis code K70.10 and 8 cases reporting diagnosis code K70.11.

Following our initial review of the claims data for the cases reporting any one of the listed diagnoses as a principal diagnosis that are included in the logic for case assignment to MS–DRGs 432, 433, and 434, we performed additional analyses to focus on the cases specifically reporting diagnosis code K70.10 or K70.11 as a principal diagnosis in response to the request to create new MS–DRGs with a two-way split (with and without MCC, respectively). The findings from our analysis are shown in the following table.

Summary Table for Cases Reporting Diagnosis Codes K70.10 or K70.11 in MS-DRGs 432, 433, and 434

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
432 – All cases	16,836	6.8	$16,532
432 – Cases reporting a principal diagnosis of alcoholic hepatitis without or with ascites (K70.10 or K70.11)	513	8.2	$17,572
433 – All cases	8,436	4.3	$9,007
433 – Cases reporting a principal diagnosis of alcoholic hepatitis without or with ascites (K70.10 or K70.11)	482	4.9	$9,028
434 – All cases	358	2.8	$5,825
434 – Cases reporting a principal diagnosis of alcoholic hepatitis without or with ascites (K70.10 or K70.11)	49	2.4	$5,544

The data show that the 513 cases reporting alcoholic hepatitis without or with ascites in MS–DRG 432 have a longer average length of stay (8.2 days versus 6.8 days) and higher average costs ($17,572 versus $16,532). For MS–DRG 433, the data show that the 482 cases reporting alcoholic hepatitis without or with ascites have a longer average length of stay (4.9 days versus 4.3 days) and a difference in average costs of $21 ($9,028 versus $9,007). For MS–DRG 434, the 49 cases reporting alcoholic hepatitis without or with ascites have a shorter length of stay (2.4 days versus 2.8 days) and lower average costs ($5,544 versus $5,825).

Based on the results of our review and our analysis of the claims data for cases reporting a principal diagnosis of alcoholic hepatitis without or with ascites (codes K70.10 or K70.11), we believe the cases demonstrate similar patterns of resource intensity in comparison to the other cases in MS–DRGs 432, 433, and 434. We also believe that these diagnoses are clinically coherent with the other diagnoses currently assigned to MS–DRGs 432, 433, and 434. While we recognize the concerns expressed by the requestor for this subset of patients with respect to the younger population and the lower volume of cases, we note that the logic for case assignment to MS–DRGs 432, 433, and 434 includes clinically related diagnoses that differ in severity and resource intensity with alcoholic hepatitis being at the lowest end of the severity spectrum. Therefore, we are proposing to maintain the structure of MS–DRGs 432, 433, and 434 for FY 2024.

We note, as discussed in section II.C.1.b. of this proposed rule, using the December 2022 update of the FY 2022 MedPAR file, we analyzed how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would affect the MS–DRG structure beginning in FY 2024. Findings from our analysis indicate that MS–DRGs 432, 433, and 434, as well as approximately 44 other base MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. We refer the reader to Table 6P.10b associated with this proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for the list of the 135 MS–DRGs that would potentially be subject to deletion and the list of the 86 new MS–DRGs that would potentially be created under this policy if the NonCC subgroup criteria was applied.

8. MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue): Spinal Fusion

We received a request to reassign cases reporting spinal fusion procedures utilizing an aprevo™ customized interbody fusion device from the lower severity MS–DRG 455 (Combined Anterior and Posterior Spinal Fusion without CC/MCC) to the higher severity MS–DRG 453 (Combined Anterior and Posterior Spinal Fusion with MCC), from the lower severity MS–DRG 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions without CC/MCC) to the higher severity level MS–DRG 456 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC) when a diagnosis of malalignment is reported, and from MS–DRGs 459 and 460 (Spinal Fusion Except Cervical with MCC and without MCC, respectively) to MS–DRG 456.

We note that the Aprevo™ Intervertebral Body Fusion Device technology was discussed in the FY 2022 IPPS/LTCH PPS proposed (86 FR 25361 through 25365) and final rules (86 FR 45127 through 45133) with respect to a new technology add-on payment application and was approved for add-on payments for FY 2022. We also note that, as discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49468 through 49469), CMS finalized the continuation of the new technology add-on payments for this technology for FY 2023.

In support of the new technology add-on payment application that was submitted for FY 2022 consideration, we received a request and proposal to create new ICD–10–PCS codes to differentiate spinal fusion procedures that utilize an aprevo™ customized interbody fusion device, which was discussed at the March 9–10, 2021 ICD–10 Coordination and Maintenance Committee meeting. As a result, effective October 1, 2021 (FY 2022), we implemented 12 new ICD–10–PCS procedure codes to identify and describe spinal fusion procedures utilizing the aprevo™ customized interbody fusion device as shown in the following table.

ICD-10-PCS Code	Description
XRGA0R7	Fusion of thoracolumbar vertebral joint using customizable interbody fusion device, open approach, new technology group 7
XRGA3R7	Fusion of thoracolumbar vertebral joint using customizable interbody fusion device, percutaneous approach, new technology group 7
XRGA4R7	Fusion of thoracolumbar vertebral joint using customizable interbody fusion device, percutaneous endoscopic approach, new technology group 7
XRGB0R7	Fusion of lumbar vertebral joint using customizable interbody fusion device, open approach, new technology group 7
XRGB3R7	Fusion of lumbar vertebral joint using customizable interbody fusion device, percutaneous approach, new technology group 7
XRGB4R7	Fusion of lumbar vertebral joint using customizable interbody fusion device, percutaneous endoscopic approach, new technology group 7
XRGC0R7	Fusion of 2 or more lumbar vertebral joints using customizable interbody fusion device, open approach, new technology group 7
XRGC3R7	Fusion of 2 or more lumbar vertebral joints using customizable interbody fusion device, percutaneous approach, new technology group 7
XRGC4R7	Fusion of 2 or more lumbar vertebral joints using customizable interbody fusion device, percutaneous endoscopic approach, new technology group 7
XRGD0R7	Fusion of lumbosacral joint using customizable interbody fusion device, open approach, new technology group 7
XRGD3R7	Fusion of lumbosacral joint using customizable interbody fusion device, percutaneous approach, new technology group 7
XRGD4R7	Fusion of lumbosacral joint using customizable interbody fusion device, percutaneous endoscopic approach, new technology group 7

Each of the listed procedure codes are assigned to MDC 01 (Diseases and Disorders of the Nervous System) in MS–DRGs 028, 029, and 030 (Spinal Procedures with MCC, with CC or Spinal Neurostimulators, and without CC/MCC, respectively) and to MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) in MS–DRGs 453, 454, and 455 (Combined Anterior and Posterior Spinal Fusion with MCC, with CC, and without CC/MCC, respectively), MS–DRGs 456, 457, and 458 (Spinal Fusion Except Cervical With Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively), and MS–DRGs 459 and 460 (Spinal Fusion Except Cervical with MCC and without MCC, respectively).

The requestor (the manufacturer of aprevo™ customized interbody spinal fusion devices) expressed concerns that findings from its analysis of claims data for spinal fusion MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460 from the first half of FY 2022 indicate there may be unintentional miscoded claims from providers with whom they do not have an explicit relationship. Specifically, the requestor stated that a subset of the facilities identified in its analysis are not customers to whom the aprevo™ custom-made device was provided. The volume of cases initially identified by the requestor in its analysis totaled 89 cases, however, upon eliminating the provider claims from the facilities that are not a current client, the resulting volume was 14 cases. The requestor stated that subsequently, after another quarter's data became available from current clients for cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device, they identified an additional 16 cases for a total of 30 cases, all of which were assigned to MS–DRGs 453, 454, and 455.

Upon further review of the data, the requestor stated it found that cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device had higher average costs in comparison to the average costs of all the cases in the highest severity level ''with MCC'' MS–DRGs 453 and 456. According to the requestor, this finding suggested that the use of the device impacts intensity of resources such that the cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device merit reassignment to the highest severity level ''with MCC'' MS–DRGs (MS–DRGs 453 and 456). The requestor asserted that while spinal disorders impact approximately 65 million patients in the U.S., the patients undergoing spine surgery with an aprevo™ customized interbody spinal fusion device are those with irreversible, debilitating conditions. In addition, the requestor stated that since the cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device already appear to map to the most resource intensive MS–DRGs for spinal procedures, there is no other alternative assignment for these procedures, with the exception of a new MS–DRG. Lastly, the requestor maintained that reassigning cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device to the ''with MCC'' level aligns with CMS's factors that are considered in review of MS–DRG classification change requests, including treatment difficulty, complexity of service, and utilization of resources.

We analyzed data from the September 2022 update of the FY 2022 MedPAR file for MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460 and cases reporting any one of the previously listed procedure codes describing utilization of an aprevo™ customized interbody spinal fusion device. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 453 All cases	3,779	9.4	$77,856
MS-DRG 453 Cases reporting customized interbody spinal fusion	17	8.4	$79,080
MS-DRG 454 All cases	19,246	4.4	$54,227
MS-DRG 454 Cases reporting customized interbody spinal fusion	75	4.4	$75,294
MS-DRG 455 All cases	16,564	2.7	$40,683
MS-DRG 455 Cases reporting customized interbody spinal fusion	67	2.7	$54,287
MS-DRG 456 All cases	1,276	13.2	$73,399
MS-DRG 456 Cases reporting customized interbody spinal fusion	0	0	0
MS-DRG 457 All cases	2,973	6.4	$53,750
MS-DRG 457 Cases reporting customized interbody spinal fusion	2	3.5	$158,782
MS-DRG 458 All cases	777	3.5	$40,343
MS-DRG 458 Cases reporting customized interbody spinal fusion	1	12	$91,672
MS-DRG 459 All cases	3,128	9.8	$53,342
MS-DRG 459 Cases reporting customized interbody spinal fusion	2	5	$57,039
MS-DRG 460 All cases	30,310	3.5	$31,921
MS-DRG 460 Cases reporting customized interbody spinal fusion	30	4.5	$46,683

We found the majority of cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device in MS–DRGs 453, 454, and 455 with a total of 159 cases (17 + 75 + 67 = 159) with an average length of stay of 4.1 days and average costs of $66,847. The 17 cases identified in MS–DRG 453 appear to have a comparable average length of stay and comparable average costs compared to all the cases in MS–DRG 453 with a difference of 1 day and a difference in average costs of $1,383 for the cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device. The 75 cases found in MS–DRG 454 have an identical average length of stay of 4.4 days in comparison to all the cases in MS–DRG 454, however, the difference in average costs is $21,067 ($75,294 − $54,227 = $21,067) for the cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device. The 67 cases found in MS–DRG 455 also have an identical average length of stay of 2.7 days in comparison to all the cases in MS–DRG 455, however, the difference in average costs is $13,604 ($54,287 − $40,683 = $13,604) for the cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device. As shown in the table, there were no cases found to report utilization of an aprevo™ customized interbody spinal fusion device in MS–DRG 456. For MS–DRG 457, the 2 cases found to report utilization of an aprevo™ customized interbody spinal fusion device appear to be outliers with a difference in average costs of $105,032 ($158,782 − $53,750 = $105,032) and a shorter average length of stay (3.5 days versus 6.4 days) in comparison to all the cases in MS–DRG 457. For MS–DRG 458, we found 1 case reporting utilization of an aprevo™ customized interbody spinal fusion device with an average length of stay almost three times the average length of stay of all the cases in MS–DRG 458 (12 days versus 3.5 days) and average costs that are twice as high ($91,672 versus $40,343) compared to the average costs of all the cases in MS–DRG 458. For MS–DRG 459, the 2 cases reporting utilization of an aprevo™ customized interbody spinal fusion device had a shorter average length of stay (5 days versus 9.8 days) compared to the average length of stay of all the cases in MS–DRG 459 with a difference in average costs of $3,697 ($57,039 − $53,342 = $3,697). For MS–DRG 460, the 30 cases reporting utilization of an aprevo™ customized interbody spinal fusion device had a longer average length of stay (4.5 days versus 3.5 days) compared to the average length of stay of all the cases in MS–DRG 460 with a difference in average costs of $14,762 ($46,683 − $31,921 = $14,762).

As previously discussed, the requestor expressed concerns that there may be unintentional miscoded claims from providers with whom they do not have an explicit relationship. We note that following the submission of the request for the FY 2024 MS–DRG

classification change for cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device, this same requestor (the manufacturer of aprevo™ customized interbody spinal fusion devices) submitted a code proposal requesting a revision to the title of the current procedure codes that identify and describe a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device for consideration as an agenda topic to be discussed at the March 7–8, 2023 ICD–10 Coordination and Maintenance Committee meeting. The requestor stated its belief that the term ''customizable'' as currently reflected in each of the 12 procedure code descriptions is potentially misunderstood by providers to encompass expandable interbody fusion cages that have been available for several years and which were not approved for new technology add-on payment as was the aprevo™ customized interbody spinal fusion device. According to the requestor, these other interbody fusion devices do not require the same patient specific surgical plan coordination as the aprevo™ customized interbody spinal fusion device and do not offer the personalized fit that matches the topography of a patient's bone. Therefore, in an effort to encourage appropriate reporting for cases where an aprevo™ customized interbody spinal fusion device has been utilized in the performance of a spinal fusion procedure, the requestor provided alternative terminology for consideration.

The proposal to revise the code title was presented and discussed as an Addenda item at the March 7–8, 2023 ICD–10 Coordination and Maintenance Committee meeting. We refer the reader to the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding the request, including a recording of the discussion and the related meeting materials. Public comments in response to the code proposal were due by April 7, 2023.

We note that the diagnosis and procedure code proposals that are presented at the March ICD–10–CM Coordination and Maintenance Committee meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles or Table 6F.—Revised Procedure Code Titles in association with the proposed rule. Accordingly, any update to the title of the procedure codes describing utilization of an aprevo™ customized interbody spinal fusion device, if finalized following the March meeting, would be reflected in Table 6F.—Revised Procedure Code Titles associated with the final rule for FY 2024.

Based on our review of this issue and our analysis of the claims data, we agree that the findings appear to indicate that cases reporting the performance of a procedure utilizing an aprevo™ customized interbody spinal fusion device reflect a higher consumption of resources. However, due to the concerns expressed with respect to suspected inaccuracies of the coding and therefore, reliability of the claims data, we believe further review is warranted. In addition, as previously discussed, the proposal to revise the current code descriptions was presented at the March 2023 ICD–10 Coordination and Maintenance Committee meeting and if finalized, the revised coding may improve the reporting of procedures where an aprevo™ customized interbody spinal fusion device is utilized. We also believe that because this technology is currently receiving new technology add-on payments, it would be advantageous to allow for more claims data to be analyzed under the application of the policy in consideration of any future modifications to the MS–DRGs for which the technology is utilized in the performance of a spinal fusion procedure.

With regard to possible future action, we will continue to monitor the claims data for resolution of the potential coding issues identified by the requestor. Because the procedure codes that we analyzed and presented findings for in this FY 2024 IPPS/LTCH PPS proposed rule may be revised based on the proposal as discussed at the March 2023 ICD–10 Coordination and Maintenance Committee meeting, the claims data that we examine in the future may change. However, we will continue to collaborate with the American Hospital Association (AHA) as one of the four Cooperating Parties through the AHA's *Coding Clinic for ICD–10–CM/PCS* and provide further education on spinal fusion procedures utilizing an aprevo™ customized interbody spinal fusion device and the proper reporting of the ICD–10–PCS spinal fusion procedure codes. Until these potential coding inaccuracies are addressed and additional, future analysis of the procedures being reported in the claims data can occur, we believe it would be premature to propose any MS–DRG modifications for spinal fusion procedures utilizing an aprevo™ customized interbody spinal fusion device at this time. For these reasons, we are proposing to maintain the current structure of MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460 for FY 2024.

9. MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract): Complications of Arteriovenous Fistulas and Shunts

We received a request to add eight ICD–10–CM diagnosis codes to the list of principal diagnoses assigned to MS–DRGs 673, 674, and 675 (Other Kidney and Urinary Tract Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract) when reported with procedure codes describing the insertion of totally implantable vascular access devices (TIVADs) and tunneled vascular access devices. The list of eight ICD–10–CM diagnosis codes submitted by the requestor, as well as their current MDC assignments, are found in the table:

ICD-10-CM Code	Description	MDC
T82.510A	Breakdown (mechanical) of surgically created arteriovenous fistula, initial encounter	05
T82.511A	Breakdown (mechanical) of surgically created arteriovenous shunt, initial encounter	05
T82.520A	Displacement of surgically created arteriovenous fistula, initial encounter	05
T82.521A	Displacement of surgically created arteriovenous shunt, initial encounter	05
T82.530A	Leakage of surgically created arteriovenous fistula, initial encounter	05
T82.531A	Leakage of surgically created arteriovenous shunt, initial encounter	05
T82.590A	Other mechanical complication of surgically created arteriovenous fistula, initial encounter	05
T82.591A	Other mechanical complication of surgically created arteriovenous shunt, initial encounter	05

In order to be treated with dialysis, a procedure that replaces kidney function when the organs fail, a connection must be established between the dialysis equipment and the patient's bloodstream. To establish long-term hemodialysis access, an arteriovenous (AV) fistula or an AV shunt can be surgically created. An AV fistula is created by suturing an artery directly to a vein, generally in the wrist, forearm, inner elbow or upper arm. AV fistulas usually require from 8 to 12 weeks for maturation prior to initial use. AV shunts, also called AV grafts, are created by connecting an artery and a vein using a graft made of synthetic material. AV shunts do not require maturation, as AV fistulas do, and they can be used for hemodialysis in as little as 24 hours after creation depending upon the type of graft that is used. The requestor noted that diagnosis codes that describe complications of dialysis catheters currently are in the list of qualifying principal diagnoses in MS–DRGs 673, 674, and 675 when reported with procedure codes describing the insertion of TIVADs or tunneled vascular access devices; therefore, according to the requestor, diagnosis codes that describe complications of arteriovenous fistulas and shunts should reasonably be added.

To begin our analysis, we reviewed the GROUPER logic for MS–DRGs 673, 674, and 675 including the special logic in MS–DRGs 673, 674, and 675 for certain MDC 11 diagnoses reported with procedure codes for the insertion of tunneled or totally implantable vascular access devices. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 40.1, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software,* for complete documentation of the GROUPER logic for MS–DRGs 673, 674, and 675.

As discussed in the FY 2003 IPPS/LTCH PPS final rule (67 FR 49993 through 49994), the procedure code for the insertion of totally implantable vascular access devices was added to the GROUPER logic of DRG 315 (Other Kidney and Urinary Tract O.R. Procedures), the predecessor DRG of MS–DRGs 673, 674, and 675, when combined with principal diagnoses specifically describing renal failure, recognizing that inserting these devices as an inpatient procedure for the purposes of hemodialysis can lead to higher average charges and longer lengths of stay for those cases. In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58511 through 58517), we discussed a similar request to add 29 ICD–10–CM diagnosis codes to the list of principal diagnoses assigned to MS–DRGs 673, 674, and 675. In the FY 2021 IPPS/LTCH PPS final rule, we finalized the assignment of diagnosis codes that describe diabetes mellitus with diabetic chronic kidney disease, codes that describe complications of kidney transplant and codes that describe mechanical complications of vascular dialysis catheters to the list of qualifying principal diagnoses in MS–DRGs 673, 674, and 675 and stated that we believed the insertion of TIVADs or tunneled vascular access devices for the purposes of hemodialysis was clinically related to these diagnosis codes. We stated that for clinical coherence, the cases reporting these diagnoses should be grouped with the subset of cases that report the insertion of totally implantable vascular access devices or tunneled vascular access devices as an inpatient procedure for the purposes of hemodialysis for renal failure.

We reviewed the eight diagnosis codes submitted by the requestor. Diagnosis codes T82.510A, T82.511A, T82.520A, T82.521A, T82.530A, T82.531A, T82.590A and T82.591A describe mechanical complications of arteriovenous fistulas and shunts and are currently assigned to MDC 05 (Diseases and Disorders of the Circulatory System). The eight diagnosis codes would require reassignment to MDC 11 in MS–DRGs 673, 674, and 675 to group with the subset of cases that report the insertion of totally implantable vascular access devices or tunneled vascular access devices as an inpatient procedure for the purposes of hemodialysis for renal failure. We examined claims data from the September 2022 update of the FY 2022 MedPAR file for all cases reporting procedures describing the insertion of TIVADs or tunneled vascular access devices with a principal diagnosis describing mechanical complications of arteriovenous fistulas and shunts and compared these data to cases in MS–DRGs 673, 674 and 675. The following table shows our findings:

MS-DRGs 673, 674 and 675 Compared to Cases Reporting Procedures Describing the Insertion of TIVADs or Tunneled Vascular Access Devices with a Principal Diagnosis Code Describing Mechanical Complications of Complications of Arteriovenous Fistulas and Shunts				
MS-DRG		**Number of Cases**	**Average Length of Stay**	**Average Costs**
673	All cases	13,904	12.1	$31,946
	Cases reporting procedures describing the insertion of TIVADs or tunneled vascular access devices with a principal diagnosis of T82.510A, T82.511A, T82.520A, T82.521A, T82.530A, T82.531A, T82.590A or T82.591A with secondary diagnosis designated as MCC	748	6	$24,467
674	All cases	5,532	7.8	$20,702
	Cases reporting procedures describing the insertion of TIVADs or tunneled vascular access devices with a principal diagnosis T82.510A, T82.511A, T82.520A, T82.521A, T82.530A, T82.531A, T82.590A or T82.591A with secondary diagnosis designated as CC	1	3	$6,418
675	All cases	303	3.6	$13,343
	Cases reporting procedures describing the insertion of TIVADs or tunneled vascular access devices with a principal diagnosis T82.510A, T82.511A, T82.520A, T82.521A, T82.530A, T82.531A, T82.590A or T82.591A without secondary diagnosis designated as CC or MCC	0	0	$0

As shown in the table, there were 13,904 cases in MS–DRG 673 with an average length of stay of 12.1 days and average costs of $31,946. There were 748 cases reporting a principal diagnosis describing mechanical complications of arteriovenous fistulas and shunts, with a secondary diagnosis of MCC, and a procedure code for the insertion of a TIVAD or tunneled vascular access device with an average length of stay of 6 days and average costs of $24,467. There were 5,532 cases in MS–DRG 674 with an average length of stay of 7.8 days and average costs of $20,702. There was one case reporting a principal diagnosis describing mechanical complications of arteriovenous fistulas and shunts, with a secondary diagnosis of CC, and a procedure code for the insertion of a TIVAD or tunneled vascular access device with a length of stay of three days and costs of $6,418. There were 303 cases in MS–DRG 675 with an average length of stay of 3.6 days and average costs of $13,343. There were zero cases reporting a principal diagnosis describing mechanical complications of arteriovenous fistulas and shunts, without a secondary diagnosis of CC or MCC, and a procedure code for the insertion of a TIVAD or tunneled vascular access device. We note that the average length of stay and average costs of cases reporting a principal diagnosis describing mechanical complications of arteriovenous fistulas and shunts and the insertion of a TIVAD or a tunneled vascular access device are lower than for all cases in MS–DRGs 673 and 674, respectively.

To further examine the impact of moving the eight MDC 05 diagnoses into MDC 11, we analyzed claims data for cases reporting an O.R. procedure assigned to MDC 05 and a principal diagnosis describing mechanical complications of arteriovenous fistulas and shunts. Our findings are reflected in the following table:

Cases Reporting Circulatory System O.R. Procedures with a Principal Diagnosis Describing Mechanical Complications of Arteriovenous Fistulas and Shunts				
MS-DRG	**Description**	**Number of Cases**	**Average Length of Stay**	**Average Costs**
215	Other Heart Assist System Implant	1	1	$68,682
219	Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC	1	13	$207,909
228	Other Cardiothoracic Procedures with MCC	3	5	$61,681
233	Coronary Bypass with Cardiac Catheterization or Open Ablation with MCC	1	13	$143,481
239	Amputation for Circulatory System Disorders Except Upper Limb and Toe with MCC	6	19.5	$71,860
242	Permanent Cardiac Pacemaker Implant with MCC	2	16.5	$94,850
246	Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Arteries or Stents	7	12.7	$56,048
252	Other Vascular Procedures with MCC	1,323	5.2	$22,734
253	Other Vascular Procedures with CC	42	4	$13,092
254	Other Vascular Procedures without CC/MCC	4	2.5	$9,344
255	Upper Limb and Toe Amputation for Circulatory System Disorders with MCC	2	6	$21,212
263	Vein Ligation and Stripping	9	4.6	$19,576
264	Other Circulatory System O.R. Procedures	102	6	$23,393
268	Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC	1	8	$49,865
270	Other Major Cardiovascular Procedures with MCC	75	4.9	$26,697
271	Other Major Cardiovascular Procedures with CC	2	3	$37,375
	Total Cases	**1,581**	**5.3**	**$23,643**

Whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures''. As shown in the table, if we were to move the eight diagnosis codes describing mechanical complications of arteriovenous fistulas and shunts from MDC 05 to MDC 11, 1,581 cases would be assigned to the surgical class referred to as ''unrelated operating room procedures'' as an unintended consequence. The data also indicates that there were more cases that reported an O.R. procedure assigned to MDC 05 with a principal diagnosis describing mechanical complications of arteriovenous fistulas and shunts than there were cases reporting a principal diagnosis describing mechanical complications of arteriovenous fistulas and shunts and a procedure code for the insertion of a TIVAD or tunneled vascular access device (1,581 cases versus 749 cases) demonstrating that inpatient admissions for mechanical complications of arteriovenous fistulas and shunts more typically have an O.R. procedure assigned to MDC 05 performed.

We also reviewed the cases reporting an O.R. procedure assigned to MDC 05 and a principal diagnosis describing mechanical complications of arteriovenous fistulas and shunts to identify the top ten O.R. procedures assigned to MDC 05 that were reported within the claims data for these cases. Our findings are shown in the following table:

Top 10 Procedures Assigned to MDC 05 Reported with a Principal Diagnosis Describing Mechanical Complications of Arteriovenous Fistulas and Shunts				
ICD-10-PCS Code	Description	Number of Times Reported	Average Length of Stay	Average Costs
03WY0JZ	Revision of synthetic substitute in upper artery, open approach	91	5.6	$23,543
037Y3ZZ	Dilation of upper artery, percutaneous approach	66	4.6	$24,564
05WY0JZ	Revision of synthetic substitute in upper vein, open approach	58	5.1	$20,969
05763ZZ	Dilation of left subclavian vein, percutaneous approach	56	4.8	$18,662
057Y3ZZ	Dilation of upper vein, percutaneous approach	53	5.8	$27,740
057F3ZZ	Dilation of left cephalic vein, percutaneous approach	49	6.8	$29,862
05CY3ZZ	Extirpation of matter from upper vein, percutaneous approach	45	4.4	$28,177
03CY0ZZ	Extirpation of matter from upper artery, open approach	44	5.1	$23,969
03B80ZZ	Excision of left brachial artery, open approach	43	5.6	$20,718

As noted previously, if we were to move the eight diagnosis codes describing mechanical complications of arteriovenous fistulas and shunts to MDC 11, cases reporting one of the O.R. procedures assigned to MDC 05 shown in the table would be assigned to the surgical class referred to as ''unrelated operating room procedures'' as an unintended consequence.

Based on the results of our analysis, we do not support adding the eight diagnosis codes that describe mechanical complications of arteriovenous fistulas and shunts to the special logic in MS–DRGs 673, 674, and 675. As discussed previously, these diagnosis codes are assigned to MDC 05 (Diseases and Disorders of the Circulatory System). We note that patients can sometimes require the insertion of tunneled or totally implantable vascular access devices for hemodialysis while surgically created AV fistulas or AV shunts are unable to be accessed due to mechanical complications, however more often these mechanical complications related to AV fistulas or AV shunts require inpatient admission for vascular surgery to be effectively treated. We believe that the eight diagnosis codes describing mechanical complications of arteriovenous fistulas and shunts are most clinically aligned with the diagnosis codes assigned to MDC 05 (where they are currently assigned). We also believe it would not be appropriate to move these diagnoses into MDC 11 because it would inadvertently cause cases reporting the eight diagnosis codes that describe mechanical complications of arteriovenous fistulas and shunts with O.R. procedures assigned to MDC 05 to be assigned to an unrelated MS–DRG.

Therefore, for the reasons discussed, we are not proposing to add the following eight ICD–10–CM codes to the list of principal diagnosis codes for MS–DRGs 673, 674, and 675 when reported with a procedure code describing the insertion of a TIVAD or a tunneled vascular access device: T82.510A, T82.511A, T82.520A, T82.521A, T82.530A, T82.531A, T82.590A and T82.591A.

10. Review of Procedure Codes in MS–DRGs 981 Through 983 and 987 Through 989

We annually conduct a review of procedures producing assignment to MS–DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987 through 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move cases reporting these procedure codes out of these MS–DRGs into one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC. We use this information to determine which procedure codes and diagnosis codes to examine. We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls. We also consider whether it would be more appropriate to move the principal diagnosis codes into the MDC to which the procedure is currently assigned.

Based on the results of our review of the claims data from the September 2022 update of the FY 2022 MedPAR file of cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we are proposing to move the cases reporting the procedures and/or principal diagnosis codes described in this section of this rule from MS–DRGs 981 through 983 or MS–DRGs 987 through 989 into one of the surgical MS–DRGs for the MDC into which the principal diagnosis or procedure is assigned.

a. Percutaneous Endoscopic Resection of Colon

During our review of the cases that group to MS–DRGs 981 through 983, we

noted that when ICD–10–PCS procedure code 0DTN4ZZ (Resection of sigmoid colon, percutaneous endoscopic approach) is reported with a principal diagnosis in MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract), the cases group to MS–DRGs 981 through 983. The principal diagnosis most frequently reported with ICD–10–PCS procedure code 0DTN4ZZ in MDC 11 is ICD–10–CM code N32.1 (Vesicointestinal fistula). ICD–10–PCS procedure code 0DTN4ZZ currently groups to several MDCs, which are listed in the following table.

MS-DRG Assignments for ICD-10-PCS Procedure Code 0DTN4ZZ		
MDC	**MS-DRG**	**Description**
06	329-331	Major Small and Large Bowel Procedures
17	820-822	Lymphoma and Leukemia with Major Procedure
17	826-828	Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major Procedure
21	907-909	Other O.R. Procedures for Injuries
24	957-959	Other Procedures for Multiple Significant Trauma

We examined claims data from the September 2022 update of the FY 2022 MedPAR file to identify the average length of stay and average costs for cases reporting procedure code 0DTN4ZZ with a principal diagnosis in MDC 11, which are currently grouping to MS–DRGs 981 through 983, as well as all cases in MS–DRGs 981 through 983. Our findings are shown in the following table.

MS-DRGs 981-983: All Cases and Cases with Principal Diagnosis in MDC 11 and Procedure Code 0DTN4ZZ			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 981--All cases	21,139	12.6	$37,872
MS-DRG 981--Cases reporting procedure code 0DTN4ZZ and a principal diagnosis in MDC 11	12	11.5	$36,596
MS-DRG 982--All cases	9,386	5.9	$20,819
MS-DRG 982--Cases reporting procedure code 0DTN4ZZ and a principal diagnosis in MDC 11	38	5.2	$23,624
MS-DRG 983--All cases	1,782	2.6	$14,541
MS-DRG 983--Cases reporting procedure code 0DTN4ZZ and a principal diagnosis in MDC 11	12	2.8	$25,172

We then examined the MS–DRGs within MDC 11 and determined that the cases reporting procedure code 0DTN4ZZ with a principal diagnosis in MDC 11 would most suitably group to MS–DRGs 673, 674, and 675 (Other Kidney and Urinary Tract Procedures with MCC, with CC, and without CC/MCC, respectively), which contain procedures performed on structures other than kidney and urinary tract anatomy.

To determine how the resources for this subset of cases compared to cases in MS–DRGs 673, 674, and 675 as a whole, we examined the average costs and length of stay for cases in MS–DRGs 673, 674, and 675. Our findings are shown in this table.

MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 673--All cases	13,904	12.1	$31,946
MS-DRG 674--All cases	5,532	7.8	$20,702
MS-DRG 675--All cases	303	3.6	$13,343

We reviewed the data and noted for this subset of cases, the average costs are higher and the average length of stays are shorter than for cases in MS–DRGs 673, 674, and 675. However, we believe that when ICD–10–PCS procedure code 0DTN4ZZ is reported with a principal diagnosis in MDC 11 (typically vesicointestinal fistula), the procedure is related to the principal diagnosis. Because vesicointestinal fistulas involve both the bladder and the bowel, some procedures in both MDC 06 (Diseases and Disorders of the Digestive System) and MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract) would be expected to be related to a principal diagnosis of vesicointestinal fistula (ICD–10–CM code N32.1). Therefore, we are proposing to add ICD–10–PCS procedure code 0DTN4ZZ to MDC 11. Under this proposal, cases reporting procedure code 0DTN4ZZ with a principal diagnosis of vesicointestinal fistula (diagnosis code N32.1) in MDC 11 would group to MS–DRGs 673, 674, and 675.

b. Open Excision of Muscle

During the review of the cases that group to MS–DRGs 981 through 983, we noted that when ICD–10–PCS procedure codes describing the open excision of muscle are reported in conjunction with ICD–10–CM diagnosis codes in MDC 05 (Diseases and Disorders of the Circulatory System), the cases group to MS–DRGs 981 through 983. The list of 28 ICD–10–CM procedure codes reviewed, as well as their current MDC assignments, are found in the table:

ICD-10-PCS Code	Description	MDC
0KB00ZZ	Excision of head muscle, open approach	01; 08; 09; 21; 24
0KB10ZZ	Excision of facial muscle, open approach	01; 08; 09; 21; 24
0KB20ZZ	Excision of right neck muscle, open approach	01; 08; 09; 21; 24
0KB30ZZ	Excision of left neck muscle, open approach	01; 08; 09; 21; 24
0KB40ZZ	Excision of tongue, palate, pharynx muscle, open approach	01; 08; 09; 21; 24
0KB50ZZ	Excision of right shoulder muscle, open approach	01; 08; 09; 21; 24
0KB60ZZ	Excision of left shoulder muscle, open approach	01; 08; 09; 21; 24
0KB70ZZ	Excision of right upper arm muscle, open approach	01; 08; 09; 21; 24
0KB80ZZ	Excision of left upper arm muscle, open approach	01; 08; 09; 21; 24
0KB90ZZ	Excision of right lower arm and wrist muscle, open approach	01; 08; 09; 21; 24
0KBB0ZZ	Excision of left lower arm and wrist muscle, open approach	01; 08; 09; 21; 24
0KBC0ZZ	Excision of right hand muscle, open approach	08; 21; 24
0KBD0ZZ	Excision of left hand muscle, open approach	08; 21; 24
0KBF0ZZ	Excision of right trunk muscle, open approach	01; 08; 09; 21; 24
0KBG0ZZ	Excision of left trunk muscle, open approach	01; 08; 09; 21; 24
0KBH0ZZ	Excision of right thorax muscle, open approach	01; 08; 09; 21; 24
0KBJ0ZZ	Excision of left thorax muscle, open approach	01; 08; 09; 21; 24
0KBK0ZZ	Excision of right abdomen muscle, open approach	01; 08; 09; 21; 24
0KBL0ZZ	Excision of left abdomen muscle, open approach	01; 08; 09; 21; 24
0KBM0ZZ	Excision of perineum muscle, open approach	01; 08; 09; 21; 24
0KBN0ZZ	Excision of right hip muscle, open approach	01; 08; 09; 10; 21; 24
0KBP0ZZ	Excision of left hip muscle, open approach	01; 08; 09; 10; 21; 24
0KBQ0ZZ	Excision of right upper leg muscle, open approach	01; 08; 09; 21; 24
0KBR0ZZ	Excision of left upper leg muscle, open approach	01; 08; 09; 21; 24
0KBS0ZZ	Excision of right lower leg muscle, open approach	01; 08; 09; 10; 21; 24
0KBT0ZZ	Excision of left lower leg muscle, open approach	01; 08; 09; 10; 21; 24
0KBV0ZZ	Excision of right foot muscle, open approach	01; 08; 09; 10; 21; 24
0KBW0ZZ	Excision of left foot muscle, open approach	01; 08; 09; 10; 21; 24

We refer the reader to Appendix E of the ICD–10 MS–DRG Version 40.1 Definitions Manual (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Feefor-Service-Payment/AcuteInpatientPPS/MS-DRGClassifications-and-Software*) for the MS–DRG assignment for each procedure code listed and further discussion of how each procedure code may be assigned to multiple MDCs and MS–DRGs under the IPPS.

The principal diagnosis most frequently reported with the 28 ICD–10–

PCS procedure codes describing the open excision of muscle in MDC 05 is ICD–10–CM code I96 (Gangrene, not elsewhere classified). Gangrene is a condition in which body tissue dies from not getting enough blood. It can cause changes in skin color, numbness or pain, swelling, and other symptoms. The combination of a procedure code describing the open excision of muscle and ICD–10–CM diagnosis code I96 indicates open debridement of muscle for gangrene was performed.

We examined claims data from the September 2022 update of the FY 2022 MedPAR file to identify the average length of stay and average costs for cases reporting a procedure code describing the open excision of muscle with a principal diagnosis in MDC 05, which are currently grouping to MS–DRGs 981 through 983, as well as all cases in MS–DRGs 981 through 983. Our findings are shown in the following table.

MS-DRGs 981-983: All Cases and Cases Reporting a Procedure Code Describing the Open Excision of Muscle and a Principal Diagnosis in MDC 05

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--All cases	21,139	12.6	$37,872
MS-DRG 981--Cases reporting procedure code describing the open excision of muscle and a principal diagnosis in MDC 05	362	11.7	$27,392
MS-DRG 982--All cases	9,386	5.9	$20,819
MS-DRG 982--Cases reporting procedure code describing the open excision of muscle and a principal diagnosis in MDC 05	121	7.9	$16,989
MS-DRG 983--All cases	1,782	2.6	$14,541
MS-DRG 983--Cases reporting procedure code describing the open excision of muscle and a principal diagnosis in MDC 05	6	4.7	$7,140

We then examined the MS–DRGs within MDC 05 and determined that the cases reporting procedure codes describing the open excision of muscle with a principal diagnosis in MDC 05 would most suitably group to MS–DRG 264 (Other Circulatory System O.R. Procedures), which contains procedures performed on structures other than circulatory anatomy.

To determine how the resources for this subset of cases compared to cases in MS–DRG 264 as a whole, we examined the average costs and length of stay for cases in MS–DRG 264. Our findings are shown in this table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 264--All cases	6,774	9.9	$27,237

We reviewed the data and noted for this subset of cases, in the ''with MCC'' subgroup the average costs of the cases reporting procedure codes describing the open excision of muscle with a principal diagnosis in MDC 05 are slightly higher ($27,392 compared to $27,237) and the average length of stay is longer (11.7 days compared to 9.9 days) than for all cases in MS–DRGs 264, while the cases in the ''with CC'' and the ''without CC/MCC'' subgroups have lower average costs ($16,989 and $7,140 respectively compared to $27,237) and a shorter average length of stay (7.9 days and 4.7 days respectively compared to 9.9 days) than for cases in MS–DRG 264. However, we believe that when a procedure code describing the open excision of muscle is reported with a principal diagnosis in MDC 05 (typically gangrene, not elsewhere classified), the procedure is related to the principal diagnosis. Because debridement, or the cutting away of dead and dying tissue, can be performed to keep gangrene from spreading, a procedure code describing the open excision of muscle would be expected to be related to a principal diagnosis of gangrene, not elsewhere classified (diagnosis code I96), and it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we are proposing to add the 28 procedure codes listed previously to MDC 05. Under this proposal, cases reporting a procedure code describing the open excision of muscle with a principal diagnosis of gangrene, not elsewhere classified (diagnosis code I96) in MDC 05 would group to MS–DRG 264.

c. Open Replacement of Skull With Synthetic Substitute

During our review of the cases that group to MS–DRGs 981 through 983, we noted that when ICD–10–PCS procedure code 0NR00JZ (Replacement of skull with synthetic substitute, open

approach) is reported with a principal diagnosis in MDC 09 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast), the cases group to MS–DRGs 981 through 983. The principal diagnosis most frequently reported with ICD–10–PCS procedure code 0NR00JZ in MDC 09 is ICD–10–CM code Z42.8 (Encounter for other plastic and reconstructive surgery following medical procedure or healed injury).

ICD–10–PCS procedure code 0NR00JZ currently groups to several MDCs, which are listed in the following table.

MS-DRG Assignments for ICD-10-PCS Procedure Code 0NR00JZ		
MDC	**MS-DRG**	**Description**
01	023-024	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis
	025-027	Craniotomy and Endovascular Intracranial Procedures
03	143-145	Other Ear, Nose, Mouth and Throat O.R. Procedures
08	515-517	Other Musculoskeletal System and Connective Tissue O.R. Procedures
21	907-909	Other O.R. Procedures for Injuries
24	955	Craniotomy for Multiple Significant Trauma

We examined claims data from the September 2022 update of the FY 2022 MedPAR file to identify the average length of stay and average costs for cases reporting procedure code 0NR00JZ with a principal diagnosis in MDC 09, which are currently grouping to MS–DRGs 981 through 983, as well as all cases in MS–DRGs 981 through 983. Our findings are shown in the following table.

MS-DRGs 981-983: All Cases and Cases with Principal Diagnosis in MDC 09 and Procedure Code 0NR00JZ			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 981--All cases	21,139	12.6	$37,872
MS-DRG 981--Cases reporting procedure code 0NR00JZ and a principal diagnosis in MDC 09	10	5.4	$34,627
MS-DRG 982--All cases	9,386	5.9	$20,819
MS-DRG 982--Cases reporting procedure code 0NR00JZ and a principal diagnosis in MDC 09	28	3.3	$21,776
MS-DRG 983--All cases	1,782	2.6	$14,541
MS-DRG 983--Cases reporting procedure code 0NR00JZ and a principal diagnosis in MDC 09	21	2.1	$23,709

We then examined the MS–DRGs within MDC 09 and determined that the cases reporting procedure code 0NR00JZ with a principal diagnosis in MDC 09 would most suitably group to MS–DRGs 579, 580, and 581 (Other Skin, Subcutaneous Tissue and Breast Procedures with MCC, with CC, and without CC/MCC, respectively) given the nature of the procedure. MS–DRGs 579, 580, and 581 contain procedures assigned to MDC 09 that do not fit within the specific surgical MS–DRGs in MDC 09, which are: skin graft; skin debridement; mastectomy for malignancy; and breast biopsy, local excision, and other breast procedures.

To determine how the resources for this subset of cases compared to cases in MS–DRGs 579, 580, and 581 as a whole, we examined the average costs and length of stay for cases in MS–DRGs 579, 580, and 581. Our findings are shown in this table.

MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 579--All cases	3,391	11	$26,423
MS-DRG 580--All cases	5,896	5.7	$14,628
MS-DRG 581--All cases	1,831	2.6	$11,784

We reviewed the data and noted for this subset of cases, the average costs are higher and the average length of stays are shorter than for cases in MS–DRGs 579, 580, and 581. However, we believe that when ICD–10–PCS procedure code 0NR00JZ is reported with a principal diagnosis in MDC 09 (typically encounter for other plastic and reconstructive surgery following medical procedure or healed injury), the procedure is related to the principal diagnosis.

Open brain surgeries that require removing a portion of the skull, for indications such as brain tumor resection, hydrocephalus shunt implantation, cerebral aneurysm clipping, evacuation of a brain hemorrhage, microvascular decompression, and lobectomy, can sometimes result in a residual cranial defect. We believe that it is clinically appropriate for the procedure to group to the same MS–DRGs as the principal diagnosis as procedure code 0NR00JZ can be used to describe cranial reconstruction procedures that involve applying a cranial prosthetic device to address the residual bony void and/or defect to restore the natural contours of the skull.

Therefore, we are proposing to add ICD–10–PCS procedure code 0NR00JZ to MDC 09. Under this proposal, cases reporting procedure code 0NR00JZ with a principal diagnosis in MDC 09 (such as encounter for other plastic and reconstructive surgery following medical procedure or healed injury) would group to MS–DRGs 579, 580, and 581.

d. Endoscopic Dilation of Ureters With Intraluminal Device

During the review of the cases that group to MS–DRGs 987 through 989, we noted that when ICD–10–PCS procedure codes describing the endoscopic dilation of ureters with an intraluminal device are reported in conjunction with ICD–10–CM diagnosis codes in MDC 05 (Diseases and Disorders of the Circulatory System), the cases group to MS–DRGs 987 through 989. The principal diagnosis most frequently reported with ICD–10–PCS procedure codes describing the endoscopic dilation of ureters with an intraluminal device in MDC 05 is ICD–10–CM code I13.0 (Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease).

In the following tables, the ICD–10–PCS procedure codes describing the endoscopic dilation of ureters with an intraluminal device are listed, as well as their MDC and MS–DRG assignments.

ICD-10-PCS Code	Description
0T768DZ	Dilation of right ureter with intraluminal device, via natural or artificial opening endoscopic
0T778DZ	Dilation of left ureter with intraluminal device, via natural or artificial opening endoscopic
0T788DZ	Dilation of bilateral ureters with intraluminal device, via natural or artificial opening endoscopic

MS-DRG Assignments for ICD-10-PCS Codes 0T768DZ, 0T778DZ and 0T788DZ		
MDC	MS-DRG	Description
11	656-658	Kidney and Ureter Procedures for Neoplasm
	659-661	Kidney and Ureter Procedures for Non-Neoplasm
21	907-909	Other O.R. Procedures for Injuries
24	957-959	Other Procedures for Multiple Significant Trauma

We examined claims data from the September 2022 update of the FY 2022 MedPAR file to identify the average length of stay and average costs for cases reporting procedure code 0T768DZ, 0T778DZ or 0T788DZ with a principal diagnosis in MDC 05, which are currently grouping to MS–DRGs 987 through 989, as well as all cases in MS–DRGs 987 through 989. Our findings are shown in the following table.

MS-DRGs 987-989: All Cases and Cases with Principal Diagnosis in MDC 05 and Procedure Code 0T768DZ, 0T778DZ or 0T788DZ			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 987--All cases	7,305	11.2	$28,127
MS-DRG 987--Cases reporting procedure code 0T768DZ, 0T778DZ or 0T788DZ and a principal diagnosis in MDC 05	358	10.3	$24,657
MS-DRG 988--All cases	5,001	5.7	$14,402
MS-DRG 988--Cases reporting procedure code 0T768DZ, 0T778DZ or 0T788DZ and a principal diagnosis in MDC 05	134	4.6	$13,704
MS-DRG 989--All cases	681	3.0	$9,570
MS-DRG 989--Cases reporting procedure code 0T768DZ, 0T778DZ or 0T788DZ and a principal diagnosis in MDC 05	7	1.4	$8,729

We then examined the MS–DRGs within MDC 05 and determined that the cases reporting procedure codes describing the endoscopic dilation of ureters with an intraluminal device with a principal diagnosis in MDC 05 would most suitably group to MS–DRG 264 (Other Circulatory System O.R. Procedures), which contains procedures performed on structures other than circulatory anatomy.

To determine how the resources for this subset of cases compared to cases in MS–DRG 264 as a whole, we examined the average costs and length of stay for cases in MS–DRG 264. Our findings are shown in this table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 264--All cases	6,774	9.9	$27,237

We reviewed these data and noted that the average costs for this subset of cases, most of which group to MS–DRG 987, are lower than the average costs than for cases in MS–DRG 264. However, we believe that when a procedure code describing the endoscopic dilation of ureters with an intraluminal device is reported with a principal diagnosis in MDC 05 (typically hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease), the procedure is related to the principal diagnosis. Ureteral intraluminal devices are used to relieve ureteral obstruction by passively dilating the ureter to allow urine to drain through the center of the hollow intraluminal device as well as around the device. Indications for endoscopic ureteral intraluminal device placement include the uncomplicated ureteral obstruction due to causes such as nephrolithiasis, tumor, or retroperitoneal fibrosis, or obstruction complicated by urinary tract infection, renal insufficiency, or renal failure. As the endoscopic dilation of ureters with an intraluminal device would be expected to be related to a principal diagnosis of hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease, not elsewhere classified (diagnosis code I13.0), it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses.

Therefore, we are proposing to add ICD–10–PCS procedure codes 0T768DZ, 0T778DZ and 0T788DZ to MDC 05. Under this proposal, cases reporting procedure code 0T768DZ, 0T778DZ or 0T788DZ with a principal diagnosis of hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease (I13.0) in MDC 05 would group to MS–DRG 264.

e. Occlusion of Splenic Artery

During our review of the cases currently grouping to MS–DRGs 987 through 989, we noted that when ICD–10–PCS procedure codes describing the occlusion of the splenic artery are reported in conjunction with ICD–10–CM diagnosis codes in MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs and Immunologic Disorders), the cases group to MS–DRGs 987 through 989. The principal diagnosis most frequently reported with ICD–10–PCS procedure codes describing the occlusion of the splenic artery in MDC 16 is ICD–10–CM code S36.032A (Major laceration of spleen, initial encounter).

In the following tables, the ICD–10–PCS procedure codes describing the occlusion of the splenic artery are listed, as well as their MDC and MS–DRG assignments.

ICD-10-PCS Code	Description
04L40CZ	Occlusion of splenic artery with extraluminal device, open approach
04L40DZ	Occlusion of splenic artery with intraluminal device, open approach
04L40ZZ	Occlusion of splenic artery, open approach
04L43CZ	Occlusion of splenic artery with extraluminal device, percutaneous approach
04L43DZ	Occlusion of splenic artery with intraluminal device, percutaneous approach
04L43ZZ	Occlusion of splenic artery, percutaneous approach
04L44CZ	Occlusion of splenic artery with extraluminal device, percutaneous endoscopic approach
04L44DZ	Occlusion of splenic artery with intraluminal device, percutaneous endoscopic approach
04L44ZZ	Occlusion of splenic artery, percutaneous endoscopic approach

MS-DRG Assignments of the ICD-10-PCS Procedure Codes Describing the Occlusion of the Splenic Artery		
MDC	MS-DRG	Description
05	270-272	Other Major Cardiovascular Procedures
06	515-517	Other Digestive System O.R. Procedures
21	907-909	Other O.R. Procedures for Injuries
24	957-959	Other O.R. Procedures for Multiple Significant Trauma

We examined claims data from the September 2022 update of the FY 2022 MedPAR file to identify the average length of stay and average costs for cases reporting procedure codes describing the occlusion of the splenic artery with a principal diagnosis in MDC 16, which are currently grouping to MS–DRGs 987 through 989, as well as all cases in MS–DRGs 987 through 989. Our findings are shown in the following table.

MS-DRGs 987-989: All Cases and Cases with Principal Diagnosis in MDC 16 and Procedure Code Describing the Occlusion of the Splenic Artery			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 987--All cases	7,305	11.2	$28,127
MS-DRG 987--Cases reporting procedure code describing the occlusion of the splenic artery and a principal diagnosis in MDC 16	118	9.1	$36,334
MS-DRG 988--All cases	5,001	5.7	$14,402
MS-DRG 988--Cases reporting procedure code describing the occlusion of the splenic artery and a principal diagnosis in MDC 16	76	4.8	$21,845
MS-DRG 989--All cases	681	3.0	$9,570
MS-DRG 989--Cases reporting procedure code describing the occlusion of the splenic artery and a principal diagnosis in MDC 16	4	3.3	$25,768

We then examined the MS–DRGs within MDC 16 and determined that the cases reporting a procedure code describing the occlusion of the splenic artery with a principal diagnosis in MDC 16 would most suitably group to MS–DRGs 799, 800, and 801 (Splenectomy with MCC, with CC, and without CC/MCC, respectively) given the nature of the procedure.

We note, as discussed in section II.C.1.b of this proposed rule, using the December 2022 update of the FY 2022 MedPAR file, we analyzed how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would affect the MS–DRG structure beginning in FY 2024. Findings from our analysis indicate that MS–DRGs 799, 800, and 801 as well as approximately 44 other base MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. We refer the reader to Table 6P.10b associated with this proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for the list of the 135 MS–DRGs that would potentially be subject to deletion and the list of the 86 new MS–DRGs that would potentially be created if the NonCC subgroup criteria was applied.

To determine how the resources for this subset of cases compared to cases in MS–DRGs 799, 800, and 801 as a whole, we examined the average costs and length of stay for cases in MS–DRGs 799, 800, and 801. Our findings are shown in this table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 799--All cases	286	10.6	$43,368
MS-DRG 800--All cases	168	6.2	$26,498
MS-DRG 801--All cases	62	2.6	$15,248

BILLING CODE 4120–01–C

We reviewed these data and noted that the average length of stay and average costs of the subset of cases reporting a procedure code describing the occlusion of the splenic artery with a principal diagnosis in MDC 16 are more similar to those of cases in MS–DRGs 799, 800, and 801. We also note that in cases of splenic injury, the diagnosis and prompt management of potentially life-threatening hemorrhage is the primary goal. Procedures to occlude the splenic artery, such as splenic embolization, can be performed for spleen injuries, such as lacerations, in order to manage bleeding prior to or instead of more invasive splenic procedures. A procedure code describing the occlusion of the splenic artery would be expected to be related to a principal diagnosis of a major laceration of spleen, initial encounter (diagnosis code S36.032A) and it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses.

Given the similarity in resource use between this subset of cases and cases in MS–DRGs 799, 800, and 801, and that we believe that procedure codes describing the occlusion of the splenic artery are related to principal diagnoses in MDC 16 (typically major laceration of spleen, initial encounter), these cases would be more appropriately assigned to MS–DRGs 799, 800, and 801 in MDC 16 than their current assignment in MS–DRGs 987 through 989. Therefore, we are proposing to add the nine procedure codes listed in the previous table that describe the occlusion of the splenic artery to MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs and Immunologic Disorders) in MS–DRGs 799, 800, and 801. Under this proposal, cases reporting a principal diagnosis of a major laceration of spleen, initial encounter (S36.032A) with a procedure describing the occlusion of the splenic artery would group to MS–DRGs 799, 800, and 801.

During the review of this issue, we noted that a splenectomy is a surgical operation involving removal of the spleen, however the GROUPER logic list for MS–DRGs 799, 800, and 801 does not exclusively contain procedure codes that describe the removal of the spleen. We refer the reader to the ICD–10 MS–DRG Version 40.1 Definitions Manual (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Feefor-Service-Payment/AcuteInpatientPPS/MS-DRGClassifications-and-Software*) for complete documentation of the GROUPER logic for MS–DRGs 799, 800, and 801. Therefore, we are also proposing to revise the titles of MDC 16 MS–DRGs 799, 800, and 801 from ''Splenectomy with MCC, with CC, and without CC/MCC, respectively'' to ''Splenic Procedures with MCC, with CC, and without CC/MCC, respectively'' to better reflect the assigned procedures.

In addition to the internal review of procedures producing assignment to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate to add procedure codes to one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls or to move the principal diagnosis to the surgical MS–DRGs to which the procedure codes are assigned. We did not receive any requests suggesting reassignment.

We also review the list of ICD–10–PCS procedures that, when in combination with their principal diagnosis code, result in assignment to MS–DRGs 981 through 983, or 987 through 989, to ascertain whether any of those procedures should be reassigned from one of those two groups of MS–DRGs to the other group of MS–DRGs based on average costs and the length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting MS–DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the MS–DRGs clinically similar or to provide payment for the cases in a similar manner.

Additionally, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate for the cases to be reassigned from one of the MS–DRG groups to the other. Based on the results of our review of the claims data from the September 2022 update of the FY 2022 MedPAR file we did not identify any cases for reassignment. We also did not receive any requests suggesting reassignment. Therefore, for FY 2024 we are not proposing to move any cases

reporting procedure codes from MS–DRGs 981 through 983 to MS–DRGs 987 through 989 or vice versa.

11. Operating Room (O.R.) and Non-O.R. Procedures

a. Background

Under the IPPS MS–DRGs (and former CMS DRGs), we have a list of procedure codes that are considered operating room (O.R.) procedures. Historically, we developed this list using physician panels that classified each procedure code based on the procedure and its effect on consumption of hospital resources. For example, generally the presence of a surgical procedure which required the use of the operating room would be expected to have a significant effect on the type of hospital resources (for example, operating room, recovery room, and anesthesia) used by a patient, and therefore, these patients were considered surgical. Because the claims data generally available do not precisely indicate whether a patient was taken to the operating room, surgical patients were identified based on the procedures that were performed.

Generally, if the procedure was not expected to require the use of the operating room, the patient would be considered medical (non-O.R.).

Currently, each ICD–10–PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment. First, each ICD–10–PCS procedure code is either designated as an O.R. procedure for purposes of MS–DRG assignment (''O.R. procedures'') or is not designated as an O.R. procedure for purposes of MS–DRG assignment (''non-O.R. procedures''). Second, for each procedure that is designated as an O.R. procedure, that O.R. procedure is further classified as either extensive or non-extensive. Third, for each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS–DRG assignment or not affecting the MS–DRG assignment. We refer to these designations that do affect MS–DRG assignment as ''non O.R. affecting the MS–DRG.'' For new procedure codes that have been finalized through the ICD–10 Coordination and Maintenance Committee meeting process and are proposed to be classified as O.R. procedures or non-O.R. procedures affecting the MS–DRG, we recommend the MS–DRG assignment which is then made available in association with the proposed rule (Table 6B.—New Procedure Codes) and subject to public comment. These proposed assignments are generally based on the assignment of predecessor codes or the assignment of similar codes. For example, we generally examine the MS–DRG assignment for similar procedures, such as the other approaches for that procedure, to determine the most appropriate MS–DRG assignment for procedures proposed to be newly designated as O.R. procedures. As discussed in section II.C.13 of the preamble of this proposed rule, we are making Table 6B.—New Procedure Codes—FY 2024 available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. We also refer readers to the ICD–10 MS–DRG Version 40.1 Definitions Manual at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the MS–DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index.

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19158), we stated that, given the long period of time that has elapsed since the original O.R. (extensive and non-extensive) and non-O.R. designations were established, the incremental changes that have occurred to these O.R. and non-O.R. procedure code lists, and changes in the way inpatient care is delivered, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes. This will be a multiyear project during which we will also review the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is now available in the ICD–10 claims data. We refer readers to the discussion regarding the designation of procedure codes in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38066) where we stated that the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD–10–PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD–10.

We discussed in the FY 2020 IPPS/LTCH PPS proposed rule that as a result of this planned review and potential restructuring, procedures that are currently designated as O.R. procedures may no longer warrant that designation, and conversely, procedures that are currently designated as non-O.R. procedures may warrant an O.R. type of designation. We intend to consider the resources used and how a procedure should affect the MS–DRG assignment. We may also consider the effect of specific surgical approaches to evaluate whether to subdivide specific MS–DRGs based on a specific surgical approach. We stated we plan to utilize our available MedPAR claims data as a basis for this review and the input of our clinical advisors. As part of this comprehensive review of the procedure codes, we also intend to evaluate the MS–DRG assignment of the procedures and the current surgical hierarchy because both of these factor into the process of refining the ICD–10 MS–DRGs to better recognize complexity of service and resource utilization.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58540 through 58541), we provided a summary of the comments we had received in response to our request for feedback on what factors or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD–10–PCS classification system for future consideration. In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25158) and final rule (86 FR 44891), and FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28174) and final rule (87 FR 48862), we stated that in consideration of the ongoing PHE, we believed it may be appropriate to allow additional time for the claims data to stabilize prior to selecting the timeframe to analyze for this review.

For this FY 2024 IPPS/LTCH PPS proposed rule, we continue to believe additional time is necessary as we continue to develop our process and methodology. Therefore, we will provide more detail on this analysis and the methodology for conducting this review in future rulemaking.

We received the following requests regarding changing the designation of specific ICD–10–PCS procedure codes from non-O.R. to O.R. procedures. We summarize these requests in this section of this rule and address why we are not considering a change to the designation of these codes at this time.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48863), we discussed a request we received to change the

designation of all ICD–10–PCS codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs, from non-O.R. to O.R. In the FY 2023 final rule, we stated that we believed additional time was needed to fully examine the numerous ICD–10–PCS codes in the classification that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs. We stated that rather than evaluating the procedure codes describing diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs in isolation, analysis should be performed for this subset of procedure codes across the MS–DRGs, as part of the comprehensive procedure code review. We also stated that as a component of our broader comprehensive procedure code review, we are also reviewing the process for determining when a procedure is considered an operating room procedure.

For this FY 2024 IPPS/LTCH PPS proposed rule, we again received a request to change the designation of all ICD–10–PCS procedure codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs, from non-O.R. to O.R from the same requestor. According to the requestor, diagnostic and therapeutic thoracoscopic and laparoscopic procedures on thoracic and abdominal organs are always performed in the operating room under complex general anesthesia. The requestor did not provide a specific list of the procedure codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs and are currently designated as non-O.R. for CMS for review, to narrow the scope of this repeat request.

As we have signaled in prior rulemaking, the designation of an O.R. procedure encompasses more than the physical location of the hospital in which the procedure may be performed; in other words, the performance of a procedure in an operating room is not the sole determining factor we consider as we examine the designation of a procedure in the ICD–10–PCS classification system. We also examine if, and in what way, the performance of the procedure affects the resource expenditure in those admissions in the inpatient setting, in addition to examining other clinical factors such as procedure complexity, and need for anesthesia administration as well as other types of sedation. As also stated in prior rulemaking, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes. Rather than evaluating this subset of procedure codes in isolation, as any potential change to the designation of these codes requires significant review, we continue to believe that analysis of the designation of the procedure codes describing diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs should be performed across the MS–DRGs, as part of the comprehensive procedure code review. Therefore, for the reasons discussed, we are not proposing any changes to the designation of all ICD–10–PCS procedure codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs, from non-O.R. to O.R. for FY 2024. As diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs differ greatly in terms of clinical factors such as procedure complexity and resource utilization, we invite feedback on what factors or criteria to consider in determining whether a procedure should be designated as an O.R. procedure in the ICD–10–PCS classification system when evaluating this subset of procedure codes as part of the comprehensive procedure code review. Feedback and other suggestions may be submitted by October 20, 2023, and directed to the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™), discussed in section II.C.1.b of the preamble of this proposed rule at: *https://mearis.cms.gov/public/home*.

We will provide more detail on the comprehensive procedure code review and the methodology for conducting this review in future rulemaking.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44892 through 44895), CMS finalized the proposal to remove the 22 codes that describe the open drainage of subcutaneous tissue and fascia listed in the following table from the ICD–10 MS–DRGs Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures. Under this finalization, these procedures no longer impact MS–DRG assignment.

BILLING CODE 4120–01–P

ICD-10-PCS Code	Description
0J900ZZ	Drainage of scalp subcutaneous tissue and fascia, open approach
0J910ZZ	Drainage of face subcutaneous tissue and fascia, open approach
0J940ZZ	Drainage of right neck subcutaneous tissue and fascia, open approach
0J950ZZ	Drainage of left neck subcutaneous tissue and fascia, open approach

BILLING CODE 4120–01–C

In the FY 2022 final rule, we noted that the designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as O.R. procedures was a result of a replication error in transitioning to ICD–10. This replication error led to ICD–10–PCS procedure codes that describe the open drainage of subcutaneous tissue and fascia being listed as comparable translations for ICD–9–CM code 83.09 (Other incision of soft tissue), which was designated as a non-extensive O.R. procedure under the ICD–9–CM MS–DRGs Version 32, as opposed to being listed as comparable translations for ICD–9–CM code 86.04 (Other incision with drainage of skin and subcutaneous tissue) which was designated as a non-O.R. procedure under the ICD–9–CM MS–DRGs Version 32. We stated in the FY 2022 final rule that designating the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as non-O.R. procedures would result in a more accurate replication of the comparable procedure, under the ICD–9–CM MS–DRGs Version 32 which was 86.04, not 83.09 and is more aligned with current shifts in treatment practices.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48863 through 48865), we discussed a request we received to re-examine this change in designation. In the FY 2023 final rule, we did not make changes to the designation of these codes and stated that procedure codes that describe the open drainage of subcutaneous tissue and fascia do not reflect the technical complexity or resource intensity in comparison to other procedures that are designated as O.R. procedures. We stated that our analysis of the September 2021 update of the FY 2021 MedPAR file reflected that when the procedure codes that describe the open drainage of the subcutaneous tissue and fascia are reported, approximately 70% of the MS–DRGs assigned are classified as surgical MS–DRGs which indicated at least one procedure code designated as an O.R. procedure was also reported in these cases. We also stated that the non-O.R. designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as finalized in the FY 2022 final rule better reflects the associated technical complexity and hospital resource use of these procedures.

For this FY 2024 IPPS/LTCH PPS proposed rule, we again received a request to re-examine the designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as non-O.R. procedures from the same requestor. The requestor stated that CMS should return the designation of these procedure codes to O.R. procedures to reflect the operating room resources utilized in the performance of these procedures and suggested that CMS analyze claims containing the 22 ICD–10–PCS codes to determine the percentage that contained timed O.R. charges billed under revenue code 360. The requestor also indicated there was confusion about the coded claims data as presented in the FY 2023 final rule. The requestor noted that the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia were designated as O.R. procedures in FY 2021 so it was unclear to the requestor why the table displayed by CMS associated with the FY 2023 final rule contained assignment to medical MS–DRGs.

First, in response to the question about the coded claims data as presented in the FY 2023 final rule, we note as generally stated in the preamble

of the proposed rule each year, the diagnosis and procedure codes from the specified FY MedPAR claims data are grouped through the applicable version of the proposed FY GROUPER. The FY 2021 MedPAR claims data presented in the FY 2023 final rule were regrouped using the proposed FY 2023 MS–DRG classifications. In the proposed FY 2023 GROUPER, the procedure codes that describe the open drainage of subcutaneous tissue and fascia no longer impacted MS–DRG assignment and that is the reason why assignments to medical DRGs were displayed in Table 6P.1f associated with the FY 2023 final rule.

Next, we refer the reader to Table 6P.8a associated with this proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for the data analysis of cases reporting the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia in the September 2022 update of the FY 2022 MedPAR file. We note that within each MDC, the MS–DRGs are divided into medical and surgical categories. In general, surgical MS–DRGs are further defined based on the precise surgical procedure performed while the medical MS–DRGs are further defined based on the precise principal diagnosis for which a patient was admitted to the hospital. In Table 6P.8a associated with this proposed rule, column B displays the category of each MS–DRG in MS–DRG GROUPER Version 40.1. The letter M is used to designate a medical MS–DRG and the letter P is used to designate a surgical MS–DRG. Overall, the data continues to indicate that the open drainage of subcutaneous tissue and fascia was not the underlying reason for, or main driver of, resource utilization for those cases. As shown in the table, when the procedure codes that describe the open drainage of the subcutaneous tissue and fascia are reported, approximately 55% of the MS–DRGs assigned are classified as surgical MS–DRGs which indicates at least one procedure code designated as an O.R. procedure was also reported in these cases. We refer the reader to the ICD–10 MS–DRG Version 40.1 Definitions Manual (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Feefor-Service-Payment/AcuteInpatientPPS/MS-DRGClassifications-and-Software*) for complete documentation of the GROUPER logic for the listed MS–DRGs.

We reviewed these data and continue to believe that procedure codes that describe the open drainage of subcutaneous tissue and fascia do not reflect the technical complexity or resource intensity in comparison to other procedures that are designated as O.R. procedures. As stated in prior rulemaking, procedures describing the open drainage of subcutaneous tissue and fascia can now be safely performed in the outpatient setting and when performed during a hospitalization, it is typically in conjunction with another O.R. procedure. In cases where procedures describing open drainage of subcutaneous tissue and fascia are the only procedures performed in an admission, the admission is quite likely due to need for IV antibiotics as opposed to the need for operating room resources in an inpatient setting.

We also note that, as stated in prior rulemaking (84 FR 42069), in deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we do not consider the reported revenue codes. Rather, as stated previously, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We do this by evaluating the ICD–10–CM diagnosis and/or ICD–10–PCS procedure codes that identify the patient conditions, procedures, and the relevant MS–DRG(s) that are the subject of a request. Specifically, for this request, we analyzed the cases reporting the ICD–10–PCS procedure codes that describe the open drainage of subcutaneous tissue and fascia. We then evaluated patient care costs using average costs and average lengths of stay (based on the MedPAR data) to detect if, and in what way, the performance of these procedures affects the resource expenditure in those admissions in the inpatient setting, in addition to examining other clinical factors such as procedure complexity, and need for anesthesia administration as well as other types of sedation.

We continue to believe that the non-O.R. designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as finalized in the FY 2022 final rule better reflects the associated technical complexity and hospital resource use of these procedures. Therefore, for the reasons discussed, we are not proposing changes to the designation of the 22 codes that describe the open drainage of subcutaneous tissue and fascia listed in the previous table for FY 2024.

12. Proposed Changes to the MS–DRG Diagnosis Codes for FY 2024

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS–DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length-of-stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal diagnosis. In FY 2008, we evaluated each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (NonCC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. Overview of Comprehensive CC/MCC Analysis

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described our process for establishing three different levels of CC severity into which we would subdivide the diagnosis codes. The categorization of diagnoses as a MCC, a CC, or a NonCC was accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our approach. Since the comprehensive analysis was completed for FY 2008, we have evaluated diagnosis codes individually when assigning severity levels to new codes and when receiving requests to change the severity level of specific diagnosis codes.

We noted in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235 through 19246) that with the transition to ICD–10–CM and the significant changes that have occurred to diagnosis codes since the FY 2008 review, we

believed it was necessary to conduct a comprehensive analysis once again. Based on this analysis, we proposed changes to the severity level designations for 1,492 ICD–10–CM diagnosis codes and invited public comments on those proposals. As summarized in the FY 2020 IPPS/LTCH PPS final rule, many commenters expressed concern with the proposed severity level designation changes overall and recommended that CMS conduct further analysis prior to finalizing any proposals. After careful consideration of the public comments we received, as discussed further in the FY 2020 final rule, we generally did not finalize our proposed changes to the severity designations for the ICD–10–CM diagnosis codes, other than the changes to the severity level designations for the diagnosis codes in category Z16 (Resistance to antimicrobial drugs) from a NonCC to a CC. We stated that postponing adoption of the proposed comprehensive changes in the severity level designations would allow further opportunity to provide additional background to the public on the methodology utilized and clinical rationale applied across diagnostic categories to assist the public in its review. We refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42150 through 42152) for a complete discussion of our response to public comments regarding the proposed severity level designation changes for FY 2020.

As discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32550), to provide the public with more information on the CC/MCC comprehensive analysis discussed in the FY 2020 IPPS/LTCH PPS proposed and final rules, CMS hosted a listening session on October 8, 2019. The listening session included a review of this methodology utilized to mathematically measure the impact on resource use. We refer readers to *https://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums/Downloads/10082019ListingSessionTrasncriptandQandAsandAudioFile.zip* for the transcript and audio file of the listening session. We also refer readers to *https://www.cms.gov/Medicare/MedicareFee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* for the supplementary file containing the mathematical data generated using claims from the FY 2018 MedPAR file describing the impact on resource use of specific ICD–10–CM diagnosis codes when reported as a secondary diagnosis that was made available for the listening session.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58550 through 58554), we discussed our plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of nine guiding principles and plan to present the findings and proposals in future rulemaking. The nine guiding principles are as follows:

- Represents end of life/near death or has reached an advanced stage associated with systemic physiologic decompensation and debility.
- Denotes organ system instability or failure.
- Involves a chronic illness with susceptibility to exacerbations or abrupt decline.
- Serves as a marker for advanced disease states across multiple different comorbid conditions.
- Reflects systemic impact.
- Post-operative/post-procedure condition/complication impacting recovery.
- Typically requires higher level of care (that is, intensive monitoring, greater number of caregivers, additional testing, intensive care unit care, extended length of stay).
- Impedes patient cooperation or management of care or both.
- Recent (last 10 years) change in best practice, or in practice guidelines and review of the extent to which these changes have led to concomitant changes in expected resource use.

We refer readers to the FY 2021 IPPS/LTCH PPS final rule for a complete discussion of our response to public comments regarding the nine guiding principles.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25175 through 25180), as another interval step in our comprehensive review of the severity designations of ICD–10–CM diagnosis codes, we requested public comments on a potential change to the severity level designations for ''unspecified'' ICD–10–CM diagnosis codes that we were considering adopting for FY 2022. Specifically, we noted we were considering changing the severity level designation of ''unspecified'' diagnosis codes to a NonCC where there are other codes available in that code subcategory that further specify the anatomic site. As summarized in the FY 2022 IPPS/LTCH PPS final rule, many commenters expressed concern with the potential severity level designation changes overall and recommended that CMS delay any possible change to the designation of these codes to give hospitals and their physicians time to prepare. After careful consideration of the public comments we received, we maintained the severity level designation of the ''unspecified'' diagnosis codes currently designated as a CC or MCC where there are other codes available in that code subcategory that further specify the anatomic site for FY 2022. We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44916 through 44926) for a complete discussion of our response to public comments regarding the potential severity level designation changes. Instead, for FY 2022, we finalized a new Medicare Code Editor (MCE) code edit for ''unspecified'' codes, effective with discharges on and after April 1, 2022. We stated we believe finalizing this new edit would provide additional time for providers to be educated while not affecting the payment the provider is eligible to receive. We refer the reader to section II.D.14.e. of the FY 2022 IPPS/LTCH PPS final rule (86 FR 44940 through 44943) for the complete discussion.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48866), we stated that as the new unspecified edit became effective beginning with discharges on and after April 1, 2022, we believed it was appropriate to not propose to change the designation of any ICD–10–CM diagnosis codes, including the unspecified codes that are subject to the ''Unspecified Code'' edit, as we continue our comprehensive CC/MCC analysis to allow interested parties the time needed to become acclimated to the new edit.

In the FY 2023 IPPS/LTCH proposed rule (87 FR 28177 through 28181), we also requested public comments on how the reporting of diagnosis codes in categories Z55–Z65 might improve our ability to recognize severity of illness, complexity of illness, and/or utilization of resources under the MS–DRGs. Consistent with the Administration's goal of advancing health equity for all, including members of historically underserved and under-resourced communities, as described in the President's January 20, 2021 Executive Order 13985 on ''Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,'' [7] we stated we were also interested in receiving feedback on how we might otherwise foster the documentation and reporting of the

[7] *Available at: https://www.federalregister.gov/documents/2021/01/25/2021-01753/advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government.*

diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data including in support of efforts to advance health equity.

We noted that social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.[8] The subset of Z codes that describe the social determinants of health are found in categories Z55–Z65 (Persons with potential health hazards related to socioeconomic and psychosocial circumstances). These codes describe a range of issues related—but not limited—to education and literacy, employment, housing, ability to obtain adequate amounts of food or safe drinking water, and occupational exposure to toxic agents, dust, or radiation.

We received numerous public comments that expressed a variety of views on our comment solicitation, including many comments that were supportive, and others that offered specific suggestions for our consideration in future rulemaking. Many commenters applauded CMS' efforts to encourage documentation and reporting of SDOH diagnosis codes given the impact that social risks can have on health outcomes. These commenters stated that it is critical that physicians, other health care professionals, and facilities recognize the impact SDOH have on the health of their patients. Many commenters also stated that the most immediate and important action CMS could take to increase the use of SDOH Z codes is to finalize the evidence-based ''Screening for Social Drivers of Health'' and ''Screen Positive Rate for Social Drivers of Health'' measures proposed to be adopted in the Hospital Inpatient Quality Reporting (IQR) Program. In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49202 through 49220), CMS finalized the ''Screening for Social Drivers of Health'' and ''Screen Positive Rate for Social Drivers of Health'' measures in the Hospital Inpatient Quality Reporting (IQR) Program. We refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 48867 through 48872) for the complete discussion of the public comments received regarding the request for information on SDOH diagnosis codes as well as the following section of this proposed rule for our proposed changes to the severity level designation for certain diagnosis codes that describe homelessness for FY 2024.

In this FY 2024 IPPS/LTCH PPS proposed rule, we continue to solicit feedback regarding the guiding principles, as well as other possible ways we can incorporate meaningful indicators of clinical severity. We have made available on the CMS website updated impact on resource use files so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2019 through the FY 2022 MedPAR files. The link to these files is posted on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*. When providing additional feedback or comments, we encourage the public to provide a detailed explanation of how applying a suggested concept or principle would ensure that the severity designation appropriately reflects resource use for any diagnosis code. We also continue to be interested in receiving feedback on how we might otherwise foster the documentation and reporting of the most specific diagnosis codes supported by the available medical record documentation and clinical knowledge of the patient's health condition to more accurately reflect each health care encounter and improve the reliability and validity of the coded data.

For new diagnosis codes approved for FY 2024, consistent with our annual process for designating a severity level (MCC, CC or NonCC) for new diagnosis codes, we first review the predecessor code designation, followed by review and consideration of other factors that may be relevant to the severity level designation, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We note that this process does not automatically result in the new diagnosis code having the same designation as the predecessor code. We refer the reader to section II.C.13 of this proposed rule for the discussion of the proposed changes to the ICD–10–CM and ICD–10–PCS coding systems for FY 2024.

c. Proposed Changes to Severity Levels

As discussed earlier in this section, in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28177 through 28181), we requested public comments on how the reporting of diagnosis codes in categories Z55–Z65 might improve our ability to recognize severity of illness, complexity of illness, and/or utilization of resources under the MS–DRGs. We sought comment on which specific SDOH Z codes were most likely to influence (that is, increase) hospital resource utilization related to inpatient care, including any supporting information that correlates inpatient hospital resource use to specific SDOH Z codes. In the FY 2023 proposed rule, we stated CMS believed a potential starting point for discussion was consideration of the SDOH Z diagnosis codes describing homelessness as homelessness can be reasonably expected to have an impact on hospital utilization.

To further examine the diagnosis codes that describe SDOH, in the FY 2023 proposed rule, we stated we reviewed the data on the impact on resource use for diagnosis code Z59.0 (Homelessness) when reported as a secondary diagnosis to facilitate discussion for the purposes of the comment solicitation. We noted that prior to FY 2022, homelessness was one of the more frequently reported codes that describe social determinants of health. We also noted that effective FY 2022, the subcategory was expanded and now included codes Z59.00 (Homelessness, unspecified), Z59.01 (Sheltered homelessness), and code Z59.02 (Unsheltered homelessness).

We also displayed the impact on resource use data generated using claims from the FY 2019 MedPAR file, FY 2020 MedPAR file and the FY 2021 MedPAR file, respectively, for the diagnosis code that describes homelessness as a NonCC. We noted there was no data for codes Z59.01 (Sheltered homelessness) and code Z59.02 (Unsheltered homelessness) as these codes became effective on October 1, 2021. We stated that when examining diagnosis code Z59.0 (Homelessness) in FY 2019 and FY 2020, the data suggested that when homelessness is reported as a secondary diagnosis, the resources involved in caring for these patients are more aligned with a CC than a NonCC or an MCC. However, in FY 2021, the data suggested that the resources involved in caring for patients experiencing homelessness are more aligned with a NonCC severity level than a CC or an MCC severity level. We stated we were uncertain if the data from FY 2021, in particular, reflected fluctuations that may be a result of the public health emergency or even reduced hospitalizations of certain conditions. We also stated we were uncertain if homelessness may be underreported when there is not an

[8] *Available at: https://health.gov/healthypeople/objectives-and-data/social-determinants-health.*

available field on the claim when other diagnoses are reported instead.

For this FY 2024 IPPS/LTCH PPS proposed rule, we again reviewed the data on the impact on resource use for the ICD–10–CM SDOH Z codes that describe homelessness, currently designated as NonCC, when reported as a secondary diagnosis. The following table reflects the impact on resource use data generated using claims from the September 2022 update of the FY 2022 MedPAR file. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our historical approach to mathematically evaluate the extent to which the presence of an ICD–10–CM code as a secondary diagnosis resulted in increased hospital resource use, and the explanation of the columns in the table.

ICD-10-CM Code	Description	Tota1 Count	Cnt1	C1	Cnt2	C2	Cnt3	C3
Z59.00	Homelessness, unspecified	27,148	3,485	1.75	12,608	2.19	11,055	3.10
Z59.01	Sheltered homelessness	6,862	821	2.00	3,027	2.24	3,014	3.08
Z59.02	Unsheltered homelessness	4,394	453	2.12	1,948	2.35	1,993	3.10

The table shows that the C1 finding is 1.75 for ICD–10–CM diagnosis code Z59.00, 2.00 for ICD–10–CM diagnosis code Z59.01, and 2.12 for ICD–10–CM diagnosis code Z59.02. A value close to 2.0 in column C1 suggests that the secondary diagnosis is more aligned with a CC than a NonCC. Because the C1 values in the table are generally close to 2, the data suggest that when these three SDOH Z codes are reported as a secondary diagnosis, the resources involved in caring for a patient experiencing homelessness support increasing the severity level from a NonCC to a CC. The table also shows that the C2 finding was 2.19 for ICD–10–CM diagnosis code Z59.00, 2.24 for ICD–10–CM diagnosis code Z59.01, and 2.35 for ICD–10–CM diagnosis code Z59.02. A C2 value close to 2.0 suggests the condition is more like a CC than a NonCC, but not as significant in resource usage as an MCC when there is at least one other secondary diagnosis that is a CC but none that is an MCC. Because the C2 values in the table are generally close to 2, the data again suggests that when these three SDOH Z codes are reported as a secondary diagnosis, the resources involved in caring for a patient experiencing homelessness support increasing the severity level from a NonCC to a CC.

As discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58550 through 58554), following the listening session on October 8, 2019, we reconvened an internal workgroup comprised of clinicians, consultants, coding specialists and other policy analysts to identify guiding principles to apply in evaluating whether changes to the severity level designations of diagnoses are needed and to ensure the severity designations appropriately reflect resource use based on review of the claims data, as well as consideration of relevant clinical factors (for example, the clinical nature of each of the secondary diagnoses and the severity level of clinically similar diagnoses) and improve the overall accuracy of the IPPS payments. In considering the nine guiding principles identified by the workgroup, as summarized previously, to illustrate how they might be applied in evaluating changes to the severity designations of diagnosis codes, we note that homelessness is a circumstance that can impede patient cooperation or management of care or both. In addition, patients experiencing homelessness can require a higher level of care by needing an extended length of stay. As discussed in the FY 2023 proposed rule, healthcare needs for patients experiencing homelessness (sheltered,[9] unsheltered,[10] or unspecified) may be associated with increased resource utilization.[11] Healthcare needs for patients experiencing homelessness may be associated with increased resource utilization compared to other patients due to difficulty finding discharge destinations to meet the patient's multifaceted needs which can result in longer inpatient stays and can have financial impacts for hospitals.[12] Longer hospital stays for these patients[13] can also be associated with increased costs because patients experiencing homelessness are less able to access care at early stages of illness, and also may be exposed to communicable disease and harsh climate conditions, resulting in more severe and complex symptoms by the time they are admitted to hospitals, potentially leading to worse health outcomes. Patients experiencing homelessness can also be disproportionately affected by mental health diagnoses and issues with substance use disorders. In addition, patients experiencing homelessness may have limited or no access to prescription medicines or over-the-counter medicines, including adequate locations to store medications away from the heat or cold,[14] and studies have shown difficulties adhering to medication regimens among persons experiencing homelessness.[15]

Therefore, after considering the C1 and C2 ratings of the three ICD–10–CM diagnosis codes that describe homelessness and consideration of the nine guiding principles, we are proposing to change the severity level designation for diagnosis codes Z59.00

[9] ''Sheltered homelessness'' refers to people experiencing homelessness who were found in emergency shelters, safe havens, transitional housing, or other temporary settings. HUD Press Release No. 22–022, *https://www.hud.gov/press/press_releases_media_advisories/hud_no_22_022#:~:text=HUD%20Releases%202021%20Annual%20Homeless%20Assessment%20Report%20Part%201,-Report%20Suggests%20that&text=%E2%80%9CSheltered%20homelessness%E2%80%9D%20refers%20to%20people,housing%2C%20or%20other%20temporary%20settings.* (accessed October 2022).

(Homelessness, unspecified), Z59.01 (Sheltered homelessness), and Z59.02 (Unsheltered homelessness) from NonCC to CC for FY 2024. As discussed in the FY 2023 IPPS/LTCH PPS final rule, if SDOH Z codes are not consistently reported in inpatient claims data, our methodology utilized to mathematically measure the impact on resource use, as described previously, may not adequately reflect what additional resources were expended by the hospital to address these SDOH circumstances in terms of requiring clinical evaluation, extended length of hospital stay, increased nursing care or monitoring or both, and comprehensive discharge planning. We also expect that SDOH Z code reporting may continue to increase for a number of reasons, for example, newer SDOH screening performed as a result of new quality measures in the Hospital Inpatient Quality Reporting program. We may consider proposed changes for other SDOH codes in the future based on our analysis of the impact on resource use, per our methodology, as previously described, and consideration of the guiding principles. We also continue to be interested in receiving feedback on how we might otherwise foster the documentation and reporting of the diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data including in support of efforts to advance health equity.

Feedback and other suggestions may be submitted by October 20, 2023 and directed to the electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™) at: *https://mearis.cms.gov/public/home*.

Additionally, for this FY 2024 IPPS/LTCH PPS proposed rule, we received a request to change the severity level designations of three ICD–10–CM diagnosis codes. The requestor suggested the severity level of ICD–10–CM diagnosis code K76.72 (Hepatic encephalopathy) be changed from NonCC to CC or MCC; N14.11 (Contrast-induced nephropathy) be changed from NonCC to CC; and S06.2XAA (Diffuse traumatic brain injury with loss of consciousness status unknown, initial encounter) be changed from CC to MCC.

We note that these three diagnosis codes became effective with discharges on and after October 1, 2022 (FY 2023) and the current claims data from the September 2022 update of the FY 2022 MedPAR file do not yet reflect these new diagnosis codes. The proposed and finalized severity level designations for these ICD–10–CM diagnosis codes were displayed in Table 6A- New Diagnosis Codes (associated with the FY 2023 proposed rule and final rule and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*). As discussed earlier in this section, for new diagnosis codes approved for each fiscal year, consistent with our annual process for designating a severity level (MCC, CC or NonCC) for new diagnosis codes, in establishing the severity level of these codes, we first reviewed the predecessor code designation, followed by review and consideration of other factors that may be relevant to the severity level designation, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition.

Specifically, the predecessor code for K76.72 (Hepatic encephalopathy) was diagnosis code K72.90 (Hepatic failure, unspecified without coma) which is designated as a NonCC. When we reviewed and considered the factors as described previously, we did not believe that the resources required for hepatic encephalopathy exceeded the resources required for patients with hepatic failure, unspecified without coma as both conditions require treatment to rid the body of toxins. Therefore, our proposed and finalized severity level designation for hepatic encephalopathy was also a NonCC for FY 2023. Similarly, the predecessor code for N14.11 (Contrast-induced nephropathy) was diagnosis code N14.1 (Nephropathy induced by other drugs, medicaments and biological substances) which was designated as a NonCC. After review and consideration of the factors as described previously, we did not believe that the resources required for contrast-induced nephropathy exceeded the resources required for patients with nephropathy induced by other drugs, medicaments and biological substances, as code N14.11 was created as an expansion of the subcategory to identify contrast dyes as the substance causing nephropathy. Before the implementation of N14.11, the diagnosis was coded with N14.1. Therefore, our proposed and finalized severity level designation for contrast-induced nephropathy was also a NonCC. Lastly, the predecessor code for S06.2XAA (Diffuse traumatic brain injury with loss of consciousness status unknown, initial encounter) was diagnosis code S06.2X9A (Diffuse traumatic brain injury with loss of consciousness of unspecified duration, initial encounter) which is designated as a CC. When we reviewed and considered the factors as described previously, we did not believe that the resources required for diffuse traumatic brain injury with loss of consciousness status unknown, initial encounter exceeded the resources required for diffuse traumatic brain injury with loss of consciousness of unspecified duration, initial encounter, therefore our proposed and finalized severity level designation for diffuse traumatic brain injury with loss of consciousness status unknown, initial encounter was also a CC.

As stated in prior rulemaking (85 FR 58560), generally, the proposed severity level ultimately depends on clinical judgement and, where the data is available, the empirical analysis of the additional resources associated with the secondary diagnosis. The impact of the secondary diagnosis is dependent on the principal diagnosis reported, with which it is associated. If the secondary diagnosis is reported primarily with a principal diagnosis that reflects serious illness with treatment complexity, then the marginal contribution of the secondary diagnosis to the overall resource use may actually be relatively small. We continue to believe that in the absence of claims data, the severity designation of these three codes as established in FY 2023 rulemaking is appropriate.

We believe that claims data reflecting the reporting of these new diagnosis codes are needed for analysis prior to proposing changes to these three diagnosis codes. As stated earlier in this section, we plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data and the application of nine guiding principles. We believe it is appropriate to consider these requests in connection with our continued comprehensive CC/MCC analysis in future rulemaking, using the available claims data, rather than proposing to change the designation of these individual ICD–10–CM diagnosis codes in the absence of such data at this time. We will consider these individual requests received for changes to severity level designations as we continue our comprehensive CC/MCC analysis and will provide more detail in future rulemaking.

d. Proposed Additions and Deletions to the Diagnosis Code Severity Levels for FY 2024

The following tables identify the proposed additions and deletions to the diagnosis code MCC severity levels list and the proposed additions and deletions to the diagnosis code CC

severity levels list for FY 2024 and are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*:

Table 6I.1—Proposed Additions to the MCC List—FY 2024;
Table 6I.2—Proposed Deletions to the MCC List—FY 2024;
Table 6J.1—Proposed Additions to the CC List—FY 2024; and
Table 6J.2—Proposed Deletions to the CC List—FY 2024

e. Proposed CC Exclusions List for FY 2024

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) to preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another;
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another;
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another;
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another; and
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50544) for detailed information regarding revisions that were made to the CC and CC Exclusion Lists under the ICD–9–CM MS–DRGs.

The ICD–10 MS–DRGs Version 40.1 CC Exclusion List is included as Appendix C in the ICD–10 MS–DRG Definitions Manual, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*, and includes two lists identified as Part 1 and Part 2. Part 1 is the list of all diagnosis codes that are defined as a CC or MCC when reported as a secondary diagnosis. For all diagnosis codes on the list, a link is provided to a collection of diagnosis codes which, when reported as the principal diagnosis, would cause the CC or MCC diagnosis to be considered as a NonCC. Part 2 is the list of diagnosis codes designated as an MCC only for patients discharged alive; otherwise, they are assigned as a NonCC.

We are proposing additional changes to the ICD–10 MS–DRGs Version 41 CC Exclusion List based on the diagnosis and procedure code updates as discussed in section II.C.13. of this FY 2024 IPPS/LTCH PPS proposed rule. Therefore, we have developed Table 6G.1.—Proposed Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2024; Table 6G.2.—Proposed Principal Diagnosis Order Additions to the CC Exclusions List—FY 2024; Table 6H.1.—Proposed Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2024; and Table 6H.2.—Proposed Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2024. For Table 6G.1, each secondary diagnosis code proposed for addition to the CC Exclusion List is shown with an asterisk and the principal diagnoses proposed to exclude the secondary diagnosis code are provided in the indented column immediately following it. For Table 6G.2, each of the principal diagnosis codes for which there is a CC exclusion is shown with an asterisk and the conditions proposed for addition to the CC Exclusion List that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. For Table 6H.1, each secondary diagnosis code proposed for deletion from the CC Exclusion List is shown with an asterisk followed by the principal diagnosis codes that currently exclude it. For Table 6H.2, each of the principal diagnosis codes is shown with an asterisk and the proposed deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis. Tables 6G.1., 6G.2., 6H.1., and 6H.2. associated with this proposed rule are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*.

We also note that in our review of the CC Exclusion List, we identified a total of 668 diagnosis codes currently listed on various principal diagnosis collection lists that are not able to be reported as a principal diagnosis based on the ICD–10–CM Official Guidelines for Coding and Reporting. In addition, these codes are listed on the Medicare Code Editor (MCE) code edit lists for Unacceptable Principal Diagnosis or Manifestations not allowed as Principal Diagnosis. Therefore, we believe it is appropriate to remove these codes from the affected principal diagnosis collection lists for V41 of the GROUPER. Because we were unable to reflect these changes in Table 6G.1., 6G.2., 6H.1., or 6H.2 at the time of the development of this proposed rule, we are providing a supplementary table, Table 6H.3—Principal Diagnosis Codes for Removal from CC Exclusion List—FY 2024 listing each of these 668 diagnosis codes, including the code descriptions, the applicable MCE edit, and the current principal diagnosis collection list(s) where each code is currently listed and from which the code would be removed for the final FY 2024 V41 GROUPER. Table 6H.3 associated with this proposed rule is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*.

13. Proposed Changes to the ICD–10–CM and ICD–10–PCS Coding Systems

To identify new, revised and deleted diagnosis and procedure codes, for FY 2024, we have developed Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, and Table 6E.—Revised Diagnosis Code Titles for this proposed rule.

These tables are not published in the Addendum to this proposed rule, but are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to this proposed rule. As discussed in section II.C.16. of the preamble of this proposed rule, the code titles are adopted as part of the ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

We are proposing the MDC and MS–DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. In addition, the proposed severity level designations for the new diagnosis codes are set forth in Table 6A. and the proposed O.R. status for the new procedure codes are set forth in Table 6B. Consistent with our established process, we examined the MS–DRG assignment and the attributes (severity level and O.R. status) of the predecessor diagnosis or procedure code, as applicable, to inform our proposed assignments and designations.

Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We note that this process does not automatically result in the new diagnosis or procedure code being proposed for assignment to the same MS–DRG or to have the same designation as the predecessor code.

We are making available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* the following tables associated with this proposed rule:

- Table 6A.—New Diagnosis Codes—FY 2024;
- Table 6B.—New Procedure Codes—FY 2024;
- Table 6C.—Invalid Diagnosis Codes—FY 2024;
- Table 6E.—Revised Diagnosis Code Titles—FY 2024;
- Table 6G.1.—Proposed Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2024;
- Table 6G.2.—Proposed Principal Diagnosis Order Additions to the CC Exclusions List—FY 2024;
- Table 6H.1.—Proposed Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2024;
- Table 6H.2.—Proposed Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2024;
- Table 6I.1.—Proposed Additions to the MCC List—FY 2024;
- Table 6I.2.–Proposed Deletions to the MCC List—FY 2024;
- Table 6J.1.—Proposed Additions to the CC List—FY 2024; and
- Table 6J.2.—Proposed Deletions to the CC List—FY 2024.

14. Proposed Changes to the Medicare Code Editor (MCE)

The Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. Patient diagnoses, procedure(s), and demographic information are entered into the Medicare claims processing systems and are subjected to a series of automated screens. The MCE screens are designed to identify cases that require further review before classification into an MS–DRG.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48874), we made available the FY 2023 ICD–10 MCE Version 40 manual file. The manual contains the definitions of the Medicare code edits, including a description of each coding edit with the corresponding diagnosis and procedure code edit lists. The link to this MCE manual file, along with the link to the mainframe and computer software for the MCE Version 40 (and ICD–10 MS–DRGs) are posted on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

For this FY 2024 IPPS/LTCH PPS proposed rule, we received one MCE request related to the Sex Conflict edit by the October 20, 2022 deadline, as discussed further in this section of the preamble of this proposed rule. Additionally, we discuss the proposals we are making based on our internal review and analysis.

a. External Causes of Morbidity Codes as Principal Diagnosis

In the MCE, the external cause codes (V, W, X, or Y codes) describe the circumstance causing an injury, not the nature of the injury, and therefore should not be used as a principal diagnosis. As discussed in section II.C.12. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2023. We are proposing to add the ICD–10–CM diagnosis codes shown in Table 6P.9a associated with this proposed rule and available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* to the edit code list for the External causes of morbidity codes as principal diagnosis edit.

b. Age Conflict Edit

In the MCE, the Age conflict edit exists to detect inconsistencies between a patient's age and any diagnosis on the patient's record; for example, a 5-year-old patient with benign prostatic hypertrophy or a 78-year-old patient coded with a delivery. In these cases, the diagnosis is clinically and virtually impossible for a patient of the stated age. Therefore, either the diagnosis or the age is presumed to be incorrect. Currently, in the MCE, the following four age diagnosis categories appear under the Age conflict edit and are listed in the manual and written in the software program:

- Perinatal/Newborn—Age 0 years only; a subset of diagnoses which will only occur during the perinatal or newborn period of age 0 (for example, tetanus neonatorum, health examination for newborn under 8 days old).
- Pediatric—Age is 0–17 years inclusive (for example, Reye's syndrome, routine child health exam).
- Maternity—Age range is 9–64 years inclusive (for example, diabetes in pregnancy, antepartum pulmonary complication).
- Adult—Age range is 15–124 years inclusive (for example, senile delirium, mature cataract).

(1) Perinatal/Newborn Diagnosis Category

Under the ICD–10 MCE, the Perinatal/Newborn diagnoses category for the Age conflict edit considers the age range of 0 years only. For that reason, the diagnosis codes on this Age conflict edit list would be expected to apply to conditions or disorders which will only occur during the perinatal or newborn period of age 0.

As discussed in section II.C.12. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2023. We are proposing to add new ICD–10–CM diagnosis codes Z05.81 (Observation and evaluation of newborn for suspected condition related to home physiologic monitoring device ruled out) and Z05.89 (Observation and evaluation of newborn for other specified suspected condition ruled out) to the edit code list for the Perinatal/Newborn diagnoses category under the Age conflict edit.

In addition, as discussed in section II.C.12. of the preamble of this proposed rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2023. Included in this table is ICD–10–CM diagnosis code Z05.8 (Observation and evaluation of newborn for other specified suspected condition ruled out) that is currently listed on the edit code list for the Perinatal/Newborn diagnoses

category under the Age conflict edit. We are proposing to delete this code from the Perinatal/Newborn diagnoses edit code list.

(2) Maternity Diagnoses

Under the ICD–10 MCE, the Maternity diagnoses category for the Age conflict edit considers the age range of 9 to 64 years inclusive. For that reason, the diagnosis codes on this Age conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

As discussed in section II.C.12. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2023. We are proposing to add new ICD–10–CM diagnosis codes to the edit code list for the Maternity diagnoses category under the Age conflict edit.

BILLING CODE 4120–01–P

ICD-10-CM code	Code description
O26.641	Intrahepatic cholestasis of pregnancy, first trimester
O26.642	Intrahepatic cholestasis of pregnancy, second trimester
O26.643	Intrahepatic cholestasis of pregnancy, third trimester
O26.649	Intrahepatic cholestasis of pregnancy, unspecified trimester
O90.41	Hepatorenal syndrome following labor and delivery
O90.49	Other postpartum acute kidney failure

In addition, as discussed in section II.C.12. of the preamble of this proposed rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2023. Included in this table is ICD–10–CM diagnosis code O90.4 (Postpartum acute kidney failure) that is currently listed on the edit code list for the Maternity diagnoses category under the Age conflict edit. We are proposing to delete this code from the Maternity diagnoses edit code list.

(3) Adult Diagnoses

Under the ICD–10 MCE, the Adult diagnoses category for the Age conflict edit considers the age range of 15 to 124 years inclusive. For that reason, the diagnosis codes on this Age conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

As discussed in section II.C.12. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2023. We are proposing to add the following new ICD–10–CM diagnosis codes to the edit code list for the Adult diagnoses category under the Age conflict edit.

ICD-10-CM code	Code description
G93.44	Adult-onset leukodystrophy with axonal spheroids
M80.0B1A	Age-related osteoporosis with current pathological fracture, right pelvis, initial encounter for fracture
M80.0B1D	Age-related osteoporosis with current pathological fracture, right pelvis, subsequent encounter for fracture with routine healing
M80.0B1G	Age-related osteoporosis with current pathological fracture, right pelvis, subsequent encounter for fracture with delayed healing
M80.0B1K	Age-related osteoporosis with current pathological fracture, right pelvis, subsequent encounter for fracture with nonunion
M80.0B1P	Age-related osteoporosis with current pathological fracture, right pelvis, subsequent encounter for fracture with malunion
M80.0B1S	Age-related osteoporosis with current pathological fracture, right pelvis, sequela
M80.0B2A	Age-related osteoporosis with current pathological fracture, left pelvis, initial encounter for fracture
M80.0B2D	Age-related osteoporosis with current pathological fracture, left pelvis, subsequent encounter for fracture with routine healing
M80.0B2G	Age-related osteoporosis with current pathological fracture, left pelvis, subsequent encounter for fracture with delayed healing
M80.0B2K	Age-related osteoporosis with current pathological fracture, left pelvis, subsequent encounter for fracture with nonunion
M80.0B2P	Age-related osteoporosis with current pathological fracture, left pelvis, subsequent encounter for fracture with malunion
M80.0B2S	Age-related osteoporosis with current pathological fracture, left pelvis, sequela
M80.0B9A	Age-related osteoporosis with current pathological fracture, unspecified pelvis, initial encounter for fracture
M80.0B9D	Age-related osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with routine healing
M80.0B9G	Age-related osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with delayed healing
M80.0B9K	Age-related osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with nonunion
M80.0B9P	Age-related osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with malunion
M80.0B9S	Age-related osteoporosis with current pathological fracture, unspecified pelvis, sequela

c. Sex Conflict Edit

We received a request to reconsider sex conflict edits in connection with concerns related to claims processing for transgender individuals. The requestor raised concerns that the current edit is not clinically accurate and is inconsistent with equitable documentation of gender at the time of service. The requestor expressed concerns that automated systems are contributing to administrative burden for obstetrician-gynecologists because the sex conflict edit requires physicians to choose the sex assigned at birth only and that hospitals must include condition code 45 to override the edit for appropriate payment for certain surgeries or procedures. The requestor described that claims are inappropriately denied due to the edit singling out transgender individuals, contributing to continued alienation of transgender patients. The requestor further shared that obstetrician-gynecologists have indicated that to provide high-quality, patient-centered care, they need to be able to document a patient's gender identity along with their sex.[16] We note that the requester raises a number of issues that are related to multiple prospective payment systems and broader aspects of health care, such as the electronic health record.

We share the requester's concern that the original design of the sex conflict edits is descriptive of a patient's sex assigned at birth as submitted on a claim, which may not be fully reflective of the practice of medicine and patient-doctor interactions, as well that CMS policy and communications about the use of condition code 45 for institutional claims has not been re-examined in some time. As we state in the CMS Framework for Health Equity, 2022–2032,[17] we strive to identify and remedy systemic barriers to equity so that every one of the people we serve has a fair and just opportunity to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status, geography, preferred language, or other factors that affect access to care and health outcomes. CMS is committed to looking holistically at the concerns raised by the commenter across settings of care and will consider how to address for future rulemaking or guidance, and we thank the commenter for continuing to share firsthand experiences.

d. Manifestation Code as Principal Diagnosis Edit

In the ICD–10–CM classification system, manifestation codes describe the manifestation of an underlying disease, not the disease itself, and therefore should not be used as a principal diagnosis.

As discussed in section II.C.12. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2023. Included in this table are the following new ICD–10–CM diagnosis codes that we are proposing to add to the edit code list for the Manifestation code as principal diagnosis edit, because the disease itself would be required to be reported first.

ICD-10-CM code	Code description
E20.811	Secondary hypoparathyroidism in diseases classified elsewhere
H36.89	Other retinal disorders in diseases classified elsewhere

In addition, as discussed in section II.C.12. of the preamble of this proposed rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2023. Included in this table is ICD–10–CM diagnosis code H36 (Retinal disorders in diseases classified elsewhere) that is currently listed on the edit code list for the Manifestation code as principal diagnosis edit. We are proposing to delete this code from the Manifestation code as principal diagnosis edit code list.

e. Unacceptable Principal Diagnosis Edit

In the MCE, there are select codes that describe a circumstance which influences an individual's health status but does not actually describe a current illness or injury. There also are codes that are not specific manifestations but may be due to an underlying cause. These codes are considered unacceptable as a principal diagnosis. In limited situations, there are a few codes on the MCE Unacceptable Principal Diagnosis edit code list that are considered ''acceptable'' when a specified secondary diagnosis is also coded and reported on the claim.

As discussed in section II.C.12. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2023. We are proposing to add the following new ICD–10–CM diagnosis codes to the Unacceptable Principal Diagnosis edit code list.

BILLING CODE 4120–01–P

[16] We note that the requester used the phrase ''gender identity along with their sex''. We believe the requester was referring to ''sex assigned at birth'' in this context.

[17] *https://www.cms.gov/files/document/cms-framework-health-equity-2022.pdf.*

ICD-10-CM code	Code description
B96.83	Acinetobacter baumannii as the cause of diseases classified elsewhere
E88.A	Wasting disease (syndrome) due to underlying condition
H36.811	Nonproliferative sickle-cell retinopathy, right eye
H36.812	Nonproliferative sickle-cell retinopathy, left eye
H36.813	Nonproliferative sickle-cell retinopathy, bilateral
H36.819	Nonproliferative sickle-cell retinopathy, unspecified eye
H36.821	Proliferative sickle-cell retinopathy, right eye
H36.822	Proliferative sickle-cell retinopathy, left eye
H36.823	Proliferative sickle-cell retinopathy, bilateral
H36.829	Proliferative sickle-cell retinopathy, unspecified eye
R40.2A	Nontraumatic coma due to underlying condition
Z02.84	Encounter for child welfare exam
Z16.13	Resistance to carbapenem
Z22.340	Carrier of carbapenem-resistant Acinetobacter baumannii
Z22.341	Carrier of carbapenem-sensitive Acinetobacter baumannii
Z22.349	Carrier of Acinetobacter baumannii, unspecified
Z22.350	Carrier of carbapenem-resistant Enterobacterales
Z22.358	Carrier of other Enterobacterales
Z22.359	Carrier of Enterobacterales, unspecified
Z29.81	Encounter for HIV pre-exposure prophylaxis
Z29.89	Encounter for other specified prophylactic measures
Z62.23	Child in custody of non-parental relative
Z62.24	Child in custody of non-relative guardian
Z62.823	Parent-step child conflict
Z62.831	Non-parental relative-child conflict
Z62.832	Non-relative guardian-child conflict
Z62.833	Group home staff-child conflict
Z62.892	Runaway [from current living environment]
Z83.710	Family history of adenomatous and serrated polyps
Z83.711	Family history of hyperplastic colon polyps
Z83.718	Other family history of colon polyps
Z83.719	Family history of colon polyps, unspecified
Z91.A41	Caregiver's other noncompliance with patient's medication regimen due to financial hardship
Z91.A48	Caregiver's other noncompliance with patient's medication regimen for other reason
Z91.A51	Caregiver's noncompliance with patient's renal dialysis due to financial hardship
Z91.A58	Caregiver's noncompliance with patient's renal dialysis for other reason
Z91.A91	Caregiver's noncompliance with patient's other medical treatment and regimen due to financial hardship
Z91.A98	Caregiver's noncompliance with patient's other medical treatment and regimen for other reason
Z91.85	Personal history of military service

In addition, as discussed in section II.C.12. of the preamble of this proposed rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2023. Included in this table are the following

ICD–10–CM diagnosis codes that are currently listed on the Unacceptable Principal Diagnosis edit code list. We are proposing to delete these codes from the Unacceptable Principal Diagnosis edit code list.

ICD-10-CM code	Code description
Z29.8	Encounter for other specified prophylactic measures
Z83.71	Family history of colonic polyps
Z91.A4	Caregiver's other noncompliance with patient's medication regimen
Z91.A5	Caregiver's noncompliance with patient's renal dialysis
Z91.A9	Caregiver's noncompliance with patient's other medical treatment and regimen

f. Unspecified Code

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44940 through 44943), we finalized the implementation of a new Unspecified code edit, effective with discharges on and after April 1, 2022. Unspecified codes exist in the ICD–10–CM classification for circumstances when documentation in the medical record does not provide the level of detail needed to support reporting a more specific code. However, in the inpatient setting, there should generally be very limited and rare circumstances for which the laterality (right, left, bilateral) of a condition is unable to be documented and reported.

As discussed in section II.C.12. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2023. We are proposing to add the following new ICD–10–CM diagnosis codes to the Unspecified code edit list.

ICD-10-CM code	Code description
M80.0B9A	Age-related osteoporosis with current pathological fracture, unspecified pelvis, initial encounter for fracture
M80.0B9D	Age-related osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with routine healing
M80.0B9G	Age-related osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with delayed healing
M80.0B9K	Age-related osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with nonunion
M80.0B9P	Age-related osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with malunion
M80.0B9S	Age-related osteoporosis with current pathological fracture, unspecified pelvis, sequela
M80.8B9A	Other osteoporosis with current pathological fracture, unspecified pelvis, initial encounter for fracture
M80.8B9D	Other osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with routine healing
M80.8B9G	Other osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with delayed healing
M80.8B9K	Other osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with nonunion
M80.8B9P	Other osteoporosis with current pathological fracture, unspecified pelvis, subsequent encounter for fracture with malunion
M80.8B9S	Other osteoporosis with current pathological fracture, unspecified pelvis, sequela

In addition, we identified four diagnosis codes that were inadvertently omitted from the Unspecified code edit list effective with discharges on and after April 1, 2022. We therefore are proposing to also add the following ICD–10–CM diagnosis codes to the Unspecified code edit list effective with discharges on and after October 1, 2023.

ICD-10-CM code	Code description
L89.103	Pressure ulcer of unspecified part of back, stage 3
L89.104	Pressure ulcer of unspecified part of back, stage 4
L89.93	Pressure ulcer of unspecified site, stage 3
L89.94	Pressure ulcer of unspecified site, stage 4

g. Future Enhancement

As we continue to evaluate the purpose and function of the MCE with respect to ICD–10, we encourage public input for future discussion. As we have discussed in prior rulemaking, we recognize a need to further examine the current list of edits and the definitions of those edits.

We continue to encourage public comments on whether there are additional concerns with the current edits, including specific edits or language that should be removed or revised, edits that should be combined, or new edits that should be added to assist in detecting errors or inaccuracies in the coded data. Comments should be directed to the new electronic intake system, Medicare Electronic Application Request Information System (MEARIS™), discussed in section II.C.1.b. of the preamble of this proposed rule at: *https://mearis.cms.gov/public/home*, by October 20, 2023.

15. Proposed Changes to Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS–DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single MS–DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS–DRG associated with the most resource-intensive surgical class.

A surgical class can be composed of one or more MS–DRGs. For example, in MDC 11, the surgical class ''kidney transplant'' consists of a single MS–DRG (MS–DRG 652) and the class ''major bladder procedures'' consists of three MS–DRGs (MS–DRGs 653, 654, and 655).

Consequently, in many cases, the surgical hierarchy has an impact on more than one MS–DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS–DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS–DRGs 001 and 002 and surgical class B includes MS–DRGs 003, 004, and 005. Assume also that the average costs of MS–DRG 001 are higher than that of MS–DRG 003, but the average costs of MS–DRGs 004 and 005 are higher than the average costs of MS–DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS–DRG in the class by frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of ''other O.R. procedures'' as discussed in this proposed rule.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS–DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the ''other O.R. procedures'' surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS–DRG or MS–DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The ''other O.R. procedures'' class is a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

Based on the changes that we are proposing to make for FY 2024, as discussed in section II.C. of the preamble of this proposed rule, we are proposing to modify the existing surgical hierarchy for FY 2024 as follows.

We are proposing to revise the surgical hierarchy for the MDC 04 (Diseases and Disorders of the Respiratory System) MS–DRGs as follows: In the MDC 04 MS–DRGs, we are proposing to sequence proposed new MS–DRG 173 (Ultrasound Accelerated and Other Thrombolysis with Principal Diagnosis Pulmonary Embolism) above MDC 04 MS–DRGs 166, 167, and 168 (Other Respiratory System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) and below MS–DRGs 163, 164, and 165 (Major Chest Procedures with MCC, with CC, and without CC/MCC, respectively).

As discussed in section II.C.2.b. of the preamble of this proposed rule, we are

proposing to revise the surgical hierarchy for the MDC 05 (Diseases and Disorders of the Circulatory System) MS–DRGs as follows: In the MDC 05 MS–DRGs, we are proposing to sequence proposed new MS–DRG 212 (Concomitant Aortic and Mitral Valve Procedures) above MS–DRGs 216, 217, 218, 219, 220, and 221 (Cardiac Valve & Other Major Cardiothoracic Procedure with and without Cardiac Catheterization, with MCC, with CC, without CC/MCC, respectively) and below MS–DRG 215 (Other Heart Assist System Implant). As discussed in section II.C.4. of the preamble of this proposed rule, we are proposing to delete MS–DRGs 222, 223, 224, 225, 226, and 227 (Cardiac Defibrillator Implant with and without Cardiac Catheterization with and without AMI/HF/Shock with and without MCC, respectively). Based on the changes we are proposing to make for those MS–DRGs in MDC 05, we are proposing to sequence proposed new MS–DRG 275 (Cardiac Defibrillator Implant with Cardiac Catheterization and MCC) above proposed new MS–DRG 276 (Cardiac Defibrillator Implant with MCC) and below MS–DRGs 231, 232, 233, 234, 235 and 236 (Coronary Bypass with or without PTCA, with or without Cardiac Catheterization or Open Ablation, with and without MCC, respectively). We are proposing to sequence proposed new MS–DRG 276 (Cardiac Defibrillator Implant with MCC) above proposed new MS–DRG 277 (Cardiac Defibrillator Implant without MCC) and below proposed new MS–DRG 275 (Cardiac Defibrillator Implant with Cardiac Catheterization and MCC). We are proposing to sequence proposed new MS–DRG 277 (Cardiac Defibrillator Implant without MCC) above MS–DRGs 266 and 267 (Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC and without MCC, respectively) and below proposed new MS–DRG 276 (Cardiac Defibrillator Implant with MCC).

As discussed in section II.C.4. of the preamble of this proposed rule, we are proposing to delete MDC 05 MS–DRGs 246 and 247 (Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Arteries or Stents and without MCC, respectively). We are also proposing to delete MDC 05 MS–DRGs 248 and 249 (Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent with MCC or 4+ Arteries or Stents and without MCC, respectively). We are proposing to revise the titles for MS–DRGs 250 and 251 from ''Percutaneous Cardiovascular Procedures without Coronary Artery Stent with MCC and without MCC, respectively'' to ''Percutaneous Cardiovascular Procedures without Intraluminal Device with MCC and without MCC, respectively.'' Based on the changes we are proposing to make for those MS–DRGs in MDC 05, we are proposing to sequence proposed new MS–DRGs 323 and 324 (Coronary Intravascular Lithotripsy with Intraluminal Device with MCC and without MCC, respectively) above proposed new MS–DRG 325 (Coronary Intravascular Lithotripsy without Intraluminal Device) and below MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with MCC and without MCC, respectively). We are proposing to sequence proposed new MS–DRG 325 (Coronary Intravascular Lithotripsy without Intraluminal Device) above proposed new MS–DRGs 321 and 322 (Percutaneous Cardiovascular Procedures with Intraluminal Device, with MCC or 4+ Arteries/Intraluminal Devices and without MCC, respectively) and below proposed new MS–DRGs 323 and 324 (Coronary Intravascular Lithotripsy with Intraluminal Device with MCC and without MCC, respectively). We are proposing to sequence proposed new MS–DRGs 321 and 322 (Percutaneous Cardiovascular Procedures with Intraluminal Device with MCC or 4+ Arteries/Intraluminal Devices and without MCC, respectively), above MS–DRGs 250 and 251 (Percutaneous Cardiovascular Procedures without Intraluminal Device with MCC and without MCC, respectively) and below proposed new MS–DRG 325 (Coronary Intravascular Lithotripsy without Intraluminal Device).

In addition, based on the changes that we are proposing to make as discussed in section II.C.8.a. of the preamble of this proposed rule, we are also proposing to sequence proposed new MDC 05 MS–DRGs 278 and 279 (Ultrasound Accelerated and Other Thrombolysis of Peripheral Vascular Structures with MCC and without MCC, respectively) above MDC 05 MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) and below MS–DRGs 250 and 251 (Percutaneous Cardiovascular Procedures without Intraluminal Device with and without MCC, respectively).

As discussed in section II.C.4. of the preamble of this proposed rule, we are proposing to delete MS–DRGs 338, 339, and 340 (Appendectomy with Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) and MS–DRGs 341, 342, and 343 (Appendectomy without Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). Based on the changes we are proposing to make for those MS–DRGs in MDC 06 (Diseases and Disorders of the Digestive System), we are proposing to revise the surgical hierarchy for MDC 06 as follows: In MDC 06, we are proposing to sequence proposed new MS–DRGs 397, 398, and 399 (Appendix Procedures with MCC, with CC, and without CC/MCC, respectively) above MS–DRGs 344, 345, and 346 (Minor Small and Large Bowel Procedures with MCC, with CC, and without CC/MCC, respectively) and below MS–DRGs 335, 336, and 337 (Peritoneal Adhesiolysis with MCC, with CC, and without CC/MCC, respectively).

Lastly, as discussed in section II.C.2.b. of the preamble of this proposed rule, we are proposing to revise the title for MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs and Immunologic Disorders) MS–DRGs 799, 800, and 801 from ''Splenectomy with MCC, with CC, and without CC/MCC, respectively'' to ''Splenic Procedures with MCC, with CC, and without CC/MCC, respectively.''

Our proposal for Appendix D MS–DRG Surgical Hierarchy by MDC and MS–DRG of the ICD–10 MS–DRG Definitions Manual Version 41 is illustrated in the following tables.

BILLING CODE 4120–01–P

Proposed Surgical Hierarchy: MDC 04	
MS-DRGs 163-165	Major Chest Procedures
Proposed New MS-DRG 173	Ultrasound Accelerated and Other Thrombolysis with Principal Diagnosis Pulmonary Embolism
MS-DRGs 166-168	Other Respiratory System O.R. Procedures

Proposed Surgical Hierarchy: MDC 05	
MS-DRG 215	Other Heart Assist System Implant
Proposed New MS-DRG 212	Concomitant Aortic and Mitral Valve Procedures
MS-DRGs 216-221	Cardiac Valve and Other Major Cardiothoracic Procedures
MS-DRGs 231-236	Coronary Bypass
Delete MS-DRGs 222-227	Cardiac Defibrillator Implant
Proposed New MS-DRG 275	Cardiac Defibrillator Implant with Cardiac Catheterization and MCC
Proposed New MS-DRG 276	Cardiac Defibrillator Implant with MCC
Proposed New MS-DRG 277	Cardiac Defibrillator Implant without MCC
MS-DRGs 266-267	Endovascular Cardiac Valve Replacement and Supplement Procedures
MS-DRGs 268-269	Aortic and Heart Assist Procedures
MS-DRGs 228-229	Other Cardiothoracic Procedures
MS-DRGs 319-320	Other Endovascular Cardiac Valve Procedures
MS-DRGs 270-272	Other Major Cardiovascular Procedures
MS-DRGs 239-241	Amputation for Circulatory System Disorders Except Upper Limb and Toe
MS-DRGs 242-244	Permanent Cardiac Pacemaker Implant
MS-DRG 245	AICD Generator Procedures
MS-DRG 265	AICD Lead Procedures
MS-DRGs 273-274	Percutaneous and Other Intracardiac Procedures
Delete MS-DRGs 246-249	Percutaneous Cardiovascular Procedures with Coronary Artery Stent
Proposed New MS-DRGs 323-324	Coronary Intravascular Lithotripsy with Intraluminal Device
Proposed New MS-DRG 325	Coronary Intravascular Lithotripsy without Intraluminal Device
Proposed New MS-DRGs 321-322	Percutaneous Cardiovascular Procedures with Intraluminal Device
MS-DRGs 250-251	Percutaneous Cardiovascular Procedures without Intraluminal Device
Proposed New MS-DRGs 278-279	Ultrasound Accelerated and Other Thrombolysis of Peripheral Vascular Structures
MS-DRGs 252-254	Other Vascular Procedures
MS-DRGs 255-257	Upper Limb and Toe Amputation for Circulatory System Disorders
MS-DRGs 258-259	Cardiac Pacemaker Device Replacement
MS-DRGs 260-262	Cardiac Pacemaker Revision Except Device Replacement
MS-DRG 263	Vein Ligation and Stripping
MS-DRG 264	Other Circulatory O.R Procedures

Proposed Surgical Hierarchy: MDC 06	
MS-DRGs 335-337	Peritoneal Adhesiolysis
Delete MS-DRGs 338-343	Appendectomy
Proposed New MS-DRGs 397-399	Appendix Procedures
MS-DRGs 344-346	Minor Small and Large Bowel Procedures

Proposed Surgical Hierarchy: MDC 16	
Proposed New Title MS-DRGs 799-801	Splenic Procedures
MS-DRGs 802-804	Other O.R. Procedures of the Blood and Blood Forming Organs

16. Maintenance of the ICD–10–CM and ICD–10–PCS Coding Systems

In September 1985, the ICD–9–CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS) and CMS, charged with maintaining and updating the ICD–9–CM system. The final update to ICD–9–CM codes was made on October 1, 2013. Thereafter, the name of the Committee was changed to the ICD–10 Coordination and Maintenance Committee, effective with the March 19–20, 2014 meeting. The ICD–10 Coordination and Maintenance Committee addresses updates to the ICD–10–CM and ICD–10–PCS coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD–9–CM diagnosis and procedure codes by fiscal year can be found on the CMS website at: *http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/codes.html*. The official list of ICD–10–CM and ICD–10–PCS codes can be found on the CMS website at: *http://www.cms.gov/Medicare/Coding/ICD10/index.html*.

The NCHS has lead responsibility for the ICD–10–CM and ICD–9–CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD–10–PCS and ICD–9–CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The Committee encourages participation in the previously mentioned process by health-related organizations and other interested parties. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed during the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2024 at a public meeting held on September 13–14, 2022, and finalized the coding changes after consideration of comments received at the meetings and in writing by November 14, 2022.

The Committee held its 2023 meeting on March 7–8, 2023. The deadline for submitting comments on these code proposals was April 7, 2023. It was announced at this meeting that any new diagnosis and procedure codes for which there was consensus of public support and for which complete tabular and indexing changes would be made by June 2023 would be included in the October 1, 2023 update to the ICD–10–CM diagnosis and ICD–10–PCS procedure code sets.

As discussed in earlier sections of the preamble of this proposed rule, there are new, revised, and deleted ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes that are captured in Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, and Table 6E.—Revised Diagnosis Code Titles for this proposed rule, which are available on the CMS website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*. The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Therefore, although we make the code titles available in these tables for the IPPS proposed rule, they are not subject to comment in the proposed rule. Because of the length of these tables, they are not published in the Addendum to the proposed rule. Rather, they are available via the internet as discussed in section VI. of the Addendum to the proposed rule.

Recordings for the virtual meeting discussions of the procedure codes at the Committee's September 13–14, 2022 meeting and the March 7–8, 2023 meeting can be obtained from the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials*. The materials for the discussions relating to diagnosis codes at the September 13–14, 2022 meeting and March 7–8, 2023 meeting can be found at: *http://www.cdc.gov/nchs/icd/icd10cm_maintenance.html*. These websites also provide detailed information about the Committee, including information on requesting a new code, participating in a Committee meeting, timeline requirements and meeting dates.

We encourage commenters to submit questions and comments on coding issues involving diagnosis codes via email to: *nchsicd10cm@cdc.gov*.

Questions and comments concerning the procedure codes should be submitted via email to: *ICDProcedureCodeRequest@cms.hhs.gov*.

In an effort to better enable the collection of health-related social needs (HRSNs), defined as individual-level, adverse social conditions that negatively impact a person's health or healthcare, are significant risk factors associated with worse health outcomes as well as increased healthcare utilization, the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS) is implementing 42 new diagnosis codes into the ICD–10–CM classification, for reporting effective April 1, 2023. The diagnosis codes are as follows:

ICD-10-CM Code	Description
T74.A1XA	Adult financial abuse, confirmed, initial encounter
T74.A1XD	Adult financial abuse, confirmed, subsequent encounter
T74.A1XS	Adult financial abuse, confirmed, sequela
T74.A2XA	Child financial abuse, confirmed, initial encounter
T74.A2XD	Child financial abuse, confirmed, subsequent encounter
T74.A2XS	Child financial abuse, confirmed, sequela
T76.A1XA	Adult financial abuse, suspected, initial encounter
T76.A1XD	Adult financial abuse, suspected, subsequent encounter
T76.A1XS	Adult financial abuse, suspected, sequela
T76.A2XA	Child financial abuse, suspected, initial encounter
T76.A2XD	Child financial abuse, suspected, subsequent encounter
T76.A2XS	Child financial abuse, suspected, sequela
Y07.010	Husband, current, perpetrator of maltreatment and neglect
Y07.011	Husband, former, perpetrator of maltreatment and neglect
Y07.020	Wife, current, perpetrator of maltreatment and neglect
Y07.021	Wife, former, perpetrator of maltreatment and neglect
Y07.030	Male partner, current, perpetrator of maltreatment and neglect
Y07.031	Male partner, former, perpetrator of maltreatment and neglect
Y07.040	Female partner, current, perpetrator of maltreatment and neglect
Y07.041	Female partner, former, perpetrator of maltreatment and neglect
Y07.050	Non-binary partner, current, perpetrator of maltreatment and neglect
Y07.051	Non-binary partner, former, perpetrator of maltreatment and neglect
Y07.44	Child, perpetrator of maltreatment and neglect
Y07.45	Grandchild, perpetrator of maltreatment and neglect
Y07.46	Grandparent, perpetrator of maltreatment and neglect
Y07.47	Parental sibling, perpetrator of maltreatment and neglect
Y07.54	Acquaintance or friend, perpetrator of maltreatment and neglect

Z55.6	Problems related to health literacy
Z58.81	Basic services unavailable in physical environment
Z58.89	Other problems related to physical environment
Z59.10	Inadequate housing, unspecified
Z59.11	Inadequate housing environmental temperature
Z59.12	Inadequate housing utilities
Z59.19	Other inadequate housing
Z62.814	Personal history of child financial abuse
Z62.815	Personal history of intimate partner abuse in childhood
Z91.141	Patient's other noncompliance with medication regimen due to financial hardship
Z91.148	Patient's other noncompliance with medication regimen for other reason
Z91.151	Patient's noncompliance with renal dialysis due to financial hardship
Z91.158	Patient's noncompliance with renal dialysis for other reason
Z91.413	Personal history of adult financial abuse
Z91.414	Personal history of adult intimate partner abuse

We refer the reader to the CDC web page at *https://www.cdc.gov/nchs/icd/Comprehensive-Listing-of-ICD-10-CM-Files.htm* for additional details regarding the implementation of these new diagnosis codes.

We provided the MS–DRG assignments for the 42 diagnosis codes effective with discharges on and after April 1, 2023, consistent with our established process for assigning new diagnosis codes. Specifically, we review the predecessor diagnosis code and MS–DRG assignment most closely associated with the new diagnosis code, and consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, and the resources utilized for the specific condition/diagnosis. We note that this process does not automatically result in the new diagnosis code being assigned to the same MS–DRG as the predecessor code. The assignments for the previously listed diagnosis codes are reflected in Table 6A.—New Diagnosis Codes (which is available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*). As with the other new diagnosis codes and MS–DRG assignments included in Table 6A in association with this proposed rule, we are soliciting public comments on the most appropriate MDC, MS–DRG, and severity level assignments for these codes for FY 2024, as well as any other options for the GROUPER logic.

In addition, CMS implemented 34 new procedure codes including laser interstitial thermal therapy (LITT) of various vertebral body sites, bone marrow transfusions, and the introduction or infusion of therapeutics, into the ICD–10–PCS classification effective with discharges on and after April 01, 2023. The procedure codes are as follows:

Procedure Code	Description	O.R.	MDC	MS-DRG
02LW0DJ	Occlusion of thoracic aorta, descending with intraluminal device, temporary, open approach	Y	05 21	270-272 907-909
04L00DJ	Occlusion of abdominal aorta with intraluminal device, temporary, open approach	Y	05 06 21 24	268-269 356-358 907-909 957-959
0P530Z3	Destruction of cervical vertebra using laser interstitial thermal therapy, open approach	Y	03 21 24	143-145 907-909 957-959
0P533Z3	Destruction of cervical vertebra using laser interstitial thermal therapy, percutaneous approach	Y	03 21 24	143-145 907-909 957-959
0P534Z3	Destruction of cervical vertebra using laser interstitial thermal therapy, percutaneous endoscopic approach	Y	03 21 24	143-145 907-909 957-959
0P540Z3	Destruction of thoracic vertebra using laser interstitial thermal therapy, open approach	Y	08 21 24	495-497 907-909 957-959
0P543Z3	Destruction of thoracic vertebra using laser interstitial thermal therapy, percutaneous approach	Y	08 21 24	495-497 907-909 957-959

0P544Z3	Destruction of thoracic vertebra using laser interstitial thermal therapy, percutaneous endoscopic approach	Y	08 21 24	495-497 907-909 957-959
0Q500Z3	Destruction of lumbar vertebra using laser interstitial thermal therapy, open approach	Y	08 21 24	495-497 907-909 957-959

* As the procedure codes are designated as non-O.R. procedures, there is no assigned MDC or MS-DRG. The ICD-10 MS-DRG assignment is dependent on the reported principal diagnosis, any secondary diagnoses defined as a complication or comorbidity (CC) or major complication or comorbidity (MCC), procedures or services performed, age, sex, and discharge status.
** NonOR affecting MS-DRG assignment

BILLING CODE 4120–01–C

The 34 procedure codes are also reflected in Table 6B—New Procedure Codes (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*). As with the other new procedure codes and MS–DRG assignments included in Table 6B in association with this proposed rule, we are soliciting public comments on the most appropriate MDC, MS–DRG, and operating room status assignments for these codes for FY 2024, as well as any other options for the GROUPER logic.

We note that Change Request (CR) 13034, Transmittal 11746, titled ''April 2023 Update to the Medicare Severity—Diagnosis Related Group (MS–DRG) Grouper and Medicare Code Editor (MCE) Version 40.1 for the International Classification of Diseases, Tenth Revision (ICD–10) Diagnosis Codes for Collection of Health-Related Social Needs (HRSNs) and New ICD–10 Procedure Coding System (PCS) Codes,'' was issued on December 15, 2022 (available on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Transmittals/r11746cp*), regarding the release of an updated version of the ICD–10 MS–DRG GROUPER and Medicare Code Editor software, Version 40.1, effective with discharges on and after April 1, 2023, reflecting the new diagnosis and procedure codes. The updated software, along with the updated ICD–10 MS–DRG V40.1 Definitions Manual and the Definitions of Medicare Code Edits V40.1 manual is available at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of Public Law 108–173 included a requirement for updating diagnosis and procedure codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) of Public Law 108–173 amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) until the fiscal year that begins after such date. This requirement improves the recognition of new technologies under the IPPS by providing information on these new technologies at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108–173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making these determinations. Topics considered during the Fall ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting were considered for an April 1 update if a strong and convincing case was made by the requestor during the Committee's public meeting. The request needed to identify the reason why a new code was needed in April for purposes of the new technology process. Meeting participants and those reviewing the Committee meeting materials were provided the opportunity to comment on the expedited request. We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950) for further discussion of the implementation of this prior April 1 update for purposes of the new technology add-on payment process.

However, as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950 through 44956), we adopted an April 1 implementation date, in addition to the annual October 1 update, beginning with April 1, 2022. We noted that the intent of this April 1 implementation date is to allow flexibility in the ICD–10 code update process. With this new April 1 update, CMS now uses the same process for consideration of all requests for an April 1 implementation date, including for purposes of the new technology add-on payment process (that is, the prior process for consideration of an April 1 implementation date only if a strong and convincing case was made by the requestor during the meeting no longer applies). We are continuing to use several aspects of our existing established process to implement new codes through the April 1 code update, which includes presenting proposals for April 1 consideration at the September ICD–10 Coordination and Maintenance Committee meeting, requesting public comments, reviewing the public comments, finalizing codes, and announcing the new codes with their assignments consistent with the new GROUPER release information. We note that under our established process, requestors indicate whether they are submitting their code request for consideration for an April 1 implementation date or an October 1 implementation date. The ICD–10 Coordination and Maintenance Committee makes efforts to accommodate the requested implementation date for each request submitted. However, the Committee determines which requests are to be presented for consideration for an April 1 implementation date or an October 1 implementation date. As discussed earlier in this section of the preamble of this proposed rule, there were code proposals presented for an April 1, 2023 implementation at the September 13–14, 2022 Committee meetings. Following the receipt of public comments, the code proposals were approved and finalized, therefore, there were new codes implemented April 1, 2023.

Consistent with the process we outlined for the April 1 implementation date, we announced the new codes in November 2022 and provided the updated code files and ICD–10–CM Official Guidelines for Coding and Reporting in January 2023. On January 30, 2023, the **Federal Register** (88 FR 5882) notice for the March 7–8, 2023 ICD–10 Coordination and Maintenance Committee meeting was published that includes the tentative agenda and identifies which topics are related to a new technology add-on payment application. By February 1, 2023, we made available the updated V40.1 ICD–10 MS–DRG Grouper software and related materials on the CMS web page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

ICD–9–CM addendum and code title information is published on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/addendum*. ICD–10–CM and ICD–10–PCS addendum and code title information is published on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10*. CMS also sends electronic files containing all ICD–10–CM and ICD–10–PCS coding changes to its Medicare contractors for use in updating their systems and providing education to providers. Information on ICD–10–CM diagnosis codes, along with the Official ICD–10–CM Coding Guidelines, can be found on the CDC website at *https://www.cdc.gov/nchs/icd/Comprehensive-Listing-of-ICD-10-CM-Files.htm*. Additionally, information on new, revised, and deleted ICD–10–CM diagnosis and ICD–10–PCS procedure codes is provided to the AHA for publication in the Coding Clinic for ICD–10. The AHA also distributes coding update information to publishers and software vendors.

For FY 2023, there are currently 73,674 diagnosis codes and 78,530 procedure codes. As displayed in Table 6A.—New Diagnosis Codes and in Table 6B.—New Procedure Codes associated with this proposed rule (available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*), there are 395 new diagnosis codes and 10 new procedure codes that have been finalized for FY 2024 at the time of the development of this proposed rule. The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Thus, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules. We will continue to provide the October updates in this manner in the IPPS proposed and final rules.

17. Replaced Devices Offered Without Cost or With a Credit

a. Background

In the FY 2008 IPPS final rule with comment period (72 FR 47246 through 47251), we discussed the topic of Medicare payment for devices that are replaced without cost or where credit for a replaced device is furnished to the hospital. We implemented a policy to reduce a hospital's IPPS payment for certain MS–DRGs where the implantation of a device that subsequently failed or was recalled determined the base MS–DRG assignment. At that time, we specified that we will reduce a hospital's IPPS payment for those MS–DRGs where the hospital received a credit for a replaced device equal to 50 percent or more of the cost of the device.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51556 through 51557), we clarified this policy to state that the policy applies if the hospital received a credit equal to 50 percent or more of the cost of the replacement device and issued instructions to hospitals accordingly.

b. Proposed Changes for FY 2024

As discussed in section II.C.5. of the preamble of this proposed rule, for FY 2024, we are proposing to delete MS–DRGs 222, 223, 224, 225, 226, and 227, add new MS–DRG 275 (Cardiac Defibrillator Implant with Cardiac Catheterization and MCC) and new MS–DRGs 276 and 277 (Cardiac Defibrillator Implant with MCC, and without MCC, respectively), and to reassign a subset of the procedures currently assigned to MS–DRGs 222 through 227 to proposed new MS–DRGs 275, 276, and 277.

As stated in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24409), we generally map new MS–DRGs onto the list when they are formed from procedures previously assigned to MS–DRGs that are already on the list. Currently, MS–DRGs 222 through 227 are on the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit as shown in the following table. A subset of the procedures currently assigned to MS–DRGs 222 through 227 is being proposed for assignment to proposed new MS–DRGs 275, 276, and 277. Therefore, we are proposing that if the applicable proposed MS–DRG changes are finalized, we also would add proposed new MS–DRGs 275, 276, and 277 to the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit and make conforming changes to delete MS–DRGs 222 through 227 from the list of MS–DRGs subject to the policy. We are also proposing to continue to include the existing MS–DRGs currently subject to the policy as displayed in the following table.

BILLING CODE 4120–01–P

MDC	MS-DRG	MS-DRG Title
Pre-MDC	001	Heart Transplant or Implant of Heart Assist System with MCC
Pre-MDC	002	Heart Transplant or Implant of Heart Assist System without MCC
01	023	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator
01	024	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC
01	025	Craniotomy and Endovascular Intracranial Procedures with MCC
01	026	Craniotomy and Endovascular Intracranial Procedures with CC
01	027	Craniotomy and Endovascular Intracranial Procedures without CC/MCC
01	040	Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC
01	041	Peripheral, Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator
01	042	Peripheral, Cranial Nerve and Other Nervous System Procedures without CC/MCC
03	140	Major Head and Neck Procedures with MCC
03	141	Major Head and Neck Procedures with CC
03	142	Major Head and Neck Procedures without CC/MCC
05	215	Other Heart Assist System Implant
05	216	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization with MCC
05	217	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization with CC
05	218	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization without CC/MCC
05	219	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization with MCC
05	220	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization with CC
05	221	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization without CC/MCC
05	222	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/Heart Failure/Shock with MCC
05	223	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/Heart Failure/Shock without MCC
05	224	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/Heart Failure/Shock with MCC
05	225	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/Heart Failure/Shock without MCC
05	226	Cardiac Defibrillator Implant without Cardiac Catheterization with MCC

MDC	MS-DRG	MS-DRG Title
05	227	Cardiac Defibrillator Implant without Cardiac Catheterization without MCC
05	242	Permanent Cardiac Pacemaker Implant with MCC
05	243	Permanent Cardiac Pacemaker Implant with CC
05	244	Permanent Cardiac Pacemaker Implant without CC/MCC
05	245	AICD Generator Procedures
05	258	Cardiac Pacemaker Device Replacement with MCC
05	259	Cardiac Pacemaker Device Replacement without MCC
05	260	Cardiac Pacemaker Revision Except Device Replacement with MCC
05	261	Cardiac Pacemaker Revision Except Device Replacement with CC
05	262	Cardiac Pacemaker Revision Except Device Replacement without CC/MCC
05	265	AICD Lead Procedures
05	266	Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC
05	267	Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC
05	268	Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC
05	269	Aortic and Heart Assist Procedures Except Pulsation Balloon without MCC
05	270	Other Major Cardiovascular Procedures with MCC
05	271	Other Major Cardiovascular Procedures with CC
05	272	Other Major Cardiovascular Procedures without CC/MCC
05	319	Other Endovascular Cardiac Valve Procedures with MCC
05	320	Other Endovascular Cardiac Valve Procedures without MCC
08	461	Bilateral or Multiple Major Joint Procedures of Lower Extremity with MCC
08	462	Bilateral or Multiple Major Joint Procedures of Lower Extremity without MCC
08	466	Revision of Hip or Knee Replacement with MCC
08	467	Revision of Hip or Knee Replacement with CC
08	468	Revision of Hip or Knee Replacement without CC/MCC
08	469	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity with MCC or Total Ankle Replacement
08	470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity without MCC
08	521	Hip Replacement with Principal Diagnosis of Hip Fracture with MCC
08	522	Hip Replacement with Principal Diagnosis of Hip Fracture without MCC

BILLING CODE 4120–01–C

The final list of MS–DRGs subject to the IPPS policy for replaced devices offered without cost or with a credit will be included in the FY 2024 IPPS/LTCH PPS final rule and also will be issued to providers in the form of a Change Request (CR).

D. Recalibration of the FY 2024 MS–DRG Relative Weights

1. Data Sources for Developing the Relative Weights

Consistent with our established policy, in developing the MS–DRG relative weights for FY 2024, we propose to use two data sources: claims data and cost report data. The claims data source is the MedPAR file, which includes fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2022 MedPAR data used in this proposed rule include discharges occurring on October 1, 2021, through September 30, 2022, based on bills received by CMS through December 31, 2022, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which at that time were under a waiver from the IPPS).

The FY 2022 MedPAR file used in calculating the relative weights includes data for approximately 6,959,895 Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR ''GHO Paid'' indicator field on the claim record is equal to ''1'' or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR ''Indirect Medical Education (IME)'' payment field, indicating that the claim was an ''IME only'' claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the December 2022 update of the FY 2022 MedPAR file complies with version 5010 of the X12 HIPAA Transaction and Code Set Standards, and includes a variable called ''claim type.'' Claim type ''60'' indicates that the claim was an inpatient claim paid as fee-for-service. Claim types ''61,'' ''62,'' ''63,'' and ''64'' relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the proposed relative weights for FY 2024 also excludes claims with claim type values not equal to ''60.'' The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. We note that the proposed FY 2024 relative weights are based on the ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes from the FY 2022 MedPAR claims data, grouped through the ICD–10 version of the proposed FY 2024 GROUPER (Version 41).

The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the HCRIS. In general, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year. Specifically, for this proposed rule, we used the December 2022 update of the FY 2021 HCRIS for calculating the FY 2024 cost-based relative weights. Consistent with our historical practice, for this FY 2024 proposed rule, we are providing the version of the HCRIS from which we calculated these 19 CCRs on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. Click on the link on the left side of the screen titled ''FY 2024 IPPS Proposed Rule Home Page'' or ''Acute Inpatient Files for Download.''

2. Methodology for Calculation of the Relative Weights

a. General

We calculated the proposed FY 2024 relative weights based on 19 CCRs. The methodology we are proposing to use to calculate the FY 2024 MS–DRG cost-based relative weights based on claims data in the FY 2022 MedPAR file and data from the FY 2021 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the proposed FY 2024 MS–DRG classifications discussed in sections II.B. and II.C. of the preamble of this proposed rule.
- The transplant cases that were used to establish the relative weights for heart and heart-lung, liver and/or intestinal, and lung transplants (MS–DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2022 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)
- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis.

Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.

Section 108 of the Further Consolidated Appropriations Act, 2020 provides that, for cost reporting periods beginning on or after October 1, 2020, costs related to hematopoietic stem cell acquisition for the purpose of an allogeneic hematopoietic stem cell transplant shall be paid on a reasonable cost basis. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule for further discussion of the reasonable cost basis payment for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842). For FY 2022 and subsequent years, we subtract the hematopoietic stem cell acquisition charges from the total charges on each transplant bill that showed hematopoietic stem cell acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.

- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than $30.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, implantable devices charges, supplies and equipment charges, therapy services charges, operating room charges, cardiology charges, laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood and blood products charges, anesthesia charges, cardiac catheterization charges, computed tomography (CT) scan charges, and magnetic resonance imaging (MRI) charges were also deleted.
- At least 92.7 percent of the providers in the MedPAR file had charges for 14 of the 19 cost centers. All claims of providers that did not have charges greater than zero for at least 14 of the 19 cost centers were deleted. In other words, a provider must have no more than five blank cost centers. If a provider did not have charges greater than zero in more than five cost centers, the claims for the provider were deleted.
- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS–DRG.
- Effective October 1, 2008, because hospital inpatient claims include a POA indicator field for each diagnosis

present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to ''Y'' for ''Yes'' for all claims that otherwise have an ''N'' (No) or a ''U'' (documentation insufficient to determine if the condition was present at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a ''Y'' indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS–DRG). If the particular condition is not present on admission (that is, an ''N'' indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPER assigns the claim to a lower severity (and, therefore, the lower weighted MS–DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Therefore, if the higher charges of these HAC claims are grouped into lower severity MS–DRGs prior to the relative weight-setting process, the relative weights of these particular MS–DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower severity MS–DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to ''Y'' only for relative weight-setting purposes for all claims that otherwise have an ''N'' or a ''U'' in the POA field. This resetting ''forced'' the more costly HAC claims into the higher severity MS–DRGs as appropriate, and the relative weights calculated for each MS–DRG more closely reflect the true costs of those cases.

In addition, in the FY 2013 IPPS/LTCH PPS final rule, for FY 2013 and subsequent fiscal years, we finalized a policy to treat hospitals that participate in the Bundled Payments for Care Improvement (BPCI) initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process without regard to hospitals' participation within these bundled payment models (77 FR 53341 through 53343). Specifically, because acute care hospitals participating in the BPCI initiative still receive IPPS payments under section 1886(d) of the Act, we include all applicable data from these subsection (d) hospitals in our IPPS payment modeling and ratesetting calculations as if the hospitals were not participating in those models under the BPCI initiative. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals participating in the BPCI initiative in our ratesetting process. For additional information on the BPCI initiative, we refer readers to the CMS' Center for Medicare and Medicaid Innovation's website at *https://innovation.cms.gov/initiatives/Bundled-Payments/index.html* and to section IV.H.4. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343).

The participation of hospitals in the BPCI initiative concluded on September 30, 2018. The participation of hospitals in the BPCI Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 1115A of the Act, is comprised of a single payment and risk track, which bundles payments for multiple services beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in BPCI Advanced in one of two capacities: as a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals will continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are Participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at *https://innovation.cms.gov/initiatives/bpci-advanced/*. Consistent with our policy for FY 2023, and consistent with how we have treated hospitals that participated in the BPCI Initiative, for FY 2024, we continue to believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because, as noted previously, these hospitals are still receiving IPPS payments under section 1886(d) of the Act. Consistent with the FY 2023 IPPS/LTCH PPS final rule, we are also proposing to include all applicable data from subsection (d) hospitals participating in the Comprehensive Care for Joint Replacement (CJR) Model in our IPPS payment modeling and ratesetting calculations. The charges for each of the 19 cost groups for each claim were standardized to remove the effects of differences in area wage levels, IME, and DSH payments, and for hospitals located in Alaska and Hawaii, the applicable cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS–DRG for each of the 19 cost groups so that each MS–DRG had 19 standardized charge totals. Statistical outliers were then removed. These charges were then adjusted to cost by applying the proposed national average CCRs developed from the FY 2021 cost report data.

The 19 cost centers that we used in the relative weight calculation are shown in a supplemental data file, Cost Center HCRIS Lines Supplemental Data File, posted via the internet on the CMS website for this proposed rule and available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. The supplemental data file shows the lines on the cost report and the corresponding revenue codes that we used to create the proposed19 national cost center CCRs. If we receive comments about the groupings in this supplemental data file, we may consider these comments as we finalize our policy.

Consistent with historical practice, we account for rare situations of non-monotonicity in a base MS–DRG and its severity levels, where the mean cost in the higher severity level is less than the mean cost in the lower severity level, in determining the relative weights for the different severity levels. If there are initially non-monotonic relative weights in the same base DRG and its severity levels, then we combine the cases that group to the specific non-monotonic MS–DRGs for purposes of relative weight calculations. For example, if there are two non-monotonic MS–DRGs, combining the cases across those two

MS–DRGs results in the same relative weight for both MS–DRGs. The relative weight calculated using the combined cases for those severity levels is monotonic, effectively removing any non-monotonicity with the base DRG and its severity levels. For this FY 2024 proposed rule, this calculation was applied to address non-monotonicity for cases that grouped to MS–DRG 016 and MS–DRG 017. In the supplemental file titled AOR/BOR File, we include statistics for the affected MS–DRGs both separately and with cases combined.

We are inviting public comments on our proposals related to recalibration of the proposed FY 2024 relative weights and the changes in relative weights from FY 2023.

b. Relative Weight Calculation for MS–DRG 018

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58451 through 58453), we created MS–DRG 018 for cases that include procedures describing Chimeric Antigen Receptor (CAR) T-cell therapies. We also finalized our proposal to modify our existing relative weight methodology to ensure that the relative weight for MS–DRG 018 appropriately reflects the relative resources required for providing CAR T-cell therapy outside of a clinical trial, while still accounting for the clinical trial cases in the overall average cost for all MS–DRGs (85 FR 58599 through 58600). Specifically, we stated that clinical trial claims that group to new MS–DRG 018 would not be included when calculating the average cost for MS–DRG 018 that is used to calculate the relative weight for this MS–DRG, so that the relative weight reflects the costs of the CAR T-cell therapy drug. We stated that we identified clinical trial claims as claims that contain ICD–10–CM diagnosis code Z00.6 or contain standardized drug charges of less than $373,000, which was the average sales price of KYMRIAH and YESCARTA, the two CAR T-cell biological products licensed to treat relapsed/refractory large B-cell lymphoma as of the time of the development of the FY 2021 final rule. In addition, we stated that (a) when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for new MS–DRG 018 to the extent such cases can be identified in the historical data, and (b) when there is expanded access use of immunotherapy, these cases will not be included when calculating the average cost for new MS–DRG 018 to the extent such cases can be identified in the historical data.

We also finalized our proposal to calculate an adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS–DRGs and for purposes of budget neutrality and outlier simulations. We calculate this adjustor by dividing the average cost for cases that we identify as clinical trial cases by the average cost for cases that we identify as non-clinical trial cases, with the additional refinements that (a) when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for cases not determined to be clinical trial cases to the extent such cases can be identified in the historical data, and (b) when there is expanded access use of immunotherapy, these cases will be included when calculating the average cost for cases determined to be clinical trial cases to the extent such cases can be identified in the historical data. We stated that to the best of our knowledge, there were no claims in the historical data used in the calculation of this adjustment for cases involving a clinical trial of a different product, and to the extent the historical data contain claims for cases involving expanded access use of immunotherapy we believe those claims would have drug charges less than $373,000.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58842), we also finalized an adjustment to the payment amount for applicable clinical trial and expanded access use immunotherapy cases that group to MS–DRG 018, and indicated that we would provide instructions for identifying these claims in separate guidance. Following the issuance of the FY 2021 IPPS/LTCH PPS final rule, we issued guidance [18] stating that providers may enter a Billing Note NTE02 ''Expand Acc Use'' on the electronic claim 837I or a remark ''Expand Acc Use'' on a paper claim to notify the Medicare administrative contractor (MAC) of expanded access use of CAR T-cell therapy. In this case, the MAC would add payer-only condition code ''ZB'' so that Pricer will apply the payment adjustment in calculating payment for the case. In cases when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the provider may enter a Billing Note NTE02 ''Diff Prod Clin Trial'' on the electronic claim 837I or a remark ''Diff Prod Clin Trial'' on a paper claim. In this case, the MAC would add payer-only condition code ''ZC'' so that the Pricer will not apply the payment adjustment in calculating payment for the case.

In the FY 2022 IPPS/LTCH PPS final rule, we revised MS–DRG 018 to include cases that report the procedure codes for CAR T-cell and non-CAR T-cell therapies and other immunotherapies (86 FR 44798 through 44806). We also finalized our proposal to continue to use the proxy of standardized drug charges of less than $373,000 (86 FR 44965) to identify clinical trial claims.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48894), we once again finalized our policy to use a proxy of standardized drug charges of less than $373,000. We also stated that we would continue to monitor the data with respect to the clinical trial threshold. As in prior years, we stated that we continue to believe to the best of our knowledge there were no claims in the historical data (FY 2021 MedPAR) used in the calculation of the adjustment for cases involving a clinical trial of a different product, and to the extent the historical data contain claims for cases involving expanded access use of immunotherapy we believe those claims would have drug charges less than $373,000. We also stated, in response to comments, that we agreed that the availability of condition code 90 obviates the need for the use of the remarks field to identify expanded access claims that group to MS–DRG 018 for the purposes of applying the clinical trial adjustment. We stated that effective October 1, 2022, providers should submit condition code 90 to identify expanded access claims that group to MS–DRG 018, rather than the remarks field, and that the MACs will no longer flag cases as expanded access claims based on information submitted in the remarks field for claims submitted on or after October 1, 2022 (87 FR 48896). We also noted that we were in the process of making modifications to the MedPAR files to include information for claims with the payer-only condition code ''ZC'' in the future, which is used by the IPPS Pricer to identify a case where the CAR T-cell, non-CAR T-cell, or other immunotherapy product is purchased in the usual manner, but the case involves a clinical trial of a different product so that the payment adjustment is not applied in calculating the payment for the case (87 FR 49080).

Following the issuance of the FY 2023 IPPS/LTCH PPS final rule, we issued

[18] *https://www.cms.gov/files/document/r10571cp.pdf.*

guidance [19] stating where there is expanded access use of immunotherapy, the provider may submit condition code ''90'' on the claim so that Pricer will apply the payment adjustment in calculating payment for the case. We stated that MACs would no longer append Condition Code 'ZB' to inpatient claims reporting Billing Note NTE02 ''Expand Acc Use'' on the electronic claim 837I or a remark ''Expand Acc Use'' on a paper claim, effective for claims for discharges that occur on or after October 1, 2022.

While we have applied a proxy of standardized drug charges of less than $373,000 to identify clinical trial claims and expanded access use cases under our special methodology for the calculation of the relative weight for MS–DRG 018 to date, we believe that because of changes that have occurred since CMS initially adopted this policy, it may no longer be necessary to apply this proxy to identify these claims. In the FY 2021 IPPS/LTCH PPS final rule, we stated that because ICD–10–CM diagnosis code Z00.6 is required to be included with clinical trial cases, we expect hospitals to include this code for such cases grouping to MS–DRG 018 for FY 2021 and all subsequent years, and we believe that providers have continued to gain experience with the use of ICD–10–CM diagnosis code Z00.6 to report cases involving a clinical trial of CAR T-cell therapy. This is supported by our observation that the percentage of claims reporting standardized drug charges of less than $373,000 that do not report ICD–10–CM code Z00.6 relative to all claims that group to MS–DRG 018 fell significantly from the FY 2019 data (used in the FY 2021 ratesetting) to the FY 2022 data (used in the FY 2024 ratesetting). For example, in the FY 2019 MedPAR data used for the FY 2021 IPPS/LTCH PPS final rule, cases that we identified as clinical trial cases (using our proxy of standardized drug charges of less than $373,000) that did not contain ICD–10–CM diagnosis code Z00.6 comprised 18% of all cases that grouped to MS–DRG 018. In the FY 2022 MedPAR data used for this FY 2024 IPPS/LTCH PPS proposed rule, cases that we identified as clinical trial cases using our proxy that did not contain ICD–10–CM diagnosis code Z00.6 comprised 4% of all cases that grouped to MS–DRG 018. In addition, prior to FY 2022, we were unable to identify cases in the MedPAR claims data that were provided as part of expanded access use in developing the relative weights. The December update of the FY 2022 MedPAR claims data now includes a field that identifies whether or not the claim includes expanded access use of immunotherapy. For the FY 2022 MedPAR claims data, this field identifies whether or not the claim includes condition code ZB. For the FY 2023 MedPAR data and for subsequent years, this field will identify whether or not the claim includes condition code 90. This allows us to exclude these claims, similar to our methodology for clinical trial cases, in the calculation of the relative weight for MS–DRG 018, without relying on a proxy. (We note that because the expanded access indicator was not available prior to the FY 2022 MedPAR, the comparison of cases identified using the proxy, as described previously, does not include the 10 cases in the FY 2022 MedPAR data with an expanded access indicator on the claim, as including these cases would mean we were not comparing the same group of cases). We further note that the MedPAR files now also include a variable that indicates whether the claim includes the payer-only condition code ''ZC'', which identifies a case involving the clinical trial of a different product where the CAR T-cell, non-CAR T-cell, or other immunotherapy product is purchased in the usual manner.

Therefore, in this FY 2024 IPPS/LTCH PPS proposed rule, we are proposing two changes to our methodology for identifying clinical trial claims and expanded access use claims in MS–DRG 018. First, we are proposing to exclude claims with the presence of condition code ''90'' (or, for FY 2024 ratesetting, which is based on the FY 2022 MedPAR data, the presence of condition code ''ZB'') and claims that contain ICD–10–CM diagnosis code Z00.6 without payer-only code ''ZC'' that group to MS–DRG 018 when calculating the average cost for MS–DRG 018. Second, for the reasons described previously, we are proposing to no longer use the proxy of standardized drug charges of less than $373,000 to identify clinical trial claims and expanded access use cases when calculating the average cost for MS–DRG 018. Accordingly, we are proposing that in calculating the relative weight for MS–DRG 018 for FY 2024, only those claims that group to MS–DRG 018 that (1) contain ICD–10–CM diagnosis code Z00.6 and do not include payer-only code ''ZC'' or (2) contain condition code ''ZB'' (or, for subsequent fiscal years, condition code ''90'') would be excluded from the calculation of the average cost for MS–DRG 018.

Consistent with this proposal, we are also proposing to modify our calculation of the adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS–DRGs:

- Calculate the average cost for cases assigned to MS–DRG 018 that either (a) contain ICD–10–CM diagnosis code Z00.6 and do not contain condition code ''ZC'' or (b) contain condition code 90 (or, for FY 2024 ratesetting, condition code ''ZB'').
- Calculate the average cost for all other cases assigned to MS–DRG 018.
- Calculate an adjustor by dividing the average cost calculated in step 1 by the average cost calculated in step 2.
- Apply the adjustor calculated in step 3 to the cases identified in step 1 as applicable clinical trial or expanded access use cases, then add this adjusted case count to the non-clinical trial case count prior to calculating the average cost across all MS–DRGs.

Applying this proposed methodology, based on the December 2022 update of the FY 2022 MedPAR file used for this proposed rule, we estimated that the average costs of cases assigned to MS–DRG 018 that are identified as clinical trial cases ($89,379) were 28 percent of the average costs of the cases assigned to MS–DRG 018 that are identified as non-clinical trial cases ($323,903). Accordingly, as we did for FY 2023, we are proposing to adjust the transfer-adjusted case count for MS–DRG 018 by applying the proposed adjustor of 0.28 to the applicable clinical trial and expanded access use immunotherapy cases, and to use this adjusted case count for MS–DRG 018 in calculating the national average cost per case, which is used in the calculation of the relative weights. Therefore, in calculating the national average cost per case for purposes of this proposed rule, each case identified as an applicable clinical trial or expanded access use immunotherapy case was adjusted by 0.28. As we did for FY 2023, we are applying this same adjustor for the applicable cases that group to MS–DRG 018 for purposes of budget neutrality and outlier simulations. We are also proposing to update the value of the adjustor based on more recent data for the final rule.

d. Cap for Relative Weight Reductions

In the FY 2023 IPPS/LTCH PPS final rule, we finalized a permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. We also finalized a budget neutrality adjustment to the standardized amount for all hospitals to ensure that application of the permanent 10-percent cap does not

[19] *https://www.cms.gov/files/document/r11727cp.pdf.*

result in an increase or decrease of estimated aggregate payments. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion of this policy. In the Addendum to this IPPS/LTCH PPS proposed rule, we present the proposed budget neutrality adjustment for reclassification and recalibration of the FY 2024 MS–DRG relative weights with application of this cap. We are also making available on the CMS website a supplemental file demonstrating the application of the permanent 10 percent cap for FY 2024. For a further discussion of the proposed budget neutrality adjustment for FY 2024, we refer readers to the Addendum of this proposed rule.

3. Development of Proposed National Average CCRs

We developed the proposed national average CCRs as follows:

Using the FY 2021 cost report data, we removed CAHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1 year (365 days). We included hospitals located in Maryland because we include their charges in our claims database. Then we created CCRs for each provider for each cost center (see the supplemental data file for line items used in the calculations) and removed any CCRs that were greater than 10 or less than 0.01. We normalized the departmental CCRs by dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. Then we took the logs of the normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the standard deviation for the log of that cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D–3 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D–3. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS–DRG in each of the 19 cost centers by the corresponding national average CCR, we summed the 19 ''costs'' across each MS–DRG to produce a total standardized cost for the MS–DRG. The average standardized cost for each MS–DRG was then computed as the total standardized cost for the MS–DRG divided by the transfer-adjusted case count for the MS–DRG. The average cost for each MS–DRG was then divided by the national average standardized cost per case to determine the proposed relative weight. We then applied the permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year; specifically for those MS–DRGs for which the relative weight otherwise would have declined by more than 10 percent from the FY 2023 relative weight, we set the proposed FY 2024 relative weight equal to 90 percent of the FY 2023 relative weight. The proposed relative weights for FY 2024 as set forth in Table 5 associated with this proposed rule and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* reflect the application of this cap.

The proposed 19 national average CCRs for FY 2024 are as follows:

BILLING CODE 4120–01–P

Group	CCR
Routine Days	0.415
Intensive Days	0.352
Drugs	0.184
Supplies & Equipment	0.305
Implantable Devices	0.278
Inhalation Therapy	0.155
Therapy Services	0.272
Anesthesia	0.075
Labor & Delivery	0.42
Operating Room	0.162
Cardiology	0.087
Cardiac Catheterization	0.103
Laboratory	0.104
Radiology	0.129
MRIs	0.068
CT Scans	0.034
Emergency Room	0.153
Blood and Blood Products	0.251
Other Services	0.344

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS–DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum

number of cases required to compute a reasonable weight. We are proposing to use that same case threshold in recalibrating the proposed MS–DRG relative weights for FY 2024. Using data from the FY 2022 MedPAR file, there were 7 MS–DRGs that contain fewer than 10 cases. For FY 2024, because we do not have sufficient MedPAR data to set accurate and stable cost relative weights for these low-volume MS–DRGs, we are proposing to compute relative weights for the low-volume MS–DRGs by adjusting their final FY 2023 relative weights by the percentage change in the average weight of the cases in other MS–DRGs from FY 2023 to FY 2024. The crosswalk table is as follows.

Low-Volume MS-DRG	MS-DRG Title	Crosswalk to MS-DRG
789	Neonates, Died or Transferred to Another Acute Care Facility	Final FY 2023 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate	Final FY 2023 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
791	Prematurity with Major Problems	Final FY 2023 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
792	Prematurity without Major Problems	Final FY 2023 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
793	Full-Term Neonate with Major Problems	Final FY 2023 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
794	Neonate with Other Significant Problems	Final FY 2023 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
795	Normal Newborn	Final FY 2023 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)

BILLING CODE 4120–01–C

E. Add-On Payments for New Services and Technologies for FY 2024

1. Background

Sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies (sometimes collectively referred to in this section as ''new technologies'') under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that a new medical service or technology may be considered for new technology add-on payment if, based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate. The regulations at 42 CFR 412.87 implement these provisions and § 412.87(b) specifies three criteria for a new medical service or technology to receive the additional payment: (1) The medical service or technology must be new; (2) the medical service or technology must be costly such that the DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. In addition, certain transformative new devices and antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway, as set forth in the regulations at § 412.87(c) and (d).

We note that section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services and technologies under the payment system established under that subsection, which establishes the system for paying for the operating costs of inpatient hospital services. The system of payment for capital costs is established under section 1886(g) of the Act. Therefore, as discussed in prior rulemaking (72 FR 47307 through 47308), we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs.

In this rule, we highlight some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria, as well as other information. For further discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51572 through 51574), the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42300), and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58736 through 58742).

a. New Technology Add-On Payment Criteria

(1) Newness Criterion

Under the first criterion, as reflected in § 412.87(b)(2), a specific medical service or technology will no longer be considered ''new'' for purposes of new medical service or technology add-on payments after CMS has recalibrated the MS–DRGs, based on available data, to

reflect the cost of the technology. We note that we do not consider a service or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a medical product receives a new FDA approval or clearance, it may not necessarily be considered ''new'' for purposes of new technology add-on payments if it is ''substantially similar'' to another medical product that was approved or cleared by FDA and has been on the market for more than 2 to 3 years. In the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43813 through 43814), we established criteria for evaluating whether a new technology is substantially similar to an existing technology, specifically whether: (1) a product uses the same or a similar mechanism of action to achieve a therapeutic outcome; (2) a product is assigned to the same or a different MS–DRG; and (3) the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population. If a technology meets all three of these criteria, it would be considered substantially similar to an existing technology and would not be considered ''new'' for purposes of new technology add-on payments. For a detailed discussion of the criteria for substantial similarity, we refer readers to the FY 2006 IPPS final rule (70 FR 47351 through 47352) and the FY 2010 IPPS/LTCH PPS final rule (74 FR 43813 through 43814).

(2) Cost Criterion

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for new medical services or technologies, the MS–DRG prospective payment rate otherwise applicable to discharges involving the new medical service or technology must be assessed for adequacy. Under the cost criterion, consistent with the formula specified in section 1886(d)(5)(K)(ii)(I) of the Act, to assess the adequacy of payment for a new technology paid under the applicable MS–DRG prospective payment rate, we evaluate whether the charges of the cases involving a new medical service or technology will exceed a threshold amount that is the lesser of 75% of the standardized amount (increased to reflect the difference between cost and charges) or 75% of one standard deviation beyond the geometric mean standardized charge for all cases in the MS–DRG to which the new medical service or technology is assigned (or the case-weighted average of all relevant MS–DRGs if the new medical service or technology occurs in many different MS–DRGs). The MS–DRG threshold amounts generally used in evaluating new technology add-on payment applications for FY 2024 are presented in a data file that is available, along with the other data files associated with the FY 2023 IPPS/LTCH PPS final rule and correction notification, on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*.

We note that, under the policy finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58603 through 58605), beginning with FY 2022, we use the proposed threshold values associated with the proposed rule for that fiscal year to evaluate the cost criterion for all applications for new technology add-on payments and previously approved technologies that may continue to receive new technology add-on payments, if those technologies would be assigned to a proposed new MS–DRG for that same fiscal year.

As finalized in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41275), beginning with FY 2020, we include the thresholds applicable to the next fiscal year (previously included in Table 10 of the annual IPPS/LTCH PPS proposed and final rules) in the data files associated with the prior fiscal year. Accordingly, the proposed thresholds for applications for new technology add-on payments for FY 2025 are presented in a data file that is available on the CMS website, along with the other data files associated with the FY 2024 proposed rule, by clicking on the FY 2024 IPPS Proposed Rule Home Page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*. We note that, for the reasons discussed in section I.F. of the preamble of this proposed rule, we are proposing to use the FY 2022 MedPAR claims data for FY 2024 ratesetting. Consistent with this proposal, for the FY 2025 proposed threshold values, we are proposing to use the FY 2022 claims data to set the proposed thresholds for applications for new technology add-on payments for FY 2025.

In the September 7, 2001 final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed that applicants should submit a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Specifically, applicants should submit a sample of sufficient size to enable us to undertake an initial validation and analysis of the data. We also discussed in the September 7, 2001 final rule (66 FR 46917) the issue of whether the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule at 45 CFR parts 160 and 164 applies to claims information that providers submit with applications for new medical service or technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for further information on this issue.

(3) Substantial Clinical Improvement Criterion

Under the third criterion at § 412.87(b)(1), a medical service or technology must represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42292), we prospectively codified in our regulations at § 412.87(b) the following aspects of how we evaluate substantial clinical improvement for purposes of new technology add-on payments under the IPPS:

- The totality of the circumstances is considered when making a determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries.
- A determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries means—

++ The new medical service or technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments;

++ The new medical service or technology offers the ability to diagnose a medical condition in a patient population where that medical condition is currently undetectable, or offers the ability to diagnose a medical condition earlier in a patient population than allowed by currently available methods, and there must also be evidence that use of the new medical service or technology to make a diagnosis affects the management of the patient;

++ The use of the new medical service or technology significantly improves clinical outcomes relative to services or technologies previously available as demonstrated by one or more of the following: a reduction in at least one clinically significant adverse event, including a reduction in mortality or a

clinically significant complication; a decreased rate of at least one subsequent diagnostic or therapeutic intervention; a decreased number of future hospitalizations or physician visits; a more rapid beneficial resolution of the disease process treatment including, but not limited to, a reduced length of stay or recovery time; an improvement in one or more activities of daily living; an improved quality of life; or, a demonstrated greater medication adherence or compliance; or

++ The totality of the circumstances otherwise demonstrates that the new medical service or technology substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.

• Evidence from the following published or unpublished information sources from within the United States or elsewhere may be sufficient to establish that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries: clinical trials, peer reviewed journal articles; study results; meta-analyses; consensus statements; white papers; patient surveys; case studies; reports; systematic literature reviews; letters from major healthcare associations; editorials and letters to the editor; and public comments. Other appropriate information sources may be considered.

• The medical condition diagnosed or treated by the new medical service or technology may have a low prevalence among Medicare beneficiaries.

• The new medical service or technology may represent an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of a subpopulation of patients with the medical condition diagnosed or treated by the new medical service or technology.

We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42292) for additional discussion of the evaluation of substantial clinical improvement for purposes of new technology add-on payments under the IPPS.

We note, consistent with the discussion in the FY 2003 IPPS final rule (67 FR 50015), that while FDA has regulatory responsibility for decisions related to marketing authorization (for example, approval, clearance, etc.), we do not rely upon FDA criteria in our evaluation of substantial clinical improvement for purposes of determining what services and technologies qualify for new technology add-on payments under Medicare. This criterion does not depend on the standard of safety and effectiveness on which FDA relies but on a demonstration of substantial clinical improvement in the Medicare population.

b. Alternative Inpatient New Technology Add-On Payment Pathway

Beginning with applications for FY 2021 new technology add-on payments, under the regulations at § 412.87(c), a medical device that is part of FDA's Breakthrough Devices Program may qualify for the new technology add-on payment under an alternative pathway. Additionally, under the regulations at § 412.87(d) for certain antimicrobial products, beginning with FY 2021, a drug that is designated by FDA as a Qualified Infectious Disease Product (QIDP), and, beginning with FY 2022, a drug that is approved by FDA under the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD), may also qualify for the new technology add-on payment under an alternative pathway. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy. We note that a technology is not required to have the specified FDA designation at the time the new technology add-on payment application is submitted. CMS reviews the application based on the information provided by the applicant only under the alternative pathway specified by the applicant at the time of application submission. However, to receive approval for the new technology add-on payment under that alternative pathway, the technology must have the applicable FDA designation and meet all other requirements in the regulations in § 412.87(c) and (d), as applicable.

(1) Alternative Pathway for Certain Transformative New Devices

For applications received for new technology add-on payments for FY 2021 and subsequent fiscal years, a medical device designated under FDA's Breakthrough Devices Program that has received FDA marketing authorization will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS, and will not need to meet the requirement under § 412.87(b)(1) that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway, a medical device that has received FDA marketing authorization (that is, has been approved or cleared by, or had a De Novo classification request granted by, FDA) as a Breakthrough Device, for the indication covered by the Breakthrough Device designation, will need to meet the requirements of § 412.87(c). We note that in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736), we clarified our policy that a new medical device under this alternative pathway must receive marketing authorization for the indication covered by the Breakthrough Devices Program designation. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736) for further discussion regarding this clarification.

(2) Alternative Pathway for Certain Antimicrobial Products

For applications received for new technology add-on payments for certain antimicrobial products, beginning with FY 2021, if a technology is designated by FDA as a QIDP and received FDA marketing authorization, and, beginning with FY 2022, if a drug is approved under FDA's LPAD pathway and used for the indication approved under the LPAD pathway, it will be considered not substantially similar to an existing technology for purposes of new technology add-on payments and will not need to meet the requirement that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway for QIDPs and LPADs, a medical product that has received FDA marketing authorization and is designated by FDA as a QIDP or approved under the LPAD pathway will need to meet the requirements of § 412.87(d). We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy.

We note that, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739), we clarified that a new medical product seeking approval for the new technology add-on payment under the alternative pathway for QIDPs must receive FDA marketing authorization for the indication covered by the QIDP designation. We also finalized our policy to expand our alternative new technology add-on payment pathway for certain antimicrobial products to include products approved under the LPAD pathway and used for the indication approved under the LPAD pathway.

c. Additional Payment for New Medical Service or Technology

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high costs involving eligible new medical services or technologies, while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. As noted previously, we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs (72 FR 47307 through 47308).

For discharges occurring before October 1, 2019, under § 412.88, if the costs of the discharge (determined by applying operating cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), CMS made an add-on payment equal to the lesser of: (1) 50% of the costs of the new medical service or technology; or (2) 50% of the amount by which the costs of the case exceed the standard DRG payment.

Beginning with discharges on or after October 1, 2019, for the reasons discussed in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300), we finalized an increase in the new technology add-on payment percentage, as reflected at § 412.88(a)(2)(ii). Specifically, for a new technology other than a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 65% of the costs of the new medical service or technology; or (2) 65% of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75% of the costs of the new medical service or technology; or (2) 75% of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product approved under FDA's LPAD pathway, beginning with discharges on or after October 1, 2020, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75% of the costs of the new medical service or technology; or (2) 75% of the amount by which the costs of the case exceed the standard DRG payment. As set forth in § 412.88(b)(2), unless the discharge qualifies for an outlier payment, the additional Medicare payment will be limited to the full MS–DRG payment plus 65% (or 75% for certain antimicrobial products (QIDPs and LPADs)) of the estimated costs of the new technology or medical service. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300) for further discussion on the increase in the new technology add-on payment beginning with discharges on or after October 1, 2019.

We note that, consistent with the prospective nature of the IPPS, we finalize the new technology add on payment amount for approved or conditionally approved technologies in the final rule for each fiscal year and do not make mid-year changes to new technology add-on payment amounts. Updated cost information may be submitted and included in rulemaking for the following fiscal year.

Section 503(d)(2) of Public Law 108–173 provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of Public Law 108–173, add-on payments for new medical services or technologies for FY 2005 and subsequent years have not been subjected to budget neutrality.

d. Evaluation of Eligibility Criteria for New Medical Service or Technology Applications

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulation at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We specified that all applicants for new technology add-on payments must have FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. In the FY 2021 IPPS/LTCH PPS final rule, to more precisely describe the various types of FDA approvals, clearances and classifications that we consider under our new technology add-on payment policy, we finalized a technical clarification to the regulation to indicate that new technologies must receive FDA marketing authorization (such as pre-market approval (PMA); 510(k) clearance; the granting of a De Novo classification request, or approval of a New Drug Application (NDA)) by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. Consistent with our longstanding policy, we consider FDA marketing authorization as representing that a product has received FDA approval or clearance when considering eligibility for the new technology add-on payment under § 412.87(e)(2) (85 FR 58742).

Additionally, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58739 through 58742), we finalized our proposal to provide conditional approval for new technology add-on payment for a technology for which an application is submitted under the alternative pathway for certain antimicrobial products at § 412.87(d) that does not receive FDA marketing authorization by the July 1 deadline specified in § 412.87(e)(2), provided that the technology otherwise meets the applicable add-on payment criteria. Under this policy, cases involving eligible antimicrobial products would begin receiving the new technology add-on payment sooner, effective for discharges the quarter after the date of FDA marketing authorization provided that the technology receives FDA marketing authorization by July 1 of the particular fiscal year for which the applicant applied for new technology add-on payments.

As discussed in more detail in section II.E.8. of the preamble of this proposed rule, beginning with the new technology add-on payment applications for FY 2025, we are proposing, for technologies that are not already FDA market authorized, to require applicants to have a complete and active FDA market authorization request at the time of new technology add-on payment application

submission, and to provide documentation of FDA acceptance or filing to CMS at the time of application submission. We are also proposing that, beginning with FY 2025 applications, in order to be eligible for consideration for the new technology add-on payment for the upcoming fiscal year, an applicant for new technology add-on payments must have received FDA approval or clearance by May 1 rather than July 1 of the year prior to the beginning of the fiscal year for which the application is being considered (except for an application that is submitted under the alternative pathway for certain antimicrobial products). Please refer to section II.E.8. of the preamble of this proposed rule for a full discussion of these proposals.

e. New Technology Liaisons

Many interested parties (including device/biologic/drug developers or manufacturers, industry consultants, others) engage CMS for coverage, coding, and payment questions or concerns. In order to streamline engagement by centralizing the different innovation pathways within CMS including new technology add-on payments, CMS has established a team of new technology liaisons that can serve as an initial resource for interested parties. This team is available to assist with all of the following:

- Help to point interested parties to or provide information and resources where possible regarding process, requirements, and timelines.
- Coordinate and facilitate opportunities for interested parties to engage with various CMS components.
- Serve as a primary point of contact for interested parties and provide updates on developments where possible or appropriate.

We received many questions from parties interested in pursuing new technology add-on payments who may not be entirely familiar with working with CMS. While we encourage interested parties to first review our resources available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech*, we know that there may be additional questions about the application process. Interested parties with further questions about Medicare's coverage, coding, and payment processes, and about how they can navigate these processes, whether for new technology add-on payments or otherwise, can contact the new technology liaison team at *MedicareInnovation@cms.hhs.gov*.

f. Application Information for New Medical Services or Technologies

Applicants for add-on payments for new medical services or technologies for FY 2025 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement (unless the application is under one of the alternative pathways as previously described), along with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. CMS will review the application based on the information provided by the applicant under the pathway specified by the applicant at the time of application submission. Complete application information, along with final deadlines for submitting a full application, will be posted as it becomes available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html*.

To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2025, once the application deadline has closed, CMS will post on its website a list of the applications submitted, along with a brief description of each technology as provided by the applicant.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48986 through 48990), we finalized our proposal to publicly post online new technology add-on payment applications, including the completed application forms, certain related materials, and any additional updated application information submitted subsequent to the initial application submission (except certain volume, cost and other information identified by the applicant as confidential), beginning with the application cycle for FY 2024, at the time the proposed rule is published. We also finalized that with the exception of information included in a confidential information section of the application, cost and volume information, and materials identified by the applicant as copyrighted and/or not otherwise releasable to the public, the contents of the application and related materials may be posted publicly, and that we will not post applications that are withdrawn prior to publication of the proposed rule. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule (87 FR 48986 through 48990) for further information regarding this policy.

We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the formal request for add-on payments for new medical services and technologies to CMS. The aforementioned burden is subject to the PRA and approved under OMB control number 0938–1347, and has an expiration date of November 30, 2023.

2. Public Input Before Publication of a Notice of Proposed Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of Public Law 108–173, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement. The process for evaluating new medical service and technology applications requires the Secretary to do all of the following:

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries.
- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending.
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement.
- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and technologies for FY 2024 prior to publication of the FY 2024 IPPS/LTCH PPS proposed rule, we published a notice in the **Federal Register** on October 3, 2022 (87 FR 59793), and held a virtual town hall meeting on December 14, 2022. In the announcement notice for the meeting, we stated that the opinions and presentations provided during the

meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for the FY 2024 new medical service and technology add-on payment applications before the publication of the FY 2024 IPPS/LTCH IPPS proposed rule.

Approximately 180 individuals registered to attend the virtual town hall meeting. We posted the recordings of the virtual town hall on the CMS web page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech*.

We considered each applicant's presentation made at the town hall meeting, as well as written comments received by the December 22, 2022 deadline, in our evaluation of the new technology add-on payment applications for FY 2024 in the development of this FY 2024 IPPS/LTCH PPS proposed rule. In response to the published notice and the December 14, 2022 New Technology Town Hall meeting, we received written comments regarding the applications for FY 2024 new technology add on payments. As explained earlier and in the **Federal Register** notice announcing the New Technology Town Hall meeting (87 FR 59793 through 59795), the purpose of the meeting was specifically to discuss the substantial clinical improvement criterion with regard to pending new technology add-on payment applications for FY 2024. Therefore, we are not summarizing any written comments in this proposed rule that are unrelated to the substantial clinical improvement criterion. In section II.E.6. of the preamble of this proposed rule, we are summarizing comments regarding individual applications, or, if applicable, indicating that there were no comments received in response to the New Technology Town Hall meeting notice or New Technology Town Hall meeting, at the end of each discussion of the individual applications.

3. ICD–10–PCS Section ''X'' Codes for Certain New Medical Services and Technologies

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49434), the ICD–10–PCS includes a new section containing the new Section ''X'' codes, which began being used with discharges occurring on or after October 1, 2015. Decisions regarding changes to ICD–10–PCS Section ''X'' codes will be handled in the same manner as the decisions for all of the other ICD–10–PCS code changes. That is, proposals to create, delete, or revise Section ''X'' codes under the ICD–10–PCS structure will be referred to the ICD–10 Coordination and Maintenance Committee. In addition, several of the new medical services and technologies that have been, or may be, approved for new technology add-on payments may now, and in the future, be assigned a Section ''X'' code within the structure of the ICD–10–PCS. We posted ICD–10–PCS Guidelines on the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10*, including guidelines for ICD–10–PCS Section ''X'' codes. We encourage providers to view the material provided on ICD–10–PCS Section ''X'' codes.

4. New COVID–19 Treatments Add-On Payment (NCTAP)

In response to the COVID–19 public health emergency (PHE), we established the New COVID–19 Treatments Add-on Payment (NCTAP) under the IPPS for COVID–19 cases that meet certain criteria (85 FR 71157 through 71158). We believe that as drugs and biological products are authorized for emergency use or approved by FDA for the treatment of COVID–19 in the inpatient setting, it is appropriate to increase the current IPPS payment amounts to mitigate any potential financial disincentives for hospitals to provide new COVID–19 treatments during the PHE. Therefore, effective for discharges occurring on or after November 2, 2020 and until the end of the PHE for COVID–19, we established the NCTAP to pay hospitals the lesser of (1) 65% of the operating outlier threshold for the claim or (2) 65% of the amount by which the costs of the case exceed the standard DRG payment, including the adjustment to the relative weight under section 3710 of the Coronavirus Aid, Relief, and Economic Security (CARES) Act, for certain cases that include the use of a drug or biological product currently authorized for emergency use or approved for treating COVID–19.

In the FY 2022 IPPS/LTCH PPS final rule, we finalized a change to our policy to extend NCTAP through the end of the FY in which the PHE ends for all eligible products in order to continue to mitigate potential financial disincentives for hospitals to provide these new treatments, and to minimize any potential payment disruption immediately following the end of the PHE. We also finalized that, for a drug or biological product eligible for NCTAP that is also approved for new technology add-on payments, we will reduce the NCTAP for an eligible case by the amount of any new technology add-on payments so that we do not create a financial disincentive between technologies eligible for both the new technology add-on payment and NCTAP compared to technologies eligible for NCTAP only (86 FR 45162). If the PHE ends in May of 2023, as planned by the Department of Health and Human Services (HHS),[20] [21] discharges involving eligible products would continue to be eligible for the NCTAP through September 30, 2023 (that is, through the end of FY 2023). The NCTAP will expire at the end of FY 2023 and no NCTAP would be made beginning in FY 2024 (that is, for discharges on or after October 1, 2023).

Further information about NCTAP, including updates and a list of currently eligible drugs and biologicals, is available on the CMS website at *https://www.cms.gov/medicare/covid-19/new-covid-19-treatments-add-payment-nctap*.

5. Proposed FY 2024 Status of Technologies Receiving New Technology Add-On Payments for FY 2023

In this section of the proposed rule, we discuss the proposed FY 2024 status of 24 technologies approved for FY 2023 new technology add-on payments, as set forth in the tables that follow. Specifically, we present our proposals to continue the new technology add-on payment for FY 2024 for those technologies that were approved for the new technology add-on payment for FY 2023 and which would still be considered ''new'' for purposes of new technology add-on payments for FY 2024. We also present our proposals to discontinue new technology add-on payments for FY 2024 for those technologies that were approved for the new technology add-on payment for FY 2023 and which would no longer be considered ''new'' for purposes of new technology add-on payments for FY 2024.

Additionally, we note that we conditionally approved DefenCath™ (a formulation of taurolidine/heparin) for FY 2023 new technology add-on payments under the alternative pathway for certain antimicrobial products, subject to the technology receiving FDA marketing authorization by July 1, 2023. As of the time of the development of this proposed rule, DefenCath™ has not yet received FDA approval. If DefenCath™ receives FDA marketing authorization before July 1, 2023, the new technology add-on payment for cases involving the use of this technology would be made effective for

[20] *https://www.hhs.gov/about/news/2023/02/09/letter-us-governors-hhs-secretary-xavier-becerra-renewing-covid-19-public-health-emergency.html.*

[21] *https://www.hhs.gov/about/news/2023/02/09/fact-sheet-covid-19-public-health-emergency-transition-roadmap.html.*

discharges beginning in the first quarter after FDA marketing authorization is granted. If FDA marketing authorization is received on or after July 1, 2023, no new technology add-on payments would be made for cases involving the use of DefenCath™ for FY 2023. If DefenCath™ receives FDA marketing authorization prior to July 1, 2023, we are proposing to continue making new technology add-on payments for DefenCath™ for FY 2024. If DefenCath™ does not receive FDA marketing authorization by July 1, 2023, then it would not be eligible for new technology add-on payments for FY 2023, and therefore would not be eligible for the continuation of new technology add-on payments for FY 2024. We note that the applicant for DefenCath™ also submitted an application for new technology add-on payments for FY 2024 under the name taurolidine/heparin, in the event that FDA market authorization is not received by July 1, 2023. We refer the reader to section II.E.7.b.(1). of the preamble of this proposed rule for discussion of the FY 2024 application for taurolidine/heparin.

Our policy is that a medical service or technology may continue to be considered ''new'' for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year. In general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the fiscal year (70 FR 47362).

Table II.P.–01 lists the technologies for which we are proposing to continue making new technology add-on payments for FY 2024 because they are still considered ''new'' for purposes of new technology add-on payments. This table also presents the newness start date, new technology add-on payment start date, 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, proposed maximum add-on payment amount, and coding assignments for each technology. We refer readers to the cited final rules in the following table for a complete discussion of the new technology add-on payment application, coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

We are inviting public comments on our proposals to continue new technology add-on payments for FY 2024 for the technologies listed in the following table.

BILLING CODE 4120–01–P

TABLE II.P.-01: PROPOSED CONTINUATION OF TECHNOLOGIES APPROVED FOR FY 2023 NEW TECHNOLOGY ADD-ON PAYMENTS STILL CONSIDERED NEW FOR FY 2024 BECAUSE 3-YEAR ANNIVERSARY DATE WILL OCCUR ON OR AFTER APRIL 1, 2024

	Technology	Newness Start Date	NTAP Start Date	3-year Anniversary Date of Entry onto U.S. Market	Previous Final Rule Citations	Proposed Maximum NTAP Amount for FY 2023	Coding Used to Identify Cases Eligible for NTAP

*As discussed in the following section, we are proposing to discontinue new technology add-on payments for COVID-19 Hemolung RAS cases.

Table II.P.–02 lists the technologies for which we are proposing to discontinue making new technology add-on payments for FY 2024 because they are no longer ''new'' for purposes of new technology add-on payments.

This table also presents the newness start date, new technology add-on payment start date, the 3-year anniversary date of the product's entry onto the U.S. market, and relevant final rule citations from prior fiscal years. We refer readers to the cited final rules in the following table for a complete discussion of the new technology add-on payment application, coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48939) and in previous rulemaking, the intent of section 1886(d)(5)(K) of the Act and regulations under § 412.87(b)(2) is to pay for new medical services and technologies for the first 2 to 3 years that a product comes on the market, during the period when the costs of the new technology are not yet fully reflected in the MS–DRG weights (69 FR 49002). While our policy is, generally, to begin the newness period on the date of FDA approval or clearance or, if later, the date of availability of the product on the U.S. market, as discussed in prior rulemaking (77 FR 53348), we have noted that data reflecting the costs of products that have received an emergency use authorization (EUA) could become available as soon as the date of the EUA issuance and prior to receiving FDA approval or clearance (86 FR 45159). With respect to the Hemolung RAS, which received an EUA on April 22, 2020, when used for patients with COVID–19, we discussed whether the newness period for the use of the Hemolung RAS for patients with COVID–19 should begin on the date of its EUA (April 22, 2020), when the product became available on the market for this indication. We described a public comment submitted by the applicant for Hemolung RAS which stated that the newness period for COVID–19 Hemolung RAS cases should begin on November 15, 2021 (the date of commercial availability of the De Novo classified device), instead of April 22, 2020 (the date of the Hemolung RAS EUA). The applicant indicated that it provided the Hemolung RAS to hospitals free or at cost to swiftly respond to the global pandemic, and that it did not profit from EUA therapies. The applicant stated that additionally, during the EUA period, hospitals were not seeking payment for Hemolung RAS therapy. The applicant stated that, therefore, cost data collected during the EUA period and prior to FDA clearance do not accurately reflect the added cost of Hemolung RAS therapy. In our response, we noted that, while the commenter stated that it provided the Hemolung RAS to hospitals free or at cost, and that hospitals were not seeking payment for the Hemolung RAS therapy during the EUA period, additional information regarding whether hospitals charged for use of the Hemolung RAS therapy between the date of its EUA and the date of commercial availability of the De Novo classified device, and how it impacts whether use of the technology may be reflected in the data, would be helpful in determining that data reflecting the cost of the product did not become available until the date of commercial availability of the De Novo classified device.

For this FY 2024 IPPS/LTCH PPS proposed rule, in the absence of additional information to support a conclusion that data reflecting the cost of the Hemolung RAS when used for patients with COVID–19 did not begin to become available as of the issuance of the EUA on April 22, 2020, we are proposing to discontinue new technology add-on payments for FY 2024 for Hemolung RAS patients with hypercapnic respiratory failure related to COVID–19, as the technology will no longer be considered new for this indication. As discussed in the FY 2023 IPPS/LTCH PPS final rule, we continue to welcome additional information regarding whether hospitals charged for use of the Hemolung RAS therapy between the date of its EUA and the date of commercial availability of the De Novo classified device, and how it impacts whether use of the technology may be reflected in the data. We further note, as set forth in Table II.P.–01 of this section, that we are proposing to continue the new technology add-on payment in FY 2024 for the use of the Hemolung RAS for patients with other causes of hypercapnic respiratory failure unrelated to COVID–19, for which we consider the beginning of the newness period to commence on the date of commercial availability of the De Novo classified device (November 15, 2021), as discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48939). In order to identify use of Hemolung RAS unrelated to COVID–19, we are proposing to identify cases eligible for new technology add-on payment with ICD–10–PCS code 5A0920Z without ICD–10–CM diagnosis code U07.1 (COVID–19).

We are inviting public comments on our proposals to discontinue new technology add-on payments for FY 2024 for the technologies listed in the Table II.P.–02.

TABLE II.P.-02: PROPOSED DISCONTINUATION OF TECHNOLOGIES APPROVED FOR FY 2023 NEW TECHNOLOGY ADD-ON PAYMENTS NO LONGER CONSIDERED NEW FOR FY 2024 BECAUSE 3-YEAR ANNIVERSARY DATE WILL OCCUR PRIOR TO APRIL 1, 2024

*See discussion in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48909 through 48914).

** As discussed in the FY 2023 IPPS/LTCH PPS final rule, because we determined that CARVYKTI™ is substantially similar to ABECMA®, we consider the beginning of the newness period for CARVYKTI™ to be March 26, 2021, which is the date that ABECMA® received FDA marketing authorization (87 FR 48925).

6. FY 2024 Applications for New Technology Add-On Payments (Traditional Pathway)

As discussed previously, in the FY 2023 IPPS/LTCH PPS final rule, we finalized our policy to publicly post online applications for new technology add-on payment beginning with FY 2024 applications (87 FR 48986 through 48990). As noted in the FY 2023 IPPS/LTCH PPS final rule, we are continuing to summarize each application in this proposed rule. However, while we are continuing to provide discussion of the concerns or issues we identified with respect to applications submitted under the traditional pathway, we are providing more succinct information as part of the summaries in the proposed and final rules regarding the applicant's assertions as to how the medical service or technology meets the newness, cost, and substantial clinical improvement criteria. We refer readers to *https://mearis.cms.gov/public/publications/ntap* for the publicly posted FY 2024 new technology add-on payment applications and supporting information (with the exception of certain cost and volume information, and information or materials identified by the applicant as confidential or copyrighted). In addition, we note that we are making available separate tables listing the ICD–10–CM codes, ICD–10–PCS codes, and/or MS–DRGs related to the analyses of the cost criterion for certain technologies for the FY 2024 new technology add-on payment applications in Table 10 associated with this proposed rule, available via the internet on the CMS website at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*. Click on the link on the left side of the screen titled ''FY 2024 IPPS Proposed Rule Home Page'' or ''Acute Inpatient—Files for Download''. Please see section VI of the Addendum for additional information regarding tables associated with the proposed rule.

We received 27 applications for new technology add-on payments for FY 2024 under the traditional new technology add-on payment pathway. In accordance with the regulations under § 412.87(e), applicants for FY 2024 new technology add-on payments must have received FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. Eight applicants withdrew their applications prior to the issuance of this proposed rule. We are addressing the remaining 19 applications.

a. CYTALUX® (Pafolacianine), First Indication

On Target Laboratories submitted an application for new technology add-on payments for CYTALUX® for use in ovarian cancer for FY 2024. The applicant stated that CYTALUX® is the first targeted intraoperative molecular imaging agent that illuminates ovarian cancer in real time, enabling the detection of more cancer for resection. CYTALUX® is an optical imaging agent comprised of a folic acid analog conjugated with a fluorescent dye which binds to folate receptor positive cancer cells and illuminates malignant lesions during surgery. Per the applicant, CYTALUX® is used in adult patients with ovarian cancer as an adjunct for intraoperative identification of malignant lesions. CYTALUX® is to be used with a near-infrared imaging system (NIR) cleared by the FDA for specific use with CYTALUX®. We note that On Target Laboratories also submitted a second application for new technology add-on payments for CYTALUX® for FY 2024 for use in lung cancer, as discussed separately in this section.

Please refer to the online application posting for CYTALUX®, available at *https://mearis.cms.gov/public/publications/ntap/NTP221017X8NAN*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, the applicant stated that a new drug application (NDA) for CYTALUX® was approved by FDA on November 29, 2021, as an optical imaging agent indicated in adult patients with ovarian cancer as an adjunct for intraoperative identification of malignant lesions. According to the applicant, CYTALUX® had market availability delayed until April 15, 2022, due to supply/product availability. The recommended dose of CYTALUX® is a single intravenous infusion of 0.025 mg/kg diluted in 250 mL of 5% Dextrose Injection, administered prior to surgery over 60 minutes using a dedicated infusion line.

According to the applicant, there are currently no ICD–10–PCS procedure codes to distinctly identify CYTALUX®. The applicant submitted a request for approval for a unique ICD–10–PCS procedure code for CYTALUX® beginning in FY 2024. The applicant provided a list of diagnosis codes that may be used to currently identify this indication for CYTALUX®, and differentiate it from the lung cancer indication, under the ICD–10–CM coding system. Please refer to the online application posting for the complete list of ICD–10–CM codes provided by the applicant.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant believes that CYTALUX® is not substantially similar to other currently available technologies because there are no other optical imaging agents with the same active ingredient, nor the same mechanism of action for the same indication of ovarian cancer, and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for CYTALUX® for the applicant's complete statements in support of its assertion that CYTALUX® is not substantially similar to other currently available technologies.

Substantial Similarity Criteria	Applicant Response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	There are no existing drugs/biologicals that are used as an adjunct for intraoperative identification of malignant lesions in adults with ovarian cancer other than CYTALUX®. Furthermore, there is no other drug marketed under the same active ingredient category or generic name, nor which have the same mechanism of action to target the folate receptor to illuminate cancerous lesions.
Is the technology assigned to the same MS-DRG as existing technologies?	No	There are no existing drugs/biologicals that are used as an adjunct for intraoperative identification of malignant lesions in adult ovarian cancer other than CYTALUX®. Furthermore, there is no other drug marketed under the same active ingredient category or generic name.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	There are no existing drugs/biologicals that are used as an adjunct for intraoperative identification of malignant lesions in adults with ovarian cancer other than CYTALUX®. Furthermore, there is no other drug marketed under the same active ingredient category or generic name.

We are inviting public comments on whether CYTALUX® is substantially similar to existing technologies and whether CYTALUX® meets the newness criterion.

With respect to the cost criterion, to identify potential cases representing patients who may be eligible for CYTALUX®, the applicant searched the FY 2021 Inpatient Standard Analytic File (IPSAF) for cases reporting a combination of ICD–10–CM/PCS codes for ovarian cancer that may require an adjunct for intraoperative identification of malignant lesions. Using the inclusion/exclusion criteria described in the following table, the applicant identified 3,281 claims mapping to five MS–DRGs. The applicant noted that it limited its search to these five MS–DRGs as 99% of cases map to these MS–DRGs. Please see Table 10.8.A.—CYTALUX® (ovarian) Codes—FY 2024 associated with this proposed rule for the complete list of codes that the applicant indicated were included in its cost analysis. The applicant followed the order of operations described in the following table and calculated a final inflated average case-weighted standardized charge per case of $133,657, which exceeded the average case-weighted threshold amount of $93,649. Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that CYTALUX® meets the cost criterion.

CYTALUX® COST ANALYSIS	
Data Source and Time Period	FY 2021 Inpatient Standard Analytic Files
List of ICD-10-CM codes	Please see Table 10.8.A. – CYTALUX® (ovarian) Codes – FY 2024 associated with this proposed rule for the complete list of ICD-10-CM codes included in the cost analysis.
List of ICD-10-PCS codes	Please see Table 10.8.A. – CYTALUX® (ovarian) Codes – FY 2024 associated with this proposed rule for the complete list of ICD-10-PCS codes included in the cost analysis.
List of MS-DRGs	736 (Uterine and Adnexa Procedures for Ovarian or Adnexal Malignancy with MCC) 737 (Uterine and Adnexa Procedures for Ovarian or Adnexal Malignancy with CC) 738 (Uterine and Adnexa Procedures for Ovarian or Adnexal Malignancy without CC/MCC) 739 (Uterine, Adnexa Procedures for Non-Ovarian and Non-Adnexal Malignancy with MCC) 740 (Uterine, Adnexa Procedures for Non-Ovarian and Non-Adnexal Malignancy with CC)
Inclusion/exclusion criteria	The applicant searched for cases reporting a combination of ICD-10-CM/PCS codes for ovarian cancer that may require an adjunct for intraoperative identification of malignant lesions as listed in Table 10.8.A. – CYTALUX® (ovarian) Codes – FY 2024 associated with this proposed rule that mapped to MS-DRG 736-740. The applicant limited its search to these five MS-DRGs as 99% of cases map to these MS-DRGs. The applicant calculated the average unstandardized charge per case for each MS-DRG. Hospitals with less than 11 admissions had their volume data hidden.
Charges removed for prior technology	Per the applicant, CYTALUX® does not completely replace any current technology so no direct or indirect charges were removed.
Standardized charges	The applicant used the standardization formula provided in Technical Appendix A of the FY 2024 application. The applicant used all relevant values reported in the impact file and the standardization file posted with the FY 2023 IPPS/LTCH PPS final rule. Hospitals were removed from this calculation if they were not present within the FY 2023 Standardizing File provided by CMS.
Inflation factor	The applicant applied an inflation factor of 20.47% to the standardized charges, which is based on the inflation factor used to calculate outlier threshold charges in the FY 2023 IPPS/LTCH PPS final rule.
Charges added for the new technology	CYTALUX® is supplied as a single dose vial for IV administration and one vial is used per patient. The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.184 for drugs from the FY 2023 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.

We are inviting public comments on whether CYTALUX® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that CYTALUX® represents a substantial clinical improvement over existing technologies because CYTALUX® enables the surgeon to identify cancer intraoperatively in real time that otherwise would have been missed, enabling the surgeon to achieve more complete resection in cytoreductive surgery for ovarian cancer. Per the applicant, the results of the Phase 3 study confirm that CYTALUX® serves as an adjunct to the surgeon, helping them to identify additional cancer which otherwise would not have been identified, enabling the surgeon to achieve more complete resection, which is the goal of cytoreductive surgery. The applicant provided two studies to support these claims as well as eleven background articles. The background articles included studies to demonstrate the importance of removing all residual disease (lesions) to improve patients' survival; studies that showed that lesions can be diffuse and numerous, of various sizes, and often not readily visible in the surgical field; a study that showed, when CYTALUX® was used in a murine tumor model and in early clinical studies, that it enabled identifying occult tumor nodules and showed potential to eliminate positive tumor margins; a study demonstrating that the folate receptor was expressed in most ovarian cancers; and a study and a review supporting the use of fluorescence in real-time to improve cancer surgery.[22] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for CYTALUX® for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

[22] Background articles are not included in the following table but can be accessed via the online posting for the technology.

Substantial Clinical Improvement Assertion #1: This technology significantly improves clinical outcomes relative to services or technologies previously available.		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Outcome(s) or findings cited by the applicant from supporting evidence to support its statements**
CYTALUX® SCI supportive ovarian cancer data: The goal of cytoreductive surgery for ovarian cancer is to safely remove all cancer, to minimize recurrence, and improve survival rates	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.	
CYTALUX® SCI supportive ovarian cancer data: Optimal or complete cytoreduction relies on accurate detection and successful surgical resection of all lesions.	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.	
CYTALUX® aided the surgeon by identifying additional cancer intraoperatively, in real time, enabling the surgeon to achieve a more complete resection in cytoreductive surgery for ovarian cancer.	Tanyi JL, Randall LM, Chambers SK, Butler KA, Winer IS, Langstraat CL, Han ES, Vahrmeijer AL, Chon HS, Morgan MA, Powell MA, Tseng JH, Lopez A, Wenham RM. A Randomized Phase 3 Study of Pafolacianine Injection (OTL38) for Intraoperative Imaging of Folate Receptor Positive Ovarian Cancer. J Clin Oncol. 2022. doi:10.1200/JCO.22.00291. Brief study description: A phase III, randomized, multicenter, single dose, open-label study to examine the use of pafolacianine injection as a tool for real-time detection of folate receptor-positive ovarian cancer.	In 33.0% of patients (95% CI, 24.3 to 42.7; P < .001), pafolacianine with near-infrared imaging identified additional cancer on tissue not planned for resection and not detected by white light assessment and palpation, exceeding the prespecified threshold of 10%. Pafolacianine, to the authors' knowledge, is the first of a new class of intraoperative fluorescent imaging agents to improve detection of malignant lesions during surgery. The accumulation of evidence through the clinical development supports the introduction of targeted fluorescent imaging into the surgical theater to enhance completeness of surgical resection with the goal of improving survival.
CYTALUX® SCI supportive ovarian cancer data: Targeted fluorescent imaging agents have potential to enable surgeons to identify malignant lesions intraoperatively	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.	
During interval debulking surgery after chemotherapy, CYTALUX® aided the surgeon by identifying additional cancer intraoperatively, in real time, enabling the surgeon to achieve more complete resection.	Randall LM, Wenham RM, Low PS, Dowdy SC, Tanyi JL. A phase II, multicenter, open-label trial of OTL38 injection for the intra-operative imaging of folate receptor-alpha positive ovarian cancer. Gynecol Oncol. 2019 Oct;155(1):63-68. doi: 10.1016/j.ygyno.2019.07.010. Epub 2019 Jul 27. PMID: 31362825. Brief study description: A phase II, multicenter, open-label trial of OTL38 (a folate-indole-cyanine green-like conjugate to folate receptor alpha (FRa)) injection to assess the safety and efficacy (sensitivity and positive predictive value (PPV)) of OTL38 for intraoperative imaging during epithelial ovarian cancer surgery.	The proportion of women receiving neoadjuvant chemotherapy (NACT) prior to surgery has significantly increased from 8.6% to 22.6% between the years of 2004 and 2013 ($p < 0.001$), and adoption of this treatment modality occurred primarily after 2007 (95%CI 2006–2009; $p = 0.001$).
	Tanyi JL, Randall LM, Chambers SK, Butler KA, Winer IS, Langstraat CL, Han ES, Vahrmeijer AL, Chon HS, Morgan MA, Powell MA, Tseng JH, Lopez A, Wenham RM. A Randomized Phase 3 Study of Pafolacianine Injection (OTL38) for Intraoperative Imaging of Folate Receptor Positive Ovarian Cancer. J Clin Oncol. 2022. doi:10.1200/JCO.22.00291. See prior study description	Among patients who underwent interval debulking surgery, the rate was 39.7% (95% CI, 27.0 to 53.4; P < .001). Pafolacianine, to the authors' knowledge, is the first of a new class of intraoperative fluorescent imaging agents for improving detection of malignant lesions during surgery. The accumulation of evidence through the clinical development supports the introduction of targeted fluorescent imaging into the surgical theater to enhance completeness of surgical resection with the goal of improving survival.

After review of the information provided by the applicant, we have the following concerns regarding whether CYTALUX® meets the substantial clinical improvement criterion. We note that CYTALUX® showed a false

positive rate of 24.8% that led to resections in the Phase 3, randomized, multicenter, single dose, open-label study of this technology.[23] While the applicant submitted a separate comment stating there was no worsening in the safety profile for patients with false positive results, we continue to question the impact on patient outcomes when taking additional tissues that were false positives. In addition, while the applicant provided background citations to support the assertion that optimal or improved cytoreduction of tumor results in improved survival in ovarian adenocarcinoma, the Phase 3 study of CYTALUX® appears to have been designed to assess the efficacy of the technology rather than clinical outcomes such as survival, recurrence, or rate of additional procedures. We would be interested in additional or longer-term data demonstrating that CYTALUX® results in improved outcomes such as improved survival or a reduced rate of recurrence to support an assessment of whether CYTALUX® represents a substantial clinical improvement.

We are inviting public comments on whether CYTALUX® meets the substantial clinical improvement criterion.

In this section, we summarize and respond to written public comments received in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for CYTALUX®.

Comment: In response to a question regarding the impact of taking additional tissues that were false positive on patient outcomes, the applicant provided evidence based on results for the 27 patients in the full analysis set (FAS) from the central laboratory, for whom all NIR fluorescent lesions were false positive. The significant adverse event (SAE) rate (two of the 27 patients [7.4%]) and the severe AE rate (four of the 27 patients [14.8%]) demonstrated that there was no worsening in the safety profile for this false positive group, in comparison to the overall rates for this study (see the following table).

Additional Analysis - Serious Adverse Event and Severe Adverse Event Rates by Subgroup

N (%)	Safety Analysis Set (N=150)	Primary Endpoint Subset (N=36)	True Positive and False Positive Subset (N=57)	Secondary Endpoint FPRα (N=27)	Ovarian Cancer Surgery
SAEs	22/150 (14.7%)	4/36 (11.1%)	6/57 (10.5%)	2/27 (7.4%)	Intra-operative [a]: 8.5% - 18.9% Post-operative 10.9% - 38.7%
Severe AEs	29/150 (19.3%)	6/36 (16.7%)	9/57 (15.8%)	4/27 (14.8%)	22.3% [b]

Abbreviations: AE=adverse event; FPRp=False Positive Rate at the patient level; SAE=serious adverse event.
a The range was for standard to extended surgeries.
b Given for primary debulking.

Response: We thank the applicant for its comments and will take this information into consideration when deciding whether to approve new technology add-on payments for CYTALUX®.

Comment: In response to a question regarding how many patients in the study had a complete resection without CYTALUX®, the applicant stated that if subjects did not receive CYTALUX®, they were not in the clinical study, and no data was collected for these subjects. The applicant asserted that in a post-procedural questionnaire in the CYTALUX® Phase 3 study for ovarian cancer, investigators self-reported achieving complete R0 (no gross residual disease) resection in 62.4% (68 of 109) of patients. The applicant added that the post-procedural questionnaire was only completed for those procedures in which the patient was randomized to receive NIR imaging with CYTALUX®. The applicant presented that, in the literature, data for achieving R0 (no visible disease after surgery) is subjective given that surgeons self-report results. The literature suggests achievement of R1 (<1cm residual disease) is between 17–65%. The high recurrence rate of 70% of women diagnosed with ovarian cancer suggests the percentage of ovarian cancer surgeries where R0 is achieved is likely over-estimated. The applicant stated that in the Phase 3 study conducted for ovarian cancer, 36/109 (33%) of subjects with folate receptor positive ovarian cancer had one or more cancerous lesions found with CYTALUX® that were not identified by standard white light and palpation on tissue that was not planned for resection; therefore, this data indicates R0 would not have been achieved in any of these patients without the use of CYTALUX®.

Response: We thank the applicant for its comments. We would appreciate if the applicant could provide references for the cited literature regarding the achievement of R1 (<1cm residual disease) in the comment. We will take this information into consideration when deciding whether to approve new technology add-on payments for CYTALUX®.

b. CYTALUX® (Pafolacianine), Second Indication

On Target Laboratories submitted an application for new technology add-on payments for CYTALUX® for use in lung cancer for FY 2024. The applicant stated that CYTALUX® is the first targeted intraoperative molecular imaging agent that illuminates lung cancer in real time, enabling the detection of more cancer for resection. CYTALUX® is an optical imaging agent comprised of a folic acid analog conjugated with a fluorescent dye which binds to folate receptor positive cancer cells and illuminates malignant lesions during surgery. Per the applicant, CYTALUX® is used in adult patients with known or suspected cancer in the lung as an adjunct for intraoperative identification of pulmonary lesions.

[23] Tanyi JL, Randall LM, Chambers SK, Butler KA, Winer IS, Langstraat CL, Han ES, Vahrmeijer AL, Chon HS, Morgan MA, Powell MA, Tseng JH, Lopez A, Wenham RM. A Randomized Phase 3 Study of Pafolacianine Injection (OTL38) for Intraoperative Imaging of Folate Receptor Positive Ovarian Cancer. J Clin Oncol. 2022. doi:10.1200/JCO.22.00291.

CYTALUX® is to be used with a near-infrared imaging system (NIR) cleared by the FDA for specific use with CYTALUX®. CYTALUX® is used by surgeons to illuminate cancer in real time during surgery. We note that On Target Laboratories also submitted a separate application for new technology add-on payments for CYTALUX® for FY 2024 for use in ovarian cancer, as discussed previously in this section.

Please refer to the online application posting for CYTALUX®, available at *https://mearis.cms.gov/public/publications/ntap/NTP221017ED6BY*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, the applicant stated that CYTALUX® has received FDA approval in a supplemental new drug application (sNDA), effective December 16, 2022, to include an additional indication for lung cancer, following approval of the original NDA for use in ovarian cancer. CYTALUX® is indicated as an adjunct for intraoperative identification of malignant and non-malignant pulmonary lesions in adult patients with known or suspected cancer in the lung. According to the applicant, CYTALUX® will have market availability delayed until approximately middle of 2023 due to supply/product availability. The recommended dose of CYTALUX® is a single intravenous infusion of 0.025 mg/kg diluted in 250 mL of 5% Dextrose Injection, administered prior to surgery over 60 minutes using a dedicated infusion line. We note that, as discussed previously, the applicant stated that CYTALUX® for ovarian cancer became commercially available on April 15, 2022. We are interested in additional information regarding whether the versions or formulations for CYTALUX® for use in lung cancer and ovarian cancer are different, or further explanation regarding the longer delay for the market availability for CYTALUX® for lung cancer.

According to the applicant, there are currently no ICD–10–PCS procedure codes to distinctly identify CYTALUX®. The applicant submitted a request for approval for a unique ICD–10–PCS procedure code for CYTALUX® beginning in FY 2024. The applicant provided a list of diagnosis codes that may be used to currently identify this indication for CYTALUX®, and differentiate it from the ovarian cancer indication, under the ICD–10–CM coding system. Please refer to the online application posting for the complete list of ICD–10–CM codes provided by the applicant.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant believes that CYTALUX® is not substantially similar to other currently available technologies because there are no other optical imaging agents with the same active ingredient, nor same mechanism of action, for the same indication, and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for CYTALUX® for the applicant's complete statements in support of its assertion that CYTALUX® is not substantially similar to other currently available technologies.

Substantial Similarity Criteria	Applicant Response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	There are no existing drugs/biologicals that are used as an adjunct for intraoperative identification of malignant lesions in adults with lung cancer other than CYTALUX®. Furthermore, there is no other drug marketed under the same active ingredient category or generic name, nor which have the same mechanism of action to target the folate receptor to illuminate cancerous lesions.
Is the technology assigned to the same MS-DRG as existing technologies?	No	There are no existing drugs/biologicals that are used as an adjunct for intraoperative identification of malignant lesions in adult lung cancer other than CYTALUX®. Furthermore, there is no other drug marketed under the same active ingredient category or generic name.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	There are no existing drugs/biologicals that are used as an adjunct for intraoperative identification of malignant lesions in adults with lung cancer other than CYTALUX®. Furthermore, there is no other drug marketed under the same active ingredient category or generic name.

We are inviting public comments on whether CYTALUX® is substantially similar to existing technologies and whether CYTALUX® meets the newness criterion.

With respect to the cost criterion, to identify potential cases representing patients who may be eligible for CYTALUX®, the applicant searched the FY 2021 Inpatient Standard Analytic File (SAF) for cases reporting a combination of ICD–10–CM/PCS codes for malignant or suspected lung lesions. Using the inclusion/exclusion criteria described in the following table, the applicant identified 15,033 claims mapping to three MS–DRGs. The applicant noted that it limited its search to these three MS–DRGs as 99% of cases map to these MS–DRGs. Please see Table 10.9.A.—CYTALUX® (lung) Codes—FY 2024 associated with this proposed rule for the complete list of codes that the applicant included in its cost analysis. The applicant followed the order of operations described in the following table and calculated a final inflated average case-weighted standardized charge per case of $122,700, which exceeded the average case-weighted threshold amount of $101,584. Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that CYTALUX® meets the cost criterion.

CYTALUX® COST ANALYSIS	
Data Source and Time Period	FY 2021 Inpatient Standard Analytic Files
List of ICD-10-CM codes	Please see Table 10.9.A. – CYTALUX® (lung) Codes – FY 2024 associated with this proposed rule for the complete list of ICD-10-CM codes included in the cost analysis.
List of ICD-10-PCS codes	Please see Table 10.9.A. – CYTALUX® (lung) Codes – FY 2024 associated with this proposed rule for the complete list of ICD-10-PCS codes included in the cost analysis.
List of MS-DRGs	163 (Major Chest Procedures with MCC) 164 (Major Chest Procedures with CC) 165 (Major Chest Procedures without CC MCC)
Inclusion/exclusion criteria	The applicant searched for cases reporting a combination of ICD-10-CM/PCS codes for malignant or suspected lung lesions as listed in Table 10.9.A. – CYTALUX® (lung) Codes – FY 2024 associated with this proposed rule that mapped to MS-DRG 163-165. The applicant limited its search to these three MS-DRGs as 99% of cases map to these MS-DRGs. The applicant calculated the average unstandardized charge per case for each MS-DRG. Hospitals with less than 11 admissions had their volume data hidden.
Charges removed for prior technology	Per the applicant, CYTALUX® does not replace any current technology so no direct or indirect charges were removed.
Standardized charges	The applicant used the standardization formula provided in Technical Appendix A of the FY 2024 application. The applicant used all relevant values reported in the impact file and the standardization file posted with the FY 2023 IPPS/LTCH PPS final rule. Hospitals were removed from this calculation if they were not present within the FY 2023 Standardizing File provided by CMS.
Inflation factor	The applicant applied an inflation factor of 20.47% to the standardized charges, which is based on the inflation factor used to calculate outlier threshold charges in the FY 2023 IPPS/LTCH PPS final rule.
Charges added for the new technology	CYTALUX® is supplied as a single dose vial for IV administration and one vial is used per patient. The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.184 for drugs from the FY 2023 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.

We are inviting public comments on whether CYTALUX® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that CYTALUX® represents a substantial clinical improvement over existing technologies because CYTALUX® enables the surgeon to visualize cancer intraoperatively, in real time, that otherwise may have gone undetected. Per the applicant, the use of the CYTALUX® during pulmonary resection for lung cancer represents a significant potential advancement over current standards of surgery by enhancing the intraoperative localization of pulmonary nodules, improving the ability to remove them with clean margins, and reducing the probability of leaving otherwise undetected malignant synchronous lesions behind. The applicant provided six studies to support these claims and nine background articles. The background articles included studies about the importance of complete cancer tissue resection to overall survival, the limitations of thoracoscopic surgery by localizing the exact location of a pulmonary nodule for resection, the low 5-year survival for lung cancer patients, and the high rates of local recurrence after lung cancer surgery; one study demonstrating that contrasted chest computed tomography (CT) scan is not sufficient to identify pulmonary nodules that need resection; one study supporting the need for cleaner margins during resection to reduce local recurrence of lung cancer; one study supporting the use of the folate receptor as an appropriate tumor specific marker; one study indicating that folate-targeted agents may have a place in cancer treatment before, as well as, after chemotherapy; and a study showing that the folate receptor is expressed in the majority of lung cancers and that CYTALUX® targets and binds to folate receptors and thus the mechanism of action is a viable target for lung cancer.[24] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for CYTALUX® for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

[24] Background articles are not included in the following table but can be accessed via the online posting for the technology.

Substantial Clinical Improvement Assertion #1: This technology significantly improves clinical outcomes relative to services or technologies previously available.		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Outcome(s) or findings cited by the applicant from supporting evidence to support its statements**
In 29% of subjects, CYTALUX® impacted the overall scope of the surgical procedure.	Singhal S, Martin L, Rice D, Blackmon S, Murthy S, Gangadharan S, Reddy R, Sarkaria I. Randomized, Multi Center Phase 3 Trial of Pafolacianine during Intraoperative Molecular Imaging of Cancer in the Lung: Results of the ELUCIDATE Trial. AATS 102nd Annual Meeting. Boston MA. May 2022. Brief study description: A prospective study with 112 patients to evaluate the efficacy and safety of CYTALUX®.	The investigators indicated a change in scope in the surgical procedure based on IMI with pafolacianine for 29% (22% increase, 7% decrease) of the patients. In the group randomized to IMI pafolacianine, there were 8/78 (10%) NSCLC patients whose stage was changed due to the CSE. Study CSEs were counted as: IMI with pafolacianine (i) localized the index lung nodule that could not be located by white light, (ii) identified a synchronous malignant lesion, or (iii) identified a close surgical margin (<= 10mm).
CYTALUX® SCI supportive lung cancer data: High rates of recurrence/poor survival in part due to incomplete resection of disease	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.	
Clinically Significant Events (CSE) occurred in 54% of patients with the use of CYTALUX®.	Manuscript in preparation on the ELUCIDATE trial. Brief study description: A Phase III, 12-center trial with 112 patients to determine the clinical utility of pafolacianine, a folate receptor (FR)-targeted fluorescent agent, in revealing by intraoperative molecular imaging (IMI) FRa positive cancers in the lung and narrow surgical margins that may otherwise be undetected with conventional visualization.	One or more clinically significant events (CSE) occurred in 53% of evaluated participants compared to a prespecified limit of 10% ($p < 0.0001$). In 38 participants, at least one was a margin <=10 mm from the resected primary nodule (38%, 95% CI 28.5 – 48.3), 32 being confirmed by histopathology. In 19 subjects (19%, 95% CI 11.8 – 28.1), IMI located the primary nodule that the surgeon could not locate with white light and palpation. IMI revealed 10 occult synchronous malignant lesions in 8 subjects (8%, 95% CI 3.5 – 15.2) undetected using white light. Most (73%) IMI-discovered synchronous malignant lesions were outside the planned resection field. A change in the overall scope of surgical procedure occurred for 29 of the subjects (22 increase, 7 decrease).
CYTALUX® SCI supportive lung cancer data: The Folate Receptor (FR) is an appropriate tumor specific marker for Non-Small Cell Lung Cancer (NSCLC)	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.	
In 9% of subjects, surgeons identified a synchronous lesion with CYTALUX® that was not	Singhal S, Martin L, Rice D, Blackmon S, Murthy S, Gangadharan S, Reddy R, Sarkaria I. Randomized, Multi Center Phase 3 Trial of Pafolacianine during Intraoperative Molecular Imaging of Cancer in the Lung: Results of the	IMI with pafolacianine identified occult synchronous malignant lesions in nine patients (9%, 95% CI 4.2 – 16.4). Most (73%) IMI-identified synchronous

identified with conventional methods.	ELUCIDATE Trial. AATS 102nd Annual Meeting. Boston MA. May 2022. See prior study description	malignant lesions were outside the planned field of resection.
	Predina JD, Newton AD, Keating J, Barbosa EM Jr, Okusanya O, Xia L, Dunbar A, Connolly C, Baldassari MP, Mizelle J, Delikatny EJ, Kucharczuk JC, Deshpande C, Kularatne SA, Low P, Drebin J, Singhal S. Intraoperative Molecular Imaging Combined With Positron Emission Tomography Improves Surgical Management of Peripheral Malignant Pulmonary Nodules. Ann Surg. 2017 Sep;266(3):479-488. doi: 10.1097/SLA.0000000000002382. PMID: 28746152. Brief study description: A study with 50 patients with pulmonary nodules to examine whether IMI with a folate receptor targeted near-infrared contrast agent (OTL38) can improve malignant pulmonary nodule identification when combined with PET.	In this study, CYTALUX® identified 56 of 59 (94.9%) malignant pulmonary nodules identified by preoperative imaging. CYTALUX® located an additional 9 malignant lesions not identified preoperatively. Nodules only detected by CYTALUX® were smaller than nodules detected preoperatively (0.5 vs 2.4 cm; P < 0.01) but displayed similar fluorescence (tumor-to-background ratio 3.3 and 3.1; P = 0.50). Sensitivity of IMI and PET were 95.6% and 73.5% (P ¼ 0.001), respectively; and positive predictive values were 94.2% and 89.3%, respectively (P > 0.05). Additionally, utilization of IMI clinically upstaged 6 (12%) subjects and improved management of 15 (30%) subjects. These data suggest that combining CYTALUX® with PET may provide superior oncologic outcomes for patients with resectable lung cancer.
In 38% of the subjects, a close surgical resection margin was detected with CYTALUX®.	Singhal S, Martin L, Rice D, Blackmon S, Murthy S, Gangadharan S, Reddy R, Sarkaria I. Randomized, Multi Center Phase 3 Trial of Pafolacianine during Intraoperative Molecular Imaging of Cancer in the Lung: Results of the ELUCIDATE Trial. AATS 102nd Annual Meeting. Boston MA. May 2022. See prior study description	Per the applicant, IMI with CYTALUX® found 38 patients with close margins <=10 mm (38%, 95% CI 28.5 – 48.3).
	Kennedy GT, Azari, FS, Bernstein E, Marfatia I, Din A, Kucharczuk JC, Low PS, Singhal S. Targeted Intraoperative Molecular Imaging for Localizing Nonpalpable Tumors and Quantifying Resection Margin Distances. JAMA Surg . 2021 Nov 1;156(11):1043-1050. doi: 10.1001/jamasurg.2021.3757. PMID: 34431971. PMCID: PMC8387952. Brief study description: A nonrandomized, open-label, single-center trial with 40 patients to assess the capability of IMI, a novel technology using a fluorescent tracer targeted to malignant cells, to localize visually occult, nonpalpable tumors and quantify margin distances during resection.	The results of this study demonstrated that CYTALUX® is reliable for intraoperative lesion localization and margin identification. In 40 patients, conventional surgical methods localized 22 of 40 lesions (55%), while CYTALUX® localized 36 of 40 (90%). Of 18 nonpalpable lesions, CYTALUX® identified 15 (83.3%). Both palpable and nonpalpable lesions demonstrated mean signal-to-background ratio more than 2. A CYTALUX® margin was able to be calculated for 39 of 40 patients (95%). CYTALUX® margins were nearly identical to margins reported on final pathology (R2 = 0.9593), with median (interquartile range) difference of 1.3 (0.7-2.0) mm. CYTALUX® detected 2 margins in nonpalpable tumors that were clinically unacceptable and would have had a high probability of recurrence.
In 19% of subjects, surgeons localized primary lesions with CYTALUX® that otherwise were undetected by conventional methods.	Singhal S, Martin L, Rice D, Blackmon S, Murthy S, Gangadharan S, Reddy R, Sarkaria I. Randomized, Multi Center Phase 3 Trial of Pafolacianine during Intraoperative Molecular Imaging of Cancer in the Lung: Results of the ELUCIDATE Trial. AATS 102nd Annual Meeting. Boston MA. May 2022.	Per the applicant, CYTALUX® located the primary lesion in 19 patients (19%, 95% CI 11.8 – 28.1) whose lesions could not be found under white light and palpation.

	See prior study description	
	Predina JD, Newton A, Corbett C, Xia L, Sulyok LF, Shin M, Deshpande C, Litzky L, Barbosa E, Low PS, Kucharczuk JC, Singhal S. Localization of Pulmonary Ground-Glass Opacities with Folate Receptor-Targeted Intraoperative Molecular Imaging. J Thorac Oncol. 2018 Jul;13(7):1028-1036. Doi: 10.1016/j.jtho.2018.03.023. Epub 2018 Apr 4. PMID: 29626619. PMCID: PMC6015787. Brief study description: A clinical trial exploring an alternative method involving near-infrared molecular imaging with a folate receptor–targeted agent, OTL38, to improve localization of GGOs and confirmation of resection margins.	The study demonstrated that of the 21 GGOs, 20 accumulated CYTALUX® and displayed fluorescence upon in situ or back table evaluation. Intraoperatively, near-infrared imaging localized 15 of 21 lesions whereas standard methods localized 10 of 21 (p = 0.05). The addition of molecular imaging affected care of nine (9) of 21 subjects by improving intraoperative localization (n = 6) and identifying close margins (n = 3).
	Kennedy GT, Azari FS, Bernstein E, Marfatia I, Din A, Deshpande C, Galvis N, Sorger J, Kucharczuk JC, Singhal S. First-in-human results of targeted intraoperative molecular imaging for visualization of ground glass opacities during robotic pulmonary resection. Transl Lung Cancer Res. 2022 Aug;11(8):1567-1577. doi: 10.21037/tlcr-21-1004. PMID: 36090642. PMCID: PMC9459620. Brief study description: A pilot study to determine whether IMI during RATS (RIMI) can localize GGOs.	As lung cancer screening rates rise, GGOs are becoming increasingly common. These types of lesions are particularly challenging to localize during surgery because they are not fully solid, and thus difficult to palpate. This paper demonstrated that CYTALUX® identified tumor-specific fluorescence in 100% (10/10) subjects in the study, whereas traditional methods identified the nodule in 70% (7/10) subjects.

After review of the information provided by the applicant, we have the following concerns regarding whether CYTALUX® meets the substantial clinical improvement criterion. We note that CYTALUX® showed false positive rate of 25.8% that led to resections in the Phase 3, multicenter study of this technology.[25] While the applicant submitted a separate comment stating there was no worsening in the safety profile for patients with false positive results, we continue to question the impact on patient outcomes when taking additional tissues that were false positive. We note that the authors discussed in the results of the phase 3 trial that there was a decreased rate of subsequent diagnostic intervention. We question if they are referring to fewer resections in future surgical procedure, and/or if this also implies a subsequent positive outcome of reduced mortality. While the studies provided in support of CYTALUX® measure identification of lesions and changes in the scope of the surgical procedure, the applicant did not provide data indicating that these endpoints directly lead to improved clinical outcomes (for example, reduction in mortality, hospitalizations, subsequent procedures, and/or rate of recurrence) based on use of CYTALUX®. Rather, improved outcomes were inferred by relying on the assumption that increased or decreased scope of resection results in better outcomes. We are interested in additional information or long-term data measuring the impact of the technology on treatment outcomes or the management of the patient to support that CYTALUX® results in an improvement over the standard of care.

We are inviting public comments on whether CYTALUX® meets the substantial clinical improvement criterion.

In this section, we summarize and respond to written public comments received in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for CYTALUX®.

Comment: In response to a question regarding the impact of taking additional tissues that were false positive on patient outcomes, the applicant stated that in the CYTALUX® Phase 3 ELUCIDATE lung cancer trial, participants who had false positive synchronous lesions removed showed no associated increase in respiratory or pulmonary adverse events based on the tissue removed. A total of 134 specimens were excised from the 100 intraoperative molecular imaging (IMI) participants, with each participant contributing one or more specimens. All were sent for local histopathology, with 104 specimens found to be positive for cancer in 89 participants. Among all 134 specimens from participants with suspected or confirmed cancer, 108 (81%) had fluoresced under IMI in 78 participants. The estimated sensitivity for detecting a cancerous tissue was 80/104 or 76.9% (model estimate 76.5% (95% CI [66.7, 84.2])). There were 28/108 (25.9%) false positives (10 primary nodules, 18 synchronous lesions). Histology on the false positive tissues was mostly benign or normal lung parenchyma. Where pathology was identified, it was most often granulomatous disease, with one fibrous tumor, one meningothelial-like nodule, one anthracotic nodule and one lipoid pneumonia.

Response: We thank the applicant for its comments and will take this information into consideration when deciding whether to approve new technology add-on payments for CYTALUX®.

c. DuraGraft®

Marizyme, Inc. submitted an application for new technology add-on payment for DuraGraft® for FY 2024. According to the applicant, DuraGraft® is an intraoperative vein-graft preservation solution used during the harvesting and grafting interval during coronary artery bypass graft surgery (CABG). The applicant stated that use of DuraGraft® does not change clinical/surgical practice; it replaces solutions currently used for flushing and storage of the saphenous vein grafts (SVG) from harvesting through grafting, including tests for graft leakage. We note that Somahlution, Inc., acquired by Marizyme in 2020,[26] submitted and withdrew applications for new technology add-on payment for DuraGraft® for FY 2018 and FY 2019, as well as submitted an application again in FY 2020, as summarized in the FY

[25] Singhal S, Sarkaria I., Martin L, Rice D, Blackmon S, Slade H. Pafolacianine for Intraoperative Molecular Imaging for Cancer in the Lung—The ELUCIDATE Trial. (Manuscript in preparation). 2022.

[26] NASDAQ. Marizyme, Inc. Completes Acquisition of Somahlution, Inc. and Raises $7.0 Million in Private Placement | Nasdaq (accessed 1/23/2023).

2020 IPPS/LTCH PPS proposed rule (84 FR 19305 through 19312). The applicant withdrew its application again prior to the issuance of the FY 2020 IPPS/LTCH PPS final rule (84 FR 42180).

Please refer to the online application posting for DuraGraft®, available at *https://mearis.cms.gov/public/publications/ntap/NTP221013TEMTR*, for additional detail describing the technology and intraoperative ischemic injury.

With respect to the newness criterion, the applicant stated that it is has submitted a De Novo classification request to FDA for DuraGraft.® Per the applicant, the proposed indication for DuraGraft® is for flushing and storage of vascular grafts during CABG surgery. The applicant stated that, effective October 1, 2017, the following ICD–10–PCS code may be used to uniquely describe procedures involving the use of DuraGraft®: XY0VX83 (Extracorporeal introduction of endothelial damage inhibitor to vein graft, new technology group 3).

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payment.

With respect to the substantial similarity criteria, the applicant asserted that DuraGraft® is not substantially similar to other currently available technologies because DuraGraft® is a first-in-class product to address vein graft disease (post-CABG) and its complications. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for DuraGraft® for the applicant's complete statements in support of its assertion that DuraGraft® is not substantially similar to other currently available technologies.

Substantial Similarity Criteria	Applicant Response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	DuraGraft® is a first-in-class product and there is no product that is similar. Common storage solutions are only salt solutions and have no ability to protect against oxidative damage and metabolic stress which are the primary mechanisms associated with ischemic injury. They are used to keep the graft wet. DuraGraft® has been formulated into a wetting solution. DuraGraft® treatment is associated with a reduction in both vein graft disease and clinical complications associated with vein graft failure post-CABG. There are currently no commercial products that prevent ischemic injury of vein grafts during CABG surgery or products that reduce vein graft disease or its complications following CABG surgery.
Is the technology assigned to the same MS-DRG as existing technologies?	Yes	MS-DRGs used during CABG surgery are aligned to the same DRGs for which DuraGraft® use is indicated.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	Yes	DuraGraft® is used in the CABG patient population.

However, we note the following concern with regard to the newness criterion. As noted in the FY 2020 IPPS/LTCH PPS proposed rule, it seems that the mechanism of action of DuraGraft® may be the same or similar to other vein graft storage solutions. Specifically, we continue to question whether the current solutions used in vein graft surgical procedures may be the same or similar to DuraGraft® in composition and treatment indication and, therefore, have the same or similar mechanism of action.[27] We are inviting public comments on whether DuraGraft® is substantially similar to existing technologies and whether DuraGraft® meets the newness criterion.

With respect to the cost criterion, to identify potential cases representing patients who may be eligible for DuraGraft®, the applicant searched the FY 2021 MedPAR file for cases reporting an ICD–10–PCS code describing common CABG procedures. Using the inclusion/exclusion criteria described in the following table, the applicant identified 54,636 cases mapping to 82 MS–DRGs. Please see Table 10.11.A.—DuraGraft® Codes—FY 2024 associated with this proposed rule for the complete list of MS–DRGs and ICD–10–CM PCS codes that the applicant indicated were included in its cost analysis. The applicant followed the order of operations described in the following table and calculated a final inflated average case-weighted standardized charge per case of $299,445, which exceeded the average case-weighted threshold amount of $218,294. Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that DuraGraft® meets the cost criterion.

[27] 84 FR 19307.

DuraGraft® COST ANALYSIS	
Data Source and Time Period	FY 2021 MedPAR file
List of ICD-10-PCS codes	Please see Table 10.11.A. - DuraGraft® Codes – FY 2024 associated with this proposed rule for the complete list of ICD-10-PCS codes included in the cost analysis.
List of MS-DRGs	Please see Table 10.11.A. – DuraGraft® Codes – FY 2024 associated with this proposed rule for the complete list of MS-DRGs included in the cost analysis.
Inclusion/exclusion criteria	The applicant identified cases by using the ICD-10-PCS procedure codes in Table 10.11.A. - DuraGraft® Codes – FY 2024 associated with this proposed rule. The applicant included only inpatient fee-for-service discharges. MS-DRGs with a total discharge count less than 11 were imputed with a count of 11. The applicant calculated the average unstandardized charge per case for each MS-DRG.
Charges removed for prior technology	Charges for related or prior technologies were not removed from the cost analysis. The applicant indicated that no technology is being replaced.
Standardized charges	The applicant stated that it used the standardization formula provided in Technical Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2021 IPPS/LTCH PPS correction notice.
Inflation factor	The applicant applied an inflation factor of 20.469% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2023 IPPS/LTCH PPS final rule.
Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the DuraGraft® kit by the national average cost-to-charge ratio of 0.311 for supplies and equipment from the FY 2023 IPPS/LTCH PPS final rule. Per the applicant, one kit will be used per one patient, and the kit is comprised of two solutions that are mixed in the operating room during surgery.

We are inviting public comments on whether DuraGraft® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that DuraGraft® represents a substantial clinical improvement over existing technologies because there is no other product or technology that reduces the incidence of peri-operative myocardial infarction. The applicant provided three studies to support its assertions and 44 background articles about reducing major adverse cardiac events (MACE).[28] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for DuraGraft® for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

[28] Sources that provide background information are not included in the table below but can be accessed via the online application.

Substantial Clinical Improvement Assertion #1: The technology significantly improves clinical outcomes relative to services or technologies previously available.		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Outcomes or findings cited by the applicant from supporting evidence to support its statements**
Reduced peri-operative myocardial infarction	Haime, M., R.R. McLean, and K.E. Kurgansky, et al. (2018). Relationship between intra-operative vein graft treatment with DuraGraft® or saline and clinical outcomes after coronary artery bypass grafting, *Expert Review of Cardiovascular Therapy*, 16:12, 963-970, Department of the Interior (DOI): 10.1080/14779072.2018.1532289 SVGs were consecutively treated with heparinized saline in 1,400 patients between 1996 and 1999, and with DuraGraft® in 1036 patients between 2001 and 2004.	At 3 and 12 months, total vessel diameter was significantly lower in the DuraGraft® group (3 month $p<0.01$, 12 month $p=0.02$).
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Reduced long term nonfatal MI	Haime et al. 2018. See prior study described.	Both crude and inverse probability treatment weight (IPTW)-adjusted models displayed a statistically significant risk reduction in patients who underwent treatment with DuraGraft®. In adjusted analyses, Treatment of SVGs with DuraGraft® resulted in a significantly lower risk for nonfatal MI, beginning at 1000 days, with a risk reduction of 45% (HR 0.55, 95% CI 0.41−0.74; $p < 0.0001$).
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Reduced long term MACE	Haime et al. 2018. See prior study described.	Treatment with DuraGraft® resulted in a significantly lower occurrence of MACE, with an adjusted risk reduction of 19% starting at 1,000 days after CABG (HR 0.81, 95% CI 0.70−0.94; P = 0.0051).
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Reduced Long Term Repeat Revascularization	Haime et al. 2018. See prior study described.	Treatment with DuraGraft® resulted in a significantly lower risk of repeat revascularization starting at 1,000 days with an adjusted 35% risk reduction (HR 0.65, 95% CI 0.44−0.97; P = 0.037).
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Reduced 12- month overall mean wall thickness (whole graft analysis)	Perrault, L.P., M. Carrier, and P. Voisine, et al. (2021). Sequential multidetector computed tomography assessments after venous graft treatment solution in coronary artery bypass grafting. *Journal of Thoracis and Cardiovascular Surgery*. Jan. 2021, Vol. 161, Number 1, 96-106. https://doi.org/10.1016/j.jtcvs.2019.10.115 This was a prospective, multi-center, randomized, double-blind, comparative within-patient study with 2 arms. 125 patients (mean	DuraGraft® treated SVGs had a significantly smaller mean wall thickness versus their saline-treated counterparts (P =.02).

Substantial Clinical Improvement Assertion #1: The technology significantly improves clinical outcomes relative to services or technologies previously available.		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Outcomes or findings cited by the applicant from supporting evidence to support its statements**
	age, 66.2 +- 6.8 years) were randomized and underwent CABG: with 125 grafts treated with DuraGraft versus 125 grafts treated with saline.	
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Reduced 12- month rate of development of wall thickness (proximal graft analysis)	Perrault et al. 2021. See prior study described.	Greater changes were found in wall thickness in the proximal segment of saline-treated grafts (0.09 + 0.29 vs 0.00 ± 0.03 mm; P =.04). The increase in wall thickness and maximum graft narrowing from 1 to 12 months was significantly smaller in the DuraGraft® group.
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Reduced 12- month proximal segment wall thickness	Perrault et al. 2021, See prior study described.	Wall thicknesses in proximal segments of grafts were significantly lower for the DuraGraft® versus saline-treated grafts at 12 months (P = .01).
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Decreased maximum graft narrowing (proximal segment analysis)	Perrault et al. 2021, See prior study described.	The change in maximum narrowing was significantly smaller for the DuraGraft®-treated group between 1 and 12 months (P=01), Additionally, the increase in wall thickness and maximum graft narrowing from 1 to 12 months was significantly smaller in the DuraGraft® group.
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Decreased Total Vessel Diameter (TVD)	Perrault et al. 2021, See prior study described.	At 3 and 12 months, TVD was significantly lower in the DuraGraft® group.
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Decrease in Total Vessel Diameter (TVD) in the proximal segment	Perrault et al. 2021, See prior study described.	Vessel diameters in the proximal segments were smaller in the DuraGraft® group at 3 and 12 months.
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Troponin-I values significantly decreased from 3-6 hours up to 4 days post- CABG in DuraGraft®group	Szalkiewicz, P., M.Y. Emmert, and P.P. Heinisch, et al. (2022). Graft Preservation confers myocardial protection during coronary artery bypass grafting. *Frontiers in Cardiovascular Medicine*, July 2022, pp 1-10. DOI 10.3389/fcvm.2022.922357 This was a single-center retrospective study in which 272 grafts were stored in either DuraGraft® or Saline/Biseko.	Post-surgery hs-TnI values were significantly lower from 3 to 6 hours (h) up to 4 days in the DuraGraft® group: 3–6 h: 4,034 ng/L [IQR 1,853–8,654] vs. 5,532 ng/L [IQR 3,633—8,862], p = 0.05; 12–24 h: 2,420 ng/L [IQR 1,408–5,782] vs. 4,166 [IQR 2,052–8,624], $p < 0.01$; 2 days: 1,095 ng/L [IQR 479–2,311] vs. 1,564 ng/L [IQR 659–5,057], p = 0.02 and at 4 days: 488 ng/L [IQR 232–1,061] vs. 745 ng/L [IQR 319–1,820], p = 0.03.
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Significantly Reduced maximum (peak) values of troponin	Szalkiewicz et al. (2022). See prior study described.	The maximum value of troponin was significantly lower after graft treatment with DuraGraft® (maximum value: 4,151 ng/L [IQR 2056– 8621] vs. 6,349 ng/L [IQR 4061–12664], p < 0.01.
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
Significantly reduced median area under the curve (AUC) for Troponon-1	Szalkiewicz et al. (2022). See prior study described.	The median area under the curve (AUC): 6,146 ng/L/24 h [IQR 3,121–13,248] vs. 10,735 ng/L/24 h [IQR 4,859–21,484], p = 0.02 were lower in the DuraGraft® group.
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	
	Szalkiewicz et al. (2022). See prior study	Repeated graft flushing with DuraGraft® resulted in lower

Substantial Clinical Improvement Assertion #1: The technology significantly improves clinical outcomes relative to services or technologies previously available.		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Outcomes or findings cited by the applicant from supporting evidence to support its statements**
Improved myocardial protection	described.	Troponin values post-surgery suggesting enhanced myocardial protection compared to Saline/Biseko. The use of DuraGraft® for leak testing during distal anastomosis and its subsequent application to the downstream myocardium appeared to be associated with improved myocardial protection in patients undergoing on-pump coronary artery bypass grafting (ONCAB), identified by significantly lower hs-TnI levels including the maximum value and AUC during the early post-operative phase after CABG when compared to Saline/Biseko.
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we have the following concerns regarding whether DuraGraft® meets the substantial clinical improvement criterion. First, we note that the Szalkiewicz and Perrault studies both used a relatively small sample size (166 and 125 patients respectively) as compared to the number of potentially eligible patients for this technology and relatively short follow-up periods (4 days and 12 months respectively).[29] [30] According to the applicant, about 400,000 CABG procedures were performed annually in the U.S. for which DuraGraft® can be used.[31] The applicant estimated that approximately 60% of these procedures (or 240,000 procedures annually or 20,000 procedures monthly) will be performed on Medicare beneficiaries. We are unsure if the sample was representative of the number of Medicare beneficiaries potentially eligible for DuraGraft®. Moreover, the sample size in the Perrault study was further reduced by SVG occlusion, from 125 grafts at the beginning of the study to 118 at 3-month follow up, a 6% decrease, and to 97 at 12-month follow up, a further reduction of 18%. We also note that Perrault et al. mentioned that a larger cohort and longer-term evaluation are needed to validate their findings. Similarly, Szalkiewicz et al. cautioned that the study was not powered for clinical outcome events. We are interested in whether similar results in reduced incidence of peri-operative myocardial infarction and associated clinical benefits would have been achieved with a larger patient sample and over a longer follow up period for clinical outcomes.

Second, we are concerned that there may be mixed evidence as to whether there is an association between exposure to DuraGraft® and clinical outcome improvement. For instance, the Haime study demonstrated that patients whose SVG was exposed to DuraGraft® and those whose SVG was exposed to saline had comparable risk for all-cause mortality.[32] We further note that in the Perrault study, patients whose SVGs were stored in DuraGraft® were just as likely to experience MACE, angina, and arrhythmias as those whose SVGs were stored in saline (MACE: 0 out of the 125 patients whose SVGs were stored in saline, 1 out of the 125 patients whose SVGs were stored in DuraGraft®, p = 0.32; angina: 0 out of the 125 patients whose SVGs were stored in saline, 1 out of the 125 patients whose SVGs were storied in DuraGraft®, p = 0.32; arrhythmia: 0 out of the 125 patients whose SVGs were stored in saline, 1 out of the 125 patients whose SVGs were storied in DuraGraft®, p = 0.32).[33] The study also found no significant differences between SVGs stored in DuraGraft® versus those in saline in maximum graft narrowing or mean lumen diameter at 1, 3, and 12 months. Similarly, the Szalkielwicz study did not identify any significant differences between patients whose SVG was exposed to DuraGraft® and those to saline in median length of hospital stay, all-cause mortality, and cardiac-related mortality.

Third, the Haime study was conducted among patients of the Veterans Administration (VA) medical system who were predominantly white (95%) and male (99%). We questioned whether the results from that study could be generalized to other patient groups, including nonveterans, women, or those from other racial or ethnic groups. We continue to question whether the demographic profiles in some of the studies that the applicant submitted for FY 2024 were comparable with those of the U.S. Medicare patients who underwent CABG surgery. For instance, in terms of patients' gender, the Perrault, Szalkiewica, and Haime studies were all conducted among CABG patients who were predominantly male (99% in the Haime study; 91% in the Perrault study; 83% in the Szalkiewicz study). However, among the

Relationship between intra-operative vein graft treatment with DuraGraft® or saline and clinical outcomes after coronary artery bypass grafting, *Expert Review of Cardiovascular Therapy,* 16:12, 963–970, DOI: 10.1080/14779072.2018.1532289.

[33] Perrault et al. (2021), *op.cit.,* Table 6, p. 103.

Medicare fee-for-service beneficiaries who underwent CABG surgery, male patients accounted for only two-thirds (66%) of this population.[34] [35] We are interested in whether the results from the Haime, Perrault, and Szalkiewicz studies can be replicated among the Medicare population. The Haime study also noted that because they used VA data only, information about service utilization outside the VA system was not available to them. We question whether their findings would be replicable among the Medicare population.

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19311), we noted our concern that some of the studies provided by the applicant as supporting materials do not account for other variables that may have confounded the association between exposure to DuraGraft® and clinical outcomes. We continue to question whether potential confounding factors have been taken into account in assessing the association between exposure to DuraGraft® and clinical outcome improvement. Specifically, both the Szalkiewicz and Haime studies were single-center studies and we question whether site-specific characteristics could have contributed to differences in clinical outcomes between patients exposed to DuraGraft® versus those exposed to saline. Also, Szalkiewicz and his team conducted their study among patients for on-pump CABG surgery, which accounts for the majority of CABG surgeries conducted in the U.S.[36] We are interested to know whether the study results can be generalized for patients who undergo off-pump CABG surgery. In addition, Haime and his team conducted their study in two consecutive phases, during which they exposed patients' SVGs to heparinized saline from 1996 to 1999, and to DuraGraft® from 2001 to 2004. Haime and his team stated that surgical and post-operative protocols did not change substantially during these periods. However, their study did not mention whether the team has accounted for changes in generalized surgical techniques or operating room practices, either of which could have contributed to the observed outcomes. The Haime team also used propensity score weighting to minimize differences in age and several clinical characteristics between patients from the two periods. Theoretically, doing so would reduce the likelihood that these differences confound the association between exposure to DuraGraft® and clinical outcomes. However, propensity scoring can only control for confounding factors that are measured, that is, captured in the data. Unmeasured confounding factors could still impact the association between exposure to DuraGraft® (or heparinized saline) and clinical outcomes. This may be the reason the research team stated that they would not be able to rule out the possibility that other changes between these two periods, including patient selection criteria and intraoperative and post-operative protocols, might still have confounded the differences in clinical outcomes. Additionally, according to the VA, only 49% of veterans had used at least one VA benefit or service.[37] Veterans may use services outside of the VA for repeat revascularization to address further progress of coronary artery disease. Repeat vascularization may be a confounding factor that impacts the clinical outcomes for patients exposed to DuraGraft® or heparinized saline. As previously stated, the Haime study noted that because they used VA data only, information about service utilization outside the VA system was not available to them. As a result, it remains unclear whether we can reliably attribute any changes in clinical outcomes to exposure to DuraGraft®.

With regard to the Perrault study (2021), where two SVGs from each patient were randomly assigned to be stored in either DuraGraft® or saline, and the surgeons and operating room staff were blinded, we are interested in whether the SVGs in each arm were comparable in wall thickness or lumen diameter at the baseline. While the Perrault study (2021) was multi-center and drew patients from 7 sites, a sizable minority of patients (42%) came from one specific site. We wonder if the impact of DuraGraft® on clinical outcomes at 12-month follow-up is confounded by unique characteristics of that specific site. In addition, the Perrault team noted that the association between DuraGraft® and clinical outcome improvement may be confounded by precision of different modalities of MDCT angiography. We agree with Perrault and his team that further studies on the effects of confounding factors, like chronic conditions (for example, left main coronary artery disease,[38] diabetes control or hypercholesterolemia), medication use (for example, antiplatelet therapy or lipid-lowering drugs), graft and anastomosis characteristics (for example, quality, size, and diameter of target vessel), type of graft use, or surgical technique (for example, open vs endoscopic harvest) [39] may provide further insight.

We are inviting public comments on whether DuraGraft® meets the substantial clinical improvement criterion. In this section, we summarize and respond to written public comments received in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for DuraGraft®.

Comment: The applicant submitted a public comment in response to two questions posed at the Town Hall meeting and provided additional information. With regard to the first question asking for clarification with respect to any differences between GALA and DuraGraft® and whether any of the studies cited by the applicant used GALA rather than DuraGraft®, the applicant stated that GALA is a pharmacy-compounded product that has been used by hospitals for graft storage and is a precursor product to DuraGraft®. According to the applicant, DuraGraft® has the same intended composition and product characteristics (pH, isotonicity, osmolarity, and ionic balance) as GALA at the time of manufacture. The applicant stated that GALA was developed by scientists at Harvard University and the West Roxbury Veterans Administration (VA) Medical Center, and had been used at the latter as a pharmacy-compounded product. In 2012, the applicant acquired a license from the VA to exclusively commercialize GALA, but the product was never sold commercially. With a shelf-life of about a week, GALA 'as is' is rendered not suitable for distribution

(August 2022) Clinical event rate in patients with and without left main disease undergoing isolated coronary artery bypass grafting: results from the European DuraGraft® Registry. *European Journal of Cardiao-Thoracic Surgery.* 62(4): ezac 403: *https://doi.org/10.1093/ejcts/ezac403.*

[39] Perrault et al. (2021), *See prior study described.*

and commercialization.[40] According to the applicant, GALA's shelf-life was primarily driven by chemical instability of L-glutathione and ascorbic acid, which were observed to be rapidly and substantially lost to oxidation within a few days of GALA compounding. L-glutathione and ascorbic acid are antioxidant components that play key roles in protecting vein grafts against ischemic injury and in particular oxidative damage, which is a primary driver of ischemic injury. The applicant noted that after obtaining the license for GALA, it addressed the product's instability issues without changing the composition of the product at its point of use by separating and configuring GALA's components into two (versus one) solutions. It observed that GALA's organic components, in particular L-glutathione and ascorbic acid, required a different environment for stability compared to the inorganic salts. The applicant formulated the organic components into Solution B, a pH 3 solution (optimal pH for chemical stability of the organic components including L-glutathione and ascorbic acid) concentrated 20-fold into 13.5 mls. Solution A is a pH 8 solution that includes all the inorganic salts (237.5 mls). At the point of use in the operating room, the two solutions are mixed to create a physiologic pH final solution to preserve vascular grafts. Per the applicant, this process enables DuraGraft® to achieve chemical stability while maintaining the same intended composition as GALA. As a result, while DuraGraft® is provided as a kit containing two separate solutions, Solution A and B, GALA was instead made as a single solution product. The applicant mentioned other changes in DuraGraft® (with respect to GALA), which are limited to manufacturing controls, most notably the incorporation of oxygen control processes during the manufacturing of Solution B to prevent loss of components to oxidation, aseptic processing controls used during the manufacture of both Solutions A and B, manufacturing of DuraGraft® according to Current Good Manufacturing Practice (CGMP) regulations[41] and inclusion of release specifications for DuraGraft®. The applicant remarked that combined changes in the manufacturing process and product configuration resulted in substantial differences in stability between GALA and DuraGraft®. In particular, L-ascorbic acid and L-glutathione have half-lives of several days in GALA versus over three years in DuraGraft®. The applicant confirmed that the GALA was used in the Haime study (2018).[42] The applicant did not conduct any studies that compared the impact of DuraGraft® and GALA on clinical outcomes.

With regard to the second question asking whether DuraGraft® was studied in Medicare patients, the applicant responded that DuraGraft® has not been studied in U.S. or U.S. Medicare patients. The applicant further stated that DuraGraft® has been studied in many European patients aged 65 or greater, which were the prospective randomized controlled trial published by Perrault et al. (2021)[43] and the retrospective study measuring postoperative Troponin levels published by Dr. Szalkiewicz et al. (2022).[44] The applicant stated that the ''European Multi-Center Registry To Assess Outcomes In Patients Undergoing CABG Surgery: Treatment Of Vascular Conduits With DuraGraft®, A Novel Endothelial Damage Inhibitor'' trial is an ongoing post-market study designed to support a European (International) CABG registry database used to assess the clinical outcomes of patients receiving DuraGraft® during CABG surgery and whose free vascular grafts (both venous and arterial) have been treated with DuraGraft®. According to the applicant, a total of 2,964 patients were enrolled in the trial, which completed enrollment on August 31, 2019. There were 45 enrolling centers in the trial in eight countries: Austria, Germany, Ireland, Italy, Spain, Switzerland, Turkey, and the United Kingdom. The applicant noted that follow-up data has been completed out to 30 days and one year, and that data will continue to be collected annually for up to five years. The applicant stated that as of August 2022, all patients have completed two full years of follow-up.

The applicant mentioned that the trial enrolled patients undergoing isolated CABG surgery or combined CABG plus mitral or aortic valve repair were aged 18 or older, with at least one SVG or radial artery graft used as a bypass conduit. Of the 2,532 isolated CABG patients, 1,617 patients were aged 65 or older. The applicant asserted that these patients were relevant to the Medicare population. The applicant also provided clinical outcomes at 1-year estimated by Kaplan-Meier method for the isolated CABG patients aged at least 65 and under age 65 according to Cox regression. The applicant stated that the trial is a single-arm registry, and therefore without a comparator arm. The applicant identified that adverse event rates in the aged 65 or older group were higher, as expected based on higher rates of comorbidities. The European System for Cardiac Operative Risk Evaluation (Version 2; EuroScore II) values for the aged 65 or older, compared to those under 65, were 2.7 ± 3.6 (1,617) vs. 1.5 ± 2.7 (915), $p < 0.001$. The applicant stated that this reflects the near double expected operative mortality in the Medicare aged patients.

The applicant stated that to compare outcomes with a U.S. population, it compared isolated CABG patients from the DuraGraft® Registry in Europe to a propensity-matched control group from the Society of Thoracic Surgeons (STS) Registry Adult Cardiac Surgery Database, a clinical outcomes registry with cardiac surgery procedure records submitted by cardiothoracic surgeons and anesthesiologists across the U.S. and Canada.[45] Altogether, 2,400 out of 2,532 patients were matched in the primary analysis cohort of isolated CABG patients. The two groups were matched on 35 prespecified variables reflecting mortality risk in the operative, peri-operative, and follow-up periods, out to one year. These variables included demographics, cardiac risk factors, pre-operative cardiac status, coronary anatomy, and surgical characteristics. According to the applicant, the propensity matched groups were well balanced on all important demographic, procedural and anatomic characteristics. The applicant stated that there were no significant differences in mortality rates between these two groups. The Hazard Ratio (HR) for DuraGraft® vs. standard of care was 0.88 (95% CI 0.67–1.15), $p = 0.347$; the estimated cumulative mortality at 1 year was 4.2% (95% CI 3.4–5.0) in the DuraGraft® cohort, compared to 4.8% (95% CI 3.9–5.7) in the STS Registry. The applicant also indicated that no difference was observed between mean survival times: DuraGraft® cohort: 353.25 days, SE = 1.29 (95% CI: 350.72–356.79) and STS cohort 353.30, SE = 1.25 (95% CI: 350.85–355.75). According to the applicant, no significant difference was found between the matched cohorts in the distribution of the selected outcome,

[40] The applicant observed that shelf-life did not pose an issue with use of compounded GALA within the West Roxbury VA Medical Center, as the product was cycled off the shelves weekly.

[41] Food and Drug Administration (November 16, 2022) Current Good Manufacturing Practice (CGMP) Regulations (Current Good Manufacturing Practice (CGMP) Regulations | FDA, accessed 1/4/2023).

[42] Haime et al. (2018) *op.cit.*

[43] Perrault et al. (2021) *op.cit.*

[44] Szakielwicz et al. (2022) *op.cit.*

[45] The Society of Thoracic Surgeons. What is the Adult Cardiac Surgery Database? (Frequently Asked Questions and Answers About the STS National Database and Public Reporting | STS, accessed 3/8/2023).

(that is, all-cause mortality rates through 1-year of follow up demonstrating the safety of the use of DuraGraft® in European and U.S. patients in propensity matched cohorts).

The applicant stated that it is currently in discussion with the STS Registry to perform a match of the DuraGraft® and STS cohorts to compare subsets of these cohorts matched with data from the Medicare database to compare rates of MI and repeat revascularization amongst the two-third of patients from the analysis cohorts that have data available in the Medicare Database. According to the applicant, this data will be available in mid-2023.

Response: We thank the applicant for its comment and will take this information into consideration when deciding whether to approve new technology add-on payment for the DuraGraft®.

d. Elranatamab

Pfizer, Inc. submitted an application for new technology add-on payments for elranatamab for FY 2024. Per the applicant, elranatamab is a heterodimeric humanized full-length bispecific antibody against B-cell maturation antigen (BCMA) and cluster of differentiation (CD)3 which, if FDA approved, will potentially be used for the treatment of adult patients with relapsed or refractory multiple myeloma (RRMM) who have received at least three prior therapies, including a proteasome inhibitor, an immunomodulatory agent, and an anti-CD38 monoclonal antibody. According to the applicant, elranatamab is proposed to act through direct bridging of the BCMA cell-surface antigen and the extracellular CD3 subunit expressed on T-cells.

Please refer to the online application posting for elranatamab, available at *https://mearis.cms.gov/public/publications/ntap/NTP221014RF1AA*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, the applicant stated it has not yet received FDA marketing authorization for elranatamab. According to the applicant, it is seeking biologics license application (BLA) approval from FDA for the treatment of adult patients with relapsed or refractory multiple myeloma who have received at least three prior therapies, including a proteasome inhibitor (PI), an immunomodulatory agent (IMiD), and an anti-cluster of differentiation 38 (anti-CD38) monoclonal antibody before July 1, 2023. According to the applicant, elranatamab is provided as a solution in a histidine buffer at pH 5.8, in 40 mg/mL single-dose vials for subcutaneous injection. Elranatamab therapy begins with priming regimen for the first two injections with 12 mg given on day one and 32 mg on day four of the first cycle. Dosing thereafter is 76 mg once weekly. Dosing is reassessed after six cycles. The applicant anticipates that patients could be admitted to receive the first two step-up doses of elranatamab in the inpatient setting.

According to the applicant, there are currently no ICD–10–PCS procedure codes to distinctly identify elranatamab. The applicant submitted a request for approval for a unique ICD–10–PCS procedure code for elranatamab beginning in FY 2024. The applicant stated that diagnosis codes C90.00 (Multiple myeloma not having achieved remission), C90.01 (Multiple myeloma in remission), and C90.02 (Multiple myeloma in relapse) may be used to currently identify the indication for elranatamab under the ICD–10–CM coding system.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that elranatamab is not substantially similar to currently available technologies (XPOVIO®, BLENREP, ABECMA®, CARVYKTI™, and traditional chemotherapy agents) because it does not use the same or similar mechanism of action when compared to these technologies to achieve a therapeutic outcome in patients with multiple myeloma (MM). Elranatamab will be a bispecific antibody therapy indicated for the treatment of RRMM in patients who have received at least three prior therapies. Other bispecific antibodies, excluding TECVAYLI™, that are currently approved by the FDA are not approved for the treatment of RRMM, and none of them target BCMA. The applicant further stated that those therapies that are currently indicated for treatment of RRMM, excluding TECVAYLI™, use entirely different mechanisms of action. The applicant also asserted that, for the purposes of the newness criterion, elranatamab is substantially similar to TECVAYLI™, which is also the subject of a new technology add-on payment application for FY 2024, as discussed separately later in this section, and which received BLA approval from FDA after submission of the application for new technology add-on payment. The applicant stated that because TECVAYLI™ and elranatamab are substantially similar for newness purposes, the applicant believes that a new technology add-on payment should apply to the BCMA-directed bispecific antibody class for the treatment of RRMM, which would be TECVAYLI™ and elranatamab (if approved). The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for elranatamab for the applicant's complete statements in support of its assertion that elranatamab is substantially similar to TECVAYLI™, but not to other currently available technologies. Please also see our discussion of TECVAYLI™'s application for new technology add on payments in section II.E.6.o of this proposed rule.

BILLING CODE 4120–01–P

Substantial Similarity Criteria	Applicant Response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	Yes	Elranatamab uses the same or similar mechanism of action when compared to TECVAYLI™ to achieve a therapeutic outcome in patients with MM, but a different mechanism of action when compared to other existing technologies. While elranatamab and TECVAYLI™ are constructed from different antibody isotypes, they use a similar mechanism of action to achieve a therapeutic outcome in patients with MM. Elranatamab and TECVAYLI™ are both bispecific antibodies that engage CD3 on T-cells and BCMA on MM cells thereby bringing the cells in close proximity. The engagement of CD3 on the T-cell activates the T-cell, leading to the T-cells releasing cytokines that result in the killing of the MM cell. There are four other FDA-approved bispecific antibodies that are not approved for the treatment of RRMM, and none of them target BCMA: (1) BLINCYTO® (blinatumomab), (2) RYBREVANT® (amivantamab-vmjw), (3) HEMLIBRA® (emicizumab), and (4) VABYSMO™ (faricimab-svoa). With respect to other therapies indicated for the treatment of adult patients with RRMM who have received at least three (3) prior therapies, they use different mechanisms of action, as follows: (1) Selinexor is a nuclear export inhibitor that acts by selectively inhibiting XPO1, reactivating tumor suppressing proteins, and inducing tumor cell apoptosis; (2) belantamab mafodotin-blmf is a BCMA-directed antibody and microtubule inhibitor conjugate that binds to BCMA and releases monomethyl auristatin F (MMAF) inside the BCMA-expressing cell to kill the cell through disruption of the microtubule network; (3) idecabtagene vicleucel is a BCMA-directed CAR T-cell therapy; and (4) ciltacabtagene autoleucel is another BCMA-directed CAR T-cell therapy.
Is the technology assigned to the same MS-DRG as existing technologies?	Yes	We anticipate that patients receiving TECVAYLI™ and elranatamab (if approved) will be assigned to MS-DRGs that are currently applicable to MM patients admitted for the provision of anticancer treatments (not including stem cell or bone marrow transplant, or CAR T-cell therapy).
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	Yes	Elranatamab is anticipated to be indicated for the treatment of RRMM, for which there are other FDA approved therapies, as noted elsewhere in this application. For purposes of the newness criterion, elranatamab and TECVAYLI™ treat the same or similar type of disease and patient population.

With regard to the newness criterion, as stated by the applicant, elranatamab has a similar mechanism of action to that of TECVAYLI™, for which we received an application for new technology add-on payments for FY 2024 for the treatment of adult patients with relapsed or refractory multiple myeloma after four or more prior lines of therapy, including an immunomodulatory agent, a proteasome inhibitor, and an anti-CD38 monoclonal antibody. TECVAYLI™ was approved by FDA for this indication on October 25, 2022, and became commercially available on November 9, 2022. Per the new technology add on payment application for TECVAYLI™, the technology's mechanism of action is described as a bispecific antibody, with distinct binding domains that simultaneously bind the BCMA target on tumor cells and the CD3 T cell receptor. Because of the apparent similarity with the bispecific antibody for elranatamab that uses binding domains that simultaneously bind the BCMA target on tumor cells and the CD3 T cell receptor, we believe that the mechanism of action for elranatamab may be the same or similar to that of TECVAYLI™. We further believe that elranatamab and TECVAYLI™ may treat the same or similar disease (RRMM) in the same or similar patient population (patients who have previously received a proteasome inhibitor (PI), an immunomodulatory agent (IMiD) and an anti-CD38 antibody). Accordingly, as it appears that elranatamab and TECVAYLI™ are purposed to achieve the same therapeutic outcome using the same or similar mechanism of action and would be assigned to the same MS–DRG, we believe that these technologies may be substantially similar to each other such that they should be considered as a single application for purposes of new technology add-on payments. We note that if this technology is substantially similar to TECVAYLI™, we believe the newness period for this technology would begin on November 9, 2022, the date TECVAYLI™ became commercially available. We are interested in information on how these two technologies may differ from each other with respect to the substantial similarity criteria and newness criterion, to inform our analysis of whether elranatamab and TECVAYLI™ are substantially similar to each other

and therefore should be considered as a single application for purposes of new technology add-on payments.

We are inviting public comment on whether elranatamab meets the newness criterion, including whether elranatamab is substantially similar to TECVAYLI™ and whether these technologies should be evaluated as a single technology for purposes of new technology add-on payments.

With respect to the cost criterion, to identify potential cases representing patients who may be eligible for treatment with elranatamab, the applicant searched the FY 2021 MedPAR file for cases reporting a diagnosis of Multiple Myeloma (in any position) and are assigned to MS–DRG 846, 847, or 848 (Chemotherapy without Acute Leukemia as Secondary Diagnosis family). The applicant noted that these case selection criteria were chosen as it is anticipated that patients could be admitted to receive the first two, step-up doses of elranatamab in the inpatient setting. Using the inclusion/exclusion criteria described in the following table, the applicant identified 674 claims mapping to two MS–DRGs, 846 (Chemotherapy without Acute Leukemia as Secondary Diagnosis with Major Complication or Comorbidity) (MCC)) and 847 (Chemotherapy without Acute Leukemia as Secondary Diagnosis with Complication or Comorbidity (CC)). The applicant followed the order of operations described in the following table and calculated a final inflated average case-weighted standardized charge per case of $60,579, which exceeded the average case-weighted threshold amount of $59,054. Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that elranatamab meets the cost criterion.

Elranatamab COST ANALYSIS	
Data Source and Time Period	FY 2021MedPAR file
List of ICD-10-CM codes	C90.00 (Multiple myeloma not having achieved remission) C90.01 (Multiple myeloma in remission) C90.02 (Multiple myeloma in relapse)
List of MS-DRGs	846 (Chemotherapy without Acute Leukemia as Secondary Diagnosis with MCC) 847 (Chemotherapy without Acute Leukemia as Secondary Diagnosis with CC)
Inclusion/exclusion criteria	The applicant included cases that had a diagnosis of Multiple Myeloma in any position (see list of ICD-10-CM codes noted previously) and are assigned to MS-DRG 846, 847, or 848. These case selection criteria were chosen as it is anticipated that patients could be admitted to receive the first two, step-up doses of elranatamab in the inpatient setting. Managed care cases, claims submitted only for graduate medical education payments, claims with ancillary costs of zero and claims that were statistical outliers within the MS-DRG were excluded.
Charges removed for prior technology	Per the applicant, the applicant removed 80% of drug charges from the analysis as elranatamab would replace currently used antineoplastics but some drug charges would remain the same whether elranatamab or an existing antineoplastic is used. For the purpose of this analysis, the applicant assumed that 20% of current drug charges would also be present in elranatamab cases.
Standardized charges	The applicant used the standardization formula provided in Technical Appendix A of the application. The applicant used all relevant values reported in the standardizing file posted with the FY 2023 IPPS/LTCH PPS final rule.
Inflation factor	The applicant applied an inflation factor of 20.47% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2023 IPPS/LTCH PPS final rule.
Charges added for the new technology	The applicant stated that the average sales price of the technology has yet to be determined.

We are inviting public comments on whether elranatamab meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that elranatamab represents a substantial clinical improvement over existing technologies because it is a new therapy for patients with RRMM who are unresponsive or unable to receive current therapies as demonstrated by low overall response rates (ORR) and access issues. The applicant stated that in clinical trials examining patients with RRMM, the ORR with elranatamab is higher than what is seen with available therapies based on empirical comparisons of individual trials. The applicant further stated that elranatamab also has a manageable safety profile. The applicant provided two studies to support these claims, as well as 13 background articles about RRMM.[46] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for elranatamab for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

[46] Background articles are not included in the following table but can be accessed via the online posting for the technology.

Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments.		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Outcome(s) or finding(s) cited by the applicant from supporting evidence to support its statements**
MM is an incurable malignancy and with each relapse, the ability of a patient to respond to therapy and the amount of time spent in response shortens and patients run out of therapy options	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.	
CAR T-cell therapies are largely unavailable to Medicare beneficiaries with late-line RRMM and have limited data in the Medicare population	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.	
BCMA-directed bispecific antibodies will be a new treatment option for late-line patients with RRMM who are refractory to or otherwise ineligible or unable to access existing therapies	Nizar Bahlis, Michael H Tomasson, Mohamad Mohty, et al., Efficacy and safety of elranatamab in patients with relapsed/refractory multiple myeloma naïve to B-cell maturation antigen (BCMA)-directed therapies: Results from cohort A of the MagnetisMM-3 study; American Society of Hematology (ASH) 2022 submitted Brief study description: This abstract describes efficacy and safety results from Cohort A of MagnetisMM-3 (NCT04649359), an open-label, multicenter, non-randomized, phase 2 study to evaluate the safety and efficacy of elranatamab monotherapy in patients with RRMM. MagnetisMM-3 enrolled 123 patients refractory to at least 1 PI, 1 IMiD drug, and 1 anti-CD38 antibody in Cohort A.	The majority of patients enrolled in the MAGNETISMM-3 study were 65 years of age or older (65% of patients treated). 19.5% of patients enrolled were 75 years of age or older. Subset analyses were conducted to demonstrate that elderly patients had similar response rates to the overall population.
	Nizar Bahlis, Michael H Tomasson, Mohamad Mohty, et al., Efficacy and safety of elranatamab in patients with relapsed/refractory multiple myeloma naïve to B-cell maturation antigen (BCMA)-directed therapies: Results from cohort A of the MagnetisMM-3 study; ASH 2022 submitted See prior study description	Enrollment criterion for MagnetisMM-3 specifies that patients must be refractory to at least one PI, one IMiD drug, and one anti-CD38 mAb. Thus, elranatamab, as a bispecific antibody, is a new treatment option for late-line patients with RRMM who are refractory (and therefore ineligible) for treatment with existing therapies.
	Lesokhin AM, Arnulf B, Niesvizky R, Mohty M, Bahlis NJ, Tomasson MH, et al. Initial safety results for MagnetisMM-3: A phase 2 trial of elranatamab, a B-cell maturation antigen (BCMA)-CD3 bispecific antibody, in patients (pts) with relapsed/refractory (R/R) multiple myeloma (MM). Journal	Patients with moderate renal impairment were not excluded from the MagnetisMM-3 study. Enrollment was allowed if patients had an estimated creatinine clearance ≥30 mL/min (according to the Cockcroft Gault formula).

	of Clinical Oncology. 2022;40(16_suppl):8006. Brief study description: This abstract describes preliminary safety results from Cohort A of MagnetisMM-3 (NCT04649359), an open-label, multicenter, non-randomized, phase 2 study to evaluate the safety and efficacy of elranatamab monotherapy in patients with RRMM.	
Substantial Clinical Improvement Assertion #2: The technology significantly improves clinical outcomes relative to services or technologies previously available.		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Outcome(s) or finding(s) cited by the applicants from supporting evidence to support its statements**
Elranatamab is expected to significantly improve outcomes compared to existing therapies approved for late-line MM.	Nizar Bahlis, Michael H Tomasson, Mohamad Mohty, et al., Efficacy and safety of elranatamab in patients with relapsed/refractory multiple myeloma naïve to B-cell maturation antigen (BCMA)-directed therapies: Results from cohort A of the MagnetisMM-3 study; ASH 2022 submitted. Brief study description: See prior study description	The primary endpoint of the study is ORR as judged by a blinded, independent, central review (BICR) committee. The ORR in this study was 61% after a median follow up of 6.8 months and 10.4 months. This was consistent in the subset of patients 65 years of age or greater and this ORR is numerically higher than the overall response rate reported with belantamab mafadotin (31%), selinexor in combination with dexamethasone (26%), and conventional chemotherapy (20.3%).
	Andrzej Jakubowiak, Nizar J Bahlis, Noopur S Raje, et al., Elranatamab, a BCMA-Targeted T-Cell Redirecting Immunotherapy, for Patients with Relapsed or Refractory Multiple Myeloma: Updated Results From MagnetisMM-1. American Society of Clinical Oncology (ASCO) 2022. Brief study description: This poster describes results fromMagnetisMM-1 (NCT03269136), an ongoing Phase 1 study in adult patients with RRMM (n=55).	The ORR in the study was 64% among 55 patients receiving elranatamab and 35% of patients achieved CR or better. A total of 77% of responders remained in response at month 9.
	The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.	

In addition to being efficacious, elranatamab has a manageable safety profile	Nizar Bahlis, Michael H Tomasson, Mohamad Mohty, et al., Efficacy and safety of elranatamab in patients with relapsed/refractory multiple myeloma naïve to B-cell maturation antigen (BCMA)-directed therapies: Results from cohort A of the MagnetisMM-3 study; ASH 2022 submitted. See prior study description	Any grade and grade 3/4 treatment-emergent adverse events (TEAEs) were reported in 100% and 74.8% of patients, respectively. Among patients who received the 2-step-up priming regimen (n=119), cytokine release syndrome (CRS) and immune effector cell-associated neurotoxicity syndrome (ICANS), respectively, were reported in 56.3% and 3.4%; of those patients, 44.8% (n=30/67) and 50.0% (n=2/4) received tocilizumab and/or steroids. All CRS and ICANS were grade 1 or 2. CRS events were confined to the first 2 priming doses (90.6%) and the first 3 doses (98.8%). No patients permanently discontinued treatment due to CRS or ICANS. Grade 3/4 Neutropenia was reported in 43.1% of patients, grade 3/4 thrombocytopenia was reported in 20.3% of patients, Grade 3/4 Anemia was reported in 33.3% of patients, Grade 3/4 lymphopenia was reported in 23.6% of patients. Infections were reported in 61.8% (grade 3/4, 31.7%) of patients; most frequently (≥10% of patients) reported were upper respiratory tract infections (14.6% [no grade 3/4]) and pneumonia (10.6% [grade 3/4, 5.7%]). No patients permanently discontinued treatment due to CRS or ICANS. A total of 7.3% of patients discontinued elranatamab due to adverse event. With longer term follow-up data with a median of 10.4 months, there continued to be no patients with Grade three or higher CRS or ICANS in patients who received the 12 mg & 32 mg step-up regimen and most cases of CRS (90.6%) occurred during the step-up regimen. There were no fatal neurotoxicity events observed.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we have the following concerns regarding whether elranatamab meets the substantial clinical improvement criterion. To support that the treatment offers an option for a patient population unresponsive to, or ineligible for, currently available treatment options, the applicant asserts that BCMA-directed bispecific antibodies will be a new treatment option for late-line patients with RRMM who are refractory to or otherwise ineligible or unable to access existing therapies. In particular, the applicant states the nature of the disease is such that patients often become refractory to all or some treatment options for late-line RRMM. The applicant further states that those patients who are not refractory to these treatment options may be ineligible for treatment due to renal insufficiency in the case of CAR T-cell therapy or unable to access therapy for other reasons. To support that elranatamab would offer a new treatment option for this patient population, the applicant references the eligibility criteria for MagnetisMM–3, a phase 2 study to evaluate the safety and efficacy of elranatamab monotherapy in patients with RRMM. The applicant states that 65% of patients were 65 years or older, patients with moderate renal impairment were not excluded, and patients must have been refractory to at least one PI, one IMiD drug, and one anti-CD38 mAb. The applicant states that these eligibility criteria indicate elranatamab was studied in a Medicare eligible population, may be appropriate for patients with renal impairment, and provides a new mechanism of action for patients with RRMM who have exhausted all other viable treatment options. However, to the extent late-line patients with RRMM who are refractory to or otherwise ineligible or unable to access CAR T-cell therapies may instead be eligible for XPOVIO®, which is also indicated for RRMM, it is unclear that this is a patient population unresponsive to, or ineligible for, all other currently available treatments. We note that this drug was studied in patients 65 years and older, is not contraindicated in renal impairment, and is also indicated for RRMM and, therefore, may also be a treatment option for patients with RRMM ineligible or unable to access CAR T-cell therapies.

The applicant also asserts CAR T-cell therapies are largely unavailable to Medicare beneficiaries with late-line RRMM due to long wait times with a median of 6 months.[47] However, as noted, to the extent these patients could also be eligible for XPOVIO®, which may be an option for patients unable to access CAR T-cell therapy, it is unclear that this supports the assertion that elranatamab offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments, or that longer wait times would mean that a patient is ineligible for or unresponsive to CAR T-cell therapy. The applicant further asserts CAR T-cell therapies are not well-studied in the Medicare population with only 35% and 36% of patients being 65 years or older in the registrational studies for ABECMA® and

[47] Kourelis T, Bansal R, Patel KK, Berdeja JG, Raje NS, Alsina M, et al. Ethical challenges with CAR T slot allocation with idecabtagene vicleucel manufacturing access. Journal of Clinical Oncology. 2022;40(16_suppl):e20021–e.

CARVYKTI™, respectively.[48] [49] However, these percentages do indicate CAR T-cell therapies were studied in late-line RMMM patients 65 years and older and the studies included patients up to 78 years old. The applicant also asserts that ''renal impairment is one of the most common complications of MM,'' and that as a result, a large portion of RRMM patients may be ineligible for CAR T-cell therapy because they are ineligible for lymphodepleting chemotherapy, which is required for administration of CAR T-cell therapy.[50] However, Hunter et al. describe two patients with end stage renal disease who were successfully treated with CAR T-cell therapy; therefore, we question whether this is an accurate conclusion.[51]

To further support that elranatamab offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments, the applicant asserts that MM is an incurable malignancy and with each relapse, the ability of a patient to respond to therapy and the amount of time spent in response shortens and patients run out of therapy options. The applicant states that almost all patients with MM eventually relapse and that the treatment of patients who have received two or more prior lines of therapy is becoming particularly challenging. The applicant also provides the ORRs of 26% for XPOVIO® with dexamethasone in patients with triple class refractory RRMM, 31% for BLENREP in patients with triple class refractory RRMM, and 29.8% with conventional chemotherapy.[52] [53] [54] However, the claim is based on the definition of the disease, RRMM, being relapsed or refractory disease. XPOVIO®, BLENREP, conventional chemotherapy, and elranatamab, if approved, would all be options for patients with RRMM. We question which patient population would benefit from elranatamab due to being ineligible for or unresponsive to all other options indicated for RRMM without data regarding the benefit of elranatamab in patients ineligible for or unresponsive to these other therapies.

The applicant also asserts that elranatamab significantly improves outcomes compared to existing therapies for RRMM. The supporting evidence is based on the ORRs for elranatamab, XPOVIO® with dexamethasone, BLENREP, and conventional chemotherapy, but does not consider the ORRs for CAR–T-cell therapies. Therefore, we question whether elranamatab provides improved outcomes compared to previously available therapy. Furthermore, the applicant asserts elranatamab has a manageable safety profile. However, having a manageable safety profile without a comparison to other therapies for RRMM does not provide evidence for an improved outcome compared to the other therapy options for RRMM.

We are inviting public comments on whether elranatamab meets the substantial clinical improvement criterion.

We did not receive any written comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for elranatamab.

e. epcoritamab

Genmab US, Inc. submitted an application for new technology add-on payments for epcoritamab for FY 2024. Per the applicant, epcoritamab is an investigational immunoglobulin G1 (IgG1) bispecific antibody which directly binds cluster of differentiation (CD)3 expressing T-cells and CD20 expressing B-cells to potently induce activation and cytotoxic activity of the T-cells against the malignant B-cells in a process that is strictly dependent on epcoritamab binding to both targets. According to the applicant, epcoritamab may be an effective treatment for patients with relapsed/refractory (R/R) Non-Hodgkin's Lymphoma (NHL), and more specifically R/R Large B-Cell Lymphoma (LBCL) by co-opting the patient's own immune system to target the disease.

Please refer to the online application posting for epcoritamab available at *https://mearis.cms.gov/public/publications/ntap/NTP221012JQM0G*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, the applicant stated it has not yet received FDA marketing authorization for epcoritamab. According to the applicant, it anticipates BLA approval from FDA for the indication of treatment of adult patients with R/R LBCL after two or more lines of systemic therapy before July 1, 2023. The applicant stated that epcoritamab is intended for subcutaneous administration with patients receiving 0.16 milligram (mg) priming and 0.87 mg intermediate dose before the first full dose of 48 mg. This is administered weekly in cycle 1–3, every 2 weeks in cycle 4–9, and every four weeks in cycle 10 and onward until disease progression. According to the applicant, in the EPCORE NHL–1 study, all patients were required per protocol to be hospitalized for 24 hours on the third dose, which was the first full dose of 48 mg. According to the applicant, the mean per patient dose, including when provided during or related to inpatient stays across all 28 injection visits, is 44.61 mg.

According to the applicant, there are currently no ICD–10–PCS procedure codes to distinctly identify administration of epcoritamab. The applicant submitted a request for approval for a unique ICD–10–PCS procedure code for epcoritamab beginning in FY 2024. The applicant provided a list of diagnosis codes that may be used to currently identify the indication for epcoritamab under the ICD–10–CM coding system. Please refer to the online application posting for the complete list of ICD–10–CM codes provided by the applicant.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that epcoritamab is not substantially similar to other currently available technologies because epcoritamab is an anti-CD3xCD20 bispecific antibody with a unique mechanism of action that will be the first of its kind for the treatment of R/R LBCL, and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for epcoritamab for the applicant's

[48] ABECMA (idecabtagene vicleucel), suspension for intravenous infusion (prescribing information); Celgene corporation and Bristol Myers Squibb company, Summit, New Jersey 2021.
