The Bureau considered whether the data could be used for harmful purposes such as fraud or identity theft or the targeted marketing of products and services that may pose other risks. The Bureau's initial view was that unmodified application-level data would be of minimal use for perpetrating identity theft or financial fraud against applicants or related natural persons. As proposed, application-level data would not include information typically required to open new accounts in the name of a small business's principal owner, such as Social Security number, date of birth, place of birth, passport number, or driver's license number. Additionally, the data would not include information useful to perpetrate existing account fraud, such as account numbers or passwords. The Bureau acknowledged, however, that almost any information relating to a small business could, in theory, be used for these purposes. For example, unmodified data could potentially be used in a phishing attack against an applicant, or for knowledge-based authentication. Some such data, however, may already be available from public and private sources. The Bureau also noted, on the basis of its expertise and analysis, that the publication of HMDA data—which contain many data fields that are similar to data fields that would be disclosed under the proposal—has not resulted in any measurable increase in fraud or identity theft against mortgage applicants.

[877] However, where a data field was already publicly available, disclosing that data field in the data may have enabled the matching of data to other datasets that may not have been controlled by the Bureau, which could have substantially facilitated re-identification or the disclosure of harmful or sensitive information.

The Bureau also considered potential impacts on targeted marketing of products and services. The Bureau explained that although the data could be used to market products and services that would have been beneficial for small businesses—perhaps increasing competition among creditors that could help small businesses receive better terms—they could also be used to target potentially vulnerable small businesses with marketing for products and services that may have posed risks that were not apparent. For example, users might perceive certain data to reveal negative information about an applicant's financial condition or vulnerability to scams relating to debt relief or credit repair. Information about a loan might also be used for a practice known as ''stacking,'' in which creditors may obtain lead lists based on publicly available information and offer follow-on loans or advances that add to the debt burden carried by small businesses. Some creditors might also use the data for deceptive marketing practices. However, the Bureau noted that the utility of the data for predatory marketing practices may be limited by delay between action taken on a loan and data publication.

The Bureau considered whether unmodified data would result in competitive harm to small business applicants or related natural persons by disclosing general information about a small business's use of credit that was not currently available to the general public. The Bureau acknowledged that certain data points in unmodified form could reflect negatively on the financial condition of a business or its owners. The Bureau also considered the potential for competitive harm to financial institutions. As discussed below with respect to the financial institution identifying information that would be reported pursuant to proposed § 1002.109(b), the Bureau proposed to identify the financial institution in the public application-level data. Therefore, the data could reveal general information about a financial institution's lending practices that is not widely available to the general public. As the Bureau explained, data fields such as census tract, NAICS code, credit type, and pricing could disclose information about where a financial institution is doing business, what industries it is doing business with, what kinds of products it is offering, and what kinds of prices it is charging, respectively. Additionally, if a small business applicant were re-identified, a financial institution's competitors could identify the small businesses to which the financial institution is offering or providing credit. A financial institution could then potentially offer credit to a particular small business at a lower price than they currently received. However, the Bureau did not assess that unmodified application-level data would include key inputs for, or be detailed enough, to substantially facilitate reverse-engineering of proprietary lending models. For example, it would not have included information about an applicant's credit history. The NPRM also noted stakeholder concern that data could harm financial institutions by increasing the amount of litigation against them. The Bureau sought comment on this risk.

With respect to feedback that disclosing information about applicants in rural areas could lead them to seek financing elsewhere, the Bureau noted that would not necessarily reduce the risk that someone in the small business's community may ultimately re-identify them because the data would be reported with respect to the location of the business, as discussed in the section-by-section analysis of § 1002.107(a)(13).

In addition to considering whether the disclosure of a data field could lead to financial or other more tangible harms, the Bureau also considered whether the data might be viewed as sensitive. In assessing whether a data field creates a risk of sensitivity, the Bureau evaluated whether its disclosure could lead to dignitary or reputational harm to small business applicants or related natural persons. For example, if re-identified, the data could reveal information that casts a negative light on a small business's financial condition, such as the fact that a loan was denied due to a business's credit characteristics or cashflow.

The Bureau also evaluated whether the disclosure of a data field could cause reputational harm to financial institutions. The Bureau discussed stakeholder concerns that the data could lead users to draw unfounded inferences about discrimination. The Bureau noted that several of the data fields, if disclosed in unmodified form, would help address this concern by serving as control variables. For example, many financial institutions consider a small business's revenue when assessing the risk of extending credit. As a result, disclosing gross annual revenue data would help ensure that data users who are evaluating potential disparities in underwriting or pricing can compare small businesses with similar revenues, thereby controlling for a factor that might provide a reason for some disparities. The Bureau also noted that it does not expect that data alone could generally be used to determine whether a lender is complying with fair lending laws. The Bureau expected that, when regulators conduct fair lending examinations, they would analyze additional information before reaching compliance determinations.

The Bureau also considered general expectations with respect to what information is available to the general public. For example, the Bureau explained that disclosing gross annual revenue in unmodified form could disclose sensitive information because it could reflect the financial condition of a small business or, where a small business is a sole proprietorship, a particular individual. This type of information is typically not available to the general public. The Bureau also acknowledged concerns that some small businesses and their owners would consider seeking credit sensitive, or would consider the disclosure of a banking relationship sensitive because others may draw adverse inferences about the small business's financial condition. These are concerns about sensitivity that would result from the re-identification of the applicant, rather than from the disclosure of particular data fields. The Bureau sought to address these concerns by mitigating the risk of re-identification.

Comments Received

The Bureau received comments in this area from a range of commenters including lenders, trade associations, business advocacy groups, and community groups.

Risk of identity theft or fraud. Some industry and academic commenters stated that the data points may subject small business applicants and related natural persons to an increased risk of fraud or identity theft. Commenters also stated that publication may expose financial institution employees, such as the financial institution contact reported under § 1002.109(b)(3), to fraud or identity theft actions, such as phishing attacks. Another commenter stated that rural applicants will be easily identifiable in data and, as a result, at greater risk of fraud.

Risk of targeted marketing harms. A group of bank trade associations and a business advocacy group asserted that public data could be collected and sold to interested third parties, potentially for targeted marketing purposes. No commenters asserted financial institutions would experience such harms.

Risk of competitive harms. Several industry commenters and a business advocacy group expressed concern that the disclosure of application-level data would pose risks of competitive harm to small business applicants or related natural persons. Some commenters stated that if an applicant is re-identified, competitors will gain non-public insights into financial information directly bearing on that small business's long term financial health and competitive goals. Some commenters noted that larger competitors may be more likely to gain information about the financial health and long-term business goals of small businesses. For example, a lender asserted that larger companies may use the data to outbid smaller competitors. Other commenters stated that data may reveal non-public information about a small business's use of credit, such as financing terms, that competitors may use to their competitive advantage.

Some industry commenters and a business advocacy group stated that small business applicants may experience reduced availability or increased cost if other financial institutions learn of their small business loans or loan terms, which would reduce their ability to obtain liquidity or increase their operating costs as compared to their competitors. These commenters asserted that publication may impose increased compliance costs and litigation risks on financial institutions that are passed on to small business applicants or that cause financial institutions to limit credit to borrowers with higher risk profiles to prevent losses.

Many industry commenters stated that publication will present significant risk of competitive harms to financial institutions. Commenters asserted that application-level data may be used to identify or reverse-engineer proprietary lending information, such as underwriting requirements or pricing models. One commenter asserted that if the pricing information and action taken data points could be used to determine a lender's limits for other credit terms that are not collected under the rule, such as the APR limit, the lender's competitors would be able to undercut or otherwise compete with those terms, for example by offering lower rates. This commenter stated that while lower APRs are generally beneficial for consumers, this may come at the cost of lower quality service. A lender suggested that data points such as gross annual revenue and the time in business may be used to reverse-engineer a financial institution's proprietary lending strategy. Another commenter asserted that data points for private label credit, such as the pricing information or census tracts, are particularly commercially sensitive to financial institutions and there is risk that disclosure of this information will cause competitive harm.

Other industry commenters indicated that competitive harm experienced by financial institutions may have broader impacts on the small business lending market. Some commenters suggested that if public data reveals proprietary commercial lender information, financial institutions may be compelled to engage in anti-competitive behavior, such as price-fixing, that restricts credit or offers less favorable terms, because it will effectively homogenize the market and limit their ability to compete with one another. One asserted that compliance concerns due to publication could result in reduced product availability by financial institutions, as they asserted was seen after publication of HMDA and CRA data.

Some industry and academic commenters stated that competitive harm may particularly impact smaller or rural financial institutions. They asserted that because these lenders have fewer small business customers than larger financial institutions, their customers are at a higher risk of re-identification. As such, it may be easier for the larger competitors of smaller or rural financial institutions to approach their small business applicants to underprice the loans and offer better terms. These commenters stated that smaller and rural financial institutions may have less flexibility to respond to resulting competitive harms because of their size and lower applicant volume.

Risk of reputational harms. An industry commenter and a business advocacy group stated that small business applicants and related natural persons will be subject to reputational risks as a result of publication. For example, one noted that if applicants are re-identified, small business owners may experience harm, discrimination, or stigmatization from disclosure of certain data points, such as race, sex, and ethnicity. Other industry commenters stated that financial institutions may also experience reputational harms. Many commenters stated that risks of reputational harm and frivolous litigation will result from incorrect conclusions about the data drawn by the public or regulators. These commenters asserted that incorrect data conclusions could result from the unique characteristics of small business lending generally, particular credit scenarios common within small business lending, and the fact that the data will not reflect all factors that went into underwriting decisions. For example, some commenters asserted that there is particular risk of misunderstanding with Farm Credit System credit based on how dividends are provided and the legal limitations for such loans. These commenters explained that because statutory provisions for Farm Credit System credit have specific coverage criteria, data may disclose a justified, but disproportionately high, rate of application denial. Additionally, commenters explained that Farm Credit System institutions may appear to charge a higher interest rate to certain borrowers but that the interest rates are offset by dividends based on the borrower's patronage.

A few industry commenters cited potential discrepancies between data points and those that appear in other sources, which could increase the risk of reputational harm and litigation for financial institutions. These commenters said that because data requirements for these other sources are not the same as proposed requirements, but are labeled with the same identifier, the resulting variations could unfairly increase scrutiny or lead to inaccurate conclusions. These commenters were especially concerned about this risk for loans subject to HMDA or CRA. Additionally, some industry commenters stated that financial institutions' reputations for protecting applicants' privacy may be impacted by data publication. Commenters noted that applicants may have concerns about providing information and may feel that conversations with a financial institution are less confidential because certain information is being disclosed to the government. One commenter mentioned that if a financial institution or the Bureau experiences a data breach, the financial institution may not be viewed as trustworthy by applicants.

In contrast, other commenters stated that published data will decrease reputational and litigation risks for financial institutions. According to one commenter, the data will provide evidence of responsible lenders' fair lending practices, which will give them a competitive advantage over less scrupulous financial institutions. Additionally, a few commenters stated that reputational and litigation harm risks from publication can be mitigated by disclaimers, as well as by data modifications and deletions. For example, these commenters stated that any data publication should include a statement for agricultural lending credit types that Farm Credit System entities

can only lend to applicants that are eligible under the Farm Credit Act.

Other harms or sensitivities. Commenters identified three additional harms that were not discussed in the NPRM: physical harms, data security, and harm to applicants' relationship with, or trust in, financial institutions.

A software vendor and several individual commenters stated the Bureau should consider physical harm or personal security threats that could result from publication. For example, a few commenters stated that if an applicant's LGBTQI+ status was revealed, the applicant may face threats to their personal security due to discrimination.

One industry commenter stated small business applicants or related natural persons may be exposed to data breaches because financial institutions will store and transmit data online. Some industry and business advocacy group commenters asserted that a data breach could cause privacy risks for financial institutions, including reputational harm related to litigation. The commenters said this would be true even if the Bureau were the breached entity, and that the Bureau must take action to protect reported data from potential breaches. Some also requested that the Bureau detail the steps it will take to protect data from breach or to indemnify financial institutions impacted by data breaches arising from a breach to the Bureau. One commenter stated that the Bureau should seek comment on its data security safeguards.

Some commenters, mainly from industry, identified potential impacts that privacy risks may have on the relationships between small business applicants and financial institutions. Some commenters stated that the publication may create friction in the lending process due to negative public sentiment. These commenters asserted that, because small business applicants may view the data collection methods as invasive or because financial institutions may feel obligated to reduce tailored credit underwriting to prevent misconceptions about lending practices, financial institutions may not be able to provide customer service at the level currently obtained. Other commenters noted that applicants who are concerned about the privacy or security of this data may be hesitant to seek credit or they might seek credit from more expensive unregulated sources.

Current Approach

As discussed below, the Bureau's preliminary view is that the risk of harm or sensitivity to small businesses and related natural persons is significant and should be considered in its privacy assessment. The Bureau's current intent is to address these risks primarily by controlling for re-identification risk. The Bureau is particularly focused on risks to personal privacy interests. Such interests may involve protected demographic information or information about personal finances that could have reputational impact if disclosed; for example, this might include the reputational impact of a credit denial arising from a personal credit score.[878] The Bureau also intends to consider certain commercial risks of harms and sensitivities to small businesses when modifying or deleting data. The Bureau does not currently intend to consider financial institution privacy interests in its analysis unless there is a compelling privacy risk.

Risk of identity theft or fraud. Based on comments received, the Bureau views any risk of identity theft or fraud for small business applicants or related natural persons resulting from the publication of data to be predicated on the small business applicant or related natural person being re-identified. As to comments that publication of financial institution contact information will subject financial institution employees to identity theft or fraud, such as phishing attempts, consistent with the NPRM, the Bureau plans to exclude from publication the name and business contact information of a person who may be contacted with questions about the financial institution's submission from the public application-level data.

Risk of targeted marketing harms. Targeted marketing harms likewise presuppose that a small business applicant or related natural person is re-identified.

Risk of competitive harms. Potential competitive harms, including information about a small business's long term financial health and competitive goals, are also predicated on re-identification. For example, commenters stating that an applicant's competitors may gain insights into its financial health, competitive strategy, and goals all assumed that the small business applicant is first re-identified.

The Bureau does not view data publication as increasing a financial institution's compliance costs and litigation risks, such that increased costs and risks would result in increased fees, reduction in credit program availability, or reduce credit availability for applicants with weak credit profiles. Historical evidence from HMDA suggests that such impacts will be minimal. Notwithstanding similar contentions prior to the 2015 HMDA Final Rule, the Bureau recently reported that, based on 2021 HMDA data, trends in mortgage origination continued to increase since the HMDA rule became effective in 2018.[879] Based on this experience with HMDA, the Bureau does not anticipate that this final rule will significantly increase the cost of credit products, reduce credit product availability, or result in otherwise unnecessary tightening of underwriting criteria.[880]

The Bureau also disagrees that publication will reveal proprietary lending information, thereby resulting in competitive harm to financial institutions. Unmodified application-level data will not include key inputs for, or be detailed enough, to substantially facilitate the reverse-engineering of proprietary lending models. For example, it will not include applicants' credit score data. Other comments expressing concern that the data collected would provide only an incomplete picture of the financial institution's lending practices confirmed that other key information about underwriting will not be collected. These omissions should prevent competitors from reverse-engineering proprietary lending models and make it unlikely that financial institutions could use the data to engage in anti-competitive behavior like price-fixing.

By the same token, there is no basis for small or rural financial institutions

[878] For example, § 1002.107(a)(11) requires a covered financial institution to report the principal reason or reasons the financial institution denied a covered application. Comment 107(a)(11)–1.ii states that a covered financial institution reports the denial reason as ''credit characteristics of the principal owner(s) or guarantor(s)'' if it denies the application based on an assessment of the principal owner(s) or guarantor(s)'s ability to meet its current or future credit obligations. Examples include principal owner(s) or guarantor(s)'s credit score, history of charge offs, bankruptcy or delinquency, low net worth, limited or insufficient credit history, or history of excessive overdraft. Thus, data about a denial reason may provide personal information about a principal owner's personal financial health that may not otherwise be known to the public.

[879] The 2015 HMDA Final Rule noted that SBREFA SERs and NPRM commenters stated that compliance costs meant that financial institutions would increase price, reduce availability, or exit markets. *See* 80 FR 66127, 66296 (Oct. 28, 2015). But the Bureau's 2021 HMDA Data Point notes that mortgage origination trends have continued to increase since that rule became effective in 2018. Mortgage origination volume has increased from 4.14 million in 2018 to 5.13 million in 2021. Similar increases were seen in application volume. *See* CFPB, *Data Point: 2021 Mortgage Market Activity and Trends* (Sept. 19, 2022), *https://files.consumerfinance.gov/f/documents/cfpb_data-point-mortgage-market-activity-trends_report_2022-09.pdf.*

[880] See part IX.F.4's analysis of small business costs for more information about the magnitude of these effects.

to be at more significant risk of this type of harm. The Bureau acknowledges that the risk of re-identification of small business applicants and related natural persons may be greater in smaller or rural areas, but that does not increase the risk of proprietary lending models being disclosed.

Risk of reputational harms. Reputational harm to small business applicants and related natural persons is also predicated on re-identification.

The Bureau does not agree that publication will increase a responsible financial institution's reputational risk. While the Bureau recognizes that financial institutions may need to defend against some increased litigation about their small business lending practices, it agrees with commenters that publication will help responsible financial institutions defend against such litigation, accordingly making it less likely to occur in the first place. The Bureau similarly agrees with commenters that responsible financial institutions will be able to use the data as evidence of their fair lending compliance, as well as to prevent or counter erroneous claims that the institution is engaging in discriminatory practices. The Bureau has not seen any significant detrimental impact on mortgage applicants' trust in financial institutions, and HMDA-covered mortgage originations have increased since the Bureau's amendments to Regulation C went into effect in 2018.[881] As in the mortgage market, requesting and publishing data from applicants does not have enough reputational impact on financial institutions to impair origination activity.

With respect to reputational risk arising from overlapping databases, the Bureau is finalizing a coverage exception for transactions covered by the Bureau's HMDA rule.[882] In addition, many datasets contain data types that already overlap with HMDA and CRA data. There is accordingly no compelling reason to expect that publishing application-level data will significantly increase whatever risk already exists from HMDA coverage.

As to comments that assert that Farm Credit System products may be incomparable to other credit product types, thereby creating the risk of reputational harm or frivolous litigation, the data will provide sufficient opportunity for Farm Credit System entities to prevent and refute any erroneous conclusions. The Bureau agrees with commenters that this harm can be averted by distinguishing Farm Credit System loans in the dataset. The Farm Credit System is one of the identified types of financial institutions for the data required under § 1002.109(b)(9).[883] As a result, users can filter the data accordingly. Farm Credit System financial institutions can also filter to defend against any conclusions they believe are inaccurate because of comparisons outside the Farm Credit System.

Other harms or sensitivities. The Bureau agrees that the privacy assessment should take account of risks of physical harm and personal security threats to applicants or related natural persons, as well as the potential for data, once available, to be used by third parties to single out or target certain applicants or related natural persons for discriminatory treatment. Re-identification in some circumstances could result in significant risks, including threats of physical or personal harm and discrimination. The risks raised by commenters are supported, for example, by Hate Crime Statistics reported by the Federal Bureau of Investigation (FBI) through its Uniform Crime Reporting Program,[884] and by Equal Employment Opportunity Commission data.[885] The Bureau believes that the risk to personal privacy interests arising from physical harm, personal security threats, and discrimination resulting from information about protected characteristics warrant significant consideration when the Bureau considers modifications or deletions to data.

However, historical evidence indicates that data publication will have little long-term impact to relationships between applicants and financial institutions. The Bureau reported in 2021 that mortgage originations subject to HMDA continued to increase despite the HMDA rule becoming effective in 2018.[886] Based on this and earlier experience with HMDA, the Bureau does not agree that publication will drive small business applicants to seek alternative financing options to avoid disclosure. The HMDA evidence also suggests that any potential increase in costs after this rule becomes effective will not be prohibitive for applicants seeking financing from a regulated financial institution and that market volume will not be substantially impacted.

Finally, the Bureau takes strong measures to mitigate and address any risks to the security of sensitive data it receives, consistent with the guidance and standards set for Federal information security programs. The agency is accordingly committed to protecting the privacy and information security of the data it receives from financial institutions under this rule. In addition, the Bureau does not agree that a financial institution could be held legally liable for the exposure of data due to a breach at a government agency or for reporting data to the Bureau if the institution was legally required to provide the data and did so in accordance with other applicable law.

Based on the record to date, the Bureau intends to consider the risk of harms to small business applicants and related natural persons discussed above in its privacy risk assessment. However, the risks of harms or sensitivities to small businesses and related natural persons discussed by commenters logically assume re-identification already occurred. The harms and sensitivities recognized above clarify the consequences of re-identification and underscore the importance of managing re-identification risk. Additionally, the Bureau's preliminary view is that privacy risks to financial institutions are less significant compared to both personal privacy interests and non-personal commercial privacy risks to small business applicants and related natural persons. Many of the harms attributable to financial institutions

[881] Mortgage origination trends since the HMDA rule became effective in 2018 suggest that any distrust resulting from financial institutions seeking HMDA data has not deterred applicants from continuing to seek credit. *See* CFPB, *Data Point: 2021 Mortgage Market Activity and Trends* (Sept. 19, 2022), *https://files.consumerfinance.gov/f/documents/cfpb_data-point-mortgage-market-activity-trends_report_2022-09.pdf*.

[883] *See* comment 109(b)(9)–1.vii.

[884] For 2019, the FBI's Uniform Crime Reporting Program reported that in single-bias incidents, 1,492 victims were targeted because of their sexual orientation and 227 victims because of their gender identity. *See* Fed. Bureau of Investigation, *2019 Hate Crimes Statistics, https://ucr.fbi.gov/hate-crime/2019/topic-pages/tables/table-1.xls* (last visited Mar. 20, 2023).

[885] The Equal Employment Opportunity Commission reports that from FY 2014 through FY 2021, approximately $43.5 million dollars of monetary benefits were paid on LGBTQ+-based sex discrimination charges. The amount has increased from $2.2 million to $9.2 million over this period. It also reports that it received 13,546 LGBTQ+-based sex discrimination charges in the same time period, with annual charges increasing from 1,100 in FY 2014 to 1,968 in FY 2021. *https://www.eeoc.gov/data/lgbtq-based-sex-discrimination-charges* (last visited Mar. 20, 2023). *See also* Off. of Mgmt. & Budget, Off. of the Chief Statistician of the U.S., *Recommendations on the Best Practices for the Collection of Sexual Orientation and Gender Identity Data on Federal Statistical Surveys* 8–9.

[886] *Compare* 80 FR 66127, 66296 (Oct. 28, 2015), *with* CFPB, *Data Point: 2021 Mortgage Market Activity and Trends* (Sept. 19, 2022), *https://www.consumerfinance.gov/data-research/research-reports/data-point-2021-mortgage-market-activity-trends/*.

noted by commenters are only likely if small business applicants are re-identified, are not likely to occur based on the history of HMDA data publication, or exist independent of the data and therefore do not result from publication. As a result, measures that the Bureau takes to reduce re-identification risk will also reduce the risk of harms to financial institutions. Thus, the Bureau intends to consider modifying or deleting data to protect a financial institution privacy interest where data publication creates a compelling privacy risk.

5. Privacy-Informed Modification and Deletion

Proposed Approach

Generally. The NPRM stated that where disclosure of an individual data field, alone or in combination with other fields, would pose risks to privacy that were not justified by the benefits of disclosure to 1071's purposes, the Bureau would consider whether it could appropriately balance the privacy risks and disclosure benefits through modification techniques or whether the field should be deleted from the public dataset. The Bureau stated that it also would evaluate the risks and benefits of disclosing a data field in light of modifications or deletions considered for other data fields. Where the Bureau determines that modification of a data field is appropriate, the Bureau stated that its consideration of the available forms of modification for the 1071 data would also be informed by the operational challenges associated with various forms of modification and the need to make application-level data available to the public in a timely manner.

In general, the Bureau stated that deleting or modifying data because the data would disclose general information about a financial institution's lending practices—compared with information that could substantially facilitate, for example, the reverse-engineering of a financial institution's proprietary lending models—would be inconsistent with section 1071, which directly contemplates disclosure of financial institution identity in connection with the public application-level dataset.[887] Each of the data fields prescribed by the statute—with the exception of the application number—could provide some insight into a financial institution's lending practices. If the Bureau were to exclude data on this basis, therefore, it would exclude virtually all of the statutorily required 1071 data points from the public data, frustrating both of the statutory purposes of section 1071.[888] While the Bureau acknowledged financial institutions' concern about the litigation and reputational risks involving 1071 data, the Bureau did not believe that this concern would justify the exclusion of data from public disclosure. One of the statutory purposes of section 1071 is to facilitate enforcement of fair lending laws, which authorize enforcement by parties other than the Bureau.[889] Additionally, section 1071 contemplates that financial institutions would make their own application-level data available to the public, which necessarily entails their identification.[890]

In light of the statutory purposes, the Bureau intended to modify or delete data only as needed under the balancing test prior to public disclosure. The NPRM discussed associated modification techniques with respect to specific data points. Where no specific modification technique was described with respect to a particular data point, the Bureau stated that it had not identified an obvious modification technique other than swapping, suppression, or deletion.

While certain information that directly identifies applicants or related natural persons generally would not be collected under the proposed rule, the Bureau did not accept that this would eliminate privacy risks that would arise from publishing the data in unmodified form. The Bureau also rejected the idea that privacy risks could be adequately resolved through rule coverage. While some re-identification risk could be reduced by increasing the number of applications reported to the Bureau, the Bureau did not believe the effects of doing so are necessarily predictable because re-identification risk depends on the characteristics of the data. Further, the Bureau did not believe that increasing the number of applications would have addressed risks of harm or sensitivity to re-identified applicants or natural persons.

Aggregate data. In the NPRM, the Bureau stated that it did not intend to address privacy risks arising from application-level data by disclosing aggregated data in its place. As required by section 1071, the Bureau proposed in § 1002.110(a) to make available to the public the information submitted to it by financial institutions pursuant to proposed § 1002.109, subject to deletions or modifications made by the Bureau. The Bureau stated that, as authorized by the statute, proposed § 1002.110(b) would have stated that the Bureau may, at its discretion, compile and aggregate information submitted by financial institutions pursuant to proposed § 1002.109, and make any compilations or aggregations of such data publicly available as the Bureau deems appropriate. The Bureau initially anticipated making the data collected under section 1071 available at the application level—with appropriate potential modifications and deletions—rather than providing aggregate data with counts and averages for each data field. The Bureau stated that it may consider releasing aggregated data in the future, after it determined whether narrower modifications or deletions could address privacy risks. The Bureau had received some suggestions to consider ''differential privacy'' techniques,[891] which are typically used in connection with aggregate statistics to reduce the identifiability of more granular data. The Bureau sought comment on whether differential privacy techniques might be appropriate for application-level data.

Recoding. The NPRM identified the Bureau's intention to consider various methods to ''recode'' the proposed data fields as necessary. The Bureau explained that recoding techniques decrease the number of distinct categories for a data field. In this context, recoding would involve providing the value of a data field in a higher-level category that increases the number of records within a given combination. Some data fields like census tract and NAICS code have structures that permit recoding without developing new 1071-specific recoding categories. For instance, if the Bureau were to determine that the re-identification risk presented by the census tract data field does not justify the benefits of unmodified disclosure, the Bureau could instead provide geography at the county level because census tracts are designed to be non-overlapping subdivisions of a county.

The Bureau also stated that it intended to consider recoding via bins or intervals of values for data fields that, in unmodified form, would have continuous values. The Bureau stated that unmodified continuous data fields can be highly identifying, but binning can significantly reduce this risk. It also

[887] *See* ECOA section 704B(f)(2)(B).

[888] *See* ECOA section 704B(a).

[889] *See, e.g.,* ECOA section 706 (providing for civil liability).

[890] *See* ECOA section 704B(f)(2).

[891] Differential privacy is a statistical method designed to protect individuals from reidentification risk. A dataset is said to be differentially private if, by looking at the dataset, one cannot tell whether any individual's data was included in the dataset.

noted the possibility of top- or bottom-coding a data field to prevent extreme—and potentially very re-identifiable—values from being released.

Other techniques. The Bureau stated that it might also consider ''targeted suppression,'' which makes certain values of data points unavailable when a certain combination of values is held by too few records. The Bureau stated that it might consider treating certain values of data points as ''not available'' if the application is the only small business application from a particular census tract. The Bureau explained that targeted suppression can be applied in several ways. One way would be to remove the value of a field that makes the record identifiable. For example, if census tract and NAICS code identify a record, the microdata could delete the value of the NAICS code for any applications that are in cells deemed sensitive. A second approach could leave the census tract and NAICS code but suppress the values of other data points. This method would reduce the potential harm if the record were re-identified. A third approach could be to remove the record from the dataset entirely. The Bureau stated that, in general, suppression is a more common approach for aggregate data than for application-level data.

The Bureau noted that one drawback to targeted suppression is that it complicates data analysis for end users. A data user would be presented with millions of rows, but in certain rows and for certain data points, values would be missing.[892] Another identified drawback is that suppression would need to be done so that the remaining unmodified data do not provide a user with the ability to back out the modified field, sometimes involving complementary suppression or deleting values of other applications to ensure that the missing value cannot be reengineered. The Bureau sought comment on whether targeted suppression techniques could preserve the benefits of publishing application-level data, and, if so, what the Bureau should consider as the minimum cell size to implement targeted suppression.

The Bureau sought comment on other modification techniques, such as ''data swapping'' (sometimes called ''switching''). Data swapping involves finding two records that are similar on several dimensions and swapping the values for other data fields between the two records. In effect, data swapping would require that the Bureau preserve certain data fields while swapping others. The Bureau stated that another set of techniques for addressing privacy risks for continuous data would involve adding ''random noise'' to the reported values. For example, under ''additive noise techniques,'' a random value is added to the existing value of the data field. Under ''multiplicative noise techniques,'' the true value is multiplied by a random value. The Bureau sought comment on whether such techniques would preserve the benefits of publication. The Bureau explained that a drawback to these approaches is that data would be released with values that do not match the true values of the underlying data.[893] Data users would need to take such modifications into account when performing any analyses.

Comments Received

Generally. With regard to how the Bureau stated its intention to assess privacy risks that would inform modification and deletion decisions, several community group commenters, a minority business advocacy group, and several members of Congress urged the Bureau to apply the NPRM's balancing test in favor of public disclosure and to make available a robust dataset. According to some commenters, the fair lending and business and community development purposes of section 1071 militate in favor of data transparency. A number of community and business advocacy group commenters stated that if published application level data are not robust, or if specific data points are not disclosed, the dataset will not adequately reveal whether these statutory purposes of section 1071 are being met. Several commenters asserted that society's interest in tackling discrimination and closing the racial wealth gap supported robust disclosure. A business advocacy group stated that robust 1071 data would promote financial stability in the economy, and cited insufficiently granular HMDA data as contributing to the 2008 subprime financial crisis.

Some community group commenters and a software vendor urged the Bureau not to delete or modify public application-level data because it would undermine the statutory purposes of section 1071. The software vendor stated that modifications or deletions may reduce the utility of the data for no privacy benefit. Several commenters asserted that the Bureau should only modify public 1071 data to protect the privacy interests of small business applicants. A joint letter from community and business advocacy groups agreed with the Bureau's statement that litigation and reputational risks faced by financial institutions do not justify excluding data from public disclosure.

On the other hand, several industry commenters urged the Bureau to make modification and deletion decisions to protect the privacy of financial institutions, applicants, and related natural persons. They stated that protecting these privacy interests was consistent with the statutory purposes of section 1071 because limiting disclosure would increase credit access and lower credit costs to minority-owned and women-owned small businesses.

Several industry, community group, and academic commenters supported modification and deletion of application-level data, stating that it could adequately address privacy risks posed by publication. A trade association asserted that publishing certain data points in an unedited, application-level format would increase the risk of applicant re-identification. Another trade association supported the liberal use of modification and deletion techniques to protect privacy interests of lenders, small business applicants, and related natural persons. Some commenters stated that the lack of reported incidents in which an individual has been re-identified in HMDA data suggests that modifications or deletions can reduce re-identification risks here also.

Some commenters offered views about what data points would be modified or deleted. Several suggested that data modifications or deletions should be consistent with HMDA. According to these commenters, the Bureau should ensure that any data deleted in the HMDA dataset is also deleted in the 1071 dataset, including the unique identifier, the application date, and the action taken date. A software vendor stated that the Bureau should modify data points that reflect gender identity or sexual orientation information, which could result in persons being subject to physical harm. Several individual commenters likewise suggested that LGBTQI+ persons face particular privacy risks. A joint letter from community and business advocacy

[892] Data users would need to understand the method behind the modifications and plan analyses to account for the fact that the suppressed data would necessarily not reflect all small business loans in a given year.

[893] For example, with respect to the amount applied for data field, a recoding technique would release the values of the data field in broad categories, for instance ''$100,000–$150,000.'' In such case, the broader category provides less information but reflects the true value of the underlying data. Noise addition, by contrast, would involve the Bureau manipulating (in a standardized and documented way) the actual values of loan amount. An application's loan amount may be released as $85,000 in the public dataset when the true value was $78,000.

groups stated that if the Bureau modifies 1071 data, it should do so on a loan-by-loan basis because the modification of a particular data field may not be necessary for all records in the dataset.

Aggregate data. The Bureau received no comments about how differential privacy techniques may be applied to application-level data. However, the Bureau did receive comments about aggregating 1071 data. Several industry commenters suggested that the Bureau publish aggregate data, instead of an application-level dataset, to mitigate privacy risks. One stated that aggregate data are sufficient to analyze the business needs and credit access of applicants, including minority-owned and women-owned small businesses. Another said that disclosing aggregate data, as opposed to application-level data, would be consistent with the practices of other agencies. Other industry commenters stated that, while some 1071 data could be disclosed at the application level, the Bureau should aggregate any data points that present re-identification risk.

Recoding. Several community group commenters stated that if the disclosure of 1071 data fields present significant privacy risks, the Bureau should consider binning data or disclosing intervals of values. For example, these commenters stated that when disclosing gross annual revenue data, the Bureau could consider publishing data in $10,000 increments. One stated that binning would be appropriate as long as the modified public 1071 dataset could satisfy the fair lending and business and community development statutory purposes of section 1071.

Other commenters stated that the use of binning should be limited. A community group and a software vendor stated that if the Bureau bins data, it should ensure that the public 1071 dataset remains sufficiently detailed to allow meaningful analysis. To demonstrate this point, the community group asserted that the current CRA system of combining all loans for businesses with revenue under $1 million does not allow for analysis of small businesses within that range. The software vendor cautioned that binning may not always be effective.

Other techniques. With respect to other modification techniques discussed in the NPRM, a community group stated that data swapping and targeted suppression would be appropriate as long as the modified public 1071 dataset could satisfy the fair lending and business and community development statutory purposes of section 1071. The Bureau received no comments about other potential modification techniques.

Current Approach

The Bureau intends to consider modification and deletion techniques as necessary to reduce cognizable privacy risks. The Bureau agrees with comments that a robust public dataset will serve the statutory objectives of section 1071.[894] By extension, a public application-level dataset with less detailed data or that omits certain data points entirely would confer relatively less public benefit. These benefits notwithstanding, in some cases modification and deletion decisions may be appropriate to protect privacy interests. The statute empowers the Bureau to modify or delete data, and the Bureau believes that modifications or deletions may be appropriate in some circumstances to reduce the cognizable privacy risks set forth above.

Modifications or deletions will not necessarily undermine the utility of the published data or will not be futile because they will not mitigate risks. With respect to the effectiveness of modifications and deletion techniques, the Bureau points to the lack of reported incidents in which an individual has been re-identified in public HMDA data, which the Bureau modifies to reduce re-identification risk. The Bureau concludes that targeted modification and deletion decisions can adequately reduce privacy risks while preserving the utility of 1071 data, as is the case with HMDA data. Modifications and deletions may be necessary, for example, in cases where unmodified application-level data will likely lead to re-identification of small business applicants or related natural persons. The Bureau will also consider modifications and deletions to the public 1071 dataset when data fields, individually or in combination with other data, pose cognizable privacy risks, as discussed above.

After obtaining a full year of reported data and conducting a full privacy analysis, the Bureau intends to make modification and deletion decisions tailored for individual data points where appropriate. The Bureau will not delete or modify data solely to align with HMDA practice. Small business lending and mortgage lending are distinct markets which face their own unique privacy risks, and re-identification risk depends on the characteristics of particular data. With respect to comments about modifying or deleting data that may convey the gender identity or sexual orientation of applicants' principal owners or other individuals that own or control applicants, the Bureau views this as sensitive information that implicates important personal privacy interests. While the Bureau is not making modification and deletion decisions about this information prior to conducting the full privacy analysis, it does intend to give significant consideration to personal privacy interests. However, it would not be feasible to make modification and deletion decisions on a loan-by-loan basis, as one comment suggested.

Regarding feedback on specific modification techniques, the Bureau does not intend to publish aggregate data instead of application-level data. Aggregate datasets do not permit the detailed, application-level analyses that best facilitate the fair lending enforcement and business and community development purposes of section 1071. In addition, the Bureau can adequately mitigate privacy risks through targeted modification and deletions of individual data fields—it is not necessary to avoid publication of all application-level data. While the Bureau does not intend to publish aggregate data in place of an application-level dataset, it anticipates releasing select aggregated data before it publishes application-level data.

The Bureau sees recoding, including binning data or disclosing intervals, as an appropriate modification technique to address privacy risks that may be posed by public release of unmodified data. While the Bureau is not making specific modification decisions at this time, it intends to consider recoding data in a targeted manner that preserves the utility of the public dataset. The Bureau also views other modification techniques, including data swapping and targeted suppression, as appropriate tools to address privacy risks. Finalizing the exact tool set, however, will depend on securing a full year of data and will be informed by continued engagement with stakeholders.

When exercising its discretion to modify or delete 1071 data, the Bureau anticipates publishing data in a manner that reduces privacy risks, in particular re-identification risk. If the Bureau determines that it is necessary to modify an individual data point to address a privacy risk, the Bureau intends to consider a range of modification techniques, including, but not limited to, recoding, data swapping, and

[894] The Bureau lacks evidence to assess the comment that published data would promote financial stability. If true, this result would align with the Bureau's authorizing statute whose purpose, in part, is to ''promote the financial stability of the United States by improving accountability and transparency in the financial system.'' Dodd-Frank Wall Street Reform and Consumer Protection Act, Public Law 111–203, 124 Stat. 1376 (2010).

targeted suppression. The Bureau intends to engage with stakeholders in the future about these issues, including providing opportunities for additional input as the Bureau considers its privacy analysis further.

6. Preliminary Privacy Assessment of Particular Data Fields

In the NPRM, the Bureau identified certain data fields that it believed would need modification or deletion to appropriately protect privacy interests, while taking account of disclosure benefits: individual contact information at reporting financial institutions; free-form text data, which occurs in a number of data fields; and the unique identifier for each application. Beyond these specific fields, the NPRM explained that the Bureau lacked data under section 1071 or comparable proxies that it could use for its privacy risk assessment. Accordingly, it did not suggest specific modifications and deletions with respect to any other data.

In order to benefit from stakeholder engagement, however, the Bureau did set forth some initial analysis on how it would apply the NPRM's balancing test to the proposed data fields. With respect to each such data field, whether individually or in combination with others, the Bureau sought comments on: (1) whether there are additional benefits of unmodified public disclosure in light of the purposes of the statute; (2) whether disclosure in unmodified form would reveal additional information that might be considered harmful or sensitive by an applicant, related natural person, or financial institution; and (3) whether disclosure in unmodified form would significantly contribute to the risk that an applicant or related natural person might be re-identified. The Bureau also sought comment on modification techniques it could use, and whether deletion would be appropriate. Where no specific technique was described with respect to particular data points, the Bureau did not identify any obvious technique besides potentially swapping, suppression, or deletion.

The Bureau received feedback on this initial analysis from a range of commenters, including industry and community group commenters. The Bureau has taken this feedback into consideration to refine its analysis of the qualitative risks associated with disclosing particular data fields in unmodified form, although, consistent with the above analysis, the Bureau's assessment remains preliminary.[895]

Overall, with the exceptions noted with respect to unique identifier, free-form text, and individual contact information, for all other finalized data points, the Bureau intends to further consider whether modification techniques may be appropriate when it analyzes reported data and conducts its full privacy analysis. In doing so, the Bureau intends to take into account existing feedback, as well as conducting ongoing engagement, about potential modifications as it examines what modifications or deletions may be appropriate for these fields. In addition, the Bureau is mindful of the statutory purposes of section 1071 and will only modify or delete data to advance a privacy interest.

i. Unique Identifier

Proposed § 1002.107(a)(1) would have required financial institutions to collect and report an alphanumeric identifier, starting with the legal entity identifier of the financial institution, unique within the financial institution to the specific covered application, and which can be used to identify and retrieve the specific file or files corresponding to the application for or extension of credit. As discussed in the section-by-section analysis of § 1002.107(a)(1), the Bureau is finalizing this data point substantially as proposed.

In the NPRM, the Bureau stated that disclosing the unique identifier in the 1071 data in unmodified form by itself would likely disclose minimal, if any, information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified, or that may be harmful or sensitive to an identified financial institution. Section 1071 prohibits financial institutions from including in 1071 records certain personally identifiable information that directly identifies a natural person applicant or someone connected with the applicant.[896] In addition, the Bureau proposed to prohibit financial institutions from reporting information that would directly identify a small business. For these reasons, the Bureau did not expect that the unique identifier would be considered harmful or sensitive.

With respect to re-identification risk, the NPRM noted that although publicly available datasets do not presently include the unique identifier data field, financial institution legal entity identifiers are publicly available, and the Bureau was aware of rare instances in which a loan number was included in UCC filings. In addition, the Bureau noted that many jurisdictions publicly disclose real estate transaction records in an identified form, and the Bureau stated that many financial institutions may include loan numbers on these publicly recorded documents.[897]

The Bureau stated that inclusion of the proposed unique identifier, rather than application or loan numbers, would limit the possibility of using an application or loan number to match 1071 data to those publicly recorded documents, thus reducing risk of re-identification. However, the Bureau acknowledged that there is a risk that, after financial institutions begin to report data under section 1071, they may replace the loan numbers currently assigned to small business loans with the unique identifier and, if they do, the unique identifier could be included on publicly recorded documents. Considering the uniqueness of the identifiers, the Bureau reasoned that this data field on a publicly recorded document could be used to match a 1071 record to an identified public record directly and reliably.

In light of these potential re-identification risks, the Bureau stated that it did not intend to publish the unique identifier data field in unmodified form. The Bureau sought comment on whether there are modifications to the unique identifier data field that would appropriately balance identified privacy risks and disclosure benefits. The Bureau stated that it was considering the feasibility of disclosing a separate unique identifier that the Bureau could create. The Bureau also considered deleting the data field from the public application-level data, but sought comment on whether such deletion would create challenges for users of the data and, if so, how the Bureau could address those challenges other than by creating a separate unique identifier. The Bureau sought comment on this analysis as well as its intent not to publish the unique identifier in unmodified form.

An academic research and policy organization agreed with the Bureau's initial analysis, noting that public HMDA data do not include a unique identifier. Several industry commenters stated that, because lenders are allowed to use their own internal account numbers and therefore the unique identifier may include a loan number or account number, the data point in combination with the financial

[895] The Bureau sought and received feedback about several data points that it did not propose. As it is not adopting those data points, it does not address privacy risks or modification techniques associated with reporting them.

[896] ECOA section 704B(e)(3).

[897] *See* 82 FR 44586, 44599 (Sept. 25, 2017); *see also* 84 FR 649, 660 (Jan. 31, 2019).

institution's name provides substantial opportunity for fraud. Because of the privacy risks discussed above, most of these commenters supported the Bureau's suggestion not to publish the unmodified unique identifier field. A CDFI lender stated that the Bureau should consider publishing a modified identifier or a separate one created by the Bureau.

After considering these comments, the Bureau intends not to publish the unique identifier data field in an unmodified form. Although it has not yet conducted a full re-identification analysis for the 1071 data, the Bureau agrees with the re-identification risks raised by commenters. The universal loan identifier for HMDA data, which is similar to the unique identifier, is not published because of the re-identification risk that it poses.[898] While HMDA publication practices are not dispositive here, the Bureau draws upon its experience implementing HMDA and Regulation C where appropriate, and it does so here.

At this time, the Bureau has not decided whether to publish public application-level data without any unique identifier information, disclose instead a separate unique identifier created by the Bureau for this purpose, or employ some other modification. The Bureau will consider what modification or deletion techniques may be appropriate when it analyzes application-level data and conducts its full privacy analysis.

ii. Application Date

Proposed § 1002.107(a)(2) would have required financial institutions to collect and report the date the covered application was received by the financial institution or the date shown on a paper or electronic application form. As discussed in the section-by-section analysis of § 1002.107(a)(2), the Bureau is finalizing this data point with modifications such that financial institutions must collect and report the date the covered application was received or shown on a paper or electronic application form.

The NPRM stated that, by itself, disclosing application date in unmodified form would likely disclose minimal, if any, information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified, or that may be harmful or sensitive to an identified financial institution. The Bureau noted that an adversary such as a competitor may conceivably find it helpful to understand when a business is seeking credit. In addition, marketers and creditors could use this information to target products to entities recently in the market for credit, either to deploy new funds or to refinance out of a current loan. However, the Bureau did not believe that disclosing the application date would otherwise disclose sensitive information about a small business or its owner. The Bureau also reasoned that any utility of this data field for such purposes would be curtailed by the time to publication.

The Bureau was not able to identify publicly available datasets that include data fields an adversary could directly match to the application date field. However, the Bureau acknowledged that an adversary may be able to infer a likely origination date based on typical time lags between application, credit decision, and origination, potentially enabling matching to other datasets that record these later dates. The Bureau stated that, if it determined that application date should be modified, it may consider disclosing the application date at a higher level; for example, disclosing the month and year but not the specific date. In light of the potential re-identification risk arising from this data field, the Bureau sought comment on whether there are other specific modifications it should consider, and whether it should consider deletion outright.

Several commenters provided feedback on the Bureau's analysis. In supporting disclosure of the application date field, a community group stated that it would promote understanding of small business lending. However, an academic research and policy organization asserted that disclosure of application date would pose re-identification risk to applicants and noted that HMDA does not disclose application date. This commenter, along with a group of trade associations, urged the Bureau not to publish the application date field to ensure consistency between 1071 and HMDA.

As discussed in part VIII.B.3 above, the Bureau views the disclosure of application date as having significant benefits. This preliminary assessment is consistent with feedback that publication of application date would promote understanding about small business lending. The Bureau's preliminary assessment is that the application date field does not pose re-identification risks such that the Bureau should modify or delete it before publication. Commenters supporting such modification or deletion did not provide additional evidence of re-identification risk that would alter the partial privacy analysis described above. The Bureau also preliminarily assesses that this unmodified data field would present limited privacy risk if re-identification occurred.

iii. Application Method and Application Recipient

Proposed § 1002.107(a)(3) would have required financial institutions to collect and report the means by which the applicant submitted the covered application directly or indirectly to the financial institution. A financial institution would have reported whether the applicant submitted the application in person, by telephone, by mail, or online. Proposed § 1002.107(a)(4) would have required financial institutions to collect and report whether the applicant submitted the covered application directly to the financial institution or its affiliate, or whether the applicant submitted the covered application directly or indirectly to the financial institution. As discussed in the section-by-section analyses of § 1002.107(a)(3) and (4), the Bureau is finalizing these data points as proposed, with certain modifications to related commentary.

In the NPRM, the Bureau stated that disclosing application method and whether the application was submitted directly or indirectly, in unmodified form, would likely disclose minimal, if any, information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified. The Bureau reasoned that the application method is likely to be of relatively limited utility to an adversary because it conveys little information about a natural person or a business's financial condition. While adversaries interested in targeted marketing could direct future marketing efforts to a business using the same application channel, the Bureau noted that marketing firms already possess strategic information about methods for establishing contact. Unmodified disclosure of application method and whether the application was submitted indirectly may reveal information that financial institutions regard as harmful or sensitive, but the Bureau did not believe that disclosure would permit the reverse-engineering of a financial institution's proprietary lending models.

The Bureau was not able to identify publicly available datasets that include data fields an adversary could directly match to the application method or application recipient data fields. While the Bureau's HMDA data and the Government-Sponsored Enterprises loan-level datasets include acquisition channel information in loan-level data, the Bureau stated that these datasets do

[898] *See* 84 FR 649, 660 (Jan. 31, 2019).

not identify applicants or related natural persons. However, the Bureau sought comment on whether there are other identifiable application/loan-level datasets that include this information or whether HMDA data or the Government-Sponsored Enterprises loan-level datasets could be matched to other identifiable datasets.

The Bureau received two comments from trade associations on this analysis. These questioned whether publishing the application method and application recipient fields would provide disclosure benefits related to section 1071's statutory purposes. One stated that lenders' methods for receiving applications are strategic business decisions and disclosing this information will cause financial institutions to suffer commercial harm.

As discussed above in part VIII.B.3, the Bureau views these data fields as having significant disclosure benefits. The Bureau does not see disclosure causing significant commercial harm to financial institutions. Disclosure of application method and application recipient data would not permit the reverse-engineering of proprietary lending models. Accordingly, the Bureau preliminarily assesses that disclosing these data fields in unmodified form would present limited privacy risk if re-identification occurred.

iv. Credit Type

Proposed § 1002.107(a)(5) would have required financial institutions to collect and report to the Bureau certain information about the type of credit applied for or originated. The proposal would have required financial institutions to report three categories of information that together constitute the type of credit. First, the proposal would have required financial institutions to report the type of credit product. Second, the proposal would have required financial institutions to report the type or types of guarantees that were obtained for an extension of credit, or that would have been obtained if the covered credit transaction had been originated. Third, the proposal would have required financial institutions to report the length of the loan term, in months, if applicable. As discussed in the section-by-section analysis of § 1002.107(a)(5), the Bureau is finalizing this data point as proposed, with revisions to the related commentary.

The NPRM stated that data on type of credit product, type of guarantee, and loan term could disclose information that may be harmful or sensitive to applicants or related natural persons. It also stated that a business's competitors could use these data fields—in conjunction with the loan amount and pricing data fields—to draw inferences about the business's financial condition based on whether the business obtained credit on favorable or unfavorable terms. Type of guarantee data could indicate heightened credit risk for the applicant.[899] Credit type data also could be used for targeted marketing of products and services that may pose risks.

The Bureau further stated that disclosure of these data fields in unmodified form may reveal information that financial institutions regard as harmful or sensitive, such as the types of products they offer or the government programs in which they participate. However, the Bureau did not expect disclosure of these data fields to permit the reverse-engineering of proprietary lending models. Furthermore, the Bureau stated that general information about the types of credit a financial institution is offering is already widely available.

The Bureau was aware that certain identified datasets include application-level information on the type of credit product, type of guarantee, or loan term. Government lending programs, such as the SBA's 7(a) and 504 programs, publish loan-level data that indicate the term of the loan and whether the loan is a term loan or a line of credit. In some States, UCC filings may include some information related to the type of collateral. In the NPRM, the Bureau stated that the existing public availability of this information decreased the potential harm or sensitivity of disclosing information about the type of credit product, type of guarantee, and loan term in the 1071 data. By the same token, however, the Bureau recognized that an adversary could use these other datasets, combined with other fields, to match a section 1071 record to an identified publicly available record.

If it determined that modifications were ultimately needed, the Bureau identified a number of possible approaches. The Bureau could disclose ''Federal guarantee'' instead of disclosing the specific program. Similarly, the Bureau could recode loan term data into bins—for example, using intervals of two or five years.

The Bureau received feedback from two community group commenters. One stated that publication of credit type data would promote understanding of small business lending. The other stated that combining loans from different Federal government guarantee programs into a single category for publication would not reduce the utility of 1071 data. The commenter also stated that if the Bureau recodes length of the loan term data into bins, the Bureau should test those bins to ensure that the recoded data are useful to users.

Based on its earlier analysis and from the comments received, the Bureau assesses that disclosing credit type data in unmodified form may present significant privacy risks if re-identification occurred. For example, the Bureau believes that these data could result in non-personal commercial privacy risks to small businesses, including revealing sensitive financial information or facilitating problematic targeted marketing. However, the Bureau does not identify any compelling privacy risks to financial institutions.

v. Credit Purpose

Proposed § 1002.107(a)(6) would have required financial institutions to collect and report the purpose or purposes of the credit applied for or originated. As discussed in the section-by-section analysis of § 1002.107(a)(6), the Bureau is finalizing this data point with modifications.

The NPRM stated that disclosing credit purpose in unmodified form by itself would likely disclose minimal, if any, information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified, or that may be harmful or sensitive to an identified financial institution. It noted that information about credit purpose could be useful to adversaries such as a small business's competitors, potential acquirers, or new market entrants, since it contains information about a business's strategy and performance, such as whether a business is expanding. Even so, this information would generally not be detailed enough to cause competitive harm, and its competitive value would likely be mitigated by time to publication.

The Bureau did not identify publicly available datasets that include data fields an adversary could directly match to the credit purpose data fields in unmodified form in the public application-level data with respect to an applicant or related natural person. The Bureau stated that identified public datasets pertaining to small business loans generally do not contain information about the purpose of the credit. Therefore, the Bureau reasoned that an adversary would have difficulty

[899] For example, the ''SBA guarantee—7(a) program'' data field is intended for businesses that have been unsuccessfully applying for credit or have had some other difficulty in accessing credit.

using the credit purpose data fields to match a section 1071 record to an identified publicly available record accurately.

The Bureau stated that disclosure of credit purpose in unmodified form may also reveal information that financial institutions regard as harmful or sensitive, such as information that a financial institution offers credit that is used for certain purposes. However, the Bureau did not identify reasons that disclosure would permit reverse-engineering of proprietary lending models.

Several lenders and one trade association provided feedback. These commenters generally stated that credit purpose data created privacy risks for small business applicants. For example, one commenter stated that if re-identification occurred, credit purpose data could reveal confidential commercial information, such as plans for business acquisitions or expansions. As discussed in the NPRM, the Bureau acknowledges that credit purpose data contains information about a business's strategy and performance. However, the Bureau does not view this information as posing a significant risk of harm because of its relative lack of detail and the delay between the date of action taken on a loan and the publication of 1071 data. Commenters did not offer evidence to the contrary. Commenters also did not offer evidence that indicates that this data point presents significant re-identification risks.

Accordingly, the Bureau preliminarily assesses that disclosing credit purpose data in unmodified form would present limited privacy risk.

vi. Amount Applied For

Proposed § 1002.107(a)(7) would have required financial institutions to collect and report to the Bureau the initial amount of credit or the initial credit limit requested by the applicant. As discussed in the section-by-section analysis of § 1002.107(a)(7), the Bureau is finalizing the amount applied for data point as proposed.

The NPRM stated that disclosing this data field in unmodified form would likely disclose information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified. Business owners might view details about the amount applied for as sensitive, particularly where they are concerned about the risk of being re-identified as an applicant for credit. The Bureau also noted that were re-identification to occur, the amount applied for could lead to targeted marketing of products or services that pose risks because it could help lenders target small businesses that received less credit than they requested with offers for loans at higher rates or fees. The Bureau stated that the amount applied for is generally not included in other publicly available data, so it would likely not be useful to adversaries seeking to match 1071 data with other publicly available data. However, the Bureau believed that amount applied for would be useful to an adversary in other ways. For example, a significant shortfall between the amount applied for and the amount approved could be used either by an applicant's competitor or by a consumer to infer that the business has a relatively weak financial position. With information on whether or not a business is granted a loan, an adversary might gain insight into the scale of a business's objectives based on the amount applied for or approved. The Bureau also noted that the relative scarcity of this information at present would also increase its value to adversaries. As an additional consideration, the Bureau saw no reason that disclosure would permit the reverse-engineering of proprietary lending models.

The Bureau received comments from several industry commenters and a community group. A group of trade associations stated that if a small business applicant is re-identified, disclosing the amount applied for could reveal information about the financial status of that small business that could harm its prospects for credit. Several industry commenters expressed concern that data about the amount applied for would create privacy risks for small business applicants by revealing confidential information, such as plans for business acquisitions or expansions. Another commenter stated that disclosing the amount applied for can create privacy risks for financial institutions. This commenter noted that the amounts applicants apply for can be arbitrary and, therefore, comparing these amounts to any amounts approved could be misleading and not a reliable metric for whether credit demand is met.

The Bureau stated that if it determined that the amount applied for should be modified, it may consider recoding the data into bins. For example, the Bureau could recode the amount applied for into bins of $25,000. In response, a community group stated that the Bureau could recode the amount applied for into bins that use the mid-point of $10,000 intervals. As noted by the commenter, HMDA utilizes this technique, and, according to the commenter, it would be sufficient for privacy purposes while producing more accurate data.

After reviewing these comments, the Bureau assesses that disclosing this data field may create some privacy risk where small business applicants and related natural persons face re-identification risk that could reveal non-public commercial information, such as an application for credit or business acquisition or expansion plans. Further, to the extent that this data point, combined with the amount approved or originated data point, indicates business difficulties, this could impact the reputational interests of small businesses and their owners. The Bureau also assesses that in some circumstances disclosing amount applied for could disclose personal information about an applicant or related natural person that would be harmful or sensitive if such person were re-identified. Comments asserting privacy risks for financial institutions, however, provided no compelling evidence of privacy risk to alter the NPRM analysis on point.

vii. Amount Approved or Originated

Proposed § 1002.107(a)(8) would have required financial institutions to collect and report to the Bureau: (i) for an application for a closed-end credit transaction that is approved but not accepted, the amount approved by the financial institution; or (ii) for a closed-end credit transaction that is originated, the amount of credit originated; or (iii) for an application for an open-end credit transaction that is originated or approved but not accepted, the amount of the credit limit approved. As discussed in the section-by-section analysis of § 1002.107(8), the Bureau is finalizing the amount approved or originated data point as proposed.

The NPRM stated that disclosing this data in unmodified form would likely disclose information about an applicant or related natural person that might be harmful or sensitive if such person were re-identified, or that might be harmful or sensitive to an identified financial institution. The Bureau stated that information about the amount approved or originated could be useful to potential adversaries. For example, these data fields would provide creditors some insight into competitors' lending practices, particularly when combined with other data points such as gross annual revenue, number of workers, time in business, and pricing. Likewise, these data might allow creditors to make general inferences about the relative risk appetites of their competitors. However, the Bureau did not see any reason that disclosure

would permit the reverse-engineering of proprietary lending models.

The Bureau stated that it had identified publicly available datasets that include data fields an adversary could directly match to the amount approved or originated data fields in unmodified form. Credit amount approved or originated is often widely available in public datasets, such as loan-level data for the SBA 7(a) and 504 programs, as well as property records and UCC filings. The Bureau accordingly stated that adversaries would be able to match the amount of credit approved or originated to an existing public record. The Bureau further stated that if it determined that the amount approved or originated should be modified, it may consider recoding.

The Bureau received comments from several industry and community group commenters. The community groups generally supported publishing these data fields. Several industry commenters disagreed. Two such commenters stated that if re-identification occurred, the amount approved or originated could harm small business applicants by disclosing information about business expansions or acquisitions. A community group stated that the Bureau could recode the amount applied for into bins that use the mid-point of $10,000 intervals. As the commenter noted, HMDA utilizes this technique and, according to the commenter, it would be sufficient for privacy purposes while producing more accurate data.

After reviewing these comments, the Bureau preliminarily assesses that disclosing amount approved or originated data in unmodified form may present significant privacy risk if re-identification occurred. In some circumstances disclosing amount approved or originated could disclose personal information about an applicant or related natural person that would be harmful or sensitive if such person were re-identified. For example, because amount approved or originated was found in publicly available datasets, in combination with information about the amount applied for, this data could facilitate targeted marketing of higher interest or predatory credit products. This combination of data could also have reputational impacts on small business applicants and related natural persons. The Bureau does not see any reason, however, that this data field will create compelling privacy risks for financial institutions.

viii. Type of Action Taken and Denial Reasons

Proposed § 1002.107(a)(9) and (11) would have required financial institutions to collect and report to the Bureau the action taken by the financial institution on the covered application, and for denied applications, the principal reason or reasons the financial institution denied the covered application. As discussed in the section-by-section analysis of § 1002.107(a)(9) and (11), the Bureau is finalizing these data points as proposed.

The NPRM stated that reasons for denial data could be harmful or sensitive for applicants or related natural persons. However, the Bureau did not believe disclosing the fact that credit was sought, in and of itself, likely would be harmful or sensitive to small businesses because credit is so widely used by small businesses. Further, the harm or sensitivity of disclosing information that credit was originated is mitigated by the publication of originated loan details in other databases such as UCC filings. Additionally, the Bureau did not assess that disclosure of action taken would permit the reverse-engineering of proprietary lending models.

The Bureau had not identified publicly available datasets that include data fields an adversary could directly match to these data fields in unmodified form. At a category level, however, the Bureau noted that these data fields could tell adversaries which records it may be possible to match against databases that include originated loans. The Bureau stated that most of these data fields included in this data point are not found in publicly available records that contain the identity of an applicant; the only data field that would be consistently available would be for originated loans. Without such an identified publicly available record to match with, attempting to re-identify an applicant by matching a 1071 record using these data fields likely would be difficult. However, the Bureau stated that adversaries may be able to use other data fields, such as census tract, NAICS code, and identified public information, such as business directories, to determine the identity of an applicant or related natural person. Thus, if applicants and related natural persons could be re-identified, an adversary could learn information about application denials for these businesses and use this information for a variety of purposes.

The Bureau sought comment on this analysis, specifically in light of potential harm and sensitivity arising from the disclosure of application denials and the reasons for denial, whether there are specific modification techniques that should be considered, and whether modifying these data fields by grouping or deleting these data fields would appropriately balance the privacy risks and benefits of disclosure, in light of the purposes of section 1071.

Community group commenters stated that the Bureau should publish data about action taken, including whether the loan was approved or denied or whether it was withdrawn or left incomplete. One stated their opposition to deleting action taken categories such as ''denied,'' ''incomplete,'' or ''approved but not accepted,'' stating that such data are fundamental to the fair lending purpose of the statute. Several stated that publishing data on denial reasons would promote fair lending and business and community development objectives by helping lenders and policymakers assess whether creditors are denied credit for legitimate reasons. An industry commenter said that action taken data may also be misleading in the context of agricultural loans because not all creditworthy applicants are eligible for loans through the Farm Credit System.

Other trade associations and a lender commented that disclosure of action taken could cause commercial or competitive harms to applicants and related natural persons. These commenters specifically noted that data about the action taken could reveal information about a business's financial status, or acquisition or expansion plans. Other commenters stated that including denial reasons in 1071 data, without including contextual information surrounding individual credit decisions, would result in unjustified reputational or litigation harm to smaller financial institutions, which originate a lower loan volume—possibly resulting in more pronounced statistical aberrations that could be erroneously interpreted as discrimination.

In response to the Bureau's request for comment about whether these data should be modified or deleted from the public dataset, a community group stated that the Bureau should not modify or delete these fields because they are fundamental to the fair lending purposes of the statute. The commenter further noted that for decades, and without adverse consequences, HMDA has included information on whether an application for credit was originated, approved but not accepted, denied, withdrawn by the applicant, or incomplete. This commenter stated that if the Bureau found it necessary to

modify this data field, a higher level of disclosure that included reasons of denial by category of business and for groupings of census tracts could achieve important fair lending and community development objectives.

As discussed above in part VIII.B.3, the Bureau views these data fields as having significant disclosure benefits. Commenters did not offer compelling evidence that disclosure of action taken, in and of itself, would reveal information about a small business applicant's financial status or strategic plans also lacked evidentiary support.[900] If re-identification were to occur, however, information about an application for credit being denied could have detrimental impacts to applicants or related natural persons when personal credit qualifications are used in making credit decisions, including personal embarrassment. Likewise, re-identification could cause non-personal commercial harm to small businesses. Accordingly, the Bureau preliminarily assesses that disclosing these data fields in unmodified form may present significant privacy risk if re-identification occurred.

ix. Action Taken Date

Proposed § 1002.107(a)(10) would have required financial institutions to collect and report the date of the action taken by the financial institution. As discussed in the section-by-section analysis of § 1002.107(10), the Bureau is finalizing this data point as proposed.

The Bureau stated that disclosing action taken date in the 1071 data in unmodified form would likely disclose minimal, if any, information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified, or that may be harmful or sensitive to an identified financial institution. The NPRM noted that publicly available datasets include data fields an adversary could directly match to the action taken date data field in unmodified form in the public application-level data with respect to an applicant or related natural person. Public availability of this data depends on the type of action taken. The approval date of originated loans is widely available in SBA 7(a), 504, and other program loan-level records that identify borrowers, and the date of executed agreements, which could be closely related to the action taken date, is often available for property records and UCC filings. For originated loans, therefore, the action taken date would substantially facilitate matching with publicly available datasets that identify borrowers. The Bureau also stated that action taken date may be less useful in re-identifying applicants of loans that were not originated because the action taken date for such loans is rarely publicly available.

The Bureau stated that if it ultimately determined that the action taken date should be modified for publication, it may consider disclosing at a higher level, such as month instead of a specific date. The Bureau sought comment on this analysis, including about whether there are specific modifications it should consider, and whether deletion would better balance the risks and benefits of disclosure.

In response, a group of trade associations stated that the Bureau should not disclose the action taken date, noting that this information is not published in HMDA data. This commenter expressed a concern that publishing the action taken date when the same data point is deleted or modified in HMDA public data would constitute inconsistent treatment without adequate explanation. The Bureau disagrees that it should omit action taken date from the public 1071 data simply to ensure consistency between this final rule and HMDA. Commenters did not provide additional evidence related to re-identification risk.

Commenters did not provide additional evidence related to re-identification risk that would alter the initial assessment provided in the NPRM. In addition, the Bureau preliminarily assesses that the action taken date would present limited privacy risk if re-identification occurred. This data field presents minimal, if any, personal information about an applicant or related natural person that would be harmful or sensitive if such person were re-identified. The Bureau also does not believe publication of these data would result in non-personal commercial privacy risks to small businesses being disclosed. The Bureau also identifies no compelling privacy risks to financial institutions.

x. Pricing Information

Proposed § 1002.107(a)(12) would have required financial institutions to collect and report to the Bureau the following information, where applicable, regarding the pricing of a covered credit transaction that is originated, or approved but not accepted: (i) the interest rate; (ii) total origination charges; (iii) broker fees; (iv) initial annual charges; (v) additional costs for merchant cash advances or other sales-based financing; and (vi) prepayment penalties. As discussed in the section-by-section analysis of § 1002.107(a)(12), the Bureau is finalizing the pricing information data point largely as proposed.

The NPRM stated that information about the interest rates and fees charged in connection with credit represents basic information about the features of a product generally and would present low risk of harm or sensitivity. It further noted that disclosure of pricing data in unmodified form may reveal information that some applicants or related natural persons may regard as harmful or sensitive, such as a reflection of their perceived credit risk. However, the Bureau also reported that it had received feedback during the SBREFA process that multiple factors contribute to pricing for small business credit. While the Bureau further stated that disclosure of pricing data in unmodified form may also reveal information that financial institutions regard as harmful or sensitive, the NPRM did not identify evidence that disclosure of pricing information would permit the reverse-engineering of proprietary lending models.

The NPRM also noted that publicly available datasets include data fields an adversary could directly match to the pricing data fields in unmodified form. Identified data about the interest rate and fees charged for a given loan are available from a limited number of publicly available datasets, such as data for the SBA 7(a) and 504 programs. The Bureau further stated that, if it were to determine that pricing data should be modified, it may consider recoding the pricing information data fields into bins, such as interest rates bins of 0.25 percentage points or origination fee bins of $500; and it also noted that it could consider top-coding pricing data.

The Bureau received feedback from a range of commenters. Community groups and some others generally agreed that publishing pricing information would serve the objectives of section 1071. These commenters saw pricing information as necessary to monitor loan affordability and assess lending in underserved communities. A software vendor stated that publishing pricing information will improve competition and pricing efficiency by allowing applicants to compare credit costs offered by financial institutions. However, industry commenters stated that pricing information would have limited benefits. Two lenders stated that

[900] When the Bureau previously assessed whether to include action taken and denial reasons in HMDA loan-level public data, it concluded that modification was unnecessary 84 FR 649, 658 (Jan. 31, 2019). The Bureau articulated its decision that ''action taken and reasons for denial'' would be disclosed without modification.

pricing information is not meaningful because it is based on a complex set of factors that is unique to each transaction. A trade association stated that pricing information in small business lending would have little benefit compared to loan pricing data in HMDA because, unlike consumer mortgage data reported in HMDA, commercial data that would be reported in the 1071 dataset is not standardized or uniform. Others said that pricing information has a high risk of being misinterpreted.

Several lenders also stated that small businesses would have privacy concerns if pricing information on their loans was made public. Two industry commenters stated that pricing information would create re-identification risk, particularly in smaller and rural areas. Another stated that farm loans present risks because such credit may be extended in small markets with few customers which could increase the possibility of re-identification of small business applicants or related natural persons. Several other industry commenters said that if re-identification were to occur, the publication of pricing data information would create competitive risks for small businesses. One said that this risk is particularly high in smaller communities where it is possible to use published information to reveal pricing information about individuals. Others stated that privacy risks are especially potent for sole proprietorships because those entities' pricing may be largely based on owners' individual credit performance and personal information. A group of trade associations commented that pricing information was the most sensitive data point and it could reveal sensitive competitive information that would place businesses at a substantial competitive disadvantage. Regarding non-personal commercial harms to small business applicants, some industry commenters aid that disclosing pricing information in 1071 data would cause some financial institutions to limit their lending to reduce reputational or litigation risk.

Other commenters addressed the risk of harm or sensitivity to financial institutions. Some industry commenters stated that publishing pricing data will create competitive risks for financial institutions by revealing pricing models for small business loans, potentially allowing competitors to undercut pricing. Two agricultural lenders commented that rural financial institutions in markets with few customers face unique risks and that they may lose customers to larger financial institutions or online lenders that have larger customer bases and thus lower re-identification risk. Several other industry commenters stated that publishing pricing information would carry reputational and competitive risks for financial institutions. Some commenters were concerned that pricing information would not capture the full context of credit decisions, risking misconceptions about the underlying rationale for pricing and creating illusory disparities in credit terms. A bank trade association stated that comparing pricing information between different types of financial institutions can be misleading and may result in reputational harm because certain lenders like credit unions and farm credit system lenders receive tax or funding advantages to offer lower interest rates. Other commenters noted the risk of reputational harm from patronage dividends in agricultural lending not being accounted for in disclosed pricing. Other commenters asserted that disclosure of pricing information in 1071 data could create litigation risk for financial institutions. Several commenters said that if regulators utilize pricing information to analyze for fair lending without taking into account all variables that went into underwriting, incorrect analyses could result in unwarranted allegations of discrimination. A bank said that litigation risk based on these misconceptions may be particularly high for smaller banks that originate fewer loans because the lower volume could result in greater variation in pricing information.

The Bureau also sought comment on whether pricing information, if published, should be modified, and if so, what modification or deletion techniques would preserve the benefits of the public application-level data. A number of lenders and trade associations stated that pricing information should not be published at all because of privacy risks. Other commenters suggested modifications. A trade association stated that published pricing information should be limited to interest rates and origination fees. This commenter also supported disclosing pricing information in bins to protect privacy without harming data utility. In contrast, a community group opposed recoding interest rates or origination fees because that might mask lending disparities, thereby hindering fair lending enforcement.

As discussed in part VIII.B.3, the Bureau views pricing information as having significant disclosure benefits. In light of the re-identification risks discussed above, the Bureau appreciates commenters' concerns that if re-identification were to occur, the disclosure of pricing information in the public application-level data could pose significant risk to sole proprietors for whom underwriting could be based on personal credit performance. The Bureau also recognizes that re-identification, if it occurred, could exacerbate privacy risks, including personal privacy risks, presented by other data fields in the dataset. Additionally, re-identification could create a risk of non-personal commercial harms for applicants, particularly in small or rural communities when combined with other data fields like census tract or NAICS code. The Bureau acknowledges commenters' concerns about potential risk of harm or sensitivity to financial institutions, including reputation and litigation risks resulting from possible misinterpretations of published pricing information. However, the Bureau does not view privacy risks to financial institutions as compelling enough to justify exclusion of the data field. As discussed in part VIII.B.4, by mitigating re-identification risk, other potential risks and harms, including those faced by financial institutions, will also be mitigated.

The Bureau preliminarily assesses that some modification techniques may be appropriate when publishing pricing information. Potential modifications that the Bureau could consider include binning data or top-coding pricing data fields. However, the Bureau is mindful that modifying pricing information too much could mask discriminatory pricing practices, thus hindering fair lending analyses. Similarly, such modifications could hinder identification of community development needs and opportunities.

xi. Census Tract

Proposed § 1002.107(a)(13) would have required financial institutions to collect and report the census tract containing the address or location where the proceeds of the credit applied for or originated will be or would have been principally applied; or if this information is unknown, the tract containing the address or location of the main office or headquarters of the applicant; or if this information is also unknown, the tract containing another address or location associated with the applicant. In addition to reporting the census tract, the financial institution would have been required to indicate which one of these three types of addresses or locations the census tract is based on. As discussed above in the section-by-section analysis of

§ 1002.107(a)(13), the Bureau is finalizing this data point as proposed.

The NPRM observed that the census tract itself would likely disclose minimal, if any, information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified, or that may be harmful or sensitive to an identified financial institution. The Bureau acknowledged that for sole proprietors, the main office is often a home address, but it noted that the applicant's actual street address would not be reported to the Bureau. The Bureau also noted that small businesses commonly make their locations available in the normal course of business—for example, to reach prospective customers.

The Bureau stated that if the address reflects where the proceeds of the credit will be or would have been principally applied, disclosing the census tract may reveal some information about an applicant's business strategy, particularly if paired with the loan purpose data field. For example, the Bureau stated that the data could indicate that a small business is pursuing or was pursuing an expansion to a particular location. However, the Bureau believed the value of this information to a small business's competitors is likely mitigated by the time to publication. The Bureau stated that disclosure of the census tract in unmodified form may also reveal information that financial institutions regard as harmful or sensitive, such as a financial institution's trade area. However, the Bureau did not conclude that disclosure would permit the reverse-engineering of a financial institution's proprietary lending models.

The Bureau identified publicly available datasets that include data fields an adversary could directly match to the census tract data field in unmodified form in the public application-level data with respect to an applicant or related natural person. The Bureau expected that, in most cases, the census tract that financial institutions would report to the Bureau would be based on the address or location of the main office or headquarters of the applicant, either because that is where the proceeds of the credit will be applied, or because the financial institution does not know the location or address where the proceeds of the credit will be applied but does know the applicant's main office or headquarters address. The Bureau also observed that, for many small businesses, this address or location is likely to be publicly available from sources such as the business's website and review websites. Information about a business's location is also likely available from loan-level data for public loan programs as well as from private datasets, such as from data brokers. Therefore, in many cases, the Bureau expected that an adversary could use the census tract data fields, combined with other fields, to match a section 1071 record to an identified publicly available record. The Bureau also sought comment on whether disclosing county, State, or some other geographic identifier—rather than the census tract—would affect the benefits of disclosure, the potential for harm or sensitivity, and the potential for re-identification of applicants or related natural persons.

A range of commenters provided feedback on the Bureau's analysis. Community group commenters saw the publication of this data as important to both the fair lending and business and community development purposes of section 1071. Some said that because there are currently no comprehensive data on the capital access problems faced by marginalized communities, census tract data would provide insight into small business credit challenges at the intersection of race, sex, ethnicity, and geography. Other community groups and a business advocacy group expressed support for publishing census tract data, stating that including demographic and geographic data could positively impact the reduction of economic inequality and generally would encourage lending to underserved markets via specific policy making.

A number of lenders, along with a trade association and a community group, expressed concern that publication of census tract data would pose significant re-identification risk for applicants, especially in smaller or rural communities with low levels of lending. Other industry commenters said that the unmodified publication of census tract data combined with other data points, in particular NAICS code data, would pose significant re-identification risk.

While some community groups expressly supported the unmodified disclosure of census tract data, others suggested specific modification techniques. One commenter suggested that the Bureau consider switching records for similarly situated applicants between nearby census tracts to protect the privacy of applicants in smaller geographic areas while preserving data utility. With respect to the Bureau's suggestion to consider disclosing a broader location category, at least one trade association expressed support for disclosing data at the State level. Meanwhile, a community group generally opposed disclosure limited to the county- or State-level, arguing that it would frustrate the purposes of section 1071. But this commenter did suggest that the Bureau consider combining and aggregating adjacent census tracts in rural areas with low levels of lending.

As discussed above in part VIII.B.3, the Bureau views the disclosure of census tract as having significant benefits. Further, disclosing census tract data on its own would present limited privacy risk. Application-level census tract by itself would likely disclose minimal, if any, information about an applicant or related natural person that would be harmful or sensitive if such person were re-identified. In addition, the Bureau does not discern evidence of compelling privacy risks for financial institutions. However, the Bureau appreciates the potential re-identification risks to applicants or related natural persons posed by the combination of census tract data and other data fields, such as NAICS code. With respect to privacy risks raised by commenters, as discussed above, the Bureau has identified publicly available datasets that include data fields an adversary could directly match to certain census tract data. Accordingly, the Bureau assesses that census tract data, combined with other data fields such as NAICS code, could be used to match to an identified publicly available record, particularly in rural areas, thereby potentially re-identifying a small business applicant or its ownership. Re-identification could in turn exacerbate privacy risks, including harm or sensitivity risks, presented by other data fields in the dataset.

Considering this privacy risk, the Bureau's preliminary assessment is that some modification techniques may be appropriate. Application-level census tract would likely disclose minimal, if any, information about an applicant or related natural person that would be harmful or sensitive if such person were re-identified. In addition, the Bureau does not discern evidence of a compelling privacy risks for financial institutions. However, the Bureau appreciates the potential re-identification risks to applicants or related natural persons posed by the combination of census tract data and other data fields such as NAICS code, and recognizes that there may be significant geographic variation in the likelihood of re-identification risk from census tract alone. The Bureau is mindful that modifying census tract data, like disclosing a broader location category such as county or State, while reducing re-identification risk to applicants and related natural persons,

could also reduce the utility of the 1071 dataset.

xii. Gross Annual Revenue

Proposed § 1002.107(a)(14) would have required financial institutions to collect and report to the Bureau the gross annual revenue of the applicant for the preceding full fiscal year prior to when the information is collected. As discussed in the section-by-section analysis of § 1002.107(a)(14), the Bureau is finalizing this data point substantively as proposed.

The NPRM stated that disclosing gross annual revenue in unmodified form would likely disclose information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified. The data field could reflect the financial condition of a small business or its ownership. The Bureau stated that competitors of the small business, other commercial entities, creditors, researchers, or persons with criminal intent all may have an interest in using these data to monitor the size or performance of an applicant that may be a rival, partner, or target of inquiry, investigation, or illegal activity. With respect to the risk of harm or sensitivity to financial institutions, the NPRM acknowledged that other creditors might use gross annual revenue data to learn more about the types of small businesses with which their competitors do business. However, the Bureau did not identify evidence that disclosure would permit reverse-engineering of proprietary lending models.

The Bureau also noted that publicly available datasets include data fields an adversary could directly match to this data field in unmodified form. This availability is not widespread. Gross annual revenue data are available from private databases. They are also available for New York State's women- and minority-owned business certification program, but those data are recoded into bins. The Bureau stated that if it determined that gross annual revenue data should be modified, it may consider recoding this data into bins, for example in ranges of $25,000, or top-coding the data to mask particularly high values, thereby reducing the identifiability of application data from small businesses with especially high gross annual revenue.

Commenters did not provide additional evidence related to re-identification risk. However, community groups and trade associations commented on modifying this field prior to publication. Several community groups and a CDFI lender generally favored the Bureau publishing unmodified gross annual revenue data to maintain its utility. One such commenter opposed modification here, stating that aggregation of data by revenue size would limit the usefulness of the data to all stakeholders, including technical assistance providers who can help small businesses apply for loans, as well as parties seeking to identify and respond to discriminatory lending patterns. Other community groups and a trade association expressed support for publishing gross annual revenue data in bins to mitigate privacy risks for applicants. These community groups stated that modified data must still be detailed enough to permit meaningful analysis, and they criticized the current CRA system of identifying all loans to businesses with revenue under $1 million as not allowing for such analysis. One commenter suggested that if the Bureau decided to modify the gross annual revenue data field it should select the mid-point and recode the data in bins of $10,000 increments. They also expressed support for top-coding provided that it did not mask any significant differences in data for larger small businesses, and suggested that the Bureau conduct testing within the first year of data to assess whether the modification was appropriate.

As discussed above in part VIII.B.3, the Bureau views disclosure of gross annual revenue data as having significant disclosure benefits. After reviewing comments, the Bureau preliminarily assesses that if re-identification were to occur, disclosing gross annual revenue data in unmodified form may present significant privacy risk to small business applicants and related natural persons. The Bureau also preliminarily assesses that modifications to this field can be made while preserving the utility of the data for statutory purposes. The Bureau will continue to consider feedback about potential modification techniques, such as binning at smaller intervals and conducting testing before top-coding.

xiii. NAICS Code

Proposed § 1002.107(a)(15) would have required financial institutions to collect and report to the Bureau a 6-digit NAICS code. As discussed above in the section-by-section analysis of § 1002.107(a)(15), the Bureau is modifying how NAICS code is reported. Under the final rule, financial institutions must collect and report a 3-digit NAICS subsector code. Using only 3-digit NAICS subsector codes will decrease the risk of re-identification to applicants and owners while adhering to the purposes of section 1071.

The NPRM stated that publishing 6-digit NAICS codes in unmodified form by itself would likely disclose minimal, if any, information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified, or that may be harmful or sensitive to an identified financial institution. Information about a small business's industry is likely apparent to anyone interacting with it. The Bureau noted that disclosure of 6-digit codes in unmodified form may reveal information that financial institutions regard as harmful or sensitive, such as the industries with which the financial institution does business, but it did not discern that such disclosure would permit reverse-engineering of proprietary lending models.

The Bureau acknowledged that 6-digit codes were likely to produce unique instances in the data, especially if combined with unmodified census tract data. It noted the existence of 73,057 census tracts and 1,057 6-digit NAICS codes.[901] With over 77 million resulting combinations, there would likely be many instances of this data forming unique combinations. The NPRM stated that if the Bureau modified 6-digit codes for publication, it would consider disclosing 2-, 3-, or 4-digit codes to reduce re-identification risk while maintaining data utility.

Community group commenters supported disclosing 6-digit NAICS codes to support the fair lending purpose of the statute. Many industry commenters expressed concern that such codes, particularly in small or rural communities where only a limited number of businesses share certain NAICS codes, would create significant re-identification risks.

Several commenters expressed support for modifying the 6-digit NAICS code in the public application-level data. One commenter stated that the NAICS code should be truncated to general categories. Several industry commenters expressed specific support for disclosing a 2-digit NAICS code, and another supported a 4-digit modification, stating it would provide sufficient information while mitigating re-identification risk.

As discussed above in part VIII.B.3, the Bureau views disclosure of a NAICS code as having significant disclosure benefits. In addition, the Bureau's shift to requiring collection and reporting of a 3-digit code will significantly reduce re-identification risk while preserving

[901] *See* 2010 Census Tallies; Off. of Mgmt. & Budget, *North American Industry Classification System (NAICS) Updates for 2022,* 86 FR 35350, 35352 (July 2, 2021).

the utility of the dataset. This shift acknowledges privacy concerns raised by some commenters, reducing the risk of cognizable privacy harms.

Overall, the Bureau preliminarily assesses that published 3-digit codes by themselves present limited privacy risk. It is unlikely that publication of these data would disclose personal information about an applicant or related natural person that would be harmful or sensitive if such person were re-identified. The Bureau also does not see evidence of non-personal commercial privacy risks to small businesses, or of any compelling privacy risk to financial institutions. However, the Bureau appreciates that there is a heightened risk of re-identification when a NAICS code is combined with other data fields, such as census tract.

xiv. Number of Workers

Proposed § 1002.107(a)(16) would have required financial institutions to collect and report to the Bureau the number of non-owners working for the applicant. In the final rule, however, a financial institution complies with § 1002.107(a)(16) by reporting in ranges. The Bureau is adopting this change in response to concerns expressed by commenters about the complexity of providing an exact number.

The NPRM stated that disclosing number of workers in unmodified form would likely disclose minimal, if any, information about an applicant or related natural person that would be harmful or sensitive if such person were re-identified. Additionally, the Bureau did not see disclosure being harmful or sensitive to financial institutions. Financial institutions may use such data to learn more about the types of small businesses with which their competitors do business, but the Bureau did not see evidence that disclosure would permit reverse-engineering of proprietary lending models.

The Bureau noted that information about the number of workers is likely to be publicly available for many businesses. For example, State registries of businesses may include information about a business's number of workers, and private databases also commonly include this information. This decreases any potential sensitivity or harm of disclosing this data point in the application-level data, and also the direct utility of the data to potential adversaries. However, these data sources also mean that in some cases an adversary could use number of workers, combined with other fields, to match an identified publicly available record. Data on a business's number of workers could easily produce unique combinations when combined with other data fields, particularly for businesses with higher numbers of workers. The NPRM further stated that the Bureau would consider modification options, including recoding and top-coding.

Several community group commenters and a group of State banking regulators supported unmodified disclosure of this data as important to the fair lending purposes of section 1071. However, an industry commenter stated that the data point was not useful for achieving any of the statutory purposes, particularly given the difficulties in counting seasonal and part-time employees. Several industry commenters stated that publishing the number of workers without modification could create privacy risks. These commenters generally asserted that the data point should not be published because the exact number of workers could be used to re-identify applicants and would reveal sensitive commercial information about the applicant's competitive strategy or business plan. Some of these commenters also expressed concern that these data are susceptible to misinterpretation and inaccuracy, particularly for seasonal or cyclical businesses that experience routine variations in employee volume over the course of a calendar year. Several commenters expressed support for modifying the public number of workers data field by recoding the data into bins. One commenter stated that the bins would need to be developed such that they do not obscure differences in smaller businesses.

As discussed above in part VIII.B.3, the Bureau views disclosure of the number of workers to have significant disclosure benefits. In addition, the Bureau's decision to have financial institutions report this data in ranges will reduce the risk of re-identification for applicants or related natural persons. In turn, that lowers the risk that applicants or related natural persons are subject to competitive harms, such as the disclosure of their proprietary business information. Further, although the Bureau has identified publicly available datasets that include number of workers, these data vary over time and are difficult to align across multiple datasets. Reporting in ranges will also help address concerns about data inaccuracy and variance.

The Bureau preliminarily assesses that disclosing unmodified application-level number of workers data in ranges would present limited privacy risk if re-identification occurred. It is unlikely that publication of this data would disclose personal information about an applicant or related natural person that would be harmful or sensitive if such person were re-identified; it is also unlikely that publication would result in non-personal commercial privacy risks to small businesses or compelling privacy risks to financial institutions.

xv. Time in Business

Proposed § 1002.107(a)(17) would have required financial institutions to collect and report to the Bureau the time the applicant has been in business, described in whole years, as relied on or collected by the financial institution. As discussed in the section-by-section analysis of § 1002.107(a)(17), however, the final rule requires a financial institution to report this data in whole years only if it collects or otherwise obtains that information as part of its procedures for evaluating credit applications. Otherwise, the financial institution reports whether the applicant has been in existence for less or more than two years. This change responds to commenter concerns about complexity in collecting this data.

The NPRM explained that disclosing time in business in unmodified form would likely disclose minimal, if any, information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified, or that may be harmful or sensitive to an identified financial institution. The Bureau did not see evidence that disclosure would permit the reverse-engineering of proprietary lending models. In addition, information about time in business was likely to be publicly available for many businesses in public registration filings and other sources, decreasing any potential harm or sensitivity from publishing this data. The Bureau noted that these same data sources could enable an adversary to directly match the time in business data field in unmodified form, particularly when combined with other fields.

The Bureau stated that if it were to modify the time in business data field, it may consider recoding time in business into bins—for example, using two- or five-year intervals. It would also consider top-coding time in business at a value such as 25 years, given that larger values are more likely to be unique. The Bureau specifically sought comment on what intervals the Bureau should use if it were to recode time in business into bins and what value the Bureau should use if it were to top-code this data field.

Several community group commenters and a group of State banking regulators supported

unmodified disclosure of time in business in the dataset to facilitate the fair lending purpose of the statute. A few industry commenters expressed concern that publication of time in business data could create re-identification risks for small business applicants and reputational harm for financial institutions. In particular, one commenter agreed that time in business data could be combined with other data points to re-identify small business applicants. With respect to potential modification options, a trade association and a community group expressed support for either binning or top-coding. The community group noted, however, that a bin that ranged from two to five years may be too long. The commenter also stated that a top-code of 25 years may be reasonable but urged the Bureau to conduct further analysis after it received the first year's data.

As discussed in part VIII.B.3, the Bureau views disclosure of time in business as having significant benefits. The Bureau also preliminary assesses that the availability of this data in existing datasets decreases potential harm or sensitivity of disclosure if re-identification occurs, but also increases the risk of re-identification risk. The Bureau will consider whether binning, top-coding, or other modification techniques may be appropriate when it analyzes application-level data and conducts its full privacy analysis. Commenters did not explain how the disclosure of the applicant's time in business could lead to reputational harms to financial institutions.

xvi. Business Ownership Status

Proposed § 1002.107(a)(18) and (19) would have required financial institutions to collect and report to the Bureau whether the applicant is a minority-owned business or a women-owned business and whether minority-owned business status or women-owned business status is being reported based on previously collected data pursuant to proposed § 1002.107(c)(2). As discussed in the section-by-section analysis of § 1002.107(a)(18), the Bureau is finalizing these data points with modifications. Specifically, it is finalizing proposed § 1002.107(a)(18) and (19) as final § 1002.107(a)(18). In addition to the minority-owned and women-owned business statuses, the final rule requires financial institutions to collect and report LGBTQI+-owned business status.

The NPRM stated that publishing demographic ownership status in unmodified form would have likely disclosed minimal, if any, information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified, or that may be harmful or sensitive to an identified financial institution. While some applicants or related natural persons may regard this information as harmful or sensitive, the Bureau believed this information generally would present low risk of harm or sensitivity. The Bureau also believed that this information already may be available to the general public and would have relatively limited utility for adversaries if an applicant or related natural person were re-identified.

However, the Bureau noted that in many cases an adversary could have used women-owned or minority-owned business status, in combination with other data, to match a section 1071 record to an identified publicly available record. The Bureau identified several sources that could have been used for such matching. Women- and minority-ownership is likely to be publicly available for many businesses that publicly register or certify with the SBA or State or local authorities as women- or minority-owned. Businesses' websites may also provide this information, and private commercial databases also include or estimate this information.

The Bureau did not receive any comments on this aspect of its privacy analysis. This lack of engagement suggests that the NPRM generally correctly assessed the privacy impacts that disclosing women-owned and minority-owned business statuses in the data in unmodified form would have for an applicant or related natural person if such person were re-identified. It also suggests the Bureau generally correctly surmised there would be minimal, if any, harms or sensitivities to financial institutions.

However, the Bureau received comments from several industry and individual commenters on the Bureau's request for comment in proposed § 1002.107(a)(20) about whether the Bureau should require financial institutions to ask separate questions regarding the sex, sexual orientation, and gender identity, of principal owners. As discussed below in part VIII.B.6.xvii, a few commenters urged the Bureau to not collect or publish data on sexual orientation and gender identity of principal owners. The commenters noted the significant risk of harm to small business applicants and related natural persons, due to the particularly sensitive nature of this information if re-identification occurred.

The Bureau acknowledges that an individual's LGBTQI+ status likely is sensitive personal information that could pose personal privacy risks as well as non-personal commercial privacy risks. If re-identification occurred, its disclosure could pose risks to privacy interests of small business owners. Accordingly, while the Bureau views disclosure of business ownership status as having significant disclosure benefits, the Bureau preliminarily assesses that disclosing this data may present significant privacy risks if re-identification occurred. That is particularly so as to LGBTQI+-owned business status; in contrast, women-owned and minority-owned business status information would present relatively limited privacy risk. The Bureau does not see evidence that LGBTQI+-owned status poses compelling privacy risks to financial institutions.

xvii. Number and Demographic Status of Principal Owners

Proposed § 1002.107(a)(20) would have required a financial institution to collect and report to the Bureau the ethnicity, race, and sex of the applicant's principal owners; whether ethnicity and race were being collected by the financial institution on the basis of visual observation and/or surname analysis; and whether ethnicity, race, or sex were being reported based on previously collected data pursuant to proposed § 1002.107(c)(2). Proposed § 1002.107(a)(21) would have required that financial institutions collect and report to the Bureau the number of an applicant's principal owners. As discussed in the section-by-section analyses of § 1002.107(a)(19) and (20), the Bureau is finalizing the ethnicity, race, and sex of principal owners and number of principal owners data points with several modifications, including renumbering the sections, changing how financial institutions are required to inquire about the principal owners sex, and removing the requirement that a financial institution report whether the ethnicity and race of an applicant's principal owners was collected on the basis of visual observation and/or surname analysis.

The NPRM stated that, in general, disclosing the ethnicity, race, and sex of an applicant's principal owners in unmodified form would likely have disclosed minimal, if any, information about an applicant or related individual that may be harmful or sensitive if such person were re-identified, or that may be harmful or sensitive to an identified financial institution. As noted similarly above for the data fields on women-owned and minority-owned business statuses, while some applicants or

related natural persons may regard this information as harmful or sensitive, this information generally would present low risk of harm or sensitivity. The Bureau also noted that this information may be already available to the general public, and that this information would have relatively limited utility for adversaries if an applicant or related natural person were re-identified.

The Bureau identified publicly available datasets that include data fields an adversary could directly match to the ethnicity, race, and sex of the applicant's principal owner(s) data fields in unmodified form. For example, certain State business registries, including those required to access women-owned and minority-owned business programs, provide this information. Other public record databases, such as the SBA's 8(a) program and the Paycheck Protection Program, also include ethnicity, race, and sex data alongside the borrower's name. In many cases, therefore, the Bureau stated that an adversary could use the ethnicity, race, and sex of the applicant's principal owners, combined with other fields, to directly or indirectly match a section 1071 record to an identified publicly available record.

As discussed in the section-by-section analysis of § 1002.107(a)(19), the Bureau proposed that financial institutions would report sex as described in proposed comment 107(a)(20)–8, which would have permitted an applicant to self-describe a principal owner's sex by selecting the ''I prefer to self-describe'' response option on a paper or electronic form or by providing additional information for an oral application, with the financial institution reporting the response using free-form text. In the NPRM, the Bureau stated intention to exclude free-form text from public application-level data. However, the Bureau sought comment on whether there were additional specific modifications it should consider with regard to applicants who choose to self-describe their principal owners' sex. The Bureau also sought comment on whether, if finalized, disclosure of sex, sexual orientation, or gender identity could cause heightened sensitivity or risk of harm and any specific modifications the Bureau should consider if such data points were included in the final rule.

Many community group and minority business advocacy group commenters supported disaggregated disclosure of ethnicity, race, and sex of principal owners, and underscored its significance in achieving the fair lending purpose of section 1071. Some of these commenters stated that publication of disaggregated data would facilitate development of policy solutions for issues of financial inequality as it relates to ethnicity, race, and sex. A few trade associations expressed concerns about publishing information collected on the basis of visual observation or surname.

Some industry commenters expressed concerns that ethnicity, race, and sex data would create significant privacy risks for small business applicants, particularly in smaller or rural communities. Other industry and individual commenters cautioned the Bureau against collecting and publishing the sexual orientation and gender identity of principal owners. Specifically, these commenters noted the significant risk of harm to small business applicants, due to the particularly sensitive personal nature of this information if re-identification occurred.

Some trade associations noted concerns that publishing ethnicity, race, and sex information, particularly where collected based on visual observation or surname, will present the risk of harm to financial institutions. Two such commenters asserted that financial institutions faced the potential for reputational or litigation risks if the ethnicity, race, or sex data are published because of potential conflicts with State or Federal privacy laws. One commenter stated that asking for this information without proper privacy precautions may expose the financial institution to legal risk under certain State privacy laws, such as the California Consumer Protection Act, that protect against disclosure of ethnicity and race information. Two others noted that State privacy laws may conflict with the requirement to obtain ethnicity and race data based on visual observation. These commenters also stated that the perceived intrusiveness from the acquisition of these data and the knowledge that it would become public could cause competitive and reputational harm to financial institutions as institutions that do not protect their customers' privacy. For example, one commenter asserted that visual observation collection may reduce trust in the financial institution and increase the applicant's apprehension regarding their privacy. As to whether the Bureau should publish the unmodified, applicant-level data on the number of principal owners, several industry commenters opposed the publication of these data, should it be finalized. The commenters stated that publication of the number of principal owners could facilitate re-identification, particularly in small or rural areas.

As discussed above in part VIII.B.3, the Bureau views disclosure of these data to have significant benefits. Commenters did not provide additional evidence related to re-identification risk that would alter the NPRM's partial privacy analysis. The current availability of these data in existing databases likely limits the risk of harm or sensitivity, although it may amplify re-identification risk. Comments that the disclosure of ethnicity, race, and sex data present a risk of reputational or litigation harm to financial institutions because it may be based on visual observation or surname are moot because no visual observation requirement is in the final rule. Commenters did not explain with sufficient detail how the final rule will increase a financial institution's litigation risks due to conflicts with State or Federal privacy laws. To the extent that asking for an applicant's principal owners' ethnicity, race, or sex must be done with proper privacy protocols in place, it seems likely that a financial institution could comply with both this final rule and other privacy requirements.

Accordingly, the Bureau preliminarily assesses that disclosure in unmodified form may increase re-identification risk and presents significant risk of harm or sensitivity if re-identification occurred. The possibility of significant privacy risk primarily results from the fact that sex data will be reported as free-form text, which as discussed in part VIII.B.6.xix below, the Bureau preliminarily assesses it will include, in some form, in the public data. The disclosure of information about the ethnicity and race of principal owners generally will present lesser risk. The Bureau does not discern evidence of compelling privacy risks to financial institutions.

xviii. Financial Institution Identifying Information

Proposed § 1002.109(b) would have required a financial institution to provide the Bureau with certain information with its submission of its small business lending application register: (1) its name; (2) its headquarters address; (3) the name and business contact information of a person who may be contacted with questions about the financial institution's submission; (4) its Federal prudential regulator, if applicable; (5) its Federal Taxpayer Identification Number; (6) its LEI; (7) its RSSD ID, if applicable; (8) parent and top-parent entity information, if applicable; (9) the type of

financial institution that it is, indicated by selecting the appropriate type or types of institution from the list provided or entering free-form text; [902] and (10) whether the financial institution is voluntarily reporting covered applications for covered credit transactions. As discussed above in the section-by-section analysis of § 1002.109(b), the Bureau is generally finalizing this data point as proposed, with certain modifications.

Regulation C requires financial institutions to report similar information when submitting their loan-level HMDA data. Regulation C also requires financial institutions to report the calendar year of submission and the total number of entries in their loan-level HMDA data. Regulation C does not require financial institutions to submit their headquarters address, RSSD ID, or financial institution type or indicate whether they are reporting data voluntarily. With the exception of contact information for a person who can be reached about the financial institution's submission, the information financial institutions are required to submit with their HMDA submissions under § 1003.5(a)(3) is publicly available through the FFIEC website.

Financial institution identifying information other than individual contact information. In the NPRM, the Bureau stated its intention to disclose the financial institution identifying information data fields in unmodified form, other than the name and business contact information of a person who may be contacted with questions about the submission. The Bureau stated that disclosing financial institution identifying information in the 1071 data in unmodified form would likely disclose minimal, if any, information about an applicant or related natural person that may be harmful or sensitive if such person were re-identified. While some businesses might view their identification as an applicant as harmful or sensitive, revealing the name of the financial institution would not significantly increase such risks. In addition, the Bureau reasoned that this information is already largely available from other identified public records, such as UCC filings. For the same reason, revealing the name of the financial institution would not significantly increase risk of fraud or identity theft. The Bureau stated that disclosing financial institution identifying information in the data in unmodified form would not, by itself, reveal information that is harmful or sensitive, given financial institutions' commercial interests. Additionally, other public records, such as public HMDA data, tax records, and commercial databases disclose Federal Taxpayer Identification number, RSSD ID, and LEI.[903] Disclosing financial institution identifying information in unmodified form may reveal information that financial institutions regard as harmful or sensitive, but the Bureau did not discern evidence that it would permit reverse-engineering of proprietary lending models. The Bureau acknowledged, however, that this information could, in some circumstances, lead to reputational risks and increased costs for financial institutions, which might be passed on to their customers in the form of increased costs or decreased access to credit.

The NPRM noted that the Bureau had received feedback that publishing financial institution identifying information could increase re-identification risk of applicants and related natural persons. This included feedback that customers of captive wholesale finance companies with applicant bases limited to franchises or licensees of a particular distributor or manufacturer would face unique re-identification risks because, in many instances, these applicants may be the financial institution's only customer in a particular State, or one of only a very small number of customers in the State, heightening the privacy concerns for publication of data tied to these financial institutions. The NPRM also noted that the Bureau had identified publicly available datasets that include data fields an adversary could directly match to financial institution identifying information data fields in unmodified form. Therefore, in many cases, the Bureau reasoned that an adversary could use identifying financial institution data fields, combined with other section 1071 data fields, to match a section 1071 record to an identified public record.

With respect to concerns about wholesale finance companies, the Bureau acknowledged that financial institution identifying information in unmodified form in the public application-level data could, in combination with other data fields like census tract, NAICS codes, and credit type or purpose, facilitate re-identification of applicants that have a common name, without requiring that adversaries match 1071 records to other identified datasets. Under proposed § 1002.104(b), which the Bureau has finalized, trade credit and other transactions would be excluded from the scope of covered credit transactions. The Bureau indicated that this might eliminate some transactions involving such lenders. The Bureau sought comment on the circumstances under which a transaction involving a captive wholesale finance company would be covered by the proposal notwithstanding the exemption. To the extent there are such transactions, the Bureau also sought comment on the instances in which captive wholesale finance companies lend *exclusively* to businesses that are publicly branded in a way that can be easily matched to the identity of the financial institution. The Bureau sought comment on whether a final rule could include certain categories of financial institution types that would allow the Bureau to easily identify such financial institutions in the unmodified 1071 dataset without an application-level analysis. Finally, the Bureau sought comment on whether there are particular modification techniques that would reduce re-identification risks and risks of harm or sensitivity for applicants and related natural persons who might be re-identified in the public application-level data.

In the NPRM, the Bureau stated its intention to publish financial institution identifying information, other than individual contact information, as reported and without modification. The Bureau stated that risks to privacy interests from the disclosure of this data in unmodified form would be justified by the benefits of disclosure for section 1071's purposes. While the Bureau did not conduct a uniqueness analysis, it stated that disclosure of financial institution identifying information would very likely substantially facilitate the re-identification of applicants or related natural persons. If such persons were re-identified, the Bureau stated that disclosure of other data fields would likely create a risk of harm or sensitivity. In addition, the Bureau stated that the disclosure of other proposed data fields in combination with a financial institution name likely would reveal information that may be harmful or sensitive to financial institutions. The Bureau nonetheless stated that these risks to privacy would be justified by the benefits of disclosure in light of section 1071's purposes.

[902] Part VIII.B.6.xix further discusses the disclosure of free-form text field information.

[903] The FFIEC publishes transmittal sheet information, including LEI and Federal Taxpayer Identification number, on its website. Fed. Fin. Insts. Examination Council, *Public Transmittal Sheet—Schema, https://ffiec.cfpb.gov/documentation/2020/public-ts-schema/* (last visited Mar. 20, 2023).

The Bureau sought comment on this analysis and its stated intention to disclose these fields without modification in the public application-level data. The Bureau received feedback on this proposed analysis from trade association and community group commenters. Two community group commenters generally supported the Bureau's proposal to disclose unmodified financial institution identifying information, other than individual contact information. A trade association opposed the proposal. This commenter urged the Bureau to withhold all financial institution identifying information data fields because, whether or not it is available elsewhere, this information would create privacy risks for financial institutions, including risks involving identity theft and data security. With respect to the Bureau's request for comment about whether these proposed data fields would pose risks to captive wholesale companies and their customers, this commenter urged the Bureau to provide additional protections for this market segment to mitigate re-identification risk.

The Bureau acknowledges that publication of financial institution identifying information may reveal information that may be harmful or sensitive to financial institutions, leading to reputational risks and increased costs. However, feedback received by the Bureau does not explain how these data would pose previously unconsidered identity theft or data security risks. Separately, the Bureau acknowledges feedback that the proposed data fields may pose special risks to captive wholesale companies and their customers. It intends to consider what additional modifications or deletions may be appropriate to protect the privacy interests of these entities.

As explained in the NPRM, this data point could potentially increase re-identification risk and commenters did not provide additional evidence related to re-identification risk that would alter the partial privacy analysis described above. However, the Bureau preliminarily assesses that disclosing the financial institution identifying information data fields in unmodified form, other than data fields containing the information for the financial institution's point of contact, would present limited risk of harm or sensitivity if re-identification occurred. The Bureau believes that it is unlikely that publication of this data would disclose personal information about an applicant or related natural person that would be harmful or sensitive if such person were re-identified. The Bureau does not believe this data will result in significant non-personal commercial risks to small businesses. The disclosure of this data field does not pose compelling privacy risks to financial institutions. The Bureau will continue to give consideration to the scenario involving captive wholesale companies and their customers as it conducts its full privacy analysis.

Individual contact information. Proposed § 1002.109(b)(1)(iii) would have required financial institutions to report the name and business contact information of a person who may be contacted with questions about the financial institution's submission. As discussed above in the section-by-section analysis of § 1002.109(b)(1)(iii), the Bureau is finalizing this data point largely as proposed, but with certain modifications. In contrast to the other financial institution identifying information described above, in the NPRM the Bureau stated its intention to delete this data field from the publicly available data.

The Bureau stated that disclosing individual contact information in the data in unmodified form would likely not disclose any information about an applicant or related natural person if such person were re-identified. However, the Bureau stated that disclosing the name and contact information of natural persons designated by the financial institution would disclose information that may be harmful or sensitive to the identified financial institutions and their employees. Financial institutions have a legitimate interest in protecting the identities of their employees from the public, consistent with their job functions, and persons identified for purposes of questions about the financial institution's submission to the Bureau might not necessarily be responsible for engaging with the general public.

The Bureau considered whether modification other than by excluding individual contact information would appropriately balance identified privacy risks and disclosure benefits. Because disclosure of this data field in unmodified form would not promote the purposes of section 1071 and would likely reveal information that would be harmful or sensitive to a financial institution and its employees, the Bureau did not identify any such alternative. Accordingly, the Bureau stated that deleting individual contact information would appropriately balance the privacy risks and disclosure benefits of this data field.

The Bureau received feedback from one trade association commenter, which supported the Bureau's analysis. The Bureau accordingly determines that the publication of the name and business contact information of a person who may be contacted by the Bureau or other regulators with questions about the financial institution's submission has minimal, if any, disclosure benefits. Moreover, the Bureau concludes that the publication of this information presents significant privacy risks because it may be harmful or sensitive to identified financial institutions and their employees. Accordingly, the Bureau is announcing its intention not to publish the name and business contact information of a person who may be contacted by the Bureau or other regulators with questions about the financial institution's submission.

xix. Free-Form Text

The Bureau proposed to require financial institutions to use free-form text to report certain data where they are reporting information that is not included in a list provided for the data fields. Under proposed § 1002.107(a)(5), (6), (11), (12), and (20), free-form text could be used in reporting credit type (product and guarantee information); credit purpose; denial reasons; pricing (the interest rate index used); and principal owners' ethnicity, race, and sex.[904] Financial institutions also would have had flexibility in describing certain identifying information provided under proposed § 1002.109(b). Free-form text used to report principal owners' ethnicity, race, and sex would have been completed based on information provided by applicants; all other free-form text would have been completed by the financial institution. As discussed above in the section-by-section analyses for particular data points within § 1002.107(a), the Bureau is finalizing these data points with certain modifications. The free-form text aspect of § 1002.109(b) is being finalized as proposed.

The Bureau explained that use of free-form text would allow the reporting of any information, including information that may be harmful or sensitive to applicants, related natural persons, and possibly the interests of financial institutions. The Bureau stated that such information might also create a significant risk of re-identification for applicants or related natural persons. Given the amount of data expected to be reported each year, the Bureau stated that it would not be feasible for it to

[904] Proposed § 1002.107(a)(20) is being finalized as § 1002.107(a)(19).

review free-form text before publishing the application-level data. Under the balancing test described in the NPRM, therefore, the Bureau initially assessed that deleting free-form text from the public application-level data (other than with respect to the financial institution identifying information described in part VIII.B.6.xviii above) would appropriately balance the benefits of disclosure with the risks to the privacy interests of applicants, related natural persons, and financial institutions.

Several industry commenters generally supported deleting free-form text from the public application-level data. A bank noted that public the HMDA data do not include free-form text fields. A group of trade associations stated that deleting this information would appropriately balance privacy risks and disclosure benefits. In contrast, a CDFI lender urged the Bureau to publish free-form text fields arguing that such fields would include important information. This commenter suggested that the Bureau could adequately mitigate the risk that the free-form text would contain sensitive or harmful information by including a disclaimer on the data collection form that free-form text may be published.

The Bureau reiterates that HMDA publication practices do not dictate decisions in this rule and that consistency between public section 1071 data and public HMDA data may not be appropriate in every instance. As an additional matter, the Bureau believes that a general disclaimer that free-form text may be published would not adequately mitigate those privacy risks. Among other considerations, because financial institutions will supply the content of most free-form text fields, applicants and related natural persons have no direct control over what information appears in those fields. Therefore, a disclaimer would provide applicants or related natural persons limited ability to mitigate their privacy risks.

The Bureau agrees that certain free-form text fields may contain information that has some disclosure benefits. In particular, free-form text for the ethnicity, race, and sex data may contain information that is important to the statutory purposes of section 1071. As discussed in the section-by-section analysis of § 1002.107(a)(19), the Bureau is finalizing a requirement whereby applicants will indicate principal owners' sex via a write-in option. While the Bureau cannot feasibly review for privacy risks all free-form text fields supplied by all financial institutions reporting data, the Bureau expects to review the free-form text provided by applicants regarding principal owners' sex. The Bureau anticipates that this free-form text will permit identification of certain response categories appropriate for publication, based on the Bureau's assessment of privacy risks. Similarly, the Bureau may be able to review ethnicity and race free-form text, where it is provided, to discern response categories that may be appropriate for publication.

The Bureau recognizes, however, that free-form text fields may present significant privacy risks if re-identification occurred. Such privacy risks would not be mitigated in the absence of pre-publication review. Accordingly, the Bureau is announcing its intention to delete free-form text from the public application-level data, other than with respect to ethnicity, race, and sex of principal owners described in part VIII.B.6.xvii and the financial institution identifying information described in part VIII.B.6.xviii. The Bureau will continue to consider whether modification techniques may be appropriate for the data fields for ethnicity, race, and sex of principal owners and certain financial institution identifying information.

IX. Dodd-Frank Act Section 1022(b)(2) Analysis

The Bureau has considered the potential benefits, costs, and impacts of the final rule. The Bureau requested comment on the preliminary discussion presented below, as well as submissions of additional data that could inform the Bureau's consideration of the benefits, costs, and impacts of the proposed rule. In developing the rule, the Bureau has consulted or offered to consult with the prudential regulators (the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the National Credit Union Administration, and the Office of the Comptroller of the Currency), the Department of Agriculture, the Department of Housing and Urban Development, the Department of Justice, the Department of the Treasury, the Economic Development Administration, the Farm Credit Administration, the Federal Trade Commission, the Financial Crimes Enforcement Network, and the Small Business Administration regarding, among other things, consistency with any prudential, market, or systemic objectives administered by such agencies.

In the Dodd-Frank Act, which was enacted ''[t]o promote the financial stability of the United States by improving accountability and transparency in the financial system,'' Congress directed the Bureau to adopt regulations governing the collection of small business lending data. Under section 1071 of that Act, covered financial institutions must compile, maintain, and submit certain specified data points regarding applications for credit for women-owned, minority-owned, and small businesses, along with ''any additional data that the Bureau determines would aid in fulfilling the purposes of [section 1071].'' Under the final rule, covered financial institutions are required to collect and report the following data points: (1) a unique identifier, (2) application date, (3) application method, (4) application recipient, (5) credit type, (6) credit purpose, (7) amount applied for, (8) amount approved or originated, (9) action taken, (10) action taken date, (11) denial reasons, (12) pricing information, (13) census tract, (14) gross annual revenue, (15) NAICS code, (16) number of workers, (17) time in business, (18) minority-owned business status, women-owned business status, and LGBTQI+-owned business status, (19) ethnicity, race, and sex of principal owners, and (20) the number of principal owners.

Under the final rule, financial institutions will be required to report data on small business credit applications under section 1071 if they originated at least 100 covered credit transactions in each of the two preceding calendar years. The Bureau is defining an application as an oral or written request for a covered credit transaction that is made in accordance with the procedures used by a financial institution for the type of credit requested, with some exceptions. Loans, lines of credit, credit cards, and merchant cash advances (including such credit transactions for agricultural purposes) all fall within the transactional scope of this final rule. The Bureau is excluding trade credit, transactions that are reportable under the Home Mortgage Disclosure Act of 1975 (HMDA),[905] insurance premium financing, public utilities credit, securities credit, and incidental credit. Factoring, leases, and consumer-designated credit that is used for business or agricultural purposes are also not covered credit transactions. In addition, the Bureau has made clear that purchases of originated covered credit transactions are not reportable. For purposes of the final rule, a business is a small business if its gross annual revenue for its preceding fiscal year is $5 million or less.

[905] 12 U.S.C. 2801 *et seq.*

A. Statement of Need

Congress directed the Bureau to adopt regulations governing the collection of small business lending data. Specifically, section 1071 of the Dodd-Frank Act amended ECOA to require financial institutions to compile, maintain, and submit to the Bureau certain data on applications for credit for women-owned, minority-owned, and small businesses. Congress enacted section 1071 for the purpose of facilitating enforcement of fair lending laws and enabling communities, governmental entities, and creditors to identify business and community development needs and opportunities of women-owned, minority-owned, and small businesses. The Bureau is issuing this final rule to implement the section 1071 mandate.

Small businesses play a key role in fostering community development and fueling economic growth both nationally and in their local communities.[906] However, comprehensive data on loans to small businesses currently are limited. The largest sources of information on lending by depository institutions (*i.e.,* banks, savings associations, and credit unions) are the FFIEC and NCUA Call Reports and reporting under the CRA. Under the FFIEC Call Report and CRA reporting requirements, small loans to businesses of any size are used in whole or in part as a proxy for loans to small businesses. The FFIEC Call Report captures banks' and savings associations' total outstanding number and amount of small loans to businesses (that is, loans originated under $1 million to businesses of any size; small loans to farms are those originated under $500,000) by institution.[907] The CRA currently requires banks and savings associations with assets over a specified threshold ($1.384 billion as of 2022) [908] to report data on loans to businesses with origination amounts of $1 million or less; reporters are asked to indicate whether the borrower's gross annual revenue is $1 million or less, if they have that information.[909] Under the CRA, banks and savings associations currently report aggregate numbers and values of originations at an institution level and at various geographic levels. The NCUA Call Report captures credit unions' total originations, but not applications, on all loans over $50,000 to members for commercial purposes, regardless of any indicator about the business's size.[910] Some federally-funded loan programs, such as the SBA's 7(a) or 504 programs and the CDFI Fund require reporting of loan-level data, but only for loans that received support under those programs. Nondepository institutions do not report small business lending applications under any of these reporting regimes. There are no similar sources of information about lending to small businesses by nondepository institutions.

There are also a variety of non-governmental data sources, issued by both private and nonprofit entities, that cover small businesses and/or the small business financing market. These include datasets and surveys published by commercial data and analytics firms, credit reporting agencies, trade associations, community groups, and academic institutions. See part II.B for additional information on these sources. While these non-public sources of data on small businesses may provide a useful supplement to existing Federal sources of small business lending data, these private and nonprofit sources often do not have lending information, may rely on unverified research based on public internet sources, and/or narrowly limit use cases for parties accessing data. Further, commercial datasets are generally not free to public users and can be costly, raising equity issues for stakeholders who cannot afford access.

Under the final rule, covered financial institutions are required to compile, maintain, and submit data regarding the ethnicity, race, and sex of the principal owners of the business and whether the business is women-owned, minority-owned, or LGBTQI+-owned. No other source of data comprehensively collects this type of protected demographic information on small business loan applications.

Section 1071 requires financial institutions to report detailed application-level data to the Bureau, and for the Bureau to generally make it available to the public on an annual basis (subject to any deletions or modifications that the Bureau determines would advance a privacy interest). Such information will constitute a public good that illuminates the lending activities of financial institutions and the small business lending market in general. In particular, the public provision of application-level data, subject to any deletions or modifications that the Bureau determines would appropriately protect privacy interests, will: (1) provide communities, governmental entities, and financial institutions additional information to help identify business and community development needs and opportunities of small businesses and (2) allow members of the public, public officials, and other stakeholders to better assess compliance with antidiscrimination statutes.

First, the data made public pursuant to the final rule and the Bureau's subsequent privacy analysis will provide information that could help to improve credit outcomes in the small business lending market, furthering the community development purpose of the rule. As discussed above, market-wide data on small business credit transactions are currently limited. Neither the public nor private sectors provide extensive data on credit products or terms. Small business owners have access to very little information on typical rates or products offered by different lenders. As a result of the data that will be made public pursuant to the final rule and subject to modification and deletion decisions by the Bureau, community development groups and commercial services will be able to provide better information to small businesses. For example, a commercial provider could provide small businesses with information on what products lenders typically offer and at what rates. These data will allow small business owners to more easily compare credit terms and evaluate credit alternatives; without these data, small business owners are limited in their ability to shop for the credit product that best suits their needs at the best price. By engaging in more informed shopping, small business owners may achieve better credit outcomes.

Furthermore, communities will use data to identify gaps in access to credit and capital for small businesses. Financial institutions can analyze data to understand small business lending market conditions and determine how best to provide credit to borrowers. Currently, financial institutions are not able to conduct very granular or

[906] *See generally* White Paper.

[907] *See* FFIEC Call Report at Schedule RC–C Part II.

[908] *See* Fed. Fin. Insts. Examination Council, *Explanation of the Community Reinvestment Act Asset-Size Threshold Change* (2022), *https://www.ffiec.gov/cra/pdf/2022_Asset_Size_Threshold.pdf.*

[909] *See* 2015 FFIEC CRA Guide at 11, 13. Small business loans are defined for CRA purposes as loans whose original amounts are $1 million or less and that were reported on the institution's Call Report or Thrift Financial Report (TFR) as either ''Loans secured by nonfarm or nonresidential real estate'' or ''Commercial and industrial loans.'' Small farm loans are defined for CRA purposes as loans whose origination amounts are $500,000 or less and were reported as either ''Loans to finance agricultural production and other loans to farmers'' or ''Loans secured by farmland.''

[910] *See* Nat'l Credit Union Admin., *Call Report Form 5300* (June 2020), *https://www.ncua.gov/files/publications/regulations/form-5300-june-2020.pdf.*

comprehensive analyses because the data on small business lending are limited. The data made public pursuant to the final rule and subsequent privacy analysis will allow financial institutions to better understand the demand for small business credit products and the conditions under which they are being supplied by other covered financial institutions. The data will help enable institutions to identify potentially profitable opportunities to extend credit. They will additionally allow governmental entities to better develop targeted lending programs, loan funds, small business incubators, and other community-driven initiatives. Small business owners, as a result, could benefit from increased credit availability.

Second, while data made public pursuant to the final rule and subsequent privacy analysis may not constitute conclusive evidence of credit discrimination on its own, the data will enable members of the public, regulators, and other stakeholders to better identify lending patterns consistent with noncompliance with antidiscrimination statutes. As described above, there are currently no application-level data comprehensive enough or that contain the demographic information required by the final rule to enable the public to conduct these kinds of analyses. The data made public pursuant to the final rule and subsequent privacy analysis will be comprehensive and contain the necessary data fields for such analysis. Users will be able to examine whether, for example, a lender denies applications from women-owned, minority-owned, or LGBTQI+-owned businesses at higher rates than those that are not or whether these businesses are charged higher prices. This kind of transparency can place appropriate pressure on covered financial institutions to ensure that their credit lending practices comply with relevant laws. Additionally, data collected under the final rule will contain the data fields that allow users to conduct more accurate fair lending analyses by comparing applications for credit products with similar characteristics.

B. Baseline for the Consideration of Costs and Benefits

In evaluating the benefits, costs, and impacts of the final rule, the Bureau takes as a baseline the current legal framework governing financial markets, *i.e.,* the current state of the world before the Bureau's rule implementing section 1071. Under this baseline, the Bureau assumes that institutions are complying with regulations that they are currently subject to, including reporting data under HMDA, CRA, and any State commercial financing disclosure laws.[911] The Bureau believes that such a baseline will also provide the public with better information about the benefits and costs of this rule.

The Bureau received no comments regarding its choice of baseline for its section 1022(b)(2) analysis.

C. Basic Approach of the Bureau's Consideration of Benefits and Costs and Data Limitations

Pursuant to section 1022(b)(2)(A) of the Dodd-Frank Act,[912] in prescribing a rule under the Federal consumer financial laws (which include ECOA and title X of the Dodd-Frank Act), the Bureau is required to consider the potential benefits and costs to ''consumers'' and ''covered persons,'' including the potential reduction of access by consumers to consumer financial products or services resulting from such rule, and the impact of final rules on covered persons as described under section 1026 of the Dodd-Frank Act[913] (*i.e.,* depository institutions and credit unions with $10 billion or less in total assets), and the impact on consumers in rural areas.

The Dodd-Frank Act defines the term ''consumer'' as an individual or someone acting on behalf of an individual, while a ''covered person'' is one who engages in offering or providing a ''consumer financial product or service,'' which means a financial product or service that is provided to consumers primarily for ''personal, family, or household purposes.''[914] In the rulemaking implementing section 1071, however, the only parties directly affected by the rule are small businesses (rather than individual consumers) and the financial institutions from whom they seek credit (rather than covered persons). Accordingly, a section 1022(b)(2)(A) analysis that considers only the costs and benefits to individual consumers and to covered persons would not meaningfully capture the costs and benefits of the rule.

[914] 12 U.S.C. 5481(4) through (6).

Below, the Bureau conducts the statutorily required analysis with respect to the rule's effects on consumers and covered persons. Additionally, the Bureau is electing to conduct this same analysis with respect to small businesses and the financial institutions required to compile, maintain, and submit data under the final rule. This discussion relies on data that the Bureau has obtained from industry, other regulatory agencies, and publicly available sources. However, as discussed further below, the data limit the Bureau's ability to quantify the potential costs, benefits, and impacts of the final rule.

1. Analysis With Respect to Consumers and Covered Persons

The final rule implements a data collection regime in which certain covered financial institutions must compile, maintain, and submit data with respect to applications for credit for small businesses. The rule will not directly impact consumers or consumers in rural areas, as those terms are defined by the Dodd-Frank Act. However, some consumers will be directly impacted in their separate capacity as sole owners of small businesses covered by the rule. Some covered persons, including some that are depository institutions or credit unions with $10 billion or less in total assets, will be directly affected by the rule not in their capacity as covered persons (*i.e.,* as offerors or providers of consumer financial products or services) but in their separate capacity as financial institutions that offer small business credit covered by the rule. The costs, benefits, and impact of the rule on those entities are discussed below.

2. Costs to Covered Financial Institutions

The final rule establishes which financial institutions, applicants, transactions, and data points are covered by its requirements. In order to precisely quantify the costs to covered financial institutions, the Bureau would need representative data on the operational costs that financial institutions would incur to gather and report 1071 data, one-time costs for financial institutions to update or create reporting infrastructure to implement the final rule, and information on the level of complexity of financial institutions' business models and compliance systems. Currently, the Bureau does not believe that data on section 1071 reporting costs with this level of granularity are systematically available from any source. The Bureau has made reasonable efforts to gather data on section 1071 reporting costs.

Through outreach efforts with industry, community groups, and other regulatory agencies, the Bureau has obtained some information about potential ongoing operational and one-time compliance costs, and the discussion below uses this information to quantify certain costs of the final rule. Throughout the section 1022 discussion in the NPRM, the Bureau also solicited feedback about data or methodologies that would enable it to more precisely estimate the benefits, costs, and impacts of the proposed rule. The Bureau has reviewed these comments and considered the information provided by the commenters. The Bureau believes that the discussion herein constitutes the most comprehensive assessment to date of the costs of section 1071 reporting by financial institutions, as well as the most accurate estimates of costs given available information. However, the Bureau recognizes that these estimations may not fully quantify the costs to each covered financial institution, especially given the wide variation of section 1071 reporting costs among financial institutions.

The Bureau categorizes costs required to comply with the final rule into ''one-time'' and ''ongoing'' costs. ''One-time'' costs refer to expenses that the financial institution will incur initially and only once to implement changes required in order to comply with the requirements of this rule. ''Ongoing'' costs are expenses incurred as a result of the ongoing reporting requirements of the rule, accrued on an annual basis. In considering the costs and impacts of the rule, the Bureau has engaged in a series of efforts to estimate the cost of compliance by covered entities. The Bureau conducted a One-Time Cost Survey, discussed in more detail in part IX.E.1 below, to learn about the one-time implementation costs associated with implementing section 1071 and adapted ongoing cost calculations from previous rulemaking efforts. The Bureau evaluated the one-time costs of implementing the procedures necessary and the ongoing costs of annually reporting under the rule in part IX.F.3 below. The discussion below provides details on the Bureau's approach in performing these institution-level analyses. The Bureau realizes that costs vary by institution due to many factors, such as size, operational structure, and product complexity, and that this variance exists on a continuum that is impossible to fully represent. In order to conduct a cost consideration that is both practical and meaningful in light of these challenges, the Bureau has chosen an approach that focuses on three representative types of financial institutions. For each type, the Bureau has produced reasonable estimates of the costs of compliance given the limitations of the available data. Part IX.F.3 below provides additional details on this approach.

3. Costs to Small Businesses

The Bureau has elected to estimate the costs to small businesses in addition to those for covered financial institutions. The Bureau expects the direct costs of the final rule to small businesses will be negligible. Therefore, the Bureau focuses its analysis on whether and how the Bureau expects financial institutions to pass on the costs of compliance with the final rule to small businesses and any possible effects on the availability or terms of small business credit. The Bureau relies on economic theory to understand the potential for costs to financial institutions to be passed on to small businesses. Further, the Bureau describes feedback received through the One-Time Cost Survey process, the SBREFA process, and comments from the NPRM process on how creditors might react to increased compliance costs due to the final rule.

4. Benefits to Small Businesses and Covered Financial Institutions

Quantifying benefits to small businesses presents substantial challenges. As discussed above, Congress enacted section 1071 for the purpose of facilitating enforcement of fair lending laws and enabling communities, governmental entities, and creditors to identify business and community development needs and opportunities of women-owned, minority-owned, and small businesses. The Bureau is unable to readily quantify any of these benefits with precision, both because the Bureau does not have the data to quantify all benefits and because the Bureau is not able to assess completely how effective the implementation of section 1071 will be in achieving those benefits. The Bureau believes that its final rule appropriately implements the statutory mandate of section 1071 to effectuate the section's stated purposes. As discussed further below, as a data reporting rule, most provisions of the final rule will benefit small businesses in indirect ways, rather than directly. Nevertheless, the Bureau believes that the impact of enhanced transparency will substantially benefit small businesses. For example, the final rule will facilitate the detection (and thus remediation) of discrimination; promote public and private investment in certain underserved markets; and promote competitive markets. Quantifying and monetizing these benefits would require identifying all possible uses of data collected under this rule, establishing causal links to the resulting public benefits, and then quantifying the magnitude of these benefits.

Similar issues arise in attempting to quantify the benefits to covered financial institutions. Certain benefits to covered financial institutions are difficult to quantify. For example, the Bureau believes that the data collected under this rule will reduce the compliance burden of fair lending reviews for lower risk financial institutions by reducing the ''false positive'' rates during fair lending prioritization by regulators. That is, by providing more comprehensive application-level data about a covered institution's lending to small businesses, regulators will be able to better identify fair lending risks and, as such, more efficiently prioritize their fair lending examinations and enforcement activities. The Bureau also believes that data made public pursuant to the final rule will allow financial institutions to better understand the demand for small business credit products and the conditions under which they are being supplied by other covered financial institutions and to identify potentially profitable opportunities to extend credit. The Bureau believes that such benefits to financial institutions could be substantial. However, quantifying them would require data that are currently unavailable.

In light of these data limitations, the discussion below generally provides a qualitative consideration of the benefits and impacts of the final rule. General economic principles, together with the limited data available, provide insight into these benefits and impacts. Where possible, the Bureau makes quantitative estimates based on these principles and the data that are available. Quantifying these benefits is difficult because the size of each effect cannot be known in advance. Given the number of small business credit transactions and the size of the small business credit market, however, small changes in behavior can have substantial aggregate effects.

5. General Comments on the Impact Analyses in the Proposed Rulemaking

Throughout the Dodd-Frank Act section 1022 discussion in the NPRM,[915] the Bureau solicited feedback that would enable it to estimate the benefits, costs, and impacts of the

[915] *See* 86 FR 56356, 56540–64 (Oct. 8, 2021).

proposed regulation more precisely. The Bureau, for example, solicited comments on its methodology for estimating one-time and ongoing costs, the estimates of the specific costs themselves, and any information that would help it better quantify the benefits and potential impacts on small businesses and covered financial institutions. Many commenters made general statements, while several provided comments specific to certain methodologies or estimates. In this section, the Bureau describes the comments more generally, while in subsequent sections, it discusses comments specific to those sections.

Commenters offered general remarks on the quality of the Bureau's one-time and ongoing cost estimates. Several community groups described the Bureau's estimates as ''well-considered'' or described the costs of the proposed rule as being outweighed by the benefits. In contrast, some industry commenters and an office of a Federal agency generally asserted that the Bureau's cost estimates were too low. The Bureau has reviewed its estimates and considered the information provided by the commenters. In the sections below, the Bureau describes specific comments related to each section of benefits, costs, and the potential impact on small entities. The methodology described in the sections below for the final rule is the same methodology that the Bureau used in the NPRM unless otherwise noted.

D. Coverage of the Final Rule

1. Coverage in General

The final rule provides that financial institutions (both depository and nondepository) that meet all the other criteria for a ''financial institution'' in § 1002.105(a) would only be required to collect and report section 1071 data if they originated at least 100 covered credit transactions in each of the two preceding calendar years. See final § 1002.105(b).

As discussed above, market-wide data on small business lending are currently limited. The Bureau is unaware of any comprehensive data available on small business originations for all financial institutions, which are needed in order to precisely identify all institutions covered by the rule. To estimate coverage of the final rule, the Bureau uses publicly available data for financial institutions divided into two groups: depository (*i.e.,* banks, savings associations, and credit unions) and nondepository institutions.

To estimate coverage of depository institutions, the Bureau relies on NCUA Call Reports to estimate coverage for credit unions, including for those that are not federally insured, and FFIEC Call Reports and the CRA data to estimate coverage for banks and savings associations. For the purposes of the analysis in this section of part IX, the Bureau estimates the number of depository institutions that would have been required to report small business lending data in 2019, based on the estimated number of originations of covered products for each institution in 2017 and 2018.[916] The Bureau accounts for mergers and acquisitions between 2017 and 2019 by assuming that any depository institutions that merged in those years report as one institution.

As discussed above, the NCUA Call Report captures the number and dollar value of originations on all loans over $50,000 to members for commercial purposes, regardless of any indicator about the business's size. For the purposes of estimating the impacts of the final rule, the Bureau uses the annual number of originated commercial loans to members reported by credit unions as a proxy for the annual number of originated covered credit transactions under the rule.[917] These are the best data available for estimating the number of credit unions that may be covered by the final rule. However, the Bureau acknowledges that the true number of covered credit unions may be different than what is presented here. For example, this proxy would overestimate the number of credit unions that will be covered if some commercial loans to members are not covered because the member is taking out a loan for a business considered large under the definition of a small business in the final rule. Alternatively, this proxy would underestimate the number of credit unions covered by the final rule if credit unions originate a substantial number of covered credit transactions with origination values under $50,000.

The FFIEC Call Report captures banks' and savings associations' outstanding number and amount of small loans to businesses (*i.e.,* loans originated under $1 million to businesses of any size; small loans to farms are those originated under $500,000). The CRA requires banks and savings associations with assets over a specified threshold ($1.384 billion as of 2022) [918] to report loans to businesses in original amounts of $1 million or less. For the purposes of estimating the impacts of the final rule, the Bureau follows the convention of using small loans to businesses as a proxy for loans to small businesses and small loans to farms as a proxy for loans to small farms. These are the best data available for estimating the number of banks and savings associations that may be covered by the final rule. However, the Bureau acknowledges that the true number of covered banks and savings associations may be different than what is presented here. For example, this proxy would overestimate the number of banks and savings associations covered by the rule if a significant number of small loans to businesses and farms are to businesses or farms that are considered large under the definition of a small business in the final rule. Alternatively, this proxy would underestimate the number of banks and savings associations covered by the rule if a significant number of businesses and farms that are small under the final rule take out loans that are larger than $1 million for businesses or $500,000 for farms.

Although banks and savings associations reporting under the CRA are required to report the number of originations of small loans to businesses and farms, the Bureau is not aware of any comprehensive dataset that contains originations made by banks and savings associations below the CRA reporting threshold. To fill this gap, the Bureau simulated plausible values for the annual number and dollar value of originations for each bank and savings association that falls below the CRA reporting threshold for 2017, 2018, and 2019.[919] The Bureau generated simulated originations in order to account for the uncertainty around the exact number and value of originations

[916] The Bureau uses 2019 instead of 2020 or 2021 in order to estimate coverage during, or based on, a year unaffected by COVID–19 pandemic conditions.

[917] For this analysis, the Bureau includes all types of commercial loans to members except construction and development loans and loans secured by multifamily residential property. This includes loans secured by farmland; loans secured by owner-occupied, non-farm, non-residential property; loans secured by non-owner occupied, non-farm, non-residential property; loans to finance agricultural production and other loans to farmers; commercial and industrial loans; unsecured commercial loans; and unsecured revolving lines of credit for commercial purposes.

[918] *See* Fed. Fin. Insts. Examination Council, *Explanation of the Community Reinvestment Act Asset-Size Threshold Change* (2022), *https://www.ffiec.gov/cra/pdf/2022_Asset_Size_Threshold.pdf.*

[919] Based on FFIEC Call Report data as of December 2019, of the 5,177 banks and savings associations that existed in 2019, only about 11 percent were required to report under CRA. That is, only about 11 percent of banks and savings associations had assets below $1.284 billion, the CRA reporting threshold in 2019. *See* Fed. Fin. Insts. Examination Council, *2019 Reporting Criteria, https://www.ffiec.gov/cra/reporter19.htm* (last visited Mar. 20, 2023).

for these banks and savings associations. To simulate these values, the Bureau assumes that these banks have the same relationship between outstanding and originated small loans to businesses and farms as banks and savings associations above the CRA reporting threshold. First, the Bureau estimated the relationship between originated and outstanding numbers and balances of small loans to businesses and farms for CRA reporters. Then the Bureau used this estimate, together with the outstanding numbers and balances of small loans to businesses and farms of non-CRA reporters, to simulate these plausible values of originations. The Bureau has documented this methodology in more detail in its *Supplemental estimation methodology for institutional coverage and market-level cost estimates in the small business lending rule* released concurrently with this final rule.[920]

Based on 2019 data from FFIEC and NCUA Call Reports and the CRA data, using the methodology described above, the Bureau estimates that the number of depository institutions that will be required to report under the final rule is between approximately 1,800 and 2,000, as shown in Table 3 below. The Bureau estimates that between 1,700 and 1,900 banks and savings associations and about 100 credit unions will be required to report under the final rule. These ranges represent 95 percent confidence intervals over the number of credit unions, banks and savings associations that will be covered under the final rule. The Bureau presents this range to reflect the uncertainty associated with the estimates and notes that the uncertainty is driven by the lack of data on originations by banks and savings associations below the CRA reporting threshold.

TABLE 3—ESTIMATED DEPOSITORY INSTITUTION COVERAGE

[As of 2019]

Coverage category	Estimated coverage
Institutions Subject to 1071 Reporting	1,800–2,000 depository institutions (17%–19% of all depository institutions).
Banks and Savings Associations (SAs) Subject to Reporting	1,700–1,900 banks and SAs (33%–36% of all banks and SAs).
Credit Unions Subject to Reporting	100 credit unions (2% of all credit unions).
Share of Total Small Business Credit by Depository Institutions (Number of Loans Originated) Captured.	94.2%–95.1%.
Share of Total Small Business Credit by Depository Institutions (Dollar Value of Loans Originated) Captured.	81.0%–83.0%.

For nondepositories, the Bureau estimates that about 620 nondepository institutions will be covered by the final rule: about 140 nondepository CDFIs; about 70 merchant cash advance providers; about 30 online lenders; about 240 commercial finance companies; about 70 governmental lending entities; and 71 Farm Credit System members.[921] See part II.D above for more detail on how the Bureau arrived at these estimates.

Comments on the estimates of coverage of the proposed rule. In the NPRM, the Bureau sought comment on whether there are additional data sources that could provide better estimates of coverage and on the methods used to estimate coverage. Two trade associations commented that the Bureau substantially underestimates the coverage of credit unions because it does not account for small business loans under $50,000. The Bureau acknowledges this limitation of the estimation methodology, as discussed above, but did not receive any information upon which to base better coverage estimates for credit unions for purposes of the final rule.

2. Coverage Based on Tiered Compliance Dates

The final rule provides that the initial compliance date for covered financial institutions will occur in three tiers; a covered financial institution will determine its compliance date tier based on the number of covered credit transactions that it originated in each of the calendar years 2022 and 2023.[922] In this section, the Bureau presents estimates of the share of covered financial institutions that will report in each tier.

The Bureau uses the estimates of originations of covered products by depository institutions in 2017 and 2018, discussed above, to estimate how many covered depository institutions will report in each tier. A covered depository institution is expected to report in Tier 1 if it originated at least 2,500 covered credit transactions in each of 2017 and 2018. A covered depository institution is expected to report in Tier 2 if it originated at least 500 covered credit transactions in each of 2017 and 2018 and was not required to report in Tier 1. A covered depository institution is expected to report in Tier 3 if it originated at least 100 covered credit transactions in each of 2017 and 2018 and was not required to report in Tier 1 or Tier 2. The Bureau also estimates the percent of covered applications from 2019 that are received by depository institutions in each tier.

Table 4, below, presents estimates of percentages of covered banks and credit unions that will report in each tier. The Bureau estimates that most covered banks, savings associations, and credit unions will not be required to report until Tier 3, as seen in the first two rows

[920] This document is available at *https://www.consumerfinance.gov/data-research/research-reports/supplemental-estimation-methodology-institutional-coverage-market-level-cost-estimates-small-business-lending-rulemaking/*.

[921] The Bureau provides estimates for the majority of nondepository institutions but knows an exact number of members of the Farm Credit System. To estimate the number of Farm Credit System members, the Bureau considers the Young, Beginning, and Small Farmers Reports for all Farm Credit System members as of December 31, 2019. The reports can be found at *https://reports.fca.gov/CRS/* (last visited Mar. 20, 2023). A Farm Credit System is covered if it reported more than 100 total number of loans on its Young, Beginning, and Small Farmers Report in 2019.

[922] A covered financial institution is in Tier 1, as specified by final § 1002.114(b)(1), if it has at least 2,500 originations of covered credit transactions in each of 2022 and 2023, with a compliance date of October 1, 2024. A covered financial institution is in Tier 2, as specified by final § 1002.114(b)(2), if it has at least 500 originations in each of 2022 and 2023 (but isn't in Tier 1) with a compliance date of April 1, 2025. A covered financial institution is in Tier 3, as specified by final § 1002.114(b)(3) and (4), if it has at least 100 originations in each of 2022 and 2023 (but isn't in Tiers 1 or 2), with a compliance date of January 1, 2026. Financial institutions that do not fall into any of the compliance tiers based on 2022 and 2023 originations, but that originate 100 more covered credit transactions in subsequent years, would comply beginning January 1, 2026 at the earliest.

of the table. However, the next two rows show that most applications to banks and savings associations (and overall) for covered products in the first reporting year will be received by the 5 percent to 6 percent of covered banks and savings associations that are expected to report in Tier 1.

TABLE 4—ESTIMATED DEPOSITORY INSTITUTION COVERAGE BY COMPLIANCE TIER[923]

Coverage category	Tier 1	Tier 2	Tier 3
Percent Covered Banks and SAs Reporting in Tier.	5%–6% of covered banks and SAs.	17%–19% of covered banks and SAs.	75%–77% of covered banks and SAs.
Percent Covered Credit Unions Reporting in Tier.	0% of covered credit unions ..	13% of covered credit unions	87% of covered credit unions.
Percent of Covered Small Business Credit Applications by Banks and SAs Captured in Tier.	90%–92% of covered bank and SA applications.	4%–5% of covered bank and SA applications.	4%–5% of covered bank and SA applications.
Percent of Covered Small Business Credit Applications by Credit Unions Captured in Tier.	0% of covered credit union applications.	55% of covered credit union applications.	46% of covered credit union applications.

As discussed above, the Bureau is unaware of any institution-level data of originations for nondepository institutions that would allow for precise estimates of when these institutions are expected to report. Consistent with assumptions made below to generate market-level estimates, the Bureau assumes that online lenders and merchant cash advance providers each originate 2,000 covered credit transactions per year and all other nondepository institutions originate 200 loans per year. These assumptions imply that all online lenders and merchant cash advance providers would be required to report in Tier 2 and all other nondepository institutions would be required to report in Tier 3.

E. Methodology for Generating Cost Estimates

The Bureau used its 2015 HMDA final rule estimates as the basis for its review of 1071 data collection and reporting tasks that would impose one-time and ongoing costs. In developing its ongoing cost methodology to estimate the impacts of its 2015 HMDA final rule, the Bureau used interviews with financial institutions to understand the processes of complying with a regulation that requires collecting and reporting credit application data and to generate estimates of how changes to the reporting requirements would impact the ongoing costs of collecting and reporting mortgage application data.[924] To analyze the potential impacts of this final rule, the Bureau adapted its methodology from its 2015 HMDA rulemaking activities to the small business lending market. The methodology described below to estimate costs of the final rule is the same as the methodology used in the NPRM unless otherwise noted.

The Bureau expects that the tasks required for data collection, checking for accuracy, and reporting under the final rule will be similar to those under the 2015 HMDA final rule. The similarities in data collection and reporting tasks allowed the Bureau to leverage its previous rulemaking experience in its analysis of the impacts of this final rule. Outreach to industry, as well as feedback during the SBREFA process and in NPRM comments, validated this approach in general. The Bureau received no comments objecting to its use of the 2015 HMDA final rule impacts estimates as the basis for its methodology for the final rule implementing section 1071.

However, there are significant differences between the home mortgage and small business lending markets. For example, small business lending is generally less automated, and has a wider variety of products, smaller volumes, and smaller credit amounts. The Bureau used the SBREFA process, NPRM comments, research using publicly available information, and the Bureau's general expertise regarding the small business lending market to determine how these differences would change the tasks required for data collection, checking for accuracy, and reporting under the final rule.

During the 2015 HMDA rulemaking process, the Bureau identified seven key aspects or dimensions of compliance costs with a data collection and reporting rule: (1) the reporting system used; (2) the degree of system integration; (3) the degree of system automation; (4) the tools for geocoding; (5) the tools for performing completeness checks; (6) the tools for performing edits; and (7) the compliance program. The Bureau assumes that financial institutions will set up their section 1071 reporting in a manner similar to how HMDA reporting was implemented.[925] As discussed in more detail below, this approach was generally supported by the SBREFA process and NPRM commenters.

The Bureau found during the HMDA rulemaking process that, generally, the complexity of a financial institution's approach across key aspects or dimensions was consistent—that is, a financial institution generally would not use less complex approaches on some dimensions and more complex approaches on others.[926] This allowed the Bureau to classify financial institutions, including depository institutions and nondepository institutions, into three broad types according to the overall level of complexity of their compliance operations. Using very similar assumptions to those used in the 2015 HMDA rulemaking, the Bureau's estimation of the costs of this final rule also assumes that complexity across key aspects or dimensions of a financial institution's small business lending data collection and reporting system is consistent.

Table 5, below, summarizes the typical approach to those seven key aspects or dimensions of compliance costs across three representative types of financial institutions based on level of complexity in compliance operations. Financial institutions that are Type A have the lowest level of complexity in

[923] To estimate applications, the Bureau assumes that depository institutions with that originate 1,000 or more covered credit transactions per year receive 3 applications per origination and depository institutions that originate fewer than 1,000 covered credit transactions per year receive 2 applications per origination.

[924] *Home Mortgage Disclosure (Regulation C),* 80 FR 66128, 66269 (Oct. 28, 2015).

[925] For example, the Bureau assumes that financial institutions will integrate their small business data management system with their other data systems the same way that similar institutions integrated their HMDA management system.

[926] 80 FR 66128, 66269 (Oct. 28, 2015).

compliance operations, while Type B and Type C have the middle and highest levels of complexity, respectively.

TABLE 5—TYPICAL APPROACH TO CERTAIN ASPECTS/DIMENSIONS OF COMPLIANCE COSTS BASED ON LEVEL OF COMPLEXITY FOR TYPES OF FINANCIAL INSTITUTIONS

Aspect/dimension of compliance costs	Typical approach by low complexity financial institutions (Type A FIs)	Typical approach by medium complexity financial institutions (Type B FIs)	Typical approach by high complexity financial institutions (Type C FIs)
Data storage system used	Store data in Excel	Use LOS and SBL DMS	Use multiple LOS, FI's central SoR, SBL DMS.
Degree of system integration	(None)	Have forward integration (LOS to SBL DMS).	Have backward and forward integration.
Degree of system automation	Highly manual process for entering and checking data.	Use manual edit checks	Have high automation (only verifying edits manually).
Tools for geocoding	Use FFIEC tool (manual)	Use batch processing	Use batch processing with multiple sources.
Tools for completeness checks	Conduct manual checks and rely on CFPB quality/validity checks.	Use LOS, which includes completeness checks.	Use multiple stages of checks.
Tools for edits	Use CFPB edits only	Use CFPB and customized edits	Use CFPB and customized edits run multiple times.
Compliance program	Have a joint compliance and audit office.	Have basic internal and external accuracy audit.	Have in-depth accuracy and fair lending audit.

Note: LOS is "Loan Origination System"; SoR is "System of Record"; SBL DMS is "Small Business Lending Data Management System." [927]

During the rulemaking process for the 2015 HMDA final rule, the Bureau found that the number of loan applications received was largely correlated with overall complexity of financial institutions' compliance operations.[928] The Bureau used this observation of financial institution practices under the previous HMDA rulemaking work, in addition to early outreach to financial institutions and data from Call Reports and publicly available data from the CDFI Fund, to generate assumptions about the annual number of small business lending applications for covered credit transactions processed by each type of financial institution. These assumptions adapt the volume assumptions from the mortgage lending context to address the fact that financial institutions typically process fewer small business credit applications than mortgage applications. The Bureau assumes that Type A FIs receive fewer than 300 applications per year, Type B FIs receive between 300 and 2,000 applications per year, and Type C FIs receive more than 2,000 applications per year. The Bureau assumes that, for Type A and B FIs, one out of two small business applications will result in an origination. Thus, the Bureau assumes that Type A FIs originate fewer than 150 covered credit transactions per year and Type B FIs originate between 150 and 999 covered credit transactions per year. The Bureau assumes that Type C FIs originate one out of three small business applications and at least 1,000 covered credit transactions per year.[929] As described in the comment review below, these methodology assumptions were generally supported by the SBREFA process and comments on the NPRM.

The Bureau understands that costs vary by financial institution due to many factors, such as size, operational structure, and product complexity, and that this variance exists on a continuum that is impossible to fully represent. Due to data limitations, the Bureau is unable to capture many of the ways in which costs vary by institution, and therefore uses these representative financial institutions with the above assumptions for its analysis. In order to aggregate costs to a market level, the Bureau must map financial institutions onto its types using discrete volume categories.

For the hiring costs discussion in part IX.F.3.i and ongoing costs discussion in part IX.F.3.ii below, the Bureau discusses costs in the context of representative institutions for ease of exposition. The Bureau assumes that a representative Type A FI receives 100 small business credit applications per year, a representative Type B FI receives 400 small business credit applications per year, and a representative Type C FI receives 6,000 small business credit applications per year. The Bureau further assumes that a representative Type A FI originates 50 covered credit transactions per year,[930] a representative Type B FI originates 200 covered credit transactions per year, and a representative Type C FI originates 2,000 covered credit transactions per year.

1. Methodology for Estimating One-Time Costs of Implementation of the Final Rule

The one-time cost estimation methodology for the final rule described in this section is the same methodology that the Bureau used in the NPRM unless otherwise noted. The primary differences are the addition of hiring costs, in response to comments, and changes in the wages to reflect the most recent data.

The Bureau has identified the following nine categories of one-time costs that will likely be incurred by financial institutions to develop the infrastructure to collect and report data under the final rule:

1. Preparation/planning
2. Updating computer systems
3. Testing/validating systems
4. Developing forms/applications

[927] The Bureau expects the development of a market for small business data management systems, similar to HMDA management systems, that financial institutions will license or purchase from third parties.

[928] 80 FR 66128, 66270 (Oct. 28, 2015).

[929] The Bureau chose the 1:2 and 1:3 application to origination ratios based on two sources of information. First see Biz2Credit, *Small Business Loan Approval Rates Rebounded in May 2020: Biz2Credit Small Business Lending Index* (May 2020), *https://cdn.biz2credit.com/appfiles/biz2credit/pdf/report-may-2020.pdf,* which shows that, in December of 2019, large banks approved small business loans at a rate of 27.5 percent, while small banks and credit unions had approval rates of 49.9 percent and 40.1 percent. Additionally, the Bureau's supervisory data supports a 33 percent approval rate as a conservative measure among these estimates for complex financial institutions (Type C FIs).

[930] The Bureau discusses a representative Type A FI that will not be covered by the final rule to make the final estimates easier to compare with those in the NPRM and to highlight what the costs of the rule would have been for a financial institution that is not covered by the final rule.

5. Training staff and third parties (such as brokers)
6. Developing policies/procedures
7. Legal/compliance review
8. Post-implementation review of compliance policies and procedures
9. Hiring costs [931]

Pre-NPRM outreach with financial institutions has informed the Bureau's understanding of one-time costs. Financial institutions will likely have to spend time and resources understanding the final rule, developing the required policies and procedures for their employees to follow, and engaging a legal team to review their draft policies and procedures. Additionally, financial institutions may require new equipment, such as new computer systems that can store and check the required data points; new or revised application forms or related materials to collect any data required under the final rule that they do not currently collect, including minority-owned, women-owned, and LGBTQI+-owned business statuses and the ethnicity, race, and sex of applicants' principal owners, and to provide any related disclosures required by the rule. Some financial institutions mentioned that they may store, check, and report data using third-party providers such as Fiserv, Jack Henry, LaserPro, or Fidelity Information Systems, while others may use more manual methods of data storage, checking, and reporting using software applications such as Microsoft Excel. Financial institutions will also engage in a one-time training of all small business lending staff to ensure that employees understand the new policies and procedures. After all new policies and procedures have been implemented and systems/equipment deployed, financial institutions will likely undertake a final internal review to ensure that all the requirements of the final rule have been satisfied.

The Bureau presented one-time cost categories 1 through 8 in the SBREFA Outline and during the SBREFA process in 2020.[932] The small entity representatives generally confirmed that these eight categories listed above accurately capture the components of one-time costs. Small entity representatives did not mention hiring costs during the SBREFA process. The Bureau added the hiring costs category after receiving comments in response to the NPRM.

The Bureau also conducted a survey in 2020 regarding one-time implementation costs for section 1071 compliance targeted at financial institutions who extend small business credit.[933] The Bureau developed the survey instrument based on guidance from industry on the potential types of one-time costs institutions might incur if required to report under a rule implementing section 1071 and tested the survey instrument on a small set of financial institutions, incorporating their feedback prior to implementation. The Bureau worked with several major industry trade associations to recruit their members to respond to the survey. A total of 105 financial institutions responded to the survey.

Estimates from survey respondents form the basis of the Bureau's estimates for one-time costs in assessing the impact of this final rule. The survey was broadly designed to ask about the one-time costs of reporting data under a regime that only included mandatory data points, used a reporting structure similar to HMDA, used the Regulation B definition of an ''application,'' and used the respondent's own internal small business definition. The survey was divided into three sections: Respondent Information, One-Time Costs, and the Cost of Credit to Small Entities.

In the Respondent Information section, the Bureau obtained basic information about the respondent, including information on the type of institution, its size, and its volume of small business lending. (The Bureau did not, however, obtain the actual name or other directly identifying information about respondents.) The One-Time Costs section of the survey measured the total hours, staff costs, and non-salary expenses associated with the different tasks comprising one-time costs. Using the reported costs of each task, the Bureau estimated the total one-time cost for each respondent. The Cost of Credit to Small Entities section dealt with the respondent's anticipated response to the increased compliance costs of being covered by a rule implementing section 1071 in order to understand the potential impacts of the rule on its small business lending activity, including any anticipated potential changes to underwriting standards, volume, prices, product mix, or market participation.

To estimate one-time costs, the Bureau needs information on a financial institution's one-time costs by category and number of originations. Of the 105 total respondents, 49 answered these questions. The Bureau refers to these respondents as the ''cost estimation sample.'' Of these respondents, 42 (86 percent) self-reported that they were a depository institution (bank, saving association, or credit union). The remaining seven (14 percent) were nondepository institutions. Table 6 presents the self-reported asset size of the 42 depository institution respondents in the cost estimation sample.[934]

TABLE 6—ASSET SIZES OF DEPOSITORY INSTITUTIONS IN ONE-TIME COST ESTIMATION SAMPLE

Asset category	Count	Percent of sample
Less than $250 million	9	21.43
$250 million to $500 million	9	21.43
$500 million to $1 billion	7	16.67
$1 billion to $10 billion	8	19.05
$10 billion to $500 billion	9	21.43

For the purposes of estimating one-time costs, the Bureau distinguishes between depository institutions and nondepository institutions. The majority of nondepository institutions are not currently subject to any similar data reporting requirements, with the notable exception of nondepository CDFIs. The Bureau anticipates that covered financial institutions that are not currently subject to data reporting requirements will need to make more changes to their existing business operations in order to comply with the requirements of the final rule. This

[931] The Bureau added this category after the NPRM and did not ask about it in the survey.

[932] SBREFA Outline at 49–52.

[933] The One-Time Cost Survey was released on July 22, 2020; the response period closed on October 16, 2020. The OMB control number for this collection is 3170–0032.

[934] Nondepository institutions also reported assets. The Bureau separately reports asset category for depository institutions because asset sizes are not as comparable between depositories and nondepositories. The Bureau does not report asset sizes for nondepository respondents because there were too few respondents to report separately without risking re-identification of respondents.

expectation is confirmed by the higher estimated one-time costs for nondepository institutions relative to depository institutions from the survey and discussed in part IX.F.3.i.

The Bureau categorizes depository institution respondents in the cost estimation sample into four groups according to the respondents' self-reported total originations. The first group contains the two depository institutions that reported fewer than 25 originations; the Bureau assumes these institutions would not report under the final rule. The second group contains ten depository institutions that reported between 25 and 149 originations.[935] The Bureau categorizes these as Type A DIs (that is, a DI that is a Type A FI as defined above.) The third group contains the 19 depository institutions that reported between 150 and 999 originations. The Bureau categorizes these as Type B DIs. The final group contains the 11 depository institutions that reported 1,000 or more originations. The Bureau categorizes these as Type C DIs.

There are not enough nondepository institutions in the cost estimation sample to separate nondepository institutions into Types A, B, and C and obtain meaningful estimates. Instead, the Bureau is relying on the assumption that nondepository institutions (referred to as Non-DIs for purposes of this analysis) will incur the same one-time costs regardless of the complexity of existing business operations, CDFI status, or coverage by State commercial financing laws.

The Bureau estimated the one-time costs for each of the four categories of financial institutions (Type A DI, Type B DI, Type C DI, and Non-DI) using the following methodology.

For each of the first eight categories of one-time costs, the Bureau asked financial institutions to estimate and report the total number of hours that junior, mid-level, and senior staff would spend on each task, along with any additional non-salary expenses. If a respondent did not provide estimates for any component (*i.e.,* staff hours or non-salary expenses) of any category, it is not counted as part of the cost estimation sample. If a respondent provided estimates for some components but did not provide an estimate for a particular component (*e.g.,* non-salary expenses for preparation/planning) then the Bureau assumed that the respondent estimated zero for that component.

The Bureau asked survey respondents to report the average hourly wage for junior, mid-level, and senior/executive staff involved in the one-time cost categories. However, for the purposes of estimating one-time costs, the Bureau assumes a constant wage across financial institutions for each level of staff. The Bureau has updated the wages for the final rule from the wages used in the NPRM. For junior staff, the Bureau uses $15.64, the 10th percentile hourly wage estimate for ''loan officers'' according to the 2021 Occupational Employment Statistics compiled by the Bureau of Labor Statistics.[936] For mid-level staff, the Bureau uses $38.74, the estimated mean hourly wage estimate for ''loan officers.'' For senior staff, the Bureau used $66.50, the 90th percentile hourly wage estimate for ''loan officers.'' To account for non-monetary compensation, the Bureau also scaled these hourly wages up by 43 percent.[937] The Bureau assumes a total hourly compensation of $22.37 for junior staff, as compared to $28.76, the mean of the junior wages reported by respondents to the survey. The Bureau assumes a total hourly compensation of $55.40 for mid-level staff, as compared to $48.94, the mean of the mid-level wages reported by respondents. The Bureau assumes a total hourly compensation of $95.10, as compared to $90.19, the mean of the senior/executive wages reported by respondents.

For each respondent in the cost estimation sample, the Bureau calculates the cost of each one-time cost category as the sum of the junior wage multiplied by the reported junior hours, the mid-level wage multiplied by the reported mid-level hours, and the senior wage multiplied by the reported senior-level hours and the reported non-salary expenses. The total cost of the first eight categories that the Bureau calculates for each respondent is the sum of the costs across all eight categories.

After calculating the total costs of the first eight categories for each respondent, the Bureau identifies outliers within the four groups of financial institutions (Type A DI, Type B DI, Type C DI, and Non-DI) using the interquartile range method, a standard outlier identification method. For each group of financial institutions, an observation is considered an outlier if the estimated total cost is greater than $1.5 * (P_{75} - P_{25}) + P_{75}$ or less than $P_{25} - 1.5 * (P_{75} - P_{25})$ where P_{75} and P_{25} are the 75th and 25th percentiles, respectively, of total costs within that group. Using this method, the Bureau identified one outlier in each Type A DI, Type B DI, and Type C DI group and no outliers in the Non-DI group.

In addition to the total estimated one-time costs, the Bureau is interested in the hours, non-salary expenses, and total costs associated with each of the different one-time cost categories. For each group, the Bureau estimates each component of one-time costs by taking the mean of the estimated component within the group, after excluding outliers. For example, the estimated number of junior hours required by Type A DIs to update computer systems is the mean number of junior hours reported by the nine Type A DIs that were in the cost estimation sample, excluding one outlier. The Bureau estimated the cost associated with each category as the sum of the junior wage multiplied by the estimated junior hours, the mid-level wage multiplied by the estimated mid-level hours, and the senior-level wage multiplied by the estimated senior hours, and the estimated non-salary expenses.

The Bureau did not include one-time hiring costs in the estimates for the NPRM. In response to comments, the Bureau estimates hiring costs for the final rule estimates. To estimate hiring costs, the Bureau assumes that, prior to implementing the final rule, current staff at a covered financial institution will not have extra capacity to take on new tasks. This assumption implies that each institution will need to hire at least one new employee. The Bureau anticipates that institutions will rearrange tasks across new and existing employees so that the new employees alone will not conduct all work associated with the final rule.

The Bureau assumes that a covered financial institution will need to hire enough full-time equivalent workers (FTEs) to cover the estimated number of staff hours necessary to comply with the final rule on an annual, ongoing basis. In part IX.E.2 below, the Bureau describes how it estimates the ongoing costs to comply with the rule, including the number of hours of staff time an institution needs per application. The Bureau assumes that an FTE will work

[935] The Bureau acknowledges that it uses information collected from institutions that will not be covered by the final rule to estimate the costs of implementing the rule. The Bureau uses these observations to maintain a large enough sample size.

[936] *See* U.S. Bureau of Labor Stat., U.S. Dep't of Labor, *Occupational Employment and Wage Statistics* (May 2021), *https://www.bls.gov/oes/current/oes132072.htm.*

[937] The June 2022 Employer Costs for Employee Compensation from the Bureau of Labor Statistics documents that wages and salaries are, on average, about 70 percent of employee compensation for private industry workers. The Bureau inflates the hourly wage to account for 100 percent of employee compensation ((100/70) − 1) * 100 = 43 percent). *See* U.S. Bureau of Labor Stat., U.S. Dep't of Labor, *Employer Costs for Employee Compensation* (June 2022), *https://www.bls.gov/news.release/archives/eci_07292022.pdf.*

about 2,080 hours each year (40 hours per week × 52 weeks = 2,080). The Bureau calculates that the total number of FTEs that a covered financial institution will need to hire as the number of hours per application multiplied by the estimated number of applications received per year divided by 2,080, rounded up to the next full FTE. For example, if an institution receives 500 applications per year and spends one hour on each application, it will need to hire one FTE ((1 * 500)/2080 = 0.24, which is round up to the next full FTE, *i.e.,* 1). In part IX.F.3.i, the Bureau also confirms that the estimated additional staff can cover the estimated staff hours required for implementing other one-time changes.

The Bureau calculates the hiring costs using the estimated cost-per-hire of $4,425, estimated by the Society for Human Resource Management.[938] This estimated cost includes advertising fees, recruiter pay and benefits, and employee referrals, among other categories. For each covered financial institution, the estimated hiring cost is $4,425 multiplied by the estimated new FTEs. The estimated total one-time costs are the sum of the estimated hiring costs and the other one-time costs for that institution discussed above.

Comments on the one-time cost methodology of the proposed rulemaking. In the NPRM, the Bureau sought comment on the methods used for estimating one-time costs of implementation. Many industry commenters provided information on the categories of costs that they expect to incur to develop the infrastructure to collect and report data under the proposed rule. In general, the costs these commenters discussed fall in the original eight one-time cost categories listed. Many of these commenters responded to the NPRM that they would incur costs associated with hiring new staff. The Bureau's one-time and ongoing cost methodologies account for the costs associated with paying staff to implement the final rule. The Bureau agrees, however, that the one-time cost methodology outlined in the NPRM could have more fulsomely accounted for the initial cost of hiring new staff to perform these tasks. As described above, the Bureau added hiring costs to one-time cost estimates in response to these comments. Except for hiring costs, commenters did not provide any additional one-time cost categories.

Two trade associations asserted that the Bureau's estimates of one-time costs are too low because the estimates are based on insufficient data for nondepository lenders and, in particular, merchant cash advance providers. The Bureau acknowledges that the scarcity of data for nondepositories pose a challenge when estimating the costs, benefits, and impacts of the final rule. This is particularly true for nondepositories that are not currently subject to a data reporting regime. Through outreach efforts with nondepository institutions and trade associations, the SBREFA process, and the one-time cost survey, the Bureau obtained information about the costs for nondepositories of complying with the final rule. Throughout the section 1022 discussion in the proposed rule, the Bureau also solicited feedback about data and methodologies that would enable it to more precisely estimate the costs of the proposed. The Bureau has reviewed these comments, considered the information provided by the commenters, and adjusted the methodology as described above.

2. Methodology for Estimating Ongoing Costs of Implementation of the Final Rule

The Bureau identified 15 specific data collection and reporting activities that would impose ongoing costs. Table 7 presents the full list of 15 activities. Activities 1 through 3 can broadly be described as data collection activities: these tasks are required to intake data and transfer it to the financial institution's small business data entry system. Activities 4 through 10 are related to reporting and resubmission: these tasks are required to collect required data, conduct internal checks, and report data consistent with the final rule. Activities 11 through 13 are related to compliance and internal audits: employee training, and internal and external auditing procedures required to ensure data consistency and reporting in compliance with the rule. Finally, activities 14 and 15 are related to small business lending examinations by regulators: these tasks will be undertaken to prepare for and assist during regulatory compliance examinations. For the sake of this analysis, the Bureau assumes that all covered financial institutions will be subject to regulatory compliance examinations and thus incur costs related to activities 14 and 15.

TABLE 7—1071 DATA COLLECTION AND REPORTING ACTIVITIES IMPOSING ONGOING COSTS

Number	Activity
1	Transcribing data.
2	Resolving reportability questions.
3	Transferring to Data Entry System, Loan Origination System, or other data storage system.
4	Geocoding data.
5	Standard annual edit and internal checks.
6	Researching questions.
7	Resolving question responses.
8	Checking post-submission edits.
9	Filing post-submission documents.
10	Small business data reporting/geocoding software.
11	Training.
12	Internal audit.
13	External audit.
14	Exam preparation.
15	Exam assistance.

Table 8 provides an example of how the Bureau calculates ongoing compliance costs associated with each compliance task. The table shows the calculation for each activity and notes whether the task would be a ''variable

[938] *See* Soc'y for Hum. Res. Mgmt., *SHRM Customized Talent Acquisition Benchmarking Report,* at 11 (2017), *https://www.shrm.org/ResourcesAndTools/business-solutions/Documents/Talent-Acquisition-Report-All-Industries-All-FTEs.pdf.*

cost,'' which would depend on the number of applications the institution receives, or a ''fixed cost'' that does not depend on the number of applications. Table 8 shows these calculations for a Type A FI, or the institution with the least amount of complexity. Table 9 below summarizes the activities whose calculation differs by institution complexity and shows the calculations for Type B FIs and Type C FIs (where they differ from those for a Type A FI).

TABLE 8—ONGOING COMPLIANCE COST CALCULATIONS FOR A TYPE A FI

Number	Activity	Calculation	Type [939]
1	Transcribing data	Hourly compensation × hours per app. × applications	Variable.
2	Resolving reportability questions	Hourly compensation × hours per app. with question × applications with questions	Variable.
3	Transfer to Data Entry System	Hourly compensation × hours per app. × applications	Variable.
4	Complete geocoding data	Hourly compensation × hours per app. × applications	Variable.
5	Standard annual edit and internal checks	Hourly compensation × hours spent on edits and checks	Fixed.
6	Researching questions	Hourly compensation × hours per app. with question × applications with questions	Variable.
7	Resolving question responses	Hourly compensation × hours per app. with question × applications with questions	Variable.
8	Checking post-submission edits	Hourly compensation × hours checking post-submission edits per application	Variable.
9	Filing post-submission documents	Hourly compensation × hours filing post-submission docs	Fixed.
10	Small business data reporting/geocoding software.	Uses free geocoding software	Fixed.
11	Training	Hourly compensation × hours of training per year × number of loan officers	Fixed.
12	Internal audit	No internal audit conducted by financial institution staff	Fixed.
13	External audit	One external audit per year	Fixed.
14	Exam preparation	Hourly compensation × hours spent on examination preparation	Fixed.
15	Exam assistance	Hourly compensation × hours spent on examination assistance	Fixed.

Many of the activities in Table 8 require time spent by loan officers and other financial institution employees. To account for time costs, the calculation uses the hourly compensation of a loan officer multiplied by the amount of time required for the activity. The Bureau uses a mean hourly wage of $38.74 for loan officers, based on data from the Bureau of Labor Statistics.[940] To account for non-monetary compensation, the Bureau scales this hourly wage by 43 percent to arrive at a total hourly compensation of $55.40 for use in these calculations.[941] The Bureau uses assumptions from its 2015 HMDA final rule analysis, updated to reflect differences between mortgage lending and small business lending, to estimate time spent on ''ongoing tasks.'' [942] As an example of a time calculation, the Bureau estimates that transcribing the required data points would require approximately 11 minutes per application for a Type A FI. The calculation multiplied the number of minutes by the number of applications and the hourly compensation to arrive at the total cost, on an annual basis, of transcribing data. As another example, the Bureau estimates that ongoing training for loan officers to comply with a financial institution's 1071 policies and procedures would take about two hours per loan officer per year. The cost calculation multiplies the number of hours by the number of loan officers and by the hourly compensation.

To arrive at the amount of time required per application for each of the 15 tasks covered financial institutions would conduct to collect, check, and report 1071 data, the Bureau begins with the assumptions made for each task for the 35 data points under the 2015 HMDA final rule and then adjusts these required times relative to the number of data points required under the final rule. The final rule requires covered financial institutions to collect 20 data points for each covered application. Several of these data points have multiple components. For example, the credit type data point has three subcomponents: the product type, the type of guarantee, and the term. The data points for pricing information and the ethnicity, race, and sex of principal owners also have multiple subcomponents.

Some activity costs in Table 8 depend on the number of applications. It is important to differentiate between these variable costs and fixed costs because the type of cost impacts whether and to what extent covered institutions might be expected to pass on their costs to small business loan applicants in the form of higher interest rates or fees (discussed in more detail in part IX.F.4 below). Data collection, reporting, and submission activities such as geocoding data, standard annual edits and internal checks, researching questions, and resolving question responses are variable costs. All other activities are fixed cost because they do not depend on the overall number of applications being processed. An example of a fixed cost calculation is exam preparation, where the hourly compensation is multiplied by the number of total hours required by loan officers to prepare for 1071-related compliance examinations.

Table 9 shows where and how the Bureau assumes Type B FIs and Type C FIs differ from Type A FIs in its ongoing cost methodology. Type B FIs and Type C FIs use more automated procedures, which result in different cost calculations. For example, for Type B FIs and Type C FIs, transferring data to the data entry system and geocoding applications are done automatically by business application data management software licensed annually by the financial institution. The relevant address is submitted for geocoding via batch processing, rather than done manually for each application. The additional ongoing geocoding costs reflect the time spent by loan officers on ''problem'' applications—that is, a percentage of overall applications that the geocoding software misses—rather than time spent on all applications. However, Type B FIs and Type C FIs have the additional ongoing cost of a

[939] In this table, the term ''variable'' means the compliance cost depends on the number of applications. The term ''fixed'' means the compliance cost does not depend on the number of applications (even if there are other factors upon which it may vary).

[940] These data reflect the mean hourly wage for ''loan officers'' according to the 2021 Occupational Employment Statistics compiled by the Bureau of Labor Statistics. *See* U.S. Bureau of Labor Stat., U.S. Dep't of Labor, *Occupational Employment and Wages* (May 2021), *https://www.bls.gov/oes/current/oes132072.htm*.

[941] The June 2022 Employer Costs for Employee Compensation from the Bureau of Labor Statistics documents that wages and salaries are, on average, about 70 percent of employee compensation for private industry workers. The Bureau inflates the hourly wage to account for 100 percent of employee compensation ((100/70) − 1) * 100 = 43 percent). U.S. Bureau of Labor Stat., U.S. Dep't of Labor, *Employer Costs for Employee Compensation* (June 2022), *https://www.bls.gov/news.release/archives/eci_07292022.pdf*.

[942] *Home Mortgage Disclosure (Regulation C),* 80 FR 66128 (Oct. 28, 2015). Some differences, for example, are reflected in the number of applications, the number of data points per application, and the number of loan officers for the representative institutions.

subscription to a geocoding software or service as well as a data management software that represents an annual fixed cost of reporting 1071 data. This is an additional ongoing cost that less complex Type A FIs (that are covered financial institutions) will not incur. The Bureau expects that Type A FIs will use free geocoding software available from the FFIEC or the Bureau, which may include a new batch function that could be developed by either the FFIEC or the Bureau.

Additionally, audit procedures differ between the three representative institution types. The Bureau expects a Type A FI would not conduct an internal audit but would pay for an annual external audit. A Type B FI would be expected to conduct a simple internal audit for data checks and also pay for an external audit on an annual basis. Type C FIs would have a sophisticated internal audit process in lieu of an external audit.

TABLE 9—DIFFERENCES IN ONGOING COST CALCULATIONS FOR TYPE B FIS AND TYPE C FIS VERSUS TYPE A FIS

Number	Activity	Difference for a Type B FI	Difference for a Type C FI
3	Transfer to Data Entry System	No employee time cost. Automatically transferred by data management software purchased/licensed.	No employee time cost. Automatically transferred by data management software purchased/licensed.
4	Complete geocoding data	Cost of time per application unable to be geocoded by software.	Few applications that require manual attention. Completed by third-party software vendor.
10	Small business data reporting/geocoding software.	Uses geocoding software and/or data management software that requires annual subscription.	Uses geocoding software and/or data management software that requires annual subscription.
12	Internal Audit	Hourly compensation × hours spent on internal audit	Hourly compensation × hours spent on internal audit.
13	External Audit	Yearly fixed expense on external audit	Only an extensive internal audit and no expenses on external audits.

Table 10 below shows major assumptions that the Bureau makes for each activity for each type of financial institution. Table 10 provides the total number of hours the Bureau assumes are required for each task that requires labor.[943] For example, the Bureau assumes that transcribing data for 100 applications will require 19 hours of labor. The table also shows the assumed fixed cost of software and audits, as well as areas where the Bureau assumes there will be cost savings due to technology. In several cases, the activity does not apply to financial institutions of a certain type, and are therefore not displayed.

TABLE 10—MAJOR ASSUMPTIONS FOR THE REPRESENTATIVE TYPE A FIS, TYPE B FIS, AND TYPE C FIS[944]

Number	Activity	Type A FI	Type B FI	Type C FI
1	Transcribing data	19 hours total	38 hours total	571 hours total.
2	Resolving reportability questions	11 hours total	23 hours total	34 hours total.
3	Transfer to 1071 data management software.	19 hours total	N/A	N/A.
4	Complete geocoding data	7 hours total; reduction in time cost relative to HMDA for software with batch processing.	10 hours total (0.5 hours per "problem" loan × 5% of loans that are "problem").	N/A.
5	Standard annual edit and internal checks.	18 hours total; reduction for online submission platform.	357 hours total; reduction for online submission platform.	741 hours total; reduction for online submission platform.
6	Researching questions	6 hours total	11 hours total	17 hours total.
7	Resolving question responses	1 hour total	1 hour total	1 hour total.
8	Checking post-submission edits	1 hour total	5 hours total	18 hours total.
9	Filing post-submission documents	<1 hour total	<1 hour total	<1 hour total.
10	1071 data management system/geocoding software.	N/A	$8,000	$13,271.
11	Training	24 hours total	120 hours total	800 hours total.
12	Internal audit	N/A	8 hours total	2,304 hours total.
13	External audit	$3,500	$5,000	N/A.
14	Exam preparation	<1 hour total	80 hours total	480 hours total.
15	Exam assistance	2 hours total	12 hours total	80 hours total.

Comments on the ongoing cost methodology of the proposed rulemaking. In the NPRM, the Bureau sought comment on the Bureau's proposed methods to estimate the ongoing costs of the small business lending rule. Many industry commenters described categories of ongoing costs that fell within the categories of ongoing cost activities set forth in the NPRM. Commenters, for example, described needing to transcribe data from the application, train employees, conduct external audits, or prepare for exams. Given the volume of comments affirming these existing categories, the Bureau has retained those existing categories of ongoing cost activities.

Some commenters suggested other categories of ongoing costs not considered by the Bureau in the NPRM. A credit union and a trade association suggested that more time was needed per application to explain to customers the new collection requirements; a bank said more time was needed to explain the requirements to collect ethnicity, race, and sex information. The Bureau believes that its one-time costs categories of ''developing forms and applications'' and ''developing policies and procedures'' already account for these types of costs and any remaining ongoing cost of explaining collection requirements will be minimal. The commenters also did not provide specific estimates for these categories of ongoing costs.

A joint trade association letter described how the rule has the potential to create a new ongoing cost of retaining

[943] Compared to the assumptions in the Bureau's proposal, this table includes additional time assumptions due to the collection of the business's LGBTQI+-owned status.

[944] The representative Type A, Type B, and Type C FIs are assumed to receive, respectively, 100, 400 and 6,000 applications.

the records. These comments focused on the information technology infrastructure associated with the retention of records. The Bureau believes that these costs are best described as one-time costs and are captured in the ''updating computer systems'' category of its one-time costs estimation. The Bureau thus has not included these as additional categories of ongoing costs.

Comments on one-time and ongoing cost estimates based on levels of financial institution complexity. The Bureau received several comments related to its approach to defining complexity and using complexity categories in its one-time and ongoing cost estimation. Several smaller banks and credit unions explained that many of their processes related to collecting, checking, and reporting data to the Bureau under the proposed rule would largely be manual. The Bureau believes that its Type A institution category already takes into account the various manual processes described by these commenters and decided against adding additional categories of complexity.

3. Methodology for Generating Market-Level Estimates of One-Time and Ongoing Costs

To generate market-level cost estimates, the Bureau relies on the estimates of the volume of small business lending originations described in part IX.D above. As with institutional coverage, the Bureau separates market-level cost estimates into estimates for depository institutions and for nondepository institutions. The methodology described below for the final rule is the same methodology that the Bureau used in the NPRM.

For depository institutions, the Bureau estimates which institutions of those that existed at the end of 2019 would likely be covered or not covered by the final rule. For this analysis, the Bureau uses 2019 to represent the first year of coverage. An institution would be required to report data on applications received in 2019 if it originated at least 100 covered originations in each of the preceding two years (*i.e.,* 2017 and 2018). If two depository institutions merged between the end of 2017 and the end of 2019, the Bureau assumes that those institutions would report as one entity. The Bureau then categorizes each institution as a Type A DI, Type B DI, or Type C DI based on its originations in 2019. Depository institutions with 0 to 149 covered originations in 2019 are categorized as Type A. Depository institutions with 150 to 999 covered originations are categorized as Type B. Depository institutions with 1,000 or more covered originations are categorized as Type C. For each depository institution, the Bureau assigns the appropriate estimated one-time cost (including hiring cost as a function of estimated applications), ongoing fixed cost, ongoing variable cost per application, and applications per origination estimates associated with its institution type. The estimated number of annual applications for each institution is the estimated number of originations multiplied by the assumed number of applications per origination for that institution type. The annual ongoing cost for each institution is the ongoing fixed cost plus the ongoing variable cost per application multiplied by the estimated number of applications. The one-time hiring cost for each institution is the estimated number of applications multiplied by the annual staff hours per application divided by 2,080, rounded up to the next full FTE, multiplied by the cost-per-hire.

To generate market-level estimates, the Bureau first calculates the estimated one-time costs, including hiring costs, and annual ongoing costs for each depository institution covered by the rule based on the estimated number of originations for that institution in 2019. The Bureau then sums these costs over the covered depository institutions to find market-level statistics of total costs. As with coverage estimates, the Bureau presents a range for market-level estimates. The range reflects the uncertainty associated with the estimate of costs for banks and savings associations below the CRA reporting threshold. The Bureau has documented how it calculates these ranges in its *Supplemental estimation methodology for institutional coverage and market-level cost estimates in the small business lending rulemaking.*[945]

The Bureau is unaware of institution-level data on originations by nondepository institutions that are comprehensive enough to estimate costs using the same method as that for depository institutions. Therefore, to generate market-level estimates for nondepository institutions, the Bureau relies on the estimates discussed above and several key assumptions. The Bureau assumes that online lenders and merchant cash advance providers are Type C FIs because they generally have more automated systems and originate more loans. The Bureau assumes that the remaining nondepository institutions are Type B FIs. The Bureau assumes that each nondepository receives the same number of applications as the representative institution for each type, as described above. Hence, the Bureau assumes that online lenders and merchant cash advance providers each receive 6,000 applications per year and all other nondepository institutions receive 400 applications per year. As explained above, the Bureau also assumes that all nondepository institutions have the same one-time costs.

F. Potential Benefits and Costs to Covered Financial Institutions and Small Businesses

The benefits of the final rule to covered financial institutions and small businesses described in this section are largely the same as the benefits discussed in the NPRM. The discussions have been updated to reflect policy differences between the NPRM and final rule.

1. Benefits to Small Businesses

The final rule will benefit small businesses by collecting data that further the two statutory purposes of section 1071. Those purposes are to facilitate the enforcement of fair lending laws and enable communities, governmental entities, and creditors to identify business and community development needs and opportunities of women-owned, minority-owned, and small businesses. Some of the benefits to small businesses discussed below stem from the public release of the data collected under the rule. As discussed in more detail in part VIII.B.1, the Bureau intends to exercise its discretion under ECOA section 704B(e)(4) to delete or modify data collected under section 1071 which are or will be available to the public where it determines that such deletion or modification appropriately protects privacy interests. The discussion below considers the benefits of releasing unmodified data, but the Bureau acknowledges that the benefits derived from public disclosure may be lower if modifications or deletions are made.

Data collected and reported under the final rule will be the largest and most comprehensive dataset in the United States on credit availability for small businesses. These data will provide important insight into lending patterns in the small business lending market. Visibility into those patterns should provide important benefits for facilitating fair lending enforcement and enabling identification of community development needs and opportunities.

The data could lead to a more efficient use of government resources in enforcing fair lending laws through more efficient prioritization of fair lending examinations and investigations. The public nature of the dataset will allow for members of the public to review the dataset (subject to modification and deletion decisions by the Bureau) for possible violations of antidiscrimination statutes. The increased transparency will benefit women-owned, minority-owned, and LGBTQI+-owned small businesses directly, in the form of remediation in the event that lenders ultimately are found to have violated fair lending laws, and indirectly, with increased access to credit resulting from the increased transparency as to the lending practices of financial institutions.

Important to the fair lending benefit of the small business lending dataset is the action taken data point. Existing datasets that collect transaction-level data only contain data on originated small business loans. Application-level data, including the action taken data point, will allow users to construct approval or denial rates, for example, for particular financial institutions. Such analyses could indicate whether, for example, women-owned, minority-owned, or LGBTQI+-owned small businesses are being discouraged or denied credit at higher rates than other small businesses, which would warrant further exploration.

Also important are several data fields on the pricing of covered credit transactions that are originated or approved but not accepted. Data users will be able to examine, for example, whether women-owned, minority-owned, or LGBTQI+-owned small businesses are charged higher interest rates, or face higher origination charges or initial annual charges than similarly situated businesses that are not women-owned, minority-owned, or LGBTQI+-owned. The final rule also requires information on prepayment penalties, which can be an important aspect of the total costs of credit for small business owners.[946] Users will be able to examine whether women-owned, minority-owned, or LGBTQI+-owned small businesses are more likely to face prepayment penalties on extended credit.

Several data points included in the final rule will contribute to more accurate fair lending analyses by allowing users to compare credit products with similar characteristics. For example, differences in the risk of extending credit likely lead to differences in approval rates and prices for covered credit transactions based on credit amount applied for and approved, all three aspects of credit type (type of credit product, types of guarantees, and loan term), and credit purpose. Many creditors also consider characteristics about the small business, such as industry, gross annual revenue, or time in business, during their underwriting or pricing processes. Supply and demand for small business credit also varies over time and by location, so the inclusion of census tract, application date, and action taken date could lead to more accurate analyses. More accurate screening for fair lending risk will, for example, reduce the false positive rate observed during fair lending prioritization and increase the efficiency of fair lending reviews.

Communities may use these data to identify gaps in access to credit for small businesses. Identifying those gaps can fuel community development, in partnership with creditors and governmental entities through the development of targeted lending programs, loan funds, small business incubators, and other community-driven initiatives to support small businesses.

Creditors will likely use the data to understand small business lending market conditions more effectively and at a more granular level than is possible with existing data sources, such as Call Reports, data from public lending programs, or privately purchased data. Data collected under the final rule, combined with the institution's existing information on the small business lending market, can help creditors identify potentially profitable opportunities to extend credit. For example, creditors will be able to use census tract information to find areas of high credit demand into which they could consider expanding and other business opportunities for the creditor.

Governmental entities will likely use the data to develop solutions that achieve policy objectives. For example, loan guarantees provided by the SBA's 7(a) and 504 programs are designed to increase the availability of business credit for businesses that otherwise have difficulty accessing credit. Governmental entities will be able to use the comprehensive data on applications for covered credit transactions collected under the final rule to identify additional opportunities to create new—or tailor existing—programs to advance their small business lending policy objectives. Additionally, the data could help facilitate emergency governmental interventions such as disaster relief.

The data collected under the final rule will be the most extensive data on credit access for women-owned, minority-owned, and LGBTQI+-owned small businesses, and such information will help various data users in understanding the needs and opportunities of such businesses. For example, governmental entities often create programs, such as those that reserve government contracts or those that provide grants, that specifically target women-owned and minority-owned businesses. Governmental entities could use data collected under the final rule to alter existing programs or create new ones to meet the needs of these business owners. Private lenders could also use the data to find untapped markets of credit demand from women-owned, minority-owned, and LGBTQI+-owned small businesses.

As one of the premier data sources on the small business credit market, data collected under the final rule will also facilitate rigorous research by academics and advocates. HMDA data, which are similar in many ways to the data that will be collected under the final rule, have been analyzed in many scholarly publications. The data collected under section 1071 will provide public- and private-sector academics and other researchers a clearer window into potential discrimination in the small business credit market, as well as a better understanding of small business credit market trends and dynamics. As in the case of HMDA, data collected under the final rule will be more broadly used to understand how business owners make borrowing decisions, respond to higher prices, and respond to risk.[947]

[946] California, for example, to include prepayment policies as a required component of pricing disclosures in commercial financing (*see* Cal. S.B. 1235 (Sept. 30, 2018), *https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=201720180SB1235*).

[947] For examples of how HMDA data has facilitated research on the mortgage market, *see, e.g.,* CFPB, *Data Point: Asian American and Pacific Islanders in the Mortgage Market* (July 2021), *https://files.consumerfinance.gov/f/documents/cfpb_aapi-mortgage-market_report_2021-07.pdf;* CFPB, *Manufactured Housing Finance: New Insights from the Home Mortgage Disclosure Act Data* (May 2021), *https://files.consumerfinance.gov/f/documents/cfpb_manufactured-housing-finance-new-insights-hmda_report_2021-05.pdf;* Neil Bhutta & Benjamin J. Keys, *Moral Hazard during the Housing Boom: Evidence from Private Mortgage Insurance,* 35(2) Review of Fin. Studies (2021), *https://academic.oup.com/rfs/advance-article/doi/10.1093/rfs/hhab060/6279755;* Sumit Agarwal *et al., The Effectiveness of Mandatory Mortgage Counseling: Can One Dissuade Borrowers from Choosing Risky Mortgages?* (Nat'l Bureau of Econ. Research, Working Paper No. 19920, 2014), *https://www.nber.org/system/files/working_papers/w19920/w19920.pdf;* Alexei Alexandrov & Sergei Koulayev, *No Shopping in the U.S. Mortgage Market: Direct and Strategic Effects of Providing Information* (CFPB, Off. of Research Working Paper

The final rule's data points will provide the above benefits in several ways. For example, the action taken and pricing information data points will allow various entities to monitor the tightness of the small business credit market and identify areas where there are high denial rates for small business credit or where it is provided only at high cost, especially to women-owned, minority-owned, or LGBTQI+-owned small businesses. Conversely, the data may also be used to identify areas of business opportunity for creditors or help assess the characteristics of successful business lending. Data on census tract, NAICS code, gross annual revenue, and number of workers will provide insight into the availability of small business credit by geography, industry, and business size. Credit type and credit purpose will provide more information on how women-owned, minority-owned, and LGBTQI+-owned small businesses use credit and whether their use differs from that of other small businesses. Time in business information will allow data users to understand the credit needs of young small businesses, and specifically young women-owned, minority-owned, and LGBTQI+-owned small businesses. Recent research has shown that women-owned and minority-owned businesses face different financing challenges early in the business lifecycle than other firms, primarily driven by less access to external financing.[948]

As creditors, communities, and governmental entities use these data to identify business opportunities, gaps in existing supports and capital access for small businesses, and more targeted policy interventions to support small businesses, small businesses will benefit from increased access to credit. Small businesses will also benefit from credit offerings more closely tailored to their needs as the data are used by creditors and others to develop more targeted credit products.

As described above, the Bureau believes that setting a threshold for coverage at 100 originated loans in each of the preceding two calendar years provides substantial coverage of the small business credit market. While the Bureau could theoretically have collected even more data pursuant to the final rule if it retained the 25-loan threshold proposed in the NPRM, the Bureau is not adopting this threshold in order to ensure that financial institutions with the lowest volume of small business lending experience no pressure to reduce their small business lending activity in order to avoid the fixed costs of coming into compliance with this final rule. While some commenters expressed concern that institutions with a low volume of small business lending might reduce their lending in order to stay under the threshold, the Bureau cannot quantify this risk, particularly given the paucity of data on small business lending.

Comments on the Bureau's estimation of the benefits to small businesses. The Bureau sought comment on its analysis of potential benefits to small businesses as set forth in the NPRM. Many community groups and several business owners agreed that the rule would support fair lending. A small business, a CDFI lender, and some community groups said collecting data will improve visibility and understanding of small businesses, particularly those that are minority- and women-owned. The CDFI lender and a joint letter from community groups, community oriented lenders, and business advocacy groups stated that the data from this rule could be used to identify which products and business models best meet the needs of underserved entrepreneurs. One commenter pointed to agricultural products as a particular sector that would benefit from increased transparency afforded by the rule, particularly regarding the status of minority- and women-owned small businesses. Two community groups and a business advocacy group pointed to how data collected on ethnicity and race under HMDA preceded an increase in lending to minority borrowers, suggesting that a similar pattern may emerge in the small business lending market after the rule goes into effect. Similarly, a few commenters pointed to how data from the Paycheck Protection Program and studies and surveys surrounding the program allowed researchers, regulators, financial institutions, and others to identify disparate lending patterns on the basis of ethnicity and race.

An individual commenter said collecting the data will help improve the collective understanding of small business lending and its interaction with regulations, and noted that other countries, such as Norway, already collect small business lending data on a Federal level. An individual commenter and two community groups suggested that the data could reveal patterns of disparities that are already well-known through lived experiences within their respective communities, particularly Black communities and farming and agricultural communities. A joint letter from community and business advocacy groups pointed to how disaggregation of those identified as Asian has revealed wide variances in income and lending patterns within these diverse communities in the mortgage lending market, suggesting similar disaggregation of race data in the final rule would improve the understanding of these diverse communities in the small business lending market.

A few commenters noted potential positive spillover effects of the rule. One community group noted positive interaction effects between fair lending to small businesses and fair housing, as more people might purchase housing close to where local businesses flourish. An individual and a joint letter from community and business advocacy groups noted that investing in small businesses, particularly in historically underfunded neighborhoods, could provide pathways to economic opportunities for members of marginalized groups and even alleviate wealth gaps based on ethnicity and race. Another commenter similarly noted that the growth of small businesses could reduce unemployment, housing insecurity, and poverty in the surrounding community.

Finally, a few minority small business owners predicted that they would benefit if the rule improved fair lending. These commenters identified the disadvantages minority-owned small businesses face when fair lending is not enforced, including business closure. One of these commenters, along with some community groups, pointed to studies that suggested fair access to credit, such as loan modifications, during the pandemic could have prevented the closure of minority-owned firms, added millions in revenue to the U.S. economy, and created millions of jobs.

A number of commenters described ways in which the final rule would provide benefits consistent with the statutory purposes of section 1071, including the establishment of a comprehensive dataset of small business lending, and the collection of detailed data points that will allow for more accurate analyses of underwriting and pricing patterns. These data, in turn, will permit for better understanding of the supply and demand of credit, and financial institutions' treatment of small business applicants and borrowers, including those that are owned by women and minorities. Commenters corroborated other benefits identified by the Bureau, such as positive spillover effects to fair housing and the local

No. 2017–01, 2018), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2948491*.

[948] *See, e.g.,* JPMorgan Chase & Co. Inst., *Small business ownership and liquid wealth* (Mar. 2021), *https://www.jpmorganchase.com/institute/research/small-business/small-business-ownership-and-liquid-wealth-report*.

economy surrounding small businesses. Data from the final rule will help researchers (including, but not limited to, those in the government, private sector, and academia) observe and quantify these benefits, just as researchers have used data from HMDA and the Paycheck Protection Program to identify areas of potential fair lending risk.

On the other hand, many financial institutions and trade associations disagreed with the Bureau's assessment of potential benefits to small businesses. First, several commenters asserted there would be minimal or even no benefit. One bank said there would be no benefit at all. Two banks said there will be ''minimal'' benefit to their clients, to their communities, and to themselves.

Second, other commenters asserted the Bureau overestimated benefits. One bank said the usefulness of standardized data is undercut by the fact that small business lending by small lenders is highly specialized. Two trade associations specified this could be problematic because standardized data ''could result in small business borrowers appearing to be similarly situated, when, in fact, the unique attributes of each borrower would result in different loan pricing by the bank.''

Third, several commenters asserted any benefits would be outweighed by costs, *i.e.,* that there would be little benefit relative to costs. Other comments asserted the Bureau failed to adequately consider the potential benefits and costs to ''consumers'' and ''covered persons'' as required by section 1022(b)(2)(A) of the Dodd-Frank Act. While some of these arguments are discussed in detail in following sections regarding costs, we present some of the arguments here as well. Two community banks and a trade association said costs would outweigh benefits for community banks and small lenders in particular. Another trade association stated data points adopted pursuant to ECOA section 704B(e)(2)(H) in particular will only provide ''minimal'' benefits compared to the cost of collecting the data. Along a similar line of reasoning, three trade associations said the rule would harm the institutions that the rule is designed to benefit. Of these, two asserted that the small, women-owned, and minority-owned businesses the rule is designed to benefit in particular would be harmed.

As detailed above, the Bureau believes that the final rule will have benefits consistent with its two statutory purposes. The data collected under the final rule will be the most extensive data on credit access for women-owned, minority-owned, and LGBTQI+-owned small businesses, and such information will facilitate the enforcement of fair lending laws and help identify business and community development needs.

With respect to comments that asserted the Bureau overestimated the benefits of the rule, the Bureau acknowledges in part IX.C the difficulty of precisely estimating the benefits of the data collection but also details how it estimates the benefits to small businesses using the best information available. With respect to commenters who described how data collected under the final rule would not have all relevant information about a credit application, the Bureau acknowledges this limitation in part IX.C above, but also describes, in part IX.F, how the data will provide significant benefits consistent with the statutory purposes of the rule despite these limitations.

With respect to comments that the costs would outweigh any benefits or that the Bureau did not adequately fulfill the requirements of section 1022(b)(2)(A) of the Dodd-Frank Act, in part IX.E, the Bureau details its methodology for estimating benefits and costs and, in part IX.F, details its estimates of benefits and costs, incorporating feedback from comments on the proposed rule. In doing so the Bureau fulfills its requirement to consider the potential benefits and costs to ''consumers'' and ''covered persons'' as required by section 1022(b)(2)(A) of the Dodd-Frank Act.

2. Benefits to Covered Financial Institutions

The final rule will provide some benefits to some covered financial institutions—*i.e.,* the financial institutions that will be required to collect and report 1071 data on small business applications for credit. The first is some reduction of the compliance burden of fair lending reviews for lower risk financial institutions, by reducing the ''false positive'' rates during fair lending review prioritization by regulators. Currently, financial institutions are subject to fair lending reviews by regulators to ensure that they are complying with ECOA in their small business lending. Data reported under the rule will allow regulators to prioritize fair lending reviews of financial institutions with higher risk of fair lending violations, which reduces the burden on institutions with lower fair lending risk. Covered financial institutions will also be able to use the data to monitor, identify, and address their own fair lending risks and thereby reduce the potential liability from enforcement actions and adverse exam findings requiring remedial action.

The rule's data collection will also provide an unprecedented window into the small business lending market, and such transparency may benefit financial institutions. Comprehensive information on small business credit applications and originations are currently unavailable. The data made public pursuant to this rule will allow financial institutions to better understand the demand for small business credit products and the conditions under which they are being supplied by other covered financial institutions.

Comments on the Bureau's estimation of the benefits to covered financial institutions. The Bureau sought comment on its analysis of potential benefits to covered financial institutions as set forth in the NPRM. A broad range of commenters, including lenders, community groups, small business owners, business advocacy groups, and others, asserted that the final rule will provide an unprecedented window into the small business lending market and thereby facilitate fair lending enforcement.

However, several industry commenters suggested that the Bureau overstated the benefits of the data collection to financial institutions. To reiterate some of the comments in the previous section, a trade association stated that they do not believe the Bureau's rule to implement section 1071 would provide ''any significant benefit'' to financial institutions. Two banks said there will be ''minimal'' benefit to their clients, to their communities, and to themselves. Another trade association noted that lenders are likely already highly aware of the market in which they lend, especially considering that small business loans often require a relatively high degree of customization. Several industry commenters said the usefulness of standardized data is undercut by the fact that small business lending by small lenders is highly specialized to accommodate the highly individualized nature of each business.

The Bureau describes in detail above the potential benefits to financial institutions. The Bureau acknowledges that many lenders may have a high awareness of the local markets in which they lend but believes that the data will still shed light on additional information about areas where lenders do not currently operate and may also shed light on currently underserved markets within the areas lenders currently operate. Comprehensive, application-level data on small business lending will provide financial

institutions better understand their local markets as well as information about markets which they do not currently serve.

3. Costs to Covered Financial Institutions

i. One-Time Costs to Covered Financial Institutions

Using the methodology described in part IX.E.1 above, Table 11 shows the estimated total expected one-time costs of the final rule for the first eight cost categories for financial institutions covered by the final rule as well as a breakdown by the eight component categories that comprise the one-time costs for Type A DIs, Type B DIs, Type C DIs, and Non-DIs.[949] The final cost category, hiring costs, is discussed later in this section. The Bureau notes that the estimated costs presented in Table 11 differ slightly from the estimated costs presented in the NPRM. This difference comes only from the update in wages between the two calculations due to a release of new data.

Table 12 shows the estimated number of junior, mid-level, and senior staff hours and non-salary expenses for each component activity for Type A DIs. Tables 13 through 15 show the same estimates for Type B DIs, Type C DIs and Non-DIs respectively. As discussed above, the Bureau estimates all one-time costs to covered financial institutions using the One-Time Cost Survey results.

TABLE 11—ESTIMATED ONE-TIME COSTS BY COST CATEGORY AND FI TYPE

Category	Type A DI	Type B DI	Type C DI	Non-DI
Preparation/planning	$6,500	$7,400	$20,500	$13,900
Updating computer systems	17,000	17,400	6,900	57,300
Testing/validating systems	11,100	3,200	11,400	7,600
Developing forms/applications	4,300	3,200	4,600	4,400
Training staff and third parties	3,500	3,900	5,300	3,100
Developing policies/procedures	4,200	2,500	3,600	4,300
Legal/compliance review	7,700	3,000	7,300	3,900
Post-implementation review	5,000	4,300	18,000	1,700
Total	59,400	44,800	77,800	96,400

TABLE 12—ESTIMATED STAFF HOURS AND NON-SALARY EXPENSES BY COST CATEGORY FOR TYPE A DIS

Category	Senior hours	Mid-level hours	Junior hours	Non-salary expenses
Preparation/planning	38	43	21	0
Updating computer systems	34	52	41	$10,000
Testing/validating systems	18	52	41	5,600
Developing forms/applications	14	34	51	0
Training staff and third parties	18	26	16	0
Developing policies/procedures	24	30	11	0
Legal/compliance review	28	26	15	3,300
Post-implementation review	26	38	19	0
Total	200	301	215	18,900

TABLE 13—ESTIMATED STAFF HOURS AND NON-SALARY EXPENSES BY COST CATEGORY FOR TYPE B DIS

Category	Senior hours	Mid-level hours	Junior hours	Non-salary expenses
Preparation/planning	50	35	21	$200
Updating computer systems	25	20	12	13,600
Testing/validating systems	18	19	12	100

Developing policies/procedures	16	13	7	100
Legal/compliance review	14	16	5	700
Post-implementation review	15	22	27	1,100
Total	182	168	111	16,400

TABLE 14—ESTIMATED STAFF HOURS AND NON-SALARY EXPENSES BY COST CATEGORY FOR TYPE C DIS

Category	Senior hours	Mid-level hours	Junior hours	Non-salary expenses
Preparation/planning	92	190	37	$500
Updating computer systems	6	46	35	3,000

[949] The estimated one-time costs by cost category for each FI type is the sum of the wages multiplied by the estimated staff hours plus the non-salary expenses. For example, the Bureau expects that for preparation and planning for the final rule, on average, a Type A DI will pay senior staff $95.10 × 38 hours (= $3,613.80), mid-level staff $55.40 × 43 hours (= $2,382.20), and junior staff $22.37 × 21 hours (= $469.77). The total estimated cost is $6,465.77, rounded to $6,500, because Type A DI is not expected to pay non-salary expenses for preparation and planning.

TABLE 14—ESTIMATED STAFF HOURS AND NON-SALARY EXPENSES BY COST CATEGORY FOR TYPE C DIs—Continued

Category	Senior hours	Mid-level hours	Junior hours	Non-salary expenses
Testing/validating systems	34	110	50	1,000
Developing forms/applications	13	46	34	100
Training staff and third parties	11	61	36	100
Developing policies/procedures	14	30	14	300
Legal/compliance review	9	56	44	2,300
Post-implementation review	3	246	103	1,800
Total	182	785	353	9,100

TABLE 15—ESTIMATED STAFF HOURS AND NON-SALARY EXPENSES BY COST CATEGORY FOR NON-DIs

Category	Senior hours	Mid-level hours	Junior hours	Non-salary expenses
Preparation/planning	38	47	29	$7,100
Updating computer systems	27	147	39	45,700
Testing/validating systems	26	24	39	2,900
Developing forms/applications	30	15	19	300
Training staff and third parties	14	18	17	400
Developing policies/procedures	32	15	14	200
Legal/compliance review	26	18	11	200
Post-implementation review	16	2	1	100
Total	209	286	169	56,900

The Bureau estimates that updating computer systems will be the biggest driver of one-time costs for Type A DIs, Type B DIs, and Non-DIs. Type A DIs and Type B DIs are expected to spend similar amounts on updating computer systems, but Type A DIs would rely somewhat more on staff.

The Bureau expects that Non-DIs will have the highest one-time costs and the highest costs to update computer systems. To update computer systems, Non-DIs will rely on mid-level staff and third-party vendors. Non-DIs will also spend relatively more on preparation and planning than Type A DIs or Type B DIs. These estimates are consistent with the expectation that Non-DIs will incur higher costs because they are less likely to already report data to regulators.

The Bureau estimates that the biggest drivers of one-time costs for Type C DIs will be preparation and planning and post-implementation review. These depository institutions will generally rely on mid-level staff to implement the required one-time changes and, in particular, will rely on mid-level staff for these two key activities. The Bureau estimates that Type C DIs will spend the most of all financial institution types on staff hours to implement one-time changes and the least on non-salary expenses.

The Bureau estimates that one-time costs will be higher for Type A DIs than for Type B DIs. These two types of depository institutions have similar estimated costs for most activities, but Type A DIs are expected to spend more on testing/validating systems and legal/compliance review.

In addition to these one-time costs, the Bureau estimates the one-time hiring costs for the additional FTEs a financial institution expects to hire based on the number of applications the institution expects to receive each year. In the ongoing cost discussion in part IX.F.3.ii below, the Bureau explains how it estimates the number of staff hours per application required to comply with the final rule on an ongoing basis. The Bureau estimates that a Type A FI requires 1.1 hours per application, a Type B FI requires 1.6 hours per application, and a Type C FI requires 0.83 hours per application.

For the purposes of exposition, the Bureau presents the estimated number of FTEs for representative financial institutions. For the market-level estimates, the Bureau estimates the number of staff hours required based on the estimated number of applications each depository institution receives.

The representative Type A FI receives 100 applications annually, requiring 110 hours to comply with the final rule.[950] Under the assumptions described in part IX.E.1 above, the representative Type A FI will need to hire one additional FTE at a one-time cost of $4,425 to cover the expected annual staff hours required to comply with the rule on an ongoing basis. This additional staff will also be able to cover the staff hours required to implement one-time changes because, on average, a Type A DI will require 716 staff hours for one-time changes (see Table 12). The Bureau estimates that the representative Type A DI will incur total one-time costs of $63,825 to implement the final rule.

The representative Type B FI receives 400 applications annually, requiring 654 hours to comply with the final rule. This FI will need to hire one additional FTE at a one-time cost of $4,425. This additional staff will also be able to cover the 461 staff hours, on average, required to implement one-time changes for a Type B DI. The Bureau estimates that the representative Type B DI will incur total one-time costs of $49,225 to implement the final rule.

The representative Type C FI receives 6,000 applications annually, requiring 5,009 hours to comply with the final rule. This FI will need to hire 3 additional FTE at a one-time cost of $13,275. This additional staff will also be able to cover the 1,320 staff hours, on average, required to implement one-time changes for a Type C DI. The Bureau estimates that the representative Type C DI will incur total one-time costs of $91,075 to implement the final rule.

[950] The Bureau discusses a representative Type A FI that will not be covered by the final rule to make the final estimates easier to compare with those in the NPRM and to highlight what the costs of the rule would have been for a financial institution that is not covered by the final rule.

The Bureau assumes that most nondepository institutions are primarily Type B and Type C FIs, so the estimated staff hours to cover ongoing tasks discussed above apply here. For one-time tasks, the Bureau estimates that a nondepository institution will require about 664 staff hours, on average, to implement one-time changes. One additional FTE would be sufficient to cover these hours if the institution reallocates some tasks across staff. The Bureau estimates that the representative Non-DI will incur total one-time costs of $100,825 to implement the final rule.

As mentioned above, the Bureau realizes that one-time costs vary by institution due to many factors, and that this variance exists on a continuum that is impossible to fully represent. The Bureau focuses on representative types of financial institutions in order to generate practical and meaningful estimates of costs. As a result, the Bureau expects that individual financial institutions will have slightly different one-time costs than the average estimates presented here.

The One-Time Cost Survey instructed respondents to assume that covered institutions would be required to report data at the application level on small business financing that constitutes ''credit'' for purposes of ECOA for the 13 statutorily mandated data points one time per year, and be responsible for validating the accuracy of all data. Respondents were further instructed to use their own institution's internal definition of small business, assume the Regulation B definition of an application, and assume a reporting structure similar to that under HMDA. Finally, respondents were instructed to not include any costs associated with creating a firewall (that is, shielding applicants' protected demographic information from certain employees). As such, respondents estimated one-time costs assuming that the final rule would be different in some ways from what the Bureau described as the requirements in the survey. One small entity representative provided feedback during the SBREFA Panel that it was hard to estimate one-time costs in the survey without knowing all the details of the rule. The Bureau sought comment on the one-time costs associated with the additional data points it proposed but did not receive any information on which to base estimates. The Bureau expects that accounting for the additional data points would only increase the one-time cost estimates by a small amount because most of the one-time costs come from a financial institution moving from not reporting 1071 data to being required to report such data.

The Bureau estimates that the overall market impact of one-time costs for depository institutions will be between $147,000,000 and $159,000,000.[951] These estimates include between $47,700,000 and $49,700,000 that depository institutions are estimated to spend on hiring additional staff.[952] Using a 7 percent discount rate and a five-year amortization window, the annualized one-time costs for depository institutions will be $35,700,000 to $38,600,000. The Bureau estimates that the overall market impact of one-time costs for nondepository institutions will be $59,800,000. This estimate includes the $3,630,000 that nondepository institutions are estimated to spend on hiring additional staff. Using a 7 percent discount rate and a five-year amortization window, the annualized one-time costs for nondepository institutions will be $15,500,000. As a frame of reference for these market-level one-time cost estimates, the estimated total non-interest expenses from the FFIEC and NCUA Call Reports for depository institutions that the Bureau estimates would be covered under the proposed rule was between $407 billion and $410 billion in 2019.[953] The upper bound estimate of total one-time costs is approximately 0.04 percent of the total annual non-interest expenses.

The Bureau estimated that the overall market impact of one-time costs from the NPRM would have been between $218,000,000 and $229,000,000 for depository institutions and $94,400,000 for nondepository institutions. The estimated market impacts for the final rule are lower than the estimated impacts from the NPRM because, based on changes made to the thresholds for the coverage of financial institutions in the final rule, the Bureau estimates that fewer financial institutions will be covered by the final rule. The estimates are also different because in the estimates for the final rule, the Bureau updated wages and included hiring costs.

Comments on the one-time cost estimates of the proposed rulemaking. In the NPRM, the Bureau sought comment on its analysis of one-time costs. A few industry commenters expressed the difficulty in estimating these costs. Several other industry comments provided an overall estimate of what they believed the overall one-time costs would be for their institution. These estimates ranged from slightly less than to considerably higher than the Bureau's estimates from the NPRM. For example, a bank with about 300 small business originations per year (a Type B DI in the Bureau's framework) estimated that the one-time implementation costs would be about $36,000. Another bank commenter estimated that it would cost well over $100,000 to implement changes.

A few industry commenters provided estimates of the costs associated with the individual cost categories used by the Bureau to estimate one-time costs. A few commenters provided estimates of the costs associated with updating computer systems in terms of staff hours or software (non-salary) expenses. For example, a State bankers association conveyed an estimate by a member of $5,000 for 1071 data submission software. A credit union commented that it anticipates initial costs of up to $100,000 to reconfigure or replace current reporting systems. A few other commenters provided estimates for other categories. For example, one credit union that originates about 150 small business loans per year estimated that staff would require 200 hours of training to prepare for the rule. A bank commented that it would require 30 to 80 hours to develop policies and procedures.

The Bureau has reviewed these estimates and considered the information reported by the commenters, together with the existing evidence provided in the one-time cost survey. The Bureau reiterates that the costs of implementing the rule are all institution-specific. As discussed above, the one-time cost estimates should be considered the average expected costs for an institution based on the complexity of the institution's operations. In addition, the Bureau expects that financial institutions will use a variety of methods to prepare for the rule. Some institutions will update systems using staff, while other institutions will purchase updates from third-party vendors. For example, one institution might use 50 staff hours to

[951] The Bureau notes that the variation in this range comes primarily from the uncertainty in the number of originations made by small banks and savings associations. The range does not fully account for the uncertainty associated with estimates of the one-time costs for each type of institution.

[952] The Bureau notes that the estimated hiring costs for the largest depository institutions may be an upper bound on the eventual realized costs and may be inflating the total hiring costs for depository institutions. The Bureau's methodology for estimating hiring costs implies that financial institutions with the most applications will need to hire several hundred employees to comply with the final rule. However, the Bureau anticipates that the largest institutions will likely save on these costs by automating some processes instead of hiring staff.

[953] The Bureau estimates this number by summing non-interest expenses over DIs that it estimates will be covered by the final rule.

update computer systems and another institution might pay $10,000 for an updated system. In this case, the Bureau would estimate that, on average, an institution would use 25 staff hours and $5,000 to update computer systems. For another example, a group of trade associations estimated, based on a survey of their members, that it would cost about $40,000 on average for small institutions to update commercial loan software. However, they also estimate that only a third of small institutions would need to update the software. This implies that the average cost associated with updating computer systems, including financial institutions that spend $0, is about $13,000, much closer to the Bureau's non-salary costs of updating computer systems for Type A DIs of $10,000. Overall, the trade association presented estimates only moderately higher than the Bureau's, after accounting for DIs that do not need to update computer systems. The Bureau considers most estimates provided by commenters as broadly consistent with the Bureau's one-time cost estimates.

A few industry commenters asserted that the firewall would be very costly to implement. However, the Bureau believes that, based on comments made on the firewall provision, it would not be feasible for many financial institutions to implement the firewall. In that case, the financial institution would be permitted to determine that one or more employees or officers should have access to protected demographic information and provide a notice to applicants informing them that employees and officers involved in making determinations regarding their applications may have access to protected demographic information. As a result, the Bureau has not changed its one-time cost estimates based on the cost of implementing the firewall.

Many industry commenters specifically stated that the Bureau underestimated one-time costs. Most of these commenters considered the training costs as too low and a few others thought that the technology costs were too low. Some commenters stated that staff would require multiple follow up training sessions to prepare for implementing the rule. However, none of the commenters provided specific information on how much training or technology would cost. The Bureau has not changed the training or technology cost estimates, preferring to rely on the evidence provided through the One-Time Cost Survey.

Many industry commenters expressed concern about being unable to implement the necessary one-time changes in the proposed 18-month implementation time. Several commenters noted the trial and error nature of implementing a new regulation and that this process could take a long time. Several other industry commenters said that third-party software providers would require significant time to develop new technology to comply with the proposed rule and financial institutions would still need to test the technology, conduct due diligence, and develop policies and procedures. A few others commented that small financial institutions, and particularly those unfamiliar with Federal reporting regimes like HMDA, would find it more difficult to implement one-time changes in time to comply with the proposed 18-month timeline. On the one-time costs survey, the Bureau did not ask about the time to make changes to prepare to comply with the eventual rule, nor did it specify an assumed time-frame. The Bureau interprets the survey responses as realistic estimates conditional on having enough time to implement changes. The comments received suggest that most financial institutions, particularly those that receive relatively fewer small business credit applications, would not have had enough time to implement changes in the proposed 18 months. The Bureau expects that the adoption of tiered compliance dates in the final rule, giving most lenders 24 or 33 months to comply with the rule, will give most financial institutions enough time to implement one-time changes in a manner consistent with the Bureau's estimates.

Several industry commenters asserted that the cost of complying with the proposed rule for small entities would be relatively higher than for larger entities. For example, a trade association commented that smaller banks will not be able to exploit the economies of scale necessary to mitigate costs. The Bureau has tried to account for some of these differences by estimating the costs for the different representative types of institutions. The Bureau in its final rule increased the reporting activity threshold from the proposed 25 covered originations in each of the two preceding calendar years to 100 covered originations in each of the two preceding calendar years. The Bureau estimates that many small financial institutions will no longer be required to report 1071 data because of this change in the coverage of financial institutions in the final rule.

ii. Ongoing Costs to Covered Financial Institutions

Using the methodology described in part IX.E.2 above, Table 16 shows the total expected annual ongoing costs of the final rule as well as a breakdown by the component 15 activities that comprise the ongoing costs for Type A FIs, Type B FIs, and Type C FIs. The bottom of the table shows the total estimated annual section 1071 ongoing compliance cost for each type of institution, along with the total cost per application the financial institution processes. To produce the estimates in Table 16, the Bureau used the calculations described in Tables 8 and 9 above and the assumptions for each activity in Table 10. In the following analysis, the Bureau provides examples of these cost calculations for the largest drivers of ongoing costs.

Compared to the NPRM, these estimated ongoing costs account for several changes. The first is a change in the assumed compensation for an hour of employee time, which was discussed in IX.E.2. The second is the inclusion of an additional data point, the LGBTQI+-owned indicator. Lastly, the new estimates account for an increased estimate of ongoing training costs in response to comments received, which is discussed in more detail in the comment review below. Besides these changes, the methodology for estimating ongoing costs remains the same as with respect to the proposed rule, unless explicitly stated otherwise.

TABLE 16—ESTIMATED ONGOING COSTS PER COMPLIANCE TASK AND FI TYPE

Number	Activity	Type A FI	Type B FI	Type C FI
1	Transcribing data	1,108	2,110	31,657
2	Resolving reportability questions	222	443	665
3	Transfer to 1071 data management software	1,108	0	0
4	Complete geocoding data	139	554	300
5	Standard annual edit and internal checks	510	11,126	27,972
6	Researching questions	275	551	826

TABLE 16—ESTIMATED ONGOING COSTS PER COMPLIANCE TASK AND FI TYPE—Continued

Number	Activity	Type A FI	Type B FI	Type C FI
7	Resolving question responses	0	0	0
8	Checking post-submission edits	7	26	105
9	Filing post-submission documents	14	14	14
10	1071 data management software/geocoding software	0	8,000	13,650
11	Training	1,336	6,681	44,542
12	Internal audit	0	443	127,642
13	External audit	3,500	5,000	0
14	Exam preparation	14	4,432	26,592
15	Exam assistance	116	698	4,654
	Total	$8,349	$40,079	$278,618
	Per application	$83	$100	$46

The Bureau estimates that a representative low complexity institution (*i.e.,* a Type A FI) would incur around $8,349 in total annual ongoing costs, or about $83 in total cost per application processed (assuming a representative 100 applications per year). For financial institutions of this type, the largest driver of ongoing costs is the fixed cost of the external audit, $3,500. Besides the audit cost, the largest drivers of the ongoing costs are activities that require employee time to complete. Activities like transcribing data, transferring data to the data management software, standard edits and internal checks, and training all require loan officer time. The Bureau expects training (activity number 11) to cost approximately $1,336 annually for six representative loan officers and an equivalent number of other staff to engage in two hours of training. The Bureau expects other time-dependent activities to cost around $1,000 each. For example, the Bureau assumes that Type A FIs will spend around 19 hours transferring data to 1071 data management software (activity number 3) based on estimates of the required time to transfer data to HMDA data management software. At the assumed hourly compensation, our estimate is around $1,108 for the Type A FI institutions to transfer data. An assumption of around 18 total hours to conduct standard annual editing checks (activity number 5) with some savings assumed due to an online submission platform that automatically checks for errors, results in an estimated annual ongoing cost of $510.

The Bureau estimates that a representative middle complexity institution (*i.e.,* a Type B FI), which is somewhat automated, would incur approximately $40,079 in additional ongoing costs per year, or around $100 per application (assuming a representative 400 applications per year). The largest components of this ongoing cost are the expenses of the small business application management software and geocoding software (activity number 10) in the form of an annual software subscription fee, and the external audit of the data (activity number 13). Using interviews of financial institutions conducted to determine compliance costs with HMDA, the Bureau found mid-range HMDA data management systems to be approximately $8,000 in annual costs; the Bureau believes that cost would be comparable in the small business lending context and thus applies that estimate here. This analysis assumes that the subscription purchase would be separate from HMDA management systems, but the development of a software to jointly manage HMDA and small business lending-related data would likely result in cost savings for both products. The Bureau also estimates that a Type B FI would spend around $5,000 on external audits of their small business loan application data. The Type B FI incurs employee time-related fixed costs conducting internal checks ($11,126), training ($6,681), and prepping for examinations ($4,432) but saves time and expense on data entry and geocoding by using data management software. As an example, the Bureau expects Type B FIs to have two full-time employees spend 40 hours each to prepare for an examination (activity number 14) resulting in a cost of $4,432, and have employees spend around 12 hours assisting with an examination (activity number 15) costing $698 annually.

The Bureau estimates a representative high complexity institution (*i.e.,* a Type C FI), would incur $278,618 of annual ongoing costs, or $46 per application (assuming a representative 6,000 applications per year). The largest driver of costs for a Type C FI is the employee time required to conduct an internal audit. The assumed 2,304 hours of employee time results in nearly $127,642 of ongoing costs annually. Exam preparation, training, and standard annual and internal checks would be expected to cost $26,592, $44,542, and $26,592 each year, respectively. The Bureau also assumes that a Type C institution would need a subscription to a small business data management software near the upper bound of the range found in interviews with financial institutions during the 2015 HMDA rulemaking, of $13,650.

The Bureau estimates that the total annual ongoing costs for depository institutions will be between about $297,000,000 and $313,000,000 per year, about $190,000,000 to $199,000,000 of which will be annual variable costs. The Bureau estimates that the total annual ongoing costs for nondepository institutions would be about $48,700,000, about $9,900,000 of which would be annual variable costs.

The Bureau estimated that the total annual ongoing costs from the NPRM would have been between $310,000,000 and $330,000,000 for depository institutions and $62,300,000 for nondepository institutions. The estimated total ongoing costs decreased between the proposal and the final rule because the Bureau raised the financial institution coverage threshold from 25 to 100 covered originations in each of the two preceding calendar years. However, the cost estimates per institution increased because the Bureau, taking into account comments received on the proposed rule, raised the ongoing costs per application by changing training costs. These changes almost offset each other because, while the final rule covers about 2,200 fewer institutions relative to the proposal due to the change in the financial institution coverage threshold, these institutions that are no longer covered had the fewest number of applications, and ongoing costs are commensurate with the number of applications.

To understand the impacts of these cost estimates on the profits of

depository institutions, the Bureau estimates the average total net income across all products per small business origination for all DIs by type.[954] There is no comprehensive published source of data on profits earned on small business credit transactions. The Bureau presents estimates of total net income per origination as an indication of a financial institution's ability to cover the additional expenses associated with the final rule. The Bureau relies on its estimates of originations for each depository institution, described in part IX.D. and its *Supplemental estimation methodology for institutional coverage and market-level cost estimates in the small business lending rulemaking.* The Bureau estimates that banks and savings associations of Type A that will be covered by the final rule have an average net income per origination between $134,000 and $167,000. Credit unions of Type A that will be covered by the final rule have an average net income per origination of $144,000. Assuming two applications per origination, a covered bank or savings association of Type A has a net income per application of approximately $67,000 to $83,000 and a covered credit union of the same type has a net income per application of about $72,000. The Bureau estimates that covered banks and savings associations of Type B have an average net income per origination between $65,000 and $75,000 or a net income per application between $33,000 and $38,000. The Bureau estimates that covered credit unions of Type B have an average net income per origination of $229,000 or an average net income per application of $115,000. The Bureau estimates that covered banks and savings associations of Type C have a net income per origination between $252,000 and $278,000, or, assuming three applications per origination, a net income per application between $84,000 and $93,000. The Bureau estimates that covered credit unions of Type C have an average net income per origination of $8,000, and average net income per application of about $4,000. The Bureau notes that these estimates are slightly higher than reported in the proposal due to the higher financial institution coverage threshold in the final rule.

With the publicly disclosed data, users would be able to assess fair lending risks at the institution and market level, furthering section 1071's fair lending purpose. Several commenters to the Bureau's 2017 request for information expressed concerns, however, about costs related to these analyses.[955] During the SBREFA process, some small entity representatives were concerned that published 1071 data could be used against financial institutions in class action litigation or to harm their public reputations.[956] Depending on the extent of publicly disclosed data, the Bureau expects that some financial institutions could incur ongoing costs responding to reports of disparities in their small business lending practices. Some financial institutions could also experience reputational risks associated with high profile reports of existing disparities where more complete analysis of its business practices would conclude that the disparities do not support a finding of discrimination on a prohibited basis. In anticipation of needing to respond to outside analysis and potential reputational risks, it is possible that some financial institutions may choose to change their product offerings available to small businesses, underwriting or pricing practices, or overall participation in the small business lending market. Several commenters expressed similar concerns that fair lending analyses on incomplete data could lead to false positives (*i.e.,* determinations of fair lending violations where none have occurred), that false positives could lead to reputational risk, and that lenders could change their lending behavior to avoid the potential for false positives. These costs associated with reputational risks are difficult to quantify, and commenters on the proposed rule did not provide any specific estimates of these costs.

The Bureau also received feedback that financial institutions could face potential costs with the publication of a public dataset under the final rule either because potential clients would be concerned about their data being collected or because of the additional competitive pressure brought by a publicly available dataset. The costs associated with customer privacy, reputational risk to financial institutions, and additional competitive pressure for financial institutions are difficult to quantify, and commenters on the proposed rule did not provide any specific estimates of these costs.

Comments on the ongoing cost estimates of the proposed rulemaking. Several industry commenters provided estimates of what they believed the overall ongoing costs would be for their institution. These estimates ranged from estimates that were quite similar to the Bureau's estimate for institutions of similar small business credit volume to estimates that were considerably higher than the Bureau's estimates. For example, a group of trade associations estimated that institutions under $500 million in assets, that on average originate 276 small business loans annually, would incur $145 per origination in ongoing cost. The Bureau's estimate in the proposal, for institutions of a similar size was $178 per origination ($89 per application). At the high end, a lender suggested over $1,000 per origination. The Bureau has reviewed these estimates and considered the information provided by the commenters.

The most voluminous category of comments was with respect to future staffing needs in response to the proposed rule. While not specific to any individual category of ongoing cost activity, a number of banks, credit unions, and Farm Credit System lenders, and several trade associations, described the need to hire additional staff to perform several of the ongoing cost activities that require staff time. Many provided estimates of the additional FTEs that the institution would have to hire to comply with the proposed rule. These estimates ranged from one additional FTE to up to 10 additional FTEs. A survey of community banks by a national trade association found that 88 percent of respondents would need to hire an additional FTE and, on average, institutions would have to hire 2–3 FTEs. Several commenters asserted that the hiring of additional staff alone showed that the Bureau's ongoing cost estimates in the proposal were inadequate.

In the ongoing cost estimates of the Bureau's proposal, the Bureau calculated the number of hours required to be spent on section 1071-related tasks, without distinguishing between existing or newly-hired staff. The Bureau assumes that the time spent on

[954] There are no broadly available data on profit per application for nondepository institutions. The Bureau uses the FFIEC Bank and NCUA Credit Union Call Report data from December 31, 2019, accessed on June 25, 2021. The Bureau uses the same internal estimates of small business loan originations as discussed in part VI.B above and total net income across all products. For estimates of net income per origination and per application, the Bureau uses only net income per origination for depository institutions with over 25 originations in 2019.

[955] 82 FR 22318 (May 15, 2017).

[956] For example, one small entity representative was concerned that published 1071 data could lead to increased litigation and thus a higher cost of credit for small businesses. Another expressed concern that pricing information could be misinterpreted by users of 1071 data (for example, according to the small entity representative, higher pricing for one race might be used to infer discrimination when the pricing was in fact unrelated to the race of the applicant). Such a misinterpretation may cause reputational damage and consequently decrease applications.

section 1071-related tasks necessarily takes time away from otherwise profitable activity to which the hours would be put in the rule's absence. Since the Bureau is accounting for time spent in this way, the Bureau believes that its estimates account for the additional staff activity required to be spent to collect, check, and report data under the final rule. For this reason, the Bureau did not change any staffing time estimates, with the below exceptions.

However, hiring additional FTEs would lead some institutions to incur one-time costs of hiring, including search and administrative burden, that they would not have incurred in the absence of the final rule. The Bureau categorizes this type of cost as a one-time cost, where the institution staffs up to be able to comply with the final rule. The Bureau is therefore incorporating the fixed cost of hiring new staff in the manner described in part IX.E.1.

Several commenters also suggested that the specific ongoing costs for training staff were too low in the proposal. As described in the proposal, the Bureau received similar comments during the SBREFA process, but wished to learn additional information through comments on the proposed rule to better estimate the cost of training. Several institutions provided specific annual costs of training employees or estimates of the overall employee time. Others more generally described the need to train more staff than just loan officers, but also administrative and other staff.

The Bureau's ongoing costs estimates only reflected the assumed training time required to train loan officers that directly handle the underwriting process. Based on the comments, the estimates in this final rule reflect a doubling of the number of assumed training hours required on an annual basis in order to account for the additional staff that would have to be trained on an annual basis besides simply the loan officers.

Lastly, the Bureau received several comments specifically about the ongoing cost of 1071 data management software. In addition to confirming this as an appropriate category of ongoing cost activity, several commenters provided specific estimates of the ongoing costs. One commenter's estimate was similar to the estimates the Bureau provided in its proposal, while others provided significantly larger estimates. A survey by a national trade organization found ongoing software cost estimates that were quite similar to the estimates the Bureau provided in its proposal for institutions of Types B and C. As an example, the survey average for institutions similar to Type B institutions in the Bureau's proposal was around $7,000 per year, while the Bureau's estimate in the proposal was $8,000. Taking this information into account, the Bureau has not adjusted its ongoing cost estimates of the annual cost of 1071 data management or geocoding software.

4. Costs to Small Businesses

The Bureau expects that any direct costs of the final rule on small businesses will stem from additional fields that the applicant may have to complete on credit applications due to the final rule compared to a financial institution's existing application process. This could include information such as the race, ethnicity, and sex of the principal owners or number of workers were not previously required on business credit applications. However, the Bureau expects the cost of completing the new section 1071 fields on applications to be negligible. Therefore, the Bureau focuses the rest of the discussion on the costs of small businesses to whether and how the Bureau expects financial institutions to pass on the costs of compliance with the final rule to small businesses and any possible effects on the availability of small business credit.

Three types of costs (one-time, fixed ongoing, and variable ongoing) have the potential to influence the price and availability of credit to small businesses. In a competitive marketplace, standard microeconomics suggests that lenders will extend loans up to the point at which the revenue from granting an additional loan is equal to the additional cost associated with the financial institution providing the loan. One-time costs and fixed ongoing costs affect the overall profitability of a lender's loan portfolio but do not affect the added profit from extending an additional loan. Variable ongoing costs, however, affect the profitability of each additional loan and will influence the number of loans a lender provides. Based on the Bureau's available evidence, it expects that the variable ongoing costs will be passed on in full to small business credit applicants in the form of higher prices or fees and does not expect there to be a significant reduction in small businesses' ability to access credit.

One-time and fixed ongoing costs affect the overall profitability of the loan portfolio and will be considered in the lender's decision to continue supplying small business credit at their current levels. The Bureau believes that a financial institution would find it worthwhile to incur the one-time costs associated with complying with the final rule if it expects to generate enough profit over multiple years to cover those costs. Each year, a financial institution would find it worthwhile to continue extending credit if the total expected revenue from its chosen quantity of loans is greater than the sum of its ongoing fixed and variable costs. As such, the Bureau believes a financial institution would find it worthwhile to reduce their supply of small business credit, even if it had already incurred the one-time costs, if the total expected revenue from that year were less than the total expected ongoing costs.[957] As discussed in detail below, the Bureau believes that a significant disruption in small business credit supply is unlikely.

In the One-Time Cost Survey, the Bureau asked respondents to rank a list of potential actions they may take in response to the compliance costs of implementing section 1071. Respondents ranked the following list: ''Raise rates or fees on small business products''; ''Raise rates/fees on other credit products''; ''Accept lower profits''; ''Exit some geographic markets''; ''Tighten underwriting standards''; ''Offer fewer or less complex products''; ''No longer offer small business credit products''; or ''Other'' with two write-in options. Respondents ranked these options from ''1'' to ''9'' indicating their most to least likely responses, where ''1'' was the most likely.

In order to analyze these responses, the Bureau pooled data only from respondents that answered both the ranking question and the number of originations question. The Bureau implemented these restrictions to the pool to eliminate responses from institutions that would not be required to report under the final rule. Of the 105 total respondents to the One-Time Cost Survey, 44 ranked every option and reported more than 25 originations in the last year.[958] The Bureau will henceforth refer to these respondents as the ''impacts of implementation'' sample.

Table 17 presents the potential responses to implementing section 1071 and the average ranking assigned by respondents in the impacts of implementation sample. The responses

[957] SBREFA Outline at 50–52. The small entity representative feedback discussed herein can be found in the SBREFA Panel Report at 40.

[958] The Bureau discusses a representative Type A FI that will not be covered by the final rule to make the final estimates easier to compare with those in the NPRM and to highlight what the costs of the rule would have been for a financial institution that is not covered by the final rule. The Bureau includes survey respondents with originations below the origination threshold to ensure a large enough sample size for analysis.

are listed in order of most to least likely on average, where a lower average ranking number means that respondents ranked that response most likely. These ranked responses shed light on potential disruptions to small business credit supply as a result of the final rule's implementation. Notably, respondents were least likely to report that they would reduce their small business lending activity, with respondents on average indicating that they would be more likely to accept lower profits than to reduce their small business lending activity.

TABLE 17—ONE-TIME COST SURVEY RESPONSES TO IMPACTS OF IMPLEMENTATION

Response	Average ranking
Raise rates or fees on small business products	1.77
Raise rates/fees on other credit products	2.93
Tighten underwriting standards	3.73
Accept lower profits	3.82
Offer fewer or less complex products	4.59
Exit some geographic markets	5.75
No longer offer small business credit products	6.57

Consistent with economic theory, respondents reported that they would be most likely to raise rates or fees on small business products and other credit products. The Bureau expects that the variable ongoing costs would be passed on in full to small business credit applicants in the form of higher prices or fees. Per application, the variable costs are approximately $32, $26, and $7.5 for Type A FIs, Type B FIs, and Type C FIs, respectively. Even if the variable costs were passed on in full to small business applicants in the form of higher interest rates or fees associated with a loan or line of credit, the Bureau expects that this would comprise a small portion of the total cost of the average loan to the small business applicant. Therefore, the Bureau expects this increase in cost to have limited impact on the availability or affordability of small business credit. The Bureau estimates that the total market impact of these costs for small businesses will be between $200,000,000 and $208,000,000.

The relative ranking of other survey response options provides additional insight into the potential for small business credit supply disruptions. In Table 17, financial institutions ranked ''tighten[ing] credit standards,'' on average, in the middle of their potential responses. The lowest three responses were ''offer fewer or less complex products,'' ''exit some geographic markets,'' and ''no longer offer small business credit products.'' For these reasons, the Bureau believes the survey responses indicate limited likelihood of significant small business credit supply disruptions.

The Bureau's total estimated one-time and ongoing costs are non-negligible and could potentially affect the supply of small business credit by financial institutions that do not regularly originate many covered credit transactions. The Bureau's final institutional coverage threshold of 100 covered credit transactions in two consecutive years could prevent some low-volume financial institutions from reducing small business lending activity in response to the compliance costs of the final rule. For example, the Bureau estimates that a Type A DI would incur one-time costs of $63,825 and fixed ongoing costs of $5,195. A depository institution that originates very few covered transactions every year may reduce its small business lending activity if it does not expect that profits, even over several years, would cover that one-time cost or if it does not expect annual revenues to exceed the annual ongoing costs. However, based on the net income per application estimates discussed above, and the responses to the One-Time Cost Survey, the Bureau believes that institutions that are covered under the final rule are unlikely to find either the one-time costs of implementation or the ongoing costs of compliance a meaningful influence in their business decision regarding small business lending activity. It is possible that some lenders just above the coverage threshold might reduce their small business lending to below the threshold to avoid reporting but, even if this does occur, the Bureau does not anticipate that this will significantly decrease aggregate credit supply. Furthermore, the Bureau's findings from the respondents to the One-Time Cost Survey (discussed above) additionally support the Bureau's conclusion that the increase in compliance costs will likely be passed through to customers in the form of higher prices or fees, rather than a significant reduction in financial institutions' willingness to supply small business credit.[959]

[959] As stated in the SBREFA Panel Report at 40, ''[g]enerally, [small entity representatives] did not suggest that they would leave the small business lending market in response to increased costs under the eventual 1071 rule.''

If the Bureau were to release the data in unmodified form, the Bureau acknowledges there would be an ongoing risk of re-identification, which may bring with it reputational risk for covered financial institutions and more significant privacy risks for small business applicants and related natural persons. Examples of such scenarios and their potential risks are detailed in part VIII.B.4.ii. See part VIII generally for more about how the Bureau's modification and deletion decisions will mitigate these risks.

Comments on the Bureau's estimation of the costs to small businesses. The Bureau sought comment on other potential costs to small businesses not discussed above, and on its analysis of costs to small businesses as described herein. Several trade associations conducted their own surveys, which largely provided support for the Bureau's estimations, specifically that price increases would be the most likely response, and showed limited support for significant market exit.

A number of commenters, mainly lenders and trade associations, described how they expected costs would be passed on to borrowers, namely through higher interest rates or fees, though one lender said they would not raise fees or restrict access to credit. Two trade associations asserted the price of motor vehicles could increase because of the rule's effect on automobile financing. Several industry commenters who cited potential price increases also noted they might have to reduce their overall volume of small business lending. Others who cited potential price increases noted they might reduce the number of product offerings, such as small dollar lending products or insurance premium financing transactions.

Consistent with results from the Bureau's One-Time Cost Survey, comments also provided little evidence to indicate that lenders would exit the

small business credit market. While some lenders and trade associations cited business exit as a potential consequence, only one lender stated they themselves might consider exiting. A group of trade associations noted that in the survey it administered to its own members, there seemed to be little evidence that any of its own members would exit. A few lenders and trade associations asserted that some smaller lenders could exit the market due to increased regulatory burdens and costs. A group of trade associations asserted lenders could even close altogether or merge with other institutions.

One bank estimated how much of its portfolio would be affected by compliance costs; if it were to stop offering loans of less than $50,000 because it decided they were no longer profitable, it would lose up to 59 percent of its agricultural and commercial customers, or 13 percent of its total lending volume. If the bank were to stop offering loans of less than $10,000, it would lose 20 percent of its agricultural and commercial loans, or 1 percent of its total lending volume. The bank observed that because the percentage of customers affected would be greater than the percentage of lending volume affected, these estimates show that borrowers of small loan amounts would be negatively impacted by the rule.

A few lenders noted that, other than price increases, decreased competition from market exit could impact small businesses, namely a lower degree of customization in loan processing and underwriting. Several industry commenters claimed that processing times will increase because of the collection of data fields required by the rule but not otherwise collected in the normal course of business.

The Bureau believes that the comments generally supported the Bureau's expectation that the most likely response to the compliance costs of the final rule will be an increase in interest rates or fees to pass on financial institutions' ongoing variable costs to small business credit applicants. While the Bureau acknowledges the potential for other effects, such as changes in product offerings, changes in loan sizes, increased processing time, tightening of credit standards, or a reduction in market participation by financial institutions, the Bureau does not expect these effects to be large enough to significantly impact the availability of small business credit. Additionally, the Bureau expects that its increased coverage threshold of one hundred loans for each of the two preceding years should reduce the likelihood of reduced small business credit supply by financial institutions who originate few loans per year.

5. Alternatives Considered

This section discusses two categories of alternatives considered: other methods for defining a covered financial institution and limiting the data points to those mandated by section 1071. The Bureau uses the methodologies discussed in parts IX.D and IX.E to estimate the impacts of these alternatives.

First, the Bureau considered multiple reporting thresholds for purposes of defining a covered financial institution. In particular, the Bureau considered whether to exempt financial institutions with fewer than 25, 50, 200, or 500 originations in each of the two preceding calendar years instead of 100 originations, as finalized in the rule. The Bureau also considered whether to exempt depository institutions with assets under $100 million or $200 million from section 1071's data collection and reporting requirements.

Under a 25-origination threshold, which was proposed in the NPRM, the Bureau estimates that about 4,000 to 4,200 depository institutions would report, which is approximately 2,200 more depository institutions relative to the final threshold of 100 originations. The Bureau estimates that about 3,600 to 3,800 banks and savings associations and about 400 credit unions would be covered under a 25-origination threshold. The Bureau estimates that about 98 percent of small business loans originated by depository institutions would be covered under a 25-origination threshold, an increase of about 4 percentage points relative to the final rule. The Bureau does not have sufficient information to precisely estimate how many more nondepository institutions would report under this alternative threshold. The Bureau estimates that the total one-time costs across all financial institutions associated with a 25-origination threshold would be about $338,000,000 to $350,000,000, an increase of about $132,000,000 relative to the 100-origination threshold. The Bureau estimates that the total annual ongoing costs associated with the 25-origination threshold would be about $392,000,000 to $413,000,000, an increase of between $47,000,000 and $52,000,000 per year relative to the 100-origination threshold.

Under a 50-origination threshold, the Bureau estimates that about 2,900 to 3,100 depository institutions would report, which is approximately 1,100 more depository institutions relative to the final threshold of 100 originations. The Bureau estimates that about 2,700 to 2,900 banks and savings associations and about 200 credit unions would be covered under a 50-origination threshold. The Bureau estimates that about 97 percent of small business loans originated by depository institutions would be covered under a 50-origination threshold, an increase of about 3 percentage points relative to the final rule. The Bureau estimates that the total one-time costs across all financial institutions associated with a 50-origination threshold would be about $272,000,000 to $285,000,000, an increase of about $66,000,000 relative to the 100-origination threshold. The Bureau estimates that the total annual ongoing costs associated with this threshold would be about $373,000,000 to $393,000,000, an increase of about $28,000,000 to $32,000,000 per year relative to the 100-origination threshold. Again, the Bureau does not have sufficient information to precisely estimate how many more nondepository institutions would be required to report under this alternative.

Under a 200-origination threshold, the Bureau estimates that about 1,000 to 1,100 depository institutions would report, which is approximately 800 fewer depository institutions relative to the final threshold of 100 originations. The Bureau estimates that about 900 to 1,100 banks and savings associations and fewer than 100 credit unions would be covered under a 200-origination threshold. The Bureau estimates that about 91 percent of small business loans originated by depository institutions would be covered under a 200-origination threshold, a decrease of about 3 to 4 percentage points relative to the final rule. The Bureau estimates that the total one-time costs across all financial institutions associated with a 200-origination threshold would be about $159,000,000 to $167,000,000, a decrease of about $47,000,000 to $51,000,000 relative to the 100-origination threshold. The Bureau estimates that the total annual ongoing costs associated with this threshold would be about $314,000,000 to $328,000,000, a decrease of about $31,000,000 to $33,000,000 per year relative to the 100-origination threshold. The Bureau does not have sufficient information to precisely estimate how many more nondepository institutions would be required to report under this alternative.

Under a 500-origination threshold, the Bureau estimates that about 400 to 500 depository institutions would report, which is approximately 1,500 fewer depository institutions relative to the final threshold of 100 originations. The

Bureau estimates that about 400 to 500 banks and savings associations and fewer than 20 credit unions would be covered under a 500-origination threshold. The Bureau estimates that about 88 percent of small business loans originated by depository institutions would be covered under a 500-origination threshold, a decrease of about 3 to 6 percentage points relative to the final rule. The Bureau estimates that the total one-time costs across all financial institutions associated with a 500-origination threshold would be about $128,000,000 to $131,000,000, a decrease of about $78,000,000 to $87,000,000 relative to the 100-origination threshold. The Bureau estimates that the total annual ongoing costs associated with this threshold would be about $281,000,000 to $290,000,000, a decrease of about $64,000,000 to $71,000,000 per year relative to the 100-origination threshold. The Bureau does not have sufficient information to precisely estimate how many more nondepository institutions would be required to report under this alternative.

The Bureau's NPRM discussed the possibility of exempting depository institutions with assets under $100 million or $200 million assets from the final rule. For the purposes of considering these alternatives, the Bureau estimates how institutional coverage and costs would be different if the Bureau required a 25-origination threshold in addition to an asset-based threshold for depository institutions. The Bureau assumes that the alternative proposal would have been that a depository institution would be required to report its small business lending activity for 2019 if it had more than 25 originations in 2017 and 2018 and had assets over the asset-based threshold on December 31, 2018. The Bureau further assumes that if two institutions merged in 2019 then the resulting institution would be required to report if the sum of the separate institutions' assets on December 31, 2018, exceeded the asset-based threshold.

Under a $100 million asset-based and 25-origination threshold, the Bureau estimates that between 3,500 and 3,600 depository institutions would report, approximately 1,600 to 1,700 more depository institutions relative to a 100-origination threshold with no asset-based threshold. The Bureau estimates that about 3,100 to 3,300 banks and savings associations and about 300 credit unions would be covered under a 25-origination and $100 million asset-based threshold. The Bureau estimates that about 98 percent of small business loans originated by depository institutions would be covered under a 25-origination and $100 million asset-based threshold, an increase of about 4 percentage points relative to the final rule. The Bureau estimates that the total one-time costs across all financial institutions associated with the addition of a $100 million asset-based threshold would be about $307,000,000 to $314,000,000, an increase of between $101,000,000 and $104,000,000 relative to the final rule. The Bureau estimates that the total annual ongoing costs associated with this threshold would be about $383,000,000 to $403,000,000, an increase of about $38,000,000 to $42,000,000 per year relative to the 100-origination threshold with no asset-based threshold.

Under a $200 million asset-based and 25-origination threshold, the Bureau estimates that about 2,700 depository institutions would report, approximately between 700 and 900 fewer depository institutions relative to a 100-origination threshold with no asset-based threshold. The Bureau estimates that about 2,400 banks and savings associations and about 300 credit unions would be covered under a 25-origination and $200 million asset-based threshold. The Bureau estimates that about 96 percent of small business loans originated by depository institutions would be covered under a 25-origination and $100 million asset-based threshold, an increase of about 2 percentage points relative to the final rule. The Bureau estimates that the total one-time costs across all financial institutions associated with the addition of a $200 million asset-based threshold would be about $259,000,000 to $264,000,000, an increase of between $46,000,000 and $53,000,000 relative to the final rule. The Bureau estimates that the total annual ongoing costs associated with this threshold would be about $364,000,000 to $380,000,000, an increase of about $19,000,000 per year relative to the 100-origination threshold with no asset-based threshold.

Second, the Bureau considered the costs and benefits for limiting its data collection to the data points specifically enumerated in ECOA section 704B(e)(2)(A) through (G). In addition to those data points, the statute also requires financial institutions to collect and report any additional data that the Bureau determines would aid in fulfilling the purposes of section 1071. The final rule includes several additional data points that rely solely on that latter authority in section 704B(e)(2)(H). Specifically, the final rule requires that financial institutions collect and report data on application method, application recipient, denial reasons (for denied applications only), pricing information (for applications that are originated or approved but not accepted), NAICS code, number of workers, time in business, and number of principal owners, all of which are adopted based on the Bureau's authority pursuant to section 704B(e)(2)(H). The Bureau has considered the impact of instead finalizing only the collection of those data points enumerated in section 704B(e)(2)(A) through (G).

Requiring the collection and reporting of only the data points enumerated in ECOA section 704B(e)(2)(A) through (G) would result in a reduction in the fair lending benefit of the data compared to the final rule. For example, not collecting pricing information would obscure possible fair lending risk by covered financial institutions. Potential discriminatory behavior is not limited to the action taken on an application, but rather includes the terms and conditions under which applicants can access credit. If the Bureau did not collect pricing information, it would not be able to evaluate potential discriminatory lending practices. As mentioned in part IX.F.1 above, several of the data points the Bureau is finalizing under its ECOA section 704B(e)(2)(H) authority are critical to conducting more accurate and complete fair lending analyses. A reduction in the rule's ability to facilitate the enforcement of fair lending laws would negatively impact small businesses and small business owners and thus run counter to that statutory purpose of section 1071.

Limiting the rule's data collection to only the data points required under the statute would also reduce the ability of the rule to support the business and community development needs and opportunities of small businesses, which is the other statutory purpose of section 1071. For example, not including pricing information would significantly reduce the ability of communities, governmental entities, and creditors to understand credit conditions available to small businesses. Not including NAICS code or time in business would also reduce the ability of governmental entities to tailor programs that can specifically benefit young businesses or businesses in certain industries.

Only requiring the collection and reporting of the data points enumerated in ECOA section 704B(e)(2)(A) through (G) would have reduced the annual ongoing cost of complying with the final rule. Under this alternative, the estimated total annual ongoing costs for Type A FIs, Type B FIs, and Type C FIs would be $7,644; $38,296 and $265,809,

respectively. Per application, the estimated ongoing cost would be $76, $96, and $44 for Type A FIs, Type B FIs, and Type C FIs, respectively. Under this alternative, the estimated total ongoing costs for Type A FIs would be $705 less per year and $7 less per application than the final rule; the estimated total ongoing costs for Type B FIs would be $1,783 less per year and $4 less per application than the final rule; and the estimated total ongoing costs for Type C FIs would be $12,809 per year and $2 per application than the final rule. The estimated total annual market-level ongoing cost of reporting would be between $326,000,000 and $340,000,000, or between about $19,000,000 to $21,000,000 per year less than under the final rule. As discussed above, respondents to the One-Time Cost Survey were instructed to assume that they would only report the statutorily mandated data fields. Hence, the Bureau can only estimate how ongoing costs would be different under this alternative.

G. Potential Impact on Depository Institutions and Credit Unions With $10 Billion or Less in Total Assets

As discussed above, the final rule will exclude financial institutions with fewer than 100 originated covered credit transactions in both of the two preceding calendar years. The Bureau believes that the benefits of the final rule to banks, savings associations, and credit unions with $10 billion or less in total assets will be similar to the benefits to covered financial institutions as a whole, discussed above. Regarding costs, other than as noted here, the Bureau also believes that the impact of the final rule on banks, savings associations, and credit unions with $10 billion or less in total assets will be similar to the impact for covered financial institutions as a whole. The primary difference in the impact on these institutions is likely to come from differences in the level of complexity of operations, compliance systems, and software, as well as number of product offerings and volume of originations of these institutions, all of which the Bureau has incorporated into the cost estimates using the three representative financial institution types.

Based on FFIEC and NCUA Call Report data for December 2019, 10,375 of 10,525 banks, savings associations, and credit unions had $10 billion or less in total assets. The Bureau estimates that between 1,700 and 1,900 of such institutions would be subject to the final rule. The Bureau estimates that the market-level impact of the final rule on annual ongoing costs for banks, savings associations, and credit unions with $10 billion or less in assets would be between $124,000,000 and $140,000,000. Regarding one-time costs, the Bureau estimates that the market-level impact of the final rule for banks, savings associations, and credit unions with $10 billion or less in assets would be between $102,000,000 and $114,000,000. Using a 7 percent discount rate and a five-year amortization window, the estimated annualized one-time costs would be between $25,000,000 and $28,000,000.

H. Potential Impact on Small Businesses in Rural Areas

The Bureau expects that small businesses in rural areas will directly experience many of the benefits of the rule described above in IX.F.1. Small businesses in rural areas will directly benefit from facilitating the enforcement of fair lending laws and the enabling of communities, governmental entities, and creditors to identify business and community development needs and opportunities of women-owned, minority-owned, and small businesses. As with all small businesses, small businesses in rural areas may bear some indirect costs of the rule. This would occur if financial institutions serving rural areas are covered by the final rule and if those institutions pass on some or all of their cost of complying with the final rule to small businesses.

The source data from CRA submissions that the Bureau uses to estimate institutional coverage and market estimates provide information on the county in which small business borrowers are located. However, approximately 89 percent of all banks did not report CRA data in 2019, and as a result the Bureau does not believe the reported data are robust enough to estimate the locations of the small business borrowers for the banks that do not report CRA data. The NCUA Call Report data do not provide any information on the location of credit union borrowers. Nonetheless, the Bureau is able to provide some geographical estimates of institutional coverage based on depository institution branch locations.

The Bureau used the FDIC's Summary of Deposits to identify the location of all brick and mortar bank and savings association branches and the NCUA Credit Union Branch Information to identify the location of all credit union branch and corporate offices.[960] A bank, savings association, or credit union branch was defined as rural if it is in a rural county, as specified by the USDA's Urban Influence Codes.[961] A branch is considered covered by the final rule if it belongs to a bank, savings association, or credit union that the Bureau estimated would be included if they exceed 100 originations in 2017 and 2018. Using the estimation methodology discussed in part IX.D above, the Bureau estimates that about 65 to 70 percent of rural bank and savings association branches and about 95 percent of non-rural bank and savings association branches would be covered under the final rule. The Bureau estimates that about 14 percent of rural credit union branches and about 11 percent of non-rural credit union branches would be covered under the final rule.[962]

In a competitive framework in which financial institutions are profit maximizers, financial institutions would pass on variable costs to future small business applicants, but absorb one-time costs and increased fixed costs in the short run.[963] Based on previous HMDA rulemaking efforts, the following seven operational steps affect variable costs: transcribing data, resolving reportability questions, transferring data to a data entry system, geocoding, researching questions, resolving question responses, and checking post-submission edits. Overall, the Bureau estimates that the impact of the final rule on variable costs per application is $32 for Type A FIs, $26 for Type B FIs, and $7.50 for Type C FIs. The Bureau believes that the covered financial institutions that serve rural areas will attempt to pass these variable costs on to future small business applicants.

---

Corp., *Summary of Deposits (SOD)—Annual Survey of Branch Office Deposits* (last updated June 1, 2022), *https://www.fdic.gov/regulations/resources/call/sod.html.* The NCUA provides data on credit union branches in the quarterly Call Report Data files. *See* Nat'l Credit Union Admin., *Call Report Quarterly Data, https://www.ncua.gov/analysis/credit-union-corporate-call-report-data/quarterly-data* (last visited Mar. 20, 2023).

[961] This is a similar methodology as used in the Bureau's rural counties list. *See* CFPB, *Rural and underserved counties list, https://www.consumerfinance.gov/compliance/compliance-resources/mortgage-resources/rural-and-underserved-counties-list/* (last visited Mar. 20, 2023).

[962] The Bureau notes that most credit union branches do not belong to covered credit unions because most credit unions did not report any small business loans in the NCUA Call Report data. Of the 5,437 credit unions that existed in December 2019, 4,359 (or 81.5 percent) reported no small business originations in 2017 or 2018.

[963] If markets are not perfectly competitive or financial institutions are not profit maximizers, then what financial institutions pass on may differ. For example, they may attempt to pass on one-time costs and increases in fixed costs, or they may not be able to pass on variable costs. Furthermore, some financial institutions may exit the market in the long run. However, other financial institutions may also enter the market in the long run.

Amortized over the life of the loan, this expense would represent a negligible increase in the overall cost of a covered credit transaction.

The One-Time Cost Survey can shed light on how financial institutions that serve rural communities will respond to the final rule. The Bureau asked respondents to the survey to report whether their institution primarily served rural or urban communities or an even mix. All respondents in the impacts of implementation sample answered this question. Of the 44 respondents in the impacts of implementation sample, 13 primarily serve rural communities, 15 primarily serve urban communities, and 16 serve an even mix. Table 18 presents the potential responses to implementing section 1071 and the average ranking assigned by respondents that serve rural communities, urban communities, an even mix, and all of the respondents in the impacts of implementation sample. The responses are listed in order of most to least likely on average across all respondents, where a lower average ranking number means that respondents ranked that response most likely. Respondents that primarily serve rural communities or an even mix rank raising rates or fees on small business or other credit products as the most likely response. These institutions also rank exiting some geographic markets and no longer offering small business credit products as the least likely response to a rule implementing section 1071.

TABLE 18—ONE-TIME COST SURVEY RESPONSES TO IMPACTS OF IMPLEMENTATION BY TYPE OF COMMUNITY SERVED

Response	Rural (n = 13)	Urban (n = 15)	Even mix (n = 16)	All (n = 44)
Raise rates or fees on small business products	1.62	1.6	2.06	1.77
Raise rates/fees on other credit products	2.54	2.73	3.44	2.93
Tighten underwriting standards	3.46	4.27	3.44	3.73
Accept lower profits	3.77	4.2	3.5	3.82
Offer fewer or less complex products	4.62	4.07	5.06	4.59
Exit some geographic markets	5.69	5.13	6.38	5.75
No longer offer small business credit products	6.62	6.13	6.94	6.57

The Bureau thus does not anticipate any material adverse effect on credit access in the long or short term to rural small businesses.

X. Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (RFA)[964] generally requires an agency to conduct an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) of any rule subject to notice-and-comment rulemaking requirements. These analyses must ''describe the impact of the proposed rule on small entities.''[965] An IRFA or FRFA is not required if the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities.[966] The Bureau also is subject to certain additional procedures under the RFA involving the convening of a panel to consult with small business representatives prior to proposing a rule for which an IRFA is required.[967]

In the proposal, the Bureau did not certify that the proposed rule would not have a significant economic impact on a substantial number of small entities within the meaning of the RFA. Accordingly, the Bureau convened and chaired a Small Business Review Panel under SBREFA to consider the impact of the proposals under consideration on small entities that would be subject to the rule implementing section 1071 and to obtain feedback from representatives of such small entities. The proposal preamble included detailed information on the Small Business Review Panel. The Panel's advice and recommendations are found in the Small Business Review Panel Final Report[968] and were discussed in the section-by-section analysis of the proposed rule.[969] The proposal also contained an IRFA pursuant to section 603 of the RFA. In this IRFA, the Bureau solicited comment on any costs, recordkeeping requirements, compliance requirements, or changes in operating procedures arising from the application of the proposed rule to small businesses; comment regarding any Federal rules that would duplicate, overlap or conflict with the proposed rule; and comment on alternative means of compliance for small entities. Comments addressing individual provisions of the proposed rule are addressed in the section-by-section analysis above. Comments addressing the impact on small entities are discussed below. Many of these comments implicated individual provisions of the final rule or the Bureau's Dodd-Frank Act section 1022 discussion and are also addressed in those parts.

Based on the comments received, and for the reasons stated below, the Bureau believes the final rule will have a significant economic impact on a substantial number of small entities. Accordingly, the Bureau has prepared the following final regulatory flexibility analysis pursuant to section 604 of the RFA.

Final Regulatory Flexibility Analysis

Under RFA section 604(a), when promulgating a final rule under 5 U.S.C. 553, after publishing a notice of proposed rulemaking, the Bureau must prepare a FRFA. Section 603(a) of the RFA also sets forth the required elements of the FRFA. Section 604(a)(1) requires the FRFA to contain a statement of the need for, and objectives of, the rule. Section 604(a)(2) requires the FRFA to contain a statement of the significant issues raised by the public comments in response to the initial regulatory flexibility analysis, a statement of the assessment of the agency of such issues, and a statement of any changes made in the proposed rule as a result of such comments. Section 604(a)(3) requires the Bureau to respond to any comments filed by the

[964] 5 U.S.C. 601 *et seq.*

[965] 5 U.S.C. 603(a). For purposes of assessing the impacts of the proposed rule on small entities, ''small entities'' is defined in the RFA to include small businesses, small not-for-profit organizations, and small government jurisdictions. 5 U.S.C. 601(6). A ''small business'' is determined by application of SBA regulations and reference to the NAICS classifications and size standards. 5 U.S.C. 601(3). A ''small organization'' is any ''not-for-profit enterprise which is independently owned and operated and is not dominant in its field.'' 5 U.S.C. 601(4). A ''small governmental jurisdiction'' is the government of a city, county, town, township, village, school district, or special district with a population of less than 50,000. 5 U.S.C. 601(5).

[966] 5 U.S.C. 605(b).

[969] 86 FR 56356, 56378–510 (Oct. 8, 2021).

Chief Counsel for Advocacy of the SBA in response to the proposed rule and provide a detailed statement of any change made to the proposed rule in the final rule as a result of the comments.

The FRFA further must contain a description of and an estimate of the number of small entities to which the rule will apply or an explanation of why no such estimate is available.[970] Section 603(b)(5) requires a description of the projected reporting, recordkeeping, and other compliance requirements of the rule, including an estimate of the classes of small entities that will be subject to the requirement and the type of professional skills necessary for the preparation of the report or record. In addition, the Bureau must describe any steps it has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each one of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected. Finally, as amended by the Dodd-Frank Act, RFA section 604(a)(6) requires that the FRFA include a description of the steps the agency has taken to minimize any additional cost of credit for small entities.

A. Statement of the Need for, and Objectives of, the Rule

As discussed in part I above, section 1071 of the Dodd-Frank Act amended ECOA to require that financial institutions collect and report to the Bureau certain data regarding applications for credit for women-owned, minority-owned, and small businesses.[971] Section 1071's statutory purposes are (1) to facilitate enforcement of fair lending laws, and (2) to enable communities, governmental entities, and creditors to identify business and community development needs and opportunities of women-owned, minority-owned, and small businesses.

Section 1071 specifies a number of data points that financial institutions are required to collect and report, and also provides authority for the Bureau to require any additional data that the Bureau determines would aid in fulfilling 1071's statutory purposes. Section 1071 also contains a number of other requirements, including those that address restricting the access of underwriters and other persons to certain data, publication of data, and the Bureau's discretion to modify or delete data prior to publication in order to advance a privacy interest.

As discussed throughout this document, Congress amended ECOA by adding section 1071, which directs the Bureau to adopt regulations governing the collection and reporting of small business lending data. Section 1071 directs the Bureau to prescribe such rules and issue such guidance as may be necessary to carry out, enforce, and compile data pursuant to section 1071, and permits the Bureau to adopt exceptions to any requirement or to exempt financial institutions from the requirements of section 1071 as the Bureau deems necessary or appropriate to carry out the purposes of section 1071.

In addition, as discussed in part II above, currently available data on small business lending are fragmented, incomplete, and not standardized, making it difficult to make meaningful comparisons across products, financial institutions, and over time. This hinders attempts by policymakers and other stakeholders to understand the size, composition, and dynamics of the small business lending marketplace, including the interaction of supply and demand, as well as potentially problematic lending practices, gaps, or trends in funding that may be holding back some communities.[972]

Data collected under the final rule will constitute the largest and most comprehensive data in the United States on credit availability for small businesses. The data collection will also provide an unprecedented window into the small business lending market, and such transparency will benefit financial institutions covered by the rule. The public data published under the final rule will allow financial institutions to better understand the demand for small business credit products and the conditions under which they are being supplied by other lenders. Lenders will likely use the data to understand small business lending market conditions more effectively and at a more granular level than is possible with existing data sources, such as Call Reports, data from public lending programs, or privately purchased data. Data collected under the final rule will enable lenders to identify promising opportunities to extend credit to small businesses.

The final rule will also provide some reduction of the compliance burden of fair lending reviews for lower risk financial institutions by reducing the ''false positive'' rates during fair lending review prioritization by regulators. Currently, financial institutions are subject to fair lending reviews by regulators to ensure that they are complying with ECOA in their small business lending. Data reported under the final rule will allow regulators to prioritize fair lending reviews of lenders with higher risk of potential fair lending violations, which reduces the burden on institutions with lower fair lending risk.

The final rule effectuates Congress's specific mandate to the Bureau to adopt rules to implement section 1071. For a further description of the reasons why agency action is being considered, see the background discussion for the final rule in part II above.

This rulemaking has multiple objectives. The final rule is intended to advance the two statutory purposes of section 1071, which are (1) facilitating enforcement of fair lending laws and (2) enabling communities, governmental entities, and creditors to identify business and community development needs and opportunities of women-owned, minority-owned, and small businesses. To achieve these objectives, the rule will require covered financial institutions to collect and report certain data on applications for covered credit transactions for small businesses, including minority-owned, women-owned, and LGBTQI+-owned small businesses. The data to be collected and reported will include a number of statutorily required data fields regarding small business applications, as well as several additional data fields that the Bureau determined will help fulfill the purposes of section 1071. The Bureau will make available to the public, annually on the Bureau's website, the data submitted to it by financial institutions, subject to deletions or modifications made by the Bureau if the Bureau determines that such deletions or modifications would advance a privacy interest.

B. Statement of the Significant Issues Raised by the Public Comments in Response to the Initial Regulatory Flexibility Analysis, a Statement of the Assessment of the Agency of Such Issues, and a Statement of Any Changes Made to the Proposed Rule in the Final Rule as a Result of Such Comments

In accordance with section 603(a) of the RFA, the Bureau prepared an IRFA. In the IRFA, the Bureau estimated the possible compliance cost for small entities with respect to a pre-statute

[970] 5 U.S.C. 603(a)(4).

[971] ECOA section 704B.

[972] While Call Report and CRA data provide some indication of the level of supply of small business credit, the lack of data on small business credit applications makes demand for credit by small businesses more difficult to assess, including with respect to local markets or protected classes.

baseline. Additionally, the IRFA discussed possible impacts on small entities, such as small businesses to whom lenders provide credit.

Very few commenters specifically address the IRFA included in the proposal. Comments made by the SBA Office of Advocacy related to the estimates included in the IRFA are addressed below in part X.B.3. A comprehensive discussion of comments that relate to parts of the regulatory flexibility analysis can be found throughout part IX above. This section addresses specific significant comments that affects the FRFA analysis.

Commenters provided feedback on the overall magnitudes of the one-time and ongoing cost estimates, which form a core part of the IRFA analysis. Some industry commenters provided their own estimates of either their institution's specific one-time or ongoing costs. With respect to one-time costs, the Bureau has reviewed estimates and considered the information provided by the commenters, together with the existing evidence provided in the One-Time Cost Survey. The Bureau considers most estimates provided by commenters as broadly consistent with the Bureau's one-time cost estimates. With respect to ongoing costs, industry commenters' estimates ranged from estimates that were quite similar to the Bureau's estimate for institutions of similar small business credit volume to estimates that were considerably higher than the Bureau's estimates. The Bureau has reviewed these estimates and considered the information provided by the commenters.

Many industry commenters claimed a need to hire additional staff, both with respect to the one-time cost of implementing the rule and the ongoing cost of reporting 1071 data annually. Many provided estimates of the additional FTEs that the institution would have to hire to comply with the proposed rule. These estimates ranged from one additional FTE to up to 10 additional FTEs. A survey of community banks by a national trade association found that 88 percent of respondents would need to hire an additional FTE and, on average, institutions would have to hire 2–3 FTEs. Several commenters asserted that the hiring of additional staff alone showed that the Bureau's one-time and ongoing cost estimates in the proposal were inadequate. In the ongoing costs estimates of the Bureau's proposal, the Bureau calculated the number of hours required to be spent on 1071-related tasks, without distinguishing between existing or newly-hired staff. The Bureau assumes that the time spent on 1071-related tasks necessarily takes time away from otherwise profitable activity to which the hours would be put in the rule's absence. Since the Bureau is accounting for time spent in this way, the Bureau believes that its estimates account for the additional staff activity required to be spent to collect, check, and report data under the final rule. For this reason, the Bureau did not change any staffing time estimates, with exceptions mentioned below.

However, hiring additional FTEs would lead some institutions to incur fixed one-time costs of hiring, including search, administrative burden, and additional training, that they would not have incurred in the absence of the final rule. The Bureau categorizes this type of cost as a one-time cost, where the institution staffs up to be able to comply with the rule. So, while the Bureau has not changed ongoing costs estimates with respect to staff hours, it is incorporating the fixed cost of hiring new staff in its estimation of one-time costs.

Several commenters also suggested that the specific ongoing costs for training staff were too low in the proposal. As described in the proposal, the Bureau received similar comments during the SBREFA process, but wished to learn additional information through comments on the proposed rule to better estimate the cost of training. Several institutions provided specific annual costs of training employees or estimates of the overall employee time expected to be required to comply with the final rule. Others more generally described the need to train more staff than just loan officers, but also administrative and other staff.

The Bureau's ongoing cost estimates only reflected the assumed training time required to train loan officers that directly handle the underwriting process. The Bureau decided, based on the comments to the proposed rule, to double the amount of assumed training hours required on an annual basis to account for the additional staff that would have to be trained on an annual basis besides simply the loan officers. The estimates in this final rule reflect the doubling of annual training hours.

C. Response of the Agency to Any Comments Filed by the Chief Counsel for Advocacy of the Small Business Administration in Response to the Proposed Rule, and a Detailed Statement of Any Change Made to the Proposed Rule in the Final Rule as a Result of the Comments

SBA Office of Advocacy provided a formal comment letter to the Bureau in response to the proposed rule. This letter expressed concerns that the Bureau underestimated the costs of the proposed rule, that the Bureau did not adequately consider the scope of coverage, and that the Bureau additionally underestimated the effect of the proposed rule on the cost of credit to small entities. Additionally, SBA Office of Advocacy provided specific feedback related to certain provisions of the proposed rule, which are addressed below.

Comments related to the Bureau's cost estimates. SBA Office of Advocacy asserted that the Bureau's estimated costs of compliance in the proposal were too low, arguing, specifically, that training costs were too low and stated that the Bureau had acknowledged that small entity representatives, during the SBREFA process, had noted that the Bureau's training costs might be low because they did not account for enough staff being trained. Regarding these training costs, the Bureau notes that, as SBA Office of Advocacy observed, the proposal identified the feedback from small entity representatives that the training costs might be underestimated. In part VIII.F.3 of the proposal the Bureau sought comments on the training and other estimates to inform the ongoing cost estimation. As noted in part IX.F above, the Bureau has increased its estimates of training costs in response to SBA Office of Advocacy and other comments to account for additional staff that would need to be trained on an ongoing basis.

SBA Office of Advocacy expressed concerns that the Bureau has underestimated the one-time costs, specifically with regard to training costs. As noted in the above methods (part IX.E) and estimations (part IX.F) discussions, the Bureau estimated one-time costs from the Bureau's One-Time Cost Survey, which was conducted of industry participants potentially subject to the Bureau's rule implementing section 1071. The Bureau's Tables 14 through 16 provide averages of survey responses. To obtain final estimates, the Bureau combined this information with relevant information from comments on the proposal. The Bureau reviewed and considered comments on the cost estimates included in its proposal.

SBA Office of Advocacy also asserted that the Bureau underestimated the pass through of compliance costs to small businesses in the form of rates and fees. SBA Office of Advocacy also asserted that, because institutions could charge an application fee, the fee may be a disincentive for small businesses to shop for a better priced loan, and

therefore the overall cost of credit may be higher than indicated.

Regarding these comments on the pass through of costs, the Bureau notes in part IX.F.4 above that it expects the variable portion of ongoing costs to be passed on to small business credit borrowers in the form of higher interest rates and fees. It made this determination from the results to its One-Time Cost Survey, economic theory, and comments on the proposed rule. Additionally, lenders presently have the ability to charge applicants application fees, something that the potential increase in fees from compliance costs associated with this final rule does not change.

Comments related to other aspects of the proposed rule. In the section-by-section analysis of the final rule in part V above, the Bureau has responded to the SBA Office of Advocacy's comments concerning a number of topics in the proposed rule, including the definition of financial institution, the small business definition, the coverage of automobile dealers, the data points generally, the proposed visual observation and surname requirement related to applicants' demographic information, data points adopted pursuant to ECOA section 704B(e)(2)(H), and the compliance date of the rule. SBA Office of Advocacy's comments and the Bureau's responses on these topics are summarized below.

Scope of coverage/definition of financial institution. Initially, SBA Office of Advocacy expressed concern about the scope of coverage, particularly as related to who would be a covered financial institution required to collect and report 1071 data. SBA Office of Advocacy argued that the proposed 25-origination threshold may be too low, and that the Bureau has not analyzed the data fully to determine whether a higher threshold would garner an appropriate amount of information to fulfill the purposes of section 1071. SBA Office of Advocacy further urged the Bureau to consider additional alternative thresholds, and supplement its analysis, including 50-, 100-, 200- and 500-origination threshold alternatives. In the final rule, the Bureau has increased the institutional coverage threshold from 25 to 100 originations annually to address industry concerns regarding the impact on the smallest financial institutions. Smaller lenders play an integral role in lending to parts of the small business sector and the Bureau does not want to risk disruption to this sector, which would run contrary to the business and community development purpose of section 1071. The Bureau also considered higher thresholds, but believes that raising the threshold further would undermine the purposes of section 1071.

Definition of small business. Next, SBA Office of Advocacy commended the Bureau for proposing an alternative size standard to SBA's approach to defining a small business, noting prior feedback concerning the need for a simpler definition that is easy for small business applicants to understand and financial institutions to implement. However, SBA Office of Advocacy noted concern from stakeholders that the $5 million gross annual revenue threshold may be too high for small financial institutions to implement and may cause some of those entities to forgo making business loans. SBA Office of Advocacy urged the Bureau to analyze other possible thresholds at a lower amount that would garner sufficient data, without the risk of smaller banks discontinuing business loans. Although the Bureau considered different threshold amounts and different size standards, it believes that a $5 million gross annual revenue threshold strikes the right balance in terms of broadly covering the small business credit market to fulfill section 1071's statutory purposes while meeting the SBA's criteria for an alternative size standard. The final rule also anticipates updates to this threshold every five years to account for inflation.

Data points—collection of ethnicity and race via visual observation or surname, and data points adopted pursuant to ECOA section 704B(e)(2)(H). SBA Office of Advocacy raised two concerns related to data points required to be collected under section 1071. First, SBA Office of Advocacy argued that the requirement in the proposed rule to collect ethnicity and race information based on visual observation or surname should be removed. SBA Office of Advocacy reiterated concerns expressed during the SBREFA panel about a visual observation requirement. SBA Office of Advocacy further argued that data collected through visual observation or surname could be corrupted by bias or other forms of discrimination, and would therefore be in opposition to the intent of section 1071. They further stated that even well trained and well-motivated financial institutions could make wrong assumptions and taint the quality of the data. After considering the issue further as explained in the section-by-section analysis of § 1002.107(a)(19) above, the final rule does not include a requirement to collect applicant demographic information based on visual observation or surname.

Second, SBA Office of Advocacy urged the Bureau to remove from the rule all data points proposed pursuant to its statutory authority set forth in ECOA section 704B(e)(2)(H), arguing that such data points are not required by section 1071, are costly, and potentially raise privacy concerns. SBA Office of Advocacy noted that these data points could be reverse engineered to determine what businesses were denied credit, particularly in small communities. They focused particularly on pricing data, asserting that these data would be costly and could damage the reputation of the institution by creating unjustified inferences that pricing disparities are due to fair lending violations. The Bureau believes that pricing and the other data points provide valuable information that furthers the dual purposes of section 1071. The Bureau believes that any risks to privacy interests can be addressed through modifications or deletions to public, application-level data, as appropriate.

Next, SBA Office of Advocacy urged the Bureau to work with small automobile dealers to make the direct and indirect impacts of the rulemaking as least burdensome as possible. SBA Office of Advocacy stated that dealers may either directly issue credit or, as noted by a trade association, in many cases, act as intermediaries between buyers and financial institutions, and in those roles may be asked to support financial institutions' compliance with the rule. The Bureau's rule does not apply to motor vehicle dealers.[973] The Bureau has also made revisions to the rule's provisions addressing reporting obligations when multiple financial institutions are involved in originating a single covered credit transaction, which the Bureau believes will provide greater clarity to motor vehicle dealers and the covered financial institutions that work with them, as well as to other covered financial institutions that originate covered credit transactions for small businesses through third parties. In addition, the Bureau has sought to reduce burden on small covered financial institutions through many provisions in the final rule, including, for example, by issuing a sample data collection form that institutions can use to collect protected demographic data from applicants. Finally, SBA Office of Advocacy encouraged the Bureau to consider an implementation period of three years or longer for the rule, rather

[973] The Bureau's rules, including this final rule to implement section 1071, generally do not apply to motor vehicle dealers, as defined in section 1029(f)(2) of the Dodd-Frank Act, that are predominantly engaged in the sale and servicing of motor vehicles, the leasing and servicing of motor vehicles, or both. 12 U.S.C. 5519.

than 18 months as proposed. SBA Office of Advocacy reiterated feedback from a roundtable session it held that an 18-month compliance period would not be sufficient, and it may take up to three years for small financial institutions to comply. They noted that unlike HMDA, financial institutions are not building off a system already in place, and instead need to develop new systems. SBA Office of Advocacy also reiterated feedback during the SBREFA process that supported a two- to three-year implementation period. The Bureau is adopting a tiered compliance date schedule because it believes that smaller and mid-sized lenders would have particular difficulties complying within the single 18-month compliance period proposed in the NPRM. Compliance with the rule beginning October 1, 2024 is required for financial institutions that originate the most covered credit transactions for small businesses. However, institutions with a moderate transaction volume have until April 1, 2025 to begin complying with the rule, and those with the lowest volume have until January 1, 2026.[974] The Bureau believes that approximately 90 percent of all covered financial institutions that are themselves ''small'' under the SBA's size standards will fall under the latest compliance date, giving them nearly three years to prepare for compliance with the Bureau's final rule.

D. Description of and an Estimate of the Number of Small Entities to Which the Rule Will Apply

For the purposes of assessing the impacts of the final rule on small entities, ''small entities'' is defined in the RFA to include small businesses, small nonprofit organizations, and small government jurisdictions.[975] A ''small business'' is determined by application of SBA regulations in reference to the North American Industry Classification System (NAICS) classification and size standards.[976] Under such standards, the Bureau identified several categories of small entities that may be subject to the proposed provisions: depository institutions; online lenders and merchant cash advance providers; commercial finance companies; nondepository CDFIs; Farm Credit System members; and governmental lending entities. The NAICS codes covered by these categories are described below.

The following table provides the Bureau's estimate of the number and types of entities that may be affected by the proposed rule:

TABLE 19—ESTIMATED NUMBER OF AFFECTED ENTITIES AND SMALL ENTITIES BY CATEGORY

Category	NAICS	Small entity threshold	Est. total covered financial institutions	Est. number of small financial institutions
Depository Institutions	522110, 522180, 522130, 522210	$850 million in assets	1,900	1,000
Online Lenders and Merchant Cash Advance Providers.	522299, 522291, 522320, 518210	$40 million (NAICS 518210); $47 million (NAICS 522299, 522291, 522320).	100	90
Commercial Finance Companies	513210, 532411, 532490, 522220, 522291.	$47 million (NAICS 513210, 522220, 522291); $40 million (NAICS 532490); $45.5 million (NAICS 532411).	240	216
Nondepository CDFIs	522390, 523910, 813410, 522310	$9.5 million (NAICS 813410); $15 million (NAICS 522310); $47 million (NAICS 523910, 522390).	139	132
Farm Credit System members	522299	$47 million	71	31
Governmental Lending Entities	NA	Population below 50,000	70	0

The following paragraphs describe the categories of entities that the Bureau expects would be affected by the final rule.

Depository institutions (banks and credit unions): The Bureau estimates that there are about 1,900 banks, savings associations, and credit unions engaged in small business lending that originate enough covered transactions to be covered by the final rule.[977] These companies potentially fall into four different industry categories, including ''Commercial Banking'' (NAICS 522110), ''Savings Institutions'' (NAICS 522120), ''Credit Unions'' (NAICS 522130), and ''Credit Card Issuing'' (NAICS 522210). All of these industries have a size standard threshold of $850 million in assets. The Bureau estimates that about 1,000 of these institutions are small entities according to this threshold. See part IX.D above for more detail on how the Bureau arrived at these estimates.

Online lenders and merchant cash advance providers: As discussed in more detail in part II.D above, the Bureau estimates that there are about 100 fintech lenders and merchant cash advance providers engaged in small business lending that originate enough covered transactions to be covered by the final rule. These companies span multiple industries, including ''All Other Nondepository Credit Intermediation'' (NAICS 522298), ''Consumer Lending'' (NAICS 522291), ''Financial Transactions, Processing, Reserve, and Clearinghouse Activities'' (NAICS 522320), and ''Data Processing, Housing and Related Services'' (NAICS 518210). All of these industries have a size standard threshold of $40 million in sales (NAICS 518210) or $47 million in sales (all other NAICS). The Bureau assumes that about 90 percent, or 90, of these entities are small according to these size standards.

Commercial finance companies: As discussed in more detail in part II.D above, the Bureau estimates that there are about 240 commercial finance companies, including captive and independent financing, engaged in small business lending that originate enough covered credit transactions to be covered by the final rule. These companies span multiple industries, including ''Software Publishers'' (NAICS 513210), ''Commercial Air, Rail, and Water Transportation Equipment Rental and Leasing'' (NAICS 532411), ''Other Commercial and Industrial Machinery and Equipment Rental and Leasing'' (NAICS 532490), ''Sales financing'' (NAICS 522220) and ''Consumer Lending'' (NAICS 522291). These industries have size standard thresholds of $47 million in sales (NAICS 513210, 522220, 522291), $45.5

[974] The Bureau estimates that most small depository institutions will fall into Tier 3 and will be required to begin complying with the final rule in 2026.

[975] 5 U.S.C. 601(6).

[976] The current SBA size standards are found on the SBA's website, Small Bus. Admin., *Table of size standards* (Mar. 17, 2023), *https://www.sba.gov/document/support-table-size-standards.*

[977] The Bureau notes that the category of depository institutions also includes CDFIs that are also depository institutions.

million in sales (NAICS 532411), or $40 million in sales (NAICS 532490). The Bureau assumes that about 90 percent, or 216, commercial finance companies are small according to these size standards.

Nondepository CDFIs: As discussed in more detail in part II.D above, the Bureau estimates that there are 139 nondepository CDFIs engaged in small business lending that originate enough covered credit transactions to be covered by the final rule. CDFIs generally fall into ''Activities Related to Credit Intermediation (Including Loan Brokers)'' (NAICS 522390), ''Miscellaneous Intermediation'' (NAICS 523910), ''Civic and Social Organizations'' (NAICS 813410), and ''Mortgage and Nonmortgage Loan Brokers'' (NAICS 522310). These industries have size standard thresholds of $9.5 million in sales (NAICS 813410), $15 million in sales (NAICS 522310), and $47 million in sales (NAICS 522390, 523910). The Bureau assumes that about 95 percent, or 132, nondepository CDFIs are small entities.

Farm Credit System members: The Bureau estimates that there are 71 members of the Farm Credit System (banks and associations) that are engaged in small business lending and that originate enough covered credit transactions to be covered by the final rule.[978] These institutions are in the ''International, Secondary Market, and All Other Credit Intermediation'' (NAICS 522299) industry. The size standard for this industry is $47 million in sales. The Bureau estimates that 18 members of the Farm Credit System are small entities.

Governmental lending entities: As discussed in more detail in part II.D above, the Bureau estimates that there are about 70 governmental lending entities engaged in small business lending that originate enough covered credit transactions to be covered by the final rule. ''Small governmental jurisdictions'' are the governments of cities, counties, towns, townships, villages, school districts, or special districts, with a population of less than fifty thousand. The Bureau assumes that none of the governmental lending entities covered by the final rule are considered small.

E. Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Final Rule, Including an Estimate of the Classes of Small Entities Which Will Be Subject to the Requirement and the Type of Professional Skills Necessary for the Preparation of the Report or Record

Reporting requirements. ECOA section 704B(f)(1) provides that ''[t]he data required to be compiled and maintained under [section 1071] by any financial institution shall be submitted annually to the Bureau.'' Section 1071 requires financial institutions to collect and report information regarding any application for ''credit'' made by women-owned, minority-owned, and small businesses. In its rule to implement section 1071, the Bureau is not covering the following transactions: leases, factoring, consumer-designated credit used for business purposes, HMDA-reportable transactions, insurance premium financing, trade credit, public utilities credit, securities credit, and incidental credit.

Under the final rule, financial institutions would be required to report data on small business credit applications if they originated at least 100 covered transactions in each of the previous two calendar years. The Bureau is requiring that data collection occur on a calendar-year basis and submitted to the Bureau by the following June 1. Under the final rule, covered financial institutions are required to collect and report the following data points: (1) a unique identifier, (2) application date, (3) application method, (4) application recipient, (5) credit type, (6) credit purpose, (7) amount applied for, (8) amount approved or originated, (9) action taken, (10) action taken date, (11) denial reasons, (12) pricing information, (13) census tract, (14) gross annual revenue, (15) NAICS code, (16) number of workers, (17) time in business, (18) minority-owned business status, women-owned business status, and LGBTQI+-owned business status, (19) ethnicity, race, and sex of principal owners, and (20) the number of principal owners. The section-by-section analyses in part V above discuss the required data points and the scope of the final rule in greater detail.

Recordkeeping requirements. ECOA section 704B(f)(2)(A) requires that information compiled and maintained under section 1071 be ''retained for not less than 3 years after the date of preparation.'' The Bureau is requiring that financial institutions retain 1071 data for at least three years after it is submitted to the Bureau. In accordance with 704B(e)(3), the Bureau is also instituting a prohibition on including certain personally identifiable information about any individuals associated with small business applicants in the data that a financial institution is required to compile, maintain, and report to the Bureau, other than information specifically required to be collected and reported (such as the ethnicity, race, and sex of principal owners and whether the business is women-owned, minority-owned, or LGBTQI+-owned). Financial institutions must, unless subject to an exception, limit the access of certain officers and employees to applicants' responses to the inquiries regarding women-owned, minority-owned, and LGBTQI+-owned business status, as well as the ethnicity, race, and sex of principal owners. In addition, applicants' responses to the inquiries regarding women-owned, minority-owned, and LGBTQI+-owned business status, as well as the ethnicity, race, and sex of principal owners, must be maintained separately from the application and accompanying information.

Costs to small entities. The Bureau expects that the proposed rule may impose one-time and ongoing costs on small-entity providers of credit to small businesses. The Bureau has identified eight categories of one-time costs that make up the components necessary for a financial institution to develop the infrastructure to collect and report data required by the rule. Those categories are preparation/planning; updating computer systems; testing/validating systems; developing forms/applications; training staff and third parties (such as dealers and brokers); developing policies/procedures; legal/compliance review; and post-implementation review of compliance policies and procedures. The Bureau conducted a survey regarding potential one-time implementation costs for section 1071 compliance targeted at financial institutions who extend small business credit. The Bureau used the results of this survey to estimate the one-time costs for financial institutions covered by the proposed rule using the methodology described in part VIII.E.1 above. The Bureau estimates that depository institutions with the lowest level of complexity in compliance

[978] Fed. Farm Credit Banks Funding Corp., *Farm Credit 2019 Annual Information Statement of the Farm Credit System,* at 7 (Feb. 28, 2020), *https://www.farmcreditfunding.com/ffcb_live/serve/public/pressre/finin/report.pdf?assetId=395570.* The Bureau notes that Farm Credit System banks do not report FFIEC Call Reports and are thus not counted in the number of banks and savings associations discussed above. To estimate the number of small Farm Credit System members, the Bureau considered FCA Call Reports and Young, Beginning, and Small Farmers Reports for all Farm Credit System members as of December 31, 2019. The reports can be found at *https://reports.fca.gov/CRS/.* A Farm Credit System is covered if it reported more than 100 total number of loans on its Young, Beginning, and Small Farmers Report in 2019. A Farm Credit System member is considered small if its net interest income plus total non-interest income is less than $41.5 million.

operations (*i.e.,* Type A DIs) would incur one-time costs of $63,825, including expected hiring costs. The Bureau estimates that depository institutions with a middle level of complexity in compliance operations (*i.e.,* Type B DIs) would incur one-time costs of $49,225, including expected hiring costs. The Bureau estimates that depository institutions with the highest level of complexity in compliance operations (*i.e.,* Type C DIs) would incur one-time costs of $91,075, including expected hiring costs. Finally, the Bureau estimates that Non-DIs would incur one-time costs of $105,250, including the costs of hiring two additional staff.

The Bureau estimates that the overall market impact of one-time costs for small depository institutions will be between $56,000,000 and $67,000,000.[979] The Bureau estimates that the overall market impact of one-time costs for Non-DIs will be about $45,000,000.

Adapting ongoing cost methodology from previous HMDA rulemaking efforts, the Bureau identified 15 specific data collection and reporting activities that would impose ongoing costs to financial institutions covered by the rule.[980] The Bureau estimates that representative financial institutions with the lowest level of complexity in compliance operations (*i.e.,* Type A FIs) would incur around $8,349 in total annual ongoing costs, or about $83 in total cost per application processed (assuming a representative 100 applications per year). For financial institutions of this type, the largest drivers of the ongoing costs are activities that require employee time to complete. Activities like transcribing data, transferring data to the data management software, standard edits and internal checks, and training all require loan officer time. The Bureau estimates that financial institutions with a middle level of complexity in compliance operations (*i.e.,* Type B FIs), which are somewhat automated, would incur approximately $40,079 in additional ongoing costs per year, or around $100 per application (assuming a representative 400 applications per year). The largest components of this ongoing cost are the expenses of the small business application management software and geocoding software (in the form of an annual software subscription fee) and the external audit of the data. The Bureau estimates that financial institutions with the highest level of complexity in compliance operations (*i.e.,* Type C FIs), which are significantly automated, would incur approximately $278,618 in additional ongoing costs per year, or around $46 per application (assuming a representative 6,000 applications per year). The largest components of this ongoing cost are the cost of an internal audit, transcribing data, and annual edits and internal checks.

The Bureau estimates that the overall market impact of ongoing costs for small entities will be between $83,000,000 and $96,000,000 per year.

Estimate of the classes of small entities that will be subject to the requirement and the type of professional skills necessary for the preparation of the report or record. Section 603(b)(4) of the RFA also requires an estimate of the type of professional skills necessary for the preparation of the reports or records. The recordkeeping and compliance requirements of the final rule that would affect small entities are summarized above. Based on outreach with financial institutions, vendors, and governmental agency representatives, the Bureau classified the operational activities that financial institutions would likely use for section 1071 data collection and reporting into 15 operational ''tasks'' which can be further grouped into four ''primary tasks.'' These are:

1. *Data collection:* Transcribing data, resolving reportability questions, and transferring data to a 1071 data management system.
2. *Reporting and resubmission:* Geocoding, standard annual edit and internal checks, researching questions, resolving question responses, checking post-submission edits, filing post-submission documents, and using vendor data management software.
3. *Compliance and internal audits:* Training, internal audits, and external audits.
4. *Section 1071-related exams:* Exam preparation and exam assistance.

All these tasks are related to the preparation of reports or records and most of them are performed by compliance personnel in the compliance department of financial institutions. For some financial institutions, however, the data intake and transcribing stage could involve loan officers or processors whose primary function is to evaluate or process loan applications. For example, at some financial institutions the loan officers would take in information from the applicant to complete the application and input that information into the reporting system. However, the Bureau believes that such roles generally do not require any additional professional skills related for the recordkeeping or other compliance requirements of this final rule that are not otherwise required during the ordinary course of business for small entities. The Bureau also notes that small nondepository institutions might not be subject to fair lending exams and might, therefore, have reduced costs.

The type of professional skills required for compliance varies depending on the particular task involved. For example, data transcribing requires data entry skills. Transferring data to a data entry system and using vendor data management software requires knowledge of computer systems and the ability to use them. Researching and resolving reportability questions requires a more complex understanding of the regulatory requirements and the details of the relevant line of business. Geocoding requires skills in using the geocoding software, web systems, or, in cases where geocoding is difficult, knowledge of the local area in which the property is located. Standard annual editing, internal checks, and post-submission editing require knowledge of the relevant data systems, data formats, and section 1071 regulatory requirements in addition to skills in quality control and assurance. Filing post-submission documents requires skills in information creation, dissemination, and communication. Training, internal audits, and external audits require communications skills, educational skills, and regulatory knowledge. Section 1071-related exam preparation and exam assistance involve knowledge of regulatory requirements, the relevant line of business, and the relevant data systems.

The Standard Occupational Classification code has compliance officers listed under code 13–1041. The Bureau believes that most of the skills required for preparation of the reports or records related to this rule are the skills required for job functions performed in this occupation. However, the Bureau recognizes that under this general occupational code there is a high level of heterogeneity in the type of skills required as well as the corresponding labor costs incurred by the financial institutions performing these functions. During the SBREFA process, some small entity representatives noted that, for instance, high-level corporate officers

[979] The Bureau notes that the variation in this range comes primarily from the uncertainty in the number of originations made by small banks and savings associations. The range does not fully account for the uncertainty associated with estimates of the one-time costs for each type of institution.

[980] The Bureau applied the same methodology for the ongoing costs for small entities as that found in part IX.E.2 above.

such as CEOs and senior vice presidents could be directly involved in some regulatory tasks. The Bureau acknowledges the possibility that certain aspects of the final rule may require some small entities to hire additional compliance staff. The Bureau received many comments on its proposal that asserted that industry participants would have to hire additional employees to comply with the rule. The Bureau made changes to its estimates of one-time costs to reflect the additional one-time cost of hiring new staff. Compliance with the final rule may emphasize certain skills. For example, new data points may increase demand for skills involved in researching questions, standard annual editing, and post-submission editing. Nevertheless, the Bureau believes that compliance would still involve the general set of skills identified above. The recordkeeping and reporting requirements associated with the final rule would also involve skills for information technology system development, integration, and maintenance. Financial institutions required to report data under HMDA often use data management systems called HMDA Management Systems for existing regulatory purposes. A similar software for reporting the data required under the final rule could be developed by the institution internally or purchased from a third-party vendor. It is possible that other systems used by financial institutions, such as loan origination systems, might also need to be upgraded to capture new data fields required to be collected and reported under the final rule. The professional skills required for this one-time upgrade would be related to software development, testing, system engineering, information technology project management, budgeting and operation.

F. Description of the Steps the Agency Has Taken To Minimize the Significant Economic Impact on Small Entities Consistent With the Stated Objectives of Applicable Statutes, Including a Statement of the Factual, Policy, and Legal Reasons for Selecting the Alternative Adopted in the Final Rule and Why Each One of the Other Significant Alternatives to the Rule Considered by the Agency Which Affect the Impact on Small Entities Was Rejected; and for a Covered Agency, as Defined in Section 609(d)(2), a Description of the Steps the Agency Has Taken To Minimize Any Additional Cost of Credit for Small Entities

In drafting this final rule, the Bureau considered multiple financial institution reporting thresholds. In particular, the Bureau considered whether to exempt financial institutions with fewer than 25, 50, 200, or 500 originations of covered credit transactions for small businesses in each of the two preceding calendar years, instead of 100 originations as finalized. The Bureau also considered whether to exempt depository institutions with assets under $100 million or $200 million from section 1071's data collection and reporting requirements. The Bureau expects that some burden reduction will result from the higher threshold of 100 loans.

The following table shows the estimated impact that different reporting thresholds the Bureau considered would have had on financial institution coverage. For the purposes of considering the asset-based threshold alternatives, the Bureau estimates how institutional coverage and costs would be different if the Bureau required a 25-origination threshold in addition to an asset-based threshold for depository institutions. For the asset-based threshold alternatives, the Bureau assumes that the alternative proposal would have been that a depository institution would be required to report its small business lending activity for 2019 if it had more than 25 originations in both 2017 and 2018 and had assets over the asset-based threshold on December 31, 2018. The Bureau further assumes that if two institutions merged in 2019 then the resulting institution would be required to report if the sum of the separate institutions' assets on December 31, 2018 exceeded the asset-based threshold.

TABLE 20—ESTIMATED IMPACT OF DIFFERENT REPORTING THRESHOLDS ON THE NUMBER AND PERCENTAGE OF SMALL DEPOSITORY INSTITUTIONS COVERED

Threshold considered	Number of small depository institutions covered	% of small depository institutions covered
25 originations	2,900–3,000	32–33
50 originations	1,900–2,100	21–23
100 originations	1,000–1,100	11–12
200 originations	400–500	4–6
500 originations	50–100	0.6–1
25 originations AND $100 million in assets	2,400–2,500	26–28
25 originations AND $200 million in assets	1,600–1,700	18–19

Further, the Bureau is finalizing several data points pursuant to its authority under ECOA section 704B(e)(2)(H) that is has concluded would help the data collection fulfill the purposes of section 1071: application method, application recipient, pricing, number of principal owners, NAICS code, number of workers, and time in business.

During the SBREFA process, small entity representatives provided detailed feedback on the data points that the Bureau was considering proposing pursuant to ECOA section 704B(e)(2)(H).[981] One small entity representative stated that the cost of collecting and reporting such data points under consideration would be significant, and another stated that the Bureau should include as few data points as possible to avoid unnecessary costs. Another small entity representative stated that the Bureau should finalize a rule with just the data points enumerated in 704B(e)(2)(A) through (G) and avoid adding any additional data points. Other small entity representatives favored or opposed the inclusion of some or all of the individual data points under consideration during the SBREFA process. Many industry commenters and SBA Office of Advocacy opposed the collection of any data points pursuant to section 704B(e)(2)(H). These commenters stated that such data points would be burdensome to collect and report, while some, particularly the

[981] The small entity representative feedback discussed herein can be found in the SBREFA Panel Report at 30–32.

pricing data point, could be subject to misinterpretation by data users.

The Bureau understands that certain data points may introduce additional burden to small entities. However, the Bureau has determined that these data points would aid in fulfilling the statutory purposes of section 1071—facilitating enforcement of fair lending laws and enabling communities, governmental entities, and creditors to identify business and community development needs and opportunities of women-owned, minority-owned, and small businesses.

Three types of costs (one-time, fixed ongoing, and variable ongoing) have the potential to influence the price and availability of credit to small businesses. In a competitive marketplace, standard microeconomics suggests that lenders will extend loans up to the point at which the value of granting an additional loan is equal to the additional cost associated with the financial institution providing the loan. One-time costs and fixed ongoing costs affect the overall profitability of a lender's loan portfolio but do not affect the profitability of extending an additional loan. Variable ongoing costs, however, affect the profitability of each additional loan and will influence the number of loans a lender provides. Based on the Bureau's available evidence, it expects that the variable ongoing costs to comply with the proposed rule will be passed on in full to small business credit applicants in the form of higher prices or fees to small businesses.

In the One-Time Cost Survey, the Bureau asked respondents to rank a list of potential actions they may take in response to the compliance costs of implementing section 1071.[982] Respondents ranked the following list: ''Raise rates or fees on small business products''; ''Raise rates/fees on other credit products''; ''Accept lower profits''; ''Exit some geographic markets''; ''Tighten underwriting standards''; ''Offer fewer or less complex products''; ''No longer offer small business credit products''; or ''Other'' with two write-in options. Respondents ranked these options from ''1'' to ''9'' indicating their most to least likely responses. Respondents also had the opportunity to write in their own responses. Consistent with economic theory, respondents reported that they would be most likely to raise rates or fees on small business products and other credit products. On average, respondents reported that they would be least likely to exit some geographic markets or cease offering small business credit products. Accordingly, the Bureau expects the likely impact of the rule on the cost of credit to small entities to be higher rates and fees because financial institutions pass on the variable ongoing costs of the required data collection. The Bureau estimates that $32, $26, and $7.50 in variable costs would be passed through per application to Type A, B, and C FIs, respectively. To put these values in context, the Bureau estimates that the per application net income is in a range of $66,000–$83,000; $33,000–$38,000; and $83,000–$92,000 for covered banks and savings associations of Types A, B, and C, respectively.

The Bureau also carefully considered the rule's potential impact on small entities in its decision related to transactional scope. For example, the Bureau is not covering trade credit in its 1071 final rule because it believes that trade credit is categorically different from products like loans, lines of credit, credit cards, and merchant cash advances and that there are several reasons to exclude it from coverage. As discussed in the section-by-section analysis of § 1002.104(b)(1), one such reason is that the Bureau understands that trade credit can be offered by entities that are themselves very small businesses; these entities, in particular, may incur large costs relative to their size to collect and report 1071 data in an accurate and consistent manner.[983] The Bureau is also adding new § 1002.104(b)(5) to exclude all HMDA reportable transactions (*i.e.,* covered loans as defined by Regulation C, 12 CFR 1003.2(e)). The Bureau is finalizing this exclusion of HMDA-reportable transactions in order to alleviate concerns from a broad range of industry commenters, including small entities, about the difficulties associated with dual reporting, particularly in light of potential inconsistences related to demographic data collection and recordkeeping. Moreover, the final rule makes clear that the term covered credit transaction does not include consumer-designated credit used for business or agricultural purposes, because such transactions are not business credit. The Bureau believes that this interpretation will reduce burden for financial institutions (including smaller ones) that offer only consumer-designated credit.

In response to the suggestion to exempt agricultural lending because of the impact on small local community financial institutions, such as credit unions, the Bureau is not defining a ''covered credit transaction'' in a way that would exclude agricultural credit from the final rule. As detailed in the section-by-section analysis of § 1002.104(a), the Bureau believes that covering agricultural credit in this rulemaking is important for both of section 1071's statutory purposes. The Bureau does note, however, that it is increasing its institutional coverage threshold, as discussed above, to minimize compliance costs for smaller financial institutions with lower lending volumes.

The Bureau believes that its adoption of a simplified small business definition better meets the needs of small entities. The final rule provides that a business is a small business if its gross annual revenue for its preceding fiscal year is $5 million or less. As discussed in the section-by-section analysis of § 1002.106(b)(1), the Bureau believes that this approach addresses the concerns that the Bureau has heard (during the SBREFA process and in response to the NPRM) with respect to determining whether applicants are small businesses for purposes of complying with section 1071, particularly with respect to the concerns regarding determining the applicant's NAICS code.

XI. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA),[984] Federal agencies are generally required to seek approval from the Office of Management and Budget (OMB) for information collection requirements prior to implementation. Under the PRA, the Bureau may not conduct nor sponsor, and, notwithstanding any other provision of law, a person is not required to respond to, an information collection unless the information collection displays a valid control number assigned by OMB.

As part of its continuing effort to reduce paperwork and respondent burden, the Bureau conducted a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on the information collection requirements in accordance with the PRA. This helps ensure that the public understands the Bureau's requirements or instructions, respondents can provide the requested data in the desired format,

[982] *See* One-Time Cost Survey at 11.

[984] 44 U.S.C. 3501 *et seq.*

reporting burden (time and financial resources) is minimized, information collection instruments are clearly understood, and the Bureau can properly assess the impact of information collection requirements on respondents. The Bureau conducted several rounds of message, form, and user testing that were approved under OMB control number 3170–0022 after appropriate public notice and a 30-day comment period.

The final rule amends 12 CFR part 1002 (Regulation B), which implements ECOA. The Bureau's OMB control number for Regulation B is 3170–0013. This final rule will revise the information collection requirements contained in Regulation B that OMB has approved under that OMB control number.

Under the rule, the Bureau adds four information collection requirements to Regulation B:

1. Compilation of reportable data (§ 1002.107), including a notice requirement (in § 1002.107(a)(18) and (19)).
2. Reporting data to the Bureau (§ 1002.109).
3. Firewall notice requirement (§ 1002.108(d)).
4. Recordkeeping (§ 1002.111).

The information collection requirements in this final rule are mandatory. Certain data fields will be modified or deleted by the Bureau, in its discretion, to advance a privacy interest before the 1071 data are made available to the public (as permitted by section 1071 and the Bureau's final rule). The data that are not modified or deleted will be made available to the public. The rest of the data will be considered confidential if the information:

- Identifies any applicants or natural persons who might not be applicants (*e.g.,* owners of a business where a legal entity is the applicant); or
- Implicates the relevant privacy interests of applicants, related natural persons, or financial institutions.

The collections of information contained in this rule, and identified as such, have been submitted to OMB for review under section 3507(d) of the PRA. A complete description of the information collection requirements (including the burden estimate methods) is provided in the information collection request that the Bureau has submitted to OMB under the requirements of the PRA. The information collection request submitted to OMB requesting approval under the PRA for the information collection requirements contained herein is available at *www.regulations.gov* as well as on OMB's public-facing docket at *www.reginfo.gov.*

Title of Collection: Regulation B: Equal Credit Opportunity Act.

OMB Control Number: 3170–0013.

Type of Review: Revision of a currently approved collection.

Affected Public: Private Sector; Federal and State Governments.

Estimated Number of Respondents: 2,470 (subpart B only).

Estimated Total Annual Burden Hours: 8,302,000 (subpart B only).

The Bureau will publish a separate **Federal Register** notice once OMB concludes its review announcing OMB approval of the information collections contained in this final rule.

In the NPRM, the Bureau invited comments on: (a) Whether the collection of information is necessary for the proper performance of the functions of the Bureau, including whether the information will have practical utility; (b) the accuracy of the Bureau's estimate of the burden of the collection of information, including the validity of the methods and the assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

No comments pertaining specifically to this section were received. The other comments on the rule generally are summarized above.

XII. Congressional Review Act

Pursuant to the Congressional Review Act,[985] the Bureau will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States at least 60 days prior to the rule's published effective date. The Office of Information and Regulatory Affairs has designated this rule as a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 12 CFR Part 1002

Banks, banking, Civil rights, Consumer protection, Credit, Credit unions, Marital status discrimination, National banks, Penalties.

Authority and Issuance

For the reasons set forth in the preamble, the Bureau amends Regulation B, 12 CFR part 1002, as set forth below:

[985] 5 U.S.C. 801 *et seq.*

PART 1002—EQUAL CREDIT OPPORTUNITY ACT (REGULATION B)

■ 1. The authority citation for part 1002 is revised to read as follows:

Authority: 12 U.S.C. 5512, 5581; 15 U.S.C. 1691b. Subpart B is also issued under 15 U.S.C. 1691c–2.

■ 2. Designate §§ 1002.1 through 1002.16 as subpart A under the following heading:

Subpart A—General

§ 1002.1 [Amended

■ 3. In § 1002.1 amend the second sentence of paragraph (a) by removing the phrase ''this part applies'' and adding in its place ''this subpart applies''.

■ 4. Section 1002.2 is amended by revising the introductory text to read as follows:

§ 1002.2 Definitions.

For the purposes of this part, unless the context indicates otherwise or as otherwise defined in subpart B, the following definitions apply:

* * * * *

■ 5. Section 1002.5 is amended by revising the introductory text of paragraph (a)(4) and adding paragraphs (a)(4)(vii) through (x) to read as follows:

§ 1002.5 Rules concerning requests for information.

(a) * * *

(4) *Other permissible collection of information.* Notwithstanding paragraph (b) of this section, a creditor may collect information under the following circumstances provided that the creditor collects the information in compliance with § 1002.107(a)(18) and (19) and accompanying commentary, or appendix B to 12 CFR part 1003, as applicable:

* * * * *

(vii) A creditor that was required to report small business lending data pursuant to § 1002.109 for any of the preceding five calendar years but is not currently a covered financial institution under § 1002.105(b) may collect information pursuant to subpart B of this part for covered applications from small businesses as defined in §§ 1002.103 and 1002.106(b) regarding whether an applicant is a minority-owned business, a women-owned business, or an LGBTQI+-owned business, and the ethnicity, race, and sex of the applicant's principal owners if it complies with the requirements for covered financial institutions pursuant to §§ 1002.107(a)(18) and (19), 1002.108, 1002.111, and 1002.112 for that

application. Such a creditor is permitted, but not required, to report data to the Bureau collected pursuant to subpart B of this part if it complies with the requirements of subpart B as otherwise required for covered financial institutions pursuant to §§ 1002.109 and 1002.110.

(viii) A creditor that exceeded the loan-volume threshold in the first year of the two-year threshold period provided in § 1002.105(b) may, in the second year, collect information pursuant to subpart B of this part for covered applications from small businesses as defined in §§ 1002.103 and 1002.106(b) regarding whether an applicant is a minority-owned business, a women-owned business, or an LGBTQI+-owned business, and the ethnicity, race, and sex of the applicant's principal owners if it complies with the requirements for covered financial institutions pursuant to §§ 1002.107(a)(18) and (19), 1002.108, 1002.111, and 1002.112 for that application. Such a creditor is permitted, but not required, to report data to the Bureau collected pursuant to subpart B of this part if it complies with the requirements of subpart B as otherwise required for covered financial institutions pursuant to §§ 1002.109 and 1002.110.

(ix) A creditor that is not currently a covered financial institution under § 1002.105(b), and is not otherwise a creditor to which § 1002.5(a)(4)(vii) or (viii) applies, may collect information pursuant to subpart B of this part for covered applications from small businesses as defined in §§ 1002.103 and 1002.106(b) regarding whether an applicant for a covered credit transaction is a minority-owned business, a women-owned business, or an LGBTQI+-owned business, and the ethnicity, race, and sex of the applicant's principal owners for a transaction if it complies with the requirements for covered financial institutions pursuant to §§ 1002.107 through 1002.112 for that application.

(x) A creditor that is collecting information pursuant to subpart B of this part or as described in paragraphs (a)(4)(vii) through (ix) of this section for covered applications from small businesses as defined in §§ 1002.103 and 1002.106(b) regarding whether an applicant for a covered credit transaction is a minority-owned business, a women-owned business, or an LGBTQI+-owned business, and the ethnicity, race, and sex of the applicant's principal owners may also collect that same information for any co-applicants provided that it also complies with the relevant requirements of subpart B of this part or as described in paragraphs (a)(4)(vii) through (ix) of this section with respect to those co-applicants.

* * * * *

■ 6. Section 1002.12 is amended by revising paragraphs (b)(1) introductory text, (b)(2) introductory text, (b)(3), (4), and (5), and paragraph (b)(7) introductory text to read as follows:

§ 1002.12 Record retention.

* * * * *

(b) * * * (1) *Applications.* For 25 months (12 months for business credit, except as provided in paragraph (b)(5) of this section or otherwise provided for in subpart B of this part) after the date that a creditor notifies an applicant of action taken on an application or of incompleteness, the creditor shall retain in original form or a copy thereof:

* * * * *

(2) *Existing accounts.* For 25 months (12 months for business credit, except as provided in paragraph (b)(5) of this section or otherwise provided for in subpart B of this part) after the date that a creditor notifies an applicant of adverse action regarding an existing account, the creditor shall retain as to that account, in original form or a copy thereof:

* * * * *

(3) *Other applications.* For 25 months (12 months for business credit, except as provided in paragraph (b)(5) of this section or otherwise provided for in subpart B of this part) after the date that a creditor receives an application for which the creditor is not required to comply with the notification requirements of § 1002.9, the creditor shall retain all written or recorded information in its possession concerning the applicant, including any notation of action taken.

(4) *Enforcement proceedings and investigations.* A creditor shall retain the information beyond 25 months (12 months for business credit, except as provided in paragraph (b)(5) of this section or otherwise provided for in subpart B) if the creditor has actual notice that it is under investigation or is subject to an enforcement proceeding for an alleged violation of the Act or this part, by the Attorney General of the United States or by an enforcement agency charged with monitoring that creditor's compliance with the Act and this part, or if it has been served with notice of an action filed pursuant to section 706 of the Act and § 1002.16 of this part. The creditor shall retain the information until final disposition of the matter, unless an earlier time is allowed by order of the agency or court.

(5) *Special rule for certain business credit applications.* With regard to a business that had gross revenues in excess of $1 million in its preceding fiscal year, or an extension of trade credit, credit incident to a factoring agreement, or other similar types of business credit, the creditor shall retain records for at least 60 days, except as otherwise provided for in subpart B, after notifying the applicant of the action taken. If within that time period the applicant requests in writing the reasons for adverse action or that records be retained, the creditor shall retain records for 12 months.

* * * * *

(7) *Prescreened solicitations.* For 25 months after the date on which an offer of credit is made to potential customers (12 months for business credit, except as provided in paragraph (b)(5) of this section or otherwise provided for in subpart B), the creditor shall retain in original form or a copy thereof:

* * * * *

■ 7. Subpart B is added to read as follows:

Subpart B—Small Business Lending Data Collection

Sec.

§ 1002.101 Authority, purpose, and scope.
§ 1002.102 Definitions.
§ 1002.103 Covered applications.
§ 1002.104 Covered credit transactions and excluded transactions.
§ 1002.105 Covered financial institutions and exempt institutions.
§ 1002.106 Business and small business.
§ 1002.107 Compilation of reportable data.
§ 1002.108 Firewall.
§ 1002.109 Reporting of data to the Bureau.
§ 1002.110 Publication of data and other disclosures.
§ 1002.111 Recordkeeping.
§ 1002.112 Enforcement.
§ 1002.113 Severability.
§ 1002.114 Effective date, compliance date, and special transitional rules.

Subpart B—Small Business Lending Data Collection

§ 1002.101 Authority, purpose, and scope.

(a) *Authority and scope.* This subpart to Regulation B is issued by the Bureau pursuant to section 704B of the Equal Credit Opportunity Act (15 U.S.C. 1691c–2). Except as otherwise provided herein, this subpart applies to covered financial institutions, as defined in § 1002.105(b), other than a person excluded from coverage of this part by section 1029 of the Consumer Financial Protection Act of 2010, title X of the Dodd-Frank Wall Street Reform and Consumer Protection Act, Public Law 111–203, 124 Stat. 1376, 2004 (2010).

(b) *Purpose.* This subpart implements section 704B of the Equal Credit

Opportunity Act, which Congress intended:

(1) To facilitate enforcement of fair lending laws; and

(2) To enable communities, governmental entities, and creditors to identify business and community development needs and opportunities of women-owned, minority-owned, and small businesses.

§ 1002.102 Definitions.

In this subpart:

(a) *Affiliate* means, with respect to a financial institution, any company that controls, is controlled by, or is under common control with, another company, as set forth in the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*). With respect to a business or an applicant, *affiliate* shall have the same meaning as in 13 CFR 121.103.

(b) *Applicant* means any person who requests or who has received an extension of business credit from a financial institution.

(c) *Business* is defined in § 1002.106(a).

(d) *Business credit* shall have the same meaning as in § 1002.2(g).

(e) *Closed-end credit transaction* means an extension of business credit that is not an open-end credit transaction under paragraph (n) of this section.

(f) *Covered application* is defined in § 1002.103.

(g) *Covered credit transaction* is defined in § 1002.104.

(h) *Covered financial institution* is defined in § 1002.105(b).

(i) *Credit* shall have the same meaning as in § 1002.2(j).

(j) *Financial institution* is defined in § 1002.105(a).

(k) *LGBTQI+ individual* includes an individual who identifies as lesbian, gay, bisexual, transgender, queer, or intersex.

(l) *LGBTQI+-owned business* means a business for which one or more LGBTQI+ individuals hold more than 50 percent of its ownership or control, and for which more than 50 percent of the net profits or losses accrue to one or more such individuals.

(m) *Minority-owned business* means a business for which one or more American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, or Hispanic or Latino individuals hold more than 50 percent of its ownership or control, and for which more than 50 percent of the net profits or losses accrue to one or more such individuals.

(n) *Open-end credit transaction* means an open-end credit plan as defined in Regulation Z, 12 CFR 1026.2(a)(20), but without regard to whether the credit is consumer credit, as defined in § 1026.2(a)(12), is extended by a creditor, as defined in § 1026.2(a)(17), or is extended to a consumer, as defined in § 1026.2(a)(11).

(o) *Principal owner* means an individual who directly owns 25 percent or more of the equity interests of a business.

(p) *Small business* is defined in § 1002.106(b).

(q) *Small business lending application register* or *register* means the data reported, or required to be reported, annually pursuant to § 1002.109.

(r) *State* shall have the same meaning as in § 1002.2(aa).

(s) *Women-owned business* means a business for which more than 50 percent of its ownership or control is held by one or more women, and more than 50 percent of its net profits or losses accrue to one or more women.

§ 1002.103 Covered applications.

(a) *Covered application.* Except as provided in paragraph (b) of this section, covered application means an oral or written request for a covered credit transaction that is made in accordance with procedures used by a financial institution for the type of credit requested.

(b) *Circumstances that are not covered applications.* A covered application does not include:

(1) Reevaluation, extension, or renewal requests on an existing business credit account, unless the request seeks additional credit amounts.

(2) Inquiries and prequalification requests.

§ 1002.104 Covered credit transactions and excluded transactions.

(a) *Covered credit transaction* means an extension of business credit that is not an excluded transaction under paragraph (b) of this section.

(b) *Excluded transactions.* The requirements of this subpart do not apply to:

(1) *Trade credit.* A financing arrangement wherein a business acquires goods or services from another business without making immediate payment in full to the business providing the goods or services.

(2) *Home Mortgage* Disclosure *Act (HMDA)-reportable transactions.* A covered loan, or application therefor, as defined by Regulation C, 12 CFR 1003.2(e).

(3) *Insurance premium financing.* A financing arrangement wherein a business agrees to pay to a financial institution, in installments, the principal amount advanced by the financial institution to an insurer or insurance producer in payment of premium on the business's insurance contract or contracts, plus charges, and, as security for repayment, the business assigns to the financial institution certain rights, obligations, and/or considerations (such as the unearned premiums, accrued dividends, or loss payments) in its insurance contract or contracts. Insurance premium financing does not include the financing of insurance policy premiums obtained in connection with the financing of goods and services.

(4) *Public utilities credit.* Public utilities credit as defined in § 1002.3(a)(1).

(5) *Securities credit.* Securities credit as defined in § 1002.3(b)(1).

(6) *Incidental credit.* Incidental credit as defined in § 1002.3(c)(1), but without regard to whether the credit is consumer credit, as defined in § 1002.2(h).

§ 1002.105 Covered financial institutions and exempt institutions.

(a) *Financial institution* means any partnership, company, corporation, association (incorporated or unincorporated), trust, estate, cooperative organization, or other entity that engages in any financial activity.

(b) *Covered financial institution* means a financial institution that originated at least 100 covered credit transactions for small businesses in each of the two preceding calendar years.

§ 1002.106 Business and small business.

(a) *Business* has the same meaning as the term ''business concern or concern'' in 13 CFR 121.105.

(b) *Small business definition*—(1) *Small business* has the same meaning as the term ''small business concern'' in 15 U.S.C. 632(a), as implemented in 13 CFR 121.101 through 121.107. Notwithstanding the size standards set forth in 13 CFR 121.201, for purposes of this subpart, a business is a small business if its gross annual revenue, as defined in § 1002.107(a)(14), for its preceding fiscal year is $5 million or less.

(2) *Inflation adjustment.* Every 5 years after January 1, 2025, the gross annual revenue threshold set forth in paragraph (b)(1) of this section shall adjust based on changes to the Consumer Price Index for All Urban Consumers (U.S. city average series for all items, not seasonally adjusted), as published by the United States Bureau of Labor Statistics. Any adjustment that takes effect under this paragraph shall be rounded to the nearest multiple of $500,000. If an adjustment is to take

effect, it will do so on January 1 of the following calendar year.

§ 1002.107 Compilation of reportable data.

(a) *Data format and itemization.* A covered financial institution shall compile and maintain data regarding covered applications from small businesses. The data shall be compiled in the manner prescribed herein and the Filing Instructions Guide for this subpart for the appropriate year. The data compiled shall include the items described in paragraphs (a)(1) through (20) of this section.

(1) *Unique identifier.* An alphanumeric identifier, starting with the legal entity identifier of the financial institution, unique within the financial institution to the specific covered application, and which can be used to identify and retrieve the specific file or files corresponding to the application for or extension of credit.

(2) *Application date.* The date the covered application was received or the date shown on a paper or electronic application form.

(3) *Application method.* The means by which the applicant submitted the covered application directly or indirectly to the financial institution.

(4) *Application recipient.* Whether the applicant submitted the covered application directly to the financial institution or its affiliate, or whether the applicant submitted the covered application indirectly to the financial institution via a third party.

(5) *Credit type.* The following information regarding the type of credit applied for or originated:

(i) *Credit product.* The credit product.

(ii) *Guarantees.* The type or types of guarantees that were obtained for an extension of credit, or that would have been obtained if the covered credit transaction were originated.

(iii) *Loan term.* The length of the loan term, in months, if applicable.

(6) *Credit purpose.* The purpose or purposes of the credit applied for or originated.

(7) *Amount applied for.* The initial amount of credit or the initial credit limit requested by the applicant.

(8) *Amount approved or originated.* (i) For an application for a closed-end credit transaction that is approved but not accepted, the amount approved by the financial institution; or

(ii) For a closed-end credit transaction that is originated, the amount of credit originated; or

(iii) For an application for an open-end credit transaction that is originated or approved but not accepted, the amount of the credit limit approved.

(9) *Action taken.* The action taken by the financial institution on the covered application, reported as originated, approved but not accepted, denied, withdrawn by the applicant, or incomplete.

(10) *Action taken date.* The date of the action taken by the financial institution.

(11) *Denial reasons.* For denied applications, the principal reason or reasons the financial institution denied the covered application.

(12) *Pricing information.* The following information regarding the pricing of a covered credit transaction that is originated or approved but not accepted, as applicable:

(i) *Interest rate.* (A) If the interest rate is fixed, the interest rate that is or would be applicable to the covered credit transaction; or

(B) If the interest rate is adjustable, the margin, index value, initial rate period expressed in months (if applicable), and index name that is or would be applicable to the covered credit transaction;

(ii) *Total origination charges.* The total amount of all charges payable directly or indirectly by the applicant and imposed directly or indirectly by the financial institution at or before origination as an incident to or a condition of the extension of credit, expressed in dollars;

(iii) *Broker fees.* The total amount of all charges included in paragraph (a)(12)(ii) of this section that are fees paid by the applicant directly to a broker or to the financial institution for delivery to a broker, expressed in dollars;

(iv) *Initial annual charges.* The total amount of all non-interest charges that are scheduled to be imposed over the first annual period of the covered credit transaction, expressed in dollars;

(v) *Additional cost for merchant cash advances or other sales-based financing.* For a merchant cash advance or other sales-based financing transaction, the difference between the amount advanced and the amount to be repaid, expressed in dollars; and

(vi) *Prepayment penalties.* (A) Notwithstanding whether such a provision was in fact included, whether the financial institution could have included a charge to be imposed for paying all or part of the transaction's principal before the date on which the principal is due under the policies and procedures applicable to the covered credit transaction; and

(B) Notwithstanding the response to paragraph (a)(12)(vi)(A) of this section, whether the terms of the covered credit transaction do in fact include a charge imposed for paying all or part of the transaction's principal before the date on which the principal is due.

(13) *Census tract.* The census tract in which is located:

(i) The address or location where the proceeds of the credit applied for or originated will be or would have been principally applied; or

(ii) If the information in paragraph (a)(13)(i) of this section is unknown, the address or location of the main office or headquarters of the applicant; or

(iii) If the information in both paragraphs (a)(13)(i) and (ii) of this section is unknown, another address or location associated with the applicant.

(iv) The financial institution shall also indicate which one of the three types of addresses or locations listed in paragraphs (a)(13)(i), (ii), or (iii) of this section the census tract is based on.

(14) *Gross annual revenue.* The applicant's gross annual revenue for its preceding fiscal year.

(15) *NAICS code.* A 3-digit North American Industry Classification System (NAICS) code for the applicant.

(16) *Number of workers.* The number of non-owners working for the applicant.

(17) *Time in business.* The time the applicant has been in business.

(18) *Minority-owned, women-owned, and LGBTQI+-owned business statuses.* Whether the applicant is a minority-owned, women-owned, and/or LGBTQI+-owned business. When requesting minority-owned, women-owned, and LGBTQI+-owned business statuses from an applicant, the financial institution shall inform the applicant that the financial institution cannot discriminate on the basis of minority-owned, women-owned, or LGBTQI+-owned business statuses, or on whether the applicant provides this information.

(19) *Ethnicity, race, and sex of principal owners.* The ethnicity, race, and sex of the applicant's principal owners. When requesting ethnicity, race, and sex information from an applicant, the financial institution shall inform the applicant that the financial institution cannot discriminate on the basis of a principal owner's ethnicity, race, or sex, or on whether the applicant provides this information.

(20) *Number of principal owners.* The number of the applicant's principal owners.

(b) *Reliance on and verification of applicant-provided data.* Unless otherwise provided in this subpart, the financial institution may rely on information from the applicant, or appropriate third-party sources, when compiling data. If the financial institution verifies applicant-provided data, however, it shall report the verified data.

(c) *Time and manner of collection*—(1) *In general.* A covered financial institution shall not discourage an applicant from responding to requests for applicant-provided data under paragraph (a) of this section and shall otherwise maintain procedures to collect such data at a time and in a manner that are reasonably designed to obtain a response.

(2) *Applicant-provided data collected directly from the applicant.* For data collected directly from the applicant, procedures that are reasonably designed to obtain a response shall include provisions for the following:

(i) The initial request for applicant-provided data occurs prior to notifying an applicant of final action taken on a covered application;

(ii) The request for applicant-provided data is prominently displayed or presented;

(iii) The collection does not have the effect of discouraging an applicant from responding to a request for applicant-provided data; and

(iv) Applicants can easily respond to a request for applicant-provided data.

(3) *Procedures to monitor compliance.* A covered financial institution shall maintain procedures to identify and respond to indicia of potential discouragement, including low response rates for applicant-provided data.

(4) *Low response rates.* A low response rate for applicant-provided data may indicate discouragement or other failure by a covered financial institution to maintain procedures to collect applicant-provided data that are reasonably designed to obtain a response.

(d) *Previously collected data.* A covered financial institution is permitted, but not required, to reuse previously collected data to satisfy paragraphs (a)(13) through (20) of this section if:

(1) To satisfy paragraphs (a)(13) and (a)(15) through (20) of this section, the data were collected within the 36 months preceding the current covered application, or to satisfy paragraph (a)(14) of this section, the data were collected within the same calendar year as the current covered application; and

(2) The financial institution has no reason to believe the data are inaccurate.

§ 1002.108 Firewall.

(a) *Definitions.* For purposes of this section, the following terms shall have the following meanings:

(1) *Involved in making any determination concerning a covered application from a small business* means participating in a decision regarding the evaluation of a covered application from a small business or the creditworthiness of a small business applicant for a covered credit transaction.

(2) *Should have access* means that an employee or officer may need to collect, see, consider, refer to, or otherwise use the information to perform that employee's or officer's assigned job duties.

(b) *Prohibition on access to certain information.* Unless the exception under paragraph (c) of this section applies, an employee or officer of a covered financial institution or a covered financial institution's affiliate shall not have access to an applicant's responses to inquiries that the financial institution makes pursuant to this subpart regarding whether the applicant is a minority-owned business, a women-owned business, or an LGBTQI+-owned business under § 1002.107(a)(18), and regarding the ethnicity, race, and sex of the applicant's principal owners under § 1002.107(a)(19), if that employee or officer is involved in making any determination concerning that applicant's covered application.

(c) *Exception to the prohibition on access to certain information.* The prohibition in paragraph (b) of this section shall not apply to an employee or officer if the financial institution determines that it is not feasible to limit that employee's or officer's access to an applicant's responses to the financial institution's inquiries under § 1002.107(a)(18) or (19) and the financial institution provides the notice required under paragraph (d) of this section to the applicant. It is not feasible to limit access as required pursuant to paragraph (b) of this section if the financial institution determines that an employee or officer involved in making any determination concerning a covered application from a small business should have access to one or more applicants' responses to the financial institution's inquiries under § 1002.107(a)(18) or (19).

(d) *Notice.* In order to satisfy the exception set forth in paragraph (c) of this section, a financial institution shall provide a notice to each applicant whose responses will be accessed, informing the applicant that one or more employees or officers involved in making determinations concerning the covered application may have access to the applicant's responses to the financial institution's inquiries regarding whether the applicant is a minority-owned business, a women-owned business, or an LGBTQI+-owned business, and regarding the ethnicity, race, and sex of the applicant's principal owners. The financial institution shall provide the notice required by this paragraph (d) when making the inquiries required under § 1002.107(a)(18) and (19) and together with the notices required pursuant to § 1002.107(a)(18) and (19).

§ 1002.109 Reporting of data to the Bureau.

(a) *Reporting to the Bureau*—(1) *Annual reporting.* (i) On or before June 1 following the calendar year for which data are compiled and maintained as required by § 1002.107, a covered financial institution shall submit its small business lending application register in the format prescribed by the Bureau.

(ii) An authorized representative of the covered financial institution with knowledge of the data shall certify to the accuracy and completeness of the data reported pursuant to this paragraph (a).

(iii) When the last day for submission of data prescribed under paragraph (a)(1) of this section falls on a Saturday or Sunday, a submission shall be considered timely if it is submitted on the next succeeding Monday.

(2) *Reporting by subsidiaries.* A covered financial institution that is a subsidiary of another covered financial institution shall complete a separate small business lending application register. The subsidiary shall submit its small business lending application register, directly or through its parent, to the Bureau.

(3) *Reporting obligations where multiple financial institutions are involved in a covered credit transaction.* Where it is necessary for more than one financial institution to make a credit decision in order to approve a single covered credit transaction, only the last covered financial institution with authority to set the material terms of the covered credit transaction is required to report the application. Financial institutions report the actions of their agents.

(b) *Financial institution identifying information.* A financial institution shall provide each of the following with its submission:

(1) Its name.

(2) Its headquarters address.

(3) The name and business contact information of a person that the Bureau or other regulators may contact about the financial institution's submission.

(4) Its Federal prudential regulator, if applicable.

(5) Its Federal Taxpayer Identification Number (TIN).

(6) Its Legal Entity Identifier (LEI).

(7) Its Research, Statistics, Supervision, and Discount

identification (RSSD ID) number, if applicable.

(8) Parent entity information, if applicable, including:

(i) The name of the immediate parent entity;

(ii) The LEI of the immediate parent entity, if available;

(iii) The RSSD ID number of the immediate parent entity, if available;

(iv) The name of the top-holding parent entity;

(v) The LEI of the top-holding parent entity, if available; and

(vi) The RSSD ID number of the top-holding parent entity, if available.

(9) The type of financial institution that it is, indicated by selecting the appropriate type or types of institution from the list provided.

(10) Whether the financial institution is voluntarily reporting covered applications from small businesses.

(c) *Procedures for the submission of data to the Bureau.* The Bureau shall make available a Filing Instructions Guide, containing technical instructions for the submission of data to the Bureau pursuant to this section, as well as any related materials, at *https://www.consumerfinance.gov/data-research/small-business-lending/filing-instructions-guide/.*

§ 1002.110 Publication of data and other disclosures.

(a) *Publication of small business lending application registers and associated financial institution information.* The Bureau shall make available to the public generally the data reported to it by financial institutions pursuant to § 1002.109, subject to deletions or modifications made by the Bureau if the Bureau determines that the deletion or modification of the data would advance a privacy interest. The Bureau shall make such data available on an annual basis.

(b) *Publication of aggregate data.* The Bureau may compile and aggregate data submitted by financial institutions pursuant to § 1002.109, and make any compilations or aggregations of such data publicly available as the Bureau deems appropriate.

(c) *Statement of financial institution's small business lending data available on the Bureau's website.* A covered financial institution shall make available to the public on its website, or otherwise upon request, a statement that the covered financial institution's small business lending application register, as modified by the Bureau pursuant to § 1002.110(a), is or will be available from the Bureau. A financial institution shall use language provided by the Bureau, or substantially similar language, to satisfy the requirement to provide a statement pursuant to this paragraph (c).

(d) *Availability of statements.* A covered financial institution shall make the notice required by paragraph (c) of this section available to the public on its website when it submits a small business lending application register to the Bureau pursuant to § 1002.109(a)(1), and shall maintain the notice for as long as it has an obligation to retain its small business lending application registers pursuant to § 1002.111(a).

(e) *Further disclosure prohibited*—(1) *Disclosure by a financial institution.* A financial institution shall not disclose or provide to a third party the information it collects pursuant to § 1002.107(a)(18) and (19) except to further compliance with the Act or this part or as required by law.

(2) *Disclosure by a third party.* A third party that obtains information collected pursuant to § 1002.107(a)(18) and (19) for the purpose of furthering compliance with the Act or this part is prohibited from any further disclosure of such information except to further compliance with the Act or this part or as required by law.

§ 1002.111 Recordkeeping.

(a) *Record retention.* A covered financial institution shall retain evidence of compliance with this subpart, which includes a copy of its small business lending application register, for at least three years after the register is required to be submitted to the Bureau pursuant to § 1002.109.

(b) *Certain information kept separate from the rest of the application.* A financial institution shall maintain, separately from the rest of the application and accompanying information, an applicant's responses to the financial institution's inquiries pursuant to this subpart regarding whether an applicant for a covered credit transaction is a minority-owned business, a women-owned business, and/or an LGBTQI+-owned business under § 1002.107(a)(18), and regarding the ethnicity, race, and sex of the applicant's principal owners under § 1002.107(a)(19).

(c) *Limitation on personally identifiable information in certain records retained under this section.* In reporting a small business lending application register pursuant to § 1002.109, maintaining the register pursuant to paragraph (a) of this section, and maintaining a separate record of information pursuant to paragraph (b) of this section, a financial institution shall not include any name, specific address, telephone number, email address, or any other personally identifiable information concerning any individual who is, or is connected with, an applicant, other than as required pursuant to § 1002.107 or paragraph (b) of this section.

§ 1002.112 Enforcement.

(a) *Administrative enforcement and civil liability.* A violation of section 704B of the Act or this subpart is subject to administrative sanctions and civil liability as provided in sections 704 (15 U.S.C. 1691c) and 706 (15 U.S.C. 1691e) of the Act, where applicable.

(b) *Bona fide errors.* A bona fide error in compiling, maintaining, or reporting data with respect to a covered application is one that was unintentional and occurred despite the maintenance of procedures reasonably adapted to avoid such an error. A bona fide error is not a violation of the Act or this subpart. A financial institution is presumed to maintain procedures reasonably adapted to avoid such errors with respect to a given data field if the number of errors found in a random sample of the financial institution's submission for the data field does not equal or exceed a threshold specified by the Bureau for this purpose in appendix F to this part. However, an error is not a bona fide error if either there is a reasonable basis to believe the error was intentional or there is evidence that the financial institution does not or has not maintained procedures reasonably adapted to avoid such errors.

(c) *Safe harbors*—(1) *Incorrect entry for application date.* A financial institution does not violate the Act or this subpart if it reports on its small business lending application register an application date that is within three business days of the actual application date pursuant to § 1002.107(a)(2).

(2) *Incorrect entry for census tract.* An incorrect entry for census tract is not a violation of the Act or this subpart if the financial institution obtained the census tract by correctly using a geocoding tool provided by the FFIEC or the Bureau.

(3) *Incorrect entry for NAICS code.* An incorrect entry for a 3-digit NAICS code is not a violation of the Act or this subpart, provided that the financial institution obtained the 3-digit NAICS code by:

(i) Relying on an applicant's representations or on an appropriate third-party source, in accordance with § 1002.107(b), regarding the NAICS code; or

(ii) Identifying the NAICS code itself, provided that the financial institution maintains procedures reasonably adapted to correctly identify a 3-digit NAICS code.

(4) *Incorrect determination of small business status, covered credit transaction, or covered application.* A financial institution that initially collects data regarding whether an applicant for a covered credit transaction is a minority-owned business, a women-owned business, or an LGBTQI+-owned business, and the ethnicity, race, and sex of the applicant's principal owners pursuant to § 1002.107(a)(18) and (19) but later concludes that it should not have collected such data does not violate the Act or this regulation if the financial institution, at the time it collected this data, had a reasonable basis for believing that the application was a covered application for a covered credit transaction from a small business pursuant to §§ 1002.103, 1002.104, and 1002.106, respectively. A financial institution seeking to avail itself of this safe harbor shall comply with the requirements of this subpart as otherwise required pursuant to §§ 1002.107, 1002.108, and 1002.111 with respect to the collected data.

§ 1002.113 Severability.

If any provision of this subpart, or any application of a provision, is stayed or determined to be invalid, the remaining provisions or applications are severable and shall continue in effect.

§ 1002.114 Effective date, compliance date, and special transitional rules.

(a) *Effective date.* The effective date for this subpart is August 29, 2023.

(b) *Compliance date.* The dates by which covered financial institutions are initially required to comply with the requirements of this subpart are as follows:

(1) A covered financial institution that originated at least 2,500 covered credit transactions for small businesses in each of calendar years 2022 and 2023 shall comply with the requirements of this subpart beginning October 1, 2024.

(2) A covered financial institution that is not subject to paragraph (b)(1) of this section and that originated at least 500 covered credit transactions for small businesses in each of calendar years 2022 and 2023 shall comply with the requirements of this subpart beginning April 1, 2025.

(3) A covered financial institution that is not subject to paragraphs (b)(1) or (2) of this section and that originated at least 100 covered credit transactions for small businesses in each of calendar years 2022 and 2023 shall comply with the requirements of this subpart beginning January 1, 2026.

(4) A financial institution that did not originate at least 100 covered credit transactions for small businesses in each of calendar years 2022 and 2023 but subsequently originates at least 100 such transactions in two consecutive calendar years shall comply with the requirements of this subpart in accordance with § 1002.105(b), but in any case no earlier than January 1, 2026.

(c) *Special transitional rules*—(1) *Collection of certain information prior to a financial institution's compliance date.* A financial institution as described in paragraphs (b)(1), (2), or (3) of this section is permitted, but not required, to collect information regarding whether an applicant for a covered credit transaction is a minority-owned business, a women-owned business, and/or an LGBTQI+-owned business under § 1002.107(a)(18), and the ethnicity, race, and sex of the applicant's principal owners under § 1002.107(a)(19) beginning 12 months prior to its applicable compliance date as set forth in paragraphs (b)(1), (2), or (3) of this section. A financial institution collecting such information pursuant to this paragraph (c)(1) must do so in accordance with the requirements set out in §§ 1002.107(a)(18) and (19), 1002.108, and 1002.111(b) and (c).

(2) *Determining which compliance date applies to a financial institution that does not collect information sufficient to determine small business status.* A financial institution that is unable to determine the number of covered credit transactions it originated for small businesses in each of calendar years 2022 and 2023 for purposes of determining its compliance date pursuant to paragraph (b) of this section, because for some or all of this period it does not have readily accessible the information needed to determine whether its covered credit transactions were originated for small businesses as defined in § 1002.106(b), is permitted to use any reasonable method to estimate its originations to small businesses for either or both of the calendar years 2022 and 2023.

■ 7. Appendices E and F are added to read as follows:

Appendix E to Part 1002—Sample Form for Collecting Certain Applicant-Provided Data Under Subpart B

BILLING CODE 4810–AM–P

Sample data collection form

Federal law requires that we request the following information to help ensure that all small businesses applying for loans and other kinds of credit are treated fairly and that communities' small business credit needs are met.

One or more employees or officers involved in making a determination concerning your application may have access to the information provided on this form. However, **FEDERAL LAW PROHIBITS DISCRIMINATION** on the basis of your answers on this form. Additionally, we cannot discriminate on the basis of whether you provide this information.

While you are not required to provide this information, we encourage you to do so. Importantly, our staff are not permitted to discourage you in any way from responding to these questions. **Filling out this form will help to ensure that ALL small business owners are treated fairly.**

Business ownership status

Please indicate the business ownership status of your small business. For the purposes of this form, your business is a minority-owned, women-owned, or LGBTQI+-owned business if one or more minorities,* women, or LGBTQI+ individuals (i) directly or indirectly own or control more than 50 percent of the business AND (ii) receive more than 50 percent of the net profits/losses of the business.

What is your business ownership status?

(Check one or more of the options below)

☐ **Minority-owned business**

☐ **Women-owned business**

☐ **LGBTQI+-owned business**

– or –

☐ **None of these apply**

– or –

☐ **I do not wish to provide this information**

*Minority means Hispanic or Latino, American Indian or Alaska Native, Asian, Black or African American, or Native Hawaiian or Other Pacific Islander. A multi-racial or multi-ethnic individual is a minority for this purpose.

Number of principal owners

For purposes of this form, a principal owner is any individual who owns 25 percent or more of the equity interest of a business. A business might not have any principal owners if, for example, it is not directly owned by any individuals (i.e., if it is owned by another entity or entities) or if no individual directly owns at least 25 percent of the business.

How many principal owners does your business have? *(Check one)*

☐ **0**

☐ **1**

☐ **2**

☐ **3**

☐ **4**

Demographic information about principal owners

As a reminder, applicants are not required to provide this information but are encouraged to do so. We cannot discriminate on the basis of any person's ethnicity, race, or sex/gender. Additionally, we cannot discriminate on the basis of whether you provide this information.

Please fill out one sheet for each principal owner.

1 Are you Hispanic or Latino?

i.e., What's your ethnicity? (Check one or more)

- ☐ **Hispanic or Latino**
  - ☐ Cuban
  - ☐ Mexican
  - ☐ Puerto Rican
  - ☐ Other Hispanic or Latino *(Please specify your origin, for example, Argentinean, Colombian, Dominican, Nicaraguan, Salvadoran, Spaniard, and so on):*
- ☐ **Not Hispanic or Latino**

– or –

- ☐ **I do not wish to provide my ethnicity**

2 What is your sex/gender?

(Please specify):

– or –

- ☐ **I do not wish to provide my sex/gender**

3 What is your race?

(Check one or more)

- ☐ **American Indian or Alaska Native** *(Please specify the name of your enrolled or principal tribe):*
- ☐ **Asian**
  - ☐ Asian Indian
  - ☐ Chinese
  - ☐ Filipino
  - ☐ Japanese
  - ☐ Korean
  - ☐ Vietnamese
  - ☐ Other Asian *(Please specify your race, for example, Cambodian, Hmong, Laotian, Pakistani, Thai, and so on):*
- ☐ **Black or African American**
  - ☐ African American
  - ☐ Ethiopian
  - ☐ Haitian
  - ☐ Jamaican
  - ☐ Nigerian
  - ☐ Somali
  - ☐ Other Black or African American *(Please specify your race, for example, Barbadian, Ghanaian, South African, and so on):*
- ☐ **Native Hawaiian or Other Pacific Islander**
  - ☐ Guamanian or Chamorro
  - ☐ Native Hawaiian
  - ☐ Samoan
  - ☐ Other Pacific Islander *(Please specify your race, for example, Fijian, Tongan, and so on):*
- ☐ **White**

– or –

- ☐ **I do not wish to provide my race**

BILLING CODE 4810–AM–C

Appendix F to Part 1002—Tolerances for Bona Fide Errors in Data Reported Under Subpart B

As set out in § 1002.112(b) and in comment 112(b)–1, a financial institution is presumed to maintain procedures reasonably adapted to avoid errors with respect to a given data field if the number of errors found in a random sample of a financial institution's data submission for a given data field do not equal or exceed the threshold in column C of the following table (Table 1, Tolerance Thresholds for Bona Fide Errors):

TABLE 1 TO APPENDIX F—TOLERANCE THRESHOLDS FOR BONA FIDE ERRORS

Small business lending application register count (A)	Random sample size[986] (B)	Threshold (#) (C)	Threshold (%) (D)
100–130	47	3	6.4
131–190	56	3	5.4
191–500	59	3	5.1
501–100,000	79	4	5.1
100,001+	159	4	2.5

The size of the random sample, under column B, shall depend on the size of the financial institution's small business lending application register, as shown in column A of the Threshold Table.

The thresholds in column C of the Threshold Table reflect the number of unintentional errors a financial institution may make within a particular data field (*e.g.,* the credit product data field within the credit type data point or the ethnicity data field for a particular principal owner within the ethnicity, race, and sex of principal owners data point) in a small business lending application register that would be deemed bona fide errors for purposes of § 1002.112(b).

For instance, a financial institution that submitted a small business lending application register containing 105 applications would be subject to a threshold of three errors per data field. If the financial institution had made two errors in reporting loan amount and two errors reporting gross annual income, all of these errors would be covered by the bona fide error provision of § 1002.112(b) and would not constitute a violation of the Act or this part. If the same financial institution had made four errors in reporting loan amount and two errors reporting gross annual income, the bona fide error provision of § 1002.112(b) would not apply to the four loan amount errors but would still apply to the two gross annual income errors.

Even when the number of errors in a particular data field do not equal or exceed the threshold in column C, if either there is a reasonable basis to believe that errors in that field were intentional or there is evidence that the financial institution did not maintain procedures reasonably adapted to avoid such errors, then the errors are not bona fide errors under § 1002.112(b).

For purposes of determining bona fide errors under § 1002.112(b), the term ''data field'' generally refers to individual fields. Some data fields may allow for more than one response. For example, with respect to information on the ethnicity or race of an applicant's principal owners, a data field may identify more than one race or more than one ethnicity for a given person. If one or more of the ethnicities or races identified in a data field are erroneous, they count as one (and only one) error for that data field.

[986] For a financial institution with fewer than 30 entries in its small business lending application register, the full sample size is the financial institution's total number of entries. The threshold number for such financial institutions remains three. Accordingly, the threshold percentage will be higher for financial institutions with fewer than 30 entries in their registers

■ 8. In Supplement I to part 1002:

■ a. Under *Section 1002.5—Rules Concerning Requests for Information,* revise *Paragraph 5(a)(2)* and *Paragraph 5(a)(4);*

■ b. Under *Section 1002.12—Record Retention,* revise *12(b)(7) Preapplication marketing information;*

■ c. Under *Section 1002.13—Information for Monitoring Purposes,* revise *13(b) Obtaining of information;* and

■ d. Add: *Section 1002.102—Definitions; Section 1002.103—Covered Applications; Section 1002.104—Covered Credit Transactions and Excluded Transactions; Section 1002.105—Covered Financial Institutions and Exempt Institutions; Section 1002.106—Business and Small Business; Section 1002.107—Compilation of Reportable Data; Section 1002.108—Firewall; Section 1002.109—Reporting of Data to the Bureau; Section 1002.110—Publication of Data and Other Disclosures; Section 1002.111—Recordkeeping; Section 1002.112—Enforcement;* and *Section 1002.114—Effective Date, Compliance Date, and Special Transition Rules.*

The revisions and additions read as follows:

Supplement I to Part 1002—Official Interpretations

* * * * *

Section 1002.5—Rules Concerning Requests for Information

* * * * *

5(a)(2) Required Collection of Information

1. *Local laws.* Information that a creditor is allowed to collect pursuant to a ''state'' statute or regulation includes information required by a local statute, regulation, or ordinance.

2. *Information required by Regulation C.* Regulation C, 12 CFR part 1003, generally requires creditors covered by the Home Mortgage Disclosure Act (HMDA) to collect and report information about the race, ethnicity, and sex of applicants for certain dwelling-secured loans, including some types of loans not covered by § 1002.13.

3. *Collecting information on behalf of creditors.* Persons such as loan brokers and correspondents do not violate the ECOA or Regulation B if they collect information that they are otherwise prohibited from collecting, where the purpose of collecting the information is to provide it to a creditor that is subject to subpart B of this part, the Home Mortgage Disclosure Act, or another Federal or State statute or regulation requiring data collection.

4. *Information required by subpart B.* Subpart B of this part generally requires creditors that are covered financial institutions as defined in § 1002.105(b) to collect and report information about the ethnicity, race, and sex of the principal owners of applicants for certain small business credit, as well as whether the applicant is a minority-owned business, a women-owned business, or an LGBTQI+-owned business, as defined in § 1002.102(m), (s), and (*l*), respectively.

5(a)(4) Other Permissible Collection of Information

1. *Other permissible collection of information.* Information regarding ethnicity, race, and sex that is not required to be collected pursuant to Regulation C, 12 CFR part 1003, or subpart B of this part, may nevertheless be collected under the circumstances set forth in § 1002.5(a)(4) without violating § 1002.5(b). The information collected pursuant to 12 CFR part 1003 must be retained pursuant to the requirements of § 1002.12. The information collected pursuant to subpart B of this part must be retained pursuant to the requirements set forth in § 1002.111.

* * * * *

Section 1002.12—Record Retention

* * * * *

12(b) Preservation of Records

* * * * *

12(b)(7) Preapplication Marketing Information

1. *Prescreened credit solicitations.* The rule requires creditors to retain copies of prescreened credit solicitations. For purposes of this part, a prescreened solicitation is an ''offer of credit'' as described in 15 U.S.C. 1681a(1) of the Fair Credit Reporting Act. A creditor complies with § 1002.12(b)(7) if it retains a copy of each solicitation mailing that contains different terms, such as the amount of credit offered, annual percentage rate, or annual fee.

2. *List of criteria.* A creditor must retain the list of criteria used to select potential recipients. This includes the criteria used by the creditor both to determine the potential recipients of the particular solicitation and to determine who will actually be offered credit.

3. *Correspondence.* A creditor may retain correspondence relating to consumers' complaints about prescreened solicitations in any manner that is reasonably accessible and is understandable to examiners. There is no requirement to establish a separate database or set of files for such correspondence, or to match consumer complaints with specific solicitation programs.

* * * * *

Section 1002.13—Information for Monitoring Purposes

* * * * *

13(b) Obtaining of Information

1. *Forms for collecting data.* A creditor may collect the information specified in § 1002.13(a) either on an application form or on a separate form referring to the application. Appendix B to this part provides for two alternative data collection model forms for use in complying with the requirements of § 1002.13(a)(1)(i) and (ii) to collect information concerning an applicant's ethnicity, race, and sex. When a creditor collects ethnicity and race information pursuant to § 1002.13(a)(1)(i)(A), the applicant must be offered the option to select more than one racial designation. When a creditor collects ethnicity and race information pursuant to § 1002.13(a)(1)(i)(B), the applicant must be offered the option to select more than one ethnicity designation and more than one racial designation.

2. *Written applications.* The regulation requires written applications for the types of credit covered by § 1002.13. A creditor can satisfy this requirement by recording on paper or by means of computer the information that the applicant provides orally and that the creditor normally considers in a credit decision.

3. *Telephone, mail applications.* i. A creditor that accepts an application by telephone or mail must request the monitoring information.

ii. A creditor that accepts an application by mail need not make a special request for the monitoring information if the applicant has failed to provide it on the application form returned to the creditor.

iii. If it is not evident on the face of an application that it was received by mail, telephone, or via an electronic medium, the creditor should indicate on the form or other application record how the application was received.

4. *Video and other electronic-application processes.* i. If a creditor takes an application through an electronic medium that allows the creditor to see the applicant, the creditor must treat the application as taken in person. The creditor must note the monitoring information on the basis of visual observation or surname, if the applicant chooses not to provide the information.

ii. If an applicant applies through an electronic medium without video capability, the creditor treats the application as if it were received by mail.

5. *Applications through loan-shopping services.* When a creditor receives an application through an unaffiliated loan-shopping service, it does not have to request the monitoring information for purposes of the ECOA or subpart A of this Regulation B. Creditors subject to the Home Mortgage Disclosure Act should be aware, however, that data collection may be called for under Regulation C (12 CFR part 1003), which generally requires creditors to report, among other things, the sex and race of an applicant on brokered applications or applications received through a correspondent. Similarly, creditors that are covered financial institutions under subpart B of this Regulation may also be required to collect, report, and maintain certain data, as set forth in subpart B of this Regulation.

6. *Inadvertent notation.* If a creditor inadvertently obtains the monitoring information in a dwelling-related transaction not covered by § 1002.13, the creditor may process and retain the application without violating the regulation.

* * * * *

Section 1002.102—Definitions

102(b) Applicant

1. *General.* In no way are the limitations to the term applicant in § 1002.102(b) of subpart B intended to repeal, abrogate, annul, impair, change, or interfere with the scope of the term applicant in § 1002.2(e) as applicable to subpart A.

102(l) LGBTQI+-Owned Business

1. *General.* In order to be an LGBTQI+-owned business for purposes of subpart B of this part, a business must satisfy both prongs of the definition of LGBTQI+-owned business. First, one or more LGBTQI+ individuals must own or control more than 50 percent of the business. However, it is not necessary that one or more LGBTQI+ individuals both own and control more than 50 percent of the business. For example, a business that is owned entirely by one or more LGBTQI+ individuals but is not controlled by any one or more such individuals satisfies the first prong of the definition. Similarly, a business that is controlled by an LGBTQI+ individual satisfies this first prong of the definition, even if none of the individuals with ownership in the business are LGBTQI+ individuals. If a business does not satisfy this first prong of the definition, it is not an LGBTQI+-owned business. Second, 50 percent or more of the net profits or losses must accrue to one or more LGBTQI+ individuals. If a business does not satisfy this second prong of the definition, it is not an LGBTQI+-owned business, regardless of whether it satisfies the first prong of the definition.

2. *Purpose of definition.* The definition of LGBTQI+-owned business is used only when an applicant determines if it is an LGBTQI+-owned business for purposes of § 1002.107(a)(18). A financial institution shall provide an applicant with the definition of LGBTQI+-owned business when asking the applicant to provide its LGBTQI+-owned business status pursuant to § 1002.107(a)(18). A financial institution satisfies this requirement if it provides the definition as set forth in the sample data collection form in appendix E. The financial institution must provide additional clarification by referencing the definition of LGBTQI+ individual as set forth in § 1002.102(k) if asked by the applicant. The financial institution is neither permitted nor required to make its own determination regarding the applicant's LGBTQI+-owned business status.

3. *Further clarifications of terms used in the definition of LGBTQI+-owned*

business. In order to assist an applicant when determining whether it is an LGBTQI+-owned business, a financial institution may provide the applicant with the definitions of ownership, control, and accrual of net profits or losses and related concepts set forth in comments 102(*l*)–4 through –6. A financial institution may assist an applicant when the applicant is determining its LGBTQI+-owned business status but is not required to do so. For purposes of reporting an applicant's status, a financial institution relies on the applicant's determinations of its ownership, control, and accrual of net profits and losses.

4. *Ownership.* For purposes of determining if a business is an LGBTQI+-owned business, an individual owns a business if that individual directly or indirectly, through any contract, arrangement, understanding, relationship or otherwise, has an equity interest in the business. Examples of ownership include being the sole proprietor of a sole proprietorship, directly or indirectly owning or holding the stock of a corporation or company, directly or indirectly having a partnership interest in a business, or directly or indirectly having a membership interest in a limited liability company. Indirect as well as direct ownership are used when determining ownership for purposes of §§ 1002.102(*l*) and 1002.107(a)(18). Thus, where applicable, ownership must be traced through corporate or other indirect ownership structures. For example, assume that the applicant is company A. If company B owns 60 percent of applicant company A and an individual owns 100 percent of company B, the individual owns 60 percent of applicant company A. Similarly, if an individual directly owns 20 percent of applicant company A and is an equal partner in partnership B that owns the remaining 80 percent of applicant company A, the individual owns 60 percent of applicant company A (*i.e.,* 20 percent due through direct ownership and 40 percent indirectly through partnership B). A trustee is considered the owner of the trust. Thus, if a trust owns a business and the trust has two co-trustees, each co-trustee owns 50 percent of the business.

5. *Control.* An individual controls a business if that individual has significant responsibility to manage or direct the business. An individual controls a business if the individual is an executive officer or senior manager (*e.g.,* a chief executive officer, chief financial officer, chief operating officer, managing member, general partner, president, vice president, or treasurer) or regularly performs similar functions. Additionally, a business may be controlled by two or more LGBTQI+ individuals if those individuals collectively control the business, such as constituting a majority of the board of directors or a majority of the partners of a partnership.

6. *Accrual of net profits or losses.* A business's net profits and losses accrue to an individual if that individual receives the net profits or losses, is legally entitled or required to receive the net profits or losses, or is legally entitled or required to recognize the net profits or losses for tax purposes.

102(m) Minority-Owned Business

1. *General.* In order to be a minority-owned business for purposes of subpart B of this part, a business must satisfy both prongs of the definition of minority-owned business. First, one or more American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, or Hispanic or Latino individuals must own or control more than 50 percent of the business. However, it is not necessary that one or more American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, or Hispanic or Latino individuals both own and control more than 50 percent of the business. For example, a business that is owned entirely, but is not controlled by, individuals belonging to one of these groups satisfies the first prong of the definition. Similarly, a business that is controlled by an American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, or Hispanic or Latino individual satisfies this first prong of the definition, even if none of the individuals with ownership in the business are American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, or Hispanic or Latino. If a business does not satisfy this first prong of the definition, it is not a minority-owned business. Second, 50 percent or more of the net profits or losses must accrue to one or more individuals belonging to these groups. If a business does not satisfy this second prong of the definition, it is not a minority-owned business, regardless of whether it satisfies the first prong of the definition.

2. *Purpose of definition.* The definition of minority-owned business is used only when an applicant determines if it is a minority-owned business for purposes of § 1002.107(a)(18). A financial institution shall provide an applicant with the definition of minority-owned business when asking the applicant to provide its minority-owned business status pursuant to § 1002.107(a)(18), but the financial institution is neither permitted nor required to make its own determination regarding the applicant's minority-owned business status.

3. *Further clarifications of terms used in the definition of minority-owned business.* In order to assist an applicant when determining whether it is a minority-owned business, a financial institution may provide the applicant with the definitions of ownership, control, and accrual of net profits or losses and related concepts set forth in comments 102(m)–4 through –6. A financial institution may assist an applicant when the applicant is determining its minority-owned business status but is not required to do so. For purposes of reporting an applicant's status, a financial institution relies on the applicant's determinations of its ownership, control, and accrual of net profits and losses.

4. *Ownership.* For purposes of determining if a business is a minority-owned business, an individual owns a business if that individual directly or indirectly, through any contract, arrangement, understanding, relationship or otherwise, has an equity interest in the business. Examples of ownership include being the sole proprietor of a sole proprietorship, directly or indirectly owning or holding the stock of a corporation or company, directly or indirectly having a partnership interest in a business, or directly or indirectly having a membership interest in a limited liability company. Indirect as well as direct ownership are used when determining ownership for purposes of §§ 1002.102(m) and 1002.107(a)(18). Thus, where applicable, ownership must be traced through corporate or other indirect ownership structures. For example, assume that the applicant is company A. If company B owns 60 percent of applicant company A and an individual owns 100 percent of company B, the individual owns 60 percent of applicant company A. Similarly, if an individual directly owns 20 percent of applicant company A and is an equal partner in partnership B that owns the remaining 80 percent of applicant company A, the individual owns 60 percent of applicant company A (*i.e.,* 20 percent due through direct ownership and 40 percent indirectly through partnership B). A trustee is considered the owner of the trust. Thus, if a trust owns a business and the trust

has two co-trustees, each co-trustee owns 50 percent of the business.

5. *Control.* An individual controls a business if that individual has significant responsibility to manage or direct the business. An individual controls a business if the individual is an executive officer or senior manager (*e.g.,* a chief executive officer, chief financial officer, chief operating officer, managing member, general partner, president, vice president, or treasurer) or regularly performs similar functions. Additionally, a business may be controlled by two or more American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, or Hispanic or Latino individuals if those individuals collectively control the business, such as constituting a majority of the board of directors or a majority of the partners of a partnership.

6. *Accrual of net profits or losses.* A business's net profits and losses accrue to an individual if that individual receives the net profits or losses, is legally entitled or required to receive the net profits or losses, or is legally entitled or required to recognize the net profits or losses for tax purposes.

7. *Multi-racial and multi-ethnic individuals.* For purposes of subpart B of this part, an individual who is multi-racial or multi-ethnic constitutes an individual for whom the definition of minority-owned business may apply, depending on whether the individual meets the other requirements of the definition. For example, an individual who is both Asian and White is an individual for whom the definition of minority-owned business shall apply if the individual meets the other requirements of the definition related to ownership or control and accrual of profits or losses.

8. *Relationship to disaggregated subcategories used to determine ethnicity and race of principal owners.* The ethnicity and race categories used in this section are aggregate ethnicity (Hispanic or Latino) and race (American Indian or Alaska Native, Asian, Black or African American, and Native Hawaiian or Other Pacific Islander) categories. Those ethnicity and race categories are the same aggregate categories used (along with Not Hispanic or Latino for ethnicity, and White for race) to collect an applicant's principal owners' ethnicity and race pursuant to § 1002.107(a)(19).

102(o) Principal Owner

1. *Individual.* Only an individual can be a principal owner of a business for purposes of subpart B of this part. Entities, such as trusts, partnerships, limited liability companies, and corporations, are not principal owners for this purpose. Additionally, an individual must directly own an equity share of 25 percent or more in the business in order to be a principal owner. Unlike the determination of ownership for purposes of collecting and reporting minority-owned business status, women-owned business status, and LGBTQI+-owned business status, indirect ownership is not considered when determining if someone is a principal owner for purposes of collecting and reporting principal owners' ethnicity, race, and sex or the number of principal owners. Thus, when determining who is a principal owner, ownership is not traced through multiple corporate structures to determine if an individual owns 25 percent or more of the equity interests. For example, if individual A directly owns 20 percent of a business, individual B directly owns 20 percent, and partnership C owns 60 percent, the business does not have any owners who satisfy the definition of principal owner set forth in § 1002.102(o), even if individual A and individual B are the only partners in the partnership C. Similarly, if individual A directly owns 30 percent of a business, individual B directly owns 20 percent, and trust D owns 50 percent, individual A is the only principal owner as defined in § 1002.102(o), even if individual B is the sole trustee of trust D.

2. *Trustee.* Although a trust is not considered a principal owner of a business for the purposes of subpart B, if the applicant for a covered credit transaction is a trust, a trustee is considered the owner of the trust. Thus, if a trust is an applicant for a covered credit transaction and the trust has two co-trustees, each co-trustee is considered to own 50 percent of the business and would each be a principal owner as defined in § 1002.102(o). In contrast, if the trust has five co-trustees, each co-trustee is considered to own 20 percent of the business and would not meet the definition of principal owner under § 1002.102(o).

3. *Purpose of definition.* A financial institution shall provide an applicant with the definition of principal owner when asking the applicant to provide the number of its principal owners pursuant to § 1002.107(a)(20) and the ethnicity, race, and sex of its principal owners pursuant to § 1002.107(a)(19). See comments 107(a)(19)–2 and 107(a)(20)–1.

102(s) Women-Owned Business

1. *General.* In order to be a women-owned business for purposes of subpart B of this part, a business must satisfy both prongs of the definition of women-owned business. First, one or more women must own or control more than 50 percent of the business. However, it is not necessary that one or more women both own and control more than 50 percent of the business. For example, a business that is owned entirely by women but is not controlled by any women satisfies the first prong of the definition. Similarly, a business that is controlled by a woman satisfies this first prong of the definition, even if none of the individuals with ownership in the business are women. If a business does not satisfy this first prong of the definition, it is not a women-owned business. Second, 50 percent or more of the net profits or losses must accrue to one or more women. If a business does not satisfy this second prong of the definition, it is not a women-owned business, regardless of whether it satisfies the first prong of the definition.

2. *Purpose of definition.* The definition of women-owned business is used only when an applicant determines if it is a women-owned business pursuant to § 1002.107(a)(18). A financial institution shall provide an applicant with the definition of women-owned business when asking the applicant to provide its women-owned business status pursuant to § 1002.107(a)(18), but the financial institution is neither permitted nor required to make its own determination regarding the applicant's women-owned business status.

3. *Further clarifications of terms used in the definition of women-owned business.* In order to assist an applicant when determining whether it is a women-owned business, a financial institution may provide the applicant with the definitions of ownership, control, and accrual of net profits or losses and related concepts set forth in comments 102(s)–4 through –6. A financial institution may assist an applicant when the applicant is determining its women-owned business status but is not required to do so. For purposes of reporting an applicant's status, a financial institution relies on the applicant's determinations of its ownership, control, and accrual of net profits and losses.

4. *Ownership.* For purposes of determining if a business is a women-owned business, an individual owns a business if that individual directly or indirectly, through any contract, arrangement, understanding, relationship or otherwise, has an equity interest in the business. Examples of ownership include being the sole proprietor of a sole proprietorship,

directly or indirectly owning or holding the stock of a corporation or company, directly or indirectly having a partnership interest in a business, or directly or indirectly having a membership interest in a limited liability company. Indirect as well as direct ownership are used when determining ownership for purposes of §§ 1002.102(s) and 1002.107(a)(18). Thus, where applicable, ownership must be traced through corporate or other indirect ownership structures. For example, assume that the applicant is company A. If company B owns 60 percent of the applicant company A and an individual owns 100 percent of company B, the individual owns 60 percent of the applicant company A. Similarly, if an individual directly owns 20 percent of the applicant company A and is an equal partner in a partnership B that owns the remaining 80 percent of the applicant company A, the individual owns 60 percent of applicant company A (*i.e.,* 20 percent due through direct ownership and 40 percent indirectly through partnership B). A trustee is considered the owner of the trust. Thus, if a trust owns a business and the trust has two co-trustees, each co-trustee owns 50 percent of the business.

5. *Control.* An individual controls a business if that individual has significant responsibility to manage or direct the business. An individual controls a business if the individual is an executive officer or senior manager (*e.g.,* a chief executive officer, chief financial officer, chief operating officer, managing member, general partner, president, vice president, or treasurer) or regularly performs similar functions. Additionally, a business may be controlled by two or more women if those women collectively control the business, such as constituting a majority of the board of directors or a majority of the partners of a partnership.

6. *Accrual of net profits or losses.* A business's net profits and losses accrue to an individual if that individual receives the net profits or losses, is legally entitled or required to receive the net profits or losses, or is legally entitled or required to recognize the net profits or losses for tax purposes.

Section 1002.103—Covered Applications

103(a) Covered Application

1. *General.* Subject to the requirements of subpart B of this part, a financial institution has latitude to establish its own application procedures, including designating the type and amount of information it will require from applicants.

2. *Procedures used.* The term ''procedures'' refers to the actual practices followed by a financial institution as well as its stated application procedures. For example, if a financial institution's stated policy is to require all applications to be in writing on the financial institution's application form, but the financial institution also makes credit decisions based on oral requests, the financial institution's procedures are to accept both oral and written applications.

3. *Consistency with subpart A.* Bureau interpretations that appear in this supplement I in connection with §§ 1002.2(f) and 1002.9 are generally applicable to the definition of a covered application in § 1002.103. However, the definition of a covered application in § 1002.103 does not include inquiries and prequalification requests. The definition of a covered application also does not include reevaluation, extension, or renewal requests on an existing business credit account, unless the request seeks additional credit amounts. See § 1002.103(b).

4. *Solicitations and firm offers of credit.* For purposes of subpart B of this part, the term covered application does not include solicitations, firm offers of credit, or other evaluations initiated by the financial institution because in these situations the business has not made a request for credit. For example, if a financial institution sends a firm offer of credit to a business for a $10,000 line of credit, and the business does not respond, it is not a covered application because the business never made a request for credit. However, using the same example, if the business seeks to obtain the credit offered, assuming the requirements of a covered application are otherwise met, the business's request constitutes a covered application for purposes of subpart B of this part. See also comment 103(b)–4.

5. *Requests for multiple covered credit transactions at one time.* Assuming the requirements of a covered application are met, if an applicant makes a request for two or more covered credit transactions at the same time, the financial institution reports each request as a separate covered application. For example, if an applicant is seeking both a term loan and a line of credit and requests them both on the same application form, the financial institution reports the requests as two separate covered applications, one for a term loan and another for a line of credit. See § 1002.107(d) for the requirements for reusing data so that a financial institution need only ask once for certain data required under § 1002.107(a). If, on the other hand, the applicant is only requesting a single covered credit transaction, but has not decided on which particular product, the financial institution reports the request as a single covered application. For example, if the applicant indicates interest in either a term loan or a line of credit, but not both, the financial institution reports the request as a single covered application. See comment 107(a)(5)–1 for instructions on reporting credit product in this situation.

6. *Initial request for a single covered credit transaction that would result in the origination of multiple covered credit transactions.* Assuming the requirements of a covered application are met, if an applicant initially makes a request for one covered credit transaction, but over the course of the application process requests multiple covered credit transactions, each covered credit transaction must be reported as a separate covered application. See § 1002.107(d) for the requirements for reusing data so that a financial institution need only ask once for certain data required under § 1002.107(a).

7. *Requests for multiple lines of credit at one time.* Assuming the requirements of a covered application are met, if an applicant requests multiple lines of credit on a single credit account, it is reported as one or more covered applications based on the procedures used by the financial institution for the type of credit account. For example, if a financial institution treats a request for multiple lines of credit at one time as sub-components of a single account, the financial institution reports the request as a single covered application. If, on the other hand, the financial institution treats each line of credit as a separate account, then the financial institution reports each request for a line of credit as a separate covered application, as set forth in comment 103(a)–5.

8. *Duplicate applications.* If a financial institution receives two or more duplicate covered applications (*i.e.,* from the same applicant, for the same credit product, for the same amount, at or around the same time), the financial institution may treat the request as a single covered application for purposes of subpart B, so long as for purposes of determining whether to extend credit, it would also treat one or more of the applications as a duplicate under its procedures.

9. *Changes in whether there is a covered credit transaction.* In certain circumstances, an applicant may change the type of product requested during the course of the application process.

Assuming other requirements of a covered application are met, if an applicant initially requests a product that is not a covered credit transaction, but prior to final action taken decides to seek instead a product that is a covered credit transaction, the application is a covered application and must be reported pursuant to § 1002.109. In this circumstance, the financial institution shall endeavor to compile, maintain, and report the data required under § 1002.107(a) in a manner that is reasonable under the circumstances. If, on the other hand, an applicant initially requests a product that is a covered credit transaction, but prior to final action taken decides instead to seek a product that is not a covered credit transaction, the application is not a covered application and thus is not reported. See also § 1002.112(c)(4), which provides a safe harbor for incorrect collection of certain data if, at the time of collection, the financial institution had a reasonable basis for believing that the application was a covered application. Assuming other requirements of a covered application are met, if an applicant initially requests a product that is a covered credit transaction, the financial institution counteroffers with a product that is not a covered credit transaction, and the applicant declines to proceed or fails to respond, the application is reported as a covered application. For example, if an applicant initially applies for a term loan, but then, after consultation with the financial institution, decides that a lease would better meet its needs and decides to proceed with that product, the application is not a covered application and thus is not reported. However, if an applicant initially applies for a term loan, the financial institution offers to consider the applicant only for a lease, and the applicant refuses, the transaction is a covered application that must be reported.

10. *Multiple unaffiliated co-applicants.* If a covered financial institution receives a covered application from multiple businesses that are not affiliates, as defined by § 1002.102(a), it shall compile, maintain, and report data pursuant to §§ 1002.107 through 1002.109 for only a single applicant that is a small business, as defined in § 1002.106(b). A covered financial institution shall establish consistent procedures for designating a single small business for purposes of collecting and reporting data under subpart B in situations where there is more than one small business co-applicant, such as reporting on the first small business listed on an application form. For example, if three businesses jointly apply as co-applicants for a term loan to purchase a piece of equipment, but only one of the businesses is a small business, as defined in § 1002.106(b), the financial institution reports on the single small business. If, however, two of the businesses are small businesses, as defined in § 1002.106(b), the financial institution must have a procedure for designating which small business among multiple small business co-applicants it will report information on, such as consistently reporting on the first small business listed on an application form. See also § 1002.5(a)(4)(x), which permits a creditor to collect certain protected information about co-applicants under certain circumstances.

11. *Refinancings and evaluation, extension, or renewal requests that request additional credit amounts.* As discussed in comments 103(b)–2 and –3, assuming other requirements of a covered application are met, an applicant's request to refinance and an applicant's request for additional credit amounts on an existing account both constitute covered applications.

103(b) Circumstances That Are Not Covered Applications

1. *In general.* The circumstances set forth in § 1002.103(b) are not covered applications for purposes of subpart B of this part, even if considered applications under subpart A of this part. However, in no way are the exclusions in § 1002.103(b) intended to repeal, abrogate, annul, impair, change, or interfere with the scope of the term application in § 1002.2(f) as applicable to subpart A.

2. *Reevaluation, extension, or renewal requests that do not request additional credit amounts.* An applicant's request to change one or more terms of an existing account does not constitute a covered application, unless the applicant is requesting additional credit amounts on the account. For example, an applicant's request to extend the duration on a line of credit or to remove a guarantor would not be a covered application. However, assuming other requirements of a covered application are met, an applicant's request to refinance would be reportable. A refinancing occurs when an existing obligation is satisfied and replaced by a new obligation undertaken by the same borrower.

3. *Reevaluation, extension, or renewal requests that request additional credit amounts.* A Assuming other requirements of a covered application are met, an applicant's request for additional credit amounts on an existing account constitutes a covered application. For example, an applicant's request for a line increase on an existing line of credit, made in accordance with a financial institution's procedures for the type of credit requested, would be a covered application. As discussed in comment 107(a)(7)–4, when reporting a covered application that seeks additional credit amounts on an existing account, the financial institution need only report the additional credit amount sought, and not the entire credit amount. For example, if an applicant currently has a line of credit account for $100,000, and seeks to increase the line to $150,000, the financial institution reports the amount applied for as $50,000.

4. *Reviews or evaluations initiated by the financial institution.* For purposes of subpart B of this part, the term covered application does not include evaluations or reviews of existing accounts initiated by the financial institution because the business has not made a request for credit. For example, if a financial institution conducts periodic reviews of its existing lines of credit and decides to increase the business's line by $10,000, it is not a covered application because the business never made a request for the additional credit amounts. However, if such an evaluation or review of an existing account by a financial institution results in the financial institution inviting the business to apply for additional credit amounts on an existing account and the business does so, the business's request constitutes a covered application for purposes of subpart B of this part, assuming other requirements of a covered application are met. Similarly, as noted in comment 103(a)–4, the term covered application also does not include solicitations and firm offers of credit.

5. *Inquiries and prequalification requests.* An inquiry is a request by a prospective applicant for information about credit terms offered by the financial institution. A prequalification request is a request by a prospective applicant for a preliminary determination on whether the prospective applicant would likely qualify for credit under a financial institution's standards or for a determination on the amount of credit for which the prospective applicant would likely qualify. Inquiries and prequalification requests are not covered applications under subpart B of this part, even though in certain circumstances inquiries and prequalification requests may constitute

applications under subpart A. For example, while an inquiry or prequalification request may become an ''application'' under subpart A if the creditor evaluates information about the business, decides to decline the request, and communicates this to the business, such inquiries or prequalifications would not be ''covered applications'' under subpart B of this part. Whether a particular request is a covered application, or whether instead it is an inquiry or prequalification request that is not reportable under subpart B, may turn, for instance, on how a financial institution structures and processes such requests: does the financial institution require or encourage a preliminary review in order for a business to be considered for a covered credit transaction, or does the business voluntarily seek preliminary feedback as a tool to explore its options before it decides whether to apply for credit with the financial institution? The name used by the financial institution for such a request is not determinative. For example, under subpart B, a review is a reportable covered application if the financial institution requires the business, before it may apply for credit, to pass through a mandatory screening process that considers particular information about the business and denies or turns away the business if it is ineligible or unlikely to qualify for credit. In contrast, a business that requests a financial institution to identify credit products for which the business might qualify based on limited or self-described characteristics, and without any commitment from the financial institution to extend credit, may not have submitted a covered application for purposes of subpart B.

Section 1002.104—Covered Credit Transactions and Excluded Transactions

104(a) Covered Credit Transaction

1. *General.* The term ''covered credit transaction'' includes all business credit (including loans, lines of credit, credit cards, and merchant cash advances) unless otherwise excluded under § 1002.104(b).

104(b) Excluded Transactions

1. *Factoring.* The term ''covered credit transaction'' does not cover factoring as described herein. For the purpose of this subpart, factoring is an accounts receivable purchase transaction between businesses that includes an agreement to purchase, transfer, or sell a legally enforceable claim for payment for goods that the recipient has supplied or services that the recipient has rendered but for which payment in full has not yet been made. The name used by the financial institution for a product is not determinative of whether or not it is a ''covered credit transaction.'' This description of factoring is not intended to repeal, abrogate, annul, impair, or interfere with any existing interpretations, orders, agreements, ordinances, rules, or regulations adopted or issued pursuant to comment 9(a)(3)–3. A financial institution shall report an extension of business credit incident to a factoring arrangement that is otherwise a covered credit transaction as ''Other sales-based financing transaction'' under § 1002.107(a)(5).

2. *Leases.* The term ''covered credit transaction'' does not cover leases as described herein. A lease, for the purpose of this subpart, is a transfer from one business to another of the right to possession and use of goods for a term, and for primarily business or commercial (including agricultural) purposes, in return for consideration. A lease does not include a sale, including a sale on approval or a sale or return, or a transaction resulting in the retention or creation of a security interest. The name used by the financial institution for a product is not determinative of whether or not it is a ''covered credit transaction.''

3. *Consumer-designated credit.* The term ''covered credit transaction'' does not include consumer-designated credit that is used for business or agricultural purposes. A transaction qualifies as consumer-designated credit if the financial institution offers or extends the credit primarily for personal, family, or household purposes. For example, an open-end credit account used for both personal and business/agricultural purposes is not business credit for the purpose of subpart B of this part unless the financial institution designated or intended for the primary purpose of the account to be business/agricultural-related.

4. *Credit transaction purchases, purchases of an interest in a pool of credit transactions, and purchases of a partial interest in a credit transaction.* The term ''covered credit transaction'' does not cover the purchase of an originated credit transaction, the purchase of an interest in a pool of credit transactions, or the purchase of a partial interest in a credit transaction such as through a loan participation agreement. Such purchases do not, in themselves, constitute an application for credit. See also comment 109(a)(3)–2.i.

104(b)(1) Trade Credit

1. *General.* Trade credit, as defined in § 1002.104(b)(1), is excluded from the definition of a covered credit transaction. An example of trade credit involves a supplier that finances the sale of equipment, supplies, or inventory. However, an extension of business credit by a financial institution other than the supplier for the financing of such items is not trade credit. Also, credit extended by a business providing goods or services to another business is not trade credit for the purposes of this subpart where the supplying business intends to sell or transfer its rights as a creditor to a third party.

2. *Trade credit under subpart A.* The definition of trade credit under comment 9(a)(3)–2 applies to relevant provisions under subpart A, and § 1002.104(b)(1) is not intended to repeal, abrogate, annul, impair, or interfere with any existing interpretations, orders, agreements, ordinances, rules, or regulations adopted or issued pursuant to comment 9(a)(3)–2.

Section 1002.105—Covered Financial Institutions and Exempt Institutions

105(a) Financial Institution

1. *Examples.* Section 1002.105(a) defines a financial institution as any partnership, company, corporation, association (incorporated or unincorporated), trust, estate, cooperative organization, or other entity that engages in any financial activity. This definition includes, but is not limited to, banks, savings associations, credit unions, online lenders, platform lenders, community development financial institutions, Farm Credit System lenders, lenders involved in equipment and vehicle financing (captive financing companies and independent financing companies), commercial finance companies, organizations exempt from taxation pursuant to 26 U.S.C. 501(c), and governments or governmental subdivisions or agencies.

2. *Motor vehicle dealers.* Pursuant to § 1002.101(a), subpart B of this part excludes from coverage persons defined by section 1029 of the Consumer Financial Protection Act of 2010, title X of the Dodd-Frank Wall Street Reform and Consumer Protection Act, Public Law 111–203, 124 Stat. 1376, 2004 (2010).

105(b) Covered Financial Institution

1. *Preceding calendar year.* The definition of covered financial institution refers to preceding calendar years. For example, in 2029, the two preceding calendar years are 2027 and 2028. Accordingly, in 2029, Financial Institution A does not meet the loan-

volume threshold in § 1002.105(b) if did not originate at least 100 covered credit transactions for small businesses both during 2027 and during 2028.

2. *Origination threshold.* A financial institution qualifies as a covered financial institution based on total covered credit transactions originated for small businesses, rather than covered applications received from small businesses. For example, if in both 2024 and 2025, Financial Institution B received 105 covered applications from small businesses and originated 95 covered credit transactions for small businesses, then for 2026, Financial Institution B is not a covered financial institution.

3. *Counting originations when multiple financial institutions are involved in originating a covered credit transaction.* For the purpose of counting originations to determine whether a financial institution is a covered financial institution under § 1002.105(b), in a situation where multiple financial institutions are involved in originating a single covered credit transaction, only the last financial institution with authority to set the material terms of the covered credit transaction is required to count the origination.

4. *Counting originations after adjustments to the gross annual revenue threshold due to inflation.* Pursuant to § 1002.106(b)(2), every five years, the gross annual revenue threshold used to define a small business in § 1002.106(b)(1) shall be adjusted, if necessary, to account for inflation. The first time such an adjustment could occur is in 2030, with an effective date of January 1, 2031. A financial institution seeking to determine whether it is a covered financial institution applies the gross annual revenue threshold that is in effect for each year it is evaluating. For example, a financial institution seeking to determine whether it is a covered financial institution in 2032 counts its originations of covered credit transactions for small businesses in calendar years 2030 and 2031. The financial institution applies the initial $5 million threshold to evaluate whether its originations were to small businesses in 2030. In this example, if the small business threshold were increased to $5.5 million effective January 1, 2031, the financial institution applies the $5.5 million threshold to count its originations for small businesses in 2031.

5. *Reevaluation, extension, or renewal requests, as well as credit line increases and other requests for additional credit amounts.* While requests for additional credit amounts on an existing account can constitute a ''covered application'' pursuant to § 1002.103(b)(1), such requests are not counted as originations for the purpose of determining whether a financial institution is a covered financial institution pursuant to § 1002.105(b). In addition, transactions that extend, renew, or otherwise amend a transaction are not counted as originations. For example, if a financial institution originates 50 term loans and 30 lines of credit for small businesses in each of the preceding two calendar years, along with 25 line increases for small businesses in each of those years, the financial institution is not a covered financial institution because it has not originated at least 100 covered credit transactions in each of the two preceding calendar years.

6. *Annual consideration.* Whether a financial institution is a covered financial institution for a particular year depends on its small business lending activity in the preceding two calendar years. Therefore, whether a financial institution is a covered financial institution is an annual consideration for each year that data may be compiled and maintained for purposes of subpart B of this part. A financial institution may be a covered financial institution for a given year of data collection (and the obligations arising from qualifying as a covered financial institution shall continue into subsequent years, pursuant to §§ 1002.110 and 1002.111), but the same financial institution may not be a covered financial institution for the following year of data collection. For example, Financial Institution C originated 105 covered transactions for small businesses in both 2024 and 2025. In 2026, Financial Institution C is a covered financial institution and therefore is obligated to compile and maintain applicable 2026 small business lending data under § 1002.107(a). During 2026, Financial Institution C originates 95 covered transactions for small businesses. In 2027, Financial Institution C is not a covered financial institution with respect to 2027 small business lending data, and is not obligated to compile and maintain 2027 data under § 1002.107(a) (although Financial Institution C may volunteer to collect and maintain 2027 data pursuant to § 1002.5(a)(4)(vii) and as explained in comment 105(b)–10). Pursuant to § 1002.109(a), Financial Institution C shall submit its small business lending application register for 2026 data in the format prescribed by the Bureau by June 1, 2027 because Financial Institution C is a covered financial institution with respect to 2026 data, and the data submission deadline of June 1, 2027 applies to 2026 data.

7. *Merger or acquisition—coverage of surviving or newly formed institution.* After a merger or acquisition, the surviving or newly formed financial institution is a covered financial institution under § 1002.105(b) if it, considering the combined lending activity of the surviving or newly formed institution and the merged or acquired financial institutions (or acquired branches or locations), satisfies the criteria included in § 1002.105(b). For example, Financial Institutions A and B merge. The surviving or newly formed financial institution meets the threshold in § 1002.105(b) if the combined previous components of the surviving or newly formed financial institution (A plus B) would have originated at least 100 covered credit transactions for small businesses for each of the two preceding calendar years. Similarly, if the combined previous components and the surviving or newly formed financial institution would have reported at least 100 covered transactions for small businesses for the year previous to the merger as well as 100 covered transactions for small businesses for the year of the merger, the threshold described in § 1002.105(b) would be met and the surviving or newly formed financial institution would be a covered institution under § 1002.105(b) for the year following the merger. Comment 105(b)–8 discusses a financial institution's responsibilities with respect to compiling and maintaining (and subsequently reporting) data during the calendar year of a merger.

8. *Merger or acquisition—coverage specific to the calendar year of the merger or acquisition.* The scenarios described below illustrate a financial institution's responsibilities specifically for data from the calendar year of a merger or acquisition. For purposes of these illustrations, an ''institution that is not covered'' means either an institution that is not a financial institution, as defined in § 1002.105(a), or a financial institution that is not a covered financial institution, as defined in § 1002.105(b).

i. Two institutions that are not covered financial institutions merge. The surviving or newly formed institution meets all of the requirements necessary to be a covered financial institution. No data are required to be compiled, maintained, or reported for the calendar year of the merger (even though the merger creates an institution that meets all of the requirements necessary to be a covered financial institution).

ii. A covered financial institution and an institution that is not covered merge. The covered financial institution is the surviving institution, or a new covered financial institution is formed. For the calendar year of the merger, data are required to be compiled, maintained, and reported for covered applications from the covered financial institution and is optional for covered applications from the financial institution that was previously not covered.

iii. A covered financial institution and an institution that is not covered merge. The institution that is not covered is the surviving institution and remains not covered after the merger, or a new institution that is not covered is formed. For the calendar year of the merger, data are required to be compiled and maintained (and subsequently reported) for covered applications from the previously covered financial institution that took place prior to the merger. After the merger date, compiling, maintaining, and reporting data is optional for applications from the institution that was previously covered for the remainder of the calendar year of the merger.

iv. Two covered financial institutions merge. The surviving or newly formed financial institution is a covered financial institution. Data are required to be compiled and maintained (and subsequently reported) for the entire calendar year of the merger. The surviving or newly formed financial institution files either a consolidated submission or separate submissions for that calendar year.

9. *Foreign applicability.* As discussed in comment 1(a)–2, Regulation B (including subpart B) generally does not apply to lending activities that occur outside the United States.

10. *Voluntary collection and reporting.* Section 1002.5(a)(4)(vii) through (x) permits a creditor that is not a covered financial institution under § 1002.105(b) to voluntarily collect and report information regarding covered applications from small businesses in certain circumstances. If a creditor is voluntarily collecting information for covered applications regarding whether the applicant is a minority-owned business, a women-owned business, and/or an LGBTQI+-owned business under § 1002.107(a)(18), and regarding the ethnicity, race, and sex of the applicant's principal owners under § 1002.107(a)(19), it shall do so in compliance with §§ 1002.107, 1002.108, 1002.111, 1002.112 as though it were a covered financial institution. If a creditor is reporting those covered applications from small businesses to the Bureau, it shall do so in compliance with §§ 1002.109 and 1002.110 as though it were a covered financial institution.

Section 1002.106—Business and Small Business

106(b) Small Business Definition

106(b)(1) Small Business

1. *Change in determination of small business status—business is ultimately not a small business.* If a financial institution initially determines an applicant is a small business as defined in § 1002.106 based on available information and collects data required by § 1002.107(a)(18) and (19) but later concludes that the applicant is not a small business, the financial institution does not violate the Act or this regulation if it meets the requirements of § 1002.112(c)(4). The financial institution shall not report the application on its small business lending application register pursuant to § 1002.109.

2. *Change in determination of small business status—business is ultimately a small business.* Consistent with comment 107(a)(14)–1, a financial institution need not independently verify gross annual revenue. If a financial institution initially determines that the applicant is not a small business as defined in § 1002.106(b), but later concludes the applicant is a small business prior to taking final action on the application, the financial institution must report the covered application pursuant to § 1002.109. In this situation, the financial institution shall endeavor to compile, maintain, and report the data required under § 1002.107(a) in a manner that is reasonable under the circumstances. For example, if the applicant initially provides a gross annual revenue of $5.5 million (that is, above the threshold for a small business as initially defined in § 1002.106(b)(1)), but during the course of underwriting the financial institution discovers the applicant's gross annual revenue was in fact $4.75 million (meaning that the applicant is within the definition of a small business under § 1002.106(b)), the financial institution is required to report the covered application pursuant to § 1002.109. In this situation, the financial institution shall take reasonable steps upon discovery to compile, maintain, and report the data necessary under § 1002.107(a) to comply with subpart B of this part for that covered application. Thus, in this example, even if the financial institution's procedure is typically to request applicant-provided data together with the application form, in this circumstance, the financial institution shall seek to collect the data during the application process necessary to comply with subpart B in a manner that is reasonable under the circumstances.

3. *Applicant's representations regarding gross annual revenue; inclusion of affiliate revenue; updated or verified information.* A financial institution is permitted to rely on an applicant's representations regarding gross annual revenue (which may or may not include any affiliate's revenue) for purposes of determining small business status under § 1002.106(b). However, if the applicant provides updated gross annual revenue information or the financial institution verifies the gross annual revenue information (see comment 107(b)–1), the financial institution must use the updated or verified information in determining small business status.

4. *Multiple unaffiliated co-applicants—size determination.* The financial institution shall not aggregate unaffiliated co-applicants' gross annual revenues for purposes of determining small business status under § 1002.106(b). If a covered financial institution receives a covered application from multiple businesses who are not affiliates, as defined by § 1002.102(a), where at least one business is a small business under § 1002.106(b), the financial institution shall compile, maintain, and report data pursuant to §§ 1002.107 through 1002.109 regarding the covered application for only a single applicant that is a small business. See comment 103(a)–10 for additional details.

106(b)(2) Inflation Adjustment

1. *Inflation adjustment methodology.* The small business gross annual revenue threshold set forth in § 1002.106(b)(1) will be adjusted upward or downward to reflect changes, if any, in the Consumer Price Index for All Urban Consumers (U.S. city average series for all items, not seasonally adjusted), as published by the United States Bureau of Labor Statistics (''CPI–U''). The base for computing each adjustment is the January 2025 CPI–U; this base value shall be compared to the CPI–U value in January 2030 and every five years thereafter. For example, after the January 2030 CPI–U is made available, the adjustment is calculated by determining the percentage change in the CPI–U between January 2025 and January 2030, applying this change to the $5 million gross annual revenue threshold, and rounding to the nearest $500,000. If, as a result of this rounding, there is no change in the gross annual revenue threshold, there will be no adjustment. For example, if in January

2030 the adjusted value were $4.9 million (reflecting a $100,000 decrease from January 2025 CPI–U), then the threshold would not adjust because $4.9 million would be rounded up to $5 million. If on the other hand, the adjusted value were $5.7 million, then the threshold would adjust to $5.5 million. Where the adjusted value is a multiple of $250,000 (*e.g.,* $5,250,000), then the threshold adjusts upward (in this example, to $5,500,000).

2. *Substitute for CPI–U.* If publication of the CPI–U ceases, or if the CPI–U otherwise becomes unavailable or is altered in such a way as to be unusable, then the Bureau shall substitute another reliable cost of living indicator from the United States Government for the purpose of calculating adjustments pursuant to § 1002.106(b)(2).

Section 1002.107—Compilation of Reportable Data

107(a) Data Format and Itemization

1. *General.* Section 1002.107(a) describes a covered financial institution's obligation to compile and maintain data regarding the covered applications it receives from small businesses.

i. A covered financial institution reports these data even if the credit originated pursuant to the reported application was subsequently sold by the institution.

ii. A covered financial institution annually reports data for covered applications for which final action was taken in the previous calendar year.

iii. A covered financial institution reports data for a covered application on its small business lending application register for the calendar year during which final action was taken on the application, even if the institution received the application in a previous calendar year.

2. *Free-form text fields.* A covered financial institution may use technology such as autocorrect and predictive text when requesting applicant-provided data under subpart B of this part that the financial institution reports via free-form text fields, provided that such technology does not restrict the applicant's ability to write in its own response instead of using text suggested by the technology.

3. *Filing Instructions Guide.* Additional details and procedures for compiling data pursuant to § 1002.107 are included in the Filing Instructions Guide, which is available at *https://www.consumerfinance.gov/data-research/small-business-lending/filing-instructions-guide/.*

4. *Additional data point response options.* The Bureau may add additional response options to the lists of responses contained in the commentary that follows for certain of the data points set forth in § 1002.107(a), via the Filing Instructions Guide. Refer to the Filing Instructions Guide for any updates for each reporting year.

107(a)(1) Unique Identifier

1. *Unique within the financial institution.* A financial institution complies with § 1002.107(a)(1) by compiling and reporting an alphanumeric application or loan identifier unique within the financial institution to the specific application. The identifier must not exceed 45 characters, and must begin with the financial institution's Legal Entity Identifier (LEI), as defined in comment 109(b)(6)–1. Separate applications for the same applicant must have separate identifiers. The identifier may only include standard numerical and/or upper-case alphabetical characters and cannot include dashes, other special characters, or characters with diacritics. The financial institution may assign the unique identifier at any time prior to reporting the application. Refinancings or applications for refinancing must be assigned a different identifier than the transaction that is being refinanced. A financial institution with multiple branches must ensure that its branches do not use the same identifiers to refer to multiple applications.

2. *Does not include directly identifying information.* The unique identifier must not include any directly identifying information, such as a whole or partial Social Security number or employer identification number, about the applicant or persons (natural or legal) associated with the applicant. See also § 1002.111(c) and related commentary.

107(a)(2) Application Date

1. *Consistency.* Section 1002.107(a)(2) requires that, in reporting the date of covered application, a financial institution shall report the date the covered application was received or the date shown on a paper or electronic application form. Although a financial institution need not choose the same approach for its entire small business lending application register, it should generally be consistent in its approach by, for example, establishing procedures for how to report this date within particular scenarios, products, or divisions. If the financial institution chooses to report the date shown on an application form and the institution retains multiple versions of the application form, the institution reports the date shown on the first application form satisfying the definition of covered application pursuant to § 1002.103.

2. *Application received.* For an application submitted directly to the financial institution or its affiliate (as described in § 1002.107(a)(4)), the financial institution shall report the date it received the covered application, as defined under § 1002.103, or the date shown on a paper or electronic application form. For an application initially submitted to a third party, see comment 107(a)(2)–3.

3. *Indirect applications.* For an application that was not submitted directly to the financial institution or its affiliate (as described in § 1002.107(a)(4)), the financial institution shall report the date the application was received by the party that initially received the application, the date the application was received by the financial institution, or the date shown on the application form. Although a financial institution need not choose the same approach for its entire small business lending application register, it should generally be consistent in its approach by, for example, establishing procedures for how to report this date within particular scenarios, products, or divisions.

4. *Safe harbor.* Pursuant to § 1002.112(c)(1), a financial institution that reports on its small business lending application register an application date that is within three business days of the actual application date pursuant to § 1002.107(a)(2) does not violate the Act or subpart B of this part. For purposes of this paragraph, a business day means any day the financial institution is open for business.

107(a)(3) Application Method

1. *General.* A financial institution complies with § 1002.107(a)(3) by reporting the means by which the applicant submitted the application from one of the following options: in-person, telephone, online, or mail. If the financial institution retains multiple versions of the application form, the institution reports the means by which the first application form satisfying the definition of covered application pursuant to § 1002.103 was submitted.

i. *In-person.* A financial institution reports the application method as ''in-person'' if the applicant submitted the application to the financial institution, or to another party acting on the financial institution's behalf, in person. The in-person application method applies, for example, to applications submitted at a branch office (including applications hand delivered by the applicant), at the applicant's place of

business, or via electronic media with a video component).

ii. *Telephone.* A financial institution reports the application method as ''telephone'' if the applicant submitted the application to the financial institution, or another party acting on the financial institution's behalf, by telephone call or via audio-based electronic media without a video component.

iii. *Online.* A financial institution reports the application method as ''online'' if the applicant submitted the application to the financial institution, or another party acting on the financial institution's behalf, through a website, mobile application (app), fax transmission, electronic mail, text message, or some other form of text-based electronic communication.

iv. *Mail.* A financial institution reports the application method as ''mail'' if the applicant submitted the application to the financial institution, or another party acting on the financial institution's behalf, via United States mail, courier or overnight service, or an overnight drop box.

107(a)(4) Application Recipient

1. *Agents.* When a financial institution is reporting actions taken by its agent consistent with comment 109(a)(3)–3, the agent is considered the financial institution for the purposes of § 1002.107(a)(4). For example, assume that an applicant submitted an application to Financial Institution B, and Financial Institution B made the credit decision acting as Financial Institution A's agent under State law. Financial Institution A reports the application and indicates that the application was submitted directly to Financial Institution A.

107(a)(5) Credit Type

1. *Reporting credit product—in general.* A financial institution complies with § 1002.107(a)(5)(i) by selecting the credit product applied for or originated, from the list below. If the credit product applied for or originated is not included on this list, the financial institution selects ''other,'' and reports the credit product via free-form text field. If an applicant requested more than one credit product at the same time, the financial institution reports each credit product requested as a separate application. However, if the applicant only requested a single covered credit transaction, but had not decided on which particular product, the financial institution complies with § 1002.107(a)(5)(i) by reporting the credit product originated (if originated), or the credit product denied (if denied), or the credit product of greater interest to the applicant, if readily determinable. If the credit product of greater interest to the applicant is not readily determinable, the financial institution complies with § 1002.107(a)(5)(i) by reporting one of the credit products requested as part of the request for a single covered credit transaction, in its discretion. See comment 103(a)–5 for instructions on reporting requests for multiple covered credit transactions at one time.

i. Term loan—unsecured.

ii. Term loan—secured.

iii. Line of credit—unsecured.

iv. Line of credit—secured.

v. Credit card account, not private-label.

vi. Private-label credit card account.

vii. Merchant cash advance.

viii. Other sales-based financing transaction.

ix. Other.

x. Not provided by applicant and otherwise undetermined.

2. *Credit card account, not private-label.* A financial institution complies with § 1002.107(a)(5)(i) by reporting the credit product as a ''credit card account, not private-label'' when the product is a business-purpose open-end credit account that is not private label and that may be accessed from time to time by a card, plate, or other single credit device to obtain credit, except that accounts or lines of credit secured by real property and overdraft lines of credit accessed by debit cards are not credit card accounts. The term credit card account does not include debit card accounts or closed-end credit that may be accessed by a card, plate, or single credit device. The term credit card account does include charge card accounts that are generally paid in full each billing period, as well as hybrid prepaid-credit cards. A financial institution reports multiple credit card account, not private-label applications requested at one time using the guidance in comment 103(a)–7.

3. *Private-label credit card account.* A financial institution complies with § 1002.107(a)(5)(i) by reporting the credit product as a ''private-label credit card account'' when the product is a business-purpose open-end private-label credit account that otherwise meets the description of a credit card account in comment 107(a)(5)–2. A private-label credit card account is a credit card account that can only be used to acquire goods or services provided by one business (for example, a specific merchant, retailer, independent dealer, or manufacturer) or a small group of related businesses. A co-branded or other card that can also be used for purchases at unrelated businesses is not a private-label credit card. A financial institution reports multiple private-label credit card account applications requested at one time in the same manner as credit card account, not private-label applications, using the guidance in comment 103(a)–7.

4. *Credit product not provided by the applicant and otherwise undetermined.* Pursuant to § 1002.107(c), a financial institution is required to maintain procedures reasonably designed to collect applicant-provided data, which includes credit product. However, if a financial institution is nonetheless unable to collect or otherwise determine credit product information because the applicant does not indicate what credit product it seeks and the application is denied, withdrawn, or closed for incompleteness before a credit product is identified, the financial institution reports that the credit product is ''not provided by applicant and otherwise undetermined.''

5. *Reporting credit product involving counteroffers.* If a financial institution presents a counteroffer for a different credit product than the product the applicant had initially requested, and the applicant does not agree to proceed with the counteroffer, the financial institution reports the application for the original credit product as denied pursuant to § 1002.107(a)(9). If the applicant agrees to proceed with consideration of the financial institution's counteroffer, the financial institution reports the disposition of the application based on the credit product that was offered and does not report the original credit product applied for. See comment 107(a)(9)–2.

6. *Other sales-based financing transaction.* For an extension of business credit incident to a factoring arrangement that is otherwise a covered credit transaction, a financial institution selects ''other sales-based financing transaction'' as the credit product. See comment 104(b)–1.

7. *Guarantees.* A financial institution complies with § 1002.107(a)(5)(ii) by selecting the type or types of guarantees that were obtained for an originated covered credit transaction, or that would have been obtained if the covered credit transaction was originated, from the list below. The financial institution selects, if applicable, up to a maximum of five guarantees for a single application. If the type of guarantee does not appear on the list, the financial institution selects ''other'' and reports the type of guarantee via free-form text field. If no guarantee is obtained or would have been obtained if the covered credit transaction was originated, the

financial institution selects ''no guarantee.'' If an application is denied, withdrawn, or closed for incompleteness before any guarantee has been identified, the financial institution selects ''no guarantee.'' The financial institution chooses State government guarantee or local government guarantee, as applicable, based on the entity directly administering the program, not the source of funding.

i. Personal guarantee—owner(s).
ii. Personal guarantee—non-owner(s).
iii. SBA guarantee—7(a) program.
iv. SBA guarantee—504 program.
v. SBA guarantee—other.
vi. USDA guarantee.
vii. FHA insurance.
viii. Bureau of Indian Affairs guarantee.
ix. Other Federal guarantee.
x. State government guarantee.
xi. Local government guarantee.
xii. Other.
xiii. No guarantee.

8. *Loan term.* A financial institution complies with § 1002.107(a)(5)(iii) by reporting the number of months in the loan term for the covered credit transaction. The loan term is the number of months after which the legal obligation will mature or terminate, measured from the date of origination. For transactions involving real property, the financial institution may instead measure the loan term from the date of the first payment period and disregard the time that elapses, if any, between the settlement of the transaction and the first payment period. For example, if a loan closes on April 12, but the first payment is not due until June 1 and includes the interest accrued in May (but not April), the financial institution may choose not to include the month of April in the loan term. In addition, the financial institution may round the loan term to the nearest full month or may count only full months and ignore partial months, as it so chooses. If a credit product, such as a credit card, does not have a loan term, the financial institution reports that the loan term is ''not applicable.'' The financial institution also reports that the loan term is ''not applicable'' if the credit product is reported as ''not provided by applicant and otherwise undetermined.'' For a credit product that generally has a loan term, the financial institution reports ''not provided by applicant and otherwise undetermined'' if the application is denied, withdrawn, or determined to be incomplete before a loan term has been identified. For merchant cash advances and other sales-based financing transactions, the financial institution complies with § 1002.107(a)(5)(iii) by reporting the loan term, if any, that the financial institution estimated or specified in processing, underwriting or providing disclosures for the application or transaction. If more than one such loan term is estimated or specified, the financial institution reports the one it considers to be most accurate, in its discretion. For merchant cash advances and other sales-based financing transactions that do not have a loan term, the financial institution reports ''not provided by applicant and otherwise undetermined.''

107(a)(6) Credit Purpose

1. *General.* A financial institution complies with § 1002.107(a)(6) by selecting the purpose or purposes of the covered credit transaction applied for or originated from the list below.

i. Purchase, construction/improvement, or refinance of non-owner-occupied real property.
ii. Purchase, construction/improvement, or refinance of owner-occupied real property.
iii. Purchase, refinance, or rehabilitation/repair of motor vehicle(s) (including light and heavy trucks).
iv. Purchase, refinance, or rehabilitation/repair of equipment.
v. Working capital (includes inventory or floor planning).
vi. Business start-up.
vii. Business expansion.
viii. Business acquisition.
ix. Refinance existing debt (other than refinancings listed above).
x. Line increase.
xi. Overdraft.
xii. Other.
xiii. Not provided by applicant and otherwise undetermined.
xiv. Not applicable.

2. *More than one purpose.* If the applicant indicates or the financial institution is otherwise aware of more than one purpose for the credit applied for or originated, the financial institution reports those purposes, up to a maximum of three, using the list provided, in any order it chooses. For example, if an applicant refinances a commercial building it owns and uses the funds to purchase a motor vehicle and expand the business it runs in a part of that building, the financial institution reports that the three purposes of the credit are purchase, construction/improvement, or refinance of owner-occupied real property; purchase, refinance, or rehabilitation/repair of motor vehicle(s) (including light and heavy trucks); and business expansion. If an application has more than three purposes, the financial institution reports any three of those purposes. In the example above, if the funds were also used to purchase equipment, the financial institution would select only three of the relevant purposes to report.

3. ''*Other*'' *credit purpose.* If a purpose of an application does not appear on the list of purposes provided, the financial institution reports ''other'' as the credit purpose and reports the credit purpose via free-form text field. If the application has more than one ''other'' purpose, the financial institution chooses the most significant ''other'' purpose, in its discretion, and reports that ''other'' purpose. The financial institution reports a maximum of three credit purposes, including any ''other'' purpose.

4. *Credit purpose not provided by applicant and otherwise undetermined.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, which includes credit purpose. However, if a financial institution is nonetheless unable to collect or determine credit purpose information, the financial institution reports that the credit purpose is ''not provided by applicant and otherwise undetermined.''

5. *Not applicable.* If the application is for a credit product that generally has indeterminate or numerous potential purposes, such as a credit card, the financial institution may report credit purpose as ''not applicable.''

6. *Collecting credit purpose.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, including credit purpose. The financial institution is permitted, but not required, to present the list of credit purposes provided in comment 107(a)(6)–1 to the applicant. The financial institution is also permitted to ask about purposes not included on the list provided in comment 107(a)(6)–1. If the applicant chooses a purpose or purposes not included on the provided list, the financial institution follows the instructions in comment 107(a)(6)–3 regarding reporting of ''other'' as the credit purpose. If an applicant chooses a purpose or purposes that are similar to purposes on the list provided, but uses different language, the financial institution reports the purpose or purposes from the list provided.

7. *Owner-occupied real property.* Real property is owner-occupied if any physical portion of the property is used by the owner for any activity, including storage.

8. *Overdraft.* When overdraft is provided as an aspect of the covered credit transaction applied for or

originated, the financial institution reports ''Overdraft'' as a purpose of the credit. The financial institution reports credit type pursuant to § 1002.107(a)(5)(i) as appropriate for the underlying covered credit transaction, such as ''Line of credit—unsecured.'' Providing occasional overdraft services as part of a deposit account offering would not be reported for the purpose of subpart B.

107(a)(7) Amount Applied For

1. *Initial amount requested.* A financial institution complies with § 1002.107(a)(7) by reporting the initial amount of credit or the initial credit limit requested by the applicant. The financial institution is not required to report credit amounts or limits discussed before an application is made, but must capture the initial amount requested at the application stage. If the applicant requests an amount as a range of numbers, the financial institution reports the midpoint of that range.

2. *No amount requested.* If the applicant does not request a specific amount at the application stage, but the financial institution underwrites the application for a specific amount, the financial institution complies with § 1002.107(a)(7) by reporting the amount considered for underwriting as the amount applied for. If the particular type of credit product applied for does not involve a specific amount requested, the financial institution reports that the requirement is ''not applicable.''

3. *Firm offers.* When an applicant responds to a ''firm offer'' that specifies an amount or limit, which may occur in conjunction with a pre-approved credit solicitation, the financial institution reports the amount of the firm offer as the amount applied for, unless the applicant requests a different amount. If the firm offer does not specify an amount or limit and the applicant does not request a specific amount, the amount applied for is the amount underwritten by the financial institution. If the firm offer specifies an amount or limit as a range and the applicant does not request a specific amount, the amount applied for is the amount underwritten by the financial institution.

4. *Additional amounts on an existing account.* When reporting a covered application that seeks additional credit amounts on an existing account, the financial institution reports only the additional credit amount sought, and not any previous amounts extended. See comment 103(b)–3.

5. *Initial amount otherwise undetermined.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, which includes the credit amount initially requested by the applicant (other than for products that do not involve a specific amount requested). However, if a financial institution is nonetheless unable to collect or otherwise determine the amount initially requested, the financial institution reports that the amount applied for is ''not provided by applicant and otherwise undetermined.'' But see comment 107(a)(7)–2 for how to report the credit amount initially requested by the applicant for particular types of credit products that do not involve a specific amount requested.

107(a)(8) Amount Approved or Originated

1. *General.* A financial institution complies with § 1002.107(a)(8) by reporting the amount approved or originated for credit that is originated or approved but not accepted. For applications that the financial institution, pursuant to § 1002.107(a)(9), reports as denied, withdrawn by the applicant, or incomplete, the financial institution reports that the amount approved or originated is ''not applicable.''

2. *Multiple approval amounts.* A financial institution may sometimes approve an applicant for more than one credit amount, allowing the applicant to choose which amount the applicant prefers for the extension or line of credit. When multiple approval amounts are offered for a closed-end credit transaction for which the action taken is approved but not accepted, and the applicant does not accept the approved offer of credit in any amount, the financial institution reports the highest amount approved. If the applicant accepts the offer of closed-end credit, the financial institution reports the amount originated. When multiple approval amounts are offered for an open-end credit transaction for which the action taken is approved but not accepted, and the applicant does not accept the approved offer of credit in any amount, the financial institution reports the highest amount approved. If the applicant accepts the offer of open-end credit, the financial institution reports the actual credit limit established.

3. *Amount approved or originated—closed-end credit transaction.* For an originated closed-end credit transaction, the financial institution reports the principal amount to be repaid. This amount will generally be disclosed on the legal obligation.

4. *Amount approved or originated—refinancing.* For a refinancing, the financial institution reports the amount of credit approved or originated under the terms of the new debt obligation.

5. *Amount approved or originated—counteroffer.* If an applicant agrees to proceed with consideration of a counteroffer for an amount or limit different from the amount for which the applicant applied, and the covered credit transaction is approved and originated, the financial institution reports the amount granted. If an applicant does not agree to proceed with consideration of a counteroffer or fails to respond, the institution reports the application as denied and reports ''not applicable'' for the amount approved or originated. See comment 107(a)(9)–2.

6. *Amount approved or originated—existing accounts.* For additional credit amounts that were approved for or originated on an existing account, the financial institution reports only the additional credit amount approved or originated, and not any previous amounts extended.

107(a)(9) Action Taken

1. *General.* A financial institution complies with § 1002.107(a)(9) by selecting the action taken by the financial institution on the application from the following list: originated, approved but not accepted, denied, withdrawn by the applicant, or incomplete. A financial institution identifies the applicable action taken code based on final action taken on the covered application.

i. *Originated.* A financial institution reports that the application was originated if the financial institution made a credit decision approving the application and that credit decision resulted in an extension of credit.

ii. *Approved but not accepted.* A financial institution reports that the application was approved but not accepted if the financial institution made a credit decision approving the application, but the applicant or the party that initially received the application failed to respond to the financial institution's approval within the specified time, or the covered credit transaction was not otherwise consummated or the account was not otherwise opened.

iii. *Denied.* A financial institution reports that the application was denied if it made a credit decision denying the application before an applicant withdrew the application, before the application was closed for incompleteness, or before the application was denied on the basis of incompleteness.

iv. *Withdrawn by the applicant.* A financial institution reports that the application was withdrawn if the application was expressly withdrawn by the applicant before the financial institution made a credit decision approving or denying the application, before the application was closed for incompleteness, or before the application was denied on the basis of incompleteness.

v. *Incomplete.* A financial institution reports that the application was incomplete if the financial institution took adverse action on the basis of incompleteness under § 1002.9(a)(1)(ii) and (c)(1)(i) or provided a written notice of incompleteness under § 1002.9(c)(1)(ii) and (2), and the applicant did not respond to the request for additional information within the period of time specified in the notice.

2. *Treatment of counteroffers.* If a financial institution makes a counteroffer to grant credit on terms other than those originally requested by the applicant (for example, for a shorter loan maturity, with a different interest rate, or in a different amount) and the applicant declines the counteroffer or fails to respond, the institution reports the action taken as a denial on the original terms requested by the applicant. If the applicant agrees to proceed with consideration of the financial institution's counteroffer, the financial institution reports the action taken as the disposition of the application based on the terms of the counteroffer. For example, assume an applicant applies for a term loan and the financial institution makes a counteroffer to proceed with consideration of a line of credit. If the applicant declines to be considered for a line of credit, the financial institution reports the application as a denied request for a term loan. If, on the other hand, the applicant agrees to be considered for a line of credit, then the financial institution reports the action taken as the disposition of the application for the line of credit. For instance, using the same example, if the financial institution makes a credit decision approving the line of credit, but the applicant fails to respond to the financial institution's approval within the specified time by accepting the credit offer, the financial institution reports the application on the line of credit as approved but not accepted.

3. *Treatment of rescinded transactions.* If a borrower successfully rescinds a transaction after closing but before a financial institution is required to submit its small business lending application register containing the information for the application under § 1002.109, the institution reports the application as approved but not accepted.

4. *Treatment of pending applications.* A financial institution does not report any application still pending at the end of the calendar year; it reports such applications on its small business lending application register for the year in which final action is taken.

5. *Treatment of conditional approvals.* If a financial institution issues an approval that is subject to the applicant meeting certain conditions prior to closing, the financial institution reports the action taken as provided below dependent on whether the conditions are solely customary commitment or closing conditions or if the conditions include any underwriting or creditworthiness conditions. Customary commitment or closing conditions may include, for example, a clear-title requirement, proof of insurance policies, or a subordination agreement from another lienholder. Underwriting or creditworthiness conditions may include, for example, conditions that constitute a counteroffer (such as a demand for a higher down-payment), satisfactory loan-to-value ratios, or verification or confirmation, in whatever form the institution requires, that the applicant meets underwriting conditions concerning applicant creditworthiness, including documentation or verification of revenue, income or assets.

i. *Conditional approval—denial.* If the approval is conditioned on satisfying underwriting or creditworthiness conditions, those conditions are not met, and the financial institution takes adverse action on some basis other than incompleteness, the financial institution reports the action taken as denied.

ii. *Conditional approval—incompleteness.* If the approval is conditioned on satisfying underwriting or creditworthiness conditions that the financial institution needs to make the credit decision, and the financial institution takes adverse action on the basis of incompleteness under § 1002.9(a)(1)(ii) and (c)(1)(i), or has sent a written notice of incompleteness under § 1002.9(c)(1)(ii) and (2), and the applicant did not respond within the period of time specified in the notice, the financial institution reports the action taken as incomplete.

iii. *Conditional approval—approved but not accepted.* If the approval is conditioned on satisfying conditions that are solely customary commitment or closing conditions and the conditions are not met, the financial institution reports the action taken as approved but not accepted. If all the conditions (underwriting, creditworthiness, or customary commitment or closing conditions) are satisfied and the financial institution agrees to extend credit but the covered credit transaction is not originated (for example, because the applicant withdraws), the financial institution reports the action taken as approved but not accepted.

iv. *Conditional approval—withdrawn by the applicant.* If the applicant expressly withdraws before satisfying all underwriting or creditworthiness conditions and before the institution denies the application or before the institution closes the file for incompleteness, the financial institution reports the action taken as withdrawn.

107(a)(10) Action Taken Date

1. *Reporting action taken date for denied applications.* For applications that are denied, a financial institution reports either the date the application was denied or the date the denial notice was sent to the applicant.

2. *Reporting action taken date for applications withdrawn by applicant.* For applications that are withdrawn by the applicant, the financial institution reports the date the express withdrawal was received, or the date shown on the notification form in the case of a written withdrawal.

3. *Reporting action taken date for applications that are approved but not accepted.* For applications approved by a financial institution but not accepted by the applicant, the financial institution reports any reasonable date, such as the approval date, the deadline for accepting the offer, or the date the file was closed. A financial institution should generally be consistent in its approach to reporting by, for example, establishing procedures for how to report this date for particular scenarios, products, or divisions.

4. *Reporting action taken date for originated applications.* For applications that result in an extension of credit, a financial institution generally reports the closing or account opening date. If the disbursement of funds takes place on a date later than the closing or account opening date, the institution may, alternatively, use the date of initial disbursement. A financial institution should generally be consistent in its approach to reporting by, for example, establishing procedures for how to report this date for particular scenarios, products, or divisions.

5. *Reporting action taken date for incomplete applications.* For applications closed for incompleteness or denied for incompleteness, the financial institution reports either the date the action was taken or the date the

denial or incompleteness notice was sent to the applicant.

107(a)(11) Denial Reasons

1. *Reason for denial—in general.* A financial institution complies with § 1002.107(a)(11) by reporting the principal reason or reasons it denied the application, indicating up to four reasons. The financial institution reports only the principal reason or reasons it denied the application. For example, if a financial institution denies an application due to insufficient cashflow, unacceptable collateral, and unverifiable business information, the financial institution is required to report these three reasons. The reasons reported must accurately describe the principal reason or reasons the financial institution denied the application. A financial institution reports denial reasons by selecting its principal reason or reasons for denying the application from the following list:

i. *Credit characteristics of the business.* A financial institution reports the denial reason as ''credit characteristics of the business'' if it denies the application based on an assessment of the business's ability to meet its current or future credit obligations. Examples include business credit score, history of business bankruptcy or delinquency, and/or a high number of recent business credit inquiries.

ii. *Credit characteristics of the principal owner(s) or guarantor(s).* A financial institution reports the denial reason as ''credit characteristics of the principal owner(s) or guarantor(s)'' if it denies the application based on an assessment of the principal owner(s) or guarantor(s)'s ability to meet its current or future credit obligations. Examples include principal owner(s) or guarantor(s)'s credit score, history of charge offs, bankruptcy or delinquency, low net worth, limited or insufficient credit history, or history of excessive overdraft.

iii. *Use of credit proceeds.* A financial institution reports the denial reason as ''use of credit proceeds'' if it denies an application because, as a matter of policy or practice, it places limits on lending to certain kinds of businesses, products, or activities it has identified as high risk.

iv. *Cashflow.* A financial institution reports the denial reason as ''cashflow'' when it denies an application due to insufficient or inconsistent cashflow.

v. *Collateral.* A financial institution reports the denial reason as ''collateral'' when it denies an application due to collateral that it deems insufficient or otherwise unacceptable.

vi. *Time in business.* A financial institution reports the denial reason as ''time in business'' when it denies an application due to insufficient time or experience in a line of business.

vii. *Government loan program criteria.* Certain loan programs are backed by government agencies that have specific eligibility requirements. When those requirements are not met by an applicant, and the financial institution denies the application, the financial institution reports the denial reason as ''government loan program criteria.'' For example, if an applicant cannot meet a government-guaranteed loan program's requirement to provide a guarantor or proof of insurance, the financial institution reports the reason for the denial as ''government loan program criteria.''

viii. *Aggregate exposure.* Aggregate exposure is a measure of the total exposure or level of indebtedness of the business and its principal owner(s) associated with an application. A financial institution reports the denial reason as ''aggregate exposure'' where the total debt associated with the application is deemed high or exceeds certain debt thresholds set by the financial institution. For example, if an application for unsecured credit exceeds the maximum amount a financial institution is permitted to approve per applicant, as stated in its credit guidelines, and the financial institution denies the application for this reason, the financial institution reports the reason for denial as ''aggregate exposure.''

ix. *Unverifiable information.* A financial institution reports the denial reason as ''unverifiable information'' when it is unable to verify information provided as part of the application, and denies the application for that reason. The unverifiable information must be necessary for the financial institution to make a credit decision based on its procedures for the type of credit requested. Examples include unverifiable assets or collateral, unavailable business credit report, and unverifiable business ownership composition.

x. *Other.* A financial institution reports the denial reason as ''other'' where none of the enumerated denial reasons adequately describe the principal reason or reasons it denied the application, and the institution reports the denial reason or reasons via free-form text field.

2. *Reason for denial—not applicable.* A financial institution complies with § 1002.107(a)(11) by reporting that the requirement is not applicable if the action taken on the application, pursuant to § 1002.107(a)(9), is not a denial. For example, if the application resulted in an originated covered credit transaction, or the application was approved but not accepted, the financial institution complies with § 1002.107(a)(11) by reporting not applicable.

107(a)(12) Pricing Information

1. *General.* For applications that a financial institution, pursuant to § 1002.107(a)(9), reports as denied, withdrawn by the applicant, or incomplete, the financial institution reports that pricing information is ''not applicable.''

107(a)(12)(i) Interest Rate

1. *General.* A financial institution complies with § 1002.107(a)(12)(i) by reporting the interest rate applicable to the amount of credit approved or originated as reported pursuant to § 1002.107(a)(8).

2. *Interest rate—initial period.* If a covered credit transaction includes an initial period with an introductory interest rate of 12 months or less, after which the interest rate adjusts upwards or shifts from a fixed to variable rate, a financial institution complies with § 1002.107(a)(12)(i) by reporting information about the interest rate applicable after the initial period. If a covered transaction includes an initial period with an interest rate of more than 12 months after which the interest rate resets, a financial institution complies with § 1002.107(a)(12)(i) by reporting information about the interest rate applicable prior to the reset period. For example, if a financial institution originates a covered credit transaction with a fixed, initial interest rate of 0 percent for six months following origination, after which the interest rate will adjust according to a Prime index rate plus a 3 percent margin, the financial institution reports the 3 percent margin, Prime as the name of the index used to adjust the interest rate, the number 6 for the length of the initial period, and ''not applicable'' for the index value. As another example, in a 10/1 adjustable-rate mortgage transaction, where the first 10 years of the repayment period has a fixed rate of 3 percent and after year 10 the interest rate will adjust according to a Prime index rate plus a 3 percent margin, a financial institution complies with § 1002.107(a)(12)(i) by reporting the fixed rate of 3 percent, the number 120 for the initial period, and ''not applicable'' in the fields for the index, margin, and index value.

3. *Multiple interest rates.* If a covered credit transaction includes multiple

interest rates applicable to different credit features, a financial institution complies with § 1002.107(a)(12)(i) by reporting the interest rate applicable to the amount of credit approved or originated reported pursuant to § 1002.107(a)(8). For example, if a financial institution originates a credit card with different interest rates for purchases, balance transfers, cash advances, and overdraft advances, the financial institution reports the interest rate applicable for purchases.

4. *Index names.* A financial institution complies with § 1002.107(a)(12)(i) by selecting the index used from the following list: Wall Street Journal Prime, 6-month CD rate, 1-year T-Bill, 3-year T-Bill, 5-year T-Note, 12-month average of 10-year T-Bill, Cost of Funds Index (COFI)-National, Cost of Funds Index (COFI)-11th District, Constant Maturity Treasury (CMT). If the index used is internal to the financial institution, the financial institution reports ''internal index'' via the list of indices provided. If the index used does not appear on the list of indices provided (and is not internal to the financial institution), the financial institution reports ''other'' and reports the name of the index via free-form text field.

5. *Index value.* For covered transactions with an adjustable interest rate, a financial institution complies with § 1002.107(a)(12)(i)(B) by reporting the index value used to set the rate that is or would be applicable to the covered transaction.

107(a)(12)(ii) Total Origination Charges

1. *Charges in comparable cash transactions.* Charges imposed uniformly in cash and credit transactions are not reportable under § 1002.107(a)(12)(ii). In determining whether an item is part of the total origination charges, a financial institution should compare the covered credit transaction in question with a similar cash transaction. A financial institution financing the sale of property or services may compare charges with those payable in a similar cash transaction by the seller of the property or service.

2. *Charges by third parties.* A financial institution includes fees and amounts charged by someone other than the financial institution in the total charges reported if the financial institution:

i. Requires the use of a third party as a condition of or an incident to the extension of credit, even if the applicant can choose the third party; or

ii. Retains a portion of the third-party charge, to the extent of the portion retained.

3. *Special rule; broker fees.* A financial institution complies with § 1002.107(a)(12)(ii) by including fees charged by a broker (including fees paid by the applicant directly to the broker or to the financial institution for delivery to the broker) in the total origination charges reported even if the financial institution does not require the applicant to use a broker and even if the financial institution does not retain any portion of the charge. For more information on broker fees, see commentary for § 1002.107(a)(12)(iii).

4. *Bundled services.* Total origination charges include all charges imposed directly or indirectly by the financial institution at or before origination as an incident to or a condition of the extension of credit. Accordingly, a financial institution complies with § 1002.107(a)(12)(ii) by including charges for other products or services paid at or before origination in the total origination charges reported if the financial institution requires the purchase of such other product or service as a condition of or an incident to the extension of credit.

5. *Origination charges—examples.* Examples of origination charges may include application fees, credit report fees, points, appraisal fees, and other similar charges.

6. *Net lender credit.* If a financial institution provides a credit to an applicant that is greater than the total origination charges the applicant would have paid, the financial institution complies with § 1002.107(a)(12)(ii) by reporting the net lender credit as a negative amount. For example, if a covered transaction has $500 provided to the applicant at origination to offset closing costs, and the financial institution does not charge any origination charges, the financial institution complies with § 1002.107(a)(12)(ii) by reporting negative $500 as the total origination charges.

107(a)(12)(iii) Broker Fees

1. *Amount.* A financial institution complies with § 1002.107(a)(12)(iii) by including the fees reported in § 1002.107(a)(12)(ii) that are fees paid by the applicant directly to the broker or to the financial institution for delivery to the broker. For example, a covered transaction has $3,000 of total origination charges. Of that $3,000, $250 are fees paid by the applicant directly to a broker and an additional $300 are fees paid to the financial institution for delivery to the broker. The financial institution complies with § 1002.107(a)(12)(iii) by reporting $550 in the broker fees reported.

2. *Fees paid directly to a broker by an applicant.* A financial institution complies with § 1002.107(a)(12)(iii) by relying on the best information readily available to the financial institution at the time final action is taken. Information readily available could include, for example, information provided by an applicant or broker that the financial institution reasonably believes regarding the amount of fees paid by the applicant directly to the broker.

107(a)(12)(iv) Initial Annual Charges

1. *Charges during the initial annual period.* The total initial annual charges include all charges scheduled to be imposed during the initial annual period following origination. For example, if a financial institution originates a covered credit transaction with a $50 monthly fee and a $100 annual fee, the financial institution complies with § 1002.107(a)(12)(iv) by reporting $700 in the initial annual charges reported. If there will be a charge in the initial annual period following origination but the amount of that charge is uncertain at the time of origination, a financial institution complies with § 1002.107(a)(12)(iv) by not reporting that charge as scheduled to be imposed during the initial annual period following origination.

2. *Interest excluded.* A financial institution complies with § 1002.107(a)(12)(iv) by excluding any interest expense from the initial annual charges reported.

3. *Avoidable charges.* A financial institution complies with § 1002.107(a)(12)(iv) by only including scheduled charges and excluding any charges for events that are avoidable by the applicant from the initial annual charges reported. Examples of avoidable charges include charges for late payment, for exceeding a credit limit, for delinquency or default, or for paying items that overdraw an account.

4. *Initial annual charges—examples.* Examples of charges scheduled to be imposed during the initial annual period may include monthly fees, annual fees, and other similar charges.

5. *Scheduled charges with variable amounts.* A financial institution complies with § 1002.107(a)(12)(iv) by reporting as the default the highest amount for a charge scheduled to be imposed. For example, if a covered credit transaction has a $75 monthly fee, but the fee is reduced to $0 if the applicant maintains an account at the financial institution originating the

covered credit transaction, the financial institution complies with § 1002.107(a)(12)(iv) by reporting $900 ($75 × 12) in the initial annual charges reported.

6. *Transactions with a term of less than one year.* For a transaction with a term of less than one year, a financial institution complies with § 1002.107(a)(12)(iv) by reporting all charges scheduled to be imposed during the term of the transaction.

107(a)(12)(v) Additional Cost for Merchant Cash Advances or Other Sales-Based Financing

1. *Merchant cash advances.* Section 1002.107(a)(12)(v) requires a financial institution to report the difference between the amount advanced and the amount to be repaid for a merchant cash advance or other sales-based financing transaction. Thus, in a merchant cash advance, a financial institution reports the difference between the amount advanced and the amount to be repaid, using the amounts (expressed in dollars) provided in the contract between the financial institution and the applicant.

107(a)(12)(vi) Prepayment Penalties

1. *Policies and procedures applicable to the covered credit transaction.* The policies and procedures applicable to the covered credit transaction include the practices that the financial institution follows when evaluating applications for the specific credit type and credit purpose requested. For example, assume that a financial institution's written procedures permit it to include prepayment penalties in the loan agreement for its term loans secured by non-owner occupied commercial real estate. For such transactions, the financial institution includes prepayment penalties in some loan agreements but not others. For an application for, or origination of, a term loan secured by non-owner occupied commercial real estate, the financial institution reports under § 1002.107(a)(12)(vi)(A) that a prepayment penalty could have been included under the policies and procedures applicable to the transaction, regardless of whether the term loan secured by non-owner occupied commercial real estate actually includes a prepayment penalty.

2. *Balloon finance charges.* A financial institution complies with § 1002.107(a)(12)(vi) by reporting as a prepayment penalty any balloon finance charge that may be imposed for paying all or part of the transaction's principal before the date on which the principal is due. For example, under the terms of a transaction, the amount of funds advanced is $12,000, the amount to be repaid is $24,000 (which includes $12,000 in principal and $12,000 in interest and fees), the length of the transaction is 12 months, and the applicant must repay $2,000 per month. The terms of the transaction state that if the applicant prepays the principal before the 12-month period is over, the applicant is responsible for paying the difference between $24,000 and the amount the applicant has already repaid prior to initiating prepayment. The difference between the $24,000 to be repaid and what the applicant has already repaid prior to initiating prepayment is a balloon finance charge and should be reported as a prepayment penalty.

107(a)(13) Census Tract

1. *General.* A financial institution complies with § 1002.107(a)(13) by reporting a census tract number as defined by the U.S. Census Bureau, which includes State and county numerical codes. A financial institution complies with § 1002.107(a)(13) if it uses the boundaries and codes in effect on January 1 of the calendar year covered by the small business lending application register that it is reporting. The financial institution reports census tract based on the following:

i. *Proceeds address.* A financial institution complies with § 1002.107(a)(13) by reporting a census tract based on the address or location where the proceeds of the credit applied for or originated will be or would have been principally applied, if known. For example, a financial institution would report a census tract based on the address or location of the site where the proceeds of a construction loan will be applied.

ii. *Main office or headquarters address.* If the address or location where the proceeds of the credit applied for or originated will be or would have been principally applied is unknown, a financial institution complies with § 1002.107(a)(13) by reporting a census tract number based on the address or location of the main office or headquarters of the applicant, if known. For example, the address or location of the main office or headquarters of the applicant may be the home address of a sole proprietor or the office address of a sole proprietor or other applicant.

iii. *Another address or location.* If neither the address or location where the proceeds of the credit applied for or originated will be or would have been principally applied nor the address or location of the main office or headquarters of the applicant are known, a financial institution complies with § 1002.107(a)(13) by reporting a census tract number based on another address or location associated with the applicant.

iv. *Type of address used.* In addition to reporting the census tract, pursuant to § 1002.107(a)(13)(iv) a financial institution must report which one of the three types of addresses or locations listed in § 1002.107(a)(13)(i) through (iii) and described in comments 107(a)(13)–1.i through iii that the census tract is determined from.

2. *Financial institution discretion.* A financial institution complies with § 1002.107(a)(13) by identifying the appropriate address or location and the type of that address or location in good faith, using appropriate information from the applicant's credit file or otherwise known by the financial institution. A financial institution is not required to make inquiries beyond its standard procedures as to the nature of the addresses or locations it collects.

3. *Address or location not provided by applicant and otherwise undetermined.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, which includes at least one address or location for an applicant for census tract reporting. However, if a financial institution is nonetheless unable to collect or otherwise determine any address or location for an application, the financial institution reports that the census tract information is ''not provided by applicant and otherwise undetermined.''

4. *Safe harbor.* As described in § 1002.112(c)(2) and comment 112(c)–1, a financial institution that obtains an incorrect census tract by correctly using a geocoding tool provided by the FFIEC or the Bureau does not violate the Act or subpart B of this part.

107(a)(14) Gross Annual Revenue

1. *Collecting gross annual revenue.* A financial institution reports the applicant's gross annual revenue, expressed in dollars, for its fiscal year preceding when the information was collected. A financial institution may rely on the applicant's statements or on information provided by the applicant in collecting and reporting gross annual revenue, even if the applicant's statement or information is based on estimation or extrapolation. However, pursuant to § 1002.107(b), if the financial institution verifies the gross annual revenue provided by the applicant, it must report the verified information. Also, pursuant to comment 107(c)(1)–5, a financial institution reports updated gross annual revenue

data if it obtains more current data from the applicant during the application process. If a financial institution has already verified gross annual revenue data and then the applicant updates it, the financial institution reports the information it believes to be more accurate, in its discretion. The financial institution may use the following language to ask about gross annual revenue and may rely on the applicant's answer (unless subsequently verified or updated):

What was the gross annual revenue of the business applying for credit in its last full fiscal year? Gross annual revenue is the amount of money the business earned before subtracting taxes and other expenses. You may provide gross annual revenue calculated using any reasonable method.

2. *Gross annual revenue not provided by applicant and otherwise undetermined.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, which includes the gross annual revenue of the applicant. However, if a financial institution is nonetheless unable to collect or determine the gross annual revenue of the applicant, the financial institution reports that the gross annual revenue is ''not provided by applicant and otherwise undetermined.''

3. *Affiliate revenue.* A financial institution is permitted, but not required, to report the gross annual revenue for the applicant that includes the revenue of affiliates as well. Likewise, as explained in comment 106(b)(1)–3, in determining whether the applicant is a small business under § 1002.106(b), a financial institution may rely on an applicant's representations regarding gross annual revenue, which may or may not include affiliates' revenue.

4. *Gross annual revenue for a startup business.* In a typical startup business situation where the applicant has no gross annual revenue for its fiscal year preceding when the information is collected, the financial institution reports that the applicant's gross annual revenue in the preceding fiscal year is ''zero.'' The financial institution shall not report pro forma projected revenue figures because these figures do not reflect actual gross revenue.

107(a)(15) NAICS Code

1. *General.* NAICS stands for North American Industry Classification System. The Office of Management and Budget has charged the Economic Classification Policy Committee with the maintenance and review of NAICS. A financial institution complies with § 1002.107(a)(15) if it uses the 3-digit NAICS subsector codes in effect on January 1 of the calendar year covered by the small business lending application register that it is reporting.

2. *NAICS not provided by applicant and otherwise undetermined.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, which includes NAICS code. However, if a financial institution is nonetheless unable to collect or otherwise determine a NAICS code for the applicant, the financial institution reports that the NAICS code is ''not provided by applicant and otherwise undetermined.''

3. *Safe harbor.* As described in § 1002.112(c)(3) and comment 112(c)–2, a financial institution that obtains an incorrect NAICS code does not violate the Act or subpart B of this part if it either relies on an applicant's representations or on an appropriate third-party source, in accordance with § 1002.107(b), regarding the NAICS code, or identifies the NAICS code itself, provided that the financial institution maintains procedures reasonably adapted to correctly identify a 3-digit NAICS code.

107(a)(16) Number of Workers

1. *General.* A financial institution complies with § 1002.107(a)(16) by reporting the number of people who work for the applicant, using the ranges prescribed in the Filing Instructions Guide.

2. *Collecting number of workers.* A financial institution may collect number of workers from an applicant using the ranges for reporting as specified by the Bureau (see comment 107(a)(16)–1) or as a numerical value. When asking for the number of workers from an applicant, a financial institution shall explain that full-time, part-time and seasonal employees, as well as contractors who work primarily for the applicant, would be counted as workers, but principal owners of the applicant would not. If asked, the financial institution shall explain that volunteers are not counted as workers, and workers for affiliates of the applicant are counted if the financial institution were also collecting the affiliates' gross annual revenue. The financial institution may use the following language to ask about the number of workers and may rely on the applicant's answer (unless subsequently verified or updated):

Counting full-time, part-time and seasonal workers, as well as contractors who work primarily for the business applying for credit, but not counting principal owners of the business, how many people work for the business applying for credit?

3. *Number of workers not provided by applicant and otherwise undetermined.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, which includes the number of workers of the applicant. However, if a financial institution is nonetheless unable to collect or determine the number of workers of the applicant, the financial institution reports that the number of workers is ''not provided by applicant and otherwise undetermined.''

107(a)(17) Time in Business

1. *Collecting time in business.* A financial institution complies with § 1002.107(a)(17) by reporting the time the applicant has been in business.

i. If a financial institution collects or otherwise obtains the number of years an applicant has been in business as part of its procedures for evaluating an application for credit, it reports the time in business in whole years, rounded down to the nearest whole year.

ii. If a financial institution does not collect time in business as described in comment 107(a)(17)–1.i, but as part of its procedures determines whether or not the applicant's time in business is less than two years, it reports the applicant's time in business as either less than two years or two or more years in business.

iii. If a financial institution does not collect time in business as part of its procedures for evaluating an application for credit as described in comments 107(a)(17)–1.i or .ii, the financial institution complies with § 1002.107(a)(17) by asking the applicant whether it has been in existence for less than two years or two or more years and reporting the information provided by the applicant accordingly.

2. *Time in business collected as part of the financial institution's procedures for evaluating an application for credit.* A financial institution that collects or obtains an applicant's time in business as part of its procedures for evaluating an application for credit is not required to collect or obtain time in business pursuant to any particular definition of time in business for this purpose. For example, if the financial institution collects the number of years the applicant has existed (such as by asking the applicant when its business was started, or by obtaining the applicant's date of incorporation from a Secretary of State or other State or Federal agency that registers or licenses businesses) as

the time in business, the financial institution reports that information accordingly pursuant to comment 107(a)(17)–1.i. Similarly, if the financial institution collects the number of years of experience the applicant's owners have in the current line of business, the financial institution reports that information accordingly pursuant to comment 107(a)(17)–1.i. If, however, the financial institution collects both the number of years the applicant has existed as well as some other measure of time in business (such as the number of years of experience the applicant's owners have in the current line of business), the financial institution reports the number of years the applicant has existed as the time in business pursuant to comment 107(a)(17)–1.i.

3. *Time in business not provided by applicant and otherwise undetermined.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, which includes the applicant's time in business. However, if a financial institution is nonetheless unable to collect or determine the applicant's time in business, the financial institution reports that the time in business is ''not provided by applicant and otherwise undetermined.''

107(a)(18) Minority-Owned, Women-Owned, and LGBTQI+-Owned Business Statuses

1. *General.* A financial institution must ask an applicant whether it is a minority-owned, women-owned, and/or LGBTQI+-owned business. The financial institution must permit an applicant to refuse (*i.e.,* decline) to answer the financial institution's inquiry regarding business status and must inform the applicant that the applicant is not required to provide the information. See the sample data collection form in appendix E to this part for sample language for providing this notice to applicants. The financial institution must report the applicant's substantive response regarding each business status, that the applicant declined to answer the inquiry (that is, selected an answer option of ''I do not wish to provide this information'' or similar), or its failure to respond to the inquiry (that is, ''not provided by applicant''), as applicable.

2. *Definitions.* When inquiring about minority-owned, women-owned, and LGBTQI+-owned business statuses (regardless of whether the request is made on a paper form, electronically, or orally), the financial institution also must provide the applicant with definitions of the terms ''minority-owned business,'' ''women-owned business,'' and ''LGBTQI+-owned business'' as set forth in § 1002.102 (m), (s) and (*l*), respectively. The financial institution satisfies this requirement if it provides the definitions as set forth in the sample data collection form in appendix E.

3. *Combining questions.* A financial institution may combine on the same paper or electronic data collection form the questions regarding minority-owned, women-owned, and LGBTQI+-owned business status pursuant to § 1002.107(a)(18) with principal owners' ethnicity, race, and sex pursuant to § 1002.107(a)(19) and the applicant's number of principal owners pursuant to § 1002.107(a)(20). See the sample data collection form in appendix E.

4. *Notices.* When requesting minority-owned, women-owned, and LGBTQI+-owned business statuses from an applicant, a financial institution must inform the applicant that the financial institution cannot discriminate on the basis of the applicant's minority-owned, women-owned, or LGBTQI+-owned business statuses, or on whether the applicant provides its minority-owned, women-owned, or LGBTQI+-owned business statuses. A financial institution must also inform the applicant that Federal law requires it to ask for an applicant's minority-owned, women-owned, and LGBTQI+-owned business statuses to help ensure that all small business applicants for credit are treated fairly and that communities' small business credit needs are being fulfilled. A financial institution may combine these notices regarding minority-owned, women-owned, and LGBTQI+-owned business statuses with the notices that a financial institution is required to provide when requesting principal owners' ethnicity, race, and sex if a financial institution requests information pursuant to § 1002.107(a)(18) and (19) in the same data collection form or at the same time. See the sample data collection form in appendix E for sample language that a financial institution may use for these notices.

5. *Maintaining the record of an applicant's response regarding minority-owned, women-owned, and LGBTQI+-owned business statuses separate from the application.* A financial institution must maintain the record of an applicant's responses to the financial institution's inquiry pursuant to § 1002.107(a)(18) separate from the application and accompanying information. See § 1002.111(b) and comment 111(b)–1. If the financial institution provides a paper or electronic data collection form, the data collection form must not be part of the application form or any other document that the financial institution uses to provide or collect any information other than minority-owned business status, women-owned business status, LGBTQI+-owned business status, principal owners' ethnicity, race, and sex, and the number of the applicant's principal owners. See the sample data collection form in appendix E. For example, if the financial institution sends the data collection form via email, the data collection form should be a separate attachment to the email or accessed through a separate link in the email. If the financial institution uses a web-based data collection form, the form should be on its own page.

6. *Minority-owned, women-owned, and/or LGBTQI+-owned business statuses not provided by applicant.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, which includes the applicant's minority-owned, women-owned, and LGBTQI+-owned business statuses. However, if a financial institution does not receive a response to the financial institution's inquiry pursuant to § 1002.107(a)(18), the financial institution reports that the applicant's business statuses were ''not provided by applicant.''

7. *Applicant declines to provide information about minority-owned, women-owned, and/or LGBTQI+-owned business statuses.* A financial institution reports that the applicant responded that it did not wish to provide the information about an applicant's minority-owned, women-owned, and LGBTQI+-owned business statuses, if the applicant declines to provide the information by selecting such a response option on a paper or electronic form (*e.g.,* by selecting an answer option of ''I do not wish to provide this information'' or similar). The financial institution also reports an applicant's refusal to provide such information in this way, if the applicant orally declines to provide such information for a covered application taken by telephone or another medium that does not involve providing any paper or electronic documents.

8. *Conflicting responses provided by applicants.* If the applicant both provides a substantive response to the financial institution's inquiry regarding business status (that is, indicates that it is a minority-owned, women-owned, and/or LGBTQI+-owned business, or checks ''none apply'' or similar) and also checks the box indicating ''I do not wish to provide this information'' or

similar, the financial institution reports the substantive response(s) provided by the applicant (rather than reporting that the applicant declined to provide the information).

9. *No verification of business statuses.* Notwithstanding § 1002.107(b), a financial institution must report the applicant's substantive response(s), that the applicant declined to answer the inquiry (that is, selected an answer option of ''I do not wish to provide this information'' or similar), or the applicant's failure to respond to the inquiry (that is, that the information was ''not provided by applicant'') pursuant to § 1002.107(a)(18), even if the financial institution verifies or otherwise obtains an applicant's minority-owned, women-owned, and/or LGBTQI+-owned business statuses for other purposes. For example, if a financial institution uses a paper data collection form to ask an applicant if it is a minority-owned business, a women-owned business, and/or an LGBTQI+-owned business and the applicant does not indicate that it is a minority-owned business, the financial institution must not report that the applicant is a minority-owned business, even if the applicant indicates that it is a minority-owned business for other purposes, such as for a special purpose credit program or a Small Business Administration program.

107(a)(19) Ethnicity, Race, and Sex of Principal Owners

1. *General.* A financial institution must ask an applicant to provide its principal owners' ethnicity, race, and sex. The financial institution must permit an applicant to refuse (*i.e.,* decline) to answer the financial institution's inquiry and must inform the applicant that it is not required to provide the information. See the sample data collection form in appendix E to this part for sample language for providing this notice to applicants. The financial institution must report the applicant's substantive responses regarding principal owners' ethnicity, race, and sex, that the applicant declined to answer an inquiry (that is, selected an answer option of ''I do not wish to provide this information'' or similar), or its failure to respond to an inquiry (that is, ''not provided by applicant''), as applicable. The financial institution must report an applicant's responses about its principal owners' ethnicity, race, and sex, regardless of whether an applicant declines or fails to answer an inquiry about the number of its principal owners under § 1002.107(a)(20). If an applicant provides some, but not all, of the requested information about the ethnicity, race, and sex of a principal owner, the financial institution reports the information that was provided by the applicant and reports that the applicant declined to provide or did not provide (as applicable) the remainder of the information. See comments 107(a)(19)–6 and –7.

2. *Definition of principal owner.* When requesting a principal owner's ethnicity, race, and sex, the financial institution must also provide the applicant with the definition of the term ''principal owner'' as set forth in § 1002.102(o). The financial institution satisfies this requirement if it provides the definition of principal owner as set forth in the sample data collection form in appendix E.

3. *Combining questions.* A financial institution may combine on the same paper or electronic data collection form the questions regarding the principal owners' ethnicity, race, and sex pursuant to § 1002.107(a)(19) with the applicant's number of principal owners pursuant to § 1002.107(a)(20) and the applicant's minority-owned, women-owned, and LGBTQI+-owned business statuses pursuant to § 1002.107(a)(18). See the sample data collection form in appendix E.

4. *Notices.* When requesting a principal owner's ethnicity, race, and sex from an applicant, a financial institution must inform the applicant that the financial institution cannot discriminate on the basis of a principal owner's ethnicity, race, or sex/gender, or on whether the applicant provides the information. A financial institution must also inform the applicant that Federal law requires it to ask for the principal owners' ethnicity, race, and sex/gender to help ensure that all small business applicants for credit are treated fairly and that communities' small business credit needs are being fulfilled. A financial institution may combine these notices with the similar notices that a financial institution is required to provide when requesting minority-owned business status, women-owned business status, and LGBTQI+-owned business status, if a financial institution requests information pursuant to § 1002.107(a)(18) and (19) in the same data collection form or at the same time. See the sample data collection form in appendix E for sample language that a financial institution may use for these notices.

5. *Maintaining the record of an applicant's responses regarding principal owners' ethnicity, race, and sex separate from the application.* A financial institution must maintain the record of an applicant's response to the financial institution's inquiries pursuant to § 1002.107(a)(19) separate from the application and accompanying information. *See* § 1002.111(b) and comment 111(b)–1. If the financial institution provides a paper or electronic data collection form, the data collection form must not be part of the application form or any other document that the financial institution uses to provide or collect any information other than minority-owned business status, women-owned business status, LGBTQI+-owned business status, principal owners' ethnicity, race, and sex, and the number of the applicant's principal owners. See the sample data collection form in appendix E for sample language. For example, if the financial institution sends the data collection form via email, the data collection form should be a separate attachment to the email or accessed through a separate link in the email. If the financial institution uses a web-based data collection form, the form should be on its own page.

6. *Ethnicity, race, or sex of principal owners not provided by applicant.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, which includes the ethnicity, race, and sex of an applicant's principal owners. However, if an applicant does not provide the information, such as in response to a request for a principal owner's ethnicity, race, or sex on a paper or electronic data collection form, the financial institution reports the ethnicity, race, or sex (as applicable) as ''not provided by applicant'' for that principal owner. For example, if the financial institution provides a paper data collection form to an applicant with two principal owners, and asks the applicant to complete and return the form but the applicant does not do so, the financial institution reports that the two principal owners' ethnicity, race, and sex were ''not provided by applicant.'' Similarly, if the financial institution provides an electronic data collection form, the applicant indicates that it has two principal owners, the applicant provides ethnicity, race, and sex for the first principal owner, and the applicant does not make any selections for the second principal owner's ethnicity, race, and sex, the financial institution reports the ethnicity, race, and sex that the applicant provided for the first principal owner and reports that each of the ethnicity, race, and sex for the second principal owner was ''not provided by applicant.'' Additionally, if the financial institution provides an

electronic or paper data collection form, the applicant indicates that it has one principal owner, provides the principal owner's ethnicity and sex information, but does not provide information about the principal owner's race and also does not select a response of ''I do not wish to provide this information'' with regard to race, the financial institution reports the ethnicity and sex provided by the applicant and reports that the race of the principal owner was ''not provided by applicant.''

7. *Applicant declines to provide information about a principal owner's ethnicity, race, or sex.* A financial institution reports that the applicant responded that it did not wish to provide the information about a principal owner's ethnicity, race, or sex (as applicable), if the applicant declines to provide the information by selecting such a response option on a paper or electronic form (*e.g.,* by selecting an answer option of ''I do not wish to provide this information'' or similar). The financial institution also reports an applicant's refusal to provide such information in this way, if the applicant orally declines to provide such information for a covered application taken by telephone or another medium that does not involve providing any paper or electronic documents.

8. *Conflicting responses provided by applicant.* If the applicant both provides a substantive response to a request for a principal owner's ethnicity, race, or sex (that is, identifies a principal owner's race, ethnicity, or sex) and also checks the box indicating ''I do not wish to provide this information'' or similar, the financial institution reports the information on ethnicity, race, or sex that was provided by the applicant (rather than reporting that the applicant declined provide the information). For example, if an applicant is completing a paper data collection form and writes in a response that a principal owner's sex is female and also indicates on the form that the applicant does not wish to provide information regarding that principal owner's sex, the financial institution reports the principal owner's sex as female.

9. *No verification of ethnicity, race, and sex of principal owners.* Notwithstanding § 1002.107(b), a financial institution must report the applicant's substantive responses as to its principal owners' ethnicity, race, and sex (that is, the applicant's identification of its principal owners' race, ethnicity, and sex), that the applicant declined to answer the inquiry (that is, selected an answer option of ''I do not wish to provide this information'' or similar), or the applicant's failure to respond to the inquiry (that is, the information was ''not provided by applicant'') pursuant to § 1002.107(a)(19), even if the financial institution verifies or otherwise obtains the ethnicity, race, or sex of the applicant's principal owners for other purposes.

10. *Reporting for fewer than four principal owners.* If an applicant has fewer than four principal owners, the financial institution reports ethnicity, race, and sex information for the number of principal owners that the applicant has and reports the ethnicity, race, and sex fields for additional principal owners as ''not applicable.'' For example, if an applicant has only one principal owner, the financial institution reports ethnicity, race, and sex information for the first principal owner and reports as ''not applicable'' the ethnicity, race, and sex data fields for principal owners two through four.

11. *Previously collected ethnicity, race, and sex information.* If a financial institution reports one or more principal owners' ethnicity, race, or sex information based on previously collected data under § 1002.107(d), the financial institution does not need to collect any additional ethnicity, race, or sex information for other principal owners (if any). See also comment 107(d)–9.

12. *Guarantors.* A financial institution does not collect or report a guarantor's ethnicity, race, and sex unless the guarantor is also a principal owner of the applicant, as defined in § 1002.102(o).

13. *Ethnicity.* i. *Aggregate categories.* A financial institution must permit an applicant to provide each principal owner's ethnicity for purposes of § 1002.107(a)(19) using one or more of the following aggregate categories:

A. Hispanic or Latino.

B. Not Hispanic or Latino.

ii. *Disaggregated subcategories.* A financial institution must permit an applicant to provide each principal owner's ethnicity for purposes of § 1002.107(a)(19) using one or more of the following disaggregated subcategories, regardless of whether the applicant has indicated that the relevant principal owner is Hispanic or Latino and regardless of whether the applicant selects any aggregate categories: Cuban; Mexican; Puerto Rican; or Other Hispanic or Latino. If an applicant indicates that a principal owner is Other Hispanic or Latino, the financial institution must permit the applicant to provide additional information regarding the principal owner's ethnicity, by using free-form text on a paper or electronic data collection form or using language that informs the applicant of the opportunity to self-identify when taking the application by means other than a paper or electronic data collection form, such as by telephone. The financial institution must permit the applicant to provide additional information indicating, for example, that the principal owner is Argentinean, Colombian, Dominican, Nicaraguan, Salvadoran, or Spaniard. See the sample data collection form in appendix E for sample language. If an applicant chooses to provide additional information regarding a principal owner's ethnicity, such as by indicating that a principal owner is Argentinean orally or in writing on a paper or electronic form, a financial institution must report that additional information via free-form text. If the applicant provides such additional information but does not also indicate that the principal owner is Other Hispanic or Latino (*e.g.,* by selecting Other Hispanic or Latino on a paper or electronic form), a financial institution is permitted, but not required, to report Other Hispanic or Latino as well.

iii. *Selecting multiple categories.* The financial institution must permit the applicant to select one, both, or none of the aggregate categories and as many disaggregated subcategories as the applicant chooses. A financial institution must permit an applicant to select a disaggregated subcategory even if the applicant does not select the corresponding aggregate category. For example, an applicant must be permitted to select the Mexican disaggregated subcategory for a principal owner without being required to select the Hispanic or Latino aggregate category. If an applicant provides ethnicity information for a principal owner, the financial institution reports all of the aggregate categories and disaggregated subcategories provided by the applicant. For example, if an applicant selects both aggregate categories and four disaggregated subcategories for a principal owner, the financial institution reports the two aggregate categories that the applicant selected and all four of the disaggregated subcategories that the applicant selected. Additionally, if an applicant selects only the Mexican disaggregated subcategory for a principal owner and no aggregate categories, the financial institution reports Mexican for the ethnicity of the applicant's principal owner but does not also report Hispanic or Latino. Further, if the applicant selects an aggregate category (*e.g.,* Not Hispanic or Latino) and a disaggregated

subcategory that does not correspond to the aggregate category (*e.g.,* Puerto Rican), the financial institution reports the information as provided by the applicant (*e.g.,* Not Hispanic or Latino, and Puerto Rican).

14. *Race.* i. *Aggregate categories.* A financial institution must permit an applicant to provide each principal owner's race for purposes of § 1002.107(a)(19) using one or more of the following aggregate categories:

A. American Indian or Alaska Native.

B. Asian.

C. Black or African American.

D. Native Hawaiian or Other Pacific Islander.

E. White.

ii. *Disaggregated subcategories.* The financial institution must permit an applicant to provide a principal owner's race for purposes of § 1002.107(a)(19) using one or more of the disaggregated subcategories as listed in this comment 107(a)(19)–14.ii, regardless of whether the applicant has selected the corresponding aggregate category.

A. The Asian aggregate category includes the following disaggregated subcategories: Asian Indian; Chinese; Filipino; Japanese; Korean; Vietnamese; and Other Asian. An applicant must also be permitted to provide the principal owner's race using one or more of these disaggregated subcategories regardless of whether the applicant indicates that the principal owner is Asian and regardless of whether the applicant selects any aggregate categories. Additionally, if an applicant indicates that a principal owner is Other Asian, the financial institution must permit the applicant to provide additional information about the principal owner's race, by using free-form text on a paper or electronic data collection form or using language that informs the applicant of the opportunity to self-identify when taking the application by means other than a paper or electronic data collection form, such as by telephone. The financial institution must permit the applicant to provide additional information indicating, for example, that the principal owner is Cambodian, Hmong, Laotian, Pakistani, or Thai. See the sample data collection form in appendix E for sample language.

B. The Black or African American aggregate category includes the following disaggregated subcategories: African American; Ethiopian; Haitian; Jamaican; Nigerian; Somali; or Other Black or African American. An applicant must also be permitted to provide the principal owner's race using one or more of these disaggregated subcategories regardless of whether the applicant indicates that the principal owner is Black or African American and regardless of whether the applicant selects any aggregate categories. Additionally, if an applicant indicates that a principal owner is Other Black or African American, the financial institution must permit the applicant to provide additional information about the principal owner's race, by using free-form text on a paper or electronic data collection form or using language that informs the applicant of the opportunity to self-identify when taking the application by means other than a paper or electronic data collection form, such as by telephone. The financial institution must permit the applicant to provide additional information indicating, for example, that the principal owner is Barbadian, Ghanaian, or South African. See the sample data collection form in appendix E for sample language.

C. The Native Hawaiian or Other Pacific Islander aggregate category includes the following disaggregated subcategories: Guamanian or Chamorro; Native Hawaiian; Samoan; and Other Pacific Islander. An applicant must also be permitted to provide the principal owner's race using one or more of these disaggregated subcategories regardless of whether the applicant indicates that the principal owner is Native Hawaiian or Other Pacific Islander and regardless of whether the applicant selects any aggregate categories. Additionally, if an applicant indicates that a principal owner is Other Pacific Islander, the financial institution must permit the applicant to provide additional information about the principal owner's race, by using free-form text on a paper or electronic data collection form or using language that informs the applicant of the opportunity to self-identify when taking the application by means other than a paper or electronic data collection form, such as by telephone. The financial institution must permit the applicant to provide additional information indicating, for example, that the principal owner is Fijian or Tongan. See the sample data collection form in appendix E for sample language.

D. If an applicant chooses to provide additional information regarding a principal owner's race, such as indicating that a principal owner is Cambodian, Barbadian, or Fijian orally or in writing on a paper or electronic form, a financial institution must report that additional information via free-form text in the appropriate data reporting field. If the applicant provides such additional information but does not also indicate that the principal owner is Other Asian, Other Black or African American, or Other Pacific Islander, as applicable (*e.g.,* by selecting Other Asian on a paper or electronic form), a financial institution is permitted, but not required, to report the corresponding ''Other'' race disaggregated subcategory (*i.e.,* Other Asian, Other Black or African American, or Other Pacific Islander).

E. In addition to permitting an applicant to indicate that a principal owner is American Indian or Alaska Native, a financial institution must permit an applicant to provide the name of an enrolled or principal tribe, by using free-form text on a paper or electronic data collection form or using language that informs the applicant of the opportunity to self-identify when taking the application by means other than a paper or electronic data collection form, such as by telephone. If an applicant chooses to provide the name of an enrolled or principal tribe, a financial institution must report that information via free-form text in the appropriate data reporting field. If the applicant provides the name of an enrolled or principal tribe but does not also indicate that the principal owner is American Indian or Alaska Native (*e.g.,* by selecting American Indian or Alaska Native on a paper or electronic form), a financial institution is permitted, but not required, to report American Indian or Alaska Native as well.

iii. *Selecting multiple categories.* The financial institution must permit the applicant to select as many aggregate categories and disaggregated subcategories as the applicant chooses. A financial institution must permit an applicant to select one or more disaggregated subcategories even if the applicant does not select an aggregate category. For example, an applicant must be permitted to select the Chinese disaggregated subcategory for a principal owner without being required to select the Asian aggregate category. If an applicant provides race information for a principal owner, the financial institution reports all of the aggregate categories and disaggregated subcategories provided by the applicant. For example, if an applicant selects two aggregate categories and five disaggregated subcategories for a principal owner, the financial institution reports the two aggregate categories that the applicant selected and the five disaggregated subcategories that the applicant selected. Additionally, if an applicant selects only the Chinese disaggregated subcategory for a principal owner, the financial institution reports Chinese for the race of the principal owner but does

not also report that the principal owner is Asian. Similarly, if the applicant selects an aggregate category (*e.g.,* Asian) and a disaggregated subcategory that does not correspond to the aggregate category (*e.g.,* Native Hawaiian), the financial institution reports the information as provided by the applicant (*e.g.,* Asian and Native Hawaiian).

15. *Sex.* Generally, a financial institution must permit an applicant to provide each principal owner's sex for purposes of § 1002.107(a)(19). When requesting information about a principal owner's sex, a financial institution shall use the term ''sex/gender.'' If the financial institution uses a paper or electronic data collection form to collect the information, the financial institution must allow the applicant to provide each principal owner's sex/gender using free-form text. When a financial institution collects the information orally, such as by telephone, the financial institution must inform the applicant of the opportunity to provide each principal owner's sex/gender and record the applicant's response. A financial institution reports the substantive information provided by the applicant (reported via free-form text in the appropriate data reporting field), or reports that the applicant declined to provide the information.

16. *Ethnicity and race information requested orally.* As described in comments 107(a)(19)–13 and –14, when collecting principal owners' ethnicity and race pursuant to § 1002.107(a)(19), a financial institution must present the applicant with the specified aggregate categories and disaggregated subcategories. When collecting ethnicity and race information orally, such as by telephone, a financial institution may not present the applicant with the option to decline to provide the information without also presenting the applicant with the specified aggregate categories and disaggregated subcategories.

i. *Ethnicity and race categories.* Notwithstanding comments 107(a)(19)–13 and –14, a financial institution is not required to read aloud every disaggregated subcategory when collecting ethnicity and race information orally, such as by telephone. Rather, the financial institution must orally present the lists of aggregate ethnicity and race categories, followed by the disaggregated subcategories (if any) associated with the aggregate categories selected by the applicant or which the applicant requests to be presented. After the applicant makes any disaggregated category selections associated with the aggregate ethnicity or race category, the financial institution must also ask if the applicant wishes to hear the lists of disaggregated subcategories for any aggregate categories not selected by the applicant. The financial institution must record any aggregate categories selected by the applicant, as well as any disaggregated subcategories regardless of whether such subcategories were selected based on the disaggregated subcategories read by the financial institution or were otherwise provided by the applicant.

ii. *More than one principal owner.* If an applicant has more than one principal owner, the financial institution is permitted to ask about ethnicity and race in a manner that reduces repetition when collecting ethnicity and race information orally, such as by telephone. For example, if an applicant has two principal owners, the financial institution may ask for both principal owners' ethnicity at the same time, rather than asking about ethnicity, race, and sex for the first principal owner followed by ethnicity, race, and sex for the second principal owner.

107(a)(20) Number of Principal Owners

1. *General.* If the financial institution asks the applicant to provide the number of its principal owners pursuant to § 1002.107(a)(20), a financial institution must provide the definition of principal owner set forth in § 1002.102(o). The financial institution satisfies this requirement if it provides the definition of principal owner as set forth in the sample data collection form in appendix E.

2. *Number of principal owners provided by applicant; verification of number of principal owners.* The financial institution may rely on statements or information provided by the applicant in collecting and reporting the number of the applicant's principal owners. However, pursuant to § 1002.107(b), if the financial institution verifies the number of principal owners provided by the applicant, it must report the verified information.

3. *Number of principal owners not provided by applicant and otherwise undetermined.* Pursuant to § 1002.107(c), a financial institution shall maintain procedures reasonably designed to collect applicant-provided data, which includes the number of principal owners of the applicant. However, if a financial institution is nonetheless unable to collect or otherwise determine the applicant's number of principal owners, the financial institution reports that the number of principal owners is ''not provided by applicant and otherwise undetermined.''

107(b) Reliance on and Verification of Applicant-Provided Data

1. *Reliance on information provided by an applicant or appropriate third-party sources.* A financial institution may rely on statements made by an applicant (whether made in writing or orally) or information provided by an applicant when compiling and reporting data pursuant to subpart B of this part for applicant-provided data; the financial institution is not required to verify those statements or that information. However, if the financial institution does verify applicant statements or information for its own business purposes, such as statements relating to gross annual revenue or time in business, the financial institution reports the verified information. Depending on the circumstances and the financial institution's procedures, certain applicant-provided data can be collected from appropriate third-party sources without a specific request from the applicant, and such information may also be relied on. For example, gross annual revenue or NAICS code may be collected from tax return documents; a financial institution may also collect an applicant's NAICS code using third-party sources such as business information products. Applicant-provided data are the data that are or could be provided by the applicant, including § 1002.107(a)(5) through (7) and (13) through (20). See comment 107(c)(1)–3. In regard to restrictions on verification of minority-owned, women-owned, and LGBTQI+-owned business statuses, and principal owners' ethnicity, race, and sex, see comments 107(a)(18)–9 and 107(a)(19)–9.

107(c) Time and Manner of Collection

107(c)(1) In General

1. *Procedures.* The term ''procedures'' refers to the actual practices followed by a financial institution as well as its stated procedures. For example, if a financial institution's stated procedure is to collect applicant-provided data on or with a paper application form, but employees encourage applicants to skip the page that asks whether the applicant is a minority-owned business, a women-owned business, or an LGBTQI+-owned business under § 1002.107(a)(18), the financial institution's procedures are not reasonably designed to obtain a response.

2. Latitude to design procedures. A financial institution has flexibility to establish procedures concerning the

timing and manner in which it collects applicant-provided data that work best for its particular lending model and product offerings, provided those procedures are reasonably designed to collect the applicant-provided data in § 1002.107(a), as required pursuant to § 1002.107(c)(1), and where applicable comply with the minimum requirements set forth in § 1002.107(c)(2).

3. *Applicant-provided data.* Applicant-provided data are the data that are or could be provided by the applicant, including § 1002.107(a)(5) (credit type), § 1002.107(a)(6) (credit purpose), § 1002.107(a)(7) (amount applied for), § 1002.107(a)(13) (address or location for purposes of determining census tract), § 1002.107(a)(14) (gross annual revenue), § 1002.107(a)(15) (NAICS code, or information about the business such that the financial institution can determine the applicant's NAICS code), § 1002.107(a)(16) (number of workers), § 1002.107(a)(17) (time in business), § 1002.107(a)(18) (minority-owned business status, women-owned business status, and LGBTQI+-owned business status), § 1002.107(a)(19) (ethnicity, race, and sex of the applicant's principal owners), and § 1002.107(a)(20) (number of principal owners). Applicant-provided data do not include data that are generated or supplied only by the financial institution, including § 1002.107(a)(1) (unique identifier), § 1002.107(a)(2) (application date), § 1002.107(a)(3) (application method), § 1002.107(a)(4) (application recipient), § 1002.107(a)(8) (amount approved or originated), § 1002.107(a)(9) (action taken), § 1002.107(a)(10) (action taken date), § 1002.107(a)(11) (denial reasons), § 1002.107(a)(12) (pricing information), and § 1002.107(a)(13) (census tract, based on address or location provided by the applicant).

4. *Collecting applicant-provided data without a direct request to the applicant.* Depending on the circumstances and the financial institution's procedures, certain applicant-provided data can be collected without a direct request to the applicant. For example, credit type may be collected based on the type of product chosen by the applicant. Similarly, a financial institution may rely on appropriate third-party sources to collect certain applicant-provided data. See § 1002.107(b) concerning the use of third-party sources.

5. *Data updated by the applicant.* A financial institution reports updated data if it obtains more current data from the applicant during the application process. For example, if an applicant states its gross annual revenue for the preceding fiscal year was $3 million, but then the applicant notifies the financial institution that its revenue in the preceding fiscal year was actually $3.2 million, the financial institution reports gross annual revenue of $3.2 million. For reporting verified applicant-provided data, see § 1002.107(b) and comment 107(b)–1. If a financial institution has already verified data and then the applicant updates it, the financial institution reports the information it believes to be more accurate, in its discretion. If a financial institution receives updates from the applicant after the application process has closed (for example, after closing or account opening), the financial institution may, at its discretion, update the data at any time prior to reporting the covered application to the Bureau.

107(c)(2) Applicant-Provided Data Collected Directly From the Applicant

1. *In general.* Whether a financial institution's procedures are reasonably designed to collect applicant-provided data is a fact-based determination and may depend on the financial institution's particular lending model, product offerings, and other circumstances; procedures that are reasonably designed to obtain a response may therefore require additional provisions beyond the minimum criteria set forth in § 1002.107(c)(2). In general, reasonably designed procedures will seek to maximize collection of applicant-provided data and minimize missing or erroneous data. While the requirements of § 1002.107(c)(2) do not apply to applicant-provided data that a financial institution obtains without a direct request to the applicant, as explained in comment 107(c)(1)–4, in such instances, a covered financial institution must still comply with § 1002.107(c)(1).

2. *Specific components.* i. *Timing of initial collection attempt.* While a financial institution has some flexibility concerning when applicant-provided data is are collected, under no circumstances may the initial request for applicant-provided data occur simultaneous with or after notifying an applicant of final action taken on a covered application. Generally, the earlier in the application process the financial institution initially seeks to collect applicant-provided data, the more likely the timing of collection is reasonably designed to obtain a response.

ii. *The request for applicant-provided data is prominently displayed or presented.* Pursuant to § 1002.107(c)(2)(ii), a financial institution must ensure an applicant actually sees, hears, or is otherwise presented with the request for applicant-provided data. If an applicant is likely to overlook or miss a request for applicant-provided data, the financial institution does not have reasonably designed procedures. Similarly, a financial institution also does not have reasonably designed procedures if it obscures, prevents, or inhibits an applicant from accessing or reviewing a request for applicant-provided data.

iii. *The collection does not have the effect of discouraging an applicant from responding to a request for applicant-provided data.* A. A covered financial institution avoids discouraging a response by, for example, communicating to the applicant that the collection of applicant-provided data is worthy of the applicant's attention or is as important as information collected in connection with the financial institution's creditworthiness determination. In contrast, a covered financial institution that collects applicant-provided data in a time or manner that directly or indirectly discourages or obstructs an applicant from responding or providing a particular response violates § 1002.107(c)(2)(iii). For example, a financial institution may not discourage a response to inquiries regarding the demographic data pursuant to § 1002.107(a)(18) and (19) by communicating to the applicant that the request is unimportant, encouraging the applicant to bypass the form altogether, or attempting to influence or alter the applicant's preferred response.

B. A covered financial institution also avoids discouraging a response by requiring an applicant to provide a response to one or more requests for applicant-provided data in order to proceed with a covered application, including, as applicable, a response of ''I do not wish to provide this information'' or similar. (As described in comments 107(a)(18)–1 and 107(a)(19)–1, a financial institution must permit an applicant to decline to provide the demographic data required by § 1002.107(a)(18) and (19), which can be satisfied by providing a response option of ''I do not wish to provide this information'' or similar.) For example, in an electronic application, a financial institution may require the applicant to either make a substantive selection about a principal owner's ethnicity, race, or sex, select an option of ''I do not wish to provide this information'' or similar, or indicate there are no principal owners before allowing the applicant to proceed to the next page of requested information.

iv. *The applicant can easily provide a response.* Pursuant to § 1002.107(c)(2)(iv), a financial institution must structure the request for information in a manner that makes it easy for the applicant to provide a response. For example, a financial institution requests applicant-provided data in the same format as other information required for the covered application, provides applicants multiple methods to provide or return applicant-provided data (for example, on a written form, through a web portal, or through other means), or provides the applicant some other type of straightforward and seamless method to provide a response. Conversely, a financial institution must avoid imposing unnecessary burden on an applicant to provide the information requested or requiring the applicant to take steps that are inconsistent with the rest of its application process. For example, a financial institution does not have reasonably designed procedures if it collects application information related to its own creditworthiness determination in electronic form, but mails a paper form to the applicant initially seeking the data required under § 1002.107(a) that the financial institution does not otherwise need for its creditworthiness determination and requiring the applicant to mail it back. On the other hand, a financial institution complies with § 1002.107(c)(2)(iv) if, at its discretion, it requests the applicant to respond to inquiries made pursuant to § 1002.107(a)(18) and (19) through a reasonable method intended to keep the applicant's responses discrete and protected from view.

v. *Multiple requests for applicant-provided data.* A financial institution is permitted, but not required, to make more than one attempt to obtain applicant-provided data if the applicant does not respond to an initial request. For example, if an applicant initially does not respond when asked early in the application process (before notifying the applicant of final action taken on the application, pursuant to § 1002.107(c)(2)(i)) to inquiries made pursuant to § 1002.107(a)(18) and (19), a financial institution may request this information again, for example, during a subsequent in-person meeting with the applicant or after notifying the applicant of final action taken on the covered application.

107(c)(3) Procedures To Monitor Compliance

1. *Procedures to identify and respond to indicia of potential discouragement, including low response rates.* Section 1002.107(c)(3) requires a covered financial institution to maintain procedures designed to identify and respond to indicia of potential discouragement, including low response rates for applicant-provided data. In general, these include monitoring for low response rates (*i.e.,* the percentage of covered applications for which the financial institution has obtained some type of response to requests for applicant-provided data, including, as applicable, an applicant response of ''I do not wish to provide this information'' or similar); monitoring for significant irregularities in any particular response that may indicate steering, improper interference, or other potential discouragement or obstruction of applicants' preferred responses; monitoring response rates and responses by division, location, loan officer, or other factors to ensure that no discouragement or improper conduct is occurring in some parts of a financial institution, even if the financial institution maintains adequate response rates and responses overall; providing adequate training to loan officers and other persons involved in collecting applicant-provided data; promptly investigating any indicia of potential discouragement; and taking prompt remedial action if discouragement or other improper conduct is identified.

107(c)(4) Low Response Rates

1. *In general.* A low response rate for applicant-provided data may indicate that the financial institution has engaged in discouragement or otherwise failed to maintain reasonably designed procedures. Response rate generally refers to whether the financial institution has obtained some type of response to requests for applicant-provided data (including, as applicable, an applicant response of ''I do not wish to provide this information'' or similar). A response rate may be measured, as appropriate, as compared to financial institutions of a similar size, type, and/or geographic reach, or other factors, as appropriate. Similarly, significant irregularities in a particular response (for example, very high rates of an applicant response of ''I do not wish to provide this information'' or similar) may also indicate that a financial institution does not have reasonably designed procedures, for example, because of steering, improper interference, or other potential discouragement or obstruction of applicants' preferred responses. Response rates may be relevant across all applicant-provided data, though are particularly relevant for the collection of the demographic data pursuant to § 1002.107(a)(18) and (19) given the heightened sensitivity of these inquiries and the importance of those data to the purposes of subpart B.

107(d) Previously Collected Data

1. *In general.* A financial institution may, for the purpose of reporting such data pursuant to § 1002.109, reuse certain previously collected data if the requirements of § 1002.107(d) are met. In that circumstance, a financial institution need not seek to collect the data anew in connection with a subsequent covered application to satisfy the requirements of this subpart. For example, if an applicant applies for and is granted a term loan, and then subsequently applies for a credit card in the same calendar year, the financial institution need not request again the data specified in § 1002.107(d). Similarly, if an applicant applies for more than one covered credit transaction at one time, a financial institution need only ask once for the data specified in § 1002.107(d).

2. *Data that can be reused.* Subject to the requirements of § 1002.107(d), a financial institution may reuse the following data: § 1002.107(a)(13) (address or location for purposes of determining census tract), § 1002.107(a)(14) (gross annual revenue) (subject to comment 107(d)–7), § 1002.107(a)(15) (NAICS code), § 1002.107(a)(16) (number of workers), § 1002.107(a)(17) (time in business) (subject to comment 107(d)–8), § 1002.107(a)(18) (minority-owned business status, women-owned business status, and LGBTQI+-owned business status) (subject to comment 107(d)–9), § 1002.107(a)(19) (ethnicity, race, and sex of applicant's principal owners) (subject to comment 107(d)–9), and § 1002.107(a)(20) (number of principal owners). A financial institution is not, however, permitted to reuse other data, such as § 1002.107(a)(6) (credit purpose).

3. *Previously reported data without a substantive response.* Data have not been ''previously collected'' within the meaning of § 1002.107(d) if the applicant did not provide a substantive response to the financial institution's request for that data and the financial institution was not otherwise able to obtain the requested data (for example, from the applicant's credit report, or tax returns).

4. *Updated data.* If, after the application process has closed on a prior covered application, a financial institution obtains updated information relevant to the data required to be collected and reported pursuant to § 1002.107(a)(13) through (20), and the

applicant subsequently submits a new covered application, the financial institution must use the updated information in connection with the new covered application (if the requirements of § 1002.107(d) are otherwise met) or seek to collect the data again. For example, if a business notifies a financial institution of a change of address of its sole business location, and subsequently submits a covered application within the time period specified in § 1002.107(d)(1) for reusing previously collected data, the financial institution must report census tract based on the updated information. In that circumstance, the financial institution may still reuse other previously collected data to satisfy § 1002.107(a)(14) through (20) if the requirements of § 1002.107(d) are met.

5. *Collection within the preceding 36 months.* Pursuant to § 1002.107(d)(1), data can be reused to satisfy § 1002.107(a)(13) and (15) through (20) if they are collected within the preceding 36 months. A financial institution may measure the 36-month period from the date of final action taken (§ 1002.107(a)(9)) on a prior application to the application date (§ 1002.107(a)(2)) on a subsequent application. For example, if a financial institution takes final action on an application on February 1, 2025, it may reuse certain previously collected data pursuant to § 1002.107(d)(1) for subsequent covered applications dated or received by the financial institution through January 31, 2028.

6. *Reason to believe data are inaccurate.* Whether a financial institution has reason to believe data are inaccurate pursuant to § 1002.107(d)(2) depends on the particular facts and circumstances. For example, a financial institution may have reason to believe data on the applicant's minority-owned business status, women-owned business status, and LGBTQI+-owned business status may be inaccurate if it knows that the applicant has had a change in ownership or a change in an owner's percentage of ownership.

7. *Collection of gross annual revenue in the same calendar year.* Pursuant to § 1002.107(d)(1), gross annual revenue information can be reused to satisfy § 1002.107(a)(14) provided it is collected in the same calendar year as the current covered application, as measured from the application date. For example, if an application is received and gross annual revenue is collected in connection with a covered application in one calendar year, but then final action was taken on the application in the following calendar year, the data may only be reused for the calendar year in which it was collected and not the calendar year in which final action was taken on the application. However, if an application is received and gross annual revenue is collected in connection with a covered application in one calendar year, a financial institution may reuse that data pursuant to § 1002.107(d) in a subsequent application initiated in the same calendar year, even if final action was taken on the subsequent application in the following calendar year.

8. *Time in business.* A financial institution that decides to reuse previously collected data to satisfy § 1002.107(a)(17) (time in business) must update the data to reflect the passage of time since the data were collected. If a financial institution only knows that the applicant had been in business less than two years at the time the data was initially collected, as described in comment 107(a)(17)–1.ii or iii, it updates the data based on the assumption that the applicant had been in business for 12 months at the time of the prior collection. For example:

i. If a financial institution previously collected data on a prior covered application that the applicant has been in business for four years, and then seeks to reuse that data for a subsequent covered application submitted one year later, it must update the data to reflect that the applicant has been in business for five years.

ii. If a financial institution previously collected data on a prior covered application that the applicant had been in business less than two years (and was not aware of the business's actual length of time in business at the time), and then seeks to reuse that data for a subsequent covered application submitted 18 months later, the financial institution reports time in business on the subsequent covered application as over two years in business.

9. *Minority-owned business status, women-owned business status, LGBTQI+-owned business status, and principal owners' ethnicity, race, and sex.* A financial institution may not reuse data to satisfy § 1002.107(a)(18) and (19) unless the data were collected in connection with a prior covered application pursuant to this subpart B. If the financial institution previously asked the applicant to provide its minority-owned business status, women-owned business status, and LGBTQI+-owned business status, and principal owners' ethnicity, race, and sex for purposes of § 1002.107(a)(18) and (19), and the applicant declined to provide the information (such as by selecting ''I do not wish to provide this information'' or similar on a data collection form or by telling the financial institution that it did not wish to provide the information), the financial institution may use that response when reporting data for a subsequent application pursuant to § 1002.107(d). However, if the applicant failed to respond (such as by leaving the response to the question blank or by failing to return a data collection form), the financial institution must inquire about the applicant's minority-owned business status, women-owned business status, LGBTQI+-owned business status, and principal owners' ethnicity, race, or sex, as applicable, in connection with a subsequent application because the data were not previously obtained. See also comment 107(a)(19)–11 concerning previously collected ethnicity, race, and sex information.

Section 1002.108—Firewall

108(a) Definitions

1. *Involved in making any determination concerning a covered application from a small business.* i. *General.* An employee or officer is involved in making a determination concerning a covered application from a small business for purposes of § 1002.108 if the employee or officer makes, or otherwise participates in, a decision regarding the evaluation of a covered application from a small business or the creditworthiness of a small business applicant for a covered credit transaction. This includes, but is not limited to, employees and officers serving as underwriters. The decision that an employee or officer makes or participates in must be about a specific covered application or about the creditworthiness of a specific applicant. An employee or officer is not involved in making a determination concerning a covered application if the employee or officer is only involved in making a decision that affects covered applications generally, or if the employee or officer only interacts with small businesses prior to them becoming applicants or submitting an application. An employee or officer may be participating in a determination concerning a covered application even if the employee or officer is not the ultimate decision maker or the sole decision maker. For example, an employee participates in a determination concerning a covered application if the employee recommends that another employee or officer approve or deny the application. Similarly, an employee or officer participates in a determination concerning a covered application if the employee or officer is part of a larger group, such as a committee, that makes

a determination concerning a covered application. For example, an employee participates in a decision if the employee is a member of a committee that approves the terms offered to an applicant for a covered application. This is true even if the employee does not support the committee's ultimate decision regarding the terms offered. Conversely, an employee or officer does not participate in a determination concerning a covered application if the employee or officer only performs ministerial functions for the committee, such as recording the minutes, or if the committee does not make a determination concerning a specific covered application.

ii. *Examples of activities that do not constitute being involved in making a determination concerning a covered application from a small business.* The following are examples of activities that do not constitute being involved in making a determination concerning a covered application:

A. Developing policies and procedures, designing or programming computer or other systems, or conducting marketing.

B. Discussing credit products, loan terms, or loan requirements with a small business before it submits a covered application.

C. Making or participating in a decision after the financial institution has taken final action on the covered application, such as a decision about servicing or collecting a covered credit transaction.

D. Using a check box form to confirm whether an applicant has submitted all necessary documents or handling a minor or clerical matter during the application process, such as suggesting or selecting a time for an appointment with an applicant.

E. Gathering information (including information collected pursuant to § 1002.107(a)(18) or (19)) and forwarding the information or a covered application to other individuals or entities.

F. Reviewing previously collected data to determine if it can be reused for a later covered application pursuant to § 1002.107(d).

iii. *Examples of activities that constitute being involved in making a determination concerning a covered application from a small business.* The following are examples of activities (done individually or as part of a group) that constitute being involved in making a determination concerning a covered application:

A. Making or participating in a decision to approve or deny a specific covered application. This includes, but is not limited to, making or participating in a decision that an applicant does not satisfy one or more of the requirements for the covered credit transaction for which it has applied.

B. Making or participating in a decision regarding the reason(s) for denial of a covered application.

C. Making or participating in a decision that a guarantor or collateral is required in order to approve a specific covered application.

D. Making or participating in a decision regarding the credit amount or credit limit that will be approved for a specific covered application.

E. Making or participating in a decision to set one or more of the other terms that will be offered for a specific covered credit transaction. This includes, but is not limited to, making or participating in a decision regarding the interest rate, the loan term, or the payment schedule that will be offered for a specific covered credit transaction.

F. Making or participating in a decision regarding a counteroffer made to a specific applicant, including a decision regarding the terms of such a counteroffer.

G. Recommending that another decision maker approve or deny a specific covered application, provide a specific reason for denying a covered application, require a guarantor or collateral in order to approve a covered application, approve a credit amount or credit limit for a covered credit transaction, set one or more other terms for a covered credit transaction, make a counteroffer regarding a covered application, or set a specific term for such a counteroffer.

2. *Should have access.* i. *General.* A financial institution may determine that an employee or officer who is involved in making a determination concerning a covered application from a small business should have access to information otherwise subject to the prohibition in § 1002.108(b) if that employee or officer is assigned one or more job duties that may require the employee or officer to collect, see, consider, refer to, or otherwise use information subject to the prohibition in § 1002.108(b). If the employee or officer might need to collect, see, consider, refer to, or use such information to perform the employee's or officer's assigned job duties, the financial institution may determine that the employee or officer should have access. For example, if a loan officer is involved in making a determination concerning a covered application and that loan officer's job description or the financial institution's policies and procedures state that the loan officer may need to collect information pursuant to § 1002.107(a)(18) or (19), the financial institution may determine that the loan officer should have access.

ii. *When a group of employees or officers should have access.* A financial institution may determine that all employees or officers with the same job description or assigned duties should have access for purposes of § 1002.108. For example, if a job description, a policy, a procedure, or another document states that a loan officer may have to collect or explain any part of a data collection form that includes the inquiries described in § 1002.107(a)(18) and (19), the financial institution may determine that all employees and officers who have been assigned the position of loan officer should have access for purposes of § 1002.108.

iii. *Making a determination regarding who should have access.* A financial institution is permitted to choose what lawful factors it will consider when determining whether an employee or officer should have access. A financial institution's determination that an employee or officer should have access may take into account relevant operational factors and lawful business practices. For example, a financial institution may consider its size, the number of employees and officers within the relevant line of business or at a particular branch or office location, and/or the number of covered applications the financial institution has received or expects to receive. Additionally, a financial institution may consider its current or its reasonably anticipated staffing levels, operations, systems, processes, policies, and procedures. A financial institution is not required to hire additional staff, upgrade its systems, change its lending or operational processes, or revise its policies or procedures for the sole purpose of limiting who should have access.

108(b) Prohibition on Access to Certain Information

1. *Scope of persons subject to the prohibition.* The prohibition in § 1002.108(b) applies to an employee or officer of a covered financial institution or its affiliate if the employee or officer is involved in making any determination concerning a covered application from a small business. For example, if a financial institution is affiliated with company B and an employee of company B is involved in making a determination concerning a covered application on behalf of the financial institution, then the financial institution must comply with § 1002.108 with regard to company B's employee.

Section 1002.108 does not require a financial institution to limit the access of employees and officers of third parties who are not affiliates of the financial institution.

2. *Scope of information that cannot be accessed when the prohibition applies to an employee or officer.* i. *Information that cannot be accessed when the prohibition applies.* If a particular employee or officer is involved in making a determination concerning a covered application from a small business, the prohibition in § 1002.108(b) only limits that employee's or officer's access to that small business applicant's responses to the inquiries that the covered financial institution makes to satisfy § 1002.107(a)(18) and (19). For example, if a financial institution uses a paper data collection form to request information pursuant to § 1002.107(a)(18) and (19), an employee or officer that is subject to the prohibition is not permitted access to the paper data collection form that contains the applicant's responses to the inquiries made pursuant to pursuant to § 1002.107(a)(18) and (19), or to any other record that identifies how the particular applicant responded to those inquires. Similarly, if a financial institution makes the inquiries required pursuant to § 1002.107(a)(18) and (19) during a telephone call, the prohibition applies to the applicant's responses to those inquiries provided during that telephone call and to any record that identifies how the particular applicant responded to those inquiries.

ii. *Information that can be accessed when the prohibition applies.* If a particular employee or officer is involved in making a determination concerning a covered application, the prohibition in § 1002.108(b) does not limit that employee's or officer's access to an applicant's responses to inquiries regarding whether the applicant is a minority-owned, women-owned, or LGBTQI+-owned business, or principal owners' ethnicity, race, or sex, made for purposes other than compliance with § 1002.107(a)(18) or (19). Thus, for example, an employee or officer who is subject to the prohibition in § 1002.108(b) may have access to information regarding whether an applicant is eligible for a Small Business Administration program for women-owned businesses without regard to whether the exception in § 1002.108(c) is satisfied. Additionally, an employee or officer who knows that an applicant is a minority-owned business, women-owned business, or LGBTQI+-owned business, or who knows the ethnicity, race, or sex of any of the applicant's principal owners due to activities unrelated to the inquiries made to satisfy the financial institution's obligations under § 1002.107(a)(18) and (19) is not prohibited from making a determination concerning the applicant's covered application. Thus, an employee or officer who knows, for example, that an applicant is a minority-owned business due to a social relationship or another professional relationship with the applicant or any of its principal owners may make determinations concerning the applicant's covered application. Furthermore, an employee or officer that is involved in making a determination concerning a covered application may see, consider, refer to, or use data collected to satisfy aspects of § 1002.107 other than § 1002.107(a)(18) or (19), such as gross annual revenue, number of workers, and time in business.

108(c) Exception to the Prohibition on Access to Certain Information

1. *General.* A financial institution is not required to limit the access of an employee or officer who is involved in making determinations concerning a covered application from a small business if the financial institution determines that the particular employee or officer should have access to the information collected pursuant to § 1002.107(a)(18) or (19), and the financial institution provides the notice required by § 1002.108(d). A financial institution is not required to perform a separate analysis of the feasibility of maintaining a firewall. A determination that an employee or officer should have access means that it is not feasible to maintain a firewall as to that particular employee or officer, and the exception applies to that employee or officer if the financial institution provides the notice required by § 1002.108(d). However, the fact that a financial institution has made a determination that an employee or officer should have access does not mean that the financial institution can permit other employees and officers who are involved in making determinations concerning a covered application to have access to the information collected pursuant to § 1002.107(a)(18) and (19). A financial institution may only permit an employee or officer who is involved in making a determination concerning a covered application to have access to information collected pursuant to § 1002.107(a)(18) and (19) if it has determined that employee or officer or a group of which the employee or officer is a member should have access to the information.

2. *Applying the exception to a specific employee or officer or group of similarly situated employees or officers.* The exception applies to an employee or officer if the financial institution determines that the employee or officer should have access to the information collected pursuant to § 1002.107(a)(18) or (19), and the financial institution provides the notice required by § 1002.108(d). A financial institution can also determine that several employees and officers should have access, that all of a group of similarly situated employees or officers should have access, and that multiple groups of similarly situated employees or officers should have access to information collected pursuant to § 1002.107(a)(18) or (19). See also comment 108(a)–2. For example, a financial institution could determine that all its small business loan officers, small business loan processors, compliance officers, and legal officers should have access. If the financial institution provides the notice required in § 1002.108(d), the financial institution may permit all of its small business loan officers, small business loan processors, compliance officers, and legal officers to have access. However, the financial institution cannot permit other employees and officers to have access simply because it has determined that the small business loan officers, loan processors, compliance officers, and legal officers should have access. For example, in this case, the financial institution may not permit its underwriters or chief executive officer to have access to the information collected from the applicant pursuant to § 1002.107(a)(18) or (19) if they are involved in making any determination concerning a covered application, unless the financial institution also determines that they should have access. This would be true even if the chief executive officer or underwriter had some of the same assigned duties as a loan officer, such as being a member of a credit committee, but has not been assigned the task(s) that may require access to one or more applicants' responses to the financial institution's inquiries under § 1002.107(a)(18) or (19). If the financial institution separately determines that underwriters and the chief executive officer should have access, then the underwriters and chief executive officer may also have access.

108(d) Notice

1. *General.* If a financial institution determines that one or more employees or officers should have access pursuant to § 1002.108(c), the financial institution must provide the required notice to, at

a minimum, the applicant or applicants whose responses will be accessed by an employee or officer involved in making determinations concerning the applicant's or applicants' covered applications. Alternatively, a financial institution may also provide the required notice to applicants whose responses will not or might not be accessed. For example, a financial institution could provide the notice to all applicants for covered credit transactions or all applicants for a specific type of product.

2. *Content of the required notice.* The notice must inform the applicant that one or more employees and officers involved in making determinations concerning the applicant's covered application may have access to the applicant's responses regarding the applicant's minority-owned business status, women-owned business status, LGBTQI+-owned business status, and its principal owners' ethnicity, race, and sex. See the sample data collection form in appendix E to this part for sample language for providing this notice to applicants. If a financial institution establishes and maintains a firewall and chooses to use the sample data collection form, the financial institution can delete this sample language from the form.

3. *Timing for providing the notice.* If the financial institution is providing the notice orally, it must provide the notice required by § 1002.108(d) prior to asking the applicant if it is a minority-owned business, women-owned business, or LGBTQI+-owned business and prior to asking for a principal owner's ethnicity, race, or sex. If the notice is provided on the same paper or electronic data collection form as the inquiries about minority-owned business status, women-owned business status, LGBTQI+-owned business status and the principal owners' ethnicity, race, or sex, the notice must appear before the inquiries. If the notice is provided in an electronic or paper document that is separate from the data collection form, the notice must be provided at the same time as the data collection form or prior to providing the data collection form. Additionally, the notice must be provided with the non-discrimination notices required pursuant to § 1002.107(a)(18) and (19). See appendix E for sample language.

Section 1002.109—Reporting of Data to the Bureau

109(a) Reporting to the Bureau

109(a)(2) Reporting by Subsidiaries

1. *Subsidiaries.* A covered financial institution is considered a subsidiary of another covered financial institution for purposes of reporting data pursuant to § 1002.109 if more than 50 percent of the ownership or control of the first covered financial institution is held by the second covered financial institution.

109(a)(3) Reporting Obligations Where Multiple Financial Institutions Are Involved in a Covered Credit Transaction

1. *General.* The following clarifies how to report applications involving more than one financial institution. The discussion below assumes that all parties involved with the covered credit transaction are covered financial institutions. However, the same principles apply if any party is not a covered financial institution.

i. A financial institution shall report the action that it takes on a covered application, whether or not the covered credit transaction closed in the financial institution's name and even if the financial institution used underwriting criteria supplied by another financial institution. However, where it is necessary for more than one financial institution to make a credit decision in order to approve a single covered credit transaction, only the last financial institution with authority to set the material terms of the covered credit transaction is required to report. Setting the material terms of the covered credit transaction include, for example, selecting among competing offers, or modifying pricing information, amount approved or originated, or repayment duration. In this situation, the determinative factor is not which financial institution actually made the last credit decision prior to closing, but rather which financial institution last had the authority for setting the material terms of the covered credit transaction prior to closing. Whether a financial institution has taken action for purposes of § 1002.109(a)(3) and comment 109(a)(3)–1 is not relevant to, and is not intended to repeal, abrogate, annul, impair, or interfere with, section 701(d) (15 U.S.C. 1691(d)) of the Act, § 1002.9, or any other provision within subpart A of this Regulation.

ii. A financial institution takes action on a covered application for purposes of § 1002.109(a)(3) if it denies the application, originates the application, approves the application but the applicant did not accept the transaction, or closes the file or denies for incompleteness. The financial institution must also report the application if it was withdrawn. For reporting purposes, it is not relevant whether the financial institution receives the application directly from the applicant or indirectly through another party, such as a broker, or (except as otherwise provided in comment 109(a)(3)–1.i) whether another financial institution also reviews and reports an action taken on a covered application involving the same credit transaction.

iii. Where it is necessary for more than one financial institution to make a credit decision in order to approve a single covered credit transaction and where more than one financial institution denies the application or otherwise does not approve the application, the reporting financial institution (the last financial institution with authority to set the material terms of the covered credit transaction) shall have a consistent procedure for determining how it reports inconsistent or differing data points for purposes of subpart B. For example, Financial Institution A is the reporting entity because it has the last authority to set the material credit terms. Financial Institution A sends the application to Financial Institution B and Financial Institution C for review, but both Financial Institution B and Financial Institution C deny the application, with different denial reasons. Based on these denials, Financial Institution A follows suit and denies the application. Financial Institution A must have a consistent procedure for what denial reason(s) to report, such as reporting the denial reason(s) from the first financial institution that denied the covered application.

2. *Examples.* The following scenarios illustrate how a financial institution reports a particular covered application. The illustrations assume that all parties involved with the covered credit transaction are covered financial institutions. However, the same principles apply if any party is not a covered financial institution. Examples i through iv involve a single financial institution with responsibility for making a credit decision without the involvement of an intermediary. Example v describes a financial institution intermediary with only passive involvement in the covered credit transaction. Example vi describes a transaction where multiple financial institutions independently decision and take action on a covered application. Examples vii and viii describe situations where more than one financial institution must make a credit decision in order to approve the covered credit transaction. Examples ix and x describe situations involving pooled and participation interests.

i. Financial Institution A received a covered application from an applicant

and approved the application before closing the covered credit transaction in its name. Financial Institution A was not acting as Financial Institution B's agent. Financial Institution B later purchased the covered credit transaction from Financial Institution A. Financial Institution A was not acting as Financial Institution B's agent. Financial Institution A reports the application. Financial Institution B has no reporting obligation for this transaction.

ii. Financial Institution A received a covered application from an applicant. If approved, the covered credit transaction would have closed in Financial Institution B's name. Financial Institution A denied the application without sending it to Financial Institution B for approval. Financial Institution A was not acting as Financial Institution B's agent. Since Financial Institution A took action on the application, Financial Institution A reports the application as denied. Financial Institution B does not report the application.

iii. Financial Institution A reviewed a covered application and made a credit decision to approve it using the underwriting criteria provided by a Financial Institution B. Financial Institution B did not review the application and did not make a credit decision prior to closing. Financial Institution A was not acting as Financial Institution B's agent. Financial Institution A reports the application. Financial Institution B has no reporting obligation for this application.

iv. Financial Institution A reviewed and made the credit decision on a covered application based on the criteria of a third-party insurer or guarantor (for example, a government or private insurer or guarantor). Financial Institution A reports the action taken on the application.

v. Financial Institution A received a covered application from an applicant and forwarded that application to Financial Institution B. Financial Institution B reviewed the application and made a credit decision approving the application prior to closing. The covered credit transaction closed in Financial Institution A's name. Financial Institution B purchased the covered credit transaction from Financial Institution A after closing. Financial Institution B was not acting as Financial Institution A's agent. Since Financial Institution B made the credit decision prior to closing, and Financial Institution A's approval was not necessary for the credit transaction, Financial Institution B reports the origination. Financial Institution A does not report the application. Assume the same facts, except that Financial Institution B reviewed the application before the covered credit transaction would have closed, but Financial Institution B denied the application. Financial Institution B reports the application as denied. Financial Institution A does not report the application because it did not take an action on the application. If, under the same facts, the application was withdrawn before Financial Institution B made a credit decision, Financial Institution B would report the application as withdrawn and Financial Institution A would not report the application for the same reason.

vi. Financial Institution A received a covered application and forwarded it to Financial Institutions B and C. Financial Institution A made a credit decision, acting as Financial Institution D's agent, and approved the application. Financial Institutions B and C are not working together with Financial Institutions A or D, or with each other, and are solely responsible for setting the terms of their own credit transactions. Financial Institution B made a credit decision approving the application, and Financial Institution C made a credit decision denying the application. The applicant did not accept the covered credit transaction from Financial Institution D. Financial Institution D reports the application as approved but not accepted. Financial Institution A does not report the application, because it was acting as Financial Institution D's agent. The applicant accepted the offer of credit from Financial Institution B, and credit was extended. Financial Institution B reports the application as originated. Financial Institution C reports the application as denied.

vii. Financial Institution A received a covered application and made a credit decision to approve it using the underwriting criteria provided by Financial Institution B. Financial Institution A was not acting as Financial Institution B's agent. Financial Institution A forwarded the application to Financial Institution B. Financial Institution B reviewed the application and made a credit decision approving the application prior to closing. Financial Institution A makes a credit decision on the application and modifies the credit terms (the interest rate and repayment term) offered by Financial Institution B. The covered credit transaction reflecting the modified terms closes in Financial Institution A's name. Financial Institution B purchases the covered credit transaction from Financial Institution A after closing. As the last financial institution with the authority for setting the material terms of the covered credit transaction, Financial Institution A reports the application as originated. Financial Institution B does not report the origination because it was not the last financial institution with the authority to set the material terms on the application. If, under the same facts, Financial Institution A did not modify the credit terms offered by Financial Institution B, Financial Institution A still reports the application as originated because it was still the last financial institution with the authority for setting the material terms, even if it chose not to so do in a particular instance. Financial Institution B does not report the origination.

viii. Financial Institution A received a covered application and forwarded it to Financial Institutions B, C, and D. Financial Institution A was not acting as anyone's agent. Financial Institution B and C reviewed the application and made a credit decision approving the application and Financial Institution D reviewed the application and made a credit decision denying the application. Prior to closing, Financial Institution A makes a credit decision on the application by deciding to offer to the applicant the credit terms offered by Financial Institution B and does not convey to the applicant the credit terms offered by Financial Institution C. The applicant does not accept the covered credit transaction. As the last financial institution with the authority for setting the material terms of the covered credit transaction, Financial Institution A reports the application as approved but not accepted. Financial Institutions B, C, and D do not report the application because they were not the last financial institution with the authority for setting the material terms of the covered credit transaction. Assume the same facts, except the applicant accepts the terms of the covered credit transaction from Financial Institution B as offered by Financial Institution A. The covered credit transaction closes in Financial Institution A's name. Financial Institution B purchases the transaction after closing. Here, Financial Institution A reports the application as originated. Financial Institutions B, C, and D do not report the application because they were not the last financial institution responsible for setting the material terms of the covered credit transaction.

ix. Financial Institution A receives a covered application and approves it, and then Financial Institution A elects to organize a loan participation agreement where Financial Institutions B and C agree to purchase a partial interest in the covered credit

transaction. Financial Institution A reports the application. Financial Institutions B and C have no reporting obligation for this application.

x. Financial Institution A purchases an interest in a pool of covered credit transactions, such as credit-backed securities or real estate investment conduits. Financial Institution A does not report this purchase.

3. *Agents.* If a covered financial institution takes action on a covered application through its agent, the financial institution reports the application. For example, acting as Financial Institution A's agent, Financial Institution B approved an application prior to closing and a covered credit transaction was originated. Financial Institution A reports the covered credit transaction as an origination. State law determines whether one party is the agent of another.

109(b) Financial Institution Identifying Information

1. *Changes to financial institution identifying information.* If a financial institution's information required pursuant to § 1002.109(b) changes, the financial institution shall provide the new information with the data submission for the collection year of the change. For example, assume two financial institutions that previously reported data under subpart B of this part merge and the surviving institution retained its Legal Entity Identifier but obtained a new TIN in February 2026. The surviving institution must report the new TIN with its data submission for its 2026 data (which is due by June 1, 2027) pursuant to § 1002.109(b)(5). Likewise, if that financial institution's Federal prudential regulator changes in February 2026 as a result of the merger, it must identify its new Federal prudential regulator in its annual submission for its 2026 data.

Paragraph 109(b)(4)

1. *Federal prudential regulator.* For purposes of § 1002.109(b)(4), *Federal prudential regulator* means, if applicable, the Federal prudential regulator for a financial institution that is a depository institution as determined pursuant to section 3q of the Federal Deposit Insurance Act (12 U.S.C. 1813(q)), including the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, or the Board of Governors of the Federal Reserve System; or the National Credit Union Administration Board for financial institutions that are Federal credit unions.

Paragraph 109(b)(6)

1. *Legal Entity Identifier (LEI).* A Legal Entity Identifier is a utility endorsed by the LEI Regulatory oversight committee, or a utility endorsed or otherwise governed by the Global LEI Foundation (GLEIF) (or any successor of the GLEIF) after the GLEIF assumes operational governance of the global LEI system. A financial institution complies with § 1002.109(b)(6) by reporting its current LEI number. A financial institution that does not currently possess an LEI number must obtain an LEI number, and has an ongoing obligation to maintain the LEI number. The GLEIF website provides a list of LEI issuing organizations. A financial institution may obtain an LEI, for purposes of complying with § 1002.109(b)(6), from any one of the issuing organizations listed on the GLEIF website.

Paragraph 109(b)(7)

1. *RSSD ID number.* The RSSD ID is a unique identifying number assigned to institutions, including main offices and branches, by the Board of Governors of the Federal Reserve System. A financial institution's RSSD ID may be found on the website of the National Information Center, which provides comprehensive financial and structure information on banks and other institutions for which the Federal Reserve Board has a supervisory, regulatory, or research interest including both domestic and foreign banking organizations that operate in the United States. If a financial institution does not have an RSSD ID, it reports that this information is not applicable.

Paragraph 109(b)(8)

1. *Immediate parent entity.* An entity is the immediate parent of a financial institution for purposes of § 1002.109(b)(8)(i) through (iii) if it is a separate entity that directly owns more than 50 percent of the financial institution.

2. *Top-holding parent entity.* An entity is the top-holding parent of a financial institution for purposes of § 1002.109(b)(8)(iv) through (vi) if it ultimately owns more than 50 percent of the financial institution, and the entity itself is not controlled by any other entity. If the immediate parent entity and the top-holding parent entity are the same, the financial institution reports that § 1002.109(b)(8)(iv) through (vi) are not applicable.

3. *LEI.* For purposes of § 1002.109(b)(8)(ii) and (v), a financial institution shall report the LEI of a parent entity if the parent entity has an LEI number. If a financial institution's parent entity does not have an LEI, the financial institution reports that this information is not applicable.

4. *RSSD ID numbers.* For purposes of § 1002.109(b)(8)(iii) and § 1002.109(b)(8)(vi), a financial institution shall report the RSSD ID number of a parent entity if the entity has an RSSD ID number. If a financial institution's parent entity does not have an RSSD ID, the financial institution reports that this information is not applicable.

Paragraph 109(b)(9)

1. *Type of financial institution.* A financial institution complies with § 1002.109(b)(9) by selecting the applicable type or types of financial institution from the list below. A financial institution shall select all applicable types.

i. Bank or savings association.
ii. Minority depository institution.
iii. Credit union.
iv. Nondepository institution.
v. Community development financial institution (CDFI).
vi. Other nonprofit financial institution.
vii. Farm Credit System institution.
viii. Government lender.
ix. Commercial finance company.
x. Equipment finance company.
xi. Industrial loan company.
xii. Online lender.
xiii. Other.

2. *Use of "other" for type of financial institution.* A financial institution reports type of financial institution as "other" where none of the enumerated types of financial institution appropriately describe the applicable type of financial institution, and the institution reports the type of financial institution via free-form text field. A financial institution that selects at least one type from the list is permitted, but not required, to also report "other" (with appropriate free-form text) if there is an additional aspect of its business that is not one of the enumerated types set out in comment 109(b)(9)–1.

3. *Additional types of financial institution.* The Bureau may add additional types of financial institutions via the Filing Instructions Guide and related materials. Refer to the Filing Instructions Guide for any updates for each reporting year.

Paragraph 109(b)(10)

1. *Financial institutions that voluntarily report covered applications under subpart B of this part.* A financial institution that is not a covered financial institution pursuant to § 1002.105(b) but that elects to voluntarily compile, maintain, and

report data under §§ 1002.107 through 1002.109 (see comment 105(b)–10) complies with § 1002.109(b)(10) by selecting ''voluntary reporter.''

Section 1002.110—Publication of Data and Other Disclosures

110(c) Statement of Financial Institution's Small Business Lending Data Available on the Bureau's Website

1. *Statement.* A financial institution shall provide the statement required by § 1002.110(c) using the following, or substantially similar, language:

Small Business Lending Data Notice

Data about our small business lending are available online for review at the Consumer Financial Protection Bureau's (CFPB's) website at https://www.consumerfinance.gov/data-research/small-business-lending/. The data show the geographic distribution of our small business lending applications; information about our loan approvals and denials; and demographic information about the principal owners of our small business applicants. The CFPB may delete or modify portions of our data prior to posting it if doing so would advance a privacy interest. Small business lending data for many other financial institutions are also available at this website.

2. *Website.* A financial institution without a website complies with § 1002.110(c) by making a written statement using the language in comment 110(c)–1, or substantially similar language, available upon request.

3. *Revised location for publicly available data.* The Bureau may modify the location specified in comment 110(c)–1 at which small business lending data are available via the Filing Instructions Guide and related materials. Refer to the Filing Instructions Guide for any updates for each reporting year.

Section 1002.111—Recordkeeping

111(a) Record Retention

1. *Evidence of compliance.* Section 1002.111(a) requires a financial institution to retain evidence of compliance with subpart B of this part for at least three years after its small business lending application register is required to be submitted to the Bureau pursuant to § 1002.109. In addition to the financial institution's small business lending application register, such evidence of compliance is likely to include, but is not limited to, the applications for credit from which information in the register is drawn, as well as the files or documents that, under § 1002.111(b), are kept separate from the applications for credit. This three-year record retention requirement applies to any records covered by § 1002.111(a), notwithstanding the more general 12-month retention period for records related to business credit specified in § 1002.12(b).

2. *Record retention for creditors under § 1002.5(a)(4)(vii) and (viii).* A creditor that is voluntarily, under § 1002.5(a)(4)(vii) and (viii), collecting information pursuant to subpart B of this part complies with § 1002.111(a) by retaining evidence of compliance with subpart B for at least three years after June 1 of the year following the year that data was collected.

111(b) Certain Information Kept Separate From the Rest of the Application

1. *Separate from the application.* A financial institution may satisfy the requirement in § 1002.111(b) by keeping an applicant's responses to the financial institution's request pursuant to § 1002.107(a)(18) and (19) in a file or document that is discrete or distinct from the application and its accompanying information. For example, such information could be collected on a piece of paper that is separate from the rest of the application form. In order to satisfy the requirement in § 1002.111(b), an applicant's responses to the financial institution's request pursuant to § 1002.107(a)(18) and (19) need not be maintained in a separate electronic system, nor need they be removed from the physical files containing the application so long as there is some separation between the demographic information and the rest of the application and its accompanying information. However, the financial institution may nonetheless need to keep this information in a different electronic or physical file in order to satisfy the prohibition in § 1002.108(b).

2. *Number of principal owners.* A financial institution is permitted to maintain information regarding the applicant's number of principal owners pursuant to § 1002.107(a)(20) with an applicant's responses to the financial institution's request pursuant to § 1002.107(a)(18) and (19).

111(c) Limitation on Personally Identifiable Information in Certain Records Retained Under This Section

1. *Small business lending application register.* The prohibition in § 1002.111(c) applies to data in the small business lending application register submitted by the financial institution to the Bureau under § 1002.109, the version of the register that the financial institution maintains under § 1002.111(a), and the separate record of certain information created pursuant to § 1002.111(b).

2. *Examples.* Section 1002.111(c) prohibits a financial institution from including any name, specific address (other than the census tract required under § 1002.107(a)(13)), telephone number, or email address of any individual who is, or is connected with, an applicant in the small business lending application register it reports pursuant to § 1002.109, in the copy of the register the financial institution retains under § 1002.111(a), and in the records of certain information it must retain separately from the application pursuant to § 1002.111(b). It likewise prohibits a financial institution from including any other personally identifiable information concerning any individual who is, or is connected with, an applicant, except as required pursuant to § 1002.107 or § 1002.111(b). Examples of such personally identifiable information that a financial institution may not include in its small business lending application register include, but are not limited to, the following: date of birth, Social Security number, official government-issued driver's license or identification number, alien registration number, government passport number, or employer or taxpayer identification number.

3. *Other records.* The prohibition in § 1002.111(c) does not extend to an application for credit, or any other records that the financial institution maintains that are not specifically enumerated in § 1002.111(c).

4. *Name and business contact information for submission.* The prohibition in § 1002.111(c) does not bar financial institutions from providing to the Bureau, pursuant to § 1002.109(b)(3), the name and business contact information of the person who may be contacted by the Bureau or other regulators with questions about the financial institution's submission under § 1002.109.

Section 1002.112—Enforcement

112(b) Bona Fide Errors

1. *Tolerances for bona fide errors.* Section 1002.112(b) provides that a financial institution is presumed to maintain procedures reasonably adapted to avoid errors with respect to a given data field if the number of errors found in a random sample of the financial institution's data submission for the data field does not equal or exceed a threshold specified by the Bureau for this purpose. The Bureau's thresholds

appear in column C of the table in appendix F. The size of the random sample, set out in column B, shall depend on the size of the financial institution's small business lending application register, as shown in column A of the table in appendix F. A financial institution has not maintained procedures reasonably adapted to avoid errors if either there is a reasonable basis to believe the error was intentional or there is evidence that the financial institution has not maintained procedures reasonably adapted to avoid errors.

2. *Tolerances and data fields.* For purposes of determining whether an error is bona fide under § 1002.112(b), the term ''data field'' generally refers to individual fields. All required data fields, and valid response options for those fields, are set forth in the Bureau's Filing Instructions Guide, available at *https://www.consumerfinance.gov/data-research/small-business-lending/filing-instructions-guide/*. Some data fields may allow for more than one response. For example, with respect to information on the ethnicity and race of an applicant's principal owner, a data field may identify more than one race or ethnicity. If there are one or more errors within an ethnicity data field, or within a race data field, for a particular principal owner, they would count as one (and only one) error for that data field. For instance, in the ethnicity data field, if an applicant indicates that one of its principal owners is Cuban, but the financial institution reports that the principal owner is Mexican and Puerto Rican, the financial institution has made one error in the ethnicity data field for that principal owner. For purposes of the error threshold table in appendix F, the financial institution is deemed to have made one error, not two.

3. *Tolerances and safe harbors.* An error that meets the criteria for one of the four safe harbor provisions in § 1002.112(c) is not counted as an error for purposes of determining whether a financial institution has exceeded the relevant error threshold in appendix F for a given data field.

112(c) Safe Harbors

1. *Information from a Federal agency—census tract.* Section 1002.112(c)(2) provides that an incorrect entry for census tract is not a violation of the Act or subpart B of this part, if the financial institution obtained the census tract using a geocoding tool provided by the FFIEC or the Bureau. However, this safe harbor provision does not extend to a financial institution's failure to provide the correct census tract number for a covered application on its small business lending application register, as required by § 1002.107(a)(13), because the FFIEC or Bureau geocoding tool did not return a census tract for the address provided by the financial institution. In addition, this safe harbor provision does not extend to a census tract error that results from a financial institution entering an inaccurate address into the FFIEC or Bureau geocoding tool.

2. *Applicability of NAICS code safe harbor.* The safe harbor in § 1002.112(c)(3) applies to an incorrect entry for the 3-digit NAICS code that financial institutions must collect and report pursuant to § 1002.107(a)(15), provided certain conditions are met. For purposes of § 1002.112(c)(3)(i), a financial institution is permitted to rely on statements made by the applicant, information provided by the applicant, or on other information obtained through its use of appropriate third-party sources, including business information products. See also comments 107(a)(15)–4 and 107(b)–1.

3. *Incorrect determination of small business status, covered credit transaction, or covered application—examples.* Section 1002.112(c)(4) provides a safe harbor from violations of the Act or this regulation for a financial institution that initially collects data under § 1002.107(a)(18) and (19) regarding whether an applicant for a covered credit transaction is a minority-owned, a women-owned, or LGBTQI+-owned business, and the ethnicity, race, and sex of the applicant's principal owners, but later concludes that it should not have collected this data, if certain conditions are met. Specifically, to qualify for this safe harbor, § 1002.112(c)(4) requires that the financial institution have had a reasonable basis at the time it collected data under § 1002.107(a)(18) and (19) for believing that the application was a covered application for a covered credit transaction from a small business pursuant to §§ 1002.103, 1002.104, and 1002.106, respectively. For example, Financial Institution A collected data under § 1002.107(a)(18) and (19) from an applicant for a covered credit transaction that had self-reported its gross annual revenue as $4.8 million. Sometime after Financial Institution A had collected this data from the applicant, the financial institution reviewed the applicant's tax returns, which indicated the applicant's gross annual revenue was in fact $5.2 million. Financial Institution A is permitted to rely on representations made by the applicant regarding gross annual revenue in determining whether an applicant is a small business (see § 1002.107(b) and comments 106(b)(1)–3 and 107(a)(14)–1). Thus, Financial Institution A may have had a reasonable basis to believe, at the time it collected data under § 1002.107(a)(18) and (19), that the applicant was a small business pursuant to § 1002.106, in which case Financial Institution A's collection of such data would not violate the Act or this regulation.

Section 1002.114—Effective Date, Compliance Date, and Special Transition Rules

114(b) Compliance Date

1. *Application of compliance date.* The applicable compliance date in § 1002.114(b) is the date by which the covered financial institution must begin to compile data as specified in § 1002.107, comply with the firewall requirements of § 1002.108, and begin to maintain records as specified in § 1002.111. In addition, the covered financial institution must comply with § 1002.110(c) and (d) no later than June 1 of the year after the applicable compliance date. For instance, if § 1002.114(b)(2) applies to a financial institution, it must comply with §§ 1002.107 and 1002.108, and portions of § 1002.111, beginning April 1, 2025, and it must comply with § 1002.110(c) and (d), and portions of § 1002.111, no later than June 1, 2026.

2. *Initial partial year collections pursuant to § 1002.114(b).* i. When the compliance date of October 1, 2024 specified in § 1002.114(b)(1) applies to a covered financial institution, the financial institution is required to collect data for covered applications during the period from October 1, 2024 to December 31, 2024. The financial institution must compile data for this period pursuant to § 1002.107, comply with the firewall requirements of § 1002.108, and maintain records as specified in § 1002.111. In addition, for data collected during this period, the covered financial institution must comply with §§ 1002.109 and 1002.110(c) and (d) by June 1, 2025.

ii. When the compliance date of April 1, 2025 specified in § 1002.114(b)(2) applies to a covered financial institution, the financial institution is required to collect data for covered applications during the period from April 1, 2025 to December 31, 2025. The financial institution must compile data for this period pursuant to § 1002.107, comply with the firewall requirements of § 1002.108, and maintain records as specified in § 1002.111. In addition, for data collected during this period, the covered financial institution must

comply with §§ 1002.109 and 1002.110(c) and (d) by June 1, 2026.

3. *Informal names for compliance date provisions.* To facilitate discussion of the compliance dates specified in § 1002.114(b)(1), (2), and (3), in the official commentary and any other documents referring to these compliance dates, the Bureau adopts the following informal simplified names. Tier 1 refers to the cohort of covered financial institutions that have a compliance date of October 1, 2024 pursuant to § 1002.114(b)(1). Tier 2 refers to the cohort of covered financial institutions that have a compliance date of April 1, 2025 pursuant to § 1002.114(b)(2). Tier 3 refers to the cohort of covered financial institutions that have a compliance date of January 1, 2026 pursuant to § 1002.114(b)(3).

4. *Examples.* The following scenarios illustrate how to determine whether a financial institution is a covered financial institution and which compliance date specified in § 1002.114(b) applies.

i. Financial Institution A originated 3,000 covered credit transactions for small businesses in calendar year 2022, and 3,000 in calendar year 2023. Financial Institution A is in Tier 1 and has a compliance date of October 1, 2024.

ii. Financial Institution B originated 2,000 covered credit transactions for small businesses in calendar year 2022, and 3,000 in calendar year 2023. Because Financial Institution B did not originate at least 2,500 covered credit transactions for small businesses in each of 2022 and 2023, it is not in Tier 1. Because Financial Institution B did originate at least 500 covered credit transactions for small businesses in each of 2022 and 2023, it is in Tier 2 and has a compliance date of April 1, 2025.

iii. Financial Institution C originated 400 covered credit transactions to small businesses in calendar year 2022, and 1,000 in calendar year 2023. Because Financial Institution C did not originate at least 2,500 covered credit transactions for small businesses in each of 2022 and 2023, it is not in Tier 1, and because it did not originate at least 500 covered credit transactions for small businesses in each of 2022 and 2023, it is not in Tier 2. Because Financial Institution C did originate at least 100 covered credit transactions for small businesses in each of 2022 and 2023, it is in Tier 3 and has a compliance date of January 1, 2026.

iv. Financial Institution D originated 90 covered credit transactions to small businesses in calendar year 2022, 120 in calendar year 2023, and 90 in both of the calendar years 2024 and 2025. Because Financial Institution D did not originate at least 100 covered credit transactions for small businesses in each of 2022 and 2023, it is not in Tier 1, Tier 2, or Tier 3. Because Financial Institution D did not originate at least 100 covered credit transactions for small businesses in subsequent consecutive calendar years, it is not a covered financial institution under § 1002.105(b) and is not required to comply with the rule in 2024, 2025, or 2026.

v. Financial Institution E originated 120 covered credit transactions for small businesses in each of calendar years 2022, 2023, and 2024, and 90 in 2025. Because Financial Institution E did not originate at least 2,500 or 500 covered credit transactions for small businesses in each of 2022 and 2023, it is not in Tier 1 or Tier 2. Because Financial Institution E originated at least 100 covered credit transactions for small businesses in each of 2022 and 2023, it is in Tier 3 and has a compliance date of January 1, 2026. However, because Financial Institution E did not originate at least 100 covered credit transactions for small businesses in each of 2024 and 2025, it no longer satisfies the definition of a covered financial institution in § 1002.105(b) at the time of the compliance date for Tier 3 institutions and thus is not required to comply with the rule in 2026.

vi. Financial Institution F originated 90 covered credit transactions for small businesses in calendar year 2022, and 120 in 2023, 2024, and 2025. Because Financial Institution F did not originate at least 100 covered credit transactions for small businesses in each of 2022 and 2023, it is not in Tier 1, Tier 2, or Tier 3. Because Financial Institution F originated at least 100 covered credit transactions for small businesses in subsequent calendar years, § 1002.114(b)(4), which cross-references § 1002.105(b), applies to Financial Institution F. Because Financial Institution F originated at least 100 covered credit transactions for small businesses in each of 2024 and 2025, it is a covered financial institution under § 1002.105(b) and is required to comply with the rule beginning January 1, 2026.

vii. Financial Institution G originated 90 covered credit transactions for small businesses in each of calendar years 2022, 2023, 2024, and 2025, and 120 in each of 2026 and 2027. Because Financial Institution F did not originate at least 100 covered credit transactions for small businesses in each of 2022 and 2023, it is not in Tier 1, Tier 2, or Tier 3. Because Financial Institution G originated at least 100 covered credit transactions for small businesses in subsequent calendar years, § 1002.114(b)(4), which cross-references § 1002.105(b), applies to Financial Institution G. Because Financial Institution G originated at least 100 covered credit transactions for small businesses in each of 2026 and 2027, it is a covered financial institution under § 1002.105(b) and is required to comply with the rule beginning January 1, 2028.

114(c) Special Transition Rules

1. *Collection of certain information prior to a financial institution's compliance date.* Notwithstanding § 1002.5(a)(4)(ix), a financial institution that chooses to collect information on covered applications as permitted by § 1002.114(c)(1) in the 12 months prior to its initial compliance date as specified in § 1002.114(b)(1), (2) or (3) need comply only with the requirements set out in §§ 1002.107(a)(18) and (19), 1002.108, and 1002.111(b) and (c) with respect to the information collected. During this 12-month period, a covered financial institution need not comply with the provisions of § 1002.107 (other than §§ 1002.107(a)(18) and (19)), 1002.109, 1002.110, 1002.111(a), or 1002.114.

2. *Transition rule for applications received prior to a compliance date but final action is taken after a compliance date.* If a covered financial institution receives a covered application from a small business prior to its initial compliance date specified in § 1002.114(b), but takes final action on or after that date, the financial institution is not required to collect data regarding that application pursuant to § 1002.107 nor to report the application pursuant to § 1002.109. For example, if a financial institution is subject to a compliance date of October 1, 2024, and it receives an application on September 15, 2024 but does not take final action on the application until October 5, 2024, the financial institution is not required to collect data pursuant to § 1002.107 nor to report data to the Bureau pursuant to § 1002.109 regarding that application.

3. *Has readily accessible the information needed to determine small business status.* A financial institution has readily accessible the information needed to determine whether its originations of covered credit transactions were for small businesses as defined in § 1002.106 if, for instance, it in the ordinary course of business collects data on the precise gross annual revenue of the businesses for which it originates loans, it obtains information sufficient to determine whether an applicant for business credit had gross annual revenues of $5 million or less, or if it collects and reports similar data to

Federal or State government agencies pursuant to other laws or regulations.

4. *Does not have readily accessible the information needed to determine small business status.* A financial institution does not have readily accessible the information needed to determine whether its originations of covered credit transactions were for small businesses as defined in § 1002.106 if it did not in the ordinary course of business collect either precise or approximate information on whether the businesses to which it originated covered credit had gross annual revenue of $5 million or less. In addition, even if precise or approximate information on gross annual revenue was initially collected, a financial institution does not have readily accessible this information if, to retrieve this information, for example, it must review paper loan files, recall such information from either archived paper records or scanned records in digital archives, or obtain such information from third parties that initially obtained this information but did not transmit such information to the financial institution.

5. *Reasonable method to estimate the number of originations.* The reasonable methods that financial institutions may use to estimate originations for 2022 and 2023 include, but are not limited to, the following:

i. A financial institution may comply with § 1002.114(c)(2) by determining the small business status of covered credit transactions by asking every applicant, prior to the closing of approved transactions, to self-report whether it had gross annual revenue for its preceding fiscal year of $5 million or less, during the period October 1 through December 31, 2023. The financial institution may annualize the number of covered credit transactions it originates to small businesses from October 1 through December 31, 2023 by quadrupling the originations for this period, and apply the annualized number of originations to both calendar years 2022 and 2023.

ii. A financial institution may comply with § 1002.114(c)(2) by assuming that every covered credit transaction it originates for business customers in calendar years 2022 and 2023 is to a small business.

iii. A financial institution may comply with § 1002.114(c)(2) by using another methodology provided that such methodology is reasonable and documented in writing.

6. *Examples.* The following scenarios illustrate the potential application of § 1002.114(c)(2) to a financial institution's compliance date under § 1002.114(b).

i. Prior to October 1, 2023, Financial Institution A did not collect gross annual revenue or other information that would allow it to determine the small business status of the businesses for whom it originated covered credit transactions in calendar years 2022 and 2023. Financial Institution A chose to use the methodology set out in comment 114(c)–5.i and as of October 1, 2023 began to collect information on gross annual revenue as defined in § 1002.107(a)(14) for its covered credit transactions originated for businesses. Using this information, Financial Institution A determined that it had originated 750 covered credit transactions for businesses that were small as defined in § 1002.106. On an annualized basis, Financial Institution A originated 3,000 covered credit transactions for small businesses (750 originations * 4 = 3,000 originations per year). Applying this annualized figure of 3,000 originations to both calendar years 2022 and 2023, Financial Institution A is in Tier 1 and has a compliance date of October 1, 2024.

ii. Prior to July 1, 2023, Financial Institution B collected gross annual revenue information for some applicants for business credit, but such information was only noted in its paper loan files. Financial Institution B thus does not have reasonable access to information that would allow it to determine the small business status of the businesses for whom it originated covered credit transactions for calendar years 2022 and 2023. Financial Institution B chose to use the methodology set out in comment 114(c)–5.i, and as of October 1, 2023, Financial Institution B began to ask all businesses for whom it was closing covered credit transactions if they had gross annual revenues in the preceding fiscal year of $5 million or less. Using this information, Financial Institution B determined that it had originated 350 covered credit transactions for businesses that were small as defined in § 1002.106. On an annualized basis, Financial Institution B originated 1,400 covered credit transactions for small businesses (350 originations * 4 = 1,400 originations per year). Applying this estimated figure of 1,400 originations to both calendar years 2022 and 2023, Financial Institution B is in Tier 2 and has a compliance date of April 1, 2025.

iii. Prior to April 1, 2023, Financial Institution C did not collect gross annual revenue or other information that would allow it to determine the small business status of the businesses for whom it originated covered credit transactions in calendar years 2022 and 2023. Financial Institution C chose its own methodology pursuant to comment 114(c)–5.iii, basing it in part on the methodology specified in comment 114(c)–5.i. Starting on April 1, 2023, Financial Institution C began to ask all business applicants for covered credit transactions if they had gross annual revenue in their preceding fiscal year of $5 million or less. Using this information, Financial Institution C determined that it had originated 100 covered credit transactions for businesses that were small as defined in § 1002.106. On an annualized basis, Financial Institution C originated approximately 133 covered credit transactions for small businesses ((100 originations * 365 days)/275 days = 132.73 originations per year). Applying this estimate of 133 originations to both calendar years 2022 and 2023, Financial Institution C is in Tier 3 and has a compliance date of January 1, 2026.

iv. Financial Institution D did not collect gross annual revenue or other information that would allow it to determine the small business status of the businesses for whom it originated covered credit transactions in calendar years 2022 and 2023. Financial Institution D determined that it had originated 3,000 total covered credit transactions for businesses in each of 2022 and 2023. Applying the methodology specified in comment 114(c)–5.ii, Financial Institution D assumed that all 3,000 covered credit transactions originated in each of 2022 and 2023 were to small businesses. On that basis, Financial Institution D is in Tier 1 and has a compliance date of October 1, 2024.

v. Financial Institution E did not collect gross annual revenue or other information that would allow it to determine the small business status of the businesses for whom it originated covered credit transactions in calendar years 2022 and 2023. Financial Institution E determined that it had originated 700 total covered credit transactions for businesses in each of 2022 and 2023. Applying the methodology specified in comment 114(c)–5.ii, Financial Institution E assumed that all such transactions in each of 2022 and 2023 were originated for small businesses. On that basis, Financial Institution E is in Tier 2 and has a compliance date of April 1, 2025.

vi. Financial Institution F did does not have readily accessible gross annual revenue or other information that would allow it to determine the small business status of the businesses for whom it originated covered credit transactions in calendar years 2022 and 2023. Financial Institution F determined that it had originated 80 total covered credit transactions for businesses in 2022 and

150 total covered credit transactions for businesses in 2023. Applying the methodology set out in comment 114(c)–5.ii, Financial Institution F assumed that all such transactions originated in 2022 and 2023 were originated for small businesses. On that basis, Financial Institution E is not in Tier 1, Tier 2 or Tier 3, and is subject to the compliance date provision specified in § 1002.114(b)(4).

Certification of Dispatchers; Proposed Rule

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

49 CFR Part 245

[Docket No. FRA–2022–0019, Notice No. 1]

RIN 2130–AC91

Certification of Dispatchers

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: FRA proposes regulations for the certification of dispatchers, pursuant to the authority granted in section 402 of the Rail Safety Improvement Act of 2008.

DATES: Comments on the proposed rule must be received by July 31, 2023. FRA will consider comments received after that date to the extent practicable.

ADDRESSES:

Comments: Comments related to Docket No. FRA–2022–0019 may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name, docket number (FRA–2022–0019), and Regulatory Identification Number (RIN) for this rulemaking (2130–AC91). All comments received will be posted without change to *https://www.regulations.gov;* this includes any personal information. Please see the Privacy Act heading in the **SUPPLEMENTARY INFORMATION** section of this document for Privacy Act information related to any submitted comments or materials.

Docket: For access to the docket to read background documents or comments received, go to *https://www.regulations.gov* and follow the online instructions for accessing the docket.

FOR FURTHER INFORMATION CONTACT: Curtis Dolan, Railroad Safety Specialist, Dispatch Operating Practices, Federal Railroad Administration, telephone: (470) 522–6633, email: *curtis.dolan@dot.gov;* or Michael C. Spinnicchia, Attorney Adviser, Federal Railroad Administration, telephone: (202) 493–0109, email: *michael.spinnicchia@dot.gov.*

I. Executive Summary

Purpose of the Regulatory Action

FRA proposes to require railroads to develop programs for certifying individuals who perform dispatching tasks on their networks. Under this proposed rule, railroads would be required to have formal processes for training prospective dispatchers, as well as verifying that each dispatcher has the requisite knowledge, skills, safety record, and abilities to safely perform all of the safety-related dispatcher duties mandated by Federal laws and regulations, prior to certification. In addition, railroads would be required to have formal processes for revoking certification (either temporarily or permanently) for dispatchers who violate specified minimum requirements.

FRA is proposing this regulation in response to the Rail Safety Improvement Act of 2008 (RSIA), which required the Secretary of Transportation (Secretary) to submit a report to Congress addressing whether certification of ''certain crafts or classes'' of railroad employees or contractors, including railroad dispatchers, was necessary to ''reduce the number and rate of accidents and incidents or to improve railroad safety.'' If the Secretary determined it was necessary to require the certification of certain crafts or classes to improve railroad safety, section 402 of the RSIA stated the Secretary *may* prescribe such regulations.

The Secretary submitted a report to Congress on November 4, 2015, stating that, based on FRA's preliminary research, dispatchers were one of the most viable candidate railroad crafts for certification. Given the safety critical role of dispatchers in facilitating safe railroad operations (which includes the coordination of emergency services in response to accidents and incidents), FRA determined that railroad safety is expected to be improved if dispatchers were required to satisfy certain standards and be certified by their employing railroads.

Summary of Major Provisions

This proposed rule would require railroads to develop written programs for certifying individuals who work as dispatchers on their territories and to submit those written certification programs to FRA for approval prior to implementation. FRA would issue a letter to the railroad when it approves a certification program, that explains the basis for approval, and a program will not be considered approved until the approval letter is issued.

FRA is proposing to require Class I railroads (including the National Railroad Passenger Corporation), and railroads providing commuter service, to submit their written certification programs to FRA no later than eight (8) months after the final rule effective date. Class II and Class III railroads would be required to submit their written certification plans sixteen (16) months after the final rule effective date. New railroads that begin operation after the final rule effective date would be required to submit their written certification programs to FRA and obtain FRA approval before commencing operations. In addition, railroads seeking to materially modify their FRA-approved certification programs would be required to obtain FRA approval prior to modifying their programs.

Railroads would be required to evaluate certification candidates in multiple areas, including prior safety conduct as a motor vehicle operator, prior safety conduct as an employee of a different railroad, substance abuse disorders and alcohol/drug rules compliance, and vision and hearing acuity.

The proposed rule also contains minimum requirements for the training provided to prospective dispatchers. The proposed requirements are intended to ensure that certified dispatchers have received sufficient training before they are hired to work as dispatchers on the railroad. The proposed requirements are also intended to ensure that certified dispatchers periodically receive recurring training on railroad safety and operating rules and practices, as well as comprehensive training on the use of new dispatching systems and technology before they are introduced on the railroads in revenue service.

With the exception of individuals designated as certified dispatchers prior to FRA approval of the railroad's

dispatcher certification program, the proposed rule would prohibit railroads from certifying dispatchers for intervals longer than three (3) years. This three-year limitation, which would be consistent with the 36-month maximum period for certifying locomotive engineers in 49 CFR 240.217(c) and conductors in 49 CFR 242.201(c), would allow for periodic re-evaluation of certified dispatchers to verify their continued compliance with FRA's minimum safety requirements.

Subpart D of this proposed rule addresses the process and criteria for denying and revoking certification. Proposed § 245.301 describes the process a railroad would be required to undergo before it denies an individual certification or recertification. This process would include providing the certification candidate with the information that forms the basis for the denial decision and giving the candidate an opportunity to rebut such evidence. When a railroad denies an individual certification or recertification, it must issue its decision in writing, and the decision must comply with certain requirements provided in the proposed rule.

A railroad could only revoke a dispatcher's certification if one of eight events occurs. Generally, for the first revocable event that is not related to a dispatcher's use of drugs or alcohol, the person's certification would be revoked for 30 days. If an individual accumulates more of these violations in a given time period, the revocation period (period of ineligibility) would become increasingly longer.

If a railroad acquires reliable information that a certified dispatcher has violated an operating rule or practice requiring decertification under the proposed rule, it shall suspend the dispatcher's certificate immediately while it determines whether revocation of the certificate is warranted. In such circumstances, dispatchers would be entitled to a hearing. Similar to a railroad's decision to deny an individual certification, a railroad's decision to revoke a dispatcher's certification would be required to satisfy certain requirements. Finally, if an intervening cause prevented or materially impaired a dispatcher's ability to comply with a railroad operating rule or practice, the railroad would not revoke the dispatcher's certification.

Subpart E of this proposed rule discusses the dispute resolution process for individuals who wish to challenge a railroad's decision to deny certification, deny recertification, or revoke certification. This dispute resolution process mirrors the process used for locomotive engineers and conductors under 49 CFR parts 240 and 242, respectively.

Finally, the proposed rule contains two appendices. Appendix A discusses the procedures that a person seeking certification or recertification should follow to furnish a railroad with information concerning their motor vehicle driving record. Appendix B provides guidance on the procedures railroads should employ in administering the vision and hearing requirements under §§ 245.117 and 245.118.

This proposed rule does not revise 49 CFR part 241, United States Locational Requirement for Dispatching of United States Rail Operations. Furthermore, this proposed rule would not apply to dispatchers located outside of the United States as ''[i]t is a longstanding principle of American law 'that legislation of Congress, unless a contrary intent appears, is meant to apply only within the territorial jurisdiction of the United States.' '' [1]

Costs and Benefits

FRA analyzed the economic impact of this proposed rule. FRA estimated the costs to be incurred by railroads and the Government. FRA also estimated the benefits of fewer dispatcher-caused accidents.

FRA is proposing regulations establishing a formal certification process for railroad dispatchers. As part of that process, railroads would be required to develop a program meeting specific requirements for training current and prospective dispatchers, documenting and verifying that the holder of the certificate has achieved certain training and proficiency, and creating a comprehensive record, including of safety compliance infractions, that other railroads can review when considering individuals for certification.

This proposed regulation would ensure that dispatchers are properly trained, are qualified to perform their duties, and meet Federal safety standards. Additionally, this proposed regulation is expected to improve railroad safety by reducing the rate of accidents/incidents.

FRA estimates the 10-year costs of the proposed rule to be $5.3 million, discounted at 7 percent. The estimated annualized costs would be $0.8 million discounted at 7 percent. The following table shows the total costs of this proposed rule, over the 10-year analysis period.

TOTAL 10-YEAR DISCOUNTED COSTS (2020 DOLLARS) [2]

Category	Present value 7% ($)	Present value 3% ($)	Annualized 7% ($)	Annualized 3% ($)
Development of Certification Program	929,395	953,949	132,325	111,832
Certification Eligibility Requirements	55,360	61,963	7,882	7,264
Recertification Eligibility Requirements	65,831	83,877	9,373	9,833
Training	707,334	812,820	100,708	95,287
Knowledge Testing	233,988	281,581	33,315	33,010
Vision and Hearing	1,586,913	1,909,692	225,941	223,874
Monitoring Operational Performance	256,017	305,956	36,451	35,867
Railroad Oversight Responsibilities	267,530	326,714	38,090	38,301
Certification Card	26,832	32,289	3,820	3,785
Petitions and Hearings	8,198	9,797	1,167	1,149
Government Administrative Cost	1,208,191	1,361,239	172,019	159,579
Total	5,345,589	6,139,877	761,092	719,781

[2] Numbers in this table and subsequent tables may not sum due to rounding.

This rule is expected to reduce the likelihood of an accident occurring due to dispatcher error. FRA has analyzed accidents over the past five years to categorize those where dispatcher training and certification would have impacted the accident. FRA then estimated benefits based on that analysis.

The following table shows the estimated 10-year quantifiable benefits of the proposed rule. The total 10-year estimated benefits would be $0.8 million (PV, 7%) and annualized benefits would be $0.1 million (PV, 7%).

TOTAL 10-YEAR DISCOUNTED BENEFITS (2020 DOLLARS)

Present value 7% ($)	Present value 3% ($)	Annualized 7% ($)	Annualized 3% ($)
785,599	918,450	111,852	107,670

This proposed rule would also provide unquantifiable benefits. FRA has quantified the monetary impact from accidents reported on FRA accident forms. However, some accident costs are not required to be reported on FRA accident forms (*e.g.,* environmental impact). That impact may account for additional benefits not quantified in this analysis. If these costs were realized, accidents affected by this proposed rulemaking could have much greater economic impact than the quantitative benefit estimates provided here.

There is also a chance of a high impact event due to a dispatcher error. This could involve fatalities, injuries, and environmental damage, as well as impacting railroads, communities, and the public. FRA has not estimated the likelihood of such an accident, but this proposed rule is expected to reduce the risk that an accident of that magnitude.

II. Legal Authority

Pursuant to the Rail Safety Improvement Act of 2008, Public Law 110–432, sec. 402, 122 Stat. 4848, 4884 (Oct. 16, 2008) (hereinafter ''RSIA''), the Secretary of Transportation (Secretary) was required to submit a report to Congress addressing whether certification of certain crafts or classes of employees, including dispatchers, was necessary to reduce the number and rate of accidents and incidents or to improve railroad safety.[3] If the Secretary determined it was necessary to require the certification of certain crafts or classes of employees to reduce the number and rate of accidents and incidents or to improve railroad safety, section 402 of the RSIA stated the Secretary may prescribe such regulations. The Secretary delegated this authority to the Federal Railroad Administrator. 49 CFR 1.89. In response to the RSIA, the Secretary submitted a report to Congress on November 4, 2015,[4] stating that, based on FRA's preliminary research, dispatchers and signal employees were potentially the most viable candidate railroad crafts for certification. Based on the analysis in Section III below, the Federal Railroad Administrator has determined that it is necessary to require the certification of railroad dispatchers to improve railroad safety.

III. Background

1. Roles and Responsibilities of Dispatchers

Railroad dispatchers play an integral role in railroad safety and operations. They are responsible for allocating and assigning track use, ensuring that trains are routed safely and efficiently, and ensuring the safety of personnel working on and around railroad track. These are cognitively complex tasks that require integrating multiple sources of information (*e.g.,* information from train schedules, computer displays of current track state, radio communication with various personnel such as locomotive engineers, and in some cases, projecting into the future (*e.g.,* estimating when the train will arrive)); and balancing multiple demands placed on track use (*e.g.,* balancing the need for maintenance-of-way workers to have time to work on the track with the need to make sure that the track will be clear when a train is anticipated to arrive). Some of the main tasks [5] dispatchers perform involve: operation monitoring (monitoring a computerized train dispatching model board); information collection and data entry (collecting information about slow orders and any blocking protection required by railroad workers on the track); communication (playing an important role in roadway worker planning and protection); emergency response (working to limit the damage to human life and property during an emergency); and knowledge of territory (knowing the specific characteristics of the territory assigned to them).

Over the past 5 to 10 years, the job of a railroad dispatcher has become more complex and demanding. The number of dispatchers has decreased over the years, and dispatcher territory is expanding due to this decrease. Also, with the advancement of Positive Train Control (PTC), dispatchers must understand the interface between the computer-aided dispatching system and the train control system, with respect to the safe movement of trains and other on-track equipment. Dispatchers need to understand the operating rules applicable to the train control system, including granting permission for movement and protection of roadway workers; unequipped trains; trains with failed or cut-out train control onboard systems; control system fails; and providing for safe operations under the alternative method of operation. The availability of affordable computer systems has made computer-aided dispatching (CAD) feasible for many railroads. The improved communications systems led to the acceptance of radio transmitted directives in place of the traditional paper train orders that had been previously used. These changes in communications and signal technology have also resulted in the closing of block towers, eliminating the job of tower operator, a job that was often on the career path to becoming a dispatcher.

Today, dispatchers are likely to use multiple computer screens and electronic equipment, in addition to a communications system. However, a short line railroad may still use hand-

[3] *See also* 49 U.S.C. 20103 (providing FRA's general authority to ''prescribe regulations and issues orders for every area of railroad safety'').

[4] *www.regulations.gov/document/FRA-2022-0019-0001.*

[5] As part of a contract with FRA, Foster-Miller, Inc., conducted research to develop a tool for assessing railroad dispatcher task load. Task load is defined as the average time demanded of a dispatcher in carrying out all job-related tasks at a particular desk, over a specified period of time (*e.g.,* one shift). Stephen J. Reinach, Toward the Development of a Performance Model of Railroad Dispatching 2042–46 (Proceedings of the Human Factors and Ergonomics Society 50th Annual Meeting, 2006). A copy of this report can be found at *https://railroads.dot.gov/elibrary/proceedings-human-factors-and-ergonomics-society-50th-annual-meeting-2006.*

written or verbal authorities to move trains across dark (unsignalled) territory. The industry's adoption of new dispatching technology, changes in operating rules and methods of operation, and railroad industry restructuring all have potential safety consequences. Additionally, excessive workloads and increases in occupational stress could result from any of these factors. The role of the dispatcher would also significantly increase with a possible increase in one-person crew operations, as more vigilance and attention will be needed to cover these operations. Additional one-person crew operations would introduce increased workloads as the dispatcher will be the direct ''lifeline'' to the multiple one-person operations in a given assigned territory.

2. FRA History of Certification

On January 4, 1987, an Amtrak train collided with a Conrail train in Chase, Maryland, resulting in 16 deaths and 174 injuries. At the time, it was the deadliest train accident in Amtrak's history. The subsequent investigation by the National Transportation Safety Board concluded that the probable cause of the accident was the impairment of the Conrail engineer who was under the influence of marijuana at the time of the collision.[6]

Following this accident, Congress passed the Rail Safety Improvement Act of 1988, Public Law 100–342, 4, 102 Stat. 624, 625 (1988), which instructed the Secretary of Transportation (Secretary) to ''issue such rules, regulations, orders, and standards as may be necessary to establish a program requiring the licensing or certification of any operator of a locomotive, including any locomotive engineer.'' On June 19, 1991, FRA published a final rule establishing a certification system for locomotive engineers and requiring railroads to ensure that they only certify individuals who met minimum qualification standards.[7] In order to minimize governmental intervention, FRA opted for a certification system where the railroads issue the certificates as opposed to a government-run licensing system. This final rule, published in 49 CFR part 240 (part 240), created certification requirements for engineers that addressed various areas, including vision and hearing acuity; training, knowledge, and performance skills; and prior safety conduct.

Seventeen years later, Congress passed the Rail Safety Improvement Act of 2008, Public Law 110–432, 402, 122 Stat. 4848, 4884 (2008) (hereinafter ''RSIA''), which mandated the creation of a certification system for conductors. On November 9, 2011, FRA published a final rule requiring railroads to have certification programs for conductors and to ensure that all certified conductors satisfy minimum Federal safety standards.[8] The conductor certification rule, published in 49 CFR part 242 (Part 242), was largely modeled after Part 240 with some deviations based on the different job classifications. Part 242 also included some organizational improvements which made the regulation more streamlined than Part 240.

3. Statutory Background for Dispatcher Certification

In addition to requiring certification for conductors, the RSIA required the Secretary to submit a report to Congress addressing whether certain other railroad crafts or classes of employees would benefit from certification. Specifically, section 402(b) of the RSIA requires that the Secretary issue a report to Congress ''about whether the certification of certain crafts or classes of railroad carrier or railroad carrier contractor or subcontractor employees is necessary to reduce the number and rate of accidents and incidents or to improve railroad safety.'' As part of that report, section 402(c) specifically requires the Secretary to consider dispatchers as one of the railroad crafts for certification.

After identifying a railroad craft or class for which certification is necessary, pursuant to the report to Congress discussed above, section 402(d) authorizes the Secretary to ''prescribe regulations requiring the certification of certain crafts or classes of employees that the Secretary determines . . . are necessary to reduce the number and rate of accidents and incidents or to improve railroad safety.''

4. Report to Congress

On November 4, 2015, the Secretary submitted the report to Congress required under the RSIA. The report stated that, based on FRA's preliminary research, dispatchers and signal repair employees were the most viable candidates for certification. In reaching this determination with respect to dispatchers, the Secretary cited a variety of factors.

The report noted that dispatchers perform safety-sensitive work as shown by dispatchers being covered under the hours-of-service laws; and they are subject to regular and pre-employment random drug and alcohol testing. In 2012 and 2013, dispatchers had the highest pre-employment positive drug testing rate among all crafts. Annual drug and alcohol testing data submitted to FRA in 2012 and 2013 showed a 0.68-percent random positive drug testing rate and a 0.79-percent pre-employment positive drug testing rate for dispatch employees compared to a 0.48-percent random positive drug testing rate and a 0.46-percent pre-employment positive drug testing rate for signal employees; and a 0.49-percent random positive drug testing rate and a 0.55-percent pre-employment positive drug testing rate for train and engine service employees.[9] The report noted that 49 CFR parts 240 and 242 require a five-year alcohol and drug background check as well as disqualification of employees for specified alcohol and drug test violations and for refusing such testing. If such requirements were included in a dispatcher certification program, it could help prevent dispatchers with active substance abuse disorders from ''job hopping'' from one employer to another and reduce the safety risk of having individuals with untreated substance abuse disorders working as dispatchers.

Another important factor in the report was the complicated nature of the work dispatchers perform to ensure the safety and efficiency of railroad operations. Dispatchers are responsible for allocating and assigning main track use to trains from their own employer as well as trains from other railroads. They are also responsible for the safety of roadway workers working on or near track. The report summarized the demanding nature of dispatching by stating that it entails performing cognitively complex tasks that require rapid decision making, projecting into the future, and balancing numerous demands on track use.

Additionally, the report cited a ''great amount of turnover'' in the nationwide train dispatching workforce, resulting in a less experienced workforce, as further support for requiring certification. Finally, the report found that, with the

[6] Railroad Accident Report: Rear-end Collision of Amtrak Passenger Train 94, the Colonial and Consolidated Rail Corporation Freight Train ENS–121, on the Northeast Corridor, Chase, Maryland, January 4, 1987 144 (Nat'l Transp. Safety Bd. 1988).

[7] 56 FR 28227 (June 19, 1991).

[8] 76 FR 69801 (Nov. 9, 2011).

[9] Testing results submitted to FRA in 2020 and 2021 showed a 0.94-percent random violation rate (drug and alcohol positives and refusals) rate and a 0.85-percent pre-employment violation rate for dispatch employees compared to a 0.81-percent random violation rate and a 0.79-percent pre-employment violation rate for signal employees; and a 0.49-percent random positive drug testing rate and a 0.55-percent pre-employment positive drug testing rate for train and engine service employees.

exception of train and engine crews, no function of railroad operations is more critical to safety than dispatching. The accumulation of these factors led to the report's conclusion that dispatching was a potentially viable candidate for certification.

5. RSAC Working Group

In March 1996, FRA established the Railroad Safety Advisory Committee (RSAC), which provides a forum for collaborative rulemaking and program development. RSAC includes representatives from all of the agency's major stakeholder groups, including railroads, labor organizations, suppliers and manufacturers, and other interested parties. When appropriate, FRA assigns a task to RSAC, and after consideration and debate, RSAC may accept or reject the task. If accepted, RSAC establishes a working group that possesses the appropriate expertise and representation of interests to develop recommendations to FRA for action on the task.

On April 21, 2017, a task statement regarding certification of dispatchers was presented to the RSAC by email, but no vote was taken. On April 24, 2019, the RSAC accepted a task (No. 19–02) entitled ''Certification of Train Dispatchers.'' [10] The purpose of the task was ''[t]o consider whether rail safety would be enhanced by developing guidance, voluntary standards, and/or draft regulatory language for the certification of train dispatchers.'' The task called for the RSAC Train Dispatcher Certification Working Group (Working Group) to perform the following:

—Review critical tasks performed by dispatching employees for safe train operations, particularly with the introduction of PTC technology.

—Review training, duration, content, and methodology for new hire and continuing education.

—Review background checks designed to prevent dispatching employees with active substance abuse disorders from ''job-hopping'' from one employer to another.

The task statement also asked the Working Group to address the following issues, if appropriate:

—What requirements for training and experience are appropriate?

—What classifications of dispatchers should be recognized, if any?

—To what extent do existing requirements and procedures for certification of locomotive engineers and conductor certification provide a model for dispatcher certification?

—What types of unsafe conduct should affect a train dispatcher's certification status?

—Do the existing locomotive engineer and conductor certifications provide an adequate model for handling appeals from decertification decisions of the railroads?

The Working Group, which included representatives from the Association of American Railroads (AAR), American Public Transportation Association, American Short Line and Regional Railroad Association (ASLRRA), American Train Dispatchers Association, Brotherhood of Railroad Signalmen, SMART Transportation, Commuter Rail Coalition, and National Railroad Construction & Maintenance Association, held its first and only meeting on September 4, 2019 in Washington, DC. At this meeting, the Working Group reviewed the task statement from the RSAC, discussed some of the safety-critical tasks performed by dispatchers, and debated whether certification of dispatchers would be beneficial to railroad safety. At the end of the meeting, action items were assigned and the next meeting was tentatively scheduled for January 2020.

However, on December 16, 2019, the presidents of the American Train Dispatchers Association, the Brotherhood of Railroad Signalmen, and the International Brotherhood of Electrical Workers (collectively the ''Unions'') sent a letter to the FRA Administrator requesting that this RSAC task be withdrawn from consideration at this time. The letter stated the Unions were currently involved in numerous activities and were not able to give the task proper attention. AAR and ASLRRA advised the Unions that they were not opposed to this request. In response to this letter, FRA withdrew this task from the RSAC, and the Working Group became inactive.

6. Public Outreach

In 2021, FRA revisited the issue of establishing certification requirements for dispatchers. The agency assembled subject matter experts from FRA, the American Train Dispatchers Association (ATDA), the International Brotherhood of Electrical Workers (IBEW), and the Brotherhood of Railroad Signalmen to exchange facts and information regarding the tasks performed by dispatchers. Those parties met virtually several times between May 5, 2021 and June 30, 2021.

As part of FRA's outreach, a list of tasks performed by dispatchers was developed. These tasks generally involved: track authorities; mandatory directives; track worker protection; emergency response coordination; or incident management. FRA reviewed each task to determine whether correctly performing the task was critical to railroad safety; what were the potential consequences if errors were made while performing the task; and whether there were any recent examples of issues or concerns with respect to the task. After performing this analysis, FRA concluded that the vast majority of tasks performed by dispatchers (80–90% of the listed tasks) were critical to railroad safety with potentially catastrophic consequences, such as accidents, injuries, and/or deaths, if the tasks were not performed properly. In addition, because dispatchers provide incident management and emergency response coordination, FRA concluded that by properly performing their tasks, dispatchers can help reduce the consequences of accidents and mitigate injuries.

During FRA's outreach, the benefits of certification based on the experience of stakeholders with engineer and conductor certification under 49 CFR parts 240 and 242 were also discussed. Some of the main benefits of certification that were identified included:

—Creating a minimum standard for training to ensure that the training encompasses all skills and proficiencies necessary to properly perform all safety-related dispatcher functions;

—Establishing a record of safety compliance that will follow a dispatcher if they wish to become certified by another railroad and that can be used to review a dispatcher's performance and potential training needs;

—Requiring certain safety checks, such as identifying active substance abuse disorders, that can minimize the risks posed by job hopping; and

—Establishing a system for individuals to dispute a railroad's decision to deny or revoke certification with the aim of creating a fair and consistent process for all parties.

Further, some parties noted that they had witnessed industry trends to reduce the length and level of training for dispatchers which would make certification even more beneficial. Based on these meetings, FRA concluded that requiring certification for dispatchers would be an important tool to ensure dispatchers are adequately trained and qualified; have a documented record of performance; and are not able to job hop without a new employer having knowledge of the dispatcher's safety performance record.

[10] At the same meeting, the RSAC also accepted a task (No. 19–03) titled ''Certification of Railroad Signal Employees.'' A separate RSAC Working Group was formed to address this task, and FRA plans to issue a related proposed rule that would establish certification requirements for signal employees.

Following this initial outreach, FRA held a follow-up conversation with ATDA and IBEW, on March 3, 2022, and individuals from ATDA and IBEW informed FRA of elements that they believe would be beneficial in a dispatcher certification program. During this conversation, which was held in videoconference format, FRA asked the attendees to provide individualized feedback on how similar or different a dispatcher certification rule should be to FRA's locomotive engineer and conductor certification rules found in 49 CFR parts 240 and 242.

FRA heard that the agency needs to ensure that comprehensive training is provided to dispatchers as the current training is inadequate. FRA also heard that railroads are not providing enough training on new technology and in some cases, training only consists of a PowerPoint presentation or watching a video. It was also noted that dispatchers are often told to ask their managers if they have questions, but managers are not always knowledgeable about the craft and often do not have sufficient expertise to answer such questions.

On March 7, 2022, FRA had a conversation with the railroad industry, including the Norfolk Southern Corporation (NS), AAR, and ASLRRA. During this conversation, which was conducted in a videoconference format, FRA also asked for individualized feedback on how FRA's locomotive engineer and conductor certification regulations in 49 CFR parts 240 and 242 could be improved upon with respect to dispatcher certification. Specifically, FRA asked for feedback on any regulatory provisions in 49 CFR parts 240 and 242 that, in their experience, may have been difficult to implement, as well as whether FRA should explore any changes to these regulatory provisions.

AAR expressed opposition to FRA's proposal to issue regulations requiring certification of dispatchers arguing that there was not a safety benefit to certification. In addition, NS questioned the need for certification regulations in the absence of any identified gaps in coverage by existing railroad training programs. ASLRRA expressed concern that FRA's proposal to issue regulations requiring dispatcher certification would result in a large paperwork burden with little benefit.

After this conversation, FRA provided a short list of written questions to AAR and ASLRRA. While AAR did not provide additional feedback in response to FRA's list of questions, ASLRRA responded to FRA's list of written questions by email on April 13, 2022, a copy of which has been placed in the docket.[11]

On March 10, 2022, FRA staff had a follow-up conversation with ATDA and IBEW to receive information on the types of errors and operating practice violations that should result in a railroad revoking a dispatcher's certification. During this conversation, which was conducted in a video conference format, FRA heard that a dispatcher's certification should not be revoked during an operations test, and that a person training a dispatcher should not have their certification revoked if a person they are training commits a revocable offense, as long as the trainer took appropriate action. However, a list of prospective revocable events was not generated during this meeting.

7. Contractors

FRA considered whether railroad contractors (and subcontractors) should be authorized to certify their employees. FRA did not, however, include that option in this proposed rule. Instead, consistent with FRA's engineer and conductor certification regulations, this proposed rule requires railroads to develop and submit certification programs to FRA for approval and then implement their FRA-approved certification programs. FRA is proposing to adopt this approach because railroads are ultimately held responsible for the actions (or failure to act) of their employees, contractors, and subcontractors when engaged in railroad operations.

FRA acknowledges that dispatcher functions are increasingly being contracted out by railroads to companies that specialize in this work. However, railroads are most knowledgeable about the unique characteristics of their territories. Therefore, railroads are best suited to develop certification programs that are needed to ensure that all employees responsible for allocating and assigning main track use, routing trains safely and efficiently, and ensuring the safety of roadway workers who are working on or near the railroad tracks have been properly trained and certified on: (a) the railroad's rules and practices for the safe movement of trains; (b) physical characteristics of the territory for which the employee will be working as a dispatcher; and (c) the dispatching systems and technology used by that railroad. In addition, by keeping certification programs in-house, railroads can implement quality control measures to ensure that their FRA-approved certification programs are being implemented properly.

Nonetheless, FRA is soliciting comment on the approach adopted in this proposed rule, which would require railroads to develop and implement FRA-approved dispatcher certification programs. To ease any potential burden, especially on Class III railroads, the proposed rule would allow all railroads to choose between conducting the training or using a training program conducted by a third-party, which would be adopted and ratified by the railroad. In addition, contractors that employ dispatchers could help railroads comply with the requirements in this proposed rule by providing information about their dispatchers' compliance with some of the proposed regulatory requirements. For example, contractors could provide information about their dispatchers' compliance with the vision and hearing acuity requirements in the proposed rule. Under this proposed rule, however, railroads would ultimately be liable for ensuring that only certified dispatchers are permitted to perform dispatching tasks on their networks.

8. Interaction With Other FRA Regulations

While developing this proposed rule, FRA has been mindful of other regulations that may touch upon topics covered in this proposed rule, including FRA's training, qualification, and oversight regulations in 49 CFR part 243 (part 243); railroad safety risk reduction programs (SSP/RRP) in 49 CFR parts 270 and 271 (part 270 and part 271); and fatigue risk management programs (FRMP) in parts 270 and 271. However, FRA finds that this proposed rule would complement, rather than duplicate, those regulations.

Dispatchers are currently included in part 243's requirements for training, qualification, and oversight for safety-related railroad employees. However, part 243 does not require employees to undergo a performance skill evaluation conducted by a qualified instructor to verify adequate knowledge transfer. Therefore, even though railroads (and third-party entities that employ dispatchers) are required to have training programs in place for dispatchers, railroads are not required to have effective processes in place to require prospective dispatchers to exhibit the extent to which they have developed the necessary skills to serve as an effective dispatcher.

[11] A record of public contact summarizing this meeting has been posted in the rulemaking docket at: *https://www.regulations.gov/document/FRA-2022-0019-0002.*

Part 243 also does not require railroads to have formal processes in place for promptly removing dispatchers from service if they violate one or more basic regulatory standards that could have a significant negative impact on the safety of rail operations. FRA's proposed dispatcher certification regulatory requirements have been drafted to help address this void, as well as prevent dispatchers who have been fired for committing one or more of the revocable events discussed in the proposed rule from "job hopping" and quickly resuming safety-sensitive service at a different railroad that is unaware of the dispatcher's prior violation(s) of FRA's rail safety requirements.

As codified in parts 270 and 271, FRA requires Class I railroads, railroads with inadequate safety performance, and passenger rail operations to implement railroad safety risk reduction programs. A railroad safety risk reduction program is a comprehensive, system-oriented approach to safety that determines an operation's level of risk by identifying and analyzing identified hazards and developing strategies to mitigate risks associated with those hazards. In this background, FRA is using the term "railroad safety risk reduction programs" to include both a "system safety program" (SSP) that is required for certain passenger rail operations [12] and a "risk reduction program" (RRP) that is required for a limited number of other rail operations.[13]

Although a railroad safety risk reduction program might address a railroad's safety hazards and risks associated with its dispatchers, the framework established by these programs neither directly addresses the risks associated with dispatching nor establishes an industry-wide approach.

First, not every railroad is required to have a railroad safety risk reduction program. Indeed, FRA estimates that fewer than 100 railroads (out of approximately 750 under FRA's jurisdiction) will be required to develop a railroad safety risk reduction program over the next 10 years.

Second, even if a railroad is required to have a railroad safety risk reduction program through which it identifies the risks associated with dispatching, the railroad may decide not to implement mitigations to eliminate or reduce those specific risks. Parts 270 and 271 permit railroads to prioritize risks.[14] Whether a railroad that is required to have a program mitigates risks associated with dispatching will depend on how the railroad prioritizes risks for mitigation and how effectively that mitigation would promote continuous safety improvement compared to mitigation of other identified hazards and risks. Thus, even if aspects of dispatching are identified as a risk, a railroad may not implement mitigations to eliminate or reduce that risk.

Accordingly, while the SSP/RRP requirements may complement this proposed rule, they do not address the need for FRA and the railroads to consider and address the safety risks of dispatching across the entire industry.

With respect to FRMPs,[15] an FRMP is a comprehensive, system-oriented approach to safety in which a railroad determines its fatigue risk by identifying and analyzing applicable hazards, and developing plans to mitigate, if not eliminate, those risks. Like the SSP/RRP rules, the FRMP rule is part of FRA's continual efforts to improve rail safety and will satisfy the statutory mandate of Section 103 of the Rail Safety Improvement Act of 2008.[16]

Like the SSP/RRP requirements, there is no guarantee that any railroad covered by the regulation will use an FRMP to address dispatching issues. As with the SSP/RRP rules, a covered railroad must identify fatigue hazards, assess the risks associated with those fatigue hazards, and prioritize those risks for mitigation purposes. It is possible that other fatigue risks, not associated with dispatching, might rank higher, in which case the risk associated with dispatching might not be promptly mitigated. Further, because the FRMP requirements would apply only to those railroads required to comply with the SSP/RRP requirements, an FRMP would not be required of every railroad that performs dispatch tasks. Thus, like the SSP/RRP rules, this proposed rule is complementary to the FRMP final rule and is not duplicative.

IV. Section-by-Section Analysis

Subpart A—General

Subpart A of the proposed rule contains general provisions, including a formal statement of the proposed rule's purpose and scope. The subpart also provides that this proposed rule does not constrain the ability of a railroad to prescribe additional or more stringent requirements for its dispatchers that are not inconsistent with this proposed rule.

Section 245.1 Purpose and Scope

This section, derived from 49 CFR 240.1 and 242.1, indicates that the purpose of the proposed rule is to ensure that only those persons who meet minimum Federal safety standards serve as dispatchers, to reduce the rate and number of accidents and incidents, and to improve railroad safety.

Even though a person may have a job title other than dispatcher, the requirements of this proposed rule would apply to that person if they meet the definition of "dispatcher." The definition of "dispatcher," and an explanation of who is covered by the definition, are discussed in more detail in the section-by-section analysis for § 245.7, below.

Section 245.3 Application and Responsibility for Compliance

The extent of FRA's jurisdiction, and the agency's exercise of that jurisdiction, is well-established. *See* 49 CFR part 209, appendix A. This proposed application and responsibility for compliance section is consistent with FRA's *Statement of Agency Policy Concerning Enforcement of the Federal Railroad Safety Laws in appendix A to 49 CFR part 209.*

This section, derived from 49 CFR 240.3 and 242.3, provides that the proposed rule would apply to all railroads with four exceptions. Paragraph (a)(1) of this section notes that this proposed rule would not apply to railroads that do not perform any dispatch tasks. In paragraph (a)(2), FRA proposes to exempt operations that occur within the confines of industrial installations commonly referred to as "plant railroads" and typified by operations such as those in steel mills that do not go beyond the plant's boundaries and that do not involve the switching of rail cars for entities other than themselves. Further explanation of what is meant by the term "plant railroad" is provided in the section-by-section analysis for § 245.7.

Paragraph (a)(3) of this section excludes "tourist, scenic, historic, and excursion operations that are not part of the general railroad system of transportation" (as defined in § 245.7) from compliance with this rule. Excluding these types of operations from this rule is consistent with FRA's jurisdictional policy that excludes these operations from all but a limited

[12] 49 CFR 270.3 (requiring the application of the system safety rule to certain passenger rail operations).

[13] 49 CFR 271.3 (requiring the application of the risk reduction program rule to certain rail operations).

[14] *See e.g.,* 49 CFR 270.5 (definition of "risk-based hazard management") and 271.103(b)(3).

[15] On June 13, 2022, FRA published a final rule adding a FRMP to the railroad safety risk reduction program requirements in Parts 270 and 271. 85 FR 83484.

[16] Codified at 49 U.S.C. 20156.

number of Federal safety laws, regulations, and orders.

The final proposed exclusion covers rapid transit operations in an urban area that are not connected to the general railroad system of transportation. It should, however, be noted that FRA exercises jurisdiction over some rapid transit type operations, given their links to the general railroad system of transportation, such as rapid transit operations conducted on track used for freight, intercity passenger, or commuter passenger railroad operation, during a block of time during which a general system railroad is not operating (temporal separation). Thus, this proposed rule would apply to persons who perform dispatch tasks for those rapid transit type operations.

Paragraph (b) is intended to clarify that any person, as defined in § 245.7, (including a railroad employee, employee of a railroad contractor, or employee of a railroad subcontractor) who performs a function required by this part will be held responsible for compliance. Therefore, this proposed regulation would cover all dispatchers regardless of whether they are employed by a railroad or a contractor. Covering employees of both railroads and contractors is consistent with other FRA regulations (such as FRA's training regulations in 49 CFR part 243) and the general trend in the railroad industry. In many instances, employees performing dispatch tasks for a railroad may be employed by a company other than the railroad upon which the person is working. In the interest of railroad safety, it is vital that all dispatchers are properly trained and qualified regardless of whether they are employed by a railroad or a contractor.

Section 245.5 Effect and Construction

This section is derived from 49 CFR 240.5 and 242.5. Paragraph (a) addresses the relationship of this proposed rule to preexisting legal relationships. Paragraph (b) states that FRA does not intend to alter the authority of a railroad to initiate disciplinary sanctions against its employees by issuance of this proposed rule.

Paragraph (c) of this section is intended to note that, as a general matter, FRA does not intend to create or prohibit the right to ''flowback'' or take a position on whether ''flowback'' is desirable. The term ''flowback'' has been used in the industry to describe a situation where an employee leaves their current position to return to a previously held position or craft. The reasons for reverting back to the previous craft may derive from personal choice or a less voluntary nature (such as downsizing). Many collective bargaining agreements address the issue of flowback. However, paragraph (c) must be read in conjunction with § 245.213, which limits flowback in certain situations (*i.e.,* when a certificate is revoked due to an alcohol or drug violation).

Paragraph (d) of this section addresses employee rights. The proposed rule would explicitly preserve any remedy already available to the person and would not create any new entitlements.

Section 245.7 Definitions

This section, derived from 49 CFR 240.7 and 242.7, defines a number of terms that have specific meaning in this proposed part. A few of these terms have definitions that are similar to, but may not exactly mirror, definitions used elsewhere in this chapter.

Dispatch

FRA proposes to use the definition of ''dispatch'' found in 49 CFR 241.5. This definition sets the limits of what constitutes a dispatcher and provides examples of the types of activities FRA intends to cover and not cover under this definition. Under this definition, the function that the individual is performing determines whether a person is dispatching. Factors such as an individual's job title, location, and whether the individual is employed by a railroad, are irrelevant to the determination of whether the individual is dispatching. Furthermore, FRA does not intend for yardmasters, as a job category, to fall within the scope of this definition. Yardmasters are only covered by this part when they are performing dispatching functions.

Paragraph (1)(i) of the definition gives specific examples of the types of functions that an individual would perform in order to be considered dispatching. In particular, FRA intends that anyone controlling the movement of on-track equipment requiring a power brake test under 49 CFR parts 232 or 238, would be considered dispatching and, therefore, would fall within the scope of the rule. Another type of movement that FRA intends to include is the movement of certain other on-track equipment, such as specialized maintenance-of-way equipment, that is not subject to the power brake regulations. However, as expressed in proposed paragraph (2)(iii), FRA intends to exclude movements of on-track equipment used in the process of sorting and grouping rail cars inside a railroad yard in order to assemble or disassemble a train.

Paragraph (1)(i) also explicitly notes two methods of controlling movements that fall within the scope of the definition. The first method that FRA considers dispatching is controlling movements by the issuance of a written or verbal authority or permission that affects a railroad operation, such as through movement authorities and speed restrictions, and includes the following: Track Warrants, Track Bulletins, Track and Time Authority, Direct Traffic Control Authorities, and any other methods of conveying authority for trains and engines to operate on a main track, controlled siding, or other track controlled by a dispatcher.

The second method that falls within the scope of the definition of ''dispatch'' is to control a movement ''by establishing a route through the use of a signal or train control system but not merely by aligning or realigning a switch.'' This provision makes clear that the act of aligning or realigning a switch alone is not sufficient to constitute dispatching. In order to constitute dispatching under this part, aligning or realigning a switch must be accompanied by the act of setting a signal authorizing movement over a track segment.

Paragraph (1)(ii) of the definition of ''dispatch'' clarifies that those railroad employees who issue an authority for either a roadway worker or stationary on-track equipment, or both, to occupy a certain stretch of track while performing repairs, inspections, etc., will also be covered by this rule. FRA included this section to distinguish this activity from that of authorizing movement of trains or other on-track equipment onto track, which is covered by paragraph (1)(i) above.

Paragraph (1)(iii) of the definition of ''dispatch'' states another function of a dispatcher, which is to issue an authority for working limits to a roadway worker.

Finally, paragraph (2) of the definition of ''dispatch'' clarifies that the term excludes several types of activities. Paragraph (2) limits the exclusions, however, to personnel in the field. Paragraph (2)(i) specifically excludes from the scope of the definition the carrying out of a written or verbal authority or permission or an authority for working limits. As further clarification, paragraph (2)(i) notes two examples of activities that would fall under the exclusion, provided they were carried out by field personnel: initiating an interlocking timing device and authorizing a train to enter working limits. Paragraph (2)(ii) specifically excludes from the scope of the definition the operation by field personnel of a function of a signal

system intended to be used by those field personnel, such as initiating an interlocking timing device.

Drug

Consistent with parts 240 and 242, FRA proposes to define ''drug'' as any substance (other than alcohol) that has known mind- or function-altering effects on a human subject, specifically including any psychoactive substance and including, but not limited to, controlled substances. This term is intended to refer to substances that have a significant potential for abuse and/or dependence. Normal ingestion of caffeine in beverages and use of nicotine from tobacco products, even though involving some degree of habituation or dependence, are not intended to be included within the definition.

Person

In this proposed part, *person* takes on the same meaning as it does in FRA's other safety rules. The term means ''an entity of any type covered under 1 U.S.C. 1'' and the definition goes into detail regarding the types of people and entities that are covered.

Plant Railroad

FRA proposes a definition of *plant railroad* consistent with FRA's longstanding policy. *See* 49 CFR part 209, app. A.

Substance Abuse Disorder

Consistent with parts 240 and 242, the term ''substance abuse disorder'' is defined as a psychological or physical dependence on alcohol or a drug, or another identifiable and treatable mental or physical disorder involving the abuse of alcohol or drugs as a primary manifestation.

This proposed definition would include drug and alcohol users who engage in abuse patterns which result in ongoing safety risks and violations.

A substance abuse disorder is ''active'' within the meaning of this proposed rule if the person: (1) is currently using alcohol or other drugs, except under medical supervision consistent with the restrictions described in § 219.103 of this chapter; or (2) has failed to successfully complete primary treatment or successfully participate in aftercare as directed by a Substance Abuse Professional (SAP) or Drug and Alcohol Counselor (DAC).

Section 245.9 Waivers

This section, derived from 49 CFR 240.9 and 242.9, provides the proposed requirements for a person seeking a waiver of any section of this proposed rule.

Section 245.11 Penalties and Consequences for Noncompliance

This section, derived from 49 CFR 240.11 and 242.11, explains that FRA may impose civil penalties on any person, including a railroad or an independent contractor or subcontractor providing goods or services to a railroad, that violates any requirement of this proposed rule. Any person who violates a requirement of this proposed rule may be subject to civil penalties between the minimum and maximum amounts authorized by statute and adjusted for inflation per violation. Individuals may be subject to penalties for willful violations only. Where a pattern of repeated violations, or a grossly negligent violation creates an imminent hazard of death or injury, or causes death or injury, an aggravated maximum penalty may be assessed.[17] In addition, each day a violation continues constitutes a separate offense. Finally, a person may be subject to criminal penalties under 49 U.S.C. 21311 for knowingly and willfully falsifying reports required by these proposed regulations.

Consistent with FRA's final rule regarding the removal of civil penalty schedules from the CFR (84 FR 23730 (May 23, 2019)), FRA will not publish a civil penalty schedule for this rule in the CFR, but plans to publish a civil penalty schedule on its website. Penalty schedules are statements of agency policy, thus notice and comment are not required prior to their issuance, nor are they required to be published in the CFR. *See* 5 U.S.C. 553(b)(3)(A). Nevertheless, commenters are invited to suggest the types of actions or omissions under each regulatory section that would subject a person to the assessment of a civil penalty. Commenters are also invited to recommend what penalty amounts may be appropriate, based upon the relative seriousness of each type of violation.

Subpart B—Program and Eligibility Requirements

Section 245.101 Certification Program Required

This section, derived from 49 CFR 240.101 and 242.101, would require railroads to have written certification programs comprised of at least seven elements, each of which comports with specific regulatory provisions in the proposed rule related to that element.

[17] Please visit FRA's website for the current aggravated maximum penalty amount at *https://railroads.dot.gov/*.

Section 245.103 FRA Review of Certification Programs

This proposed section, derived from 49 CFR 240.103 and 242.103, describes the process for the submission and review of dispatcher certification programs. Paragraph (a) of this section would only apply to railroads that have existing dispatching operations on the effective date of the final rule and provides the deadlines for when these railroads would be required to submit their certification programs to FRA. The submission schedule would require Class I railroads and commuter service railroads to submit their programs earlier than Class II railroads, Class III railroads, and railroads not otherwise classified. The separate deadlines would help space out the initial influx of programs FRA will receive after the final rule goes into effect, to allow FRA to issue approval and disapproval decisions in a more timely manner. FRA also presumes that, in general, Class I railroads and commuter service railroads will have more resources to devote to creating these programs and will be better positioned to create and draft them more quickly.

Paragraph (b) of this section would only apply to railroads that do not have existing dispatching operations on the effective date of the final rule. If such railroads wish to begin dispatching operations, they would be required to submit their program to FRA, and FRA must approve their program, before they begin dispatching operations.

Paragraph (c) of this section provides that railroads would submit their programs and their requests for approval (which are described in greater detail in § 245.107(a)) by uploading them to a secure document submission site. This will allow for more efficient processing and will significantly reduce the risk of a program submission getting lost. FRA will need basic information from each railroad before setting up the user's account. In order to provide secure access, information regarding the points of contact is required. It is anticipated that FRA will be able to approve or disapprove all or part of a program and generate automated notifications by email to a railroad's points of contact.

FRA does not intend to develop a secure document submission site so that confidential materials are identified and not shared with the general public. This is because FRA does not expect the information in a program to be of such a confidential or proprietary nature, particularly since each railroad would be required to share the program submission, resubmission, or material modification all of its dispatchers as

well as with the president of each labor organization that represents the railroad's certified dispatchers, and the programs will be available on FRA's website. *See* § 245.103(d) and (j). Accordingly, FRA does not at this time believe it is necessary to develop a document submission system which addresses confidential materials.

When a railroad submits its certification program to FRA, paragraph (d) of this section requires the railroad to also submit a copy of the program and the request for approval to the president of each labor organization that represents the railroad's dispatchers and to all of the railroad's dispatchers that are subject to this part. The railroad's submission to FRA must include a statement affirming that it has provided a copy of the program and the request for approval to the president of each labor organization that represents the railroad's dispatchers and to all of the railroad's dispatchers that are subject to this part. In addition, the submission must include a list of the names and email addresses of each labor organization president who received a copy of the program. Paragraph (e) of this section provides instruction on who is allowed to comment on these programs. For dispatchers who are members of a labor union, any comments must be submitted by a designated representative. For dispatchers who are not members of a labor union, they can personally submit a comment on their railroad's certification program. FRA anticipates that comments submitted under this process will assist the agency in determining whether a program conforms to the requirements set forth in this rule, and thus, FRA will not make a decision on a program until after the 45-day comment period in paragraph (e)(1) has passed.

Paragraph (f) of this section states FRA's aspirational goal to decide on whether to approve a program within 90 days of the date that the program is submitted. However, this is only a goal and not a deadline for the agency. Paragraph (f)(3) makes clear that if FRA is unable to issue a decision on the program within 90 days, the program is not considered approved on the 91st day. A certification program will not be approved until FRA issues a letter notifying the railroad that its program has been approved. While FRA will make every effort to issue approval and disapproval letters within 90 days, FRA recognizes that this will not always be possible. It may be especially difficult for FRA to meet this goal during the initial implementation of this rule when FRA expects to receive many certification programs within a relatively short period of time.

Paragraph (g) of this section addresses the process for railroads who wish to materially modify their previously approved programs. If a railroad wishes to materially modify its program, it must submit two documents to FRA: (1) a description of how it intends to modify its current program (this constitutes the request for approval required under § 245.107(a)); and (2) a copy of the modified program. Paragraph (g)(1) defines a ''material modification'' as a modification that ''would affect the program's conformance with this part.'' This definition is taken from 49 CFR 240.103(h)(1) and 242.103(i)(1) and is intentionally broad to cover the innumerable modifications to a program that could be considered material. FRA recognizes that there may be a desire among some interested parties to have a more specific definition of ''material modification'' in the regulation. Thus, FRA welcomes any comments on suggested changes to the ''material modification'' definition.

Paragraph (g)(3) notes that the process for submission and review of material modifications mirrors the process for submission and review of initial certification programs. Railroads shall submit their material modifications to FRA in conformance with paragraph (c) of this section and shall send a copy of the material modification description and the modified program to all required parties referenced in paragraph (d) of this section. Certain interested parties may comment on the modification in conformance with paragraph (e) of this section, and FRA will issue a letter either approving or disapproving the material modification in conformance with paragraph (f) of this section. If FRA approves the material modification, the railroad can begin implementing the modification and the modified program will replace the original program. If FRA disapproves the material modification, the railroad cannot implement the modification, and the original program must remain in effect. If a railroad's material modification submission contains multiple modifications, FRA reserves the right to approve some modifications while disapproving other modifications. In such an instance, the railroad can only begin implementing those modifications that FRA has approved.

Paragraph (h) of this section describes the process to resubmit a program or material modification that was previously disapproved by FRA. Paragraph (h)(2) notes that the process for submission and review of resubmitted programs and material modifications mirrors the process for submission and review of initial certification programs. Railroads shall resubmit their initial programs or material modifications to FRA in conformance with paragraph (c) of this section and shall send a copy of the resubmitted program or material modification to all required parties referenced in paragraph (d) of this section. Certain interested parties may comment on the resubmitted program or material modification in conformance with paragraph (e) of this section and FRA will issue a letter either approving or disapproving the resubmitted program or material modification in conformance with paragraph (f) of this section.

Paragraph (h)(3) provides the deadlines, if any, for when a railroad must resubmit its program or material modification to FRA. Railroads with existing dispatching operations on the effective date of the final rule (legacy railroads), whose initial programs are disapproved by FRA, must resubmit their program within 30 days of the date FRA notified the railroad that its program was deficient. If a legacy railroad fails to resubmit its program within 30 days and continues its dispatching operations, FRA will determine the appropriate enforcement approach to achieve compliance, including civil penalties and/or an emergency order.

FRA believes a 30-day deadline is needed for legacy railroads because § 245.105(a) allows legacy railroads to continue dispatching operations while they await FRA approval of their programs. Thus, without a deadline, legacy railroads could purposely delay coming into compliance with this proposed rule by taking months or even years to resubmit their programs. In contrast, railroads that begin dispatching operations after the effective date of this proposed rule cannot begin such operations until FRA approves their program. Likewise, any railroad (both legacy and non-legacy) cannot implement a material modification to its program until FRA has approved the modification. Therefore, in these scenarios, FRA decided that a deadline is unnecessary because the railroads have every incentive to resubmit their programs or material modifications in a timely manner. However, while there is no FRA-imposed deadline in these scenarios, FRA still recommends that railroads provide their resubmissions within 30 days of being notified of deficiencies.

Paragraph (i) of this section acknowledges that FRA reserves the right to revisit a prior approval of a certification program. In certain circumstances, including an audit of a certification program, FRA may discover that it made an error when it previously approved a program. This paragraph allows FRA to rescind a prior approval while also providing the railroads with certain rights. Paragraph (i)(3) notes that the process for submission and review of programs whose prior approval has been rescinded mirrors the process for submission and review of initial certification programs, and resubmission of initially disapproved programs. Railroads shall resubmit their programs to FRA in conformance with paragraph (c) of this section and they shall send a copy of the resubmitted program to all required parties referenced in paragraph (d) of this section. Certain interested parties may comment on the resubmitted program in conformance with paragraph (e) of this section and FRA will issue a letter either approving or disapproving the resubmitted program in conformance with paragraph (f) of this section.

Paragraphs (i)(6) and (7) allow for a grace period where a rescinded program may remain in effect for a certain period of time. However, once FRA approves a resubmitted program, the resubmitted program must replace the rescinded program. In addition, a rescinded program can no longer remain in effect if FRA has twice disapproved the railroad's resubmitted program. This latter scenario is best explained through an example: On February 10th, FRA notifies ABC Railroad (ABC) that FRA is rescinding its prior approval of its dispatcher certification program. On March 10th, ABC resubmits its program to FRA. On June 10th, FRA disapproves ABC's resubmitted program. On July 10th, ABC sends FRA its second resubmitted program. On October 10th, FRA issues a letter once again disapproving ABC's program. In this example, ABC's rescinded program could remain in effect between February 10th and October 10th. However, after October 10th, the rescinded program could no longer be in effect. If ABC continued to perform dispatching operations after October 10th, while it did not have an FRA-approved certification program, FRA could find that the railroad failed to implement a program. In such cases, FRA will determine the appropriate enforcement approach to achieve compliance, including civil penalties and/or an emergency order. In exercising its enforcement discretion, FRA may consider such factors as the number and extent of the remaining deficiencies in the program and whether the railroad made good faith efforts to address the deficiencies in its resubmissions.

Finally, paragraph (j) of this section notes that the following documents will be available on FRA's website (*railroads.dot.gov*): (1) submitted programs and material modifications from the railroads; (2) any comments to the submissions from the railroads; and (3) the letters from FRA either approving or disapproving a program or a material modification. While parts 240 and 242 do not currently require the posting of these documents on FRA's website, the current practice, with respect to locomotive engineer and conductor certification programs, has been for FRA to post comments to a railroad's submission and FRA approval and disapproval letters on its website. FRA is proposing this paragraph (j) in an effort to make the review and approval process of dispatcher certification programs as transparent as possible.

Section 245.105 Implementation Schedule for Certification Programs

This section, derived from 49 CFR 240.201 and 242.105, contains the timetable for the implementation of this proposed rule. Paragraph (a) of this section acknowledges that railroads with existing dispatching operations on the effective date of this proposed rule (legacy railroads) may continue their dispatching operations while they await FRA's approval of their certification programs. However, if FRA disapproves a legacy railroad's certification program on two occasions (the initial submission and the first resubmission), the railroad will no longer be in compliance with the rule if it continues its dispatching operations without an FRA-approved program. In such a scenario, FRA could find that the railroad has failed to implement a program and would determine the appropriate enforcement approach to achieve compliance, including civil penalties and/or an emergency order. In exercising this enforcement discretion, FRA may consider such factors as the number and extent of the remaining deficiencies in the program and whether the railroad made good faith efforts to comply with the requirements of the rule through its submitted program. Paragraph (b) of this section provides that any non-legacy railroad (a railroad that did not have existing dispatching operations on the effective date of this proposed rule) may not commence dispatching operations until FRA has approved its dispatcher certification program.

Paragraphs (c) and (d) of this section require that railroads, in writing, designate as certified dispatchers all persons authorized by the railroad to perform the duties of a dispatcher as of the effective date of the final rule, or authorized between the effective date of the final rule and the date FRA approves the railroad's certification program. Railroads must also issue a certificate to each person they designate. This designation system is modeled after the system used when parts 240 and 242 first went into effect. This system allows such ''legacy dispatchers'' to obtain a certificate so that once their railroad's program is approved, they will be considered a ''previously certified dispatcher'' when it comes time for them to be recertified through the railroad's certification program. Therefore, the recertifying railroad will not have to provide legacy dispatchers with the kind of basic training that would be given to individuals with no dispatching experience. In other words, a person with 20 years of experience as a dispatcher most likely does not need to take a ''Dispatching 101'' course that goes over the basics of dispatching. Instead, this person would be better served by undergoing continuing education training as described in §§ 245.107(b)(2) and 245.119(j).

Paragraph (e) of this section states that after this rule has been in effect for eight months, no person may serve as a dispatcher unless that person is certified. Paragraph (f) of this section requires each railroad to make formal determinations concerning those individuals it has designated as dispatchers within three years after FRA's approval of the railroad's certification program. Pursuant to this paragraph, a designated dispatcher may serve as a dispatcher for up to three years from the date of FRA's approval of the program. At the end of the three years, however, the designated dispatcher can no longer serve as a dispatcher unless they successfully complete the tests and evaluations provided in subpart B of this rule (*i.e.,* the full certification process).

Thus, individuals who are designated as dispatchers and certified under paragraphs (c) or (d) of this section could be certified for more than three years before they have to complete the railroad's full certification process. For example, if a person is designated (and certified) as a dispatcher on September 1, 2024, and FRA approves the railroad's certification program on September 1, 2025, this dispatcher would not have to go through the full certification process and get recertified until September 1, 2028 (four years from

the date the individual was designated by the railroad as a certified dispatcher). Railroads should note that they may not test and evaluate a designated dispatcher or dispatcher candidate under subpart B of this rule until they have a certification program approved by FRA pursuant to § 245.103.

In order to test and evaluate all of its designated dispatchers by the end of the three-year period, a large railroad will likely have to begin that process well in advance of the end of the three years. For example, paragraph (f), which is derived from part 240 and part 242's designation provisions, would permit a railroad to test and evaluate one-third of its designated dispatchers within one year of the approval date of the railroad's certification program; another one-third within two years of the program's approval date; and the final one-third within three years of the program's approval date.

To address the issue of designated dispatchers who would be eligible to retire within three years of the date FRA approves their railroad's certification program, FRA is proposing paragraphs (f)(1) through (3) in this section since it would not be an efficient use of a railroad's resources to perform the full certification process on a designated dispatcher who is going to retire before the end of their designation period. Paragraph (f)(1) provides that a designated dispatcher, who is eligible to receive a retirement pension in accordance with the terms of an applicable agreement or with the terms of the Railroad Retirement Act (45 U.S.C. 231) within three years from the date FRA approves the railroad's certification program, may request, in writing, that the railroad not perform the full certification process on that designated dispatcher until three years from the date FRA approves the railroad's program.

Paragraph (f)(2) provides that, upon receipt of that written request, a railroad may wait to perform the full certification process on the person making the request until the end of the dispatcher's designation period. Thus, paragraphs (f)(1) and (2) allow designated dispatchers to serve as dispatchers for the full designation period and then retire before being subjected to the full certification process. While it is in the railroads' interest not to perform the full certification process for a person who is going to retire once the designation period expires, and thus, in their interest to grant as many requests as possible, it may not be feasible to accommodate every request that is made. If, for example, a significant number of designated dispatchers on a railroad properly request that the railroad wait to recertify them at the end of the designation period, but then do not, in fact, retire by the expiration of the designation period, the railroad might not be able to recertify everyone in time and would risk violating this rule. In recognition of that risk and the need to give the railroads some flexibility to comply with the rule, paragraph (f)(2) also provides that a railroad that grants any request must grant the request of all eligible persons ''to every extent possible.''

In addition, paragraph (f)(3) provides that a designated dispatcher, who is also subject to recertification under part 240 or 242, may not make a request under paragraph (f)(1) of this section. This provision recognizes that railroads would likely want to have concurrent certification processes for certifying a person who will be both a certified dispatcher and a certified locomotive engineer or conductor. Thus, it would not be appropriate, in that instance, for a designated dispatcher who is already subject to recertification under part 240 or 242 to make a request to delay the full dispatcher certification process.

Paragraph (g) of this section provides that, after FRA approves a railroad's certification program, the railroad cannot certify or recertify a person as a dispatcher unless that person has been tested and evaluated in accordance with the procedures provided in subpart B of this rule. In other words, after FRA approves a railroad's program, that railroad can no longer designate individuals as certified dispatchers under paragraphs (c) or (d) of this section.

Section 245.107 Requirements for Certification Programs

This section, derived from appendix B to part 240 and appendix B to part 242, provides both the organizational requirements and a narrative description of the submission required under §§ 245.101 and 245.103. FRA is not requiring railroad submissions to be made on a specific form. Instead, FRA is prescribing only minimal constraints on the organization and manner of presenting information.

Paragraph (a) of this section addresses what must be included in a railroad's submission to FRA. Specifically, the railroad must include two documents in its submission: (1) a request for approval; and (2) the certification program. If a railroad is submitting its initial certification program, the request for approval can be a brief document that simply states that the railroad is submitting its initial certification program for approval by FRA. However, if a railroad is making a material modification or modifications to a program that has previously been approved by FRA, the request for approval must mention all of the material modifications that the railroad is making to its program and the copy of the certification program will include all of the modifications.

Paragraph (b) of this section requires that the program be divided into six sections, each dealing with a different subject matter, and that the railroad identify the appropriate person to be contacted in the event FRA needs to discuss some aspect of the railroad's program. Section 1 of a certification program shall include basic contact information and will address whether the railroad accepts responsibility for training previously uncertified dispatchers. Section 2 of a program addresses how the railroad will handle training dispatchers who have been previously certified. The main focus in Section 2 is how the railroad will address its requirement to provide continuing education for its previously certified dispatchers. Continuing education is essential because time and circumstances have the capacity to diminish both abstract knowledge and the proper application of that knowledge to discrete events. Time and circumstances also have the capacity to alter the value of previously obtained knowledge and the application of that knowledge. Therefore, dispatchers need to have their fundamental knowledge of operating rules and practices refreshed periodically. While a railroad has latitude to select the specific subject matters to be covered, the duration of the training, the methods of presenting the information, and the frequency with which the training will be provided, the railroad must describe in this section how it will use that latitude to ensure that its dispatchers remain knowledgeable concerning the safe discharge of their responsibilities so as to comply with the standard set forth in § 245.119(j).

A matter of particular concern to FRA is how each railroad acts to ensure that dispatchers remain knowledgeable about the territory over which they are authorized to dispatch, but from which the dispatcher has been absent. Paragraph (b)(2)(v) requires that Section 2 of the program addresses how long a person may be absent from dispatching over a territory before familiarization training is required and how the dispatcher will acquire that familiarization training. This time period can be less than 12 months, but

it cannot exceed 12 months in accordance with § 245.120(c).

Section 3 of the program includes requirements for the testing and evaluation procedures for previously certified dispatchers. Paragraph (b)(3)(i) notes that railroads must address how their programs will comply with the standards found in § 245.121. Section 245.121 directs that, when seeking a demonstration of the person's knowledge, a railroad must employ a written test that contains objective questions that cover the following subject matters: (i) safety and operating rules; (ii) timetable instructions; (iii) compliance with all applicable Federal regulations; (iv) physical characteristics of the territory on which a person will be serving as a dispatcher; and (v) dispatching systems and technology. The test must accurately measure the person's knowledge of all of these areas. Paragraph (b)(3)(ii) requires the program to detail the railroad's procedures for testing vision and hearing acuity and for ensuring that its medical examiners have sufficient knowledge to make a determination as to whether a person can safely work as a dispatcher.

Section 4 of the program includes the requirements for training, testing, and evaluating persons not previously certified. Railroads who elect, in Section 1 of the program, to not take responsibility for training previously uncertified dispatchers can skip this section. However, all other railroads must provide details for how they will train, test, and evaluate previously uncertified persons to ensure that they acquire and demonstrate sufficient knowledge and skills to safely perform the job of a dispatcher. Paragraph (b)(4)(ii) requires the same level of detail in this section that is required in Sections 2 and 3 of the program. This encompasses addressing both the training requirements found in § 245.119 and the knowledge testing requirements in § 245.121. If a railroad relies on another entity to conduct its training away from the railroad's own territory and dispatching systems, paragraph (b)(4)(iii) states that the railroad must explain in its program how dispatching students will be given the required training on the physical characteristics of the railroad's territory and its dispatching systems and technology.

Section 5 of the program addresses how the railroad will monitor the operational performance of its certified dispatchers in accordance with § 245.123. In particular, the railroad must discuss the processes and procedures it will use for ensuring that such monitoring and testing is performed. This includes a description of the scoring system the railroad will employ during such testing. Finally, Section 6 of the program addresses how the railroad will perform its routine administration of the program. This section must include summaries of how the program will comply with the various provisions listed in paragraph (b)(6) that contain certain procedural requirements for a railroad's certification program.

Section 245.109 Determinations Required for Certification and Recertification

This proposed section lists the determinations that would be required for evaluating a candidate's eligibility to be certified or recertified. The reference to § 245.303 in paragraph (a)(2) of this section is to ensure railroads determine whether a candidate is eligible to hold a certification by reviewing any prior revocations addressed in subpart D of this rule.

Despite the reference to provisions in §§ 245.111 and 245.113 requiring a review of safety conduct information from the preceding five years, § 245.113(h)(1) would not permit a railroad to consider information concerning safety conduct that occurred prior to the effective date of the final rule issued in this rulemaking. Even though this provision would result in a railroad's evaluation of less than five years' worth of information for some dispatchers early on in the rule's effective period, it is included in Part 245 for the same reason similar provisions were included in parts 240 and 242. Namely, that all dispatchers should be permitted to start with a ''clean slate'' for certification purposes as a matter of basic fairness. See 56 FR 28228, 28242 (June 19, 1991).

Paragraph (b) of this section would provide flexibility to railroads and dispatchers or dispatcher candidates in obtaining the information required by §§ 245.111 and 245.113.

Section 245.111 Prior Safety Conduct as Motor Vehicle Operator

This section, derived from 49 CFR 240.111, 240.115, and 242.111, would provide the requirements and procedures that a railroad would be required to follow when evaluating a dispatcher or dispatcher candidate's prior safety conduct as a motor vehicle operator. FRA believes that the prior safety conduct of a motor vehicle operator is one indicator of that person's drug and/or alcohol use and therefore an important piece of information for a railroad to consider.

Pursuant to this section, each person seeking certification or recertification as a dispatcher would be required to request in writing that the chief of each driver licensing agency that issued them a driver's license within the preceding five years provide a copy of the person's driving record to the railroad. Unlike part 240, this proposed rule would not require individuals to also request motor vehicle operator information from the National Driver Register (NDR). Based on the NDR statute and regulation (*see* 49 U.S.C. chapter 303 and 23 CFR part 1327), railroads are prohibited from running NDR checks or requesting NDR information from individuals seeking employment as certified dispatchers.

Paragraphs (b) and (c) of this section would require a railroad to certify or recertify a person for 60 days if the person: (1) requested the required information at least 60 days prior to the date of the decision to certify or recertify; and (2) otherwise meets the eligibility requirements provided in § 245.109(a)(2) through (5). If a railroad certifies or recertifies a person for 60 days pursuant to paragraphs (b) and (c) but is unable to obtain and evaluate the required information during those 60 days, the person would be ineligible to perform as a dispatcher until the information can be evaluated. However, if a person is simply unable to obtain the required information, that person or the certifying or recertifying railroad could petition for a waiver from FRA (*see* 49 CFR part 211). During the pendency of the waiver request, a railroad would be required to certify or recertify a person if the person otherwise meets the eligibility requirements of § 245.109(a)(2) through (5).

Paragraph (k) of this section would require certified dispatchers or persons seeking initial certification as dispatchers to notify the certifying railroad (or the prospective certifying railroad, if applicable) of motor vehicle incidents described in paragraphs (m)(1) and (2) of this section within 48 hours of the conviction or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for such incidents. This proposed paragraph would also prohibit railroads from having a more restrictive company rule requiring certified dispatchers to report a conviction or completed State action to cancel, revoke, or deny a motor vehicle driver's license in less than 48 hours.

The reasoning behind proposed paragraph (k) involves several intertwined objectives. As a matter of fairness, a railroad should not revoke, deny, or otherwise make a person

ineligible for certification until that person has received due process from the State agency taking the action against the motor vehicle license. Further, by not requiring reporting until 48 hours after the completed State action, the proposed rule would have the practical effect of ensuring that a required referral to a drug and alcohol counselor (DAC) under paragraph (n) of this section would not occur prematurely. However, proposed paragraph (k) would not prevent an eligible person from choosing to voluntarily self-refer. Nor would it prevent the railroad from referring the person for an evaluation under an internal railroad policy, if other information exists that identifies the person as possibly having a substance abuse disorder.

Paragraph (n) of this section would provide that, if a motor vehicle incident described in paragraph (m) is identified, the railroad would be required to provide the data to its DAC along with ''any information concerning the person's railroad service record.'' Furthermore, the person would have to be referred for evaluation to determine whether the person has an active substance abuse disorder. If the person has an active substance abuse disorder, the person would not be eligible for certification. However, even if it is determined that the person is not currently affected by an active substance abuse disorder, the railroad would be required, if recommended by a DAC, to condition certification upon participation in any needed aftercare and/or follow-up testing for alcohol or drugs or both. The intent of this proposed provision is to use motor vehicle records to identify dispatchers or candidates for dispatcher certification who may have active substance abuse disorders and make sure they are referred for evaluation and any necessary treatment before allowing them to perform safety sensitive service. Any testing performed as a result of a DAC's recommendation under paragraph (n) would be done under company authority, not Federal authority. However, the testing would be required to comply with the ''technical standards'' of part 219, subpart H, and part 40.

Paragraph (n)(5) is intended to clarify that failure to cooperate in the DAC evaluation discussed in paragraph (n)(2) of this section would result in the person being ineligible to perform as a certified dispatcher until such time as the person cooperates in the evaluation.

Section 245.113 Prior Safety Conduct With Other Railroads

This proposed section, which is derived from 49 CFR 240.113, 240.205, and 242.113, would establish a process for certification candidates to request information about their prior safety conduct when employed or certified by another railroad. Except as otherwise provided by the retroactive time limit contained in paragraph (g) of this section, this section would require railroads to review records provided by railroads that previously employed or certified the certification candidate regarding the candidate's prior compliance with §§ 245.115 and 245.303 within the previous five years, as well as the candidate's prior compliance with § 245.111 within the previous three years.

Paragraph (b) of this section contains an exception that if a certification candidate has not been employed or certified by any other railroad in the previous five years, they do not have to submit a request pursuant to paragraph (c) of this section. Such candidates, however, must notify the railroad to which they are seeking certification of this fact. This exception should help minimize any burden arising from these proposed requirements.

For certification candidates who do not qualify for the exception provided in paragraph (b), paragraph (c) would require the certification candidate to submit a written request to each railroad that employed or certified the candidate within the previous five years. As indicated earlier, the written request would direct the previous railroad employer or certifying railroad to provide information about the certification candidate's prior compliance with §§ 245.115 and 245.303 within the previous five years, as well as the candidate's prior compliance with § 245.111 within the previous three years from the date of the written request.

In addition, railroads would be required by paragraph (e) of this section to comply with written requests for records of prior safety conduct submitted by former employees or certified persons pursuant to this section within 30 days after receipt of such requests. Railroads that are unable to provide information about prior safety conduct within 30 days would be required, by paragraph (f) of this section, to either: (1) provide a written explanation of why the railroad cannot provide the information within the requested time frame, along with an estimate of how much time will be needed to supply the requested information; or (2) provide an adequate explanation for why the railroad cannot provide the information requested.

In the event a railroad seeking to certify or recertify a certification candidate receives a written statement from another railroad pursuant to paragraph (f) of this section, which explains that the railroad cannot provide the information requested, the railroad seeking to certify or recertify the certification candidate would be deemed to have complied with the eligibility determination required by paragraph (a) of this section provided it retains a copy of the other railroad's written statement in its records.

Similarly, in the event a railroad seeking to certify or recertify a certification candidate does not receive any written response from other railroads, the railroad would be deemed to have complied with the eligibility determination required by paragraph (a) of this section provided it retains a copy of the written request for this information in its records.

Section 245.115 Substance Abuse Disorders and Alcohol Drug Rules Compliance

This proposed section, which is derived from 49 CFR 240.119, 240.205, and 242.115, addresses: (1) active substance abuse disorders and (2) specific alcohol/drug regulatory violations. As noted earlier, annual drug and alcohol testing data submitted to FRA revealed that dispatch employees had a random violation rate (drug and alcohol positives and refusals) and a pre-employment violation rate that was considerably higher than their train and engine service counterparts.

Therefore, this section and § 245.111 address certain situations in which inquiry must be made into the possibility that the individual has an active substance abuse disorder if the individual is to obtain or retain a certificate. The fact that specific instances are cited in this section would not eliminate the general duty of the railroad to take reasonable and proportional action in other appropriate cases. Declining job performance, extreme mood swings, irregular attendance, and other indicators may, to the extent not immediately explicable, indicate the need for an evaluation under internal policies of the railroad.

The purpose of identifying conditions is not to require (and does not require) a railroad to order an evaluation any time a listed condition is exhibited. Rather, FRA is simply providing guidance here as to conditions that may, given the context, call for an evaluation under internal policies of the railroad.

Moreover, FRA remains vigilant of harassment and intimidation and will take appropriate action if such conduct is discovered.

Paragraph (a) of this section would require railroads to determine that a person initially certifying, or a dispatcher recertifying, meets the eligibility requirements of this section. In addition, each railroad would be required by § 245.203 to retain the documents used to make that determination.

Paragraph (c) of this section would prohibit a person with an active substance abuse disorder from being certified as a dispatcher. This means appropriate action must be taken with respect to a certificate (whether denial or suspension) whenever the existence of an active substance abuse disorder comes to the official attention of the railroad, with the exception discussed below. Paragraph (c) would also provide a mechanism for an employee to voluntarily self-refer for substance abuse counseling or treatment.

Paragraph (d) would address conduct constituting a violation of § 219.101 or § 219.102 of FRA's alcohol/drug regulations. Section 219.101(a)(1) prohibits regulated employees from using or possessing alcohol or any controlled substance when the employee is on duty and subject to performing regulated service for a railroad. Section 219.101(a)(2) prohibits regulated employees from reporting for regulated service, or going on or remaining on duty in regulated service, while under the influence of (or impaired by) alcohol or while having a breath or blood alcohol concentration of 0.04 or more. A regulated employee is also prohibited from using alcohol either within four hours of reporting for regulated service or after receiving notice to report for regulated service, whichever is less. This is conduct that specifically and directly threatens safety in a way that is wholly unacceptable, regardless of its genesis and regardless of whether it has occurred previously. In its more extreme forms, such conduct is punishable as a felony under the criminal laws of the United States (18 U.S.C. 341 *et seq.*) and a number of states.

Section 219.102 prohibits use of a controlled substance by a regulated employee at any time, whether on or off duty, except for approved medical use. Abuse of marijuana, cocaine, amphetamines, and other controlled substances poses unacceptable risks to safety.

Under the alcohol/drug regulations, whenever a violation of § 219.101 or § 219.102 is established, based on authorized or mandated chemical testing, the employee must be removed from service and may not return until after an SAP evaluation, any needed treatment and/or education, and a negative return-to-duty test, and follow-up testing (as required by § 219.104). These requirements constitute an absolute minimum standard for action when a dispatcher is determined to have violated one of these prohibitions. Considering the need both for general and specific deterrence with respect to future unsafe conduct, additional action should be premised on the severity of the violation and whether the same individual has had prior violations.

This proposed rule would require railroads to consider conduct that occurred within the period of five consecutive years prior to the review. This is the same period provided in this proposed rule as the maximum period of ineligibility for certification following repeated alcohol/drug violations and is the same period used in parts 240 and 242. Use of a five-year cycle reflects railroad industry experience indicating that conduct committed as much as five years before may tend to predict future alcohol or drug abuse behavior. For example, in analyzing data submitted to FRA between 2017 and 2021, FRA found that railroad employees returning to duty from previous drug or alcohol violations were approximately five times more likely to test positive than other railroad employees. Of course, railroads would retain the flexibility to consider prior conduct (including conduct more than five years prior) in determining whom they will hire as dispatchers.

Conduct violative of the FRA proscriptions against alcohol and drugs need not occur while the person is serving in the capacity of a dispatcher in order to be considered. For instance, a person who violated § 219.101 while working as a locomotive engineer and then sought dispatcher certification six months later (under the provision described below) would not be eligible for certification. The same is true under Part 240—an employee who violates § 219.101 while working as a brakeman and then seeks locomotive engineer certification six months later would not be eligible for certification at that time. The responsibility of the railroad would therefore not be limited to periodic recertification. This proposed rule would require a review of certification status for any conduct in violation of § 219.101 or § 219.102.

The proposed rule would require a determination of ineligibility for a period of nine months for an initial violation of § 219.101. This would parallel the nine-month disqualification in §§ 240.119(c)(4)(iii) and 242.115(e)(4)(iii).

Specifying a period of ineligibility serves the interest of deterrence while giving further encouragement to deal with the problem before it is detected by management. In order to preserve and encourage referrals, the nine-month period could only be waived in the case of a qualifying referral (*see* § 219.1001). FRA believes that this distinction in treatment, which is also found in part 242, is warranted as a strong inducement to participation because referral programs help identify troubled employees before those employees get into accidents and incidents. Although FRA does not know how many actual referrals may be generated, the intended result would be reached if an atmosphere of intolerance for drug and/or alcohol abusing behavior is reinforced in the workplace and violators know that they may be reported by their colleagues or others if they report for duty while impaired.

In the case of a second violation of § 219.101, the dispatcher would be ineligible for a period of five years. Given railroad employment practices and commitment to alcohol/drug compliance, it is likely that any individual so situated may also be permanently dismissed from employment. However, it would be important that the employing railroad follow through and revoke the certificate under this proposed rule, so the dispatcher could not go to work for another railroad (or railroad contractor) within the five-year period using the unexpired certificate issued by the first railroad as the basis for certification. These proposed sanctions mirror the sanctions in §§ 240.119 and 242.115.

Under this proposed rule, one violation of § 219.102 within the five-year window would require only temporary suspension and the minimum response described in § 245.115(e) (referral for evaluation, treatment as necessary, negative return-to-duty test, and appropriate follow-up). This parallels the approach taken in parts 240 and 242 and reflects FRA's intent to not undercut the therapeutic approach to drug abuse employed by many railroads. This approach permits first-time positive drug tests to be handled in a non-punitive manner that concentrates on remediation of any underlying substance abuse problem and avoids the adversarial process associated with investigations, grievances, and arbitrations under the Railway Labor Act and collective bargaining agreements. A second violation of § 219.102 would subject the

employee to a mandatory two-year period of ineligibility. A third violation within five years would lead to a five-year period of ineligibility.

This proposed rule also addresses violations of §§ 219.101 and 219.102 in combination. A person violating § 219.101 after a prior § 219.102 violation would be ineligible for three years; and the same would be true for the reverse sequence. This mirrors the ineligibility period for locomotive engineers and conductors who have one § 219.101 violation and one § 219.102 violation. *See* 49 CFR 240.119(e)(4)(ii) and 242.115(e)(4)(ii).

Refusals to participate in chemical tests would be treated as if the test were positive. A refusal to provide a breath or body fluid sample for testing under the requirements of 49 CFR part 219 when instructed to do so by a railroad representative would be treated, for purposes of ineligibility under this section, in the same manner as a violation of: (1) § 219.101, in the case of a refusal to provide a breath sample for alcohol testing, or a blood specimen for mandatory post-accident toxicological testing; or (2) § 219.102, in the case of a refusal to provide a body fluid specimen for drug testing. Interested parties should, however, note that 49 CFR part 40, subpart I, discusses medical conditions under which an individual's failure to provide a sufficient sample would not be deemed a refusal. In addition, subpart G of FRA's alcohol and drug regulations excuses employees from compliance with the requirement to participate in random drug and alcohol testing if the employee can substantiate a medical emergency involving the employee or an immediate family member. *See* 49 CFR 219.617.

If an employee covered by 49 CFR part 219 refuses to provide a breath or body fluid specimen or specimens when required to by a railroad pursuant to a mandatory provision of 49 CFR part 219, then the railroad (apart from any action it takes under part 245) would be required to remove that employee from regulated service and disqualify the employee from working in regulated service for nine months. *See* 49 CFR 219.104 and 219.107; *see also,* 49 CFR part 219, subpart H, and 49 CFR 40.191 and 40.261.

Paragraph (e) prescribes the conditions under which employees may be certified or recertified after a determination that the certification should be denied, suspended, or revoked, due to a violation of § 219.101 or § 219.102 of FRA's alcohol/drug regulations. These conditions are derived from the conditions in §§ 240.119(d) and 242.115(f) and closely parallel the return-to-duty provisions of the alcohol/drug rule. The proposed regulation would not require compensation of the employee for the time spent in this testing, which is a condition precedent to retention of the certificate; but the issue of compensation would ultimately be resolved by reference to the collective bargaining agreement or other terms and conditions of employment under the Railway Labor Act. Moreover, the railroad that intends to withdraw its conditional certification would be required to afford the dispatcher the hearing procedures provided by § 245.307 if the dispatcher does not waive their right to the hearing.

Paragraph (f) would ensure that a dispatcher, like any other covered employee, can self-refer for treatment under the alcohol/drug rule (49 CFR 219.1003) before being detected in violation of alcohol/drug prohibitions and would be entitled to confidential handling of that referral and subsequent treatment. This means that a railroad would not normally receive notice from the DAC of any substance abuse disorder identified as a result of a voluntary self-referral under 49 CFR 219.1003. However, paragraph (f) would also require that the railroad policy provide that confidentiality is waived if the dispatcher at any time refuses to cooperate in a recommended course of counseling or treatment, to the extent that the railroad must receive notice that the employee has an active substance abuse disorder so that appropriate certificate action can be taken. The effect of this proposed provision is that the certification status of a dispatcher who seeks help and cooperates in treatment would not be affected, unless the dispatcher fails to follow through.

Section 245.117 Vision Acuity

This proposed section, derived from 49 CFR 240.121, 240.207, and 242.117, contains the requirements for vision acuity testing that a railroad would have to incorporate in its dispatcher certification program. This section differs from its analogous sections in 49 CFR parts 240 and 242 in that 49 CFR parts 240 and 242 address the requirements for vision and hearing acuity in the same section. However, FRA determined that for this proposed rule, it could more clearly present these requirements if they were in two separate sections: one section for vision acuity (§ 245.117) and one section for hearing acuity (§ 245.118).

Paragraph (c) of this section contains the general vision standards that a person must satisfy in order to be certified as a dispatcher unless they are determined to have sufficient vision acuity under paragraph (d) of this section. The standards in paragraph (c) mirror the vision acuity standards for locomotive engineers and conductors in 49 CFR parts 240 and 242. In drafting this proposed rule, FRA discussed whether vision acuity standards were necessary for dispatchers and if so, whether they needed to be as stringent as the standards for engineers and conductors. Ultimately, FRA concluded that dispatchers should have to satisfy certain vision standards with a dispatcher's ability to distinguish between colors being particularly important. FRA requests comments on whether vision acuity standards for dispatchers are necessary, and if so, whether they should be as strict as the standards for locomotive engineers and conductors.

Although some individuals may not be able to meet the threshold acuity levels in paragraph (c) of this section, they may be able to compensate in other ways that will permit them to function at an appropriately safe level despite their physical limitations. Paragraph (d) of this section permits a railroad to have procedures whereby medical examiners can evaluate such individuals and make discrete determinations about each person's ability to compensate for their physical limitations. If the railroad's medical examiner concludes that an individual has compensated for their limitations and could safely serve as a dispatcher, the railroad could certify that person under this regulation once the railroad possesses the medical examiner's professional medical opinion to that effect. If necessary, medical examiners can condition their opinion on certain circumstances or restrictions, such as the use of corrective lens for example.

Paragraph (e) of this section describes what documents the railroad must keep on file with respect to vision acuity testing. Such records must be retained for both individuals who the railroad certifies as dispatchers and those individuals who the railroad denies certification. Paragraph (g) of this section addresses the issue of vision deterioration. Once certified dispatchers become aware that their vision has deteriorated, they must notify the railroad before performing any subsequent service as a dispatcher. FRA presumes that certified dispatchers would most likely become aware of deterioration in their vision either through their own personal observation or through examination by a medical professional. Should this occur, before a certified dispatcher can return to

service, they must be reexamined. If upon reexamination, the railroad's medical examiner concludes that the certified dispatcher still satisfies the vision acuity standards in this part, the dispatcher can return to service. However, if the medical examiner concludes that the dispatcher no longer satisfies these requirements, the railroad must deny the person's certification in accordance with § 245.301, regardless of how much time remains before the dispatcher's current certificate expires. Certified dispatchers should note that willful noncompliance with the notification requirement in this paragraph could result in enforcement action.

Section 245.118 Hearing Acuity

This proposed section, derived from 49 CFR 240.121, 240.207, and 242.117, contains the requirements for hearing acuity testing that a railroad would have to incorporate in its dispatcher certification program.

Paragraph (c) of this section contains the general hearing standards that a person must satisfy in order to be certified as a dispatcher unless they are determined to have sufficient hearing acuity under paragraph (d) of this section. The standards in paragraph (c) mirror the hearing acuity standards for locomotive engineers and conductors in 49 CFR parts 240 and 242. FRA discussed whether hearing acuity standards were necessary for dispatchers and if so, whether they needed to be as stringent as the standards for engineers and conductors. Ultimately, FRA concluded that dispatchers should have to satisfy certain hearing standards and it was logical for these standards to be consistent with the hearing standards for engineers and conductors. FRA requests comments on whether hearing acuity standards for dispatchers are necessary, and if so, whether they should be as strict as the standards for locomotive engineers and conductors.

Although some individuals may not be able to meet the threshold acuity levels in paragraph (c) of this section, they may be able to compensate in other ways that will permit them to function at an appropriately safe level despite their physical limitations. Paragraph (d) of this section permits a railroad to have procedures whereby doctors can evaluate such individuals and make discrete determinations about each person's ability to compensate for their physical limitations. If the railroad's medical examiner concludes that an individual has compensated for their limitations and could safely serve as a dispatcher, the railroad could certify that person under this regulation once the railroad possesses the medical examiner's professional medical opinion to that effect. If necessary, medical examiners can condition their opinion on certain circumstances or restrictions, such as the use of a hearing aid for example.

Paragraph (e) of this section describes what documents the railroad must keep on file with respect to hearing acuity testing. Such records must be retained for both individuals who the railroad certifies as dispatchers and those individuals who the railroad denies certification. Paragraph (g) of this section addresses the issue of hearing deterioration. Once certified dispatchers become aware that their hearing has deteriorated, they must notify the railroad before performing any subsequent service as a dispatcher. FRA presumes that certified dispatchers would most likely become aware of deterioration in their hearing either through their own personal observation or through examination by a medical professional. Should this occur, they must be reexamined before returning to service. If upon reexamination, the railroad's medical examiner concludes that the certified dispatcher still satisfies the hearing acuity standards in this part, the dispatcher can return to service. However, if the medical examiner concludes that the dispatcher no longer satisfies these requirements, the railroad must deny the person's certification in accordance with § 245.301, regardless of how much time remains before the dispatcher's current certificate expires. Certified dispatchers should note that willful noncompliance with the notification requirement in this paragraph could result in enforcement action.

Section 245.119 Training Requirements

This proposed section, derived from 49 CFR 240.123, 240.213, and 242.119, would require railroads to provide initial and periodic training to dispatchers. Such training is necessary to ensure that dispatchers have the knowledge, skills, and abilities necessary to safely perform all of the safety-related duties mandated by Federal laws, regulations, and orders.

Paragraph (b) of this section requires a railroad's certification program to address whether the railroad will accept responsibility for training dispatchers and thus be able to initially certify dispatchers or whether the railroad will only be recertifying dispatchers who were previously certified by other railroads. If a railroad accepts responsibility for training dispatchers, paragraph (c) of this section notes that the railroad must state in its certification program whether it will conduct the training program for dispatchers or it will have another entity perform the training on its behalf.

Under this section, railroads have latitude to design and develop the training and delivery methods they will employ; but paragraphs (d), (e), and (f) of this section provide requirements for railroads that elect to train a previously untrained person to be a dispatcher. Pursuant to paragraph (d), a railroad that makes this election would be required to determine how training must be structured, developed, and delivered, including an appropriate combination of classroom, simulator, computer-based, correspondence, on-the-job training, or other formal training. Paragraph (d)(3) also requires railroads to review and modify their training programs whenever new safety-related railroad laws, regulations, orders, technologies, procedures, software, or equipment are introduced into the workplace.

Paragraph (f) of this section provides the requirements a previously untrained person must satisfy in order to become certified. Paragraph (f)(2) states the person must demonstrate on-the-job proficiency by successfully completing dispatching tasks and using the necessary dispatching systems and technology. These tasks may be performed under the direct onsite supervision of a person who has the necessary dispatching experience and at least one year of experience as a dispatcher. FRA requests comments, including any supporting data, on whether this ''one year of experience'' requirement for persons supervising a certification candidate is sufficient. The final requirement, found in paragraph (f)(3), is that the previously untrained person shall demonstrate their knowledge of the physical characteristics of any assigned territory by successfully completing a test. FRA understands that a railroad may assign dispatchers additional territories after they become certified and the dispatchers can go through the process for becoming qualified on those territories after they are already certified. However, paragraph (f)(3) establishes the basic requirement that before a previously untrained person can become certified, they must demonstrate that they are qualified on at least one territory. Paragraph (f)(3) also requires railroads to provide the person(s) being tested with an opportunity to consult with a supervisory employee, who possesses territorial qualifications for the territory,

to explain a test question. This requirement is equivalent to 49 CFR 242.119(f) and is included so that certification candidates being tested would be able to obtain clarification of test questions from someone who possesses knowledge of the relevant territory.

Paragraph (g) of this section requires railroads to retain written documentation of the listed determinations. Paragraph (g)(1) only applies to individuals who have not been previously certified as dispatchers whereas paragraphs (g)(2) and (3) apply to all certified dispatchers.

Paragraph (h) of this section requires a railroad's certification program to explain the methods for acquiring familiarity with the physical characteristics of a territory and becoming qualified or requalified on a territory. Paragraph (h)(3) requires railroads to designate in their programs the maximum amount of time that a dispatcher can be absent from a territory before requalification is required. To conform with § 245.120(c), this time period cannot exceed 12 months. However, railroads can choose a shorter time period if they desire. For example, if a railroad wants to require that a dispatcher get requalified on a territory if they have not dispatched over that territory in six months, the railroad is allowed to do so, but it must include this requirement in its certification program.

Section 245.120 Requirements for Territorial Qualification

This proposed section, derived from 49 CFR 240.231 and 242.301, explains the requirements for territorial qualifications. Paragraph (a) of this section prohibits railroads from permitting or requiring a person to serve as a dispatcher on a particular territory, unless the railroad determines that the person is a certified dispatcher who is either qualified on that particular territory or assisted by a Dispatcher Pilot who is qualified on the territory. Paragraph (b) of this section requires a person to immediately notify the railroad if they are called to serve on a territory on which the person is not qualified. In such scenarios, the dispatcher could only dispatch over the territory if they were assisted by a Dispatcher Pilot who is qualified on the territory. Paragraph (c) of this section establishes that the maximum amount of time that a dispatcher can be absent from a territory before requalification on that territory is required is 12 months. However, railroads have the option, under § 245.119(h)(3), to make this time period shorter.

Section 245.121 Knowledge Testing

This proposed section, derived from 49 CFR 240.125, 240.209, and 242.121, would require railroads to provide for the initial and periodic testing of dispatchers. Paragraph (b) of this section outlines the general requirements for such testing. This testing will have to effectively examine and measure a dispatcher's knowledge of five subject areas: safety and operating rules; timetable instructions; compliance with all applicable Federal regulations; physical characteristics of the territory on which a person will be or is currently working as a dispatcher; and dispatching systems and technology.

Under this section, railroads have discretion to design the tests that will be employed; for most railroads that will entail some modification of their existing ''book of rules'' examination to include new subject areas. This section does not specify the number of questions to be asked or the passing score to be obtained. However, it does require that the test be conducted without open reference books unless use of such materials is part of a test objective. A railroad may not give an all-open book exam. Some portion of the test must be closed book. Since the testing procedures and requirements selected by the railroad would be submitted to FRA for approval, FRA would monitor the exercise of discretion being afforded railroads by this section.

Paragraph (c) of this section mirrors 49 CFR 242.121(e) by requiring railroads to provide the person(s) being tested with an opportunity to consult with a supervisory employee, who possesses territorial qualifications for the territory, to explain a test question.

Paragraph (d) of this section states that if a person fails a test, the railroad cannot allow that person to serve as a dispatcher until they achieve a passing score on reexamination. The railroad would decide how much time, if any, must pass after a test failure before a certification candidate can be reexamined. Furthermore, the railroad would decide what additional training, if any, a candidate would receive after a test failure. The railroad would also decide whether there should be a limit on the number of times a candidate could retake a test, and if so, the maximum number of test retakes the railroad will allow.

Section 245.123 Monitoring Operational Performance

This proposed section, derived from 49 CFR 240.129 and 242.123, contains the requirements for conducting unannounced compliance tests.

Paragraph (a) of this section requires each railroad to describe in its certification program how it will monitor the conduct of its certified dispatchers by performing unannounced compliance tests on railroad and Federal rules, as well as territorial and dispatch systems. Paragraph (a)(3) requires railroads to indicate the types of actions they will take in the event they find deficiencies with a dispatcher's performance during an unannounced compliance test. FRA believes it is up to each railroad to decide the appropriate action to take in light of various factors, including collective bargaining agreements. Further, FRA believes that the vast majority of railroads have adequate policies to deal with deficiencies with a dispatcher's performance and have handled them appropriately for many years.

To avoid restricting the options available to the railroads and employee representatives to develop processes for handling test failures, FRA designed this regulation to be as flexible as possible. There are a variety of actions and approaches that a railroad could take such as developing and providing formal remedial training for dispatchers who fail tests or have deficiencies in their performance. Each railroad could also consider implementing a formal procedure whereby a dispatcher is given the opportunity to explain, in writing, the factors that they believe caused their test failure or performance deficiencies. This explanation may allow a railroad to determine what areas of training to focus on or perhaps discover that the reason for the failure/deficiency was due to something other than a lack of skills. FRA believes there are numerous other approaches that could be considered and evaluated by railroads and their dispatchers, and FRA does not want to stifle a railroad's ability to adopt an approach that is best for its organization.

Paragraph (b) of this section provides the requirements for these unannounced compliance tests, including the operational tests that must be performed and who is allowed to conduct the test. Paragraph (b)(3) specifies that each railroad must give each of its certified dispatchers at least one unannounced compliance test each calendar year, except as provided in paragraph (c) of this section. FRA recognizes that before these unannounced compliance tests can be performed in conformance with this section, a railroad's certification program must first be approved by FRA. Thus, at the latest, FRA expects railroads to perform these unannounced compliance tests on all of their certified

dispatchers during the calendar year immediately following the year their certification program is first approved by FRA. For example, if FRA approves one railroad's program in January 2025 and another railroad's program in December 2025, both of these railroads would have to perform unannounced compliance tests on all of their certified dispatchers starting in 2026. While FRA would encourage these railroads to commence the unannounced tests after their programs are approved in 2025, FRA recognizes it may not be practical to perform unannounced tests on all of their certified dispatchers by the end of 2025, especially for the railroad whose program was not approved until December 2025.

Paragraph (c) of this section recognizes that some certified dispatchers may not be performing a service that requires a dispatcher certificate, and thus, a railroad may not be able to provide those dispatchers with the annual, unannounced compliance test. For example, a certified dispatcher may be on furlough, in military service, off with an extended illness, or working in another service. In situations like these where a dispatcher is not performing service that requires certification, the railroad does not have to give an unannounced compliance test. However, when the certified dispatcher returns to dispatcher service, they will have to be given an unannounced compliance test within 30 days of their return. Moreover, the railroad will have to retain a written record that documents the date the dispatcher stopped performing service requiring certification, the date the dispatcher returned to service requiring certification, and the date the dispatcher received their unannounced compliance test following their return to service requiring certification.

Section 245.125 Certification Determinations Made by Other Railroads

This section of the proposed rule, derived from 49 CFR 240.225 and 242.125, contains requirements that would apply when a certified or previously certified dispatcher is about to begin work for a different railroad. This section would permit a railroad to rely on determinations made by another railroad concerning a person's certification. However, this section would require railroads to address in their certification programs how they will administer training for previously uncertified dispatchers with extensive dispatching experience or previously certified dispatchers who have had their certification expire. In both scenarios, FRA would allow the railroad to reduce the on-the-job training that might otherwise be required if the person were treated as having no dispatching experience. However, if a railroad's certification program fails to specify how the railroad will train a dispatcher who was previously certified by another railroad, all dispatchers and dispatcher candidates will be required to take the railroad's entire training program (regardless of the dispatcher's prior certification status).

Subpart C—Administration of the Certification Program

Section 245.201 Time Limitations for Certification

This proposed section, derived from 49 CFR 240.217 and 242.201, contains various time constraints to preclude railroads from relying on stale information when evaluating candidates for certification or recertification. For example, when making a determination of eligibility based on prior safety conduct as an employee of a different railroad pursuant to § 245.113, paragraph (a) would prohibit a railroad from relying on data provided more than one year before the date of the railroad's certification decision. However, paragraph (b) goes on to explain that the time constraints listed in paragraph (a) would not apply to railroads who are not evaluating candidates for certification or recertification, but simply relying on eligibility determinations that have already been made by another railroad in accordance with § 245.125.

Paragraph (c) prohibits a railroad from certifying a person as a dispatcher for more than three years except for those individuals who are designated as certified dispatchers under § 245.105(c) or (d). When a railroad designates an individual as a certified dispatcher under § 245.105(c) or (d), that certification can last for three years after the date that FRA initially approves the railroad's certification program. This could lead to situations where a certificate could be valid for more than three years. For example, if a railroad designates an individual as a certified dispatcher in January 2025, but FRA does not approve the railroad's certification program until January 2026, the dispatcher's certification could last until January 2029 (four years in total). However, any subsequent recertifications for that dispatcher could only last for three years. In other words, if the dispatcher in the previous example got recertified in January 2029, that certificate would expire no later than January 2032.

Paragraph (d) would require railroads to issue certificates that comply with § 245.207 to their certified dispatchers within 30 days from the date of the railroad's decision to certify or recertify that person.

Section 245.203 Retaining Information Supporting Determinations

This proposed section, derived from 49 CFR 240.215 and 242.203, contains recordkeeping requirements for railroads that certify dispatchers. Paragraph (b) lists the information that railroads would be required to retain for each of their certified dispatchers and certification candidates, while paragraph (e) provides that all records required to be retained must be retained for six years from the date of the railroad's certification, recertification, denial, or revocation decision. Paragraph (e) would also require railroads to make these records available to FRA representatives, upon request, in a timely manner.

Paragraph (f) would prohibit railroads and individuals from falsifying records that railroads are required to retain pursuant to this section. Paragraph (g) contains minimum standards for electronic recordkeeping with which railroads would be required to comply, in order to maintain electronic versions of the required records. These minimum standards for electronic recordkeeping are virtually identical to the electronic recordkeeping standards contained in 49 CFR 242.203.

Section 245.205 List of Certified Dispatchers and Recordkeeping

This proposed section, derived from 49 CFR 240.221 and 242.205, would require a railroad to maintain a list of its certified dispatchers. Paragraph (b) of this section would also require a railroad to update its list of certified dispatchers at least annually and to make its list of certified dispatchers available, upon request, to FRA representatives in a timely manner.

Paragraph (c) contains minimum standards for electronic recordkeeping with which railroads would be required to comply, in order to maintain an electronic version of the list of certified dispatchers required by this section. These minimum standards are similar to the electronic recordkeeping standards contained in 49 CFR 242.205.

Paragraph (d) would prohibit railroads and individuals from falsifying the list of certified dispatchers that railroads are required to maintain pursuant to this section.

Section 245.207 Certificate Requirements

This proposed section contains requirements for the certificate that each certified dispatcher would be required to carry. The requirements in paragraphs (a)–(e) of this section, which pertain to the required minimum content for certificates and authorization of the person designated by the railroad to sign the certificates, are derived from 49 CFR 240.223 and 242.207.

Paragraph (a) of this section specifies that railroads have the option of issuing certificates electronically or in paper form. Paragraph (a)(1) would require that the dispatcher certificate identify the railroad issuing the certificate. Therefore, a certified dispatcher who works for more than one railroad would be required to have a separate certificate for each railroad with which the dispatcher is currently certified. Paragraph (a)(7) would require the certificate to be signed by an individual who has been designated by the railroad as an authorized signatory of dispatcher certificates, as described in paragraph (c) of this section. Electronic signatures are permitted under this proposed rule. In addition, paragraph (e) of this section would prohibit railroads and individuals from falsifying dispatcher certificates.

Paragraphs (f) and (i) are derived from 49 CFR 240.305 and 242.209. These paragraphs would require dispatchers to have their certificates in their possession while on duty as a dispatcher, to display their certificates when requested to do so by FRA representatives, State inspectors [18] authorized under 49 CFR part 212, and certain railroad officers, and to notify a railroad if they are called to serve as a dispatcher in a service that would cause them to exceed their certificate limits.

Paragraph (g), derived from 49 CFR 240.301 and 242.211(a), would require railroads to promptly replace a dispatcher's certificate at no cost to the dispatcher, if the certificate is lost, stolen, or mutilated. However, unlike § 242.211(b), this section does not contain detailed requirements for temporary replacement certificates. Temporary replacement certificates generally contain most of the information provided on official certificates. Therefore, it does not appear to be especially burdensome for railroads to issue temporary certificates to replace certificates that have been lost, stolen, or mutilated. Nonetheless, by refraining from proposing a formal process for the issuance of temporary dispatcher replacement certificates, FRA would allow railroads to decide how and when to issue temporary replacement certificates to dispatchers. FRA is soliciting comment on this proposed approach.

Section 245.213 Multiple Certifications [19]

This proposed section, derived from 49 CFR 240.308 and 242.213, establishes how railroads should handle certified dispatchers who are certified with multiple railroads, attempting to become certified with multiple railroads, or certified in another railroad craft. FRA recognizes that while it is fairly common for an individual to work as both a locomotive engineer and a conductor, it is less common for a dispatcher to also work in another craft that requires certification. However, because situations may arise where a dispatcher is also certified to work in another craft, such as a locomotive engineer or conductor, FRA wanted to address how to handle such situations.

Paragraph (a) of this section would allow a certified dispatcher to become certified in one or more of the other railroad crafts that require certification such as locomotive engineer or conductor. If a person is certified in multiple crafts by the same railroad, paragraph (b) would require the railroad to coordinate the expiration dates of the certificates, to the extent possible. While railroads are not required to have all of a person's certificates expire at the same time, it would be beneficial, from the standpoint of administrating the certification programs, if railroads followed this practice. Thus, FRA encourages railroads to coordinate these expiration dates when possible.

Paragraph (c) of this section would pertain to individuals who are certified dispatchers for multiple railroads or who are seeking to become certified dispatchers for multiple railroads. Paragraph (c)(1) would require a dispatcher to notify all railroads with which the dispatcher holds a current dispatcher certificate, if another railroad denies, suspends, or revokes the dispatcher's certification. Paragraph (c)(2) would prohibit an individual from working as a dispatcher for *any* railroad while their dispatcher certification is suspended or revoked by a railroad. For example, if a person is a certified dispatcher with Railroad ABC and Railroad DEF, and ABC suspends and/or revokes the person's certificate, that person would not be able to work as a dispatcher for DEF, or any other railroad, during the period of suspension and/or revocation. Furthermore, paragraph (c)(3) states that if a person has their dispatcher certification suspended or revoked by one railroad, and they attempt to become a certified dispatcher with another railroad while their certification is suspended or revoked, they must notify the railroad they are seeking certification from of their current suspended or revoked certification status. Therefore, if a person is seeking dispatcher certification with Railroad XYZ while their dispatcher certificate is suspended or revoked by Railroad ABC, they must notify XYZ of their current suspended or revoked certification status.

Paragraphs (d), (e), and (f) of this section address how the revocation of a dispatcher's certification would affect an individual's ability to work in another railroad craft requiring certification, and vice versa. If a person's dispatcher certification was revoked because of a drug or alcohol violation, as described in § 245.303(e)(8), then that person would be ineligible to work in any craft requiring certification, such as a locomotive engineer or conductor, for any railroad during the period of revocation. Such person would also not be able to obtain a certificate in any of those crafts from any railroad while their dispatcher certificate is revoked. Likewise, if a person's non-dispatcher certification(s), such as locomotive engineer or conductor, are revoked because of an alcohol or drug violation, that person will be ineligible to work as a certified dispatcher or obtain a dispatcher certificate from any railroad during the revocation period. In contrast, if a dispatcher's certification is revoked for a violation that does not involve alcohol or drugs, such as § 245.303(e)(1) through (7), that person would still be able to work in any other craft requiring certification, such as a locomotive engineer or conductor, during the period of revocation, as long as the person is certified in that craft. Likewise, a person could still work as a certified dispatcher if their certificate for another craft, such as locomotive engineer or conductor, was revoked due

[18] Although State inspectors authorized under 49 CFR part 212 could be considered ''FRA representatives,'' they are mentioned separately in this section to ensure that there is no dispute regarding their authority.

[19] To the extent possible, FRA has attempted to match the section numbers in this proposed rule to the analogous sections in the conductor certification rule (49 CFR part 242). Since 49 CFR 242.213 addresses multiple certification issues, FRA is proposing section number 245.213 for the multiple certification section in this proposed rule instead of the next sequential section number which would be 245.209.

to a violation that did not involve drugs or alcohol.

FRA's reasoning for this line of delineation between revocable events that involve alcohol and drugs and those that do not is rooted in railroad safety. If someone shows up to work as a dispatcher under the influence of alcohol or drugs, it stands to reason that they could likely show up to work for another certified craft, such as a locomotive engineer or conductor, under the influence as well. Thus, it makes sense for an individual's alcohol or drug violations as a dispatcher to impact their eligibility to work in another craft that requires certification and vice versa. With respect to revocable events that do not involve alcohol or drugs, FRA finds that the tasks performed by a dispatcher are so inherently different from the tasks performed in another certified craft, such as an operating crew member, that it does not automatically follow that a person's revocable event as a dispatcher indicates that they are more likely to also have a revocable event while performing in another certified craft. Thus, FRA is taking the position that a revocation of a dispatcher certificate which does not involve alcohol or drugs should not affect that person's eligibility to work in another railroad craft requiring certification, and vice versa. However, FRA requests comments on this issue.

Paragraphs (g) and (h) of this section would prohibit a railroad from denying or revoking a dispatcher's certification just because their attempt at certification or recertification in another railroad craft, such as locomotive engineer or conductor, was denied, and vice versa. Paragraph (i) of this section would allow a railroad to issue a single certificate to a person who is certified in multiple railroad crafts that require certification. If a railroad exercises this option, it must ensure that the single certificate contains all of the components required for each craft. Alternatively, railroads are also welcome to issue multiple certificates to a person who is certified in multiple crafts (one certificate for each craft). Thus, if a person is certified as both a dispatcher and conductor, the railroad could issue the person a single certificate containing both crafts or it could issue one dispatcher certificate and one conductor certificate.

Finally, paragraph (j) of this section denotes that if a person is certified in multiple crafts and they are involved in a revocable event, that event can only lead to the revocation of a certificate for a single railroad craft. The railroad must determine which certificate should be revoked based on the work the individual was performing at the time of the event. In such instances, while the railroad may only revoke a certificate for a single craft, that revocation could affect a person's eligibility to perform other crafts. For example, if a person who is certified as a dispatcher and a conductor, violates 49 CFR 219.101 while on duty as a dispatcher, the railroad should only revoke the individual's dispatcher certification. The person's conductor certificate cannot be revoked for the incident that occurred while the person was on duty as a dispatcher. However, as discussed in paragraph (d)(1) of this section, this person would not be able to work as a conductor while their dispatcher certificate was revoked for this offense.

Section 245.215 Railroad Oversight Responsibilities

This proposed section, derived from 49 CFR 240.309 and 242.215, would require each Class I railroad (including the National Railroad Passenger Corporation), each railroad providing commuter service, and each Class II railroad to conduct an annual review and analysis of its program for responding to detected instances of poor safety conduct by certified dispatchers. FRA has formulated the information collection requirements of this proposed section to ensure that railroads collect data on dispatcher safety behavior and feed that information into their operational monitoring efforts, thereby enhancing safety.

This section would require each Class I railroad (including the National Railroad Passenger Corporation), railroad providing commuter service, and Class II railroad to have an internal auditing plan to keep track of eight distinct events that involve poor safety conduct by dispatchers. For each event, the railroad would be required to indicate what response it took to that situation. The railroad would then be required to evaluate this information, together with data showing the results of annual operational testing and causation of FRA reportable train accidents, to determine what additional or different efforts, if any, are needed to improve the safety performance of that railroad's certified dispatchers. FRA would not require railroads to furnish this data or their analysis of the data to FRA. Instead, FRA would require that railroads be prepared to submit such information when requested.

As set forth in paragraph (i), an instance of poor safety conduct involving a person who is a certified dispatcher and is certified in another railroad craft (such as a locomotive engineer or conductor) need only be reported once under the appropriate section of this chapter (*e.g.,* under § 240.309, § 242.215, or under this section). The determination as to where to report the instance of poor safety conduct should be based on the work the person was performing at the time the conduct occurred. This determination is similar to the determination made under part 225, in which railroads determine whether an accident was caused by poor performance of what is traditionally considered a conductor's job function (*e.g.,* switch handling, derail handling, etc.) or whether it was caused by poor performance of what is traditionally considered a locomotive engineer's job function (*e.g.,* operation of the locomotive, braking, etc.)

Denial and Revocation of Certification

This subpart parallels part 240 and part 242's approach to adverse decisions concerning certification (*i.e.,* decisions to deny certification or recertification and revoke certification). With respect to denials, the approach of this rule is predicated principally on the theory that decisions to deny certification or recertification will come at the conclusion of a prescribed evaluation process which will be conducted in accordance with the provisions set forth in this subpart. Thus, this proposed rule contains specific procedures designed to ensure that a person in jeopardy of being denied certification or recertification will be given a reasonable opportunity to examine and respond to the negative information that might serve as the basis for being denied certification or recertification.

When considering revocation, this proposed rule contemplates that decisions to revoke certification will only occur for the reasons specified in this subpart. Since revocation decisions by their very nature involve a clear potential for factual disagreement, this subpart is structured to ensure that such decisions will only come after a certified dispatcher has been afforded an opportunity for an investigatory hearing at which the presiding officer will determine whether there is sufficient evidence to establish that the dispatcher's conduct warranted revocation of their certification.

This subpart also provides for certificate suspension in certain circumstances. Certificate suspension would be employed in instances where there is reason to think the certificate should be revoked or made conditional but time is needed to resolve the situation. Certificate suspension is applicable in instances where a person

is awaiting an investigatory hearing to determine whether that person violated certain provisions of FRA's alcohol and drug control rules, or committed a violation of certain operating rules or practices, and situations in which the person is being evaluated or treated for an active substance abuse disorder.

Section 245.301 Process for Denying Certification

This proposed section, derived from 49 CFR 240.219 and 242.401, establishes minimum procedures that must be offered to a certification candidate before a railroad denies the candidate certification or recertification. Paragraph (a) of this section gives a certification candidate a reasonable opportunity to explain or rebut adverse information, including written documents or records, that the railroad intends to use as the basis for its decision to deny certification or recertification.

Paragraph (b) of this section requires that a written explanation of an adverse decision be 'served' on a certification candidate within 10 days of the railroad's decision. Paragraph (b) also requires that the basis for a railroad's denial decision address any explanation or rebuttal information that the dispatcher candidate may have provided pursuant to paragraph (a) of this section.

Paragraph (c) of this section prohibits a railroad from denying certification based on a failure to comply with a railroad operating rule or practice which constitutes a violation under § 245.303(e)(1) through (7) if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the dispatcher's ability to comply with that railroad operating rule or practice. This paragraph is derived from the intervening cause exception for revocation in § 245.307(h).

Section 245.303 Criteria for Revoking Certification

This proposed section, derived from 49 CFR 240.117, 240.305, and 242.403, provides the circumstances under which a dispatcher may have their certification revoked. In addition, paragraph (a) of this section makes it unlawful to fail to comply with any of the railroad rules or practices described in paragraph (e) of this section. Paragraph (a) is needed so that FRA can initiate enforcement action. For example, FRA might want to initiate enforcement action in the event that a railroad fails to initiate revocation action or a person who is not a certified dispatcher violates a railroad rule or practice described in paragraph (e) of this section. (Railroads should, however, note that they may not revoke a dispatcher's certificate, including a designated dispatcher's certificate, until they have obtained FRA approval of their certification programs pursuant to § 245.103.)

Paragraph (b) of this section provides that a certified dispatcher who fails to comply with a railroad rule or practice described in paragraph (e) would have their dispatcher certification revoked. Paragraph (c) provides that a certified dispatcher who is monitoring, piloting, or instructing another dispatcher could have their certification revoked if the certified dispatcher fails to take appropriate action to prevent a violation of a railroad rule or practice described in paragraph (e) of this section. As explained in paragraph (c), ''appropriate action'' does not mean that a supervisor, pilot, or instructor must prevent a violation from occurring at all costs, but rather the duty may be met by warning the dispatcher, as appropriate, of a potential or foreseeable violation.

Paragraph (d) provides that a certified dispatcher who is called by a railroad to perform a duty other than that of a dispatcher would not have their dispatcher certification revoked based on actions taken or not taken while performing that duty. In general, this paragraph would apply regardless of whether the individual was called to perform a certified craft, such as locomotive engineer or conductor, or a non-certified craft. However, this exemption would not apply to violations described in paragraph (e)(8) of this section. Therefore, certified dispatchers working in other capacities, that do not require certification, who violate certain alcohol and drug rules would have their certification revoked for the appropriate period pursuant to § 245.115. However, if the certified dispatcher was working in another certified craft, such as a locomotive engineer or conductor, at the time of the alcohol or drug violation, their certificate for the craft that they were performing at the time of the violation would be revoked as opposed to their dispatcher certificate. If a certified dispatcher who is also certified in another craft, such as locomotive engineer or conductor, violates § 219.101 while performing a craft that does not require certification, the railroad shall pick one, and only one, certificate to revoke. For example, if a person, who is a certified dispatcher and conductor, violates § 219.101 while working as a brakeman, the railroad must decide to revoke either their dispatcher certificate or their conductor certificate, but it cannot revoke both certificates. Regardless of which certificate the railroad chooses to revoke, the person will be unable to work as a dispatcher or conductor during the period of revocation. *See* § 245.213(d)(1) and (3).

Paragraph (e) provides the eight types of rule infractions that could result in certification revocation. The infractions listed in paragraphs (e)(1) through (8) are derived in part from the revocable events provided in 49 CFR 242.117(e) but have been modified to account for the duties and responsibilities of a dispatcher.

Paragraph (e)(1) refers to a dispatcher's failure to properly protect the public and railroad personnel after receiving a report of highway-rail grade crossing warning system malfunction. Depending on the type of warning system malfunction at issue, this violation could involve the dispatcher's failure to issue a mandatory directive that restricts speed or imposes a stop and flag order for train crews approaching the highway-rail grade crossing.

Paragraph (e)(2) refers to violations that could include a dispatcher granting authority or permission for a train or on-track equipment to enter an out of service or blue flag protected track.

Paragraph (e)(3) refers to violations that could include a dispatcher granting authority or permission for a train or on-track equipment to enter established Roadway Worker In Charge (RWIC) limits without authorization from the RWIC who owns the limits.

Paragraph (e)(4) refers to the removal of blocking devices or established protection of RWIC working limits, prior to the RWIC releasing the limits. Similar to the previous paragraph, this entry is directly correlated to the protection of personnel and equipment on controlled track. In setting up protected limits for an RWIC, dispatchers apply blocking devices which are used to isolate the limits owned by the RWIC. Removing these devices and established protection exposes the RWIC to movements of trains, engines, and on-track equipment.

Paragraph (e)(5) refers to violations that could include the failure of a dispatcher to properly apply blocking devices or establish appropriate protection necessary to protect working limits or the movement of trains or on-track equipment.

Paragraph (e)(6) references a dispatcher's failure to properly issue or apply mandatory directives when warranted. Mandatory directives are defined in § 245.7 as any movement authority or speed restriction that affects a railroad operation. Therefore, any form used to authorize the use of, or

provide protection for, controlled track is a mandatory directive. Mandatory directives can be in the form of speed restrictions/slow orders, track authorities, track warrants, and various other movement orders.

Paragraph (e)(7) refers to violations that could include a dispatcher circumventing train control systems by granting permission or authorizing a train or engine with inoperative or malfunctioning PTC or cab signal equipment onto territory requiring the use of these systems.

Paragraph (f) proposes a three-year period for considering certified dispatcher conduct that failed to comply with a railroad operating rule or practice described in paragraphs (e)(1) through (7) of this section. However, when alcohol and drug violations are at issue, the time period for evaluating prior operating rule misconduct would be dictated by § 245.115, which would establish a period of 60 consecutive months prior to the date of review for such evaluations.

Paragraph (g) provides that if a single incident contravenes more than one railroad operating rule or practice listed in paragraph (e) of this section, the incident would be treated as a single violation. FRA considers a single incident to be a unique identifiable occurrence caused by a certified dispatcher's violation of one or more railroad operating rules or practices listed in paragraph (e). However, a certified dispatcher could be involved in more than one incident during a single tour of duty, if the incidents are separated by time, distance, or circumstance.

Paragraph (h) provides that a certified dispatcher may have their certification revoked for violation of a railroad operating rule or practice listed in paragraph (e) that occurs during a properly conducted operational compliance test. However, as reflected in paragraph (i), violations of railroad operating rules or practices that occur during operational tests that are not conducted in compliance with this part, the railroad's operating rules, or the railroad's program under § 217.9 will not be considered for revocation purposes.

Section 245.305 Periods of Ineligibility

This section of the proposed rule, derived from 49 CFR 240.117 and 242.405, describes how a railroad would determine the period of ineligibility (*e.g.,* for revocation or denial of certification) for a dispatcher or dispatcher candidate. Paragraph (a) of this section provides the starting date for a period of ineligibility. For persons who are not currently certified as dispatchers, a period of ineligibility would begin on the date of the railroad's written determination that the most recent incident has occurred. For example, if the railroad made a written determination on March 10th that the most recent incident occurred on March 1st, the period of ineligibility would begin on March 10th. For persons who are currently certified dispatchers, a period of ineligibility would begin on the date the railroad notifies the person that their recertification has been denied or their certification has been suspended. For dispatchers who have their certification revoked, the period of ineligibility would begin on the date the railroad notifies the dispatcher of the certificate suspension as opposed to the notification date of certificate revocation because once a person's certificate is suspended, they are ineligible to work as a dispatcher pending a determination as to whether the certificate should be revoked.

With respect to revocation, paragraph (b) of this section provides that once a railroad determines that a dispatcher has failed to comply with its safety rule concerning one or more events listed in § 245.303(e), two consequences will occur. First, the railroad will be required to revoke the dispatcher's certification for a period of time provided in this section. Second, that revocation will initiate a period during which the dispatcher will be subject to an increasingly more severe period of revocation if additional revocable events occur in the next 24 to 36 months. The standard periods of revocation proposed in this section track the revocation periods provided in parts 240 and 242. One revocable event would result in revocation for 30 days. Two revocable events within 24 months of each other would result in revocation for six (6) months. Three revocable events within 36 months of each other would result in revocation of one (1) year. Four revocable events within 36 months of each other would result in revocation for three (3) years.

While paragraph (c) of this section contains a provision that parallels § 242.405(b) and provides that all periods of revocation may consist of training, paragraph (d) contains a provision that parallels §§ 240.117(h) and 242.405(c). Paragraph (d) provides that a person whose dispatcher certification is denied or revoked will be eligible for grant or reinstatement of the certificate prior to the expiration of the initial period of revocation if they satisfy all of the criteria listed in the paragraph.

Section 245.307 Process for Revoking Certification

This proposed section, derived from 49 CFR 240.307 and 242.407, provides the procedures a railroad must follow if it acquires reliable information regarding a dispatcher's violation of an operating rule or practice listed in §§ 245.303(e) or 245.115(d). Paragraph (b)(1) of this section provides that, upon receipt of reliable information regarding a violation of a railroad operating rule or practice described in §§ 245.303(e) or 245.115(d), a railroad must suspend the person's certificate immediately. Paragraph (b)(2) provides that, prior to or upon suspending the person's certificate, the railroad would have to provide either oral or written notice of the reason for the suspension, the pending revocation, and an opportunity for a hearing. If the initial notice was verbal, then the notice would have to be promptly confirmed in writing. The amount of time the railroad has to confirm the notice in writing would depend on whether or not a collective bargaining agreement is in effect and applicable. In the absence of such an agreement, a railroad would have four days to provide written notice. If a notice of suspension is amended after a hearing is convened and/or does not contain citations to all railroad rules and practices that may apply to a potentially revocable event, the Certification Review Board (CRB or Board), if asked to review the revocation decision, might subsequently find that this constitutes procedural error pursuant to § 245.405.

Pursuant to paragraph (b)(4) of this section, no later than the convening of a hearing, the railroad must provide the dispatcher with a copy of the written information and a list of witnesses the railroad will present at the hearing. If requested, a recess to the start of the hearing shall be granted if the copy of the written information and list of witnesses is not provided until just prior to the convening of the hearing. If the information that led to the suspension of a dispatcher's certificate pursuant to paragraph (b)(1) of this section is provided through statements of an employee of the convening railroad, the railroad must make that employee available for examination during the hearing. Examination may be telephonic or virtual when it is impractical to provide the witness at the hearing. These provisions in paragraph (b)(4) of this section were added to ensure that dispatchers are provided with information and/or witnesses necessary to defend themselves at their hearing. Even if a railroad conducts a

hearing pursuant to the procedures in an applicable collective bargaining agreement, the railroad will still have to comply with the provisions of paragraph (b)(4). It is not, however, FRA's intent to require railroads to call every witness included on the railroad's list of witnesses to testify at the hearing. If, for example, a railroad believes that it has provided sufficient evidence during a hearing to prove its case, and that calling a witness on its list to testify would be unduly repetitive, the railroad would not be obligated to call that witness to testify. Of course, the opposing party could request that the witness be produced to testify, but the hearing officer would have the authority pursuant to paragraph (d)(4) of this section to determine whether the witness's testimony would be unduly repetitive or so extensive and lacking in relevancy that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

Paragraph (d)(2) of this section provides the presiding officer with the powers necessary to regulate the conduct of the hearing. Thus, a presiding officer would be permitted to deny excessive hearing request delays by the dispatcher. Moreover, a presiding officer could find implied consent to postpone a hearing when a dispatcher's witnesses are not available within 10 days of the date the certificate is suspended. However, the CRB may grant a petition on review if the CRB finds that the hearing schedule caused the petitioner substantial harm.

Paragraph (e) of this section contains requirements regarding the written decision in a railroad hearing. FRA believes these requirements will ensure that railroads issue clear and detailed decisions. In turn, clear and detailed decisions will allow a dispatcher to understand exactly why their certification was revoked and will allow the CRB to have a more detailed understanding of the case if it is asked to review the revocation decision pursuant to subpart E of this proposed rule.

Paragraph (f) credits the period of certificate suspension prior to the commencement of a hearing required under this section towards satisfying any applicable revocation period imposed in accordance with the provisions of § 245.305. For example, if a dispatcher's certificate is suspended on July 1st and on July 11th, the railroad issues a decision to revoke the dispatcher's certificate for 30 days, the time between July 1st and July 11th would count towards the 30-day revocation period. Thus, the dispatcher's certificate would only be revoked for an additional 20 days after the railroad issued its revocation decision.

Paragraph (g) requires a railroad to revoke a dispatcher's certification if it discovers that another railroad has revoked that person's dispatcher certification. The revocation period shall coincide with the revocation period of the railroad that initially revoked the dispatcher's certification. For example, if a dispatcher is certified by Railroad ABC and Railroad XYZ, and ABC revokes the dispatcher's certification from November 1st through November 30th, XYZ must revoke the dispatcher's certification through November 30th once it learns of ABC's revocation. The revocation hearing requirement in this rule is satisfied when any single railroad holds a revocation hearing for a dispatcher that arises from the same set of facts.

Paragraphs (h) and (i) provide two specific defenses for railroad supervisors and hearing officers to consider when deciding whether to suspend or revoke a person's certificate due to an alleged revocable event. Pursuant to these provisions, either defense would have to be proven by sufficient evidence. Paragraph (h) prohibits railroads from revoking a dispatcher's certificate when there is sufficient evidence of an intervening cause that prevented or materially impaired the dispatcher's ability to comply. For example, a railroad should consider assertions that a Dispatcher Pilot or Dispatcher Trainer failed to take appropriate action to prevent an uncertified dispatcher or dispatcher trainee from using defective equipment. Similarly, a railroad should consider assertions that a train crew member relayed incorrect information to the dispatcher who reasonably relied on it, thus causing a revocable event. However, FRA does not intend to imply that all equipment failures and errors caused by others will serve to absolve dispatchers from certification revocation under this proposed rule. The factual issues presented by each incident would need to be analyzed on a case-by-case basis.

Paragraph (i) would allow railroads to exercise discretion when determining whether to revoke a dispatcher's certification ''if sufficient evidence exists to establish that the violation of the railroad operating rule or practice described in § 245.303(e) was of a minimal nature and had no direct or potential effect on rail safety.'' However, FRA acknowledges that the determination as to whether an incident meets this criterion could be subject to different interpretations. For this reason, paragraph (j) would require railroads to retain information about the evidence relied upon when exercising this discretion. Unless a railroad fails to retain information as required in paragraph (j) or acts in bad faith, FRA does not anticipate taking enforcement action against the railroad even if FRA believes the railroad could have revoked the dispatcher's certification.

Paragraph (j) of this section requires railroads to keep records of those violations in which they must not or elect not to revoke a dispatcher's certificate pursuant to paragraph (h) or (i) of this section. Paragraph (k) addresses concerns that problems could arise if FRA disagrees with a railroad's decision not to suspend a dispatcher's certificate for an alleged violation of an operating rule or practice pursuant to § 245.303(e). As long as a railroad makes a good faith determination after a reasonable inquiry, the railroad will have immunity from civil enforcement for making what the agency believes to be an incorrect determination. However, if railroads do not conduct a reasonable inquiry or act in good faith, they could be subject to civil penalty assessment under this rule. In addition, even if a railroad does not take what FRA considers appropriate revocation action, FRA could still take enforcement action against an individual responsible for the noncompliance by assessing a civil penalty against the individual or issuing an order prohibiting the individual from performing safety-sensitive functions in the rail industry for a specified period pursuant to part 209, subpart D.

Subpart E—Dispute Resolution Procedures

This subpart details the opportunities and procedures for a person to challenge a railroad's decision to deny certification or recertification or to revoke a dispatcher's certification. While the proposed dispute resolution process for dispatchers largely mirrors the processes for engineers under part 240 and conductors under part 242, FRA has made some modifications that will be discussed below. In addition, FRA has undertaken efforts to simplify these regulations so that they are clear and comprehensible to all interested parties.

Section 245.401 Review Board Established

This proposed section, derived from 49 CFR 240.401 and 242.501, provides that a person who is denied certification or recertification or has had their dispatcher certification revoked may petition FRA to review the railroad's decision. Pursuant to this section, FRA

delegates initial responsibility for adjudicating such disputes to the CRB. Although creation of the CRB will require issuance of an internal FRA order, FRA anticipates that the CRB will mirror the Operating Crew Review Board (OCRB) which currently adjudicates disputes under parts 240 and 242.[20] Under this proposed rule, this newly created Board would adjudicate certification disputes for all certified crafts, including locomotive engineers, conductors, and dispatchers. FRA is fully aware that these different job disciplines require different knowledge bases and skill sets. While the specific process for selecting CRB members would be delineated in an FRA order or other internal document, FRA would ensure that the CRB is composed of employees with sufficient backgrounds in these various disciplines. Only those CRB members with sufficient knowledge of dispatching would be able to participate as a voting member on a petition filed under this part.

Section 245.403 Petition Requirements

This proposed section, derived from 49 CFR 240.403 and 242.503, provides the requirements for obtaining FRA review of a railroad's decision to deny certification, deny recertification, or revoke certification. The requirements contained in paragraph (b) of this section include the need to seek review in a timely fashion once the adverse decision is served on the petitioner. In the interest of consistency and uniformity with parts 240 and 242, petitioners under this part would have 120 days, from the date the adverse decision was served upon them, to file a petition for review by the CRB.

Paragraph (b)(3) provides that a petitioner must file their petition through *https://www.regulations.gov.* Petitioners and their representatives should save some form of proof of their filing in case an error occurs in the *Regulations.gov* system and they have to submit proof that their petition was timely filed. All documents associated with a CRB petition will be posted to the docket for that case on *Regulations.gov* and all DOT dockets on *Regulations.gov* are available to the public. You may review DOT's complete Privacy Act Statement published in the **Federal Register** on April 11, 2000 (Volume 65, Number 70, Pages 19477–78).

Paragraph (b)(4) requires that a petition contain certain contact information, including an email address, for the petitioner and their representative, if any. The OCRB solely communicates with parties via email. FRA anticipates that the CRB will operate in a similar manner, and will only send communications to the parties via email. If a petition only contains an email address for the petitioner's representative, but not the petitioner, the CRB will only send any necessary communications to the representative. Because all communications will be performed via email, FRA has determined that it is unnecessary for a petition to include a mailing address for petitioner or their representative. Thus, unlike in parts 240 and 242, this information will not be required.[21] Lastly, if any required contact information for petitioner or their representative, such as a phone number or email address, changes during the pendency of a petition before the CRB, it is the responsibility of the petitioner or their representative to provide the CRB and the railroad with the new contact information.

Paragraph (b)(6) requires petitioners or their representatives to state the facts and arguments in support of their petition. In other words, they need to explain to the CRB why they think the railroad was incorrect in denying or revoking the petitioner's certification. Paragraph (b)(7) requires petitioners to submit all documents related to the railroad's decision that are in their possession or reasonably available to them. This potentially includes the transcript and exhibits from the petitioner's denial or revocation hearing. In most cases, these documents will be essential to the Board's ability to make an informed decision on the petition. If neither the petitioner nor the railroad provides these documents, the Board may have to specifically request these documents. Such a request is likely to delay the Board's adjudication of the petition. Therefore, it is in the petitioner's interest to provide the Board with these documents as part of their petition.

Paragraph (c) of this section was added to clarify a petitioner's responsibilities, if requested by the CRB, with respect to a petition seeking review of a railroad decision that is based on a failure to comply with any drug or alcohol related rules or a return-to-service agreement. It provides that, if requested by the CRB, a petitioner must supplement the petition with ''a copy of the information under 49 CFR 40.329 that laboratories, medical review officers, and other service agents are required to release to employees.'' This paragraph also provides that a petitioner must provide a written explanation in response to a CRB request if they do not supply the Board with the written documents that should be reasonably available under 49 CFR 40.329.

Paragraph (d) of this section gives the CRB discretion to grant a request for additional time to file a petition if certain circumstances are met. As an initial matter, the petitioner must put forth good cause for granting the extension. Thus, a petitioner will have to demonstrate a reasonable justification for granting the extension of time. This justification should be as detailed as possible to assist the Board in its determination. In addition to showing good cause for an extension, a petitioner must either submit their extension request before the deadline for filing their petition or, if the deadline has already passed, they must allege facts constituting ''excusable neglect'' for failing to meet the deadline. The mere assertion of excusable neglect, unsupported by facts, will be insufficient. Excusable neglect requires a demonstration of good faith on the part of the party seeking an extension of time, and some reasonable basis for noncompliance within the time frame specified in the rules. Absent a showing along these lines, relief will be denied. The Board will make determinations on whether ''good cause'' and/or ''excusable neglect'' has been shown on a case-by-case basis.

Paragraph (e) of this section explains that a decision by the CRB to deny a petition for untimeliness or lack of compliance with the requirements of § 245.403 may be appealed directly to the FRA Administrator. Normally an appeal to the Administrator can only occur after a case has been heard by FRA's hearing officer. However, petitions that the Board finds to be untimely or incomplete are the two exceptions where a party can skip petitioning the hearing officer and go directly to filing an appeal with the Administrator.

Section 245.405 Processing Certification Review Petitions

This section of the proposed rule, derived from 49 CFR 240.405 and 242.505, details how petitions for review by the CRB will be handled. Paragraph (a) of this section notes that when FRA receives a CRB petition, it will send a written notification to the parties involved in the petition. FRA will send these acknowledgments via email. If a representative files a petition

[20] In a future rulemaking, FRA expects to revise parts 240 and 242 to refer to the CRB instead of the OCRB.

[21] In a future rulemaking, FRA expects to revise Parts 240 and 242 to conform to the electronic communication requirements of this rulemaking.

on behalf of a petitioner, the petition must include the petitioner's email address, if the petitioner also wants to receive the acknowledgment email and any other correspondence (including the Board's decision) from FRA. The acknowledgment email will include the docket number for the petition so that both parties can access the documents in the case on *https://www.regulations.gov.* FRA will not send a copy of the petition to the railroad.

Paragraph (b) of this section provides railroads with the opportunity to respond to a petition. While it is always optional for a railroad to respond to a petitioner's arguments, if the petitioner did not include relevant documents in their petition, such as hearing transcripts or exhibits, the railroad is required to provide FRA with those documents, even if it does not otherwise respond to the arguments in the petition. Railroads would have 60 days, from the date FRA sends the acknowledgment email, to file a response in the docket on *https://www.regulations.gov.* Railroads may submit responses after the 60-day deadline, but the Board will only review such late filings if it is practicable. In other words, there is no guarantee that the Board will review a late response prior to issuing a decision; thus, if a railroad wishes to respond to a petition, it should meet the 60-day deadline. The railroad can fulfill its requirement to serve a copy of its response on the other party by sending its response to petitioner and/or petitioner's representative via email.

Paragraph (c) of this section specifies when a case will be referred to the Board, and what authority the Board has to decide on a petition. If a railroad files a response before the 60-day deadline in paragraph (b) of this section, the petition will be referred to the Board upon receipt of the response. Otherwise, the petition will be referred to the Board 60 days after the date the acknowledgment email was sent. The Board has the authority to grant a petition (rule in favor of the petitioner), deny a petition (rule in favor of the railroad), or dismiss a petition. An example of when the Board would dismiss a petition would be if the railroad did not deny or revoke the petitioner's certification, and thus, there was no case or controversy before the Board. If there is insufficient evidence of record for the Board to make a decision on the merits of a petition, the Board may choose to remand a petition or issue an interim order, so that additional fact-finding can occur.

Paragraphs (d), (e), and (f) of this section provide the standards of review that the Board will employ for procedural issues, factual issues, and legal issues, respectively. These standards mirror the standards of review used by the OCRB to review locomotive engineer and conductor petitions. It is not the Board's intention to correct all procedural errors committed by a railroad. Instead, the Board will only grant a petition if the railroad's procedural error caused substantial harm to the petitioner. For factual issues, the petitioner must show that the railroad did not have substantial evidence to support its decision to deny or revoke the petitioner's certification. If the Board must decide a legal issue, it will perform *de novo* review, meaning that it will not give deference to any decision or interpretation made by the railroad.

Paragraph (g) of this section acknowledges that the Board's decision-making power is limited to granting or denying a petition. In other words, the Board is only empowered to make determinations concerning qualifications under this regulation. The Board is not empowered to mitigate the consequences of a railroad decision if the decision was valid under this regulation. The contractual consequences, if any, of these determinations would have to be resolved under dispute resolution mechanisms that do not directly involve FRA. For example, FRA cannot order a railroad to alter its seniority rosters or make an award of back pay, in the event of a finding that a railroad wrongfully denied certification.

Paragraph (h) of this section notes that the Board will issue a written decision that will be served on both parties. FRA will send the decision to the parties by email and it will also be posted in the case's docket on *https://www.regulations.gov.*

Section 245.407 Request for a Hearing

This proposed section, derived from 49 CFR 240.407 and 49 CFR 242.507, provides that a party who has been adversely affected by a CRB decision will have the opportunity to request an administrative proceeding as prescribed in § 245.509. Paragraph (b) of this section gives the instructions and the deadline for submitting a hearing request. Just like with CRB petitions, parties must file hearing requests electronically. To file a hearing request, the adversely affected party should upload the request to the docket on *https://www.regulations.gov* that was used while the case was before the Board. This docket will also be used to file documents while the case is before the hearing officer. After the 20-day deadline to file a hearing request has passed, FRA will check the docket on *https://www.regulations.gov* to see if a hearing request was filed. Paragraph (c) of this section contains the requirements for a hearing request, which includes the docket number for the case while it was before the Board. Paragraph (c) also requires the signature of the requesting party or their representative. FRA will accept electronic signatures for purposes of satisfying this requirement.

Paragraph (d) of this section notes that FRA will arrange for the appointment of a presiding officer, and it will be the presiding officer's duty to schedule a hearing for the earliest practicable date. Paragraph (e) of this section provides that a party who fails to request an administrative hearing in a timely fashion will lose the right to further administrative review and the CRB's decision will constitute final agency action.

Section 245.409 Hearings

This section of the proposed rule, derived from 49 CFR 240.409 and 49 CFR 242.509, describes the authority of the presiding officer to conduct an administrative hearing and the procedures by which the administrative hearing will be governed. Paragraph (b) of this section provides that the proceeding will afford an aggrieved party a *de novo* hearing at which the relevant facts will be adduced, and the correct application of this part will be determined. In instances when the issues are purely legal, or when only limited factual findings are necessary to determine issues, the presiding officer may determine the issues following an evidentiary hearing only on the disputed factual issues, if any. The presiding officer can therefore grant full or partial summary judgment.

Paragraph (d) of this section provides that the presiding officer may authorize discovery. It also authorizes the presiding officer to sanction willful noncompliance with permissible discovery requests. Paragraph (e) of this section requires that documents in the nature of pleadings be signed. This signature can be electronic and will constitute a certification of factual and legal good faith. Paragraph (f) of this section provides the requirement for service and for certificates of service. Paragraph (g) of this section expresses the presiding officer's authority to address noncompliance with a law or directive. This provision is intended to ensure that the presiding officer will have the authority to control the proceeding so that an efficient and fair hearing is conducted.

Paragraph (h) of this section states the right of each party to appear and be represented. Paragraph (i) of this section protects witnesses by ensuring their right of representation and their right to have their representative question them. Paragraph (j) of this section allows any party to request consolidation or separation of hearings of two or more petitions when to do so would be appropriate under established jurisprudential standards. This option is intended to allow more efficient determination of petitions in cases where a joint hearing would be advantageous.

Under paragraph (k) of this section, the presiding officer could, with certain exceptions, extend periods for action required in the proceedings, provided substantial prejudice would not result to a party. The authority to deny an extension request submitted after a deadline has already passed shows the preference for use of this authority to provide extensions of time as a tool to alleviate unforeseen or unnecessary burdens, and not as a remedy for inexcusable neglect.

Paragraph (l) of this section establishes a motion as the appropriate method for requesting action by the presiding officer. This paragraph also provides the form of motions and the response period for written motions. Paragraph (m) of this section provides rules for the mode of hearing and record maintenance, including requirements for sworn testimony, verbatim record (including oral testimony and argument), and inclusion of evidence or substitutes therefor in the record. Paragraph (n) of this section directs the presiding officer to employ specific rules of evidence as guidelines for the introduction of evidence, and permits the presiding officer to determine what evidence may be received. Further, paragraph (o) of this section provides additional powers the presiding officer may exercise during the proceedings.

Paragraph (p) of this section provides that the petitioner before the CRB, the railroad that took the certification action at issue, and FRA are mandatory parties to the administrative proceeding. Paragraph (q) of this section states what party will be the hearing petitioner and what parties will be the respondents. If the Board granted the petition, the railroad will be the hearing petitioner and the dispatcher or dispatcher candidate will be a respondent. If the Board denied the petition, the dispatcher or dispatcher candidate will be the hearing petitioner and the railroad will be a respondent. The actions of the dispatcher and the railroad will be at issue in the hearing—not the actions of the CRB. Thus, it is appropriate that the dispatcher and the railroad fill the roles of petitioner and respondent for the hearing.

Paragraph (q) also provides that FRA will be a mandatory party in the proceeding. In all proceedings, FRA will initially be considered a co-respondent. If, based on evidence acquired after the filing of a hearing petition, FRA concludes that the public interest in safety is more closely aligned with the position of the petitioner than the respondent, FRA can request that the hearing officer exercise their inherent authority to realign parties for good cause shown. However, FRA anticipates that such a situation would rarely occur. FRA represents the interests of the government; hence, parties and their representatives will have to be careful to avoid ethical dilemmas that might arise due to FRA's ability to realign itself. Paragraph (q) also notes that the party requesting the hearing has the burden of proving its case by the preponderance of evidence.

Paragraph (r) of this section gives the presiding officer authority to close the record in a case. Paragraph (s) of this section provides the presiding officer with the authority to issue a decision and includes requirements for that decision.

Section 245.411 Appeals

This proposed section, derived from 49 CFR 240.411 and 49 CFR 242.511, permits any party aggrieved by the presiding officer's decision to file an appeal with the FRA Administrator. Paragraph (a) of this section provides that if no appeal is timely filed, the presiding officer's decision will constitute final agency action. The appeal shall be filed in the same docket on *https://www.regulations.gov* used when the case was before the Board and the presiding officer.

Paragraph (b) of this section allows for a party to reply to the appeal. Paragraphs (c) and (d) of this section describe the Administrator's authority to conduct the proceedings of an appeal. Paragraph (e) of this section addresses the Administrator's different options for ruling on an appeal. The phrase "except where the terms of the Administrator's decision (for example, remanding a case to the presiding officer) show that the parties' administrative remedies have not been exhausted" is included in this rule so that parties understand that a remand, or other intermediate decision, will not constitute final agency action. The inclusion of this phrase clarifies this potential outcome to those parties that are not represented by an attorney or who might otherwise be confused as to whether any action taken by the Administrator should be considered final agency action.

Paragraph (f) of this section provides instructions for how appeals to the Administrator that come directly from the CRB should be handled. The only cases that can go directly from the Board to the Administrator are cases where the Board denied a petition for being untimely or incomplete. If the Administrator vacates and remands the Board's decision, the case will return to the Board. If the Administrator affirms the Board's decision, that will constitute final agency action.

Appendices

FRA has included two appendices with this proposed rule.

Appendix A, derived from appendix C to part 240 and appendix C to part 242, provides a narrative discussion of the procedures that a person seeking certification or recertification should follow to furnish a railroad with information concerning their motor vehicle driving record. Appendix B, derived from appendix D to part 240 and appendix D to part 242, provides a narrative discussion of the procedures that a railroad is required to employ in administering the vision and hearing requirements of § 245.117 and § 245.118. The main issue addressed in this appendix is discussing test methods for determining whether a person has the ability to recognize and distinguish among the colors used as signals in the railroad industry.

V. Regulatory Impact and Notices

A. Executive Order 12866 as Amended by Executive Order 14094

This proposed rule is not a significant regulatory action within the meaning of Executive Order 12866 as amended by Executive Order 14094, Modernizing Regulatory Review. Details on the estimated costs of this NPRM can be found in the Regulatory Impact Analysis (RIA), which FRA has prepared and placed in the docket (FRA–2022–0019).

FRA is proposing regulations establishing a formal certification process for railroad dispatchers. As part of that process, railroads would be required to develop a program for training current and prospective dispatchers, documenting and verifying that the holder of the certificate has achieved certain training and proficiency, and creating a record of safety compliance infractions that other railroads can review when considering individuals for certification. This proposed regulation would ensure that dispatchers are properly trained, are

qualified to perform their duties, and meet Federal safety standards. Additionally, this proposed regulation is expected to improve railroad safety by reducing the rate of accidents/incidents.

The RIA presents estimates of the costs likely to occur over the first 10 years of the proposed rule. The analysis includes estimates of costs associated with development of certification programs, initial and periodic training, knowledge testing, and monitoring of operational performance. Additionally, costs are estimated for vision and hearing tests, review of certification determinations made by other railroads, and Government administrative costs.

FRA estimated 10-year costs of $5.3 million discounted at 7 percent. The annualized cost would be $0.8 million discounted at 7 percent. The following table shows the estimated 10-year costs of the proposed rule.

TOTAL 10-YEAR DISCOUNTED COSTS

[2020 dollars]

Category	10-Year cost ($)	Present value 7% ($)	Present value 3% ($)	Annualized 7% ($)	Annualized 3% ($)
Development of Certification Program	976,996	929,395	953,949	132,325	111,832
Certification Eligibility Requirements	67,860	55,360	61,963	7,882	7,264
Recertification Eligibility Requirements	101,515	65,831	83,877	9,373	9,833
Training	910,415	707,334	812,820	100,708	95,287
Knowledge Testing	327,028	233,988	281,581	33,315	33,010
Vision and Hearing	2,217,910	1,586,913	1,909,692	225,941	223,874
Monitoring Operational Performance	353,656	256,017	305,956	36,451	35,867

The primary benefit of this proposed rule is that it would ensure that railroads properly train and monitor dispatcher performance to reduce the risk of accidents caused by dispatcher error. This rule would allow railroads to revoke certification of dispatchers who make serious safety-related violations. This includes failure to protect a malfunctioning highway-rail grade crossing or incorrectly granting permission to proceed through a protected track segment.

This rule is expected to reduce the likelihood of an accident occurring due to dispatcher error. FRA has analyzed accidents over the past five years to categorize those where dispatcher training and certification would have impacted the accident. FRA estimated that this rule would prevent 30% of accidents that were caused or likely caused by the dispatcher. FRA estimated that this rule would prevent 10% of accidents where a dispatcher may have contributed to the accident.

The following table shows the estimated 10-year benefits of the proposed rule. The total 10-year estimated benefits would be $0.8 million (PV, 7%) and annualized benefits would be $0.1 million (PV, 7%).

TOTAL 10-YEAR DISCOUNTED BENEFITS

[2020 dollars]

Present value 7% ($)	Present value 3% ($)	Annualized 7% ($)	Annualized 3% ($)
785,599	918,450	111,852	107,670

FRA has quantified the monetary impact from accidents reported on FRA accident forms. However, some accident costs are not required to be reported on FRA accident forms (*e.g.,* environmental impact). For example, the cost of property damage represents a portion of the total cost of train accidents, such as, the cost of direct labor and damage to on-track equipment, track, track structures, and roadbed. Other direct accident costs, such as accident clean up, third party property damage, lost lading, environmental damage, loss of economic activity to the community, and train delays are not included in FRA's accident/incident reportable damages from the railroads. That impact may account for additional benefits not quantified in this analysis. If these costs not covered by FRA data were realized, accidents affected by this proposed rulemaking could have much greater economic impact than the quantitative benefit estimates provided here.

B. Regulatory Flexibility Act and Executive Order 13272

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) and E.O. 13272 (67 FR 53461, Aug. 16, 2002) require agency review of proposed and final rules to assess their impacts on small entities. An agency must prepare an Initial Regulatory Flexibility Analysis (IRFA) unless it determines and certifies that a rule, if promulgated, would not have a significant economic impact on a substantial number of small entities. FRA has not determined whether this proposed rule would have a significant economic impact on a substantial number of small entities. Therefore, FRA prepared this IRFA to facilitate public comment on the potential small business impacts of the requirements in this NPRM.

FRA invites all interested parties to submit data and information regarding the potential economic impact on small entities that would result from adoption of the proposals in this NPRM. FRA particularly encourages small entities that could potentially be impacted by the proposed rule to participate in the public comment process. FRA will consider all information and comments received in the public comment process when making a determination of the economic impact on small entities.

1. Reasons for Considering Agency Action

FRA is concerned with the potential for accidents caused by dispatcher error. Railroads' dispatcher training programs may not be covering all aspects of a dispatcher's job responsibility. Additionally, railroads may not be testing dispatchers and ensuring that their knowledge is maintained continuously. The risk from job-hopping of a dispatcher with a substance abuse problem is also addressed by the proposed rule.

This NPRM would require railroads to develop a dispatcher certification program. This proposed rule would ensure that railroads examine railroad safety with respect to dispatchers. If FRA did not issue the rule as proposed, railroads would be free to hire and train dispatchers as they see fit.

2. A Succinct Statement of the Objectives of, and the Legal Basis for, the Proposed Rule

This proposed rule is expected to help reduce the rate of dispatcher-caused accidents. The annual operational performance monitoring would ensure that dispatchers maintain their knowledge after the initial certification process.

FRA is proposing regulations concerning dispatcher certification based on the general statutory authority of the Secretary. The general authority states, in relevant part, that the Secretary ''as necessary, shall prescribe regulations and issue orders for every area of railroad safety supplementing laws and regulations in effect on October 16, 1970.'' [22] The Secretary delegated this authority to the Federal Railroad Administrator.[23] In addition, section 402 of the RSIA grants the Secretary authority to prescribe regulations requiring the certification of certain crafts or classes, including dispatchers, to improve railroad safety.

3. A Description of, and Where Feasible, an Estimate of the Number of Small Entities to Which the Proposed Rule Would Apply

The Regulatory Flexibility Act of 1980 requires a review of proposed and final rules to assess their impact on small entities, unless the Secretary certifies that the rule would not have a significant economic impact on a substantial number of small entities. ''Small entity'' is defined in 5 U.S.C. 601 as a small business concern that is independently owned and operated and is not dominant in its field of operation. The U.S. Small Business Administration (SBA) has authority to regulate issues related to small businesses, and stipulates in its size standards that a ''small entity'' in the railroad industry is a for profit ''line-haul railroad'' that has fewer than 1,500 employees, a ''short line railroad'' with fewer than 1,500 employees, a ''commuter rail system'' with annual receipts of less than $16.5 million dollars, or a contractor that performs support activities for railroads with annual receipts of less than $16.5 million.[24]

Federal agencies may adopt their own size standards for small entities in consultation with SBA and in conjunction with public comment. Under that authority, FRA has published a proposed statement of agency policy that formally establishes ''small entities'' or ''small businesses'' as railroads, contractors, and hazardous materials shippers that meet the revenue requirements of a Class III railroad as set forth in 49 CFR 1201.1–1, which is $20 million or less in inflation-adjusted annual revenues,[25] and commuter railroads or small Governmental jurisdictions that serve populations of 50,000 or less. *See* 68 FR 24891 (May 9, 2003) (codified at appendix C to 49 CFR part 209). FRA is using this definition for the proposed rule.

When developing the proposed rule, FRA considered the impact that the proposed rule would have on small entities.

The proposed rule would be applicable to all railroads who perform dispatching operations. However, the majority of small railroads do not have a dispatching function as part of their operations. The remaining small railroads would only be minimally impacted as most of their dispatch operations are contracted out to third parties. FRA estimates there are 744 Class III railroads, of which 704 operate on the general system. These railroads are of varying size, with some belonging to larger holding companies. Approximately 140 Class III railroads would be impacted by this rulemaking because they have dispatchers on staff or use third parties to dispatch trains for their operation. The remaining Class III railroads operate on track owned by Class I railroads or do not have a dispatching function as part of their operation. For those railroads operating on Class I track, the host railroad would be responsible for the dispatching on those tracks; therefore, the smaller railroad would not require a dispatcher certification program.

4. A Description of the Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Rule, Including an Estimate of the Class of Small Entities That Would Be Subject to the Requirements and the Type of Professional Skill Necessary for Preparation of the Report or Record

Railroads would be required to submit information to FRA for approval of dispatching certification programs. For small railroads that choose to develop their own certification programs, they would likely be less complex than larger railroads' operations. This would ease some of the burden on small railroads.

The training program, and annual railroad responsibilities would be prepared by a professional or administrative employee. The type of professional skills needed by an employee responsible for submitting a special approval request includes the

[22] 49 U.S.C. 20103.

[23] 49 CFR 1.89(a).

[25] The Class III railroad revenue threshold is $40.4 million or less, for 2021. (The Class II railroad threshold is between $40.4 million and $900 million.) Surface Transportation Board (STB), available at *https://www.stb.gov/news-communications/latest-news/pr-21-16/.*

ability to plan and organize work. Such an employee would also need good verbal and written communication skills and attention to detail.

Summary of Class III Railroad Costs

Class III Railroads would have all the same cost components as larger railroads except they would not be required to perform annual railroad oversight responsibilities in accordance with the proposed rule. Therefore, that cost has been excluded for Class III railroads.

The following table shows the annualized cost for Class III railroads over the 10-year analysis period. The total estimated 10-year costs for Class III railroads would be $0.8 million and the annualized cost for all Class III railroads would be $118,984 (PV, 7 percent).

TOTAL 10-YEAR AND ANNUALIZED COSTS, CLASS III RAILROADS

Category	Present value 7% ($)	Annualized 7% ($)
Development of Certification Program	100,579	14,320
Certification Eligibility Requirements	13,840	1,971
Recertification Eligibility Requirements	16,458	2,343
Training	176,834	25,177
Knowledge Testing	58,497	8,329
Vision and Hearing	396,728	56,485
Monitoring Operational Performance	64,004	9,113
Certification Card	6,708	955
Petitions and Hearings	2,050	292
Total	835,697	118,984

The industry trade organization representing small railroads, ASLRRA, reports the average freight revenue per Class III railroad is $4.75 million.[26] The following table summarized the average annual costs and revenue for Class III railroads.

AVERAGE CLASS III RAILROADS' COSTS AND REVENUE

Total cost for class III railroads, annualized 7% ($)	Number of class III railroads with dispatcher plans	Average annual cost per class III railroad ($)	Average class III annual revenue ($)	Average annual cost as a percent of revenue
A	B	c = a ÷ b	d	e = c ÷ d
118,984	140	850	4,750,000	0.02

The average annual cost for a Class III railroad impacted by this rule would be $850. This represents a small percentage (0.02%) of the average annual revenue for a Class III railroad.

The estimates above show that the burden on Class III railroads would not be a significant economic burden. FRA requests comments on this estimate and will consider all comments when making a determination for the final rule.

5. Identification, to the Extent Practicable, of All Relevant Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rule

FRA is not aware of any relevant Federal rule that duplicates, overlaps with, or conflicts with this NPRM. This proposed rule is complementary to, rather than duplicative of, other recent regulatory initiatives FRA has issued or is in the process of developing. These initiatives include: the implementation of positive train control (PTC) systems by required railroads;[27] training, qualification, and oversight;[28] railroad safety risk reduction programs;[29] and the development of fatigue risk management programs.[30]

6. A Description of Significant Alternatives to the Rule

This analysis considered two alternatives to the rule: the baseline approach, and an approach that would certify just the training program. The baseline alternative (no action) would not ensure that dispatchers are being properly trained. Without this rule, railroad operations may be less safe if railroads are not providing adequate training to their dispatchers.

The alternative of certifying only the training program would require a railroad to enhance their training of dispatchers. Training, however, is only a part of the certification process. The additional requirements of this proposed rule would ensure that dispatchers' hearing, vision, prior safety conduct at other railroads, and other aspects have been reviewed and are consistent with railroad safety.

C. Paperwork Reduction Act

FRA is submitting the information collection requirements in this proposed rule to the Office of Management and

Budget (OMB) for approval under the Paperwork Reduction Act of 1995.[31] The entire table contains the new information collection requirements and the estimated time to fulfill each requirement are as follows:

CFR section	Respondent universe	Total annual responses	Average time per response	Total annual burden hours	Wage rate	Total cost equivalent
		(A)	(B)	(C) = A * B	(D) [32]	(E) = C * D
245.9—Waivers—Petitions	203 railroads	.33 petitions	3 hours	1.00	$77.44	$77.44
245.101/.103—Certification program required and FRA review of certification program—Development of certification program in accordance with this Part and procedures contained under § 245.107—Railroads with Current Dispatching Operations and New Dispatching Railroads (Note: Each certification program includes procedure requirements under § 245.111 through § 245.121.).	203 railroads + ASLRRA and holding companies.	71 plans (14.33 Class I and commuter railroads plans + 3.33 generic program developed by ASLRRA and holding companies plans + 53.33 Class II and III railroads plans).	120 hours + 120 hours + 6 hours.	2,439.18	115.24	281,091.10
—(d)(1) Dispatcher certification submission—Copies of the program provided to the president of each rail labor organization (RLO) that represents the railroad's employees that are subject to this part.	203 railroads	3 copies	15 minutes	.75	77.44	58.08
—(d)(2) Affirmative statements that the railroad has provided a copy of the program to RLOs.	203 railroads	3 affirmative statements.	15 minutes	.75	77.44	58.08
—(e) Comment Period—Affirmed comments on a railroad's program by any designated representative of employees subject to this part or any directly affected employee who does not have a designated representative.	203 railroads	12 comments	4 hours	48.00	77.44	3,717.12
—(g) Material Modifications of FRA-approved program—Railroad to submit a description of how it intends to modify the program and a copy of the modified program to FRA.	The paperwork burden for this requirement is outside the scope of the 3-year PRA review period.					
—(h) Resubmission—Railroad can resubmit its program or material modification as described in paragraph (f)(2) of this section after addressing all of the deficiencies noted by FRA and the resubmission must conform with the procedures and requirements contained in § 245.107.	203 railroads + ASLRRA and holding companies.	4.67 revised plans (3.67 revised plans Class I and commuter railroads + 1 revised plan ASLRRA and holding companies).	20 hours	94.00	77.44	7,279.36
—(i) Rescinding Prior Approval of Program—Railroad to resubmit its certification program and the program must conform with the procedures and requirements contained in § 245.107.	The paperwork burden for this requirement is outside the scope of the 3-year PRA review period.					
245.105 (c)(1)–(d)(1)—Implementation schedule for certification programs—Designation of certified dispatcher.	203 railroads	522 designated lists	5 minutes	43.50	77.44	3,368.64
—(c)(2)–(d)(2) Issue a certificate that complies with § 245.207 to each person that it designates.	203 railroads	522 issued certificate cards.	3 minutes	26.10	77.44	2,021.18
—(f) Written requests for delayed certification—Railroad may wait to recertify the person making the request until the end of the three-year period after FRA has approved the railroad's certification program.	FRA anticipates zero submissions.					
—(g) Testing and evaluation—Railroad shall only certify or recertify a person as a dispatcher if that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part.	The paperwork burden for testing and evaluation is included in the economic burden and the burden for certificates is included under § 245.105.					
245.107—Requirements for Certification Programs—Procedures for Obtaining and Evaluating Motor Vehicle Driving Record Data.	The paperwork requirements described in this appendix are accounted for throughout this table.					
245.109(a)—Determinations required for certification and recertification—Eligibility requirements.	The paperwork burden for this requirement is covered under § 245.111 through § 245.121 and § 245.303.					

[31] 44 U.S.C. 3501 *et seq.*

[32] Throughout the tables in this document, the dollar equivalent cost is derived from the 2020 Surface Transportation Board's Full Year Wage A&B data series using the appropriate employee group hourly wage rate that includes 75-percent overhead charges.

CFR section	Respondent universe	Total annual responses	Average time per response	Total annual burden hours	Wage rate	Total cost equivalent
		(A)	(B)	(C) = A * B	(D) [32]	(E) = C * D
—(b) Person entering into an agreement that results in a railroad obtaining the information needed for compliance with this subpart in a different manner than that prescribed in § 245.111 or § 245.113.	As a condition of employment, dispatchers will sign an agreement upon being hired. There is no paperwork burden since this is the usual and customary procedure.					
245.111(a)–(c)—Prior safety conduct as motor vehicle operator—Eligibility requirements of this section involving prior conduct as a motor vehicle operator.	203 railroads	522 motor vehicle records.	5 minutes	43.50	77.44	3,368.64
—(e) If driver information is not obtained as required pursuant to paragraph (g) of this section, that person or the railroad certifying or recertifying that person may petition for a waiver in accordance with the provisions of part 211 of this chapter.	203 railroads	2 waivers	2 hours	4.00	77.44	309.76
—(f) Individual's duty—Consent to make information concerning driving record available to that railroad.	This is usual and customary procedure. The consent form is signed at the time of hiring to make driving information available to the railroad.					
—(g)–(h) Request to obtain driver's license information from licensing agency.	203 railroads	522 written requests	5 minutes	43.50	59.00	2,566.50
—(i) Requests for additional information from licensing agency.	The paperwork burden for this requirement is included under § 242.111(g)–(h).					
—(j) Notification to railroad by persons of never having a license.	203 railroads	2 notices	10 minutes	.33	77.44	25.56
—(k) Report of motor vehicle incidents described in paragraphs (m)(1) and (2) of this section to the employing railroad within 48 hours.	203 railroads	10 self-reports	10 minutes	1.67	77.44	129.32
—(l)–(m) Evaluation of person's driving record by railroad.	203 railroads	522 motor vehicle record evaluations.	5 minutes	43.50	71.89	3,127.22
—(n)(1) DAC referral by railroad after report of driving drug/alcohol incident.	203 railroads	9 DAC referrals	5 minutes	.75	115.24	86.43
—(n)(2) DAC request and supply by persons of prior counseling or treatment.	203 railroads	1 request and supplied record.	30 minutes	.50	115.24	57.62
—(n)(3) Conditional certifications recommended by DAC.	203 railroads	3 conditional certification recommendations.	4 hours	12.00	115.24	1,382.88
245.113(b)—Prior safety conduct as an employee of a different railroad—Certification candidate has not been employed or certified by any other railroad in the previous five years, they do not have to submit a request in accordance with paragraph (c) of this section, but they must notify the railroad of this fact in accordance with procedures established by the railroad in its certification program.	This is usual and customary procedure and, therefore, there is no paperwork burden.					
—(c) Person seeking certification or recertification under this part shall submit a written request to each railroad that employed or certified the person within the previous five years.	203 railroads	3.33 requests	15 minutes	.83	77.44	64.28
—(e) and (g) Railroad shall provide the information requested to the railroad designated in the written request.	203 railroads	3.33 records	15 minutes	.83	77.44	64.28
—(f) An explanation shall state why the railroad cannot provide the information within the requested time frame or cannot provide the requested information.	FRA anticipates zero submissions.					
245.115(a)—Substance abuse disorders and alcohol drug rules compliance—Determination that person meets eligibility requirements.	203 railroads	459 determinations	2 minutes	15.30	77.40	1,184.22
—(b) Written documents from DAC that person is not affected by a disorder.	203 railroads	20 filed documents	30 minutes	10.00	115.24	1,152.40
—(c)(3) Fitness requirement—Voluntarily self-referral by dispatcher for substance abuse counseling or treatment under the policy required by § 219.1003 of this chapter.	203 railroads	1 self-referral	10 minutes	.17	115.24	19.59

245.213(a)–(h)—Multiple Certificates—Notification of denial of certification by individuals holding multiple certifications.	203 railroads	3 notifications	10 minutes	.50 hour	77.44	38.72
—(i) In lieu of issuing multiple certificates, a railroad may issue one certificate to a person who is certified in multiple crafts.	The paperwork requirement for this burden is covered under § 245.105.					
245.215—Railroad oversight responsibility—Review and analysis of administration of certification program.	203 railroads	17.33 annual reviews and analyses.	8 hours	138.64	115.24	15,976.87
—(d) Report of findings and conclusions reached during annual review by railroad to FRA (if requested in writing by FRA) review and analysis effort.	203 railroads	2 reports	4 hours	8.00	115.24	921.92
245.301(a)—Denial of certification—Notification to candidate of information that and candidate response forms basis for denying certification.	203 railroads	2 notices + 1 response.	1 hour	3.00	77.44	232.32
—(b) Denial Decision Requirements—Written notification of denial of certification by railroad to candidate.	203 railroads	2 notifications	1 hour	2.00	77.44	154.88
245.307(b)(1)–(b)(4)—Process for revoking certification—Immediate suspension of dispatcher's certification.	203 railroads	5 suspended certification letters and documentations.	30 minutes	2.50	77.44	193.60
—(b)(5)–(b)(6) Determinations based on the record of the hearing, whether revocation of the certification is warranted.	The paperwork requirement for this burden is covered under § 245.307(e).					
—(b)(7) Retention of record of the hearing for three years after the date the decision is rendered.	203 railroads	5 records	15 minutes	1.25	77.44	96.80
—(d)(9) Hearing Procedures—Written waiver of right to hearing.	203 railroads	1 written waiver	10 minutes	.17	59.00	10.03
—(e) Revocation Decision Requirements—Written decisions by railroad official.	203 railroads	5 written decisions and service of decisions.	2 hours	10.00	115.24	1,152.40
—(g) Revocation of certification based on information that another railroad has done so.	203 railroads	1 revoked certification	10 minutes	.17	115.24	19.59
—(j) Placing relevant information in record if sufficient evidence meeting the criteria in paragraph (h) or (i) of this section becomes available.	The paperwork requirement for this burden is covered under § 245.307(b)(7).					
—(k) Good faith determination	203 railroads	1 good faith determination.	1 hour	1.00 hour	77.44	77.44
Subpart E—Dispute Resolution Procedures—§ 245.401 through § 245.411.	The requirements under these provisions are exempted from the PRA under 5 CFR 1320.4(a)(2). Since these provisions pertain to an administrative action or investigation, there is no PRA burden associated with these requirements.					
Appendix A to Part 245—Procedures for Obtaining and Evaluating Motor Vehicle Driving Record Data.	The paperwork requirements described in this appendix are accounted for throughout this table.					

CFR section	Respondent universe	Total annual responses (A)	Average time per response (B)	Total annual burden hours (C) = A * B	Wage rate (D) [32]	Total cost equivalent (E) = C * D
Appendix B to Part 245—Medical Standards Guidelines.	The paperwork requirements described in this appendix are accounted for throughout this table.					
Totals [33]	203 railroads + ASLRRA and holding companies.	9,493 responses	N/A	3,819	N/A	403,937

All estimates include the time for reviewing instructions; searching existing data sources; gathering or maintaining the needed data; and reviewing the information. Pursuant to 44 U.S.C. 3506(c)(2)(B), FRA solicits comments concerning: Whether these information collection requirements are necessary for the proper performance of the functions of FRA, including whether the information has practical utility; the accuracy of FRA's estimates of the burden of the information collection requirements; the quality, utility, and clarity of the information to be collected; and whether the burden of collection of information on those who are to respond, including through the use of automated collection techniques or other forms of information technology, may be minimized. For information or a copy of the paperwork package submitted to OMB, contact Ms. Arlette Mussington, Information Collection Clearance Officer, at (571) 609–1285, or Ms. Joanne Swafford, Information Collection Clearance Officer, at (757) 897–9908.

Organizations and individuals desiring to submit comments on the collection of information requirements should direct them via email to Ms. Arlette Mussington at *arlette.mussington@dot.gov,* or Ms. Joanne Swafford at *joanne.swafford@dot.gov.*

OMB is required to decide concerning the collection of information requirements contained in this rule between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication. FRA is not authorized to impose a penalty on persons for violating information collection requirements that do not display a current OMB control number, if required. FRA intends to obtain current OMB control numbers for any new information collection requirements resulting from this rulemaking action prior to the effective date of the final rule. The OMB control number, when assigned, will be announced by separate notice in the **Federal Register**.

D. Federalism Implications

Executive Order 13132, Federalism,[34] requires FRA to develop an accountable process to ensure ''meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.'' ''Policies that have federalism implications'' are defined in the Executive Order to include regulations that have ''substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.'' Under Executive Order 13132, the agency may not issue a regulation with federalism implications that imposes substantial direct compliance costs and that is not required by statute, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by State and local governments, the agency consults with State and local governments, or the agency consults with State and local government officials early in the process of developing the regulation. Where a regulation has federalism implications and preempts State law, the agency seeks to consult with State and local officials in the process of developing the regulation.

FRA has analyzed this proposed rule in accordance with the principles and criteria contained in Executive Order 13132. FRA has determined that this proposed rule has no federalism implications, other than the possible preemption of State laws under 49 U.S.C. 20106. Therefore, the consultation and funding requirements of Executive Order 13132 do not apply, and preparation of a federalism summary impact statement for the proposed rule is not required.

E. International Trade Impact Assessment

The Trade Agreements Act of 1979 [35] prohibits Federal agencies from engaging in any standards or related activities that create unnecessary obstacles to the foreign commerce of the United States. Legitimate domestic objectives, such as safety, are not considered unnecessary obstacles. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards. This proposed rule is purely domestic in nature and is not expected to affect trade opportunities for U.S. firms doing business overseas or for foreign firms doing business in the United States.

F. Environmental Impact

FRA has evaluated this proposed rule consistent with the National Environmental Policy Act[36] (NEPA), the Council on Environmental Quality's NEPA implementing regulations,[37] and FRA's NEPA implementing regulations [38] and determined that it is categorically excluded from environmental review and therefore does not require the preparation of an environmental assessment (EA) or environmental impact statement (EIS). Categorical exclusions (CEs) are actions identified in an agency's NEPA implementing regulations that do not normally have a significant impact on the environment and therefore do not require either an EA or EIS.[39] Specifically, FRA has determined that this proposed rule is categorically excluded from detailed environmental review.[40]

The main purpose of this rulemaking is to establish certification requirements

[33] Totals may not add due to rounding.

[34] 64 FR 43255 (Aug. 10, 1999).

[35] 19 U.S.C. Ch. 13.

[36] 42 U.S.C. 4321 *et seq.*

[37] 40 CFR parts 1500–1508.

[38] 23 CFR part 771.

[39] 40 CFR 1508.4.

[40] *See* 23 CFR 771.116(c)(15) (categorically excluding ''[p]romulgation of rules, the issuance of policy statements, the waiver or modification of existing regulatory requirements, or discretionary approvals that do not result in significantly increased emissions of air or water pollutants or noise'').

for train dispatchers. This rule would not directly or indirectly impact any environmental resources and would not result in significantly increased emissions of air or water pollutants or noise. In analyzing the applicability of a CE, FRA must also consider whether unusual circumstances are present that would warrant a more detailed environmental review.[41] FRA has concluded that no such unusual circumstances exist with respect to this proposed rule and it meets the requirements for categorical exclusion.[42]

Pursuant to Section 106 of the National Historic Preservation Act and its implementing regulations, FRA has determined this undertaking has no potential to affect historic properties.[43] FRA has also determined that this rulemaking does not approve a project resulting in a use of a resource protected by Section 4(f).[44] Further, FRA reviewed this proposed rulemaking and found it consistent with Executive Order 14008, ''Tackling the Climate Crisis at Home and Abroad.''

G. Executive Order 12898 (Environmental Justice)

Executive Order 12898, ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations,'' and DOT Order 5610.2C[45] require DOT agencies to achieve environmental justice as part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects, including interrelated social and economic effects, of their programs, policies, and activities on minority populations and low-income populations. The DOT Order instructs DOT agencies to address compliance with Executive Order 12898 and requirements within the DOT Order in rulemaking activities, as appropriate, and also requires consideration of the benefits of transportation programs, policies, and other activities where minority populations and low-income populations benefit, at a minimum, to the same level as the general population as a whole when determining impacts on minority and low-income populations. FRA has evaluated this proposed rule under Executive Order 12898 and the DOT Order and has determined it would not cause disproportionately high and adverse human health and environmental effects on minority populations or low-income populations.

H. Unfunded Mandates Reform Act of 1995

Under section 201 of the Unfunded Mandates Reform Act of 1995,[46] each Federal agency ''shall, unless otherwise prohibited by law, assess the effects of Federal regulatory actions on State, local, and Tribal governments, and the private sector (other than to the extent that such regulations incorporate requirements specifically set forth in law).'' Section 202 of the Act[47] further requires that ''before promulgating any general notice of proposed rulemaking that is likely to result in promulgation of any rule that includes any Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any 1 year, and before promulgating any final rule for which a general notice of proposed rulemaking was published, the agency shall prepare a written statement'' detailing the effect on State, local, and Tribal governments and the private sector. This proposed rule would not result in the expenditure, in the aggregate, of $100,000,000 or more (as adjusted annually for inflation) in any one year, and thus preparation of such a statement is not required.

I. Energy Impact

Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' requires Federal agencies to prepare a Statement of Energy Effects for any ''significant energy action.''[48] FRA evaluated this proposed rule under Executive Order 13211 and determined that this regulatory action is not a ''significant energy action'' within the meaning of Executive Order 13211.

J. Privacy Act Statement

In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, to *http://www.regulations.gov,* as described in the system of records notice, DOT/ALL–14 FDMS, accessible through *www.transportation.gov/privacy.* To facilitate comment tracking and response, we encourage commenters to provide their name, or the name of their organization; however, submission of names is completely optional. Whether or not commenters identify themselves, all timely comments will be fully considered. If you wish to provide comments containing proprietary or confidential information, please contact the agency for alternate submission instructions.

K. Executive Order 13175 (Tribal Consultation)

FRA has evaluated this proposed rule in accordance with the principles and criteria contained in Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, dated November 6, 2000. The proposed rule would not have a substantial direct effect on one or more Indian Tribes, would not impose substantial direct compliance costs on Indian Tribal governments, and would not preempt Tribal laws. Therefore, the funding and consultation requirements of Executive Order 13175 do not apply, and a Tribal summary impact statement is not required.

List of Subjects in 49 CFR Part 245

Administrative practice and procedure, Dispatcher, Penalties, Railroad employees, Railroad operating procedures, Railroad safety, Reporting and recordkeeping requirements.

The Proposed Rule

■ For the reasons discussed in the preamble, FRA proposes to amend chapter II, subtitle B, of title 49 of the Code of Federal Regulations, by adding part 245 to read as follows:

PART 245—QUALIFICATION AND CERTIFICATION OF DISPATCHERS

Sec.

Subpart A—General

245.1 Purpose and scope.
245.3 Application and responsibility for compliance.
245.5 Effect and construction.
245.7 Definitions.
245.9 Waivers.
245.11 Penalties and consequences for noncompliance.

Subpart B—Program and Eligibility Requirements

245.101 Certification program required.
245.103 FRA review of certification programs.
245.105 Implementation schedule for certification programs.
245.107 Requirements for certification programs.
245.109 Determinations required for certification and recertification.

[41] 23 CFR 771.116(b).

[42] 23 CFR 771.116(c)(15).

[43] *See* 16 U.S.C. 470.

[44] *See* Department of Transportation Act of 1966, as amended (Pub. L. 89–670, 80 Stat. 931); 49 U.S.C. 303.

[47] 2 U.S.C. 1532.

[48] 66 FR 28355 (May 22, 2001).

245.111 Prior safety conduct as motor vehicle operator.
245.113 Prior safety conduct with other railroads.
245.115 Substance abuse disorders and alcohol drug rules compliance.
245.117 Vision acuity.
245.118 Hearing acuity.
245.119 Training requirements.
245.120 Requirements for territorial qualification.
245.121 Knowledge testing.
245.123 Monitoring operational performance.
245.125 Certification determinations made by other railroads.

Subpart C—Administration of the Certification Program

245.201 Time limitations for certification.
245.203 Retaining information supporting determinations.
245.205 List of certified dispatchers and recordkeeping.
245.207 Certificate requirements.
245.213 Multiple certifications.
245.215 Railroad oversight responsibilities.

Subpart D—Denial and Revocation of Certification

245.301 Process for denying certification.
245.303 Criteria for revoking certification.
245.305 Periods of ineligibility.
245.307 Process for revoking certification.

Subpart E—Dispute Resolution Procedures

245.401 Review board established.
245.403 Petition requirements.
245.405 Processing certification review petitions.
245.407 Request for a hearing.
245.409 Hearings.
245.411 Appeals.

Appendix A to Part 245—Procedures for Obtaining and Evaluating Motor Vehicle Driving Record Data

Appendix B to Part 245—Medical Standards Guidelines

Authority: 49 U.S.C. 20103, 20107, 20162, 21301, 21304, 21311; 28 U.S.C. 2461 note; 49 CFR 1.89; and Public Law 110–432, sec. 402, 122 Stat. 4884.

Subpart A—General

§ 245.1 Purpose and scope.

(a) The purpose of this part is to ensure that only those persons who meet minimum Federal safety standards serve as dispatchers, to reduce the rate and number of accidents and incidents, and to improve railroad safety.

(b) This part prescribes minimum Federal safety standards for the eligibility, training, testing, certification, and monitoring of all dispatchers to whom it applies. This part does not restrict a railroad from adopting and enforcing additional or more stringent requirements consistent with this part.

(c) The dispatcher certification requirements prescribed in this part apply to any person who meets the definition of dispatcher contained in § 245.7, regardless of the fact that the person may have a job classification title other than that of dispatcher.

§ 245.3 Application and responsibility for compliance.

(a) This part applies to all railroads except:

(1) Railroads that do not have any dispatch tasks, as defined in § 245.7, performed either by dispatchers employed by the railroad or employed by a contractor or subcontractor;

(2) Railroads that operate only on track inside an installation that is not part of the general railroad system of transportation (*i.e.,* plant railroads, as defined in § 245.7);

(3) Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation as defined in § 245.7; or

(4) Rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

(b) Although the duties imposed by this part are generally stated in terms of the duty of a railroad, each person, as defined in § 245.7, who performs any function required by this part must perform that function in accordance with this part.

§ 245.5 Effect and construction.

(a) FRA does not intend, by use of the term dispatcher in this part, to alter the terms, conditions, or interpretation of existing collective bargaining agreements that employ other job classification titles when identifying a person who dispatches train.

(b) FRA does not intend, by issuance of these regulations, to alter the authority of a railroad to initiate disciplinary sanctions against its employees, including managers and supervisors, in the normal and customary manner, including those contained in its collective bargaining agreements.

(c) Except as provided in § 245.213, nothing in this part shall be construed to create or prohibit an eligibility or entitlement to employment in other service for the railroad as a result of denial, suspension, or revocation of certification under this part.

(d) Nothing in this part shall be deemed to abridge any additional procedural rights or remedies not inconsistent with this part that are available to the employee under a collective bargaining agreement, the Railway Labor Act, or (with respect to employment at will) at common law with respect to removal from service or other adverse action taken as a consequence of this part.

§ 245.7 Definitions.

As used in this part:

Administrator means the Administrator of the FRA or the Administrator's delegate.

Alcohol means ethyl alcohol (ethanol) and includes use or possession of any beverage, mixture, or preparation containing ethyl alcohol.

Blocking device means a method of control that either prohibits the operation of a switch or signal or restricts access to a section of track.

Controlled substance has the meaning assigned by 21 U.S.C. 802 and includes all substances listed on Schedules I through V as they may be revised from time to time (21 CFR parts 1301 through 1316).

Controlled track means a track upon which movements of trains, engines, and on-track equipment must be authorized by a control station.

Dispatch means:

(1) To perform a function that would be classified as a duty of a ''dispatching service employee,'' as that term is defined by the hours of service laws at 49 U.S.C. 21101(2), if the function were to be performed in the United States. The term dispatch includes, but is not limited to, by the use of an electrical or mechanical device:

(i) Controlling the movement of a train or other on-track equipment by the issuance of a written or verbal authority or permission affecting a railroad operation, or by establishing a route through the use of a railroad signal or train control system but not merely by aligning or realigning a switch; or

(ii) Controlling the occupancy of a track by a roadway worker or stationary on-track equipment, or both; or

(iii) Issuing an authority for working limits to a roadway worker.

(2) The term *dispatch* does not include the action of personnel in the field:

(i) Effecting implementation of a written or verbal authority or permission affecting a railroad operation or an authority or permission affecting a railroad operation or an authority for working limits to a roadway worker (*e.g.,* initiating an interlocking timing device, authorizing a train to enter working limits); or

(ii) Operating a function of a signal system designed for use by those personnel; or

(iii) Sorting and grouping rail cars inside a railroad yard to assemble or disassemble a train.

Dispatcher means any individual who dispatches.

Dispatcher Pilot means a dispatcher qualified on assigned territory, tasked with overseeing a non-qualified

employee who has not successfully completed all instruction, training and examination programs for the physical characteristics of the territory or position.

Drug means any substance (other than alcohol) that has known mind or function-altering effects on a human subject, specifically including any psychoactive substance and including, but not limited to, controlled substances.

Drug and alcohol counselor (DAC) means a person who meets the credentialing and qualification requirements of a ''Substance Abuse Professional'' (SAP), as provided in 49 CFR part 40.

File, filed, and *filing* mean submission of a document under this part on the date when the Docket Clerk receives it, or if sent by mail, the date mailing was completed.

FRA means the Federal Railroad Administration.

FRA representative means the FRA Associate Administrator for Railroad Safety/Chief Safety Officer and the Associate Administrator's delegate, including any safety inspector employed by the Federal Railroad Administration and any qualified State railroad safety inspector acting under part 212 of this chapter.

Ineligible or *ineligibility* means that a person is legally disqualified from serving as a certified dispatcher. The term covers a number of circumstances in which a person may not serve as a certified dispatcher. Revocation of certification pursuant to § 245.307 and denial of certification pursuant to § 245.301 are two examples in which a person would be ineligible to serve as a dispatcher. A period of ineligibility may end when a condition or conditions are met, such as when a person meets the conditions to serve as a dispatcher following an alcohol or drug violation pursuant to § 245.115.

Knowingly means having actual knowledge of the facts giving rise to the violation or that a reasonable person acting in the circumstances, exercising due care, would have had such knowledge.

Main track means a track upon which the operation of trains is governed by one or more of the following methods of operation: Timetable; mandatory directive; signal indication; or any form of absolute or manual block system.

Mandatory directive means any movement authority or speed restriction that affects a railroad operation.

Medical examiner means a person licensed as a doctor of medicine or doctor of osteopathy. A medical examiner can be a qualified full-time salaried employee of a railroad, a qualified practitioner who contracts with the railroad on a fee-for-service or other basis, or a qualified practitioner designated by the railroad to perform functions in connection with medical evaluations of employees. As used in this rule, the medical examiner owes a duty to make an honest and fully informed evaluation of the condition of an employee.

On-the-job training means job training that occurs in the workplace, *i.e.,* the employee learns the job while doing the job.

Person means an entity of any type covered under 1 U.S.C. 1, including but not limited to the following: a railroad; a manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any independent contractor providing goods or services to a railroad; and any employee of such owner, manufacturer, lessor, lessee, or independent contractor.

Physical characteristics means the actual track profile of and physical location for points within a specific yard or route that affect the movement of a locomotive or train. Physical characteristics includes *main track physical characteristics* (see definition of ''main track'' in this section) and other than main track physical characteristics.

Plant railroad means a plant or installation that owns or leases a locomotive, uses that locomotive to switch cars throughout the plant or installation, and is moving goods solely for use in the facility's own industrial processes. The plant or installation could include track immediately adjacent to the plant or installation if the plant railroad leases the track from the general system railroad and the lease provides for (and actual practice entails) the exclusive use of that trackage by the plant railroad and the general system railroad for purposes of moving only cars shipped to or from the plant. A plant or installation that operates a locomotive to switch or move cars for other entities, even if solely within the confines of the plant or installation, rather than for its own purposes or industrial processes, will not be considered a plant railroad because the performance of such activity makes the operation part of the general railroad system of transportation.

Qualified means a person who has successfully completed all instruction, training and examination programs required by the employer, and the applicable parts of this chapter and that the person therefore may reasonably be expected to be proficient on all safety related tasks the person is assigned to perform.

Qualified instructor means a person who has demonstrated, pursuant to the railroad's written program, an adequate knowledge of the subjects under instruction and, where applicable, has the necessary dispatching experience to effectively instruct in the field, and has the following qualifications:

(1) Has demonstrated, pursuant to the railroad's written program, an adequate knowledge of the subjects under instruction;

(2) Where applicable, has the necessary experience to effectively instruct in the field;

(3) Is a certified dispatcher under this part; and

(4) If the railroad has designated employee representation, has been selected by a designated railroad officer, in concurrence with the designated employee representative, or has a minimum of one year of service working as a certified dispatcher.

Railroad means any form of nonhighway ground transportation that runs on rails or electromagnetic guideways and any entity providing such transportation, including:

(1) Commuter or other short-haul railroad passenger service in a metropolitan or suburban area and commuter railroad service that was operated by the Consolidated Rail Corporation on January 1, 1979; and

(2) High speed ground transportation systems that connect metropolitan areas, without regard to whether those systems use new technologies not associated with traditional railroads; but does not include rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

Railroad officer means any supervisory employee of a railroad.

Roadway worker in charge (RWIC) means a roadway worker who is qualified under § 214.353 of this chapter to establish on-track safety for roadway work groups, and lone workers qualified under § 214.347 of this chapter to establish on-track safety for themselves.

Serve or service, in the context of serving documents, has the meaning given in Rule 5 of the Federal Rules of Civil Procedure as amended. Similarly, the computation of time provisions in Rule 6 of the Federal Rules of Civil Procedure as amended are also applicable in this part. *See also* the definition of ''filing'' in this section.

Substance abuse disorder refers to a psychological or physical dependence on alcohol or a drug, or another identifiable and treatable mental or

physical disorder involving the abuse of alcohol or drugs as a primary manifestation. A substance abuse disorder is ''active'' within the meaning of this part if the person is currently using alcohol or other drugs, except under medical supervision consistent with the restrictions described in § 219.103 of this chapter or has failed to complete primary treatment successfully or participate in aftercare successfully as directed by a DAC or SAP.

Substance Abuse Professional (SAP) means a person who meets the qualifications of a substance abuse professional, as provided in 49 CFR part 40.

Territorial qualifications means possessing the necessary knowledge concerning a railroad's operating rules and timetable special instructions including familiarity with applicable *main track and other than main track physical characteristics* of the territory over which the locomotive or train movement will occur as well as the characteristics of the position to include and not limited to the operation and capabilities of dispatch control systems.

Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation means a tourist, scenic, historic, or excursion operation conducted only on track used exclusively for that purpose (*i.e.,* there is no freight, intercity passenger, or commuter passenger railroad operation on the track).

§ 245.9 Waivers.

(a) A person subject to a requirement of this part may petition FRA for a waiver of compliance with such requirement. The filing of such a petition does not affect that person's responsibility for compliance with that requirement while the petition is being considered.

(b) Each petition for a waiver under this section must be filed in the manner and contain the information required by part 211 of this chapter.

(c) If FRA finds that a waiver of compliance is in the public interest and is consistent with railroad safety, FRA may grant the waiver subject to any conditions FRA deems necessary.

§ 245.11 Penalties and consequences for noncompliance.

(a) Any person (including but not limited to a railroad; any manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, or lessee; or any independent contractor or subcontractor of a railroad) who violates any requirement of this part or causes the violation of any such requirement is subject to a civil penalty of at least the minimum civil monetary penalty and not more than the ordinary maximum civil monetary penalty per violation. However, penalties may be assessed against individuals only for willful violations, and a penalty not to exceed the aggravated maximum civil monetary penalty per violation may be assessed, where:

(1) A grossly negligent violation, or a pattern of repeated violations, has created an imminent hazard of death or injury to persons; or

(2) A death or injury has occurred. See 49 CFR part 209, appendix A.

(b) Each day a violation continues constitutes a separate offense.

(c) A person who violates any requirement of this part or causes the violation of any such requirement may be subject to disqualification from all safety-sensitive service in accordance with part 209 of this chapter.

(d) A person who knowingly and willfully falsifies a record or report required by this part may be subject to criminal penalties under 49 U.S.C. 21311.

(e) In addition to the enforcement methods referred to in paragraphs (a) through (d) of this section, FRA may also address violations of this part by use of the emergency order, compliance order, and/or injunctive provisions of the Federal rail safety laws.

(f) FRA's website at *https://railroads.dot.gov/* contains a schedule of civil penalty amounts used in connection with this part.

Subpart B—Program and Eligibility Requirements

§ 245.101 Certification program required.

(a) Each railroad that this part applies to shall have a written dispatcher certification program.

(b) Each certification program shall include all of the following:

(1) A procedure for evaluating prior safety conduct as a motor vehicle operator that complies with the criteria established in § 245.111.

(2) A procedure for evaluating prior safety conduct as an employee or certified dispatcher of a different railroad that complies with the criteria established in § 245.113.

(3) A procedure for evaluating potential substance abuse disorders and compliance with railroad alcohol and drug rules that complies with the criteria established in § 245.115.

(4) A procedure for evaluating vision and hearing acuity that complies with the criteria established in §§ 245.117 and 245.118.

(5) A procedure for training that complies with the criteria established in § 245.119.

(6) A procedure for knowledge testing that complies with the criteria established in § 245.121.

(7) A procedure for monitoring operational performance that complies with the criteria established in § 245.123.

§ 245.103 FRA review of certification programs.

(a) *Certification program submission schedule for railroads with current dispatching operations.* Each railroad with current dispatching operations, as [EFFECTIVE DATE OF FINAL RULE] shall submit its dispatcher certification program to FRA, in accordance with the procedures and requirements contained in § 245.107, according to the following schedule:

(1) All Class I railroads (including the National Railroad Passenger Corporation) and railroads providing commuter service shall submit their programs to FRA no later than [DATE EIGHT MONTHS AFTER THE EFFECTIVE DATE OF THE FINAL RULE].

(2) All Class II railroads and Class III railroads (including a switching and terminal or other railroad not otherwise classified) shall submit their programs to FRA no later than [DATE 16 MONTHS AFTER THE EFFECTIVE DATE OF THE FINAL RULE].

(b) *Certification program submission for new dispatching railroads.* For each railroad that commences dispatching operations after the effective date of this rule, the railroad shall submit and obtain approval of its written certification program to FRA, in accordance with the procedures and requirements contained in § 245.107, prior to commencing dispatching operations.

(c) *Method for submitting certification programs to FRA.* Railroads must submit their written certification programs and their requests for approval (described in § 245.107(a)) by uploading the program to FRA's secure document submission site.

(d) *Notification requirements.* Each railroad that submits a program to FRA must:

(1) Simultaneously with its submission, provide a copy of the program and the request for approval to the president of each labor organization that represents the railroad's dispatchers

and to all of the railroad's dispatchers that are subject to this part; and

(2) Include in its submission to FRA, a statement affirming that the railroad has provided a copy of the program and the request for approval to the president of each labor organization that represents the railroad's dispatchers and to all of the railroad's dispatchers that are subject to this part, along with a list of the names and email addresses of each president of a labor organization who was provided a copy of the program.

(e) *Comment period.* Any designated representative of dispatchers subject to this part or any directly affected person who does not have a designated representative may comment on a railroad's program provided that:

(1) The comment is submitted no later than 45 days after the date the program was submitted to FRA;

(2) The comment includes a concise statement of the commenter's interest in the matter;

(3) The commenter affirms that a copy of the comment was provided to the railroad; and

(4) The comment was emailed to *FRADISPATCHCERTPROG@dot.gov.*

(f) *FRA review period.* Upon receipt of a program, FRA will commence a thorough review of the program to ensure that it satisfies all of the requirements under this part.

(1) If FRA determines that the program satisfies all of the requirements under this part, FRA will issue a letter notifying the railroad that its program has been approved. Such letter will typically be issued within 90 days of the date the program was submitted to FRA.

(2) If FRA determines that the program does not satisfy all of the requirements under this part, FRA will issue a letter notifying the railroad that its program has been disapproved. Such letter will typically be issued within 90 days of the date the program was submitted to FRA and will identify the deficiencies found in the program that must be corrected before the program can be approved. After addressing these deficiencies, railroads can resubmit their programs in accordance with paragraph (h) of this section.

(3) If a railroad does not receive an approval or disapproval letter from FRA within 90 days of the date the program was submitted to FRA, FRA's decision on the program will remain pending until such time that FRA issues a letter either approving or disapproving the program. A certification program is not approved until FRA issues a letter approving the program.

(g) *Material modifications.* A railroad that intends to make one or more material modifications to its FRA-approved program must submit a description of how it intends to modify the program and a copy of the modified program.

(1) A modification is material if it would affect the program's conformance with this part.

(2) The description of the modification and the modified program must conform with the procedures and requirements contained in § 245.107.

(3) The process for submission and review of material modifications shall conform with paragraphs (c) through (f) of this section.

(4) A railroad cannot implement a material modification to its program until FRA issues its approval of the material modification in accordance with paragraph (f)(1) of this section.

(h) *Resubmissions.* If FRA disapproves a railroad's program or material modification, as described in paragraph (f)(2) of this section, the railroad can resubmit its program or material modification after addressing all of the deficiencies noted by FRA.

(1) The resubmission must conform with the procedures and requirements contained in § 245.107.

(2) The process for submission and review of resubmitted programs and resubmitted material modifications shall conform with paragraphs (c) through (f) of this section.

(3) The following deadlines apply for railroads that have their programs or material modifications disapproved by FRA:

(i) For a railroad that submitted its program pursuant to paragraph (a) of this section, the railroad must resubmit its program within 30 days of the date that FRA notified the railroad of the deficiencies in its program. If a railroad fails to resubmit its program within this timeframe and it continues its dispatching operations, FRA may consider such actions to be a failure to implement a program.

(ii) For a railroad that submitted its program pursuant to paragraph (b) of this section, there is no FRA-imposed deadline for resubmitting its program. However, pursuant to § 245.105(b), the railroad cannot begin dispatching operations until its program has been approved by FRA.

(iii) For a railroad that submitted a material modification to its FRA-approved program, there is no FRA-imposed deadline for resubmitting the material modification. However, pursuant to paragraph (g)(3) of this section, the railroad cannot implement the material modification until it has been approved by FRA.

(i) *Rescinding prior approval of program.* FRA reserves the right to revisit its prior approval of a railroad's program at any time.

(1) If upon such review, FRA discovers deficiencies in the program such that the program does not comply with subpart B of this part, FRA shall issue the railroad a letter rescinding its prior approval of the program and notifying the railroad of the deficiencies in its program that must be addressed.

(2) Within 30 days of FRA notifying the railroad of the deficiencies in its program, the railroad must address these deficiencies and resubmit its program to FRA. The resubmitted program must conform with the procedures and requirements contained in § 245.107.

(3) The process for submission and review of resubmitted programs under this paragraph shall conform with paragraphs (c) through (f) of this section.

(4) If a railroad fails to resubmit its program to FRA within the timeframe prescribed in paragraph (i)(2) of this section and the railroad continues its dispatching operations, FRA may consider such actions to be a failure to implement a program.

(5) If FRA issues a letter disapproving the railroad's resubmitted program, the railroad shall continue to resubmit its program in accordance with this paragraph (i).

(6) A program that has its approval rescinded under paragraph (i)(1) of this section may remain in effect until whichever of the following happens first:

(i) FRA approves the railroad's resubmitted program; or

(ii) FRA disapproves the railroad's second attempt at resubmitting its program.

(7) If FRA disapproves a railroad's second attempt at resubmitting its program under this paragraph and the railroad continues its dispatching operations, FRA may consider such actions to be a failure to implement a program.

(j) *Availability of certification program documents.* The following documents will be available on FRA's website (*railroads.dot.gov*):

(1) A railroad's originally submitted program, a resubmission of its program, or a material modification of its program;

(2) Any comments, submitted in accordance with paragraph (e) of this section, to a railroad's originally submitted program, a resubmission of its program, or a material modification of its program; and

(3) Any approval or disapproval letter issued by FRA in response to a

railroad's originally submitted program, a resubmission of its program, or a material modification of its program.

§ 245.105 Implementation schedule for certification programs.

(a) Each railroad that submits its dispatcher certification program to FRA in accordance with § 245.103(a), may continue dispatching operations while it awaits approval of its program by FRA. However, if FRA disapproves a railroad's program on two occasions and the railroad continues dispatching operations, FRA may consider such actions to be a failure to implement a program.

(b) Each railroad that submits its dispatcher certification program to FRA in accordance with § 245.103(b), must have its program approved by FRA prior to commencing dispatching operations. If such railroad commences dispatching operations before its program is approved by FRA, FRA may consider such actions to be a failure to implement a program.

(c) By [DATE 8 MONTHS AFTER EFFECTIVE DATE OF FINAL RULE], each railroad shall:

(1) In writing, designate as certified dispatchers all persons authorized by the railroad to perform the duties of a dispatcher as of [DATE 8 MONTHS AFTER EFFECTIVE DATE OF FINAL RULE]; and

(2) Issue a certificate that complies with § 245.207 to each person that it designates.

(d) After [DATE 8 MONTHS AFTER EFFECTIVE DATE OF FINAL RULE], each railroad shall:

(1) In writing, designate as a certified dispatcher any person who has been authorized by the railroad to perform the duties of a dispatcher between [EFFECTIVE DATE OF FINAL RULE] and the date FRA approves the railroad's certification program; and

(2) Issue a certificate that complies with § 245.207 to each person that it designates.

(e) After [DATE 8 MONTHS AFTER EFFECTIVE DATE OF FINAL RULE], no railroad shall permit or require a person to perform service as a dispatcher unless that person is a certified dispatcher.

(f) No railroad shall permit or require a person, designated as a certified dispatcher under the provisions of paragraph (c) or (d) of this section, to perform service as a certified dispatcher for more than three years after the date FRA approves the railroad's certification program unless that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part.

(1) Except as provided in paragraph (f)(3) of this section, a person who has been designated as a certified dispatcher under the provisions of paragraph (c) or (d) of this section and who is eligible to receive a retirement pension in accordance with the terms of an applicable agreement or in accordance with the terms of the Railroad Retirement Act (45 U.S.C. 231) within three years from the date the certifying railroad's program is approved by FRA, may request in writing, that a railroad not recertify that person, pursuant to subpart B of this part, until three years from the date the certifying railroad's program is approved.

(2) Upon receipt of a written request pursuant to paragraph (f)(1) of this section, a railroad may wait to recertify the person making the request until the end of the three-year period after FRA has approved the railroad's certification program. If a railroad grants any request, it must grant the request of all eligible persons to every extent possible.

(3) A person who is subject to recertification under part 240 or 242 of this chapter may not make a request pursuant to paragraph (f)(1) of this section.

(g) After a railroad's certification program has been approved by FRA, the railroad shall only certify or recertify a person as a dispatcher if that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part.

§ 245.107 Requirements for certification programs.

(a) *Railroad's certification program submission.* (1) A railroad's certification program submission must include a copy of the certification program and a request for approval.

(2) The request for approval can be in letter or narrative format.

(3) A railroad will receive approval or disapproval notices from FRA by email.

(4) FRA may electronically store any materials required by this part.

(b) *Organization of the certification program.* Each program must be organized to present the required information in paragraphs (b)(1) through (6) of this section. Each section must begin by giving the name, title, telephone number, and email address of the person to be contacted concerning the matters addressed by that section. If a person is identified in a prior section, it is sufficient to merely repeat the person's name in a subsequent section.

(1) *Section 1 of the program: general information and elections.* (i) The first section of the submission must contain the name of the railroad, the person to be contacted concerning the request (including the person's name, title, telephone number, and email address) and a statement electing either to accept responsibility for educating previously uncertified persons to be dispatchers or to not accept this responsibility.

(ii) If a railroad elects not to provide initial dispatcher training, the railroad will be limited to recertifying persons initially certified by another railroad. A railroad can change its election by obtaining FRA approval of a material modification to its program in accordance with § 245.103(g).

(iii) If a railroad elects to accept responsibility for training persons not previously certified as dispatchers, the railroad must submit information on how such persons will be trained, but is not required to actually perform such training. A railroad that elects to accept the responsibility for the training of such persons may authorize another railroad or a non-railroad entity to perform the actual training effort. The electing railroad remains responsible for ensuring that such other training providers adhere to the training program the railroad submits.

(2) *Section 2 of the program: training persons previously certified.* The second section of the submission must contain information concerning the railroad's program for training previously certified dispatchers, including all of the following information:

(i) As provided for in § 245.119(j), each railroad must have a program for the ongoing education of its dispatchers to ensure that they maintain the necessary knowledge concerning relevant Federal safety regulations, operating rules and practices, familiarity with physical characteristics of the territory, and the dispatching systems and technology. The railroad must describe in this section how it will ensure that its dispatchers remain knowledgeable concerning the safe discharge of their responsibilities so as to comply with the standard set forth in § 245.119(j);

(ii) In accordance with the requirements in § 245.119(h), this section must contain sufficient detail to permit effective evaluation of the railroad's training program in terms of the subject matters covered, the frequency and duration of the training sessions (including the interval between attendance at such trainings), the training environment employed (for example, use of classroom, use of computer-based training, use of film or slide presentations, and use of on-the-job training), and which aspects of the program are voluntary or mandatory;

(iii) How the training will address a certified dispatcher's loss of retention of knowledge over time;

(iv) How the training will address changed circumstances over time such as the introduction of new or modified technology, including software modifications to dispatch systems and related signal and train control systems, new operating rule books, or significant changes in operations including alteration in the territory dispatchers are authorized to work over; and

(v) A plan for familiarization training that addresses how long a person can be absent from dispatching on a territory before needing to be requalified on that territory (a time period that cannot exceed 12 months), and once that threshold is reached, how the person will acquire the needed familiarization training.

(3) *Section 3 of the program: testing and evaluating persons previously certified.* The third section of the submission must contain information concerning the railroad's program for testing and evaluating previously certified dispatchers including all of the following information:

(i) The railroad must describe in this section how it will ensure that its dispatchers demonstrate their knowledge concerning the safe discharge of their responsibilities so as to comply with the standards set forth in § 245.121; and

(ii) The railroad must describe in this section how it will have ongoing testing and evaluation to ensure that its dispatchers have the necessary vision and hearing acuity as provided for in §§ 245.117 and 245.118. This section must also address how a railroad will ensure that its medical examiners have sufficient information concerning the railroad's operations, as well as the dispatcher's safety related tasks, to effectively form appropriate conclusions about the ability of a particular individual to safely perform as a dispatcher.

(4) *Section 4 of the program: training, testing, and evaluating persons not previously certified.* Unless a railroad has made an election not to accept responsibility for conducting the initial training of persons to be dispatchers, the fourth section of the submission must contain information concerning the railroad's program for educating, testing, and evaluating persons not previously certified as dispatchers including all of the following information:

(i) As provided for in § 245.119(d), a railroad that is issuing an initial dispatcher certification to a person must have a program for the training, testing, and evaluation of its dispatchers to ensure that they acquire the necessary knowledge and skills. A railroad must describe in this section how it will ensure that its dispatchers will acquire sufficient knowledge and skills and demonstrate their knowledge and skills concerning the safe discharge of their responsibilities.

(ii) This section must contain the same level of detail concerning initial training programs and the testing and evaluation of previously uncertified dispatchers as is required for previously certified dispatchers in § 245.107(b)(2) and (3) (Sections 2 and 3 of the program).

(iii) Railroads that elect to rely on other entities to conduct training away from the railroad's own territory and dispatching systems and technology, must indicate how the student will be provided with the required training on the physical characteristics for the railroad's territory and dispatching systems and technology.

(5) *Section 5 of the program: monitoring operational performance by certified dispatchers.* The fifth section of the submission must contain information concerning the railroad's program for monitoring the operation of its certified dispatchers including all of the following information:

(i) Section 245.123 requires that a railroad perform ongoing monitoring of its dispatchers and that each dispatcher has an annual unannounced compliance test. A railroad must describe in this section how it will ensure that the railroad is monitoring that its dispatchers demonstrate their skills concerning the safe discharge of their responsibilities.

(ii) A railroad must describe the scoring system used by the railroad during an operational monitoring observation or unannounced compliance test administered in accordance with the procedures required under § 245.123.

(6) *Section 6 of the program: procedures for routine administration of the dispatcher certification program.* The final section of the submission must contain a summary of how the railroad's program and procedures will implement the various aspects of the regulatory provisions that relate to routine administration of its certification program for dispatchers. Specifically, this section must address the procedural aspects of the following provisions and must describe the manner in which the railroad will implement its program so as to comply with each of the following provisions:

(i) Section 245.301 which provides that each railroad must have procedures for review and comment on adverse information;

(ii) Sections 245.111, 245.113, 245.115, and 245.303 which require a railroad to have procedures for evaluating data concerning prior safety conduct as a motor vehicle operator and as railroad workers;

(iii) Sections 245.109, 245.201, and 245.301 which place a duty on the railroad to make a series of determinations. When describing how it will implement its program to comply with those sections, a railroad must describe: the procedures it will utilize to ensure that all of the necessary determinations have been made in a timely fashion; who will be authorized to conclude that a person will or will be not certified; and how the railroad will communicate adverse decisions;

(iv) Sections 245.109, 245.117, 245.118, 245.119, and 245.121, which place a duty on the railroad to make a series of determinations. When describing how it will implement its program to comply with those sections, a railroad must describe how it will document the factual basis the railroad relied on in making determinations under those sections;

(v) Section 245.125 which permits reliance on certification determinations made by other railroads; and

(vi) Sections 245.207 and 245.307 which contain the requirements for replacing lost certificates and the conduct of certification revocation proceedings.

§ 245.109 Determinations required for certification and recertification.

(a) After FRA has approved a railroad's dispatcher certification program, the railroad, prior to initially certifying or recertifying any person as a dispatcher, shall, in accordance with its FRA-approved program, determine in writing that:

(1) The individual meets the prior safety conduct eligibility requirements of §§ 245.111 and 245.113;

(2) The individual meets the eligibility requirements of §§ 245.115 and 245.303;

(3) The individual meets the vision and hearing acuity standards of §§ 245.117 and 245.118;

(4) The individual has the necessary knowledge, as demonstrated by successfully completing a test that meets the requirements of § 245.121; and

(5) If applicable, the individual has completed a training program that meets the requirements of § 245.119.

(b) Nothing in this section, § 245.111, or § 245.113 shall be construed to prevent persons subject to this part from

entering into an agreement that results in a railroad obtaining the information needed for compliance with this subpart in a different manner than that prescribed in § 245.111 or § 245.113.

§ 245.111 Prior safety conduct as motor vehicle operator.

(a) Except as provided in paragraphs (b) through (e) of this section, after FRA has approved a railroad's dispatcher certification program, the railroad, prior to initially certifying or recertifying any person as a dispatcher, shall determine that the person meets the eligibility requirements of this section involving prior conduct as a motor vehicle operator.

(b) A railroad shall initially certify a person as a dispatcher for 60 days if the person:

(1) Requested the information required by paragraph (g) of this section at least 60 days prior to the date of the decision to certify that person; and

(2) Otherwise meets the eligibility requirements provided in § 245.109(a)(1) through (5).

(c) A railroad shall recertify a person as a dispatcher for 60 days from the expiration date of that person's certification if the person:

(1) Requested the information required by paragraph (g) of this section at least 60 days prior to the date of the decision to recertify that person; and

(2) Otherwise meets the eligibility requirements provided in § 245.109(a)(1) through (5).

(d) Except as provided in paragraph (e) of this section, if a railroad who certified or recertified a person for 60 days pursuant to paragraph (b) or (c) of this section does not obtain and evaluate the information requested pursuant to paragraph (g) of this section within 60 days, that person will be ineligible to perform as a dispatcher until the information can be evaluated by the railroad.

(e) If a person requests the information required pursuant to paragraph (g) of this section but is unable to obtain it, that person or the railroad certifying or recertifying that person may petition for a waiver of the requirements of paragraph (a) of this section in accordance with the provisions of part 211 of this chapter. A railroad shall certify or recertify a person during the pendency of the waiver request if the person otherwise meets the eligibility requirements provided in § 245.109(a)(1) through (5).

(f) Except for persons designated as dispatchers under § 245.105(c) or (d) or for persons covered by paragraph (j) of this section, each person seeking certification or recertification under this part shall, within one year prior to the date of the railroad's decision on certification or recertification:

(1) Take the actions required by paragraphs (g) through (i) of this section to make information concerning their driving record available to the railroad that is considering such certification or recertification; and

(2) Take any additional actions, including providing any necessary consent required by State, Federal, or foreign law to make information concerning their driving record available to that railroad.

(g) Each person seeking certification or recertification under this part shall request, in writing, that the chief of each driver licensing agency identified in paragraph (h) of this section provide a copy of that agency's available information concerning their driving record to the railroad that is considering such certification or recertification.

(h) Each person shall request the information required under paragraph (g) of this section from:

(1) The chief of the driver licensing agency of any jurisdiction, including a State or foreign country, which last issued that person a driver's license; and

(2) The chief of the driver licensing agency of any other jurisdiction, including states or foreign countries, that issued or reissued the person a driver's license within the preceding five years.

(i) If advised by the railroad that a driver licensing agency has informed the railroad that additional information concerning that person's driving history may exist in the files of a State agency or foreign country not previously contacted in accordance with this section, such person shall:

(1) Request in writing that the chief of the driver licensing agency which compiled the information provide a copy of the available information to the prospective certifying railroad; and

(2) Take any additional action required by State, Federal, or foreign law to obtain that additional information.

(j) Any person who has never obtained a motor vehicle driving license is not required to comply with the provisions of paragraph (g) of this section but shall notify the railroad of that fact in accordance with procedures established by the railroad in its certification program.

(k) Each certified dispatcher or person seeking initial certification shall report motor vehicle incidents described in paragraphs (m)(1) and (2) of this section to the employing railroad within 48 hours of being convicted for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for, such violations. For purposes of this paragraph and paragraph (m) of this section, ''State action'' means action of the jurisdiction that has issued the motor vehicle driver's license, including a foreign country. For purposes of dispatcher certification, no railroad shall require reporting earlier than 48 hours after the conviction, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license.

(l) When evaluating a person's motor vehicle driving record, a railroad shall not consider information concerning motor vehicle driving incidents that occurred:

(1) Prior to the effective date of this rule;

(2) More than three years before the date of the railroad's certification decision; or

(3) At a time other than that specifically provided for in § 245.111, § 245.113, § 245.115, or § 245.303.

(m) A railroad shall only consider information concerning the following types of motor vehicle incidents:

(1) A conviction for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for operating a motor vehicle while under the influence of, or impaired by, alcohol or a controlled substance; or

(2) A conviction for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for refusal to undergo such testing as is required by State or foreign law when a law enforcement official seeks to determine whether a person is operating a vehicle while under the influence of alcohol or a controlled substance.

(n) If such an incident, described in paragraph (m) of this section, is identified:

(1) The railroad shall provide the data to the railroad's DAC, together with any information concerning the person's railroad service record, and shall refer the person for evaluation to determine if the person has an active substance abuse disorder.

(2) The person shall cooperate in the evaluation and shall provide any requested records of prior counseling or treatment for review exclusively by the DAC in the context of such evaluation.

(3) If the person is evaluated as not currently affected by an active substance abuse disorder, the subject data shall not be considered further with respect to certification. However, the railroad shall, on recommendation of the DAC, condition certification upon participation in any needed aftercare and/or follow-up testing for alcohol or

drugs deemed necessary by the DAC consistent with the technical standards specified in 49 CFR part 219, subpart H, as well as 49 CFR part 40.

(4) If the person is evaluated as currently affected by an active substance abuse disorder, the provisions of § 245.115(c) will apply.

(5) If the person fails to comply with the requirements of paragraph (n)(2) of this section, the person shall be ineligible to perform as a certified dispatcher until such time as the person complies with the requirements.

(o) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.113 Prior safety conduct with other railroads.

(a) After FRA has approved a railroad's dispatcher certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate, that the certification candidate meets the eligibility requirements of this section.

(b) If the certification candidate has not been employed or certified by any other railroad in the previous five years, they do not have to submit a request in accordance with paragraph (c) of this section, but they must notify the railroad of this fact in accordance with procedures established by the railroad in its certification program.

(c) Except as provided for in paragraph (b) of this section, each person seeking certification or recertification under this part shall submit a written request to each railroad that employed or certified the person within the previous five years to provide the following information to the railroad that is considering whether to certify or recertify that person as a dispatcher:

(1) Information about that person's compliance with § 245.111 within the three years preceding the date of the request;

(2) Information about that person's compliance with § 245.115 within the five years preceding the date of the request; and

(3) Information about that person's compliance with § 245.303 within the five years preceding the date of the request.

(d) Each person submitting a written request required by paragraph (c) of this section shall:

(1) Submit the request no more than one year before the date of the railroad's decision on certification or recertification; and

(2) Take any additional actions, including providing any necessary consent required by State or Federal law to make information concerning their service record available to that railroad.

(e) Within 30 days after receipt of a written request that complies with paragraph (c) of this section, a railroad shall provide the information requested to the railroad designated in the written request.

(f) If a railroad is unable to provide the information requested within 30 days after receipt of a written request that complies with paragraph (c) of this section, the railroad shall provide an explanation, in writing, of why it cannot provide the information within the requested time frame. If the railroad will ultimately be able to provide the requested information, the explanation shall state approximately how much more time the railroad needs to supply the requested information. If the railroad will not be able to provide the requested information, the explanation shall provide an adequate explanation for why it cannot provide this information. Copies of this explanation shall be provided to the railroad designated in the written request and to the person who submitted the written request for information.

(g) When evaluating a person's prior safety conduct with a different railroad, a railroad shall not consider information concerning prior safety conduct that occurred:

(1) Prior to [EFFECTIVE DATE OF FINAL RULE]; or

(2) At a time other than that specifically provided for in § 245.111, § 245.113, § 245.115, or § 245.303.

(h) Each railroad shall adopt and comply with a program that complies with the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program that complies with the requirements of this subject, that person shall be considered to have violated the requirements of this section.

§ 245.115 Substance abuse disorders and alcohol drug rules compliance.

(a) *Eligibility determination.* After FRA has approved a railroad's dispatcher certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate, that the person meets the eligibility requirements of this section.

(b) *Documentation.* In order to make the determination required under paragraph (c) of this section, a railroad shall have on file documents pertinent to that determination, including a written document from its DAC which states their professional opinion that the person has been evaluated as not currently affected by a substance abuse disorder or that the person has been evaluated as affected by an active substance abuse disorder.

(c) *Fitness requirement.* (1) A person who has an active substance abuse disorder shall be denied certification or recertification as a dispatcher.

(2) Except as provided for in paragraph (f) of this section, a certified dispatcher who is determined to have an active substance abuse disorder shall be ineligible to hold certification. Consistent with other provisions of this part, certification may be reinstated as provided in paragraph (e) of this section.

(3) In the case of a current employee of a railroad evaluated as having an active substance abuse disorder (including a person identified under the procedures of § 245.111), the employee may, if otherwise eligible, voluntarily self-refer for substance abuse counseling or treatment under the policy required by § 219.1001(b)(1) of this chapter; and the railroad shall then treat the substance abuse evaluation as confidential except with respect to ineligibility for certification.

(d) *Prior alcohol/drug conduct; Federal rule compliance.* (1) In determining whether a person may be or remain certified as a dispatcher, a railroad shall consider conduct described in paragraph (d)(2) of this section that occurred within a period of five consecutive years prior to the review. A review of certification shall be initiated promptly upon the occurrence and documentation of any incident of conduct described in this paragraph (d).

(2) A railroad shall consider any violation of § 219.101 or § 219.102 of this chapter and any refusal to provide a breath or body fluid sample for testing under the requirements of part 219 of this chapter when instructed to do so by a railroad representative.

(3) A period of ineligibility described in this section shall begin:

(i) For a person not currently certified, on the date of the railroad's written determination that the most recent incident has occurred; or

(ii) For a person currently certified, on the date of the railroad's notification to the person that recertification has been denied or certification has been suspended.

(4) The period of ineligibility described in this section shall be determined in accordance with the following standards:

(i) In the case of one violation of § 219.102 of this chapter, the person shall be ineligible to hold a certificate during evaluation and any required primary treatment as described in paragraph (e) of this section. In the case of two violations of § 219.102 of this chapter, the person shall be ineligible to hold a certificate for a period of two years. In the case of more than two such violations, the person shall be ineligible to hold a certificate for a period of five years.

(ii) In the case of one violation of § 219.102 of this chapter and one violation of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of three years.

(iii) In the case of one violation of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of nine months (unless identification of the violation was through a qualifying referral program described in § 219.1001 of this chapter and the dispatcher waives investigation, in which case the certificate shall be deemed suspended during evaluation and any required primary treatment as described in paragraph (e) of this section). In the case of two or more violations of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of five years.

(iv) If a person refuses to provide a breath or body fluid sample for testing under the requirements of part 219 of this chapter when instructed to do so by a railroad representative, the person shall be ineligible to hold a certificate for a period of nine months.

(e) *Future eligibility to hold certificate following alcohol/drug violation.* The following requirements apply to a person who has been denied certification or who has had their certification suspended or revoked as a result of conduct described in paragraph (d) of this section:

(1) The person shall not be eligible for grant or reinstatement of the certificate unless and until the person has:

(i) Been evaluated by a SAP to determine if the person currently has an active substance abuse disorder;

(ii) Successfully completed any program of counseling or treatment determined to be necessary by the SAP prior to return to service; and

(iii) In accordance with the testing procedures of 49 CFR part 219, subpart H, has had a return-to-duty alcohol test with an alcohol concentration of less than .02 and return-to-duty body fluid sample that tested negative for controlled substances.

(2) A dispatcher placed in service or returned to service under the above-stated conditions shall continue in any program of counseling or treatment deemed necessary by the SAP and shall be subject to a reasonable program of follow-up alcohol and drug testing without prior notice for a period of not more than five years following return to service. Follow-up tests shall include not fewer than six alcohol tests and six drug tests during the first year following return to service.

(3) Return-to-duty and follow-up alcohol and drug tests shall be performed consistent with the requirements of 49 CFR part 219, subpart H.

(4) This paragraph (e) does not create an entitlement to utilize the services of a railroad SAP, to be afforded leave from employment for counseling or treatment, or to employment as a dispatcher. Nor does it restrict any discretion available to the railroad to take disciplinary action based on conduct described herein.

(f) *Confidentiality protected.* Nothing in this part shall affect the responsibility of the railroad under § 219.1003(f) of this chapter to treat qualified referrals for substance abuse counseling and treatment as confidential; and the certification status of a dispatcher who is successfully assisted under the procedures of that section shall not be adversely affected. However, the railroad shall include in its referral policy, as required pursuant to § 219.1003(j) of this chapter, a provision that, at least with respect to a certified dispatcher or a candidate for certification, the policy of confidentiality is waived (to the extent that the railroad shall receive from the SAP or DAC official notice of the substance abuse disorder and shall suspend or revoke the certification, as appropriate) if the person at any time refuses to cooperate in a recommended course of counseling or treatment.

(g) *Complying with certification program.* Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.117 Vision acuity.

(a) After FRA has approved a railroad's dispatcher certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate, that the person meets the standards for visual acuity prescribed in this section and Appendix B to this part.

(b) Any examination required under this section shall be performed by or under the supervision of a medical examiner or a licensed physician's assistant.

(c) Except as provided in paragraph (d) of this section, each dispatcher shall have visual acuity that meets or exceeds the following thresholds:

(1) For distant viewing, either:

(i) Distant visual acuity of at least 20/40 (Snellen) in each eye without corrective lenses; or

(ii) Distant visual acuity separately corrected to at least 20/40 (Snellen) with corrective lenses and distant binocular acuity of at least 20/40 (Snellen) in both eyes with or without corrective lenses;

(2) A field of vision of at least 70 degrees in the horizontal meridian in each eye; and

(3) The ability to recognize and distinguish between the colors of railroad signals as demonstrated by successfully completing one of the tests in appendix B to this part.

(d) A person not meeting the thresholds in paragraph (c) of this section shall, upon request of the certification candidate, be subject to further medical evaluation by a railroad's medical examiner to determine that person's ability to safely perform as a dispatcher. In such cases, the following procedures will apply:

(1) In accordance with the guidance prescribed in appendix B to this part, a person is entitled to:

(i) One retest without making any showing; and

(ii) An additional retest if the person provides evidence that circumstances have changed since the last test to the extent that the person may now be able to safely perform as a dispatcher.

(2) The railroad shall provide its medical examiner with a copy of this part, including all appendices.

(3) If, after consultation with a railroad officer, the medical examiner concludes that, despite not meeting the threshold(s) in paragraph (c) of this section, the person has the ability to safely perform as a dispatcher, the

railroad may conclude that the person satisfies the vision acuity requirements of this section to be a certified dispatcher. Such certification will be conditioned on any special restrictions the medical examiner determines in writing to be necessary.

(e) In order to make the determination required under paragraph (a) of this section, a railroad shall have on file the following for each certification candidate:

(1) A medical examiner's certificate that the candidate has been medically examined and either does or does not meet the vision acuity standards prescribed in paragraph (c) of this section.

(2) If needed under paragraph (d) of this section, a medical examiner's written professional opinion which states the basis for their determination that:

(i) The candidate can be certified, under certain conditions if necessary, even though the candidate does not meet the vision acuity standards prescribed in paragraph (c) of this section; or

(ii) The candidate's vision acuity prevents the candidate from being able to safely perform as a dispatcher.

(f) If the examination required under this section shows that the person needs corrective lenses to meet the standards for vision acuity prescribed in this section and appendix B to this part, that person shall use corrective lenses at all times while performing as a dispatcher unless the railroad's medical examiner subsequently determines in writing that the person can safely perform as a dispatcher without corrective lenses.

(g) When a certified dispatcher becomes aware that their vision has deteriorated, they shall notify the railroad's medical department or other appropriate railroad official of the deterioration. Such notification must occur prior to performing any subsequent service as a dispatcher. The individual cannot return to service as a dispatcher until they are reexamined and determined by the railroad's medical examiner to satisfy the vision acuity standards prescribed in this section and appendix B to this part.

(h) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.118 Hearing acuity.

(a) After FRA has approved a railroad's dispatcher certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate, that the person meets the standards for hearing acuity prescribed in this section and Appendix B to this part.

(b) Any examination required under this section shall be performed by or under the supervision of a medical examiner or a licensed physician's assistant.

(c) Except as provided in paragraph (d) of this section, each dispatcher shall have hearing acuity that meets or exceeds the following thresholds with or without use of a hearing aid: The person does not have an average hearing loss in the better ear greater than 40 decibels at 500 Hz, 1,000 Hz, and 2,000 Hz. The hearing test or audiogram used to show a person's hearing acuity shall meet the requirements of one of the following:

(1) As required in 29 CFR 1910.95(h) (Occupational Safety and Health Administration);

(2) As required in § 227.111 of this chapter; or

(3) Conducted using an audiometer that meets the specifications of and is maintained and used in accordance with a formal industry standard, such as American National Standards Institute (ANSI) S3.6, ''Specifications for Audiometers.''

(d) A person not meeting the thresholds in paragraph (c) of this section shall, upon request of the certification candidate, be subject to further medical evaluation by a railroad's medical examiner to determine that person's ability to safely perform as a dispatcher. In such cases, the following procedures will apply:

(1) In accordance with the guidance prescribed in appendix B to this part, a person is entitled to:

(i) One retest without making any showing; and

(ii) An additional retest if the person provides evidence that circumstances have changed since the last test to the extent that the person may now be able to safely perform as a dispatcher.

(2) The railroad shall provide its medical examiner with a copy of this part, including all appendices.

(3) If, after consultation with a railroad officer, the medical examiner concludes that, despite not meeting the threshold(s) in paragraph (c) of this section, the person has the ability to safely perform as a dispatcher, the railroad may conclude that the person satisfies the hearing acuity requirements of this section to be a certified dispatcher. Such certification will be conditioned on any special restrictions the medical examiner determines in writing to be necessary.

(e) In order to make the determination required under paragraph (a) of this section, a railroad shall have on file the following for each certification candidate:

(1) A medical examiner's certificate that the candidate has been medically examined and either does or does not meet the hearing acuity standards prescribed in paragraph (c) of this section.

(2) If needed under paragraph (d) of this section, a medical examiner's written professional opinion which states the basis for their determination that:

(i) The candidate can be certified, under certain conditions if necessary, even though the candidate does not meet the hearing acuity standards prescribed in paragraph (c) of this section; or

(ii) The candidate's hearing acuity prevents the candidate from being able to safely perform as a dispatcher.

(f) If the examination required under this section shows that the person needs a hearing aid to meet the standards for hearing acuity prescribed in this section and appendix B to this part, that person shall use a hearing aid at all times while performing as a dispatcher unless the railroad's medical examiner subsequently determines in writing that the person can safely perform as a dispatcher without a hearing aid.

(g) When a certified dispatcher becomes aware that their hearing has deteriorated, they shall notify the railroad's medical department or other appropriate railroad official of the deterioration. Such notification must occur prior to performing any subsequent service as a dispatcher. The individual cannot return to service as a dispatcher until they are reexamined and determined by the railroad's medical examiner to satisfy the hearing acuity standards prescribed in this section and appendix B to this part.

(h) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.119 Training requirements.

(a) After FRA has approved a railroad's certification program, the

railroad shall determine, prior to issuing any person a dispatcher certificate, that the person has successfully completed the training, in accordance with the requirements of this section.

(b) A railroad's certification program shall state the railroad's election either:

(1) To accept responsibility for the training of dispatchers and thereby obtain authority for that railroad to initially certify a person as a dispatcher; or

(2) To recertify only dispatchers previously certified by other railroads.

(c) A railroad that elects to accept responsibility for the training of dispatchers shall state in its certification program whether it will conduct the training program or employ a training program conducted by some other entity on its behalf but adopted and ratified by the railroad.

(d) A railroad that elects to train persons not previously certified as dispatchers shall develop an initial training program which, at a minimum, includes the following:

(1) An explanation of how training must be structured, developed, and delivered, including an appropriate combination of classroom, simulator, computer-based, correspondence, on-the-job training, or other formal training. The curriculum shall be designed to impart knowledge of, and ability to comply with, applicable Federal railroad safety laws, regulations, and orders, as well as any relevant railroad rules and procedures promulgated to implement those applicable Federal railroad safety laws, regulations, and orders. This training shall document a person's knowledge of, and ability to comply with, Federal railroad safety laws, regulations, and orders, as well as railroad rules and procedures.

(2) An on-the-job training component which shall include the following:

(i) A syllabus describing content, required tasks, and related steps the employee learning the job shall be able to perform within a specified timeframe;

(ii) A statement of the conditions (*e.g.,* prerequisites, dispatch and related dispatch support systems, documentation, briefings, demonstrations, and practice) necessary for learning transfer; and

(iii) A statement of the standards by which proficiency is measured through a combination of task/step accuracy, completeness, and repetition.

(3) A description of the processes to review and modify its training program when new safety-related railroad laws, regulations, orders, technologies, procedures, software, or equipment are introduced into the workplace, including how it is determined if additional or refresher training is needed.

(e) Prior to beginning the initial dispatching related tasks associated with on-the-job exercises discussed in paragraph (d)(2) of this section, each railroad shall make any relevant information or materials, such as operating rules, safety rules, or other rules, available for referencing by certification candidates.

(f) Prior to a person, not previously certified as a dispatcher, being certified as a dispatcher, a railroad shall require the person to:

(1) Successfully complete the formal initial training program developed pursuant to paragraph (d) of this section and any associated examinations covering the skills and knowledge the person will need to perform the tasks necessary to be a dispatcher;

(2) Demonstrate on-the-job proficiency, with input from a qualified instructor, by successfully completing the tasks and using the dispatching systems and technology necessary to be a dispatcher. A certification candidate may perform such tasks under the direct onsite supervision of a person who has the necessary dispatching experience and at least one year of experience as a dispatcher; and

(3) Demonstrate knowledge of the physical characteristics of any assigned territory. If the railroad uses a written test to fulfill this requirement, the railroad must provide the certification candidate with an opportunity to consult with a supervisory employee, who possesses territorial qualifications for the territory, to explain a question.

(g) In making the determination required under paragraph (a) of the section, a railroad shall have written documentation showing that:

(1) The person completed a training program that complies with paragraph (d) of this section (if the person has not been previously certified as a dispatcher);

(2) The person demonstrated their knowledge by achieving a passing grade under the testing and evaluation procedures of the training program; and

(3) The person achieved a passing score on the physical characteristics exam associated with the territories, or its pertinent segments, over which the person will be performing dispatching service.

(h) The certification program, required under this part and submitted in accordance with the procedures and requirements described in § 245.107, shall include:

(1) The methods that a person may acquire familiarity with the physical characteristics of a territory;

(2) The procedures used to qualify and requalify a dispatcher on a territory; and

(3) The maximum time period in which a dispatcher can be absent from a territory before requalification is required. In accordance with § 245.120(c), this time period cannot exceed 12 months.

(i) If ownership of a railroad is being transferred from one company to another, the dispatchers of the acquiring company may receive familiarization training from the selling company prior to the acquiring company commencing operation.

(j) A railroad shall provide for the continuing education of certified dispatchers to ensure that each dispatcher maintains the necessary knowledge concerning:

(1) Railroad safety and operating rules;

(2) Physical territory:

(3) Dispatching systems and technology; and

(4) Compliance with all applicable Federal regulations including, but not limited to, hazardous materials, passenger train emergency preparedness, emergency response procedures, and physical characteristics of a territory.

(k) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.120 Requirements for territorial qualification.

(a) After FRA has approved a railroad's certification program, a railroad shall not permit or require a person to serve as a dispatcher on a particular territory unless that railroad determines that:

(1) The person is certified as a dispatcher; and

(2) The person either:

(i) Possesses the necessary territorial qualifications for the applicable territory pursuant to § 245.119; or

(ii) Is assisted by a Dispatcher Pilot who is qualified on the territory.

(b) If a person is called to serve on a territory that they are not qualified on, the person must immediately notify the railroad that they are not qualified on the assigned territory.

(c) A person shall no longer be considered qualified on a territory if they have not worked on that territory

as a dispatcher in the previous 12 months.

(d) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.121 Knowledge testing.

(a) After FRA has approved a railroad's dispatcher certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate and in accordance with the requirements of this section, that the person has demonstrated sufficient knowledge of the railroad's rules and practices for the safe movement of trains.

(b) In order to make the knowledge determination required by paragraph (a) of this section, a railroad shall have procedures for testing a person being evaluated for certification as a dispatcher that shall be:

(1) Designed to examine a person's knowledge of the railroad's operating rules and practices for the safe movement of trains;

(2) Objective in nature;

(3) In written or electronic form;

(4) Covering the following subjects:

(i) Safety and operating rules;

(ii) Timetable instructions;

(iii) Compliance with all applicable Federal regulations;

(iv) Physical characteristics of the territory on which a person will be or is currently working as a dispatcher; and

(v) Dispatching systems and technology.

(5) Sufficient to accurately measure the person's knowledge of the covered subjects; and

(6) Conducted without open reference books or other materials except to the degree the person is being tested on their ability to use such reference books or materials.

(c) The railroad shall provide the certification candidate with an opportunity to consult with a supervisory employee, who possesses territorial qualifications for the territory, to explain a test question.

(d) If a person fails the test, no railroad shall permit or require that person to function as a dispatcher prior to that person's achieving a passing score during a reexamination of the test.

(e) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.123 Monitoring operational performance.

(a) Each railroad's certification program shall describe how it will monitor the operational performance of its certified dispatchers by including procedures for:

(1) Giving each certified dispatcher at least one unannounced railroad and Federal rules, territorial and dispatch systems compliance test each calendar year, except as provided for in paragraph (c) of this section;

(2) Giving unannounced compliance tests to certified dispatchers who return to dispatcher service after performing service that does not require certification pursuant to this part, as described in paragraph (c) of this section; and

(3) What actions the railroad will take if it finds deficiencies in a dispatcher's performance during an unannounced compliance test.

(b) An unannounced compliance test shall:

(1) Test certified dispatchers for compliance with one or more operational tests in accordance with the provisions of § 217.9 of this chapter;

(2) Be performed by a railroad officer who meets the requirements of § 217.9(b)(1) of this chapter; and

(3) Be given to each certified dispatcher at least once each calendar year, except as provided for in paragraph (c) of this section.

(c) A certified dispatcher who is not performing service that requires certification pursuant to this part does not need to be given an unannounced compliance test. However, when the certified dispatcher returns to service that requires certification pursuant to this part, the railroad shall:

(1) Give the certified dispatcher an unannounced compliance test within 30 days of their return to dispatcher service; and

(2) Retain a written record that includes the following information:

(i) The date the dispatcher stopped performing service that required certification pursuant to this part;

(ii) The date the dispatcher returned to service that required certification pursuant to this part; and

(iii) The date and the result of the unannounced compliance test that was performed following the dispatcher's return to service requiring certification.

(d) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.125 Certification determinations made by other railroads.

(a) A railroad that is considering certification of a person as a dispatcher may rely on certain determinations made by another railroad concerning that person's certification.

(b) A railroad's certification program shall address how the railroad will administer the training of previously uncertified dispatchers with extensive dispatching experience or previously certified dispatchers who have had their certification expire. If a railroad's certification program fails to specify how it will train these dispatchers, then the railroad shall require these dispatchers to successfully complete the certifying railroad's entire training program.

(c) A railroad relying on certification determinations made by another railroad shall still be responsible for determining that:

(1) The prior certification is still valid in accordance with the provisions of §§ 245.201 and 245.307;

(2) The person has received training on the physical characteristics of the new territory in accordance with § 245.119; and

(3) The person has demonstrated the necessary knowledge concerning the railroad's operating rules, territory, dispatch systems and technology in accordance with § 245.121.

Subpart C—Administration of the Certification Program

§ 245.201 Time limitations for certification.

(a) After FRA approves a railroad's dispatcher certification program, that railroad shall not certify or recertify a person as a dispatcher if the railroad is making:

(1) A determination concerning eligibility under §§ 245.111, 245.113, 245.115, and 245.303 and the eligibility data being relied on was furnished more than one year before the date of the railroad's certification decision;

(2) A determination concerning visual or hearing acuity and the medical examination being relied on was

conducted more than 450 days before the date of the railroad's certification decision;

(3) A determination concerning demonstrated knowledge and the knowledge examination being relied on was conducted more than one year before the date of the railroad's certification decision; or

(4) A determination concerning demonstrated knowledge and the knowledge examination being relied on was conducted more than two years before the date of the railroad's recertification decision if the railroad administers a knowledge testing program pursuant to § 245.121 at intervals that do not exceed two years.

(b) The time limitations of paragraph (a) of this section do not apply to a railroad that is making a certification decision in reliance on determinations made by another railroad in accordance with § 245.125.

(c) Except if a person is designated as a certified dispatcher under § 245.105(c) or (d), no railroad shall certify a person as a dispatcher for an interval of more than three years.

(d) Each railroad shall issue each certified dispatcher a certificate that complies with § 245.207 no later than 30 days from the date of its decision to certify or recertify that person.

§ 245.203 Retaining information supporting determinations.

(a) After FRA approves a railroad's dispatcher certification program, any time the railroad issues, denies, or revokes a certificate after making the determinations required under § 245.109, it shall maintain a record for each certified dispatcher and certification candidate. Each record shall contain the information, described in paragraph (b) of this section, that the railroad relied on in making the determinations required under § 245.109.

(b) A railroad shall retain the following information:

(1) Relevant data from the railroad's records concerning the person's prior safety conduct and eligibility;

(2) Relevant data furnished by another railroad;

(3) Relevant data furnished by a governmental agency concerning the person's motor vehicle driving record;

(4) Relevant data furnished by the person seeking certification concerning their eligibility;

(5) The relevant test results data concerning vision and hearing acuity;

(6) If applicable, the relevant data concerning the professional opinion of the railroad's medical examiner on the adequacy of the person's vision or hearing acuity;

(7) Relevant data from the railroad's records concerning the person's success or failure on knowledge test(s) under § 245.121;

(8) A sample copy of the written knowledge test or tests administered; and

(9) The relevant data from the railroad's records concerning the person's success or failure on unannounced tests the railroad performed to monitor the dispatcher's performance in accordance with § 245.123.

(c) If a railroad is relying on successful completion of an approved training program conducted by another entity, the relying railroad shall maintain a record for each certification candidate that contains the relevant data furnished by the training entity concerning the person's demonstration of knowledge and relied on by the railroad in making its determinations.

(d) If a railroad is relying on a certification decision initially made by another railroad, the relying railroad shall maintain a record for each certification candidate that contains the relevant data furnished by the other railroad which it relied on in making its determinations.

(e) All records required under this section shall be retained by the railroad for a period of six years from the date of the certification, recertification, denial, or revocation decision and shall, upon request, be made available to FRA representatives in a timely manner.

(f) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on the record(s) required by this section; or

(2) Otherwise falsify such records through material misstatement, omission, or mutilation.

(g) Nothing in this section precludes a railroad from maintaining the information required to be retained under this section in an electronic format provided that:

(1) The railroad maintains an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or individual records;

(2) The program and data storage system must be protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) A record cannot be deleted or altered by any individual after the record is certified by the employee who created the record;

(3) Any amendment to a record is either:

(i) Electronically stored apart from the record that it amends; or

(ii) Electronically attached to the record as information without changing the original record;

(4) Each amendment to a record uniquely identifies the person making the amendment; and

(5) The system employed by the railroad for data storage permits reasonable access and retrieval of the information which can be easily produced in an electronic or printed format that can be:

(i) Provided to FRA representatives in a timely manner; and

(ii) Authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by an FRA representative.

§ 245.205 List of certified dispatchers and recordkeeping.

(a) After a railroad's certification program has received its initial approval from FRA, pursuant to § 245.103(f)(1), the railroad must maintain a list of each person who is currently certified as a dispatcher by the railroad. The list must include the date of the railroad's certification decision and the date the person's certification expires.

(b) The list shall:

(1) Be updated at least annually;

(2) Be made available, upon request, to FRA representatives in a timely manner; and

(3) Be available either:

(i) In electronic format pursuant to paragraph (c) of this section; or

(ii) At the divisional or regional headquarters of the railroad.

(c) If a railroad elects to maintain its list in an electronic format, it must:

(1) Maintain an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or the list;

(2) Have its program and data storage system protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) An entry on the list cannot be deleted or altered by any individual

after the entry is certified by the employee who created the entry;

(3) Have any amendment to the list either:

(i) Electronically stored apart from the entry on the list that it amends; or

(ii) Electronically attached to the entry on the list as information without changing the original entry;

(4) Ensure that each amendment to the list uniquely identifies the person making the amendment; and

(5) Ensure that the system employed for data storage permits reasonable access and retrieval of the information which can be easily produced in an electronic or printed format that can be:

(i) Provided to FRA representatives in a timely manner; and

(ii) Authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by an FRA representative.

(d) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on the list required by this section; or

(2) Otherwise falsify such list through material misstatement, omission, or mutilation.

§ 245.207 Certificate requirements.

(a) Each person who becomes a certified dispatcher in accordance with this part shall be issued a paper or electronic certificate that must:

(1) Identify the railroad that is issuing the certificate;

(2) Indicate that it is a dispatcher certificate;

(3) Provide the following information about the certified person:

(i) Name;

(ii) Employee identification number;

(iii) Year of birth; and

(iv) Either a physical description or photograph of the person;

(4) Identify any conditions or limitations, including conditions to ameliorate vision or hearing acuity deficiencies, that restrict, limit, or alter the person's abilities to work as a dispatcher;

(5) Show the effective date of the certification;

(6) Show the expiration date of the certification except as provided for in paragraph (b) of this section;

(7) Be signed by an individual designated in accordance with paragraph (c) of this section; and

(8) Be electronic or be of sufficiently small size to permit being carried in an ordinary pocket wallet.

(b) A certificate does not need to include an expiration date, as required under paragraph (a)(6) of this section, if the person was designated as a certified dispatcher under § 245.105(c) or (d).

(c) Each railroad shall designate in writing any person it authorizes to sign the certificates described in this section. The designation shall identify such persons by name or job title.

(d) Nothing in this section shall prohibit any railroad from including additional information on the certificate or supplementing the certificate through other documents.

(e) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on a certificate; or

(2) Otherwise falsify a certificate through material misstatement, omission, or mutilation.

(f) Except as provided for in paragraph (h) of this section, each certified dispatcher shall:

(1) Have their certificate in their possession while on duty as a dispatcher; and

(2) Display their certificate upon a request from:

(i) An FRA representative;

(ii) A state inspector authorized under part 212 of this chapter;

(iii) An officer of the issuing railroad; or

(iv) An officer of the dispatcher's employer if the dispatcher is not employed by the issuing railroad.

(g) If a dispatcher's certificate is lost, stolen, or mutilated, the railroad shall promptly replace the certificate at no cost to the dispatcher.

(h) A certified dispatcher is exempt from the requirements of paragraph (f) of this section if:

(1) The railroad made its certification or recertification decision within the last 30 days and the dispatcher has not yet received their certificate; or

(2) The dispatcher's certificate was lost, stolen, or mutilated, and the railroad has not yet issued a replacement certificate to the dispatcher.

(i) Any dispatcher who is notified or called to serve as a dispatcher and such service would cause the dispatcher to exceed certificate limitations, set forth in accordance with subpart B of this part, shall immediately notify the railroad that they are not authorized to perform that anticipated service and it shall be unlawful for the railroad to require such service.

(j) Nothing in this section shall be deemed to alter a certified dispatcher's duty to comply with other provisions of this chapter concerning railroad safety.

§ 245.213 Multiple certifications.

(a) A person who holds a dispatcher certificate may also be certified in other crafts, such as a locomotive engineer or conductor.

(b) A railroad that issues multiple certificates to a person, shall, to the extent possible, coordinate the expiration date of those certificates.

(c)(1) A person who holds a current dispatcher certificate from more than one railroad shall immediately notify the other certifying railroad(s) if they are denied dispatcher certification or recertification under § 245.301 by another railroad or has their dispatcher certification suspended or revoked under § 245.307 by another railroad.

(2) If a person has their dispatcher certification suspended or revoked by a railroad under § 245.307, they may not work as a dispatcher for any other railroad during the period that their certification is suspended or revoked.

(3) If a person has their dispatcher certification suspended or revoked by a railroad under § 245.307, they must notify any railroad that they are seeking certification from that their dispatcher certification is currently suspended or revoked by another railroad.

(d) Paragraphs (d)(1) through (4) apply to people who are currently certified as a dispatcher and also currently certified in another craft, such as a locomotive engineer or conductor:

(1) If a person's dispatcher certification is revoked under § 245.307 for a violation of § 245.303(e)(8), they may not work in another certified craft, such as a locomotive engineer or conductor, for any railroad during the period of revocation.

(2) If a person's dispatcher certification is revoked under § 245.307 for a violation of § 245.303(e)(1) through (7), they may work in another certified craft, such as a locomotive engineer or conductor, during the period of revocation.

(3) If any of a person's non-dispatcher certifications are revoked for failure to comply with § 219.101 of this chapter, they may not work as a dispatcher for any railroad during the period of revocation.

(4) If any of a person's non-dispatcher certifications are revoked for any reason other than a failure to comply with § 219.101 of this chapter, they may work as a dispatcher during the period of revocation.

(e) A person who has had their dispatcher certification revoked for failure to comply with § 219.101 of this chapter, may not obtain any other certification pursuant to this chapter from any railroad during the period of revocation.

(f) A person who has had any of their non-dispatcher certifications revoked for failure to comply with § 219.101 of this chapter, may not obtain a dispatcher certificate pursuant to this part from any railroad during the period of revocation.

(g) A railroad that denies a person dispatcher certification or recertification under § 245.301 shall not, solely on the basis of that denial, deny or revoke that person's non-dispatcher certifications or recertifications.

(h) A railroad that denies a person any non-dispatcher certification pursuant to this chapter shall not, solely on the basis of that denial, deny or revoke that person's dispatcher certification or recertification.

(i) In lieu of issuing multiple certificates, a railroad may issue one certificate to a person who is certified in multiple crafts as long as the single certificate complies with all of the certificate requirements for those crafts.

(j) A person who is certified in multiple crafts and who is involved in a revocable event, as described in this chapter, may only have one certificate revoked for that event. The determination by the railroad as to which certificate to revoke must be based on the work the person was performing at the time the revocable event occurred.

§ 245.215 Railroad oversight responsibilities.

(a) No later than March 31 of each year (beginning in calendar year [DATE THREE YEARS AFTER EFFECTIVE DATE OF FINAL RULE], each Class I railroad (including the National Railroad Passenger Corporation), each railroad providing commuter service, and each Class II railroad shall conduct a formal annual review and analysis concerning the administration of its program for responding to detected instances of poor safety conduct by certified dispatchers during the prior calendar year.

(b) Each review and analysis shall involve:

(1) The number and nature of the instances of detected poor safety conduct including the nature of the remedial action taken in response thereto;

(2) The number and nature of FRA reported train accidents attributed to poor safety performance by dispatchers; and

(3) The number and type of operational monitoring test failures recorded by railroad officers who meet the requirements of § 217.9(b)(1) of this chapter.

(c) Based on that review and analysis, each railroad shall determine what action(s) it will take to improve the safety of railroad operations to reduce or eliminate future incidents of that nature.

(d) If requested in writing by FRA, the railroad shall provide a report of the findings and conclusions reached during such annual review and analysis effort.

(e) For reporting purposes, information about the nature of detected poor safety conduct shall be capable of segregation for study and evaluation purposes into the following categories:

(1) Incidents involving failure to provide proper protection of a reported inoperable or malfunctioning highway-rail grade crossing.

(2) Incidents involving granting permission for a train or on-track equipment to enter into an out-of-service or blue flag protected track.

(3) Incidents involving granting permission for a train or on-track equipment to enter into established RWIC limits without authority or permission from the RWIC.

(4) Incidents involving removal of blocking devices or established protection of RWIC working limits prior to the RWIC releasing the limits.

(5) Incidents involving failure to properly apply blocking devices or failure to establish proper protection for specified working limits or movements of trains or on-track equipment.

(6) Incidents involving failure to properly issue or apply mandatory directives when warranted.

(7) Incidents involving granting permission for a train to enter Positive Train Control (PTC) or Cab Signal limits with inoperative or malfunctioning PTC or Cab Signal equipment without proper approval.

(8) Incidents involving noncompliance with part 219 of this chapter.

(f) For reporting purposes, each category of detected poor safety conduct identified in paragraph (e) of this section shall be capable of being annotated to reflect the following:

(1) The total number of incidents in that category;

(2) The number of incidents within that total which reflect incidents requiring an FRA accident/incident report under part 225 of this chapter; and

(3) The number of incidents within that total which were detected as a result of a scheduled operational monitoring effort.

(g) For reporting purposes, each instance of detected poor safety conduct identified in paragraph (b) of this section shall be capable of being annotated to reflect the following:

(1) The nature of the remedial action taken, and the number of events subdivided, so as to reflect which of the following actions was selected:

(i) Imposition of informal discipline;

(ii) Imposition of formal discipline;

(iii) Provision of informal training; or

(iv) Provision of formal training; and

(2) If the nature of the remedial action taken was formal discipline, the number of events further subdivided so as to reflect which of the following punishments was imposed by the railroad:

(i) The person was withheld from service;

(ii) The person was dismissed from employment; or

(iii) The person was issued demerits. If more than one form of punishment was imposed, only the punishment deemed the most severe shall be shown.

(h) For reporting purposes, each instance of detected poor safety conduct identified in paragraph (b) of this section which resulted in the imposition of formal or informal discipline shall be annotated to reflect the following:

(1) The number of instances in which the railroad's internal appeals process reduced the punishment initially imposed at the conclusion of its hearing; and

(2) The number of instances in which the punishment imposed by the railroad was reduced by any of the following entities: The National Railroad Adjustment Board, a Public Law Board, a Special Board of Adjustment, or other body for the resolution of disputes duly constituted under the provisions of the Railway Labor Act.

(i) For reporting purposes, an instance of poor safety conduct involving a person who is a certified dispatcher and is certified in another craft, such as a locomotive engineer or conductor, need only be reported once (*e.g.,* either under this section or § 240.309 or § 242.215 of this chapter). The determination as to where to report the instance of poor safety conduct should be based on the work the person was performing at the time the conduct occurred.

Subpart D—Denial and Revocation of Certification

§ 245.301 Process for denying certification.

(a) A railroad shall notify a candidate for certification or recertification of information known to the railroad that forms the basis for denying the person certification and provide the person a reasonable opportunity to explain or rebut that adverse information in

writing prior to denying certification. A railroad shall provide the dispatcher candidate with any documents or records, including written statements, related to failure to meet a requirement of this part which support its pending denial decision.

(b) If a railroad denies a person certification or recertification, it shall issue a decision that complies with all of the following requirements:

(1) It must be in writing.

(2) It must explain the basis for the railroad's denial decision.

(3) It must address any explanation or rebuttal information that the certification candidate provided pursuant to paragraph (a) of this section.

(4) It must include the date of the railroad's decision.

(5) It must be served on the candidate no later than 10 days after the railroad's decision.

(c) A railroad shall not deny the person's certification for failing to comply with a railroad operating rule or practice which constitutes a violation under § 245.303(e)(1) through (7) if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the dispatcher's ability to comply with that railroad operating rule or practice.

§ 245.303 Criteria for revoking certification.

(a) It shall be unlawful to fail to comply with any of the railroad rules or practices described in paragraph (e) of this section.

(b) A certified dispatcher who has demonstrated a failure to comply with a railroad rule or practice described in paragraph (e) of this section shall have their certification revoked.

(c) A certified dispatcher who is monitoring, piloting, or instructing a dispatcher and fails to take appropriate action to prevent a violation of a railroad rule or practice described in paragraph (e) of this section shall have their certification revoked. Appropriate action does not mean that a supervisor, pilot, or instructor must prevent a violation from occurring at all costs; the duty may be met by warning the dispatcher of a potential or foreseeable violation.

(d) A certified dispatcher who is called by a railroad to perform a duty other than that of a dispatcher shall not have their dispatcher certification revoked based on actions taken or not taken while performing that duty except for violations described in paragraph (e)(8) of this section.

(e) When determining whether to revoke a dispatcher's certification, a railroad shall only consider violations of its operating rules or practices that involve:

(1) Failure to provide proper protection of a reported inoperable or malfunctioning highway-rail grade crossing.

(2) Granting permission for a train or on-track equipment to enter into an out-of-service or blue flag protected track.

(3) Granting permission for a train or on-track equipment to enter into established RWIC limits without authority or permission from the RWIC.

(4) Removal of blocking devices or established protection of RWIC working limits prior to the RWIC releasing the limits.

(5) Failure to properly apply blocking devices or establish proper protection for specified working limits or movements of trains or on-track equipment.

(6) Failure to properly issue or apply mandatory directives when warranted.

(7) Granting permission, without prior approval, for a train to enter Positive Train Control (PTC) or Cab Signal limits with inoperative or malfunctioning PTC or Cab Signal equipment.

(8) Failure to comply with § 219.101 of this chapter. However, such incidents shall be considered as a violation only for the purposes of § 245.305(a)(2) and (b).

(f) In making the determination as to whether to revoke a dispatcher's certification, a railroad shall only consider conduct described in paragraphs (e)(1) through (7) of this section that occurred within the three years prior to the determination.

(g) If in any single incident the person's conduct contravened more than one operating rule or practice, that event shall be treated as a single violation for the purposes of this section.

(h) A violation of one or more operating rules or practices described in paragraphs (e)(1) through (7) of this section that occurs during a properly conducted operational compliance test subject to the provisions of this chapter shall be counted in determining the periods of ineligibility described in § 245.305.

(i) An operational test that is not conducted in compliance with this part, a railroad's operating rules, or a railroad's program under § 217.9 of this chapter, will not be considered a legitimate test of operational skill or knowledge, and will not be considered for revocation purposes.

(j) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.305 Periods of ineligibility.

(a) The starting date for a period of ineligibility described in this section shall be:

(1) For a person not currently certified, the date of the railroad's written determination that the most recent incident has occurred; or

(2) For a person currently certified, the date of the railroad's notification to the person that recertification has been denied or certification has been suspended.

(b) A period of ineligibility shall be determined according to the following standards:

(1) In the case of a single incident involving a violation of one or more of the operating rules or practices described in § 245.303(e)(1) through (7), the person shall have their certificate revoked for a period of 30 calendar days.

(2) In the case of two separate incidents involving a violation of one or more of the operating rules or practices described in § 245.303(e)(1) through (7), that occurred within 24 months of each other, the person shall have their certificate revoked for a period of 6 months.

(3) In the case of three separate incidents involving violations of one or more of the operating rules or practices, described in § 245.303(e)(1) through (8), that occurred within 36 months of each other, the person shall have their certificate revoked for a period of 1 year.

(4) In the case of four separate incidents involving violations of one or more of the operating rules or practices, described in § 245.303(e)(1) through (8), that occurred within 36 months of each other, the person shall have their certificate revoked for a period of 3 years.

(5) Where, based on the occurrence of violations described in § 245.303(e)(8), different periods of ineligibility may result under the provisions of this section and § 245.115, the longest period of revocation shall control.

(c) Any or all periods of revocation provided in paragraph (b) of this section may consist of training.

(d) A person whose certification is denied or revoked shall be eligible for grant or reinstatement of the certificate prior to the expiration of the initial period of ineligibility only if:

(1) The denial or revocation of certification in accordance with the

provisions of paragraph (b) of this section is for a period of one year or less;

(2) Certification is denied or revoked for reasons other than noncompliance with § 219.101 of this chapter;

(3) The person is evaluated by a railroad officer and determined to have received adequate remedial training;

(4) The person successfully completes any mandatory program of training or retraining, if that is determined to be necessary by the railroad prior to return to service; and

(5) At least one half the pertinent period of ineligibility specified in paragraph (b) of this section has elapsed.

§ 245.307 Process for revoking certification.

(a) If a railroad determines that a dispatcher, who is currently certified by the railroad, has violated a railroad operating rule or practice described in § 245.303(e), the railroad shall revoke the dispatcher's certification in accordance with the procedures and requirements of this section.

(b) Except as providing for in § 245.115(f), if a railroad acquires reliable information that a dispatcher, who is currently certified by the railroad, has violated a railroad operating rule or practice described in §§ 245.303(e) or 245.115(d), the railroad shall undergo the following process to determine whether revocation of the dispatcher's certification is warranted:

(1) The dispatcher's certification shall be suspended immediately.

(2) Prior to or upon suspending the dispatcher's certification, the railroad shall provide the dispatcher with notice of: the reason for the suspension; the pending revocation; and an opportunity for a hearing before a presiding officer other than the investigating officer. This notice may initially be given either orally or in writing. If given orally, the notice must be subsequently confirmed in writing in a manner that conforms with the notification provisions of the applicable collective bargaining agreement. If there is no applicable collective bargaining agreement notification provision, the written notice must be made within four days of the date the certification was suspended.

(3) The railroad must convene the hearing within the time frame required under the applicable collective bargaining agreement. If there is no applicable collective bargaining agreement or the applicable collective bargaining agreement does not include such a requirement, the hearing shall be convened within 10 days of the date the certification is suspended unless the dispatcher requests or consents to a delay to the start of the hearing.

(4) No later than the start of the hearing, the railroad shall provide the dispatcher with a copy of the written information and a list of witnesses the railroad will present at the hearing. If this information was provided just prior to the start of the hearing and the dispatcher requests a recess to the start of the hearing, such request must be granted. If this information was provided by an employee of the railroad, the railroad shall make that employee available for examination during the hearing.

(5) Following the hearing, the railroad must determine, based on the record of the hearing, whether revocation of the certification is warranted. The railroad shall have the burden of proving that revocation of the dispatcher's certification is warranted under § 245.303.

(6) If the railroad determines that revocation of the dispatcher's certification is warranted, the railroad shall impose the proper period of revocation provided for in § 245.305 or § 245.115.

(7) The railroad shall retain the record of the hearing for three years after the date the decision is rendered.

(c) A hearing required by this section which is conducted in a manner that conforms procedurally to the applicable collective bargaining agreement shall satisfy the procedural requirements of this section.

(d) Except as provided for in paragraph (c) of this section, a hearing required under this section shall be conducted in accordance with the following procedures:

(1) The hearing shall be conducted by a presiding officer who can be any proficient person authorized by the railroad other than the investigating officer.

(2) The presiding officer shall convene and preside over the hearing and exercise the powers necessary to regulate the conduct of the hearing for the purpose of achieving a prompt and fair determination of all material issues in dispute.

(3) The presiding officer may:

(i) Adopt any needed procedures for the submission of evidence in written form;

(ii) Examine witnesses at the hearing; and

(iii) Take any other action authorized by or consistent with the provisions of this part and permitted by law that may assist in achieving a prompt and fair determination of all material issues in dispute.

(4) All relevant and probative evidence shall be received into the record unless the presiding officer determines the evidence to be unduly repetitive or have such minimal relevance that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

(5) Parties may appear at the hearing and be heard on their own behalf or through designated representatives. Parties may offer relevant evidence including testimony and may conduct such examination of witnesses as may be required for a full disclosure of the relevant facts.

(6) Testimony by witnesses at the hearing shall be recorded verbatim. Witnesses can testify in person, over the phone, or virtually.

(7) The record in the proceeding shall be closed at the conclusion of the hearing unless the presiding officer allows additional time for the submission of evidence.

(8) A hearing required under this section may be consolidated with any disciplinary action or other hearing arising from the same facts.

(9) A person may waive their right to a hearing. That waiver shall:

(i) Be in writing;

(ii) Reflect the fact that the person has knowledge and understanding of these rights and voluntarily surrenders them; and

(iii) Be signed by the person making the waiver.

(e) Except as provided for in paragraph (c) of this section, a decision, required by this section, on whether to revoke a dispatcher's certification shall comply with the following requirements:

(1) No later than 10 days after the close of the record, a railroad official, other than the investigating officer, shall prepare and sign a written decision as to whether the railroad is revoking the dispatcher's certification.

(2) The decision shall:

(i) Contain the findings of fact on all material issues as well as an explanation for those findings with citations to all applicable railroad operating rules and practices;

(ii) State whether the railroad official found that the dispatcher's certification should be revoked;

(iii) State the period of revocation under § 245.305 (if the railroad official concludes that the dispatcher's certification should be revoked); and

(iv) Be served on the employee and the employee's representative, if any, with the railroad retaining proof of service for three years after the date the decision is rendered.

(f) The period that a dispatcher's certification is suspended in accordance

with paragraph (b)(1) of this section shall be credited towards any period of revocation that the railroad assesses in accordance with § 245.305.

(g) A railroad shall revoke a dispatcher's certification if, during the period that certification is valid, the railroad acquires information which convinces it that another railroad has revoked the person's dispatcher certification in accordance with the provisions of this section. Such revocation shall end on the same date that the revocation period ends for the railroad that initially revoked the person's certification. The requirement to provide a hearing under this section is satisfied when any single railroad holds a hearing. No additional hearing is required prior to a revocation by more than one railroad arising from the same facts.

(h) A railroad shall not revoke a dispatcher's certification if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the dispatcher's ability to comply with the railroad operating rule or practice which constitutes a violation under § 245.303.

(i) A railroad may decide not to revoke a dispatcher's certification if sufficient evidence exists to establish that the violation of the railroad operating rule or practice described in § 245.303(e) was of a minimal nature and had no direct or potential effect on rail safety.

(j) If sufficient evidence meeting the criteria in paragraph (h) or (i) of this section becomes available, the railroad shall place the relevant information in the records maintained in compliance with:

(1) Section 245.215 for Class I railroads (including that National Railroad Passenger Corporation), railroads providing commuter service, and Class II railroads; and

(2) Section 245.203 for Class III railroads.

(k) If a railroad makes a good faith determination, after performing a reasonable inquiry, that the course of conduct provided for in paragraph (h) or (i) of this section is warranted, the railroad will not be in violation of paragraph (b)(1) of this section if it decides not to suspend the dispatcher's certification.

Subpart E—Dispute Resolution Procedures

§ 245.401 Review board established.

(a) Any person who has been denied certification, denied recertification, or has had their certification revoked and believes that a railroad incorrectly determined that they failed to meet the certification requirements of this part when making the decision to deny or revoke certification, may petition the Administrator to review the railroad's decision.

(b) The Administrator has delegated initial responsibility for adjudicating such disputes to the Certification Review Board (Board). The Board shall be composed of FRA employees.

§ 245.403 Petition requirements.

(a) To obtain review of a railroad's decision to deny certification, deny recertification, or revoke certification, a person shall file a petition for review that complies with this section.

(b) Each petition shall:

(1) Be in writing;

(2) Be filed no more than 120 days after the date the railroad's denial or revocation decision was served on the petitioner, except as provided for in paragraph (d) of this section;

(3) Be filed on *https://www.regulations.gov.*

(4) Include the following contact information for the petitioner and petitioner's representative (if petitioner is represented):

(i) Full name;

(ii) Daytime telephone number; and

(iii) Email address;

(5) Include the name of the railroad;

(6) Contain the facts that the petitioner believes constitute the improper action by the railroad and the arguments in support of the petition; and

(7) Include all written documents in the petitioner's possession or reasonably available to the petitioner that document the railroad's decision.

(c) If requested by the Board, the petitioner must provide a copy of the information under 49 CFR 40.329 that laboratories, medical review officers, and other service agents are required to release to employees. The petitioner must provide a written explanation in response to a Board request if written documents, that should be reasonably available to the petitioner, are not supplied.

(d) The Board may extend the petition filing period in its discretion provided that the petitioner provides good cause for the extension and:

(1) The request for an extension is filed before the expiration of the period provided for in paragraph (b)(2) of this section; or

(2) The failure to timely file was the result of excusable neglect.

(e) A party aggrieved by a Board decision to deny a petition as untimely or not in compliance with the requirements of this section may file an appeal with the Administrator in accordance with § 245.411.

§ 245.405 Processing certification review petitions.

(a) Each petition shall be acknowledged in writing by FRA. The acknowledgment shall be sent to the petitioner (if an email address is provided), petitioner's representative (if any), and the railroad. The acknowledgment shall contain the docket number assigned to the petition and will notify the parties where the petition can be accessed.

(b) Within 60 days from the date of the acknowledgment provided in paragraph (a) of this section, the railroad may submit to FRA any information that the railroad considers pertinent to the petition, and shall supplement the record with any relevant documents in its possession, such as hearing transcripts and exhibits, that were not submitted by the petitioner. Late filings will only be considered to the extent practicable. A railroad that submits such information shall:

(1) Identify the petitioner by name and the docket number for the petition;

(2) Provide the railroad's email address;

(3) Serve a copy of the information being submitted to the petitioner and petitioner's representative, if any; and

(4) Be filed on *https://www.regulations.gov.*

(c) The petition will be referred to the Board for a decision after a railroad's response is received or 60 days from the date of the acknowledgment provided in paragraph (a) of this section, whichever is earlier. Based on the record, the Board shall have the authority to grant, deny, dismiss, or remand the petition. If the Board finds that there is insufficient basis for granting or denying the petition, the Board may issue an order affording the parties an opportunity to provide additional information or argument consistent with its findings.

(d) When considering procedural issues, the Board will grant the petition if the petitioner shows:

(1) That a procedural error occurred; and

(2) The procedural error caused substantial harm to the petitioner.

(e) When considering factual issues, the Board will grant the petition if the petitioner shows that the railroad did not provide substantial evidence to support its decision.

(f) When considering legal issues, the Board will determine whether the railroad's legal interpretations are correct based on a *de novo* review.

(g) The Board will only consider whether the denial or revocation of

certification or recertification was improper under this part and will grant or deny the petition accordingly. The Board will not otherwise consider the propriety of a railroad's decision. For example,the Board will not consider whether the railroad properly applied its own more stringent requirements.

(h) The Board's written decision shall be served on the petitioner and/or petitioner's representative (if any), and the railroad.

§ 245.407 Request for a hearing.

(a) If adversely affected by the Board's decision, either the petitioner before the Board or the railroad involved shall have a right to an administrative proceeding as prescribed by § 245.409.

(b) To exercise that right, the adversely affected party shall file a written request for a hearing within 20 days of service of the Board's decision on that party. The request must be filed in the docket on *https://www.regulations.gov* that was used when the case was before the Board.

(c) A written request for a hearing must contain the following:

(1) The name, telephone number, and email address of the requesting party and the requesting party's designated representative (if any);

(2) The name, telephone number, and email address of the respondent;

(3) The docket number for the case while it was before the Board;

(4) The specific factual issues, industry rules, regulations, or laws that the requesting party alleges need to be examined in connection with the certification decision in question; and

(5) The signature of the requesting party or the requesting party's representative (if any).

(d) Upon receipt of a hearing request complying with paragraph (c) of this section, FRA shall arrange for the appointment of a presiding officer who shall schedule the hearing for the earliest practicable date.

(e) If a party fails to request a hearing within the period provided in paragraph (b) of this section, the Board's decision will constitute final agency action.

§ 245.409 Hearings.

(a) An administrative hearing for a dispatcher certification petition shall be conducted by a presiding officer, who can be any person authorized by the Administrator.

(b) The presiding officer shall convene and preside over the hearing. The hearing shall be a *de novo* hearing to find the relevant facts and determine the correct application of this part to those facts. The presiding officer may determine that there is no genuine issue covering some or all material facts and limit evidentiary proceedings to any issues of material fact as to which there is a genuine dispute.

(c) The presiding officer may exercise the powers of the Administrator to regulate the conduct of the hearing for the purpose of achieving a prompt and fair determination of all material issues in controversy.

(d) The presiding officer may authorize discovery of the types and quantities which in the presiding officer's discretion will contribute to a fair hearing without unduly burdening the parties. The presiding officer may impose appropriate non-monetary sanctions, including limitations as to the presentation of evidence and issues, for any party's willful failure or refusal to comply with approved discovery requests.

(e) Every petition, motion, response, or other authorized or required document shall be signed by the party filing the same, or by a duly authorized officer or representative of record, or by any other person. If signed by such other person, the reason therefor must be stated and the power of attorney or other authority authorizing such other person to subscribe the document must be filed with the document. The signature of the person subscribing any document constitutes a certification that they have read the document; that to the best of their knowledge, information, and belief every statement contained in the document is true and no such statements are misleading; and that it is not interposed for delay or to be vexatious.

(f) After the request for a hearing is filed, all documents filed or served upon one party must be served upon all parties. Each party may designate a person upon whom service is to be made when not specified by law, regulation, or directive of the presiding officer. If a party does not designate a person upon whom service is to be made, then service may be made upon any person having subscribed to a submission of the party being served, unless otherwise specified by law, regulation, or directive of the presiding officer. Proof of service shall accompany all documents when they are tendered for filing.

(g) If any document initiating, filed in, or served in, a proceeding is not in substantial compliance with the applicable law, regulation, or directive of the presiding officer, the presiding officer may strike or dismiss all or part of such document, or require its amendment.

(h) Any party to a proceeding may appear and be heard in person or by an authorized representative.

(i) Any person testifying at a hearing or deposition may be accompanied, represented, and advised by an attorney or other representative, and may be examined by that person.

(j) Any party may request to consolidate or separate the hearing of two or more petitions by motion to the presiding officer, when they arise from the same or similar facts or when the matters are for any reason deemed more efficiently heard together.

(k) Except as provided in § 245.407(e) and paragraph (s)(4) of this section, whenever a party has the right or is required to take action within a period prescribed by this part, or by law, regulation, or directive of the presiding officer, the presiding officer may extend such period, with or without notice, for good cause, provided another party is not substantially prejudiced by such extension. A request to extend a period which has already expired may be denied as untimely.

(l) An application to the presiding officer for an order or ruling not otherwise specifically provided for in this part shall be by motion. The motion shall be filed with the presiding officer and, if written, served upon all parties. All motions, unless made during the hearing, shall be written. Motions made during hearings may be made orally on the record, except that the presiding officer may direct that any oral motion be reduced to writing. Any motion shall state with particularity the grounds therefor and the relief or order sought and shall be accompanied by any affidavits or other evidence desired to be relied upon which is not already part of the record. Any matter submitted in response to a written motion must be filed and served within 14 days of the motion, or within such other period as directed by the presiding officer.

(m) Testimony by witnesses at the hearing shall be given under oath and the hearing shall be recorded verbatim. The presiding officer shall give the parties to the proceeding adequate opportunity during the course of the hearing for the presentation of arguments in support of or in opposition to motions, and objections and exceptions to rulings of the presiding officer. The presiding officer may permit oral argument on any issues for which the presiding officer deems it appropriate and beneficial. Any evidence or argument received or proffered orally shall be transcribed and made a part of the record. Any physical evidence or written argument received or proffered shall be made a part of the

record, except that the presiding officer may authorize the substitution of copies, photographs, or descriptions, when deemed to be appropriate.

(n) The presiding officer shall employ the Federal Rules of Evidence for United States Courts and Magistrates as general guidelines for the introduction of evidence. Notwithstanding paragraph (m) of this section, all relevant and probative evidence shall be received unless the presiding officer determines the evidence to be unduly repetitive or so extensive and lacking in relevancy that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

(o) The presiding officer may:

(1) Administer oaths and affirmations;

(2) Issue subpoenas as provided for in § 209.7 of this chapter;

(3) Adopt any needed procedures for the submission of evidence in written form;

(4) Examine witnesses at the hearing;

(5) Convene, recess, adjourn, or otherwise regulate the course of the hearing; and

(6) Take any other action authorized by or consistent with the provisions of this part and permitted by law that may expedite the hearing or aid in the disposition of the proceeding.

(p) The petitioner before the Board, the railroad involved in taking the certification action, and FRA shall be parties at the hearing. All parties may participate in the hearing and may appear and be heard on their own behalf or through designated representatives. All parties may offer relevant evidence, including testimony, and may conduct such cross-examination of witnesses as may be required to make a record of the relevant facts.

(q) The party requesting the administrative hearing shall be the ''hearing petitioner.'' The party that the Board issued its decision in favor of will be a respondent. At the start of each proceeding, FRA will be a respondent as well. The hearing petitioner shall have the burden of proving its case by a preponderance of the evidence.

(r) The record in the proceeding shall be closed at the conclusion of the evidentiary hearing unless the presiding officer allows additional time for the submission of additional evidence. In such instances the record shall be left open for such time as the presiding officer grants for that purpose.

(s) At the close of the record, the presiding officer shall prepare a written decision in the proceeding. The decision:

(1) Shall contain the findings of fact and conclusions of law, as well as the basis for each, concerning all material issues of fact or law presented on the record;

(2) Shall be served on all parties to the proceeding;

(3) Shall not become final for 35 days after issuance;

(4) Constitutes final agency action unless an aggrieved party files an appeal within 35 days after issuance; and

(5) Is not precedential.

§ 245.411 Appeals.

(a) Any party aggrieved by the presiding officer's decision may file an appeal in the presiding officer's docket. The appeal must be filed within 35 days of issuance of the decision. A copy of the appeal shall be served on each party. The appeal shall set forth objections to the presiding officer's decision, supported by reference to applicable laws and regulations and with specific reference to the record. If no appeal is timely filed, the presiding officer's decision constitutes final agency action.

(b) A party may file a reply to the appeal within 25 days of service of the appeal. The reply shall be supported by reference to applicable laws and regulations and with specific reference to the record, if the party relies on evidence contained in the record.

(c) The Administrator may extend the period for filing an appeal or a response for good cause shown, provided that the written request for extension is served before expiration of the applicable period provided in this section.

(d) The Administrator has sole discretion to permit oral argument on the appeal. On the Administrator's own initiative or written motion by any party, the Administrator may grant the parties an opportunity for oral argument.

(e) The Administrator may remand, vacate, affirm, reverse, alter, or modify the decision of the presiding officer and the Administrator's decision constitutes final agency action except where the terms of the Administrator's decision (for example, remanding a case to the presiding officer) show that the parties' administrative remedies have not been exhausted.

(f) An appeal from a Board decision pursuant to § 245.403(e) must be filed in the Board's docket within 35 days of issuance of the decision. A copy of the appeal shall be served on each party. The Administrator may affirm or vacate the Board's decision, and may remand the petition to the Board for further proceedings. An Administrator's decision to affirm the Board's decision constitutes final agency action.

Appendix A to Part 245—Procedures for Obtaining and Evaluating Motor Vehicle Driving Record Data

(1) The purpose of this appendix is to outline the procedures available to individuals and railroads for complying with the proposed requirements of § 245.111 of this chapter. This provision requires that railroads consider the motor vehicle driving record of each person prior to issuing him or her certification or recertification as a dispatcher.

(2) To fulfill that obligation, a railroad is required to review a certification candidate's recent motor vehicle driving record. Generally, that will be a single record on file with the State agency that issued the candidate's current motor vehicle driver's license. However, a motor vehicle driving record can include multiple documents if the candidate has been issued a motor vehicle driver's license by more than one State agency or a foreign country.

Access to State Motor Vehicle Driving Record Data

(3) The right of railroad workers, their employers, or prospective employers to have access to a State motor vehicle licensing agency's data concerning an individual's driving record is controlled by state law. Although many States have mechanisms through which employers and prospective employers, such as railroads, can obtain such data, there are some states where privacy concerns make such access very difficult or impossible. Since individuals are generally entitled to obtain access to their driving record data that will be relied on by a State motor vehicle licensing agency when that agency is taking action concerning their driving privileges, FRA places the responsibility on individuals who want to serve as dispatchers to request that their current state motor vehicle licensing agency (or agencies) furnish such data directly to the railroad that is considering certification (or recertification) of the individual as a dispatcher. Depending on the procedures established by the state motor vehicle licensing agency, the individual may be asked to send the State agency a brief letter requesting such action or to execute a state agency form that accomplishes the same effect. Requests for an individual's motor vehicle driving record normally involve payment of a nominal fee established by the State agency as well. In rare instances, when a certification (or recertification) candidate has been issued multiple licenses, an individual may be required to submit multiple requests.

(4) Once the railroad has obtained the individual's motor vehicle driving record(s), the railroad is required to afford the certification (or recertification) candidate an opportunity to review and comment on the record(s) in writing pursuant to § 245.301. The railroad is also required to provide this review opportunity before the railroad renders a decision based on information in the record(s). The railroad is required to evaluate the information in the certification (or recertification) candidate's motor vehicle driving record(s) pursuant to the provisions of this part.

Appendix B to Part 245—Medical Standards Guidelines

(1) The purpose of this appendix is to provide greater guidance on the procedures that should be employed in administering the vision and hearing requirements of §§ 245.117 and 245.118.

(2) For any examination performed to determine whether a person meets the vision acuity requirements in § 245.117, it is recommended that such examination be performed by a licensed optometrist or a technician who reports to a licensed optometrist. It is also recommended that any test conducted pursuant to § 245.117 be performed according to any directions supplied by the test's manufacturer and any ANSI standards that are applicable.

(3) For any examination performed to determine whether a person meets the hearing acuity requirements in § 245.118, it is recommended that such examination be performed by a licensed or certified audiologist or a technician who reports to a licensed or certified audiologist. It is also recommended that any test conducted pursuant to § 245.118 be performed according to any directions supplied by the test's manufacturer and any ANSI standards that are applicable.

(4) In determining whether a person has the visual acuity that meets or exceeds the requirements of this part, the following testing protocols are deemed acceptable testing methods for determining whether a person has the ability to recognize and distinguish among the colors used as signals in the railroad industry. The acceptable test methods are shown in the left-hand column and the criteria that should be employed to determine whether a person has failed the particular testing protocol are shown in the right-hand column.

TABLE 1 TO APPENDIX B OF PART 245

Accepted tests	Failure criteria
Pseudoisochromatic Plate Tests	
American Optical Company 1965	5 or more errors on plates 1–15.
AOC—Hardy-Rand-Ritter plates—second edition	Any error on plates 1–6 (plates 1–4 are for demonstration—test plate 1 is actually plate 5 in book).
Dvorine—Second edition	3 or more errors on plates 1–15.
Ishihara (14 plate)	2 or more errors on plates 1–11.
Ishihara (16 plate)	2 or more errors on plates 1–8.
Ishihara (24 plate)	3 or more errors on plates 1–15.
Ishihara (38 plate)	4 or more errors on plates 1–21.
Richmond Plates 1983	5 or more errors on plates 1–15.
Multifunction Vision Tester	
Keystone Orthoscope	Any error.
OPTEC 2000	Any error.
Titmus Vision Tester	Any error.
Titmus II Vision Tester	Any error.

(5) In administering any of these protocols, the person conducting the examination should be aware that railroad signals do not always occur in the same sequence and that ‘‘yellow signals’’ do not always appear to be the same. It is not acceptable to use ‘‘yarn’’ or other materials to conduct a simple test to determine whether the certification candidate has the requisite vision. No person shall be allowed to wear chromatic lenses during an initial test of the person's color vision; the initial test is one conducted in accordance with one of the accepted tests in the chart and § 245.117(c)(3).

(6) An examinee who fails to meet the criteria in the chart may be further evaluated as determined by the railroad's medical examiner. Ophthalmologic referral, field testing, or other practical color testing may be utilized depending on the experience of the examinee. The railroad's medical examiner will review all pertinent information and, under some circumstances, may restrict an examinee who does not meet the criteria for serving as a dispatcher. The intent of §§ 245.117(d) and 245.118(d) is not to provide an examinee with the right to make an infinite number of requests for further evaluation, but to provide an examinee with at least one opportunity to prove that a hearing or vision test failure does not mean the examinee cannot safely perform as a dispatcher. Appropriate further medical evaluation could include providing another approved scientific screening test or a field test. All railroads should retain the discretion to limit the number of retests that an examinee can request, but any cap placed on the number of retests should not limit retesting when changed circumstances would make such retesting appropriate. Changed circumstances would most likely occur if the examinee's medical condition has improved in some way or if technology has advanced to the extent that it arguably could compensate for a hearing or vision deficiency.

(7) Dispatchers who wear contact lenses should have good tolerance to the lenses and should be instructed to have a pair of corrective glasses available when on duty.

Issued in Washington, DC.

Amitabha Bose,

Administrator.

Certification of Signal Employees; Proposed Rule

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

49 CFR Part 246

[Docket No. FRA–2022–0020, Notice No. 1]

RIN 2130–AC92

Certification of Signal Employees

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: FRA proposes regulations for the certification of signal employees, pursuant to the authority granted in section 402 of the Rail Safety Improvement Act of 2008.

DATES: Comments on the proposed rule must be received by July 31, 2023. FRA will consider comments received after that date to the extent practicable.

ADDRESSES: *Comments:* Comments related to Docket No. FRA–2022–0020 may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name, docket number (FRA–2022–0020), and Regulatory Identification Number (RIN) for this rulemaking (2130–AC92). All comments received will be posted without change to *https://www.regulations.gov;* this includes any personal information. Please see the Privacy Act heading in the **SUPPLEMENTARY INFORMATION** section of this document for Privacy Act information related to any submitted comments or materials.

Docket: For access to the docket to read background documents or comments received, go to *https://www.regulations.gov* and follow the online instructions for accessing the docket.

FOR FURTHER INFORMATION CONTACT: Gabe Neal, Staff Director, Signal, Train Control, and Crossings Division, U.S. Department of Transportation, Federal Railroad Administration, telephone: (816) 516–7168, email: *Gabe.Neal@dot.gov;* or Kathryn Gresham, Attorney Adviser, U.S. Department of Transportation, Federal Railroad Administration, telephone: (202) 577–7142, email: *kathryn.gresham@dot.gov.*

I. Executive Summary

Purpose of the Regulatory Action

FRA proposes to require railroads to develop programs for the certification of signal employees and to submit those written certification programs to FRA for approval prior to implementation. Signal employees are responsible for the installation, testing, troubleshooting, repair, and maintenance of railroad signal systems which, for purposes of this proposed rule, include highway-rail and pathway grade crossing warning systems, unusual contingency detection devices, broken rail detection systems, power-assisted switches, and switch point indicators.

Under this proposed rule, railroads would be required to verify and document that each signal employee [1] has the requisite knowledge, skills, safety record, and abilities to safely perform all of the safety-related signal employee duties mandated by Federal laws and regulations, prior to certification. In addition, railroads would be required to have formal processes for revoking certification (either temporarily or permanently) for signal employees who violate specified minimum requirements.

FRA is proposing this regulation in response to the Rail Safety Improvement Act of 2008 (RSIA), which required the Secretary of Transportation (Secretary) to submit a report to Congress addressing whether certification of ''certain crafts or classes'' of railroad employees or contractors, including signal employees, was necessary to ''reduce the number and rate of accidents and incidents or to improve railroad safety.'' If the Secretary determined it was necessary to require the certification of certain crafts or classes to improve railroad safety, section 402 of the RSIA authorized the Secretary to prescribe such regulations.

The Secretary submitted a report to Congress on November 4, 2015,[2] stating that, based on FRA's preliminary research, signal employees were one of the most viable candidate railroad crafts for certification, particularly with the introduction of Positive Train Control (PTC) technology. Given the safety critical role of signal employees in facilitating safe railroad operations, FRA determined that railroad safety is expected to be improved if signal employees were required to satisfy certain standards and be certified by each railroad whose signal systems they install, troubleshoot, repair, test, or maintain.

Summary of Major Provisions

This proposed rule would require railroads to develop written programs for certifying individuals who work as signal employees on their territories and to submit those written certification programs to FRA for approval prior to implementation. FRA would issue a letter to the railroad when it approves a certification program that explains the basis for approval and a program would not be considered approved until the approval letter is issued.

FRA is proposing to require Class I railroads (including the National Railroad Passenger Corporation), and railroads providing commuter service, to submit their written certification programs to FRA no later than eight (8) months after the final rule effective date. Class II and Class III railroads would be

[1] Although ''signal employees'' are also referred to as ''signalmen,'' those terms are synonymous.

[2] A copy of this November 4, 2015 Report to Congress has been posted in the rulemaking docket at: *https://www.regulations.gov/document/FRA-2022-0020-0001.*

required to submit their written certification plans sixteen (16) months after the final rule effective date. New railroads that begin operation after the final rule effective date would be required to submit their written certification programs to FRA and obtain FRA approval before installing their signal systems and commencing operations. In addition, railroads seeking to materially modify their FRA-approved certification programs would be required to obtain FRA approval prior to modifying their programs.

Railroads would be required to evaluate certification candidates in multiple areas, including prior safety conduct as a motor vehicle operator, prior safety conduct with other railroads, substance abuse disorders and alcohol/drug rules compliance, and vision and hearing acuity.

The proposed rule also contains minimum requirements for the training provided to candidates for signal employee certification. These proposed requirements are intended to ensure signal employees receive sufficient training before they are certified to work on signal systems. These proposed requirements are also intended to ensure that certified signal employees periodically receive recurring training on railroad signal system standards, test procedures, operating rules and procedures, and orders governing the installation, operation, testing, troubleshooting, repair, and maintenance of railroad signal systems, as well as comprehensive training on new signal systems and technology before they are introduced on the railroads where they work.

With the exception of individuals designated as certified signal employees prior to FRA approval of the railroad's signal employee certification program, the proposed rule would prohibit railroads from certifying signal employees for intervals longer than three (3) years. This three-year limitation, which would be consistent with the 36-month maximum period for certifying locomotive engineers in 49 CFR 240.217(c) and the 36-month maximum period for certifying conductors in 49 CFR 240.201(c), would allow for periodic re-evaluation of certified signal employees to verify their continued compliance with FRA's minimum safety requirements.

Subpart D of this proposed rule addresses the process and criteria for denying and revoking certification. Proposed § 246.301 describes the process a railroad would be required to undergo before it denies an individual certification or recertification. This process would include providing the certification candidate with the information that forms the basis for the denial decision and giving the candidate an opportunity to rebut such evidence. When a railroad denies an individual certification or recertification, it must issue its decision in writing and the decision must comply with certain requirements provided in the proposed rule.

A railroad could only revoke a signal employee's certification if one of eleven events occurs. Generally, for the first revocable event that is not related to a signal employee's use of drugs or alcohol, the individual's certification would be revoked for 30 days. If an individual accumulates more of these violations in a given time period, the revocation period (period of ineligibility) would become increasingly longer.

If a railroad acquires reliable information that a certified signal employee has violated an operating rule or practice requiring decertification under the proposed rule, it must suspend the signal employee's certification immediately while it determines whether certification revocation is warranted. In such circumstances, signal employees would be entitled to a hearing. Similar to a railroad's decision to deny an individual certification, a railroad's decision to revoke a signal employee's certification would be required to comply with certain requirements. Finally, if an intervening cause prevented or materially impaired a signal employee's ability to comply with a railroad operating rule or practice, the railroad would not revoke the signal employee's certification.

Subpart E of this proposed rule discusses the dispute resolution process for individuals who wish to challenge a railroad's decision to deny certification, deny recertification, or revoke certification. This dispute resolution process mirrors the process used for locomotive engineers and conductors under 49 CFR parts 240 and 242, respectively.

Finally, the proposed rule contains two appendices. Appendix A discusses the procedures that a person seeking certification or recertification should follow to furnish a railroad with information concerning their motor vehicle driving record. Appendix B provides guidance on the procedures railroads should employ in administering the vision and hearing requirements under §§ 246.117 and 246.118.

Costs and Benefits

FRA analyzed the economic impact of this proposed rule. FRA estimated the costs estimated to be incurred by railroads and the Government. FRA also estimated the benefits of fewer signal employee-caused accidents.

FRA is proposing regulations establishing a formal certification process for railroad signal employees. As part of that process, railroads would be required to develop a program meeting specific requirements for training current and prospective signal employees, documenting and verifying that the holder of the certificate has achieved certain training and proficiency, and creating a comprehensive record, including of safety compliance infractions, that other railroads can review when considering individuals for certification.

This proposed regulation would ensure that signal employees are properly trained, are qualified to perform their duties, and meet Federal safety standards. Additionally, this proposed regulation is expected to improve railroad safety by reducing the rate of accidents/incidents.

FRA estimates the 10-year costs of the proposed rule to be $8.3 million, discounted at 7 percent. The estimated annualized costs would be $1.2 million discounted at 7 percent. The following table shows the total costs of this proposed rule, over the 10-year analysis period.

TOTAL 10-YEAR DISCOUNTED COSTS

[2020 dollars] [3]

Category	Present value 7% ($)	Present value 3% ($)	Annualized 7% ($)	Annualized 3% ($)
Development of Certification Program	1,140,385	1,168,920	162,365	137,033
Certification Eligibility Requirements	87,507	100,380	12,459	11,768
Recertification Eligibility Requirements	203,790	259,653	29,015	30,439

TOTAL 10-YEAR DISCOUNTED COSTS—Continued

[2020 dollars][3]

Category	Present value 7% ($)	Present value 3% ($)	Annualized 7% ($)	Annualized 3% ($)
Training	2,079,835	2,379,911	296,122	278,998
Knowledge Testing	746,865	898,884	106,337	105,377
Vision and Hearing	1,097,523	1,320,891	156,263	154,849
Monitoring Operational Performance	832,102	994,414	118,473	116,576
Railroad Oversight Responsibilities	267,530	326,714	38,090	38,301
Certification Card	103,175	124,175	14,690	14,557
Petitions and Hearings	42,451	50,731	6,044	5,947
Government Administrative Cost	1,653,360	1,914,063	235,401	224,387
Total	8,277,337	9,566,001	1,178,507	1,121,427

This rule would reduce the likelihood of an accident occurring due to signal employee error. FRA has analyzed accidents over the past 10 years to categorize those where signal employee training and certification would have impacted the accident. FRA then estimated benefits based on that analysis.

The following table shows the estimated 10-year quantifiable benefits of the proposed rule. The total 10-year estimated benefits would be $2.9 million (PV, 7%) and annualized benefits would be $0.4 million (PV, 7%).

TOTAL 10-YEAR DISCOUNTED BENEFITS

[2020 dollars]

Category	Present value 7% ($)	Present value 3% ($)	Annualized 7% ($)	Annualized 3% ($)
Grade Crossing Accidents	1,766,028	2,064,676	251,443	242,043
Train Accidents/Incidents	989,123	1,156,391	140,829	135,564
Business Benefits from Fewer Activation Failures	159,526	186,503	22,713	21,864
Total	2,914,678	3,407,570	414,985	399,471

This proposed rule would also provide unquantifiable benefits. FRA has quantified the monetary impact from accidents which is reported on FRA accident forms. However, some accident costs are not required to be reported on FRA accident forms (*e.g.,* environmental impact). That impact may account for additional benefits not quantified in this analysis. If these costs were realized, accidents affected by this proposed rulemaking could have much greater economic impact than estimated quantitative benefit estimates.

There is also a chance of a high impact event due to signal employee error. This could involve fatalities, injuries, and environmental damage, as well as impact railroads, communities, and the public. FRA has not estimated the likelihood of such an accident, but this proposed rule is expected to reduce the risk of an accident of that magnitude.

II. Legal Authority

Pursuant to the Rail Safety Improvement Act of 2008, Public Law 110–432, sec. 402, 122 Stat. 4884 (Oct. 16, 2008) (hereinafter ''RSIA''), the Secretary of Transportation (Secretary) was required to submit a report to Congress addressing whether certification of certain crafts or classes of employees, including signal repair and maintenance employees, was necessary to reduce the number and rate of accidents and incidents or to improve railroad safety.[4] If the Secretary determined it was necessary to require the certification of certain crafts or classes of employees to reduce the number and rate of accidents and incidents or to improve railroad safety, section 402 of the RSIA stated the Secretary may prescribe such regulations. The Secretary delegated this authority to the Federal Railroad Administrator. 49 CFR 1.89. In response to the RSIA, the Secretary submitted a report to Congress on November 4, 2015, stating that, based on FRA's preliminary research, dispatchers and signal employees were potentially the most viable candidate railroad crafts for certification. Based on the analysis in Section III below, the Federal Railroad Administrator has determined that it is necessary to require the certification of signal employees to improve railroad safety.

III. Background

1. Roles and Responsibilities of Signal Employees

Railroad signal employees play an integral role in ensuring the safety of railroad operations, as well as the safety of highway motorists. They are responsible for the installation, testing, troubleshooting, repair, and maintenance of signal systems, as defined in proposed 49 CFR 246.7, which railroads utilize to direct train movements. Signal employees must also use specialized test and maintenance equipment to complete safety critical

[3] Numbers in this table and subsequent tables may not sum due to rounding.

[4] *See also* 49 U.S.C. 20103 (providing FRA's general authority to ''prescribe regulations and issue orders for every area of railroad safety'').

tasks on mechanical, electrical, and electronic signal equipment.

The work performed by signal employees can generally be divided into two categories: construction and maintenance. On larger railroads, some signal employees work in groups (often referred to as ''gangs'') under the direct supervision and oversight of an experienced signal employee to construct, install, and upgrade signal systems and signal system subsystems and components. Some signal employees also work in ''gangs'' under the direct supervision and oversight of an experienced signal employee to make repairs to the signal system, while other signal employees (often referred to as ''signal maintainers'') are tasked with inspecting and testing signal systems and performing minor and emergency repairs as needed.

The implementation of complex PTC system technology requires increasingly sophisticated work by signal employees. PTC systems provide another layer of safety to existing signal systems, many of which have been place for many decades. In addition, PTC systems are interoperable with each other, as well as with existing signal systems. Therefore, signal employees need to understand the relationship between signal and PTC systems and the communication medium and how these systems operate, function, and react to a myriad of circumstances. Signal systems and PTC systems are also continually upgraded, so the development and implementation of these systems need to be properly understood and monitored by both FRA and railroad signal employees.

2. FRA History of Certification

On January 4, 1987, an Amtrak train collided with a Conrail train in Chase, Maryland, resulting in 16 deaths and 174 injuries. At the time, it was the deadliest train accident in Amtrak's history. The subsequent investigation by the National Transportation Safety Board concluded that the probable cause of the accident was the impairment of the Conrail engineer who was under the influence of marijuana at the time of the collision.[5]

Following this accident, Congress passed the Rail Safety Improvement Act of 1988, Public Law 100–342, 4, 102 Stat. 624, 625 (1988), which instructed the Secretary of Transportation (Secretary) to ''issue such rules, regulations, orders, and standards as may be necessary to establish a program requiring the licensing or certification of any operator of a locomotive, including any locomotive engineer.'' On June 19, 1991, FRA published a final rule establishing a certification system for locomotive engineers and requiring railroads to ensure that they only certify individuals who met minimum qualification standards.[6] In order to minimize governmental intervention, FRA opted for a certification system where the railroads issue the certificates as opposed to a government-run licensing system. This final rule, published in 49 CFR part 240 (part 240), created certification requirements for engineers that addressed various areas including vision and hearing acuity; training, knowledge, and performance skills; and prior safety conduct.

Seventeen years later, Congress passed the RSIA, which mandated the creation of a certification system for conductors. On November 9, 2011, FRA published a final rule requiring railroads to have certification programs for conductors and to ensure that all certified conductors satisfy minimum Federal safety standards.[7] The conductor certification rule, published in 49 CFR part 242 (part 242), was largely modeled after part 240 with some deviations based on the different job classifications. Part 242 also included some organizational improvements which made the regulation more streamlined than part 240.

3. Statutory Background for Signal Employee Certification

In addition to requiring certification for conductors, the RSIA required the Secretary to submit a report to Congress addressing whether certain other railroad crafts or classes of employees would benefit from certification. Specifically, section 402(b) of the RSIA requires that the Secretary issue a report to Congress ''about whether the certification of certain crafts or classes of railroad carrier or railroad carrier contractor or subcontractor employees is necessary to reduce the number and rate of accidents and incidents or to improve railroad safety.'' As part of that report, section 402(c) specifically requires the Secretary to consider ''signal repair and maintenance employees'' as one of the railroad crafts for certification.

After identifying a railroad craft or class for which certification is necessary, pursuant to the report to Congress discussed above, section 402(d) authorizes the Secretary to ''prescribe regulations requiring the certification of certain crafts or classes of employees that the Secretary determines . . . are necessary to reduce the number and rate of accidents and incidents or to improve railroad safety.''

4. Report to Congress

On November 4, 2015, the Secretary submitted the report to Congress required under the RSIA. The report stated that, based on FRA's preliminary research, dispatchers and signal repair employees were the most viable candidates for certification, particularly with the introduction of Positive Train Control (PTC) technology. In reaching this determination with respect to signal employees, the Secretary cited a variety of factors.

The report noted that signal employees perform safety-sensitive work as shown by signal employees being covered under the Hours of Service laws. Signal employees are also subject to regular and pre-employment random drug and alcohol testing. In 2012 and 2013, signal employees had a positive drug testing rate that was considerably higher than that of their train and engine service counterparts. Annual drug and alcohol testing data submitted to FRA in 2012 and 2013 showed a 0.75-percent random positive drug rate for signal employees, as compared to a 0.30-percent random positive drug rate for train and engine service employees.[8]

The report also noted that the greatest proportion of contractors covered under the Hours of Service laws are signal employees, who tend to switch employers more frequently than other crafts of employees. In addition, the report noted that frequent job-hopping by signal employees makes it even more important to track their violations and any disqualifications that may result. However, 49 CFR parts 240 and 242 require a five-year alcohol and drug background check, as well as disqualification of employees for specified alcohol and drug test violations and for refusing such testing. If such requirements are included in a signal employee certification program, they could help prevent signal employees with active substance abuse disorders from ''job hopping'' from one employer to another and reduce the safety risk of having individuals with

[5] Railroad Accident Report: Rear-end Collision of Amtrak Passenger Train 94, the Colonial and Consolidated Rail Corporation Freight Train ENS–121, on the Northeast Corridor, Chase, Maryland, January 4, 1987 (144 Nat'l Transp. Safety Bd. 1988).

[6] 56 FR. 28227 (June 19, 1991).

[7] 76 FR 69801 (Nov. 9, 2011).

[8] Testing results submitted to FRA in 2020 and 2021 showed a 0.81-percent random violation (drug and alcohol positives and refusals) rate and a 0.79-percent pre-employment violation rate for signal employees, as compared to a 0.49-percent random positive drug testing rate and a 0.55-percent pre-employment positive drug testing rate for train and engine service employees.

untreated substance abuse disorders working as signal employees.

Another important factor in the report was the nature of the work signal employees perform on wayside signal and train control systems, which are safety-critical for freight and passenger rail operations. The report noted that, in the coming decade, the rail industry will likely lose many experienced signal employees to retirement, while growth in freight, commuter, and intercity passenger rail will require that more signal employees are hired and trained.

The report also summarized the challenges posed by PTC system implementation, while noting the ''increasingly sophisticated work'' involved in the implementation of complex PTC system technology by signal employees.[9] In particular, the report noted that ''signal employees will be required to differentiate between a vital and non-vital PTC system [10] and to address the technicalities of using standalone or overlay PTC systems.'' [11] This combination of factors led to the report's conclusion that signal employees are a potentially viable candidate craft for certification.

5. RSAC Working Group

In March 1996, FRA established the Railroad Safety Advisory Committee (RSAC), which provides a forum for collaborative rulemaking and program development. RSAC includes representatives from all of the agency's major stakeholder groups, including railroads, labor organizations, suppliers and manufacturers, and other interested parties. When appropriate, FRA assigns a task to RSAC, and after consideration and debate, RSAC may accept or reject the task. If accepted, RSAC establishes a working group that possesses the appropriate expertise and representation of interests to develop recommendations to FRA for action on the task.

On April 21, 2017, a task statement regarding certification of signal employees was presented to the RSAC by email but no vote was taken. On April 24, 2019, the RSAC accepted a task (No. 19–03) entitled, ''Certification of Railroad Signal Employees.'' [12] The purpose of the task was ''[t]o consider whether rail safety would be enhanced by developing guidance, voluntary standards, and/or draft regulatory language for the certification of railroad signal installation, repair, and maintenance workers.'' The task called for the RSAC Signal Employee Working Group (Working Group) to perform the following actions:

—Review critical tasks performed by railroad signalmen for safe train operations, particularly with the introduction of Positive Train Control (PTC) technology;
—Review training duration, content, and methodology for new hires and continuing education.
—Review background checks designed to prevent railroad signalmen with active substance abuse disorders from ''job-hopping'' from one employer to another.

The revised task statement also asked the Working Group to address the following issues, if appropriate:

—What requirements for training and experience are appropriate?
—What classifications of signalmen should be recognized, if any?
—To what extent do existing requirements and procedures for the certification of locomotive engineers and conductors provide a model for signalmen certification?
—What types of unsafe conduct should affect railroad signalmen's certification status?
—Do the existing locomotive engineer and conductor certifications provide an adequate model for handling appeals from decertification decisions of the railroads?

The Working Group, which included representatives from the Association of American Railroads (AAR), American Public Transportation Association (APTA), American Short Line and Regional Railroad Association (ASLRRA), Brotherhood of Railroad Signalmen (BRS), SMART Transportation, Commuter Rail Coalition, and National Railroad Construction & Maintenance Association, held its first and only meeting on September 5, 2019 in Washington, DC At this meeting, the Working Group reviewed the task statement from the RSAC, discussed some of the safety-critical tasks performed by signal employees, and debated whether certification of signal employees would be beneficial to railroad safety. At the end of the meeting, action items were assigned and the next meeting was tentatively scheduled for January 2020.

However, on December 16, 2019, the presidents of the American Train Dispatchers Association, BRS, and the International Brotherhood of Electrical Workers (collectively the ''Unions'') sent a letter to the FRA Administrator requesting that the RSAC task be withdrawn from consideration. The letter stated the Unions were involved in numerous activities and were not able to give the task proper attention. AAR and ASLRRA advised the unions that they were not opposed to this request. In response to this letter, FRA withdrew the task from the RSAC and the Working Group became inactive.

6. Public Outreach

In 2021, FRA revisited the issue of establishing certification requirements for signal employees. The agency assembled subject matter experts from FRA, the International Brotherhood of Electrical Workers (IBEW) and the Brotherhood of Railroad Signalmen to exchange facts or information regarding the tasks performed by signal employees. Those parties met virtually several times between May 5, 2021 and June 30, 2021.

As part of FRA's outreach, a list of tasks performed by signal employees was developed. These tasks generally involved: vital equipment design validation, installation, calibration, testing, maintenance, and repair (interlockings, grade crossings, wayside signal systems, PTC, etc.). FRA reviewed each task to determine whether correctly performing the task was critical to railroad safety; what were the potential consequences if errors were made while performing the task; and whether there were any recent examples of issues or concerns with respect to the task. After performing this analysis, FRA concluded that the vast majority of tasks performed by signal employees (80–90% of the listed tasks) were critical to railroad safety with potentially catastrophic consequences, such as accidents, injuries, and/or deaths, if the tasks were not performed properly.

During FRA's outreach, the benefits of certification based on the experience of stakeholders with engineer and conductor certification under 49 CFR parts 240 and 242 were also discussed. Some of the main benefits of

[9] *See* 2015 DOT Report to Congress on Certification of Railroad Crafts at 3.

[10] PTC systems vary widely in complexity and sophistication based on the level of automation and functionality they implement, the system architecture used, the wayside system upon which they are based (*i.e.,* non-signaled, block signal, cab signal, etc.), and the degree of train control they are capable of assuming. Vital systems are reliable and built upon failsafe principles, while non-vital systems are reliable but not guaranteed to provide failsafe operation.

[11] *See* 2015 DOT Report to Congress on Certification of Railroad Crafts at 3. An overlay system relies upon and supplements an existing wayside signal system or redundant method of operation. A standalone system replaces the existing method of operation.

[12] At the same meeting, the RSAC also accepted a task (No. 19–02) titled ''Certification of Train Dispatchers.'' A separate RSAC Working Group was formed to address this task and FRA plans to issue a related proposed rule that would establish certification requirements for dispatchers.

certification that were identified include:

—Creating a minimum standard for training to ensure that the training encompasses all skills and proficiencies necessary to properly perform all safety-related signal employee functions;
—Establishing a record of safety compliance that will follow a signal employee if they wish to become certified by another railroad and that can be used to review a signal employee's performance and potential training needs;
—Requiring certain safety checks, such as identifying active substance abuse disorders, that can minimize the risks posed by job hopping; and
—Establishing a system for individuals to dispute a railroad's decision to deny or revoke certification with the aim of creating a fair and consistent process for all parties.

Based on these meetings, FRA concluded that requiring certification for signal employees would be an important tool to ensure signal employees performing safety-sensitive tasks are adequately trained and qualified and have a documented record of performance that is accessible to prospective employers.

Following this initial outreach, FRA held a follow-up conversation with BRS and IBEW, on March 3, 2022, and individuals from the BRS and IBEW informed FRA of elements that they believe would be beneficial in a signal employee certification program. During this conversation, which was held in videoconference format, FRA asked the attendees to provide individualized feedback on how similar or different a signal employee certification rule should be to FRA's locomotive engineer and conductor certification rules found in 49 CFR parts 240 and 242.

FRA heard that the agency needs to ensure that comprehensive training is provided to signal employees as the current training is inadequate. FRA also heard that railroads are not providing enough training on new equipment and new technology for signal employees. It was also noted that, in some cases, signal employees are being required to use new equipment and new technology without having received any prior training on the equipment or technology.

On March 7, 2022, FRA had a conversation with the railroad industry, including Norfolk Southern Corporation (NS), ASLRRA, and AAR. During this conversation, which was conducted in a videoconference format, FRA also asked for individualized feedback on how FRA's locomotive engineer and conductor certification regulations in 49 CFR parts 240 and 242 could be improved upon with respect to signal employee certification. Specifically, FRA asked for feedback on any regulatory provisions in 49 CFR parts 240 and 242 that, in their experience, may have been difficult to implement, as well as whether FRA should explore any changes to these regulatory provisions.

AAR expressed opposition to FRA's proposal to issue regulations requiring certification of signal employees arguing that there was not a safety benefit to certification. In addition, NS questioned the need for certification regulations in the absence of any identified gaps in coverage by existing railroad training programs.

ASLRRA expressed concern that FRA's proposal to issue regulations requiring certification of dispatchers and signal employees would result in a big paperwork burden with little benefit. In addition, ASLRRA asserted that most shortline railroads do not have signal systems. With respect to grade crossings, ASLRRA asserted that most shortline railroads rely on contractors to maintain their grade crossing warning systems.

After this conversation, FRA provided a short list of written questions to AAR and ASLRRA. While AAR did not provide additional feedback in response to FRA's list of questions, ASLRRA responded to FRA's list of written questions by email on April 13, 2022, a copy of which has been placed in the docket.[13]

On March 8, 2022, FRA staff had a follow-up conversation with BRS and IBEW to receive information on the types of errors and grade crossing and signal violations that should result in a railroad revoking a signal employee's certification. During this conversation, which was conducted in a videoconference format, FRA heard that it might be appropriate to revoke a signal employee's certification in response to willful violations.

7. Contractors

FRA considered whether railroad contractors (and subcontractors) should be authorized to certify their employees. FRA did not, however, include that option in this proposed rule. Instead, consistent with FRA's engineer and conductor certification regulations, this proposed rule requires railroads to develop and submit certification programs to FRA for approval and then implement their FRA-approved certification programs. FRA is proposing to adopt this approach because railroads are ultimately held responsible for the actions (or failure to act) of their employees, contractors, and subcontractors when engaged in railroad operations.

FRA acknowledges that signal employee tasks are being subcontracted out by railroads to companies that specialize in this work. However, railroads are generally most knowledgeable about the signal systems that have been deployed on their territories. Therefore, railroads are best suited to develop certification programs that are needed to ensure all signal employees responsible for installing, troubleshooting, testing, repair, or maintenance of railroad signal systems, as defined in § 246.7, have been properly trained and certified on: (a) all applicable Federal rail safety laws, regulations, and orders governing the installation, testing, repair, and maintenance of these systems; and (b) all railroad rules and procedures promulgated to implement those Federal rail safety laws, regulations, and orders. In addition, by keeping certification programs in-house, railroads can implement quality control measures to ensure that their FRA-approved certification programs are being implemented properly.

Nonetheless, FRA is soliciting comment on the approach adopted in this proposed rule, which would require railroads to develop and implement FRA-approved signal employee certification programs. To ease any potential burden, especially on Class III railroads, the proposed rule would allow all railroads to choose between conducting the training or using a training program conducted by a third party, which would be adopted and ratified by the railroad. In addition, contractors that employ signal employees could help railroads comply with the requirements in this proposed rule by providing information about their signal employees' compliance with some of the proposed regulatory requirements. For example, contractors could provide information about their signal employees' compliance with the vision and hearing acuity requirements in the proposed rule. Under this proposed rule, however, railroads would ultimately be responsible for ensuring that certified signal employees are installing, testing, maintaining, and repairing their signal systems.

[13] A record of public contact summarizing this meeting has been posted in the rulemaking docket at: *https://www.regulations.gov/document/FRA-2022-0020-0003.*

8. Interaction With Other FRA Regulations

While developing this proposed rule, FRA has been mindful of other regulations that may touch upon topics covered in this proposed rule, including FRA's training, qualification, and oversight regulations in 49 CFR part 243 (part 243); railroad safety risk reduction programs (SSP/RRP) in 49 CFR parts 270 and 271 (parts 270 and 271); and fatigue risk management programs (FRMP) in parts 270 and 271. However, FRA finds that this proposed rule would complement, rather than duplicate, those regulations.

Signal employees are currently included in part 243's requirements for training, qualification, and oversight for safety-related railroad employees. However, part 243 does not require railroads to have formal processes in place for promptly removing signal employees from service if they violate one or more basic regulatory standards that could have a significant negative impact on the safety of rail operations. FRA's proposed signal employee certification requirements have been drafted to help address this void, as well as prevent signal employees who have been fired for committing one or more of the revocable events discussed in the proposed rule from ''job hopping'' and quickly resuming safety-sensitive service at a different railroad that is unaware of the signal employee's prior violation(s) of FRA's rail safety regulations.

As codified in parts 270 and 271, FRA requires Class I railroads, railroads with inadequate safety performance, and passenger rail operations to implement railroad safety risk reduction programs. A railroad safety risk reduction program is a comprehensive, system-oriented approach to safety that determines an operation's level of risk by identifying and analyzing identified hazards and developing strategies to mitigate risks associated with those hazards. In this background, FRA is using the term ''railroad safety risk reduction programs'' to include both a ''system safety program'' (SSP) that is required for certain passenger rail operations [14] and a ''risk reduction program'' (RRP) that is required for a limited number of other rail operations.[15] Although a railroad safety risk reduction program might address a railroad's safety hazards and risks associated with its signal employees, the framework established by these programs neither directly addresses the risks associated with signal systems nor establishes an industry-wide approach.

First, not every railroad is required to have a railroad safety risk reduction program. Indeed, FRA estimates that fewer than 100 railroads (out of approximately 750 railroads under FRA's jurisdiction) will be required to develop a railroad safety risk reduction program over the next 10 years.

Second, even if a railroad is required to have a railroad safety risk reduction program through which it identifies the risks associated with installing, testing, maintaining, and repairing signal systems, the railroad may decide not to implement mitigations to eliminate or reduce those specific risks. Parts 270 and 271 permit railroads to prioritize risks.[16] Whether a railroad is required to have a program that mitigates risks associated with signal systems will depend on how the railroad prioritizes risks for mitigation and how effectively that mitigation would promote continuous safety improvement compared to mitigation of other identified hazards and risks. Thus, even if signal systems are identified as a risk, a railroad may not implement mitigations to eliminate or reduce that risk.

Accordingly, this proposed rule may complement the SSP/RRP requirements but does not duplicate those requirements. Without this proposed rule, railroads may not be required to implement mitigations to address identified safety risks associated with signal systems across the entire industry.

With respect to FRMPs,[17] an FRMP is a comprehensive, system-oriented approach to safety in which a railroad determines its fatigue risk by identifying and analyzing applicable hazards and developing plans to mitigate, if not eliminate, those risks. Like the SSP/RRP rules, the FRMP rule is part of FRA's continual efforts to improve rail safety and satisfies the statutory mandate of Section 103 of the RSIA.[18]

Like the SSP/RRP requirements, there is no guarantee that any railroad covered by the regulation will use an FRMP to address signal issues. As with the SSP/RRP rules, a covered railroad must identify fatigue hazards, assess the risks associated with those fatigue hazards, and prioritize those risks for mitigation purposes. It is possible that other fatigue risks, not associated with signal systems, might rank higher, in which case the risk associated with signal systems might not be promptly mitigated. Further, because the FRMP requirements would apply only to those railroads required to comply with the SSP/RRP requirements, an FRMP would not be required of every railroad. Thus, like the SSP/RRP rules, this proposed rule is complementary to the FRMP final rule and is not duplicative.

IV. Section-by-Section Analysis

Subpart A—General

Subpart A of the proposed rule contains general provisions, including a formal statement of the proposed rule's purpose and scope. The subpart also provides that this proposed rule does not constrain the ability of a railroad to prescribe additional or more stringent requirements for its signal employees that are not inconsistent with this proposed rule.

Section 246.1 Purpose and Scope

This proposed section, derived from 49 CFR 240.1 and 242.1, indicates that the purpose of the proposed rule is to ensure that only those persons who meet minimum Federal safety standards serve as certified signal employees, to reduce the rate and number of accidents and incidents, and to improve railroad safety.

Even though a person may have a job title other than signal employee, the requirements of this proposed rule would apply to that person if they meet the definition of ''signal employee'' without regard to the class or craft of the employee or the manner in which the employee is compensated, if at all. The definition of ''signal employee,'' and an explanation of who is covered by the definition, are discussed in more detail in the section-by-section analysis for § 246.7, below.

Section 246.3 Application and Responsibility for Compliance

The extent of FRA's jurisdiction, and the agency's exercise of that jurisdiction, is well-established. *See* 49 CFR part 209, app. A. This proposed application and responsibility for compliance section is consistent with FRA's *Statement of Agency Policy Concerning Enforcement of the Federal Railroad Safety Laws* in appendix A to 49 CFR part 209 (Policy Statement).

This proposed section, derived from 49 CFR 240.3 and 242.3, provides that the proposed rule would apply to all railroads with four exceptions.

[14] 49 CFR 270.3 (requiring the application of the system safety program rule to certain passenger rail operations).

[15] 49 CFR 271.3 (requiring the application of the risk reduction program rule to certain rail operations).

[16] *See e.g.,* 49 CFR 270.5 (definition of ''risk-based hazard management'') and 271.103(b)(3).

[17] On June 13, 2022, FRA published a final rule adding a FRMP to the railroad safety risk reduction program requirements in parts 270 and 271. 85 FR 83484.

[18] Codified at 49 U.S.C. 20156.

Paragraph (a)(1) of this section notes that this proposed rule would not apply to railroads that do not have a signal system, as defined in § 246.7. In paragraph (a)(2), FRA proposes to exempt operations that occur within the confines of industrial installations commonly referred to as ''plant railroads'' and typified by operations such as those in steel mills that do not go beyond the plant's boundaries and that do not involve the switching of rail cars for entities other than themselves. Further explanation of what is meant by the term ''plant railroad'' is provided in the section-by-section analysis for § 246.7.

In paragraph (a)(3), FRA is also proposing to exclude ''tourist, scenic, historic, and excursion operations conducted only on track used exclusively for that purpose . . . and only on track inside an installation that is insular.'' In other words, FRA is proposing to exclude tourist, scenic, historic, or excursion operations conducted only on track where there is no freight, intercity passenger, or commuter passenger railroad operations on the track. In addition, FRA is proposing to consider insularity when determining whether the requirements of this proposed rule apply to a tourist, scenic, historic, or excursion operation. As explained in the Policy Statement, FRA considers a railroad to be ''insular'' if its operations are limited to a separate enclave in such a way that there is no reasonable expectation that the safety of any member of the public (except a business guest, a licensee of the tourist operation or an affiliated entity, or a trespasser) would be affected by the operation. A railroad is not considered insular if one or more of the following exists on its line: (a) A public highway-rail grade crossing that is in use; (b) an at-grade rail crossing that is in use; (c) a bridge over a public road or waters used for commercial navigation; or (d) a common corridor with a railroad (*i.e.,* its operations are within 30 feet of those of any railroad). In addition, when determining insularity for purposes of this proposed rule, FRA would consider whether a public pathway grade crossing is located on the railroad line. FRA is proposing to add this criterion to the determination of insularity for purposes of this proposed rule, in recognition of the potential safety risks associated with the use of public pathway grade crossings by members of the general public.

FRA believes that applying the proposed regulatory requirements in this part to signal employees who work on non-insular passenger rail operations off the general system is warranted by the potential risk to passengers associated with accidents involving heavy motor vehicles. FRA acknowledges that a passenger railroad off the general system may be considered non-insular, yet have only private grade crossings on its line of railroad. Due to the non-insular status of the railroad, signal employees who install, maintain, test, or repair train-activated warning devices at those private grade crossings or who install, maintain, test, or repair signal systems on its line would be subject to this rule.

The final proposed exclusion in § 246.3(a)(4) covers rapid transit operations in an urban area that are not connected to the general railroad system of transportation. It should, however, be noted that FRA exercises jurisdiction over some rapid transit type operations, given their links to the general railroad system of transportation, such as rapid transit operations conducted on track used for freight, intercity passenger, or commuter passenger railroad operations, during a block of time during which a general system railroad is not operating (temporal separation). Thus, this proposed rule would apply to persons who perform work on signal systems for those rapid transit type operations.

Paragraph (b) is intended to clarify that any person, as defined in § 246.7 (including a railroad employee or employee of a railroad contractor) who performs a function required by this part will be held responsible for compliance.

Section 246.5 Effect and Construction

This proposed section is derived from 49 CFR 240.5 and 242.5. Paragraph (a) addresses the relationship of this proposed rule to preexisting legal relationships. Paragraph (b) states that FRA does not intend to alter the authority of a railroad to initiate disciplinary sanctions against its employees by issuance of this proposed rule.

Paragraph (c) of this section is intended to note that, as a general matter, FRA does not intend to create or prohibit the right to ''flowback'' or take a position on whether ''flowback'' is desirable. The term ''flowback'' has been used in the industry to describe a situation where an employee leaves their current position to return to a previously held position or craft. The reasons for reverting back to the previous craft may derive from personal choice or a less voluntary nature (such as downsizing). Many collective bargaining agreements address the issue of flowback. However, paragraph (c) must be read in conjunction with § 246.213, which would limit flowback in certain situations (*i.e.,* when a certificate is revoked due to an alcohol or drug violation).

Paragraph (d) of this proposed section addresses employee rights. The proposed rule would explicitly preserve any remedy already available to the person and would not create any new entitlements.

Section 246.7 Definitions

This section defines a number of terms that have specific meaning in this proposed part. Some of these terms have definitions that are similar to, but may not exactly mirror, definitions used elsewhere in this chapter.

Contractor, as defined in this proposed part, would include prime contractors, as well as subcontractors. This definition, which mirrors the definition of ''contractor'' in 49 CFR part 243, has been included in this section to help explain FRA's intent that the requirements of this part which apply to railroad contractors are also intended to apply to railroad subcontractors as well.

Disable, as defined in this proposed part, would mean to render a device [or system] incapable of proper and effective action or to materially impair the functioning of that device. In the interest of consistency, this proposed definition is very similar to the definition of ''disable'' provided in § 218.53 of FRA's railroad operating practices regulations. However, for purposes of this proposed part, the term ''disable'' would include situations in which a device or system is lawfully rendered incapable of proper and effective action.

Consistent with parts 240 and 242, FRA proposes to define ''drug'' as any substance (other than alcohol) that has known mind- or function-altering effects on an individual, specifically including any psychoactive substance and including, but not limited to, controlled substances. This term is intended to refer to substances that have a significant potential for abuse and/or dependence. Normal ingestion of caffeine in beverages and use of nicotine from tobacco products, even though involving some degree of habituation or dependence, are not intended to be included within the definition.

In this proposed part, the terms ''ineligible'' and ''ineligibility'' would be catch-all terms that not only encompass revocation and denial of certification, but also cover other situations in which a signal employee would be legally disqualified from serving as a signal employee. For example, a certified signal employee

may voluntarily refer him or herself for substance abuse counseling or treatment under 242.115(c). If the signal employee then refuses to complete a course of action recommended under the provisions of 49 CFR 219.1003, that would not be an operating rule or procedure, or type of alcohol or drug violation that would require revocation (nor would it require denial of certification). Rather the signal employee would simply remain ''ineligible'' until a railroad determined that the person no longer had a substance abuse disorder, or the person re-entered a substance abuse program and it had been determined under the provisions of 49 CFR 219.1003 that the person could safely return to duty under certain conditions.

In this proposed part, *mentor* would be defined as a certified signal employee who has at least one year of experience as a certified signal employee. FRA is proposing to define the term, ''mentor,'' to help clarify that a mentor provides direct supervision and oversight over the work of one or more signal employees.

In this proposed part, *person* would take on the same meaning as it does in FRA's other safety rules. The proposed definition is intended to clarify that this term does not apply merely to individual persons. Instead, the term would mean ''an entity of any type covered under 1 U.S.C. 1'' and the proposed definition goes into detail regarding the types of people and entities that are covered.

FRA proposes a definition of *plant railroad* to aid in the understanding of the application of this part pursuant to section 246.3(a)(1). The definition coincides with FRA's longstanding explanation of how the agency will not exercise jurisdiction over a plant railroad that does not operate on the general system of transportation and does not move cars for other entities. *See* 49 CFR part 209, app. A.

Although the RSIA required FRA to issue a report to Congress on whether the certification of certain crafts or classes of railroad carrier or railroad carrier contractor or subcontractor employees, including ''signal repair and maintenance employees,'' is necessary to reduce the number and rate of accidents and incidents or to improve railroad safety, the RSIA did not define the term, ''signal repair and maintenance employees.'' In the absence of such a definition in the RSIA, FRA proposes to use the streamlined term, ''signal employee.'' FRA also proposes to define this streamlined term, ''signal employee,'' as a person who is engaged in installing, troubleshooting, testing, repair, or maintenance of railroad signal systems, highway-rail and pathway grade crossing warning systems, unusual contingency detection devices, power-assisted switches, broken rail detection systems, and switch-point indicators, as well as other safety-related devices, appliances, and systems installed on the railroad in signaled or non-signaled territory. This proposed definition is generally consistent with the definition of ''signal employee'' in the hours of service law but includes the terms ''troubleshooting'' and ''testing'' which are not found in the statutory definition.[19]

Consistent with parts 240 and 242, the term ''substance abuse disorder'' is defined as a psychological or physical dependence on alcohol or a drug or another identifiable and treatable mental or physical disorder involving the abuse of alcohol or drugs as a primary manifestation.

This proposed definition would include drug and alcohol users who engage in abuse patterns which result in ongoing safety risks and violations. A substance abuse disorder is ''active'' within the meaning of this proposed rule if the person (1) is currently using alcohol or other drugs, except under medical supervision consistent with the restrictions described in § 219.103 of this chapter or (2) has failed to successfully complete primary treatment or successfully participate in aftercare as directed by a Substance Abuse Professional (SAP) or Drug and Alcohol Counselor (DAC).

Section 246.9 Waivers

This proposed section, derived from 49 CFR 240.9 and 242.9, provides the proposed requirements for a person seeking a waiver of any section of this proposed rule.

Section 246.11 Penalties and Consequences for Noncompliance

This proposed section, derived from 49 CFR 240.11 and 242.11, explains that FRA may impose civil penalties on any person, including a railroad or a contractor providing goods or services to a railroad, that violates any requirement of this proposed rule. Any person who violates a requirement of this proposed rule may be subject to civil penalties between the minimum and maximum amounts authorized by statute and adjusted for inflation per violation. Individuals may be subject to penalties for willful violations only. Where a pattern of repeated violations, or a grossly negligent violation creates an imminent hazard of death or injury, or causes death or injury, an aggravated maximum penalty may be assessed.[20] Finally, a person may be subject to criminal penalties under 49 U.S.C. 21311 for knowingly and willfully falsifying reports required by these proposed regulations.

Consistent with FRA's final rule regarding the removal of civil penalty schedules from the CFR (84 FR 23730 (May 23, 2019)), FRA will not publish a civil penalty schedule for this rule in the CFR, but plans to publish a civil penalty schedule on its website. Penalty schedules are statements of agency policy, thus notice and comment are not required prior to their issuance, nor are they required to be published in the CFR. See 5 U.S.C. 553(b)(3)(A). Nevertheless, commenters are invited to suggest the types of actions or omissions under each regulatory section that would subject a person to the assessment of a civil penalty. Commenters are also invited to recommend what penalty amounts may be appropriate, based upon the relative seriousness of each type of violation.

Subpart B—Program and Eligibility Requirements

Section 246.101 Certification Program Required

This proposed section, derived from 49 CFR 240.101 and 242.101, would require railroads to have written certification programs comprised of multiple elements, each of which comports with specific regulatory provisions in the proposed rule related to that element. In addition to these required elements, paragraph (b)(1) would require railroads who elect to classify their certified signal employees into multiple occupational categories (and, in some cases, subcategories) to explain and discuss each category or subcategory of certified signal employees.

Paragraph (c) would require railroads to maintain version control for their certification programs. Therefore, railroads would be required to maintain an up-to-date, detailed list or index

[19] 49 U.S.C. 21101(4). The hours of service law defines ''signal employee'' as ''an individual who is engaged in installing, repairing, or maintaining signal systems.'' 49 U.S.C. 21101(4). While FRA believes ''troubleshooting'' and ''testing'' would fall under the terms ''installing, repairing, or maintaining'' in the hours of service law definition, FRA wanted to make explicit in this rule that ''troubleshooting'' and ''testing'' are included in the definition of ''signal employee.'' The addition of ''troubleshooting'' and ''testing'' in the proposed definition in this rule is not intended to capture a broader group of employees than provided in the hours of service law.

[20] Please visit FRA's website for the current aggravated maximum penalty amount at *https://railroads.dot.gov/.*

tracking every change made to their certification programs. FRA would encourage railroads to maintain a redlined version of their certification programs to reflect changes that have been made over the years in context.

Section 246.103 FRA Review of Certification Programs

This proposed section, derived from 49 CFR 240.103 and 242.103, describes the process for the submission and review of signal employee certification programs. Paragraph (a) of this section applies to railroads that have a signal system, as defined in § 246.7, in operation prior to the effective date of the final rule and provides the deadlines for when these railroads would be required to submit their certification programs to FRA. (Paragraph (a) would not, however, apply to railroads that are exempted by § 246.3(a)). The submission schedule in paragraph (a) would require Class I railroads and commuter service railroads to submit their programs earlier than Class II railroads, Class III railroads, and railroads not otherwise classified. The separate deadlines would help space out the initial influx of programs FRA will receive after the final rule goes into effect, to allow FRA to issue approval and disapproval decisions in a more timely manner. FRA also presumes that, in general, Class I railroads and commuter service railroads will have more resources to devote to creating these programs and will be better positioned to create and draft them more quickly.

Paragraph (b) of this section would only apply to railroads that commence operations after the effective date of the final rule. Prior to installing, implementing, or operating any signal system as defined in § 246.7, these railroads would be required to submit their signal employee certification program to FRA and obtain FRA approval.

Paragraph (c) of this section provides that railroads would submit their programs and their requests for approval (which are described in greater detail in § 246.106(a)) by uploading them to FRA's secure document submission site. This will allow for more efficient processing and will significantly reduce the risk of a program submission getting lost. FRA will need basic information from each railroad before setting up the user's account. In order to provide secure access, information regarding the points of contact will be required. It is anticipated that FRA will be able to approve or disapprove all or part of a program and generate automated notifications by email to a railroad's points of contact.

FRA does not intend to develop a secure document submission site that would allow confidential materials to be identified and not shared with the general public. This is because FRA does not expect the information in a program to be confidential or proprietary, particularly since each railroad would be required to share the program submission, resubmission, or material modification with the president of each labor organization that represents the railroad's certified signal employees and the program will be available on FRA's website. *See* § 246.103(d) and (j). Accordingly, FRA does not at this time believe it is necessary to develop a document submission system to address confidential materials.

When a railroad submits its certification program to FRA, paragraph (d) of this section would require the railroad to also submit a copy of the program and the request for approval to the president of each labor organization that represents the railroad's signal employees and to all of the railroad's signal employees who would be subject to this part. The railroad's submission to FRA must include a statement affirming that it has provided a copy of the program and the request for approval to the president of each labor organization that represents its signal employees and to all of the railroad's signal employees who would be subject to this part. In addition, the railroad would be required to include a list of the names and email addresses of each labor organization president who received a copy of the program.

Paragraph (e) of this section explains who would be allowed to comment on these programs. For signal employees who are members of a labor union, any comments must be submitted by a designated representative. Signal employees who are not members of a labor union would, however, be permitted to personally submit comments on their railroad's certification program. FRA anticipates that comments submitted through this process will assist the agency in determining whether a program conforms to the requirements set forth in this rule, and thus, FRA will not make a decision on a program until after the 45-day comment period in paragraph (e)(1) has passed.

Paragraph (f) of this section states FRA's aspirational goal to decide on whether to approve a program within 90 days of the date that the program is submitted. However, this would only be a goal and not a deadline for the agency. Paragraph (f)(3) explains that if FRA is unable to issue a decision on the program within 90 days, the program will not be considered approved on the 91st day. A certification program will not be approved until FRA issues a letter notifying the railroad that its program has been approved. While FRA will make every effort to issue approval and disapproval letters within 90 days, FRA recognizes that this will not always be possible. It may be especially difficult for FRA to meet this goal during the initial implementation of the final rule issued in this rulemaking when FRA expects to receive many certification programs within a relatively short period of time.

Paragraph (g) of this section addresses the process for railroads who wish to materially modify their previously approved programs. If a railroad wishes to materially modify its certification program, it must submit two documents to FRA: (1) a description of how it intends to modify its current program (this constitutes the request for approval required under § 246.106(a)); and (2) a copy of the modified program. Paragraph (g)(1) defines a ''material modification'' as a modification that ''would affect the program's conformance with this part.'' This definition is taken from 49 CFR 240.103(h)(1) and 242.103(i)(1) and is intentionally broad to cover many different types of program modifications. FRA recognizes that there may be some desire among some interested parties to have a more specific definition of ''material modification'' in the regulation. Thus, FRA welcomes any comments on suggested changes to the proposed definition of ''material modification.''

Paragraph (g)(3) explains that the process for submission and review of material modifications mirrors the process for submission and review of initial certification programs. Railroads would be required to submit their material modifications to FRA in conformance with paragraph (c) of this section and would be required to send a copy of the material modification description and the modified program to all required parties referenced in paragraph (d) of this section. Certain interested parties would be allowed to comment on the modification in conformance with paragraph (e) of this section, and FRA would issue a letter either approving or disapproving the material modification in conformance with paragraph (f) of this section. If FRA approves the material modification, the railroad could begin implementing the modification and the modified program would replace the original program. If

FRA disapproves the material modification, the railroad would not be allowed to implement the modification and the original program must remain in effect. If a railroad's material modification submission contains multiple modifications, FRA reserves the right to approve some modifications while disapproving other modifications. In such an instance, the railroad could only begin implementing those modifications that FRA has approved.

Paragraph (h) of this section describes the process to resubmit a program or material modification that was previously disapproved by FRA. Paragraph (h)(2) notes that the process for submission and review of resubmitted programs and material modifications mirrors the process for submission and review of initial certification programs. Railroads would resubmit their initial programs or material modifications to FRA in conformance with paragraph (c) of this section and would send a copy of the resubmitted program or material modification to all required parties referenced in paragraph (d) of this section. Certain interested parties would be allowed to comment on the resubmitted program or material modification in conformance with paragraph (e) of this section and FRA would issue a letter either approving or disapproving the resubmitted program or material modification in conformance with paragraph (f) of this section.

Railroads would, however, remain responsible for maintaining their signal systems, as defined in § 246.7, in compliance with Federal regulations even if rail operations cease or have not yet been initiated.

Paragraph (h)(3) provides the deadlines, if any, for when a railroad must resubmit its certification program or material modification to FRA. For railroads that have installed or implemented a signal system, as defined in § 246.7, prior to the effective date of the final rule (legacy railroads), if their initial certification program is disapproved by FRA, the railroad would be required to resubmit its program within 30 days of the date FRA notified the railroad that its program was deficient. If a legacy railroad fails to resubmit its program within 30 days and continues operations, FRA may use its enforcement discretion to determine whether enforcement action against the railroad is warranted.

FRA believes a 30-day deadline is needed for legacy railroads because § 246.105(a) allows legacy railroads to continue operations while they await FRA approval of their programs. Thus, without a deadline, legacy railroads could purposely delay coming into compliance with the final rule issued in this rulemaking by taking months or even years to resubmit their programs. In contrast, railroads that begin operations after the effective date of the final rule cannot begin operations until FRA approves their program. Likewise, no railroad (legacy or non-legacy) can implement a material modification to its program until FRA has approved the modification. In these scenarios, a deadline is unnecessary because the railroad has every incentive to resubmit its programs or material modifications in a timely manner. However, while there is no FRA-imposed deadline in these scenarios, FRA still recommends that railroads provide their resubmissions within 30 days of being notified of deficiencies.

Paragraph (i) of this section acknowledges that FRA reserves the right to revisit its prior approval of a certification program. In certain circumstances, including an audit of a certification program, FRA may discover that it made an error when it previously approved a program. This paragraph allows FRA to rescind a wrongful prior approval while also providing the railroads with certain rights. Paragraph (i)(3) notes that the process for submission and review of programs whose prior approval has been rescinded mirrors the process for submission and review of initial certification programs and resubmission of initially disapproved programs. Railroads would resubmit their programs to FRA in conformance with paragraph (c) of this section and they would send a copy of the resubmitted program to all required parties referenced in paragraph (d) of this section. Certain interested parties would be allowed to comment on the resubmitted program in conformance with paragraph (e) of this section, and FRA would issue a letter either approving or disapproving the resubmitted program in conformance with paragraph (f) of this section.

Paragraphs (i)(6) and (i)(7) allow for a grace period where a rescinded program may remain in effect for a certain period of time. However, once FRA approves a resubmitted program, the resubmitted program must replace the rescinded program. In addition, a rescinded program can no longer remain in effect if FRA has twice disapproved the railroad's resubmitted program. This latter scenario is best explained through an example: On February 10th, FRA notifies ABC Railroad (ABC) that FRA is rescinding its prior approval of the railroad's signal employee certification program. On March 10th, ABC resubmits its program to FRA. On June 10th, FRA disapproves ABC's resubmitted program. On July 10th, ABC sends FRA its second resubmitted program. On October 10th, FRA issues a letter once again disapproving ABC's program. In this example, ABC's rescinded program could remain in effect between February 10th and October 10th. However, after October 10th, the rescinded program could no longer be in effect. If ABC continued to operate its signal system after October 10th, when it did not have an FRA-approved certification program, FRA could find that the railroad failed to implement a program. In such cases, FRA would determine the appropriate enforcement approach to achieve compliance, including civil penalties and/or an emergency order. In exercising its enforcement discretion, FRA may consider such factors as the number and extent of the remaining deficiencies in the program and whether the railroad made good faith efforts to address the deficiencies in its resubmissions.

Finally, paragraph (j) of this section notes that the following documents would be made available on FRA's website (*railroads.dot.gov*): (1) certification programs and material modifications submitted by the railroads; (2) any comments to the submissions from the railroads; and (3) the letters from FRA approving or disapproving a program or a material modification. While parts 240 and 242 do not currently require the posting of these documents on FRA's website, the current practice with respect to locomotive engineer and conductor certification programs has been for FRA to post comments on a railroad's submission, as well as FRA approval and disapproval letters, on its website. Paragraph (j) of this section in this proposed rule is intended to make the proposed review and approval process for railroad signal employee certification programs as transparent as possible.

Section 246.105 Implementation Schedule for Certification Programs

This section, derived from 49 CFR 240.201 and 242.105, contains the timetable for implementing this proposed rule. Paragraph (a) of this section acknowledges railroads that have installed or implemented a signal system, as defined in § 246.7, prior to the effective date of the final rule may continue their rail operations while they await FRA's approval of their certification programs. However, if FRA disapproves a legacy railroad's certification program twice (the initial

submission and the first resubmission), the railroad will no longer be in compliance with the rule if it continues to operate its signal system without an FRA-approved program. In such a scenario, FRA could find that the railroad has failed to implement a program and would determine the appropriate enforcement approach to achieve compliance, including civil penalties and/or an emergency order. In exercising this enforcement discretion, FRA may consider such factors as the number and extent of the remaining deficiencies in the program and whether the railroad made good faith efforts to comply with the requirements of the rule through its submitted program. Paragraph (b) provides that any non-legacy railroad (a railroad that did not have any signal system, as defined in § 246.7, installed or implemented prior to the effective date of the final rule) may not install or implement a signal system until FRA has approved its signal employee certification program.

Paragraph (c) of this section would require railroads to designate as certified signal employees, in writing, all persons authorized by the railroad to perform the duties of each category or subcategory of certified signal employee identified by the railroad pursuant to § 246.107 as of the effective date of the final rule. Similarly, paragraph (d) of this section would require railroads to designate as certified signal employees, in writing, all such persons authorized by the railroad to perform the duties of certified signal employees pursuant to § 246.107 between the effective date of the final rule and the date FRA approves the railroad's certification program. Railroads would also be required to issue a certificate to each person they designate. This designation system is modeled after the system used when parts 240 and 242 first went into effect. This system allows ''legacy signal employees'' to obtain certificates so that when their railroad's program is approved, they will be considered ''previously certified signal employees'' when the time comes for them to be recertified through the railroad's signal employee certification program. Therefore, the recertifying railroad will not have to provide legacy certified signal employees with the kind of basic training that would be given to individuals with little to no signal experience. In other words, a person with 20 years of experience as a signal employee most likely does not need to take a ''Signal 101'' course that provides a basic overview of signal systems and related technology. Instead, this person would be better served by undergoing continuing education training as described in §§ 246.107(b)(2) and 246.119(j).

Paragraph (e) of this section states that after the final rule has been in effect for eight months, no person would be permitted to serve as a certified signal employee unless that person has been certified. Paragraph (f) of this section requires each railroad to make formal determinations concerning those individuals it has designated as certified signal employees within three years after FRA's approval of the railroad's certification program. Pursuant to this paragraph, a designated signal employee may serve as a certified signal employee for up to three years from the date of FRA's approval of the program. At the end of three years, however, the designated signal employee can no longer serve as a certified signal employee unless they successfully complete the tests and evaluations provided in subpart B of this rule (*i.e.,* the full certification process).

Thus, individuals who are designated as certified signal employees under paragraphs (c) and (d) of this section could be certified for more than three years before they have to complete the railroad's full certification process. For example, if a person is designated as a certified signal employee on September 1, 2024, and FRA approves the railroad's certification program on September 1, 2025, the signal employee would not have to go through the full certification process and get recertified until September 1, 2028 (four years from the date the individual was designated by the railroad as a certified signal employee). Railroads should note that they may not test and evaluate a designated signal employee or signal employee certification candidate under subpart B of this rule until they have a certification program approved by FRA pursuant to § 246.103.

In order to test and evaluate all of its designated signal employees by the end of the three-year period, a large railroad would likely have to begin that process well in advance of the end of the three-year period. For example, paragraph (f), which is derived from the designation provisions in parts 240 and 242, would permit a railroad to test and evaluate one-third of its designated signal employees within one year of the approval date of the railroad's certification program; another one-third within two years of the program's approval date; and the final one-third within three years of the program's approval date.

To address the issue of designated signal employees who would be eligible to retire within three years of the date FRA approves their railroad's certification program, FRA is proposing paragraphs (f)(1) through (3) in this section since it would not be an efficient use of railroad resources to conduct the full certification process for a designated signal employee who is going to retire before the end of their designation period. Paragraph (f)(1) provides that a designated signal employee, who is eligible to receive a retirement pension in accordance with the terms of an applicable agreement or with the terms of the Railroad Retirement Act (45 U.S.C. 231) within three years from the date FRA approves the railroad's certification program, may request in writing that the railroad not perform the full certification progress on that designated signal employee until three years from the date FRA approves the railroad's program.

Paragraph (f)(2) would allow the railroad to honor the designated signal employee's request. Thus, paragraphs (f)(1) and (2) allow designated signal employees to serve as signal employees for the full designation period and then retire before being subjected to the full certification process. While it is in the railroads' interest not to perform the full certification process for a person who is going to retire once the designation period expires, and thus, in their interest to grant as many requests as possible, it may not be feasible to accommodate every request that is made. If, for example, a significant number of designated signal employees properly request that the railroad wait to recertify them at the end of the designation period, but then do not retire by the end of the designation period, the railroad might not be able to recertify everyone in time and would risk violating this rule. In recognition of that risk and the need to give railroads some flexibility to comply with the rule, paragraph (f)(2) also provides that a railroad granting any request to delay performance of the full certification process must grant the request of all eligible persons ''to every extent possible.''

In addition, paragraph (f)(3) provides that a designated signal employee who is also subject to recertification under part 240 or 242 may not make a request under paragraph (f)(1) of this section. This provision recognizes that railroads would likely want to have concurrent certification processes for certifying a person who will be both a certified signal employee and a certified locomotive engineer or conductor. Thus, it would not be appropriate, in that instance, for a designated signal employee who is already subject to recertification under part 240 or 242 to

make a request to delay the full signal employee certification process.

Paragraph (g) of this section provides that after FRA approves a railroad's certification program, the railroad cannot certify or recertify a person as a signal employee unless that person has been tested and evaluated in accordance with the procedures provided in subpart B of this rule. In other words, after FRA approves a railroad's program, that railroad can no longer designate persons as certified signal employees under paragraph (c) or (d) of this section.

Section 246.106 Requirements for Certification Programs

This proposed section, derived from Appendix B to part 240 and Appendix B to part 242, provides both the proposed organizational requirements and a narrative description of the submission required under §§ 246.101 and 246.103. FRA is not proposing to require railroad submissions to be made on a specific form. Instead, FRA proposes to prescribe only minimal constraints on the organization and manner of presenting information.

Paragraph (a) of this section addresses what must be included in a railroad's submission to FRA. Specifically, the railroad must include two documents in its submission: (1) a request for approval; and (2) the certification program. If a railroad is submitting its initial certification program, the request for approval can be a brief document that simply states the railroad is submitting its initial signal employee certification program to FRA for approval. However, if a railroad is making a material modification or modifications to a signal employee certification program that has previously been approved by FRA, the request for approval must describe how the railroad intends to modify its program. In addition, the railroad must provide a copy of the modified certification program that identifies all of the proposed changes from the last FRA-approved version of the program, as required by section 246.103(g).

Paragraph (b) of this section would require that signal employee certification programs be divided into six sections, each dealing with a different subject matter, and that the railroad identify the appropriate person to be contacted in the event FRA needs to discuss some aspect of the railroad's program. Paragraph (b)(1) would require railroads to include basic contact information in Section One of their certification programs and to address whether the railroad elects to accept responsibility for training persons not previously certified as signal employees. However, for railroads that elect to classify their certified signal employees into more than one occupational category or subcategory by class, task, location, or other suitable terminology, paragraph (b)(1) would require the railroad to provide detailed information about each occupational category (and subcategory, if applicable) of certified signal service in Section One of its certification program.

Paragraph (b)(2) would require railroads to address in Section Two of their certification programs how they will provide continuing education for certified signal employees. A matter of particular concern to FRA is how each railroad will ensure that certified signal employees receive sufficient training on new signal systems and related technology that are deployed on the railroad's territory. While a railroad would have the latitude to select the specific subject matters to be covered, the duration of continuing education sessions, the methods of presenting the information, and the frequency with which continuing education will be provided, the railroad must describe in this section how it will use that latitude to ensure that its certified signal employees receive up-to-date and comprehensive training on new signal systems and related technology so as to comply with the training standards set forth in § 246.119(j).

However, time and circumstances can diminish both abstract knowledge and the proper application of that knowledge to discrete events. Time and circumstances can also alter the value of previously obtained knowledge and the application of that knowledge. Therefore, certified signal employees also need to have their fundamental knowledge of applicable Federal laws and regulations, as well as railroad signal system safety rules and practices, refreshed periodically. Therefore, the railroad must also describe in Section Two how it will ensure that its certified signal employees remain knowledgeable concerning the safe discharge of their responsibilities, in accordance with the standard set forth in § 246.119(j).

Section Three of the certification program must address requirements for the testing and evaluation of previously certified signal employees. Paragraph (b)(3)(i) would require railroads to address how their certification programs will comply with the standards found in § 246.121. Section 246.121 would require railroads, when seeking a demonstration of the signal employee's knowledge, to employ a written or electronic test containing objective questions that address the following subject matters: (i) compliance with all applicable Federal railroad safety laws, regulations, and orders governing signal systems and related technology; (ii) compliance with all applicable railroad safety and operating rules; and (iii) compliance with all applicable railroad standards, procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of the railroad's signal systems and related technology. In addition, the test must also include a practical demonstration component. Paragraph (b)(3)(ii) would also require railroads, in their certification programs, to explain their procedures for testing vision and hearing acuity and for ensuring that their medical examiners have sufficient knowledge to make determinations on whether candidates for signal employee certification or recertification can safely work as certified signal employees.

Section Four of the certification program would address the requirements for training, testing, and evaluating persons not previously certified as signal employees. Railroads that elect, in Section One of the certification programs, to not take responsibility for training persons not previously certified as signal employees can skip this section. Paragraph (b)(4) would require railroads that elect to provide training to persons who have not been previously certified as signal employees to provide details in Section Four for how they will train, test, and evaluate these individuals to ensure they acquire and demonstrate sufficient knowledge and skills to safely perform the job of a certified signal employee. Paragraph (b)(4)(i) would also require railroads to discuss in Section Four its procedures for mentoring candidates for signal employee certification, in accordance with § 246.124.

Paragraph (b)(4)(ii) would require railroads to include the same level of detail in Section Four of their certification programs as that provided in Sections Two and Three of their programs. Therefore, railroads would be required to address both the training requirements found in § 246.119 and the knowledge testing requirements in § 246.121.

If a railroad intends to rely on another entity to provide training to persons not previously certified as signal employees, paragraph (b)(4)(iii) would require the railroad to explain in Section Four how the railroad will ensure that the training provided by another entity adheres to the railroad's certification program. Specifically, the railroad would be required to explain how persons not previously certified as signal employees will be given the required training on

the railroad's signal systems and related technology.

Paragraph (b)(5) would require railroads to discuss in Section Five of their certification programs how the railroad will monitor the operational performance of its certified signal employees in accordance with § 246.123. In particular, the railroad must discuss the processes and procedures it will use for ensuring that such monitoring and testing is performed. This includes a description of the scoring system the railroad will employ during monitoring observations and unannounced tests.

Finally, paragraph (b)(6) would require railroads to address in Section Six of their certification programs how the railroad will perform routine administration of the program. This section must include summaries of how the program will comply with the various provisions listed in paragraph (b)(6) that contain procedural requirements for railroad certification programs.

Section 246.107 Signal Service Classifications

This proposed section would permit, but not require, railroads to issue certificates for one or more occupational categories or subcategories of certified signal employee service. While some railroads with only one type of signal employee service might not have any interest in certifying multiple types of signal employee service, larger railroads that have already established multiple categories of signal employee service (such as signal maintainers, signal inspectors, locomotive signal/electrical technicians, etc.) on their territories may find it beneficial to issue certificates for multiple types of signal employee service. Therefore, by allowing railroads to classify their certified signal employees into multiple occupational categories or subcategories, FRA would give railroads the flexibility to shape the structure of their certification programs to highlight the specific tasks and responsibilities for each category and subcategory of certified signal employee working on their territories.

A railroad that classifies its certified signal employees into separate categories, such as signal maintainers, signal inspectors, and locomotive signal/electrical technicians, would be permitted to issue specific certificates for each category of signal employee service. This proposed section would also allow railroads to certify signal employees for signal system work on specific railroad divisions or subdivisions, as opposed to issuing one universal signal employee certificate that would certify the signal employee to perform signal system work anywhere on the certifying railroad's territory. As further explained in the Section-by-Section Analysis of § 246.106(b), railroads that choose to classify their certified signal employees into multiple occupational categories and subcategories would be required by § 246.106(b)(1)(iv) to provide detailed information about each occupational category (and subcategory, if applicable) of its certified signal employees.

Paragraph (b) of this section would require certified signal employees to immediately notify the railroad (or their employer, if they are not employed by a railroad) if they are called to work on a signal system or signal-related technology on which they have not been certified. When notified that a certified signal employee has been called to work on a signal system or signal-related technology on which the employee has not been certified, paragraph (c) would prohibit the railroad from requiring the certified signal employee to work on the signal system or signal-related technology unless the certified signal employee is allowed to work under the direct oversight and supervision of a mentor in accordance with § 246.124.

Section 246.109 Determinations Required for Certification and Recertification

This proposed section lists the determinations that would be required for evaluating a candidate's eligibility to be certified or recertified. The reference to § 246.303 in paragraph (a)(2) of this section is to ensure railroads determine whether a candidate is eligible to hold a certification by reviewing any prior revocations addressed in subpart D of this rule.

Despite the reference in paragraph (a)(1) of this section to provisions in §§ 246.111 and 246.113 requiring a review of safety conduct information from the preceding five years, § 246.113(g)(1) would not permit a railroad to consider information concerning safety conduct that occurred prior to the effective date of the final rule issued in this rulemaking. Even though this provision would result in a railroad's evaluation of less than five years' worth of information for some signal employees early on in the rule's effective period, it is included in part 246 for the same reason similar provisions were included in parts 240 and 242—namely, that all signal employees should be permitted to start with a ''clean slate'' for certification purposes as a matter of basic fairness. See 56 FR 28228, 28242 (June 19, 1991).

Paragraph (b) of this section would provide flexibility to railroads and signal employees or signal employee candidates in obtaining the information required by §§ 246.111 and 246.113. For example, in some states, railroads may be able to obtain motor vehicle operator data for signal employees and signal employee candidates through background checks.

Section 246.111 Prior Safety Conduct as Motor Vehicle Operator

This proposed section, derived from 49 CFR 240.111, 240.115, and 242.111, would provide the requirements and procedures that a railroad would be required to follow when evaluating a certified signal employee or certification candidate's prior safety conduct as a motor vehicle operator. FRA believes that the prior safety conduct of a motor vehicle operator is one indicator of that person's drug and/or alcohol use and therefore an important piece of information for a railroad to consider.

Pursuant to this section, each person seeking certification or recertification as a signal employee would be required to request in writing that the chief of each driver licensing agency that issued them a driver's license within the preceding five years provide a copy of the person's driving record to the railroad. Unlike part 240, this proposed rule would not require individuals to also request motor vehicle operator information from the National Driver Registry (NDR). Based on the NDR statute and regulation (*see* 49 U.S.C. chapter 303 and 23 CFR part 1327), railroads are prohibited from running NDR checks or requesting NDR information from individuals seeking employment as certified signal employees.

Paragraphs (b) and (c) of this section would require a railroad to certify or recertify a person for 60 days if the person: (1) requested the required information at least 60 days prior to the date of the decision to certify or recertify; and (2) otherwise meets the eligibility requirements provided in § 246.109(a)(1) through (5). If a railroad certifies or recertifies a person for 60 days pursuant to paragraphs (b) and (c) but is unable to obtain and evaluate the required information during those 60 days, the person would be ineligible to perform as a certified signal employee until the information can be evaluated. However, if a person is simply unable to obtain the required information, that person or the certifying or recertifying railroad could petition for a waiver from FRA (*see* 49 CFR part 211). During the pendency of the waiver request, a railroad would be required to certify or recertify a person if the person

otherwise meets the eligibility requirements of § 246.109(a)(1) through (5).

Paragraph (k) of this section would require certified signal employees or persons seeking certification as signal employees to notify their employer (if employed by a railroad or contractor to a railroad), all prospective certifying railroads (if applicable), and all railroads with whom the person holds a signal employee certificate of motor vehicle incidents described in paragraph (m) of this section within 48 hours of the conviction or completed State action to cancel, revoke, suspend, or deny their motor vehicle driver's license for such incidents. Paragraph (k) would also prohibit railroads from having a more restrictive company rule requiring certified signal employees or persons seeking signal employee certification to report a conviction or completed State action to cancel, revoke, or deny a motor vehicle driver's license in less than 48 hours.

The reasoning behind proposed paragraph (k) involves several intertwined objectives. As a matter of fairness, a railroad should not revoke, deny, or otherwise make a person ineligible for certification until that person has received due process from the State agency taking the action against the motor vehicle license. Further, by not requiring reporting until 48 hours after the completed State action, the proposed rule would have the practical effect of ensuring that a required referral to a drug and alcohol counselor (DAC) under paragraph (n) of this section would not occur prematurely. However, proposed paragraph (k) would not prevent an eligible person from choosing to voluntarily self-refer. Nor would it prevent the railroad from referring the person for an evaluation under an internal railroad policy if other information exists that identifies the person as possibly having a substance abuse disorder.

Paragraph (n) of this section would provide that if a motor vehicle incident described in paragraph (m) is identified, the railroad would be required to provide the data to its DAC along with ''any information concerning the person's railroad service record.'' Furthermore, the person would have to be referred for evaluation to determine whether the person has an active substance abuse disorder. If the person has an active substance abuse disorder, the person would not be eligible for certification. However, even if it is determined that the person is not currently affected by an active substance abuse disorder, the railroad would be required, if recommended by a DAC, to condition certification upon participation in any needed aftercare and/or follow-up testing for alcohol or drugs or both. The intent of this proposed provision is to use motor vehicle records to identify signal employees or candidates for signal employee certification who may have active substance abuse disorders and make sure they are referred for evaluation and any necessary treatment before allowing them to perform safety sensitive service. Any testing performed as a result of a DAC's recommendation under paragraph (n) would be done under company authority, not Federal. However, the testing would be required to comply with the ''technical standards'' of part 219, subpart H, and part 40.

Paragraph (n)(5) is intended to clarify that failure to cooperate in the DAC evaluation discussed in paragraphs (n)(2) of this section would result in the person being ineligible to perform as a certified signal employee until such time as the person cooperates in the evaluation.

Section 246.113 Prior Safety Conduct With Other Railroads

This proposed section, which is derived from 49 CFR 240.113, 240.205, and 242.113, would establish a process for certification candidates to request information about their prior safety conduct when employed or certified by another railroad. Except as otherwise provided by the retroactive time limit contained in paragraph (g) of this section, this section would require railroads to review records provided by railroads that previously employed or certified the certification candidate regarding the candidate's prior compliance with §§ 246.115 and 246.303 within the previous five years, as well as the candidate's motor vehicle driving record within the previous three years.

Paragraph (b) of this section contains an exception that if a certification candidate has not been employed or certified by any other railroad in the previous five years, they do not have to submit a request pursuant to paragraph (c) of this section. Such candidates, however, must notify the railroad where they are seeking certification of this fact. This exception should help minimize any burden arising from these proposed requirements.

For certification candidates who do not qualify for the exception provided in paragraph (b), paragraph (c) would require the certification candidate to submit a written request to each railroad that employed or certified the candidate within the previous five years. As indicated earlier, the written request would direct the previous railroad employer or certifying railroad to provide information about the certification candidate's prior compliance with §§ 246.115 and 246.303 within the previous five years, as well as the candidate's motor vehicle driving record within the previous three years from the date of the written request.

In addition, railroads would be required by paragraph (e) to comply with written requests for records of prior safety conduct submitted by former employees or certified signal employees pursuant to this section within 30 days after receipt of such requests. Railroads that are unable to provide information about prior safety conduct within 30 days would be required by paragraph (f) to either: (1) provide a written explanation of why the railroad cannot provide the information within the requested time frame, along with an estimate of how much time will be needed to supply the requested information; or (2) provide an adequate explanation for why the railroad cannot provide the information requested.

In the event a railroad seeking to certify or recertify a certification candidate receives a written statement from another railroad pursuant to paragraph (f) of this section, which explains that the railroad cannot provide the information requested, the railroad seeking to certify or recertify the certification candidate would be deemed to have complied with the eligibility determination required by paragraph (a) of this section, provided the railroad retains a copy of the other railroad's written statement in its records.

Similarly, in the event a railroad seeking to certify or recertify a certification candidate does not receive a written response from other railroads, the railroad would be deemed to have complied with the eligibility determination required by paragraph (a) of this section provided the railroad retains a copy of its written request for this information in its records.

Section 246.115 Substance Abuse Disorders and Alcohol Drug Rules Compliance

This proposed section, which is derived from 49 CFR 240.119, 240.205, and 242.115, addresses: (1) active substance abuse disorders; and (2) specific alcohol/drug regulatory violations. As noted earlier, annual drug and alcohol testing data submitted to FRA revealed that signal employees had

a random violation rate (drug and alcohol positives and refusals) and a pre-employment violation rate that was considerably higher than their train and engine service counterparts.

Therefore, this section and § 246.111 address certain situations in which inquiry must be made into the possibility that the individual has an active substance abuse disorder if the individual is to obtain or retain a certificate. The fact that specific instances are cited in this section would not preclude the general duty of the railroad to take reasonable and proportional action in other appropriate cases. Declining job performance, extreme mood swings, irregular attendance and other indicators may, to the extent not immediately explicable, indicate the need for an evaluation under internal policies of the railroad.

The purpose of identifying conditions is not to require (and does not require) a railroad to order an evaluation any time a listed condition is exhibited. Rather, FRA is simply providing guidance here as to conditions that may, given the context, call for an evaluation under internal policies of the railroad. Moreover, FRA remains vigilant of harassment and intimidation and will take appropriate action if such conduct is discovered.

Paragraph (a) of this section would require railroads to determine that a person initially certifying, or a signal employee recertifying, meets the eligibility requirements of this section. In addition, each railroad would be required by § 246.203 to retain the documents used to make that determination.

Paragraph (c) of this section would prohibit a person with an active substance abuse disorder from being certified as a signal employee. This means appropriate action must be taken with respect to a certificate (whether denial or suspension) whenever the existence of an active substance abuse disorder comes to the official attention of the railroad, with the exception discussed below. Paragraph (c) would also provide a mechanism for an employee to voluntarily self-refer for substance abuse counseling or treatment.

Paragraph (d) would address conduct constituting a violation of § 219.101 or § 219.102 of the alcohol/drug regulations. Section 219.101(a)(1) prohibits regulated employees from using or possessing alcohol or any controlled substance when the employee is on duty and subject to performing regulated service for a railroad. Section 219.101(a)(2) prohibits regulated employees from reporting for regulated service, or going on or remaining on duty in regulated service, while under the influence of (or impaired by) alcohol or while having a breath or blood alcohol concentration of 0.04 or more. A regulated employee is also prohibited from using alcohol either within four hours of reporting for regulated service or after receiving notice to report for regulated service, whichever is less. This is conduct that specifically and directly threatens safety in a way that is wholly unacceptable, regardless of its genesis and regardless of whether it has occurred previously. In its more extreme forms, such conduct is punishable as a felony under the criminal laws of the United States (18 U.S.C. 341 *et seq.*) and a number of states.

Section 219.102 prohibits use of a controlled substance by a regulated employee, at any time, whether on or off duty, except for approved medical use. Abuse of marijuana, cocaine, amphetamines, and other controlled substances poses unacceptable risks to safety.

Under the alcohol/drug regulations, whenever a violation of § 219.101 or § 219.102 is established, based on authorized or mandated chemical testing, the employee must be removed from service and may not return until after an SAP evaluation, any needed treatment and/or education, and a negative return-to-duty test, and is subject to follow-up testing (as required by § 219.104). These requirements constitute an absolute minimum standard for action when a signal employee is determined to have violated one of these prohibitions. Considering the need both for general and specific deterrence with respect to future unsafe conduct, additional action should be premised on the severity of the violation and whether the same individual has had prior violations.

This proposed rule would require railroads to consider conduct that occurred within the period of five consecutive years prior to the review. This is the same period provided in this proposed rule as the maximum period of ineligibility for certification following repeated alcohol/drug violations and is the same period used in parts 240 and 242. Use of a 5-year cycle reflects railroad industry experience indicating that conduct committed as much as 5 years before may tend to predict future alcohol or drug abuse behavior. For example, in analyzing data submitted to FRA between 2017 and 2021, FRA found that railroad employees returning to duty from previous drug or alcohol violations were approximately five times more likely to test positive than other railroad employees. Of course, railroads would retain the flexibility to consider prior conduct (including conduct more than 5 years prior) in determining whom they will hire as signal employees.

Conduct violative of the FRA proscriptions against alcohol and drugs need not occur while the person is serving in the capacity of a signal employee in order to be considered. For instance, an employee who violated § 219.101 while working as a conductor and then sought signal employee certification six months later (under the provision described below) would not be eligible for certification. The same is true under part 240—an employee who violates § 219.101 while working as a brakeman and then seeks locomotive engineer certification six months later would not be eligible for certification at that time. The responsibility of the railroad would therefore not be limited to periodic recertification. This proposed rule would require a review of certification status for any conduct in violation of § 219.101 or § 219.102.

The proposed rule would require a determination of ineligibility for a period of 9 months for an initial violation of § 219.101. This would parallel the 9-month ineligibility period in §§ 240.119(c)(4)(iii) and 242.115(e)(4)(iii).

Specifying a period of ineligibility serves the interest of deterrence while giving further encouragement to deal with the problem before it is detected by management. In order to preserve and encourage referrals, the nine-month period could only be waived in the case of a qualifying referral (*see* § 219.1001). FRA believes that this distinction in treatment, which is also found in part 242, is warranted as a strong inducement to participation because referral programs help identify troubled employees before those employees get into accidents and incidents.

In the case of a second violation of § 219.101, the signal employee would be ineligible for a period of five years. Given railroad employment practices and commitment to alcohol/drug compliance, it is likely that any individual so situated may also be permanently dismissed from employment. However, it would be important that the employing railroad follow through and revoke the certificate under this proposed rule, so the signal employee could not go to work for another railroad (or railroad contractor) within the five-year period using the unexpired certificate issued by the first railroad as the basis for certification. These proposed sanctions

mirror the sanctions in §§ 240.119 and 242.115.

Under this proposed rule, one violation of § 219.102 within the 5-year window would require only temporary suspension and the minimum response described in § 246.115(e) (referral for evaluation, treatment as necessary, negative return-to-duty test, and appropriate follow-up). This parallels the approach taken in parts 240 and 242 and reflects FRA's intent to not undercut the therapeutic approach to drug abuse employed by many railroads. This approach permits first-time positive drug tests to be handled in a non-punitive manner that concentrates on remediation of any underlying substance abuse problem and avoids the adversarial process associated with investigations, grievances, and arbitrations under the Railway Labor Act and collective bargaining agreements. A second violation of § 219.102 would subject the employee to a mandatory two-year period of ineligibility. A third violation within five years would lead to a five-year period of ineligibility.

This proposed rule also addresses violations of §§ 219.101 and 219.102 in combination. A person violating § 219.101 after a prior § 219.102 violation would be ineligible for three years; and the same would be true for the reverse sequence. This mirrors the ineligibility period for locomotive engineers and conductors who have one § 219.101 violation and one § 219.102 violation. *See* 49 CFR 240.119(e)(4)(ii) and 242.115(e)(4)(ii).

Refusals to participate in chemical tests would be treated as if the test were positive. A refusal to provide a breath or body fluid sample for testing under the requirements of 49 CFR part 219 when instructed to do so by a railroad representative would be treated, for purposes of ineligibility under this section, in the same manner as a violation of: (1) § 219.101, in the case of a refusal to provide a breath sample for alcohol testing, or a blood specimen for mandatory post-accident toxicological testing; or (2) § 219.102, in the case of a refusal to provide a body fluid specimen for drug testing.

Interested parties should, however, note that 49 CFR part 40, subpart I, discusses medical conditions under which an individual's failure to provide a sufficient sample would not be deemed a refusal. In addition, subpart G of FRA's alcohol and drug regulations excuses employees from compliance with the requirement to participate in random drug and alcohol testing if the employee can substantiate a medical emergency involving the employee or an immediate family member. *See* 49 CFR 219.617.

If an employee covered by 49 CFR part 219 refuses to provide a breath or body fluid specimen or specimens when required to by a railroad pursuant to a mandatory provision of 49 CFR part 219, then the railroad (apart from any action it takes under part 246) would be required to remove that employee from regulated service and disqualify the employee from working in regulated service for nine months. *See* 49 CFR 219.104 and 219.107; *see also,* 49 CFR part 219, subpart H, and 49 CFR 40.191 and 40.261. The employee would also be prohibited by § 246.213(c) from working as a certified signal employee for any other railroad during this 9-month period.

Paragraph (e) prescribes the conditions under which employees may be certified or recertified after a determination that the certification should be denied, suspended, or revoked, due to a violation of § 219.101 or § 219.102 of FRA's alcohol/drug regulations. These conditions are derived from the conditions in §§ 240.119(d) and 242.115(f) and closely parallel the return-to-duty provisions of the alcohol/drug rule. The proposed regulation would not require compensation of the employee for the time spent in this testing, which is a condition precedent to retention of the certificate; but the issue of compensation would ultimately be resolved by reference to the collective bargaining agreement or other terms and conditions of employment under the Railway Labor Act. Moreover, the railroad that intends to withdraw its conditional certification would be required to afford the signal employee the hearing procedures provided by § 246.307 if the signal employee does not waive their right to the hearing.

Paragraph (f) would ensure that a signal employee, like any other covered employee, can self-refer for treatment under the alcohol/drug rule (49 CFR 219.1003) before being detected in violation of alcohol/drug prohibitions and would be entitled to confidential handling of that referral and subsequent treatment. This means that a railroad would not normally receive notice from the DAC of any substance abuse disorder identified as a result of a voluntary self-referral under 49 CFR 219.1003. However, paragraph (f) would also require that the railroad policy provide that confidentiality is waived if the signal employee at any time refuses to cooperate in a recommended course of counseling or treatment, to the extent that the railroad must receive notice that the employee has an active substance abuse disorder so that appropriate certificate action can be taken. The effect of this proposed provision is that the certification status of a signal employee who seeks help and cooperates in treatment would not be affected, unless the signal employee fails to follow through.

Section 246.117 Vision Acuity

This proposed section, derived from 49 CFR 240.121, 240.207, and 242.117, contains the requirements for vision acuity testing that a railroad would have to incorporate in its signal employee certification program. This section differs from its analogous sections in 49 CFR parts 240 and 242 in that 40 CFR parts 240 and 242 address the requirements of vision and hearing acuity in the same section. However, FRA determined that for this proposed rule, it could more clearly present these requirements if they are in two separate sections: one section for vision acuity (§ 246.117) and one section for hearing acuity (§ 246.118).

Paragraph (c) of this section contains the general vision standards that a person would be required to satisfy in order to be certified as a signal employee unless they are determined to have sufficient vision acuity under paragraph (d) of this section. The standards in paragraph (c) mirror the vision acuity standards for locomotive engineers and conductors in 49 CFR parts 240 and 242. FRA is proposing that certified signal employees should have to satisfy certain vision standards, with the ability to distinguish between colors being particularly important. However, FRA requests comments on whether vision acuity standards for certified signal employees are necessary, and if so, whether they should be as strict as the standards for locomotive engineers and conductors.

Although some individuals may not be able to meet the threshold acuity levels in paragraph (c) of this section, they may be able to compensate in other ways that will permit them to function at an appropriately safe level despite their physical limitations. Paragraph (d) of this section permits a railroad to have procedures whereby doctors can evaluate such individuals and make discrete determinations about each person's ability to compensate for their physical limitations. If the railroad's medical examiner concludes that an individual has compensated for their limitations and could safely serve as a certified signal employee, the railroad could certify that person under this proposed regulation if the railroad obtains the medical examiner's professional medical opinion to that

effect. If necessary, medical examiners could condition their opinion on certain circumstances or restrictions, such as the use of corrective lens.

Paragraph (e) of this section describes what documents the railroad would be required to keep on file with respect to vision acuity testing. Railroads would be required to retain these records for individuals who the railroad certifies as signal employees, as well as those individuals for whom the railroad denies certification. Paragraph (g) of this section addresses the issue of vision deterioration. Once certified signal employees become aware that their vision has deteriorated, they must notify the railroad before performing any subsequent service as a certified signal employee. FRA presumes that certified signal employees would most likely become aware of deterioration in their vision either through their own personal observation or through examination by a medical professional. Should this occur, before a certified signal employee can return to service, they must be reexamined. If upon reexamination, the railroad's medical examiner concludes that the certified signal employee still satisfies the vision acuity standards in this part, the certified signal employee would be allowed to return to service. However, if the medical examiner concludes that the certified signal employee no longer satisfies these requirements, the railroad must deny the person's certification in accordance with § 246.301, regardless of how much time remains before the signal employee's current certificate expires. Certified signal employees should note that willful noncompliance with the notification requirement in this paragraph could result in enforcement action.

Section 246.118 Hearing Acuity

This proposed section, derived from 49 CFR 240.121, 240.207, and 242.117, contains the requirements for hearing acuity testing that a railroad would be required to incorporate in its signal employee program.

Paragraph (c) of this section contains the general hearing standards that a person must satisfy in order to be certified as a signal employee unless they are determined to have sufficient hearing acuity under paragraph (d) of this section. The standards in paragraph (c) mirror the hearing acuity standards for locomotive engineers and conductors in 49 CFR parts 240 and 242. FRA is considering whether hearing acuity standards are necessary for certified signal employees and if so, whether they need to be as stringent as the standards for engineers and conductors. FRA proposes that certified signal employees should have to satisfy certain hearing standards and it seems logical for these standards to be consistent with the hearing standards for engineers and conductors. However, FRA requests comments on whether hearing acuity standards for certified signal employees are necessary, and if so, whether they should be as strict as the standards for locomotive engineers and conductors.

Although some individuals may not be able to meet the threshold acuity levels in paragraph (c) of this section, they may be able to compensate in other ways that will permit them to function at an appropriately safe level despite their physical limitations. Paragraph (d) of this section would permit a railroad to have procedures whereby doctors can evaluate such individuals and make discrete determinations about each person's ability to compensate for their physical limitations. If the railroad's medical examiner concludes that an individual has compensated for their limitations and could safely serve as a certified signal employee, the railroad could certify that person under this regulation once the railroad possesses the medical examiner's professional medical opinion to that effect. If necessary, medical examiners could condition their opinion on certain circumstances or restrictions, such as the use of a hearing aid.

Paragraph (e) of this section describes what documents the railroad would be required to keep on file with respect to hearing acuity testing. Railroads would be required to retain these records for both individuals who the railroad certifies as signal employees and those individuals for whom the railroad denies certification. Paragraph (g) of this section addresses the issue of hearing deterioration. Once certified signal employees become aware that their hearing has deteriorated, they would be required to notify the railroad before performing any subsequent service as a certified signal employee. FRA presumes certified signal employees would most likely become aware of deterioration in their hearing either through their own personal observation or through examination by a medical professional. Before a certified signal employee could return to service, they would have to be reexamined. If upon reexamination, the railroad's medical examiner concludes that the certified signal employee still satisfies the hearing acuity standards in this part, the certified signal employee could return to service. However, if the medical examiner concludes that the certified signal employee no longer satisfies these requirements, the railroad would be required to deny the person's certification in accordance with § 246.301, regardless of how much time remains before the signal employee's current certificate expires. Certified signal employees should note that willful noncompliance with the notification requirement in this paragraph could result in enforcement action.

Section 246.119 Training Requirements

This proposed section, derived from 49 CFR 240.123, 240.213, and 242.119, would require railroads to provide initial and periodic training to signal employees. Such training is necessary to ensure certified signal employees have the knowledge, skills, and abilities necessary to safely perform all of the safety-related duties mandated by Federal law, regulations, and orders.

Paragraph (b) of this section would require railroads to address in their certification programs whether the railroad will accept responsibility for training persons who have not been previously certified as signal employees and thus obtain authority to provide initial signal employee certification or whether the railroad will only recertify signal employees who were previously certified by other railroads. If a railroad accepts responsibility for training persons who have not been previously certified as signal employees, paragraph (c) of this section would require the railroad to state in its certification program whether it will conduct the training or whether the railroad will employ a training program that has been adopted and ratified by the railroad, but will be conducted by another entity on its behalf.

Under this section, railroads would have latitude to design and develop the training and delivery methods they will employ; but paragraphs (d), (e), and (f) of this section contain proposed requirements for railroads that elect to train persons who have not been previously certified as signal employees. Pursuant to paragraph (d), a railroad that makes this election would be required to determine how training will be structured, developed, and delivered, including an appropriate combination of classroom, simulator, computer-based, correspondence, practical demonstration, on-the-job training, or other formal training. Paragraph (d)(3) would also require railroads to review and modify their training programs whenever new safety-related railroad laws, regulations, orders, and procedures are issued, as well as whenever new signal systems,

technologies, software, or equipment are introduced into the workplace.

Paragraph (f) of this section provides the requirements a person not previously certified as a signal employee would have to satisfy in order to become a certified signal employee. Paragraph (f)(2) states the person must demonstrate on-the-job proficiency by successfully completing the tasks, and using the signal systems and technology necessary, to be a certified signal employee on the railroad. A certification candidate may perform these tasks under the direct onsite supervision of a certified signal employee who has at least one year of experience as a signal employee. FRA requests comments, including any supporting data, on whether this ''one year of experience'' requirement for certified signal employees supervising certification candidates is sufficient. The final proposed requirement, found in paragraph (f)(3), is that the previously uncertified person must demonstrate their knowledge of the railroad's signal systems, technologies, software, and equipment deployed on the railroad's territory. If the railroad uses a written test to fulfill this requirement, paragraph (f)(3) would require the railroad to provide the person(s) being tested with an opportunity to consult with a qualified instructor to explain a test question. This requirement is equivalent to 49 CFR 242.119(f) and is included so that certification candidates being tested can obtain clarification of test questions from someone who possesses knowledge of the signal systems, technologies, software and equipment deployed in the relevant territory.

Paragraph (g) of this section would require railroads to retain written documentation of the listed determinations. Paragraph (g)(1) would only apply to people who have not been previously certified as signal employees, whereas paragraph (g)(2) would apply to all persons seeking signal employee certification.

Paragraph (h) would require all railroads, regardless of their election in paragraph (b) of this section, to provide comprehensive training on the installation, operation, testing, maintenance, and repair of the signal systems and related technology deployed on their territory. (This training must include training on both signal software and signal equipment.) In order to implement this requirement, paragraph (h) requires railroads to address in their certification program how such training will be provided and how the railroad will ensure that each certified signal employee receives this comprehensive training before the employee is required to install, operate, test, maintain, or repair any signal system or related technology deployed on the railroad's territory.

Paragraph (h)(3) would also require railroads to discuss in their programs the maximum amount of time that a certified signal employee can be absent from performing various types of safety-sensitive work on signal systems before refresher training will be required. This provision is intended to require railroads to address situations in which a certified signal employee may have been working on signal system installations for an extended period and was not involved in the intricacies of maintenance and repair of those systems during that time. This time period cannot exceed twelve months. However, railroads would be allowed to choose a shorter time period if they desire.

Paragraph (j) of this section would require each railroad to provide for the continuing education of their certified signal employees to ensure each certified signal employee maintains the necessary knowledge and skills concerning compliance with all applicable Federal laws, regulations, and orders; compliance with all applicable railroad signal system safety and operating rules; and compliance with all applicable standards, procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of new and existing signal systems and new and existing signal-related technology deployed on its territory. Given the formal annual review and analysis of railroad certification programs that each Class I railroad, commuter railroad, and Class II railroad would be required by § 246.215 to conduct, FRA anticipates that these railroads will address issues identified during the annual review and analysis of their certification programs in their continuing education programs. Thus, FRA expects the annual review and analysis required by § 246.215 will help improve the overall quality of the railroads' training programs.

Paragraph (k) is intended to ensure that each certified signal employee receives comprehensive training on the installation, operation, testing, maintenance, and repair of new signal systems (including software and equipment) and new signal-related technology deployed on the railroad's territory before the employee is required to install, operate, test, maintain, or repair any such system or signal-related technology.

Section 246.121 Knowledge Testing

This proposed section, derived from 49 CFR 240.125, 240.209, and 242.121, would require railroads to provide for the initial and periodic testing of certified signal employees. Paragraph (b) of this section outlines the general requirements for such testing. This testing will have to effectively examine and measure a signal employee's knowledge of: (a) all applicable Federal railroad safety laws, regulations, and orders governing signal systems and related technology, (b) all applicable railroad safety and operating rules, and (c) all applicable railroad standards, procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of the railroad's signal systems and related technology.

Under this section, railroads would have discretion to design the tests that will be employed; for most railroads that would entail some modification of their existing ''book of rules'' examination to include new subject areas. This section does not specify the minimum number of questions to be asked or the passing score to be obtained. However, it would require that the test be conducted without open reference books unless use of such materials is part of a test objective. Also, this section would require that knowledge testing include a practical demonstration component, with other test components in written or electronic form. Since the testing procedures and requirements selected by the railroad would be submitted to FRA for approval, FRA expects the railroad would describe how it will exercise its discretion to ensure certified signal employees on its territory demonstrate their knowledge concerning the safe discharge of their responsibilities. FRA would also monitor the exercise of discretion being afforded to railroads by this section.

Paragraph (c) of this section mirrors 49 CFR 242.121(e) and would require the railroad to provide the person(s) being testing with an opportunity to consult with a qualified instructor to explain one or more test questions.

Paragraph (d) of this section states that if a person fails a test, the railroad cannot allow that person to serve as a certified signal employee until they achieve a passing score on reexamination. The railroad would decide how much time, if any, mut pass after a test failure before a certification candidate can be reexamined. Furthermore, the railroad would decide what additional training, if any, a candidate would receive after a test

failure. The railroad would also decide whether there should be a limit on the number of times a candidate could retake a test, and if so, the number of test retakes the railroad will allow.

Section 246.123 Monitoring Operational Performance

This proposed section, derived from 49 CFR 240.129 and 242.123, contains proposed requirements for conducting unannounced compliance tests. Paragraph (a) of this section would require each railroad to describe in its certification program how it will monitor the conduct of its certified signal employees by performing unannounced compliance tests on the railroad's signal standards, test procedures, and Federal regulations concerning signal systems, as well as monitoring the performance of signal-related tasks. Paragraph (a)(3) would require railroads to indicate the types of actions they will take if they identify deficiencies in a certified signal employee's performance during an unannounced compliance test. FRA believes it is up to each railroad to decide the appropriate action to take in light of various factors, including collective bargaining agreements. Further, FRA believes that the vast majority of railroads have adequate policies to deal with deficiencies in a signal employee's performance and have handled them appropriately for many years.

To avoid restricting the options available to the railroads and employee representatives to develop processes for handling test failures, FRA designed this regulation to be as flexible as possible. There are a variety of actions and approaches that a railroad could take, such as developing and providing formal remedial training for certified signal employees who fail tests or have deficiencies in their performance. Railroads could also implement formal procedures whereby certified signal employees are given the opportunity to explain, in writing, the factors that they believe caused their test failure or performance deficiency. These explanations could help railroads identify areas of training on which to focus or perhaps discover that the reason for the failure/deficiency was due to something other than a lack of skills. FRA believes there are numerous other approaches that could be considered and evaluated by railroads and their certified signal employees. FRA does not want to stifle a railroad's ability to adopt an approach that is best for its organization.

Paragraph (a)(4) would require railroads to describe how they will monitor the performance of signal-related tasks by their certified signal employees. For example, railroad monitoring could include unaccompanied, post-installation inspections of signal cut-overs (conducted within three days of the installation) to verify that the certified signal employee properly installed and tested the signal system in accordance with the railroad's signal standards. Paragraph (b) of this section provides proposed requirements for these unannounced compliance tests, including signal system tests that must be performed and who would be allowed to conduct the tests. Paragraph (b)(3) specifies that each railroad would be required to give each of its certified signal employees at least one unannounced compliance test each calendar year, except as provided in paragraph (d) of this section. FRA recognizes that before these unannounced compliance tests can be performed in conformance with this section, a railroad's certification program must first be approved by FRA. Thus, at the latest, FRA expects railroads to perform these unannounced compliance tests on all of their certified signal employees during the calendar year immediately following the year their certification program is first approved by FRA. For example, if FRA approves one railroad's program in January 2025 and another railroad's program in December 2025, both of these railroads would be required to perform unannounced compliance tests on all of their certified signal employees starting in 2026. While FRA would encourage these railroads to commence the unannounced tests after their programs are approved in 2025, FRA recognizes it may not be practical to perform unannounced tests on all of their certified signal employees by the end of 2025, especially for the railroad whose program was not approved until December 2025.

Paragraph (c) of this section reflects FRA's recognition that some certified signal employees may not be performing tasks that require certification. Therefore, a railroad would not be required to provide those certified signal employees with an annual, unannounced compliance test. For example, a certified signal employee may be on furlough, in military service, off with an extended illness, or working in another craft. In situations like these where a certified signal employee is not performing tasks that require certification, the railroad would not have to give an unannounced compliance test. However, when the certified signal employee resumes work on signal systems that requires certification, they would have to be given an unannounced compliance test within 30 days. Moreover, the railroad would be required to retain a written record documenting the dates on which the certified signal employee stopped performing tasks requiring certification, the date the certified signal employee resumed performing signal system work requiring certification, and the date the certified signal employee received their unannounced compliance test following their resumption of signal system work requiring certification.

Section 246.124 Mentoring

This proposed section would require railroads to include, in their certification programs, procedures for mentoring signal employees who have not been certified by the railroad (such as newly-hired signal employees who were certified by their previous employers). By allowing for the mentoring of these signal employees, railroads can allow uncertified signal employees to perform signal work under the direct oversight and supervision of a mentor until these signal employees are certified by the railroad.

After a railroad's certification program has been approved by FRA, paragraph (b) of this section would require that the railroad assign either a signal employee that it has certified pursuant to this part or a signal employee who is working under the direct observation and supervision of a mentor to perform work on a signal system or signal-related technology that requires certification. Therefore, if the railroad assigns a signal employee that it has not certified to perform work on a signal system or signal-related technology that requires certification, paragraph (b) would require the railroad to assign a mentor who can directly oversee and supervise the work performed by the signal employee.

Paragraph (c) of this section would only apply to railroads who elect to classify their certified signal employees into more than one occupational category or subcategory, in accordance with § 246.107. These railroads would be required by paragraph (c) to address in their certification programs how mentoring will be provided for certified signal employees who move into a different occupational category or subcategory of certified signal service.

Paragraph (e) of this section reflects FRA's intent that mentors must be held accountable for the work performed by the signal employees who are working under their direct oversight and supervision. Therefore, paragraph (e)

would require railroads to address in their certification programs how they will hold mentors accountable for the work performed by signal employees who are working under their direct oversight and supervision.

Section 246.125 Certification Determinations Made by Other Railroads

This section of the proposed rule, derived from 49 CFR 240.225 and 242.125, contains requirements that would apply when a certified or previously certified signal employee is about to begin work for a different railroad. This section would allow a railroad to rely on determinations made by another railroad concerning a person's certification.

As noted previously in the discussion above related to § 246.124, railroads would be required to provide mentoring for signal employees with some signal system work experience who have not been certified by the railroad. However, this section would also require railroads to address in their certification programs how they will administer training for previously uncertified signal employees with extensive signal experience or previously certified signal employees who have had their certification expire. In both scenarios, FRA would allow the railroad to reduce the on-the-job training that might otherwise be required if these signal employees were treated as having no signal system work experience. However, if a railroad's certification program fails to specify how the railroad will train a previously certified signal employee hired from another railroad, all signal employees hired by that railroad would be required to take the hiring railroad's entire training program (regardless of the signal employee's prior certification status).

Subpart C—Administration of the Certification Program

Section 246.201 Time Limitations for Certification

This proposed section, derived from 49 CFR 240.217 and 242.201, contains various time constraints that preclude railroads from relying on stale information when evaluating a candidate for certification or recertification. For example, when making a determination of eligibility based on prior safety conduct on a different railroad pursuant to § 246.113, paragraph (a)(1) would prohibit a railroad from relying on information provided more than one year before the railroad's certification decision. However, paragraph (b) goes on to explain that the time constraints listed in paragraph (a) would not apply to railroads who are making certification or recertification decisions based on the eligibility determination that have already been made by another railroad in accordance with § 246.125.

Paragraph (c) would prohibit a railroad from certifying a person as a signal employee for more than three years except for those individuals who are designated as certified signal employees under § 246.105(c) or (d). When a railroad designates a person as a certified signal employee under § 246.105(c) or (d), that certification can last for three years after the date that FRA initially approves the railroad's certification program. This could, however, lead to situations where a certificate could be valid for more than three years. For example, if a railroad designates a person as a certified signal employee in January 2025, but FRA does not approve the railroad's certification program until January 2026, the signal employee's certification could last until January 2029 (four years in total). However, any subsequent recertifications for that signal employee could only last for three years. In other words, if the signal employee in the previous example got recertified in January 2029, that certificate would expire no later than January 2032.

Paragraph (d) would require railroads to issue certificates that comply with § 246.207 to their certified signal employees within 30 days from the date of the railroad's decision to certify or recertify that person.

Section 246.203 Retaining Information Supporting Determinations

This proposed section, derived from 49 CFR 240.215 and 242.203, contains recordkeeping requirements for railroads that employ certified signal employees. Paragraph (b) lists the documents that railroads would be required to retain for each of their certified signal employees and certification candidates, while paragraph (e) would require railroads to retain these records for six (6) years from the date of the certification, recertification, denial, or revocation decision. Paragraph (e) would also require railroads to make these records available to FRA representatives, upon request, in a timely manner.

Paragraph (f) would prohibit railroads and individuals from falsifying records that railroads are required to retain pursuant to this section. Paragraph (g) contains minimum standards for electronic recordkeeping with which railroads would be required to comply to maintain electronic versions of the required records. These minimum standards for electronic recordkeeping are virtually identical to the electronic recordkeeping standards contained in 49 CFR 242.203.

Section 246.205 List of Certified Signal Employees and Recordkeeping

This proposed section, derived from 49 CFR 240.221 and 242.205, would require a railroad to maintain a list of its certified signal employees. Paragraph (b) of this section would also require railroads to update their lists of certified signal employees at least annually and to make its list of certified signal employees available, upon request, to FRA representatives in a timely manner.

Paragraph (c) contains minimum standards for electronic recordkeeping with which railroads would be required to comply, in order to maintain an electronic version of the list of certified signal employees required by this section. These minimum standards are similar to the electronic recordkeeping standards contained in 49 CFR 242.205.

Paragraph (d) would prohibit railroads and individuals from falsifying the list of certified signal employees that railroads are required to maintain pursuant to this section.

Section 246.207 Certificate Requirements

This proposed section contains proposed requirements for the certificate that each certified signal employee would be required to carry. The requirements in paragraphs (a)–(e) of this section, which pertain to the proposed minimum content for certificates and authorization of the person who would be designated to sign the certificates, are derived from 49 CFR 240.223 and 242.207.

Paragraph (a) of this section specifies that railroads have the option of issuing certificates electronically or in paper form. Paragraph (a)(1) would require that the signal employee certificate identify the railroad issuing the certificate. Therefore, a certified signal employee who works for more than one railroad would be required to have a separate certificate for each railroad with whom the signal employee is certified. For railroads who choose to classify their certified signal employees into occupational categories or subcategories, pursuant to § 246.107, paragraph (a)(2) would require the railroad to indicate the specific signal employee category(ies) or subcategory(ies) for which the person has been certified.

Paragraph (a)(7) would require the certificate to be signed by an individual who has been designated by the railroad

as an authorized signatory of signal employee certificates, as described in paragraph (c) of this section. Electronic signatures are permitted under this proposed rule. In addition, paragraph (e) of this section would prohibit railroads and individuals from falsifying certificates.

Paragraphs (f) and (i) are derived from 49 CFR 240.305 and 242.209. These paragraphs would require signal employees to have their certificates in their possession while on duty, display their certificates when requested by an FRA representative, State inspectors [21] authorized under 49 CFR part 212, or certain railroad officers, and to notify a railroad if they are called to serve as a signal employee in a service that would cause the employee to exceed their certificate limits.

Paragraph (g), derived from 49 CFR 240.301 and 242.211(a), would require a railroad to promptly replace a certified signal employee's certificate at no cost to the employee, if the certificate is lost, stolen, mutilated, or becomes unreadable. However, unlike § 242.211(b), this section does not contain detailed requirements for temporary replacement certificates. Temporary replacement certificates generally contain most of the information provided on official certificates. Therefore, it does not appear to be especially burdensome for railroads to issue temporary certificates to replace certificates that have been lost, stolen, mutilated, or become unreadable. Nonetheless, by refraining from proposing a formal process for the issuance of temporary replacement certificates, FRA would allow railroads to decide how and when to issue temporary replacement certificates to signal employees. FRA is soliciting comment on this proposed approach.

Section 246.213 Multiple Certifications [22]

This proposed section, derived from 49 CFR 240.308 and 242.213, establishes how railroads would handle certified signal employees who are also certified in another railroad craft. FRA recognizes that while it is fairly common for an individual to work as both an engineer and a conductor, it is less common for a signal employee to also work in another craft that requires certification. However, because situations may arise where a certified signal employee is also certified to work in another craft, such as a locomotive engineer or conductor, FRA would like to address how railroads would be required to handle such situations.

Paragraph (a) of this section would allow a certified signal employee to become certified in one or more of the other railroad crafts that require certification such as locomotive engineer or conductor. If a person is certified in multiple crafts by the same railroad, paragraph (b) would require the railroad to coordinate the expiration dates of those certificates, to the extent possible. While railroads are not required to have all of a person's certificates expire at the same time, it would be beneficial from the standpoint of administrating the certification programs if railroads followed this practice. Thus, FRA encourages railroads to coordinate these expiration dates when possible.

Paragraph (c) of this section would pertain to signal employees who hold signal employee certificates issued by multiple railroads or who are seeking to become certified signal employees for multiple railroads. Paragraph (c)(1) would require the signal employee to immediately notify their employer(s) and all railroads with whom the signal employee holds a signal employee certificate, if a railroad denies, suspends, or revokes the signal employee's certification or recertification. Certified signal employees should note that willful noncompliance with the notification requirements in this paragraph will likely result in enforcement action including, but not limited to, disqualification from safety-sensitive service.

Paragraph (c)(2) would prohibit an individual from working as a certified signal employee for *any* railroad while their signal employee certification is suspended or revoked by a railroad, except as provided for in § 246.124(d). For example, if an individual is a certified signal employee with Railroad ABC and Railroad DEF, and ABC suspends and/or revokes the individual's certificate, that individual would not be able to work as a certified signal employee for DEF, or any other railroad, during the period of suspension and/or revocation. (Section 246.124(d) would, however, allow the individual to perform work on signal systems, if allowed by a railroad's certification program, under the direct oversight and supervision of a mentor.)

Paragraph (c)(3) states that if a person has their signal employee certification suspended or revoked by one railroad and that person attempts to become a certified signal employee with another railroad during the certificate suspension or revocation period, they must notify the railroad from whom they are seeking certification that their signal employee certificate has been suspended or revoked. Therefore, if a person is seeking signal employee certification with Railroad XYX when their signal employee certificate is suspended or revoked by Railroad ABC, they must notify XYZ of their current suspended or revoked certification status.

Paragraphs (d), (e), and (f) of this section address how the revocation of a person's signal employee certification would affect that person's ability to work in another railroad craft requiring certification and vice versa. If a person's signal employee certification is revoked because of a drug or alcohol violation, as described in § 246.303(e)(11), then that person would be ineligible to work in any craft requiring certification, such as a locomotive engineer or conductor, for any railroad during the period of revocation. Such person would also be prohibited from obtaining certification in any of those crafts from any railroad while their signal employee certification is revoked. Likewise, if a person's non-signal employee certification, such as locomotive engineer or conductor, is revoked because of an alcohol or drug violation, as described in § 219.101 of this chapter, that person will be ineligible to work as a certified signal employee or obtain a signal employee certificate from any railroad during the revocation period. In contrast, if a signal employee's certification is revoked for a violation that does not involve alcohol or drugs, as described in §§ 246.303(e)(1) through (10), that person would still be able to work in any other railroad craft requiring certification, such as a locomotive engineer or conductor, during the period of revocation, as long as the person is certified in that craft. Likewise, a person could still work as a certified signal employee if their certificate for another railroad craft, such as locomotive engineer or conductor, was revoked due to a violation that did not involve drugs or alcohol.

FRA's reasoning for this line of delineation between revocable events that involve alcohol and drugs and those that do not is rooted in railroad safety. If someone shows up to work as

[21] Although State inspectors authorized under 49 CFR part 212 could be considered FRA representatives, they are mentioned separately in this section to ensure there is no dispute regarding their authority.

[22] To the extent possible, FRA has attempted to match the section numbers in this proposed rule to analogous sections in the conductor certification rule (49 CFR part 242). Since 49 CFR 242.213 addresses multiple certification issues, FRA is proposing to use section number 246.213 for the multiple certification section in this proposed rule instead of the next sequential section number, which would be 246.209.

a certified signal employee under the influence of alcohol or drugs, it stands to reason that they could likely show up to work for another craft, such as a locomotive engineer or conductor, under the influence as well. Thus, it makes sense for an individual's alcohol or drug violations as a certified signal employee to impact their eligibility to work in another craft that requires certification and vice versa. With respect to revocable events that do not involve alcohol or drugs, FRA finds that the tasks performed by a certified signal employee are so inherently different from the tasks performed in another certified craft, such as an operating crew member, that it does not automatically follow that a person's revocable event as a certified signal employee indicates they are more likely to also have a revocable event while performing in another craft. Thus, FRA is taking the position that the revocation of a signal employee certificate which does not involve alcohol or drugs should not affect that person's eligibility to work in another railroad craft requiring certification, and vice versa. However, FRA solicits comments on this issue.

Paragraphs (f) and (g) would prohibit a railroad from denying or revoking a signal employee's certification just because their attempt at certification or recertification in another railroad craft, such as locomotive engineer or conductor, was denied and vice versa. Paragraph (h) would allow a railroad to issue a single certificate to an individual who is certified in multiple railroad crafts that require certification. If a railroad exercises this option, it must ensure that the single certificate contains all of the components required for that craft. Alternatively, railroads are also welcome to issue multiple certificates to an individual who is certified in multiple crafts (one certificate for each craft). Thus, if a person is certified as both a signal employee and conductor, the railroad could issue the person a single certificate for both crafts or it could issue one signal employee certificate and one conductor certificate.

Finally, paragraph (i) of this section denotes that if a person is certified in multiple crafts and they are involved in a revocable event, that event can only lead to the revocation of a certificate for a single railroad craft. The railroad would be required to determine which certificate should be revoked based on the work the individual was performing at the time of the event. In such instances, while the railroad may only revoke a certificate for a single craft, that revocation could affect a person's eligibility to perform other crafts. For example, if a person who is certified as a signal employee and a conductor violates § 246.303(e)(11) while on duty as a signal employee, the railroad should only revoke the person's signal employee certification. The person's conductor certification could not be revoked for the incident that occurred while the individual was on duty as a signal employee. However, as discussed in paragraph (d)(1) of this section, this person would not be able to work as a conductor while their signal employee certificate was revoked for this offense.

Section 246.215 Railroad Oversight Responsibilities

This proposed section, derived from 49 CFR 240.309 and 242.215, would require each Class I railroad (including the National Railroad Passenger Corporation), each railroad providing commuter service, and each Class II railroad to conduct an annual review and analysis of its program for responding to detected instances of poor safety conduct by certified signal employees. FRA has formulated the information collection requirements of this proposed section to ensure that railroads collect data on signal employee safety behavior and feed that information into their operational monitoring efforts, thereby enhancing safety.

This section would require each Class I railroad (including the National Railroad Passenger Corporation), railroad providing commuter service, and Class II railroad to have an internal auditing plan to keep track of events involving poor safety conduct by certified signal employees. For each such event, the railroad would be required to indicate how it responded to that event. The railroad would then be required to evaluate this information, together with data showing the results of annual testing and causation of FRA reportable train accident/incidents, to determine whether additional or different actions, if any, are needed to improve the safety performance of its certified signal employees. FRA would not, however, require railroads to furnish this data or their analysis of the data to FRA. Instead, FRA would require that railroads be prepared to submit such information when requested.

As set forth in paragraph (i), an instance of poor safety conduct involving a person who is a certified signal employee and is certified in another railroad craft (such as a locomotive engineer or conductor) need only be reported once under the appropriate section of this chapter (*e.g.,* under § 240.309, § 242.215, or under this section). The determination as to where to report the instance of poor safety conduct should be based on the work the person was performing at the time the conduct occurred. This determination is similar to the determination made under part 225, in which railroads determine whether an accident was caused by poor performance of what is traditionally considered a conductor's job function (*e.g.,* switch handling, derail handling, etc.) or whether it was caused by poor performance of what is traditionally considered a locomotive engineer's job function (*e.g.,* operation of the locomotive, braking, etc.)

Subpart D—Denial and Revocation of Certification

This subpart parallels part 240 and part 242's approach to adverse decisions concerning certification (*i.e.,* decisions to deny certification or recertification and revoke certification). With respect to denials, the approach of this proposed rule is predicated principally on the theory that decisions to deny certification or recertification will come at the conclusion of a prescribed evaluation process which would be conducted in accordance with the provisions set forth in this subpart. Thus, this proposed rule contains specific procedures designed to ensure that a person in jeopardy of being denied certification or recertification would be given a reasonable opportunity to examine and respond to negative information that may serve as the basis for being denied certification or recertification.

When considering revocation, this proposed rule contemplates that decisions to revoke certification would only occur for the reasons specified in this subpart. Since revocation decisions by their very nature involve a clear potential for factual disagreement, this subpart is structured to ensure that such decisions would only be made after a certified signal employee has been afforded an opportunity for an investigatory hearing at which the presiding officer would determine whether there is sufficient evidence to establish that the signal employee's conduct warranted revocation of their certification.

This subpart also provides for certificate suspension in certain circumstances. Certificate suspension would be employed in instances where there is reason to think the certificate should be revoked or made conditional but time is needed to resolve the situation. Certificate suspension would be applicable in instances where a person is awaiting an investigatory

hearing to determine whether that person violated certain provisions of FRA's alcohol and drug control rules, or committed a violation of certain signal standards, procedures, or practices, and situations in which the person is being evaluated or treated for an active substance abuse disorder.

Section 246.301 Process for Denying Certification

This proposed section, derived from 49 CFR 240.219 and 242.401, establishes minimum procedures that must be offered to a certification candidate before a railroad denies the candidate certification or recertification. Paragraph (a) of this section gives a certification candidate a reasonable opportunity to explain or rebut adverse information, including written documents or records, that the railroad intends to use as the basis for its decision to deny certification or recertification.

Paragraph (b) of this section requires that a written explanation of an adverse decision be 'served' on a certification candidate within 10 days of the railroad's decision. Paragraph (b) also requires that the basis for a railroad's denial decision address any explanation or rebuttal information that the certification candidate may have provided pursuant to paragraph (a) of this section.

Paragraph (c) of this section prohibits a railroad from denying certification based on a failure to comply with a railroad test procedure, signal standard, or practice which constitutes a violation under § 246.303(e)(1) through (10) if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the signal employee's ability to comply with that railroad test procedure, signal standard, or practice. This paragraph is derived from the intervening cause exception for revocation in § 246.307(h).

Section 246.303 Criteria for Revoking Certification

This proposed section, derived from 49 CFR 240.117, 240.305, and 242.403, provides the circumstances under which a signal employee may have their certification revoked. In addition, paragraph (a) of this section makes it unlawful to fail to comply with any of the railroad test procedures, signal standards and practices described in paragraph (e) of this section. Paragraph (a) is needed so that FRA can initiate enforcement action. For example, FRA might want to initiate enforcement action in the event that a railroad fails to initiate revocation action or a person who is not a certified signal employee violates a railroad test procedure, signal standard or practice described in paragraph (e) of this section. (Railroads should, however, note that they may not revoke a signal employee's certificate, including a designated signal employee's certificate, until they have obtained FRA approval of their certification programs pursuant to § 246.103.)

Paragraph (b) of this section provides that a certified signal employee who fails to comply with a railroad test procedure, signal standard or practice described in paragraph (e) will have their signal employee certification revoked. Paragraph (c) provides that a certified signal employee who is monitoring, mentoring, or instructing another signal employee could have their certification revoked if the certified signal employee fails to take appropriate action to prevent a violation of a railroad test procedure, signal standard or practice described in paragraph (e) of this section. As explained in paragraph (c), ''appropriate action'' does not mean that a supervisor, certified signal employee, mentor, or instructor must prevent a violation from occurring at all costs, but rather the duty may be met by warning the signal employee, as appropriate, of a potential or foreseeable violation.

Paragraph (d) provides that a certified signal employee who is called by a railroad to perform a duty other than that of a signal employee would not have their signal employee certification revoked based on actions taken or not taken while performing that duty. In general, this paragraph would apply regardless of whether the individual was called to perform a certified craft, such as locomotive engineer or conductor, or a non-certified craft. However, this exemption would not, however, apply to violations described in paragraph (e)(11) of this section. Therefore, certified signal employees working in other capacities that do not require certification, who violate certain alcohol and drug rules would have their signal employee certification revoked for the appropriate period of time pursuant to § 246.115. However, if the certified signal employee was working in another certified craft, such as a locomotive engineer or conductor, at the time of the alcohol or drug violation, their certificate for the craft that they were performing at the time of the violation would be revoked as opposed to their signal employee certificate.

If a certified signal employee who is also certified in another craft, such as locomotive engineer or conductor, violates § 219.101 while performing a craft that does not require certification, the railroad must select one, and only one, certificate to revoke. For example, if a person who is a certified signal employee and conductor violates § 219.101 while working as a brakeman, the railroad must decide to revoke either their signal employee or conductor certificate, but it cannot revoke both certificates. Regardless of which certificate the railroad chooses to revoke, however, the person will be unable to work as a signal employee or conductor during the period of revocation. *See* § 246.213(d).

Paragraph (e) provides the eleven types of rule infractions that could result in certification revocation. The infractions listed in paragraphs (e)(1) through (11) are derived in part from the revocable events provided in 49 CFR 242.117(e) but have been modified to account for the duties and responsibilities of a certified signal employee.

Paragraph (e)(1) refers to action(s) taken by a certified signal employee that interfere with the normal functioning of a highway-rail grade crossing warning system or signal system, if alternative means of protecting motorists and other crossing users have not already been provided. (For this purpose, railroads shall only consider violations of paragraph (e)(1) that result in an activation failure or false proceed signal.)

Paragraph (e)(2) refers to action(s) taken by a certified signal employee that fail to comply with a railroad rule or procedure when removing one or more of the following devices and systems from service: (a) highway-rail or pathway grade crossing warning devices and systems; (b) wayside signal devices and systems; or (c) other devices or systems subject to this part. Similarly, paragraph (e)(3) refers to action(s) taken by a certified signal employee that fail to comply with a railroad rule or procedure when placing these devices and systems in service or restoring them back to service.

Paragraph (e)(4) refers to violations involving a certified signal employee's failure to conduct certain inspections and tests on highway-rail and pathway grade crossing warning devices and systems that are required by railroad rule, signal standard, or railroad procedures. These required inspections and tests would include post-installation and post-repair testing and inspections that are required by FRA's grade crossing and signal regulations in parts 234 and 236, as well as inspections and tests that are required after modification or disarrangement of grade crossing warning devices and other types of signal systems.

Paragraph (e)(5) refers to a certified signal employee's failure to restore power to a train detection or highway-rail or pathway grade crossing warning device or system after manual interruption of the power source. (For violations of this nature, railroads would, however, be directed to consider only those violations that result in activation failure.)

Paragraph (e)(6) refers to a certified signal employee's failure to comply with railroad validation or cutover procedures.

Paragraph (e)(7) refers to a certified signal employee's failure to comply with FRA's Roadway Worker Protection regulations in 49 CFR part 214. However, for purposes of this part, paragraph (e)(7) would require railroads to consider only those violations that directly involve a certified signal employee who failed to ascertain whether on-track safety was being provided before fouling the railroad track.

Paragraphs (e)(8) through (e)(10) refer to a certified signal employee's failure to comply with FRA's Railroad Operating Practices regulations related to work performed on, under, or between rolling equipment. Paragraph (e)(11) refers to a certified signal employee's failure to comply with the alcohol and drug use prohibitions in § 219.101 of FRA's alcohol and drug regulations.

Paragraph (f) proposes a three-year period for considering certified signal employee conduct that failed to comply with a Federal regulation or railroad test procedure, signal standard or practice described in paragraphs (e)(1) through (10) of this section. However, when alcohol and drug violations are at issue, the time period for evaluating prior operating rule misconduct would be dictated by § 246.115, which would establish a period of 60 consecutive months prior to the date of review for such evaluations.

Paragraph (g) provides that if a single incident contravenes more than one Federal regulatory provision or railroad test procedure, signal standard, or practice listed in paragraph (e) of this section, the incident would be treated as a single violation. FRA considers a single incident to be a unique identifiable occurrence caused by a certified signal employee's violation of one or more railroad operating rules or practices listed in paragraph (e). However, a certified signal employee could be involved in more than one incident during a single tour of duty, if the incidents are separated by time, distance, or circumstance.

Paragraph (h) provides that a certified signal employee may have their certification revoked for violation of a railroad test procedure, signal standard, or practice listed in paragraph (e) that occurs during a properly conducted monitoring test. However, as reflected in paragraph (i), violations of railroad test procedures, signal standards, or practices that occur during monitoring tests that are not conducted in compliance with this part, the railroad's testing procedures, or the railroad's program under § 217.9 will not be considered for revocation purposes.

Section 246.305 Periods of Ineligibility

This section of the proposed rule, derived from 49 CFR 240.117 and 242.405, describes how a railroad would determine the period of ineligibility (*e.g.,* for revocation or denial of certification) for a certified signal employee or candidate for signal employee certification. Paragraph (a) of this section provides the starting date for a period of ineligibility. For persons who are not certified as signal employees, a period of ineligibility would begin on the date of the railroad's written determination that an incident involving a potential violation of one or more regulatory requirements in § 246.303(e)(1) through (10) has occurred. For example, if the railroad made a written determination on March 10th that an incident involving a potential violation of one or more regulatory requirements in § 246.303(e)(1) through (10) occurred on March 1st, the period of ineligibility would begin on March 10th for persons who are not certified signal employees. However, for certified signal employees and candidates for signal employee recertification, a period of ineligibility would begin on the date the railroad notifies the candidate for signal employee recertification that recertification has been denied or the date the railroad notifies the certified signal employee that their certification has been suspended.

Even though some certified signal employees will be subsequently notified that their certification will be revoked as a result of the incident, the period of ineligibility will begin on the date the railroad notifies the certified signal employee that their certification has been suspended. This is because once a person's certificate is suspended, they are ineligible to work as a certified signal employee pending a determination as to whether their certification should be revoked.

With respect to revocation, paragraph (b) of this section provides that once a railroad determines that a certified signal employee has failed to comply with its test procedures, signal standards, or practices listed in § 246.303(e), two consequences would occur. First, the railroad would be required to revoke the signal employee's certification for a period of time provided in this section. Second, that revocation would initiate a period during which the signal employee would be subject to an increasingly more severe period of revocation if additional revocable events occur within the next 24 to 36 months.

The standard periods of revocation proposed in this section track the revocation periods provided in parts 240 and 242. One revocable event would result in revocation for 30 days. Two revocable events within 24 months of each other would result in revocation for six (6) months. Three revocable events within 36 months of each other would result in revocation of one (1) year. Four revocable events within 36 months of each other would result in revocation for three (3) years.

While paragraph (c) of this section contains a provision that parallels § 242.405(b) and provides that all periods of revocation may consist of training, paragraph (d) contains a provision that parallels §§ 240.117(h) and 242.405(c). Paragraph (d) provides that a person whose signal employee certification is denied or revoked would be eligible for grant or reinstatement of the certificate prior to the expiration of the initial period of revocation if they can satisfy all of the criteria listed in the paragraph.

Section 246.307 Process for Revoking Certification

This proposed section, derived from 49 CFR 240.307 and 242.407, provides the procedures a railroad would be required to follow if it acquires reliable information regarding a certified signal employee's violation of a railroad test procedure, signal standard, or practice described in § 246.303(e) or 246.115(d). Paragraph (b)(1) of this section would require a railroad to suspend a signal employee's certification immediately, upon receipt of reliable information regarding a violation of a railroad test procedure, signal standard, or practice described in § 246.303(e). Prior to, or upon suspending, the signal employee's certificate, paragraph (b)(3) would require the railroad to provide either verbal or written notice of the reason for the suspension, the pending revocation, and an opportunity for a hearing. If the initial notice was verbal, then the notice would have to be promptly confirmed in writing. The amount of time the railroad would have to confirm the verbal notice in writing would depend on whether or not a collective bargaining agreement is

in effect and applicable. In the absence of such an agreement, a railroad would have four days to provide written notice. If a notice of suspension is amended after a hearing is convened or does not contain citations to all railroad test procedure, signal standards, and practices that may apply to the potentially revocable event, the Certification Review Board (CRB or Board), if asked to review the revocation decision, might subsequently find that this constitutes procedural error pursuant to § 246.405.

Paragraph (b)(5) of this section would require the railroad, no later than the start of the hearing, to provide the signal employee with a copy of the written information and a list of witnesses that the railroad will present at the hearing. If requested, a recess to the start of the hearing would be granted if the written information and list of witnesses is not provided until just prior to the start of the hearing. If the information that led to the suspension of the signal employee's certificate pursuant to paragraph (b)(1) of this section is provided through statements of an employee of the convening railroad, the railroad would be required to make that employee available for examination during the hearing. Examination may be telephonic or virtual when it is impractical to provide the witness at the hearing. These provisions in paragraph (b)(5) of this section are intended to ensure that signal employees are provided with information and/or witnesses necessary to defend themselves at their hearings. Even if a railroad conducts a hearing pursuant to the procedures in an applicable collective bargaining agreement, the railroad would still have to comply with the provisions of paragraph (b)(5). It is not, however, FRA's intent to require railroads to call every witness included on the railroad's list of witnesses to testify at the hearing. If, for example, a railroad believes that it has provided sufficient evidence during a hearing to prove its case and that calling a witness on its list to testify would be unduly repetitive, the railroad would not be obligated to call that witness to testify. Of course, the opposing party could request that the witness be produced to testify, but the hearing officer would have the authority pursuant to paragraph (d)(4) of this section to determine whether the witness's testimony would be unduly repetitive or have such minimal relevance that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

Paragraph (d)(2) of this section provides the presiding officer with the powers necessary to regulate the conduct of the hearing. Thus, a presiding officer would be permitted to deny excessive hearing request delays by the signal employee. Moreover, a presiding officer could find implied consent to postpone a hearing when a signal employee's witnesses are not available within 10 days of the date the certificate is suspended. However, the CRB may grant a petition on review if the CRB finds that the hearing schedule caused the petitioner substantial harm.

Paragraph (e) of this section contains requirements regarding the written decision in a railroad hearing. FRA believes these requirements would ensure that railroads issue clear and detailed decisions. In turn, clear and detailed decisions would allow a signal employee to understand exactly why their certification was revoked and would allow the CRB to have a more detailed understanding of the case if asked to review the revocation decision pursuant to subpart E of this proposed rule.

Paragraph (f) credits the period of certificate suspension prior to the commencement of a hearing required under this section towards satisfying any applicable revocation period imposed in accordance with the provisions of § 246.305. For example, if a signal employee's certificate is suspended on July 1st and on July 11th, the railroad issues a decision to revoke the signal employee's certificate for 30 days, the time between July 1st and July 11th would count towards the 30-day revocation period. Thus, the signal employee's certificate would only be revoked for an additional 20 days after the railroad issued its revocation decision.

Paragraph (g) would require a railroad to revoke a signal employee's certification if it discovers that another railroad has revoked that individual's signal employee certification. The revocation period would coincide with the period of revocation imposed by the railroad that initially revoked the signal employee's certification. For example, if a signal employee is certified by Railroad ABC and Railroad XYZ, and ABC revokes the signal employee's certification from November 1st through November 30th, XYZ must revoke the signal employee's certification through November 30th once it learns of ABC's revocation. The revocation hearing requirement in this rule would be satisfied if any railroad holds a revocation hearing for the signal employee that arises from the same set of facts.

Paragraphs (h) and (i) provide two specific defenses for railroad supervisors and hearing officers to consider when deciding whether to suspend or revoke a person's certificate due to an alleged revocable event. Pursuant to these provisions, either defense would have to be proven by sufficient evidence. Paragraph (h) would prohibit railroads from revoking a signal employee's certificate when there is sufficient evidence of an intervening cause that prevented or materially impaired the signal employee's ability to comply. For example, a railroad should consider assertions that a qualified instructor failed to take appropriate action to prevent an uncertified signal employee or signal employee trainee from using defective equipment. However, FRA does not intend to imply that all equipment failures and errors caused by others will serve to absolve signal employees from certification revocation under this proposed rule. The factual issues presented by each incident would need to be analyzed on a case-by-case basis.

Paragraph (i) would allow railroads to exercise discretion when determining whether to revoke a signal employee's certification ''if sufficient evidence exists to establish that the violation of the railroad test procedure, signal standard, or practice described in § 246.303(e) was of a minimal nature and had no direct or potential effect on rail safety.'' However, FRA acknowledges that the determination as to whether an incident meets this criterion could be subject to different interpretations. For this reason, paragraph (j) would require railroads to retain information about the evidence relied upon when exercising this discretion. Unless a railroad fails to retain information as required in paragraph (j) or acts in bad faith, FRA does not anticipate taking enforcement action against the railroad even if FRA believes the railroad could have revoked the signal employee's certification.

Paragraph (j) of this section would require railroads to keep records of those violations in which they must not or elect not to revoke a signal employee's certificate pursuant to paragraph (h) or (i) of this section. Paragraph (k) addresses concerns that problems could arise if FRA disagrees with a railroad's decision not to suspend a signal employee's certificate for an alleged violation of a railroad test procedure, signal standard, or practice pursuant to § 246.303(e). As long as a railroad makes a good faith determination after a reasonable inquiry, the railroad will have immunity from civil enforcement for making what the agency believes to be an incorrect determination. However, if railroads do

not conduct a reasonable inquiry or act in good faith, they could be subject to civil penalty assessment under this rule. In addition, even if a railroad does not take what FRA considers appropriate revocation action, FRA could still take enforcement action against an individual responsible for the noncompliance by assessing a civil penalty against the individual or issuing an order prohibiting the individual from performing safety-sensitive functions in the rail industry for a specified period of time pursuant to part 209, subpart D.

Subpart E—Dispute Resolution Procedures

This subpart details the opportunities and procedures for a person to challenge a railroad's decision to deny certification or recertification or to revoke a signal employee's certification. While the proposed dispute resolution process for signal employees largely mirrors the processes for engineers under part 240 and conductors under part 242, FRA proposes some modifications in this proposed rule that will be discussed below. In addition, FRA has undertaken efforts to simplify these regulations to make them clear and comprehensible to all interested parties.

Section 246.401 Review Board Established

This proposed section, derived from 49 CFR 240.401 and 242.501, provides that a person who is denied certification or recertification or has had their signal employee certification revoked may petition FRA to review the railroad's decision. Pursuant to this section, FRA delegates initial responsibility for adjudicating such disputes to the CRB. Although creation of the CRB will require issuance of an internal FRA order, FRA anticipates that the CRB will mirror the Operating Crew Review Board (OCRB) which currently adjudicates disputes under parts 240 and 242.[23] Under this proposed rule, this newly created Board would adjudicate certification disputes for all certified crafts, including locomotive engineers, conductors, and signal employees. FRA is fully aware that these different job disciplines require different knowledge bases and skill sets. While the specific process for selecting CRB members would be delineated in an FRA order or other internal document, FRA would ensure that the CRB is composed of employees with sufficient backgrounds in these various disciplines. Only those CRB members with sufficient knowledge of signaling would be able to participate as a voting member on a petition filed under this part.

Section 246.403 Petition Requirements

This proposed section, derived from 49 CFR 240.403 and 242.503, contains proposed requirements for obtaining FRA review of a railroad's decision to deny or revoke certification, or deny recertification. Paragraph (b) of this section would require petitioners to seek review in a timely fashion once the adverse decision is served on them. In the interest of consistency and uniformity with parts 240 and 242, petitioners would have 120 days from the date the adverse decision was served upon them to file a petition for review by the CRB.

Paragraph (b)(3) would require petitioners to file their petitions through *https://www.regulations.gov.* Petitioners and their representatives would, however, be well-advised to save some form of proof of filing, in case an error occurs in the *regulations.gov* system and they have to submit proof that their petition was timely filed. All documents associated with a CRB petition would be posted to the docket on *Regulations.gov* and all DOT dockets on *Regulations.gov* are available to the public. You may review DOT's complete Privacy Act Statement published in the **Federal Register** on April 11, 2000 (Volume 65, Number 70, Pages 19477–78).

Paragraph (b)(4) would require that a petition contain contact information, including an email address, for the petitioner and their representative, if any. The OCRB only communicates with parties via email. Therefore, FRA anticipates the CRB will operate in a similar manner and will only send communications to the parties via email. If a petition only contains an email address for the petitioner's representative, but not the petitioner, the CRB will only send any necessary communications to the representative. Accordingly, a petition filed in accordance with this part need not include a mailing address for petitioner or their representative, unlike petitions for review filed pursuant to parts 240 and 242. Lastly, if any required contact information for petitioner or their representative, such as a phone number or email address, changes during the pendency of a petition before the CRB, it would be the responsibility of the petitioner or their representative to provide the CRB and the railroad with the new contact information.

Paragraph (b)(6) would require petitioners or their representatives to state the facts and arguments in support of their petition. In other words, they would need to explain to the CRB why they think the railroad was incorrect in denying or revoking the petitioner's certification. Paragraph (b)(7) would require petitioners to submit all documents related to the railroad's decision that are in their possession or reasonably available to them. This may include the transcript and exhibits from the petitioner's denial or revocation hearing. In most cases, these documents will be essential to the Board's ability to make an informed decision on the petition. If neither the petitioner nor the railroad provides these documents, the Board may have to specifically request these documents which would likely to delay the Board's adjudication of the petition. Therefore, it is in the petitioner's interest to include these documents as part of their petition.

Paragraph (c) of this section is intended to clarify a petitioner's responsibilities with respect to a petition seeking review of a railroad decision based on petitioner's alleged failure to comply with a drug or alcohol-related rule or a return-to-service agreement. If requested by the CRB, paragraph (c) would require a petitioner to supplement the petition with ''a copy of the information under 49 CFR 40.329 that laboratories, medical review officers, and other service agents are required to release to employees.'' This paragraph would also require a petitioner to provide a written explanation in response to a CRB request if the petitioner does not supply the Board with written documents that should be reasonably available under 49 CFR 40.329.

Paragraph (d) of this section would give the CRB discretion to grant a request for additional time to file a petition if certain circumstances are met. As an initial matter, the petitioner would be required to show good cause for granting the extension. Thus, a petitioner would have to demonstrate a reasonable justification for granting the extension of time. This justification should be as detailed as possible to assist the Board in its determination. In addition to showing good cause for an extension, a petitioner would be required to submit their extension request before the deadline for filing their petition or, if the deadline has already passed, they must allege facts constituting ''excusable neglect'' for failing to meet the deadline. The mere assertion of excusable neglect, unsupported by facts, would be insufficient. Excusable neglect would require a demonstration of good faith on the part of the party seeking an

[23] In a future rulemaking, FRA expects to revise parts 240 and 242 to refer to the CRB instead of the OCRB.

extension of time, and some reasonable basis for the party's failure to comply with the time frame specified in this proposed rule. Absent a showing along these lines, relief would be denied. The Board would make determinations on whether ''good cause'' and/or ''excusable neglect'' has been shown on a case-by-case basis.

Paragraph (e) explains that a decision by the CRB to deny a petition for untimeliness or lack of compliance with the requirements of § 246.303 may be appealed directly to the FRA Administrator. Normally an appeal to the Administrator can only occur after a case has been heard by FRA's hearing officer. However, petitions that the Board finds to be untimely or incomplete are the two exceptions where a party can skip petitioning the hearing officer and go directly to filing an appeal with the Administrator.

Section 246.405 Processing Certification Review Petitions

This section of the proposed rule, derived from 49 CFR 240.405 and 242.505, details how petitions for review by the CRB would be handled. Paragraph (a) of this section notes that when FRA receives a CRB petition, FRA would send a written notification to the parties involved in the petition. FRA proposes to send these acknowledgments via email. If a representative files a petition on behalf of a petitioner, the petition must include the petitioner's email address, if the petitioner also wants to receive the acknowledgment email and any other correspondence (including the Board's decision) from FRA. The acknowledgment email would include the docket number for the petition so that both parties can access the documents in the case on *https://www.regulations.gov.* FRA would not send a copy of the petition to the railroad.

Paragraph (b) of this section would provide railroads with the opportunity to respond to a petition. While it is always optional for a railroad to respond to a petitioner's arguments, if the petitioner did not include relevant documents in their petition, such as hearing transcripts or exhibits, the railroad is required to provide FRA with those documents, even if it does not respond to the arguments in the petition. Railroads would have 60 days, from the date FRA sends the acknowledgment email, to file a response to the petition in the docket on *https://www.regulations.gov.* Railroads would be permitted to submit responses after the 60-day deadline, but the Board would only review such late filings if practicable. In other words, there is no guarantee that the Board would review a late response prior to issuing a decision; thus, if a railroad wishes to respond to a petition, it should meet the 60-day filing deadline. The railroad could fulfill its requirement to serve a copy of its response on the other parties by sending its response via email to petitioner, petitioner's representative, and petitioner's employer (if different from the railroad that revoked petitioner's certification).

Paragraph (c) of this section explains when a case would be referred to the Board, and what authority the Board would have. If a railroad files a response before the 60-day deadline in paragraph (b) of this section, the petition would be referred to the Board upon receipt of the response. Otherwise, the petition would be referred to the Board 60 days after the date the acknowledgment email was sent. The Board would have the authority to grant a petition (rule in favor of the petitioner), deny a petition (rule in favor of the railroad), or dismiss a petition. An example of when the Board would dismiss a petition would be if the respondent railroad did not deny or revoke the petitioner's certification, and thus, there was no case or controversy before the Board. If there is insufficient evidence in the record for the Board to make a decision on the merits of a petition, the Board may choose to remand a petition or issue an interim order, so that additional fact-finding can occur.

Paragraphs (d), (e), and (f) of this section provide the standards of review that the Board would employ for procedural issues, factual issues, and legal issues, respectively. These standards mirror the standards of review used by the OCRB to review locomotive engineer and conductor petitions. The Board would not correct all procedural errors committed by a railroad. Instead, the Board would only grant a petition if the respondent railroad's procedural error caused substantial harm to the petitioner. For factual issues, the petitioner would be required to show that the respondent railroad did not have substantial evidence to support its decision to deny or revoke the petitioner's certification. If the Board must decide a legal issue, it would conduct *de novo* review, meaning that it would not give deference to any decision or interpretation made by the railroad.

Paragraph (g) of this section acknowledges that the Board's decision-making power would be limited to granting or denying a petition. In other words, the Board would only be empowered to make determinations concerning qualifications under this proposed regulation. The Board would not be empowered to mitigate the consequences of a railroad decision if the decision is valid under this proposed regulation. The contractual consequences, if any, of these determinations would have to be resolved under dispute resolution mechanisms that do not directly involve FRA. For example, FRA cannot order a railroad to alter its seniority rosters or make an award of back pay, in the event of a finding that a railroad wrongfully denied certification.

Paragraph (h) of this section would require the Board to issue a written decision that would be served on all affected parties. FRA would send the decision to the parties by email and it will also be posted in the case's docket on *https://www.regulations.gov.*

Section 246.407 Request for a Hearing

This proposed section, derived from 49 CFR 240.407 and 49 CFR 242.507, provides that a party who has been adversely affected by a CRB decision would have the opportunity to request an administrative proceeding as prescribed in § 246.409. Paragraph (b) of this section contains the instructions and the deadline for submitting a hearing request. Just like CRB petitions, parties would be required to file hearing requests electronically. To file a hearing request, the adversely affected party would upload the request to the docket on *https://www.regulations.gov* that was used while the case was before the Board. This docket would also be used to file documents while the case is before the hearing officer. After the 20-day deadline to file a hearing request has passed, FRA would check the docket on *https://www.regulations.gov* to see if a hearing request was filed. Paragraph (c) of this section contains a list of elements that would be required for a hearing request, including the docket number assigned to the case when it was before the Board. With respect to the signature requirement in paragraph (c), FRA would accept electronic signatures.

Paragraph (d) of this section states that FRA would arrange for the appointment of a presiding officer. The presiding officer would then schedule a hearing for the earliest practicable date.

Paragraph (e) of this section provides that a party who fails to request an administrative hearing in a timely fashion would lose the right to further administrative review and the CRB's decision would constitute final agency action.

Section 246.409 Hearings

This section of the proposed rule, derived from 49 CFR 240.409 and 49 CFR 242.509, describes the authority of the presiding officer to conduct an administrative hearing and the procedures by which the administrative hearing would be governed. Paragraph (b) of this section provides that the proceeding would afford an aggrieved party a *de novo* hearing at which the relevant facts would be adduced and the correct application of this part would be determined. When the issues presented are purely legal, or when only limited factual findings are necessary to determine issues, the presiding officer may determine the issues following an evidentiary hearing only on the disputed factual issues, if any. The presiding officer could then grant full or partial summary judgment.

Paragraph (d) of this section provides that the presiding officer may authorize discovery. It would also authorize the presiding officer to sanction willful noncompliance with permissible discovery requests. Paragraph (e) of this section would require that documents in the nature of pleadings be signed. This signature could be electronic and would constitute a certification of factual and legal good faith. Paragraph (f) of this section contains a proposed requirement for service and for certificates of service. Paragraph (g) of this section would give the presiding officer authority to address noncompliance with a law or directive. This provision is intended to ensure that the presiding officer will have the authority to control the proceeding so that an efficient and fair hearing can be conducted.

Paragraph (h) of this section states the right of each party to appear and be represented. Paragraph (i) of this section is intended to protect witnesses by ensuring their right of representation and their right to have their representative question them. Paragraph (j) of this section would allow any party to request consolidation or separation of hearings of two or more petitions when appropriate under established jurisprudential standards. This option is intended to allow for more efficient determination of petitions in cases where a joint hearing would be advantageous.

Under paragraph (k) of this section, the presiding officer could, with certain exceptions, extend deadlines for action required in the proceedings, provided substantial prejudice would not result to a party. The authority to deny an extension request submitted after a deadline has already passed shows the preference for use of this authority to provide extensions of time as a tool to alleviate unforeseen or unnecessary burdens, and not as a remedy for inexcusable neglect.

Paragraph (l) of this section would establish motions as the appropriate method for requesting action by the presiding officer. This paragraph also provides the proposed form of motions and the proposed response period for written motions. Paragraph (m) of this section contains proposed rules for the mode of hearing and record maintenance, including proposed requirements for sworn testimony, verbatim record (including oral testimony and argument), and inclusion of evidence or substitutes therefor in the record. Paragraph (n) of this section would direct the presiding officer to employ specific rules of evidence as guidelines for the introduction of evidence, and would permit the presiding officer to determine what evidence may be received. Further, paragraph (o) of this section provides additional powers the presiding officer may exercise during the proceedings.

Paragraph (p) of this section would require that the petitioner before the CRB, the railroad that took the certification action at issue, and FRA serve as mandatory parties to the administrative proceeding. Paragraph (q) of this section explains which party would be the hearing petitioner and which parties would be the respondents. If the Board granted the petition, the railroad would be the hearing petitioner and the signal employee or signal employee candidate would be a respondent. If the Board denied the petition, the signal employee or signal employee candidate would be the hearing petitioner and the railroad would be a respondent. The actions of the signal employee (or certification candidate) and the railroad would be at issue in the hearing—not the actions of the CRB. Thus, it is appropriate that the signal employee and the railroad fill the roles of petitioner and respondent for the hearing.

Paragraph (q) also provides that FRA would be a mandatory party in the proceeding. In all proceedings, FRA would initially be considered a co-respondent. If, based on evidence acquired after the filing of a hearing petition, FRA concludes that the public interest in safety is more closely aligned with the position of the petitioner than the respondent, FRA could request that the hearing officer exercise their inherent authority to realign parties for good cause shown. However, FRA anticipates that such a situation would rarely occur. FRA would represent the interests of the government; hence, parties and their representatives would have to be careful to avoid ethical dilemmas that might arise due to FRA's ability to realign itself. Paragraph (q) also notes that the party requesting the hearing would have the burden of proving its case by the preponderance of evidence.

Paragraph (r) of this section would give the presiding officer authority to close the record in a case. Paragraph (s) of this section would also give the presiding officer authority to issue a decision and includes proposed requirements for that decision.

Section 246.411 Appeals

This proposed section, derived from 49 CFR 240.411 and 49 CFR 242.511, would permit any party aggrieved by the presiding officer's decision to file an appeal with the FRA Administrator. Paragraph (a) of this section provides that if no appeal is timely filed, the presiding officer's decision would constitute final agency action. The appeal must be filed in the same docket on *https://www.regulations.gov* used when the case was before the Board and the presiding officer.

Paragraph (b) of this section allows for a party to reply to the appeal. Paragraphs (c) and (d) of this section describe the Administrator's authority to conduct the proceedings of an appeal. Paragraph (e) of this section addresses the Administrator's options for ruling on an appeal. The phrase ''except where the terms of the Administrator's decision (for example, remanding a case to the presiding officer) show that the parties' administrative remedies have not been exhausted'' is included in this proposed rule because a remand, or other intermediate decision, would not constitute final agency action. The inclusion of this phrase is intended to clarify this potential outcome to those parties who are not represented by an attorney or who might otherwise be confused as to whether any action taken by the Administrator should be considered final agency action.

Paragraph (f) of this section provides instructions for handling appeals to the Administrator that come directly from the CRB. The only cases that would be allowed to proceed directly from the Board to the Administrator would be cases in which the Board denied a petition for being untimely or incomplete. If the Administrator vacates and remands the Board's decision, the case would return to the Board. If the Administrator affirms the Board's decision, that would constitute final agency action.

Appendices

FRA has included two appendices with this proposed rule. Appendix A, derived from appendix C to part 240 and appendix C to part 242, provides a narrative discussion of the procedures that a person seeking certification or recertification should follow to furnish a railroad with information concerning their motor vehicle driving record. Appendix B, derived from appendix D to part 240 and appendix D to part 242, provides a narrative discussion of the procedures that a railroad would be required to employ when administering the vision and hearing requirements of §§ 246.117 and 246.118. This appendix discusses test methods for determining whether a person has the ability to recognize and distinguish among the colors used as signals in the railroad industry.

V. Regulatory Impact and Notices

A. Executive Order 12866 as Amended by Executive Order 14094

This proposed rule is not a significant regulatory action within the meaning of Executive Order 12866 as amended by Executive Order 14094, Modernizing Regulatory Review. Details on the estimated costs of this NPRM can be found in the Regulatory Impact Analysis (RIA), which FRA has prepared and placed in the docket (FRA–2021–0020).

FRA is proposing regulations establishing a formal certification process for railroad signal employees. As part of that process, railroads would be required to develop a program for training current and prospective signal employees, documenting and verifying that the holder of the certificate has achieved certain training and proficiency, and creating a record of safety compliance infractions that other railroads can review when considering individuals for certification. This proposed regulation would ensure that signal employees are properly trained, are qualified to perform their duties, and meet Federal safety standards. Additionally, this proposed regulation is expected to improve railroad safety by reducing the rate of accidents/incidents.

The RIA presents estimates of the costs likely to occur over the first 10 years of the proposed rule. The analysis includes estimates of costs associated with development of training programs, initial and periodic training, knowledge testing, and monitoring of operational performance. Additionally, costs are estimated for vision and hearing tests, certification determinations made by other railroads, and Government administrative costs.

FRA estimated 10-year costs of $8.3 million discounted at 7 percent. The annualized cost would be $1.2 million discounted at 7 percent. The following table shows the estimated 10-year costs of the proposed rule.

TOTAL 10-YEAR DISCOUNTED COSTS

[2020 Dollars]

Category	Present value 7% ($)	Present value 3% ($)	Annualized 7% ($)	Annualized 3% ($)
Development of Certification Program	1,140,385	1,168,920	162,365	137,033
Certification Eligibility Requirements	87,507	100,380	12,459	11,768
Recertification Eligibility Requirements	203,790	259,653	29,015	30,439
Training	2,079,835	2,379,911	296,122	278,998
Knowledge Testing	746,865	898,884	106,337	105,377
Vision and Hearing	1,097,523	1,320,891	156,263	154,849
Monitoring Operational Performance	832,102	994,414	118,473	116,576
Railroad Oversight Responsibilities	267,530	326,714	38,090	38,301
Certification Card	103,175	124,175	14,690	14,557
Petitions and Hearings	42,451	50,731	6,044	5,947
Government Administrative Cost	1,653,360	1,914,063	235,401	224,387
Total	8,277,337	9,566,001	1,178,507	1,121,427

This rule is expected to reduce the likelihood of an accident occurring due to signal employee error. FRA has analyzed accidents over the past 10 years to categorize those where signal employee may have caused the accident. FRA then estimated benefits based on that analysis.

The following table shows the estimated 10-year benefits of the proposed rule. The total 10-year estimated benefits would be $2.9 million (PV, 7%) and annualized benefits would be $0.4 million (PV, 7%).

TOTAL 10-YEAR DISCOUNTED BENEFITS

[2020 Dollars]

Category	Present value 7% ($)	Present value 3% ($)	Annualized 7% ($)	Annualized 3% ($)
Grade Crossing Accidents	1,766,028	2,064,676	251,443	242,043
Train Accidents/Incidents	989,123	1,156,391	140,829	135,564
Business Benefits from Fewer Activation Failures	159,526	186,503	22,713	21,864
Total	2,914,678	3,407,570	414,985	399,471

Additional benefits are discussed, but not quantified, in this analysis. This proposed rule would require railroads to check with prior employers when hiring a new signal employee. This would include a check of their prior safety

record and whether the prospective signal employee had their certification revoked in the past.

B. Regulatory Flexibility Act and Executive Order 13272

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) and E.O. 13272 (67 FR 53461, Aug. 16, 2002) require agency review of proposed and final rules to assess their impacts on small entities. An agency must prepare an Initial Regulatory Flexibility Analysis (IRFA) unless it determines and certifies that a rule, if promulgated, would not have a significant economic impact on a substantial number of small entities. FRA has not determined whether this proposed rule would have a significant economic impact on a substantial number of small entities. Therefore, FRA prepared this IRFA to facilitate public comment on the potential small business impacts of the requirements in this NPRM.

FRA invites all interested parties to submit data and information regarding the potential economic impact on small entities that would result from adoption of the proposals in this NPRM. FRA particularly encourages small entities that could potentially be impacted by the proposed rule to participate in the public comment process. FRA will consider all information and comments received in the public comment process when making a determination of the economic impact on small entities.

1. Reasons for Considering Agency Action

FRA is concerned with accidents caused by signal employee error. Railroads' signal employee training programs may not be covering all aspects of a signal employee's job responsibility. Additionally, railroads may not be testing signal employees and ensuring that their knowledge is maintained continuously.

This NPRM would require railroads to develop a signal employee certification program. This proposed rule would ensure that railroads examine railroad safety with respect to signal employees. If FRA did not issue the rule as proposed, railroads would be free to hire and train signal employees as they see fit.

2. A Succinct Statement of the Objectives of, and the Legal Basis for, the Proposed Rule

This proposed rule may reduce the rate of signal employee-caused accidents. The annual operational performance monitoring would ensure that signal employees maintain their knowledge after the initial certification process.

FRA is proposing regulations for the certification of signal employees, pursuant to the authority granted in section 402 of the Rail Safety Improvement Act of 2008 (RSIA). Also, the general authority of the Secretary states, in relevant part, that the Secretary ''as necessary, shall prescribe regulations and issue orders for every area of railroad safety supplementing laws and regulations in effect on October 16, 1970.'' [24] The Secretary delegated this authority to the Federal Railroad Administrator.[25]

3. A Description of, and Where Feasible, an Estimate of the Number of Small Entities to Which the Proposed Rule Would Apply

The Regulatory Flexibility Act of 1980 requires a review of proposed and final rules to assess their impact on small entities, unless the Secretary certifies that the rule would not have a significant economic impact on a substantial number of small entities. ''Small entity'' is defined in 5 U.S.C. 601 as a small business concern that is independently owned and operated and is not dominant in its field of operation. The U.S. Small Business Administration (SBA) has authority to regulate issues related to small businesses, and stipulates in its size standards that a ''small entity'' in the railroad industry is a for profit ''line-haul railroad'' that has fewer than 1,500 employees, a ''short line railroad'' with fewer than 1,500 employees, a ''commuter rail system'' with annual receipts of less than $16.5 million dollars, or a contractor that performs support activities for railroads with annual receipts of less than $16.5 million.[26]

Federal agencies may adopt their own size standards for small entities in consultation with SBA and in conjunction with public comment. Under that authority, FRA has published a proposed statement of agency policy that formally establishes ''small entities'' or ''small businesses'' as railroads, contractors, and hazardous materials shippers that meet the revenue requirements of a Class III railroad as set forth in 49 CFR 1201.1–1, which is $20 million or less in inflation-adjusted annual revenues,[27] and commuter railroads or small Governmental jurisdictions that serve populations of 50,000 or less. *See* 68 FR 24891 (May 9, 2003) (codified at Appendix C to 49 CFR part 209). FRA is using this definition for the proposed rule.

When shaping the proposed rule, FRA considered the impact that the proposed rule would have on small entities.

The proposed rule would be applicable to all railroads with signal systems. However, some small railroads do not have a signal system as part of their operations. FRA estimates there are 744 Class III railroads, of which 704 operate on the general system. These railroads are of varying size, with some belonging to larger holding companies. Approximately 490 Class III railroads would be impacted by this rulemaking because they have a signal system. The remaining Class III railroads do not have a signal system, thus would have no need for signal employee certification program.

4. A Description of the Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Rule, Including an Estimate of the Class of Small Entities That Would be Subject to the Requirements and the Type of Professional Skill Necessary for Preparation of the Report or Record

Railroads would be required to submit information to FRA for approval of signal employee certification programs. For small railroads that choose to develop their own certification programs, they would likely be less complex than larger railroads' operations. This would ease some of the burden on small railroads.

The training program, and annual railroad responsibilities would be prepared by a professional or administrative employee. The type of professional skills needed by an employee responsible for submitting a special approval request includes the ability to plan and organize work. Such an employee would also need good verbal and written communication skills and attention to detail.

Summary of Class III Railroad Costs

Class III Railroads would have all the same cost components as larger railroads except they would not be required to perform annual railroad oversight responsibilities in accordance with the proposed rule. Therefore, that

[26] U.S. Small Business Administration, ''Table of Small Business Size Standards Matched to North American Industry Classification System Codes, August 19, 2019. *https://www.sba.gov/sites/default/files/2019-08/SBA%20Table%20of%20Size%20Standards_Effective%20Aug%2019,%202019.pdf.*

[27] The Class III railroad revenue threshold is $40.4 million or less, for 2021. (The Class II railroad threshold is between $40.4 million and $900 million.) *See* Surface Transportation Board (STB), available at *https://www.stb.gov/news-communications/latest-news/pr-21-16/.*

cost has been excluded for Class III railroads.

The following table shows the annualized cost for Class III railroads over the 10-year analysis period. The total estimated 10-year costs for Class III railroads would be $2.4 million and the annualized cost for all Class III railroads would be $346,052 (PV, 7 percent).

TOTAL 10-YEAR AND ANNUALIZED COSTS, CLASS III RAILROADS

Category	Present value 7% ($)	Annualized 7% ($)
Development of Certification Program	309,067	44,004
Certification Eligibility Requirements	21,877	3,115
Recertification Eligibility Requirements	50,947	7,254
Training	519,959	74,030
Knowledge Testing	186,716	26,584
Vision and Hearing	1,097,523	156,263
Monitoring Operational Performance	208,026	29,618
Certification Card	25,794	3,672
Petitions and Hearings	10,613	1,511
Total	2,430,522	346,052

The industry trade organization representing small railroads, ASLRRA, reports the average freight revenue per Class III railroad is $4.75 million.[28] The following table summarizes the average annual costs and revenue for Class III railroads.

AVERAGE CLASS III RAILROADS' COSTS AND REVENUE

Total cost for Class III railroads, annualized 7%	Number of Class III railroads with signal systems	Average annual cost per Class III railroad ($)	Average Class III annual revenue ($)	Average annual cost as a percent of revenue
a	b	c = a ÷ b	d	e = c ÷ d
346,052	535	647	4,750,000	0.01%

The average annual cost for a Class III railroad impacted by this rule would be $647. This represents a small percentage (0.01%) of the average annual revenue for a Class III railroad.

The estimates above show that the burden on Class III railroads would not be a significant economic burden. FRA requests comments on this estimate and will consider all comments when making a determination for the final rule.

5. Identification, to the Extent Practicable, of All Relevant Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rule

FRA is not aware of any relevant Federal rule that duplicates, overlaps with, or conflicts with this NPRM. This proposed rule is complementary to, rather than duplicative of, other recent regulatory initiatives FRA has issued or is in the process of developing. These initiatives include: the implementation of positive train control (PTC) systems by required railroads;[29] training, qualification, and oversight;[30] railroad safety risk reduction programs;[31] and the development of fatigue risk management programs.[32]

6. A Description of Significant Alternatives to the Rule

This analysis considered two alternatives to the rule: the baseline approach, and an approach that would certify just the training program. The baseline alternative (no action) would not ensure that signal employees are being properly trained. Without this rule, railroad operations may be less safe if railroads are not providing adequate training to their signal employees.

The alternative of certifying only the training program would require a railroad to enhance their training of signal employees. Training, however, is only a part of the certification process. The additional requirements of this proposed rule would ensure that signal employees' hearing, vision, prior safety conduct at other railroads, and other aspects have been reviewed and are consistent with railroad safety.

C. Paperwork Reduction Act

FRA is submitting the information collection requirements in this proposed rule to the Office of Management and Budget (OMB) for approval under the Paperwork Reduction Act of 1995.[33] The entire table contains the new information collection requirements and the estimated time to fulfill each requirement are as follows:

—(d) Report of findings and conclusions reached during annual review by railroad to FRA (if requested in writing by FRA) review and analysis effort..	553 railroads	2 reports	4 hours	8.00	115.24	921.92
246.301(a)—Denial of certification—Notification to candidate of information that and candidate response forms basis for denying certification.	553 railroads	6 notices + 3 responses.	1 hour	9.00	77.44	696.96
—(b) Denial Decision Requirements—Written notification of denial of certification by railroad to candidate.	553 railroads	6 notifications	1 hour	6.00	77.44	464.64
246.307(b)(1)–(b)(4)—Process for revoking certification—Immediate suspension of signal employee's certification.	553 railroads	15 suspended certification letters and documentations.	30 minutes	7.50	77.44	580.80
—(b)(5)–(b)(6) Determinations based on the record of the hearing, whether revocation of the certification is warranted.	The paperwork requirement for this burden is covered under § 246.307(e).					
—(b)(7) Retention of record of the hearing for three years after the date the decision is rendered.	553 railroads	15 records	15 minutes	3.75	77.44	290.40
—(d)(9) Hearing Procedures—Written waiver of right to hearing.	553 railroads	3 written waivers	10 minutes	.50	59.00	29.50
—(e) Revocation Decision Requirements—Written decisions by railroad official.	553 railroads	15 written decisions and service of decisions.	2 hours	30.00	115.24	3,457.20
—(g) Revocation of certification based on information that another railroad has done so.	553 railroads	3 revoked certifications.	10 minutes	.50	115.24	57.62
—(j) Placing relevant information in record if sufficient evidence meeting the criteria in paragraph (h) or (i) of this section becomes available.	The paperwork requirement for this burden is covered under § 246.307(b)(7).					
—(k) Good faith determination	553 railroads	3 good faith determinations.	1 hour	3.00	77.44	232.32
Subpart E—Dispute Resolution Procedures—§ 246.401 through § 246.411.	The requirements under these provisions are exempted from the PRA under 5 CFR 1320.4(a)(2). Since these provisions pertain to an administrative action or investigation, there is no PRA burden associated with these requirements.					
Appendix A to Part 246—Procedures for Obtaining and Evaluating Motor Vehicle Driving Record Data.	The paperwork requirements described in this appendix are accounted for throughout this table.					
Appendix B to Part 246—Medical Standards Guidelines.	The paperwork requirements described in this appendix are accounted for throughout this table.					

CFR section	Respondent universe	Total annual responses (A)	Average time per responses (B)	Total annual burden hours (C) = A * B	Wage rate (D) [34]	Total cost equivalent (E) = C * D
Totals [35]	553 railroads + ASLRRA and holding companies.	35,577 responses	N/A	7,682	N/A	747,257

All estimates include the time for reviewing instructions; searching existing data sources; gathering or maintaining the needed data; and reviewing the information. Pursuant to 44 U.S.C. 3506(c)(2)(B), FRA solicits comments concerning: Whether these information collection requirements are necessary for the proper performance of the functions of FRA, including whether the information has practical utility; the accuracy of FRA's estimates of the burden of the information collection requirements; the quality, utility, and clarity of the information to be collected; and whether the burden of collection of information on those who are to respond, including through the use of automated collection techniques or other forms of information technology, may be minimized. For information or a copy of the paperwork package submitted to OMB, contact Ms. Arlette Mussington, Information Collection Clearance Officer, at email: *arlette.mussington@dot.gov* or telephone: (571) 609–1285 or Ms. Joanne Swafford, Information Collection Clearance Officer, at email: *joanne.swafford@dot.gov* or telephone: (757) 897–9908. Organizations and individuals desiring to submit comments on the collection of information requirements should direct them via email to Ms. Mussington at *arlette.mussington@dot.gov* or Ms. Swafford at *joanne.swafford@dot.gov.*

OMB is required to decide concerning the collection of information requirements contained in this rule between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication. FRA is not authorized to impose a penalty on persons for violating information collection requirements that do not display a current OMB control number, if required. FRA intends to obtain current OMB control numbers for any new information collection requirements resulting from this rulemaking action prior to the effective date of the final rule. The OMB control number, when assigned, will be announced by separate notice in the **Federal Register**.

D. Federalism Implications

Executive Order 13132, Federalism,[36] requires FRA to develop an accountable process to ensure ''meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.'' ''Policies that have federalism implications'' are defined in the Executive Order to include regulations that have ''substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.'' Under Executive Order 13132, the agency may not issue a regulation with federalism implications that imposes substantial direct compliance costs and that is not required by statute, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by State and local governments, the agency consults with State and local governments, or the agency consults with State and local government officials early in the process of developing the regulation. Where a regulation has federalism implications and preempts State law, the agency seeks to consult with State and local officials in the process of developing the regulation.

FRA has analyzed this proposed rule in accordance with the principles and criteria contained in Executive Order 13132. FRA has determined that this proposed rule has no federalism implications, other than the possible preemption of State laws under 49 U.S.C. 20106. Therefore, the consultation and funding requirements of Executive Order 13132 do not apply, and preparation of a federalism summary impact statement for the proposed rule is not required.

E. International Trade Impact Assessment

The Trade Agreements Act of 1979 [37] prohibits Federal agencies from engaging in any standards or related activities that create unnecessary obstacles to the foreign commerce of the United States. Legitimate domestic objectives, such as safety, are not considered unnecessary obstacles. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards. This proposed rule is purely domestic in nature and is not expected to affect trade opportunities for U.S. firms doing business overseas or for foreign firms doing business in the United States.

F. Environmental Impact

FRA has evaluated this proposed rule consistent with the National Environmental Policy Act [38] (NEPA), the Council on Environmental Quality's NEPA implementing regulations,[39] and FRA's NEPA implementing regulations [40] and determined that it is categorically excluded from environmental review and therefore does not require the preparation of an environmental assessment (EA) or environmental impact statement (EIS). Categorical exclusions (CEs) are actions identified in an agency's NEPA implementing regulations that do not normally have a significant impact on the environment and therefore do not require either an EA or EIS.[41] Specifically, FRA has determined that this proposed rule is categorically excluded from detailed environmental review.[42]

The main purpose of this rulemaking is to establish certification requirements for signal employees. This rule would not directly or indirectly impact any environmental resources and would not

[34] Throughout the tables in this document, the dollar equivalent cost is derived from the 2020 Surface Transportation Board's Full Year Wage A&B data series using the appropriate employee group hourly wage rate that includes 75-percent overhead charges.

[35] Totals may not add due to rounding.

[37] 19 U.S.C. Ch. 13.

[38] 42 U.S.C. 4321 *et seq.*

[39] 40 CFR parts 1500–1508.

[40] 23 CFR part 771.

[41] 40 CFR 1508.4.

[42] *See* 23 CFR 771.116(c)(15) (categorically excluding ''[p]romulgation of rules, the issuance of policy statements, the waiver or modification of existing regulatory requirements, or discretionary approvals that do not result in significantly increased emissions of air or water pollutants or noise'').

result in significantly increased emissions of air or water pollutants or noise. In analyzing the applicability of a CE, FRA must also consider whether unusual circumstances are present that would warrant a more detailed environmental review.[43] FRA has concluded that no such unusual circumstances exist with respect to this proposed rule and it meets the requirements for categorical exclusion.[44]

Pursuant to Section 106 of the National Historic Preservation Act and its implementing regulations, FRA has determined this undertaking has no potential to affect historic properties.[45] FRA has also determined that this rulemaking does not approve a project resulting in a use of a resource protected by Section 4(f).[46] Further, FRA reviewed this proposed rulemaking and found it consistent with Executive Order 14008, ''Tackling the Climate Crisis at Home and Abroad.''

G. Executive Order 12898 (Environmental Justice)

Executive Order 12898, ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations,'' and DOT Order 5610.2C [47] require DOT agencies to achieve environmental justice as part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects, including interrelated social and economic effects, of their programs, policies, and activities on minority populations and low-income populations. The DOT Order instructs DOT agencies to address compliance with Executive Order 12898 and requirements within the DOT Order in rulemaking activities, as appropriate, and also requires consideration of the benefits of transportation programs, policies, and other activities where minority populations and low-income populations benefit, at a minimum, to the same level as the general population as a whole when determining impacts on minority and low-income populations. FRA has evaluated this proposed rule under Executive Order 12898 and the DOT Order and has determined it would not cause disproportionately high and adverse human health and environmental effects on minority populations or low-income populations.

H. Unfunded Mandates Reform Act of 1995

Under section 201 of the Unfunded Mandates Reform Act of 1995,[48] each Federal agency ''shall, unless otherwise prohibited by law, assess the effects of Federal regulatory actions on State, local, and Tribal governments, and the private sector (other than to the extent that such regulations incorporate requirements specifically set forth in law).'' Section 202 of the Act [49] further requires that ''before promulgating any general notice of proposed rulemaking that is likely to result in promulgation of any rule that includes any Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any 1 year, and before promulgating any final rule for which a general notice of proposed rulemaking was published, the agency shall prepare a written statement'' detailing the effect on State, local, and Tribal governments and the private sector. This proposed rule would not result in the expenditure, in the aggregate, of $100,000,000 or more (as adjusted annually for inflation) in any one year, and thus preparation of such a statement is not required.

I. Energy Impact

Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' requires Federal agencies to prepare a Statement of Energy Effects for any ''significant energy action.'' [50] FRA evaluated this proposed rule under Executive Order 13211 and determined that this regulatory action is not a ''significant energy action'' within the meaning of Executive Order 13211.

J. Privacy Act Statement

In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, to *www.regulations.gov,* as described in the system of records notice, DOT/ALL–14 FDMS, accessible through *www.dot.gov/privacy.* To facilitate comment tracking and response, we encourage commenters to provide their name, or the name of their organization; however, submission of names is completely optional. Whether or not commenters identify themselves, all timely comments will be fully considered. If you wish to provide comments containing proprietary or confidential information, please contact the agency for alternate submission instructions.

K. Executive Order 13175 (Tribal Consultation)

FRA has evaluated this proposed rule in accordance with the principles and criteria contained in Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, dated November 6, 2000. The proposed rule would not have a substantial direct effect on one or more Indian Tribes, would not impose substantial direct compliance costs on Indian Tribal governments, and would not preempt Tribal laws. Therefore, the funding and consultation requirements of Executive Order 13175 do not apply, and a Tribal summary impact statement is not required.

List of Subjects in 49 CFR Part 246

Administrative practice and procedure, Signal Employee, Penalties, Railroad employees, Railroad safety, Reporting and recordkeeping requirements.

The Proposed Rule

■ For the reasons discussed in the preamble, FRA proposes to amend chapter II, subtitle B, of title 49 of the Code of Federal Regulations, by adding part 246 to read as follows:

PART 246—CERTIFICATION OF SIGNAL EMPLOYEES

Sec.

Subpart A—General

246.1 Purpose and scope.
246.3 Application and responsibility for compliance.
246.5 Effect and construction.
246.7 Definitions.
246.9 Waivers.
246.11 Penalties and consequences for noncompliance.

Subpart B—Program and Eligibility Requirements

246.101 Certification program required.
246.103 FRA review of certification programs.
246.105 Implementation schedule for certification programs.
246.106 Requirements for certification programs.
246.107 Signal service classifications.
246.109 Determinations required for certification and recertification.
246.111 Prior safety conduct as motor vehicle operator.

[43] 23 CFR 771.116(b).

[44] 23 CFR 771.116(c)(15).

[45] *See* 16 U.S.C. 470.

[46] *See* Department of Transportation Act of 1966, as amended (Public Law 89–670, 80 Stat. 931); 49 U.S.C. 303.

[47] *Available at https://www.transportation.gov/sites/dot.gov/files/Final-for-OST-C-210312-003-signed.pdf.*

[49] 2 U.S.C. 1532.

[50] 66 FR 28355 (May 22, 2001).

246.113 Prior safety conduct with other railroads.
246.115 Substance abuse disorders and alcohol drug rules compliance.
246.117 Vision acuity.
246.118 Hearing acuity.
246.119 Training requirements.
246.121 Knowledge testing.
246.123 Monitoring operational performance.
246.124 Mentoring.
246.125 Certification determinations made by other railroads.

Subpart C—Administration of the Certification Program

246.201 Time limitations for certification.
246.203 Retaining information supporting determinations.
246.205 List of certified signal employees and recordkeeping.
246.207 Certificate requirements.
246.213 Multiple certifications.
246.215 Railroad oversight responsibilities.

Subpart D—Denial and Revocation of Certification

246.301 Process for denying certification.
246.303 Criteria for revoking certification.
246.305 Periods of ineligibility.
246.307 Process for revoking certification.

Subpart E—Dispute Resolution Procedures

246.401 Review board established.
246.403 Petition requirements.
246.405 Processing certification review petitions.
246.407 Request for a hearing.
246.409 Hearings.
246.411 Appeals.
Appendix A to Part 246—Procedures for Obtaining and Evaluating Motor Vehicle Driving Record Data
Appendix B to Part 246—Medical Standards Guidelines

Authority: 49 U.S.C. 20103, 20107, 20162, 21301, 21304, 21311; 28 U.S.C. 2461 note; 49 CFR 1.89; and Public Law 110–432, sec. 402, 122 Stat. 4884.

Subpart A—General

§ 246.1 Purpose and scope.

(a) The purpose of this part is to ensure that only those persons who meet minimum Federal safety standards serve as certified signal employees, to reduce the rate and number of accidents and incidents, and to improve railroad safety.

(b) This part prescribes minimum Federal safety standards for the eligibility, training, testing, certification and monitoring of all signal employees to whom it applies. This part does not restrict a railroad from adopting and enforcing additional or more stringent requirements consistent with this part.

(c) The signal employee certification requirements prescribed in this part apply to any person who meets the definition of signal employee contained in § 246.7, regardless of the fact that the person may have a job classification title other than that of signal employee.

§ 246.3 Application and responsibility for compliance.

(a) This part applies to all railroads, except:

(1) Railroads that do not have a signal system as defined in § 246.7;

(2) Railroads that operate only on track inside an installation that is not part of the general railroad system of transportation (*i.e.,* plant railroads, as defined in § 246.7);

(3) Tourist, scenic, historic, or excursion operations conducted only on track used exclusively for that purpose (*i.e.,* there is no freight, intercity passenger, or commuter passenger railroad operations on the track) and only on track inside an installation that is insular; *i.e.,* the operations are limited to a separate enclave in such a way that there is no reasonable expectation that the safety of the public—except a business guest, a licensee of the railroad or an affiliated entity, or a trespasser—would be affected by the operation. An operation will not be considered insular, for purposes of this part, if one or more of the following exists on its line:

(i) A public highway-rail grade crossing that is in use;

(ii) A public pathway grade crossing that is in use;

(iii) An at-grade rail crossing that is in use;

(iv) A bridge over a public road or waters used for commercial navigation; or

(v) A common corridor with a railroad, *i.e.,* its operations are within 30 feet of those of any railroad; or

(4) Rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

(b) Although the duties imposed by this part are generally stated in terms of the duty of a railroad, each person, as defined in § 246.7, who performs any function required by this part must perform that function in accordance with this part.

§ 246.5 Effect and construction.

(a) FRA does not intend, by use of the term signal employee in this part, to alter the terms, conditions, or interpretation of existing collective bargaining agreements that employ other job classification titles when identifying a person who is engaged in installing, troubleshooting, testing, repair, or maintenance of railroad signal systems.

(b) FRA does not intend by issuance of these regulations to alter the authority of a railroad to initiate disciplinary sanctions against its employees, including managers and supervisors, in the normal and customary manner, including those contained in its collective bargaining agreements.

(c) Except as provided in § 246.213, nothing in this part shall be construed to create or prohibit an eligibility or entitlement to employment in other service for the railroad as a result of denial, suspension, or revocation of certification under this part.

(d) Nothing in this part shall be deemed to abridge any additional procedural rights or remedies not inconsistent with this part that are available to the employee under a collective bargaining agreement, the Railway Labor Act, or (with respect to employment at will) at common law with respect to removal from service or other adverse action taken as a consequence of this part.

§ 246.7 Definitions.

As used in this part:

Administrator means the Administrator of the FRA or the Administrator's delegate.

Alcohol means ethyl alcohol (ethanol) and includes use or possession of any beverage, mixture, or preparation containing ethyl alcohol.

Contractor means a person under contract with a railroad, including but not limited to, a prime contractor or a subcontractor.

Controlled substance has the meaning assigned by 21 U.S.C. 802 and includes all substances listed on Schedules I through V as they may be revised from time to time (21 CFR parts 1301 through 1316).

Disable means to render a device or system incapable of proper and effective action or to materially impair the functioning of that device or system.

Drug means any substance (other than alcohol) that has known mind or function-altering effects on a human subject, specifically including any psychoactive substance and including, but not limited to, controlled substances.

Drug and alcohol counselor (DAC) means a person who meets the credentialing and qualification requirements of a ''Substance Abuse Professional'' (SAP), as provided in 49 CFR part 40.

File, filed, and *filing* mean submission of a document under this part on the date when the Docket Clerk receives it, or if sent by mail, the date mailing was completed.

FRA means the Federal Railroad Administration.

FRA representative means the FRA Associate Administrator for Railroad

Safety/Chief Safety Officer and the Associate Administrator's delegate, including any safety inspector employed by the Federal Railroad Administration and any qualified State railroad safety inspector acting under part 212 of this chapter.

Ineligible or *ineligibility* means that a person is legally disqualified from serving as a certified signal employee. The term covers a number of circumstances in which a person may not serve as a certified signal employee. Revocation of certification pursuant to § 246.307 and denial of certification pursuant to § 246.301 are two examples in which a person would be ineligible to serve as a certified signal employee. A period of ineligibility may end when a condition or conditions are met, such as when a person meets the conditions to serve as a certified signal employee following an alcohol or drug violation pursuant to § 246.115.

Knowingly means having actual knowledge of the facts giving rise to the violation or that a reasonable person acting in the circumstances, exercising due care, would have had such knowledge.

Medical examiner means a person licensed as a doctor of medicine or doctor of osteopathy. A medical examiner can be a qualified full-time salaried employee of a railroad, a qualified practitioner who contracts with the railroad on a fee-for-service or other basis, or a qualified practitioner designated by the railroad to perform functions in connection with medical evaluations of employees. As used in this rule, the medical examiner owes a duty to make an honest and fully informed evaluation of the condition of an employee.

Mentor means a certified signal employee who has at least one year of experience as a certified signal employee. For purposes of this part, a mentor also provides direct supervision and oversight over the work of one or more signal employees.

On-the-job training means job training that occurs in the workplace, *i.e.,* the employee learns the job while doing the job.

Person means an entity of any type covered under 1 U.S.C. 1, including but not limited to the following: a railroad; a manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any independent contractor providing goods or services to a railroad; and any employee of such owner, manufacturer, lessor, lessee, or independent contractor.

Physical characteristics means the actual track profile of and physical location for points within a specific yard or route that affect the movement of a locomotive or train. Physical characteristics includes how signal systems and related technology are deployed within the territory, for purposes of this part.

Plant railroad means a plant or installation that owns or leases a locomotive, uses that locomotive to switch cars throughout the plant or installation, and is moving goods solely for use in the facility's own industrial processes. The plant or installation could include track immediately adjacent to the plant or installation if the plant railroad leases the track from the general system railroad and the lease provides for (and actual practice entails) the exclusive use of that trackage by the plant railroad and the general system railroad for purposes of moving only cars shipped to or from the plant. A plant or installation that operates a locomotive to switch or move cars for other entities, even if solely within the confines of the plant or installation, rather than for its own purposes or industrial processes, will not be considered a plant railroad because the performance of such activity makes the operation part of the general railroad system of transportation.

Qualified instructor means a person who:

(1) Has demonstrated, pursuant to the railroad's written program, an adequate knowledge of the subjects under instruction;

(2) Where applicable, has the necessary experience to effectively instruct in the field;

(3) Is a certified signal employee under this part; and

(4) If the railroad has designated employee representation, has been selected by a designated railroad officer, in concurrence with the designated employee representative, or has a minimum of one year of service working as a certified signal employee.

Railroad means any form of nonhighway ground transportation that runs on rails or electromagnetic guideways and any entity providing such transportation, including:

(1) Commuter or other short-haul railroad passenger service in a metropolitan or suburban area and commuter railroad service that was operated by the Consolidated Rail Corporation on January 1, 1979; and

(2) High speed ground transportation systems that connect metropolitan areas, without regard to whether those systems use new technologies not associated with traditional railroads; but does not include rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

Railroad officer means any supervisory employee of a railroad.

Serve or service, in the context of serving documents, has the meaning given in Rule 5 of the Federal Rules of Civil Procedure as amended. Similarly, the computation of time provisions in Rule 6 of the Federal Rules of Civil Procedure as amended are also applicable in this part. *See also* the definition of ''filing'' in this section.

Signal employee means a person who is engaged in installing, troubleshooting, testing, repairing, or maintaining railroad signal systems or related technology.

Signal system, for purposes of this part, includes the following: block signal systems, cab signal systems, train control systems, positive train control systems, highway-rail and pathway grade crossing warning systems, unusual contingency detection devices, power-assisted switches, broken rail detection systems, switch point indicators, as well as other safety-related devices, appliances, technology, and systems installed on the railroad in signaled or non-signaled territory.

Substance abuse disorder refers to a psychological or physical dependence on alcohol or a drug, or another identifiable and treatable mental or physical disorder involving the abuse of alcohol or drugs as a primary manifestation. A substance abuse disorder is ''active'' within the meaning of this part if the person is currently using alcohol or other drugs, except under medical supervision consistent with the restrictions described in § 219.103 of this chapter or has failed to successfully complete primary treatment or successfully participate in aftercare as directed by a DAC or SAP.

Substance Abuse Professional (SAP) means a person who meets the qualifications of a substance abuse professional, as provided in 49 CFR part 40.

Unusual contingency detection device means a device used in the detection of defective conditions on locomotives and rolling stock (*e.g.,* high-wide load, hot or defective bearing, defective wheel detectors) or other unsafe conditions (*e.g.,* high-water, high wind, sliding or slumping soil, rock or snow slide detectors). These devices need not be connected to a signal system for this part to apply.

§ 246.9 Waivers.

(a) A person subject to a requirement of this part may petition FRA for a waiver of compliance with such requirement. The filing of such a petition does not affect that person's responsibility for compliance with that requirement while the petition is being considered.

(b) Each petition for a waiver under this section must be filed in the manner and contain the information required by part 211 of this chapter.

(c) If FRA finds that a waiver of compliance is in the public interest and is consistent with railroad safety, FRA may grant the waiver subject to any conditions FRA deems necessary.

§ 246.11 Penalties and consequences for noncompliance.

(a) Any person, as defined in § 246.7, who violates any requirement of this part or causes the violation of any such requirement is subject to a civil penalty of at least the minimum civil monetary penalty and not more than the ordinary maximum civil monetary penalty per violation. However, penalties may be assessed against individuals only for willful violations, and a penalty not to exceed the aggravated maximum civil monetary penalty per violation may be assessed, where:

(1) A grossly negligent violation, or a pattern of repeated violations, has created an imminent hazard of death or injury to persons, or

(2) A death or injury has occurred. *See* 49 CFR part 209, appendix A.

(b) Each day a violation continues constitutes a separate offense.

(c) A person who violates any requirement of this part or causes the violation of any such requirement may be subject to disqualification from all safety-sensitive service in accordance with part 209 of this chapter.

(d) A person who knowingly and willfully falsifies a record or report required by this part may be subject to criminal penalties under 49 U.S.C. 21311.

(e) In addition to the enforcement methods referred to in paragraphs (a) through (d) of this section, FRA may also address violations of this part by use of the emergency order, compliance order, and/or injunctive provisions of the Federal rail safety laws.

(f) FRA's website at *https://railroads.dot.gov/* contains a schedule of civil penalty amounts used in connection with this part.

Subpart B—Program and Eligibility Requirements

§ 246.101 Certification program required.

(a) Each railroad subject to this part shall have a written signal employee certification program.

(b) Each certification program shall include all of the following:

(1) If applicable, an explanation and discussion of the occupational categories of certified signal service that comply with the requirements in § 246.107;

(2) A procedure for evaluating prior safety conduct as a motor vehicle operator that complies with the criteria established in § 246.111;

(3) A procedure for evaluating prior safety conduct with other railroads that complies with the criteria established in § 246.113;

(4) A procedure for evaluating potential substance abuse disorders and compliance with railroad alcohol and drug rules that complies with the criteria established in § 246.115;

(5) A procedure for evaluating visual and hearing acuity that complies with the criteria established in §§ 246.117 and 246.118;

(6) A procedure for training that complies with the criteria established in § 246.119;

(7) A procedure for knowledge testing that complies with the criteria established in § 246.121;

(8) A procedure for monitoring operational performance that complies with the criteria established in § 246.123; and

(9) A procedure for mentoring uncertified signal employees that complies with the criteria established in § 246.124.

(c) Each certification program shall be version controlled. Any change from the previous version of the certification program must be tracked.

§ 246.103 FRA review of certification programs.

(a) *Certification program submission schedule for railroads with signal systems in operation.* With the exception of railroads exempted by § 246.3(a), each railroad with a signal system in operation as of [EFFECTIVE DATE OF FINAL RULE] shall submit its signal employee certification program to FRA, in accordance with the procedures and requirements contained in § 246.106, according to the following schedule:

(1) All Class I railroads (including the National Railroad Passenger Corporation) and railroads providing commuter service shall submit their programs to FRA no later than [DATE 8 MONTHS AFTER EFFECTIVE DATE OF FINAL RULE].

(2) All Class II railroads and Class III railroads (including a switching and terminal or other railroad not otherwise classified) shall submit their programs to FRA no later than [DATE 16 MONTHS AFTER EFFECTIVE DATE OF FINAL RULE].

(b) *Certification program submission for new railroads.* Each railroad that commences operations after [EFFECTIVE DATE OF FINAL RULE] shall submit, and obtain approval of, its written signal employee certification program to FRA, in accordance with the procedures and requirements contained in § 246.106, prior to installing, implementing, or operating a signal system subject to this part.

(c) *Method for submitting certification programs to FRA.* Railroads must submit their written certification programs and their requests for approval (described in § 246.106(a)) by uploading the program to FRA's secure document submission site.

(d) Each railroad that submits a program to FRA must:

(1) Simultaneously with its submission, provide a copy of the program and the request for approval to the president of each labor organization that represents the railroad's signal employees and to all of the railroad's signal employees who are subject to this part; and

(2) Include in its submission to FRA, a statement affirming that the railroad has provided a copy of the program and request for approval to the president of each labor organization that represents the railroad's signal employees and to all of the railroad's signal employees who are subject to this part, along with a list of the names and email addresses of each president of a labor organization who was provided a copy of the program.

(e) *Comment period.* Any designated representative of signal employees subject to this part or any directly affected person who does not have a designated representative may comment on a railroad's program provided that:

(1) The comment is submitted no later than 45 days after the date the program was submitted to FRA;

(2) The comment includes a concise statement of the commenter's interest in the matter;

(3) The commenter affirms that a copy of the comment was provided to the railroad; and

(4) The comment was emailed to *FRASIGNALCERTPROG@dot.gov.*

(f) *FRA review period.* Upon receipt of a complete program, FRA will commence a thorough review of the

program to ensure that it satisfies all of the requirements under this part.

(1) If FRA determines that the program satisfies all of the requirements under this part, FRA will issue a letter notifying the railroad that its program has been approved. Such letter will typically be issued within 90 days of the date the program was submitted to FRA.

(2) If FRA determines that the program does not satisfy all of the requirements under this part, FRA will issue a letter notifying the railroad that its program has been disapproved. Such letter will typically be issued within 90 days of the date the program was submitted to FRA and will identify the deficiencies found in the program that must be corrected before the program can be approved. After addressing these deficiencies, railroads can resubmit their programs in accordance with paragraph (h) of this section.

(3) If a railroad does not receive an approval or disapproval letter from FRA within 90 days of the date the program was submitted to FRA, FRA's decision on the program will remain pending until such time that FRA issues a letter either approving or disapproving the program. A certification program is not approved until FRA issues a letter approving the program.

(g) *Material modifications.* A railroad that intends to make one or more material modifications to its FRA-approved program must submit a description of how it intends to modify the program and a copy of the modified program which indicates changes from the last approved version.

(1) A modification is material if it would affect the program's conformance with this part.

(2) The description of the modification and the modified program must conform with the procedures and requirements contained in § 246.106.

(3) The process for submission and review of material modifications shall conform with paragraphs (c) through (f) of this section.

(4) A railroad shall not implement a material modification to its program until FRA issues its approval of the material modification in accordance with paragraph (f)(1) of this section.

(h) *Resubmissions.* If FRA disapproves a railroad's program or material modification, as described in paragraph (f)(2) of this section, the railroad may resubmit its program or material modification after addressing all of the deficiencies noted by FRA.

(1) The resubmission must conform with the procedures and requirements contained in § 246.106.

(2) The process for submission and review of resubmitted programs and resubmitted material modifications shall conform with paragraphs (c) through (f) of this section.

(3) The following deadlines apply for railroads that have their programs or material modifications disapproved by FRA:

(i) For a railroad that submitted its program pursuant to paragraph (a) of this section, the railroad must resubmit its program within 30 days of the date that FRA notified the railroad of the deficiencies in its program. If a railroad fails to resubmit its program within this timeframe and continues its rail operations, FRA may consider such actions to be a failure to implement a program.

(ii) For a railroad that submitted its program pursuant to paragraph (b) of this section, there is no FRA-imposed deadline for resubmitting its program. However, pursuant to § 246.105(b), the railroad shall not install, implement, or operate signal systems subject to this part until its program has been approved by FRA.

(iii) For a railroad that submitted a material modification to its FRA-approved program, there is no FRA-imposed deadline for resubmitting the material modification. However, pursuant to paragraph (g)(4) of this section, the railroad cannot implement the material modification until it has been approved by FRA.

(i) *Rescinding prior approval of program.* FRA reserves the right to revisit its prior approval of a railroad's program at any time.

(1) If upon such review FRA discovers deficiencies in the program, FRA shall issue the railroad a letter rescinding its prior approval of the program and notifying the railroad of the deficiencies in its program that must be addressed.

(2) Within 30 days of FRA notifying the railroad of the deficiencies in its program, the railroad must address these deficiencies and resubmit its program to FRA. The resubmitted program must conform with the procedures and requirements contained in § 246.106.

(3) The process for submission and review of resubmitted programs under this paragraph shall conform with paragraphs (c) through (f) of this section.

(4) If a railroad fails to resubmit its program to FRA within the timeframe prescribed in paragraph (i)(2) of this section and the railroad continues its rail operations, FRA may consider such actions to be a failure to implement a program.

(5) If FRA issues a letter disapproving the railroad's resubmitted program, the railroad shall continue to resubmit its program in accordance with this paragraph (i).

(6) A program that has its approval rescinded under paragraph (i)(1) of this section may remain in effect until whichever of the following happens first:

(i) FRA approves the railroad's resubmitted program; or

(ii) FRA disapproves the railroad's second attempt at resubmitting its program.

(7) If FRA disapproves a railroad's second attempt at resubmitting its program under this paragraph and the railroad continues its rail operations, FRA may consider such actions to be a failure to implement a program.

(j) *Availability of certification program documents.* The following documents will be available on FRA's website (*railroads.dot.gov*):

(1) A railroad's originally submitted program, a resubmission of its program, or a material modification of its program;

(2) Any comments, submitted in accordance with paragraph (e) of this section, to a railroad's originally submitted program, a resubmission of its program, or a material modification of its program; and

(3) Any approval or disapproval letter issued by FRA in response to a railroad's originally submitted program, a resubmission of its program, or a material modification of its program.

§ 246.105 Implementation schedule for certification programs.

(a) Each railroad that submits its signal employee certification program to FRA in accordance with § 246.103(a), must comply with 49 CFR parts 233, 234, 235, and 236 while it awaits approval of its program by FRA. However, if FRA disapproves a railroad's program on two occasions and the railroad continues rail operations, FRA may consider such actions to be a failure to implement a program.

(b) Each railroad that submits its signal employee certification program to FRA in accordance with § 246.103(b), must have its program approved by FRA prior to installing, implementing, or operating signal systems subject to this part. If a railroad installs, implements, or operates a signal system before its program is approved by FRA, FRA may consider such actions to be a failure to implement a program.

(c) By [DATE 8 MONTHS AFTER EFFECTIVE DATE OF FINAL RULE], each railroad shall:

(1) In writing, designate as certified signal employees all persons authorized by the railroad to perform the duties of a certified signal employee or, if

applicable, each category or subcategory of certified signal employee identified by the railroad pursuant to § 246.107 as of [EFFECTIVE DATE OF FINAL RULE]; and

(2) Issue a certificate that complies with § 246.207 to each person that it designates.

(d) After [DATE 8 MONTHS AFTER EFFECTIVE DATE OF FINAL RULE], each railroad shall:

(1) In writing, designate as a certified signal employee any person who has been authorized by the railroad to perform the duties of a certified signal employee or, if applicable, any category or subcategory of certified signal employee identified by the railroad pursuant to § 246.107 between [EFFECTIVE DATE OF FINAL RULE] and the date FRA approves the railroad's certification program; and

(2) Issue a certificate that complies with § 246.207 to each person that it designates.

(e) After [DATE 8 MONTHS AFTER EFFECTIVE DATE OF FINAL RULE], no railroad shall permit or require a person to perform service as a certified signal employee unless that person is a certified signal employee.

(f) No railroad shall permit or require a person, designated as a certified signal employee under the provisions of paragraph (c) or (d) of this section, to perform service as a certified signal employee for more than three years after the date FRA approves the railroad's certification program unless that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part.

(1) Except as provided in paragraph (f)(3) of this section, a person who has been designated as a certified signal employee under the provisions of paragraph (c) or (d) of this section and who is eligible to receive a retirement pension in accordance with the terms of an applicable agreement or in accordance with the terms of the Railroad Retirement Act (45 U.S.C. 231) within three years from the date the certifying railroad's program is approved, may request, in writing, that a railroad not recertify that person, pursuant to subpart B of this part, until three years from the date the certifying railroad's program is approved.

(2) Upon receipt of a written request pursuant to paragraph (f)(1) of this section, a railroad may wait to recertify the person making the request until the end of the three-year period after FRA has approved the railroad's certification program. If a railroad grants any request, it must grant request all eligible persons to every extent possible.

(3) A person who is subject to recertification under part 240 or 242 of this chapter may not make a request pursuant to paragraph (f)(1) of this section.

(g) After a railroad's certification program has been approved by FRA, the railroad shall only certify or recertify a person as a signal employee if that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part.

§ 246.106 Requirements for certification programs.

(a) *Railroad certification program submission.* (1) A railroad's certification program submission must include a copy of its certification program and a request for approval.

(2) The request for approval can be in letter or narrative format.

(3) A railroad will receive approval or disapproval notices from FRA by email.

(4) FRA may electronically store any materials required by this part.

(b) *Organization of the certification program.* Each certification program must be organized to present the required information in the six sections described in paragraphs (b)(1) through (6) of this section Each section of the certification program must begin with the name, title, telephone number, and email address of the person to be contacted concerning the matters addressed by that section. If a person is identified in a prior section, it is sufficient to merely repeat the person's name in a subsequent section.

(1) *Section One of the certification program: General information and elections.* (i) The first section of the certification program must contain the name of the railroad, the person to be contacted to discuss that section (including the person's name, title, telephone number, and email address), and a statement electing either to accept responsibility for training persons not previously certified as signal employees or to not accept this responsibility.

(ii) If a railroad elects not to provide certification training to persons not previously certified as signal employees, the railroad will be limited to recertifying signal employees initially certified by another railroad. A railroad may change its election by obtaining FRA approval of a material modification to its certification program in accordance with § 246.103(g).

(iii) If a railroad elects to accept responsibility for training persons not previously certified as signal employees, the railroad must submit information on how such persons will be trained but is not required to actually perform such training. A railroad that elects to accept responsibility for the training of such persons may authorize another railroad or a non-railroad entity to provide the training. The electing railroad remains responsible for ensuring that the authorized training provider(s) adhere to the training program the railroad submits.

(iv) If a railroad elects to classify its certified signal employees into more than one occupational category or subcategory by class, task, location, or other suitable terminology, the railroad shall include the following in this section of its certification program:

(A) An up-to-date list and description of each occupational category or subcategory of certified signal employee;

(B) A statement of the roles and responsibilities of each occupational category or subcategory of certified signal employee; and

(C) A detailed list of the safety-related tasks and subtasks performed by each category or subcategory of certified signal employee.

(2) *Section Two of the certification program: Training previously certified signal employees.* The second section of the certification program must contain information concerning the railroad's program for training previously certified signal employees, including all of the following information:

(i) As provided for in § 246.119(j), each railroad must have a program for the ongoing education of its certified signal employees to ensure that they maintain the necessary knowledge concerning all applicable Federal safety laws, regulations, and orders; knowledge concerning all applicable railroad signal system safety and operating rules; and knowledge concerning all applicable standards, procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of signal systems and related technology deployed on the railroad. The railroad must describe in this section of its certification program how it will ensure that its certified signal employees maintain the necessary knowledge and skills to safely discharge their responsibilities so as to comply with the standard set forth in § 246.119(j);

(ii) In accordance with § 246.119(h), the railroad must provide sufficient detail in the second section of its certification program to permit effective evaluation of the contents and scope of the railroad's training program on the signal systems and signal-related technology deployed on its territory. FRA anticipates that railroads will address, in this section of their

certification programs, the frequency and duration of training sessions (including the interval between attendance at such training sessions), the training environment(s) that will be employed (*e.g.,* classroom, computer-based training, use of film or slide presentations, or on-the-job training) and which aspects of the training program will be voluntary or mandatory;

(iii) How the training will address a certified signal employee's loss of retained knowledge over time; and

(iv) How the training will address changed circumstances over time, such as the introduction of new or modified signal system equipment and related technology (including software modifications), so as to comply with the training standard set forth in § 246.119.

(3) *Section Three of the certification program: Testing and evaluating previously certified signal employees.* The third section of the certification program must contain information about the railroad's program for testing and evaluating previously certified signal employees, including all of the following information:

(i) The railroad must describe in this section how it will ensure that its previously certified signal employees demonstrate their knowledge concerning the safe discharge of their responsibilities, so as to comply with the standards set forth in § 246.121; and

(ii) The railroad must describe in this section how it will have ongoing testing and evaluation to ensure that its previously certified signal employees have the required vision and hearing acuity as provided in §§ 246.117 and 246.118. This section must also address how the railroad will ensure that its medical examiners have sufficient information concerning the railroad's operations, as well as the safety-related tasks performed by certified signal employees, to allow for effective and appropriate determinations about the ability of a particular individual to safely perform as a certified signal employee.

(4) *Section Four of the certification program: Training, testing, and evaluating persons who have not been certified as signal employees.* Unless a railroad has made an election not to accept responsibility for conducting the initial signal employee certification training, the fourth section of the certification program must contain information about the railroad's program for educating, testing, and evaluating persons who have not been previously certified as signal employees, including all of the following information:

(i) As provided for in § 246.119, a railroad that is issuing an initial signal employee certification to a person must have a program for the training, testing, and evaluation of its signal employee certification candidates to ensure that they acquire the necessary knowledge and skills. A railroad must describe in this section of its certification program how it will ensure that its signal employee certification candidates acquire sufficient knowledge and skills and demonstrate their knowledge and skills concerning the safe discharge of their responsibilities. A railroad must also discuss in this section of its certification program its procedures for mentoring candidates for signal employee certification, in accordance with § 246.124;

(ii) This section of the railroad's certification program must contain the same level of detail concerning the initial training program and testing and evaluation of previously uncertified signal employees as is required for previously certified signal employees in § 246.106(b)(2) and (3) (Sections Two and Three of the railroad's certification program);

(iii) Railroads that elect to rely on other entities to conduct signal employee certification training away from the railroad's own territory must explain how training will be provided to signal employee certification candidates on the signal systems and related technology deployed on the railroad's territory.

(5) *Section Five of the certification program: Monitoring operational performance by certified signal employees.* The fifth section of the certification program must contain information about the railroad's program for monitoring the operational performance of its certified signal employees, including all of the following information:

(i) Section 246.123 requires that a railroad conduct ongoing monitoring of its certified signal employees and that each certified signal employee have an annual unannounced compliance test. A railroad must describe in this section of its certification program how the railroad will ensure that it has an ongoing program for monitoring its certified signal employees that requires them to demonstrate their ability to safely discharge their responsibilities.

(ii) A railroad must describe in this section the scoring system used by the railroad during operational monitoring observations and unannounced compliance tests that are administered in accordance with § 246.123.

(6) *Section Six of the certification program: Procedures for routine administration of the signal employee certification program.* The final section of the certification program must contain a summary of how the railroad's program and procedures will implement various aspects of the regulatory provisions in this part that relate to the routine administration of the railroad's certification program for signal employees. Specifically, this section must address the procedural aspects of the following provisions and must describe the manner in which the railroad will implement its program so as to comply with each of the following provisions:

(i) Section 246.301 which provides that each railroad must have procedures for review and comment on adverse information;

(ii) Sections 246.111, 246.113, 246.115, and 246.303 which require each railroad to have procedures for evaluating data concerning prior safety conduct as a motor vehicle operator and as a railroad worker;

(iii) Sections 246.109, 246.201, and 246.301 which place a duty on the railroad to make a series of determinations. When describing how it will implement its certification program to comply with these sections, a railroad must describe: the procedures it will utilize to ensure that all of the necessary determinations have been made in a timely fashion; who will be authorized by the railroad to determine whether a person will or will not be certified; and how the railroad will communicate adverse decisions;

(iv) Sections 246.109, 246.117, 246.118, 246.119, and 246.121, which place a duty on the railroad to make a series of determinations. When describing how the railroad will implement its program to comply with these sections, a railroad must describe how it will document the factual basis the railroad relied upon when making determinations under these sections;

(v) Section 246.124 which require each railroad to have procedures for mentoring signal employees who have not been certified;

(vi) Section 246.125 which permits reliance on signal employee certification determinations made by other railroads; and

(vii) Sections 246.207 and 246.307 which contain the requirements for replacing lost certificates and the conduct of certification revocation proceedings.

§ 246.107 Signal service classifications.

(a) A railroad may classify its certified signal employees in occupational categories or subcategories by class, task, location, or other suitable

terminology, in accordance with an FRA-approved certification program that complies with the requirements of this part.

(b) Any certified signal employee called to work on a signal system or signal-related technology on which they have not been certified shall immediately notify the railroad or their employer that they are not certified to work on the signal system or signal-related technology.

(c) No railroad shall permit a certified signal employee to work on a signal system or signal-related technology on which the employee has not been certified, unless the certified signal employee works under the direct oversight and supervision of a mentor in accordance with § 246.124.

§ 246.109 Determinations required for certification and recertification.

(a) After FRA has approved a railroad's signal employee certification program, the railroad, prior to initially certifying or recertifying any person as a signal employee, shall, in accordance with its FRA-approved program, determine in writing that:

(1) The individual meets the prior safety conduct eligibility requirements of §§ 246.111 and 246.113;

(2) The individual meets the eligibility requirements of §§ 246.115 and 246.303;

(3) The individual meets the vision and hearing acuity standards of §§ 246.117 and 246.118;

(4) If applicable, the individual has completed a training program that meets the requirements of § 246.119;

(5) The individual has the necessary knowledge, as demonstrated by successfully completing testing and practical demonstration that meet the requirements of § 246.121.

(b) Nothing in this section, § 246.111, or § 246.113 shall be construed to prevent persons subject to this part from entering into an agreement that results in a railroad obtaining the information needed for compliance with this subpart in a different manner than that prescribed in § 246.111 or § 246.113.

§ 246.111 Prior safety conduct as motor vehicle operator.

(a) Except as provided in paragraphs (b) through (e) of this section, after FRA has approved a railroad's signal employee certification program, the railroad, prior to certifying or recertifying any person as a signal employee, shall determine that the person meets the eligibility requirements of this section involving prior conduct as a motor vehicle operator.

(b) A railroad shall certify a person as a signal employee for 60 days if the person:

(1) Requested the information required by paragraph (g) of this section at least 60 days prior to the date of the decision to certify that person; and

(2) Otherwise meets the eligibility requirements provided in § 246.109(a)(1) through (5).

(c) A railroad shall recertify a person as a signal employee for 60 days from the expiration date of that person's certification if the person:

(1) Requested the information required by paragraph (g) of this section at least 60 days prior to the date of the decision to recertify that person; and

(2) Otherwise meets the eligibility requirements provided in § 246.109(a)(1) through (5).

(d) Except as provided in paragraph (e) of this section, if a railroad who certified or recertified a person for 60 days pursuant to paragraph (b) or (c) of this section does not obtain and evaluate the information requested pursuant to paragraph (g) of this section within 60 days, that person will be ineligible to perform as a certified signal employee until the information can be evaluated by the railroad.

(e) If a person requests the information required pursuant to paragraph (g) of this section but is unable to obtain it, that person or the railroad certifying or recertifying that person may petition for a waiver of the requirements of paragraph (a) of this section in accordance with the provisions of part 211 of this chapter. A railroad shall certify or recertify a person during the pendency of the waiver request if the person otherwise meets the eligibility requirements provided in § 246.109(a)(1) through (5).

(f) Except for persons designated as signal employees under § 246.105(c) or (d) or for persons covered by paragraph (j) of this section, each person seeking certification or recertification under this part shall, within one year prior to the date of the railroad's decision on certification or recertification:

(1) Take the actions required by paragraphs (g) through (i) of this section to make information concerning their driving record available to the railroad that is considering such certification or recertification; and

(2) Take any additional actions, including providing any necessary consent required by State, Federal, or foreign law to make information concerning their driving record available to that railroad.

(g) Each person seeking certification or recertification under this part shall request, in writing, that the chief of each driver licensing agency identified in paragraph (h) of this section provide a copy of that agency's available information concerning their driving record to the railroad that is considering such certification or recertification.

(h) Each person shall request the information required under paragraph (g) of this section from:

(1) The chief of the driver licensing agency of any jurisdiction, including a State or foreign country, which last issued that person a driver's license; and

(2) The chief of the driver licensing agency of any other jurisdiction, including states or foreign countries, that issued or reissued the person a driver's license within the preceding five years.

(i) If advised by the railroad that a driver licensing agency has informed the railroad that additional information concerning that person's driving history may exist in the files of a State agency or foreign country not previously contacted in accordance with this section, such person shall:

(1) Request in writing that the chief of the driver licensing agency which compiled the information provide a copy of the available information to the prospective certifying railroad; and

(2) Take any additional action required by State, Federal, or foreign law to obtain that additional information.

(j) Any person who has never obtained a motor vehicle driving license is not required to comply with the provisions of paragraph (g) of this section but shall notify the railroad of that fact in accordance with procedures established by the railroad in its certification program.

(k) Each certified signal employee or person seeking certification as a signal employee shall report motor vehicle incidents described in paragraphs (m)(1) and (2) of this section to their employer(s) (if employed by a railroad or contractor to a railroad), all prospective certifying railroads (if applicable), and all railroad(s) with whom the person holds a signal employee certificate within 48 hours of:

(1) Being convicted for such violations, or

(2) A completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for such violations. For purposes of this paragraph and paragraph (m) of this section, "State action" means action of the jurisdiction that has issued the motor vehicle driver's license, including a foreign country. For purposes of signal employee certification, no railroad shall require reporting earlier than 48 hours

after the conviction, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license.

(l) When evaluating a person's motor vehicle driving record, a railroad shall not consider information concerning motor vehicle driving incidents that occurred:

(1) Prior to the effective date of this rule; or

(2) More than three years before the date of the railroad's certification decision; or

(3) At a time other than that specifically provided for in § 246.111, § 246.113, § 246.115, or § 246.303.

(m) A railroad shall only consider information concerning the following types of motor vehicle incidents:

(1) A conviction for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for operating a motor vehicle while under the influence of, or impaired by, alcohol or a controlled substance; or

(2) A conviction for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for refusal to undergo such testing as is required by State or foreign law when a law enforcement official seeks to determine whether a person is operating a vehicle while under the influence of alcohol or a controlled substance.

(n) If such an incident, described in paragraph (m) of this section, is identified:

(1) The railroad shall provide the data to the railroad's Drug and Alcohol Counselor (DAC), together with any information concerning the person's railroad service record, and shall refer the person for evaluation to determine if the person has an active substance abuse disorder.

(2) The person shall cooperate in the evaluation and shall provide any requested records of prior counseling or treatment for review exclusively by the DAC in the context of such evaluation.

(3) If the person is evaluated as not currently affected by an active substance abuse disorder, the subject data shall not be considered further with respect to certification. However, the railroad shall, on recommendation of the DAC, condition certification upon participation in any needed aftercare and/or follow-up testing for alcohol or drugs deemed necessary by the DAC consistent with the technical standards specified in 49 CFR part 219, subpart H, as well as 49 CFR part 40.

(4) If the person is evaluated as currently affected by an active substance abuse disorder, the provisions of § 246.115(c) will apply.

(5) If the person fails to comply with the requirements of paragraph (n)(2) of this section, the person shall be ineligible to perform as a certified signal employee until such time as the person complies with the requirements.

(o) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.113 Prior safety conduct with other railroads.

(a) After FRA has approved a railroad's signal employee certification program, the railroad shall determine, prior to issuing any person a signal employee certificate, that the certification candidate meets the eligibility requirements of this section.

(b) If the certification candidate has not been employed or certified by any other railroad in the previous five years, they do not have to submit a request in accordance with paragraph (c) of this section, but they must notify the railroad of this fact in accordance with procedures established by the railroad in its certification program.

(c) Except as provided for in paragraph (b) of this section, each person seeking certification or recertification under this part shall submit a written request to each railroad that employed or certified the person within the previous five years to provide the following information to the railroad that is considering whether to certify or recertify that person as a signal employee:

(1) Information about that person's compliance with § 246.111 within the three years preceding the date of the request;

(2) Information about that person's compliance with § 246.115 within the five years preceding the date of the request; and

(3) Information about that person's compliance with § 246.303 within the five years preceding the date of the request.

(d) Each person submitting a written request required by paragraph (c) of this section shall:

(1) Submit the request no more than one year before the date of the railroad's decision on certification or recertification; and

(2) Take any additional actions, including providing any necessary consent required by State or Federal law to make information concerning their service record available to the railroad.

(e) Within 30 days after receipt of a written request that complies with paragraph (c) of this section, a railroad provide the information requested to the railroad designated in the written request.

(f) If a railroad is unable to provide the information requested within 30 days after receipt of a written request that complies with paragraph (c) of this section, the railroad shall provide an explanation, in writing, of why it cannot provide the information within the requested time frame. If the railroad will ultimately be able to provide the requested information, the explanation shall state approximately how much more time the railroad needs to supply the requested information. If the railroad will not be able to provide the requested information, the railroad shall provide an adequate explanation for why it cannot provide this information. Copies of this explanation shall be provided to the railroad designated in the written request and to the person who submitted the written request for information.

(g) When evaluating a person's prior safety conduct with a different railroad, a railroad shall not consider information concerning prior safety conduct that occurred:

(1) Prior to [EFFECTIVE DATE OF FINAL RULE]; or

(2) At a time other than that specifically provided for in § 246.111, § 246.113, § 246.115, or § 246.303.

(h) Each railroad shall adopt and comply with a program that complies with the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or contractor) violates any requirement of a program that complies with the requirements of this subject, that person shall be considered to have violated the requirements of this section.

§ 246.115 Substance abuse disorders and alcohol drug rules compliance.

(a) *Eligibility determination.* After FRA has approved a railroad's signal employee certification program, the railroad shall determine, prior to issuing any person a signal employee certificate, that the person meets the eligibility requirements of this section.

(b) *Documentation.* In order to make the determination required under paragraph (c) of this section, a railroad shall have on file documents pertinent to that determination, including a written document from its DAC which

states their professional opinion that the person has been evaluated as not currently affected by a substance abuse disorder or that the person has been evaluated as affected by an active substance abuse disorder.

(c) *Fitness requirement.* (1) A person who has an active substance abuse disorder shall be denied certification or recertification as a signal employee.

(2) Except as provided in paragraph (f) of this section, a certified signal employee who is determined to have an active substance abuse disorder shall be ineligible to hold certification. Consistent with other provisions of this part, certification may be reinstated as provided in paragraph (e) of this section.

(3) In the case of a current employee of a railroad evaluated as having an active substance abuse disorder (including a person identified under the procedures of § 246.111), the employee may, if otherwise eligible, voluntarily self-refer for substance abuse counseling or treatment under the policy required by § 219.1001(b)(1) of this chapter; and the railroad shall then treat the substance abuse evaluation as confidential except with respect to ineligibility for certification.

(d) *Prior alcohol/drug conduct; Federal rule compliance.* (1) In determining whether a person may be or remain certified as a signal employee, a railroad shall consider conduct described in paragraph (d)(2) of this section that occurred within a period of five consecutive years prior to the review. A review of certification shall be initiated promptly upon the occurrence and documentation of any incident of conduct described in this paragraph (d).

(2) A railroad shall consider any violation of § 219.101 or § 219.102 of this chapter and any refusal to provide a breath or body fluid sample for testing under the requirements of part 219 of this chapter when instructed to do so by a railroad representative.

(3) A period of ineligibility described in this section shall begin:

(i) For a person not currently certified, on the date of the railroad's written determination that the most recent incident has occurred; or

(ii) For a person currently certified, on the date of the railroad's notification to the person that recertification has been denied or certification has been suspended.

(4) The period of ineligibility described in this section shall be determined in accordance with the following standards:

(i) In the case of one violation of § 219.102 of this chapter, the person shall be ineligible to hold a certificate during evaluation and any required primary treatment as described in paragraph (e) of this section. In the case of two violations of § 219.102 of this chapter, the person shall be ineligible to hold a certificate for a period of two years. In the case of more than two such violations, the person shall be ineligible to hold a certificate for a period of five years.

(ii) In the case of one violation of § 219.102 of this chapter and one violation of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of three years.

(iii) In the case of one violation of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of nine months (unless identification of the violation was through a qualifying referral program described in § 219.1001 of this chapter and the signal employee waives investigation, in which case the certificate shall be deemed suspended during evaluation and any required primary treatment as described in paragraph (e) of this section). In the case of two or more violations of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of five years.

(iv) If a person refuses to provide a breath or body fluid sample for testing under the requirements of part 219 of this chapter when instructed to do so by a railroad representative, the person shall be ineligible to hold a certificate for a period of nine months.

(e) *Future eligibility to hold certificate following alcohol/drug violation.* The following requirements apply to a person who has been denied certification or who has had their certification suspended or revoked as a result of conduct described in paragraph (d) of this section:

(1) The person shall not be eligible for grant or reinstatement of the certificate unless and until the person has:

(i) Been evaluated by a Substance Abuse Professional (SAP) to determine if the person currently has an active substance abuse disorder;

(ii) Successfully completed any program of counseling or treatment determined to be necessary by the SAP prior to return to service; and

(iii) In accordance with the testing procedures of 49 CFR part 219, subpart H, has had a return-to-duty alcohol test with an alcohol concentration of less than .02 and a return-to-duty body fluid sample that tested negative for controlled substances.

(2) A certified signal employee placed in service or returned to service under the above-stated conditions shall continue in any program of counseling or treatment deemed necessary by the SAP and shall be subject to a reasonable program of follow-up alcohol and drug testing without prior notice for a period of not more than five years following return to service. Follow-up tests shall include not fewer than six alcohol tests and six drug tests during the first year following return to service.

(3) Return-to-duty and follow-up alcohol and drug tests shall be performed consistent with the requirements of 49 CFR part 219, subpart H.

(4) This paragraph (e) does not create an entitlement to utilize the services of a railroad SAP, to be afforded leave from employment for counseling or treatment, or to employment as a signal employee. Nor does it restrict any discretion available to the railroad to take disciplinary action based on conduct described herein.

(f) *Confidentiality protected.* Nothing in this part shall affect the responsibility of the railroad under § 219.1003(f) of this chapter to treat qualified referrals for substance abuse counseling and treatment as confidential; and the certification status of a signal employee who is successfully assisted under the procedures of that section shall not be adversely affected. However, the railroad shall include in its referral policy, as required pursuant to § 219.1003(j) of this chapter, a provision that, at least with respect to a certified signal employee or a candidate for certification, the policy of confidentiality is waived (to the extent that the railroad shall receive from the SAP or DAC official notice of the substance abuse disorder and shall suspend or revoke the certification, as appropriate) if the person at any time refuses to cooperate in a recommended course of counseling or treatment.

(g) *Complying with certification program.* Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.117 Vision acuity.

(a) After FRA has approved a railroad's signal employee certification program, the railroad shall determine, prior to issuing any person a signal employee certificate, that the person meets the standards for visual acuity prescribed in this section and Appendix B to this part.

(b) Any examination required under this section shall be performed by or under the supervision of a medical examiner or a licensed physician's assistant.

(c) Except as provided in paragraph (d) of this section, each certified signal employee shall have visual acuity that meets or exceeds the following thresholds:

(1) For distant viewing, either:

(i) Distant visual acuity of at least 20/40 (Snellen) in each eye without corrective lenses; or

(ii) Distant visual acuity separately corrected to at least 20/40 (Snellen) with corrective lenses and distant binocular acuity of at least 20/40 (Snellen) in both eyes with or without corrective lenses;

(2) A field of vision of at least 70 degrees in the horizontal meridian in each eye; and

(3) The ability to recognize and distinguish between the colors of railroad signals as demonstrated by successfully completing one of the tests in Appendix B to this part.

(d) A person not meeting the thresholds in paragraph (c) of this section shall, upon request of the certification candidate, be subject to further medical evaluation by a railroad's medical examiner to determine that person's ability to safely perform as a certified signal employee. In such cases, the following procedures will apply:

(1) In accordance with the guidance prescribed in Appendix B to this part, a person is entitled to:

(i) One retest without making any showing; and

(ii) An additional retest if the person provides evidence that circumstances have changed since the last test to the extent that the person may now be able to safely perform as a certified signal employee.

(2) The railroad shall provide its medical examiner with a copy of this part, including all appendices.

(3) If, after consultation with a railroad officer, the medical examiner concludes that, despite not meeting the threshold(s) in paragraph (c) of this section, the person has the ability to safely perform as a certified signal employee, the railroad may conclude that the person satisfies the vision acuity requirements of this section to be a certified signal employee. Such certification will be conditioned on any special restrictions the medical examiner determines in writing to be necessary.

(e) In order to make the determination required under paragraph (a) of this section, a railroad shall have on file the following for each certification candidate:

(1) A medical examiner's certificate that the candidate has been medically examined and either does or does not meet the vision acuity standards prescribed in paragraph (c) of this section.

(2) If necessary under paragraph (d) of this section, a medical examiner's written professional opinion which states the basis for their determination that:

(i) The candidate can be certified, under certain conditions if necessary, even though the candidate does not meet the vision acuity standards prescribed in paragraph (c) of this section; or

(ii) The candidate's vision acuity prevents the candidate from being able to safely perform as a certified signal employee.

(f) If the examination required under this section shows that the person needs corrective lenses to meet the standards for vision acuity prescribed in this section and appendix B to this part, that person shall use corrective lenses at all times while performing as a certified signal employee unless the railroad's medical examiner subsequently determines in writing that the person can safely perform as a certified signal employee without corrective lenses.

(g) When a certified signal employee becomes aware that their vision has deteriorated, they shall notify the railroad's medical department or other appropriate railroad official of the deterioration. Such notification must occur prior to performing any subsequent service as a certified signal employee. The individual cannot return to service as a certified signal employee until they are reexamined and determined by the railroad's medical examiner to satisfy the vision acuity standards prescribed in this section and appendix B to this part.

(h) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.118 Hearing acuity.

(a) After FRA has approved a railroad's signal employee certification program, the railroad shall determine, prior to issuing any person a signal employee certificate, that the person meets the standards for hearing acuity prescribed in this section and appendix B to this part.

(b) Any examination required under this section shall be performed by or under the supervision of a medical examiner or a licensed physician's assistant.

(c) Except as provided in paragraph (d) of this section, each certified signal employee shall have hearing acuity that meets or exceeds the following thresholds with or without use of a hearing aid: The person does not have an average hearing loss in the better ear greater than 40 decibels at 500 Hz, 1,000 Hz, and 2,000 Hz. The hearing test or audiogram used to show a person's hearing acuity shall meet the requirements of one of the following:

(1) As required in 29 CFR 1910.95(h) (Occupational Safety and Health Administration);

(2) As required in § 227.111 of this chapter; or

(3) Conducted using an audiometer that meets the specifications of, and is maintained and used in accordance with, a formal industry standard, such as American National Standards Institute (ANSI) S3.6, ''Specifications for Audiometers.''

(d) A person not meeting the thresholds in paragraph (c) of this section shall, upon request of the certification candidate, be subject to further medical evaluation by a railroad's medical examiner to determine that person's ability to safely perform as a certified signal employee. In such cases, the following procedures will apply:

(1) In accordance with the guidance prescribed in Appendix B to this part, a person is entitled to:

(i) One retest without making any showing; and

(ii) An additional retest if the person provides evidence that circumstances have changed since the last test to the extent that the person may now be able to safely perform as a certified signal employee.

(2) The railroad shall provide its medical examiner with a copy of this part, including all appendices.

(3) If, after consultation with a railroad officer, the medical examiner concludes that, despite not meeting the threshold(s) in paragraph (c) of this section, the person has the ability to safely perform as a certified signal employee, the railroad may conclude that the person satisfies the hearing acuity requirements of this section to be a certified signal employee. Such certification will be conditioned on any special restrictions the medical examiner determines in writing to be necessary.

(e) In order to make the determination required under paragraph (a) of this section, a railroad shall have on file the following for each certification candidate:

(1) A medical examiner's certificate that the candidate has been medically examined and either does or does not meet the hearing acuity standards prescribed in paragraph (c) of this section.

(2) If necessary under paragraph (d) of this section, a medical examiner's written professional opinion which states the basis for their determination that:

(i) The candidate can be certified, under certain conditions if necessary, even though the candidate does not meet the hearing acuity standards prescribed in paragraph (c) of this section; or

(ii) The candidate's hearing acuity prevents the candidate from being able to safely perform as a certified signal employee.

(f) If the examination required under this section shows that the person needs a hearing aid to meet the standards for hearing acuity prescribed in this section and appendix B to this part, that person shall use a hearing aid at all times while performing as a certified signal employee unless the railroad's medical examiner subsequently determines in writing that the person can safely perform as a certified signal employee without a hearing aid.

(g) When a certified signal employee becomes aware that their hearing has deteriorated, they shall notify the railroad's medical department or other appropriate railroad official of the deterioration. Such notification must occur prior to performing any subsequent service as a certified signal employee. The person cannot return to service as a certified signal employee until they are reexamined and determined by the railroad's medical examiner to satisfy the hearing acuity standards prescribed in this section and appendix B to this part.

(h) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.119 Training requirements.

(a) After FRA has approved a railroad's certification program, the railroad shall determine, prior to issuing any person a signal employee certificate, that the person has successfully completed training, in accordance with the requirements of this section.

(b) As further explained in § 246.106, a railroad's certification program shall state the railroad's election either:

(1) To accept responsibility for training persons who have not been previously certified as signal employees and thereby obtain authority to provide signal employee certification; or

(2) To recertify signal employees previously certified by other railroads.

(c) A railroad that elects to accept responsibility for the training of persons who have not been previously certified as signal employees shall state in its certification program whether it will conduct the training or employ a training program conducted by another entity on its behalf, but adopted and ratified by the railroad.

(d) A railroad that elects to train persons not previously certified as signal employees shall address the following requirements in its certification program:

(1) An explanation of how training will be structured, developed, and delivered, including an appropriate combination of classroom, simulator, computer-based, correspondence, practical demonstration, on-the-job training, or other formal training. The curriculum shall be designed to impart knowledge of, and ability to comply with applicable Federal railroad safety laws, regulations, and orders, as well as any relevant railroad rules and procedures promulgated to implement those Federal railroad safety laws, regulations, and orders. The training shall document a person's knowledge of, and ability to comply with, Federal railroad safety laws, regulations, and orders, as well as railroad rules and procedures.

(2) An on-the-job training component which shall include the following:

(i) A syllabus describing content, required tasks, and related steps the employee learning the job shall be able to perform within a specified timeframe;

(ii) A statement of the conditions (*e.g.,* prerequisites, tools, equipment, documentation, briefings, demonstrations, and practice) necessary for learning transfer; and

(iii) A statement of the standards by which proficiency is measured through a combination of task/step accuracy, completeness, and repetition.

(3) A description of the processes to review and modify its training program when new safety-related laws, regulations, orders, and procedures are issued and when new signal systems, technologies, software or equipment are introduced into the workplace. This description shall also explain how the railroad will determine if additional or refresher training is needed.

(e) Prior to beginning the initial signal employee tasks associated with on-the-job exercises referenced in paragraph (d)(2) of this section, each railroad shall make any relevant information or materials, such as signal standards, test procedures, operating rules, safety rules, or other rules, available for referencing by certification candidates.

(f) Prior to initial certification of a person as a certified signal employee, a railroad shall require the person to:

(1) Successfully complete the formal initial training program developed pursuant to paragraph (d) of this section and any associated examinations covering the skills and knowledge the person will need to perform the tasks necessary to be a certified signal employee;

(2) Demonstrate on-the-job proficiency, with input from a qualified instructor, by successfully completing the tasks and using the signal systems and technology necessary to be a certified signal employee on the certifying railroad. A certification candidate may perform such tasks under the direct onsite supervision of a certified signal employee who has at least one year of experience as a signal employee; and

(3) Demonstrate knowledge of the signal systems, technology, software, and equipment deployed on the railroad's territory. If the railroad uses a written test to fulfill this requirement, the railroad must provide the certification candidate with an opportunity to consult with a qualified instructor to explain a question.

(g) In making the determination required under paragraph (a) of this section, a railroad shall have written documentation showing that:

(1) The person completed a training program that complies with paragraph (d) of this section (if the person has not previously been certified as a signal employee); and

(2) The person demonstrated their knowledge by achieving a passing grade under the testing, practical demonstration, and evaluation procedures of the training program.

(h) Notwithstanding the railroad's election in paragraph (b) of this section, each railroad shall provide comprehensive training on the installation, operation, testing, maintenance, and repair of the signal systems (including software and equipment) and signal-related technology deployed on its territory as part of its certification program required

under this part and submitted in accordance with the procedures and requirements in § 246.106. In its certification program, each railroad shall address:

(1) How comprehensive training will be provided on the installation, operation, testing, maintenance, and repair of the signal systems (including software and equipment) and signal-related technology deployed on the railroad's territory; and

(2) How the railroad will ensure that the comprehensive training discussed in this paragraph is provided to each certified signal employee before the employee is required to install, operate, test, maintain, or repair any signal system (including software and equipment) or signal-related technology deployed on the railroad's territory; and

(3) The maximum time periods in which a certified signal employee can be absent from performing safety-sensitive work on signal systems before refresher training will be required. This time period cannot exceed 12 months.

(i) If ownership of a railroad is being transferred from one company to another, the signal employees of the acquiring company may receive familiarization training from the selling company prior to the acquiring company commencing operation.

(j) Each railroad shall provide for the continuing education of its certified signal employees to ensure that each certified signal employee maintains the necessary knowledge and skills concerning:

(1) Compliance with all applicable Federal laws, regulations, and orders;

(2) Compliance with all applicable railroad signal system safety and operating rules; and

(3) Compliance with all applicable standards, procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of new and existing signal systems (including new and existing software and equipment) and new and existing signal-related technology deployed on the railroad.

(k) Each railroad shall provide comprehensive training on the installation, operation, testing, maintenance, and repair of new signal systems (including software and equipment) and signal-related technology to its certified signal employees before requiring any certified signal employee to install, operate, test, maintain, or repair any new signal system (including software or equipment) or new signal-related technology on its territory.

(l) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.121 Knowledge testing.

(a) After FRA has approved a railroad's signal employee certification program, the railroad shall determine, prior to issuing any person a signal employee certificate, that the person has demonstrated sufficient knowledge of the railroad's signal standards, test procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of the railroad's signal systems in accordance with the requirements of this section.

(b) In order to make the knowledge determination required by paragraph (a) of this section, a railroad shall have procedures for testing a person being evaluated for certification as a signal employee that shall be:

(1) Designed to examine a person's knowledge of:

(i) All applicable Federal railroad safety laws, regulations, and orders governing signal systems and related technology;

(ii) All applicable railroad safety and operating rules; and

(iii) All applicable railroad standards, procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of the railroad's signal systems and related technology, including:

(A) The railroad's rules and standards for disabling and removing signal systems from service; and

(B) The railroad's rules and standards for placing signal systems back in service;

(2) Objective in nature;

(3) Include a practical demonstration component;

(4) In written or electronic form;

(5) Sufficient to accurately measure the person's knowledge of the subjects listed in paragraph (b)(1) of this section; and

(6) Conducted without open reference books or other materials except to the degree the person is being tested on their ability to use such reference books or materials.

(c) The railroad shall provide the certification candidate with an opportunity to consult with a qualified instructor to explain one or more test questions.

(d) If a person fails the test, no railroad shall permit or require that person to work as a certified signal employee prior to that person's achieving a passing score during a reexamination of the test.

(e) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.123 Monitoring operational performance.

(a) Each railroad's certification program shall describe how it will monitor the operational performance of its certified signal employees by including procedures for:

(1) Giving each certified signal employee at least one unannounced compliance test each calendar year on the railroad's signal system standards, test procedures, and Federal regulations concerning signal systems, except as provided for in paragraph (d) of this section;

(2) Giving unannounced compliance tests to certified signal employees who return to signal service after performing service that does not require certification pursuant to this part, as described in paragraph (d) of this section;

(3) What actions the railroad will take if it finds deficiencies in a certified signal employee's performance during an unannounced compliance test; and

(4) Monitoring the performance of signal-related tasks.

(b) An unannounced compliance test shall:

(1) Test certified signal employees for compliance with one or more signal system standards or test procedures in accordance with the railroad's certification program and § 217.9 of this chapter;

(2) Be performed by a certified signal employee;

(3) Be given to each certified signal employee at least once each calendar year, except as provided for in paragraph (d) of this section; and

(4) If the railroad's certification program classifies signal employees, the unannounced compliance test shall be within scope of the signal employee's classification.

(c) A certified signal employee who is not performing service that requires certification pursuant to this part does not need to be given an unannounced compliance test. However, when the certified signal employee returns to

service that requires certification pursuant to this part, the railroad shall:

(1) Give the certified signal employee an unannounced compliance test within 30 days of their return to signal service; and

(2) Retain a written record that includes the following information:

(i) The date the certified signal employee stopped performing service that required certification pursuant to this part;

(ii) The date the certified signal employee returned to performing service that required certification pursuant to this part; and

(iii) The date and the result of the unannounced compliance test was performed following the signal employee's return to service requiring certification.

(d) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.124 Mentoring.

(a) Each railroad's certification program shall include procedures for mentoring signal employees who have not been certified by the railroad.

(b) After FRA has approved a railroad's certification program, the railroad shall not permit or require any person to perform work on a signal system or signal-related technology on its territory that requires certification unless the railroad first determines that:

(1) The person is a certified signal employee who has been certified by the railroad; or

(2) The person is a signal employee who is working under the direct observation and supervision of a mentor.

(c) If the railroad elects to classify its certified signal employees into more than one occupational category or subcategory pursuant to § 246.107, the railroad shall address in its certification program how mentoring will be provided for certified signal employees who move into a different occupational category or subcategory of certified signal service.

(d) If allowed by the railroad's certification program, any work on a signal system performed by a signal employee whose certification has been revoked shall be performed under the direct oversight and supervision of a mentor.

(e) Each railroad's certification program shall address how mentors will be held accountable for the work performed by signal employees when they are working under the mentor's direct oversight and supervision.

§ 246.125 Certification determinations made by other railroads.

(a) A railroad that is considering certification of a person as a signal employee may rely on certain determinations made by another railroad concerning that person's certification.

(b) A railroad's certification program shall address how the railroad will administer the training of previously uncertified signal employees with extensive signal experience or previously certified signal employees who have had their certification expire. If a railroad's certification program fails to specify how it will train these signal employees, then the railroad shall require these signal employees to successfully complete the certifying railroad's entire training program.

(c) A railroad relying on certification determinations made by another railroad shall be responsible for determining that:

(1) The prior certification is still valid in accordance with the provisions of §§ 246.201 and 246.307;

(2) The person has received training on the railroad's signal standards, test procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of the railroad's signal systems, technology, software, and equipment deployed on a railroad's territory pursuant to § 246.119; and

(3) The person has demonstrated the necessary knowledge concerning the railroad's operating rules, territory, signal systems, technology, software, and equipment deployed on a railroad's territory in accordance with § 246.121.

Subpart C—Administration of the Certification Program

§ 246.201 Time limitations for certification.

(a) After FRA approves a railroad's signal employee certification program, that railroad shall not certify or recertify a person as a signal employee if the railroad is making:

(1) A determination concerning eligibility under §§ 246.111, 246.113, 246.115, and 246.303 and the eligibility data being relied on was furnished more than one year before the date of the railroad's certification decision;

(2) A determination concerning visual or hearing acuity and the medical examination being relied on was conducted more than 450 days before the date of the railroad's certification decision;

(3) A determination concerning demonstrated knowledge and the knowledge examination being relied on was conducted more than one year before the date of the railroad's certification decision; or

(4) A determination concerning demonstrated knowledge and the knowledge examination being relied on was conducted more than two years before the date of the railroad's recertification decision if the railroad administers a knowledge testing program pursuant to § 246.121 at intervals that do not exceed two years.

(b) The time limitations of paragraph (a) of this section do not apply to a railroad that is making a certification decision in reliance on determinations made by another railroad in accordance with § 246.125.

(c) Except if a person is designated as a certified signal employee under § 246.105(c) or (d), no railroad shall certify a person as a signal employee for an interval of more than three years.

(d) Each railroad shall issue each certified signal employee a certificate that complies with § 246.207 no later than 30 days from the date of its decision to certify or recertify that person.

§ 246.203 Retaining information supporting determinations.

(a) After FRA approves a railroad's signal employee certification program, any time the railroad issues, denies, or revokes a certificate after making the determinations required under § 246.109, it shall maintain a record for each certified signal employee and certification candidate. Each record shall contain the information, described in paragraph (b) of this section, that the railroad relied on in making the determinations required under § 246.109.

(b) A railroad shall retain the following information:

(1) Relevant data from the railroad's records concerning the person's prior safety conduct and eligibility;

(2) Relevant data furnished by another railroad;

(3) Relevant data furnished by a governmental agency concerning the person's motor vehicle driving record;

(4) Relevant data furnished by the person seeking certification concerning their eligibility;

(5) The relevant test results data concerning vision and hearing acuity;

(6) If applicable, the relevant data concerning the professional opinion of the railroad's medical examiner on the

adequacy of the person's vision or hearing acuity;

(7) Relevant data from the railroad's records concerning the person's success or failure on knowledge test(s) under § 246.121;

(8) A sample copy of the written knowledge test or tests administered; and

(9) The relevant data from the railroad's records concerning the person's success or failure on unannounced tests the railroad performed to monitor the signal employee's performance in accordance with § 246.123.

(c) If a railroad is relying on successful completion of a training program conducted by another entity, the relying railroad shall maintain a record for each certification candidate that contains the relevant data furnished by the training entity concerning the person's demonstration of knowledge and relied on by the railroad in making its determinations.

(d) If a railroad is relying on a certification decision initially made by another railroad, the relying railroad shall maintain a record for each certification candidate that contains the relevant data furnished by the other railroad which it relied on in making its determinations.

(e) All records required under this section shall be retained by the railroad for a period of six years from the date of the certification, recertification, denial, or revocation decision and shall be made available to FRA representatives, upon request, in a timely manner.

(f) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on the record(s) required by this section; or

(2) Otherwise falsify such records through material misstatement, omission, or mutilation.

(g) Nothing in this section precludes a railroad from maintaining the information required to be retained under this section in an electronic format provided that:

(1) The railroad maintains an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or individual records;

(2) The program and data storage system must be protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) A record cannot be deleted or altered by any individual after the record is certified by the employee who created the record;

(3) Any amendment to a record is either:

(i) Electronically stored apart from the record that it amends; or

(ii) Electronically attached to the record as information without changing the original record;

(4) Each amendment to a record uniquely identifies the person making the amendment; and

(5) The system employed by the railroad for data storage permits reasonable access and retrieval of the information which can be easily produced in an electronic or printed format that can be:

(i) Provided to FRA representatives in a timely manner; and

(ii) Authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by an FRA representative.

§ 246.205 List of certified signal employees and recordkeeping.

(a) After a railroad's certification program has received its initial approval from FRA, pursuant to § 246.103(f)(1), the railroad must maintain a list of each person who is currently certified as a signal employee by the railroad. The list must include the date of the railroad's certification decision and the date the person's certification expires.

(b) The list shall:

(1) Be updated at least annually;

(2) Be made available, upon request, to FRA representatives in a timely manner; and

(3) Be available either:

(i) In electronic format pursuant to paragraph (c) of this section; or

(ii) At the divisional or regional headquarters of the railroad.

(c) If a railroad elects to maintain its list in an electronic format, it must:

(1) Maintain an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or the list;

(2) Have its program and data storage system protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) An entry on the list cannot be deleted or altered by any individual after the entry is certified by the employee who created the entry;

(3) Have any amendment to the list either:

(i) Electronically stored apart from the entry on the list that it amends; or

(ii) Electronically attached to the entry on the list as information without changing the original entry;

(4) Ensure that each amendment to the list uniquely identifies the person making the amendment;

(5) Ensure that the system employed for data storage permits reasonable access and retrieval of the information which can be easily produced in an electronic or printed format that can be:

(i) Provided to FRA representatives within a timely manner; and

(ii) Authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by an FRA representative.

(d) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on the list required by this section; or

(2) Otherwise falsify such list through material misstatement, omission, or mutilation.

§ 246.207 Certificate requirements.

(a) Each person who becomes a certified signal employee in accordance with this part shall be issued a paper or electronic certificate that must:

(1) Identify the railroad that is issuing the certificate;

(2) Indicate that it is a signal employee certificate, along with any additional signal employee categories or subcategories developed by the railroad pursuant to § 246.107;

(3) Provide the following information about the certified signal employee:

(i) Name;

(ii) Employee identification number;

(iii) Year of birth; and

(iv) Either a physical description or photograph of the person;

(4) Identify any conditions or limitations, including conditions to ameliorate vision or hearing acuity deficiencies, that restrict, limit, or alter the person's abilities to work as a certified signal employee;

(5) Show the effective date of the certification;

(6) Show the expiration date of the certification, except as provided for in paragraph (b) of this section;

(7) Be signed by an individual designated in accordance with paragraph (c) of this section; and

(8) Be electronic or be of sufficiently small size to permit being carried in an ordinary pocket wallet.

(b) A certificate does not need to include an expiration date, as required under paragraph (a)(6) of this section, if the person was designated as a certified signal employee under § 246.105(c) or (d).

(c) Each railroad shall designate in writing any person it authorizes to sign the certificates described in this section. The designation shall identify such persons by name or job title.

(d) Nothing in this section shall prohibit any railroad from including additional information on the certificate or supplementing the certificate through other documents.

(e) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on a certificate; or

(2) Otherwise falsify a certificate through material misstatement, omission, or mutilation.

(f) Except as provided for in paragraph (h) of this section, each certified signal employee shall:

(1) Have their certificate in their possession while on duty as a signal employee; and

(2) Display their certificate upon request from:

(i) An FRA representative;

(ii) A State inspector authorized under part 212 of this chapter;

(iii) An officer of the issuing railroad; or

(iv) An officer of the signal employee's employer if the signal employee is not employed by the issuing railroad.

(g) If a signal employee's certificate is lost, stolen, mutilated, or becomes unreadable, the railroad shall promptly replace the certificate at no cost to the signal employee.

(h) A certified signal employee is exempt from the requirements of paragraph (f) of this section if:

(1) The railroad made its certification or recertification decision within the last 30 days and the signal employee has not yet received their certificate; or

(2) The signal employee's certificate was lost, stolen, mutilated, or became unreadable, and the railroad has not yet issued a replacement certificate to the signal employee.

(i) Any signal employee who is notified or called to serve as a signal employee and such service would cause the signal employee to exceed certificate limitations, set forth in accordance with subpart B of this part, shall immediately notify the railroad that they are not authorized to perform that anticipated service and it shall be unlawful for the railroad to require such service.

(j) Nothing in this section shall be deemed to alter a certified signal employee's duty to comply with other provisions of this chapter concerning railroad safety.

§ 246.213 Multiple certifications.

(a) A person who holds a signal employee certificate may:

(1) Hold a signal employee certificate for multiple types of signal service; and

(2) Be certified in other crafts, such as a locomotive engineer or conductor.

(b) A railroad that issues multiple certificates to a person, shall, to the extent possible, coordinate the expiration date of those certificates.

(c)(1) A person who holds a current signal employee certificate from more than one railroad shall immediately notify their employer(s) and all railroad(s) with whom they hold a signal employee certificate if they are denied signal employee certification or recertification under § 246.301 by a railroad or have their signal employee certification suspended or revoked under § 246.307 by a railroad.

(2) If a person has their signal employee certification suspended or revoked by a railroad under § 246.307, they shall not work as a certified signal employee for any railroad during the period that their certification is suspended or revoked, except as provided for in § 246.124(d).

(3) If a person has their signal employee certification suspended or revoked by a railroad under § 246.307, they shall notify any railroad from whom they are seeking signal employee certification that their signal employee certification has been suspended or revoked by another railroad.

(d) Paragraphs (d)(1) through (3) of this section apply to people who are currently certified as a signal employee and also currently certified in another railroad craft, such as a locomotive engineer or conductor:

(1) If a person's signal employee certification is revoked under § 246.307 for a violation of § 246.303(e)(11), they shall not work in another certified railroad craft, such as a locomotive engineer or conductor, during the period of revocation.

(2) If a person's signal employee certification is revoked under § 246.307 for a violation of § 246.303(e)(11), they shall not obtain certification for any other railroad craft pursuant to this chapter during the period of revocation.

(3) If a person's signal employee certification is revoked under § 246.307 for a violation of § 246.303(e)(1) through (10), they may work in another certified railroad craft, such as a locomotive engineer or conductor, during the period of revocation.

(e) Paragraphs (e)(1) through (3) of this section also apply to people who are certified as a signal employee and certified in another railroad craft, such as a locomotive engineer or conductor:

(1) A person whose certification in any railroad craft has been revoked for failure to comply with § 219.101 of this chapter shall not work as a certified signal employee for any railroad during the revocation period.

(2) A person whose certification in any railroad craft has been revoked for failure to comply with § 219.101 of this chapter shall not obtain signal employee certification pursuant to this part from any railroad during the revocation period.

(3) A certified signal employee who has had their certification in another railroad craft suspended or revoked for any reason other than a failure to comply with § 219.101 of this chapter may work as a certified signal employee during the suspension or revocation period.

(f) A railroad that denies a person signal employee certification or recertification under § 246.301 shall not, solely on the basis of that denial, deny or revoke that person's certifications or recertifications in another railroad craft.

(g) A railroad that denies a person's certification or recertification, pursuant to this chapter, in any railroad craft other than signal employee shall not, solely on the basis of that denial, deny or revoke that person's signal employee certification or recertification.

(h) In lieu of issuing multiple certificates, a railroad may issue one certificate to a person who is certified in multiple crafts as long as the single certificate complies with all of the certificate requirements for those crafts.

(i) A person who is certified in multiple crafts and who is involved in a revocable event, as described in this chapter, may only have one certificate revoked for that event. The determination by the railroad as to which certificate to revoke must be based on the work the person was performing at the time the revocable event occurred.

§ 246.215 Railroad oversight responsibilities.

(a) No later than March 31 of each year (beginning in calendar year [YEAR THAT IS 3 YEARS AFTER EFFECTIVE DATE OF FINAL RULE]), each Class I railroad (including the National Railroad Passenger Corporation), each railroad providing commuter service,

and each Class II railroad shall conduct a formal annual review and analysis concerning the administration of its program for responding to detected instances of poor safety conduct by certified signal employees during the prior calendar year.

(b) Each review and analysis shall involve:

(1) The number and nature of the instances of detected poor safety conduct including the nature of the remedial action taken in response thereto;

(2) The number and nature of FRA reported accidents/incidents attributed to poor safety performance by signal employees; and

(3) The number and type of operational monitoring test failures recorded by certified signal employees conducting compliance tests pursuant to § 246.123.

(c) Based on that review and analysis, each railroad shall determine what action(s) it will take to improve the safety of railroad operations to reduce or eliminate future accidents/incidents of that nature.

(d) If requested in writing by FRA, the railroad shall provide a report of the findings and conclusions reached during such annual review and analysis effort.

(e) For reporting purposes, information about the nature of detected poor safety conduct shall be capable of segregation for study and evaluation purposes into the following categories:

(1) Incidents involving noncompliance with railroad rules and procedures governing the removal from service of:

(i) Highway-rail and pathway grade crossing warning devices and systems; and

(ii) Wayside signal devices and systems;

(iii) Other devices or signal systems subject to this part.

(2) Incidents involving noncompliance with railroad rules and procedures governing the restoration of service of:

(i) Highway-rail and pathway grade crossing warning devices and systems; and

(ii) Wayside signal devices and systems;

(iii) Other devices or signal systems subject to this part.

(3) Incidents involving interference with the normal functioning of:

(i) Highway-rail and pathway grade crossing warning devices and systems; and

(ii) Wayside signal devices and systems.

(4) Incidents involving noncompliance with railroad rules and test procedures governing the inspection and testing of grade crossing warning devices and systems after installation, modification, disarrangement, maintenance, testing, and repair.

(5) Incidents involving noncompliance with railroad test procedures on devices or signal systems subject to this part.

(6) Incidents resulting in a signal false proceed, grade crossing activation failure, or accident or personal injury related to the same.

(7) Incidents involving noncompliance with the on-track safety requirements in part 214 of this chapter.

(8) Incidents involving noncompliance with part 219 of this chapter.

(f) For reporting purposes, each category of detected poor safety conduct identified in paragraph (e) of this section shall be capable of being annotated to reflect the following:

(1) The total number of incidents in that category;

(2) The number of incidents within that total which reflect incidents requiring an FRA accident/incident report under part 225 of this chapter; and

(3) The number of incidents within that total which were detected as a result of a scheduled operational monitoring effort.

(g) For reporting purposes, each instance of detected poor safety conduct identified in paragraph (b) of this section shall be capable of being annotated to reflect the following:

(1) The nature of the remedial action taken, and the number of events subdivided so as to reflect which of the following actions was selected:

(i) Imposition of informal discipline;

(ii) Imposition of formal discipline;

(iii) Provision of informal training; or

(iv) Provision of formal training; and

(2) If the nature of the remedial action taken was formal discipline, the number of events further subdivided so as to reflect which of the following punishments was imposed by the railroad:

(i) The person was withheld from service;

(ii) The person was dismissed from employment; or

(iii) The person was issued demerits. If more than one form of punishment was imposed only the punishment deemed the most severe shall be shown.

(iv) The person's classification or type of signal service was removed or reduced.

(h) For reporting purposes, each instance of detected poor safety conduct identified in paragraph (b) of this section which resulted in the imposition of formal or informal discipline shall be annotated to reflect the following:

(1) The number of instances in which the railroad's internal appeals process reduced the punishment initially imposed at the conclusion of its hearing; and

(2) The number of instances in which the punishment imposed by the railroad was reduced by any of the following entities: The National Railroad Adjustment Board, a Public Law Board, a Special Board of Adjustment, or other body for the resolution of disputes duly constituted under the provisions of the Railway Labor Act.

(i) For reporting purposes, an instance of poor safety conduct involving an individual who is a certified signal employee and is certified in another craft such as locomotive engineer or conductor, need only be reported once (*e.g.,* either under this section or § 240.309 or § 242.215 of this chapter). The determination as to where to report the instance of poor safety conduct should be based on the work the person was performing at the time the conduct occurred.

Subpart D—Denial and Revocation of Certification

§ 246.301 Process for denying certification.

(a) A railroad shall notify a candidate for certification or recertification of information known to the railroad that forms the basis for denying the person certification and provide the person a reasonable opportunity to explain or rebut that adverse information in writing prior to denying certification. A railroad shall provide the signal employee candidate with any documents or records, including written statements, related to failure to meet a requirement of this part that support its pending denial decision.

(b) If a railroad denies a person certification or recertification, it shall issue a decision that complies with all of the following requirements:

(1) It must be in writing;

(2) It must explain the basis for the railroad's denial decision;

(3) It must address any explanation or rebuttal information that the certification candidate provides pursuant to paragraph (a) of this section;

(4) It must include the date of the railroad's decision; and

(5) It must be served on the candidate no later than 10 days after the railroad's decision.

(c) A railroad shall not deny the person's certification for failing to comply with a railroad test procedure, signal standard, or practice which

constitutes a violation under § 246.303(e)(1) through (10) if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the signal employee's ability to comply with that railroad test procedure, signal standard, or practice.

§ 246.303 Criteria for revoking certification.

(a) It shall be unlawful to fail to comply with any of the railroad rules or practices described in paragraph (e) of this section.

(b) A certified signal employee who has demonstrated a failure to comply with a railroad test procedure, signal standard or practice described in paragraph (e) of this section shall have their certification revoked.

(c) A certified signal employee who is monitoring, mentoring, or instructing a signal employee and fails to take appropriate action to prevent a violation of a railroad test procedure, signal standard or practice described in paragraph (e) of this section shall have their certification revoked. Appropriate action does not mean that a supervisor, mentor, or instructor must prevent a violation from occurring at all costs; the duty may be met by warning the signal employee of a potential or foreseeable violation.

(d) A certified signal employee who is called by a railroad to perform a duty other than that of a signal employee shall not have their signal employee certification revoked based on actions taken or not taken while performing that duty except for violations described in paragraph (e)(11) of this section.

(e) When determining whether to revoke a signal employee's certification, a railroad shall only consider violations of Federal regulatory provisions or railroad rules, procedures, signal standards, and practices that involve:

(1) Interfering with the normal functioning of a highway-rail grade crossing warning system under § 234.209 of this chapter, or signal system under § 236.4 of this chapter, without providing an alternative means of protection. (Railroads shall only consider those violations that result in an activation failure or false proceed signal.)

(2) Failure to comply with a railroad rule or procedure when removing from service:

(i) Highway-rail or pathway grade crossing warning devices and systems;

(ii) Wayside signal devices and systems; or

(iii) Other devices or signal systems subject to this part.

(3) Failure to comply with railroad rule or procedure when placing in service or restoring to service:

(i) Highway-rail and pathway grade crossing warning devices and systems;

(ii) Wayside signal devices and systems; or

(iii) Other devices or signal systems subject to this part.

(4) Failure to perform an inspection or test to ensure a highway-rail or pathway grade crossing warning device or system functions as intended, when required by railroad rule or procedure, after:

(i) Installation, maintenance, testing or repair of the warning device or system;

(ii) Modification or disarrangement of the warning device or system; or

(iii) Malfunction or failure of the warning device or system;

(5) Failure to restore power to train detection device or highway-rail or pathway grade crossing warning device or system after manual interruption of the power source. (Railroads shall consider only those violations that result in activation failures.)

(6) Failure to comply with railroad validation or cutover procedures.

(7) Failure to comply with §§ 214.313, 214.319, 214.321, 214.323, 214.325, 214.327, and 214.329. Railroads shall consider only those violations directly involving the signal employee who failed to ascertain whether on-track safety was being provided before fouling a track.

(8) Failure to comply with § 218.25 of this chapter (Workers on a main track);

(9) Failure to comply with § 218.27 of this chapter (Workers on other than main track);

(10) Failure to comply with § 218.29 of this chapter (Alternate methods of protection);

(11) Failure to comply with § 219.101 of this chapter.

(f) In making the determination as to whether to revoke a signal employee's certification, a railroad shall only consider conduct described in paragraphs (e)(1) through (10) of this section that occurred within the three years prior to the determination.

(g) If in any single incident the person's conduct contravened more than one Federal regulatory provision or railroad rule, procedure, signal standard, or practice listed in paragraph (e) of this section, that event shall be treated as a single violation for the purposes of this section.

(h) A violation of one or more railroad rules, procedures, signal standards, or practices described in paragraphs (e)(1) through (10) of this section that occurs during a properly conducted compliance test subject to the provisions of this chapter shall be counted in determining the periods of ineligibility described in § 246.305.

(i) A compliance test that is not conducted in accordance with this part, the railroad's operating rules, or the railroad's program under § 217.9 of this chapter, will not be considered a legitimate test of skill or knowledge and will not be considered for revocation purposes.

(j) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.305 Periods of ineligibility.

(a) The starting date for a period of ineligibility described in this section shall be:

(1) For a person not currently certified, the date of the railroad's written determination that the most recent incident has occurred; or

(2) For a person currently certified, the date of the railroad's notification to the person that recertification has been denied or certification has been suspended.

(b) A period of ineligibility shall be determined according to the following standards:

(1) In the case of a single incident involving a violation of one or more of the Federal regulatory provisions or railroad rules, procedures, signal standards, or practices described in § 246.303(e)(1) through (10), the person shall have their certificate revoked for a period of 30 calendar days.

(2) In the case of two separate incidents involving a violation of one or more of the railroad rules, procedures, signal standards, or practices described in § 246.303(e)(1) through (10), that occurred within 24 months of each other, the person shall have their certificate revoked for a period of 6 months.

(3) In the case of three separate incidents involving violations of one or more of the railroad rules, procedures, signal standards, or practices, described in § 246.303(e)(1) through (10), that occurred within 36 months of each other, the person shall have their certificate revoked for a period of 1 year.

(4) In the case of four separate incidents involving violations of one or more of the railroad rules, procedures, signal standards, or practices, described in § 246.303(e)(1) through (10), that

occurred within 36 months of each other, the person shall have their certificate revoked for a period of 3 years.

(5) Where, based on the occurrence of violations described in § 246.303(e)(1) through (10), different periods of ineligibility may result under the provisions of this section and § 246.115, the longest period of revocation shall control.

(c) Any or all periods of revocation provided in paragraph (b) of this section may consist of training.

(d) A person whose certification is denied or revoked shall be eligible for grant or reinstatement of the certificate prior to the expiration of the initial period of ineligibility only if:

(1) The denial or revocation of certification in accordance with the provisions of paragraph (b) of this section is for a period of one year or less;

(2) Certification is denied or revoked for reasons other than noncompliance with § 219.101 of this chapter;

(3) The person is evaluated by a railroad officer and determined to have received adequate remedial training;

(4) The person successfully completes any mandatory program of training or retraining, if that is determined to be necessary by the railroad prior to return to service; and

(5) At least one half of the pertinent period of ineligibility specified in paragraph (b) of this section has elapsed.

§ 246.307 Process for revoking certification.

(a) If a railroad determines that a signal employee, who is currently certified by the railroad, has violated a railroad test procedure, signal standard or practice described in § 246.303(e), the railroad shall revoke the signal employee's certification in accordance with the procedures and requirements of this section.

(b) Except as provided for in § 246.115(f), if a railroad acquires reliable information that a signal employee, who is currently certified by the railroad, has violated a railroad rule, procedure, signal standard, or practice described in § 246.303(e), the railroad shall undergo the following process to determine whether revocation of the signal employee's certification is warranted:

(1) The signal employee's certification shall be suspended immediately.

(2) The signal employee's employer(s) (if different from the suspending railroad) shall be immediately notified of the certification suspension and the reason for the certification suspension.

(3) Prior to or upon suspending the signal employee's certification, the railroad shall provide the signal employee with notice of: the reason for the suspension; the pending revocation; and an opportunity for a hearing before a presiding officer other than the investigating officer. This notice may initially be given either verbally or in writing. If given verbally, the notice must be subsequently confirmed in writing in a manner that conforms with the notification provisions of the applicable collective bargaining agreement. If there is no applicable collective bargaining agreement notification provision, the written notice must be made within four days of the date the certification was suspended.

(4) The railroad must convene the hearing within the time frame required under the applicable collective bargaining agreement. If there is no applicable collective bargaining agreement or the applicable collective bargaining agreement does not include such a requirement, the hearing shall be convened within 10 days of the date the certification is suspended unless the signal employee requests or consents to a delay to the start of the hearing.

(5) No later than the start of the hearing, the railroad shall provide the signal employee with a copy of the written information and a list of witnesses the railroad will present at the hearing. If this information was provided just prior to the start of the hearing and the signal employee requests a recess to the start of the hearing, such request must be granted. If this information was provided by an employee of the railroad, the railroad shall make that employee available for examination during the hearing.

(6) Following the hearing, the railroad must determine, based on the record of the hearing, whether revocation of the certification is warranted. The railroad shall have the burden of proving that revocation of the signal employee's certification is warranted under § 246.303.

(7) If the railroad determines that revocation of the signal employee's certification is warranted, the railroad shall impose the proper period of revocation provided for in §§ 246.305 and 246.115.

(8) The railroad shall retain the record of the hearing for three years after the date the decision is rendered.

(c) A hearing required by this section which is conducted in a manner that conforms procedurally to the applicable collective bargaining agreement shall satisfy the procedural requirements of this section.

(d) Except as provided for in paragraph (c) of this section, a hearing required under this section shall be conducted in accordance with the following procedures:

(1) The hearing shall be conducted by a presiding officer who can be any proficient person authorized by the railroad other than the investigating officer.

(2) The presiding officer shall convene and preside over the hearing and exercise the powers necessary to regulate the conduct of the hearing for the purpose of achieving a prompt and fair determination of all material issues in dispute.

(3) The presiding officer may:

(i) Adopt any needed procedures for the submission of evidence in written form;

(ii) Examine witnesses at the hearing; and

(iii) Take any other action authorized by or consistent with the provisions of this part and permitted by law that may assist in achieving a prompt and fair determination of all material issues in dispute.

(4) All relevant and probative evidence shall be received into the record unless the presiding officer determines the evidence to be unduly repetitive or have such minimal relevance that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

(5) Parties may appear at the hearing and be heard on their own behalf or through designated representatives. Parties may offer relevant evidence including testimony and may conduct such examination of witnesses as may be required for a full disclosure of the relevant facts.

(6) Testimony by witnesses at the hearing shall be recorded verbatim. Witnesses can testify in person, over the phone, or virtually.

(7) The record in the proceeding shall be closed at the conclusion of the hearing unless the presiding officer allows additional time for the submission of evidence.

(8) A hearing required under this section may be consolidated with any disciplinary action or other hearing arising from the same facts.

(9) A person may waive their right to a hearing. That waiver shall:

(i) Be made in writing;

(ii) Reflect the fact that the person has knowledge and understanding of these rights and voluntarily surrenders them; and

(iii) Be signed by the person making the waiver.

(e) Except as provided for in paragraph (c) of this section, a decision,

required by this section, on whether to revoke a signal employee's certification shall comply with the following requirements:

(1) No later than 10 days after the close of the record, a railroad official, other than the investigating officer, shall prepare and sign a written decision as to whether the railroad is revoking the signal employee's certification.

(2) The decision shall:

(i) Contain the findings of fact on all material issues as well as an explanation for those findings with citations to all applicable railroad rules, signal standards and procedures and any applicable Federal regulations;

(ii) State whether the railroad official found that the signal employee's certification should be revoked;

(iii) State the period of revocation under § 246.305 (if the railroad official concludes that the signal employee's certification should be revoked); and

(iv) Be served on the employee and the employee's representative, if any, with the railroad retaining proof of service for three years after the date the decision is rendered.

(f) The period that a signal employee's certification is suspended in accordance with paragraph (b)(1) of this section shall be credited towards any period of revocation that the railroad assesses in accordance with § 246.305.

(g) A railroad shall revoke a signal employee's certification if, during the period that certification is valid, the railroad acquires information that another railroad has revoked the person's signal employee certification in accordance with the provisions of this section. Such revocation shall run concurrently with the period of revocation imposed by the railroad that initially revoked the person's certification. The requirement to provide a hearing under this section is satisfied when any single railroad holds a hearing. No additional hearing is required prior to revocation by more than one railroad arising from the same facts.

(h) A railroad shall not revoke a signal employee's certification if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the signal employee's ability to comply with the railroad test procedure, signal standard, or practice which constitutes a violation under § 246.303.

(i) A railroad may decide not to revoke a signal employee's certification if sufficient evidence exists to establish that the violation of the railroad test procedure, signal standard, or practice described in § 246.303(e) was of a minimal nature and had no direct or potential effect on rail safety.

(j) If sufficient evidence meeting the criteria in paragraph (h) or (i) of this section becomes available, the railroad shall place the relevant information in the records maintained in compliance with:

(1) Section 246.215 for Class I railroads (including that National Railroad Passenger Corporation), railroads providing commuter service, and Class II railroads; and

(2) Section 246.203 for Class III railroads.

(k) If a railroad makes a good faith determination, after performing a reasonable inquiry, that the course of conduct provided for in paragraph (h) or (i) of this section is warranted, the railroad will not be in violation of paragraph (b)(1) of this section if it decides not to suspend the signal employee's certification.

Subpart E—Dispute Resolution Procedures

§ 246.401 Review board established.

(a) Any person who has been denied certification or recertification, or has had their certification revoked and believes a railroad incorrectly determined that they failed to meet the certification requirements of this part when making the decision to deny or revoke certification, may petition the Administrator to review the railroad's decision.

(b) The Administrator has delegated initial responsibility for adjudicating such disputes to the Certification Review Board (Board). The Board shall be composed of FRA employees.

§ 246.403 Petition requirements.

(a) To obtain review of a railroad's decision to deny or revoke certification, or deny recertification, a person shall file a petition for review that complies with this section.

(b) Each petition shall:

(1) Be in writing;

(2) Be filed no more than 120 days after the date the railroad's denial or revocation decision was served on the petitioner, except as provided for in paragraph (d) of this section;

(3) Be filed on *https://www.regulations.gov;*

(4) Include the following contact information for the petitioner and petitioner's representative (if petitioner is represented):

(i) Full name;

(ii) Daytime telephone number; and

(iii) Email address;

(5) Include the name of the railroad and the name of the petitioner's employer (if different from the railroad that revoked petitioner's certification);

(6) Contain the facts that the petitioner believes constitute the improper action by the railroad and the arguments in support of the petition; and

(7) Include all written documents in the petitioner's possession or reasonably available to the petitioner that document the railroad's decision.

(c) If requested by the Board, the petitioner must provide a copy of the information under 49 CFR 40.329 that laboratories, medical review officers, and other service agents are required to release to employees. The petitioner must provide a written explanation in response to a Board request if written documents, that should be reasonably available to the petitioner, are not supplied.

(d) The Board may extend the petition filing period in its discretion, provided the petitioner provides good cause for the extension and:

(1) The request for an extension is filed before the expiration of the period provided for in paragraph (b)(2) of this section; or

(2) The failure to timely file was the result of excusable neglect.

(e) A party aggrieved by a Board decision to deny a petition as untimely or not in compliance with the requirements of this section may file an appeal with the Administrator in accordance with § 246.411.

§ 246.405 Processing certification review petitions.

(a) Each petition shall be acknowledged in writing by FRA. The acknowledgment shall be sent by email to the petitioner (if an email address is provided), petitioner's representative (if any), the railroad, and petitioner's employer (if different from the railroad that revoked petitioner's certification). The acknowledgment shall contain the docket number assigned to the petition and will notify the parties where the petition can be accessed.

(b) Within 60 days from the date of the acknowledgment provided in paragraph (a) of this section, the railroad may submit to FRA any information that the railroad considers pertinent to the petition and shall supplement the record with any relevant documents in its possession, such as hearing transcripts and exhibits, that were not submitted by the petitioner. Late filings will only be considered to the extent practicable. A railroad that submits such information shall:

(1) Identify the petitioner by name and the docket number for the petition;

(2) Provide the railroad's email address;

(3) Serve a copy of the information being submitted to FRA to the petitioner and petitioner's representative (if any); and

(4) Be filed on *https://www.regulations.gov.*

(c) The petition will be referred to the Board for a decision after a railroad's response is received or 60 days from the date of the acknowledgment provided in paragraph (a) of this section, whichever is earlier. Based on the record, the Board shall have the authority to grant, deny, dismiss, or remand the petition. If the Board finds that there is insufficient basis for granting or denying the petition, the Board may issue an order affording the parties an opportunity to provide additional information or argument consistent with its findings.

(d) When considering procedural issues, the Board will grant the petition if the petitioner shows:

(1) That a procedural error occurred; and

(2) The procedural error caused substantial harm to the petitioner.

(e) When considering factual issues, the Board will grant the petition if the petitioner shows that the railroad did not provide substantial evidence to support its decision.

(f) When considering legal issues, the Board will determine whether the railroad's legal interpretations are correct based on a *de novo* review.

(g) The Board will only consider whether the denial or revocation of certification or recertification was improper under this part and will grant or deny the petition accordingly. The Board will not otherwise consider the propriety of a railroad's decision. For example,the Board will not consider whether the railroad properly applied its own more stringent requirements.

(h) The Board's written decision shall be served on the petitioner, petitioner's representative (if any), the railroad, and petitioner's employer (if different from the railroad that revoked petitioner's certification).

§ 246.407 Request for a hearing.

(a) If adversely affected by the Board's decision, either the petitioner before the Board or the railroad involved shall have a right to an administrative proceeding as prescribed by § 246.409.

(b) To exercise that right, the adversely affected party shall file a written request for a hearing within 20 days of service of the Board's decision on that party. The request must be filed in the docket on *https://www.regulations.gov* that was used when the case was before the Board.

(c) A written request for a hearing must contain the following:

(1) The name, telephone number, and email address of the requesting party and the party's designated representative (if any);

(2) The name, telephone number, and email address of the respondent;

(3) The docket number for the case while it was before the Board;

(4) The specific factual issues, industry rules, regulations, or laws that the requesting party alleges need to be examined in connection with the certification decision in question; and

(5) The signature of the requesting party or the requesting party's representative (if any).

(d) Upon receipt of a hearing request complying with paragraph (c) of this section, FRA shall arrange for the appointment of a presiding officer who shall schedule the hearing for the earliest practicable date.

(e) If a party fails to request a hearing within the period provided in paragraph (b) of this section, the Board's decision will constitute final agency action.

§ 246.409 Hearings.

(a) An administrative hearing for a signal employee certification petition shall be conducted by a presiding officer, who can be any person authorized by the Administrator.

(b) The presiding officer shall convene and preside over the hearing. The hearing shall be a *de novo* hearing to find the relevant facts and determine the correct application of this part to those facts. The presiding officer may determine that there is no genuine issue covering some or all material facts and limit evidentiary proceedings to any issues of material fact as to which there is a genuine dispute.

(c) The presiding officer may exercise the powers of the Administrator to regulate the conduct of the hearing for the purpose of achieving a prompt and fair determination of all material issues in controversy.

(d) The presiding officer may authorize discovery of the types and quantities which in the presiding officer's discretion will contribute to a fair hearing without unduly burdening the parties. The presiding officer may impose appropriate non-monetary sanctions, including limitations as to the presentation of evidence and issues, for any party's willful failure or refusal to comply with approved discovery requests.

(e) Every petition, motion, response, or other authorized or required document shall be signed by the party filing the same, or by a duly authorized officer or representative of record, or by any other person. If signed by such other person, the reason therefor must be stated and the power of attorney or other authority authorizing such other person to subscribe the document must be filed with the document. The signature of the person subscribing any document constitutes a certification that they have read the document; that to the best of their knowledge, information, and belief every statement contained in the document is true and no such statements are misleading; and that it is not interposed for delay or to be vexatious.

(f) After the request for a hearing is filed, all documents filed or served upon one party must be served upon all parties. Each party may designate a person upon whom service is to be made when not specified by law, regulation, or directive of the presiding officer. If a party does not designate a person upon whom service is to be made, then service may be made upon any person having subscribed to a submission of the party being served, unless otherwise specified by law, regulation, or directive of the presiding officer. Proof of service shall accompany all documents when they are tendered for filing.

(g) If any document initiating, filed in, or served in, a proceeding is not in substantial compliance with the applicable law, regulation, or directive of the presiding officer, the presiding officer may strike or dismiss all or part of such document, or require its amendment.

(h) Any party to a proceeding may appear and be heard in person or by an authorized representative.

(i) Any person testifying at a hearing or deposition may be accompanied, represented, and advised by an attorney or other representative, and may be examined by that person.

(j) Any party may request to consolidate or separate the hearing of two or more petitions by motion to the presiding officer when they arise from the same or similar facts or when the matters are for any reason deemed more efficiently heard together.

(k) Except as provided in § 246.407(e) and paragraph (s)(4) of this section, whenever a party has the right or is required to take action within a period prescribed by this part, or by law, regulation, or directive of the presiding officer, the presiding officer may extend such period, with or without notice, for good cause, provided another party is not substantially prejudiced by such extension. A request to extend a period which has already expired may be denied as untimely.

(l) An application to the presiding officer for an order or ruling not otherwise specifically provided for in this part shall be by motion. The motion shall be filed with the presiding officer and, if written, served upon all parties. All motions, unless made during the hearing, shall be written. Motions made during hearings may be made orally on the record, except that the presiding officer may direct that any oral motion be reduced to writing. Any motion shall state with particularity the grounds therefor and the relief or order sought and shall be accompanied by any affidavits or other evidence desired to be relied upon which is not already part of the record. Any matter submitted in response to a written motion must be filed and served within 14 days of the motion, or within such other period as directed by the presiding officer.

(m) Testimony by witnesses at the hearing shall be given under oath and the hearing shall be recorded verbatim. The presiding officer shall give the parties to the proceeding adequate opportunity during the course of the hearing for the presentation of arguments in support of or in opposition to motions, and objections and exceptions to rulings of the presiding officer. The presiding officer may permit oral argument on any issues for which the presiding officer deems it appropriate and beneficial. Any evidence or argument received or proffered orally shall be transcribed and made a part of the record. Any physical evidence or written argument received or proffered shall be made a part of the record, except that the presiding officer may authorize the substitution of copies, photographs, or descriptions, when deemed to be appropriate.

(n) The presiding officer shall employ the Federal Rules of Evidence for United States Courts and Magistrates as general guidelines for the introduction of evidence. Notwithstanding paragraph (m) of this section, all relevant and probative evidence shall be received unless the presiding officer determines the evidence to be unduly repetitive or so extensive and lacking in relevancy that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

(o) The presiding officer may:

(1) Administer oaths and affirmations;

(2) Issue subpoenas as provided for in § 209.7 of this chapter;

(3) Adopt any needed procedures for the submission of evidence in written form;

(4) Examine witnesses at the hearing;

(5) Convene, recess, adjourn, or otherwise regulate the course of the hearing; and

(6) Take any other action authorized by or consistent with the provisions of this part and permitted by law that may expedite the hearing or aid in the disposition of the proceeding.

(p) The petitioner before the Board, the railroad involved in taking the certification action, and FRA shall be parties at the hearing. All parties may participate in the hearing and may appear and be heard on their own behalf or through designated representatives. All parties may offer relevant evidence, including testimony, and may conduct such cross-examination of witnesses as may be required to make a record of the relevant facts.

(q) The party requesting the administrative hearing shall be the ''hearing petitioner.'' The party that the Board issued its decision in favor of will be a respondent. At the start of each proceeding, FRA will be a respondent as well. The hearing petitioner shall have the burden of proving its case by a preponderance of the evidence.

(r) The record in the proceeding shall be closed at the conclusion of the evidentiary hearing unless the presiding officer allows additional time for the submission of additional evidence. In such instances the record shall be left open for such time as the presiding officer grants for that purpose.

(s) At the close of the record, the presiding officer shall prepare a written decision in the proceeding. The decision:

(1) Shall contain the findings of fact and conclusions of law, as well as the basis for each, concerning all material issues of fact or law presented on the record;

(2) Shall be served on all parties to the proceeding;

(3) Shall not become final for 35 days after issuance;

(4) Constitutes final agency action unless an aggrieved party files an appeal within 35 days after issuance; and

(5) Is not precedential.

§ 246.411 Appeals.

(a) Any party aggrieved by the presiding officer's decision may file an appeal in the presiding officer's docket. The appeal must be filed within 35 days of issuance of the decision. A copy of the appeal shall be served on each party. The appeal shall set forth objections to the presiding officer's decision, supported by reference to applicable laws and regulations and with specific reference to the record. If no appeal is timely filed, the presiding officer's decision constitutes final agency action.

(b) A party may file a reply to the appeal within 25 days of service of the appeal. The reply shall be supported by reference to applicable laws and regulations and with specific reference to the record, if the party relies on evidence contained in the record.

(c) The Administrator may extend the period for filing an appeal or a response for good cause shown, provided that the written request for extension is served before expiration of the applicable period provided in this section.

(d) The Administrator has sole discretion to permit oral argument on the appeal. On the Administrator's own initiative or written motion by any party, the Administrator may grant the parties an opportunity for oral argument.

(e) The Administrator may remand, vacate, affirm, reverse, alter, or modify the decision of the presiding officer and the Administrator's decision constitutes final agency action except where the terms of the Administrator's decision (for example, remanding a case to the presiding officer) show that the parties' administrative remedies have not been exhausted.

(f) An appeal from a Board decision pursuant to § 246.403(e) must be filed in the Board's docket within 35 days of issuance of the decision. A copy of the appeal shall be served on each party. The Administrator may affirm or vacate the Board's decision and may remand the petition to the Board for further proceedings. An Administrator's decision to affirm the Board's decision constitutes final agency action.

Appendix A to Part 246—Procedures for Obtaining and Evaluating Motor Vehicle Driving Record Data

(1) The purpose of this appendix is to outline the procedures available to individuals and railroads for complying with the proposed requirements of § 246.111. This provision requires that railroads consider the motor vehicle driving record of each person prior to issuing them certification or recertification as a signal employee.

(2) To fulfill that obligation, a railroad is required to review a certification candidate's recent motor vehicle driving record. Generally, that will be a single record on file with the State agency that issued the certification candidate's current motor vehicle driver's license. However, a motor vehicle driving record can include multiple documents if the certification candidate has been issued a motor vehicle driver's license by more than one State agency or a foreign country.

Access to State Motor Vehicle Driving Record Data

(3) The right of railroad workers, their employers, or prospective employers to have access to a State motor vehicle licensing agency's data concerning an individual's driving record is controlled by State law. Although many states have mechanisms through which employers and prospective

employers, such as railroads, can obtain such data, there are some states where privacy concerns make such access very difficult or impossible. Since individuals are generally entitled to obtain access to their driving record data that will be relied on by a State motor vehicle licensing agency when that agency is taking action concerning their driving privileges, FRA places the responsibility on individuals who want to serve as certified signal employees to request that their current State motor vehicle licensing agency (or agencies) furnish such data directly to the railroad that is considering certification (or recertification) of the individual as a signal employee. Depending on the procedures established by the State motor vehicle licensing agency, the individual may be asked to send the State agency a brief letter requesting such action or to execute a State agency form that accomplishes the same effect. Requests for an individual's motor vehicle driving record normally involve payment of a nominal fee established by the State agency as well. In rare instances, when a certification (or recertification) candidate has been issued multiple licenses, an individual may be required to submit multiple requests.

(4) Once the railroad has obtained the individual's motor vehicle driving record(s), the railroad is required to afford the certification (or recertification) candidate an opportunity to review and comment on the record(s) in writing pursuant to § 246.301. The railroad is also required to provide this review opportunity before the railroad renders a decision based on information in the record(s). The railroad is required to evaluate the information in the certification (or recertification) candidate's motor vehicle driving record(s) pursuant to the provisions of this part.

Appendix B to Part 246—Medical Standards Guidelines

(1) The purpose of this appendix is to provide greater guidance on the procedures that should be employed in administering the vision and hearing requirements of §§ 246.117 and 246.118.

(2) For any examination performed to determine whether a person meets the vision acuity requirements in § 246.117, it is recommended that such examination be performed by a licensed optometrist or a technician who reports to a licensed optometrist. It is also recommended that any test conducted pursuant to § 246.117 be performed according to any directions supplied by the test's manufacturer and any ANSI standards that are applicable.

(3) For any examination performed to determine whether a person meets the hearing acuity requirements in § 246.118, it is recommended that such examination be performed by a licensed or certified audiologist or a technician who reports to a licensed or certified audiologist. It is also recommended that any test conducted pursuant to § 246.118 be performed according to any directions supplied by the test's manufacturer and any ANSI standards that are applicable.

(4) In determining whether a person has the visual acuity that meets or exceeds the requirements of this part, the following testing protocols are deemed acceptable testing methods for determining whether a person has the ability to recognize and distinguish among the colors used as signals in the railroad industry. The acceptable test methods are shown in the left hand column and the criteria that should be employed to determine whether a person has failed the particular testing protocol are shown in the right hand column.

TABLE 1 TO APPENDIX B TO PART 246

Accepted tests	Failure criteria
Pseudoisochromatic Plate Tests	
American Optical Company 1965	5 or more errors on plates 1–15.
AOC—Hardy-Rand-Ritter plates—second edition	Any error on plates 1–6 (plates 1–4 are for demonstration—test plate 1 is actually plate 5 in book).
Dvorine—Second edition	3 or more errors on plates 1–15.
Ishihara (14 plate)	2 or more errors on plates 1–11.
Ishihara (16 plate)	2 or more errors on plates 1–8.
Ishihara (24 plate)	3 or more errors on plates 1–15.
Ishihara (38 plate)	4 or more errors on plates 1–21.
Richmond Plates 1983	5 or more errors on plates 1–15.
Multifunction Vision Tester	
Keystone Orthoscope	Any error.
OPTEC 2000	Any error.
Titmus Vision Tester	Any error.
Titmus II Vision Tester	Any error.

(5) In administering any of these protocols, the person conducting the examination should be aware that railroad signals do not always occur in the same sequence and that ''yellow signals'' do not always appear to be the same. It is not acceptable to use ''yarn'' or other materials to conduct a simple test to determine whether the certification candidate has the requisite vision. No person shall be allowed to wear chromatic lenses during an initial test of the person's color vision; the initial test is one conducted in accordance with one of the accepted tests in the chart and § 246.117(c)(3).

(6)(i) An examinee who fails to meet the criteria in the chart may be further evaluated as determined by the railroad's medical examiner. Ophthalmologic referral, field testing, or other practical color testing may be utilized depending on the experience of the examinee. The railroad's medical examiner will review all pertinent information and, under some circumstances, may restrict an examinee who does not meet the criteria for serving as a signal employee. The intent of §§ 246.117(d) and 246.118(d) is not to provide an examinee with the right to make an infinite number of requests for further evaluation, but to provide an examinee with at least one opportunity to prove that a hearing or vision test failure does not mean the examinee cannot safely perform as a certified signal employee.

(ii) Appropriate further medical evaluation could include providing another approved scientific screening test or a field test. All railroads should retain the discretion to limit the number of retests that an examinee can request, but any cap placed on the number of retests should not limit retesting when changed circumstances would make such retesting appropriate. Changed circumstances would most likely occur if the examinee's medical condition has improved in some way or if technology has advanced to the extent that it arguably could compensate for a hearing or vision deficiency.

(7) Certified signal employees who wear contact lenses should have good tolerance to the lenses and should be instructed to have a pair of corrective glasses available when on duty.

Issued in Washington, DC.

Amitabha Bose,

Administrator.

Medication Guides: Patient Medication Information; Proposed Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 201, 208, 314, 606, and 610

[Docket No. FDA–2019–N–5959]

RIN 0910–AH68

Medication Guides: Patient Medication Information

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA, the Agency, or we) is proposing to amend its human prescription drug product labeling regulations for Medication Guides (FDA-approved written prescription drug product information distributed to patients). This action, if finalized, will require applicants to create a new type of Medication Guide, referred to as Patient Medication Information (PMI), for prescription drug products, including biological products, used, dispensed, or administered on an outpatient basis and for blood and blood components transfused in an outpatient setting. PMI would be a one-page document with standardized format and content that would be submitted to FDA for approval. This proposed rule is intended to improve public health by providing patients with clear, concise, accessible, and useful written prescription drug product information delivered in a consistent and easily understood format to help patients use their prescription drug products safely and effectively.

DATES: Either electronic or written comments on the proposed rule must be submitted by November 27, 2023. Submit written comments (including recommendations) on the collection of information under the Paperwork Reduction Act of 1995 by November 27, 2023.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of November 27, 2023. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2019–N–5959 for ''Medication Guides: Patient Medication Information.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

Submit comments on the information collection under the Paperwork Reduction Act of 1995 to the Office of Management and Budget (OMB) at *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. The title of this proposed collection is ''Medication Guides: Patient Medication Information.''

I. Executive Summary

A. Purpose of the Proposed Rule

FDA is proposing to amend its prescription drug product labeling regulations for Medication Guides to require a new type of Medication Guide, referred to as PMI, for prescription drug products used, dispensed, or administered on an outpatient basis, including blood and blood components transfused in an outpatient setting. For the purposes of this proposed rule, a prescription drug product also includes a biological product licensed under the Public Health Service Act (PHS Act). Currently, Medication Guides are required only for certain prescription drug products that FDA determines pose a significant and serious public health concern and are used primarily on an outpatient basis.

We have long recognized the importance of providing patients with written information about their prescription drug products because there is evidence that such information may help patients use prescription drug products safely and effectively and may potentially reduce preventable adverse drug reactions and improve health outcomes. Patients may currently receive one or more types of written patient information regarding prescription drug products, including patient package inserts (PPIs), Medication Guides, consumer medication information (CMI), and Instructions for Use documents. This written patient information, in certain instances, has been duplicative, incomplete, conflicting, or difficult to read and understand, and has not been sufficient to meet the needs of patients. PMI is intended to improve public health by providing patients with clear, concise, accessible, and useful written prescription drug product information delivered in a consistent and easily understood format to help patients use their prescription drug products safely and effectively.

B. Summary of the Major Provisions of the Proposed Rule

Under the proposed rule, PMI would highlight essential information that the patient needs to know about the prescription drug product and basic directions on how to use the product. PMI would be a one-page document that follows standardized format and content requirements. PMI would consist of the following headings:

- [Insert Drug Name] is
- Important Safety Information
- Common Side Effects
- Directions for Use

In determining specific headings and information to be included in PMI, we researched scientific literature, conducted studies examining several PMI prototypes, held public workshops and hearings, and obtained stakeholder input on what information patients need in order to use their prescription drug products safely and effectively.

When finalized, this proposed rule would require applicants of all new and approved new drug applications (NDAs) and biologics license applications (BLAs) to create PMI for prescription drug products that are to be used, dispensed, or administered on an outpatient basis. Applicants of NDAs and BLAs would be required to submit PMI to FDA for approval. The proposed rule covers NDAs and BLAs for interchangeable biosimilars and non-interchangeable biosimilars.

When finalized, the proposed rule would also require applicants of new and approved abbreviated new drug applications (ANDAs) that refer to a listed drug for which FDA has approved PMI to have PMI that is the same as that of the reference listed drug (RLD) except for certain differences in labeling permitted under the law. As described further in this document, FDA will create a PMI template for approved ANDAs if: (1) the ANDA references a listed drug whose approval has been withdrawn and (2) no PMI was approved for the RLD before the approval of the RLD was withdrawn.

PMI would be stored in an online central repository managed by FDA and would be freely accessible to the public, including patients, healthcare providers, and authorized dispensers.

Authorized dispensers would be required to provide PMI to patients each time a prescription drug product for which an FDA-approved PMI exists is used, dispensed, or administered on an outpatient basis. The default method of distribution for PMI is in paper form. Although authorized dispensers would be required to have paper distribution of PMI available upon request, this proposed rule would allow for electronic distribution instead of paper distribution upon a patient's request and would accommodate future technological advances in the methods used to provide PMI upon a patient's request.

When finalized, this proposed rule would require that PMI be available for distribution to transfusion services of blood and blood components, unless a waiver applies. The requirement to create PMI and make it available for distribution to transfusion services applies to all establishments that collect blood and blood components for

transfusion. However, only licensed blood establishments would be required to submit PMI to FDA for approval. Each time blood or blood components are administered on an outpatient basis, transfusion services would be considered authorized dispensers and would be required to provide PMI to each patient. This approach would ensure that every patient who receives blood or a blood component with an associated PMI on an outpatient basis would receive that PMI.

FDA would withdraw the current regulations requiring Medication Guides for certain prescription drug products after all prescription drug products that currently have Medication Guides have FDA-approved PMI. During the proposed 5-year implementation schedule of the final rule, the current regulations governing Medication Guides would remain in place but would no longer be applicable to a prescription drug product once that prescription drug product has FDA-approved PMI.

FDA would also withdraw the current regulations requiring PPIs for oral contraceptives and estrogen-containing products after all such prescription drug products that had PPIs have FDA-approved PMI. During the proposed 5-year implementation schedule of the final rule, the current regulations for PPIs would remain in place but would no longer be applicable to a prescription drug product once that prescription drug product has FDA-approved PMI. Under this proposed rule, once finalized, we would no longer accept voluntary submissions of PPIs for prescription drug products.

C. Legal Authority

FDA's proposed revisions to the format and content requirements for prescription drug labeling are authorized by the Federal Food, Drug, and Cosmetic Act (FD&C Act) and the PHS Act.

D. Costs and Benefits

This proposed rule would require that all human prescription drug products used, dispensed, or administered on an outpatient basis, including blood and blood components transfused in an outpatient setting, be accompanied by a one-page product information document, or Medication Guide, known as PMI. The public would benefit from this labeling with decreased search costs for information. The public may also benefit from a reduction in risk associated with their drug products, including blood and blood component products transfused in outpatient settings, due to the availability of PMI if the new labeling helps patients make better healthcare decisions. We estimate that the present discounted value of these potential benefits from PMI over 10 years would range between $127.5 million and $4.3 billion using a 3 percent discount rate, with a primary estimate of $1.6 billion; using a 7 percent discount rate, the present-value benefits from PMI would range between $101.0 million and $3.4 billion, with a primary estimate of $1.3 billion. Annualized over 10 years, we estimate that the benefit from PMI would range between $14.9 and $507.9 million per year, with a primary estimate of $188.0 million, using a 3 percent discount rate; with a 7 percent discount rate, we estimate the annualized benefit to range between $14.4 and $486.8 million, with a primary estimate of $180.5 million per year. We estimate that annual benefits would be constant beginning in year 5.

The proposed rule would impose costs on industry, the majority of which would stem from developing PMI. The proposed rule would also impose costs on FDA, primarily from reviewing PMI submissions, developing PMI templates for a small subset of drugs, and establishing and maintaining the online PMI database. We estimate that the total present value of net costs over 10 years would range from $105.0 to $312.5 million, with a primary estimate of $192.8 million, using a 3 percent discount rate and from $89.0 to $263.6 million, with a primary estimate of $162.6 million, using a 7 percent discount rate. Annualizing these costs over 10 years, we estimate the cost would range from $12.3 to $36.6 million per year at a 3 percent discount rate, with a primary estimate of $22.6 million per year, and from $12.7 to $37.5 million per year using a discount rate of 7 percent, with a primary estimate of $23.2 million. We estimate that annual costs would be constant beginning in year 5. Dispensers may face additional costs to distribute PMI that we cannot estimate at this time.

II. Table of Abbreviations and Acronyms Commonly Used in This Document

Abbreviation/acronym	What it means
ANDA	Abbreviated New Drug Application.
BLA	Biologics License Application.
CDC	Centers for Disease Control and Prevention.
CMI	Consumer Medication Information.
DESI	Drug Efficacy Study Implementation.
FD&C Act	Federal Food, Drug, and Cosmetic Act.
FDA	Food and Drug Administration.
HHS	Department of Health and Human Services.
NDA	New Drug Application.
NVICP	National Vaccine Injury Compensation Program.
OMB	Office of Management and Budget.
PHS Act	Public Health Service Act.
PI	Prescribing Information.
PMI	Patient Medication Information.
PPI	Patient Package Insert.
RCAC	FDA Risk Communication Advisory Committee.
REMS	Risk Evaluation and Mitigation Strategy.
RLD	Reference Listed Drug.
VISs	Vaccine Information Statements.

III. Background

A. Introduction

Currently, patients may receive one or more types of written patient prescription drug product information in an outpatient setting when they receive a prescription medication, including: (1) PPIs, (2) Medication Guides, (3) CMI, and (4) Instructions for Use documents. Medication Guides and some PPIs are required under the FD&C Act (see section 505–1 of the FD&C Act (21 U.S.C. 355–1)) and FDA regulations (see part 208 (21 CFR part 208)) and §§ 310.501 and 310.515 (21 CFR 310.501 and 310.515)). CMI is produced by voluntary private sector entities and is intended to provide general written patient prescription drug product information to patients. An Instructions for Use document is developed by applicants and is intended for patients who use prescription drug products that have complicated or detailed patient-use instructions.

1. Patient Package Insert (PPI)

A PPI is written prescription drug product information developed by applicants for patients. Current FDA regulations require that applicants develop PPIs for oral contraceptives and estrogen-containing products (see §§ 310.501 and 310.515). Applicants must submit the required PPIs to FDA for approval and provide FDA-approved PPIs with each package of the drug product that the manufacturer or distributor intends to dispense to patients. Applicants can also voluntarily create a PPI for other prescription drug products and may submit it to FDA for approval as part of a prescription drug product's labeling. However, distribution of a voluntarily submitted PPI is not required, even if it is FDA-approved.

FDA can require a risk evaluation and mitigation strategy (REMS) when FDA determines a REMS is necessary to ensure that the benefits of a prescription drug product outweigh the risks (see section 505–1 of the FD&C Act). Under section 505–1(e) of the FD&C Act, PPIs are one potential element of a REMS if FDA determines that a PPI may help mitigate a serious risk of the prescription drug product.[1]

2. Medication Guide for Prescription Drug Products

Currently, a Medication Guide is FDA-approved written patient prescription drug product information for certain prescription drug products that are used primarily on an outpatient basis (see part 208). Under current regulations, FDA requires a Medication Guide when FDA determines one or more of the following circumstances exist: (1) the prescription drug product is one for which patient labeling could help prevent serious adverse effects; (2) the prescription drug product is one that has a serious risk or risks (relative to benefits) of which patients should be made aware, because information concerning the risk or risks could affect a patient's decision to use or continue to use the product; or (3) the prescription drug product is important to health, and patients' adherence to directions for use is crucial to the prescription drug product's effectiveness (§ 208.1(c) (21 CFR 208.1(c))).

FDA can also require Medication Guides as an element of a REMS under section 505–1(e) of the FD&C Act. In the **Federal Register** of November 18, 2011 (76 FR 71577), FDA published a notice of availability of a guidance for industry entitled ''Medication Guides—Distribution Requirements and Inclusion in Risk Evaluation and Mitigation Strategies (REMS)'' (available at: *https://www.fda.gov/media/79776/download*) to clarify when Medication Guides would be a part of a REMS and to clarify when FDA intended to exercise enforcement discretion regarding when a Medication Guide must be provided to a patient.

Medication Guides contain information that is necessary to a patient's safe and effective use of a prescription drug product. For those selected prescription drug products that currently have Medication Guides, Medication Guides are developed by applicants, approved by FDA, and required to be distributed to patients.

3. Consumer Medication Information (CMI)

CMI is written patient prescription drug product information that is developed by organizations or individuals in the private sector other than the applicant of the prescription drug product. CMI is intended for voluntary distribution to patients when a prescription drug product is dispensed from a pharmacy. CMI is not developed by or in consultation with the applicant, is not approved by FDA, and is not required by FDA to be distributed to patients.

Different organizations and individuals create CMI and make it available to pharmacies for purchase. FDA provides recommendations for creating useful CMI through guidance (available at: *https://www.fda.gov/media/72574/download*). However, CMI is not standardized, and the content, even for the same prescription drug product, can vary greatly depending on which organization or individual created the CMI.

4. Instructions for Use

For certain prescription drug products that have complicated or detailed patient-use instructions, applicants may develop an Instructions for Use document. The Instructions for Use document, if developed, is reviewed and approved by FDA and is generally provided when the drug is dispensed to the patient. In the **Federal Register** of July 15, 2022 (87 FR 42485), FDA published a notice of availability of a final guidance for industry entitled ''Instructions for Use—Patient Labeling for Human Prescription Drug and Biological Products—Content and Format'' (available at: *https://www.fda.gov/media/128446/download*) to provide recommendations for developing the content and format of an Instructions for Use document for human prescription drugs and biological products and drug-device or biologic-device combination products submitted under an NDA or BLA. This guidance represents FDA's current thinking on this topic.

B. Need for the Regulation

We have long recognized the importance of providing written information to patients about their prescription drug products. There is evidence that prescription drug product information may help patients use their prescription drug products safely and effectively, which may reduce preventable adverse drug events and improve health outcomes. For example, written prescription drug product information is an important part of patient counseling because it reinforces verbal instructions or warnings given by healthcare providers, may improve patient understanding and recall of instructions, and provides patients with supplemental information about the prescription drug product after visits with healthcare providers (Ref. 1). We evaluated the current system for written prescription drug product information, which includes Medication Guides, PPIs, CMI, and Instructions for Use. Based on that evaluation (discussed below in detail), we have determined that the current system does not consistently provide patients with clear, concise, accessible, and sufficiently useful written prescription drug product information delivered in a consistent and easily understood format to help patients use their prescription drug

[1] Currently, there are no REMS that contain a PPI as an element.

products safely and effectively. Therefore, we are proposing a new type of Medication Guide to help patients use their prescription drug products safely and effectively.

In addition, a common major public health problem is that some patients do not adhere to prescription drug therapy (*e.g.,* for antihypertensive drugs), and some patients do not use their prescribed drugs as directed by their healthcare providers (Refs. 2 through 4). Reports show that patients' nonadherence to long-term prescription drug product therapies negatively affects patient outcomes and has led to preventable healthcare costs (Refs. 3 and 5). It is estimated that nonadherence contributes to as many as 25 percent of hospital admissions (Ref. 4), 50 percent of treatment failures, and approximately 125,000 deaths in the United States per year (Refs. 2 and 4).

Although the reasons for medication nonadherence are multidimensional (Ref. 2), patients' knowledge about prescription drug products is important for adherence (Ref. 6). To help increase patients' knowledge, information about prescription drug products should be communicated to patients when these products are dispensed, administered, or used on an outpatient basis (Ref. 2). This information can remind patients about important information regarding the prescription drug product and answer questions that arise after patients have visited a healthcare provider (Ref. 7).

1. Previous Efforts To Provide Written Prescription Drug Product Information to Patients

Since the 1970s, we have required that useful patient prescription drug product labeling written in nontechnical language be distributed to patients every time certain prescription drug products are dispensed. Specifically, we published regulations requiring that manufacturers/distributors of oral contraceptive drug products (see § 310.501; 35 FR 9001, June 11, 1970; and 43 FR 4214, January 31, 1978) and estrogen-containing drug products (see § 310.515 and 42 FR 37636, July 22, 1977) provide patients with PPIs containing information about the prescription drug product's benefits and risks.

In the **Federal Register** of July 6, 1979 (44 FR 40016), we published a proposed rule that would have required written patient information for most prescription drug products in addition to PPI for oral contraceptives and estrogen-containing products. However, in the **Federal Register** of September 12, 1980 (45 FR 60754), the final rule instead required procedures for preparing and distributing PPIs for a limited number of prescription drug products in addition to PPI for oral contraceptives and estrogen-containing products.

FDA proposed to revoke the final rule in the **Federal Register** of February 17, 1982 ((47 FR 7200) and reprinted February 19, 1982 (47 FR 7458)). In the **Federal Register** of September 7, 1982 (47 FR 39147), we revoked the final rule.

In the **Federal Register** of August 24, 1995 (60 FR 44182), we published a proposed rule entitled ''Prescription Drug Product Labeling: Medication Guide Requirements'' (1995 proposed rule) (available at: *https://www.govinfo.gov/content/pkg/FR-1995-08-24/pdf/95-21020.pdf*), which was intended to help patients receive useful written information about prescription drug products. If finalized, the 1995 proposed rule would have set specific distribution and quality goals and timeframes for distributing useful written patient information. The proposed rule would have required applicants to prepare and distribute Medication Guides or provide the means to distribute Medication Guides for a limited number of prescription drug products (primarily used on an outpatient basis) that FDA determined posed a serious and significant public health concern requiring the immediate distribution of FDA-approved patient information.

Consistent with the health promotion and disease prevention objectives of Healthy People 2000 (Ref. 8), the 1995 proposed rule would have also set a goal for distributing useful written patient information for those prescription drug products that did not require Medication Guides. The goal was that the private sector initiatives would result in the distribution of useful written patient information to 75 percent of individuals receiving new prescriptions by 2000 and to 95 percent of individuals receiving new prescriptions by 2006.

The 1995 proposed rule described criteria to determine the usefulness of written patient information. We described useful written patient information as information written in nontechnical language and containing a summary of the most important information about a drug product. We also specified that the usefulness of written patient information would be evaluated based on scientific accuracy, consistency with a standard format, nonpromotional tone and content, specificity, comprehensiveness, understandable language, and legibility.

If the 1995 proposed rule had been finalized, we would have periodically evaluated and reported on the private sector's progress towards achieving the target goals. If the goals were not met in the specified timeframes, we proposed that we would either implement a mandatory comprehensive Medication Guide program or seek public comments on whether a comprehensive program should be implemented. Additionally, we would try to determine whether any other steps were needed to meet the goals of patient prescription drug product information.

As we were reviewing the public comments to the 1995 proposed rule, Congress enacted Public Law 104–180 (the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act, 1997) on August 6, 1996. A goal of section 601(b) of Public Law 104–180 was for the private sector to distribute useful written prescription information to 75 percent of individuals receiving new prescriptions by 2000 and to 95 percent of individuals receiving new prescriptions by 2006, consistent with the goals of the 1995 proposed rule. Section 601(a) of the law also required the Secretary of the Department of Health and Human Services (Secretary) (HHS) to organize a committee of interested stakeholders to develop a long-range, comprehensive action plan to achieve this goal.

Section 601(d) of the law prohibited us from taking further regulatory steps at that time to require a uniform content or format for written prescription drug product information that was voluntarily provided to patients if private sector initiatives met the goal within the specified timeframes. FDA was charged with evaluating the private sector's progress in meeting the goal of distributing useful written prescription drug product information beginning January 1, 2001. If, after reviewing the private sector initiatives, FDA determined that the goals of the law had not been met, FDA could seek public comments on alternative initiatives to meet the goal.

In response to the Public Law 104–180 mandate, the Secretary convened a steering committee composed of healthcare professionals, consumer organizations, pharmaceutical manufacturers, prescription drug wholesalers, drug information database companies, CMI developers, and others. The steering committee created a long-term action plan for improving oral and written prescription drug product information, reported in the 1996 ''Action Plan for the Provision of Useful Prescription Medicine Information''

(Keystone Action Plan) (Ref. 9). The Keystone Action Plan endorsed the elements specified in Public Law 104–180 for defining the usefulness of prescription drug product information, specifically that the materials should be scientifically accurate, unbiased in content and tone, sufficiently specific and comprehensive, and presented in an understandable and legible format that is readily comprehensible to patients and is timely and up to date. The Keystone Action Plan explained that written prescription drug product information that meets these criteria for usefulness would enable patients to use their prescription drug products properly and appropriately, receive the maximum benefit from the prescription drug products, and avoid harm.

In the **Federal Register** of December 1, 1998 (63 FR 66378), we published a final rule requiring the mandatory distribution of Medication Guides for a small number of prescription drug and biological products that FDA determines pose a serious and significant public health concern requiring distribution of FDA-approved patient medication information. FDA anticipated that on average, no more than 5 to 10 prescription drug products per year would require such information. However, because of the types and characteristics of the prescription drug products approved, the number of prescription drug products required to have Medication Guides has increased significantly to over 550 Medication Guides since publication of the final rule in 1998 (approximately 20 to 25 per year).

2. FDA's Evaluation of the Private Sector's Progress To Provide Written Prescription Drug Product Information to Patients

Consistent with Public Law 104–180, the Keystone Action Plan required the development of mechanisms to periodically assess the quality of written prescription drug product information. We were charged with evaluating the private sector's progress toward meeting the goal of distributing useful written prescription drug product information (Ref. 9). Subsequently, we contracted with the National Association of Boards of Pharmacy and a group of academics to conduct several studies to determine the private sector's progress toward meeting the goal of Public Law 104–180.

In 1999, an initial study assessed the CMI that was voluntarily provided to patients receiving new prescriptions at pharmacies (the 1999 study) (Ref. 1). The 1999 study assessed the percentage of trained shoppers (acting as patients) who received any written information when receiving a new prescription and the quality of this information received from 306 randomly selected community pharmacies in 8 States. A panel of experts evaluated the written information for usefulness (as defined in the Keystone Action Plan) and quality, using explicit criteria. The results showed that of the 918 new prescriptions presented at pharmacies, the following occurred (Ref. 1):

• 87 percent were dispensed with CMI.
• 81 percent were dispensed with information that was considered unbiased in content and tone.
• 69 percent were dispensed with acceptable information about adverse drug reactions and what to do if an adverse drug reaction occurred.
• 68 percent were dispensed with acceptable information about the drug product and its indications for use.
• 49 percent were dispensed with acceptable directions about how to use the prescription drug product, receive maximum benefits from the drug product, and interpret the benefits of the drug product.
• 19 percent were dispensed with acceptable information about the drug products' contraindications and what to do if a contraindication existed.

FDA presented these 1999 study results at a public workshop held on February 29 and March 1, 2000 (Ref. 10).

A second study was performed in 2001 (the 2001 study) to determine whether the private sector had made further progress toward meeting the goal of Public Law 104–180. The 2001 study expanded upon the initial 1999 study and included 384 randomly selected pharmacies in 44 States. All CMIs received by trained shoppers (acting as patients) with new prescriptions at the pharmacy were sent to an expert panel (consistent with the 1999 study) to evaluate against eight general criteria described in the Keystone Action Plan. The criteria specified that the written patient information must include the following: (1) drug names and indications for use; (2) contraindications and what to do, if applicable; (3) specific directions about how to use, monitor, and get the most benefit; (4) specific precautions and how to avoid harm while using the prescription drug; (5) symptoms of serious or frequent adverse reactions and what to do; (6) general information, a disclaimer, and encouragement to ask questions; (7) scientifically accurate, unbiased, and up-to-date information; and (8) a written format that is legible and comprehensible to the consumer. Consumers were also recruited to evaluate the written information and the extent to which the information was comprehensible, legible, and useful (Ref. 11).

The results of the 2001 study were presented in a final report to HHS and FDA in 2001 and were also published in 2005. The results showed that 89 percent of the 1,367 new prescriptions were dispensed with CMI (Refs. 11 and 12). However, the expert panel judged that fewer than 20 percent of CMI met the criteria for specificity, legibility, and comprehensibility (Ref. 11). Fewer than 10 percent of all leaflets met the quality criteria regarding contraindications, precautions, and how to avoid harm (Ref. 11). Assessments from consumers, consistent with assessments from expert panels, showed that most CMI did not meet the criteria (as described in the Keystone Action Plan) for font size, spacing, use of bullets, and reading difficulty. The 2001 study concluded that CMI ''falls short of the information quality level required in the 1996 federal legislation,'' and additional efforts were needed to meet the federally mandated distribution and quality goal (Ref. 11).

In the **Federal Register** of May 26, 2005 (70 FR 30467), we published a notice of availability of a draft guidance for industry entitled ''Useful Written Consumer Medication Information (CMI).'' In the **Federal Register** of July 18, 2006 (71 FR 40724), we published a notice of availability of a final guidance for industry (the 2006 CMI guidance, available at: *https://www.fda.gov/media/72574/download*). The 2006 CMI guidance is intended to assist organizations and individuals in developing useful CMI.

A third study, conducted in 2008 as a followup to the 1999 and 2001 studies, evaluated the quality and usability of CMI provided with new prescriptions. The results were presented to HHS and FDA in a final report published in 2008 (the 2008 study) (Ref. 13). This study used methods similar to those used in the 2001 study, but the 2008 study also incorporated information from the 2006 CMI guidance on developing useful written CMI. The 2006 CMI guidance, which was written in part based on the results of the 1999 and 2001 studies, assists individuals and organizations in developing useful written CMI.

The 2008 study included 365 pharmacies in 41 States (Ref. 13). The results indicated that although 94 percent of patients received CMI with new prescriptions, only about 70 percent of this information met the minimum criteria for usefulness, and a number of additional deficiencies were noted. Despite the FDA guidance, the

2008 study identified various shortcomings of the evaluated CMI, including lack of information about the management of the prescription drug product, significant redundancy of information that resulted in excessively long leaflets, poor formatting, and inadequate legibility and an inappropriately high reading level. Only half of CMI had specific information about what patients would need to monitor and manage when using their prescription drug therapies and actions to take when side effects or other problems occur. The 2008 study found that the length and format of CMI and the percent of items covered continued to vary considerably from pharmacy to pharmacy. The majority of CMI did not satisfy the criteria recommended in the 2006 CMI guidance. The 2008 study also noted that, although progress had been made, CMI continued to fall short of the Congressionally mandated goal of Public Law 104–180 that 95 percent of new prescriptions be accompanied by useful written patient information by 2006 (Ref. 13).

3. FDA 2007 Public Hearing

In the **Federal Register** of April 9, 2007 (72 FR 17559), we announced a public hearing entitled ''Use of Medication Guides to Distribute Drug Risk Information to Patients'' (the 2007 FDA public hearing) to be held on June 12 and 13, 2007 (Docket No. 2007N–0121). At the 2007 FDA public hearing, we obtained feedback and requested information and views on specific issues associated with the development, distribution, comprehensibility, and accessibility of Medication Guides. FDA officials heard testimony from one member of Congress; 40 individuals representing academia, consumers and consumer groups; the pharmaceutical industry; healthcare professional groups; physicians; pharmacists; and pharmacy organizations (Ref. 14). Although stakeholders stated it was important that patients receive appropriate risk information in the form of Medication Guides to make informed decisions about certain prescription drug products, stakeholders suggested that the current Medication Guide program was too cumbersome and lacked a standard distribution system. Stakeholders urged FDA to: (1) increase awareness of Medication Guides, (2) make Medication Guides easier to read and understand, (3) move toward facilitating the distribution of Medication Guides by electronic means, and (4) consider combining the information in Medication Guides with other information, such as CMI (Ref. 14).

4. Citizen Petition

In June 2008, we received a citizen petition (the 2008 citizen petition) from a large group of stakeholders representing pharmacy practice, medical consumers, and medical communications companies (Docket No. FDA–2008–P–0380). The 2008 citizen petition asked us to adopt an FDA-approved, concise, plain language, single-page patient information document for prescription drugs. The 2008 citizen petition requested that the one-page ''single patient document'' combine and simplify the many documents that patients currently receive at the pharmacy for prescription drug products (Ref. 15). In 2010, the petitioners voluntarily withdrew the 2008 citizen petition, citing FDA's significant work and strides toward achieving the goals of the 2008 citizen petition with the ongoing development of PMI (Ref. 16).

5. The FDA Risk Communication Advisory Committee Meeting

In February 2009, the FDA Risk Communication Advisory Committee (RCAC), which included some members of the FDA Drug Safety and Risk Management Advisory Committee, met to explore approaches to improve the communication of prescription drug product information to patients, specifically regarding CMI, Medication Guides, and PPIs (Ref. 17). The RCAC recommended that FDA adopt a single standard document for communicating essential information about prescription drug products to patients. The single document was proposed as a replacement for CMI, Medication Guides, and PPIs. The RCAC also recommended that the standard document be FDA-approved and subject to a rigorous empirical evaluation of its effectiveness (Ref. 17).

We have determined that the current system fails to consistently provide patients with sufficient information to help them use prescription drug products safely and effectively. Based on the results of the 1999, 2001, and 2008 studies, comments from stakeholders at the 2007 FDA public hearing, the 2008 citizen petition, and recommendations from the 2009 RCAC, we are proposing a new type of Medication Guide to help patients use their prescription drug products safely and effectively.

6. Development of Prototypes

Prior to the development of this proposed rule, FDA developed prototypes for the proposed new type of Medication Guide, called PMI, based on stakeholders' input, research findings, and our knowledge and experience. To solicit further public input on the PMI prototypes and PMI in general, FDA held a public workshop, participated in a series of workshops convened by the Engelberg Center for Health Care Reform at the Brookings Institution (Brookings Institution), held a public hearing following the procedures set forth in part 15 (21 CFR part 15), and research was conducted on prototypes for PMI (OMB control number 0910–0691; Ref. 31).

C. History of the Rulemaking

1. FDA 2009 Public Workshop

On September 24 and 25, 2009, we convened a public workshop (the 2009 public workshop). Participants discussed the optimal content and format of written prescription drug product information to ensure that the information is comprehensible, accurate, and more easily accessible to patients (see 74 FR 33265, July 10, 2009, Docket No. FDA–2009–N–0295). The 2009 public workshop explored the following questions:

- What content is critical for patients to receive and in what order and format?
- How can access be improved?
- How should this information be distributed to patients?
- What parameters are appropriate with regard to evaluating the usefulness of the materials?

We prepared an issue paper to serve as context and background for the 2009 public workshop (Ref. 18).

At the 2009 public workshop, we presented four PMI prototypes for a fictitious drug that used different labeling formats. FDA developed the PMI prototypes based on stakeholders' input, patient information studies and pilots, consumer-focused research, and our knowledge and experience with patient information and current labeling practices. All four PMI prototypes consisted of the same core content, including uses, side effects, what to do while taking the drug, what to avoid while taking the drug, and how to take the drug.

Prototype 1 was modeled on the format of the over-the-counter ''Drug Facts'' section of labeling (see 21 CFR 201.66), was one page in length, and was the most succinct (Ref. 19). Prototype 2 was modeled on the format of the ''Highlights of Prescribing Information'' section of labeling (see § 201.57(a) (21 CFR 201.57(a)), was one page, and was more detailed than Prototype 1 (Ref. 20). Prototype 3 was modeled on the format of the Prescribing Information (PI) and

contained two levels of information (see § 201.57). The first level summarized the information in a concise manner (similar to Highlights of Prescribing Information), and the second level explained the information in detail (similar to the Full Prescribing Information). Prototype 3 was two pages in length, appeared in question-and-answer format, and repeated information (Ref. 21). Prototype 4 was modeled on the current Medication Guide requirements (see part 208), was four pages in length, and was more detailed and comprehensive than the other three prototypes. It appeared in paragraph format and contained standard statements (Ref. 22).

During the 2009 public workshop, attendees identified the strengths and weaknesses of the four PMI prototypes pertaining to format, presentation, and context. Academic panelists described the key attributes and goals of written patient prescription drug product information as follows (Ref. 23):

- Patients should be able to understand what the prescription drug product is used for and how to use it appropriately.
- Patients should be able to find, understand, and retain information about the prescription drug product's contraindications and side effects.
- Patients should know where they can locate additional information about the prescription drug product that is not included in the written prescription drug product information.

Attendees also suggested that user testing of written prescription drug product information during the development stage should be mandatory to ensure that the final product is consumer friendly.

2. Brookings Institution Workshops and Distribution Studies

Based on a cooperative agreement with FDA, the Brookings Institution convened a series of four public workshops that discussed optimizing, implementing, and evaluating the adoption of PMI (Ref. 24).

On July 21, 2010, the Brookings Institution hosted the first workshop. Experts from academia, medical professional groups, stakeholders from the private sector (applicants, consumer organizations, and publishers of CMI), and FDA met to discuss improving written patient prescription drug product information. The following objectives were discussed at the workshop (Ref. 25):

- The overarching principles for effectively communicating prescription drug product information to patients.
- The metrics for evaluating CMI and the most useful content and format of a single paper document for prescription drug product information as represented in FDA's PMI prototypes.
- FDA's proposed strategy for evaluating the PMI prototypes.
- How patients will receive prescription drug product information in the future and whether this has implications for near-term initiatives centered around a single-document solution.

FDA further refined the PMI prototypes based on feedback provided at the first Brookings Institution workshop.

On October 12, 2010, the second Brookings Institution workshop was held to discuss strategies for making PMI easily accessible and how to most effectively distribute PMI to patients. As in July 2010, experts from academia and medical professional groups, stakeholders from the private sector (applicants, consumer organizations, and publishers of CMI), and representatives from FDA explored the following topics at the workshop (Ref. 26):

- Patient preferences for access to and distribution of PMI.
- Potential roles that applicants, publishers, distribution partners, pharmacists, and physicians can play in the development and distribution of PMI.
- Models for effective distribution of PMI within current and future healthcare delivery systems.
- Potential strategies for monitoring and ensuring the effectiveness of PMI.

The third Brookings Institution workshop was held on February 23, 2011. It summarized the first two Brookings Institution workshops and further discussed how to design pilot studies to test the distribution of PMI. The experts discussed the following topics (Ref. 27):

- The goals and objectives of demonstration pilots designed to evaluate feasibility of different methods to distribute the PMI prototype and to assess patient and provider preferences for the PMI prototype that was distributed to patients.
- How to develop a PMI prototype for use in the distribution pilots.
- The framework, development, and evaluation strategy for proposed distribution pilots.

As a result of discussions about PMI distribution at the third Brookings Institution workshop, Catalina Health (now Adheris Health) launched an 8-week quality improvement initiative in August 2012 to disseminate newly designed patient information to patients filling prescriptions at participating pharmacies (Ref. 28). The newly designed patient information was based on FDA's PMI prototypes. Through voluntary telephone and online responses, Catalina Health: (1) surveyed patients to confirm that they received Catalina Health's patient information with their prescription drug product, (2) assessed whether they found the information useful, and (3) determined how they would like to receive this newly formatted patient information in the future. The results revealed that:

- More than 90 percent of patients recalled receiving Catalina Health's patient information and considered the written patient information useful (Ref. 28).
- The majority of patients surveyed (≥92 percent), across all age groups, reported that the new PMI was either ''very useful'' or ''somewhat useful''. Few respondents found this information to be either ''not very useful'' or ''not useful at all'' (≤9 percent across age groups). (Ref. 28).

On July 1, 2014, the Brookings Institution held a fourth public workshop to explore the following (Ref. 29):

- Lessons learned from health literacy researchers engaged in PMI projects.
- The role of stakeholders in moving the PMI initiative forward.

Stakeholders leveraged key findings from the previous three Brookings Institution workshops. Stakeholders developed methods and conducted research geared toward assessing the effectiveness of FDA's PMI prototypes and strategies to distribute PMI. Based on the previous findings and their research, the participants emphasized that enough information now exists to create effective PMI that will provide more value than currently available written prescription drug product information (Ref. 29).

3. FDA 2010 Part 15 Public Hearing

On September 27 and 28, 2010, we hosted a part 15 public hearing to solicit input on a new framework for the development and distribution of PMI to be provided to patients who are prescribed drug products. The purpose of the 2010 part 15 public hearing was to solicit input on the processes and procedures for standardizing PMI using a quality system approach for monitoring the development and distribution of PMI (see 75 FR 52765, August 27, 2010, Docket No. FDA–2010–N–0437).

The hearing was attended by experts from academia, medical professional groups, stakeholders from the private sector (applicants, consumer

organizations, and publishers of CMI), and FDA. Presentations and comments from the attendees offered support for the following principles:

- PMI should be available at pharmacies and should use the existing distribution capabilities of the pharmacy.
- FDA should have an active role in the development and approval of PMI and should design content and format guidelines.
- Plain language should be used to increase comprehension.
- PMI should be consumer tested.
- A range of distribution methods should be used for PMI.

However, attendees disagreed on whether the length of PMI should be limited to one page (Ref. 30).

4. FDA's Research on PMI Prototypes

In developing the four PMI prototypes, FDA focused on creating a standardized format that patients would become familiar with to help them use and understand PMI. Based on the RCAC recommendations, discussions from the 2009 public workshop, the Brookings Institution workshops, the 2010 part 15 public hearing, and comments from stakeholders, we further narrowed down our four PMI prototypes to two PMI prototypes. The two PMI prototypes tested, formatted in either ''Bubbles'' or ''Over-the-Counter'' formats, were based on existing Medication Guide regulations, and developed to be representative of real Medication Guides. These prototypes were selected through an iterative process involving recommendations and empirical data gleaned from several sources, including: (1) input from the previously mentioned entities (*e.g.,* public stakeholders and risk communication experts from government, industry, and academia (Ref. 17)); (2) the application of plain language principles to the content and formatting of these handouts; and (3) findings from qualitative research with patients who had one of the medical conditions (*e.g.,* rheumatoid arthritis) that the fictitious drug described in these PMI prototypes (*i.e.,* Rheutopia) was indicated to treat (Ref. 17).

We announced our research study entitled ''Experimental Study of Patient Information Prototypes'' and requested comments on the proposed collection of information (75 FR 23775, May 4, 2010, Docket No. FDA–2010–N–0184). We explained that the study was designed to use different prototypes to test whether consumers were able to comprehend serious warnings, directions for use, drug indications and uses, contraindications, and side effects in the material presented.

In 2012, RTI International, contracted by FDA, conducted a research study using variations of the two PMI prototypes to test different ways of presenting information about prescription drug products to patients who had obtained a prescription drug product. The study examined the impact of the PMI prototypes on outcomes, including perceived risk, recall, and ease of understanding the information.

The research study included qualitative components and quantitative components to assess the comprehension and the use of the two PMI prototypes for a fictitious drug, Rheutopia, in individuals with and without the chronic health condition for which Rheutopia was indicated. The qualitative phase of RTI International's research explored preferences for format and font used in the PMI prototypes and assessed readability and comprehension. The quantitative phase of RTI International's research investigated whether either of the two PMI prototypes resulted in better recall of the information, increased perceived risk, or increased ease of understanding. The results suggest that content and format may be important predictors of recall of factual information about prescription drug products. We used the results of the 2012 research study in conjunction with additional research to develop several aspects of this proposed rule (Ref. 31).

The information obtained from the hearings, the results of the research performed, and the recommendations provided by stakeholders highlights the importance of providing clear, concise, and accessible information to patients as this may help them to use their prescription drug products safely and effectively.

IV. Legal Authority

In this proposed rule, FDA is addressing legal issues relating to FDA's proposed action to revise the regulations regarding format and content for prescription drug labeling. Our proposed revisions to the format and content requirements for prescription drug labeling are authorized by the FD&C Act (21 U.S.C. 321 *et seq.*) and by the PHS Act (42 U.S.C. 262 and 264).

The FD&C Act provides that a drug shall be deemed to be misbranded if the requirements of section 502 of the FD&C Act are not met (21 U.S.C. 352). This provision applies to all drugs, including those that are also regulated as biological products under the PHS Act. In addition, section 351(b) of the PHS Act (42 U.S.C. 262(b)) provides that ''no person shall falsely label or mark any package or container of any biological product or alter any label or mark on the package or container of the biological product so as to falsify the label or mark.''

Section 502(f) of the FD&C Act deems a drug to be misbranded if its labeling lacks adequate directions for use and adequate warnings against use in those pathological conditions where its use may be dangerous to health, as well as adequate warnings against unsafe dosage or methods or duration of administration or application, in such manner and form, as are necessary for the protection of users. This section of the FD&C Act further authorizes FDA, on authority delegated from the Secretary, to issue regulations exempting a drug or device from the requirement to bear adequate directions for use upon a determination that such directions are not necessary for the protection of users.

It is well-established that a drug must have adequate directions for use unless the drug is exempt from that requirement by regulation. For a prescription drug to avoid being misbranded under section 502(f) of the FD&C Act, its labeling must conform to regulations issued by FDA. (See, *e.g., U.S.* v. *Articles of Drug,* 625 F.2d 665, 672 (5th Cir. 1980).) FDA has, since 1952, had a regulation that states the conditions under which a prescription drug must be labeled in order to be exempt from the adequate directions for use requirement. (See 17 FR 6818 (July 25, 1952).) The current version of that rule is codified in § 201.100 (21 CFR 201.100). This proposed rule, if finalized, would modify the existing exemption from adequate directions for use for prescription drugs (§ 201.100). We are proposing this rule based on our determination that an additional condition must be present for a prescription drug to be exempt from the requirement to provide adequate directions for use. This additional condition is that, when PMI is required under part 208 or proposed § 606.123 (21 CFR 606.123), the drug must have FDA-approved PMI and be dispensed with such PMI (as described in proposed part 208 or § 606.123) as applicable.

In addition, section 502(a) of the FD&C Act deems a drug to be misbranded ''if its labeling is false or misleading in any particular.'' Under section 201(n) of the FD&C Act (21 U.S.C. 321(n)), when considering whether labeling is misleading, FDA shall consider whether the labeling fails to reveal facts that are material with

respect to consequences that may result from the use of the drug under the conditions of use prescribed in the labeling or advertising thereof or under usual or customary conditions of use. If a prescription drug does not have PMI after it is required for that drug, its labeling will fail to reveal material information to patients.

Furthermore, the premarket approval provisions for drugs require that product labeling adequately address the safety and effectiveness of the drug product. Under section 505 of the FD&C Act (21 U.S.C. 355), we will approve an NDA only if the drug is shown to be both safe and effective for use under the conditions set forth in the drug's labeling. Under 21 CFR 314.125, we will not approve an NDA unless, among other things, there is adequate safety and effectiveness information for the labeled uses and the product labeling complies with the requirements of 21 CFR part 201. Under section 351(a)(2)(C)(i)(I) of the PHS Act, we are authorized to license a biological product only upon a demonstration that the biological product is safe, pure, and potent. This demonstration would be assessed in the context of the labeling for that product.

Section 701(a) of the FD&C Act (21 U.S.C. 371(a)) authorizes us to issue regulations for the efficient enforcement of the FD&C Act. Section 361 of the PHS Act (42 U.S.C. 264) authorizes us to make and enforce regulations determined to be necessary to prevent the introduction, transmission, or spread of communicable disease into the United States or from one State or possession into any other State or possession. For blood and blood components intended for transfusion on an outpatient basis, the proposed requirement to include information on the risks associated with blood transfusion, including transfusion-transmitted infections, in PMI may aid in preventing the introduction, transmission, or spread of communicable disease.

Furthermore, section 505–1 of the FD&C Act, authorizes FDA to require a Medication Guide, such as PMI, as one element of a REMS when necessary to help mitigate a serious risk of the prescription drug product.

With regard to generic drug products, section 505(j)(2)(A)(v) of the FD&C Act requires an ANDA to include information showing that the proposed generic drug product's labeling is the same (with some exceptions) as the labeling approved for the corresponding RLD. Thus, because under this proposal PMI will be approved drug labeling, FDA has authority to require drug product manufacturers seeking approval of ANDAs to adopt PMI that is the same as the PMI for the RLD, if an approved PMI for their RLD exists, except that the PMI for the ANDA could reflect certain permissible differences in accordance with section 505(j)(2)(A)(v) of the FD&C Act and § 314.94(a)(8)(iv) (21 CFR 314.94(a)(8)(iv)). If the ANDA is already approved when the PMI for its RLD is first approved, FDA believes it is appropriate that the ANDA product also adopt PMI that is the same as that approved for the RLD, except that again, the PMI for the ANDA could reflect certain permissible differences. The statutory bases for this requirement with respect to approved ANDAs are the misbranding provisions cited previously. Where an ANDA applicant seeks approval of an ANDA referencing a listed drug whose approval has been withdrawn and for which no PMI was approved for the RLD before the approval of the RLD was withdrawn, the ANDA applicant must submit PMI that corresponds to an FDA-created template once FDA has provided a template. Again, the statutory bases for this requirement are the misbranding provisions.

We note that Federal courts have affirmed that FDA has authority to require the dispensing of patient labeling for prescription drugs and that such requirements do not interfere with the practice of medicine. (See *Pharmaceutical Manufacturers Association* v. *Food and Drug Administration,* 484 F. Supp. 1179 (D. Del. 1980), aff'd per curiam, 634 F. 2d 106 (3rd Cir. 1980).)

V. Description of the Proposed Rule

We are proposing to revise the part heading and all subparts of current part 208. The part heading would be revised to ''Medication Guides.'' FDA is proposing to require a new type of Medication Guide for patients that will be called PMI. These proposed requirements for patient labeling would ensure that clear, concise, accessible, and useful written prescription drug product information would be delivered to patients in a consistent and easily understood format to help patients use all of their prescription drug products safely and effectively when dispensed in an outpatient setting.

Proposed part 208 (Medication Guides) would be the successor regulation to current part 208 (Medication Guides for Prescription Drug Products). Therefore, current Medication Guides would continue to be available as a potential element of a REMS under section 505–1(e) of the FD&C Act as described in section V.J of this document until FDA has approved PMI for the prescription drug product.

Consistent with proposed part 208, FDA is proposing to add § 606.123 to part 606, subpart G, to require establishments that collect blood and blood components intended for transfusion to create and distribute PMI consistent with proposed part 208.

A detailed description of the proposed revisions and a description of each proposed section are provided in sections V.A through V.L of this document.

A. Placement and Removal of the Current Requirements for Medication Guides for Prescription Drug Products (Proposed §§ 208.91, 208.92, 208.94, 208.96, and 208.98)

Medication Guides are currently required under part 208 for certain prescription drug products that FDA determines pose a serious and significant public health concern, requiring distribution of FDA-approved patient information. Medication Guides contain information that FDA believes is necessary to a patient's safe and effective use of a prescription drug product. Once a prescription drug product has FDA-approved PMI, its current Medication Guide requirement (if any) would no longer be applicable (see also discussion in section V.J of this document). FDA would withdraw the current regulations governing Medication Guides in part 208 after all prescription drug products that had Medication Guides have FDA-approved PMI.

We believe it is important that patients continue receiving FDA-approved patient information for prescription drug products that we previously determined posed a serious and significant public health concern during the implementation of the final rule. Therefore, we propose that the provisions in current part 208 requiring Medication Guides for select prescription drug products would remain in effect as described in section V.J of this document.

For current part 208 to remain in effect until all prescription drug products that had Medication Guides have FDA-approved PMI, we propose that current §§ 208.1 and 208.3 be relocated to §§ 208.91 and 208.92, subpart C, respectively. Current §§ 208.20, 208.24, and 208.26 would be relocated to proposed §§ 208.94, 208.96, and 208.98, subpart D, respectively. The definitions in proposed § 208.92 would be revised for clarity and consistency with definitions in proposed § 208.20; however, the substantive meaning of the definitions would remain the same.

B. Removal of the Requirements for Patient Package Inserts (Proposed §§ 310.501 and 310.515)

PPIs for oral contraceptives and estrogen-containing drug products are required under §§ 310.501 and 310.515, respectively. PPIs provide detailed information to patients about the benefits and risks involved with using these prescription drug products and contain information to help patients use them safely and effectively. We have determined that once an oral contraceptive or estrogen-containing prescription drug product has FDA-approved PMI, PPIs would no longer be necessary for the safe and effective use of these products (see also discussion in section V.J of this document). FDA would withdraw the current regulations in §§ 310.501 and 310.515 for NDAs, BLAs, and ANDAs that have FDA-approved PPIs after all such prescription drug products have FDA-approved PMI.

We believe it is important that patients continue to receive FDA-approved patient information for oral contraceptives and estrogen-containing products during the implementation of PMI. Therefore, we propose that §§ 310.501 and 310.515 would remain in effect as described in section V.J of this document.

Under this proposed rule, when finalized, we would no longer accept voluntary submissions of PPI for prescription drug products. Prescription drug products used, dispensed, or administered on an outpatient basis would be required to have FDA-approved PMI, with the exception of excluded products identified in proposed § 208.10(d)).

C. Scope and Purpose (Proposed §§ 208.10 and 606.123)

Currently, Medication Guides are required only for prescription drug products that FDA determines pose a serious and significant public health concern requiring distribution of FDA-approved patient information. In contrast, when finalized, this proposed rule would require the creation and distribution of a new type of Medication Guide, called PMI, for any prescription drug product that is approved or submitted for approval under section 505 of the FD&C Act that is used, dispensed, or administered on an outpatient basis with the exception of excluded entities identified in proposed § 208.10(d). For the purposes of this proposed rule, a drug product also includes a biological product licensed under section 351(a) or (k) of the PHS Act. PMI would improve public health by providing patients with clear, concise, accessible, and useful written prescription drug product information delivered in a consistent and easily understood format to help patients use their prescription drug products safely and effectively.

PMI content would be based on information required in the PI as described in §§ 201.56, 201.57, and 201.80 (21 CFR 201.56, 201.57, and 201.80), and/or the circular of information described in § 606.122 (21 CFR 606.122). In cases where marketing of an application has been discontinued but approval of the application has not been withdrawn under 21 CFR 314.150 or section 505(e) of the FD&C Act, the applicant must continue to comply with all applicable statutory and regulatory requirements, including the requirements set forth in this proposed rule, if finalized.

Authorized dispensers would be required to provide patients with FDA-approved PMI, when such PMI exists, each time a prescription drug product is used, dispensed, or administered on an outpatient basis. This would ensure that patients receive the information to help them use their prescription drug products safely and effectively. Prescription drug products used, dispensed, or administered on an outpatient basis are those prescription drug products that are dispensed outside of an inpatient setting (which include a hospital or long-term care facility, such as a nursing home or rehabilitation facility). The most common outpatient settings are retail pharmacies and hospital ambulatory care pharmacies, where the patient takes the prescription drug product home and uses it. Outpatient settings also include those in which the prescription drug product is dispensed to a healthcare provider who administers it to the patient. This includes, but is not limited to, clinics, healthcare providers' offices, dialysis centers, and infusion centers, including those administering blood and blood component transfusions. In all of these outpatient settings, we believe that patients should be able to take home important information about the prescription drug product, such as information about potential side effects that may occur, when to notify a healthcare provider, or followup that may be required after receiving a prescription drug product.

PMI would not be required for prescription drug products used, dispensed, or administered by a healthcare provider in an emergency (for example, an emergency room visit), including a public health emergency setting, including natural and/or human-made disasters, or an inpatient setting (for example, a hospital or a nursing home). PMI would not be required for a product under Emergency Use Authorization, which may require patient or provider Fact Sheets. In these situations, a healthcare provider provides the patient or a patient's caregiver with information about the drug product and the potential side effects that may occur and also answers questions the patient may have. Further, in these situations and settings, the healthcare provider is responsible for monitoring the patient, as necessary, after the prescription drug product is used, dispensed, or administered. Finally, Emergency Use Authorizations are not FDA approved applications; therefore, products authorized under Emergency Use Authorizations would not require PMI.

With few anticipated exceptions, we propose to exclude manufacturers of preventive vaccines that do not have a Medication Guide from the requirement to create and distribute PMI. The Centers for Disease Control and Prevention (CDC) manages a comprehensive preventive vaccine program that includes providing information on preventive vaccines to patients. We have determined that the current system for developing and providing vaccine information statements (VISs) to patients meets the goal of PMI for these products. Under the National Childhood Vaccine Injury Act of 1986, the Secretary is required to develop and disseminate vaccine information materials for distribution by all U.S. healthcare providers (see section 300aa–26 of the National Childhood Vaccine Injury Act of 1986 (42 U.S.C. 300aa–1 to 300aa–34)). Healthcare providers must distribute the information to patients (or the parent or legal representative of a child) who receive vaccines under the National Vaccine Injury Compensation Program of 1986 (NVICP) (Pub. L. 99–660). Development and revision of VISs have been delegated to CDC. CDC also develops VISs for vaccines that are not covered by NVICP. VISs are available on the internet at *https://www.cdc.gov/vaccines/hcp/vis/current-vis.html.*

D. Definitions (Proposed § 208.20)

This proposed rule would provide definitions for the purposes of this rule for the terms *administered, applicant, authorized dispenser, dispensed, drug name, drug product, licensed healthcare provider, manufacturer, patient, Patient Medication Information, revision date,* and *used.* This proposed rule would also revise definitions from current part 208 for clarity and consistency;

however, the substantive meaning of those definitions would remain the same.

Specifically, this proposed rule would define *authorized dispenser* as an individual(s) or entity who is licensed, registered, or otherwise permitted by the jurisdiction in which the individual(s) or entity practices to provide prescription drug products in the course of professional practice. We believe that, in most instances, the authorized dispenser will be a pharmacist. However, an authorized dispenser may also include physicians, nurses, or other licensed healthcare providers legally permitted under State law to provide prescription drug products to patients.

This proposed rule would also define *Patient Medication Information* as a type of Medication Guide—a form of patient labeling—which meets the requirements set forth in this proposed rule. PMI would be labeling under section 201(m) of the FD&C Act.

E. Requirements for the Format of Patient Medication Information (Proposed § 208.30)

The proposed rule would establish the general format requirements for PMI (see proposed § 208.30). The proposed rule would require PMI to have a uniform format that will make it easier for patients to read, understand, and use PMI. The formatting of written patient prescription drug product information has a large effect on the ease of understanding and use of the information (Ref. 32). The formatting requirements are consistent with the guidelines from patient education experts (Refs. 32 and 33). These formatting requirements are intended to make it easier for patients to read and comprehend the important information contained in PMI and help them use their prescription drug products safely and effectively (Refs. 32 and 33).

Consistent with current FDA regulations (see § 201.15(c)(1) (21 CFR 201.15(c)(1))), the proposed rule would require that PMI be written in the English language; provided, however, that in the case of articles distributed solely in the Commonwealth of Puerto Rico or in a Territory where the predominant language is one other than English, the predominant language may be substituted for English (see proposed § 208.30(a)(1)).

FDA strongly encourages applicants to work with retailers and other organizations to ensure that PMI is accessible to individuals with limited English proficiency. To the extent an applicant, retailer, or other organization receives Federal financial assistance from HHS, they are required to take reasonable steps to provide meaningful access to their programs and activities by individuals with limited English proficiency under Title VI of the Civil Rights Act of 1964 and its implementing regulations.[2]

Currently, translations in languages other than English of written prescription drug information (including Medication Guides and Patient Package Inserts) are provided in numerous ways—by drug applicants, retailers, and other organizations. These organizations create written translations of medication information, and they also provide live oral sight translations by an interpreter (for example, via telephone) of medication information in multiple languages. For example, the American Society of Health-System Pharmacists provides more than 1,500 monographs covering prescription and nonprescription drugs in both English and Spanish.[3] Translations of PMI could similarly be made available by retailers and other organizations.

In accordance with current FDA regulations at § 201.15(c)(1) and proposed § 208.30(a)(1), when PMI is provided in a language other than English it must be distributed along with English language PMI, with the limited exception of articles distributed solely in the Commonwealth of Puerto Rico or in a Territory where the predominant language is one other than English (and PMI is provided in such predominant language).

FDA acknowledges the benefits of having translated prescription drug information for individuals with limited English proficiency. This proposed rule provides flexibility to allow for multiple approaches to provide access to PMI for individuals with limited English proficiency through a variety of different mechanisms. FDA seeks further information regarding what actions applicants and other organizations might take to make PMI accessible to individuals with limited English proficiency.

The proposed rule would require that PMI be provided to a patient in paper format and be legible and printed on a single side of an 8½ by 11-inch sheet of paper and not exceed one page (see proposed § 208.30(a)(2)). Studies show that patients prefer a simplified one-page format for written patient information and are more likely to read information that is short and concise (Refs. 34 and 35). Studies also show that patients understand more information when it is contained in a shorter document and are better able to understand information when it is presented in a simplified one-page format (Refs. 34, 36, and 37). In contrast, patients are often overwhelmed by and have difficulty understanding lengthy patient information materials (Refs. 35 and 38).

We have determined that written patient prescription drug product information can be appropriately provided in a single page. For example, FDA has successfully created one-page Medication Guides for extended-release and long-acting opioid analgesics (Ref. 39) and immediate-release opioid analgesics. As stated previously, this one-page format is also supported by feedback obtained from stakeholder input, advisory committees, workshops, and public hearings.

As discussed in section V.K of this document, proposed § 208.90 would allow for a waiver from one or more of the proposed requirements for PMI if we determine that any requirement is inapplicable, unnecessary, impracticable, or contrary to patients' best interests for a particular prescription drug product. We envision rarely granting a waiver to the one-page format requirement. FDA may consider an applicant's request for an extension from the specified implementation date to fully comply with the PMI requirements. Such requests will be evaluated on a case-by-case basis. Under this proposed rule, PMI would be stored electronically in a central repository managed by FDA (as discussed in section VI of this document). The proposed rule would require that PMI provided in electronic format be printable to ensure that all patients have access to the written patient prescription drug product information, including patients who do not have access to the electronic version of PMI (see proposed § 208.30(a)(3)). To maintain standardization for ease of use by patients, electronic and printed PMI must be identical and meet the format and content requirements specified in this proposed rule.

The proposed rule would require that all headings and subheadings (as required in proposed § 208.40(b) and (c)(2)) and that the title ''PATIENT MEDICATION INFORMATION'' (as required in proposed § 208.40(a)(5)) appear in bold type (see proposed § 208.30(a)(4)). The proposed rule would also require bold type for the drug name(s), phonetic spelling of the drug name(s), dosage form(s), and

[2] 42 U.S.C. 2000d, *et seq.;* 45 CFR part 80; *see also* Section 1557 of the Affordable Care Act, 42 U.S.C. 18116, which provides similar protections as those under Title VI in health programs and activities receiving Federal financial assistance.

[3] *https://www.ashp.org/products-and-services/database-licensing-and-integration/ashp-patient-medication-information.*

route(s) of administration listed at the top of the page on the line immediately below the title ''PATIENT MEDICATION INFORMATION'' (see proposed § 208.30(a)(4)). Bold headings would introduce each section and draw distinction between sections. We believe that the use of bold type would emphasize PMI headings and help patients scan for information contained in PMI (Ref. 40). Only PMI headings, subheadings, the title ''PATIENT MEDICATION INFORMATION,'' and the drug name(s), phonetic spelling of the drug name(s), dosage form(s), and route(s) of administration at the top of the page must appear in bold type. The drug name(s) used in other parts of PMI must not appear in bold. In general, bold text should not be used for any other information in the document.

The proposed rule would require the title ''PATIENT MEDICATION INFORMATION'' to appear in all uppercase letters. Using all uppercase letters for the title will alert patients to the purpose of the document. The proprietary name (if any) of the prescription drug product may be presented in all uppercase letters. Generally, no other words may be presented in all uppercase letters with the exception of commonly used acronyms (for example, GERD in place of gastroesophageal reflux disease) (see proposed § 208.30(a)(5)). However, when an acronym is used, it should be defined the first time it appears in PMI (for example, gastroesophageal reflux disease (GERD)). Other information should be composed of both uppercase and lowercase type or just lowercase type. The use of text set in all uppercase type is more difficult to read (Ref. 41). The proprietary name of the prescription drug product, if used, may be written in all uppercase type, which will prominently display the proprietary name so patients can easily identify and associate PMI with the correct prescription drug product. For drug products without a proprietary name, the nonproprietary name should be written in title case letters.

The proposed rule would require that the title ''PATIENT MEDICATION INFORMATION'' (as described above) and the drug name(s), phonetic spelling of the drug name(s), dosage form(s), and route(s) of administration beginning immediately below the title must appear centered at the top of the page (see proposed § 208.30(a)(6)). This will ensure that the title and purpose of the document are easy for patients to find.

The proposed rule would require that PMI be presented in a minimum of 10-point font with 1 point equal to 0.0138 inches (see proposed § 208.30(b)(1)). This size type is intended to make it easier for patients to read the important information contained in PMI (Ref. 33). This proposed requirement applies to all sections of PMI except the name and address of the manufacturer, packer, and/or distributor; the U.S. license number of the prescription drug product that is a biological product; the statement ''The content of this Patient Medication Information has been approved by the U.S. Food and Drug Administration;'' and the revision date.

The proposed rule would prohibit PMI from containing any reverse type (such as white or neutral color type on a darker color background), lightface, shading, condensed type, or narrow fonts (see proposed § 208.30(b)(2)). These effects can make reading more difficult for patients (Ref. 40).

The proposed rule would prohibit PMI from containing any colors other than black type to facilitate readability for patients (see proposed § 208.30(b)(3)). Black type on a white background maximizes contrast and therefore legibility of words (Ref. 40). Furthermore, certain colors and combinations of colors do not print clearly on paper (Ref. 41). This proposed requirement also considers feedback from stakeholders regarding pharmacies' printing limitations (for example, certain pharmacies are limited to printing in black and white).

Because PMI is a one-page document, the proposed rule would prohibit PMI from containing a page number (see proposed § 208.30(b)(4)). This would prevent patient confusion if the applicant submits PMI to FDA with other documents that may include page numbers.

We are proposing that pictograms and icons not be used in PMI for several reasons. For example, research indicates that different cultures may have different interpretation of pictograms and icons (Refs. 40 and 42). Pharmacies' printing limitations were also taken into consideration.

F. Requirements for the Content of Patient Medication Information (Proposed § 208.40)

We propose that PMI would highlight the most important information that patients need to know to help them use their prescription drug products safely and effectively. PMI is not intended to be a substitute for the PI described in §§ 201.56(d), 201.57, and 201.80 or the circular of information described in § 606.122 (while PMI would highlight the most important information, it is not intended to and would not include all the essential scientific information needed for the safe and effective use of the drug) or to be a replacement for patient counseling by a healthcare provider. PMI, while meant to help patients safely and effectively use prescription drug products, would not be considered to be adequate directions for use as described in 21 CFR 201.5. Rather, PMI would be provided to patients with prescription drug products that are used, dispensed, or administered on an outpatient basis to help them safely and effectively use the prescription drug product.

In determining specific headings and information to be included in PMI, we researched scientific literature, conducted studies examining several PMI prototypes, held public workshops and hearings, and obtained stakeholder input on what information patients need in order to use their prescription drug products safely and effectively. The proposed content of PMI would highlight essential information found in the PI that the patient needs to know about the prescription drug product and would include basic directions on how to use the prescription drug product. Some information included in the drug product's PI may not be regularly included in PMI. Detailed instructions for use that cannot be adequately conveyed in PMI would continue to be approved by FDA in other labeling (for example, in the PI or in the Instructions for Use for the drug product).

The proposed rule would require PMI to be written in terms that are likely to be read and understood by most individuals (see proposed § 208.40(a)(1)). The use of overly technical language may deter patients from reading and understanding the important information contained in PMI. Based on the National Adult Literacy Survey, nearly half of the U.S. adult population is functioning at or below an eighth-grade reading level (Ref. 43). Other studies have also found that the average American adult reads at an eighth-grade or ninth-grade reading level (Ref. 44). The Keystone Action Plan advocates that prescription drug product information intended for patients be written at a sixth-grade through eighth-grade reading level (Ref. 9).

We believe that the approaches taken will help to improve accessibility of medication information for all patients, including patients with low health literacy, who may be dispensed a prescription drug product in an outpatient setting. FDA seeks comment on whether the proposed format and content requirements support the accessibility of patient medication information for all intended users,

including patients with low health literacy.

FDA is aware that consumer testing, such as the testing of readability and comprehension, may be used to inform the development of written patient materials such as PMI and may improve the usability of these materials. We are not proposing to require consumer testing for PMI at this time, because FDA lacks empirical evidence demonstrating that consumer-tested PMI directly results in benefits to patients over non-consumer-tested PMI. However, FDA recognizes the potential value in consumer testing and is aware that some stakeholders are engaged in consumer testing of written patient materials for their drug products. We note that FDA carefully considered the question of whether consumer testing of PMI would be an appropriate requirement for this regulation, and we understand that some stakeholders advocate for the requirement of such testing to increase the potential usefulness of the PMI. In response to this proposal, we invite comment on this question, and in particular, the submission of empirical evidence supporting the value of such consumer testing. We also ask those in the public who would oppose a requirement of consumer testing to submit comments explaining their position on this issue. FDA will consider this option as a requirement in the final rule if compelling evidence concerning the value of consumer testing is submitted.

Rather than require consumer testing, FDA is considering the establishment of a publicly available database, potentially through a public-private partnership, of consumer-tested phrases and terms that would assist in the development of written patient materials, including PMI. FDA expects to implement the use of common terms and consistent descriptions as part of the patient labeling review process, when appropriate, across drug products to facilitate consumers' understanding of these phrases and terms across written materials, including PMI. FDA seeks comments on the development and maintenance of such a database.

The proposed rule would require that PMI must not be promotional in tone (see proposed § 208.40(a)(2)). As noted above, the primary purpose of PMI is to highlight the most important information that patients need to know to help them use their prescription drug products safely and effectively. This approach of conveying important information in an objective manner is consistent with the existing regulatory provision pertaining to the FDA-approved PI that states that a prescription drug product's PI must not be promotional in tone (§ 201.56(a)(2)). This proposed rule is not intended to address the use of other avenues, outside of PMI, to communicate to patients, including to provide promotional messaging.

The proposed rule would also require PMI to be scientifically accurate, not to be false or misleading in any particular, and to be based on and consistent with the prescription drug product's PI, as described in §§ 201.56, 201.57, and/or 201.80 or in the circular of information described in § 606.122 (see §§ 202.1 and 201.100(d)(1) and section 505 of the FD&C Act (see proposed § 208.40(a)(3)). The proposed rule would require that PMI for NDAs and BLAs be updated when new information becomes available that would cause PMI to become inaccurate, false, or misleading in accordance with § 314.70 (21 CFR 314.70) and § 601.12 (21 CFR 601.12) (see proposed § 208.40(a)(3)). This provision would require that PMI for ANDAs be updated when the PMI for the RLD is updated or the FDA-created template is updated (for ANDAs with withdrawn RLDs).

The proposed rule would require that the title ''PATIENT MEDICATION INFORMATION'' appear at the top of the page (see proposed § 208.40(a)(4)). This title would inform readers that the document has prescription drug product information intended for patients.

The proposed rule would require that the drug name(s) be listed at the top of the page on the line below the title, ''PATIENT MEDICATION INFORMATION'' (see proposed § 208.40(a)(5)). We propose that the phonetic spelling(s) of the proprietary name (if any) and the established name (or the proper name) must also be included to help the patient pronounce the name(s) of the prescription drug product. If the drug name is used again throughout the PMI, only the proprietary name (if any) would be used. Those prescription drug products not having a proprietary name would use the established name or the proper name.

The proposed rule would require the statement ''The content of this Patient Medication Information has been approved by the U.S. Food and Drug Administration'' to appear at the bottom of the page, followed by the revision date (see proposed § 208.40(a)(6)). The revision date would be the initial date the first PMI was approved or the date on which any changes have been made to PMI, whichever applies and is later, and would appear in numeric format (for example, Revised: 10/2025). This would alert patients to any revision to the PMI since the patient last received the information.

The proposed rule would require that the name and place of business of the manufacturer, packer, or distributor of the prescription drug product that is not a biological product appear in the PMI below the statement required in § 208.40(a)(6) and the revision date (see proposed § 208.40(a)(7)). The proposed rule would require the licensed manufacturer's name, address, and U.S. license number of the prescription drug product that is a biological product to appear in the PMI (the distributor's or marketer's name and address may also be included) (see proposed § 208.40(a)(7)). The authorized dispenser may include their name and place of business. While the manufacturer or distributor information may be available on the original carton or container for the product or in the prescribing information, patients generally do not receive the carton or container or the prescribing information when the prescription drug product is dispensed at a pharmacy. Thus, including this information on the PMI helps to ensure the patient receives it.

The proposed rule would require that any heading, subheading, or specific information (see proposed § 208.40(b) and (c)) that is clearly inapplicable to the prescription drug product be omitted from the PMI (see proposed § 208.40(a)(8)) because such heading or specific information is not required for the patient to safely or effectively use the prescription drug product. The omission of any required heading, subheading, or specific information would be indicated only in the absence of the required heading, subheading, or specific information in the PMI.

The proposed rule would require specific headings in the following order: ''[Insert drug name] is,'' ''Important Safety Information,'' ''Common Side Effects,'' and ''Directions for Use'' (see proposed § 208.40(b)). The use of headings helps to highlight specific information and helps patients locate information in the document and better understand it (Refs. 45 and 46). The proposed rule would require the headings to appear in a specified order and would ensure consistency in formatting for all PMI. This proposed requirement would help patients become familiar with both the type and location of relevant information in PMI. This will help them to quickly and accurately locate information about how to safely and effectively use the prescription drug product (Ref. 47).

The proposed rule would require specific information to be included under each required heading (see

proposed § 208.40(c)). We propose that the information in each section must be concise and based on and consistent with the prescription drug product's PI.

Under the heading, ''[Insert Drug Name] is,'' the proposed rule would require a concise summary of the approved outpatient indications and uses of the prescription drug product listed in the prescription drug product's PI (see proposed § 208.40(c)(1)). The information in this section would be consistent with the information found in the INDICATIONS AND USAGE section of the PI. FDA is aware that certain prescription drug products have a large number of approved indications and uses. Therefore, this section of PMI is not meant to list all approved indications and uses verbatim as described in the PI, but rather to summarize the approved outpatient indications and uses in language that is most useful for patients.

Under the heading ''Important Safety Information,'' the proposed rule would require specific subheadings in the following order: ''Warnings,'' ''Do not take,'' Serious side effects,'' and ''Tell your health care provider before taking'' (proposed § 208.40(c)(2)).

The proposed rule would require the subheading ''Warnings'' to be followed by a concise summary of serious warnings, including those that may lead to death or serious injury from the use of the prescription drug product (see proposed § 208.40(c)(2)(i)). The ''Warnings'' subheading must include a summary of the information found in the prescription drug product's boxed warning, if any, that is most relevant for patients to know for the safe and effective use of the prescription drug product.

The proposed rule would require the subheading ''Do not take'' to be followed by a statement of the circumstances (if any) in which the prescription drug product should not be used because the risk of use outweighs any benefit (see proposed § 208.40(c)(2)(ii)). The information in the ''Do not take'' subheading would be consistent with the most relevant information to patients found in the ''CONTRAINDICATIONS'' section of the PI. Because PMI is intended to aid patients on how to safely and effectively use their prescription drug product after it has been prescribed, patients need to be aware of contraindications (if any) associated with the prescription drug product.

The proposed rule would require the subheading ''Serious side effects'' followed by: (1) a listing of the clinically significant adverse reactions or risks associated with the use of the prescription drug product that are most relevant to the patient and (2) information on when to call a healthcare provider or when and how to obtain emergency help if certain clinically significant adverse reactions occur (see proposed § 208.40(c)(2)(iii)). The information under this subheading must be consistent with either: (1) the most relevant information to patients found in the ''WARNINGS AND PRECAUTIONS'' section for drug labeling that must meet the format and content requirements of §§ 201.56(d) and 201.57 or (2) the ''WARNINGS'' section and the ''PRECAUTIONS'' section for drug labeling that must meet the format and content requirements of § 201.80. Side effects that may not meet the preceding criteria may still be considered serious side effects when, based on appropriate medical judgment, they may jeopardize the patient and may require medical or surgical intervention to prevent one of the outcomes previously listed (see FDA Guidance for Industry, ''Adverse Reactions Section of Labeling for Human Prescription Drug and Biological Products—Content and Format,'' January 2006 (available at *https://www.fda.gov/media/72139/download*).)

The proposed rule would require the subheading ''Tell your health care provider before taking'' followed by a statement that identifies specific populations and conditions that may have clinically important differences in response to the prescription drug product or may change the recommendation for use of the prescription drug product (for example, pregnancy or lactation) (see proposed § 208.40(c)(2)(iv)).

Under the heading ''Common Side Effects,'' the proposed rule would require a statement of frequently occurring adverse reactions from the use of the prescription drug product (see proposed § 208.40(c)(3)). The listed common side effects would have to be consistent with the ''ADVERSE REACTIONS section'' of the prescription drug product's PI. Under this heading, the most common adverse reactions that would be listed are those that are likely to be caused by use of the drug product or that are meaningful to the patient in terms of seriousness and frequency. We propose that the listed common side effects must focus on the most clinically relevant and the important adverse reactions to inform the patient. In determining whether a less common adverse reaction should be included, consideration may be given to a combination of factors, which include the seriousness of an adverse reaction, the likelihood that the reaction could affect patients' adherence or continuation of therapy, and the importance of identifying the adverse reaction and treating it at an early stage (see FDA Guidance for Industry, ''Adverse Reactions Section of Labeling for Human Prescription Drug and Biological Products—Content and Format.'').

The proposed rule would require that the following statement follow the summary of adverse reactions: ''These are not all the possible side effects of [Insert Drug Name]. Call your health care provider if you have side effects that worsen or do not go away. You may also report side effects to FDA at [insert current FDA telephone number and web address for voluntary reporting of adverse reactions]'' (see proposed § 208.40(c)(3)). Including information in PMI about how to report side effects to FDA is consistent with our efforts to encourage patients and healthcare providers to report suspected adverse reactions to FDA.

Under the heading ''Directions for Use,'' the proposed rule would require the statement ''Use exactly as prescribed'' to appear first after the heading to emphasize the importance of taking the prescription drug product as directed by the healthcare provider (see proposed § 208.40(c)(4)). We propose that the statement ''Use exactly as prescribed'' must be followed by a summary of how the prescription drug product must be administered and the route of administration. This section of PMI would also contain basic directions for use and any special instructions on how to administer the drug (for example, whether it should be taken with food or taken at a period of time before or after eating certain foods, or what to do if a patient misses a scheduled dose). If applicable, this section would include a statement of special handling, storage conditions, and disposal information. The dosing and administration and the storage, handling, and disposal information must be consistent with the most relevant information to patients that is found: (1) in the ''DOSAGE AND ADMINISTRATION'' section of the PI and (2) in the ''HOW SUPPLIED/STORAGE AND HANDLING'' section for drug labeling that must meet the format and content requirements of §§ 201.56(d) and 201.57 or the ''HOW SUPPLIED'' section for drug labeling that must meet the format and content requirements of § 201.80.

We intend that detailed instructions for patients' use of drug products, known as ''Instructions for Use,'' will continue to be available as a separate document and approved by FDA, where

appropriate, for drug products with complicated administration instruction (for example, inhalers or injectables). We propose that PMI would direct patients to the FDA-approved Instructions for Use, when applicable.

G. Development of Patient Medication Information for New Drug Applications, Biologics License Applications, and Abbreviated New Drug Applications (Proposed § 208.50)

The proposed rule would require the applicant of an NDA or a BLA for a prescription drug product used, dispensed, or administered on an outpatient basis to create PMI (see proposed § 208.50(a)). PMI would be required for NDAs and BLAs pending or submitted on or after the effective date of the final rule, based on this proposed rule, and NDAs and BLAs that were approved by FDA before the effective date of the final rule, pursuant to the implementation schedule described in section V.J of this document. In certain circumstances, FDA may require more than one PMI for a prescription drug product, associated with a single PI, when one PMI cannot adequately convey the safe and effective use of the drug to patients. This may occur in instances where there are two or more formulations of a prescription drug product described in a PI. For example, more than one PMI would be needed where a product with a single PI has both an injection form and a pill form and the patient would benefit from separate PMI for the respective forms.

The proposed rule would require PMI for a prescription drug product approved or submitted for approval as an ANDA under section 505(j) of the FD&C Act that refers to a listed drug approved under section 505(c) of the FD&C Act for which FDA has approved PMI (see proposed § 208.50(b)(1)). The PMI for these ANDAs would be the same as the PMI approved for the RLD upon which its approval is based except for changes required: (1) because of differences approved under a suitability petition (see 505(j)(2)(C) of the FD&C Act and § 314.93 (21 CFR 314.93)) or (2) because the drug product and the reference listed drug are produced or distributed by different manufacturers (see section 505(j)(2)(A)(v) of the FD&C Act and § 314.94(a)(8)(iv)).

The proposed rule would also require PMI for a prescription drug product approved or submitted for approval as an ANDA under section 505(j) of the FD&C Act that refers to a listed drug approved under section 505(c) of the FD&C Act for which approval of the RLD has been voluntarily withdrawn and the approval of the RLD is withdrawn before the approval of PMI for the RLD (see proposed § 208.50(b)(2)). However, due to limitations of 505(j) of the FD&C Act and to ensure that all ANDAs that refer to an RLD have the same PMI, FDA would create a PMI template for these ANDAs. Except for permissible differences consistent with § 314.93 and § 314.94(a)(8)(iv), the PMI for these ANDAs would be the same as the content in the PMI template created by FDA.

FDA recognizes that there is a class of ANDAs that was approved under section 505(c) prior to the 1984 Hatch-Waxman Amendments to the FD&C Act. These pre-Hatch-Waxman ANDAs could be for products that are duplicates of a pre-1962 innovator drug product(s) that was subject to the Drug Efficacy Study Implementation (DESI) review and listed in a DESI notice, or they could be for similar or related products. These pre-Hatch-Waxman ANDAs did not rely on a specific listed drug as their basis of submission, but instead relied on the evidence of effectiveness that had been provided, reviewed, and accepted during the DESI process. The safety of these drugs had been determined on the basis of information included in the innovator new drug application(s) submitted prior to 1962 and by the subsequent marketing experience with the drug(s). In some circumstances these ANDAs have been treated similarly to ANDAs approved under section 505(j) of the FD&C Act in that they have followed changes in labeling made by the innovator product that was the subject of the DESI notice they relied on as their basis of submission. In other cases, some products have been treated similarly to other products approved under section 505(c) of the FD&C Act and have labeling that differs from the innovator product that was the subject of the DESI notice. In many cases, the innovator product(s) listed in the DESI notices are no longer marketed. FDA currently expects to address these ANDAs in the final rule in a similar manner as ANDAs approved under section 505(j) of the FD&C Act by requiring PMI for drugs covered by these ANDAs that either follows PMI created by an innovator drug product listed in the DESI notice they relied on as their basis of submission or, in appropriate circumstances, that follows a template created by FDA. FDA asks for comments on this proposal for this class of ANDAs.

H. Submission of Patient Medication Information for New Drug Applications, Biologics License Applications, and Abbreviated New Drug Applications (Proposed § 208.60)

The proposed rule would require NDA or BLA applicants (as described in this proposed rule) to submit PMI, along with the PI upon which the PMI is based, to FDA for approval (see proposed § 208.60(a)). For NDAs and BLAs submitted on or after the effective date of the final rule based on this proposed rule, PMI would be submitted as part of the application. For NDAs and BLAs approved before the effective date of the final rule or pending when the final rule becomes effective, the applicant would submit PMI to FDA in a prior approval supplement pursuant to § 314.70(b)(2)(v)(B) and § 601.12 or as an amendment as applicable. Section V.J of this document further explains when applicants would submit PMI to FDA for approval.

The proposed rule would also require ANDA applicants to submit PMI to FDA for approval after either: (1) PMI for the RLD is approved or (2) FDA has finalized the PMI template and provides notice of the template to the applicant, whichever applies (see proposed § 208.60(b)). Applicants of ANDAs submitted on or after the effective date of the final rule that rely on an RLD with an approved PMI or for which FDA has created a PMI template would be required to submit PMI to FDA as a part of the original ANDA. At the time the final rule becomes effective, applicants of pending ANDAs that reference an RLD for which there is no PMI will be required to submit an amendment once PMI is available for the RLD or once FDA has created a PMI template, if this occurs before the ANDA is approved. Applicants of ANDAs approved before the effective date of the final rule or before PMI is approved for their RLD or before FDA makes a template available, as applicable, would be required to submit a supplement with PMI to FDA, consistent with § 314.70. Generally, applicants would submit a supplement to FDA with PMI that is the same as that for the RLD or FDA-created template except for changes required: (1) because of differences approved under a suitability petition (see 505(j)(2)(C) of the FD&C Act and § 314.93) or (2) because the drug product and the reference listed drug are produced or distributed by different manufacturers (see section 505(j)(2)(A)(v) of the FD&C Act and § 314.94(a)(8)(iv)).

I. Providing Patient Medication Information to Patients (Proposed § 208.70)

Proposed § 208.70(a) would require authorized dispensers to provide FDA-approved PMI to patients (or their agents) every time a prescription drug product is used, dispensed, or administered on an outpatient basis when such PMI is available. Providing PMI when the prescription drug product is used, dispensed, or administered on an outpatient basis will help remind and reinforce for the patient the essential information the patient needs to know about the prescription drug product and the basic directions on how to use the product. This will also ensure that patients receive any updated information about their prescription drug product when it is available. It is not anticipated that PMI would be provided each and every time a prescription drug is used (for example, every time a patient is provided with a pill or capsule from a prescription) or administered (for example, each time a cream is applied), but rather the first time the prescription is used, dispensed, or administered and each time a prescription is dispensed (for example, when a prescription is refilled). Although authorized dispensers would be required to always have PMI available in paper format, this proposed rule is flexible in terms of distribution mechanisms. This proposed rule would allow for electronic distribution (in addition to paper format) and accommodates for future technological advances in providing PMI to patients.

Section 510 of the FD&C Act requires all persons engaged in manufacturing, preparing, issuing, compounding, or processing a drug to register with FDA and provide us with a list of drug products in commercial distribution. Under section 510(g)(1) of the FD&C Act, however, certain pharmacies are exempt from such registration and listing requirements. The distribution of PMI by a pharmacy does not limit this exemption. Accordingly, under proposed § 208.70(b), an authorized dispenser would not be subject to the registration and listing requirements under section 510 of the FD&C Act solely because of an action performed by the authorized dispenser to comply with this proposed rule.

J. Schedule for Implementing the General Requirements for Patient Medication Information (Proposed § 208.80)

1. Implementation Schedule for Applicants To Submit PMI to FDA for NDAs, BLAs, or Efficacy Supplements

FDA is proposing a 5-year implementation schedule for PMI. The proposed implementation schedule for PMI is summarized in table 1 of this document.

TABLE 1—IMPLEMENTATION SCHEDULE

NDAs, BLAs, and efficacy supplements	Time by which PMI must be submitted to FDA
Applications submitted on or after the effective date of the final rule[1]	Time of submission (part of application).
Applications pending at the time of the effective date of the final rule	No later than 1 year after the date of approval of the pending application.
Applications approved on or before the effective date and that have a Medication Guide required under part 208 or a PPI required under § 310.501 or § 310.515.	No later than 1 year after the effective date of the final rule.
Applications approved from January 1, 2013, up to and including the effective date of the final rule that do not have a Medication Guide required under part 208 or a PPI required under § 310.501 or § 310.515.	No later than 2 years after the effective date of the final rule.
Applications approved from January 1, 2008, up to and including December 31, 2012, that do not have a Medication Guide required under part 208 or a PPI required under § 310.501 or § 310.515.	No later than 3 years after the effective date of the final rule.
Applications approved from January 1, 2003, up to and including December 31, 2007, that do not have a Medication Guide required under part 208 or a PPI required under § 310.501 or § 310.515.	No later than 4 years after the effective date of the final rule.
Applications approved on or before December 31, 2002, that do not have a Medication Guide required under part 208 or a PPI required under § 310.501 or § 310.515.	No later than 5 years after the effective date of the final rule.

[1] Final rule refers to a final rule that may publish based on this proposed rule.

The proposed rule would require a staggered implementation schedule for applicants to submit PMI to FDA for NDAs, BLAs, and efficacy supplements (see proposed § 208.80(a)). As indicated in table 1 of this document, for the purposes of this rule, the time by which applicants would be required to submit PMI to FDA would primarily be based on when the NDA, BLA, or efficacy supplement was approved. If an NDA or a BLA has one or more approved efficacy supplements, the approval date of the efficacy supplement that triggers the earliest PMI submission would be used to determine the submission date. We propose that the final rule based on this proposed rule become effective 6 months after the date of publication in the **Federal Register**. The proposed rule would require applicants of NDAs, BLAs, or efficacy supplements submitted for approval on or after the effective date of the final rule to include PMI as part of the application submitted to FDA (see proposed § 208.80(a)(1)). The proposed rule would require the applicants of NDAs, BLAs, or efficacy supplements pending on the effective date of the final rule to submit PMI to FDA no later than 1 year after the date of approval of the pending application (see proposed § 208.80(a)(2)). A pending application's approval would not be delayed because of the new requirements for PMI.

The implementation schedule in proposed § 208.80(a)(3) would require applicants of NDAs and BLAs that have a current FDA-approved Medication Guide required under part 208 or an FDA-approved PPI required under §§ 310.501 or 310.515 to submit PMI to FDA no later than 1 year after the effective date of the final rule. Because these prescription drug products already have approved patient labeling, FDA believes that 1 year will be sufficient to convert the existing FDA-approved Medication Guide and FDA-approved required PPIs to meet the requirements of the final rule. This proposed rule does not modify or affect the REMS requirements. As previously discussed in sections V.A and V.B of this document, once a prescription drug product has FDA-approved PMI, the current requirements for Medication Guides and PPIs would no longer be applicable to such product.

Apart from applications that have an existing FDA-approved Medication Guide or FDA-approved PPI, the implementation schedule proposed in § 208.80(a)(4) through (a)(7) would generally require applicants to submit PMI for newer products first, followed by older products. Newer prescription drug products would generally have PMI at the earliest possible date because these prescription drug products may be less familiar to patients. Staggering the PMI implementation is intended to provide applicants with sufficient time to create PMI and submit it to FDA and would also allow FDA to best use our resources to approve PMI efficiently.

2. Implementation Schedule for Applicants To Submit PMI to FDA for ANDAs

The labeling for the ANDA drug product must be the same as the labeling for its RLD at the time of the ANDA's approval, as required in § 314.94(a)(8)), except for changes required: (1) because of differences approved under a suitability petition (see 505(j)(2)(C) of the FD&C Act and § 314.93) or (2) because the drug product and the reference listed drug are produced or distributed by different manufacturers (see section 505(j)(2)(A)(v) of the FD&C Act and § 314.94(a)(8)(iv)). Therefore, the proposed rule would require that applicants for which an ANDA is submitted for approval on or after the effective date of the final rule must submit PMI to FDA as part of the application if the PMI for the RLD is approved at the time the ANDA is submitted, or if FDA has finalized the PMI template and provided notice of the template to the applicant (see proposed § 208.80(b)(1)(i)). If PMI for the RLD is not approved or if FDA has not finalized the PMI template and provided notice of the template to the applicant, whichever applies, at the time the ANDA is submitted but such PMI is approved for the RLD or FDA finalizes the template and provides notice of the template to the applicant before the ANDA is approved, the applicant for the ANDA must submit PMI in an amendment to the pending application after the approval of the PMI for the RLD or after FDA finalizes the PMI template and provides notice of the template to the applicant, whichever applies (see proposed § 208.80(b)(1)(ii)). If PMI is approved for the RLD or if FDA finalizes the PMI template and provides notice of the template to the applicant after the ANDA is approved, the applicant must submit a supplement with the PMI consistent with § 314.70, after the approval of the PMI for the RLD or after FDA finalizes the PMI template and provides notice of the template to the applicant, whichever applies (see proposed § 208.80(b)(1)(iii)).

For ANDAs pending on the effective date of the final rule, the proposed rule would require applicants to submit an amendment with PMI if the PMI for the RLD is approved or if FDA finalizes the PMI template and provides notice of the template to the applicant, whichever applies, before the ANDA is approved (see proposed § 208.80(b)(2)(i)). If PMI for the RLD is approved or if FDA finalizes the PMI template and provides notice of the template to the applicant after the pending ANDA is approved, the ANDA applicant must submit a supplement with PMI to FDA consistent with § 314.70, after the approval of the PMI for the RLD or after FDA finalizes the PMI template and provides notice of the template to the applicant, whichever applies (see proposed § 208.80(b)(2)(ii)).

The proposed rule would require applicants of ANDAs approved on or before the effective date of the final rule to submit a supplement with a PMI package, consistent with § 314.70.

3. Implementation Schedule for Authorized Dispensers To Provide PMI to Patients

The proposed rule would require authorized dispensers to provide FDA-approved PMI, when such PMI is available, beginning 2 years after the effective date of a final rule based on this proposed rule (see proposed § 208.80(c)). Dispensers should check the FDA labeling repository at *https://labels.fda.gov* on a monthly basis for newly FDA-approved PMI or revised PMI. It is understood that dispensers may need a reasonable amount of time to download PMI after it is published; however, it is expected that they will update their systems on a monthly basis.

Although only a small percentage of prescription drug products would have approved PMI 2 years after the effective date of the final rule, most prescription drug products that previously had Medication Guides would have FDA-approved PMI at that point. Once FDA approves PMI for a prescription drug product that previously had a Medication Guide, dispensers would no longer need to follow the requirements for providing the Medication Guide under proposed § 208.96 (see current § 208.24).

K. Waivers (Proposed § 208.90)

The proposed rule would allow for waivers from one or more of the proposed requirements for PMI (for example, the format and content of PMI and submitting and distributing PMI) if we determine that any requirement is inapplicable, unnecessary, impracticable, or contrary to patients' best interests for a particular prescription drug product (see proposed § 208.90). Waivers could be initiated by FDA or requested by a person or entity that is covered by the final rule. FDA may consider an applicant's request for an extension from the specified implementation date to fully comply with the PMI requirements. Such requests will be evaluated on a case-by-case basis.

As an example, FDA proposes that a waiver or extension would be considered if FDA determined that complying with the requirements for PMI could contribute to a drug shortage or otherwise prevent patient access to the drug product.

As another example, FDA proposes that a waiver or extension would be considered if the CDC plans to use its delegated authority to develop and issue emergency use instructions for eligible medical countermeasures under section 564A(e) of the FD&C Act (21 U.S.C. 360bbb–3a(e)).

FDA considers the one-page requirement to be a key feature of PMI. We envision rarely granting a waiver to the one-page requirement (see proposed § 208.30(a)(2)). However, we may allow PMI to exceed one page, if necessary, for the safe and effective use of the prescription drug product.

FDA is seeking comment on possible PMI requirements for which waivers could be requested and the criteria that FDA might consider when evaluating such requests. Waivers or extensions requested by a person or entity covered by the final rule will be reviewed on a case-by-case basis. Requests for waivers or extensions and the rationale for the waiver or extension for PMI requirements for NDAs and BLAs would need to be submitted to the director of the FDA division responsible for reviewing the marketing application for the drug product. For ANDAs, the requests for waivers or extensions and the rationale for the waiver or extension would need to be submitted to the Director of the Office of Generic Drugs. For biological products, requests for waivers or extensions and the rationale for the waiver or extension would be submitted to the FDA application division in the office with product responsibility.

L. Medication Guides: Patient Medication Information for Blood and Blood Components Intended for Transfusion (Proposed § 606.123)

When finalized, this proposed rule would add proposed § 606.123 (Medication Guides: Patient Medication Information for blood and blood components intended for transfusion). The addition of the proposed requirement would ensure that every patient who receives blood or a blood component on an outpatient basis receives PMI.

The proposed rule would require establishments that collect blood and blood components for transfusion to create PMI, as described in proposed part 208, for distribution to the transfusion service (see proposed § 606.123(a)). The proposed rule would

require licensed blood establishments to submit PMI to FDA for approval.

The proposed rule would require transfusion services, as an authorized dispenser, to provide PMI to each patient (or the patient's agent) when blood or blood components are administered on an outpatient basis when such PMI is available (see proposed § 606.123(b)). Although the transfusion service must always have PMI available in paper format, the proposed rule is flexible in terms of distribution mechanisms. This proposed rule would allow for electronic distribution upon request and accommodates future technological advances in providing PMI to patients.

The proposed rule would allow for waivers from one or more of the proposed requirements for PMI (for example, the format and content of PMI, submitting, and distributing PMI) if we determine that any requirement is inapplicable, unnecessary, impracticable, or contrary to patients' best interests (see proposed § 606.123(c)). Waivers could be initiated by FDA or requested by a blood collection establishment or transfusion service. Requests for waivers or extensions and the rationale for the waiver or extension must be submitted to the FDA application division in the office with product responsibility. FDA is seeking comment on possible PMI requirements for which waivers would be requested and the nature of such requests.

In contrast to other prescription drug products, blood and blood components intended for transfusion are subject to the labeling requirements under §§ 606.121 and 606.122, including the requirement that a circular of information for prescribers be made available for distribution. We currently recognize a circular of information prepared jointly by the AABB (formerly known as the American Association of Blood Banks), the American Red Cross, America's Blood Centers, and the Armed Services Blood Program as acceptable.

We specifically invite public comments on the following topics with respect to PMI for blood and blood components:

1. Informational materials that are currently available to patients who receive blood or blood components for transfusion on an outpatient basis, including the adequacy of such information.
2. The difference in the proposed requirements for applicants that FDA should consider in finalizing the rule (*i.e.,* the requirement to submit PMI to FDA for approval).
3. The feasibility of industry jointly developing PMI documents for blood and blood components intended for transfusion on an outpatient basis and the timeframe needed to develop the documents.
4. The electronic storage of PMI for blood and blood components on the FDA website *https://labels.fda.gov.*

We also request public comments on the feasibility of blood transfusion services, as the authorized dispenser of blood and blood components, providing PMI to patients (or patients' agents) who are administered blood or blood components on an outpatient basis.

At this time, we are not proposing an implementation schedule for blood collection establishments to develop PMI and for applicants to submit it to FDA for approval. We propose that the final rule may include staggered implementation schedules for blood collection establishments and transfusion services because of the need to explore the feasibility of industry jointly developing PMI documents.

VI. Electronic Repository for Patient Medication Information

PMI for prescription drug products would be stored electronically in the FDA labeling repository at *https://labels.fda.gov* that currently holds PI, FDA-approved patient labeling, and carton and container labeling submitted to us under current requirements, such as labeling, listing information, and annual reports. PMI for blood and blood components will either be stored electronically in the FDA labeling repository (*https://labels.fda.gov*) or a link will be provided at *https://labels.fda.gov* to the site where they are stored electronically. The FDA labeling repository is searchable by proprietary name (if any), active ingredient, company name, National Drug Code number, application number or regulatory citation, and proprietary name and company. The labeling found in the repository will be compliant with section 508 of The Rehabilitation Act of 1973 requirements, which can help to provide broader access to patients.

The purpose of the electronic repository would be to provide a single online electronic data source that allows easy open access to PMI. Maintaining PMI in an electronic format would allow patients, healthcare providers, and pharmacies open access to up-to-date PMI.

VII. Proposed Effective Date

We propose that a final rule based on this proposed rule become effective 6 months after the date the final rule publishes in the **Federal Register**. Given the number of prescription drug products that will be impacted by this proposed rule, the constraints on our resources, and the need to provide applicants with sufficient time to create PMI and submit it to FDA, we understand that 6 months is not likely to be sufficient time to fully implement this rule. Thus, we are proposing to follow the implementation plan set out in section V.J of this document.

VIII. Preliminary Economic Analysis of Impacts

We have examined the impacts of the proposed rule under Executive Order 12866, Executive Order 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Orders 12866 and 13563 direct us to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The Office of Information and Regulatory Affairs has determined that this proposed rule is a significant regulatory action as defined by Executive Order 12866, section 3(f)(1).

The Regulatory Flexibility Act requires us to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because we find the cost of the proposed rule to be a substantial percentage of sales for small businesses, we find that the proposed rule will have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (section 202(a)) requires us to prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing "any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any one year." The current threshold after adjustment for inflation is $177 million, using the most current (2022) Implicit Price Deflator for the Gross Domestic Product. This proposed rule would not result in an expenditure in any year that meets or exceeds this amount.

A. Summary of Costs and Benefits

This proposed rule would require that human prescription drug products used, dispensed, or administered on an outpatient basis, including blood and blood components transfused in an

outpatient setting, be accompanied by a one-page product information document, or Medication Guide, known as Patient Medication Information (PMI). Manufacturers of these products would be required to create PMI according to standardized content and format requirements. PMI would be reviewed and approved by FDA and stored in an online, central repository accessible to the public. Firms would incur costs to develop PMI. FDA would incur costs to review PMI as well as to establish and maintain the online database. For a small subset of drug products, FDA would also incur costs to develop a template for PMI. Dispensers may face additional costs to print and distribute PMI. Firms that currently supply Consumer Medication Information (CMI) to pharmacies may also incur costs associated with switching from CMI to PMI. PMI would provide the public with FDA-approved labeling that is created specifically for patients. The public would benefit from this labeling with decreased search costs for information. The public may also benefit from a reduction in risk associated with their drug products, including blood and blood component products transfused in outpatient settings, due to the availability of PMI if the new labeling helps patients make better healthcare decisions.

In our primary analysis, we assume that all products subject to the rule would stay on the market. However, we observe that the costs of creating, updating, or submitting PMI could exceed the profits for certain low-revenue drug products. Some of these products would be eligible for a waiver or extension of the requirements of PMI, for example, if complying with the requirements could contribute to a drug shortage or otherwise impede patient access. For those products not eligible for a waiver or extension, firms may choose to discontinue marketing the drugs, which would lead to additional social costs under the proposed rule. We perform additional analyses to better understand how the costs and benefits of the rule would be affected by waivers and extensions or discontinuations of drug products.

The costs and benefits of the proposed rule are summarized in table 2. This table shows the estimated average annualized net costs of this rule, using both 7 and 3 percent annual discount rates over a 10-year evaluation period. We estimate that the present value of net costs over 10 years would range from $105.0 to $312.5 million, with a primary estimate of $192.8 million, at a 3 percent discount rate and from $89.0 to $263.6 million, with a primary estimate of $162.6 million, at a 7 percent discount rate. Annualizing these costs over 10 years, we estimate the cost would range from $12.3 to $36.6 million per year at a 3 percent discount rate, with a primary estimate of $22.6 million per year, and from $12.7 to $37.5 million per year using a discount rate of 7 percent, with a primary estimate of $23.2 million.

Table 2 also shows the estimated annualized benefits and other non-quantified benefits. The monetized benefit of this rule would result from decreased search costs for information pertaining to drug, blood, and blood component products received in outpatient settings. We estimate that the present discounted value of these potential benefits from PMI over 10 years would range between $127.5 million and $4.3 billion using a 3 percent discount rate, with a primary estimate of $1.6 billion; using a 7 percent discount rate, the present-value benefits from PMI would range between $101.0 million and $3.4 billion, with a primary estimate of $1.3 billion. Annualized over 10 years, we estimate that the benefit from PMI would range between $14.9 and $507.9 million per year, with a primary estimate of $188.0 million, using a 3 percent discount rate; with a 7 percent discount rate, we estimate the annualized benefit to range between $14.4 and $486.8 million, with a primary estimate of $180.5 million per year. In addition to these monetized benefits, patients may experience a reduction in risk associated with drug, blood, and blood component products if PMI leads them to make better, more informed healthcare decisions.

TABLE 2—SUMMARY OF BENEFITS, COSTS, AND DISTRIBUTIONAL EFFECTS OF THE PROPOSED RULE

Category	Primary estimate	Low estimate	High estimate	Units			Notes
				Year dollars	Discount rate (%)	Period covered (years)	
Benefits:							
Annualized Monetized $m/year	$180.5	$14.4	$486.8	2020	7	10	
	188.0	14.9	507.9	2020	3	10	
Annualized Quantified					7		
					3		
Qualitative	Risk reduction from improved access to information.						
Costs:							
Annualized Monetized $m/year	23.2	12.7	37.5	2020	7	10	
	22.6	12.3	36.6	2020	3	10	
Annualized Quantified					7		
					3		
Qualitative							
Transfers:							
Federal Annualized Monetized $m/year					7		
					3		
From/To	From:			To:			
Other Annualized Monetized $m/year					7		
					3		
From/To	From:			To:			

Effects:
State, Local or Tribal Government: No effect.
Small Business: Potential for significant impact on the smallest firms.

TABLE 2—SUMMARY OF BENEFITS, COSTS, AND DISTRIBUTIONAL EFFECTS OF THE PROPOSED RULE—Continued

Category	Primary estimate	Low estimate	High estimate	Units			Notes
				Year dollars	Discount rate (%)	Period covered (years)	
Wages: No effect. Growth: No effect.							

In calculating the costs discussed above, we have netted out the cost savings that would stem from this proposed rule. PMI would replace the current Medication Guides and Patient Package Inserts; therefore, manufacturers would not need to create or submit updates to their Medication Guides and Patient Package Inserts, which would result in cost savings to those manufacturers.

B. Summary of Regulatory Flexibility Analysis

To determine the impact of the proposed rule on small entities that manufacture reference drug products, we compare the cost of the rule to the total U.S. sales, as reported by Dun and Bradstreet, of the small entities. For all such firms with 1,000 or fewer employees, we estimate the average cost of PMI to range between 0.2 and 1.0 percent of sales. The largest impact would be felt by the smallest firms; for firms with one to five employees, we estimate that the cost of PMI would range between 1.4 and 7.1 percent of sales. To determine the impact of the proposed rule on small entities that manufacture non-reference drug products, we estimate the average annualized cost of PMI and compare that to the firms' estimated receipts by firm size. For firms that manufacture non-reference products with 499 or fewer employees, we estimate the average cost of PMI to range between 0.02 and 0.05 percent of receipts. The largest impact would again be felt by the smallest firms; for such firms with 1 to 19 employees, we estimate the average cost of PMI would range between 0.04 and 0.10 percent of receipts. To determine the impact of the proposed rule on small entities that manufacture blood and blood component products for transfusion in an outpatient setting, we estimate the average annualized cost of PMI and compare that to the sales data for U.S. firms obtained from Dun and Bradstreet. We estimate that the annualized cost of PMI would represent less than one tenth of a percent of annual sales under any cost or discounting scenario for these firms. Given that we find the cost of the proposed rule to be a substantial percentage of sales for small businesses that manufacture drug products, the Agency concludes that this rule, if finalized, would have a significant adverse impact on a substantial number of small entities.

We have developed a comprehensive Economic Analysis of Impacts that assesses the impacts of the proposed rule. The full preliminary analysis of economic impacts is available in the docket for this proposed rule (Ref. 48) and at *https://www.fda.gov/about-fda/reports/economic-impact-analyses-fda-regulations.*

IX. Analysis of Environmental Impact

We have determined under 21 CFR 25.30(h) and (k) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

X. Paperwork Reduction Act of 1995

This proposed rule contains information collection provisions that are subject to review by OMB under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). A description of these provisions is given in the *Description* section of this document with an estimate of the annual reporting and third-party disclosure, including an estimate of the one-time reporting and one-time third-party disclosure. Included in the estimate is the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Title: Medication Guides: Patient Medication Information (part 208)—OMB Control Number 0910–0393—Revision.

Description: We are proposing to amend our regulations governing human prescription drug product labeling. The proposed rule would revise part 208 concerning Medication Guides and part 606 for blood and blood components intended for transfusion. With certain exceptions, the proposed rule would require applicants to create a new type of Medication Guide, called PMI, for human prescription drug products (for the purposes of this proposed rule, a drug product also includes a biological product licensed under section 351(a) and (k) of the PHS Act), used, dispensed, or administered on an outpatient basis. Blood establishments would also be required to create PMI for blood and blood components intended for transfusion administered on an outpatient basis. The goal of the proposed rule is to improve public health by providing clear, concise, accessible, and useful written prescription drug product information available in a consistent and easily understood format to help patients use their prescription drug products safely and effectively.

Patients need prescription drug product information that is clear, concise, and consumer-friendly. To improve how patients receive prescription drug product information, we are proposing to require that applicants of human prescription drug products used, dispensed, or administered on an outpatient basis and establishments that collect blood and blood components transfused in an outpatient setting create PMI in a one-page document with standardized format and content. All PMI would be based on and consistent with the PI and the labeling requirements under §§ 201.56, 201.57, 201.80, and 606.122. Additionally, PMI in electronic format would need to be printable and identical to PMI in paper format.

Applicants of NDAs and BLAs would be required to create PMI and submit it

to FDA for approval. While all blood establishments would be required to create PMI, only licensed establishments would be required to submit PMI to FDA. The proposed rule covers NDAs including 505(b)(1) and(2) applications and BLAs including interchangeable biosimilars and non-interchangeable biosimilars. Additional information to help with drafting biosimilar labeling is available in the final guidance for industry entitled ''Labeling for Biosimilar Products'' (available at *https://www.fda.gov/media/96894/download*). Any specific recommendations for labeling for interchangeable products will be provided in future guidance. We invite comments on whether interchangeable products would have to have their own PMI or whether they would copy the PMI of the reference product to which they would be interchangeable.

Applicants of ANDAs for a prescription drug product approved or submitted for approval that rely on an RLD with an FDA-approved PMI would be required to submit a PMI to FDA for approval. The PMI for these ANDAs would be the same as the PMI approved for the RLD upon which its approval is based, except for changes required or permissible differences pursuant to § 314.94(a)(8)(iv).

In addition, applicants of ANDAs that refer to a listed drug approved under section 505(c) of the FD&C Act for which approval has been voluntarily withdrawn before the approval of PMI for the RLD would be required to submit a PMI. However, because of the limitations of 505(j) of the FD&C Act and to ensure that all ANDAs that refer to an RLD have the same PMI, FDA would create a PMI template for these ANDAs. The PMI for these ANDAs would be the same as the PMI template that FDA created except for changes required or permissible differences pursuant to § 314.94(a)(8)(iv).

Description of Respondents: The respondents to this collection of information are applicants of NDAs and BLAs; applicants of ANDAs; and authorized dispensers of human prescription drug products used, dispensed, or administered on an outpatient basis, including authorized dispensers of transfusion services that provide blood or blood components for administration on an outpatient basis.

For the purposes of this analysis, we estimated the burden on applicants of ANDAs by estimating the number of ANDA products that reference an NDA RLD.

There are five human blood and blood component products intended for transfusion that could be administered on an outpatient basis that would need PMI: (1) whole blood, (2) red blood cells, (3) platelets, (4) plasma, and (5) cryoprecipitate antihemophilic factor. Based on past experience with development of information available for distribution with blood and blood components for transfusion (for example, circular of information), FDA assumes that a single PMI document would be developed for each blood or blood component. Thus, for the purposes of this analysis, FDA assumes that five PMI documents would be created initially for human blood and blood component products and considers this as part of the estimate for BLAs.

We estimate the burden associated with this collection of information as follows:

One-Time Burdens

If the proposed rule is finalized, it will impose a one-time burden for respondents with regard to both reporting and third-party disclosure. To minimize this burden on respondents, FDA is proposing a 5-year implementation schedule as shown in table 3 of this document that is proposed to be codified at § 208.80.

TABLE 3—ONE-TIME BURDEN [1]

21 CFR section and activity	Years in which burden occurs after the effective date of the final rule	Number of respondents	Number of responses per respondent	Total responses	Average burden per response	Total hours
One-Time Reporting for Applicants of Existing and Pending NDAs and BLAs To Create and Submit PMI To FDA						
PMI for NDAs and BLAs Submitted Under §§ 314.70 and 601.12 (NDAs and BLAs approved on or before the effective date of the final rule based on this proposed rule) (§§ 208.50 and 208.60, and 606.123(a)).	Year 1	1,669	0.32	529	320	169,280
	Year 2	1,669	0.32	529	320	169,280
	Year 3	1,669	0.32	529	320	169,280
	Year 4	1,669	0.32	529	320	169,280
	Year 5	1,669	0.32	528	320	168,960
Subtotal						846,080
PMI for Pending NDAs and BLAs Submitted Under §§ 314.60 and 601.2 (NDAs and BLAs pending on the effective date of the final rule based on this proposed rule) (§§ 208.50 and 208.60, and 606.123(a)).	Year 1	7	1	7	320	2,240
Subtotal						849,166
One-Time Reporting for Applicants of Existing and Pending ANDAs To Create and Submit PMI to FDA						
PMI for ANDAs Submitted Under § 314.97 (ANDAs approved on or before the effective date of the final rule based on this proposed rule) (§§ 208.50 and 208.60).	Year 1	840	1.48	1,240	27	33,480
	Year 2	840	1.48	1,240	27	33,480

Total						1,806,927

[1] Numbers have been rounded to the nearest hundredth.

Applicants of NDAs and BLAs will incur a one-time regulatory burden for applications that are approved on or before or are pending on the effective date of the final rule based on this proposed rule associated with creating PMI and submitting PMI to FDA for approval as required under proposed §§ 208.50, 208.60, and 606.123(a). We also anticipate that applicants of ANDAs will incur a one-time regulatory burden associated with creating PMI and submitting PMI to FDA for approval as required under proposed §§ 208.50 and 208.60 for applications that are approved on or before or are pending on the effective date of the final rule. This one-time regulatory burden for all affected applicants with applications approved on or before the effective date would be distributed over a 5-year implementation period after the effective date of the final rule based on the proposed rule. The implementation schedule is shown in table 3 of this document and is proposed to be codified at § 208.80.

Proposed § 208.80(a) would require an implementation schedule for applicants of NDAs and BLAs approved on or before the effective date of the final rule (existing drug products) to submit PMI for applications on a staggered basis, beginning 1 year after the effective date of the final rule. The timeframe by which applicants would be required to submit PMI to FDA for approval would primarily be based on when the application or the application's efficacy supplement was approved. Table 3 of this document provides an estimate of the one-time reporting burden for existing drug products associated with creating PMI and submitting PMI to FDA in a supplement. Based on information available in our establishment and product listing database for drug and biological products, we estimate that 1,669 applicants of NDAs and BLAs (1,453 NDA applicants + 216 BLA applicants) will be affected by this proposed rule. Collectively, these respondents are responsible for submitting a labeling supplement with PMI for 2,644 existing drug products. The number of existing drug products was estimated based on an analysis of data from the Orange Book: Approved Drug Products With Therapeutic Equivalence Evaluations (available at *https://www.accessdata.fda.gov/scripts/cder/ob/default.cfm*) and the Purple Book: Lists of Licensed Biological Products With Reference Products Exclusivity and Biosimilarity Interchangeability Evaluation (available at *https://www.fda.gov/Drugs/DevelopmentApprovalProcess/HowDrugsareDevelopedandApproved/ApprovalApplications/TherapeuticBiologicApplications/Biosimilars/ucm411418.htm*) to determine the number of unique products on the market that are used primarily in outpatient settings. These applicants would submit a labeling supplement with PMI for approximately 528.8 products each year over a 5-year implementation period (a total of 2,644 products), beginning 1 year after the effective date of the final rule based on this proposed rule and continuing for 5 years (table 3 of this document).

Additionally, applicants of applications pending at the time the final rule becomes effective may need to amend their NDAs and BLAs to comply with the PMI requirements in proposed part 208. Based on our experience with labeling submissions, we have estimated that 5 percent of 134 NDAs and BLAs submitted under §§ 314.60 and 601.2 will be pending at the time the final rule based on this proposed rule becomes effective. Therefore, we assume that approximately seven applicants of NDAs and BLAs will submit amendments to their NDA or BLA to include PMI for seven pending applications on the effective date of the final rule (table 3 of this document).

Based on our experience with labeling submissions for medication guides and PPIs, we estimate that approximately 320 hours, on average, would be needed for applicants of NDAs and BLAs to create PMI and submit PMI to FDA for approval. This estimate subtotals 849,166 hours for applicants of NDAs and BLAs that are approved on or before or are pending on the effective date of the final rule (846,080 hours for NDAs and BLAs approved on or before the effective date of the final rule + 2,240 hours for NDAs and BLAs pending on the effective date of the final rule) (table 3 of this document).

Under proposed part 208, applicants of ANDAs approved on or before the effective date of the final rule (existing ANDAs) would be required to submit PMI to FDA in a supplement after the PMI is approved for the RLD product or after the PMI template that FDA created is provided, whichever applies. Table 3 of this document provides an estimate of the one-time reporting burden associated with existing ANDAs. Based on information available in our establishment and product listing database for drug and biological products, we estimate that 840 applicants of existing ANDAs will be affected by this proposed rule. Collectively, these respondents are responsible for submitting a labeling supplement with PMI for approximately 6,200 existing ANDAs (estimate based on data from the Orange Book from May 2018 of non-RLD ANDAs on the market) over a 5-year period, beginning 1 year after the effective date of the final rule based on this proposed rule and continuing for 5 years (approximately 1,240 per year).

Additionally, applicants of ANDAs pending at the time the final rule becomes effective would be required to submit PMI in an amendment after the PMI is approved for the RLD product or after the PMI template that FDA created is provided, whichever applies. Table 3

of this document provides an estimate of the one-time reporting burden associated with pending ANDAs. Using our experience with labeling submissions, we have estimated that 5 percent of the 1,186 ANDAs will be pending when the final rule based on this proposed rule becomes effective (59 pending ANDAs). We estimate that approximately 13 applicants of ANDAs will submit amendments to their ANDA to include PMI for 59 pending ANDAs.

Based on our experience with labeling and submissions, we estimate that approximately 27 hours, on average, would be needed for applicants of ANDAs to create PMI and submit PMI to FDA for approval. This estimate subtotals 168,993 hours for applicants of existing and pending ANDAs (167,400 hours for existing ANDAs + 1,593 for pending ANDAs) (table 3 of this document).

In some circumstances, an applicant may request or FDA may initiate a waiver under proposed § 208.90 or proposed § 606.123(c) of a PMI requirement, such as the content and format requirements. Based on our experience with labeling submissions, we estimate that 3 percent of the 2,529 applicants of existing and pending NDAs, BLAs, and ANDAs (1,669 applicants for existing NDAs and BLAs + 7 applicants of pending NDAs and BLAs + 840 applicants of existing ANDAs + 13 applicants of pending ANDAs) will request a waiver for a PMI requirement, approximately 76 applicants (table 3 of this document). We estimate that each applicant would submit one request, for a total of 76 requests. These requests would be submitted to us beginning 1 year after the effective date of the final rule and would be submitted throughout the 5-year implementation timeframe (table 3 of this document). The average burden per response is the estimated number of hours an applicant would spend creating and submitting the request to FDA. Based on our experience with labeling submissions, we estimate that approximately 4 hours, on average, would be needed per submission, subtotaling 304 hours (table 4 of this document).

To reduce the burden for authorized dispensers, FDA will submit PMI electronically for storage in a central repository. As a part of authorized dispensers' and transfusion services' normal business workflow, they will be able to download PMI from the central repository, integrate PMI into their existing software system, and provide PMI to patients as required under proposed §§ 208.70 and 606.123(b). As such, authorized dispensers and transfusion services will incur a one-time burden to download and integrate PMI into their existing software system. While a healthcare provider can administer or provide a prescription drug product directly to a patient, FDA expects authorized dispensers will generally be pharmacists at retail pharmacies in most instances. Based on an analysis of pharmacy ownership and the number of owners with multiple pharmacies, we expect that 44,318 pharmacies could incur the burden associated with these activities. Additionally, we have estimated that 4,961 transfusion services will incur the burden associated with these activities, totaling 49,279 respondents for this burden. The average burden per recordkeeping is the estimated number of hours an authorized dispenser would spend downloading PMI into their existing software system. FDA estimates that approximately 16 hours would be needed to download and integrate PMI into the existing software system, totaling 788,464 hours (table 3 of this document).

Reporting

Table 4 shows the estimated annual reporting burden associated with this collection of information.

TABLE 4—ESTIMATED ANNUAL REPORTING BURDEN [1] [2]

21 CFR section and activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
PMI for NDAs and BLAs (§§ 208.50(a) and 208.60(a), and 606.123(a))	108	1.1	119	320	38,080
PMI for ANDAs (§ 208.50(b) and 208.60(b))	251	4.73	1,186	27	32,022
Waiver Requests for PMI requirements (§§ 208.90 and 606.123(c))	1,489	1	1,489	4	5,956
Medication Guides Submitted with NDAs and BLAs (§ 208.94 (previously § 208.20))	57	1	57	320	18,240
Medication Guides Submitted as Supplements or Updates (§ 208.94 (previously § 208.26(a)))	108	1	108	72	7,776
Exemptions and Deferrals for Medication Guides (§ 208.98 (previously § 208.20))	1	1	1	4	4
Total					102,078

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.
[2] Numbers have been rounded to the nearest hundredth.

Under proposed §§ 208.50(a), 208.60(a), and 606.123(a), applicants of NDAs or BLAs would be required to create PMI and submit PMI to FDA as part of the respective application. Based on our review of the annual Prescription Drug User Fee Act performance reports from 1993 to 2014, we estimate that 108 applicants of NDAs and BLAs will submit an NDA under § 314.50 or a BLA under § 601.2 for 119 new drug products annually, on average. Based on our experience with the information collection, we estimate that this activity will require 320 hours per submission. We calculate, therefore, an annual burden of 38,080 hours as reflected in table 4 of this document.

Under proposed §§ 208.50(b) and 208.60(b), applicants of ANDAs (new ANDAs) would be required to submit PMI to FDA as a part of the application. Accordingly, based on current data, we estimate that 251 ANDA applicants will submit PMI to FDA for approval, resulting in 1,186 submissions annually. Based on our experience with labeling submissions, we estimate that this activity will require an average of 27 hours per submission for a total of 32,022 hours annually as reflected in table 4 of this document.

Under proposed §§ 208.90 and 606.123(c), any covered entity may submit a request for a waiver. Covered entities would include applicants and authorized dispensers. Based on our experience with labeling submissions, we estimate that 3 percent of the 359 applicants (108 NDA applicants and BLA applicants + 251 ANDA applicants) of new drug products and new ANDAs will request a waiver from a PMI requirement, approximately 11 applicants submitting 1 NDA, BLA, or ANDA each. The average burden per response is the estimated number of hours an applicant would spend creating and submitting the request to FDA. Based on our experience with labeling submissions, we estimate that

approximately 4 hours, on average, would be needed per submission, subtotaling 44 hours. Additionally, under proposed § 208.90, authorized dispensers and under proposed § 606.123(c) transfusion services may request a waiver for any requirement related to providing PMI to patients. Based on our experience with the information collection, we estimate that 1,478 authorized dispensers and transfusion services (3 percent of 49,279 authorized dispensers and transfusion services) will each request 1 waiver from a PMI requirement. We estimate that the average burden per response is 4 hours. Therefore, we estimate that 1,489 covered entities/respondents (11 applicants of NDAs, BLAs, and ANDAs + 1,478 authorized dispensers and transfusion services) will request 1 waiver from a PMI requirement, totaling 5,956 hours (44 hours for NDA, BLA, or ANDA applicants + 5,912 hours for authorized dispensers and transfusion services), as reflected in table 4 of this document.

We propose to relocate current §§ 208.20 and 208.26(a) to proposed §§ 208.94 and 208.98. We have retained the estimates for current §§ 208.20 and 208.26(a) as previously approved by OMB under control number 0910–0393 as reflected in table 4 of this document.

Third-Party Disclosure

Table 5 shows the estimated annual third-party disclosure associated with this collection of information.

TABLE 5—ESTIMATED ANNUAL THIRD-PARTY DISCLOSURE BURDEN [1] [2]

21 CFR section and activity	Number of respondents	Number of disclosures per respondent	Total annual disclosures	Average burden per disclosure	Total hours
Downloading PMI into Database (§§ 208.70 and 606.123(b))	49,276	12	591,312	0.5 (30 minutes)	295,656
Providing PMI to Patients (§§ 208.70 and 606.123(b))	93,697	45,924.63	4,303,000,000	0.02 (1 minute)	86,060,000
Medication Guide from Packer/Distributor to Authorized Dispenser (§ 208.96 (previously § 208.24(c)).	191	9,000	1,719,000	1.25	2,148,750
Medication Guide from Authorized Dispenser to Patient (§ 208.96 (previously § 208.24(e)).	88,736	5,705	506,238,880	0.05 (3 minutes)	25,311,944
Total					113,816,350

[1] There are no capital or operating and maintenance costs associated with this collection of information.
[2] Numbers have been rounded to the nearest hundredth.

Authorized dispensers, including transfusion services, would also be required to download updated PMI into their existing software system on a regular basis to ensure that patients receive the most up-to-date PMI. We anticipate that PMI would be updated in the central repository monthly. Therefore, authorized dispensers would need to download updated and new PMI from the central repository monthly. Consistent with our estimates to download and integrate PMI, we anticipate that 49,276 authorized dispensers could incur the burden associated with this activity. The average burden per recordkeeping is the estimated number of hours an authorized dispenser would spend downloading updated PMI into their existing software system. We estimate that 0.5 hours (30 minutes) would be needed to update PMI monthly, totaling 295,656 hours as reflected in table 5 of this document.

Proposed §§ 208.70(a) and 606.123(b) would require that authorized dispensers of human prescription drug products and transfusion services, respectively, provide FDA-approved PMI to patients when such PMI is available. Authorized dispensers and transfusion services must be capable of providing PMI in paper format to patients; however, they may provide PMI in electronic format to patients. Estimated printing costs will be equivalent to current printing costs, because dispensers already provide written information in paper format to patients. Further, we do not expect that dispensers will incur additional costs when printing PMI, because the length of PMI will be shorter than written information currently provided to patients. Because providing prescription drug product information to patients is currently a part of authorized dispensers' business practices and we are proposing that PMI be limited to one page, we anticipate time and effort for dispensers will be reduced.

Authorized dispensers and transfusion services may provide PMI in electronic format to patients when requested. Based on the normal course of their activities, many pharmacies may already have the contact information in patients' profiles. As a result, dispensers could expeditiously provide patients with PMI electronically.

Based on current data, we estimate that 88,736 pharmacies and 4,961 transfusion services could be affected by proposed §§ 208.70 and 606.123(b), respectively. These respondents would be responsible for providing to patients PMI for human prescription drug products used, dispensed, or administered on an outpatient basis or when patients receive transfusions on an outpatient basis. Collectively, these respondents are responsible for dispensing 4.3 billion prescriptions annually and 3 million transfusions annually. We estimate that it will take dispensers an average of 0.02 hours (1 minute) to provide PMI to patients for a total of 86,060,000 hours annually as reflected in table 5 of this document.

We propose to relocate current § 208.24(c) and (e) to proposed § 208.96. We have retained the estimates for current § 208.24(c) and (e) as previously approved under OMB control number 0910–0393 as reflected in table 5 of this document.

To ensure that comments on information collection are received, OMB recommends that written comments be submitted at *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. The title of this proposed collection is ''Medication Guides: Patient Medication Information.'' All comments should be identified with the title of the information collection.

In compliance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3407(d)), we have submitted the information collection provisions of this proposed rule to OMB for review. These information collection requirements will not be effective until FDA publishes a final rule, OMB approves the information collection requirements, and the rule goes into effect. FDA will announce OMB approval of these requirements in the **Federal Register**.

XI. Federalism

We have analyzed this proposed rule in accordance with the principles set

forth in Executive Order 13132. We have determined that this proposed rule does not contain policies that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, we conclude that the proposed rule does not contain policies that have federalism implications as defined in the Executive order and, consequently, a federalism summary impact statement is not required.

We are aware that States have laws or regulations that require pharmacists to counsel patients on the use of prescription drug products. We do not believe this proposed rule on PMI conflicts with such laws or regulations because this proposed rule would not affect any oral counseling requirements imposed by State laws or regulations. Nevertheless, we will continue to examine State laws for federalism purposes. We invite comments from interested persons, particularly with respect to State initiatives, to provide information to patients on prescription drug products used, dispensed, or administered on an outpatient basis.

XII. Consultation and Coordination With Indian Tribal Governments

We have analyzed this proposed rule in accordance with the principles set forth in Executive Order 13175. We have tentatively determined that the proposed rule does not contain policies that would have a substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. The Agency solicits comments from tribal officials on any potential impact on Indian Tribes from this proposed action.

List of Subjects

21 CFR Part 201

Drugs, Labeling, Reporting and recordkeeping requirements.

21 CFR Part 208

Labeling, Prescription drugs, Reporting and recordkeeping requirements.

21 CFR Part 314

Administrative practice and procedure, Confidential business information, Drugs, Reporting and recordkeeping requirements.

21 CFR Part 606

Blood, Labeling, Laboratories, Reporting and recordkeeping requirements.

21 CFR Part 610

Biologics, Labeling, Reporting and recordkeeping requirements.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, the FDA proposes to amend 21 CFR parts 201, 208, 314, 606, and 610 as follows:

PART 201—LABELING

■ 1. The authority citation for part 201 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 343, 351, 352, 353, 355, 358, 360, 360b, 360ccc, 360ccc–1, 360ee, 360gg–360ss, 371, 374, 379e; 42 U.S.C. 216, 241, 262, 264.

■ 2. In § 201.57, revise the last two sentences of paragraph (c)(18) to read as follows:

§ 201.57 Specific requirements on content and format of labeling for human prescription drug and biological products described in § 201.56(b)(1).

* * * * *

(c) * * *

(18) * * * Any FDA-approved patient labeling printed immediately following this section or accompanying the labeling is subject to the type size requirements in paragraph (d)(6) of this section, except for a Medication Guide to be provided to patients in compliance with §§ 208.70 and 208.96 of this chapter. Medication Guides for

distribution to patients are subject to the type size requirements set forth in §§ 208.30 and 208.94 of this chapter.

* * * * *

■ 3. In § 201.80, revise the last two sentences of paragraph (f)(2) to read as follows:

§ 201.80 Specific requirements on content and format of labeling for human prescription drug and biological products; older drugs not described in § 201.56(b)(1).

* * * * *

(f) * * *

(2) * * * Any FDA-approved patient labeling must be referenced in this section, and the full text of such patient labeling must be reprinted immediately following the last section of labeling or must accompany the prescription drug product labeling. The type size requirement for the Medication Guide set forth in §§ 208.30 and 208.94 of this chapter does not apply to the Medication Guide that is reprinted in or that accompanies the prescription drug product labeling unless such Medication Guide is to be detached and provided or distributed to patients in compliance with §§ 208.70 and 208.96 of this chapter.

* * * * *

■ 4. In § 201.100, add paragraph (g) to read as follows:

§ 201.100 Prescription drugs for human use.

* * * * *

(g) When a Medication Guide is required under part 208 or § 606.123 of this chapter, the drug must have an approved Medication Guide and be dispensed with a Medication Guide (as described in part 208 or § 606.123 of this chapter).

■ 5. Revise part 208 to read as follows:

PART 208—MEDICATION GUIDES

Sec.

Subpart A—General Provisions for Patient Medication Information

208.10 Scope and purpose.
208.20 Definitions.

Subpart B—General Requirements for Patient Medication Information

208.30 Format of Patient Medication Information.
208.40 Content of Patient Medication Information.
208.50 Development of Patient Medication Information for new drug applications, biologics license applications, and abbreviated new drug applications.
208.60 Submission of Patient Medication Information for new drug applications, biologics license applications, and abbreviated new drug applications.
208.70 Providing Patient Medication Information to patients.
208.80 Schedule for implementing the general requirements for Patient Medication Information.
208.90 Waivers.

Subpart C—General Provisions for Medication Guides for Prescription Drug Products

208.91 Scope and purpose.
208.92 Definitions.

Subpart D—General Requirements for Medication Guides for Prescription Drug Products

208.94 Content and format of a Medication Guide.
208.96 Distributing and providing a Medication Guide.
208.98 Exemptions and deferrals.

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 356, 357, 360, 371, 374; 42 U.S.C. 262.

Subpart A—General Provisions for Patient Medication Information

§ 208.10 Scope and purpose.

(a) *Scope.* Subparts A and B of this part set forth requirements for patient labeling for prescription drug products used, dispensed, or administered on an outpatient basis. This patient labeling is a type of Medication Guide called Patient Medication Information. Any prescription drug product that is approved or submitted for approval under section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355) or section 351(a) or (k) of the Public Health Service Act (42 U.S.C. 262(a) or (k)) and that is used, dispensed, or administered on an outpatient basis is required to have the Food and Drug Administration (FDA)-approved Patient Medication Information, with the exception of excluded entities identified in paragraph (d) of this section.

(b) *Purpose.* Patient Medication Information for prescription drug products required under this part provides concise, accessible, and useful written prescription drug product information for patients. Patient Medication Information must be delivered in a consistent and easily understood format to help patients use their prescription drug products safely and effectively.

(c) *Covered entities.* (1) Applicants of prescription drug products approved or submitted for approval under section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355) or section 351(a) or (k) of the Public Health Service Act (42 U.S.C. 262(a) or (k)) must have FDA-approved Patient Medication Information for each prescription drug product used, dispensed, or administered on an outpatient basis, with the exception of excluded entities identified in paragraph (d) of this section.

(2) Authorized dispensers are required to provide patients with FDA-approved Patient Medication Information each time a prescription drug product is used, dispensed, or administered on an outpatient basis when such Patient Medication Information exists.

(d) *Excluded entities.* Applicants of prescription drug products that are preventive vaccines that do not have a Medication Guide (as required under subparts C and D of this part) are not required to submit Patient Medication Information to FDA for approval for those products unless FDA determines that Patient Medication Information is required for safe and/or effective use of the product.

§ 208.20 Definitions.

The following definitions apply to this part:

Administered means the act of directly providing a prescription drug product to a patient by injection, inhalation, ingestion, application, or any other means by a licensed healthcare provider (or a licensed healthcare provider's agent) or by a patient (or a patient's agent) under the direction of a licensed healthcare provider (or a licensed healthcare provider's agent). In some circumstances, a product can be both administered and dispensed at the same time.

Applicant means all of the following:

(1) Any person who submits an application or abbreviated application or an amendment or supplement to their application under part 314 or part 601 of this chapter to obtain FDA approval of a new drug or biological product and,

(2) Any person who owns an approved application or an abbreviated application.

Authorized dispenser means an individual(s) or entity who is licensed, registered, or otherwise permitted by the jurisdiction in which the individual(s) or entity practices to provide prescription drug products in the course of professional practice.

Dispensed means the act of providing a prescription drug product to a patient (or a patient's agent) in either of the following ways:

(1) By a licensed healthcare provider (or a licensed healthcare provider's agent), either directly or indirectly, for administration by the patient (or the patient's agent) under or outside of the licensed healthcare provider's direct supervision.

(2) By an authorized dispenser (or an authorized dispenser's agent) under a

lawful prescription of a licensed healthcare provider.

Drug name means the proprietary name, if any, and the established name of the drug (as defined in section 502(e)(3) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 352(e)(3)) or, for biological products, the proper name (as defined in § 600.3 of this chapter) including any appropriate descriptors.

Drug product means a finished dosage form (for example, tablet, capsule, solution), as defined in § 210.3 of this chapter, that contains a drug substance, generally, but not necessarily, in association with one or more other ingredients. For the purposes of this part, *drug product* also includes a biological product licensed under section 351(a) and (k) of the Public Health Service Act (42 U.S.C. 262(a) and (k)).

Licensed healthcare provider means an individual who is licensed, registered, or otherwise permitted by the jurisdiction in which the individual practices to prescribe drug products in the course of professional practice.

Manufacturer means all of the following:

(1) For a drug product that is not a biological product, the manufacturer as described in § 201.1 of this chapter.

(2) For a drug product that is a biological product, the manufacturer as described in § 600.3(t) of this chapter.

Patient means any individual to whom a drug product is intended to be or has been used, dispensed, or administered.

Patient Medication Information means a type of FDA-approved Medication Guide—a form of patient labeling—that conforms to the specifications set forth in subparts A and B of this part.

Revision date means the date (month/year) on which Patient Medication Information was initially approved or the date on which any changes have been made to the Patient Medication Information, whichever applies and whichever date is later.

Used (in relation to prescription drug products and Patient Medication Information) means the act of a patient (or a patient's agent) directly applying a prescription drug product to the body of the patient by injection, inhalation, ingestion, application, or any other means.

Subpart B—General Requirements for Patient Medication Information

§ 208.30 Format of Patient Medication Information.

(a) Patient Medication Information must meet the following requirements:

(1) Patient Medication Information must be written in English; provided, however, that in the case of articles distributed solely in the Commonwealth of Puerto Rico or in a Territory where the predominant language is one other than English, the predominant language may be substituted for English.

(2) Patient Medication Information provided to a patient in paper format must be legible and printed on a single side of an 8½ by 11-inch sheet of paper. It must not exceed a single page in length.

(3) Patient Medication Information provided in electronic format must be printable and produce a document that is identical to the Patient Medication Information in paper format.

(4) The required Patient Medication Information headings, subheadings, title ''PATIENT MEDICATION INFORMATION,'' and drug name(s), phonetic spelling of the drug name(s), dosage form(s), and route(s) of administration must appear in bold, beginning on the line immediately below the title.

(5) The title ''PATIENT MEDICATION INFORMATION'' must be presented in all uppercase letters. The proprietary name (if any) may be presented in all uppercase letters. Generally, no other words may be presented in all uppercase letters with the exception of commonly used acronyms.

(6) The title ''PATIENT MEDICATION INFORMATION'' and the drug name(s), phonetic spelling of the drug name(s), dosage form(s), and route(s) of administration beginning immediately below the title must appear centered at the top of the page.

(b) Patient Medication Information must *not* contain any of the following:

(1) Letter type that is less than 10-point font (1 point = 0.0138 inches) for any section of Patient Medication Information. However, the manufacturer's, packer's, and/or distributor's name and place of business (and the U.S. license number of the prescription drug product that is a biological product), the statement ''The content of this Patient Medication Information has been approved by the U.S. Food and Drug Administration,'' and the revision date can be less than 10-point font.

(2) Reverse type, lightface, shading, condensed type, or narrow fonts.

(3) Colors other than black type.

(4) Page number.

§ 208.40 Content of Patient Medication Information.

(a) *General content requirements for Patient Medication Information.* Patient Medication Information must meet all general content requirements as follows:

(1) Patient Medication Information must be easily read and understood by the general population, including individuals with low literacy and comprehension levels.

(2) Patient Medication Information must not be promotional in tone.

(3) The content of Patient Medication Information must be scientifically accurate, must not be false or misleading in any particular, and must be based on and consistent with the Prescribing Information (PI) for the prescription drug product required under §§ 201.56, 201.57, 201.80, and 606.122 of this chapter and section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355). Patient Medication Information for new drug applications and biologics license applications must be updated when new information becomes available that would cause the Patient Medication Information to become inaccurate, false, or misleading in accordance with §§ 314.70 and 601.12 of this chapter.

(4) The title ''PATIENT MEDICATION INFORMATION'' must appear at the top of the page.

(5) The drug name(s) must appear immediately below the title ''PATIENT MEDICATION INFORMATION'' and must include the phonetic spelling of the proprietary name, if any, and the established name (or the proper name) of the prescription drug product. The drug name(s) must be followed by the dosage form(s) and route(s) of administration. If the drug name needs to be used again throughout Patient Medication Information, only the proprietary name (if any) must be used. Those prescription drug products not having a proprietary name must use the established name or the proper name.

(6) The statement ''The content of this Patient Medication Information has been approved by the U.S. Food and Drug Administration'' must appear at the bottom of the page followed by the revision date.

(7) The name and place of business of the manufacturer, packer, or distributor of a prescription drug product that is not also a biological product must be included in Patient Medication Information below the statement required in paragraph (a)(6) of this section and the revision date. The licensed manufacturer's name, address, and U.S. license number of a prescription drug product that is also a biological product must be included in Patient Medication Information below the statement required in paragraph (a)(6) of this section and the revision date. The name and place of business of

the authorized dispenser may also be included in Patient Medication Information.

(8) Any heading, subheading, or specific information required under paragraphs (b) and (c) of this section that is inapplicable must be omitted from Patient Medication Information.

(b) *Required headings for Patient Medication Information.* Patient Medication Information must contain these headings in the following order if not omitted under paragraph (a)(8) of this section: [Insert drug name] is, Important Safety Information, Common Side Effects, Directions for Use.

(c) *Specific content required under headings for Patient Medication Information.* Each heading must contain the specific information as follows if not omitted under paragraph (a)(8) of this section:

(1) *[Insert drug name] is.* A concise summary of the outpatient indications and uses for the prescription drug product listed in the prescription drug product's Prescribing Information (PI). The information in this section would be consistent with the information found in the INDICATIONS AND USAGE section of the PI.

(2) *Important Safety Information.* This heading must contain these subheadings in the following order if not omitted under paragraph (a)(8) of this section:

(i) *Warnings.* A concise summary of serious warnings from the use of the prescription drug product, including any that may lead to death or serious injury. The *Warnings* subheading must include a summary of the information found in the prescription drug product's boxed warning, if any, that is most relevant for patients to know for the safe and effective use of the prescription drug product.

(ii) *Do not take.* A statement of the circumstances (if any) under which the prescription drug product should not be used because the risk of use outweighs any benefit. The information in the *Do not take* subheading would be consistent with the most relevant information to patients found in the CONTRAINDICATIONS section of the PI.

(iii) *Serious side effects.* A listing of the clinically significant adverse reactions or risks associated with the use of the prescription drug product that are most relevant to the patient, and information on when to call a healthcare provider or when and how to obtain emergency help if certain clinically significant adverse reactions occur. The information in the *Serious side effects* subheading must be consistent with either:

(A) The most relevant information to patients found in the ''WARNINGS AND PRECAUTIONS'' section for drug labeling that must meet the format and content requirements of §§ 201.56(d) and 201.57 of this chapter; or

(B) The ''WARNINGS'' section and the ''PRECAUTIONS'' section for drug labeling that must meet the format and content requirements of § 201.80 of this chapter.

(iv) *Tell your health care provider before taking.* A statement that identifies specific populations and conditions (if any) that may have clinically important differences in response to the prescription drug product or may change the recommendation for use of the prescription drug product.

(3) *Common Side Effects.* A statement of frequently occurring adverse reactions (if any) from the use of the prescription drug product, followed by the statement ''These are not all of the possible side effects of [Insert Drug Name]. Call your health care provider if you have side effects that worsen or do not go away. You may also report side effects to FDA at [insert current FDA telephone number and web address for voluntary reporting of adverse reactions].''

(4) *Directions for Use.* The statement ''Use exactly as prescribed'' must appear first after this heading. This statement must be followed by how the prescription drug product must be administered and the route of administration. ''Directions for Use'' also must contain basic directions for use and any special instructions on how to administer the drug (for example, whether it should be taken with food or taken at a period of time before or after eating certain foods, or what to do if a patient misses a scheduled dose). If applicable, this section includes a statement of special handling, storage conditions, and disposal information. The dosing and administration and the storage, handling, and disposal information must be consistent with the most relevant information to patients found in:

(i) The ''DOSAGE AND ADMINISTRATION'' section of the PI; and

(ii) The ''HOW SUPPLIED/STORAGE AND HANDLING'' section for drug labeling that must meet the format and content requirements of §§ 201.56(d) and 201.57 of this chapter or the ''HOW SUPPLIED'' section for drug labeling that must meet the format and content requirements of § 201.80 of this chapter. Additional FDA-approved patient labeling must be referenced, when applicable.

§ 208.50 Development of Patient Medication Information for new drug applications, biologics license applications, and abbreviated new drug applications.

(a) *New drug applications and biologics license applications.* The applicant of a new drug application (NDA) or a biologics license application (BLA) for a prescription drug product used, dispensed, or administered on an outpatient basis must create Patient Medication Information in accordance with the requirements set forth in this part and other applicable regulations. In certain circumstances, FDA may require more than one Patient Medication Information for a prescription drug product, associated with a single PI, when one Patient Medication Information cannot adequately convey the safe and effective use of the drug to patients.

(b) *Abbreviated new drug applications.* (1) Except as provided in paragraph (b)(2) of this section, the applicant of a prescription drug product approved or submitted for approval under section 505(j) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(j)) must have Patient Medication Information that is the same as that of the reference listed drug upon which its approval is based except for:

(i) Changes required because of differences approved under a suitability petition (see 505(j)(2)(C) of the Federal Food, Drug and Cosmetic Act and § 314.93 of this chapter); or

(ii) Changes permitted pursuant to § 314.94(a)(8)(iv) of this chapter.

(2) The applicant of a prescription drug product approved or submitted for approval under section 505(j) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(j)) that refers to a listed drug approved under section 505(c) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(c)) for which approval has been voluntarily withdrawn before the approval of the Patient Medication Information for the reference listed drug must have Patient Medication Information that is the same as that of the Patient Medication Information template that FDA creates for the prescription drug product except for:

(i) Changes required because of differences approved under a suitability petition (see 505(j)(2)(C) of the Federal Food, Drug and Cosmetic Act and § 314.93 of this chapter); or

(ii) Changes permitted pursuant to § 314.94(a)(8)(iv) of this chapter.

§ 208.60 Submission of Patient Medication Information for new drug applications, biologics license applications, and abbreviated new drug applications.

(a) *New drug applications and biologics license applications.* The NDA or BLA applicant must submit to FDA for approval as part of the application the Patient Medication Information along with the PI upon which the Patient Medication Information is based. If Patient Medication Information is submitted after approval of the NDA or BLA, the Patient Medication Information, along with the PI upon which the Patient Medication Information is based, must be submitted to FDA for approval in a prior approval supplement pursuant to §§ 314.70(b)(2)(v)(B) and 601.12(f)(1) of this chapter.

(b) *Abbreviated new drug applications.* The abbreviated new drug application (ANDA) applicant must submit Patient Medication Information to FDA for approval after either Patient Medication Information for the reference listed drug is approved or FDA has finalized the Patient Medication Information template and provides notice of the template to the applicant, whichever applies. If Patient Medication Information is submitted after the original approval of the ANDA, Patient Medication Information must be submitted in a supplement to the ANDA consistent with § 314.70 of this chapter.

§ 208.70 Providing Patient Medication Information to patients.

(a) When a prescription drug product is used, dispensed, or administered to a patient (or the patient's agent) on an outpatient basis, the authorized dispenser of a prescription drug product for which Patient Medication Information is required under subparts A and B of this part must provide FDA-approved Patient Medication Information to each patient (or the patient's agent). Authorized dispensers may provide Patient Medication Information to the patient electronically; however, paper distribution must always be available.

(b) An authorized dispenser is not subject to section 510 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360) (which requires the registration of those that engage in the manufacture, preparation, propagation, compounding, or processing of drugs and the listing of certain drugs in commercial distribution) solely because of an action performed by the authorized dispenser under this part.

§ 208.80 Schedule for implementing the general requirements for Patient Medication Information.

(a) *Implementation schedule for applicants to submit Patient Medication Information for NDAs and BLAs.* NDA and BLA applicants must submit to FDA Patient Medication Information that conforms to the requirements in subparts A and B of this part. If an approved NDA or a BLA has one or more approved efficacy supplements, use the NDA, BLA, or efficacy supplement approval date that triggers the earliest submission for the following implementation schedule:

(1) For products for which an NDA, a BLA, or an efficacy supplement is submitted for approval on or after [EFFECTIVE DATE OF FINAL RULE WILL BE ADDED], a Patient Medication Information must be submitted to FDA as part of the application.

(2) For products for which an NDA, a BLA, or an efficacy supplement is pending on [EFFECTIVE DATE OF FINAL RULE WILL BE ADDED], a supplement or, if appropriate, an amendment, with Patient Medication Information must be submitted to FDA no later than 1 year after the date of approval of the pending application.

(3) For products with an FDA-approved Medication Guide (as required under subparts C and D of this part) or an FDA-approved patient package insert (as required under § 310.501 or § 310.515 of this chapter) for which an NDA or a BLA has been approved on or any time before [EFFECTIVE DATE OF FINAL RULE WILL BE ADDED], a supplement with Patient Medication Information must be submitted to FDA no later than [DATE 1 YEAR AFTER EFFECTIVE DATE OF FINAL RULE WILL BE ADDED]. Once the product with an FDA-approved Medication Guide (as required under subparts C and D of this part) or an FDA-approved patient package insert (as required under § 310.501 or § 310.515 of this chapter) has FDA-approved Patient Medication Information, the Medication Guide requirements (under subparts C and D of this part) and the patient package insert requirements (§§ 310.501 and 310.515 of this chapter) are no longer applicable to such product.

(4) For products without an FDA-approved Medication Guide or an FDA-approved patient package insert for which an NDA, a BLA, or an efficacy supplement has been approved any time from January 1, 2013, up to and including [EFFECTIVE DATE OF FINAL RULE WILL BE ADDED], a supplement with Patient Medication Information must be submitted to FDA no later than [DATE 2 YEARS AFTER EFFECTIVE DATE OF FINAL RULE WILL BE ADDED].

(5) For products without an FDA-approved Medication Guide or an FDA-approved patient package insert for which an NDA, a BLA, or an efficacy supplement has been approved from January 1, 2008, up to and including December 31, 2012, a supplement with Patient Medication Information must be submitted to FDA no later than [DATE 3 YEARS AFTER EFFECTIVE DATE OF FINAL RULE WILL BE ADDED].

(6) For products without an FDA-approved Medication Guide or without an FDA-approved patient package insert for which an NDA, a BLA, or an efficacy supplement has been approved from January 1, 2003, up to and including December 31, 2007, a supplement with Patient Medication Information must be submitted to FDA no later than [DATE 4 YEARS AFTER EFFECTIVE DATE OF FINAL RULE WILL BE ADDED].

(7) For products without an FDA-approved Medication Guide or without an FDA-approved patient package insert for which an NDA, a BLA, or an efficacy supplement has been approved on or before December 31, 2002, a supplement with Patient Medication Information must be submitted to FDA no later than [DATE 5 YEARS AFTER EFFECTIVE DATE OF FINAL RULE WILL BE ADDED].

(b) *Implementation schedule for applicants to submit Patient Medication Information for ANDAs.* ANDA applicants must submit to FDA Patient Medication Information that conforms to the requirements in subparts A and B of this part and other applicable regulations.

(1) For products for which an ANDA is submitted for approval on or after [EFFECTIVE DATE OF FINAL RULE WILL BE ADDED], Patient Medication Information must be submitted to FDA as follows:

(i) If the Patient Medication Information for the reference listed drug is approved at the time the ANDA is submitted or if FDA has finalized the Patient Medication Information template and provides notice of the template to the applicant, whichever applies, Patient Medication Information must be submitted to FDA as part of the application.

(ii) If the Patient Medication Information for the reference listed drug is not approved or if FDA has not finalized the Patient Medication Information template and provided notice of the template to the applicant, whichever applies, at the time the ANDA is submitted but such Patient Medication Information is approved for the reference listed drug or FDA

finalizes the template and provides notice of the template to the applicant before the ANDA is approved, the applicant for the ANDA must submit Patient Medication Information in an amendment to the pending application after the approval of the Patient Medication Information for the reference listed drug or after FDA finalizes the Patient Medication Information template and provides notice of the template to the applicant, whichever applies.

(iii) If the Patient Medication Information for the reference listed drug is not approved or if FDA has not finalized the Patient Medication Information template and provided notice of the template to the applicant, whichever applies, before the submitted ANDA is approved, a supplement with the Patient Medication Information must be submitted to FDA, consistent with § 314.70 of this chapter, after the approval of the Patient Medication Information for the reference listed drug or after FDA finalizes the Patient Medication Information template and provides notice of the template to the applicant, whichever applies.

(2) For products for which an ANDA is pending on the [EFFECTIVE DATE OF FINAL RULE WILL BE ADDED], Patient Medication Information must be submitted as follows:

(i) If the Patient Medication Information for the reference listed drug is approved or if FDA finalizes the Patient Medication Information template and provides notice of the template to the applicant before the ANDA is approved, an amendment to the pending application with Patient Medication Information must be submitted to FDA after the approval of the Patient Medication Information for the reference listed drug or after FDA finalizes the Patient Medication Information template and provides notice of the template to the applicant, whichever applies.

(ii) If the Patient Medication Information for the reference listed drug is approved or if FDA finalizes the Patient Medication Information template and provides notice of the template to the applicant after the pending ANDA is approved, a supplement with Patient Medication Information must be submitted to FDA, consistent with § 314.70 of this chapter, after the approval of the Patient Medication Information for the reference listed drug or after FDA finalizes the Patient Medication Information template and provides notice of the template to the applicant, whichever applies.

(3) For products for which an ANDA has been approved on or any time before [EFFECTIVE DATE OF FINAL RULE WILL BE ADDED], a supplement with Patient Medication Information must be submitted to FDA, consistent with § 314.70 of this chapter, after the approval of the Patient Medication Information for the reference listed drug or after FDA finalizes the Patient Medication Information template and provides notice of the template to the applicant, whichever applies.

(c) *Implementation schedule for authorized dispensers to provide Patient Medication Information to patients.* Authorized dispensers must begin to provide FDA-approved Patient Medication Information as required under this section on [DATE 2 YEARS AFTER EFFECTIVE DATE OF FINAL RULE WILL BE ADDED] and must continue to provide FDA-approved Patient Medication Information thereafter. Once a product with an FDA-approved Medication Guide (as required under subparts C and D of this part) has FDA-approved Patient Medication Information, the requirements for providing a Medication Guide (under § 208.96) are no longer applicable for such product.

§ 208.90 Waivers.

On its own initiative or in response to a request from a covered entity, FDA may waive any Patient Medication Information requirement on the basis that the requirement is inapplicable, impracticable, or contrary to a patient's best interests (for example, impedes patient access to the drug product). FDA may consider an applicant's request for an extension from the specified implementation date to comply fully with the Patient Medication Information requirements. Written requests for waivers must be submitted to the director of the FDA division responsible for reviewing the marketing application for the drug product. For ANDAs, the requests for waivers and the rationale for the waiver would need to be submitted to the Director of the Office of Generic Drugs. For biological products, requests would be submitted to the FDA application division in the office with product responsibility.

Subpart C—General Provisions for Medication Guides for Prescription Drug Products

§ 208.91 Scope and purpose.

(a) Subparts C and D of this part set forth requirements for patient labeling for human prescription drug products, including biological products, that FDA determines pose a serious and significant public health concern requiring distribution of FDA-approved patient information. It applies primarily to human prescription drug products used on an outpatient basis without direct supervision by a health professional. Subparts C and D of this part apply to new prescriptions and refill prescriptions.

(b) The purpose of patient labeling for human prescription drug products required under this part is to provide information when FDA determines in writing that it is necessary to patients' safe and effective use of drug products.

(c) Patient labeling will be required if FDA determines that one or more of the following circumstances exists:

(1) The drug product is one for which patient labeling could help prevent serious adverse effects.

(2) The drug product is one that has serious risk(s) (relative to benefits) of which patients should be made aware because information concerning the risk(s) could affect a patient's decision to use or to continue to use the product.

(3) The drug product is important to health, and patient adherence to directions for use is crucial to the drug's effectiveness.

(d) Drug products described in § 208.10 must comply with subparts A and B of this part according to the implementation plan in § 208.80. Once a drug product has FDA-approved Patient Medication Information, the requirements for Medication Guides under subparts C and D of this part are no longer applicable.

§ 208.92 Definitions.

The following definitions apply to subparts C and D of this part:

Authorized dispenser means an individual who is licensed, registered, or otherwise permitted by the jurisdiction in which the individual practices to provide prescription drug products in the course of professional practice.

Dispensed means the act of providing a prescription drug product to a patient (or a patient's agent) by either of the following ways:

(1) By a licensed healthcare provider (or a licensed provider's agent), either directly or indirectly, for administration by the patient (or the patient's agent) or outside the licensed provider's direct supervision.

(2) By an authorized dispenser (or authorized dispenser's agent) under a lawful prescription of a licensed healthcare provider.

Distribute means the act of delivering, other than by dispensing, a drug product to any person.

Distributor means a person who distributes a drug product.

Drug product means a finished dosage form (for example, tablet, capsule, solution) that contains a drug substance, generally, but not necessarily, in association with one or more other ingredients. For the purposes of this part, drug product also includes a biological product licensed under section 351(a) and (k) of the Public Health Service Act (42 U.S.C. 262(a) and (k)).

Licensed healthcare provider means an individual who is licensed, registered, or otherwise permitted by the jurisdiction in which the individual practices to prescribe drug products in the course of professional practice.

Manufacturer means all of the following:

(1) For a drug product that is not also a biological product, both the manufacturer as described in § 201.1 of this chapter and the applicant as described in § 314.3(b) of this chapter.

(2) For a drug product that is also a biological product, the manufacturer as described in § 600.3(t) of this chapter.

Medication Guide means FDA-approved patient labeling conforming to the specifications set forth in subparts C and D of this part and other applicable regulations.

Packer means a person who packages a drug product.

Patient means any individual to whom a drug product is intended to be, or has been, used, dispensed, or administered.

Serious risk or serious adverse effect means an adverse drug experience, or the risk of such an experience, as that term is defined in §§ 310.305, 312.32, 314.80, and 600.80 of this chapter.

Subpart D—General Requirements for Medication Guides for Prescription Drug Products

§ 208.94 Content and format of a Medication Guide.

(a) A Medication Guide must meet all of the following conditions:

(1) The Medication Guide must be written in English, in nontechnical, understandable language, and shall not be promotional in tone.

(2) The Medication Guide must be scientifically accurate and must be based on, and must not conflict with, the approved professional labeling for the drug product under § 201.57 of this chapter, but the language of the Medication Guide need not be identical to the sections of approved labeling to which it corresponds.

(3) The Medication Guide must be specific and comprehensive.

(4) The letter height or type size must be no smaller than 10 points (1 point = 0.0138 inches) for all sections of the Medication Guide, except the manufacturer's name and address and the revision date.

(5) The Medication Guide must be legible and clearly presented. Where appropriate, the Medication Guide must also use boxes, bold or underlined print, or other highlighting techniques to emphasize specific portions of the text.

(6) The words ''Medication Guide'' must appear prominently at the top of the first page of a Medication Guide. The verbatim statement ''This Medication Guide has been approved by the U.S. Food and Drug Administration'' must appear at the bottom of a Medication Guide.

(7) The brand name and established or proper name of the drug product must appear immediately below the words ''Medication Guide.'' The established or proper name must be no less than one-half the height of the brand name.

(b) A Medication Guide must contain those of the following headings relevant to the drug product and to the need for the Medication Guide in the specified order. Each heading must contain the specific information as follows:

(1) The brand name (*e.g.,* the trademark or proprietary name), if any, and the established or proper name. Those products not having an established or proper name must be designated by their active ingredients. The Medication Guide must include the phonetic spelling of either the brand name or the established name, whichever is used throughout the Medication Guide.

(2) The heading ''What is the most important information I should know about (*name of drug*)?'' followed by a statement describing the particular serious and significant public health concern that has created the need for the Medication Guide. The statement must describe specifically what the patient should do or consider because of that concern, such as weighing particular risks against the benefits of the drug, avoiding particular behaviors (*e.g.,* activities, drugs), observing certain events (*e.g.,* symptoms, signs) that could prevent or mitigate a serious adverse effect, or engaging in particular behaviors (*e.g.,* adhering to the dosing regimen).

(3) The heading ''What is (*name of drug*)?'' followed by a section that identifies a drug product's indications for use. The Medication Guide must not identify an indication unless the indication is identified in the INDICATIONS AND USAGE section of the professional labeling for the product as required under § 201.57 of this chapter. In appropriate circumstances, this section may also explain the nature of the disease or condition the drug product is intended to treat, as well as the benefit(s) of treating the condition.

(4) The heading ''Who should not take (*name of drug*)?'' followed by information on circumstances under which the drug product should not be used for its labeled indication (its contraindications). The Medication Guide must contain directions regarding what to do if any of the contraindications apply to a patient, such as contacting the licensed provider or discontinuing use of the drug product.

(5) The heading ''How should I take (*name of drug*)?'' followed by information on the proper use of the drug product, such as:

(i) A statement stressing the importance of adhering to the dosing instructions, if this is particularly important;

(ii) A statement describing any special instructions on how to administer the drug product, if they are important to the drug's safety or effectiveness;

(iii) A statement of what patients should do in case of overdose of the drug product; and

(iv) A statement of what patients should do if they miss taking a scheduled dose(s) of the drug product, where there are data to support the advice, and where the wrong behavior could cause harm or lack of effect.

(6) The heading ''What should I avoid while taking (*name of drug*)?'' followed by a statement or statements of specific, important precautions patients should take to ensure proper use of the drug, including:

(i) A statement that identifies activities (such as driving or sunbathing) and drugs, foods, or other substances (such as tobacco or alcohol) that patients should avoid when using the medication;

(ii) A statement of the risks to mothers and fetuses from use of the drug during pregnancy if specific, important risks are known;

(iii) A statement of the risks of the drug product to nursing infants if specific, important risks are known;

(iv) A statement about pediatric risks if the drug product has specific hazards associated with its use in pediatric patients;

(v) A statement about geriatric risks if the drug product has specific hazards associated with its use in geriatric patients; and

(vi) A statement of special precautions if any, that apply to the safe and effective use of the drug product in other identifiable patient populations.

(7) The heading ''What are the possible or reasonably likely side effects of (*name of drug*)?'' followed by:

(i) A statement of the adverse reactions reasonably likely to be caused by the drug product that are serious or occur frequently.

(ii) A statement of the risk, if there is one, of patients' developing dependence on the drug product.

(iii) For drug products approved under section 505 of the Federal Food, Drug, and Cosmetic Act, the following verbatim statements: ''Call your doctor for medical advice about side effects. You may report side effects to FDA at 1–800–FDA–1088.''

(8) General information about the safe and effective use of prescription drug products, including:

(i) The verbatim statement ''Medicines are sometimes prescribed for purposes other than those listed in a Medication Guide'' followed by a statement that patients should ask health professionals about any concerns and a reference to the availability of professional labeling;

(ii) A statement that the drug product should not be used for a condition other than that for which it is prescribed or be given to other persons;

(iii) The name and place of business of the manufacturer, packer, or distributor of a drug product that is not also a biological product, or the name and place of business of the manufacturer or distributor of a drug product that is also a biological product, and in any case, the name and place of business of the dispenser of the product may also be included; and

(iv) The date, identified as such, of the most recent revision of the Medication Guide, placed immediately after the last section.

(9) Additional headings and subheadings may be interspersed throughout the Medication Guide, if appropriate.

§ 208.96 Distributing and providing a Medication Guide.

(a) The manufacturer of a drug product for which a Medication Guide is required under this part must obtain FDA approval of the Medication Guide before the Medication Guide may be distributed.

(b) Each manufacturer who ships a container of drug product for which a Medication Guide is required under this part is responsible for ensuring that Medication Guides are available for distribution to patients by either:

(1) Providing Medication Guides in sufficient numbers to distributors, packers, or authorized dispensers to permit the authorized dispenser to provide a Medication Guide to each patient receiving a prescription for the drug product; or

(2) Providing the means to produce Medication Guides in sufficient numbers to distributors, packers, or authorized dispensers to permit the authorized dispenser to provide a Medication Guide to each patient receiving a prescription for the drug product.

(c) Each distributor or packer that receives Medication Guides or has the means to produce Medication Guides from a manufacturer under paragraph (b) of this section must provide those Medication Guides or the means to produce Medication Guides to each authorized dispenser to whom it ships a container of drug product.

(d) The label of each container or package, where the container label is too small, of drug product for which a Medication Guide is required under this part must instruct the authorized dispenser to provide a Medication Guide to each patient to whom the drug product is dispensed and must state how the Medication Guide is provided. These statements must appear on the label in a prominent and conspicuous manner.

(e) Each authorized dispenser of a prescription drug product for which a Medication Guide is required under this part must, when the product is dispensed, provide a Medication Guide directly to each patient (or to the patient's agent) unless an exemption applies under § 208.98.

(f) An authorized dispenser or wholesaler is not subject to section 510 of the Federal Food, Drug, and Cosmetic Act, which requires the registration of producers of drugs and the listing of drugs in commercial distribution, solely because of an act performed by the authorized dispenser or wholesaler under this part.

§ 208.98 Exemptions and deferrals.

(a) FDA on its own initiative or in response to a written request from an applicant may exempt or defer any Medication Guide content or format requirement—except those requirements in § 208.94(a)(2) and (6)—on the basis that the requirement is inapplicable, unnecessary, or contrary to patients' best interests. Requests from applicants should be submitted to the director of the FDA division responsible for reviewing the marketing application for the drug product, or for a biological product, to the FDA application division in the office with product responsibility.

(b) If the licensed provider who prescribes a drug product subject to this part determines that it is not in a particular patient's best interest to receive a Medication Guide because of significant concerns about the effect of a Medication Guide on the patient, the licensed provider may direct that the Medication Guide not be provided to the particular patient. However, the authorized dispenser of a prescription drug product subject to this part must provide a Medication Guide to any patient who requests information when the drug product is dispensed, regardless of any such direction by the licensed provider.

PART 314—APPLICATIONS FOR FDA APPROVAL TO MARKET A NEW DRUG

■ 6. The authority citation for part 314 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 355a, 355f, 356, 356a, 356b, 356c, 356e, 360cc, 371, 374, 379e, 379k–1.

■ 7. In § 314.70, revise paragraph (b)(2)(v)(B) and add paragraph (c)(6)(iv) to read as follows:

§ 314.70 Supplements and other changes to an approved NDA.

* * * * *

(b) * * *

(2) * * *

(v) * * *

(B) If applicable, any change to Medication Guides required under part 208 of this chapter, except for changes in the information specified in §§ 208.40(a)(4), (7), and (8), and (c)(3) of this chapter, and § 208.94(b)(8)(iii) and (iv) of this chapter; and

* * * * *

(c) * * *

(6) * * *

(iv) Addition of Patient Medication Information for a drug approved under an ANDA if the proposed Patient Medication Information is the same as that approved for the reference listed drug or the same as the Patient Medication Information template finalized by FDA, whichever applies, except for permissible differences consistent with § 314.94(a)(8)(iv).

* * * * *

PART 606—CURRENT GOOD MANUFACTURING PRACTICE FOR BLOOD AND BLOOD COMPONENTS

■ 8. The authority citation for part 606 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 355, 360, 360j, 371, 374; 42 U.S.C. 216, 262, 263a, 264.

■ 9. Add § 606.123 to subpart G to read as follows:

§ 606.123 Medication Guides: Patient Medication Information for blood and blood components intended for transfusion.

Medication Guides: Patient Medication Information (as described in part 208 of this chapter) must be provided to a patient who is administered blood or blood components on an outpatient basis unless a waiver is granted.

(a) Blood establishments must make Patient Medication Information (as described in part 208 of this chapter) available for distribution to the transfusion service. Licensed blood establishments must submit Patient Medication Information to FDA for approval (as described in part 208 of this chapter).

(b) When blood or blood components are administered on an outpatient basis, the transfusion service must provide Patient Medication Information to each patient (or the patient's agent). The transfusion service may provide Patient Medication Information to the patient electronically; however, paper distribution must always be available.

(c) On its own initiative or in response to a written request from a blood collection establishment or transfusion service, FDA may waive any Patient Medication Information requirement on the basis that the requirement is inapplicable, unnecessary, impracticable, or contrary to a patient's best interests. Written requests for waivers must be submitted to the FDA application division in the office with product responsibility.

PART 610—GENERAL BIOLOGICAL PRODUCTS STANDARDS

■ 10. The authority citation for part 610 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 360, 360c, 360d, 360h, 360i, 371, 372, 374, 381; 42 U.S.C. 216, 262, 263, 263a, 264.

§ 610.60 [Amended]

■ 11. Amend § 610.60 by removing paragraph (a)(7).

Dated: May 19, 2023.

Robert M. Califf,

Commissioner of Food and Drugs.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List April 12, 2023

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/—layouts/PG/register.aspx.*

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
