**Description**

Human remains representing, at minimum, 28 individuals were removed from Taylor Mound, located south of White Cloud, in Doniphan County, KS. In the summer of 1968, Taylor Mound was excavated as part of a Kansas State University archeological field school, under the direction of archeologist Dr. Patricia J. O'Brien. Radiocarbon dating of charcoal and burned wood samples collected at the site yielded dates corresponding to the Middle Woodland period (354 BC/BCE–A.D. 398). These dates are consistent with most of the diagnostic artifacts recovered from the burial site. (Some pottery from the excavation also suggests the mound was

utilized into the Late Prehistoric period and was associated with the Central Plains tradition (A.D. 1100–1350). In addition, two osteological studies were completed on the skeletal remains excavated from Taylor Mound. In 1971, Linda Klepinger and William M. Bass published the initial analysis, and in 2009, Lee Meadows Jantz, Richard L. Jantz, and Rebecca J. Wilson completed a second analysis. No known individuals were identified. The 1,390 associated funerary objects are 912 pieces of stone debitage, 10 hammerstones, nine bifaces, nine stone points, five scrapers, one celt, one stone bead, one stone blade, 200 unmodified shells, one modified bone disc, two turtle shell fragments, 212 ceramic body sherds, 10 ceramic rim sherds, one lot of burned animal bones, one lot of unburned animal bones, 12 charcoal samples, two sediment samples containing burned earth, and one metal broom handle that was excavated but is believed to be part of a previous site disturbance.

**Aboriginal Land**

The human remains and associated funerary objects in this notice were removed from known geographic locations. These locations are the aboriginal lands of one or more Indian Tribes. The following information was used to identify the aboriginal land: treaties.
