Two separate petitions for rulemaking (PRM) were submitted to the NRC for consideration in 2008 and 2019 requesting that the NRC revise the definition of *Decommissioning* in 10 CFR 50.2 and amend 10 CFR 50.82 to allow access to the DTF to pay for the cost of the disposal of MRCs prior to permanent cessation of operations at nuclear power plants. The Commission subsequently denied both petitions, noting that the subject is adequately covered by existing regulations, including the exemption process in 10 CFR 50.12, ''Specific exemptions.'' In the analysis recommending denial of the PRMs, the NRC staff notes that any withdrawal of funds from the DTF during operations, other than those allowed by NRC regulations, may challenge the underlying intent of the decommissioning funding regulations. Therefore, only under extraordinary circumstances would a withdrawal from the DTF prior to permanent cessation of operations be permissible. However, the NRC staff envisions certain circumstances, which could be stated in an exemption request, that may lead to the approval of the particular request, based on the totality of the facts. This draft ISG discusses the various ways and means by which the DTF could be used to cover the cost of MRC disposal during operations, including what information would assist the NRC staff in assessing a licensee's request for exemption from the regulations related to the activity.

Dated: June 14, 2023.

For the Nuclear Regulatory Commission.

John M. Moses,

Deputy Director, Division of Rulemaking, Environmental, and Financial Support, Office of Nuclear Material Safety and Safeguards.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

707th Meeting of the Advisory Committee on Reactor Safeguards (ACRS)

In accordance with the purposes of sections 29 and 182b of the Atomic Energy Act (42 U.S.C. 2039, 2232(b)), the Advisory Committee on Reactor Safeguards (ACRS) will hold meetings on July 12–14, 2023. The Committee will be conducting meetings that will include some Members being physically present at the NRC while other Members participate remotely. Interested members of the public are encouraged to participate remotely in any open sessions via MS Teams or via phone at 301–576–2978, passcode 581992331#. A more detailed agenda including the MSTeams link may be found at the ACRS public website at *https://www.nrc.gov/reading-rm/doc-collections/acrs/agenda/index.html.* If you would like the MSTeams link forwarded to you, please contact the Designated Federal Officer as follows: *Quynh.Nguyen@nrc.gov,* or *Lawrence.Burkhart@nrc.gov.*

Wednesday, July 12, 2023

8:30 a.m.–8:35 a.m.: Opening Remarks by the ACRS Chairman (Open)—The ACRS Chairman will make opening remarks regarding the conduct of the meeting.

8:35 a.m.–10:30 a.m.: EPRI Data Validation Topical Report (Open/Closed)—The Committee will have presentations and discussions with representatives from EPRI and the NRC staff regarding the subject topic. [NOTE: Pursuant to 5 U.S.C. 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

10:30 a.m.–11:30 a.m.: Committee Deliberation on EPRI Data Validation Topical Report (Open/Closed)—The Committee will have discussion and deliberation regarding the subject topic. [NOTE: Pursuant to 5 U.S.C. 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

1:00 p.m.–2:30 p.m.: Vogtle License Amendment Request (LAR) on Loading Lead Test Assemblies (LTAs) with Increased Enrichment (RB/ZA) (Open)—The Committee will have presentations and discussions with representatives from Southern Nuclear and the NRC staff regarding the subject topic.

2:30 p.m.–3:30 p.m.: Committee Deliberation on Vogtle LAR on Loading LTAs with Increased Enrichment (Open)—The Committee will have

discussion and deliberation regarding the subject topic.

3:30 p.m.–5:00 p.m.: ARITA–ARTEMIS/RELAP Integrated Transient Analysis Methodology Topical Report (JM–L/KH) (Open/Closed)—The Committee will have presentations and discussions with representatives from Framatome and the NRC staff regarding the subject topic. [NOTE: Pursuant to 5 U.S.C. 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

5:00 p.m.–6:00 p.m.: Committee Deliberation on ARITA–ARTEMIS/RELAP Integrated Transient Analysis Methodology Topical Report (JM–L/KH) (Open/Closed)—The Committee will have discussion and deliberation regarding the subject topic. [NOTE: Pursuant to 5 U.S.C. 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

Thursday, July 13, 2023

8:30 a.m.–10:30 a.m.: LANCR02 Lattice Physics Model Description Topical Report/Preparation of Reports (JM–L/MS) (Open/Closed)—The Committee will have presentations and discussions with representatives from GE and the NRC staff regarding the subject topic. [NOTE: Pursuant to 5 U.S.C. 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

10:30 a.m.–6:00 p.m.: Preparation of Reports (Open/Closed)—The Committee will continue its discussion of proposed ACRS reports. [NOTE: Pursuant to 5 U.S.C. 552b(c)(4), a portion of this session may be closed to discuss and protect information designated as proprietary.]

Friday, July 14, 2023

8:30 a.m.–5:00 p.m.: Planning and Procedures Session/Future ACRS Activities/Reconciliation of ACRS Comments and Recommendations (Open/Closed)—The Committee will hear discussion of the recommendations of the Planning and Procedures Subcommittee regarding items proposed for consideration by the Full Committee during future ACRS meetings, and/or proceed to preparation of reports as determined by the Chairman. [NOTE: Pursuant to 5 U.S.C. 552b(c)(2), a portion of this session may be closed to discuss organizational and personnel matters that relate solely to internal personnel rules and practices of the ACRS.] [NOTE: Pursuant to 5 U.S.C. 552b(c)(4), a portion of this session may be closed to discuss and protect information designated as proprietary.]

Procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on June 13, 2019 (84 FR 27662). In accordance with those procedures, oral or written views may be presented by members of the public, including representatives of the nuclear industry. Persons desiring to make oral statements should notify Quynh Nguyen, Cognizant ACRS Staff and the Designated Federal Officer (DFO) (Telephone: 301–415–5844, Email: *Quynh.Nguyen@nrc.gov*), 5 days before the meeting, if possible, so that appropriate arrangements can be made to allow necessary time during the meeting for such statements. In view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with the cognizant ACRS staff if such rescheduling would result in major inconvenience.

An electronic copy of each presentation should be emailed to the cognizant ACRS staff at least one day before the meeting.

In accordance with Subsection 10(d) of Public Law 92–463 and 5 U.S.C. 552b(c), certain portions of this meeting may be closed, as specifically noted above. Use of still, motion picture, and television cameras during the meeting may be limited to selected portions of the meeting as determined by the Chairman. Electronic recordings will be permitted only during the open portions of the meeting.

ACRS meeting agendas, meeting transcripts, and letter reports are available through the NRC Public Document Room (PDR) at *pdr.resource@nrc.gov,* or by calling the PDR at 1–800–397–4209, or from the Publicly Available Records System component of NRC's Agencywide Documents Access and Management System, which is accessible from the NRC website at *http://www.nrc.gov/reading-rm/adams.html* or *http://www.nrc.gov/reading-rm/doc-collections/#ACRS/.*

Dated: June 14, 2023.

Russell E. Chazell,

Federal Advisory Committee Management Officer, Office of the Secretary.

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2023–171 and CP2023–175; MC2023–172 and CP2023–176]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* June 22, 2023.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the Market Dominant or the Competitive product list, or the modification of an existing product currently appearing on the Market Dominant or the Competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance

with the requirements of 39 CFR 3011.301.[1]

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern Market Dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern Competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s).:* MC2023–171 and CP2023–175; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage® Contract 2 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* June 12, 2023; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Philip T. Abraham; *Comments Due:* June 22, 2023.

2. *Docket No(s).:* MC2023–172 and CP2023–176; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage® Contract 3 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* June 12, 2023; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Jennaca D. Upperman; *Comments Due:* June 22, 2023.

This Notice will be published in the **Federal Register**.

Erica A. Barker,

Secretary.

POSTAL SERVICE

Privacy Act of 1974; Modified System of Records

AGENCY: Postal Service™.

ACTION: Notice of a modified system of records.

SUMMARY: The United States Postal Service® (USPS®) is proposing to revise one General Privacy Act Systems of Records (SOR) 500.000 Property Management Records. These updates are being made to support an initiative to track workroom floor assets and activities.

DATES: These revisions will become effective without further notice on July 21, 2023, unless comments received on or before that date result in a contrary determination.

ADDRESSES: Comments may be submitted via email to the Privacy and Records Management Office, United States Postal Service Headquarters (*uspsprivacyfedregnotice@usps.gov*). Arrangements to view copies of any written comments received, to facilitate public inspection, will be made upon request.

FOR FURTHER INFORMATION CONTACT: Janine Castorina, Chief Privacy and

[1] *See* Docket No. RM2018–3, Order Adopting Final Rules Relating to Non-Public Information, June 27, 2018, Attachment A at 19–22 (Order No. 4679).

[1] *See* Docket No. RM2018–3, Order Adopting Final Rules Relating to Non-Public Information, June 27, 2018, Attachment A at 19–22 (Order No. 4679).

Records Management Officer, Privacy and Records Management Office, *uspsprivacyfedregnotice@usps.gov* and by phone at 202–268–2000.

SUPPLEMENTARY INFORMATION:

I. Background

The Postal Service is seeking to implement an initiative that will allow for the tracking of assets and activities on the workroom floor. This asset and activity tracking will use Bluetooth chip technology associated with ID badges for employees, contractors and visitors within a building or facility. This tracking functionality will facilitate the collection of workhour statistics, including time spent on various activities and duties, allow employees to perform clock rings, and help account for employees during an emergency evacuation from selected facilities.

II. Rationale for Changes to USPS Privacy Act Systems of Records

The Postal Service is proposing to modify SOR 500.000 Property Management Records, to allow for the tracking of assets and activities on the workroom floor. The SOR will be revised accordingly in the following manners:

—Add four new Purposes of the System: #s 13,14, 15, and 16.
—Add one new Category of Records in the System, # 14
—Add one new Policy and Practice for Retrieval of Records: # 7
—Add one new Policy and Practice for Retention and Disposal of Records: # 8

III. Description of the Modified System of Records

Pursuant to 5 U.S.C. 552a (e)(11), interested persons are invited to submit written data, views, or arguments on this proposal. A report of the proposed revisions has been sent to Congress and to the Office of Management and Budget for their evaluations. The Postal Service does not expect these amended systems of records to have any adverse effect on individual privacy rights.

The notice for modifications to USPS SOR 500.000, Property Management Records is provided below in its entirety:

SYSTEM NAME AND NUMBER:

USPS 500.000, Property Management Records.

SECURITY CLASSIFICATION:

None.

SYSTEM LOCATION:

All USPS facilities and contractor sites.

SYSTEM MANAGER(S):

For records of accountable property, carpool membership, and use of USPS parking facilities: Vice President, Facilities, United States Postal Service, 475 L'Enfant Plaza SW, Washington, DC 20260. For records of building access and Postal Inspector computer access authorizations: Chief Postal Inspector, Inspection Service, United States Postal Service, 475 L'Enfant Plaza SW, Washington, DC 20260. For other records of computer access authorizations: Chief Information Officer and Executive Vice President, United States Postal Service, 475 L'Enfant Plaza SW, Washington, DC 20260.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

39 U.S.C. 401.

PURPOSE(S) OF THE SYSTEM:

To ensure personal and building safety and security by controlling access to USPS facilities. To ensure accountability for property issued to persons. To assign computer logon IDs; to identify USPS computer users to resolve their computer access problems by telephone; and to monitor and audit the use of USPS information resources as necessary to ensure compliance with USPS regulations. To enable access to the USPS meeting and video web conferencing applications. To enhance your online meeting experience by utilizing enhanced features and functionality, including voluntary polling to gather responses from attendees to generate reports or the interactive chat feature. To facilitate team collaboration and communication through information sharing and cross-functional participation. To allow users to communicate through web-based applications. To facilitate and support cybersecurity investigations of detected or reported information security incidents. To share your personal image via your device camera during meetings and web conferences, if you voluntarily choose to turn the camera on, enabling virtual face-to-face conversations. To authenticate user identity for the purpose of accessing USPS information systems. To provide parking and carpooling services to individuals who use USPS parking facilities. To provide pre-registration for guest access to online meetings and web conferences. To provide visibility on unmeasured workroom floor activities. To enhance visibility into work hours used by product type, standard work management, and overtime status. To improve scheduling efficiency through visibility into the use of workroom floor assets and activities. To generate clock ring data based on employee workroom floor activities, assignments and/or duties.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals who are granted regular access to USPS facilities through the issuance of a building access badge, or who are assigned accountable property. Individuals with authorized access to USPS computers and information resources, including USPS employees, contractors, and other individuals; Individuals participating in web-based meetings, video conferences, collaboration, and communication applications. Individuals who are members of carpools with USPS employees or otherwise regularly use USPS parking facilities.

CATEGORIES OF RECORDS IN THE SYSTEM:

Building access information: Records related to issuance of building access badges, including name, Social Security Number, Employee Identification Number, date of birth, photograph, postal assignment information, work contact information, finance number(s), duty location, and pay location. Property issuance information: Records related to issuance of accountable USPS property, equipment, and controlled documents, including name, Social Security Number, equipment description, equipment serial numbers, and issuance date. Computer access authorization information: Records related to computer users, including logon ID, Social Security Number, Employee Identification Number, or other assigned identifier, employment status information or contractor status information, and extent of access granted. Participant session data from web-based meetings and web conferences: Participant Name, Participant's Webcam-Generated Image (Including Presenters), Recorded Participant Audio, Video, And Shared Meeting Screen Content, Chat Interaction, Polling Questions And Associated Responses, Participant Join Time And Leave Time, Meeting Duration, Participant Location, Participant Media Hardware Information, Participant Job Information, Participant Stated Locale, Participant Connection Type, Participant Data Center, Participant Device Type, Participant Domain, Participant Full Data Center, Participant Hard Disk ID, Participant ID, Participant IP Address, Participant Join Time, Participant Camera Name, Participant MAC Address, Participant Microphone Name, Participant Network Type, Participant PC Name, Participant Role,

Identity verification information: Question, answer, and email address. Carpool and parking information: Records related to membership in carpools with USPS employees or about individuals who otherwise regularly use USPS parking facilities, including name, space number, principal's and others' license numbers, home address, and contact information. Workroom Floor Access and Activity Information: Records related to issuance of building access badges supporting time keeping functions, including name, Bluetooth Device ID, Employee Identification Number, postal assignment information, workroom floor activities, assignments and/or duties, work contact information, finance number(s), duty location, clock ring data, and pay location.

RECORD SOURCE CATEGORIES:

Employees; contractors; subject individuals; and other systems of records.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Standard routine uses 1. through 9. apply.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Automated database, computer storage media, and paper.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Records about building access and issuance of accountable property are retrieved by name, Social Security Number, or Employee Identification Number. Records about authorized

access to computer and information resources are retrieved by name, logon ID, Employee Identification Number, or other unique identifier of the individual. Report and tracking data created during web-based meetings and video conferences that pertain to individual participants, content shared, conference codes and other relevant session data and historical device usage data are retrieved by meeting ID, host name or host email address. Records pertaining to web-based collaboration and communication applications are retrieved by organizer name and other associated personal identifiers. Media recordings created during web-based meetings and video conferences are retrieved by meeting ID, host name or host email address. Records of carpools and parking facilities are retrieved by name, ZIP Code, space number, or parking license number. Records pertaining to workhour data derived from RFID and Bluetooth technologies are retrieved by name, Employee Identification Number, and Bluetooth Device ID.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Building access and accountable property records are retained until termination of access or accountability. Records of computer access privileges are retained 1 year after all authorizations are cancelled. Report and tracking data created during web-based meeting and video conferences, such as other relevant session data and historical device usage data, are retained for twenty-four months. Records pertaining to web-based collaboration and communication applications are retained for twenty-four months. Web-based meeting or video session recordings are retained for twenty-four months. Records of carpool membership and use of USPS parking facilities are retained 6 years. Records existing on paper are destroyed by burning, pulping, or shredding. Records existing on computer storage media are destroyed according to the applicable USPS media sanitization practice. Records pertaining to workhour data derived from RFID and Bluetooth technologies may be retained up to 90 days.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Paper records, computers, and computer storage media are located in controlled-access areas under supervision of program personnel. Access to these areas is limited to authorized personnel, who must be identified with a badge. Access to records is limited to individuals whose official duties require such access. Contractors and licensees are subject to contract controls and unannounced on-site audits and inspections. Computers are protected by mechanical locks, card key systems, or other physical access control methods. The use of computer systems is regulated with installed security software, computer logon identifications, and operating system controls including access controls, terminal and transaction logging, and file management software.

RECORD ACCESS PROCEDURES:

Requests for access must be made in accordance with the Notification Procedure above and USPS Privacy Act regulations regarding access to records and verification of identity under 39 CFR 266.5.

CONTESTING RECORD PROCEDURES:

See Notification Procedure and Record Access Procedures above.

NOTIFICATION PROCEDURES:

Inquiries for records about building access, accountable property, carpool membership, and use of USPS parking facilities must be addressed to the facility head. Inquiries about computer access authorization records must be directed to the Manager, Corporate Information Security, 475 L'Enfant Plaza SW, Suite 2141, Washington, DC 20260. For Inspection Service computer access records, inquiries must be submitted to the Inspector in Charge, Information Technology Division, 2111 Wilson Blvd., Suite 500, Arlington, VA 22201. Inquiries must include full name, Social Security Number or Employee Identification Number, and period of employment or residency at the location.

EXEMPTIONS PROMULGATED FROM THIS SYSTEM:

None.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97726; File No. SR–MRX–2023–10]

Self-Regulatory Organizations; Nasdaq MRX, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Complex Order Rules

June 14, 2023.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on June 6, 2023, Nasdaq MRX, LLC (''MRX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Options 3, Section 7, Types of Orders and Order and Quote Protocols; Options 3, Section 11, Auction Mechanisms; Options 3, Section 12, Crossing Orders, Section 13, Price Improvement Mechanisms for Crossing Transactions; Options 3, Section 14, Complex Orders; Options 3, Section 15, Simple Order Risk Protections; and Options 3, Section 16, Complex Order Risk Protections.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/mrx/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

In connection with a technology migration to an enhanced Nasdaq, Inc. (''Nasdaq'') functionality, the Exchange intends to adopt certain trading functionality currently utilized at Nasdaq affiliate exchanges. Also, the Exchange intends to remove certain functionality. Specifically, the following sections would be amended: Options 3, Section 7, Types of Orders and Order and Quote Protocols; Options 3, Section 11, Auction Mechanisms; Options 3, Section 12, Crossing Orders, Section 13, Price Improvement Mechanisms for Crossing Transactions; Options 3, Section 14, Complex Orders; Options 3, Section 15, Simple Order Risk Protections; and Options 3, Section 16, Complex Order Risk Protections. Each change will be described below.

Re-Introduction of Stock-Related Strategies and Elimination of Trade Value

Allowance

Before the migration of MRX to an enhanced technology platform,[3] MRX Members were able to trade certain Stock-Option Orders as described in MRX Options 3, Section 14(a)(2),[4] Stock-Complex Orders as described in MRX Options 3, Section 14(a)(3),[5] Complex QCC with Stock Orders as described in MRX Options 3, Section 14(b)(15),[6] QCC with Stock Orders[7] as described in Options 3, Section 7(t) and 12(e), as described in Supplementary Material .03 of MRX Options 3, Section 14 (''Delayed Functionalities'').[8] Separately, prior to the MRX migration, the Exchange offered a Trade Value Allowance,[9] which was also delayed.

At the time the Exchange issued an Options Trader Alert announcing migration details, the Exchange noted that these Delayed Functionalities would not be available for symbols that migrated to the platform and thereafter, until such time as the Exchange recommenced their availability by announcing a date in an Options Trader Alert, which date would be prior to one year from the start of the migration of the symbols to the platform.[10] The Exchange further noted that it was contemplating amendments to its stock-tied functionality and desired additional time to draft and code those changes before reintroducing stock-tied functionality on MRX.[11] MRX's technology migration commenced on November 7, 2022 and was completed on December 5, 2022.[12] At this time, the Exchange proposes to re-introduce stock-tied functionality and remove the delayed implementation language within Options 3, Sections 7, 11, 12, 13, and 14.

Stock-Tied Functionality

MRX proposes to: (1) re-introduce stock-tied functionality; and (2) amend the stock-tied functionality that was available before the migration. Before the migration of MRX to an enhanced technology platform when the Exchange was offering stock-tied functionality, MRX Members desiring to execute an order with stock or an ETF component were required to enter into a brokerage agreement with a broker-dealer designated by the Exchange and were permitted to enter into such an agreement with one or more other broker-dealers to which the Exchange is able to route stock orders.[13]

The Exchange proposes to amend its rules to instead require that a Member desiring to execute a Stock-Option Order or a Stock-Complex Order enter into a brokerage agreement with Nasdaq Execution Services, LLC (''NES'') which will execute the stock or ETF component of the order.[14] The stock component of a Qualified Contingent Cross (''QCC'') with Stock Order or a Complex QCC with Stock Order will continue to be handled by a third-party broker as provided in Options 3, Sections 12(e) and (f).[15] NES is a broker-dealer owned and operated by Nasdaq, Inc. NES, an affiliate of the Exchange, has been approved by the Commission to become a Member of the Exchange and perform inbound routing on behalf of the Exchange.[16] Additionally, NES is permitted to route outbound orders either directly or indirectly through a third party routing broker-dealer to other market centers and perform other functions regarding the cancellation of

[3] *See* Securities Exchange Act Release No. 95854 (September 21, 2022), 87 FR 58571 (September 27, 2022) (Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1, To Amend Its Rules Relating to Single-Leg and Complex Orders in Connection With a Technology Migration).

[4] The term ''Stock-Option Order'' refers to an order for a Stock-Option Strategy as defined in Options 3, Section 14(a)(2). A Stock-Option Strategy is the purchase or sale of a stated number of units of an underlying stock or a security convertible into the underlying stock (''convertible security'') coupled with the purchase or sale of options contract(s) on the opposite side of the market representing either (A) the same number of units of the underlying stock or convertible security, or (B) the number of units of the underlying stock necessary to create a delta neutral position, but in no case in a ratio greater than eight-to-one (8.00), where the ratio represents the total number of units of the underlying stock or convertible security in the option leg to the total number of units of the underlying stock or convertible security in the stock leg. *See* MRX Options 3, Section 14(a)(2).

[5] The term ''Stock-Complex Order'' refers to an order for a Stock-Complex Strategy as defined in Options 3, Section 14(a)(3). A Stock-Complex Strategy is the purchase or sale of a stated number of units of an underlying stock or a security convertible into the underlying stock (''convertible security'') coupled with the purchase or sale of a Complex Options Strategy on the opposite side of the market representing either (A) the same number of units of the underlying stock or convertible security, or (B) the number of units of the underlying stock necessary to create a delta neutral position, but in no case in a ratio greater than eight-to-one (8.00), where the ratio represents the total number of units of the underlying stock or convertible security in the option legs to the total number of units of the underlying stock or convertible security in the stock leg. Only those Stock-Complex Strategies with no more than the applicable number of legs, as determined by the Exchange on a class-by-class basis, are eligible for processing. *See* MRX Options 3, Section 14(a)(3).

[6] A Complex QCC with Stock Order is a Qualified Contingent Cross Complex Order, as defined in subparagraph (b)(6) of Options 3, Section 14, entered with a stock component to be communicated to a designated broker-dealer for execution pursuant to MRX Options 3, Section 12(f).

[7] A QCC with Stock Order is a Qualified Contingent Cross Order, as defined in Options 3, Section 7(j), entered with a stock component to be communicated to a designated broker-dealer for execution pursuant to Options 3, Section 12(e). *See* Options 3, Section 7(t).

[8] *See* note 3 above.

[9] The Trade Value Allowance permits Stock-Option Strategies and Stock-Complex Strategies at valid increments Options 3, Section 14(c)(1), Stock-Option Strategies and Stock-Complex Strategies to trade outside of their expected notional trade value by a specified amount, in order to facilitate the execution of the stock leg and options leg(s). The Trade Value Allowance is the percentage difference between the expected notional value of a trade and the actual notional value of the trade. The amount of Trade Value Allowance permitted may be determined by the Member, or a default value determined by the Exchange and announced to Members; provided that any amount of Trade Value Allowance is permitted in mechanisms pursuant to Options 3, Sections 11 and 13 when auction orders do not trade solely with their contra-side order. *See* Supplementary Material .03 of MRX Options 3, Section 14.

[10] *See* note 3 above.

[11] *See* note 3 above. MRX indicated that it would also need time to file any related rule changes with the Commission prior to reintroducing stock-tied functionality.

[12] *See* Options Trader Alert #2022–34.

[13] *See* Supplementary Material .02 to Options 3, Section 14.

[14] *Id.*

[15] MRX members may also trade QCC Orders and complex [sic] QCC Orders. *See* Options 3, Section 12(c) and (d). For those orders, the parties to the trade will arrange for the execution of the stock component of the order.

[16] *See* Securities Exchange Act Release No. 79995 (February 9, 2017), 82 FR 10811 (February 15, 2017) (SR–ISEMercury–2016–22) (Order Granting Approval of Proposed Rule Changes, as Modified by Amendment Nos. 1 and 2 Thereto, To Permit Nasdaq Execution Services, LLC To Become an Affiliated Member of Each Exchange To Perform Certain Routing and Other Functions).

orders and the maintenance of a NES error account.[17]

NES currently acts as agent for orders to buy and sell the underlying stock or ETF component of a Complex Order on Nasdaq Phlx LLC (''Phlx'').[18] The functions performed by NES on Phlx today are identical to the functions that MRX proposes for NES to perform for MRX Members.[19] Identical to Phlx, after MRX's System determines that a Complex Order execution is possible and identifies the prices for each component of such Complex Order, MRX will electronically communicate the stock or ETF component of the Complex Order to NES for execution.[20] NES, acting as agent for the orders to buy and sell the underlying stock or ETF, will execute the orders in the over-the-counter (''OTC'') market and will handle the orders pursuant to applicable rules regarding equity trading, including the rules governing trade reporting, trade-throughs, and short sales. Before the migration of MRX to an enhanced technology platform when the Exchange was offering stock-tied functionality, this function was performed by a third-party broker-dealer.

The proposed stock-tied functionality is identical to Phlx Options 3, Sections 13(b)(10)(ii) and 14(a)(i) with respect to utilizing NES to process and report the stock or ETF component of a Complex Order. However, there are two differences in the way Phlx and MRX handle stock-tied option orders.

First, while both Phlx and MRX have certain risk protections for complex orders, they differ. With respect to MRX, the execution price of the Complex Order must be within a certain price from the current market, as determined by the Exchange pursuant to Options 3, Section 16(a). Specifically, today, MRX Options 3, Section 16(a) provides that the System will not permit any leg of a complex strategy to trade-through the NBBO for the series or any stock component by a configurable amount calculated as the lesser of (i) an absolute amount not to exceed $0.10, and (ii) a percentage of the NBBO not to exceed 500%, as determined by the Exchange on a class, series or underlying basis. In contrast, Phlx Options 3, Section 16(b)(i) describes Phlx's Acceptable Complex Execution (''ACE'') Parameter which defines a price range outside of which a complex order will not be executed. On Phlx, a complex order to sell is not executed at a price that is lower than the cNBBO[21] bid by more than the ACE Parameter. Conversely, on Phlx, a complex order to buy will not be executed at a price that is higher than the cNBBO offer by more than the ACE Parameter. While MRX's and Phlx's price checks differ, both markets seek to prevent executions from occurring at certain prices and at certain percentages from the NBBO. MRX's proposal would require NES to apply the same price check for stock-tied functionality that was being applied previously by a third-party broker-dealer that executed the stock or ETF component of a complex strategy on behalf of MRX Members prior to MRX's technology migration. MRX Members would continue to be subject to the same price check which is applied to all Complex Orders executed on MRX.

Second, MRX and Phlx differ with respect to the manner in which their systems handle Stock-Option Strategies and Stock-Complex Strategies that would execute against interest on the Complex Order Book at a price that does not meet the price checks in their respective rules or do not meet Regulation SHO provisions as provided for in proposed Options 3, Section 16(e)[22] are handled by their respective systems. As proposed, MRX will hold orders on the Complex Order book that cannot be executed because of Regulation SHO or price check restrictions, unless the Member requests the order to be cancelled. If an MRX Member elects to have the order held on the Complex Order Book, the order would await other matching opportunities, otherwise at the Member's election the order would be returned to the Member. In contrast, Phlx only provides for a cancellation of the order. MRX's proposed approach would provide the Member with optionality as to the handing of the order. The Exchange believes providing the choice to have the order held on the Complex Order Book provides Members with an opportunity for an execution.

NES

NES is a registered broker-dealer and member of various exchanges and the Financial Industry Regulatory Authority (''FINRA''). NES will be responsible for the proper execution, trade reporting, and submission to clearing of the underlying stock or ETF component of a Complex Order.[23] Because these trades will occur off-exchange, the principal regulator is FINRA. Furthermore, today, NES is responsible for compliance with FINRA rules generally and is subject to examination by FINRA. Specifically, NES is subject to FINRA Rule 3110, which generally requires that the policies and procedures and supervisory systems of a broker-dealer be reasonably designed to achieve compliance with applicable securities laws and regulations and with applicable FINRA rules, including those relating to the misuse of material non-public information. To this end, today, NES has in place policies related to confidentiality and the potential for informational advantages relating to its affiliates, intended to protect against the misuse of material nonpublic information.[24] In particular, NES will

[17] *Id.* MRX is subject to certain limitations and conditions such as maintaining a Regulatory Services Agreement with FINRA, as well as an agreement pursuant to Rule 17d–2 under the Act, among other limitations and conditions.

[18] *See* Phlx Options 3, Sections 13(b), 14(a) and 16(b).

[19] *See* Securities Exchange Act Release No. 63777 (January 26, 2011), 76 FR 5630 (February 1, 2011) (SR–Phlx–2010–157) (Order Approving a Proposed Rule Change, as Modified by Amendment Nos. 1 and 2, Relating to Complex Orders) (''Phlx Complex Order Approval''). NES assumed the stock execution functionalities that were previously performed by NOS. Phlx subsequently filed to permit both inbound and outbound orders to be routed through NES instead of Nasdaq Options Services LLC (''NOS''). *See* Securities Exchange Act Release No. 71417 (January 28, 2014), 79 FR 6253 (February 3, 2014) (SR–Phlx–2014–04) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Outbound Routing) and 71416 (January 28, 2014), 79 FR 6244 (February 3, 2014) (SR–Phlx–2014–05) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Inbound Routing of Options Orders).

[20] *See* proposed Supplementary Material .08(b) to Options 3, Section 11, proposed Options 3, Section 12(b)(2), proposed Supplementary Material .09(b) to Options 3, Section 13, proposed Supplementary Material .02 to Options 3, Section 14 and proposed Options 3, Section 16(d). *See also* Phlx Options 3, Section 13(b)(10)(ii), Options 3, Section 16(b).

[21] The term ''cNBBO'' means the best net debit or credit price for a Complex Order Strategy based on the NBBO for the individual options components of a Complex Order Strategy, and, where the underlying security is a component of the Complex Order, the National Best Bid and/or Offer for the underlying security. *See* Phlx Options 3, Section 14(a)(vi).

[22] As proposed, NES will only execute Stock-Option Strategies and Stock-Complex Strategies if the underlying covered security component is in accordance with Rule 201 of Regulation SHO.

[23] The Commission's approval order for Phlx stated that NOS (now NES) ''. . . as a facility of the Phlx, NOS is subject to oversight by the Commission and by the Phlx. In addition, NOS, a member of FINRA, is responsible for compliance with applicable rules regarding equity trading, including rules governing trade reporting, trade-throughs and short sales, and is subject to examination by FINRA. Because NOS will execute the stock or ETF component of a Complex Order in the OTC market, the principal regulator of these trades will be FINRA, rather than the Phlx or Nasdaq.'' *See* SR–Phlx–2010–157 76 FR 5630 at 5625, footnote 20. Phlx originally set up its affiliated broker-dealers as two separate entities, NES and NOS. When Phlx replaced NOS with NES, it noted in the rule change that NES will operate the same way as NOS operated, in terms of routing options orders to destination options exchanges. *See* SR–Phlx–2014–04, 79 FR 6253 at 6254.

[24] Similarly, the Exchange does establish and maintain procedures and internal controls reasonably designed to adequately restrict the flow of confidential and proprietary information between the Exchange and NES. Additionally NES undertook all NOS' responsibilities with respect to

have in place policies and procedures designed to prevent the misuse of material non-public information related to stock-tied executions. Of note, NES only receives information about the stock or ETF portion of the order from the Exchange. As mentioned herein, today, NES is responsible for the proper execution, trade reporting, and submission to clearing of the underlying stock or ETF component of a Complex Order on Phlx. MRX will adopt identical policies and procedures for its stock-tied functionality as are in place on Phlx today.

In addition, because the execution and reporting of the stock/ETF piece will occur otherwise than on MRX or any other exchange, it will be handled by NES pursuant to applicable rules regarding equity trading,[25] including the rules governing trade reporting, trade-throughs and short sales. Specifically, NES will report the trades to the Trade Reporting Facility.[26] Firms that are members of FINRA are required to have a Uniform Service Bureau/Executing Broker Agreement (''AGU'') with NES in order to trade Complex Orders containing a stock/ETF component. Firms that are not members of FINRA are required to have a Qualified Special Representative (''QSR'') arrangement with NES in order to trade Complex Orders containing a stock/ETF component. This requirement is codified in proposed Supplementary Material .08 to Options 3, Section 11, proposed Options 3, Section 12(b)(1), proposed Supplementary Material .09 to Options 3, Section 13 and proposed Supplementary Material .07 to Options 3, Section 14. Accordingly, this process is available to all MRX Members and the stock/ETF component of a Complex Order, once executed, will be properly processed for trade reporting purposes. Phlx has identical requirements within its Options 3, Sections 13(b)(10) and 14(a)(i).

With respect to trade-throughs, the Exchange believes that the stock/ETF component of a Complex Order is eligible for the Qualified Contingent Trade Exemption from Rule 611(a) of Regulation NMS. A Qualified Contingent Trade is a transaction consisting of two or more component orders, executed as agent or principal, that satisfy the six elements in the Commission's order exempting Qualified Contingent Trades (''QCTs'') from the requirements of Rule 611(a),[27] which requires trading centers to establish, maintain, and enforce written policies and procedures that are reasonably designed to prevent trade-throughs.[28] The Exchange believes that the stock/ETF portion of a Complex Order under this proposal complies with all six requirements. Moreover, as explained below, MRX's System will validate compliance with each requirement such that any matched order received by NES under this proposal has been checked for compliance with the exemption, as follows:

(1) At least one component order is in an NMS stock: The stock/ETF component must be an NMS stock, which is validated by the System;

(2) all components are effected with a product or price contingency that either has been agreed to by the respective counterparties or arranged for by a broker-dealer as principal or agent: A Complex Order, by definition consists of a single net/debit price and this price contingency applies to all the components of the order, such that the stock price computed and sent to NES allows the stock/ETF order to be executed at the proper net debit/credit price based on the execution price of each of the option legs, which is determined by the MRX System;

(3) the execution of one component is contingent upon the execution of all other components at or near the same time: Once a Complex Order is accepted and validated by the System, the entire package is processed as a single transaction and each of the option leg and stock/ETF components are simultaneously processed;

(4) the specific relationship between the component orders (*e.g.,* the spread between the prices of the component orders) is determined at the time the contingent order is placed: Complex Orders, upon entry, must have a size for each component and a net debit/credit, which the System validates and processes to determine the ratio between the components; an order is rejected if the net debit/credit price and size are not provided on the order;

(5) the component orders bear a derivative relationship to one another, represent different classes of shares of the same issuer, or involve the securities of participants in mergers or with intentions to merge that have been announced or since cancelled: under this proposal, the stock/ETF component must be the underlying security respecting the option legs, which is validated by the System; and

(6) the transaction is fully hedged (without regard to any prior existing position) as a result of the other components of the contingent trade: Under this proposal, the ratio between the options and stock/ETF must be a conforming ratio (8 contracts per 100 shares), which the System validates, and which under reasonable risk valuation methodologies, means that the stock/ETF position is fully hedged.[29]

Furthermore, proposed Supplementary Material .08 to Options 3, Section 11, proposed Options 3, Section 12(b)(1), proposed Supplementary Material .09 to Options 3, Section 13 and proposed Supplementary Material .07 to Options 3, Section 14 provide that Members may only submit Complex Orders with a stock/ETF component if such orders

the execution and reporting of the underlying security component of a Complex Order. *See* SR–Phlx–2014–04 at note 20. Therefore, members of FINRA or the NASDAQ Stock Market (''NASDAQ'') who were required to have a Uniform Service Bureau/Executing Broker Agreement (''AGU'') with NOS in order to trade Complex Orders containing a stock/ETF component and firms that are not members of FINRA or NASDAQ who were required to have a Qualified Special Representative (''QSR'') arrangement with NOS in order to trade Complex Orders containing a stock/ETF component were required to have such arrangements with NES. *See* Securities Exchange Act Release No. 71417 (January 28, 2014), 79 FR 6253 (February 3, 2014) (SR–Phlx–2014–04) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Outbound Routing) and 71416 (January 28, 2014), 79 FR 6244 (February 3, 2014) (SR–Phlx–2014–05) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Inbound Routing of Options Orders).

[25] Once the orders are communicated to the broker-dealer for execution, the broker-dealer has complete responsibility for determining whether the orders may be executed in accordance with all of the rules applicable to execution of equity orders.

[26] Specifically, the trades will be reported to the FINRA/Nasdaq TRF which is a facility of FINRA that is operated by Nasdaq, Inc. and utilizes Automated Confirmation Transaction (''ACT'') Service technology.

[27] 17 CFR 242.611(a).

[28] *See* Securities Exchange Act Release Nos. 57620 (April 4, 2008), 73 FR 19271 (April 9, 2008) (''QCT Exemptive Order''). *See also* Securities Exchange Act Release No. 54389 (August 31, 2006), 71 FR 52829 (September 7, 2006). The QCT Exemption applies to trade-throughs caused by the execution of an order involving one or more NMS stocks that are components of a ''qualified contingent trade.'' As described more fully in the QCT Exemptive Order, a qualified contingent trade is a transaction consisting of two or more component orders, executed as principal or agent, where: (1) At least one component order is an NMS stock; (2) all components are effected with a product or price contingency that either has been agreed to by the respective counterparties or arranged for by a broker-dealer as principal or agent; (3) the execution of one component is contingent upon the execution of all other components at or near the same time; (4) the specific relationship between the component orders (*e.g.,* the spread between the prices of the component orders) is determined at the time the contingent order is placed; (5) the component orders bear a derivative relationship to one another, represent different classes of shares of the same issuer, or involve the securities of participants in mergers or with intentions to merge that have been announced or since cancelled; and (6) the Exempted NMS Stock Transaction is fully hedged (without regard to any prior existing position) as a result of the other components of the contingent trade.

[29] A trading center may demonstrate that an Exempted NMS Stock Transaction is fully hedged under the circumstances based on the use of reasonable risk-valuation methodologies. The release approving the original exemption stated: To effectively execute a contingent trade, its component orders must be executed in full or in ratio at its predetermined spread or ratio. ''In ratio'' clarifies that component orders of a contingent trade do not necessarily have to be executed in full, but any partial executions must be in a predetermined ratio.

comply with the Qualified Contingent Trade Exemption. Members submitting such Complex Orders with a stock/ETF component represent that such orders comply with the Qualified Contingent Trade Exemption. Thus, the Exchange believes that Complex Orders consisting of a stock/ETF component will comply with the exemption and that MRX's System will validate such compliance to assist NES in carrying out its responsibilities as agent for these orders.

With respect to short sale regulation, the proposed handling of the stock/ETF component of a Complex Order under this proposal should not raise any issues of compliance with the currently operative provisions of Regulation SHO.[30] When a Complex Order has a stock/ETF component, Members must indicate, pursuant to Regulation SHO, whether that order involves a long or short sale. The System will accept Complex Orders with a stock/ETF component marked to reflect either a long or short position; specifically, orders not marked as buy, sell or sell short will be rejected by MRX's System.[31] The System will electronically deliver the stock/ETF component to NES for execution. Simultaneous to the options execution on MRX's System, NES will execute and report the stock/ETF component, which will contain the long or short indication as it was delivered by the Member to MRX's System. Accordingly, NES, as a trading center under Rule 201, will be compliant with the requirements of Regulation SHO. Of course, broker-dealers, including both NES and the Members submitting orders to MRX with a stock/ETF component, must comply with Regulation SHO. NES' compliance team updates, reviews and monitors NES' policies and procedures including those pertaining to Regulation SHO on an annual basis.

Further, proposed Supplementary Material .08(c) to Options 3, Section 11, and proposed Options 3, Section 12(b)(3), proposed Supplementary Material .09(c) to Options 3, Section 13, and proposed Options 3, Section 16(e) provide that when the short sale price test in Rule 201 of Regulation SHO[32] is triggered for a covered security, NES will not execute a short sale order in the underlying covered security component[33] of a Complex Order if the price is equal to or below the current national best bid. However, NES will execute a short sale order in the underlying covered security component of a Complex Order if such order is marked ''short exempt,'' regardless of whether it is at a price that is equal to or below the current national best bid. If NES cannot execute the underlying covered security component of a Complex Order in accordance with Rule 201 of Regulation SHO, the Exchange will hold the Complex Order on the Complex Order Book, if consistent with Member instructions (Members may always elect to cancel the order).[34] The order may execute at a price that is not equal to or below the current national best bid.[35] This proposed rule is similar to Phlx Options 3, Section 16(b) except that unlike Phlx, MRX will not cancel back the Complex Order to the entering Member unless the Member requests that the order be cancelled. As noted above, MRX and Phlx differ with respect to the manner in which their systems handle Stock-Option Strategies and Stock-Complex Strategies that do not meet requisite price checks in their respective rules or do not meet the requirements of Regulation SHO. As proposed, MRX will hold orders on the Complex Order book that cannot be executed pursuant to Regulation SHO restrictions, unless the Member requests the order to be cancelled.[36] If an MRX Member elects to have the order held, the order would await other matching opportunities, otherwise at the Member's election the order would be returned to the Member. In contrast, Phlx only provides for a cancellation of the order. MRX's proposed approach would the Member with optionality as to the handing of the order. The Exchange believes providing the choice to have the order held provides Members with an opportunity for an execution.

For these reasons, the processing of the stock/ETF component of a Complex Order under this proposal will comply with applicable rules regarding equity trading, including the rules governing trade reporting, trade-throughs and short sales. NES's responsibilities respecting these equity trading rules will be documented in NES's written policies and procedures. NES' compliance team updates, reviews and monitors NES' policies and procedures regarding equity trading rules on an annual basis. NES is regulated by FINRA and as such, NES policies and procedures are subject to review and examinations by FINRA.

As part of the execution of the stock/ETF component, NES will ensure that the execution price is within the intra-day high-low range for the day in that stock at the time the Complex Order is processed and within a certain price range from the current market pursuant to Options 3, Section 16(a),[37] which the Exchange will establish in an Options Trader Alert. If the stock price is not within these parameters, the Complex Order is not executable and would be held on the order book or cancelled, consistent with Member instructions.[38] Before the migration of MRX to enhanced technology platform when the Exchange was offering stock-tied functionality, the third-party broker-dealer would ensure the execution price was within the intra-day high-low range. With the transition to NES, the Exchange would commence performing this check. Members who transact stock-tied functionality on MRX would therefore continue to be subject to the same execution price check with NES as they were before the migration.

The Exchange believes that the continued electronic submission of the stock/ETF piece of the Complex Order to NES for execution should help ensure that the Complex Order, as a whole, is executed timely and at the desired price. In addition, the Exchange's electronic communication of the stock or ETF component to NES for execution eliminates the need for each party to separately submit the stock component to a broker-dealer for execution. The execution of the stock/ETF portion of a Complex Order will be immediate; the Exchange's System will calculate the stock price based on the net debit/credit price of the Complex Order,[39] while also calculating and determining the appropriate options price(s), all electronically. The Exchange continues to believe that this practice would not

[30] 17 CFR 242.200 *et seq.*

[31] The Exchange also accepts short sell exempt orders as described herein.

[32] *See* Securities Exchange Act Release No. 61595 (February 26, 2010), 75 FR 11232 (March 10, 2010) (''Rule 201 Adopting Release'').

[33] For purposes of this paragraph, the term ''covered security'' shall have the same meaning as in Rule 201(a)(1) of Regulation SHO.

[34] *See* proposed Options 3, Section 16(e). In contrast, Complex Orders in an auction mechanism that cannot be executed in accordance with Regulation SHO will be cancelled back and will not rest on the Complex Order Book as provided in Supplementary Material .08 to Options 3, Section 11 and Supplementary Material .09 to Options 3, Section 13.

[35] *See* proposed Options 3, Section 16(e).

[36] *See* proposed Options 3, Section 16(e).

[37] This intra-day high-low range check does not occur for Complex PIM Orders, Complex Facilitation Orders and Complex SOM Orders, and also does not occur for Complex Customer Cross Orders.

[38] *See* proposed Options 3, Section 16(d). In contrast, Complex Orders in an auction mechanism that cannot be executed in accordance with Regulation SHO will be cancelled back and will not rest on the Complex Order Book as provided in Supplementary Material .08 to Options 3, Section 11 and Supplementary Material .09 to Options 3, Section 13.

[39] The stock/ETF price is, of course, included within the net debit/credit price of the Complex Order.

require the Exchange to later nullify options trades if the stock price cannot be achieved. Accordingly, like Phlx, the Exchange is not proposing to adopt a rule permitting such option trade nullifications because the trade would not occur at a price that later required nullification due to the unavailability of the stock/ETF price. The Exchange further believes that the certainty associated with such electronic calculations and processing will continue to be an attractive feature for Members transacting Complex Orders with a stock or ETF component. Likewise, Phlx does not have a rule for options trade nullification for similar transactions. Phlx reasoned in its proposal to similarly use an affiliate to execute the stock or ETF component of a Complex Order that because such execution would be immediate, with Phlx's system calculating the stock or ETF price based on the net debit/credit price of the Complex Order while also calculating and determining the appropriate options price(s), that it believed that its approach would not require Phlx to later nullify options trades if the stock price cannot be achieved.[40]

The Exchange also believes that it is appropriate to construct a program wherein its affiliate, NES, is the exclusive conduit for the execution of the stock/ETF component of a Complex Order under this proposal, similar to Phlx.[41] As a practical matter, complex order programs on other exchanges involve specific arrangements with a broker-dealer to facilitate prompt execution. NES does not intend to charge a fee for the execution of the stock/ETF component of a Complex Order.[42] The Exchange believes that is consistent with the Act for such an arrangement to involve one broker-dealer, even one that is an affiliate, particularly to offer the aforementioned benefits of a prompt, electronic execution for Complex Orders involving stock/ETFs. Specifically, offering a seamless, automatic execution for both the options and stock/ETF components of a Complex Order is an important feature that should promote just and equitable principles of trade and remove impediments to and perfect the mechanism of a free and open market and a national market system by deeply enhancing the sort of complex order processing available on options exchanges today. Nevertheless, Members could, in lieu of this proposed arrangement with NES, choose, instead, the following alternatives: (i) avoid using Complex Orders that involve stock/ETFs, (ii) use a trading floor to execute Complex Order with stock, or (iii) go to another options venue, several of which offer a similar feature.[43]

In line with the proposed amendments, the Exchange proposes to remove language within Supplementary Material .02 of Options 3, Section 14 which states,

> Members may also indicate preferred execution brokers, and such preferences will determine order routing priority whenever possible. A trade of a Stock-Option Order or a Stock-Complex Order will be automatically cancelled if market conditions prevent the execution of the stock or option leg(s) at the prices necessary to achieve the agreed upon net price. When a Stock-Option Order or Stock-Complex Order has been matched with another Stock-Option Order or Stock-Complex Order that is for less than the full size of the Stock-Option Order or Stock-Complex Order, the full size of the Stock-Option Order or Stock Complex Order being processed by the stock execution venue will be unavailable for trading while the order is being processed.

As noted herein, Members will no longer be able to indicate preferred execution brokers which makes the first sentence within Supplementary Material .02 of Options 3, Section 14 unnecessary. The second sentence within Supplementary Material .02 of Options 3, Section 14 is being removed because the Exchange is replacing this rule text with proposed Options 3, Section 16(d) and (e) which describes price checks that will be performed for Stock-Option Orders or Stock-Complex Orders by NES. The third sentence within Supplementary Material .02 of Options 3, Section 14 is being removed because the Exchange's proposal to replace the third-party broker with NES will remove a delay that currently exists in the workflow to process a Stock-Option Order or Stock-Complex Order. NES will perform the stock leg validations proposed in Options 3, Sections 16(d) and (e) for Stock-Option Orders or Stock-Complex Orders. Thereafter, NES would print the stock components onto the Trade Reporting Facility and MRX would print the option component executions. This new workflow in which the stock or ETF component of the order will be routed to NES for execution instead of a third-party broker-dealer will obviate the possibility that the stock execution venue will be unavailable for trading while the order is being processed because MRX would no longer be reliant on a third-party broker-dealer to conduct the appropriate checks and, thereafter, relay information to MRX. With the proposed change, NES, the Exchange's affiliate, would conduct the necessary price checks and would make Stock-Option Orders or Stock-Complex Orders available to MRX in the same way that it does for Phlx. The Exchange believes that this new workflow would increase the efficiency of the entire transaction, including stock component validation and reporting.

Complex Opening Process

Similarly, the Exchange proposes to amend Supplementary Material .04 to Options 3, Section 14 to provide that Stock-Option Strategies and Stock-Complex Strategies will open pursuant to the Complex Opening Price Determination described in Supplementary Material .05 to Options 3, Section 14 instead of the Complex Uncrossing Process described in Supplementary Material .06(b) to Options 3, Section 14. Similar to the discussion above, the applicable price checks for the stock/ETF component of a Stock-Option Strategy and Stock-Complex Strategy were being performed by a third-party broker-dealer before the migration, which caused a delay that prevented these strategies from participating in the Complex Opening Process. With the proposed change to utilize NES in lieu of a third-party broker-dealer, Stock-Option Strategies and Stock-Complex Strategies would be able to participate in the Complex Opening Process because there would be no delay as NES, the Exchange's affiliate, would conduct the necessary checks (*i.e.,* the price checks Options 3, Section 16(d) and (e)). Thereafter, NES would make Stock-Option Order or Stock-Complex Order available to participate in the Complex Opening Process.

For example, assume that an underlying equity is in a Regulation

[40] *See* Phlx Complex Order Approval *supra* at 5633.

[41] *See* MRX General 2, Section 4(b) which provides that Nasdaq, Inc., which owns NASDAQ Execution Services, LLC and the Exchange, shall establish and maintain procedures and internal controls reasonably designed to ensure that NASDAQ Execution Services, LLC does not develop or implement changes to its system on the basis of non-public information regarding planned changes to the Exchange's systems, obtained as a result of its affiliation with the Exchange, until such information is available generally to similarly situated Exchange Members in connection with the provision of inbound routing to the Exchange.

[42] However, Trade Reporting Facility and clearing fees, not charged by MRX or NES, may result. National Securities Clearing Corporation (''NSCC'') and ACT will bill firms directly for their use of the NSCC and ACT systems, respectively. To the extent that NES is billed by NSCC or ACT, it will not pass through such fees to firms for the stock/ETF portion of a Complex Order under this proposal. MRX's fees applicable to Complex Orders appear in its Fee Schedule and may change from time to time.

[43] Existing Complex Order mechanisms at Cboe, Inc. (''Cboe'') offers a similar end result. *See* Cboe 5.33(l).

SHO State, the underlying equity component is open on the primary underlying market, and the following strategy is created prior to the option leg being opened on MRX:

- Assume Stock Option Strategy: Buy 8 puts and buy 100 shares
- Stock Leg NBBO: 50.00 × 50.20
- Option leg opens on MRX and the NBBO is 2.00 × 2.10
- Stock-Option Strategy derived NBBO: 16.50 × 16.75 [44]
- Firm A Customer Stock-Option Order to buy 5 strategies for 16.50 arrives
- Firm B Stock-Option Order to buy 5 strategies for 16.50 arrives
- Firm C Stock-Option Order to sell 7 strategies for 16.50 arrives with instructions to short the stock component
- Firm D Stock-Option Order to sell 3 strategies for 16.50 arrives with instructions to Sell the Stock component

In the above scenario, only Firm A (buying 5 strategies) and Firm D (not shorting 3 strategies) can actually trade at the Opening Price despite it appearing there is a fully matched cross. Firm C (selling 7 strategies) cannot trade because the underlying is in a Regulation SHO state and the only price the stock leg can be matched at, is on the National Best Bid, which is not a permissible price to short sell for an underlying in a Regulation SHO state.

Prior to the migration, MRX did not attempt to match Stock-Option Orders and Stock-Complex Orders during the Complex Opening Price Determination because the Exchange could not ensure that all parties in the cross would be able to match at the proposed stock leg price because the checks were performed by a third party. If the third party was unable to match part of the cross, executions on the options components would need to be busted, therefore the Exchange did not consider Stock-Option Orders and Stock-Complex Orders in the Complex Opening prior to the migration.

With this proposal, the price checks would be conducted by NES, an affiliate of the Exchange. Once MRX determines the stock and option leg prices, MRX will communicate the stock price and quantity to NES, who will conduct the necessary price checks. The proposed workflow provides efficiencies for the stock component execution as compared to the current process which involves a third-party broker-dealer. With this process, MRX would be able to process the option component and match the strategies during the Complex Opening Price Determination without the need for MRX to await a response from a third-party broker-dealer.

The ability to attempt this match opportunity earlier in the Complex Opening Price Determination is critical because the market can move between the Complex Opening Price Determination and the Complex Uncrossing Process [45] in such a way that the trade could no longer be possible. By way of example, prior to the migration, if the Stock Component adjusts to 53.00 × 54.00 before this strategy can attempt a Complex Uncrossing Process, the Stock Option Strategy derived NBBO would be 17.25 × 17.70 and there would no longer be a match possible for the interest willing to buy and sell at 16.50. If the System instead had utilized the Opening Price Determination, the execution would have occurred in this instance.

Trade Value Allowance

Trade Value Allowance is a functionality that allows Stock-Option Strategies and Stock-Complex Strategies to trade outside of their expected notional trade value by a specified amount (the ''Trade Value Allowance'').[46] After calculating the appropriate options match price for a Stock-Option or Stock-Complex Order expressed in a valid one cent increment, the System calculates the corresponding stock match price rounded to the increment supported by the equity market.

The Exchange no longer desires to offer the Trade Value Allowance. The Exchange has issued an Options Trader Alert indicating its intent to decommission this functionality to provide notice to Members.[47] Very few Members have opted to utilize the Trade Value Allowance and even a smaller percentage of trades were subject to the allowance. Phlx does not have a similar allowance today. In an effort to harmonize its complex order functionality across its Nasdaq affiliated markets, the Exchange proposes to no longer offer the Trade Value Allowance functionality. With the proposed change to utilize NES, the Exchange would determine the stock leg prices, and NES would be able to execute the stock leg at two different prices to ensure that the net price of the execution is within the notional value of the original order, thus eliminating the need for the allowance.

Options 3, Section 7

The Exchange proposes to make a clarifying change to MRX Options 3, Section 7, Types of Orders and Order and Quote Protocols. The Exchange proposes to amend MRX Options 3, Section 7(t) related to QCC with Stock Orders to make clear that QCC with Stock Orders may only be entered through FIX.[48] MRX has 2 order entry protocols, FIX and OTTO.[49] Members are required to have an order entry protocol to enter orders onto MRX. MRX offers each Member one FIX port at no cost.[50] All Members would have the ability to enter QCC with Stock Orders. QCC with Stock Orders may not be entered through OTTO.

Additionally, the Exchange proposes to amend Supplementary Material .02(d) to Options 3, Section 7 related to Immediate-or-Cancel Orders. The Exchange proposes to specifically amend Supplementary Material .02(d)(3) to Options 3, Section 7 to add QCC with Stock Orders and Complex QCC with Stock to the list of order types that have a Time in Force or ''TIF'' of Immediate-or-Cancel or ''IOC''. Because QCC with Stock Orders and Complex QCC with Stock have a TIF of IOC, these order types will either execute on entry or cancel. Adding these order types to Supplementary Material .02(d)(3) to Options 3, Section 7 will make this clear.

[44] The derived NBBO for the Stock Option Strategy was calculated as follows: Stock Option Strategy Derived Bid = ¼(2.00 × 8) + ¼(50) = 16.50 and Stock Option Strategy Derived Offer = ¼(2.10 × 8) + ¼(50.20) = 16.75. The Stock Option Strategy is normalized by MRX's System by dividing the legs by the greatest common denominator of four (4). The normalized ratio was applied to the option leg price and stock leg price to determine the net price strategy.

[45] *See* Supplementary Material .06 to MRX Options 3, Section 14.

[46] The Trade Value Allowance is the percentage difference between the expected notional value of a trade and the actual notional value of the trade. *See* Supplementary Material .03 of MRX Options 3, Section 14.

[47] *See* Options Trader Alert # 2023–3. No Member has expressed concern with this functionality being eliminated.

[48] ''Financial Information eXchange'' or ''FIX'' is an interface that allows Members and their Sponsored Customers to connect, send, and receive messages related to orders and auction orders to the Exchange. Features include the following: (1) execution messages; (2) order messages; (3) risk protection triggers and cancel notifications; and (4) post trade allocation messages. *See* Supplementary Material .03(a) to Options 3, Section 7.

[49] ''Ouch to Trade Options'' or ''OTTO'' is an interface that allows Members and their Sponsored Customers to connect, send, and receive messages related to orders, auction orders, and auction responses to the Exchange. Features include the following: (1) options symbol directory messages (*e.g.,* underlying and complex instruments); (2) system event messages (*e.g.,* start of trading hours messages and start of opening); (3) trading action messages (*e.g.,* halts and resumes); (4) execution messages; (5) order messages; (6) risk protection triggers and cancel notifications; (7) auction notifications; (8) auction responses; and (9) post trade allocation messages. *See* Supplementary Material .03(b) to Options 3, Section 7.

[50] *See* Options 7, Section 6, Ports and Other Services.

Options 3, Section 12

The Exchange proposes to amend Options 3, Section 12(e)(4) to clarify the manner in which a Member may submit a QCC with Stock Order.[51] Today, Options 3, Section 12(e)(4) provides that, ''QCC with Stock Orders can be entered with separate prices for the stock and options components, or with a net price for both.'' The Exchange proposes to amend this rule text to instead reflect the current manner in which QCC with Stock Orders may be entered into MRX's System. The proposed rule text would provide, ''QCC with Stock Orders must be entered with a net price for the stock and options components through FIX. The System will calculate the individual component prices.'' The current language of Options 3, Section 12(e)(4) is not correct. The Exchange proposes to amend this language to make clear the current System functionality. The proposed language does not result in a change to the Exchange's System. As noted above, QCC with Stock Orders may not be entered through OTTO. The Exchange notes that requiring QCC with Stock Orders to be submitted through FIX is consistent with proposed Options 3, Section 7(t) which currently requires Members to enter QCC Orders through FIX. Additionally, the Exchange is specifying the System calculates the individual component prices.

Options 3, Section 15

The Exchange proposes to amend its Market Wide Risk Protection within Options 3, Section 15(a)(1)(C) to add certain additional information concerning the current Market Wide Risk Protection along with new language that would apply as a result of the proposed changes to stock-tied functionality.

Today, the Exchange offers a Market Wide Risk Protection which is comprised of an ''Order Entry Rate Protection'' which protects Members against entering orders at a rate that exceeds predefined thresholds, and an ''Order Execution Rate Protection,'' which protects Members against executing orders at a rate that exceeds their predefined risk settings. Both of these risk protections are detailed in the ''Market Wide Risk Protection.'' Today, pursuant to the proposed Market Wide Risk Protection rule, the Exchange's System maintains one or more counting programs for each Member that count orders entered and contracts traded on MRX. Members can use multiple counting programs to separate risk protections for different groups established within the Member.

MRX Options 3, Section 15(a)(1)(C) currently states, that the counting programs will maintain separate counts, over rolling time periods specified by the Member for each count of: (1) the total number of orders entered; (2) the total number of contracts traded. The Exchange proposes to amend MRX Options 3, Section 15(a)(1)(C) to instead provide,

> [t]he counting programs will maintain separate counts, over rolling time periods specified by the Member for each count, of: (1) the total number of orders entered in the regular order book; (2) the total number of orders entered in the complex order book with only options legs; (3) the total number of Stock-Option Orders and Stock-Complex Orders entered in the complex order book with both stock and options legs ; (4) the total number of contracts traded in regular orders; (5) the total number of contracts traded in complex orders with only options legs; and (6) the total number of Stock-Option Order and Stock-Complex Order contracts traded in complex orders with both stock and option legs).

Today, the counting programs maintain separate counts over rolling time period for the total number of orders entered in the regular order book, complex order book with only options legs; and the complex order book with both stock and options legs. Additionally, the risk protection counts the total number of contracts traded in regular orders and Complex Orders with only options legs.[52] The current rule text does not provide for each of these counts today.

The Exchange proposes a technical amendment to the first provision of MRX Options 3, Section 15(a)(1)(C) to add ''in the regular order book'' to the sentence to distinguish the single-leg order book from the complex order book.

At the time that MRX adopted Complex Order rules, those rules were intended to be identical to Nasdaq ISE, LLC (''ISE'') complex order rules.[53] MRX should have amended MRX Options 3, Section 15(a)(1)(C) to include the rule text within (2) through (5), as noted above, to mirror the rules of ISE Options 3, Section 15(a)(1)(C) as it pertains to Complex Orders. The Exchange proposes to mirror the rules of ISE Options 3, Section 15(a)(1)(C) within (2) through (5) except that the rules will use the defined terms Stock-Option Order, Stock-Complex Order, and Complex Option Order.[54] The Exchange notes that the stock portion of QCC Orders, Complex Qualified QCC Orders, QCC with Stock Orders, and Complex QCC with Stock Orders are not counted in (3) because MRX's System does not handle the stock portion of these orders. MRX would not represent the stock leg through NES as it would for other Stock-Option Orders and Stock-Complex Orders as described herein. The Exchange inadvertently did not amend its rules similar to ISE today. Today, the Market Wide Risk Protection includes Complex Orders, where applicable. At this time, MRX proposes to mirror ISE's rules related to the counting functionality for Complex Orders to reflect the manner in which the System operates. The Exchange notes that QCC Orders, Complex Qualified QCC Orders, QCC with Stock Orders, and Complex QCC with Stock Orders are considered, where applicable, in Options 3, Section 15(a)(1)(C)(1), (2), (4) and (5).

Today, the Exchange does not include a complex execution count for Complex Orders with a stock component as the execution counts maintained by the Order Execution Rate Protection are based solely on options contracts traded. At this time, as a result of amending the stock-tied functionality, the Exchange proposes to add a new number (6) to MRX Options 3, Section 15(a)(1)(C) to note that the counting programs will maintain separate counts, over rolling time periods specified by the Member for each count, of the total number of Stock-Option Order and Stock-Complex Order contracts traded in Complex Order with both stock and option legs. The Exchange is adding new number (6) because it is introducing NES in place of a third-party broker-dealer. As a result, the Exchange will guarantee a stock-tied execution. Before the migration, the stock-tied execution was not guaranteed by the third-party broker-dealer. Because of the ability to guarantee the execution, the Exchange is amending Options 3, Section 15(a)(1)(C) to add (6) to the list of contracts counted by the Market Wide Risk Protection because the Exchange is able to perform the risk check since NES will be handling the stock for Stock-Option Orders and Stock-Complex Orders. This risk protection will reduce risk associated with system errors or market events that

[51] QCC with Stock Orders are processed in accordance with Options 3, Section 12(e).

[52] The Member's allowable order rate for the Order Entry Rate Protection is comprised of the parameters defined in (1) to (3), while the allowable contract execution rate for the Order Execution Rate Protection is comprised of the parameters defined in (4) and (5).

[53] *See* Securities Exchange Act Release No. 86326 (July 8, 2019), 84 FR 33300 (July 12, 2019) (SR–MRX–2019014) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt Complex Order Pricing).

[54] A similar change will be made to ISE to utilize the defined terms ''Stock-Option Order,'' ''Stock-Complex Order'' and ''Complex Option Order.''

may cause Members to send a large number of orders, or receive multiple, automatic executions, before they can adjust their exposure in the market. Without adequate risk management tools, such as those proposed in this filing, Members could reduce the amount of order flow and liquidity that they provide on MRX. As a result, the functionality promotes just and equitable principles of trade.

Finally, the Exchange proposes to add the defined term ''DNTT'' to the end of Options 3, Section 16(a) to define the instruction on a Complex Order to price each leg of the Complex Order to be executed equal to or better than the NBBO for the options series or any stock component, as applicable as a ''Do-Not-Trade-Through'' or ''DNTT.'' This is not a substantive amendment, rather this change is meant to assist Members in locating this functionality within MRX's rules.

Implementation

The Exchange will issue an Options Trader Alert to Members to provide notification of the implementation date for MRX's Delayed Functionalities, except Trade Value Allowance. MRX will announce the day it will recommence the Delayed Functionalities, except Trade Value Allowance, before November 7, 2023, which is one year from the day MRX's technology migration commenced. Separately, MRX informed Members that it will not recommence the Trade Value Allowance functionality in a separate Options Trader Alert.[55] As discussed above, the Trade Value Allowance will no longer be necessary.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[56] in general, and furthers the objectives of Section 6(b)(5) of the Act,[57] in particular, in that it is designed to promote just and equitable principles of trade and to protect investors and the public interest for the reasons discussed below.

Re-Introduction of Stock-Related Strategies and Elimination of Trade Value Allowance

Stock-Tied Functionality

The Exchange's proposal to amend its stock-tied functionality that the Exchange used prior to the technology migration and recommence offering this functionality as described above promotes just and equitable principles of trade and removes impediments to and perfect the mechanism of a free and open market and a national market system because it will permit the Exchange to streamline its stock-tied processes as discussed more fully below. Further, the amendments to require that a Member desiring to execute an order with stock or an ETF component enter into a brokerage agreement with NES, a broker-dealer owned and operated by Nasdaq, Inc., protects investors and the general public because Members will be required to comply with NES' requirements and those requirements will be uniform for all MRX Members.

The proposed stock-tied functionality is identical to Phlx Options 3, Sections 13(b)(10)(ii) and 14(a)(i) with respect to utilizing NES to process and report stock-tied functionality with two differences.

First, while both Phlx and MRX have certain risk protections for complex orders, they differ. With respect to MRX, the execution price of the Complex Order must be within a certain price from the current market, as determined by the Exchange pursuant to Options 3, Section 16(a). Specifically, today, MRX Options 3, Section 16(a) provides that the System will not permit any leg of a complex strategy to trade-through the NBBO for the series or any stock component by a configurable amount calculated as the lesser of (i) an absolute amount not to exceed $0.10, and (ii) a percentage of the NBBO not to exceed 500%, as determined by the Exchange on a class, series or underlying basis. Phlx Options 3, Section 16(b)(i) describes Phlx's ACE Parameter which defines a price range outside of which a complex order will not be executed. On Phlx, a complex order to sell is not executed at a price that is lower than the cNBBO bid by more than the ACE Parameter. Conversely, on Phlx, a complex order to buy will not be executed at a price that is higher than the cNBBO offer by more than the ACE Parameter. While MRX's and Phlx's price checks differ, both markets seek to prevent executions from occurring at certain prices and at certain percentages from the NBBO. The Exchange believes that this proposal promotes just and equitable principles of trade because NES would apply the same price check for stock-tied functionality that was being applied previously by a third party that executed the stock or ETF component of a complex strategy on behalf of MRX Members. Additionally, MRX Members would continue to be subject to the same price check which is applied to all Complex Orders executed on MRX.

Second, MRX and Phlx differ with respect to the manner in which their systems handle Stock-Option Strategies and Stock-Complex Strategies that would execute against interest on the Complex Order Book at a price that do not meet price checks as provided for in proposed Options 3, Section 16(d)[58] or do not meet Regulation SHO provisions as provided for in proposed Options 3, Section 16(e)[59] are handled by their respective systems. As proposed, MRX will hold orders on the Complex Order book that cannot be executed because of Regulation SHO or price check restrictions, unless the Member requests the order to be cancelled. If an MRX Member elects to have the order held on the Complex Order Book, the order would await other matching opportunities, otherwise at the Member's election the order would be returned to the Member. In contrast, Phlx only provides for a cancellation of the order. The Exchange believes that this proposal promotes just and equitable principles of trade because MRX's proposed approach would provide the Member with optionality as to the handing of the order. The Exchange believes providing the choice to have the order held on the Complex Order Book provides Members with an opportunity for an execution.

NES, an affiliate of the Exchange and a registered broker-dealer, has been approved by the Commission to become a Member of the Exchange and perform inbound routing on behalf of the Exchange.[60] Additionally, NES is permitted to route outbound orders either directly or indirectly through a third party routing broker-dealer to other market centers and perform other functions regarding the cancellation of orders and the maintenance of a NES error account.[61] The functions performed by NES on Phlx today are identical to the functions that MRX proposes for NES to perform for MRX Members.[62] Identical to Phlx, after

[55] *See supra* note 12.

[56] 15 U.S.C. 78f(b).

[57] 15 U.S.C. 78f(b)(5).

[58] As proposed, the execution price of Stock-Option Strategies and Stock-Complex Strategies must be within the high-low range for the day in that stock at the time the Complex Order is processed and within a certain price from the current market pursuant to Options 3, Section 16(a), as determined by the Exchange.

[59] *See supra* note 22.

[60] *See supra* note 16.

[61] *See supra* note 17.

[62] *See* Securities Exchange Act Release No. 63777 (January 26, 2011), 76 FR 5630 (February 1, 2011) (SR–Phlx–2010–157) (Order Approving a Proposed Rule Change, as Modified by Amendment Nos. 1 and 2, Relating to Complex Orders) (''Phlx Complex Order Approval''). NES assumed the stock execution functionalities that were previously performed by NOS. Phlx subsequently filed to permit both inbound and outbound orders to be routed through NES instead of Nasdaq Options

MRX's System determines that a Complex Order is possible and identifies the prices for each component of such Complex Order, MRX will electronically communicate the stock or ETF component of the Complex Order to NES for execution.[63]

NES, acting as agent for the orders to buy and sell the underlying stock or ETF, will execute the orders in the OTC market and will handle the orders pursuant to applicable rules regarding equity trading, including the rules governing trade reporting, trade-throughs, and short sales. Before the migration, this function was performed by a third-party broker-dealer that executed the stock or ETF component of a complex strategy on behalf of MRX Members. As proposed, this structure will promote just and equitable principles of trade because NES will be responsible for the proper execution, trade reporting, and submission to clearing of the underlying stock or ETF component of a Complex Order.[64] Furthermore, today, NES is responsible for compliance with FINRA rules generally and is subject to examination by FINRA.[65] Finally, today, NES has in place policies related to confidentiality and the potential for informational advantages relating to its affiliates, intended to protect against the misuse of material nonpublic information.[66] In particular, NES will have in place policies and procedures designed to prevent the misuse of material non-public information related to stock-tied executions which will protect investors and the public interest. NES only receives information about the stock or ETF portion of the order from the Exchange. As mentioned herein, today, NES is responsible for the proper execution, trade reporting, and submission to clearing of the underlying stock or ETF component of a Complex Order on Phlx. MRX will adopt identical policies and procedures for its stock-tied functionality as are in place on Phlx today.

In addition, the execution and reporting of the stock/ETF piece will occur otherwise than on MRX or any other exchange, and will be handled by NES pursuant to applicable rules regarding equity trading,[67] including the rules governing trade reporting, trade-throughs and short sales. The Exchange's proposal also promotes just and equitable principles of trade as NES will report the trades to the Trade Reporting Facility.[68] Further, all MRX Members may execute stock-tied transactions. All stock-tied transactions will have the stock/ETF component of a Complex Order, once executed, properly processed for trade reporting purposes. Phlx has identical rules for processing and reporting.[69]

With respect to trade-throughs, the Exchange believes that the stock/ETF component of a Complex Order is eligible for the Qualified Contingent Trade Exemption from Rule 611(a) of Regulation NMS. The Exchange believes that the stock/ETF portion of a Complex Order under this proposal complies with all six requirements of the Qualified Contingent Trade Exemption.[70] In order to promote just and equitable principles of trade, MRX's System will validate compliance with each requirement such that any matched order received by NES under this proposal has been checked for compliance with the exemption. Members may only submit Complex Orders with a stock/ETF component if such orders comply with the Qualified Contingent Trade Exemption.[71] Members submitting such Complex Orders with a stock/ETF component represent that such orders comply with the Qualified Contingent Trade Exemption. Thus, the Exchange believes that Complex Orders consisting of a stock/ETF component will comply with the exemption and that MRX's System will validate such compliance to assist NES in carrying out its responsibilities as agent for these orders.

With respect to short sale regulation, the proposed handling of the stock/ETF component of a Complex Order under this proposal should not raise any issues of compliance with the currently operative provisions of Regulation SHO[72] and therefore promote just and equitable principles of trade. When a Complex Order has a stock/ETF component, Members must indicate, pursuant to Regulation SHO, whether that order involves a long or short sale. The System will accept Complex Orders with a stock/ETF component marked to reflect either a long or short position; specifically, orders not marked as buy, sell or sell short will be rejected by MRX's System.[73] The System will electronically deliver the stock/ETF component to NES for execution. Simultaneous to the options execution on MRX's System, NES will execute and report the stock/ETF component, which will contain the long or short indication as it was delivered by the Member to MRX's System. Accordingly, NES, as a trading center under Rule 201, will be compliant with the requirements of Regulation SHO. Of course, broker-dealers, including both NES and the Members submitting orders to MRX with a stock/ETF component, must comply with Regulation SHO. NES'

Services LLC (''NOS''). *See* Securities Exchange Act Release No. 71417 (January 28, 2014), 79 FR 6253 (February 3, 2014) (SR–Phlx–2014–04) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Outbound Routing) and 71416 (January 28, 2014), 79 FR 6244 (February 3, 2014) (SR–Phlx–2014–05) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Inbound Routing of Options Orders).

[64] *See supra* note 23.

[65] NES is subject to FINRA Rule 3110, which generally requires that the policies and procedures and supervisory systems be reasonably designed to achieve compliance with applicable securities laws and regulations and with applicable FINRA rules, including those relating to the misuse of material non-public information.

[66] *See supra* note 24.

[67] *See supra* note 25.

[68] *See supra* note 26.

[69] *See* Phlx Options 3, Sections 13(b)(10) and 14(a)(i).

[70] The six requirements include: (1) At least one component order is in an NMS stock: The stock/ETF component must be an NMS stock, which is validated by the System; (2) all components are effected with a product or price contingency that either has been agreed to by the respective counterparties or arranged for by a broker-dealer as principal or agent: A Complex Order, by definition consists of a single net/debit price and this price contingency applies to all the components of the order, such that the stock price computed and sent to NES allows the stock/ETF order to be executed at the proper net debit/credit price based on the execution price of each of the option legs, which is determined by the MRX System; (3) the execution of one component is contingent upon the execution of all other components at or near the same time: Once a Complex Order is accepted and validated by the System, the entire package is processed as a single transaction and each of the option leg and stock/ETF components are simultaneously processed; (4) the specific relationship between the component orders (*e.g.,* the spread between the prices of the component orders) is determined at the time the contingent order is placed: Complex Orders, upon entry, must have a size for each component and a net debit/credit, which the System validates and processes to determine the ratio between the components; an order is rejected if the net debit/credit price and size are not provided on the order; (5) the component orders bear a derivative relationship to one another, represent different classes of shares of the same issuer, or involve the securities of participants in mergers or with intentions to merge that have been announced or since cancelled: under this proposal, the stock/ETF component must be the underlying security respecting the option legs, which is validated by the System; and (6) the transaction is fully hedged (without regard to any prior existing position) as a result of the other components of the contingent trade: Under this proposal, the ratio between the options and stock/ETF must be a conforming ratio (8 contracts per 100 shares), which the System validates, and which under reasonable risk valuation methodologies, means that the stock/ETF position is fully hedged.

[71] *See* Supplementary Material .07 to Options 3, Section 14.

[72] 17 CFR 242.200 *et seq.*

[73] The Exchange also accept short sell exempt orders as described herein.

compliance team updates, reviews and monitors NES' policies and procedures including those pertaining to Regulation SHO on an annual basis.

Further, proposed Options 3, Section 16(e) provides that when the short sale price test in Rule 201 of Regulation SHO [74] is triggered for a covered security, NES will not execute a short sale order in the underlying covered security component of a Complex Order if the price is equal to or below the current national best bid. However, NES will execute a short sale order in the underlying covered security component of a Complex Order if such order is marked ''short exempt,'' regardless of whether it is at a price that is equal to or below the current national best bid. If NES cannot execute the underlying covered security component of a Complex Order in accordance with Rule 201 of Regulation SHO, the Exchange will hold the Complex Order on the Complex Order Book, if consistent with Member instructions (Members may always elect to cancel the order).[75] The order may execute at a price that is not equal to or below the current national best bid. This proposed rule is similar to Phlx Options 3, Section 16(b) except that unlike Phlx, MRX will not cancel back the Complex Order to the entering Member unless the Member requests that the order be cancelled back.

For these reasons, the processing of the stock/ETF component of a Complex Order under this proposal will comply with applicable rules regarding equity trading, including the rules governing trade reporting, trade-throughs and short sales and is consistent with the Act. NES's responsibilities respecting these equity trading rules will be documented in NES's written policies and procedures. NES' compliance team updates, reviews and monitors NES' policies and procedures. NES is regulated by FINRA and as such, NES policies and procedures are subject to review and examinations by FINRA.

Further, as part of the execution of the stock/ETF component, the Exchange will ensure that the execution price is within the intra-day high-low range for the day in that stock at the time the Complex Order is processed and within a certain price range from the current market pursuant to Options 3, Section 16(a) which will protect investors and the general public.[76] If the stock price is not within these parameters, the Complex Order is not executable and would be held on the order book or cancelled, consistent with Member instructions.[77] Before the migration of MRX to enhanced technology platform when the Exchange was offering stock-tied functionality, the third-party broker-dealer would ensure the execution price was within the intra-day high-low range. With the transition to NES, the Exchange would commence performing this check. Members who transact stock-tied functionality on MRX would therefore continue to be subject to the same execution price check with NES as they were before the migration. This intra-day high-low range check does not occur for certain Complex Orders auctions (*e.g.* Complex PIM Orders,[78] Complex Facilitation Orders [79] and Complex SOM Orders [80]) and also does not occur for Complex Customer Cross Orders [81] or Complex QCC Orders.[82] The Exchange believes that this exception for auctions is consistent with the Act because these auctions have their own rules for auction eligibility, entry checks, and offer price improvement all of which are distinguishable from execution of orders on the Complex Order Book. Complex Customer Cross Orders are automatically executed upon entry so long as: (i) the price of the transaction is at or within the best bid and offer for the same complex strategy on the Complex Order Book; (ii) there are no Priority Customer Complex Orders for the same strategy at the same price on the Complex Order Book; and (iii) the options legs can be executed at prices that comply with the provisions of Options 3, Section 14(c)(2). Complex Customer Cross Orders will be rejected if they cannot be executed.[83]

Finally, the Exchange also believes that it is appropriate to construct a program wherein its affiliate, NES, is the exclusive conduit for the execution of the stock/ETF component of a Complex Order under this proposal, identical to Phlx.[84] As a practical matter, complex order programs on other exchanges involve specific arrangements with a broker-dealer to facilitate prompt execution. NES does not intend to charge a fee for the execution of the stock/ETF component of a Complex Order.[85] The Exchange believes that is consistent with the Act for such an arrangement to involve one broker-dealer, even one that is an affiliate, particularly to offer the aforementioned benefits of a prompt, electronic execution for Complex Orders involving stock/ETFs. Specifically, offering a seamless, automatic execution for both the options and stock/ETF components of a Complex Order is an important feature that should promote just and equitable principles of trade and remove impediments to and perfect the mechanism of a free and open market and a national market system by deeply enhancing the sort of complex order processing available on options exchanges today. Nevertheless, Members could, in lieu of this proposed arrangement with NES, choose, instead, the following alternatives: (i) avoid using Complex Orders that involve stock/ETFs, (ii) use a trading floor to execute Complex Order with stock, or (iii) go to another options venue, several of which offer a similar feature.[86]

The Exchange's proposal to remove the second and third sentences within Supplementary Material .02 of Options 3, Section 14 [87] is consistent with the Act in that it protects investors and the general public because this new workflow in which the stock or ETF

[74] *See supra* note 32.

[75] *See* proposed Options 3, Section 16(e). In contrast, Complex Orders in an auction mechanism that cannot be executed in accordance with Regulation SHO will be cancelled back and will not rest on the Complex Order Book as provided in Supplementary Material .08 to Options 3, Section 11 and Supplementary Material .09 to Options 3, Section 13.

[76] *See supra* note 37.

[77] Similar to other order types, the Member may elect to enter the order as an Immediate-or-Cancel to avoid resting on the order book or as Day order which could rest on the order book.

[78] A Complex PIM Order is an order entered into the Complex Price Improvement Mechanism as described in Options 3, Section 13(e). *See* MRX Options 3, Section 14(b)(18).

[79] A Complex Facilitation Order is an order entered into the Complex Facilitation Mechanism as described in Options 3, Section 11(c). *See* MRX Options 3, Section 14(b)(16).

[80] A Complex SOM Order is an order entered into the Complex Solicited Order Mechanism as described in Options 3, Section 11(e). *See* MRX Options 3, Section 14(b)(17).

[81] *See* Options 3, Section 12(b).

[82] *See* Options 3, Section 12(d).

[83] Supplementary Material .01 to Options 3, Section 22 applies to Complex Customer Cross Orders.

[84] *See supra* note 41. *See* proposed Supplementary Material .02 to MRX Options 3, Section 14. In addition to amending Supplementary Material .02 to MRX Options 3, Section 14 to require Members to enter into a brokerage agreement, the Exchange proposes to make conforming changes to Supplementary Material .02 to MRX Options 3, Section 14 to delete provisions that allow Members to enter into a brokerage agreement with one or more brokers to route stock orders.

[85] *See supra* note 42.

[86] *See supra* note 43.

[87] The second and third sentences of Supplementary Material .02 of MRX Options 3, Section 14 states, ''A trade of a Stock-Option Order or a Stock-Complex Order will be automatically cancelled if market conditions prevent the execution of the stock or option leg(s) at the prices necessary to achieve the agreed upon net price. When a Stock-Option Order or Stock-Complex Order has been matched with another Stock-Option Order or Stock-Complex Order that is for less than the full size of the Stock-Option Order or Stock-Complex Order, the full size of the Stock-Option Order or Stock Complex Order being processed by the stock execution venue will be unavailable for trading while the order is being processed.''

component of the order will be routed to NES for execution instead of a third-party broker-dealer will obviate the possibility that the stock execution venue will be unavailable for trading while the order is being processed because of the efficiency created in executing the entire transaction, including stock component validation and reporting, without the need for MRX to utilize a third-party broker-dealer and await a response from the third-party broker-dealer. MRX would no longer be reliant on a third-party broker-dealer to conduct the appropriate checks and, thereafter, relay information to MRX. With the proposed change, NES, the Exchange's affiliate, would conduct the necessary checks and thereafter the Stock-Option Order or Stock-Complex Order would be available for execution. Proposed Options 3, Sections 16(d) and (e) describe the System price checks that will be performed for Stock-Option Orders or Stock-Complex Orders by NES.

Similarly, the Exchange's proposal to amend Supplementary Material .04 to Options 3, Section 14 to provide that Stock-Option Strategies and Stock-Complex Strategies will open pursuant to the Complex Opening Price Determination described in Supplementary Material .05 to Options 3, Section 14, instead of the Complex Uncrossing Process described in Supplementary Material .06(b) to Options 3, Section 14, is consistent with the Act. Similar to the discussion above, previously the applicable checks for the stock/ETF component of a Stock-Option Strategy and Stock-Complex Strategy were being performed by a third-party broker-dealer before the migration, which caused a delay that prevented these strategies from participating in the Complex Opening Process. With the proposed change to utilize NES, in lieu of a third-party broker-dealer, Stock-Option Strategies and Stock-Complex Strategies would be able to participate in the Complex Opening Process as NES, the Exchange's affiliate, would conduct the necessary price checks and would be able to make Stock-Option Order or Stock-Complex Order available to participate in the Complex Opening Process without the need for MRX to await a response from a third-party broker-dealer. This amendment is consistent with the Act as it serves to protect investors and the general public by improving the Exchange's processes to make Stock-Option Strategies and Stock-Complex Strategies subject to the Complex Opening Price Determination similar to other order types. The Complex Opening Process seeks to maximize the interest which is traded during the Complex Opening Price Determination process and deliver a rational price for the available interest at the opening. The Complex Opening Price Determination process maximizes the number of contracts executed during the Complex Opening Process and ensures that residual contracts of partially executed orders or quotes are at a price equal to or inferior to the Opening Price.

Trade Value Allowance

The Exchange's proposal to no longer offer Trade Value Allowance is consistent with the Act because very few Members have opted to utilize the Trade Value Allowance and even a smaller percentage of trades were subject to the allowance. Phlx does not have a similar allowance today. In an effort to harmonize its complex order functionality across its Nasdaq affiliated markets, the Exchange proposes to no longer offer the Trade Value Allowance functionality. In addition, the Exchange believes that this proposal removes impediments to and perfect the mechanism of a free and open market and a national market system because the proposal removes an allowance that is no longer necessary; other options exchanges, like Phlx, do not offer such an allowance. With the proposed change to utilize NES, the Exchange would be able to determine stock leg prices, and NES would be able to execute the stock leg at two different prices to ensure that the net price of the execution is within the notional value of the original order, thus eliminating the need for the allowance.

Options 3, Section 7

The Exchange's proposal to make a clarifying change to MRX Options 3, Section 7, Types of Orders and Order and Quote Protocols is consistent with the Act. The Exchange proposes to amend MRX Options 3, Section 7(t) related to QCC with Stock Orders to make clear that QCC with Stock Orders may only be entered through FIX. MRX has 2 order entry protocols, FIX and OTTO. QCC with Stock Orders may not be entered through OTTO. Members are required to have an order entry protocol to enter orders onto MRX.[88] The Exchange's proposal to add rule text to Options 3, Section 7(t) will clarify the functionality, thereby protecting investors and the general public.

Additionally, the Exchange's proposal to amend Supplementary Material .02(d) to Options 3, Section 7 related to Immediate-or-Cancel Orders is consistent with the Act. The Exchange proposes to specifically amend Supplementary Material .02(d)(3) to Options 3, Section 7 to add QCC with Stock Orders and Complex QCC with Stock to the list of order types that have a Time in Force or ''TIF'' of Immediate-or-Cancel or ''IOC.'' Because QCC with Stock Orders and Complex QCC with Stock have a TIF of IOC, these order types will execute either execute on entry or cancel. This amendment will make clear the manner in which the aforementioned order types trade, thereby protecting investors and the general public.

Options 3, Section 12

The Exchange's proposal to amend Options 3, Section 12(e)(4) to clarify that a Member may submit a QCC with Stock Order with a net price for the stock and options components through FIX and may not submit QCC with Stock Orders with separate prices for the stock and options components and that the System will perform the calculation is consistent with the Act because the amended rule text makes clear the format in which these orders may be submitted to the System. Today, the Exchange does not allow FIX to accept QCC with Stock Orders with separate prices for the stock and options components. Each exchange may specify the manner in which certain order types may be submitted to an exchange and the format for submitting those orders. The proposal protects investors and the general public by clarifying the manner in which Members may submit QCC with Stock Orders. The proposed language does not result in a change to the Exchange's System. As noted above, QCC with Stock Orders may not be entered through OTTO. The Exchange notes that requiring QCC with Stock Orders to be submitted through FIX is consistent with proposed Options 3, Section 7(t) which requires Members to enter QCC Orders through FIX.

Options 3, Section 15

The Exchange's proposal to amend its Market Wide Risk Protection within Options 3, Section 15(a)(1)(C) to add certain additional information concerning the current Market Wide Risk Protection along with new language that would apply as a result of the proposed changes to stock-tied functionality is consistent with the Act. The first provision, the total number of orders entered is being amended to simply add ''in the regular order book'' to distinguish the single-leg order book

[88] MRX offers each Member one FIX port at no cost. *See* Options 7, Section 6.

from the complex order book. This amendment is non-substantive and would serve to clarify which order book is impacted.

The proposed changes to MRX Options 3, Section 15(a)(1)(C) protect investors and the public interest by clearly describing the operation of the Market Wide Risk Protection. As discussed above, the functionality of proposed MRX Options 3, Section 15(a)(1)(C)(2) through (5) is consistent with functionality that currently exists on ISE.[89] Proposed MRX Options 3, Section 15(a)(1)(C)(6) adds the total number of contracts traded in Stock-Option Orders and Stock-Complex Orders to the Market Wide Risk Protection. This change protects investors and the general public because this risk protection by expanding the scope of the Market Wide Risk Protection to include additional contracts which will reduce risk associated with system errors or market events that may cause Members to send a large number of orders, or receive multiple, automatic executions, before they can adjust their exposure in the market. The Exchange notes that QCC Orders, Complex Qualified QCC Orders, QCC with Stock Orders, and Complex QCC with Stock Orders are considered, where applicable, in Options 3, Section 15(a)(1)(C)(1), (2), (4) and (5). Members will continue to be provided with the flexibility needed to appropriately tailor the Market Wide Risk Protection to their respective risk management needs.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Re-Introduction of Stock-Related Strategies and Elimination of Trade Value Allowance

Stock-Tied Functionality

The Exchange's proposal to amend its stock-tied functionality and recommence offering this functionality does not impose an intra-market undue burden on competition as all Members may utilize the stock-tied functionality and would be uniformly subject to the requirements associated with executing a stock-tied transaction. Also, in lieu of this proposed arrangement with NES, Members could choose, instead, the following alternatives: (i) avoid using Complex Orders that involve stock/ETFs, (ii) use a trading floor to execute Complex Order with stock, or (iii) go to another options venue, several of which offer a similar feature.[90] The Exchange's proposal to amend its stock-tied functionality and recommence offering this functionality does not impose an inter-market undue burden on competition as other options exchanges today may offer a similar process for handling stock-tied transactions. Today, Phlx offers an identical process for handling stock-tied transactions.[91]

The Exchange's proposal to remove rule text from Options 3, Section 14 that states, ''When a Stock-Option Order or Stock-Complex Order has been matched with another Stock-Option Order or Stock-Complex Order that is for less than the full size of the Stock-Option Order or Stock-Complex Order, the full size of the Stock-Option Order or Stock Complex Order being processed by the stock execution venue will be unavailable for trading while the order is being processed,'' does not impose an undue burden on intra-market competition because the proposed new functionality will apply equally to all Members transacting Complex Orders on MRX. All Stock-Option Orders and Stock-Complex Orders will be handled in the same manner by the System. The Exchange's proposal to remove rule text from Options 3, Section 14 does not impose an undue burden on inter-market competition as the scope of this change is limited to MRX and its relationship with a broker-dealer handling the stock component of the order.

The Exchange's proposal to remove the rule text within Supplementary Material .02 of Options 3, Section 14 [92] does not impose an undue burden on intra-market competition because all Members will have the ability to use the new workflow in which the stock or ETF component of the order will be routed to NES for execution instead of a third-party broker-dealer. The proposed new functionality will apply equally to all Members transacting Complex Orders on MRX. All Stock-Option Orders and Stock-Complex Orders will be handled in the same manner by the System. Additionally, this proposed amendment will not impose an undue burden on inter-market competition because all market participants that direct orders to MRX will have their orders handled in a similar manner. The proposed stock-tied functionality is identical to Phlx Options 3, Sections 13(b)(10)(ii) and 14(a)(i) with respect to utilizing NES to process and report the stock or ETF component of a Complex Order.

Similarly, the Exchange's proposal to amend Supplementary Material .04 to Options 3, Section 14 to provide that Stock-Option Strategies and Stock-Complex Strategies will open pursuant to the Complex Opening Price Determination described in Supplementary Material .05 to Options 3, Section 14, instead of the Complex Uncrossing Process described in Supplementary Material .06(b) to Options 3, Section 14, does not impose an undue burden on intra-market competition because all Stock-Option Strategies and Stock-Complex Strategies will be subject to the same process. All Stock-Option Orders and Stock-Complex Orders will be transacted in the Complex Opening by the System. The Exchange's proposal to amend Supplementary Material .04 to Options 3, Section 14 to provide that Stock-Option Strategies and Stock-Complex Strategies will open pursuant to the Complex Opening Price Determination described in Supplementary Material .05 to Options 3, Section 14, instead of the Complex Uncrossing Process described in Supplementary Material .06(b) to Options 3, Section 14 does not impose an undue burden on inter-market competition because other options markets may also elect to permit similar order types to trade in their complex opening process.

Trade Value Allowance

The Exchange's proposal to no longer offer Trade Value Allowance does not impose an undue burden on intra-market competition because no Member would be able to utilize the Trade Value Allowance. The proposed stock-tied functionality is identical to Phlx Options 3, Sections 13(b)(10)(ii) and 14(a)(i) with respect to utilizing NES to process and report the stock or ETF component of a Complex Order.

The Exchange's proposal to no longer offer Trade Value Allowance does not impose an undue burden on inter-market competition because other

[89] *See* ISE Options 3, Section 15(a)(1)(C)(2) through (5).

[90] *See supra* note 43.

[91] *See* Phlx Options 3, Sections 13(b)(10) and 14(a)(i).

[92] Supplementary Material .02 of Options 3, Section 14 states that, ''Members may also indicate preferred execution brokers, and such preferences will determine order routing priority whenever possible. A trade of a Stock-Option Order or a Stock-Complex Order will be automatically cancelled if market conditions prevent the execution of the stock or option leg(s) at the prices necessary to achieve the agreed upon net price. When a Stock-Option Order or Stock-Complex Order has been matched with another Stock-Option Order or Stock-Complex Order that is for less than the full size of the Stock-Option Order or Stock-Complex Order, the full size of the Stock-Option Order or Stock Complex Order being processed by the stock execution venue will be unavailable for trading while the order is being processed.''

options exchanges could choose to offer a similar functionality.

Options 3, Section 7

The Exchange's proposal to make a clarifying change to MRX Options 3, Section 7, Types of Orders and Order and Quote Protocols does not impose an undue burden on intra-market competition because all Members may enter QCC with Stock Orders through FIX and the Exchange provides each Member with one FIX Port at no cost.

The Exchange's proposal to make a clarifying change to MRX Options 3, Section 7, Types of Orders and Order and Quote Protocols does not impose an undue burden on inter-market competition because other options exchanges may also create order entry protocols for their markets.

Additionally, the Exchange's proposal to amend Supplementary Material .02(d) to Options 3, Section 7 to add QCC with Stock Orders and Complex QCC with Stock to the list of order types that have a Time in Force or ''TIF'' of Immediate-or-Cancel or ''IOC'' does not impose an undue burden on intra-market competition because this amendment reflects the description of these particular order types which will either execute on entry or cancel. All QCC with Stock Orders and Complex QCC with Stock that are entered on MRX will be handled in the same manner. Further, all Members may trade QCC with Stock Orders and Complex QCC with Stock Orders. Additionally, the Exchange's proposal to amend Supplementary Material .02(d) to Options 3, Section 7 related to Immediate-or-Cancel Orders does not impose an undue burden on inter-market competition because other options markets may adopt a similar requirement for such orders.

Options 3, Section 12

The Exchange's proposal to amend Options 3, Section 12(e)(4) to clarify that a Member may submit a QCC with Stock Order with a net price for the stock and options components through FIX and may not submit QCC with Stock Orders with separate prices for the stock and options components and the System will calculate the individual component prices does not impose an intra-market burden on competition because all Members are required to uniformly submit QCC with Stock Orders in this fashion.

The Exchange's proposal to amend Options 3, Section 12(e)(4) to clarify that a Member may submit a QCC with Stock Order with a net price for the stock and options components through FIX and may not submit QCC with Stock Orders with separate prices for the stock and options components and the System will calculate the individual component prices does not impose an inter-market burden on competition because each exchange may specify the manner in which certain order types may be submitted to an exchange and the format for submitting those orders. Also, requiring QCC with Stock Orders to be submitted through FIX is consistent with proposed Options 3, Section 7(t) which requires Members to enter QCC Orders through FIX.

Options 3, Section 15

The Exchange's proposal to amend its Market Wide Risk Protection within Options 3, Section 15(a)(1)(C) to add certain additional information concerning the current Market Wide Risk Protection along with new language does not impose an undue burden on intra-market competition because the counting programs within the Market Wide Risk Protections will apply equally to all Members. The proposal to amend the Market Wide Risk Protection does not impose an undue burden on inter-market competition because other options exchanges may adopt similar risk protections for their members.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act[93] and subparagraph (f)(6) of Rule 19b–4 thereunder.[94]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–MRX–2023–10 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MRX–2023–10. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number

[93] 15 U.S.C. 78s(b)(3)(A)(iii).

[94] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

SR–MRX–2023–10 and should be submitted on or before July 12, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[95]

Sherry R. Haywood,

Assistant Secretary.

[FR Doc. 2023–13108 Filed 6–20–23; 8:45 am]

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97723; File No. SR–BOX–2023–16]

Self-Regulatory Organizations; BOX Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fee Schedule for Trading on the BOX Options Market LLC Facility To Offer Ad-Hoc Historical Requests for the Intraday Open-Close Data Report and Adopt Fees for This Data

June 14, 2023.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on June 12, 2023, BOX Exchange LLC (''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Exchange filed the proposed rule change pursuant to section 19(b)(3)(A)(ii) of the Act,[3] and Rule 19b–4(f)(2) thereunder,[4] which renders the proposal effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange is filing with the Securities and Exchange Commission (''Commission'') a proposed rule change to amend the Fee Schedule to amend the Fee Schedule [sic] on the BOX Options Market LLC (''BOX'') options facility to offer ad-hoc historical requests for the Intraday Open-Close Data Report and adopt fees for this data. The text of the proposed rule change is available from the principal office of the Exchange, at the Commission's Public Reference Room and also on the Exchange's internet website at *http://boxexchange.com.*

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange recently adopted a new data product on BOX known as the Intraday Open-Close Data Report.[5] When the Exchange established the Intraday Open-Close Data Report data, it did not include ad-hoc requests for the Intraday Open-Close historical data. Since establishing the Intraday Open-Close Data Report, Participants and non-Participants have expressed interest in ad-hoc historical requests for the Intraday Open-Close Data Report. As such, the Exchange now proposes to offer ad-hoc historical requests for the Intraday Open-Close Data Report and adopt fees for this data. Specifically, the Exchange proposes to assess a $1,000 fee per request per month for the historical data.

Similar to the ad-hoc requests for the End-of-Day Open Close Data Report, ad-hoc requests for the Intraday Open-Close Data Report can be for any number of months beginning with January 2018 for which the data is available.[6] The proposed fee will apply to both Participants and non-Participants. The Exchange notes that another exchange provides similar data that may be purchased on an ad-hoc basis and is similarly priced.[7]

By way of background, the Exchange currently offers the Intraday Open-Close Data Report to Participants and non-Participants, which is a volume summary file for trading activity on BOX. The Exchange notes that the file contains proprietary BOX trade data and does not include trade data from any other exchanges. It is also a historical data product and not a real time data feed. The Intraday Open-Close Data Report is produced and updated every 10 minutes during the trading day. Data is captured in ''snapshots'' taken every 10 minutes throughout the trading day and available to subscribers within five minutes of the conclusion of each 10-minute period. Each update will represent combined data captured from the current ''snapshot'' and all previous ''snapshots'' and thus will provide open-close data on an aggregate basis. The Intraday Open-Close Data Report aggregates the volume by origin (Public Customer, Professional Customer, Broker Dealer, and Market Maker), buying/selling, and opening/closing criteria. Public Customer and Professional Customer volume is further broken down into trade size buckets (less than 100 contracts, 100–199 contracts, greater than 199 contracts). Ad-hoc requests for Intraday Open-Close Data Report will provide the same information for a requested historical time period for any number of months beginning with January 2018.[8]

This product is offered to Participants on a completely voluntary basis in that the Exchange is not required by any rule or regulation to make this data available and potential subscribers may purchase the Intraday Open-Close Data Report or

[95] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A)(ii).

[4] 17 CFR 240.19b–4(f)(2).

[5] *See* Securities Exchange Act Release No. 97174 (March 21, 2023), 88 FR 18201 (March 27, 2023) (SR–BOX–2023–09).

[6] For example, a Participant or non-Participant that requests historical Intraday Open-Close Data for the months of January 2018 and February 2018, would be assessed a total of $2,000. Participants and non-Participants are permitted to make ad-hoc requests for any number of days within a month for the Intraday Open-Close Data Report. For example, a Participant or non-Participant may make an ad-hoc request for the Intraday Open-Close Data Report from May 1st to May 20th. The accounting will be prorated based on the number of trading days in the month versus the number of trading days received. The Participant or non-Participant will be charged for the request on a prorated basis. The Exchange is proposing to allow ad-hoc requests for the Intraday Open-Close Data Report for any month starting January 2018, as this is what is currently offered for End-of-Day historical data requests. The Exchange notes that it may make historical data prior to January 2018 available in the future and that such historical data would be available to all Participants or non-Participants.

[7] *See* Miami International Securities Exchange, LLC (''MIAX'') Fee Schedule. MIAX assesses $1,000 per request per month for the Intra-Day Ad-Hoc Request for historical data.

[8] The historical monthly reports of the Intraday Open-Close Data Report will contain all series in an underlying security if the security had volume on BOX during that month. The Intraday Open-Close Data Report file format specifications can be found at *www.boxoptions.com.*

make ad-hoc requests for the Intraday Open-Close Data Report only if they voluntarily choose to do so. It is a business decision of each potential subscriber whether to subscribe to the Intraday Open-Close Data Report and/or make ad-hoc requests for the Intraday Open-Close Data Report.

The Exchange also proposes to make a clarifying change to the End-of-Day Ad-hoc Request (historical data) section of the BOX Fee Schedule. Specifically, the Exchange proposes to add that mid-month requests for End-of Day historical data will be prorated based on the number of trading days in the month versus the number of trading days received. The Exchange notes that it is not proposing to change an existing practice, as this is how mid-month requests for End-of-Day historical data are currently processed. The Exchange believes this will add transparency and clarity to the Fee Schedule with respect to how fees are assessed for End-of-Day Ad-hoc Requests.

2. Statutory Basis

The Exchange believes that the proposal is consistent with the requirements of section 6(b) of the Act,[9] in general, and section 6(b)(4) and 6(b)(5) of the Act,[10] in particular, in that it provides for the equitable allocation of reasonable dues, fees, and other charges among BOX Participants and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

The Exchange also believes that its proposed changes to its Fee Schedule concerning fees for the Intraday Ad-hoc Open-Close Data Report is consistent with section 6(b) of the Act,[11] in general, and furthers the objectives of section 6(b)(4) of the Act,[12] in particular, in that it is an equitable allocation of dues, fees and other charges among its Participants and other recipients of Exchange data.

In adopting Regulation NMS, the Commission granted self-regulatory organizations (''SROs'') and broker-dealers increased authority and flexibility to offer new and unique market data to the public. It was believed that this authority would expand the amount of data available to consumers, and also spur innovation and competition for the provision of market data. Particularly, the Intraday Open-Close Data Report further broadens the availability of U.S. option market data to investors consistent with the principles of Regulation NMS. The data product also promotes increased transparency through the dissemination of the Intraday Ad-hoc Open-Close Data Report. Particularly, information regarding opening and closing activity across different option series during the trading day may indicate investor sentiment, which may allow market participants to make better informed trading decisions throughout the day. Subscribers to the data may also be able to enhance their ability to analyze option trade and volume data and create and test trading models and analytical strategies. The Exchange believes the Intraday Open-Close Data Report provides a valuable tool that subscribers can use to gain comprehensive insight into the trading activity in a particular series, but also emphasizes such data is not necessary for trading and completely optional. Moreover, another exchange offers a similar data product.[13] This proposal seeks to respond to Participant requests for ad-hoc Intraday Open-Close data and adopt a fee of $1,000 per request per month for such requests.

The Exchange operates in a highly competitive environment. Indeed, there are currently 16 registered options exchanges that trade options. Based on publicly available information, for the month of March 2023, no single options exchange had more than approximately 16% of the equity options market share and the Exchange represented only approximately 6.19% of the equity options market share for the month of May 2023.[14] The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Particularly, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [15] Making similar data products available to market participants fosters competition in the marketplace, and constrains the ability of exchanges to charge supra-competitive fees. In the event that a market participant views one exchange's data product as more or less attractive than the competition they can and do switch between similar products.

The Exchange believes the proposed fee is reasonable as the proposed fee is similar to a fee currently assessed by another exchange that provides a similar data product.[16] Further, the Exchange notes that an ad-hoc request for the Intraday Day Open-Close Data Report is entirely optional and if a market participant views another exchange's data as more attractive than the proposed Intraday Open-Close data product, then such market participant can choose not to purchase BOX's data and instead purchase another exchange's data product, which offer similar data points, albeit based on that other market's trading activity.

The Exchange also believes that its proposal to respond to market participant requests and adopt fees for ad-hoc requests for the Intraday Open-Close Data Report is reasonable as this would further support the current offering of the Intraday Open-Close Data Report that is designed to aid investors by providing insight into trading on BOX. The proposed ad-hoc requests for Intraday Open-Close Data Report would provide interested options market participants with valuable information about opening and closing transactions executed on BOX, similar to other historical trade data products offered by competing options exchanges. In turn, this data would assist market participants in gauging investor sentiment and trading activity, resulting in potentially better-informed trading decisions. As noted above, users may also use such data to create and test trading models and analytical strategies.

Providing market data, such as the Intraday Open-Close Data Report, is also a means by which exchanges compete to attract business. Subscribers that receive the Intraday Open-Close Data Report in response to an ad hoc request, may use such data to evaluate the usefulness of BOX's Intraday Open-Close Data Report and decide, based on that data, whether to subscribe to the Intraday Open-Close Data Report on a monthly basis. To the extent that the Exchange is successful in attracting subscribers for the Intraday Open-Close Data Report through this proposal, it may earn trading revenues and further enhance the value of its data products. If the market deems the proposal to be unfair or inequitable, firms can diminish or discontinue their use of the data and/or avail themselves

[9] 15 U.S.C. 78f(b).

[10] 15 U.S.C. 78f(b)(4) and (5).

[11] 15 U.S.C. 78f(b).

[12] 15 U.S.C. 78f(b)(4).

[15] *See* Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005) (''Regulation NMS Adopting Release'').

[16] *See supra* note 7.

of similar products offered by other exchanges.[17]

The Exchange believes the proposed fee is equitable and not unfairly discriminatory as the fee would apply equally to all users who choose to purchase the historical data. The Exchange's proposed fee would not differentiate between subscribers that purchase the ad-hoc Intraday Open-Close Data Report and is set at a modest level that would allow any interested Participant or non-Participant to purchase such data based on their business needs.

The Exchange reiterates that the decision as to whether or not to purchase the ad-hoc Intraday Open-Close Data Report is entirely optional for all potential subscribers. Indeed, no market participant is required to purchase the ad-hoc Intraday Open-Close Data Report, and the Exchange is not required to make the ad-hoc Intraday Open-Close Data Report available to all investors. Rather, the Exchange is voluntarily making the ad-hoc Intraday Open-Close Data Report available, as requested by customers, and market participants may choose to receive (and pay for) this data based on their own business needs. Potential purchasers may request the data at any time if they believe it to be valuable or may decline to purchase such data.

Lastly, the Exchange believes that the proposed change to the End-of-Day Ad-Hoc request is reasonable and appropriate as the added language will provide clarity and transparency with respect to mid-month requests for this End-of-Day Ad-hoc Requests.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. Rather, the Exchange believes that the proposal will promote competition by permitting the Exchange to sell a data product similar to those offered by another competitor options exchange.[18] The Exchange also does not believe the proposed fees would cause any unnecessary or in appropriate burden on intermarket competition as other exchanges are free to introduce their own comparable data product and lower their prices to better compete with the Exchange's offering. The Exchange does not believe the proposed rule change would cause any unnecessary or inappropriate burden on intramarket competition. Particularly, the proposed fee applies uniformly to any purchaser, in that it does not differentiate between subscribers that purchase Intraday Open-Close Data Report. The proposed fees are set at a modest level that would allow any interested Participant or non-Participant to purchase such data based on their business needs.

Finally, the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues. In such an environment, the Exchange must continually review, and consider adjusting, its fees to remain competitive with other exchanges. For the reasons described above, the Exchange believes that the proposed rule change reflects this competitive environment.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to section 19(b)(3)(A)(ii) of the Exchange Act[19] and Rule 19b–4(f)(2) thereunder,[20] because it establishes or changes a due, or fee.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend the rule change if it appears to the Commission that the action is necessary or appropriate in the public interest, for the protection of investors, or would otherwise further the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–BOX–2023–16 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–BOX–2023–16. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–BOX–2023–16 and should be submitted on or before July 12, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[21]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97724; File No. SR–MEMX–2023–10]

Self-Regulatory Organizations; MEMX LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Modify the Method by Which the Exchange Provides Certain Rebates

June 14, 2023.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on June 1, 2023, MEMX LLC (''MEMX'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing with the Commission a proposed rule change to amend the Exchange's fee schedule applicable to Members [3] (the ''Fee Schedule'') pursuant to Exchange Rules 15.1(a) and (c). The Exchange proposes to implement the changes to the Fee Schedule pursuant to this proposal on June 1, 2023. The text of the proposed rule change is provided in Exhibit 5.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Exchange Rule 1.5(p).

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend the Fee Schedule to modify the method by which the Exchange provides the rebate under Liquidity Provision Tiers 4, 5, and 6 such that if a Member achieves any of the criteria under Liquidity Provision Tiers 4, 5, or 6 in a given month, it would receive that rebate for that month and in the following month. As described further below, this differs from the current practice, whereby a Member receives the applicable rebate at the end of the month if it achieved the applicable criteria during that month, and the process resets the following month.

The Exchange first notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. More specifically, the Exchange is only one of 16 registered equities exchanges, as well as a number of alternative trading systems and other off-exchange venues, to which market participants may direct their order flow. Based on publicly available information, no single registered equities exchange currently has more than approximately 16% of the total market share of executed volume of equities trading.[4] Thus, in such a low-concentrated and highly competitive market, no single equities exchange possesses significant pricing power in the execution of order flow, and the Exchange currently represents approximately 3% of the overall market share.[5] The Exchange in particular operates a ''Maker-Taker'' model whereby it provides rebates to Members that add liquidity to the Exchange and charges fees to Members that remove liquidity from the Exchange. The Fee Schedule sets forth the standard rebates and fees applied per share for orders that add and remove liquidity, respectively. Additionally, in response to the competitive environment, the Exchange also offers tiered pricing, which provides Members with opportunities to qualify for higher rebates or lower fees where certain volume criteria and thresholds are met. Tiered pricing provides an incremental incentive for Members to strive for higher tier levels, which provides increasingly higher benefits or discounts for satisfying increasingly more stringent criteria.

[4] Market share percentage calculated as of June 1, 2023. The Exchange receives and processes data made available through consolidated data feeds (*i.e.,* CTS and UTDF).

[5] *Id.*

Liquidity Provision Tiers

The Exchange currently provides a base rebate of $0.0018 per share for executions of Added Displayed Volume.[6] The Exchange also currently offers Liquidity Provision Tiers 1–6 under which a Member may receive an enhanced rebate for executions of Added Displayed Volume by achieving the corresponding required volume criteria for each such tier. The Exchange now proposes to modify the method by which it provides the rebate under Liquidity Provision Tiers 4, 5, and 6, as further described below.

With respect to Liquidity Provision Tier 4, the Exchange currently provides an enhanced rebate of $0.0029 per share for executions of Added Displayed Volume for Members that qualify for such tier by achieving: (1) an ADAV [7] that is equal to or greater than 0.15% of the TCV; [8] or (2) a Displayed ADAV [9] that is equal to or greater than 0.02% of the TCV and a Step-Up Displayed ADAV [10] of the TCV from April 2023 that is equal to or greater than 50% of the Member's April 2023 Displayed ADAV of the TCV.[11]

With respect to Liquidity Provision Tier 5, the Exchange currently provides an enhanced rebate of $0.0027 per share for executions of Added Displayed Volume for Members that qualify for such tier by achieving an ADAV that is

[6] The base rebate for executions of Added Displayed Volume is referred to by the Exchange on the Fee Schedule under the existing description ''Added displayed volume'' with a Fee Code of ''B'', ''D'' or ''J'', as applicable, on execution reports.

[7] As set forth on the Fee Schedule, ''ADAV'' means the average daily added volume calculated as the number of shares added per day, which is calculated on a monthly basis, and ''Displayed ADAV'' means ADAV with respect to displayed orders.

[8] As set forth on the Fee Schedule, ''TCV'' means total consolidated volume calculated as the volume reported by all exchanges and trade reporting facilities to a consolidated transaction reporting plan for the month for which the fees apply.

[9] As set forth on the Fee Schedule, ''Non-Displayed ADAV'' means ADAV with respect to non-displayed orders (including orders subject to Display-Price Sliding that receive price improvement when executed and Midpoint Peg orders).

[10] As set forth on the Fee Schedule, ''Step-Up Displayed ADAV'' means Displayed ADAV in the relevant baseline month subtracted from current Displayed ADAV.

[11] The pricing for Liquidity Provision Tier 4 is referred to by the Exchange on the Fee Schedule under the existing description ''Added displayed volume, Liquidity Provision Tier 4'' with a Fee Code of ''B4'', ''D4'' or ''J4'', as applicable, to be provided by the Exchange on the monthly invoices provided to Members.

equal to or greater than 0.075% of the TCV.[12] With respect to Liquidity Provision Tier 6, the Exchange currently provides an enhanced rebate of $0.0024 per share for executions of Added Displayed Volume for Members that qualify for such tier by achieving a Displayed ADAV that is equal to or greater than 0.007% of the TCV and has a Step-Up Displayed ADAV of the TCV from May 2023 that is equal to or greater than 50% of the Member's May 2023 Displayed ADAV of the TCV.[13]

The Exchange is not proposing to modify the rebates provided or qualification criteria of Liquidity Provision Tiers 4, 5, and 6 as described above. However, the Exchange now proposes to modify the method by which it will provide the rebates under Liquidity Provision Tiers 4, 5, and 6 and it will indicate this in a note under the Liquidity Provision Tiers pricing table on the Fee Schedule. Specifically, the Exchange will note: ''*Members that qualify for Tier 4, 5, or 6 based on activity in a given month will also receive the associated Tier 4, 5, or 6 rebate during the following month.*'' Effectively, this means that if a Member achieves the applicable criteria under any of the Liquidity Provision Tiers 4, 5, or 6 during a given month, that Member will receive that rebate for the total amount of Added Displayed Volume executed during that month and in the following month, even if they do not achieve the applicable criteria under that same Liquidity Provision Tier during that following month. This is different from the current practice, whereby the Exchange calculates Members' overall ADAV on a monthly basis, and Members that qualify for a Liquidity Provision Tier by achieving the applicable criteria receive the applicable enhanced rebate per share for all executions of Added Displayed Volume in that previous month. Accordingly, Members do not know whether they will receive the enhanced rebate at the time of execution, but rather, receive it at the end of the month based on their activity during that month.

To illustrate, the Exchange offers the following example: Under the current method, at the end of June 2023, the Exchange would calculate a Member's total ADAV for June 2023 and if that Member met either of the criteria under Liquidity Provision Tier 4, the Member would receive the enhanced rebate of $0.0029 per share for the Added Displayed Volume it executed in June 2023. Under the new model, the Exchange will continue to calculate a Member's total ADAV at the end of June 2023, and will continue to provide $0.0029 per share for the Member's Added Displayed execution volume in June 2023, but it will also provide $0.0029 per share for the Added Displayed Volume the Member executes in July 2023 (regardless of the Member's activity in July 2023). Accordingly, in this example, the Member will be aware of the rebate it will receive under Liquidity Provision Tier 4 during the month of July 2023, regardless of what their July 2023 ADAV is, because it is awarded based on its June 2023 ADAV. The Exchange notes that although the enhanced rebate of $0.0029 per share would be provided to the Member in July of 2023, if the Member in the example above did not qualify for Liquidity Provision Tier 4 based on their July 2023 ADAV, the Member would no longer qualify for the enhanced rebate of $0.0029 per share for the Added Displayed Volume the Member executes in August 2023.

The tiered pricing structure for executions of Added Displayed Volume under the Liquidity Provision Tiers provides an incremental incentive for Members to strive for higher volume thresholds to receive higher enhanced rebates for such executions and, as such, is intended to encourage Members to maintain or increase their order flow, primarily in the form of liquidity-adding volume, to the Exchange, thereby contributing to a deeper and more liquid market to the benefit of all Members and market participants. The Exchange believes that the Liquidity Provision Tiers reflect a reasonable and competitive pricing structure that is right-sized and consistent with the Exchange's overall pricing philosophy of encouraging added and/or displayed liquidity. The proposed change does not modify any criteria or rebate provided under any of the Liquidity Provision Tiers, rather, it modifies the process by which rebates paid under Liquidity Provision Tier 4, 5, and 6 are awarded to Members, allowing Members to anticipate whether such rebate will apply at the time of execution based on whether the criteria was achieved in the prior month. The Exchange believes this method will provide Members with additional certainty when trading on the Exchange, which in turn, will incentivize Members to achieve certain volume thresholds on the Exchange on an ongoing basis.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of section 6 of the Act,[14] in general, and with sections 6(b)(4) and 6(b)(5) of the Act,[15] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the ever-shifting market share among the exchanges from month to month demonstrates that market participants can shift order flow or discontinue to reduce use of certain categories of products, in response to new or different pricing structures being introduced into the market. The Exchange believes the proposal continues to reflect a reasonable and competitive pricing structure designed to incentivize market participants to direct additional order flow to the Exchange, which the Exchange believes would promote price discovery and enhance liquidity and market quality on the Exchange to the benefit of all Members and market participants.

The Exchange notes that volume-based incentives and discounts (such as tiers) have been widely adopted by exchanges (including the Exchange), and are reasonable, equitable and not unfairly discriminatory because they are open to all members on an equal basis and provide additional benefits or discounts that are reasonably related to the value to an exchange's market quality associated with higher levels of market activity, such as higher levels of liquidity provision and/or growth patterns, and the introduction of higher volumes of orders into the price and volume discovery process. The Exchange believes that the proposed modification of the way it provides the rebate under Liquidity Provision Tiers 4, 5, and 6 is reasonable, equitable and not unfairly discriminatory for these same reasons, as the tiers continue to provide Members with incremental incentives to achieve certain volume thresholds on the Exchange, are available to all Members on an equal

[12] The pricing for Liquidity Provision Tier 5 is referred to by the Exchange on the Fee Schedule under the existing description ''Added displayed volume, Liquidity Provision Tier 5'' with a Fee Code of ''B5'', ''D5'' or ''J5'', as applicable, to be provided by the Exchange on the monthly invoices provided to Members.

[13] The pricing for Liquidity Provision Tier 6 is referred to by the Exchange on the Fee Schedule under the existing description ''Added displayed volume, Liquidity Provision Tier 6'' with a Fee Code of ''B6'', ''D6'' or ''J6'', as applicable, to be provided by the Exchange on the monthly invoices provided to Members.

[14] 15 U.S.C. 78f.

[15] 15 U.S.C. 78f(b)(4) and (5).

basis, and, as described above, are reasonably designed to encourage Members to maintain or increase their order flow to the Exchange with an added layer of certainty in the rebate they will receive, if applicable.

The Exchange also believes that the proposed modification is appropriate to apply only to Liquidity Provision Tiers 4, 5, and 6 at this time given that the enhanced rebates provided under those specific Liquidity Provision Tiers (as opposed to Liquidity Provision Tiers 1, 2, and 3 [16]) are each less than $0.0030 per share, which is the standard fee charged by the Exchange for orders that remove liquidity and also the highest transaction fee allowed by the Commission under Rule 610(c)(1) of Regulation NMS.[17] The Exchange considers this distinction relevant in light of the fact that this is the first time the Exchange will be providing rebates in this manner, and as such, would like to initiate this change under Liquidity Provision Tiers that provide rebates below the aforementioned standard fee for removing liquidity. Again, the Exchange believes that the application of its methodology of awarding rebates under Liquidity Provision Tiers 4, 5, and 6 is reasonable, equitable, and not unfairly discriminatory, as there is a legitimate distinction between the rebates provided under these Liquidity Provision Tiers as opposed to Liquidity Provision Tiers 1, 2, and 3, and the opportunity to qualify for the Liquidity Provision Tiers is available equally to all Members of the Exchange.

For the reasons discussed above, the Exchange submits that the proposal satisfies the requirements of sections 6(b)(4) and 6(b)(5) of the Act [18] in that it provides for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities and is not designed to unfairly discriminate between customers, issuers, brokers, or dealers.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposal will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Instead, as discussed above, the proposal is intended to incentivize market participants to direct additional order flow to the Exchange, which the Exchange believes would promote price discovery and enhance liquidity and market quality on the Exchange to the benefit of all Members and market participants. As a result, the Exchange believes the proposal would enhance its competitiveness as a market that attracts actionable orders, thereby making it a more desirable destination venue for its customers. For these reasons, the Exchange believes that the proposal furthers the Commission's goal in adopting Regulation NMS of fostering competition among orders, which promotes ''more efficient pricing of individual stocks for all types of orders, large and small.'' [19]

Intramarket Competition

As discussed above, the Exchange believes that the proposal would maintain a tiered pricing structure that is still consistent with the Exchange's overall pricing philosophy of encouraging added and/or displayed liquidity and would incentivize market participants to direct additional order flow to the Exchange through volume-based tiers, thereby enhancing liquidity and market quality on the Exchange to the benefit of all Members, as well as enhancing the attractiveness of the Exchange as a trading venue, which the Exchange believes, in turn, would continue to encourage market participants to direct additional order flow to the Exchange. Greater liquidity benefits all Members by providing more trading opportunities and encourages Members to send additional orders to the Exchange, thereby contributing to robust levels of liquidity, which benefits all market participants.

The Exchange does not believe that the proposed change would impose any burden on intramarket competition because such change will incentivize members to submit additional order flow, thereby contributing to a more robust and well-balanced market ecosystem on the Exchange to the benefit of all Members as well as enhancing the attractiveness of the Exchange as a trading venue, which the Exchange believes, in turn, would continue to encourage market participants to direct additional order flow to the Exchange. Greater liquidity benefits all Members by providing more trading opportunities and encourages Members to send additional orders to the Exchange, thereby contributing to robust levels of liquidity, which benefits all market participants. The opportunity to qualify for each of the Liquidity Provision Tiers is still available to all Members that meet the associated volume requirements in any month. For the foregoing reasons, the Exchange believes the proposed changes would not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intermarket Competition

As noted above, the Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. Members have numerous alternative venues that they may participate on and direct their order flow to, including 15 other equities exchanges and numerous alternative trading systems and other off-exchange venues. As noted above, no single registered equities exchange currently has more than approximately 16% of the total market share of executed volume of equities trading. Thus, in such a low-concentrated and highly competitive market, no single equities exchange possesses significant pricing power in the execution of order flow. Moreover, the Exchange believes that the ever-shifting market share among the exchanges from month to month demonstrates that market participants can shift order flow or discontinue to reduce use of certain categories of products, in response to new or different pricing structures being introduced into the market. Accordingly, competitive forces constrain the Exchange's transaction fees and rebates and market participants can readily choose to send their orders to other exchange and off-exchange venues if they deem fee levels and processes at those other venues to be more favorable. As described above, the proposed change represents a competitive proposal through which the Exchange is seeking to incentivize market participants to direct additional order flow to the Exchange through volume-based tier rebates that are awarded based on a prior month's activity, thus allowing Members to have greater certainty of the rebate that they will receive when trading on the Exchange. Accordingly, the Exchange believes the proposal would not burden, but rather promote, intermarket competition by enabling it to better compete with other exchanges that offer similar pricing structures and incentives to market participants.

Additionally, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities

[16] Currently, the rebates provided under Liquidity Provision Tiers 1, 2, and 3 are $0.00335, $0.00325, and $0.0031 per share, respectively.

[17] 17 CFR 242.610.

[18] 15 U.S.C. 78f(b)(4) and (5).

[19] *See supra* note 18.

markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [20] The fact that this market is competitive has also long been recognized by the courts. In *NetCoalition* v. *SEC,* the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .''.[21] Accordingly, the Exchange does not believe its proposed rule change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to section 19(b)(3)(A)(ii) of the Act [22] and Rule 19b–4(f)(2) [23] thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–MEMX–2023–10 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MEMX–2023–10. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to File Number SR–MEMX–2023–10 and should be submitted on or before July 12, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[24]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97725; File No. SR–NYSE–2023–22]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 308

June 14, 2023.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that on June 5, 2023, New York Stock Exchange LLC (''NYSE'' or the ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 308 to correct an obsolete reference. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to proposes to amend Rule 308 (Acceptability Proceedings) to correct an obsolete reference.

In March 2023, the Exchange amended Rule 308 to reflect the consolidation of the Acceptability Board with the Hearing Board as defined in Rule 9232(b) (Criteria for Selection of Panelists, Replacement Panelists, and Floor-Based Panelists).[4] At the same time, the Exchange removed the reference to offices of a member in the second paragraph of Rule 308(d) by deleting ''member or'' from the final sentence of that paragraph.[5] In an omission, it did not delete ''member or'' from the final sentence of the first paragraph of Rule 308(d). It proposes to do so now.

The Exchange proposes to delete the reference because under Rule 2(a) (''Member,'' ''Membership,'' ''Member Firm,'' etc.), a member is a natural person associated with a member organization who has been approved by the Exchange and designated by such member organization to effect transactions on the trading floor of the Exchange or any facility thereof. As such, a member cannot be a license holder or a registered broker-dealer, and thus would not have an office that ''engages in a business involving substantial direct contact with securities customers'' as set forth in Rule 308(d), unlike member organizations.[6]

The proposed change would be consistent with both the change made to the second paragraph of Rule 308(d) in the March Filing and with changes made to Rule 308-Equities(d) (Acceptability Proceedings) of the Exchange's affiliate NYSE American LLC.[7]

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[8] in general, and furthers the objectives of Section 6(b)(5) of the Act,[9] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that deletion of the obsolete reference to a member in Rule 308(d) would increase the clarity and transparency of the Exchange's rules and remove impediments to and perfect the mechanism of a free and open market by ensuring that persons subject to the Exchange's jurisdiction, regulators, and the investing public could more easily navigate and understand the Exchange rules. The Exchange believes that it would alleviate any possible confusion that could result from the current reference to the offices of a member or member organization in paragraph one of Rule 308(d) and the offices of a member organization in paragraph two of Rule 308(d). The Exchange further believes that the proposed change would not be inconsistent with the public interest and the protection of investors because investors will not be harmed and in fact would benefit from increased transparency and clarity, thereby reducing potential confusion.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change does not address competitive issues but rather proposes the deletion of an obsolete reference in Rule 308(d).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[10] and Rule 19b–4(f)(6) thereunder.[11] Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6)(iii) thereunder.

A proposed rule change filed under Rule 19b–4(f)(6)[12] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b4(f)(6)(iii),[13] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[14] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

[4] *See* Securities Exchange Act Release No. 97206 (March 27, 2023), 88 FR 19334 (March 31, 2023) (SR–NYSE–2023–19) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Amend Rule 308 as Defined in Rule 9232(b) and Delete and Replace Certain Obsolete References). The rule change included the deletion and, where applicable, replacement of obsolete references in the NYSE rules and Listed Company Manual.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–97727; File No. SR–MIAX–2023–19]

Self-Regulatory Organizations; Miami International Securities Exchange LLC; Notice of Designation of Longer Period for Commission Action on a Proposed Rule Change To Amend Exchange Rule 307, Position Limits

June 14, 2023.

On April 21, 2023, Miami International Securities Exchange LLC (''MIAX'' or ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission''), pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend Exchange Rule 307, Position Limits, to establish a process for adjusting option position limits following a stock split or reverse stock split in the underlying security. The proposed rule change was published for comment in the **Federal Register** on May 8, 2023.[3] The Commission has received no comment letters regarding the proposed rule change.

Section 19(b)(2) of the Act[4] provides that within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the notice for this proposed rule change is June 22, 2023.

The Commission is extending the 45-day time period for Commission action on the proposed rule change. The Commission finds that it is appropriate to designate a longer period within which to take action on the proposed rule change so that it has sufficient time to consider the proposed rule change. Accordingly, pursuant to section 19(b)(2) of the Act,[5] the Commission designates August 6, 2023, as the date by which the Commission shall either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change (File No. SR–MIAX–2023–19).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[6]

Sherry R. Haywood,

Assistant Secretary.

DEPARTMENT OF STATE

[Public Notice: 12102]

Notice of Determinations; Culturally Significant Objects Being Imported for Exhibition—Determinations: ''Remedios Varo: Science Fictions'' Exhibition

SUMMARY: Notice is hereby given of the following determinations: I hereby determine that certain objects being imported from abroad pursuant to an agreement with their foreign owner or custodian for temporary display in the exhibition ''Remedios Varo: Science Fictions'' at The Art Institute of Chicago, in Chicago, Illinois, and at possible additional exhibitions or venues yet to be determined, are of cultural significance, and, further, that their temporary exhibition or display within the United States as aforementioned is in the national interest. I have ordered that Public Notice of these determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Reed Liriano, Program Coordinator, Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6471; email: *section2459@state.gov*). The mailing address is U.S. Department of State, L/PD, 2200 C Street NW (SA–5), Suite 5H03, Washington, DC 20522–0505.

SUPPLEMENTARY INFORMATION: The foregoing determinations were made pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), E.O. 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.;* 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236–3 of August 28,

2000, and Delegation of Authority No. 523 of December 22, 2021.

Nicole L. Elkon,

Deputy Assistant Secretary for Professional and Cultural Exchanges, Bureau of Educational and Cultural Affairs, Department of State.

BILLING CODE 4710–05–P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 1333X]

Cleveland & Cuyahoga Railway, LLC—Discontinuance of Service Exemption—in Cuyahoga County, Ohio

On June 1, 2023, Cleveland & Cuyahoga Railway, LLC (CCR), a Class III rail carrier, filed a petition under 49 U.S.C. 10502 for exemption from the prior approval requirements of 49 U.S.C. 10903 to discontinue service over approximately 10.4 miles of rail line owned by Wheeling & Lake Erie Railway Company (WLER) in Cuyahoga County, Ohio, extending from milepost 15.5 at Falls Junction in Glenwillow, Ohio, to milepost 5.1 in Cleveland, Ohio (the Line). The Line traverses U.S. Postal Service Zip Codes 44105, 44113, 44127, 44128, 44131, 44137, 44139, and 44146.

CCR states that it provided service on the Line pursuant to a lease with WLER,[1] which the parties terminated by mutual agreement effective May 31, 2023. (Pet. 4.) According to CCR, WLER has resumed rail operations over the Line as a common carrier. (*Id.*) CCR states that there currently is one shipper on the Line, which will continue to be served by WLER. (*Id.* at 8.)

CCR states that, based on the information in its possession, the Line does not contain federally granted rights-of-way and that any documentation in its possession will be made available to those requesting it. (*Id.* at 4.)

As a condition to this exemption, any employee adversely affected by the discontinuance of service shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979).

By issuance of this notice, the Board is instituting an exemption proceeding pursuant to 49 U.S.C. 10502(b). A final decision will be issued by September 19, 2023.

Because this is a discontinuance proceeding and not an abandonment, interim trail use/rail banking and public use conditions are not appropriate. Because there will be environmental review during any subsequent abandonment, this discontinuance does not require an environmental review. *See* 49 CFR 1105.6(c)(5), 1105.8(b).

Any offer of financial assistance (OFA) for subsidy under 49 CFR 1152.27(b)(2) will be due no later than 120 days after the filing of the petition for exemption, or 10 days after service of a decision granting the petition for exemption, whichever occurs sooner.[2] Persons interested in submitting an OFA must first file a formal expression of intent to file an offer by June 30, 2023, indicating the intent to file an OFA for subsidy and demonstrating that they are preliminarily financially responsible. *See* 49 CFR 1152.27(c)(1)(i).

All filings in response to this notice must refer to Docket No. AB 1333X and must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on CCR's representative, Karl Morell, Karl Morell & Associates, 440 1st Street NW, Suite 440, Washington, DC 20001. Replies to the petition are due on or before July 11, 2023.

Persons seeking further information concerning discontinuance procedures may contact the Board's Office of Public Assistance, Governmental Affairs, and Compliance at (202) 245–0238 or refer to the full abandonment and discontinuance regulations at 49 CFR part 1152. Questions concerning environmental issues may be directed to the Board's Office of Environmental Analysis at (202) 245–0294. If you require accommodation under the Americans with Disabilities Act, please call (202) 245–0245.

Board decisions and notices are available at *www.stb.gov.*

Decided: June 15, 2023.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Tammy Lowery,

Clearance Clerk.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent of Waiver With Respect to Land; Indy South Greenwood Airport, Greenwood, Indiana

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice.

SUMMARY: The FAA is considering a proposal to change approximately 3.2 acres of airport land from aeronautical use to non-aeronautical use and to authorize the sale of airport property located at Indy South Greenwood Airport, Greenwood, IN. The aforementioned land is not needed for aeronautical use. The subject property is located on the north end of the airport on the west side of Runway 19 and is proposed to be sold for the development of a restaurant facility.

DATES: Comments must be received on or before July 21, 2023.

ADDRESSES: Documents are available for review by appointment at the FAA Chicago Airports District Office, Melanie Myers, Program Manager, 2300 East Devon Avenue, Des Plaines, IL 60018, Telephone: (847) 294–7525/Fax: (847) 294–7046.

Written comments on the Sponsor's request may be submitted using any of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov,* and follow the instructions for sending your comments electronically.
- *Mail:* Melanie Myers, Program Manager, Federal Aviation Administration, Chicago Airports District Office, 2300 East Devon Avenue, Des Plaines, IL 60018.
- *Hand Delivery:* Deliver to mail address above between 8 a.m. and 5 p.m. Monday through Friday, excluding Federal holidays.
- *Fax:* (847) 294–7046.

FOR FURTHER INFORMATION CONTACT: Melanie Myers, Program Manager, Federal Aviation Administration, Chicago Airports District Office, 2300 East Devon Avenue, Des Plaines, IL 60018. Telephone Number: (847) 294–7525/FAX Number: (847) 294–7046.

SUPPLEMENTARY INFORMATION: In accordance with section 47107(h) of Title 49, United States Code, this notice is required to be published in the **Federal Register** 30 days before modifying the land-use assurance that requires the property to be used for an aeronautical purpose.

The subject 3.2 acre parcel contains foundations and parking pads from hangars that were removed in 2016 and

2017. This land was part of the initial purchase of the airport and was funded by Airport Improvement Program (AIP) grant 03–18–0097–02. The Greenwood Board of Aviation Commissioners, Airport Sponsor of the Indy South Greenwood Airport proposes to sell this land for the development of a restaurant facility. The Airport Sponsor has obtained an appraisal and will receive fair market value for the sale of the land.

The disposition of proceeds from the sale of the airport property will be in accordance with FAA's Policy and Procedures Concerning the Use of Airport Revenue, published in the **Federal Register** on February 16, 1999 (64 FR 7696).

This notice announces that the FAA is considering the release of the subject airport property at the Indy South Greenwood Airport, Greenwood, Indiana from federal land covenants, subject to a reservation for continuing right of flight as well as restrictions on the released property as required in FAA Order 5190.6B section 22.16. Approval does not constitute a commitment by the FAA to financially assist in the disposal of the subject airport property nor a determination of eligibility for grant-in-aid funding from the FAA.

Survey Description

PART OF THE NORTHEAST QUARTER OF SECTION 28, TOWNSHIP 14 NORTH, RANGE 4 EAST, PLEASANT TOWNSHIP, JOHNSON COUNTY, INDIANA, DESCRIBED AS FOLLOWS:

COMMENCING AT A HARRISON MONUMENT AT THE NORTHEAST CORNER OF SAID NORTHEAST QUARTER; THENCE SOUTH 88 DEGREES 11 MINUTES 14 SECONDS WEST ALONG THE NORTH LINE OF SAID NORTHEAST QUARTER A DISTANCE OF 1598.94 FEET TO THE PLACE OF BEGINNING; THENCE SOUTH 00 DEGREES 29 MINUTES 33 SECONDS WEST A DISTANCE OF 748.60 FEET; THENCE SOUTH 88 DEGREES 19 MINUTES 33 SECONDS WEST A DISTANCE OF 446.64 FEET; THENCE NORTH 00 DEGREES 28 MINUTES 22 SECONDS EAST A DISTANCE OF 185.00 FEET; THENCE NORTH 88 DEGREES 19 MINUTES 33 SECONDS EAST A DISTANCE OF 283.50 FEET; THENCE NORTH 54 DEGREES 19 MINUTES 40 SECONDS EAST A DISTANCE OF 78.14 FEET; THENCE NORTH 00 DEGREES 29 MINUTES 33 SECONDS EAST A DISTANCE OF 519.63 FEET TO THE NORTH LINE OF SAID NORTHEAST QUARTER; THENCE NORTH 88 DEGREES 11 MINUTES 14 SECONDS EAST ALONG SAID NORTH LINE A DISTANCE OF 100.08 FEET TO THE PLACE OF BEGINNING. CONTAINING 3.221 ACRES, MORE OR LESS.

Issued in Des Plaines, IL on June 7, 2023.

Debra L. Bartell,

Manager, Chicago Airports District Office, FAA, Great Lakes Region.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2023–0143]

Truck Leasing Task Force (TLTF); Notice of Public Meeting

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of public meeting.

SUMMARY: This notice announces a meeting of the TLTF.

DATES: The meeting will be held on Tuesday, July 11, 2023, from 10 a.m. to 3:30 p.m. ET. Requests for accommodations for a disability must be received by Friday, June 30. Requests to submit written materials for consideration during the meeting must be received no later than Friday, June 30.

ADDRESSES: The meeting will be held virtually for its entirety. Please register in advance of the meeting at *www.fmcsa.dot.gov/tltf.* A copy of the agenda for the entire meeting will be made available at *www.fmcsa.dot.gov/tltf* at least 1 week in advance of the meeting. Once approved, copies of the meeting minutes will be available at the website following the meeting. You may visit the TLTF website at *www.fmcsa.dot.gov/tltf* for further information on the committee and its activities.

FOR FURTHER INFORMATION CONTACT: Ms. Shannon L. Watson, Deputy Designated Federal Officer, TLTF, FMCSA, 1200 New Jersey Avenue SE, Washington, DC 20590, (202) 360–2925,*tltf@dot.gov.* Any committee-related request should be sent to the person listed in this section.

SUPPLEMENTARY INFORMATION:

I. Background

The TLTF was created under the Federal Advisory Committee Act (FACA) in accordance with section 23009 of the Bipartisan Infrastructure Law (BIL) (Pub. L. 117–58), which requires the Federal Motor Carrier Safety Administration (FMCSA) to establish the TLTF. The TLTF will examine the terms, conditions, and equitability of common truck leasing arrangements, particularly as they impact owner-operators and trucking businesses subject to such agreements and submit a report on the task force's identified issues and conclusions regarding truck leasing arrangements, including recommended best practices, to the Secretary, the Secretary of Labor, and the appropriate committees of Congress. The TLTF will work in coordination with, and be informed by, the United States Department of Labor.

The TLTF operates in accordance with FACA under the terms of the TLTF charter, filed February 11, 2022.

II. Agenda

The agenda will cover the following topics:

- An ethics briefing for FACA members;
- A discussion of ground rules for meetings (including logistics and meeting etiquette);
- A review of BIL requirements for topics/issues the TLTF must discuss;
- A discussion of the schedule for future meetings (virtual and hybrid, possibly), data needs/requests to support deliberations, guest presenters, etc.;
- Initial deliberations and discussion on the required list of BIL items.

III. Public Participation

The meeting will be open to the public via virtual platform. Advance registration via the website is required.

DOT is committed to providing equal access to this meeting for all participants. If you need alternative formats or services due to a disability, such as sign language interpretation or other ancillary aids, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section by Friday, June 30, 2023.

Oral comments from the public will be heard during designated comment periods at the discretion of the TLTF chair and Designated Federal Officer. To accommodate as many speakers as possible, the time for each commenter may be limited. Speakers are requested to submit a written copy of their remarks for inclusion in the meeting records and for circulation to TLTF members. All prepared remarks submitted on time will be accepted and considered as part of the record. Any member of the public may present a

written statement to the committee at any time.

Larry W. Minor,

Associate Administrator for Policy.

[FR Doc. 2023–13102 Filed 6–20–23; 8:45 am]

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket No. FRA–2023–0002–N–11]

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of information collection; request for comment.

SUMMARY: Under the Paperwork Reduction Act of 1995 (PRA) and its implementing regulations, this notice announces that FRA is forwarding the Information Collection Request (ICR) abstracted below to the Office of Management and Budget (OMB) for review and comment. The ICR describes the information collection and its expected burden. On March 24, 2023, FRA published a notice providing a 60-day period for public comment on the ICR.

DATES: Interested persons are invited to submit comments on or before July 21, 2023.

ADDRESSES: Written comments and recommendations for the proposed ICR should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find the particular ICR by selecting ''Currently under Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Ms. Joanne Swafford, Information Collection Clearance Officer, at email: *joanne.swafford@dot.gov* or telephone: (757) 897–9908 or *arlette.mussington@dot.gov* or telephone: (571) 609–1285.

SUPPLEMENTARY INFORMATION: The PRA, 44 U.S.C. 3501–3520, and its implementing regulations, 5 CFR part 1320, require Federal agencies to issue two notices seeking public comment on information collection activities before OMB may approve paperwork packages. *See* 44 U.S.C. 3506, 3507; 5 CFR 1320.8 through 1320.12. On March 24, 2023, FRA published a 60-day notice in the **Federal Register** soliciting public comment on the ICR for which it is now seeking OMB approval. *See* 88 FR 17919. FRA has received one comment related to the proposed collection of information. This commenter expressed concerns about FRA's estimated paperwork burdens with respect to the Risk Reduction Program (RRP), but did not articulate in detail which burdens were of concern. While FRA notes this feedback, FRA's stakeholder-informed process re-evaluates the estimated paperwork burdens periodically to ensure accuracy and FRA's subject matter experts also analyze the updated data to determine accurate estimates.

Before OMB decides whether to approve this proposed collection of information, it must provide 30-days' notice for public comment. Federal law requires OMB to approve or disapprove paperwork packages between 30 and 60 days after the 30-day notice is published. 44 U.S.C. 3507(b)–(c); 5 CFR 1320.12(d); see also 60 FR 44978, 44983, Aug. 29, 1995. OMB believes the 30-day notice informs the regulated community to file relevant comments and affords the agency adequate time to digest public comments before it renders a decision. 60 FR 44983, Aug. 29, 1995. Therefore, respondents should submit their respective comments to OMB within 30 days of publication to best ensure having their full effect.

Comments are invited on the following ICR regarding: (1) Whether the information collection activities are necessary for FRA to properly execute its functions, including whether the information will have practical utility; (2) the accuracy of FRA's estimates of the burden of the information collection activities, including the validity of the methodology and assumptions used to determine the estimates; (3) ways for FRA to enhance the quality, utility, and clarity of the information being collected; and (4) ways to minimize the burden of information collection activities on the public, including the use of automated collection techniques or other forms of information technology.

The summary below describes the ICR that FRA will submit for OMB clearance as the PRA requires:

Title: Risk Reduction Program.

OMB Control Number: 2130–0610.

Abstract: In 2020, FRA issued a final rule [1] that requires each Class I freight railroad and each freight railroad with inadequate safety performance (ISP) to develop and implement a RRP to improve the safety of its operations. RRP is a comprehensive, system-oriented approach to safety that determines a railroad operation's level of risk by identifying and analyzing applicable hazards, and develops plans to mitigate, if not eliminate, that risk.

The information collected under this regulation will be used by railroads, and FRA, to improve safety through structured, proactive processes that systematically evaluate railroad safety hazards on their systems and manage the risks associated with those hazards to help reduce the number and rates of railroad accidents/incidents, injuries, and fatalities. Each railroad has flexibility to tailor an RRP to its specific railroad operations. Each railroad must implement its RRP under a written, FRA-approved RRP plan and conduct an annual internal assessment of its RRP, with FRA also auditing railroads' RRPs.

The primary reason for the reduction in the estimated paperwork burden is the expected decrease in the number of responses. Specifically, all Class I freight railroads have already submitted their RRP plans, leading to a decrease in the overall PRA burden, resulting in no anticipated submissions under certain regulatory sections.

As a result of the merger between the Canadian Pacific and Kansas City Southern railroads, Class I the respondent universe was reduced from seven to six Class I railroads. While the individual burden remains the same, for transparency, the burden table is being re-published in this 30-day notice to illustrate the updates made.

Type of Request: Extension without change (with changes in estimates) of a currently approved collection.

Affected Public: Businesses.

Form(s): N/A.

Respondent Universe: 6 Class I railroads and 15 Class II or Class III freight railroads demonstrating inadequate safety performance.

Frequency of Submission: On occasion.

Reporting Burden:

[1] 85 FR 9262 (Feb. 18, 2020).

CFR section	Respondent universe	Total annual responses (A)	Average time per responses (B)	Total annual burden hours (C = A * B)	Total cost equivalent in U.S. dollar (D = C * wage rates)

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket No. FRA–2023–0002–N–10]

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of information collection; request for comment.

SUMMARY: Under the Paperwork Reduction Act of 1995 (PRA) and its implementing regulations, this notice announces that FRA is forwarding the Information Collection Request (ICR) abstracted below to the Office of Management and Budget (OMB) for review and comment. The ICR describes the information collection and its expected burden. On March 24, 2023, FRA published a notice providing a 60-day period for public comment on the ICR.

DATES: Interested persons are invited to submit comments on or before July 21, 2023.

ADDRESSES: Written comments and recommendations for the proposed ICR should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find the particular ICR by selecting ''Currently under Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Ms. Arlette Mussington, Information Collection Clearance Officer, at email: *arlette.mussington@dot.gov* or telephone: (571) 609–1285 or Ms. Joanne Swafford, Information Collection Clearance Officer, at email: *joanne.swafford@dot.gov* or telephone: (757) 897–9908.

SUPPLEMENTARY INFORMATION: The PRA, 44 U.S.C. 3501–3520, and its implementing regulations, 5 CFR part 1320, require Federal agencies to issue two notices seeking public comment on information collection activities before OMB may approve paperwork packages. *See* 44 U.S.C. 3506, 3507; 5 CFR 1320.8 through 1320.12. On March 24, 2023, FRA published a 60-day notice in the **Federal Register** soliciting public comment on the ICR for which it is now seeking OMB approval. *See* 88 FR 17917. FRA received no comments related to the proposed collection of information.

Before OMB decides whether to approve this proposed collection of information, it must provide 30-days' notice for public comment. Federal law requires OMB to approve or disapprove paperwork packages between 30 and 60 days after the 30-day notice is published. 44 U.S.C. 3507(b)–(c); 5 CFR 1320.12(d); *see also* 60 FR 44978, 44983, Aug. 29, 1995. OMB believes the 30-day notice informs the regulated community to file relevant comments and affords the agency adequate time to digest public comments before it renders a decision. 60 FR 44983, Aug. 29, 1995. Therefore, respondents should submit their respective comments to OMB within 30 days of publication to best ensure having their full effect.

Comments are invited on the following ICR regarding: (1) Whether the information collection activities are necessary for FRA to properly execute its functions, including whether the information will have practical utility; (2) the accuracy of FRA's estimates of the burden of the information collection activities, including the validity of the methodology and assumptions used to determine the estimates; (3) ways for FRA to enhance the quality, utility, and clarity of the information being collected; and (4) ways to minimize the burden of information collection activities on the public, including the use of automated collection techniques or other forms of information technology.

The summary below describes the ICR that FRA will submit for OMB clearance as the PRA requires:

Title: System Safety Program Plan.

OMB Control Number: 2130–0599.

Abstract: In 2020, FRA issued a final rule [1] that requires passenger rail operations to develop and implement a system safety program (SSP) to improve the safety of their operations.

FRA uses the information collected to help ensure that commuter and intercity passenger rail operations establish and implement SSPs to improve the safety of their operations and to confirm compliance with the rule. Each passenger rail operation should use its SSP to proactively identify and mitigate or eliminate hazards and the resulting risk on its system at an early stage to reduce the number of railroad accidents, incidents, and associated injuries, fatalities, and property damage. A passenger rail operation has the flexibility to tailor an SSP to its specific operations. An SSP must be fully implemented within 36 months of FRA's approval of a passenger rail operation's submitted SSP plan. Under the SSP regulation, FRA will audit a passenger rail operation's compliance with its SSP plan and will use the information collected to ensure compliance with this regulation.

Type of Request: Extension without change (with changes in estimates) of a currently approved collection.

Affected Public: Businesses.

Form(s): N/A.

Respondent Universe: 33 passenger rail operations + 1 new passenger rail operation.

Frequency of Submission: On occasion.

Total Estimated Annual Responses: 767.

Total Estimated Annual Burden: 1,891 hours.

Total Estimated Annual Burden Hour Dollar Cost Equivalent: $153,019.

FRA informs all interested parties that it may not conduct or sponsor, and a respondent is not required to respond to, a collection of information that does not display a currently valid OMB control number.

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–2023–0007 (Notice No. 2023–08)]

Hazardous Materials: Information Collection Activities

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995,

PHMSA invites comments on information collections pertaining to hazardous materials transportation for which PHMSA intends to request renewal and extension from the Office of Management and Budget. PHMSA published a 60-day comment period soliciting comments on these information collections in the **Federal Register** on March 22, 2023, and did not receive any comments.

DATES: Interested persons are invited to submit comments on or before July 21, 2023.

ADDRESSES: Written comments and recommendations for the information collections should be sent within 30 days of publication of this notice to *https://www.reginfo.gov/public/do/PRAMain.*

Information collections can be found by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

We invite comments on: (1) whether the collections of information are necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the Department's estimate of the burden of the information collections; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

Docket: For access to the Dockets to read background documents or comments received, go to *https://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Steven Andrews or Nina Vore, Standards and Rulemaking Division, (202) 366–8553, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

SUPPLEMENTARY INFORMATION: Section 1320.8(d), title 5, Code of Federal Regulations (CFR) requires PHMSA to provide interested members of the public and affected agencies an opportunity to comment on information collection and recordkeeping requests. This notice identifies information collection requests that PHMSA previously published on March 22, 2023,[1] in a 60-day **Federal Register** notice seeking comments and is now submitting to the Office of Management and Budget (OMB) for renewal and extension. These information collections are contained in 49 CFR 171.6 of the Hazardous Materials Regulations (HMR; 49 CFR parts 171 through 180). PHMSA has revised burden estimates, where appropriate, to reflect current reporting levels or adjustments based on changes in proposed or final rules published since the information collections were last approved. The following information is provided for each information collection: (1) title of the information collection, including former title if a change is being made; (2) OMB control number; (3) summary of the information collection activity; (4) description of affected public; (5) estimate of total annual reporting and recordkeeping burden; and (6) frequency of collection. PHMSA will request a 3-year term of approval for the information collection activity and will publish a notice in the **Federal Register** alerting the public upon OMB's approval. PHMSA requests comments on the following information collections:

Title: Hazardous Materials Incident Reports.

OMB Control Number: 2137–0039.

Summary: This information collection is applicable upon occurrence of an incident as prescribed in 49 CFR 171.15 and 171.16. A Hazardous Materials Incident Report, DOT Form F 5800.1, must be completed by a person in physical possession of a hazardous material at the time a hazardous material incident occurs in transportation, such as a release of materials, serious accident, evacuation, or closure of a main artery. Incidents meeting criteria in 49 CFR 171.15 also require a telephonic report. This information collection enhances the Agency's ability to evaluate the effectiveness of its regulatory program, determine the need for regulatory changes, and address emerging hazardous materials transportation safety issues. The requirements apply to all interstate and intrastate carriers engaged in the transportation of hazardous materials by rail, air, water, and highway. The following information collections and their burdens are associated with this OMB Control Number:

Information collection	Respondents	Total annual responses	Hours per response	Total annual burden hours
Telephone Notifications	180	716	0.08	57
Incident Reports Paper—Written	172	2,888	1.6	4,621
Incident Reports—Electronic	166	19,720	0.8	15,776

Affected Public: Shippers and carriers of hazardous materials.

Annual Reporting and Recordkeeping Burden:

Number of Respondents: 518.

Total Annual Responses: 23,324.

Total Annual Burden Hours: 20,454.

Frequency of Collection: On occasion.

Title: Cargo Tank Motor Vehicles in Liquefied Compressed Gas Service.

OMB Control Number: 2137–0595.

Summary: This information collection and recordkeeping burden pertains to the requirements applicable to the manufacture, certification, inspection, repair, maintenance, and operation of certain DOT specification and non-specification cargo tank motor vehicles used to transport liquefied compressed gases. These requirements are intended to ensure cargo tank motor vehicles used to transport liquefied compressed gases are operated safely, and to minimize the potential for catastrophic releases during unloading and loading operations. They include: (1) requirements for operators of cargo tank motor vehicles in liquefied compressed gas service to develop operating procedures applicable to unloading operations and carry the operating procedures on each vehicle; (2) inspection, maintenance, marking, and testing requirements for the cargo tank discharge system, including delivery hose assemblies; and (3) requirements for emergency discharge control equipment on certain cargo tank motor vehicles transporting liquefied compressed gases that must be installed and certified by a Registered Inspector.

The following information collections and their burdens are associated with this OMB Control Number:

[1] 88 FR 17295.

Information collection	Respondents	Total annual responses	Hours per response	Total annual burden hours
Marking New/Repaired Hoses with Unique Identifier	6800	12,172	0.083	1,010
Monthly Hose Inspections Record	6800	439,960	0.1	43,996
Record of Monthly Piping Tests Record	6800	400,112	0.2	80,022
Hose Pressure Test Marking Record	6800	12,172	0.083	1,010
Annual Hose Test Record	6800	36,652	0.42	15,394
Cargo Tanks in Other Than Metered Delivery Service—Design Certification for Automatic Shutoff	150	900	8	7,200
Cargo Tanks in Other Than Metered Delivery Service—Instillation of Shutoff System by a Registered Inspector	150	900	8	7,200
Cargo Tank Motor Vehicles in Metered Delivery Service—Certification of Remote-Control Equipment by a Registered Inspector	150	3300	8	26,400

Affected Public: Carriers in liquefied compressed gas service, manufacturers and repairers.

Annual Reporting and Recordkeeping Burden:

Number of Respondents: 34,450.

Total Annual Responses: 906,168.

Total Annual Burden Hours: 182,232.

Frequency of Collection: On occasion.

Title: Inspection and Testing of Meter Provers.

OMB Control Number: 2137–0620.

Summary: This information collection and recordkeeping burden results from the requirements pertaining to the use, inspection, and maintenance of mechanical displacement meter provers (meter provers) used to check the accurate flow of liquid hazardous materials into bulk packagings, such as portable tanks and cargo tank motor vehicles, under the HMR. These meter provers are used to ensure that the proper amount of liquid hazardous materials is being loaded and unloaded. These meter provers consist of a gauge and several pipes that always contain small amounts of the liquid hazardous material in the pipes as residual material and, therefore, must be inspected and maintained in accordance with the HMR to ensure they are in proper calibration and working order. These meter provers are not subject to the specification testing and inspection requirements in 49 CFR part 178. However, these meter provers must be visually annually inspected and hydrostatic pressure tested every five years in order to ensure they are properly working as specified in 49 CFR 173.5a of the HMR. Therefore, this information collection requires that:

(1) Each meter prover must undergo and pass an annual external visual inspection to ensure that the meter provers used in the flow of liquid hazardous materials into bulk packagings are accurate and in conformance with the performance standards in the HMR.

(2) Each meter prover must undergo and pass a hydrostatic pressure test at least every 5 years to ensure that the meter provers used in the flow of liquid hazardous materials into bulk packagings are accurate and in conformance with the performance standards in the HMR.

(3) Each meter prover must successfully complete the test and inspection and must be marked in accordance with 49 CFR 180.415(b) and 173.5a.

(4) Each owner must retain a record of the most recent visual inspection and pressure test until the meter prover is requalified.

The following information collections and their burdens are associated with this OMB Control Number:

Information collection	Respondents	Total annual responses	Hours per response	Total annual burden hours
Annual Visual Inspection	250	250	0.5	125
Hydrostatic Pressure Test (Every 5 Years)	250	250	0.2	50

Affected Public: Owners of meter provers used to measure liquid hazardous materials flow into bulk packagings such as cargo tanks and portable tanks.

Annual Reporting and Recordkeeping Burden:

Number of Respondents: 500.

Total Annual Responses: 500.

Total Annual Burden Hours: 175.

Frequency of Collection: On occasion.

Issued in Washington, DC, on June 14, 2023.

T. Glenn Foster,

Chief, Regulatory Review and Reinvention Branch, Office of Hazardous Materials Safety, Pipeline and Hazardous Materials Safety Administration.

[FR Doc. 2023–13097 Filed 6–20–23; 8:45 am]

BILLING CODE 4910–60–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Actions

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of one or more persons that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List (SDN List) based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons are blocked, and U.S. persons are generally prohibited from engaging in transactions with them. OFAC is also publishing an update to the identifying information of one person currently included on the SDN List.

DATES: See **SUPPLEMENTARY INFORMATION** section for applicable date(s).

FOR FURTHER INFORMATION CONTACT: OFAC: Associate Director for Global Targeting, tel.: 202–622–2420; Assistant Director for Licensing, tel.: 202–622–2480; Assistant Director for Regulatory Affairs, tel.: 202–622–4855; or the Assistant Director for Sanctions Compliance & Evaluation, tel.: 202–622–2490.

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions

programs are available on OFAC's website (*https://www.treasury.gov/ofac*).

Notice of OFAC Actions

A. On May 19, 2023, OFAC determined that the property and interests in property subject to U.S. jurisdiction of the following persons are blocked under the relevant sanctions authority listed below.

Individuals:

1. KOSTIOUK, Evgueni, Alzey, Germany; Poland; DOB 13 Jun 1954; nationality Belarus; Gender Male (individual) [RUSSIA-EO14024].

   Designated pursuant to sections 1(a)(i) of Executive Order 14024 of April 15, 2021, "Blocking Property With Respect To Specified Harmful Foreign Activities of the Government of the Russian Federation," 86 FR 20249, 3 CFR, 2021 Comp., p. 542 (Apr. 15, 2021) (E.O. 14024) for operating or having operated in the technology sector of the Russian Federation economy.

2. SWINIARSKI, Jacek Romuald, Poland; DOB 07 Feb 1967; nationality Poland; Gender Male; National ID No. 67020701814 (Poland) (individual) [RUSSIA-EO14024] (Linked To: INTER-TRANS SPOLKA Z OGRANICZONA ODPOWIEDZIALNOSCIA).

   Designated pursuant to section 1(a)(vii) of E.O. 14024 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, Inter-Trans Spolka Z Ograniczona Odpowiedzialnoscia, a person whose property and interests in property are blocked pursuant to E.O. 14024.

3. EFIMOV, Anton Anatolyevich (a.k.a. EFIMOV, Anton Anatolevich), Spain; Estonia; Russia; DOB 31 Aug 1975; alt. DOB 08 Aug 1975; nationality Russia; Gender Male (individual) [RUSSIA-EO14024].

   Designated pursuant to section 1(a)(i) of Executive Order 14024 for operating or having operated in the electronics sector of the Russian Federation economy.

4. LITVINENKO, Vladimir Stefanovich (Cyrillic: ЛИТВИНЕНКО, Владимир Стефанович) (a.k.a. LITVINENKO, Vladimir Stefanovic), St. Petersburg, Russia; DOB 14 Aug 1955; POB Krasnodar territory, Russia; nationality Russia; Gender Male; Tax ID No. 780151794940 (Russia) (individual) [RUSSIA-EO14024] (Linked To: FEDERAL STATE BUDGET EDUCATIONAL INSTITUTION OF HIGHER EDUCATION SAINT PETERSBURG MINING UNIVERSITY).

Designated pursuant to sections 1(a)(i) and 1(a)(iii)(C) and of E.O. 14024 for operating or having operated in the metals and mining sector of the Russian Federation economy and for being or having been a leader, official, senior executive officer, or member of the board of directors of Federal State Budget Educational Institution of Higher Education Saint Petersburg Mining University, an entity whose property and interests in property are blocked pursuant to E.O. 14024.

5. TROENDLE, Dirk, Germany; DOB 11 Mar 1956; nationality Germany; Gender Male; Passport C93XHRVNT (Germany) (individual) [RUSSIA-EO14024] (Linked To: MORETTI, Walter).

Designated pursuant to section 1(a)(vi)(B) of E.O. 14024 for having materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services to or in support of Walter Moretti, a person whose property and interests in property are blocked pursuant to E.O. 14024.

6. VAN INGEN, Edwin Onno, Netherlands; DOB 17 Aug 1964; nationality Netherlands; Gender Male; Passport NWR0J8669 (Netherlands) (individual) [RUSSIA-EO14024].

Designated pursuant to section 1(a)(vii) of Executive Order 14024 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, the Government of the Russian Federation.

7. BUECHEL, Pascal Dominik (a.k.a. BUCHEL, Pascal Dominik), Liechtenstein; DOB 23 Sep 1974; POB Liechtenstein; nationality Liechtenstein; Gender Male (individual) [RUSSIA-EO14024] (Linked To: TRADE INITIATIVE ESTABLISHMENT).

Designated pursuant to section 1(a)(iii)(C) of E.O. 14024 for being or having been a leader, official, senior executive officer, or member of the board of directors of Trade Initiative Establishment, an entity whose property and interests in property are blocked pursuant to E.O. 14024.

8. LESTAFYE, Anton Yuryevich (a.k.a. KUZMIN, Anton Yuryevich; a.k.a. LESTAFIER, Anton), Russia; DOB 08 Mar 1983; nationality Russia; Gender Male; Passport 763579648 (Russia); Tax ID No. 503611829859 (Russia) (individual) [RUSSIA-EO14024].

Designated pursuant to section 1(a)(i) of Executive Order 14024 for operating or having operated in the technology sector of the Russian Federation economy.

9. TIMOSHIN, Andrey Vladimirovich (a.k.a. TIMOSHIN, Andrei Vladimirovich), Russia; DOB 03 Dec 1978; POB Moscow, Russia; nationality Russia; Gender Male; Identification Number 771574784272 (Russia) (individual) [RUSSIA-EO14024].

Designated pursuant to section 1(a)(i) of Executive Order 14024 for operating or having operated in the technology sector of the Russian Federation economy.

10. VINOGRADOVA, Natalya Yuryevna, Russia; DOB 23 Feb 1972; nationality Russia; Gender Female; Tax ID No. 509153587 (Russia) (individual) [RUSSIA-EO14024].

Designated pursuant to section 1(a)(i) of Executive Order 14024 for operating or having operated in the technology sector of the Russian Federation economy.

11. GARSHIN, Vadim Veniaminovich, Russia; DOB 01 May 1961; POB Yevpatoriya, Ukraine; nationality Russia; Gender Male; Passport 736240066 (Russia) issued 13 Oct 2014 expires 13 Oct 2024 (individual) [RUSSIA-EO14024].

    Designated pursuant to section 1(a)(i) of Executive Order 14024 for operating or having operated in the technology sector of the Russian Federation economy.

12. RAZORENOV, Aleksandr Gennadievich (a.k.a. RAZORENOV, Alexander Gennadiyevich), Russia; DOB 26 Dec 1950; POB Moscow, Russia; nationality Russia; Gender Male; Passport 736076110 (Russia) expires 16 Sep 2024; alt. Passport 761699993 (Russia) expires 07 Oct 2029 (individual) [RUSSIA-EO14024].

    Designated pursuant to section 1(a)(i) of Executive Order 14024 for operating or having operated in the technology sector of the Russian Federation economy.

13. SERGEEVA, Yulia Aleksandrovna (a.k.a. SERGEEVA, Julia), Russia; DOB 22 Jan 1978; POB Moscow, Russia; nationality Russia; Gender Female; Passport 530329881 (Russia) issued 14 Feb 2013 expires 10 Nov 2021; National ID No. 4503550173 (Russia) (individual) [RUSSIA-EO14024].

    Designated pursuant to section 1(a)(i) of Executive Order 14024 for operating or having operated in the financial services sector of the Russian Federation economy.

14. VELICHKO, Sergey Yevgenyevich, Russia; DOB 22 May 1973; POB Moscow, Russia; nationality Russia; Gender Male; Passport 752332056 (Russia) issued 24 Sep 2015 expires 24 Sep 2025; National ID No. 4502258245 (Russia) (individual) [RUSSIA-EO14024].

    Designated pursuant to section 1(a)(i) of Executive Order 14024 for operating or having operated in the financial services sector of the Russian Federation economy.

15. AKIFYEV, Pavel Viktorovich (a.k.a. AKIFEV, Pavel Viktorovich), Russia; DOB 19 Dec 1985; nationality Russia; Gender Male; Tax ID No. 773365062478 (Russia) (individual) [RUSSIA-EO14024].

    Designated pursuant to section 1(a)(i) of Executive Order 14024 for operating or having operated in the technology sector of the Russian Federation economy.

16. VERKHOVTSEVA, Svetlana Yuryevna (Cyrillic: ВЕРХОВЦЕВА, Светлана Юрьевна), Sjatoozerskaja 28-24, Moscow, Russia; Czech Republic; DOB 02 Dec 1961; nationality Russia; Gender Female; Tax ID No. 110200499266 (Russia) (individual) [RUSSIA-EO14024].

BILLING CODE 4810–AL–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Credit for Renewable Electricity Production and Publication of Inflation Adjustment Factor and Reference Price for Calendar Year 2023

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of publication.

SUMMARY: The 2023 inflation adjustment factor and reference price are used in determining the availability of the credit for renewable electricity production under section 45 (section 45 credit).

FOR FURTHER INFORMATION CONTACT: Charles Hyde, CC:PSI:6, Internal Revenue Service, 1111 Constitution Avenue NW, Washington, DC 20224, (202) 317–6853 (not a toll-free number).

SUPPLEMENTARY INFORMATION: The 2023 inflation adjustment factor and reference price apply to calendar year 2023 sales of kilowatt hours of electricity produced in the United States or a possession thereof from qualified energy resources.

Inflation Adjustment Factor: The inflation adjustment factor for calendar year 2023 for qualified energy resources is 1.8909.

Reference Price: The reference price for calendar year 2023 for facilities producing electricity from wind is 3.74 cents per kilowatt hour. The reference prices for facilities producing electricity from closed-loop biomass, open-loop biomass, geothermal energy, solar energy, municipal solid waste, qualified hydropower production, and marine and hydrokinetic renewable energy have not been determined for calendar year 2023.

Phaseout Calculation: Because the 2023 reference price for electricity produced from wind (3.74 cents per kilowatt hour) does not exceed 8 cents multiplied by the inflation adjustment factor (1.8909), the phaseout of the credit provided in section 45(b)(1) does not apply to such electricity sold during calendar year 2023. For electricity produced from closed-loop biomass, open-loop biomass, geothermal energy, solar energy, municipal solid waste, qualified hydropower production, and marine and hydrokinetic renewable energy, the phaseout of the credit provided in section 45(b)(1) does not apply to such electricity sold during calendar year 2023.

Inflation Reduction Act Amendments: Section 45 was amended by section 13101 of Public Law 117–169, 136 Stat. 1818 (August 16, 2022), commonly known as the Inflation Reduction Act of 2022 (IRA). The IRA changed the manner in which the section 45 credit amounts are calculated for any qualified facility placed in service after December 31, 2021. The IRA also removed the one-

half reduction of the credit amount under section 45(b)(4)(A) for qualified hydropower facilities and marine and hydrokinetic renewable energy facilities placed in service after December 31, 2022. In the case of any qualified facility placed in service before January 1, 2022, the section 45 credit amounts are determined under the calculation rules provided by the prior version of section 45.

As amended by the IRA, section 45(b)(6)(A) provides that, in the case of any qualified facility that satisfies the requirements of section 45(b)(6)(B), the credit amount determined under section 45(a) (determined after the application of section 45(b)(1) through (5) and without regard to section 45(b)(6)) is equal to such amount multiplied by 5. A qualified facility satisfies the requirements of section 45(b)(6)(B) if it is placed in service after December 31, 2021, and it is one of the following: (i) a facility with a maximum net output of less than 1 megawatt (as measured in alternating current); (ii) a facility the construction of which began prior to January 29, 2023, which is the date that is 60 days after the publication of the guidance with respect to the requirements of section 45(b)(7)(A) (prevailing wage requirements) and section 45(b)(8) (apprenticeship requirements);[1] or (iii) a facility that satisfies the requirements of section 45(b)(7)(A) and (8). The IRA also added bonus credit amounts with respect to qualified facilities placed in service after December 31, 2022, that meet domestic content requirements under section 45(b)(9)[2] or energy community requirements under section 45(b)(11).[3]

The IRA amended the phaseout of the section 45 credit for wind facilities under section 45(b)(5) such that it does not apply to facilities placed in service after December 31, 2021. The IRA also added a new phaseout of the section 45 credit under section 45(b)(10) in the case of qualified facilities placed in service after December 31, 2022, for taxpayers making an elective payment election under section 6417. The IRA also amended the credit amount reduction under section 45(b)(3) in the case of qualified facilities the construction of which began after August 16, 2022.

The IRA amended section 45(d)(4) to restore the section 45 credit for electricity produced in solar energy facilities in the case of qualified facilities placed in service after December 31, 2021, and the construction of which begins before January 1, 2025. Effective for facilities placed in service after December 31, 2022, the IRA amended the definition of marine and hydrokinetic renewable energy under section 45(c)(10) and the definition of a marine and hydrokinetic renewable energy facility under section 45(d)(11). The IRA extended certain deadlines in the definitions under section 45(d) for wind facilities, closed-loop biomass facilities, open-loop biomass facilities, geothermal facilities, landfill gas facilities, trash facilities, qualified hydropower facilities, and marine and hydrokinetic renewable energy facilities.

Credit Amount for a Qualified Facility Placed in Service before January 1, 2022: As required by section 45(b)(2), the 1.5 cent amount provided in section 45(a)(1) is adjusted by multiplying such amount by the inflation adjustment factor for the calendar year in which the sale occurs. If any amount as increased under section 45(b)(2) is not a multiple of 0.1 cent, such amount is rounded to the nearest multiple of 0.1 cent. In the case of electricity produced in open-loop biomass facilities, landfill gas facilities, trash facilities, qualified hydropower facilities, and marine and hydrokinetic renewable energy facilities, section 45(b)(4)(A) requires the amount in effect under section 45(a)(1) (before rounding to the nearest 0.1 cent as required by section 45(b)(2)) to be reduced by one-half.

Under the calculation required by section 45(b)(2), the credit for renewable electricity production for calendar year 2023 determined under section 45(a) is 2.8 cents per kilowatt hour on the sale of electricity produced in any qualified facility placed in service before January 1, 2022, from the qualified energy resources of wind, closed-loop biomass, and geothermal energy, and 1.4 cents per kilowatt hour on the sale of electricity produced in any qualified facility placed in service before January 1, 2022, from the qualified energy resources of open-loop biomass, landfill gas, trash, qualified hydropower, and marine and hydrokinetic renewable energy.

Credit Amount for a Qualified Facility Placed in Service after December 31, 2021: As required by section 45(b)(2), the 0.3 cent amount provided in section 45(a)(1) is adjusted by multiplying such amount by the inflation adjustment factor for the calendar year in which the sale occurs. If the 0.3 cent amount as adjusted for inflation is not a multiple of 0.05 cent, the amount is rounded to the nearest multiple of 0.05 cent. In the case of electricity produced in open-loop biomass facilities, landfill gas facilities, trash facilities, qualified hydropower facilities, and marine and hydrokinetic renewable energy facilities, section 45(b)(4)(A) requires the amount in effect under section 45(a)(1) (determined before rounding as required by section 45(b)(2)) to be reduced by one-half.

Under the calculation required by section 45(b)(2), the credit for renewable electricity production for calendar year 2023 determined under section 45(a) is 0.55 cents per kilowatt hour on the sale of electricity produced in any qualified facility placed in service after December 31, 2021, from the qualified energy resources of wind, closed-loop biomass, geothermal energy, and solar energy, and 0.3 cents per kilowatt hour on the sale of electricity produced in any qualified facility placed in service after December 31, 2021, from the qualified energy resources of open-loop biomass, landfill gas, trash, qualified hydropower, and marine and hydrokinetic renewable energy.

Credit Amount for Qualified Hydropower Facilities and Marine and Hydrokinetic Renewable Energy Facilities Placed in Service after December 31, 2022: Under the calculation required by section 45(b)(2), the credit for renewable electricity production for calendar year 2023 determined under section 45(a) is 0.55 cents per kilowatt hour on the sale of electricity produced in any qualified facility placed in service after December 31, 2022, from the qualified energy resources of qualified hydropower and marine and hydrokinetic renewable energy.

(Authority: 45(e)(2)(A) (26 U.S.C. 45(e)(2)(A)) of the Internal Revenue Code.)

Christopher T. Kelley,

Special Counsel to the Associate Chief Counsel (Passthroughs and Special Industries).

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0160]

Agency Information Collection Activity: State Home Programs for Veterans

AGENCY: Veterans Health Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: Veterans Health Administration (VHA), Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of a currently approved collection, and allow 60 days for public comment in response to the notice.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before August 21, 2023.

ADDRESSES: Submit written comments on the collection of information through Federal Docket Management System (FDMS) at *www.Regulations.gov* or to Grant Bennett, Office of Regulations, Appeals, and Policy (10BRAP), Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420 or email to *Grant.Bennett@va.gov*. Please refer to ''OMB Control No. 2900–0160'' in any correspondence. During the comment period, comments may be viewed online through FDMS.

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 810 Vermont Ave. NW, Washington, DC 20006, (202) 266–4688 or email *maribel.aponte@va.gov*. Please refer to ''OMB Control No. 2900–0160'' in any correspondence.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995, Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VHA invites comments on: (1) whether the proposed collection of information is necessary for the proper performance of VHA's functions, including whether the information will have practical utility; (2) the accuracy of VHA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Authority: Public Law 104–13; 44 U.S.C. 3501–3521.

Title: State Home Programs for Veterans (VA Forms 10–5588, 10–5588A, and 10–10SH).

OMB Control Number: 2900–0160.

Type of Review: Revision of a currently approved collection.

Abstract: Authority for this information collection can be found in two public laws affecting State homes: Public Law 115–159, the State Veterans Home Adult Day Health Care Improvement Act of 2017, which requires VA to pay State Veteran Homes (SVHs) for medical model adult day health care provided to certain eligible Veterans; and Public Law 116–315, Section 3007, Waiver of Requirements of Department of Veterans Affairs for Receipt of Per Diem Payments for Domiciliary Care at State Homes and Modification of Eligibility for such Payments. This information collection also enables the payment of per diem to State homes that provide care to eligible Veterans in accordance with Title 38 CFR part 51. The intended effect of these provisions is to create a safeguard that Veterans are receiving a high quality of care in SVHs.

To ensure that high quality care is furnished to Veterans, VA requires those facilities providing nursing home care, domiciliary care, and adult day health care programs to Veterans to supply various kinds of information. The information required includes an application and justification for payment; records and reports that facility management must maintain regarding payment activities of residents or participants; and records and reports that facilities management and health care professionals must maintain regarding eligible residents or participants. The following three forms are included in this information collection:

a. VA Form 10–5588: State Home Report and Statement of Federal Aid Claimed—38 CFR 51, 52 and title 38, U.S.C., sections 1741, 1742, 1743 and 1745—is used to assess and provide per diem to State homes. This collection instrument is used by the State home employees and VA Staff.

b. VA Form 10–5588A: Claim for Increased Per Diem Payment for Veterans Awarded Retroactive Service Connection—38 CFR 51, 52 and title 38, U.S.C. 1741, 1742, 1743 and 1745—is used to assess and provide per diem to State homes retroactively. This collection instrument is used by the State home employees and VA Staff.

c. VA Form 10–10SH: State Home Program Application for Veterans Care Medical Certification—38 CFR 51, 52 and title 38, U.S.C. 1741, 1742, 1743 and 1745—provides for the collection of information to apply for the benefits of this program.

The State Home Per Diem (SHPD) Program recently automated the 10–10SH form. The form was converted into a web-based, fillable form that can be electronically submitted from the SVH to the appropriate VAMC. It includes data field validation, assuring that all required fields have been filled before the user can electronically submit the 10–10SH form. The VA portion of the application also includes business rules to assist the VA representatives in making uniform determinations, allow the VA representative to return incomplete applications to the SVH along with a notification to them, and record receipt of the completed application.

Total Annual Burden: 4,816 hours.

Total Annual Responses: 13,614.

VA Form 10–5588

Affected Public: State, Local, and Tribal Governments.

Estimated Annual Burden: 834 hours.

Estimated Average Burden Per Respondent: 30 minutes.

Frequency of Response: Monthly.

Estimated Number of Respondents: 139.

VA Form 10–5588A

Affected Public: State, Local, and Tribal Governments.

Estimated Annual Burden: 180 hours.

Estimated Average Burden Per Respondent: 20 minutes.

Frequency of Response: Monthly.

Estimated Number of Respondents: 45.

VA Form 10–10SH

Affected Public: State, Local, and Tribal Governments.

Estimated Annual Burden: 3,802 hours.

Estimated Average Burden Per Respondent: 20 minutes.

Frequency of Response: Once annually.

Estimated Number of Respondents: 11,406.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration/Data Governance Analytics, Department of Veterans Affairs.

BILLING CODE 8320–01–P

FEDERAL REGISTER

Vol. 88 Wednesday,
No. 118 June 21, 2023

Part II

Department of Energy

10 CFR Parts 429, 430, and 431
Energy Conservation Program: Test Procedure for Consumer Water Heaters and Residential-Duty Commercial Water Heaters; Final Rule

DEPARTMENT OF ENERGY

10 CFR Parts 429, 430, and 431

[EERE–2019–BT–TP–0032]

RIN 1904–AE77

Energy Conservation Program: Test Procedure for Consumer Water Heaters and Residential-Duty Commercial Water Heaters

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final rule.

SUMMARY: This final rule incorporates by reference the latest version of the industry testing standard for consumer water heaters and residential-duty commercial water heaters and adopts relevant portions of those standards into the Federal test procedure. In this final rule, the U.S. Department of Energy (DOE) is also expanding the scope of coverage of the test procedure to apply to certain consumer water heater designs (including circulating water heaters and low-temperature water heaters), adding definitions for certain specialty water heaters, updating test conditions and tolerance requirements to reduce burden, clarifying test set-up and installation methods, addressing the test conduct for products which can store water at temperatures above the delivery setpoint, establishing an effective volume calculation, and extending untested provisions to electric instantaneous water heaters.

DATES: The effective date of this rule is July 21, 2023. The final rule changes will be mandatory for consumer water heater testing starting December 18, 2023 and for residential-duty commercial water heater testing starting June 17, 2024. The incorporation by reference of certain material listed in this rule is approved by the Director of the Federal Register on July 21, 2023.

ADDRESSES: The docket, which includes **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at *www.regulations.gov.* All documents in the docket are listed in the *www.regulations.gov* index. However, not all documents listed in the index may be publicly available, such as those containing information that is exempt from public disclosure.

A link to the docket web page can be found at: *www.regulations.gov/docket/EERE-2019-BT-TP-0032.* The docket web page contains instructions on how to access all documents, including public comments, in the docket.

For further information on how to review the docket, contact the Appliance and Equipment Standards Program staff at (202) 287–1445 or by email: *ApplianceStandardsQuestions@ee.doe.gov.*

FOR FURTHER INFORMATION CONTACT:

Ms. Julia Hegarty, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 597–6737. Email: *ApplianceStandardsQuestions@ee.doe.gov.*

Mr. Eric Stas, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–5827. Email: *Eric.Stas@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: DOE incorporates by reference the following industry standards into part 430:

ANSI/ASHRAE Standard 41.1–2020, ''Standard Methods for Temperature Measurement,'' ANSI-approved June 30, 2020 (''ASHRAE 41.1–2020'').

ANSI/ASHRAE Standard 41.6–2014, ''Standard Method for Humidity Measurement,'' ANSI-approved July 3, 2014 (''ASHRAE 41.6–2014'').

ANSI/ASHRAE Standard 118.2–2022, ''Method of Testing for Rating Residential Water Heaters and Residential-Duty Commercial Water Heaters,'' ANSI-approved March 1, 2022 (''ASHRAE 118.2–2022'').

Copies of ASHRAE 41.1–2020, ASHRAE 41.6–2014, and ASHRAE 118.2–2022 can be obtained from the American Society of Heating, Refrigerating, and Air-Conditioning Engineers, Inc., (ASHRAE), 180 Technology Parkway NW, Peachtree Corners, GA 30092, (800) 527–4723 or (404) 636–8400, or online at: *www.ashrae.org.*

ASTM D2156–09 (Reapproved 2018) ''Standard Test Method for Smoke Density in Flue Gases from Burning Distillate Fuels,'' approved October 1, 2018 (''ASTM D2156–09 (RA 2018)'').

ASTM E97–82 (Reapproved 1987) ''Standard Test Methods for Directional Reflectance Factor, 45-Deg 0-Deg, of Opaque Specimens by Broad-Band Filter Reflectometry,'' approved October 29, 1982 and withdrawn 1991 (''ASTM E97–1987 (W1991)'').

Copies of ASTM D2156–09 (RA 2018) can be obtained from ASTM International (ASTM), 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA 19428–2959 or online at: *www.astm.org.*

Copies of ASTM E97–1987 (W1991) are reasonably available from standards resellers including GlobalSpec's Engineering 360 (*https://standards.globalspec.com/std/3801495/astm-e97-82-1987*) and IHS Markit (*https://.global.ihs.com/doc_detail.cfm?document_name=ASTM%20E97&item_s_key=00020483*).

See section IV.N of this document for a further discussion of these industry standards.

Table of Contents

I. Authority and Background

Consumer water heaters are included in the list of ''covered products'' for which DOE is authorized to establish and amend energy conservation standards and test procedures. (42 U.S.C. 6292(a)(4)) DOE's energy conservation standards and test procedures for consumer water heaters are currently prescribed respectively at title 10 of the Code of Federal Regulations (CFR), part 430, section 32(d), and 10 CFR part 430, subpart B, appendix E ((appendix E), *Uniform Test Method for Measuring the Energy Consumption of Water Heaters.* Residential-duty commercial water heaters, for which DOE is also authorized to establish and amend energy conservation standards and test procedures (42 U.S.C. 6311(1)(K)), must also be tested according to appendix E. 10 CFR 431.106(b)(1) (*See* 42 U.S.C. 6295(e)(5)(H)). DOE's energy conservation standards for residential-duty commercial water heaters are currently prescribed at 10 CFR 431.110(b)(1). The following sections discuss DOE's authority to establish and amend test procedures for consumer water heaters and residential-duty commercial water heaters, as well as relevant background information regarding DOE's consideration of test procedures for these products and equipment.

A. Authority

The Energy Policy and Conservation Act, as amended (EPCA),[1] authorizes DOE to regulate the energy efficiency of a number of consumer products and certain industrial equipment. (42 U.S.C. 6291–6317, as codified) Title III, Part B [2] of EPCA established the Energy Conservation Program for Consumer Products Other Than Automobiles, which sets forth a variety of provisions designed to improve energy efficiency. (42 U.S.C. 6291–6309, as codified) These products include consumer water heaters, one of the subjects of this document. (42 U.S.C. 6292(a)(4)) Title III, Part C [3] of EPCA, added by Public Law 95–619, Title IV, section 441(a), established the Energy Conservation Program for Certain Industrial Equipment, which again sets forth a variety of provisions designed to improve energy efficiency. (42 U.S.C. 6311–6317, as codified) This equipment includes residential-duty commercial water heaters, which are also the subject of this document. (42 U.S.C. 6311(1)(K))

The energy conservation program under EPCA consists essentially of four parts: (1) testing, (2) labeling, (3) Federal energy conservation standards, and (4) certification and enforcement procedures. Relevant provisions of EPCA specifically include definitions (42 U.S.C. 6291; 42 U.S.C. 6311), test procedures (42 U.S.C. 6293; 42 U.S.C. 6314), labeling provisions (42 U.S.C. 6294; 42 U.S.C. 6315), energy conservation standards (42 U.S.C. 6295; 42 U.S.C. 6313), and the authority to require information and reports from manufacturers (42 U.S.C. 6296; 42 U.S.C. 6316).

The Federal testing requirements consist of test procedures that manufacturers of covered products and commercial equipment must use as the basis for: (1) certifying to DOE that their products/equipment comply with the applicable energy conservation standards adopted pursuant to EPCA (42 U.S.C. 6295(s); 42 U.S.C. 6296; 42 U.S.C. 6316(a)-(b)), and (2) making other representations about the efficiency of those products/equipment (42 U.S.C. 6293(c); 42 U.S.C. 6314(d)). Similarly, DOE must use these test procedures to determine whether the products comply with any relevant standards promulgated under EPCA. (42 U.S.C. 6295(s))

Federal energy efficiency requirements for covered products and equipment established under EPCA generally supersede State laws and regulations concerning energy conservation testing, labeling, and standards. (42 U.S.C. 6297(a)-(c); 42 U.S.C. 6316(a)-(b)) DOE may, however, grant waivers of Federal preemption in limited circumstances for particular State laws or regulations, in accordance with the procedures and other provisions of EPCA. (42 U.S.C. 6297(d); 42 U.S.C. 6316(a); 42 U.S.C. 6316(b)(2)(D))

Under 42 U.S.C. 6293, EPCA sets forth the criteria and procedures DOE must follow when prescribing or amending test procedures for covered products. Specifically, EPCA requires that any test procedures prescribed or amended shall be reasonably designed to produce test results which measure energy efficiency, energy use, or estimated annual operating cost of a covered product during a representative average use cycle or period of use and not be unduly burdensome to conduct. (42 U.S.C. 6293(b)(3)) Under 42 U.S.C. 6314, the statute sets forth the criteria and procedures DOE must follow when prescribing or amending test procedures for covered equipment, reciting similar requirements at 42 U.S.C. 6314(a)(2).

In addition, the Energy Independence and Security Act of 2007 amended EPCA to require that DOE amend its test procedures for all covered consumer products to integrate measures of standby mode and off mode energy consumption. (42 U.S.C. 6295(gg)(2)(A)) Standby mode and off mode energy consumption must be incorporated into the overall energy efficiency, energy consumption, or other energy descriptor for each covered product, unless the current test procedure already accounts for and incorporates the standby mode and off mode energy consumption, or if such integration is technically infeasible. (42 U.S.C. 6295(gg)(2)(A)(i)–(ii)) If an integrated test procedure is technically infeasible, DOE must prescribe separate standby mode and off mode energy use test procedures for the covered product, if a separate test is technically feasible. (42 U.S.C. 6295(gg)(2)(A)(ii))) Any such amendment must consider the most current versions of the International Electrotechnical Commission (IEC) Standard 62301 [4] and IEC Standard 62087,[5] as applicable. (42 U.S.C. 6295(gg)(2)(A))

The American Energy Manufacturing Technical Corrections Act (AEMTCA), Public Law 112–210, further amended

[1] All references to EPCA in this document refer to the statute as amended through the Energy Act of 2020, Public Law 116–260 (Dec. 27, 2020), which reflect the last statutory amendments that impact Parts A and A–1 of EPCA.

[2] For editorial reasons, upon codification in the U.S. Code, Part B was redesignated Part A.

[3] For editorial reasons, upon codification in the U.S. Code, Part C was redesignated Part A–1.

[4] IEC 62301, *Household electrical appliances—Measurement of standby power* (Edition 2.0, 2011–01).

[5] IEC 62087, *Audio, video and related equipment—Methods of measurement for power consumption* (Edition 1.0, Parts 1–6: 2015, Part 7: 2018).

EPCA to require that DOE establish a uniform efficiency descriptor and accompanying test methods to replace the energy factor (EF) metric for covered consumer water heaters and the thermal efficiency (TE) and standby loss (SL) metrics for commercial water-heating equipment [6] within one year of the enactment of AEMTCA. (42 U.S.C. 6295(e)(5)(B)–(C)) The uniform efficiency descriptor and accompanying test method were required to apply, to the maximum extent practicable, to all water-heating technologies in use at the time and to future water-heating technologies, but could exclude specific categories of covered water heaters that do not have residential uses, can be clearly described, and are effectively rated using the TE and SL descriptors. (42 U.S.C. 6295(e)(5)(F) and (H)) In addition, beginning one year after the date of publication of DOE's final rule establishing the uniform descriptor, the efficiency standards for covered water heaters were required to be denominated according to the uniform efficiency descriptor established in the final rule (42 U.S.C. 6295(e)(5)(D)); and for affected covered water heaters tested prior to the effective date of the test procedure final rule, DOE was required to develop a mathematical factor for converting the measurement of their energy efficiency from the EF, TE, and SL metrics to the new uniform energy descriptor. (42 U.S.C. 6295(e)(5)(E)(i)–(ii))

EPCA also requires that, at least once every seven years, DOE evaluate test procedures for each type of covered product and covered equipment, including consumer water heaters and residential-duty commercial water heaters, to determine whether amended test procedures would more accurately or fully comply with the requirements for the test procedures to not be unduly burdensome to conduct and be reasonably designed to produce test results that reflect energy efficiency, energy use, and estimated operating costs during a representative average use cycle (or additionally, period of use for consumer products). (42 U.S.C. 6293(b)(1)(A); 42 U.S.C. 6314(a)(1)(A))

If the Secretary determines, on her own behalf or in response to a petition by any interested person, that a test procedure should be prescribed or amended, the Secretary shall promptly publish in the **Federal Register** proposed test procedures and afford interested persons an opportunity to present oral and written data, views, and arguments with respect to such procedures. (42 U.S.C. 6293(b)(2); 42 US.C. 6314(b)) The comment period on a proposed rule to amend a test procedure shall be at least 60 days [7] and may not exceed 270 days. (42 U.S.C. 6293(b)(2)) In prescribing or amending a test procedure, the Secretary shall take into account such information as the Secretary determines relevant to such procedure, including technological developments relating to energy use or energy efficiency of the type (or class) of covered products involved. (42 U.S.C. 6293(b)(2)) If DOE determines that test procedure revisions are not appropriate, DOE must publish in the **Federal Register** its determination not to amend the test procedures. (42 U.S.C. 6293(b)(1)(A)(ii); 42 U.S.C. 6314(a)(1)(A)(ii)) DOE is publishing this final rule in satisfaction of the 7-year review requirement specified in EPCA. (42 U.S.C. 6293(b)(1)(A) and 42 U.S.C. 6314(a)(1)(A))

B. Background

The following discussion provides a brief history of the current rulemaking, which considers potential amendments to the test procedure for consumer water heaters and residential-duty commercial water heaters.[8] On April 16, 2020, DOE published in the **Federal Register** a request for information (April 2020 RFI) seeking comments on the existing DOE test procedure for consumer water heaters and residential-duty commercial water heaters. 85 FR 21104. The April 2020 RFI discussed a draft version of the American National Standards Institute (ANSI)/American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE) Standard 118.2, ''Method of Testing for Rating Residential Water Heaters and Residential-Duty Commercial Water Heaters,'' published in March 2019 (March 2019 ASHRAE Draft 118.2), which is very similar to the existing DOE test procedure for consumer water heaters and residential-duty commercial water heaters. 85 FR 21104, 21108–21110 (April 16, 2020).

In the April 2020 RFI, DOE requested comments, information, and data about a number of issues, including: (1) differences between the March 2019 ASHRAE Draft 118.2 and the existing DOE test procedure; (2) test tolerances for supply water temperature, ambient temperature, relative humidity, voltage, and gas pressure; (3) the location of the instrumentation that measures water volume or mass; and (4) how to test certain types of consumer water heaters that cannot be easily tested to the existing DOE test procedure (*i.e.,* recirculating gas-fired instantaneous water heaters, water heaters that cannot deliver water at 125 degrees Fahrenheit (°F) ±5 °F, and water heaters with storage volumes greater than 2 gallons that cannot have their internal tank temperatures measured). *Id.* at 85 FR 21109–21114.

DOE subsequently published in the **Federal Register** a notice of proposed rulemaking on January 11, 2022 (January 2022 NOPR) in which the Department proposed to update appendix E, and related sections of the CFR, as follows:

(1) Incorporate by reference current versions of industry standards referenced by the current and proposed DOE test procedures: ASHRAE Standard 41.1,[9] ASHRAE Standard 41.6,[10] the pending update to ASHRAE Standard 118.2 [11] (contingent on it being substantively the same as the draft which was under review), ASTM International (ASTM) Standard D2156,[12] and ASTM Standard E97.[13]

[6] The initial thermal efficiency and standby loss test procedures for commercial water heating equipment (including residential-duty commercial water heaters) were added to EPCA by the Energy Policy Act of 1992 (EPACT 1992), Public Law 102–486, and corresponded to those referenced in the ASHRAE and Illuminating Engineering Society of North America (IESNA) Standard 90.1–1989 (*i.e.,* ASHRAE Standard 90.1–1989). (42 U.S.C. 6314(a)(4)(A)) DOE subsequently updated the commercial water heating equipment test procedures on two separate occasions—once in a direct final rule published on October 21, 2004, and again in a final rule published on May 16, 2012. These rules incorporated by reference certain sections of the latest versions of American National Standards Institute (ANSI) Standard Z21.10.3, *Gas Water Heaters, Volume III, Storage Water Heaters with Input Ratings Above 75,000 Btu Per Hour, Circulating and Instantaneous,* available at the time (*i.e.,* ANSI Z21.10.3–1998 and ANSI Z21.10.3–2011, respectively). 69 FR 61974, 61983 (Oct. 21, 2004) and 77 FR 28928, 28996 (May 16, 2012).

[7] For covered equipment, if the Secretary determines that a test procedure amendment is warranted, the Secretary must publish proposed test procedures in the **Federal Register** and afford interested persons an opportunity (of not less than 45 days' duration) to present oral and written data, views, and arguments on the proposed test procedure. (42 U.S.C. 6314(b))

[8] For a more complete history of earlier rulemaking efforts to develop the energy conservation standards and test procedure for consumer water heaters and residential-duty commercial water heaters, please consult the January 11, 2022 NOPR. *See* 87 FR 1554, 1556–1558.

[9] ASHRAE Standard 41.1–2020, ''Standard Methods for Temperature Measurement,'' approved June 30, 2020.

[10] ASHRAE Standard 41.6–2014, ''Standard Method for Humidity Measurement,'' ANSI approved July 3, 2014.

[11] ASHRAE Standard 118.2–2022, ''Method of Testing for Rating Residential Water Heaters and Residential-Duty Commercial Water Heaters,'' ANSI approved March 1, 2022.

[12] ASTM Standard D2156–09 (RA 2018), ''Standard Test Method for Smoke Density in Flue Gases from Burning Distillate Fuels,'' reapproved October 1, 2018.

[13] ASTM Standard E97–1987 (W 1991), ''Standard Test Methods for Directional Reflectance Factor, 45-

(2) Add definitions for ''circulating water heater,'' ''low temperature water heater,'' and ''tabletop water heater.''

(3) Specify how a mixing valve should be installed when the water heater is designed to operate with one.

(4) Modify flow rate requirements during the first-hour rating (FHR) test for water heaters with a rated storage volume less than 20 gallons.

(5) Modify timing of the first measurement in each draw of the 24-hour simulated-use test.

(6) Clarify the determination of the first recovery period.

(7) Clarify the mass of water to be used to calculate recovery efficiency.

(8) Modify the terminology throughout appendix E to explicitly state ''non-flow activated'' and ''flow-activated'' water heater, where appropriate.

(9) Clarify the descriptions of defined measured values for the standby period measurements.

(10) Modify the test condition specifications and tolerances, including electric supply voltage tolerance, ambient temperature, ambient dry-bulb temperature, ambient relative humidity, standard temperature and pressure definition, gas supply pressure, and manifold pressure.

(11) Add provisions to address gas-fired water heaters with measured fuel input rates that deviate from the certified input rate.

(12) Clarify provisions for calculating the volume or mass delivered.

(13) Add specifications for testing for the newly defined ''low temperature water heaters.''

(14) Clarify testing requirements for the heat pump part of a split-system heat pump water heater.

(15) Define the use of a separate unfired hot water storage tank for testing water heaters designed to operate with a separately sold hot water storage tank.

(16) Clarify that any connection to an external network or control be disconnected during testing.

(17) Add procedures for estimating internal stored water temperature for water heater designs in which the internal tank temperature cannot be directly measured.

(18) Modify the provisions for untested water heater basic models within 10 CFR 429.70(g) to include electric instantaneous water heaters.

87 FR 1554, 1558.[14]

DOE held a public meeting related to the January 2022 NOPR on January 27, 2022 (hereinafter, the NOPR public meeting).

On July 14, 2022, DOE published a supplemental notice of proposed rulemaking in the **Federal Register** (July 2022 SNOPR), that proposed to maintain the proposals from the January 2022 NOPR but with modifications discussed in the July 2022 SNOPR. 87 FR 42270. Specifically, the July 2022 SNOPR proposed to further update appendix E and related sections of the CFR by:

(1) Additionally requiring that, for water heaters with rated storage volume less than 2 gallons and a rated maximum gallons per minute (Max GPM or maximum GPM) of less than 1 gallon per minute, the flow rate tolerance shall be ±25 percent of the rated Max GPM.

(2) Allowing optional efficiency representations at alternative test conditions for heat pump water heaters.

(3) Adding a definition for ''split-system heat pump water heaters'' to distinguish these from circulating heat pump water heaters (*i.e.,* ''heat pump-only'' water heaters).

(4) Requiring gas-fired circulating water heaters to be tested using an unfired hot water storage tank (UFHWST) with a storage volume between 80 and 120 gallons and meets but does not exceed the minimum energy conservation standards (based on R-value) required at 10 CFR 431.110(a), and that circulating heat pump water heaters be tested using a 40-gallon electric resistance water heater at the minimum UEF standard required at 10 CFR 430.32(d).

(5) Requiring that water heaters (with the exception of demand-response water heaters) with user-selectable modes to ''overheat'' the water stored in the tank to increase effective capacity be tested at the highest internal tank temperature that can be achieved while maintaining the outlet water temperature at 125 °F ±5 °F. (If no such overheated mode exists, the unit is to be tested in a default mode.)

(6) Defining ''demand-response water heater'' based on the U.S. Environmental Protection Agency (EPA) ENERGY STAR Product Specification for Residential Water Heaters Version 5.0 (ENERGY STAR Water Heaters Specification v5.0) [15] definition for ''connected water heating product,'' with the additional requirement that demand-response water heaters cannot overheat as a result of user-initiated operation.

(7) Establishing a metric and method for determining the effective storage volume.

(8) Adopting a method of determining the internal storage tank temperature for certain water heaters which cannot be directly measured using draws at the beginning and end of the 24-hour simulated-use test. 87 FR 42270, 42273–42274 (July 14, 2022).

This final rule responds to comments received in response to the January 2022 NOPR that were not addressed in the July 2022 SNOPR and comments received in response to the July 2022 SNOPR. Table I.1 presents the list of commenters who provided written submissions and/or oral statements at the NOPR public meeting which are addressed in this final rule.

* **Note:** The January 27, 2022 TP NOPR Pubic Meeting Transcript can be found in the docket for this rulemaking at *www.regulations.gov* under entry number EERE–2019–BT–TP–0032–0027. Comments arising from the public meeting will be cited as follows: (Commenter name, Jan. 27, 2022 Public Meeting Transcript, No. 27 at p. X).

A parenthetical reference at the end of a comment quotation or paraphrase provides the location of the item in the public record.[16] To the extent that interested parties have provided written comments that are substantively similar to any oral comments provided during the NOPR public meeting, DOE cites the written comments throughout this final rule. Any oral comments provided during the webinar that are substantively distinct from a submitter's written comments are summarized and cited separately throughout this final rule.

APGA commented that DOE should adopt changes to its rulemaking process as outlined in a report by National Academies of Sciences, Engineering, and Medicine (NASEM) for both test procedures and standards. (APGA, No. 38 at p. 2) In response, the Department notes that the rulemaking process for test procedures of covered products and equipment are outlined at appendix A to subpart C of 10 CFR part 430, and DOE periodically examines and revises these provisions in separate rulemaking proceedings.

Section II of this document provides a synopsis of this final rule, and section III of this document discusses each amendment to the test procedure for consumer water heaters and residential-duty commercial water heaters in detail.

II. Synopsis of the Final Rule

In this final rule, DOE amends appendix E and related sections of the CFR. In summary, the final rule:

1. Incorporates by reference current versions of industry standards: ASHRAE 41.1, ASHRAE 41.6, ASHRAE 118.2, ASTM D2156, and ASTM E97.

2. Adds definitions for ''circulating water heater, ''tabletop water heater, and ''low-temperature water heater.

3. Harmonizes various aspects of the DOE test procedure with industry test procedures ASHRAE 118.2–2022 and NEEA Advanced Water Heating Specification v8.0.

4. Modifies the test condition specifications and tolerances, including electric supply voltage tolerance, ambient conditions (ambient dry-bulb temperature and ambient relative humidity), standard temperature and pressure definition, gas supply pressure, manifold pressure, inlet water temperature, and flow rate tolerances, and adds optional test conditions for heat pump water heaters.

5. Specifies and clarifies methods for mixing valve installation for affected water heaters, orifice modification, and calculation of volume or mass delivered.

6. Defines the use of a separate unfired hot water storage tank or separate electric storage water heater for testing water heaters designed to operate with a separately sold tank.

7. Adds procedures for estimating internal stored water temperature for water heater designs in which the internal tank temperature cannot be directly measured.

8. Clarifies test procedures for water heaters with network connection capabilities.

9. Clarifies test procedures for flow-activated water heaters and water heaters that are not flow-activated by aligning terminology.

10. Includes additional testing provisions for electric resistance water heaters undergoing optional high temperature testing.

11. Includes a calculation for determining the effective storage volume of a water heater.

The adopted amendments are summarized in Table II.1 compared to the test procedure provision prior to the amendment, as well as the reason for the adopted change.

TABLE II.1—SUMMARY OF CHANGES IN THE AMENDED TEST PROCEDURE

DOE test procedure prior to amendment	Amended test procedure	Attribution
References the 1986 (Reaffirmed 2006) version of ASHRAE 41.1 for methods for temperature measurement.	References the updated 2020 version of ASHRAE 41.1	Industry TP Update to ASHRAE 41.1.
The 1982 version of ASHRAE 41.6 for methods for humidity measurement is referenced within the 1986 version of ASHRAE 41.1.	References the 2014 version of ASHRAE 41.6, which is referenced by ASHRAE 41.1–2020.	Industry TP Update to ASHRAE 41.6.

[16] The parenthetical reference provides a reference for information located in the docket of DOE's rulemaking to develop test procedures for consumer water heaters and residential-duty commercial water heaters. (Docket No. EERE–2019–BT–TP–0032, which is maintained at *www.regulations.gov*). The references are arranged as follows: (commenter name, comment docket ID number, page of that document).

TABLE II.1—SUMMARY OF CHANGES IN THE AMENDED TEST PROCEDURE—Continued

DOE test procedure prior to amendment	Amended test procedure	Attribution
References the 2009 version of ASTM D2156 for testing smoke density in flue gases from burning distillate fuels.	References the version of ASTM D2156 that was reaffirmed in 2018.	Industry TP Update to ASTM D2156.
The 1987 version of ASTM E97 for testing directional reflectance factor, 45-deg 0-deg, of opaque specimens by broad-band filter reflectometry is referenced within ASTM D2156–09.	References the 1987 version of ASTM E97, which is referenced by ASTM D2156–09 (RA 2018).	Industry TP Update to ASTM E97.
Does not define a ''circulating water heater'' as used in 10 CFR 430.2.	Adds a definition for ''circulating water heater'' to 10 CFR 430.2.	Allow for testing certain consumer water heaters.
Does not define a ''tabletop water heater'' as used as a product class distinction at 10 CFR 430.32(d).	Adds a definition for ''tabletop water heater'' to 10 CFR 430.2.	Reinstate definition inadvertently removed by previous final rule.
Interprets the upper limit for consumer electric heat pump water heaters to be 12 kW of input, with ''commercial heat pump water heater'' defined at 10 CFR 431.102 as having rated electric power input greater than 12 kW.	Corrects the upper limit for consumer electric heat pump water heaters to 24 amperes at 250 volts of input and amends the definition for ''commercial heat pump water heater'' accordingly.	Make consistent with statutory definition.
Does not address how to configure a water heater for test when a mixing valve is required for proper operation.	Specifies how a mixing valve should be installed when the water heater is designed to operate with one.	Method added by DOE to improve repeatability.
Requires the flow rate during the FHR test to be 1.0 ± 0.25 gpm (3.8 ± 0.95 L/min) for water heaters with a rated storage volume less than 20 gallons.	Requires the flow rate during the FHR test to be 1.5 ± 0.25 gpm (5.7 ± 0.95 L/min) for water heaters with a rated storage volume less than 20 gallons.	Harmonization with industry TP ASHRAE 118.2–2022.
Does not address the situation in which the first recovery ends during a draw when testing to the 24-hour simulated-use test.	Clarifies that the first recovery period will extend to the end of the draw in which the first recovery ended, and that if a second recovery initiates prior to the end of the draw, that the second recovery is part of the first recovery period as well.	Harmonization with industry TP ASHRAE 118.2–2022.
The recovery efficiency equation for storage-type water heaters refers to the mass of water removed from the start of the test to the end of the first recovery period.	Clarifies that, for the calculation of recovery efficiency, the mass of water removed during the first recovery period includes water removed during all draws from the start of the test until the end of the first recovery period.	Harmonization with industry TP ASHRAE 118.2–2022.
The procedures for the standby period after the last draw of the 24-hour simulated-use test allow for a recovery to occur at the end of the 8-hour standby period, which indicates that the power to the main burner, heating element, or compressor is not disabled.	Clarifies the alternate approach to determine the energy consumed during the 24-hour simulated use test if a standby period occurs after the final draw of the test.	Harmonization with industry TP ASHRAE 118.2–2022.
Appendix E uses the phrases ''storage-type'' and ''instantaneous-type'' to refer to ''non-flow activated'' and ''flow-activated'' water heaters, respectively.	Uses the terms ''non-flow activated'' and ''flow-activated'' water heater, where appropriate.	Clarification.
The descriptions for $Q_{su,0}$, $Q_{su,f}$, $\overline{T}_{su,0}$, $\overline{T}_{su,f}$, $\tau_{stby,1}$, $\overline{T}_{t,stby,1}$, and $\overline{T}_{a,stby,1}$ only address when the standby period occurs between draw clusters 1 and 2.	The descriptions for $Q_{su,0}$, $Q_{su,f}$, $\overline{T}_{su,0}$, $\overline{T}_{su,f}$, $\tau_{stby,1}$, $\overline{T}_{t,stby,1}$, and $\overline{T}_{a,stby,1}$ are generalized to refer to the section where the standby period is determined.	Clarification.
Specifies that the first required measurement for each draw of the 24-hour simulated-use test is 5 seconds after the draw is initiated.	Specifies that the first required measurement for each draw of the 24-hour simulated-use test is 15 seconds after the draw is initiated.	Method updated by DOE to reduce burden.
Requires the electric supply voltage to be within ±1 percent of the rated voltage for the entire test.	Requires the electric supply voltage to be within ±2 percent of the rated voltage beginning 5 seconds after the start of a recovery and ending 5 seconds before the end of a recovery.	Method updated by DOE to reduce burden.
Requires maintaining ambient temperature for non-heat pump water heaters within a range of 67.5 °F ± 2.5 °F.	Requires maintaining the ambient temperature for non-heat pump water heaters within a range of 67.5 °F ± 5 °F, and with an average of 67.5 °F ± 2.5 °F.	Method updated by DOE to reduce burden.
Requires maintaining the dry-bulb temperature for heat pump water heaters within a range of 67.5 °F ± 1 °F.	Requires maintaining the dry-bulb temperature for heat pump water heaters within a range of 67.5 °F ± 5 °F, and with an average of 67.5 °F ± 1 °F during recoveries and an average of 67.5 °F ± 2.5 °F when not recovering.	Method updated by DOE to reduce burden.
Requires maintaining the relative humidity for heat pump water heaters within a range of 50 percent ±2 percent.	Requires maintaining the relative humidity for heat pump water heaters within a range of 50 percent ±5 percent, and at an average of 50 percent ±2 percent during recoveries.	Method updated by DOE to reduce burden
Requires that the heating value be corrected to a standard temperature and pressure, but does not state what temperature and pressure is standard or how to correct the heating value to the standard temperature and pressure.	States that the standard temperature is 60 °F (15.6 °C) and the standard pressure is 30 inches of mercury column (101.6 kPa). Provides a method for converting heating value from the measured to the standard conditions via incorporation by reference of ASHRAE 118.2–2022.	Harmonization with industry TP ASHRAE 118.2–2022.
Requires that the manifold pressure be within ±10 percent of the manufacturer recommended value.	Clarifies that the manifold pressure tolerance applies only to water heaters with a pressure regulator that can be adjusted. Requires that the manifold pressure be within the greater of ±10 percent of the manufacturer recommended value or ±0.2 inches water column.	Method updated by DOE to reduce burden.
Does not specify the input rate at which the gas supply pressure tolerance is determined.	Specifies that the gas supply pressure tolerance is to be maintained when operating at the maximum input rate.	Method added by DOE to clarify enforcement test procedure.
Does not contain procedures for modifying the orifice of a water heater that is not operating at the manufacturer specified input rate.	Adds provisions regarding the modification of the orifice	Method added by DOE to clarify enforcement test procedure.
Does not specify how to calculate the mass removed from the water heater when mass is calculated indirectly using density and volume measurements.	Specifies how to calculate the mass of water indirectly using density and volume measurements.	Method added by DOE to improve repeatability.
Does not accommodate testing of ''low-temperature water heaters'' in appendix E.	Adds a definition of ''low-temperature water heater'' in 10 CFR 430.2 and requires low temperature water heaters to be tested to their maximum possible delivery temperature in appendix E.	Allow for testing certain consumer water heaters.

TABLE II.1—SUMMARY OF CHANGES IN THE AMENDED TEST PROCEDURE—Continued

DOE test procedure prior to amendment	Amended test procedure	Attribution
Does not explicitly define the test conditions required for each part of a split-system heat pump water heater.	Explicitly states that the heat pump part of a split-system heat pump water heater is tested at the dry-bulb temperature and relative humidity conditions required for heat pump water heaters, and that the storage tank is tested at the ambient temperature and relative humidity conditions required for non-heat pump water heaters.	Method added by DOE to improve representativeness and repeatability.
Does not accommodate testing of water heaters that require a separately-sold hot water storage tank to properly operate.	Requires that gas-fired circulating water heaters be tested using a UFHWST with a storage volume between 80 and 120 gallons and that meets but does not exceed the minimum energy conservation standards required according to 10 CFR 431.110(a), and that heat pump circulating water heaters be tested using a 40-gallon electric storage water heater at the minimum UEF standard required at 10 CFR 430.32(d).	Allow for testing certain consumer water heaters.
Does not address water heaters with network connection capabilities.	Explicitly states that any connection to an external network or control be disconnected during testing.	Clarification.
Does not accommodate certain water heaters for which the mean tank temperature cannot be directly measured.	Establishes a method of determining the internal storage tank temperature using draws at the beginning and end of the 24-hour simulated use test.	Allow for testing certain consumer water heaters.
10 CFR 429.70(g) does not allow untested electric instantaneous water heaters to be certified, but does allow untested electric storage water heaters to be certified.	Extends the untested provisions within 10 CFR 429.70(g) to include electric instantaneous water heaters.	AEDM allowed by DOE to reduce burden.
Does not specify flow rate tolerance for water heaters with rated storage volume less than 2 gallons.	Specifies that flow rates for all water heaters with rated storage volume less than 2 gallons must be maintained within a tolerance of ±0.25 gallons per minute. Additionally proposes that for water heaters with rated storage volume less than 2 gallons and a rated Max GPM of less than 1 gallon per minute, the flow rate tolerance shall be ±25 percent of the rated Max GPM.	Method added by DOE to improve repeatability and reproducibility.
Does not include optional efficiency representations at alternative test conditions for heat pump water heaters.	Allows for optional efficiency representations at alternative test conditions for heat pump water heaters.	Harmonization with industry TP NEEA Advanced Water Heating Specification v8.0.
Does not include a definition for ''split-system heat pump water heater.''.	Adds a definition for ''split-system heat pump water heater'' to distinguish these from heat pump-only water heaters.	Harmonization with industry TP NEEA Advanced Water Heating Specification v8.0.
Specifies that water heaters with multiple modes of operation be tested in the ''default'' or other similarly named mode.	Provides a test method for electric resistance water heaters subject to high temperature testing (setting the water heater to the highest storage tank temperature and using a mixing valve to temper the delivery water to be within 125 ± 5 °F). Does not require the use of this type of testing for any water heaters, however, until compliance with amended standards is required.	Method added by DOE to improve representativeness.
Does not include any method to determine effective storage volume of storage-type water heaters or circulating water heaters.	Establishes a metric and method for determining the effective storage volume of storage-type water heaters and circulating water heaters.	Method added by DOE which adopts a metric for additional consumer information.
Does not include a definition for ''thermal break.''	Adopts a definition for ''thermal break'' but does not mandate the use of this component in test set-up.	Harmonization with industry TP ASHRAE 118.2–2022.

DOE has determined that the amendments described in section III and adopted in this document will not alter the measured efficiency of consumer water heaters and residential-duty commercial water heaters, or require retesting or recertification solely as a result of DOE's adoption of the amendments to the test procedures. Discussion of DOE's actions are addressed in detail in section III of this document.

The effective date for the amended test procedures adopted in this final rule is 30 days after publication of this document in the **Federal Register**. Representations of energy use or energy efficiency must be based on testing in accordance with the amended test procedures beginning 180 days after the publication of this final rule for consumer water heaters and 360 after the publication of this final rule for residential-duty commercial water heaters.

III. Discussion

A. Scope of Applicability and Definitions

This document covers those products that meet the definition of consumer ''water heaters,'' as defined in the statute at 42 U.S.C. 6291(27), as codified at 10 CFR 430.2. This document also covers commercial water heating equipment with residential applications ((*i.e.,* those water heaters which meet the definition of ''residential-duty commercial water heater'' at 10 CFR 431.102).

In the context of covered consumer products, EPCA defines ''water heater'' as a product which utilizes oil, gas, or electricity to heat potable water for use outside the heater upon demand, including—

(a) Storage type units which heat and store water at a thermostatically controlled temperature, including gas storage water heaters with an input of 75,000 Btu per hour or less, oil storage water heaters with an input of 105,000 Btu per hour or less, and electric storage water heaters with an input of 12 kilowatts or less;

(b) Instantaneous type units which heat water but contain no more than one gallon of water per 4,000 Btu per hour of input, including gas instantaneous water heaters with an input of 200,000 Btu per hour or less, oil instantaneous water heaters with an input of 210,000 Btu per hour or less, and electric instantaneous water heaters with an input of 12 kilowatts or less; and

(c) Heat pump type units, with a maximum current rating of 24 amperes at a voltage no greater than 250 volts, which are products designed to transfer thermal energy from one temperature level to a higher temperature level for the purpose of heating water, including all ancillary equipment such as fans, storage tanks, pumps, or controls

necessary for the device to perform its function.

(42 U.S.C. 6291(27); 10 CFR 430.2)

In addition, at 10 CFR 430.2, DOE defines several specific categories of consumer water heaters, as follows:

(1) ''Electric instantaneous water heater'' means a water heater that uses electricity as the energy source, has a nameplate input rating of 12 kW or less, and contains no more than one gallon of water per 4,000 Btu per hour of input.

(2) ''Electric storage water heater'' means a water heater that uses electricity as the energy source, has a nameplate input rating of 12 kW or less, and contains more than one gallon of water per 4,000 Btu per hour of input.

(3) ''Gas-fired instantaneous water heater'' means a water heater that uses gas as the main energy source, has a nameplate input rating less than 200,000 Btu/h, and contains no more than one gallon of water per 4,000 Btu per hour of input.

(4) ''Gas-fired storage water heater'' means a water heater that uses gas as the main energy source, has a nameplate input rating of 75,000 Btu/h or less, and contains more than one gallon of water per 4,000 Btu per hour of input.

(5) ''Grid-enabled water heater'' means an electric resistance water heater that—

(a) Has a rated storage tank volume of more than 75 gallons;

(b) Is manufactured on or after April 16, 2015;

(c) Is equipped at the point of manufacture with an activation lock and;

(d) Bears a permanent label applied by the manufacturer that—

(i) Is made of material not adversely affected by water;

(ii) Is attached by means of non-water-soluble adhesive; and

(iii) Advises purchasers and end-users of the intended and appropriate use of the product with the following notice printed in 16.5 point Arial Narrow Bold font: ''IMPORTANT INFORMATION: This water heater is intended only for use as part of an electric thermal storage or demand response program. It will not provide adequate hot water unless enrolled in such a program and activated by your utility company or another program operator. Confirm the availability of a program in your local area before purchasing or installing this product.''

(6) ''Oil-fired instantaneous water heater'' means a water heater that uses oil as the main energy source, has a nameplate input rating of 210,000 Btu/h or less, and contains no more than one gallon of water per 4,000 Btu per hour of input.

(7) ''Oil-fired storage water heater'' means a water heater that uses oil as the main energy source, has a nameplate input rating of 105,000 Btu/h or less, and contains more than one gallon of water per 4,000 Btu per hour of input.

The definition for ''grid-enabled water heater'' includes the term ''activation lock,'' which is defined to mean a control mechanism (either by a physical device directly on the water heater or a control system integrated into the water heater) that is locked by default and contains a physical, software, or digital communication that must be activated with an activation key to enable the product to operate at its designed specifications and capabilities and without which the activation of the product will provide not greater than 50 percent of the rated first-hour delivery of hot water certified by the manufacturer. 10 CFR 430.2. As specified in this definition, the control mechanism must be physically incorporated into the water heater or, if a control system, integrated into the water heater to qualify as an activation lock. DOE is aware of certain State programs that encourage water heaters to be equipped with communication ports that allow for demand-response communication between the water heater and the utility.[17] DOE notes that presence of such a communication port, in and of itself, would not qualify as an activation lock for the purpose of classifying a water heater as a grid-enabled water heater. Demand-response water heaters are discussed separately in section III.A.1 of this final rule.

Additionally, as discussed further in section III.A.3 of this document, the appendix E test procedure also applies to residential-duty commercial water heaters. (*See* 10 CFR 431.106(b)(1)) DOE defines these equipment categories at 10 CFR 431.102 as any gas-fired storage, oil-fired storage, or electric instantaneous commercial water heater that meets the following conditions:

(1) For models requiring electricity, uses single-phase external power supply;

(2) Is not designed to provide outlet hot water at temperatures greater than 180 °F; and

(3) Does not meet any of the following criteria:

Water heater type	Indicator of non-residential application
Gas-fired Storage	Rated input >105 kBtu/h; Rated storage volume >120 gallons.
Oil-fired Storage	Rated input >140 kBtu/h; Rated storage volume >120 gallons.
Electric Instantaneous	Rated input >58.6 kW; Rated storage volume >2 gallons.

In the January 2022 NOPR, DOE discussed definitions and the scope of appendix E for heat pump water heaters (electric as well as gas-fired), gas-fired instantaneous water heaters (specifically circulating gas-fired water heaters), tabletop water heaters, and residential-duty commercial water heaters. 87 FR 1554, 1560–1567 (Jan. 11, 2022). Additionally, DOE proposed a new definition for ''demand-response water heater'' in the July 2022 SNOPR. 87 FR 42270, 42280 (July 14, 2022).

BWC generally agreed with DOE's determinations regarding product and equipment definitions and classifications. (BWC, No. 33 at p. 1) AET generally commented that DOE's test procedures should be appropriate for all consumer water heaters within the scope of standards, especially for electric instantaneous water heaters. (AET, No. 29 at pp. 11–12)

[17] On May 7, 2019, the State of Washington signed House Bill 1444 which amended the Revised Code of Washington (RCW) (*i.e.,* the statutory code in the State of Washington), Title 19, Chapter 19.260 (RCW 19.260). On January 6, 2020, the State of Washington amended the Washington Administrative Code (WAC) (*i.e.,* the regulatory code in the State of Washington), Title 194, Chapter 194–24 (WAC 194–24) (Washington January 2020 Amendment) to align with RCW 19.260. Similarly, the State of Oregon published a final rule (Oregon August 2020 final rule) on August 8, 2020, which amended the Oregon Administrative Rules (OAR), Chapter 330, Division 92 (OAR–330–092). The Washington House Bill 1444 and the Oregon August 2020 final rule established a definition for electric storage water heater (RCW 19.260.020(14); OAR–330–092–0010(10)), an effective date of January 1, 2021 in Washington and January 1, 2022 in Oregon (RCW 19.260.080(1); OAR–330–092–0015(17)), a requirement that electric storage water heaters must have a modular demand response communications port compliant with the March 2018 version of the ANSI/CTA–2045–A communication interface standard, or a standard determined to be equivalent (RCW 19.260.080(1)(a)–(b); OAR–330–092–0020(17)), and, in Oregon, must bear a label or marking on the products stating either ''DR-ready: CTA–2045–A'' or ''DR-ready: CTA–2045–A and [equivalent DR system protocol]'' (OAR–330–092–0045(17)).

As discussed throughout this rulemaking, it is DOE's intention to ensure that the appendix E test procedure amended by this final rule is appropriate and applicable to all consumer water heaters and residential-duty commercial water heaters. Sections III.A.1 through III.A.4 of this document address specific issues related to scope and definitions that either DOE requested comment on in the January 2022 NOPR or July 2022 SNOPR, or that were identified by commenters in response to those documents.

1. Demand-Response Water Heaters

Storage-type water heaters that have ''connected'' capability, often referred to as ''demand-response'' water heaters, can be remotely activated and/or deactivated by signals from a utility company or another program operator, and are able to serve as a thermal energy storage device. DOE considered whether specific testing requirements would be appropriate for demand-response water heaters (such as requiring measurement of the energy consumed by connected features, or providing a method for calculating the amount of thermal energy storage available); however, DOE had tentatively determined that additional test procedure provisions (such as the calculation of a thermal energy storage metric) are premature and unnecessary to specify at this time as the market continues to develop and evolve. DOE proposed only that a provision be added to the test procedure to require that if a water heater can connect to an external network or controller, that communication shall be disabled during testing. 87 FR 1554, 1585–1586 (Jan. 11, 2022). Several stakeholders provided input on this tentative determination.

NEEA encouraged DOE to adopt definitions and test methods for ''connectable'' water heaters in the test procedure. The commenter pointed to the following existing and emerging standards as references: Consumer Technology Association (CTA) Standard 2045 (ANSI/CTA–2045)/EcoPort,[18] U.S. Environmental Protection Agency (EPA) ENERGY STAR connected device requirements, and AHRI 1430, *Standard for Demand Response for Electric Water Heaters.*[19] NEEA stated that definitions of connectivity have already been adopted by the States of Washington, Oregon, and California as part of their water heating appliance standards. (NEEA, No. 30 at pp. 2–3) The CA IOUs recommended the adoption of a definition for the communication capability for grid-enabled water heaters that is consistent with the Connected Product Criteria in the ENERGY STAR Product Specification for Residential Water Heaters.[20] The CA IOUs also recommended that DOE incorporate the associated ENERGY STAR connected products test procedure into the appendix E test procedure. (CA IOUs, No. 36 at pp. 2–3)

In response, DOE considered these comments and also assessed the operation of demand-response water heaters as grid thermal energy storage devices using specific communication protocols in order to determine how to distinguish these products from other water heaters capable of storage tank overheating. On July 18, 2022, EPA published an ENERGY STAR Version 5.0 Residential Water Heater Specification, which included definitions for ''connected water heater product'' and ''demand response.'' These definitions included references to Consumer Technology Association (CTA) Standard 2045 (ANSI/CTA–2045),[21] a design standard for a communications module that allows a water heater to receive signals from a utility company (*e.g.,* a curtailment request). As indicated by NEEA and the CA IOUs, the presence of a CTA–2045 port uniquely enables a water heater to be able to participate in any demand-response program, and DOE has additionally determined that products with these features are increasing in number.

In the July 2022 SNOPR, DOE noted that certain new water heaters were available on the market that are shipped from the point of manufacture with a mixing valve installed and intentionally ''overheat'' [22] the water to a stored temperature that is higher than the delivery temperature setpoint to provide additional capacity.[23] 87 FR 42270, 42279–42280 (July 14, 2022). DOE proposed specific test requirements for such products (see section III.E.1 of this document for discussion). DOE also noted that water heaters with demand-response capabilities may undergo utility-initiated overheating during certain periods to store additional energy in the water heater during peak demand periods, and tentatively determined that the test provisions proposed for water heaters that overheat may not be appropriate for demand-response water heaters that overheat. *Id.* To distinguish demand-response water heaters from other types capable of overheating, DOE proposed to define a ''demand-response water heater'' as follows:

Demand-response water heater means a storage-type water heater that—

1. Has integrated communications hardware and additional hardware and software required to enable connected functionality with a utility or third party, that dispatches signals with demand response instructions and/or price signals to the product and receives messages from the demand-response water heater;

2. Meets the communication and equipment standards for Consumer Technology Association (CTA) Standard 2045–B (ANSI/CTA–2045–B); [24]

3. Automatically heats the stored water above the delivery temperature setpoint only in response to instructions received from a utility or third party.

87 FR 42270, 42280 (July 14, 2022). DOE sought comment on this proposed definition. *Id.*

[18] Available online at: *shop.cta.tech/products/https-cdn-cta-tech-cta-media-media-ansi-cta-2045-b-final-2022-pdf* (Last accessed on Sept. 17, 2022).

[19] AHRI Standard 1430, ''Standard for Demand Response for Electric Water Heaters,'' was published in December 2022. It is an industry consensus standard developed by an AHRI Consensus Standards Project Committee that includes definitions, test requirements, operating and physical requirements, minimum data requirements for published ratings, marking and nameplate, and data and conformance conditions for demand-response electric water heaters. For more information, see *www.ahrinet.org/search-standards/ahri-1430-demand-flexible-electric-storage-water-heaters* (Last accessed on Feb. 17, 2023).

[20] According to version 5.0 of the ENERGY STAR Program Requirements for Residential Water Heaters Eligibility Criteria, a ''connected water heater product (CWHP)'' includes the ENERGY STAR certified water heater, integrated or separate communications hardware, and additional hardware and software required to enable connected functionality. ''Demand Response'' is also defined by that source to mean changes in electric or gas usage by end-use customers from their normal consumption patterns in response to changes in the price of electricity or gas over time, or to incentive payments designed to induce lower electricity or gas use at times of high wholesale market prices or when system reliability is jeopardized. Version 5.0 of the ENERGY STAR specification is available online at: *www.energystar.gov/products/spec/residential_water_heaters_specification_version_5_0_pd* (Last accessed on July 25, 2022).

[21] *See* section 4.D.a of the ENERGY STAR Version 5.0 specification.

[22] The term ''overheating'' refers to raising the tank temperature above the outlet water setpoint and does not denote performance outside of the normal operating range of the water heater.

[23] While typical water heaters do not store water warmer than the outlet temperature setpoint (which is, on average, 125 ± 5 °F), water heaters designed to increase energy storage capacity may overheat the tank to temperatures such as 140–150 °F and use a mixing valve to temper the outlet water down to the setpoint condition. The energy storage capacity is proportional to both the size of the tank and the temperature of the water within.

[24] ANSI/CTA–2045–B, ''Modular Communications Interface for Energy Management,'' published February 2021. (Available at: *shop.cta.tech/products/https-cdn-cta-tech-cta-media-media-ansi-cta-2045-b-final-2022-pdf*) (Last accessed Sept. 17, 2022).

In response to the July 2022 SNOPR, AHRI, A.O. Smith, BWC, and Rheem recommended that DOE change its definition of ''demand-response water heater'' to be consistent with ENERGY STAR and AHRI Standard 1430.[25] (AHRI, No. 55 at p. 7; A.O. Smith, No. 51 at pp. 6–7; BWC, No. 48 at p. 2; Rheem, No. 47 at p. 6) Specifically, AHRI and A.O. Smith requested that DOE define ''demand-flexible water heater'' as ''an electric resistance storage water heater or heat pump water heater with the capability to reduce, shed, shift, load up, and modulate energy consumption in response to a command or instructions received from a utility or third party.'' (AHRI, No. 55 at p. 7; A.O. Smith, No. 51 at pp. 6–7) BWC requested that DOE use the ENERGY STAR and AHRI Standard 1430 definitions of ''demand-response'' to avoid manufacturer burden and allow for easier future development of these products. (BWC, No. 48 at p. 2) Rheem further recommended that DOE seek direct feedback from EPA's ENERGY STAR program. (Rheem, No. 47 at p. 6)

NYSERDA pointed out that DOE's proposed definition for ''demand-response water heater,'' which states that it cannot overheat as a result of user-initiated operation, is an additional requirement beyond ENERGY STAR's definitions. Accordingly, NYSERDA urged DOE to define ''overheating test exempt water heaters'' so as to avoid creating market confusion, and the commenter recommended that DOE consider the power usage for connectedness as included in the ENERGY STAR water heater specification, as it would allow utilities to plan more effectively, encourage the additional load to be minimal, and inform consumers regarding anticipated operating costs. (NYSERDA, No. 50 at p. 2)

NEEA indicated support for DOE's proposed definition of ''demand-response water heater'' and the proposal for demand-response water heaters to meet the communication and equipment standards for ANSI/CTA–2045. (NEEA, No. 56 at pp. 2–3) AHRI, however, indicated that DOE's definition would require compliance with the demand-response program the water heater is enrolled in, whereas other, non-DOE definitions allow consumers to opt out. (AHRI, No. 55 at p. 7) BWC and Rheem requested that DOE remove the requirement to comply with CTA–2045. (BWC, No. 48 at pp. 1–2, Rheem, No. 47 at p. 6) BWC stated that requiring compliance with CTA–2045 may prevent manufacturers from designing their products around separate and future protocols. (BWC, No. 48 at pp. 1–2)

Rheem recommended that DOE's definition acknowledge the fact that many water heaters with demand-response capability are currently shipped without all necessary hardware to participate in a demand-response program. Rheem also suggested that DOE's definition does not cover most demand-response water heaters because it excludes water heaters without the ability to heat water above the setpoint. (Rheem, No. 47 at p. 6)

After reviewing these comments from stakeholders, DOE understands that, for the purpose of demand-response programs, utilities and manufacturers would benefit from a standardized definition of ''demand-response water heater,'' specifically one that requires certain communications protocols to be present in order to be compatible with the demand-response signals from the utility or third-party. Stakeholders have indicated that, in order to be deemed a ''demand-response water heater,'' a product must demonstrate that it is capable of executing the commands from the demand-response signals (*i.e.,* pass the verification tests in the ENERGY STAR Test Method to Validate Demand Response or in AHRI Standard 1430). However, DOE proposed a more limited definition for ''demand-response water heater'' in the July 2022 SNOPR, seeking only to describe the types of water heaters that could temporarily increase the storage tank temperature as a means to perform a load up [26] such that this particular operation would not be considered ''overheating'' in the appendix E test procedure (*see* 87 FR 42270, 42280 (July 14, 2022)). This led DOE to revisit its proposed definition and to reassess its planned approach.

As a result, in this final rule, DOE has decided not to establish a definition for ''demand-response water heater.'' DOE has considered the various requirements which stakeholders suggested should be criteria for a product to be called a ''demand-response water heater'' and has determined that, while standardization of these requirements may be beneficial to utilities and industry, it is unnecessary at this time because DOE can instead describe the types of water heaters that can temporarily increase the storage tank temperature only in response to instructions from a utility or third-party demand response program without defining ''demand-response water heater''. Additionally, as discussed in section III.E.1.b of this document, this final rule only amends the test procedure to provide a means for testing water heaters in the highest tank temperature setting, and DOE is adopting it as a voluntary measure in this test procedure for certain electric storage water heaters. As such, it is no longer necessary to establish a definition for ''demand-response water heater'' in this test procedure rulemaking.

2. Heat Pump Water Heaters

As discussed in section III.A of this document, EPCA defines ''water heater'' to include, in relevant part, (A) storage type units which heat and store water at a thermostatically controlled temperature, including . . . electric storage water heaters with an input of 12 kilowatts or less; (B) instantaneous type units which heat water but contain no more than one gallon of water per 4,000 Btu per hour of input, including . . . electric instantaneous water heaters with an input of 12 kilowatts or less; and (C) heat pump type units, with a maximum current rating of 24 amperes at a voltage no greater than 250 volts, which are products designed to transfer thermal energy from one temperature level to a higher temperature level for the purpose of heating water, including all ancillary equipment such as fans, storage tanks, pumps, or controls necessary for the device to perform its function. (42 U.S.C. 6291(27))

Because the maximum current and voltage ratings for consumer heat pump type units are 24 amperes at no more than 250 volts, the maximum electrical input for this type of product is determined to be 6 kilowatts.[27] In this final rule, DOE is providing clarifications on how these definitions apply to electric and gas-fired heat pump storage water heaters.

a. Electric Heat Pump Storage Water Heaters

EPCA is not explicit as to whether heat pump type units are considered a subcategory of storage type units and

[25] AHRI Standard 1430–2022 (I–P), ''2022 Standard for Demand Flexible Water Heaters,'' published December 2022. (Available at: *https://www.ahrinet.org/search-standards/ahri-1430-demand-flexible-electric-storage-water-heaters.*) (Last accessed Feb. 17, 2023)

[26] According to the ENERGY STAR Test Method to Validate Demand Response v1.2, a connected water heating product is required to use and/or store additional thermal energy that the device otherwise would not have used/stored under normal operation in response to a load up request. This allows the stored thermal energy to increase within the safety parameters determined by the manufacturer, and, for installations with a mixing valve, the device may exceed the user set point temperature.

[27] Power equals current times voltage, so the definition of consumer heat pump type unit corresponds to a maximum power rating of 6,000 W, or 6 kW (*i.e.,* 24 A times 250 V equals 6,000 W).

instantaneous type units. ''Storage type units'' and ''instantaneous type units'' are not exclusive of ''heat pump type units.'' Based on the statute's ''water heater'' definition, an electric heat pump type unit could be covered under the ''water heater'' definition's description of storage type units (if it heats and stores water at a thermostatically controlled temperature with an input of 12 kilowatts or less) or instantaneous type unit (if it heats water and contains no more than one gallon of water per 4,000 Btu per hour of input and has an input of 12 kilowatts or less).

On November 10, 2016, DOE published a final rule in the **Federal Register** (the November 2016 Final Rule) that treated heat pump-type units as a subcategory of the other two types of units listed in the definition of water heater. Specifically, DOE stated in the November 2016 final rule that a heat pump water heater with a total rated input of less than 12 kilowatts would be a consumer water heater because EPCA classifies electric water heaters with less than 12 kilowatts rated electrical input as consumer water heaters. 81 FR 79261, 79301–79302. In the January 2022 NOPR, DOE responded to comments requesting clarification on whether electric heat pump water heaters between 6 kilowatts and 12 kilowatts of input should be classified as consumer water heaters or commercial water heaters. 87 FR 1554, 1561–1563 (Jan. 11, 2022). Upon further review of EPCA and the water heater market, DOE initially determined in the January 2022 NOPR that the interpretation presented in the November 2016 Final Rule was not the best reading of EPCA. *Id.*

In the January 2022 NOPR, DOE explained that the structure of the statutory definition of ''water heater'' in the Energy Conservation Program for Consumer Products in Part A of EPCA lists each type of water heater at equal subparagraph designations. Therefore, when defining ''water heater'' for the purpose of determining whether a water heater is a consumer water heater, the energy use criteria specified for heat pump-type units is to be applied separately and distinctly from the criteria specified for the categorizations of storage-type units and instantaneous-type units. Therefore, DOE had tentatively determined that heat pump water heaters, which operate with a maximum current rating greater than 24 amperes or at a voltage greater than 250 volts, are more appropriately covered as commercial water heaters than consumer water heaters. 87 FR 1554, 1561–1562 (Jan. 11, 2022).

As explained in the January 2022 NOPR, there are three other reasons why DOE tentatively concluded that the revised interpretation would be more applicable to the residential water heater market.

First, heat pump technology is capable of providing heat output which exceeds the energy input. A heat pump type unit with an input rate of 12 kilowatts could have a heating capacity (*i.e.,* output capacity) of approximately 42 kilowatts, which is 3.6 times the output heating capacity provided by the largest possible consumer electric storage type water heater (*i.e.,* 11.8 kilowatts).[28] While a heat pump-type unit with a 12 kilowatt input capacity could theoretically be designed and installed in a residential application, its water heating capacity (*i.e.,* output capacity) would far exceed the water heating demand of any residential installation. 87 FR 1554, 1562 (Jan. 11, 2022).

Second, the DOE test procedure for consumer water heaters at the time of the November 2016 Final Rule only covered heat pump water heaters which have ''a maximum current rating of 24 amperes (including the compressor and all auxiliary equipment such as fans, pumps, controls, and, if on the same circuit, any resistive elements) for an input voltage of 250 volts or less,'' and, therefore, electric heat pump water heaters with greater than 24 amperes at 250 volts were not considered at the time when the current energy conservation standards for consumer water heaters were established (April 2010). As a result, these current standards do not reflect energy usage for heat pump water heaters between 6 kilowatts and 12 kilowatts, and such products are more appropriately rated to the commercial water heater test procedure (10 CFR 431.106) and evaluated against the maximum standby loss standards for this equipment (10 CFR 431.110(a)). 87 FR 1554, 1562 (Jan. 11, 2022).

Third, based on its review of the market, DOE is aware of integrated heat pump water heaters, split-system heat pump water heaters, and heat pump-only water heaters (*i.e.,* circulating heat pump water heaters) which are designed for use in residential applications, and all such products are rated at or below 24 A/250 V of input. Integrated heat pump water heaters, which consist of an air-source heat pump in one assembly with a storage tank, typically operate with 240-volt input. Although integrated heat pump water heaters usually have backup 4.5-kilowatt electric resistance heating elements, the elements do not operate simultaneously, which ensures that these products do not surpass 6 kilowatts of input or 24 A/250 V at any given time. Some integrated heat pump water heaters are designed to operate at only 120 volts of input (*i.e.,* ''retrofit-ready,'' ''plug-in,'' or ''120-volt'' heat pump water heaters). Split-system heat pump water heaters, which consist of a separate heat pump and storage tank that are sold together (where the heat pump components are usually situated outdoors), are also covered by the currently applicable appendix E test procedure and have electrical input ratings which do not exceed 24 A/250 V. Circulating heat pump water heaters (or ''heat pump-only'' water heaters), which consist of only a heat pump module and must be installed with a separate storage tank, similarly do not exceed this limit, and there are models of circulating heat pump water heaters which are intended to operate on 120 volts of input. Alternative source heat pump water heaters (*e.g.,* ground-source or water-source), were not considered in this rulemaking due to their predominant use as commercial products. 87 FR 1554, 1563 (Jan. 11, 2022).

In this final rule, DOE maintains the revised interpretation as discussed in the January 2022 NOPR. To clarify this interpretation in the regulatory definitions, DOE is amending the definition of ''commercial heat pump water heater'' at 10 CFR 431.102 to reflect this revised interpretation. The revised definition reads: ''*Commercial heat pump water heater (CHPWH)* means a water heater (including all ancillary equipment such as fans, blowers, pumps, storage tanks, piping, and controls, as applicable) that uses a refrigeration cycle, such as vapor compression, to transfer heat from a low-temperature source to a higher-temperature sink for the purpose of heating potable water, and operates with a current rating greater than 24 amperes or a voltage greater than 250 volts. Such equipment includes, but is not limited to, air-source heat pump water heaters, water-source heat pump water heaters, and direct geo-exchange heat pump water heaters.''

In the April 2020 RFI, DOE requested feedback on the need for creating a separate definition for ''electric heat pump storage water heater,'' similar to the definition in the March 2019

[28] A 12-kW electric resistance water heater with an assumed recovery efficiency of 98 percent would have an output heating capacity of 11.8 kW (12 kW × 0.98 = 11.8 kW). An electric heat pump-type water heater with a 12-kW input capacity, with an assumed recovery efficiency of 350 percent, would have an output heating capacity of 42 kW (12 kW × 3.5 = 42 kW), which is 3.6 times greater than the 11.8 kW output heating capacity of an electric resistance water heater with equivalent input capacity.

ASHRAE Draft 118.2, or whether the current DOE definitions in 10 CFR 430.2 for ''electric storage water heater'' and ''water heater,'' which include ''heat pump type units,'' would adequately cover such products for the purpose of performing the DOE test procedure. 85 FR 21104, 21110 (April 16, 2020). The Department's tentative determination in the January 2022 NOPR was that a separate definition would not be needed because the current definitions were sufficient to describe these products. 87 FR 1554, 1563–1564 (Jan. 11, 2022). In response to the January 2022 NOPR, Rheem requested that the product class-specific definitions include or refer to the ''heat pump type'' requirements in EPCA. (Rheem, No. 31 at p. 2) BWC agreed with DOE's assessment that consumer heat pump water heaters operate at no greater than 24 amperes at 250 volts. (BWC, No. 33 at pp. 1–2)

Additionally, DOE received several comments on the January 2022 NOPR regarding definitions for specific types of heat pump water heaters used in residential applications.

The CA IOUs recommended that DOE should supplement its test procedure definitions to address heat pump water heaters rated to operate at 120 volts of input. More specifically, the CA IOUs recommended that DOE develop a separate definition for 120-volt heat pump water heaters in the test procedure and consider any distinguishing characteristics that might require changes to the test procedure to represent their real-world performance accurately. These commenters argued that a separate definition would allow for the possibility of separate energy conservation standards for these products. The CA IOUs stated that they expect the first 120-volt heat pump water heaters to appear on the retail market in 2022 and noted that the California Energy Commission recently adopted a goal to install six million heat pumps (for space and water heating) by 2030, many of which they anticipate will be 120-volt heat pump water heaters. (CA IOUs, No. 36 at p. 4)

AET expressed support for the inclusion of heat pump-only water heaters within the scope of the DOE test procedure but suggested revising the terminology so as to differentiate a ''heat pump water heater without a tank'' from a ''heat pump water heater with a tank.'' (AET, No. 29 at p. 2) On this point, DOE notes that there is not yet a particular term for these products defined at 10 CFR 430.2 or in appendix E. These products may be referred to using any of the terms mentioned by AET, but the clearest description of these products is ''circulating heat pump water heaters.'' Circulating water heaters are discussed further in section III.A.4.a of this document. DOE is adopting a definition for ''circulating water heater'' in this final rule, which will include these products.

Rheem recommended that DOE include split-system heat pump water heaters in the ''water heaters requiring a storage tank'' definition proposed in the January 2022 NOPR and that DOE define ''integrated heat pump water heater'' to distinguish them from split-system water heaters. (Rheem, No. 47 at p. 4) AHRI stated that a definition of ''split-system water heater'' is not required if DOE does not include the proposed optional additional test conditions in this rulemaking. (AHRI, No. 55 at p. 5)

In response to Rheem's comments, a split-system water heater is not necessarily a ''water heater requiring a storage tank,'' as proposed in the January 2022 NOPR, because for a water heater to meet the proposed definition of ''water heater requiring a storage tank'' would mean there is no storage tank specified or supplied by the manufacturer but that it requires one for testing and operation. A split-system water heater, however, may have a manufacturer supplied or specified tank and, as such, would not necessarily fall under the definition of a ''water heater requiring a storage tank.'' When the tank is specified or supplied by the manufacturer, that tank should be used for testing, rather than a water heater or storage tank that meets the default conditions that were proposed to be added in section 4.10 of appendix E. Additionally, in response to the suggestion that DOE define ''integrated heat pump water heater,'' DOE notes that, as discussed later in this section, it is modifying the definition of a ''split-system water heater'' based on comments to mean a heat pump-type water heater in which at least the compressor, which may be installed outdoors, is separate from the storage tank. Therefore, heat pump water heaters that do not fall under the definition of ''split-system water heater'' adopted in this final rule would be integrated heat pump water heaters, as the refrigeration components would be integrated with the tank. Thus, it is unnecessary to separately define ''integrated heat pump water heaters,'' and the term would not be used in the test method. Creating additional definitions for this configuration may lead to confusion. In response to AHRI's comment, as discussed and for the reasons explained in section III.C.7 of this document, DOE has decided to include the proposed optional additional test conditions in this rulemaking, and, thus, the Department has defined the term ''split-system water heater.''

A.O. Smith requested that DOE clearly define ''heat pump-only water heater'' and elucidate how appendix E applies to them. (A.O. Smith, No. 51 at p. 5) BWC requested that DOE clarify in its definitions the difference between split-system and heat pump-only water heaters. (BWC, No. 48 at p. 1)

In response, a heat pump-only water heater is considered a circulating water heater, which is a type of heat pump water heater, falls under the circulating water heater product classes, and is covered under the associated provisions of appendix E. Such distinctions were previously discussed in the January 2022 NOPR. 87 FR 1554, 1565 (Jan. 11, 2022). These units have an input greater than or equal to 4,000 Btu per hour per gallon, and accordingly, they are considered instantaneous water heaters. In contrast, split-system heat pump water heaters (which, unlike heat pump-only units, are distributed with a storage tank) are considered storage water heaters.

After considering these comments, DOE has decided to affirm coverage in this test procedure final rule for all of the aforementioned types of consumer heat pump water heaters. In particular, DOE has determined that the current definitions of ''heat pump-type'' and ''electric storage water heater'' adequately cover the electric heat pump water heaters on the market that are representative of residential use (including, but not limited to, integrated 240-volt and 120-volt heat pump water heaters, split-system heat pump water heaters, and circulating heat pump water heaters), and that a separate definition for ''electric heat pump water heaters'' is not needed in order to appropriately characterize the test procedure for consumer water heaters and residential-duty commercial water heaters.

At the time of this final rule, DOE is only aware of a small number of 120-volt integrated heat pump water heaters and circulating heat pump water heaters on the market. Therefore, DOE has limited information to determine whether there are any distinguishing characteristics of these products which would necessitate tailored test procedure requirements in order to produce ratings that are representative, reproducible, and repeatable. One manufacturer has publicly certified

ratings [29] for 120-volt electric storage heat pump models using the currently applicable appendix E test procedure (without the use of a test procedure waiver), so DOE, therefore, concludes that the appendix E test procedure is appropriate and representative for these models. DOE is aware, however, that default mode operation of 120-volt electric storage heat pump water heaters may require raising the tank temperature above the delivery setpoint in order to meet consumer expectations of first hour rating (FHR), and further discussion of potential impacts of storage tank overheating on ratings for 120-volt electric storage heat pump water heaters as a result of this final rule's action can be found in section III.E.1 and III.J.3 of this document.

In response to the July 2022 SNOPR, which proposed optional ambient test conditions and new definitions for ''split-system water heaters,'' AHRI and A.O. Smith requested that DOE change its definition of ''split-system water heater'' to the definition used by ENERGY STAR, which specifies that the compressor, evaporator, and/or condenser are separated from a storage tank that is specified by the manufacturer and rated as a single system. (AHRI, No. 55 at p. 5; A.O. Smith, No. 51 at p. 4) A.O. Smith offered an alternative definition to DOE's earlier definition of ''split-system heat pump water heater'' which specified the heat pump as being an outdoor component. (A.O. Smith, No. 51 at pp. 4–5)

A.O. Smith, NEEA, and the CA IOUs stated that it is unnecessary for the definition of ''split-system water heater'' to specify the location of specific components and requested that DOE eliminate the distinction between indoor and outdoor components. (A.O. Smith, No. 51 at p. 5; CA IOUs, No. 52 at pp. 4–5; NEEA, No. 56 at p. 2) The CA IOUs stated that the compressor should be specified as the component separate from the storage tank, rather than the heat pump, to more generally reflect split-system water heaters. (CA IOUs, No. 52 at pp. 4–5)

NEEA additionally recommended that DOE should not include references to ''indoor'' or ''outdoor'' in its proposed definition of ''split-system heat pump water heater,'' as outdoor installation of the heat pump component does not necessarily follow the splitting of heating and storage functions into separate components, and an all-indoor split-system HPWH has the potential to provide significant benefits to consumers. NEEA added that adopting a split-system definition that excludes such products could hinder manufacturers in bringing them to market. (NEEA, No. 56 at p. 2) Similarly, Nyle commented that the proposed definition is problematic because not all split-system heat pump water heaters contain an outdoor component, noting that it manufactures a 120-volt heat pump water heater for indoor use only. Nyle suggested revising the definition to indicate that a split-system heat pump water heater means a heat pump-type water heater where the storage unit and heat pump components are independent from one another but must be connected to operate (*i.e.,* through refrigerant lines, water piping, or via a thermal storage device). (Nyle, No. 57 at p. 1)

In order to address the need for separate test conditions for split-system water heaters (see section III.C.7 of this document for a discussion on optional test conditions, which simulate different indoor and outdoor air conditions for the different components of a split-system water heater), DOE is adopting a definition for this subset of heat pump water heaters at 10 CFR part 430, subpart B, appendix E, section 1.14.

In response to these comments, DOE acknowledges that it is not necessary to specify the location of the components and/or the storage tank in the definition of ''split-system heat pump water heater'' as long as they are separate. Therefore, DOE has changed the definition of ''split-system heat pump water heater'' to mean a heat pump-type water heater in which at least the compressor, which may be installed outdoors, is separate from the storage tank. This definition still reflects that which is used in NEEA's Advanced Water Heating Specification (AWHS) version 8.0 (AWHS v8.0),[30] with minor modifications.

Additionally, a new definition for ''circulating water heater'' is being established in this final rule at 10 CFR 430.2, as discussed in section III.A.4.a of this document. This product category includes heat pump-only water heaters, which is also discussed in section III.A.4.a of this document. Specific testing provisions for circulating water heaters are being newly established in this final rule, as discussed in section III.D.4 of this document.

b. Gas-Fired Heat Pump Storage Water Heaters

The statutory definition for a ''heat pump type'' water heater (*see* 42 U.S.C. 6291(27)(C)) is not specific to electric heat pump type water heaters. Gas-fired heat pump storage water heaters typically use an absorption or adsorption refrigeration cycle, driven by a gas burner, to transfer heat from the surrounding air to the water inside the water heater.

In the July 2014 Final Rule, DOE codified a definition for ''gas-fired heat pump water heater'' as follows:

Gas-fired heat pump water heater means a water heater that uses gas as the main energy source, has a nameplate input rating of 75,000 Btu/h (79 MJ/h) or less, has a maximum current rating of 24 amperes (including all auxiliary equipment such as fans, pumps, controls, and, if on the same circuit, any resistive elements) at an input voltage of no greater than 250 volts, has a rated storage volume not more than 120 gallons (450 liters), and is designed to transfer thermal energy from one temperature level to a higher temperature level to deliver water at a thermostatically controlled temperature less than or equal to 180 °F (82 °C). 79 FR 40542, 40567 (July 11, 2014).

Then, in the November 2016 Final Rule, DOE reasoned that even though gas-fired heat pump water heaters were covered by the existing test procedure, this definition was extraneous because it is not specifically referenced in any part of DOE's test procedures or energy conservation standards for consumer water heaters. 81 FR 79261, 79261, 79287 (Nov. 10, 2016). The definition for ''gas-fired heat pump water heater'' was deleted, and the current definition for ''gas-fired storage water heater'' was added instead. *Id.* at 81 FR 79320–79321.

Since the deletion of the definition in the November 2016 Final Rule, ASHRAE published an updated version of the test standard 118.2, ''Method of Testing for Rating Residential Water Heaters and Residential-Duty Commercial Water Heaters,'' in January 2022 (ASHRAE 118.2–2022) (*see* section III.B.2 for further discussion of this standard). The January 2022 NOPR issued prior to publication of ASHRAE 118.2–2022 and assessed public review drafts of ASHRAE 118.2–2022—all of which still included a definition for

[29] DOE reviewed public certification data in its Compliance Certification Management System (CCMS) database, found online at *www.regulations.doe.gov/certification-data/#q=Product_Group_s%3A**.

[30] AWHS v8.0 was published by NEEA on March 1, 2022. Although early editions of the AWHS focused primarily on providing more representative performance metrics for heat pump water heaters in cold climates, the latest editions are now more broadly focused on providing representative performance metrics for heat pump water heaters across all climates. AWHS v8.0 includes separate test condition requirements for integrated and split-system heat pump water heaters. These test conditions are discussed further in detail in section III.C.1 of this final rule. (Available at: *neea.org/resources/advanced-water-heating-specification-v8.0*) (Last accessed on Sept. 19, 2022).

''gas-fired heat pump storage water heater.'' The definition for ''gas-fired heat pump storage water heaters'' in the public review drafts of ASHRAE 118.2–2022 was adopted in section 2.4 of the final published version, which defines the term as follows:

(a) Use gas as the main energy source,

(b) Have a nameplate input rating of 20,000 Btu/h (26.4 MJ/h) or less,

(c) Have a maximum current rating of 24 amp (including all auxiliary equipment, such as fans, pumps, controls, and, if on the same circuit, any resistive elements) at an input voltage of no greater than 250 V,

(d) Have a rated storage volume not more than 120 gal (450 L), and

(e) Are designed to transfer thermal energy from one temperature level to a higher temperature level to deliver water at a thermostatically controlled temperature less than or equal to 180 °F (82 °C).

In the January 2022 NOPR, DOE stated that, currently, a water heater that uses gas as the main energy source, has a nameplate input rating of 75,000 Btu/h or less, and contains more than one gallon of water per 4,000 Btu per hour of input is a gas-fired storage water heater. (10 CFR 430.2) If the gas-fired storage water heater also has a heat pump with a maximum current rating of 24 amperes at a voltage no greater than 250 volts, is designed to transfer thermal energy from one temperature level to a higher temperature level for the purpose of heating water, including all ancillary equipment such as fans, storage tanks, pumps, or controls necessary for the device to perform its function, it would be a heat pump type unit (see 10 CFR 430.2). 87 FR 1554, 1564 (Jan. 11, 2022).

DOE also noted in the January 2022 NOPR that this industry definition establishes the scope of coverage for these products more narrowly than the current definitions for ''gas-fired storage water heater'' and ''heat pump type'' water heater together. Specifically, the ASHRAE 118.2–2022 definition limits the input rate at 20,000 Btu/h—presumably because the input rates of models currently in development for residential applications are less than 20,000 Btu/h—whereas the current definitions at 10 CFR 430.2 accommodate potential future products up to 75,000 Btu/h. In recognition of the developing market for gas-fired heat pump water heaters, DOE had tentatively determined not to limit scope of coverage to only 20,000 Btu/h. 87 FR 1554, 1564 (Jan. 11, 2022).

In response to the January 2022 NOPR, BWC suggested DOE re-evaluate whether current consumer water heater definitions adequately cover gas-fired heat pump water heaters (as defined by ASHRAE) in light of questions as to whether features related to these products depart from the current consumer water heater definitions. (BWC, No. 33 at p. 2) However, the commenter did not provide further details.

DOE did not receive any additional comments elucidating which features may be of concern, and as a result, DOE is not able to identify reasons to justify redefining gas-fired heat pump storage water heaters in a way that departs from the current definitions. At the time of this final rule, such products are still mostly in the field trial stage in the United States, and, thus, they are not mass-produced, nor are they widely distributed in the commercial market. However, DOE is aware that products currently under development consist of a modulating gas-fired burner that powers an absorption cycle using a design which would meet the definition for a ''split-system heat pump water heater'' (discussed in section III.A.2.a of this document). Nonetheless, because the current definitions for ''gas-fired storage water heater'' and ''heat pump type'' water heater are sufficiently broad, such products would remain appropriately encompassed within the current scope of coverage. Should more designs of gas-fired heat pump water heaters (either storage type or instantaneous type) emerge into the water heaters market, DOE would evaluate the definitions and appropriateness of its test methods for gas-fired and heat pump products as they would apply to this novel technology.

Moreover, while ASHRAE 118.2–2022 does define gas-fired heat pump storage water heaters, there are no unique test methods for these products outlined in the industry test standards. Similar to the determination in the November 2016 Final Rule, DOE has concluded that the definition in ASHRAE 118.2–2022 is extraneous. Furthermore, given that no concrete concerns regarding the applicability of the current methods to gas-fired heat pump water heaters have been identified, DOE has determined not to adopt any specific provisions for these in its amended appendix E test procedure at this time.

3. Residential-Duty Commercial Water Heaters

In this rulemaking, DOE has sought comment on the definition for ''residential-duty commercial water heater,'' which defines a category of commercial water heaters that are subject to the appendix E test procedure due to their residential applications. 85 FR 21104, 21108 (April 16, 2020).

In the January 2022 NOPR, DOE acknowledged that some water heaters intended for commercial use are covered by the residential-duty commercial water heater definition and tested and rated to the appendix E test procedure and residential-duty commercial water heater energy conservation standards in terms of UEF. DOE explained that these water heaters have characteristics that are similar to water heaters with residential applications and, as such, under 42 U.S.C. 6295(e)(5)(F), cannot be excluded from being tested and rated using the consumer water heaters test procedure and residential-duty commercial water heater energy conservation standards. Thus, DOE did not propose amendments to this definition. 87 FR 1554, 1566 (Jan. 11, 2022).

DOE has determined that whether a product is marketed as commercial or residential may not always be indicative of the intended installation location. The January 2022 NOPR provided the example of water heaters that are intended for residential use but sometimes marketed as ''commercial-grade'' as a means to convey an expectation of reliability. 87 FR 1554, 1566–1567 (Jan. 11, 2022).

In commenting on the January 2022 NOPR, with regards to residential-duty commercial water heaters, AET commented that the method used to evaluate consumer electric instantaneous and residential-duty commercial electric instantaneous water heaters in the December 2016 Conversion Factor Final Rule was not approved for these products, and the energy conservation standards DOE issued for consumer water heaters could not be met by them. AET argued that the energy conservation standards for residential-duty commercial electric instantaneous water heaters were based on performance for fossil fuel-fired commercial tankless water heaters as opposed to actual product testing, and, therefore, the commenter asserted that the minimum efficiency requirements for residential-duty commercial electric instantaneous water heaters are too low and should be updated. (AET, No. 29 at pp. 14–15)

DOE understands that the commenter's discussion of the ''method used to evaluate consumer electric instantaneous and residential-duty commercial electric instantaneous water heaters'' refers to the analytical approach in 2016 that was used to predict the UEF values of these water heaters from existing representations of maximum GPM (*see* 81 FR 96204,

92616–92617 (Dec. 29, 2016)) and thermal efficiency (*see* 81 FR 96204, 96218 (Dec. 29, 2016)). At this time, however, the current appendix E test procedure does provide a method to test and rate these water heaters.[31] DOE notes that there are currently consumer and residential-duty commercial electric instantaneous water heaters certified to meet the applicable energy conservation standards.

Otherwise, DOE did not receive any comments specifically pertaining to the definition for residential-duty commercial water heaters. Therefore, DOE is not amending the definition for ''residential-duty commercial water heater'' in this final rule for the reasons previously discussed. DOE may consider potential amended standards for residential-duty commercial electric instantaneous water heaters in a separate rulemaking addressing the energy conservation standards for commercial water heaters.[32]

4. Specialty Water Heaters

As first proposed in the January 2022 NOPR, this final rule expands the scope of coverage of the appendix E test procedure to include low-temperature water heaters and circulating water heaters, which both fall under the statutory definition of consumer ''water heater'' but did not previously have test methods appropriate for their unique operation. DOE is also re-instating an inadvertently omitted definition for ''tabletop water heater'' at 10 CFR 430.2. In addition, DOE has considered whether to address solar water heaters in the consumer water heaters test procedure, but the Department has determined not to expand the scope of coverage of the appendix E to these products at this time. DOE may further consider solar water heaters in a separate rulemaking in the future. Each of these categories of water heaters is discussed in the following subsections.

Dyson generally commented that indirect circulation systems especially have an extraordinarily flexible use case and can be implemented in both warm and cool regions. (Dyson, No. 28 at p. 1) DOE understands this comment to refer to systems which use a separate boiler to provide the heat source for domestic water heating. However, consumer boilers are not within the scope of this rulemaking.

a. Circulating Water Heaters

As discussed in section III.A of this document, a gas-fired instantaneous water heater is a water heater that uses gas as the main energy source, has a nameplate input rating less than 200,000 Btu per hour, and contains no more than one gallon of water per 4,000 Btu per hour of input. 10 CFR 430.2.

In the April 2020 RFI, DOE requested feedback on the typical application of a specific configuration of gas-fired instantaneous water heaters, commonly referred to as ''circulating gas-fired instantaneous water heaters.'' 85 FR 21104, 21113 (April 16, 2020). As explained in the April 2020 RFI, DOE has found that several manufacturers produce consumer gas-fired instantaneous water heaters that are designed to be used with a volume of stored water (usually in a tank, but sometimes in a recirculating hot water system of sufficient volume, such as a hydronic space heating or designated hot water system) in which the water heater does not provide hot water directly to fixtures, such as a faucet or shower head, but rather replenishes heat lost from the tank or system through hot water draws or standby losses by circulating water to and from the tank or other system. These circulating gas-fired instantaneous water heaters are typically activated by an aquastat [33] installed in a storage tank that is sold separately or by an inlet water temperature sensor. DOE further stated that while the products identified by DOE are within the statutory and regulatory definition of a consumer ''water heater'' and, therefore, a covered product, the design and application of circulating gas-fired instantaneous water heaters make testing to the currently applicable Federal test procedure for consumer water heaters difficult, if not impossible, as these products are not capable of delivering water at the temperatures and flow rates specified in the UEF test method contained therein. *Id.* As a result, the currently applicable appendix E test procedure does not sufficiently cover circulating water heaters.

DOE received several comments on the April 2020 RFI recommending generally that DOE amend the regulatory definitions of gas-fired instantaneous water heaters to exclude models designed exclusively for commercial use even though they have input rates below the consumer water heater input rate limit (*i.e.,* ≤200,000 Btu/h). AHRI and individual manufacturers commented that these products are used in commercial applications even though they may in certain cases meet the statutory definition for a consumer water heater, and that the residential draw pattern profiles may not be applicable. These comments are discussed in detail in the January 2022 NOPR. 87 FR 1554, 1565 (Jan. 11, 2022).

In the January 2022 NOPR, DOE noted that 42 U.S.C. 6291(1) states that a ''consumer product'' means any article of a type which, to any significant extent, is distributed in commerce for personal use or consumption by individuals. DOE also stated that its examination of product literature has found that circulating water heaters are predominately marketed for commercial applications. However, the input rates of many of the available models are below the maximum input rate of a consumer water heater and can, therefore, be suitable for residential applications. DOE noted that there exist circulating heat pump water heaters (heat pump-only water heaters) which operate in the same manner as gas-fired circulating water heaters but are clearly marketed for residential applications. Consequently, it is foreseeable that there could be the potential for product substitution into the consumer market. For these reasons, DOE tentatively determined that circulating water heaters are covered ''consumer products.'' 87 FR 1554, 1565 (Jan. 11, 2022).

In the January 2022 NOPR, DOE proposed to include the following definition at 10 CFR 430.2: ''*Circulating water heater* means an instantaneous or heat pump-type water heater that does not have an operational scheme in which the burner, heating element, or compressor initiates and/or terminates heating based on sensing flow; has a water temperature sensor located at the inlet of the water heater or in a separate storage tank that is the primary means of initiating and terminating heating; and must be used in combination with a recirculating pump and either a separate storage tank or water circulation loop in order to achieve the water flow and temperature conditions recommended in the manufacturer's installation and operation instructions.'' 87 FR 1554, 1565 (Jan. 11, 2022).

Commenters had varying viewpoints on this topic. AET expressed general agreement with DOE's proposal to add a new definition and product category for circulating water heaters. (AET, No. 29 at p. 1)

[31] Section 5.3.2 of appendix E details the Max GPM rating test for flow-activated water heaters, Table II in section 5.4.1 of appendix E details how to select draw pattern based on Max GPM rating, and sections 5.4.2 and 5.4.3 of appendix E detail the test sequence.

[32] DOE is concurrently evaluating energy conservation standards for commercial water heaters in Docket No. EERE–2021–BT–STD–0027.

[33] An ''aquastat'' is a temperature measuring device typically used to control the water temperature in a separate hot water storage tank.

Rheem supported the addition of a definition for ''circulating water heater'' to 10 CFR 430.2 and accompanying test procedures within appendix E for such products that have residential applications, but the commenter emphasized that the division between consumer and commercial water heaters should be appropriately set. Rheem argued that because a ''circulating water heater'' must use a separate storage tank, circulating water heater product classes should be defined using the storage-type unit input rate criteria (*e.g.,* a gas-fired circulating water heater with an input rate at or below 75,000 Btu/h is a consumer water heater and greater than 75,000 Btu/h is a commercial water heater). Rheem also recommended further investigation as to whether certain capacities of storage-type water heaters could be covered by the ''circulating water heater'' definition. Rheem added that the ''circulating water heater'' definition should be amended to allow a water temperature sensor at the outlet of the water heater. (Rheem, No. 31 at p. 2)

BWC generally disagreed with DOE's proposal that circulating water heaters should be covered as consumer products, arguing that these products are exclusively installed in commercial applications as either part of a recirculation loop or coupled to an unfired hot water storage tank. BWC also noted that circulating water heaters heat water to higher temperatures than consumer instantaneous water heaters do. BWC argued that classifying circulating water heaters as consumer products would provide little to no benefit to consumers, place additional burden on manufacturers, and cause market confusion as to how these products are specified and designed for field applications. (BWC, No. 33 at pp. 1–2)

AHRI expressed concerns about including circulating water heaters in a residential water heaters test procedure because they are mostly used in commercial applications, even with input rates below 200,000 Btu/h. In lieu of a solution in the test procedure, AHRI requested that DOE reinstate the enforcement policy on circulating water heaters.[34] (AHRI, No. 40 at p. 5) A.O. Smith provided similar comments, suggesting that DOE should reissue the September 5, 2019 enforcement policy for gas-fired circulating water heaters, or alternatively identify them in the test procedure as ''historically regulated as commercial water heating equipment'' that ''can be tested via the thermal efficiency energy metrics; and . . . therefore should not be subjected to UEF requirements.'' (A.O. Smith, No. 37 at pp. 2–3) Like AHRI and A.O. Smith, BWC recommended reinstating the September 2019 enforcement policy to allow industry to determine the proper test procedure. (BWC, No. 33 at pp. 1–2)

EEI requested more information on the size of the existing stock and current sales volumes of circulating water heaters. (EEI, Jan. 27, 2022 Public Meeting Transcript, No. 27 at pp. 46–47)

In response, the Department reiterates that EPCA directed DOE to develop a test procedure that applies, to the maximum extent practicable, to all water heating technologies in use and to future water heating technologies. (42 U.S.C. 6295(e)(5)(H)) As a circulating water heater could be designed to operate in a similar manner to other consumer water heaters (*i.e.,* ''heat pump-only'' water heaters) and at conditions appropriate for residential applications, DOE is required to address these products in appendix E with other classes of consumer water heaters. Furthermore, the definition for ''consumer product'' states that it is an article ''of a type'' that is distributed for personal use or consumption by individuals ''without regard to whether such article of such type is in fact distributed in commerce for personal use or consumption by an individual.'' (42 U.S.C. 6291(1))

In response to Rheem's comment, circulating water heaters have high input rate to storage volume ratios, which classify these products as instantaneous-type water heaters (*see* 10 CFR 430.2 and 42 U.S.C. 6291(27)(B)). As such, the statutory definition of a storage-type water heater (found at 42 U.S.C. 6291(27)(A)) does not cover circulating water heaters because circulating water heaters have no more than one gallon of water per 4,000 Btu/h of input. As a result, the 75,000 Btu/h upper limit on the input rate for gas-fired storage-type water heaters would not apply and will not be included in the scope of the definition of ''circulating water heater.''

In response to BWC's comments, DOE notes that hot water delivery temperature is not related to the statutory definition of coverage. Rather, EPCA defines whether a water heater is covered as a consumer product primarily according to its input rating, without regard to its maximum hot water delivery temperature. DOE also concludes that classifying circulating water heaters (that meet the input rating requirements) as consumer products would provide a benefit to consumers by allowing them to compare circulating water heaters alongside other consumer water heaters with a UEF rating. Under 42 U.S.C. 6293(b), EPCA requires that DOE test procedure not place undue burden on manufacturers. In this instance, although test burden would increase for manufacturers of circulating water heaters, it would not be considered an undue burden, because these water heaters are consumer products (by definition) and, therefore, should be subject to consumer water heater test procedures. Contrary to BWC's assertion, DOE concludes that covering circulating water heaters as consumer products would reduce or resolve market confusion surrounding these products; since they can be used in residential applications, they should be rated accordingly.

In response to A.O. Smith's comment requesting DOE to consider circulating gas-fired water heaters as historically regulated as commercial water heaters and sufficiently described by the commercial water heater metrics, DOE is not expanding the scope to products which are ''historically regulated as commercial water heating equipment'' because DOE is only considering circulating gas-fired water heaters with input rates less than or equal to 200,000 Btu/h, which meet the existing statutory definition for consumer water heaters (and, thus, do not meet the definition for gas-fired instantaneous commercial water heaters). Furthermore, DOE clarifies that the Department is not considering these gas-fired circulating water heaters (ones which meet the existing statutory definition for consumer water heaters) to be residential-duty commercial water heaters.

In response to the July 2022 SNOPR, BWC and AHRI once again reiterated their understanding that circulating water waters are used almost exclusively in commercial applications. (BWC, No. 48 at p.4; AHRI, No. 55 at p. 5) BWC requested that DOE exercise authority granted under the American Manufacturing Technical Corrections Act (AEMTCA) (42 U.S.C. 6295(e)(5)(F)) to regulate circulating water heaters as commercial products even though they meet residential definitions, or clearly demonstrate residential use. (BWC, No. 48 at p. 4) AHRI suggested that addressing circulating water heaters in a consumer rulemaking would cause confusion because their efficiency metric is different from conventional consumer water heaters. (AHRI, No. 55 at p. 5)

In response, EPCA allows DOE to provide an exclusion from the uniform

[34] DOE had issued an enforcement policy for circulating water heaters that expired on December 31, 2021.

efficiency descriptor for specific categories of otherwise covered water heaters that do not have residential uses, that can be clearly described, and that are effectively rated using the current thermal efficiency and standby loss descriptors. (42 U.S.C. 6295(e)(5)(F)(i)) [35] However, DOE reads this statutory provision as only permitting exclusion of water heaters that were categories of covered *commercial* water heaters under section 342(a)(5) of EPCA [42 U.S.C. 6313(a)(5)]. It does not grant DOE authority to exclude consumer water heaters from the ambit of the uniform test procedure, nor to somehow convert consumer water heaters to commercial water heaters and to subject them to energy conservation standards applicable to commercial water heaters. In the present case, it is clear that the circulating water heaters in question are consumer water heaters, given that they have input rates below 200,000 Btu/h, and they otherwise meet the definitional criteria of the statute for an instantaneous-type water heater (*see* 42 U.S.C. 6291(27)(B)). Moreover, circulating water heaters have the demonstrated ability to perform tank loading or recirculating loop operation, as would indicate that these products do have clearly described residential uses. Consequently, in response to these comments, DOE notes that because both heat pump-only and gas-fired circulating water heaters meet the requirements to be classified as consumer products under EPCA, the statute requires that such water heaters must be tested according to DOE test procedure at appendix E.

This final rule establishes a test method to determine the UEF of consumer circulating water heaters. Effective and compliance dates are discussed further in section III.I of this document.

In development of this final rule, DOE was not able to discern rates of shipments and amount of stock for consumer circulating water heaters as EEI had requested. However, DOE did identify circulating water heater models currently on the market that are consumer water heaters. DOE has determined that circulating water heaters may have a water temperature sensor at the inlet or at the outlet of the water heater—as suggested by Rheem—and, therefore, the Department agrees with Rheem and is adopting the following definition for ''circulating water heater'' at 10 CFR 430.2:

Circulating water heater means an instantaneous or heat pump-type water heater that does not have an operational scheme in which the burner, heating element, or compressor initiates and/or terminates heating based on sensing flow; has a water temperature sensor located at the inlet or at the outlet of the water heater or in a separate storage tank that is the primary means of initiating and terminating heating; and must be used in combination with a recirculating pump and either a separate storage tank or water circulation loop in order to achieve the water flow and temperature conditions recommended in the manufacturer's installation and operation instructions.

b. Low-Temperature Water Heaters

DOE has identified certain flow-activated water heaters that are designed to deliver water at temperatures below the set point temperature of 125 °F ±5 °F (51.7 °C ±2.8 °C) that is required by section 2.5 of the currently applicable appendix E (hereinafter referred to as ''low-temperature'' water heaters). These low-temperature water heaters (often referred to as ''handwashing'' or ''point-of-use'' water heaters in marketing literature) typically have low heating rates, which requires the testing agency to reduce the flow rate in order to be able to achieve the outlet temperature within the set point temperature range. However, these units also have a minimum activation flow rate below which the unit shuts off. To the extent that a unit would stop heating water when the flow rate is too low, there may be no flow rate at which the unit would operate and deliver water at the outlet temperature required under section 2.5 of appendix E. Further, the definition of water heater or electric instantaneous water heater does not include a minimum water delivery temperature. To the extent that a low-temperature water heater uses electricity as the energy source, has a nameplate input rating of 12 kilowatts or less, and contains no more than one gallon of water per 4,000 Btu per hour of input, it would be an electric instantaneous water heater. 10 CFR 430.2. Therefore, because such products are within the scope of consumer water heater coverage under EPCA, the appendix E test procedure should address them; however, the currently applicable appendix E does not address them.

DOE requested information in the April 2020 RFI on testing these products at a lower set point temperature and other potential changes which may be necessary to accommodate these types of models. 85 FR 21104, 21113 (April 16, 2020). Several commenters on the April 2020 RFI recommended that the test procedure be modified to indicate a lower set point temperature for testing, such as the maximum water temperature delivery that the model is capable of delivering (see NOPR discussion for complete details). 87 FR 1554, 1582 (Jan. 11, 2022).

In the January 2022 NOPR, DOE proposed to define a ''low-temperature water heater'' as an electric instantaneous water heater that is not a circulating water heater and cannot deliver water at a temperature greater than or equal to the set point temperature specified in section 2.5 of appendix E to subpart B of this part when supplied with water at the supply water temperature specified in section 2.3 of appendix E to subpart B of this part. DOE also tentatively determined that lowering the set point temperature for low-temperature water heaters to their maximum possible delivery temperature would allow these water heaters to be tested appropriately and in a representative manner. As such, DOE proposed to require low-temperature water heaters to be tested to their maximum possible delivery temperature. 87 FR 1554, 1583 (Jan. 11, 2022).

AET agreed with DOE's proposal to add a new definition and product category for low-temperature water heaters. (AET, No. 29 at p. 2) EEI requested more information on the size of the existing stock, as well as the current sales volumes of low-temperature water heaters. (EEI, Jan, 27, 2022 Public Meeting Transcript, No. 27 at pp. 46–47) As with circulating water heaters, DOE does not currently have this information available but will continue to gather this data to the extent possible.

Rheem commented that the proposed definition for ''low-temperature water heater'' should include water heaters with less than 10 gallons of storage and clarify how it is different from other electric water heaters. Rheem suggested that the installation and operation (I&O) manual could be referenced to determine delivery temperature limits, but alternatively, manufacturers could certify supplemental testing instructions to DOE (*i.e.,* when testing an electric instantaneous water heater set according to the I&O manual and cannot meet the required delivery temperature, the unit should be tested according to the

[35] DOE acted in accordance with EPCA provisions as specified at 6295(e)(5)(F)(i) when establishing product classes for residential-duty commercial water heaters. In a July 2014 Final Rule establishing the UEF test procedure, DOE determined that covered commercial water heating equipment that did not meet the definition of a ''residential-duty commercial water heater'' met the criteria in EPCA for exclusion from the uniform efficiency descriptor. 79 FR 40542, 40545–40547 (July 11, 2014).

maximum delivery temperature). (Rheem, No. 31 at p. 3)

In response to the comments from Rheem, DOE notes that the inability to deliver water at the specified outlet water temperatures in appendix E is independent of the storage volume of the water heater. Hence, restricting this product type definition to only those water heaters that have less than 10 gallons of storage volume may unintentionally leave larger low-temperature water heaters without adequate test provisions in appendix E. This inability to deliver water at 125 °F ±5 °F—*specifically at the appendix E flow rate*—serves as the key distinguishing factor between low-temperature water heaters and other electric instantaneous water heaters. While the maximum delivery temperatures may be noted in an I&O manual, as Rheem suggested, this must be verified under the test conditions (most notably the supply water temperatures) specified in appendix E. Section 5.2.2 of the amended appendix E includes instructions for setting the outlet discharge temperature. Should the flow rate need to be reduced in order to meet the outlet temperature requirements, then the product would meet the criterion for a low-temperature water heater.

In this final rule, DOE is adopting a slightly modified definition for ''low-temperature water heater,'' taking into account the comments provided by Rheem. Accordingly, DOE is defining ''low-temperature water heater'' as an electric instantaneous water heater that is not a circulating water heater and cannot deliver water at a temperature greater than or equal to the set point temperature specified in section 2.5 of appendix E when supplied with water at the supply water temperature specified in section 2.3 of appendix E at the flow rate specified in section 5.2.2.1 of appendix E. (DOE is including language which specifies that the delivery temperature is that which results from the appendix E flow rate.)

c. Tabletop Water Heaters

As discussed in the January 2022 NOPR, the definition for ''tabletop water heater'' was removed from appendix E as part of the July 2014 Final Rule but was inadvertently not added to 10 CFR 430.2 (79 FR 40542, 40567–40568 (July 14, 2014)). 87 FR 1554, 1566 (Jan. 11, 2022). Up until then, ''tabletop water heater'' was defined as a water heater in a rectangular box enclosure designed to slide into a kitchen countertop space with typical dimensions of 36 inches high, 25 inches deep, and 24 inches wide. 66 FR 4474, 4497 (Jan. 17, 2001). In the January 2022 NOPR, after considering comments on the April 2020 RFI, DOE proposed to add the definition of tabletop water heater 10 CFR 430.2, as it read prior to being removed from appendix E. 87 FR 1554, 1556.

In response to the January 2022 NOPR, AET agreed with re-instating the definition for tabletop water heater at 10 CFR 430.2. (AET, No. 29 at p. 2)

DOE did not receive any other comment relating to this proposal, so the Department is re-instating the definition for ''tabletop water heater'' at 10 CFR 430.2, as proposed.

d. Solar Water Heaters

In response to an RFI published on May 21, 2020 (May 2020 RFI), regarding the energy conservation standards for consumer water heaters (85 FR 30853), the Solar Rating & Certification Corporation (SRCC) recommended that solar water heating technologies be considered for inclusion in the energy conservation standards and test procedures for consumer water heaters. SRCC stated that without the involvement of DOE, the industry metrics struggle to gain acceptance with policymakers and consumers. SRCC also stated that DOE rulemakings to include solar-equipped water heaters in regulations would serve to establish a single performance metric and signal the legitimacy of solar water heating technologies. (Docket: EERE–2017–BT–STD–0019, SRCC, No. 11 at pp. 3–4)

Subsequently, on October 7, 2020, SRCC published a draft test procedure titled, ''Solar Uniform Energy Factor Procedure for Solar Water Heating Systems'' (SUEF test method).[36] The draft SRCC test procedure addresses methods to test different types of solar water heaters.

In the January 2022 NOPR, DOE responded to SRCC's comment on the May 2020 RFI, by noting that on April 8, 2015, DOE published an energy conservation standards NOPR (the April 2015 NOPR) addressing definitions for consumer water heaters (80 FR 18784). 87 FR 1554, 1585 (Jan. 11, 2022). DOE further noted that the April 2015 NOPR proposed definitions for ''solar-assisted fossil fuel storage water heater'' and ''solar-assisted electric storage water heater'' and clarified that water heaters meeting these definitions are not subject to the amended energy conservation standards for consumer water heaters established by the April 2010 final rule. *Id.* DOE stated its intention to address solar water heaters in a separate rulemaking. *Id.* In response to the January 2022 NOPR, SEA commented that DOE should account for solar water heaters in its test procedure and energy conservation standards. (SEA, No. 24 at p. 1)

In response, DOE notes that ''solar water heater,'' as defined in section 5.1 of SRCC's SUEF test method, include a solar collector or module that is directly exposed to solar radiation outdoors and is often separated from a storage tank and/or back-up water heater located indoors. Therefore, appendix E does not currently accommodate these products, and an in-depth evaluation of the modifications to appendix E necessary to accommodate the testing of these products is required. Given the lack of available test data utilizing the SUEF test method, DOE is not amending the scope of the appendix E test procedure in this rulemaking to explicitly include solar water heaters at this time. However, DOE will continue to consider these solar water heater products further, and depending upon the conclusions reached, the Department may address them in a separate future rulemaking, as appropriate.

B. Updates to Industry Standards

Prior to the effective date of this final rule, the applicable DOE test procedure in appendix E referenced the following industry standards:

- ASHRAE 41.1–1986 (Reaffirmed 2006), Standard Method for Temperature Measurement (ASHRAE 41.1–1986 (RA 2006)); and
- ASTM D2156–09, (ASTM D2156–09), Standard Test Method for Smoke Density in Flue Gases from Burning Distillate Fuels.

ASHRAE 41.1–1986 (RA 2006) was superseded by ASHRAE 41.1–2013 on January 30, 2013 (ASHRAE 41.1–2013). ASHRAE 41.1–2013 was superseded by ASHRAE 41.1–2020 on June 30, 2020. Updates to ASHRAE 41.1 are discussed in section III.B.1 of this document.

ASTM D2156–09 was reapproved without modification in 2018 (ASTM D2156–09 (RA 2018)). In the January 2022 NOPR, DOE proposed to update appendix E to reference the most recent version of ASTM D2156 (*i.e.,* ASTM D2156–09 (RA 2018)). 87 FR 1554, 1567 (Jan. 11, 2022). DOE did not receive any comments in response to its proposal. Therefore, DOE is updating the reference of ASTM D2156–09 to the most recent industry standard (*i.e.,* ASTM D2156–09 (RA 2018)). DOE is also incorporating by reference ASTM E97–1987 (W1991) because it is

[36] SRCC's draft Solar Uniform Energy Factor Procedure for Solar Water Heating Systems is available at: *www.iccsafe.org/wp-content/uploads/is_stsc/Solar-UEF-Specification-for-Rating-Solar-Water-Heating-Systems-20201012.pdf* (Last accessed on July 13, 2022).

necessary to perform procedures within ASTM D2156–09 and ASTM D2156–09 (RA 2018).[37]

As discussed previously in this document, ASHRAE maintains a water heater test procedure, ANSI/ASHRAE Standard 118.2, ''Method of Testing for Rating Residential Water Heaters.'' The test procedure specified in ANSI/ASHRAE 118.2–2006 (RA 2015) is similar to the DOE test procedure that was in effect prior to the July 2014 final rule, although neither the previous DOE consumer water heater test procedure nor the version in place prior to this final rule reference ANSI/ASHRAE Standard 118.2–2006 (RA 2015). In March 2019, ASHRAE published the March 2019 ASHRAE Draft 118.2, the second public review draft of Board of Standards Review (BSR) ANSI/ASHRAE Standard 118.2–2006R, ''Method of Testing for Rating Residential Water Heaters and Residential-Duty Commercial Water Heaters,'' which DOE referenced in the April 2020 RFI. 85 FR 21104, 21109–21111 (April 16, 2020). In April 2021, ASHRAE published substantive changes to a previous public review draft [38] of BSR ANSI/ASHRAE Standard 118.2–2006R, ''Method of Testing for Rating Residential Water Heaters and Residential-Duty Commercial Water Heaters'' (April 2021 ASHRAE Draft 118.2). The January 2022 NOPR examined these public review drafts and discussed the differences between them and the DOE test procedure. 87 FR 1554, 1567 (Jan. 11, 2022).

On January 24, 2022, ASHRAE published a revised edition of the 118.2 standard, ''Method of Testing for Rating Residential Water Heaters and Residential-Duty Commercial Water Heaters,'' ASHRAE 118.2–2022. The published edition finalized revisions shown in the March 2019 and April 2021 public review drafts.

In comments responding to the January 2022 NOPR, Lutz encouraged DOE to incorporate by reference the industry test standard ASHRAE 118.2–2022. Lutz also recommended DOE review the test procedures in use in Europe and Japan. (Lutz, No. 35 at p. 1) BWC supported DOE's proposal to incorporate by reference the latest industry test standards. (BWC, No. 33 at p. 2)

As discussed previously in this document, DOE will adopt industry test standards as DOE test procedures for covered products and equipment, unless such methodology would be unduly burdensome to conduct or would not produce test results that reflect the energy efficiency, energy use, water use (as specified in EPCA) or estimated operating costs of that equipment during a representative average use cycle. (10 CFR part 430, subpart C, appendix A, section 8(c)) In this final rule, DOE is harmonizing provisions in appendix E to align with certain updates in ASHRAE 118.2–2022 rather than incorporate the entire industry test standard. DOE has concluded that certain updates in ASHRAE 118.2–2022 do not meet the EPCA criteria outlined in this paragraph and has, thus, determined that those updates should not be incorporated into the DOE test procedure at appendix E. DOE's assessment of ASHRAE 118.2–2022 is laid out in detail in section III.B.2 of this document.

Finally, as discussed in the July 2022 SNOPR, DOE has reviewed NEEA's Advanced Water Heating Specifications in order to assess optional rating conditions and methods for heat pump water heaters. This test procedure was identified by stakeholders in response to the January 2022 NOPR as becoming a widely used methodology to provide alternate ratings for heat pump water heaters at different climate conditions. 87 FR 42270, 42275–42276 (July 14, 2022). In the January 2022 NOPR, DOE discussed comments previously received on the April 2020 RFI suggesting that DOE explore the usage of NEEA's Advanced Water Heating Specification—which was at version 7.0 at the time—for voluntary climate-specific efficiency representations of heat pump water heaters. 87 FR 1554, 1580 (Jan. 11, 2022). In response to those comments, DOE stated that it did not have data to indicate what conditions would be representative for regional representations, and, thus, DOE tentatively determined not to allow optional representations of additional efficiency ratings at test conditions other than those found in the DOE test procedure (which are representative of the Nation as a whole), such as those made in accordance with NEEA's Advanced Water Heating Specification. *Id.* However, as discussed in the July 2022 SNOPR, DOE has re-evaluated the benefits to consumers provided by optional representations. 87 FR 42270, 42275–42277 (July 14, 2022). In this final rule, DOE is including optional test conditions for heat pump water heaters aligning with version 8.0 (the latest version) of NEEA's Advanced Water Heating Specification. This matter is discussed in further detail in section III.C.7 of this document.

1. ASHRAE 41.1–2020

As stated previously, ASHRAE 41.1–1986 (RA 2006) was superseded by ASHRAE 41.1–2013, and ASHRAE 41.1–2013 was superseded by ASHRAE 41.1–2020. ASHRAE 41.1–2013 removed the aspirated wet-bulb psychrometer descriptions and stated they would be included in the next revision to ASHRAE 41.6, ''Standard Method for Humidity Measurement.'' ASHRAE 41.6 was updated on July 3, 2014, and included the aspirated wet-bulb psychrometer descriptions that were removed in ASHRAE 41.1–2013. ASHRAE 41.1–2013 also added uncertainty analysis for temperature measurements, information for thermistor-type devices, descriptions for thermopiles, and reorganized the standard to be consistent with other ASHRAE standards. ASHRAE 41.1–2020 added conditional steady-state test criteria and further updated the standard to meet ASHRAE's mandatory language requirements.

As discussed in the January 2022 NOPR, section 3.2.1 of appendix E requires that temperature measurements be made in accordance with ASHRAE 41.1–1986 (RA 2006), and section 3.2.2 of appendix E provides accuracy and precision requirements for air dry-bulb, air wet-bulb, inlet and outlet water, and storage tank temperatures. Sections 5.2.2.1 and 5.3.2 of appendix E effectively require steady-state operation in which the flow-activated water heater is operating at the maximum input rate, is supplied with water at a temperature of 58 °F ±2 °F, and delivers water at a temperature of 125 °F ±5 °F. 87 FR 1554, 1567 (Jan. 11, 2022).

In the development of this final rule, DOE reviewed ASHRAE 41.1–1986 (RA 22006), ASHRAE 41.1–2013, and ASHRAE 41.1–2020 and found that the sections most relevant to appendix E are the temperature measurement sections (*i.e.,* sections 5 through 11 of ASHRAE 41.1–1986 (RA 2006), section 7 of ASHRAE 41.1–2013, and section 7 of ASHRAE 41.1–2020) [39] and the steady-state test criteria added in ASHRAE 41.1–2020. The information in the

[37] Certain methods provided as part of ASTM E97–1987 (W1991) are directly referenced by ASTM D2156–09 and ASTM D2156–09 (RA 2018). Copies of ASTM E97–1987 (W1991) are readily available from ASTM International, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA 19428–2959 or online at: *www.astm.org.* (Last accessed on Sept. 20, 2022.)

[38] The April 2021 ASHRAE Draft 118.2 shows only the proposed substantive changes to the March 2019 ASHRAE Draft 118.2. All sections not included in the April 2021 ASHRAE Draft 118.2 are as proposed in the March 2019 ASHRAE Draft 118.2 or have not been changed in a way that their content affects the results of the test procedure proposed in the March 2019 ASHRAE Draft 118.2.

[39] Sections 5 through 11 of ASHRAE 41.1–1986 (RA 2006) were combined into section 7 of ASHRAE 41.1–2013.

temperature measurement sections of the examined three versions of ASHRAE 41.1 does not vary significantly. The additional steady-state test criteria of ASHRAE 41.1–2020 varies significantly from and is more stringent than [40] the criteria specified in sections 5.2.2.1 and 5.3.2 of appendix E; however, the appendix E criteria supersede those in ASHRAE 41.1–2020.

In the January 2022 NOPR, DOE tentatively determined that updating the reference of ASHRAE 41.1–1986 (RA 2006) to the most recent version of the industry standard (*i.e.,* ASHRAE 41.1–2020) would not have a significant effect on the test results, as the content of the relevant sections of the ASHRAE 41.1 standards have not changed significantly and the new content published in ASHRAE 41.1–2020 is superseded by appendix E. As such, DOE proposed to update the reference of ASHRAE 41.1–1986 (RA 2006) to ASHRAE 41.1–2020. ASHRAE 41.1–2020 references ASHRAE 41.6–2014 and requires its use when measuring the wet-bulb temperature. The wet-bulb temperature is required when testing heat pump water heaters to appendix E, and, therefore, DOE also proposed to incorporate by reference ASHRAE 41.6–2014. 87 FR 1554, 1567–1568 (Jan. 11, 2022).

DOE did not receive any comments in response to its proposals to incorporate by reference ASHRAE 41.1.–2020 and ASHRAE 41.6–2014; therefore, DOE is incorporating by reference both standards in this final rule for the reasons previously stated.

2. ASHRAE 118.2–2022

ASHRAE 118.2–2022, published on January 24, 2022 and approved by ANSI on March 1, 2022, supersedes ASHRAE 118.2–2006. The foreword to ASHRAE 118.2–2022 states that it was derived from the DOE appendix E test procedure but also has several substantive changes. Specifically, it notes that a major change was to move the conditions of the test (air temperature, humidity, inlet and outlet water temperatures) and draw patterns to an Informative Appendix A, ''U.S. Values for Test Variables,'' indicating that this test standard has been revised such that it can easily be applied with other test conditions and draw patterns. Additionally, the foreword states that other changes include clarifying the timing of the standby period, clarifying the end of the recovery period, specifying that the density of water used in calculations be measured at the outlet, and adjusting the FHR flow rate for smaller tanks and defining a draw time limit if the water heater can keep up with the FHR flow rate. The following subsections of this final rule discuss the substantial differences between the updated ASHRAE 118.2–2022 test standard and DOE's existing appendix E test procedure. Based on a review of its own test data and stakeholder feedback, the Department is not adopting every update in ASHRAE 118.2–2022 into the amended appendix E test procedure promulgated by this final rule. DOE has provided discussion of the amendments being made to harmonize with ASHRAE 118.2–2022 in section III.B.2.b of this document, whereas other updates in ASHRAE 118.2–2022 not being adopted are discussed in section III.B.2.c of this document.

AET generally supported DOE's proposal to adopt most aspects of ASHRAE 118.2 but noted that the definition of ''UEF'' in ASHRAE 118.2 is different from the definition of that term used by DOE. AET noted that a UEF rating per ASHRAE Standard 118.2 would not be comparable to a UEF rating per DOE's test procedure due to differences in test conditions. (AET, No. 29 at pp. 6–7) DOE agrees that there could be differences between the UEF test result from ASHRAE 118.2–2022 and the amended appendix E test procedure from this final rule. Where differences between these test procedures exist, the requirements at 10 CFR 430.23 and appendix E control. As such, manufacturers must ensure that any representations of ''UEF'' are made in accordance with the applicable version of the DOE test procedure.

a. Scope

Section 2 of ASHRAE 118.2–2022 states that the industry test standard applies to water heaters designed to be capable of providing outlet water at a controlled temperature of at least the nominal outlet water temperature under the conditions specified in the standard. As discussed in section III.A.4.b of this final rule, the January 2022 NOPR proposed to expand the scope of the DOE test procedure to include low-temperature water heaters. 87 FR 1554, 1582–1583 (Jan. 11, 2022). As such, the scope of ASHRAE 118.2–2022 is narrower than the test procedure proposed in DOE's January 2022 NOPR and July 2022 SNOPR because it explicitly excludes low-temperature water heaters. In order to include low-temperature water heaters within the scope of the amended appendix E test procedure, DOE is including testing provisions which are not in ASHRAE 118.2–2022 to allow for the testing of low-temperature water heaters. These test methods are discussed in section III.E.3 of this final rule.

Additionally, the scope of ASHRAE 118.2–2022 differs significantly from the scope of products covered under the EPCA definition for consumer ''water heater'' and DOE's definition for ''residential-duty commercial water heater.'' For example, section 2 of ASHRAE 118.2–2022 limits the storage volume for storage-type water heaters to 120 gallons or less and limits the maximum delivery temperature to 180 °F (82 °C), whereas EPCA does not place limits on storage volume or maximum delivery temperature for consumer water heaters. (42 U.S.C. 6291(27); 42 U.S.C. 6311(12)(A)–(B))) The scope of electric instantaneous water heaters covered by ASHRAE 118.2–2022 equates to the limit for residential-duty commercial electric instantaneous water heaters; however, section 2.2 of ASHRAE 118.2–2022 does not specify any limits on storage volume, and as a result, it covers certain commercial electric instantaneous water heaters—whereas the currently applicable appendix E test procedure does not. Section 2.1 of ASHRAE 118.2–2022 has a definition for ''electric heat-pump storage water heater'' which explicitly limits the nameplate input rating to 12 kilowatts or less, which, as discussed in section III.A.2.a of this final rule, does not correspond to the statutory limit for heat pump-type units and would include commercial heat pump water heaters (which are outside of the scope of the appendix E test procedure). Finally, section 2.4 of ASHRAE 118.2–2022 limits gas-fired heat pump storage water heaters to nameplate input ratings no greater than 20,000 Btu/h, which is significantly lower than the statutory limit of 75,000 Btu/h (*see* 42 U.S.C. 6291(27)(A) and the discussion in section III.A.2.b of this document).

In the January 2022 NOPR, DOE evaluated feedback from commenters indicating that most aspects of the test methods in ASHRAE 118.2–2022 [41] were still applicable outside of its formal scope of coverage. 87 FR 1554, 1568 (Jan. 11, 2022). In the January 2022

[40] Section 5.5.3 of ASHRAE 41.1–2020 would be used to determine steady-state operation within sections 5.2.2.1 and 5.3.2 of appendix E. Using this criteria, a flow-activated water heater delivering water between 120 °F and 121 °F, which is within the current delivery temperature range of 125 °F ± 5 °F, would not be considered in steady-state due to the difference in temperature between the average of the sample and the set point temperature.

[41] ASHRAE 118.2–2022 was published on January 24, 2022, which was after the January 2022 NOPR was published in the **Federal Register** on January 11, 2022; thus, the NOPR only discusses public review drafts of ASHRAE 118.2–2022 which were available at the time.

NOPR, DOE stated that it has found through testing that models with rated storage volumes above 120 gallons or that can deliver water above 180 °F can be tested to DOE's appendix E test procedure, and, given the similarities between the currently applicable DOE test procedure and ASHRAE 118.2–2022, DOE tentatively determined that such models could also be tested using the methods in the ASHRAE test standard. *Id.* DOE did not receive any comments in response to this tentative conclusion in the January 2022 NOPR. Therefore, in evaluating the provisions within ASHRAE 118.2–2022, DOE has determined that its test methods remain applicable to all consumer water heaters and residential-duty commercial water heaters within the scope of appendix E (with the exception of low-temperature water heaters). As proposed in the January 2022 NOPR, this final rule makes several amendments to appendix E to harmonize with new provisions in ASHRAE 118.2–2022. Additionally, DOE determined that methods specified in annex B of ASHRAE 118.2 were applicable to the associated test procedures of this rulemaking, and, therefore, the Department has incorporated by reference ASHRAE 118.2–2022 for use in appendix E, with annex B being the directly applicable provision.

b. Provisions in ASHRAE 118.2–2022 Being Addressed by DOE

Thermal Break

ASHRAE 118.2–2022 specifies the use of a ''thermal break'' in the test set-ups shown for free-standing water heaters and water heaters supplied with a countertop enclosure (*see* Figures 1, 2, 3, 6, 7, 8, and 9 of ASHRAE 118.2–2022). A thermal break is optional in the ASHRAE 118.2–2022 test set-ups shown for wall-mounted water heaters (*see* Figures 4 and 5 of ASHRAE 118.2–2022).

ASHRAE 118.2–2022 defines a ''thermal break'' in section 3 as a nipple made of material that has thermal insulation properties (*e.g.* plastics) to insulate the bypass loop from the inlet piping. It should be able to withstand a pressure of 150 psi (1.034 MPa), and a temperature greater than the maximum temperature the water heater is designed to produce. A thermal break is added to the test set-up to prevent heat from traveling up the inlet piping into a bypass line, if one is utilized. (ASHRAE 118.2–2022 requires a bypass line to be installed, whereas the existing appendix E test procedure does not.) When purging the inlet piping before a draw, any heat that is transferred from the water heater through the inlet piping to the bypass line section would be lost, as the bypass line is replenished with cold supply water. The thermal break helps to prevent this heat loss.

In this rulemaking, DOE has sought feedback from stakeholders in the April 2020 RFI as to whether a thermal break should be required in the DOE test procedure regardless of whether a bypass line is used, and additionally, whether DOE should adopt a definition for this set-up component. 85 FR 21104, 21110 (April 16, 2020). The January 2022 NOPR discussed the mixed comments received on this topic. In summary, three commenters stated that a thermal break should be included in the test set-up regardless of whether there is a bypass or purge line; however, three others (including a testing standards organization, CSA Group) stated that a thermal break is not needed if no bypass or purge loop is present. Several commenters indicated that a standardized definition for a ''thermal break'' would be beneficial for repeatability of the test procedure. 87 FR 1554, 1569 (Jan. 11, 2022).

In the January 2022 NOPR, DOE explained that a bypass line is a method that test laboratories use to ensure inlet water temperatures are within the bounds of the test procedure (*i.e.,* within 58 °F ±2 °F by the first measurement of the draw), but its inclusion in the test set-up can create a condition whereby a constant low temperature can remove energy from the water heater at a higher rate than would be removed in the field. Because a bypass line is not the only approach to maintaining inlet conditions, DOE had tentatively determined that requiring a thermal break (and providing a definition for this component) would not be necessary. *Id.*

BWC responded by indicating that it is not aware of any manufacturer or test laboratory omitting the use of a thermal break, and, therefore, DOE should adopt a definition for ''thermal break'' to ensure consistent results from laboratory to laboratory. The commenter recommended that a thermal break should be defined as ''a plastic and thermally non-conductive material that can withstand a minimum temperature of 150 °F.'' BWC also stated that its testing indicated that when a bypass line (also known as a ''purge loop'') is used, all temperatures more consistently met the tolerance criteria in appendix E; furthermore, test results were more often out of tolerance when a bypass line was not used. BWC argued that as a result, use of a bypass line will remain common practice, and as such, thermal breaks will also continue to be used. (BWC, No. 33 at p. 3)

DOE has considered the comments received on this topic throughout this rulemaking, and, although DOE maintains that a thermal break would not be needed in all set-up cases, the Department has concluded that there is overwhelming support for establishing a standardized definition for ''thermal break.'' In order to address concerns regarding the repeatability of the test procedure (*i.e.,* various facilities maintaining a consistent set-up approach), DOE is adopting a definition for this component consistent with that in section 3 of ASHRAE 118.2–2022, but with minor modification. Specifically, DOE is defining ''thermal break'' as ''a thermally non-conductive material that can withstand a pressure of 150 psi (1.034 MPa) at a temperature greater than the maximum temperature the water heater is designed to produce and is utilized to insulate a bypass loop, if one is used in the test set-up, from the inlet piping.'' However, DOE is not requiring the use of a bypass loop or a thermal break in this final rule. DOE reasons that providing a definition for a thermal break will improve consistency in test set-ups when the testing agency opts to use a bypass loop with a thermal break.

FHR Test Flow Rates

Section 7.3.3.1 of ASHRAE 118.2–2022 indicates that the flow rate for non-flow-activated water heaters with rated storage volumes less than 20 gallons would be 1.5 ± 0.25 gallons per minute (gpm) (5.7 ± 0.95 liters (L)/minute (min)) when conducting the FHR test. Section 5.3.3, ''First-Hour Rating Test,'' of appendix E requires that water heaters with a storage volume less than 20 gallons be tested at 1.0 ± 0.25 gpm (3.8 ± 0.95 L/min). These flow rates are lower than the 3.0 ± 0.25 gpm (11.4 ± 0.95 L/min) required for water heaters with rated storage volumes greater than or equal to 20 gallons. Water heaters with low rated storage volumes (less than 20 gallons) and high input rates can potentially operate indefinitely (*i.e.,* instantaneously) at even the 3.0 ± 0.25 gpm (11.4 ± 0.95 L/min) flow rate. Therefore, when such products are tested as currently required by appendix E, the measured FHR is near the maximum possible value of 60 gallons (227 L) [42] and, as a result, these

[42] At 1.0 ±0.25 gallons per minute during the 60-minute first-hour rating test, the maximum possible delivery capacity is 1.0 gallon per minute × 60 minutes = 60 gallons. At 1.5 ± 0.25 gallons per minute during the 60-minute first-hour rating test, the maximum possible delivery capacity is 1.5 gallon per minute × 60 minutes = 90 gallons.

products would be required to use the medium draw pattern according to Table I of appendix E. However, as discussed in the January 2022 NOPR, these models could be used in applications similar to water heaters that are required to test using the high draw pattern, and the existing method of testing these products may not best represent how they are used in the field. Instead, DOE finds that a flow rate of 1.5 ± 0.25 gpm (5.7 ± 0.95 L/min)—as introduced in ASHRAE 118.2–2022—would be sufficient to allow these products to be tested and rated in the high draw pattern. 87 FR 1554, 1569–1570 (Jan. 11, 2022).

In this rulemaking, DOE has sought information from commenters regarding the flow rate for the FHR test of non-flow-activated water heaters with rated storage volumes less than 20 gallons. DOE has also participated in the public review of ASHRAE 118.2 prior to the 2022 edition being released, leading up to the establishment of the 1.5 ± 0.25 gpm (5.7 ± 0.95 L/min) flow rate criteria for these products during the FHR test. DOE also performed testing on three electric storage water heaters less than 20 gallons to both the then currently applicable appendix E and ASHRAE 118.2–2022 flow rates and provided these test data in the January 2022 NOPR. The results indicated that changing the flow rate during the FHR test for water heaters with a rated storage volume less than 20 gallons from 1.0 ± 0.25 gpm (3.8 ± 0.95L/min) to 1.5 ± 0.25 gpm (5.7 ± 0.95 L/min) would have a relatively minimal impact on the FHR for water heaters with low input rates. For models with high input rates, the change in flow rate could significantly increase the FHR and result in some models being tested and rated for UEF using a higher draw pattern, which would provide ratings that are more representative of their actual use. Therefore, DOE proposed to adopt the higher flow rate of 1.5 ± 0.25 gpm (5.7 ± 0.95 L/min) for the FHR test of non-flow-activated water heaters with rated storage volumes less than 20 gallons. 87 FR 1554, 1570 (Jan. 11, 2022).

In response, AHRI indicated that the revised flow rate of 1.5 gpm may not be appropriate for models as small as 2 gallons, for which the proposed change could yield unrepresentative results for FHR. (AHRI, No. 40 at p. 4) AHRI also raised concerns about the accuracy of flow rates for smaller capacity water heaters. (AHRI, Jan. 27, 2022 Public Meeting Transcript, No. 27 at p. 41) Rheem generally supported DOE's proposal to align with ASHRAE 118.2–2022 on this issue. However, Rheem pointed out that the test data provided in the NOPR reflected consumer water heaters in only the very small draw pattern, so Rheem requested DOE to provide further test data and also to conduct testing on products near the division between the very small and low draw patterns. Rheem stated that a change in draw pattern will affect the UEF rating and will need to be taken into account. (Rheem, No. 31 at p. 2)

In response to the concerns raised by AHRI, DOE notes that its test data presented in the January 2022 NOPR were taken from samples in the very small draw pattern (*see* 87 FR 1554, 1570 (Jan. 11, 2022)). DOE has additionally provided the storage volumes of the products which were tested in Table III.1 of this final rule. The samples were all approximately 2 gallons in storage volume, and the 1.5 gpm flow rate was found to be sufficiently representative for these products (the absolute value of the largest percent difference was less than 5 percent). Additionally, as stated in the January 2022 NOPR, the increase in flow rate did not cause any of these products to move from the very small draw pattern to the low draw pattern, which resolves a chief concern regarding the representativeness of the FHR results. *Id.* In response to Rheem's requests for additional data, DOE was not able to identify non-flow-activated water heaters less than 20 gallons closer to 18 gallons of FHR—the division between the very small and low draw patterns—in order to perform testing on such products. However, while the net average change may approximately be a 2-percent increase in FHR rating, DOE has determined that the increased flow rate will allow products to be rated in more representative draw patterns, as discussed earlier in this section.

TABLE III.1—AVERAGE FIRST-HOUR RATING BASED ON A FLOW RATE OF 1.0 GPM AND 1.5 GPM

Unit No.	Measured storage volume, gallons	Average FHR* at 1.0 gpm (3.8 L/min), gallons	Average FHR* at 1.5 gpm (5.7 L/min), gallons	Change %
1	2.4	7.3 (Very Small)	7.5 (Very Small)	+3.4
2	2.4	6.4 (Very Small)	6.2 (Very Small)	-2.2
3	1.8	6.9 (Very Small)	7.2 (Very Small)	+4.7
Net Average			+2.0.	

*FHR results are rounded to the nearest 0.1 gallon and reflect the arithmetic mean of four trials per water heater.

In this final rule, DOE is amending section 5.3.3.1 of the appendix E test procedure to require a flow rate of 1.5 ± 0.25 gpm (5.7 ± 0.95 L/min) when conducting the FHR test on non-flow-activated water heaters with rated storage volumes less than 20 gallons.

24-Hour Simulated-Use Test First Recovery Period

The first recovery period of the 24-hour simulated-use test is used in section 8.3.2 of ASHRAE 118.2–2022 and section 6.3.2 of appendix E to calculate recovery efficiency. Section 8.3.2 of ASHRAE 118.2–2022 specifies that, when the first recovery of the 24-hour simulated-use test ends during a draw, the first recovery period extends until the end of that draw, whereas DOE's test procedure does not explicitly address how to calculate recovery efficiency if the first recovery period ends during a draw.

A ''recovery period'' is defined in section 1 of appendix E as ''the time when the main burner of a storage water heater is raising the temperature of the stored water.'' Each of the parameters in the current recovery efficiency equation in section 6.3.2 of appendix E is recorded from the ''beginning of the test to the end of the first recovery period following the first draw.'' The currently applicable appendix E test procedure does not explicitly state whether values are recorded at the end of the recovery period that ends after the initiation of the first draw, or at the end of a recovery period that occurs after the end of the first draw.

In the January 2022 NOPR, DOE noted that the situation in which a recovery ends during a draw likely occurs during draws with a low enough flow rate that the water heater can heat water more

quickly than the draw is removing. 87 FR 1554, 1574 (Jan. 11, 2022). DOE also explained that the energy used for the recovery efficiency calculation includes energy used to heat water and auxiliary energy; therefore, the energy associated with the first recovery period should represent the entire draw to capture all energy use. *Id.*

On January 31, 2020, DOE published in the **Federal Register** a Notice of Decision and Order [43] (Decision and Order) by which a test procedure waiver for certain basic models was granted to address the issue of a second recovery initiating during the draw during which the first recovery ended. 85 FR 5648. The Decision and Order prescribes an alternate test procedure that extends the first recovery period to include both the first and second recoveries. *Id.* at 85 FR 5652. In the context of the Decision and Order, DOE determined that the consideration of delivered water mass and inlet and outlet temperatures until the end of the draw is appropriately representative, and, therefore, the entire energy used from both recoveries is included. *Id.* at 85 FR 5651–5652.

In the January 2022 NOPR, after considering comments received in response to the April 2020 RFI, DOE proposed to establish a new provision that states that when the first recovery ends during a draw, the first recovery period is extended to the end of the draw and the mean tank temperature measured immediately after cut-out is used as the maximum mean tank temperature value in the recovery efficiency calculation. 87 FR 1554, 1574 (Jan. 11, 2022). In addition, DOE proposed to update the recovery efficiency equation to specify accounting for the mass of water drawn for all draws initiated during the recovery period. DOE noted that such a change would be consistent with the published Notice of Decision and Order and was supported by commenters. *Id.*

In response, BWC stated the proposed updates to the overall test procedure provide a more accurate calculation of recovery efficiency and eliminate situations where products would be disadvantaged for completing their recovery in the middle of a draw, thereby providing a more representative measurement of a product's overall energy efficiency. (BWC, No. 33 at pp. 5–6)

DOE did not receive any other comments in response to these proposals. As such, DOE is amending appendix E to adopt the proposals from the January 2022 NOPR, which are consistent with the alternate test procedure in the Decision and Order and in ASHRAE 118.2–2022.

24-Hour Simulated-Use Test Final Hour

Although not stated explicitly in section 5.4.2 of the currently applicable appendix E, in the case that the standby period is between the first and second draw clusters, power to the main burner, heating element, or compressor is disabled during the last hour of the 24-hour simulated-use test. In the case that the standby period is after the last draw of the 24-hour simulated-use test, power to the main burner, heating element, or compressor is not disabled. Section 5.4.2 of the currently applicable appendix E states that during the last hour of the 24-hour simulated-use test, power to the main burner, heating element, or compressor shall be disabled; at 24 hours, record the reading given by the gas meter, oil meter, and/or the electrical energy meter as appropriate; and determine the fossil fuel and/or electrical energy consumed during the entire 24-hour simulated-use test and designate the quantity as Q. Section 5.4.2 of the currently applicable appendix E also provides that in the case that the standby period is after the last draw of the 24-hour simulated-use test, an 8-hour standby period is required, and this period may extend past hour 24. The procedures for the standby period after the last draw of the 24-hour simulated-use test allow for a recovery to occur at the end of the 8-hour standby period, which indicates that the power to the main burner, heating element, or compressor is not disabled. DOE's procedure, as described, may result in some confusion. Further, the method of determining the total energy use during the 24-hour simulated-use test, Q, and total test time are not explicitly stated for when a standby period occurs after the last draw of the 24-hour simulated-use test. As discussed in the following paragraphs, DOE is amending the procedures for the last hour of the 24-hour simulated-use test, consistent with its proposals in the January 2022 NOPR, to explain how to end the test for both standby period scenarios, and this amendment aligns with the updated approach in ASHRAE 118.2–2022.

In ASHRAE 118.2–2022, power is not disabled when the standby period occurs after the last draw of the test. However, if a recovery occurs between an elapsed time of 23 hours following the start of the test (hour 23) and 24 hours following the start of the test (hour 24), the following alternate approach is applied to determine the energy consumed during the 24-hour simulated-use test: The time, total energy used, and mean tank temperature are recorded at 1 minute prior to the start of the recovery occurring between hour 23 and hour 24, along with the average ambient temperature from 1 minute prior to the start of the recovery occurring between hour 23 and hour 24 to hour 24 of the 24-hour simulated-use test. These values are used to determine the total energy used by the water heater during the 24-hour simulated-use test. This alternate calculation combines the total energy used 1 minute prior to the start of the recovery occurring between hours 23 and 24 and the standby loss experienced by the tank during the time between the minute prior to the recovery start and hour 24. This provision in section 7.4.3.2 of ASHRAE 118.2–2022 does not require the water heater to be de-energized during the standby period. Disabling power to the water heater is typically a manual operation that requires the presence of a technician. In cases where the technician does not disable power at the correct time, a retest of the 24-hour simulated-use test may be necessary. To the extent this provision would eliminate the need to ensure that a unit is switched off for the last hour of the 24-hour simulated-use test, it could reduce test burden.

In the January 2022 NOPR, after considering comments on the April 2020 RFI, DOE tentatively concluded that further evaluation of the alternate procedure presented in the March 2019 ASHRAE Draft 118.2 and April 2021 ASHRAE Draft 118.2 should be conducted before a determination is made on whether DOE should adopt such changes. However, DOE also tentatively determined that the procedure for the last hour of the 24-hour simulated-use test would benefit from further, more explicit instruction, and, thus, DOE proposed to explicitly state how to end the test depending on whether the standby period is between draw clusters 1 and 2 or after the last draw of the test. 87 FR 1554, 1575 (Jan. 11, 2022).

No comments or data were received on this topic in response to the January 2022 NOPR or July 2022 SNOPR.

As such and for the reasons previously stated, DOE is finalizing its proposal from the January 2022 NOPR to clarify how to end the test depending on when the standby period occurs. DOE will continue to evaluate the impacts of fully adopting the ASHRAE 118.2–2022 method and may consider that in a future test procedure rulemaking for the subject water heaters.

[43] Notice of Decision and Order in response to BWC petition for waiver is available at: *www.regulations.gov/document?D=EERE-2019-BT-WAV-0020-0008.*

As discussed in section III.E.4 of this document, DOE is dividing section 5.4.2 of appendix E into two sections: section 5.4.2.1, ''Water Heaters that Can Have Internal Storage Tank Temperature Measured Directly,'' and section 5.4.2.2, ''Water Heaters that Cannot Have Internal Storage Tank Temperature Measured Directly.'' The new section 5.4.2.1 of appendix E provides specific direction on the measurements to be taken if the standby period occurs at the end of the first recovery period after the last draw of the 24-hour simulated-use test. These revised instructions for the final hour of the 24-hour simulated-use test also no longer require disabling the water heater for the standby mode, a change which harmonizes with the procedure in ASHRAE 118.2–2022. DOE has determined that these provisions are appropriate only for water heaters that can have internal storage tank temperatures measured directly, because these steps require recording the mean tank temperature at various points during the final hour. For water heaters that cannot have internal storage tank temperatures measured directly, DOE is adopting an alternative method entirely (discussed in section III.E.7 of this document) which requires a standby period after the final draw and temperature measurements made via estimation.

c. Other Updates

Inlet Water Temperature Measurement Location

In its review of the ASHRAE 118.2–2022 set-up figures, DOE determined that the placement of the inlet water temperature measurement probe differs between ASHRAE 118.2–2022 and the currently applicable appendix E. In ASHRAE 118.2–2022, the inlet water temperature is always measured on the upstream side of the heat trap formed by the U-bend in the required piping, whereas the figures in appendix E vary this location (*i.e.,* either on the upstream side or on the downstream side of the U-bend) depending on the type of water heater being tested.

DOE requested information about the potential impact of this measurement location on energy efficiency results in the January 2022 NOPR. 87 FR 1554, 1569 (Jan. 11, 2022).

On this topic, BWC stated there are inconsistencies in the placement of inlet thermocouples in the set-up figures currently shown in appendix E. BWC suggested adopting the figures in ASHRAE Standard 118.2, as they are representative of most set-ups and illustrate placement of the inlet thermocouples on the upstream side of the U-bend in all instances. BWC also more generally urged DOE to adopt the water heater test set-up figures adopted in ASHRAE 118.2–2022, stating that it is not aware of any testing laboratory that does not utilize the set-ups depicted in these figures. (BWC, No. 33 at pp. 2–3) (DOE understands the ''inconsistencies'' mentioned by BWC as referring to the differences in temperature probe placement for different types of water heaters, as mentioned at the beginning of this subsection.)

AET indicated that there may be problems with the location and orientation of the bypass (purge) line connection in the ASHRAE 118.2–2022 test set-ups when testing small water heaters (*i.e.,* electric instantaneous water heaters). The commenter claimed that without a bypass line installed at the water inlet, it is not possible to meet the test conditions and tolerances for the inlet water temperature during test draws when the measurement location is as specified in the current appendix E test procedure. AET explained that the location of the bypass line combined with the rest of the piping configuration for measuring inlet water temperature can induce a small amount of flow in the piping near the inlet to the water heater, even when a draw is not being conducted and there is no flow through the water heater. According to AET, flow-activated water heaters with especially sensitive flow sensors could initiate heating upon sensing this ''false flow,'' and this would in turn cause the energy consumption under test to increase in an unrepresentative manner. AET provided a detailed description of this phenomenon in its public comment and stated that its claims were substantiated by review of recent test data, though these data were not provided to DOE. AET suggested that one potential solution to the identified problem could be to move the connection point of the purge line and the inlet measurement location further from the water heater. In addition, AET suggested adjusting the various pipe T-junctions and their orientations such that the momentum of a cold-water purge will be directed horizontally away from the pipe direction going to the water heater and not induce a false flow, with the commenter opining that this change could be implemented for all types of water heaters. (AET, No. 29 at pp. 6–9)

As discussed in the January 2022 NOPR, maintaining the same inlet water temperature measurement location for all water heater types ((*i.e.,* harmonizing with ASHRAE 118.2–2022)) would simplify the test set-up as compared to the requirements of the currently applicable appendix E. However, DOE did not have sufficient information at the time to propose such harmonization. 87 FR 1554, 1568–1569 (Jan. 11, 2022).

In the January 2022 NOPR, DOE noted that use of a bypass loop is not the only possible test set-up for meeting the test conditions within appendix E. 87 FR 1554, 1569 (Jan. 11, 2022). However, based on the comment from BWC, DOE understands that many test facilities do use a bypass loop as a solution to having to stabilize the inlet water conditions. After considering the comments from AET and BWC, DOE has determined that laboratories are likely to continue to use bypass lines regardless of the placement of the inlet water temperature measurement, because a bypass line is simple to install and relatively low-cost. If this occurs, then there is a risk that UEF ratings for certain flow-activated water heaters with highly sensitive sensors may be lower due to the additional energy consumption of the water heater when a false flow is sensed. DOE is not incorporating the updates found in the ASHRAE 118.2–2022 figures. Instead, DOE is maintaining the current set-up directions for inlet water temperature measurement in appendix E and, which will allow for the continued use of a bypass line when necessary and appropriate. Regarding AET's concerns about the location of the bypass loop for certain electric instantaneous water heaters, DOE notes that it has not observed the issue in any of its testing. Further, DOE is not adopting the figures in ASHRAE 118.2–2022, so, therefore, the Department is not specifying the location of the bypass loop in its test set-up. Accordingly, during testing, there will be sufficient flexibility to locate the bypass line, when necessary, in a location that results in representative operation and performance of the unit under test.

FHR Test Initiation Criteria

ASHRAE 118.2–2022 includes additional criteria defining the start of the FHR test as compared to DOE's test procedure at appendix E. These differences are briefly explained in the following paragraphs.

Section 5.3.3.3 of the currently applicable appendix E states that prior to the start of the FHR test, if the water heater is not operating (*i.e.,* heating water), initiate a draw until cut-in [44]

[44] ''Cut-in'' is defined in section 1 of appendix E as ''the time when or water temperature at which a water heater control or thermostat acts to increase the energy or fuel input to the heating elements, compressor, or burner.''

(*i.e.,* when the water heater begins heating water). The draw is then terminated any time after cut-in, and the water heater is operated until cut-out.[45] Once the maximum mean tank temperature is observed after cut-out, the initial draw of the FHR test begins.

Section 7.3.3.3 of ASHRAE 118.2–2022 specifies that the draw preceding the initial draw of the FHR test must proceed until the outlet temperature drops 15 °F below the maximum outlet temperature observed, or until a draw time limit [46] is reached. If the draw time limit is reached before the outlet temperature drops 15 °F below the maximum outlet temperature observed, then the main heating source of the water heater is shut off, and the draw is continued until the outlet temperature has dropped 15 °F below the maximum outlet temperature. Requiring the outlet temperature to drop 15 °F below the maximum outlet temperature may provide a more consistent starting condition for the FHR test compared to the pre-conditioning method specified in the currently applicable DOE test procedure because draws of varying lengths can create different internal tank temperature profiles.

Thus, in the January 2022 NOPR, DOE tentatively determined that the additional requirement to tie the length of the initial draw to a specific outlet temperature (which in some cases would extend the draw length as compared to the currently applicable DOE test procedure) could increase the repeatability of the FHR test. 87 FR 1554, 1570–1571 (Jan. 11, 2022). However, DOE also argued that, with both the ASHRAE 118.2–2022 and appendix E initiation criteria, the water heater can be considered ''fully heated'' and to have similar internal energy content before beginning the FHR test, although differences may be present due to the internal water temperature gradient throughout the tank. DOE did not propose an amendment to include pre-FHR test conditioning, because it was unclear how these differences in internal tank temperature would affect the test results. 87 FR 1554, 1571 (Jan. 11, 2022).

In response, A.O. Smith stated that the 15 °F initiation criterion and the additional specificity on draw termination in ASHRAE 118.2 would improve consistency and repeatability and would not conflict with the currently applicable DOE test procedure, and, therefore, those provisions should be adopted. (A.O. Smith, No. 37 at pp. 6–7) BWC also urged DOE to consider adopting the pre-FHR pre-conditioning requirements specified in ASHRAE 118.2. BWC stated that the specifications in ASHRAE 118.2 only add parameters to achieve better testing consistency, and that the currently applicable test procedure may frequently yield inconsistencies from short pre-draws prior to the initiation of the FHR test, thereby causing storage water heaters to be unable to meet the test procedure's 125 °F ± 5 °F requirement. BWC stated that changes to the pre-FHR preconditioning requirements were agreed to by manufacturers during the development of ASHRAE 118.2, and that manufacturers are prepared to undertake the burden of any re-testing in favor of a more robust test method. (BWC, No. 33 at pp. 4–5)

In response, DOE notes that commenters did not indicate the impact of this change on rated values of products nor did they provide any data in that regard. Additionally, DOE is not aware of storage water heaters which are not able to meet the 125 °F ± 5 °F outlet temperature requirement, but if this is demonstrated to be a problem, the Department would address the impacted products in a future rulemaking once more data are collected. Although the Department acknowledges the potential benefits to consistency and repeatability that may accompany a pre-FHR preconditioning requirement, without a clear understanding of the associated impact on ratings, DOE is not adopting this change to the Federal test procedure at this time.

Additionally, DOE notes that the draw time limit in section 7.3.3.3 of ASHRAE 118.2–2022 is a function of the ''nominal'' capacity of the water heater (in gallons or liters). Nominal capacity is typically not equal to the rated storage volume, and there is no standardized methodology in appendix E or in ASHRAE 118.2–2022 to determine nominal capacity; hence, there is a concern that the draw time limits could be different for two identical water heaters labeled at two different nominal capacities. If DOE were to adopt the essence of the initiation criteria in ASHRAE 118.2–2022, DOE would consider substituting ''nominal capacity'' for ''rated storage volume'' (because rated storage volume is a standardized metric with a test method associated with it in section 5.2.1 of appendix E). This deviation could cause additional testing costs for manufacturers.

For these reasons, DOE is maintaining the FHR test initiation criteria currently found in appendix E, which provide that the preconditioning draw can be terminated any time after cut-in, and the water heater is operated until cut-out. Once the maximum mean tank temperature is observed after cut-out, the initial draw of the FHR test begins.

24-Hour Simulated-Use Test Initiation Criteria

Similar to the initiation criteria discussed in the previous section for the FHR test, section 7.4.2 of ASHRAE 118.2–2022 includes criteria for a pre-24-hour simulated-use test draw, which ends after either the outlet temperature drops by 15 °F or the draw time limit is reached. Section 5.4.2 of the currently applicable appendix E requires that the water heater sit idle for 1 hour prior to the start of the 24-hour simulated-use test, during which time no water is drawn from the unit and no energy is input to the main heating elements, heat pump compressor, and/or burners. Appendix E provides no instruction on how to condition the tank prior to this one hour. However, as discussed in the previous section, it remains unclear how the outlet temperature drop criteria and the draw time limit will affect the internal tank temperature at the start of the 24-hour simulated-use test and how this difference in internal tank temperatures will affect the test results.

In the January 2022 NOPR, DOE did not propose to amend appendix E to include the April 2021 ASHRAE Draft 118.2 24-hour simulated-use test initiation criteria (which was substantially the same as the 24-hour simulated-use test initiation criteria included in ASHRAE 118.2–2022) and invited comment and data that provide information on the impact of this update on UEF results. 87 FR 1554, 1573 (Jan. 11, 2022).

On this topic, BWC argued that the initiation criteria in ASHRAE Standard 118.2 should also be adopted for the 24-hour simulated-use test so as to improve the repeatability and reproducibility of the test procedure. (BWC, No. 33 at pp. 4–5) DOE considered this comment, as well as those received regarding the FHR test initiation criteria, and has determined that it still lacks the necessary data that would provide a clear understanding of the impact that this update would have on ratings. Accordingly, for the same reasons stated in the previous section, DOE is not adopting this change in this final rule.

[45] ''Cut-out'' is defined in section 1 of appendix E as ''the time when or water temperature at which a water heater control or thermostat acts to reduce to a minimum the energy or fuel input to the heating elements, compressor, or burner.''

[46] The draw time limit is the rated storage capacity divided by the flow rate times 1.2 (*i.e.,* for a 75-gallon water heater the draw time limit would be 30 minutes, or 75 gallons divided by 3 gpm times 1.2).

FHR Test Termination Temperature

Section 7.3.3.4 of ASHRAE 118.2–2022 includes additional criteria regarding water draws during the FHR test, as compared to the current DOE test procedure. The FHR test required in section 5.3.3 of appendix E specifies a series of water draws over the course of one hour. After each water draw is initiated, the draw is terminated when the outlet water temperature decreases 15 °F from the maximum outlet water temperature measured during the draw. For example, if after initiating a water draw, the outlet water temperature reaches a maximum temperature of 125 °F, the water draw would continue until the outlet water temperature drops to 110 °F, at which time the water draw would be terminated. Similar to the public review drafts of ASHRAE 118.2, section 7.3.3.4 of ASHRAE 118.2–2022 specifies that water draws during the FHR test terminate if either: (1) The outlet water temperature decreases by the quantity of nominal delivery temperature minus 110 °F from the maximum outlet water temperature [47] or (2) the outlet water temperature decreases to 105 °F, regardless of the maximum outlet water temperature measured during the draw. Setting a minimum temperature threshold of 105 °F would reflect that, in practice, consumers would likely stop drawing water when it gets below 105 °F, as the water would no longer be considered ''hot.''

A temperature of 105 °F would be the FHR test termination temperature if the maximum outlet temperature were 120 °F (a 15 °F difference) as per the current DOE test procedure. 120 °F is the lower end of the outlet temperature tolerance band specified in section 5.2.2.2 of appendix E (*i.e.,* 125 °F ± 5 °F). However, as discussed in section III.A.4.b of this document, there exist low-temperature water heaters that are not capable of maintaining these temperatures when tested to the flow rates required in section 5.2.2.2 of appendix E, and this raises the question of whether a criterion for ending a draw when the outlet temperature reaches 105 °F would be representative for all consumer water heaters and residential-duty commercial water heaters.

In this rulemaking, DOE sought information and feedback from stakeholders on the potential impacts and implications of setting an FHR test termination temperature such as 105 °F. In particular, DOE was interested in data which would determine the representativeness of a 105 °F minimum temperature based on consumer use and expectations. 85 FR 21104, 21109 (April 16, 2020). While several stakeholders generally supported the use of a termination temperature, two manufacturers indicated that more testing and investigation are necessary prior to adopting this. 87 FR 1554, 1571, 1572 (Jan. 11, 2022). In commenting on the April 2020 RFI, Rheem suggested 100 °F instead to account for low-temperature water heaters. (Rheem, No. 14 at p. 3) In the January 2022 NOPR, DOE tentatively determined that, based on a review of existing test data, the 105 °F termination temperature criterion would affect only a small number of tests, if any. Additionally, DOE noted that Rheem's suggested 100 °F termination temperature would most likely not be representative for all types of consumer water heaters and residential-duty commercial water heaters. Given the need for further evaluation of the specific termination temperature and its potential impacts, DOE did not propose to adopt a termination temperature for the FHR test in the January 2022 NOPR. 87 FR 1554, 1572 (Jan. 11, 2022).

In response to the January 2022 NOPR, BWC reiterated that DOE should include the 105 °F termination temperature established in ASHRAE Standard 118.2 to provide additional clarity and reflect representative usage. (BWC, No. 33 at p. 4) However, commenters did not provide additional data or consumer usage information to indicate whether 105 °F is representative of the minimum delivery temperature consumers generally expect. DOE was likewise unable to obtain widespread field use data on its own initiative.

As of this final rule, there remains significant uncertainty regarding what the value of the termination temperature should be. As noted previously, Rheem indicated 100 °F should be used to account for low-temperature water heaters. Section 7.3.3.4 of ASHRAE 118.2–2022 uses a 105 °F minimum termination temperature, which was recommended by several stakeholders. DOE did not receive, nor has DOE found, any additional data regarding the minimum delivery temperature consumers would generally expect. However, should the water heater provide a maximum delivery temperature during the test which is lower than 120 °F (which may potentially occur even if the unit's controls are adjusted properly according to section 5.2.2 of appendix E), a 15 °F temperature drop would result in termination below 105 °F. DOE expects this would impact a relatively small number of units, but at this time, there is inadequate test data to indicate how frequently this may occur, which types of products would be affected, and how they would be affected by a specific termination temperature.

Given these considerations, DOE is not adopting a minimum termination temperature for the FHR test in this rulemaking.

FHR Test Final Draw Volume

Section 5.3.3.3 of appendix E includes a provision for the FHR test requiring that if the final draw is not initiated prior to one hour from the start of the test, then a final draw is imposed at the elapsed time of one hour. In this situation, calculations presented in section 6.1 of appendix E are used to determine the volume drawn during the final draw for purposes of calculating FHR. The volume of the final draw is ''scaled'' based on the temperature of the water delivered during the final draw as compared to the temperature of the water delivered during the previous draw to account for the water removed in the final draw being at a lower temperature than previous draws. The scaled final draw volume is added to the total volume drawn during the prior draws to determine the FHR. ASHRAE 118.2–2022 does not include a final draw volume scaling calculation for the case in which a draw is not in progress at one hour from the start of the test and a final draw is imposed at the elapsed time of one hour. Instead, the ASHRAE 118.2–2022 method calculates FHR as the sum of the volume of hot water delivered giving full credit to the final draw.

The methodology for conducting the FHR test, and in particular the issue of whether to scale the final draw, was considered by DOE in a final rule that was published in the **Federal Register** on May 11, 1998 (the May 1998 Final Rule). 63 FR 25996. In the May 1998 Final Rule, DOE determined that scaling the final draw volume based on the outlet water temperature was appropriate and was included to adjust the volume of the last draw to account for the lower heat content of the last draw compared to the earlier draws with fully heated water. *Id.* at 63 FR 25996, 26004–26005.

In the January 2022 NOPR, after considering comments on the April 2020 RFI, DOE proposed not to update the final draw volume provisions in the FHR test because DOE tentatively determined that scaling the final draw

[47] The nominal delivery temperature in section 2.4 of the appendix E test procedure is 125 °F, and 125 °F − 110 °F = 15 °F. Thus, for a nominal delivery temperature of 125 °F, ASHRAE 118.2–2022 and the DOE test procedure both use a 15 °F drop to indicate when the draw must be terminated.

volume based on outlet temperature is more representative of the actual use in the field. 87 FR 1554, 1573 (Jan. 11, 2022). As discussed in the January 2022 NOPR, AHRI and individual manufacturers recommended that DOE remove the scaling calculations to harmonize with ASHRAE 118.2–2022, indicating that this change would have minimal impact on ratings. *Id.* at 87 FR 1572. CSA, however, raised concerns with that approach, because water is usually tempered by the end user, and the commenter argued that a water heater that delivers a volume of water at a higher temperature should not be credited the same as one that delivers roughly the same volume at a lower temperature. CSA also noted that removing the scaling of the final draw volume could possibly move water heaters to a higher draw pattern. *Id.*

After considering these comments, DOE noted in the January 2022 NOPR that the scaling of the final draw accounts for the possible lower heat content of the last draw as compared to earlier draws. DOE further explained that the test procedure specifies a constant flow rate throughout testing, and, as water is drawn from a typical non-flow-activated water heater, the water temperature decreases. As the temperature of the water delivered by the water heater decreases, mixing valves at the point of use will reduce the amount of cold water being mixed with the hot water in order to maintain the same delivery temperature to the consumer. If the water from the water heater is at a lower temperature, more of this hot water will be required to reach the correct temperature at the fixture. Thus, DOE tentatively determined that scaling the final draw volume based on outlet temperature is more representative of the actual use in the field. 87 FR 1554, 1572–1573 (Jan. 11, 2022). Furthermore, DOE also noted that if the scaling calculation were removed, many water heaters would have a different FHR than under the currently applicable appendix E, and some would change draw pattern bins, which would require retesting for UEF and thereby increase manufacturer burden. *Id.*

In response, BWC strongly disagreed with DOE's position that scaling the final draw based on outlet temperature is representative of field use. BWC reiterated its earlier comments that scaling should not be necessary and would potentially lead to unrepeatable test results depending on the timing of the last draw (*e.g.,* creating the possibility of two different FHR ratings for the same product). BWC instead recommended the procedure in ASHRAE Standard 118.2, where the sum of the volume of hot water delivered is used without scaling the final draw. BWC argued that this approach would more fairly account for water heated by the product. (BWC, No. 33 at pp. 4–5)

After considering BWC's comment, DOE maintains that when the final draw is imposed at the end of the FHR test, scaling the volume of water drawn by temperature is representative and appropriate. Scaling the final draw allows FHR to capture the difference in hot water delivery capacity between water heaters that provide roughly the same amount of hot water in the final draw, but where one water heater provides water at a higher temperature than the other. This is appropriate because, as noted, the water temperature is usually tempered at the fixture to provide the end user with water at the target outlet temperature. If the hot water is at a lower temperature, more water is required to provide the user with water at the target temperature, while less water would be needed if the water is at a higher temperature. Therefore, DOE has concluded that it is appropriate for FHR to reflect this difference in capacity, which would not be accounted for if the scaling calculation is removed. DOE also notes that, at this time, there is limited information available to assess the potential impacts of removing the scaling calculation on UEF and FHR ratings, and as a result DOE is not amending the appendix E test procedure to include the full volume of the final draw.

24-Hour Simulated-Use Test Standby Period Duration

Appendix E includes a standby [48] loss measurement period between the first and second draw clusters [49] of the 24-hour simulated use test. During this time, temperature data is recorded and used to calculate the standby heat loss coefficient. *See* section 5.4.2 of appendix E. Sections 7.4.3.1 and 7.4.3.2 of ASHRAE 118.2–2022 add a condition that the standby period data can be recorded between the first and second draw clusters only if the time between the observed maximum mean tank temperatures after cut-out following the first draw cluster to the start of the second draw cluster is greater than or equal to 6 hours. Otherwise, the standby period data would be recorded after the last draw of the test. This condition would provide a sufficiently long standby period to determine standby loss, which might make this calculation more repeatable and the results more representative of standby losses experienced in an average period of use. However, this might also cause the test to extend beyond a 24-hour duration.

The currently applicable DOE test procedure does not have a 6-hour minimum for a standby period between the first and second draw clusters of the 24-hour simulated use test. However, section 5.4.2 of appendix E states, ''In the event that the recovery period continues from the end of the last draw of the first draw cluster until the subsequent draw, the standby period will start after the end of the first recovery period after the last draw of the simulated-use test, when the temperature reaches the maximum average tank temperature, though no sooner than five minutes after the end of this recovery period. The standby period shall last eight hours, so testing will extend beyond the 24-hour duration of the simulated-use test.'' As such, DOE does currently have a minimum standby period duration, but only under the particular case that there is no opportunity to observe standby operation between the first draw cluster and the second draw cluster.

In the April 2020 RFI, the Department requested comments on potentially adding a minimum standby period length of 6 hours and the associated data collection and calculations. 85 FR 21104, 21110 (April 16, 2020). Commenters were split on the appropriateness of this amendment, with some stakeholders noting a key concern would be the extension of the total test period time to over 24 hours in many cases. 87 FR 1554, 1574 (Jan. 11, 2022).

The standby heat loss coefficient (*i.e.,* UA) is the main result calculated from the data recorded during the standby period. DOE reviewed its available test data and found that, generally, the standby period duration has little effect on the UA value, and the UA value in turn has very little effect on UEF. As discussed in the January 2022 NOPR, UA is used only to adjust the daily water heating energy consumption to the nominal ambient temperature of 67.5 °F (19.7 °C); given that the ambient temperature range is relatively narrow (*i.e.,* 65 °F to 70 °F (18.3 °C to 21.1 °C)), the adjustment has only a minimal impact on the daily water heating

[48] ''Standby'' is defined in section 1.12 of appendix E as ''the time, in hours, during which water is not being withdrawn from the water heater.''

[49] A ''draw cluster'' is defined in section 1 of appendix E as ''a collection of water draws initiated during the 24-hour simulated-use test during which no successive draws are separated by more than 2 hours.'' There are two draw clusters in the very small draw pattern and three draw clusters in the low, medium, and high draw patterns.

energy consumption. 87 FR 1554, 1574 (Jan. 11, 2022).

In commenting on the January 2022 NOPR, BWC generally disagreed with DOE's tentative determination that including a 6-hour standby period minimum would not significantly impact UEF ratings. BWC also mentioned that it has experienced difficulty having adequate time to calculate the standby loss coefficient after the first draw cluster. Thus, BWC reiterated its support for the methodology in ASHRAE 118.2–2022 but stated that the company would like time to examine this matter before commenting further. (BWC, No. 33 at p. 6) BWC did not provide further comments or data on this topic in response to the July 2022 SNOPR.

Considering that DOE did not receive further comments demonstrating a quantifiable impact of the standby period length on the UEF, DOE concludes, as initially presented in the January 2022 NOPR, that based on its test data, the duration of the standby period does not significantly impact the UEF result. Therefore, in order to minimize burden (*i.e.,* total test duration) on manufacturers and laboratories while still allowing results to be representative, repeatable, and reproducible, DOE is not amending the appendix E test procedure to require the standby period to be a minimum of 6 hours in duration.

C. Test Conditions and Tolerances

In the January 2022 NOPR, DOE made a number of proposals to the test conditions and tolerances that were intended to improve representativeness, reduce testing burden, and/or harmonize with industry test methods. 87 1554, 1558–1559 (Jan. 11, 2022). These proposals included changes to the electric supply voltage tolerance, ambient condition tolerances, gas supply pressure and manifold pressure tolerances, and flow rate tolerances for certain water heaters. *Id.* In addition, in the July 2022 SNOPR, DOE made supplemental proposals regarding the tolerance on flow rate during the UEF test for models with rated storage volumes less than 2 gallons and max GPM less than 1 gallon, and regarding optional test conditions for heat pump water heaters. 87 FR 42270, 42273 (July 14, 2022). These proposals were intended to improve repeatability and reproducibility and harmonize with industry testing practices, respectively. *Id.*

In response to the January 2022 NOPR proposals, APGA provided general comments stressing the importance of ensuring accuracy, repeatability, and reproducibility in a test procedure that is not unduly burdensome to conduct. (APGA, No. 38 at pp. 1–2) AHRI indicated its support of DOE's proposals to reduce test burden; specifically, AHRI supported increasing test tolerances for ambient temperature and relative humidity, and extending untested provisions to include electric instantaneous water heaters. (AHRI, Jan. 27, 2022 Public Meeting Transcript, No. 27 at p. 40)

As previously discussed in section I.A of this final rule, DOE's efforts are aligned with EPCA requirements to create test procedures that are representative of average use without being unduly burdensome to conduct. (42 U.S.C. 6293(b)(3)) Each of the proposed changes to test conditions and tolerances, along with specific stakeholder comments received and DOE's responses, are discussed further in the subsections that immediately follow.

1. Supply Water Temperature Measurements

Section 2.3 of the currently applicable appendix E specifies maintaining the supply water temperature at 58 °F ± 2 °F (14.4 °C ± 1.1 °C). During the 24-hour simulated-use test, maintaining the supply water temperature within this range can be difficult at the immediate start of a draw due to the short time between draw initiation and the first measurement at 5 seconds (with subsequent measurements every 3 seconds thereafter), as required by sections 5.4.2 and 5.4.3 of appendix E. In some test configurations, particularly during the lower flow rate water draws, the inlet water and piping may retain heat from a previous draw, causing the water entering the unit during the initial measurements to be slightly outside of tolerance. Any supply water temperature reading outside of the test tolerances would invalidate a test. However, due to the small percentage of total water use that would be affected, supply water temperatures that are slightly out of tolerance for the first one or two data points would have a negligible effect on the overall test result.[50] This issue is less evident during the FHR test, which specifies an initial temperature measurement 15 seconds after the start of the water draw. This is not an issue during the Max GPM test due to the system being in steady state during the entire test.

In the April 2020 RFI, DOE requested feedback on whether one or two supply water temperature data points outside of the test tolerance at the beginning of a draw would have a measurable effect on the results of the test. 85 FR 21104, 21111 (April 16, 2020). DOE further requested feedback on whether it should consider relaxing the requirement for supply water temperature tolerances at the start of a draw, and if so, which methods are most appropriate for doing so while maintaining accuracy and repeatability. *Id.* at 85 FR 21111–21112. DOE received comments regarding these tolerances from stakeholders including AHRI, A.O. Smith, NEEA, Rheem, BWC, CSA, Rinnai, and SMTI. These comments are summarized and discussed in section III.C.3.a of the January 2022 NOPR. 87 FR 1554, 1576–1577 (Jan. 11, 2022).

In response to comments made on the April 2020 RFI, DOE proposed in the January 2022 NOPR to increase the time between initiating the draw and first measurement of supply water temperature from 5 seconds to 15 seconds in sections 5.4.2 and 5.4.3 of appendix E, as recommended by the commenters. 87 FR 1554, 1577 (Jan. 11, 2022). DOE reasoned that the proposed change may, if adopted, reduce test burden by reducing the occurrence of a test being invalidated (which would require re-testing) due to the first one or two water temperature readings exceeding the defined temperature tolerance. Further, this proposed change would eliminate the need to amend the supply water temperature tolerances which, outside of the time period at the start of a draw, are relatively easy to maintain. *Id.*

In response to the January 2022 NOPR, A.O. Smith reiterated its previous comment that there would be no measurable effect on test results by allowing one or two supply water temperature data points outside of the current test tolerance at the beginning of a draw. The commenter suggested that DOE should adopt the test set-up described in ASHRAE 118.2–2022, which includes a purge line designed by third-party laboratories to help achieve tolerances on supply water temperature. A.O. Smith also commented that widening tolerances in certain cases may ultimately cause variations in test results. (A.O. Smith, No. 37 at p. 5) In contrast, BWC supported DOE's proposal to increase the span between the first draw initiation and the first temperature measurement from 5 seconds to 15 seconds because it would reduce testing burden; the 5-second

[50] For example, the first two temperature readings would reflect 8 seconds of water flow, in comparison to total water draw durations ranging from 1 minute to over 8 minutes, according to the water draw patterns defined in Tables III.1, III.2, III.3, and III.4 of appendix E.

time interval requires significant and frequent purging which, if not conducted, may invalidate tests. (BWC, No. 33 at p. 7) In response to A.O. Smith, DOE reiterates its position, as previously stated in the January 2022 NOPR, that although one or two measurements outside the current tolerance may not have an effect on test results, DOE has chosen to alleviate the issue of potential test invalidation by instead increasing the time between initiating the draw and first measurement of supply water temperature. *Id.*

After considering these comments, DOE has decided to adopt the proposal from the January 2022 NOPR to increase the time between initiating the draw and first measurement from 5 seconds to 15 seconds in sections 5.4.2 and 5.4.3 of appendix E. In response to A.O. Smith's suggestion that DOE adopt the test set-up in ASHRAE 118.2–2022, as discussed in detail in section III.B.2.c of this document, DOE is maintaining the current set-up directions for inlet water temperature measurement in appendix E and not incorporating the updates found in the ASHRAE 118.2–2022 figures because the addition of a bypass line and thermal break was determined to be optional. However, increasing the time of first recordation of the supply water temperature measurement after the start of a draw from being taken at 5 seconds to being taken at 15 seconds will allow units to reach a supply temperature within tolerance without need for modifications to the test set-up.

2. Gas Pressure

For gas-fired water heaters, sections 2.7.2 and 2.7.3 of the currently applicable appendix E require maintaining the gas supply pressure in accordance with the manufacturer's specifications; or if the supply pressure is not specified, maintaining a supply pressure of 7 to 10 inches of water column (1.7 to 2.5 kPa) for natural gas and 11 to 13 inches of water column (2.7 to 3.2 kPa) for propane gas. In addition, for gas-fired water heaters with a pressure regulator, sections 2.7.2 and 2.7.3 of the currently applicable appendix E require the regulator outlet pressure to be within ±10 percent of the manufacturer's specified manifold pressure.

In the January 2022 NOPR, DOE noted that from a review of product literature, DOE found that many gas-fired water heaters with modulating input rate burners have a factory preset manifold pressure that is computer-controlled and cannot be adjusted directly. Further, the manufacturer-specified manifold pressure typically refers to when the water heater is operating at the maximum firing rate. As a result, and after considering comments on the April 2020 RFI, DOE proposed to remove the ±10 percent manifold pressure tolerance for certain gas-fired water heaters, recognizing that some of these products do not provide the capability to adjust the manifold pressure. 87 FR 1554, 1578–1579 (Jan. 11, 2022). DOE also proposed the addition of an absolute manifold pressure tolerance of ±0.2 inches water column, which would be used for gas-fired water heaters with a zero-governor valve for which the ±10 percent tolerance would be overly restrictive. *Id.* For example, applying the ±10 percent to a manufacturer recommended gas pressure of 0.1 inches water column would result in a tolerance of ±0.01 inches of water column, which is less than both the accuracy and precision tolerances required for gas pressure instrumentation within section 3.1 of the currently applicable appendix E. Further, DOE proposed that the required gas pressures within appendix E apply when operating at the manufacturer's specified input rate or, for modulating input rate water heaters, the maximum input rate. *Id.*

DOE did not receive comments in response to the previously discussed amendments to sections 2.7.2 and 2.7.3 of appendix E proposed in the January 2022 NOPR concerning manifold pressure tolerance for gas-fired water heaters. Accordingly, DOE is adopting these amendments in this final rule for the reasons previously stated.

3. Input Rate

In addition to the gas pressure requirements, section 5.2.3 of the currently applicable appendix E test procedure requires maintaining an hourly Btu rating (*i.e.,* input rate) that is within ±2 percent of the value specified by the manufacturer (*i.e.,* the nameplate value). DOE has observed during testing that an input rate cannot be achieved that is within ±2 percent of the nameplate value while maintaining the gas supply pressure and manifold pressure within the required ranges for some gas-fired water heaters. In such instances, it is common practice for the testing laboratory to modify the size of the orifice that is shipped with the water heater; for example, the testing laboratory may enlarge the orifice to allow enough gas flow to achieve the nameplate input rating within the specified tolerance, if the input rate is too low with the orifice as supplied. For commercial water heating equipment, DOE addressed this issue by specifying in the product-specific enforcement provisions that, if the fuel input rate is still not within ±2 percent of the rated input after adjusting the manifold and supply pressures to their specified limits, DOE will attempt to modify the gas inlet orifice. 10 CFR 429.134(n)(ii).

In the April 2020 RFI, DOE requested comment on whether provisions should be added to the test procedure at appendix E to address water heaters that cannot operate within ±2 percent of the nameplate rated input as shipped from the factory and how this issue should be addressed. 85 FR 21104, 21112 (April 16, 2020). On this topic, DOE received comments from manufacturers and their representatives, including AHRI, Rheem, Rinnai, BWC, and CEC, suggesting various methods to achieve the ±2 percent tolerance. These comments are summarized and discussed in the January 2022 NOPR. 87 FR 1554, 1579 (Jan. 11, 2022).

After considering these comments, DOE proposed in the January 2022 NOPR to add provisions to appendix E to provide further direction for achieving an input rate that is ±2 percent of the nameplate value specified by the manufacturer. 87 FR 1554, 1579 (Jan. 11, 2022). Specifically, DOE proposed to modify section 5.2.3 of appendix E to require that the following steps be taken to achieve an input rate that is ±2 percent of the nameplate value specified by the manufacturer:

(1) Attempt to increase or decrease the gas outlet pressure within ±10 percent of the value specified on the nameplate to achieve the nameplate input (within ±2 percent).

(2) If the fuel input rate is still not within ±2 percent of the nameplate input, increase or decrease the gas supply pressure within the range specified on the nameplate.

(3) If the measured fuel input rate is still not within ±2 percent of the certified rated input, modify the gas inlet orifice as required to achieve a fuel input rate that is ±2 percent of the nameplate input rate.

Id.

Regarding commenters' suggestion to check for leaks as an additional step in the process, DOE noted that gas leak detection should be part of a test laboratory's normal operating procedures, and, therefore, detection does not require specification within DOE's test procedures. 87 FR 1554, 1579 (Jan. 11, 2022). DOE also explained that the purpose of adjusting the orifice during testing is to ensure that the performance of the water heater is representative of performance at the Btu rating specified by the manufacturer on the product's nameplate, which informs

the field installation conditions. Allowing for adjustment of the orifice reduces test burden and improves repeatability by providing test laboratories with a last resort to maintain the hourly Btu rating as specified by the manufacturer. Further, DOE noted that the proposal that the orifice be modified would occur only after other options have been exhausted. Lastly, DOE proposed that should a unit fail to achieve an input within the 2 percent tolerance, DOE would continue testing with the measured input value as opposed to the rated value (*i.e.,* the fuel input rate found via testing would be used for the purpose of determining compliance). 87 FR 1554, 1579–1580 (Jan. 11, 2022).

In response to DOE's proposals on this topic in the January 2022 NOPR, AHRI agreed with the Department's proposal to first adjust the manifold pressure and then modify the orifice if an input rate within 2 percent of the nameplate input rating is not achieved. (AHRI, No. 40 at pp. 1–2)

Rheem, AHRI, and BWC commented that if the unit cannot reach input rates within ±2 percent of the nameplate rate, the unit is likely faulty, and the test results should not be accepted. (Rheem, No. 31 at pp. 2–3; AHRI, No. 40 at pp. 1–2; BWC, No. 33 at p. 8) AHRI suggested that if this occurs, the manufacturer should be contacted. AHRI also stated that laboratory testing should only be performed by qualified laboratory personnel, adding that the architecture of oil-fired water heaters also introduces additional complexity for these products. (AHRI, No. 40 at p. 2) BWC also commented that last-resort orifice adjustments should only be performed by qualified laboratory personnel, and indicated that DOE may wish to reference language in Section A1.3.2.1.10 of the AHRI Residential Water Heater Operations Manual.[51] (BWC, No. 33 at p. 7)

In response to these comments, DOE agrees with commenters that testing should generally be performed at accredited laboratory institutions by qualified personnel. In response to BWC's suggestion that DOE reference section A1.3.2.1.10 of the AHRI Residential Water Heater Operations Manual, DOE notes that the amendments to section 5.2.3 of appendix E are consistent with the instructions in the AHRI Residential Water Heater Operations Manual in that they both require a modification to the orifice, with the AHRI Operations Manual requiring the testing laboratory to ''re-orifice'' the unit and the language DOE is adopting requiring the test agency to ''modify'' the orifice. The finalized amendment would provide a more flexible approach than the language of section A1.3.2.1.10 of the AHRI Residential Water Heater Operations Manual by not requiring involvement by the water heater manufacturer in any modifications to the orifice. DOE notes that a unit not achieving the nameplate input rate within ±2 percent could represent a malfunctioning unit or a broader issue in the design of the model. Under the proposed test approach, such models would be tested and evaluated for compliance based on its actual performance.

With regards to oil-fired water heaters, the amended section 5.2.3 provisions to appendix E reference the fuel oil supply requirements in section 2.7.4 of appendix E, which provide adequate direction for the adjustment.

After evaluating these comments, DOE is adopting modifications to appendix E and 10 CFR 429.134 concerning input rate provisions as proposed in the January 2022 NOPR and for the reasons previously stated.

4. Ambient Test Condition Tolerances

Section 2.2 of appendix E specifies maintaining the ambient air temperature between 65.0 °F and 70.0 °F (18.3 °C and 21.1 °C) on a continuous basis for all types of consumer water heaters (and residential-duty commercial water heaters) other than heat pump water heaters. For heat pump water heaters, the dry-bulb (ambient air) temperature must be maintained between 67.5 °F ±1 °F (19.7 °C ±0.6 °C), and the relative humidity must be maintained at 50 percent ±2 percent throughout the test. Appendix E does not specify a relative humidity tolerance for non-heat pump water heaters. Similar to the supply water temperature discussed previously, a brief measurement of air temperature or relative humidity that is only minimally outside of the test tolerance would invalidate a test, but likely would have a negligible effect on the results of the test, as the total time out of tolerance would be insignificant compared to the total time of the test. In the April 2020 RFI, DOE requested feedback on whether the tolerances for ambient air temperature and relative humidity are difficult to maintain at the start of a draw, and if so, whether DOE should consider relaxing these requirements at the start of a draw and to what extent. 85 FR 21104, 21112 (April 16, 2020).

After considering comments received on the April 2020 RFI, DOE proposed in the January 2022 NOPR to change the ambient temperature requirement for non-heat pump water heaters to an average of 67.5 °F ± 2.5 °F, with a maximum deviation of 67.5 °F ± 5 °F, as opposed to only a maximum deviation of 67.5 °F ± 2.5 °F as currently specified in the test procedure. 87 FR 1554, 1578 (Jan. 11, 2022). DOE reasoned that such a change could, if adopted, reduce the need to re-run tests in instances in which the results of the invalid test and the valid test would not differ significantly, and, therefore, reduce test burden. *Id.* DOE also noted that through a review of its available test data, DOE found that short fluctuations in ambient temperature have little to no effect on the test results of non-heat pump water heaters. *Id.*

For heat pump water heaters, DOE proposed in the January 2022 NOPR to change the dry-bulb temperature requirement for heat pump water heaters to an average of 67.5 °F ± 1 °F during recoveries and an average of 67.5 °F ± 2.5 °F when not recovering, with a maximum deviation of 67.5 °F ± 5 °F, as opposed to only a maximum deviation of 67.5 °F ± 1 °F as currently specified in the test procedure. *Id.* DOE reasoned that this proposed change would maintain the stringency of the dry-bulb temperature requirement while allowing for short deviations from the targeted dry-bulb temperature range, which would reduce the need to re-run tests in instances in which the results of the invalid test and the valid test would not differ significantly, and, therefore, reduce test burden. *Id.*

For heat pump water heaters, DOE also proposed in the January 2022 NOPR to increase the absolute relative humidity tolerance from ±2 percent to ±5 percent across the entire test, with the average relative humidity between 50 percent ±2 percent during recoveries. 87 FR 1554, 1578 (Jan. 11, 2022). DOE reasoned that this change, if adopted, would reduce test burden by reducing the need to re-run tests in instances in which the results of the invalid test and the valid test would not differ significantly. *Id.*

As noted, the currently applicable appendix E does not specify a relative

[51] AHRI maintains an Operations Manual for Residential Water Heater Certification Program (AHRI Residential Water Heaters Operations Manual), which addresses how testing will be done in the AHRI certification program. Section A1.3.2.1.10 of the January 2022 edition of the AHRI Operations Manual for its Residential Water Heaters states: ''If adjusting the manifold pressure does not achieve the rated input, the operator shall re-orifice the unit using an alternate orifice supplied by the manufacturer. [Note: Manufacturers are to supply test facility with a selection of orifices for use at the test facility. When a test unit is re-orificed, the test facility will notify the manufacturer of the alternate orifice used, and the manufacturer shall re-supply the test facility with a replacement orifice.'' See: *www.ahrinet.org/Portals/OM/RWH_OM.pdf.* (Last accessed July 21, 2022.)

humidity tolerance for non-heat pump water heaters. In the January 2022 NOPR, DOE explained that (as initially described in the April 2020 RFI), DOE conducted exploratory testing to investigate the effect of relative humidity on the measured UEF values of two consumer gas-fired instantaneous water heaters that are flow-activated and have less than 2 gallons of storage volume, one using non-condensing technology and the other using condensing technology. 87 FR 1554, 1578 (Jan. 11, 2022). For each model, testing was performed at a relative humidity of 50 percent and at a relative humidity of 80 percent, and DOE found that increasing relative humidity from 50 percent to 80 percent resulted in a maximum change in UEF for the non-condensing and condensing models of 0.011 and 0.015, respectively. DOE noted that UEF is reported to the nearest 0.01 (*see* 10 CFR 429.17(b)(2)), and, thus, a change in UEF on the order of 0.01 to 0.02 as suggested by DOE's test results could be considered as substantively impacting the test results. However, DOE did not propose to adopt a tolerance on relative humidity in the January 2022 NOPR, noting that it was still examining this issue. DOE requested further comment and test data on whether a relative humidity requirement should be added to appendix E for non-heat pump water heaters. *Id.*

In response to the proposals made in the January 2022 NOPR concerning ambient air temperature and relative humidity tolerances, AHRI indicated its support of DOE's proposals to reduce test burden; specifically, AHRI supported increasing test tolerances for ambient temperature and relative humidity. (AHRI, Jan. 27, 2022 Public Meeting Transcript, No. 27 at p. 40) NEEA and CA IOUs suggested that DOE should specify a relative humidity level of 50 percent ± 5 percent for all water heater types as was proposed for heat pump water heaters in the January 2022 NOPR, which the commenters argued would reduce test burden and ensure that results are comparable, repeatable, and representative across all products and technologies. (NEEA, No. 30 at pp. 1–2; CA IOUs, No. 36 at pp. 3–4)

BWC, however, anticipated difficulty maintaining even the proposed ±5 percent tolerance during compressor cycling for electric heat pump water heaters. BWC also argued that establishing a relative humidity tolerance when testing water heaters other than heat pump water heaters is unnecessary after observing low impact on UEF rating during its testing of a gas instantaneous water heater at both 20 percent relative humidity and 100 percent relative humidity. (BWC, No. 33 at p. 7) In response to BWC's comments, DOE notes that BWC has not provided, nor is DOE aware of, any data suggesting that a ±5 percent relative humidity tolerance would be difficult to maintain for heat pump water heaters.

After considering comments on the January 2022 NOPR, DOE is adopting the changes to ambient air temperature and relative humidity tolerances as proposed. Regarding the recommendation that DOE specify a relative humidity level of 50 percent ± 5 percent for all water heater types, DOE finds that it does not have adequate test data to make such a change at this time, but DOE will continue to further investigate this issue.

5. Electrical Supply Voltage Tolerances

For all water heaters, section 2.7.1 of the currently applicable appendix E specifies maintaining the electrical supply voltage within ±1 percent of the center of the voltage range specified by the manufacturer. In the April 2020 RFI, DOE requested feedback on whether the tolerances for electrical supply voltage are difficult to maintain at the start of a draw, and if so, whether DOE should consider relaxing these requirements at the start of a draw and to what extent. 85 FR 21104, 21112 (April 16, 2020).

In the January 2022 NOPR, after considering comments received in response to the April 2020 RFI, DOE proposed to increase the electrical supply voltage tolerance from ±1 percent on a continuous basis to ±2 percent on a continuous basis. 87 FR 1554, 1577 (Jan. 11, 2022). DOE also proposed to add clarification that this tolerance is only applicable beginning 5 seconds after the start of a recovery to 5 seconds before the end of a recovery (*i.e.,* only when the water heater is undergoing a recovery). *Id.* DOE reasoned that these proposed changes could reduce test burden by reducing the need to re-run tests while maintaining the representativeness of the test procedure. *Id.*

In response to these proposed changes, DOE received comment from BWC supporting the proposal to increase the tolerance for electric supply voltage. (BWC, No. 33 at p. 7)

DOE has thus determined that the proposed changes to sections 2.7.1 and 3.7 of appendix E concerning electric supply voltage tolerance are appropriate and is adopting them in this final rule for the reasons previously stated.

6. Flow Rate Tolerances

Section 5.4.2 of appendix E, *Test Sequence for Water Heaters with Rated Storage Volumes Greater Than or Equal to 2 Gallons,* provides that all draws during the 24-hour simulated-use test must be made at the flow rates specified in the applicable draw pattern table in section 5.5 of this appendix, within a tolerance of ±0.25 gallons per minute (±0.9 liters per minute). Section 5.4.3 of appendix E, *Test Sequence for Water Heaters with Rated Storage Volume Less Than 2 Gallons,* currently does not provide explicit instruction for the tolerance on the flow rate.

Within the proposed amendments to the regulatory text provided in the January 2022 NOPR, DOE included a proposed amendment to section 5.4.3 of appendix E to specify that flow rates for water heaters with rated storage volume less than 2 gallons must be maintained within a tolerance of ±0.25 gallons per minute (±0.9 liters per minute). 87 FR 1554, 1603 (Jan. 11, 2022). Because this proposed change was not addressed explicitly in the preamble to the January 2022 NOPR, DOE raised this issue again in the July 2022 SNOPR. 87 FR 42270, 42274 (July 14, 2022).

However, as discussed in the July 2022 SNOPR, there are models with Max GPM delivery capacities at or below 1.0 gallon per minute, and for these products, the flow rate used during draws must be the Max GPM flow rate. A flow rate tolerance of ±0.25 gallons per minute would be too wide for products with Max GPM flow rates as low as 0.20 gallons per minute. Because the flow rate tolerance represents 25 percent of the flow rate at 1.0 gallon per minute, DOE proposed another amendment to section 5.4.3 of appendix E in the July 2022 SNOR to specify that for water heaters with a rated Max GPM of less than 1 gallon per minute, the flow rate tolerance shall be ±25 percent of the rated Max GPM. DOE reasoned that for such products, a flow rate tolerance ±25 percent of the rated Max GPM would represent the same level of variation (on a percentage basis) as for products rated at 1.0 gallon per minute and subject to a tolerance of ±0.25 gallon per minute. DOE noted that third-party laboratories are currently technically capable of implementing this methodology based on DOE's own test data. 87 FR 42270, 42274 (July 14, 2022).

In response to the July 2022 SNOPR, ASAP, ACEEE, and NRDC expressed support for DOE's proposal to specify the flow rate tolerance requirements for water heaters with a rated storage volume under 2 gallons. (ASAP, ACEEE, and NRDC, No. 54 at p. 1) BWC expressed they had not had adequate time to conduct testing in order to determine the impact of DOE's proposed

establishment of a ±25 percent of maximum GPM threshold, and as a result, the company had no further comments on that proposal. (BWC, No. 48 at p. 2)

AHRI, A.O. Smith, and Rheem offered a few potential revisions to the proposal. AHRI requested that DOE set a minimum tolerance of ±0.1 gpm for the 24-hour simulated-use test for models with maximum flow rates less than 1 gpm because the proposed ±25 percent tolerance may be difficult to meet for some models. (AHRI, No. 55 at p. 2) A.O. Smith stated that the proposed flow rate tolerances for the 24-hour simulated-use test for water heaters with a rated storage volume less than 2 gallons would require manufacturers to invest in more precise equipment and may also easily invalidate results for units with low Max GPM values. Accordingly, A.O. Smith requested that DOE adopt the proposed flow rate tolerance from the NOPR, rather than the SNOPR. (A.O. Smith, No. 51 at pp. 2–3) Rheem indicated that the proposed flow rate tolerance of 25 percent of Max GPM may be too low for water heaters with very low max GPM and recommended that DOE change the tolerance to the maximum between that value and ±0.1 gpm. Rheem also recommended that all flow rate tolerances be calculated based on the average of the flow rate over the entire draw, so as to help reduce the number of invalid tests. (Rheem, No. 47 at p. 2)

As discussed previously, the lowest Max GPM certified to DOE is currently 0.2 gpm, and DOE's amended test procedure must provide a reproducible and repeatable method for testing products with such low flow rates. DOE has determined that a tolerance of ±0.1 gpm could offer too much variability in test results for products rated with such low flow rates. Specifically, a tolerance this wide would represent ±50 percent of the flow rate of this kind of water heater, and because the temperature rise through the water heater is inversely related to the flow rate when the water heater is constantly firing at its maximum input rate, this variation in flow rate can cause the temperature rise to potentially double. As stated, DOE is aware that third-party laboratories are equipped with instrumentation to measure flow rates within the tolerance level proposed in the July 2022 SNOPR.

DOE did not receive any test data in response to the July 2022 SNOPR indicating that manufacturers or third party test laboratories would not be able to meet the tolerances proposed in the July 2022 SNOPR. Furthermore, DOE has concluded that a 0.1 gpm tolerance is too large for the lowest flow rate models currently on the market (0.2 gpm) and would be even more problematic if models with flow rates below 0.2 gpm are introduced in the future. As such, in this final rule, DOE is adopting the flow rate tolerance amendments to sections 5.4.2 and 5.4.3 of appendix E, as proposed in the July 2022 SNOPR.

7. Optional Test Conditions for Heat Pump Water Heaters

In the course of this rulemaking, DOE has received numerous comments from stakeholders requesting that DOE consider allowing manufacturers to optionally rate heat pump water heaters to test conditions other than those currently specified in appendix E, which are intended to be representative of national average water and air temperatures. Commenters noted that heat pump operation is dependent upon the surrounding ambient air temperatures,[52] and that there would be significant value to providing consumers, installers, and utilities with efficiency representations that are closer to the conditions for particular climates. *See* 87 FR 1554, 1580 (Jan. 11, 2022) and 87 FR 42270, 42275–42276 (July 14, 2022).

For example, Lutz commented that a single inlet water temperature may not be representative for all cases because this may vary by geographical location, and, furthermore, that taking this into account is even more important for split-system heat pump water heaters with an outdoor unit. (Lutz, No. 35 at p. 1) NEEA argued that, because heat pump water heater performance can be affected by variations in ambient conditions, DOE should clarify what manufacturers can report about a unit's performance at conditions other than those required by the test procedure. NEEA added that information regarding delivery capacity and sizing guidance would be important for installers. (NEEA, No. 30 at p. 3)

In the January 2022 NOPR, DOE did not propose to allow for optional (voluntary) representations of heat pump water heater efficiencies at non-standard temperatures because there was not enough information at the time to identify the most representative alternate test conditions (*e.g.,* regional conditions). 87 FR 1554, 1580 (Jan. 11, 2022). However, commenters on the July 2022 SNOPR identified the NEEA Advanced Water Heating Specification (currently at version 8.0, AWHS v8.0) provides multiple conditions which manufacturers are providing ratings at. 87 FR 42270, 42775–42276 (July 14, 2022). Consequentially, DOE revisited the NEEA Advanced Water Heating Specification to determine how the test conditions specified in that document might be applied for optional representations in the DOE test procedure.

Section 2.2 of appendix E currently specifies that the ambient air temperature shall be maintained between 65.0 °F and 70.0 °F (18.3 °C and 21.1 °C) on a continuous basis during the test. Additionally, for heat pump water heaters, that test procedure provision provides that the dry-bulb temperature shall be maintained at 67.5 °F ± 1 °F (19.7 °C ± 0.6 °C) and that the relative humidity shall be maintained at 50 percent ± 2 percent throughout the test. EPCA requires that the DOE test procedure must be reasonably designed to produce test results which measure energy efficiency during a representative average use cycle or period of use. (42 U.S.C. 6293(b)(3)) While the test conditions in the current appendix E test procedure must remain representative for the nation as a whole, in the July 2022 SNOPR, DOE tentatively determined that comments from interested parties have demonstrated that allowing additional representations of efficiency at alternative ambient conditions could provide consumers with additional information about the expected performance of heat pump water heaters at conditions that are representative of their specific installation circumstances. For other types of covered products and equipment, DOE has adopted optional metrics for voluntary representations where it was determined that the primary efficiency metric would not be representative for certain installation conditions common for the product or equipment.[53] As discussed in the July

[52] Because heat pumps ''transfer thermal energy from one temperature level to a higher temperature level'' (*see* 42 U.S.C. 6291(27)(C) and 10 CFR 430.2), the energy efficiency is dependent upon the difference between temperatures that must be overcome by the heat pump cycle. As discussed in section III.A.2 of this document, heat pump water heaters are typically air-source, *i.e.,* these products source heat from surrounding air and transfer it to domestic hot water. Therefore, lower ambient air temperatures, such as those experienced in colder climates or due to seasonal differences, would result in lower efficiencies.

[53] For example, on July 27, 2022, DOE published a final rule in the **Federal Register** pertaining to test procedures for direct-expansion dedicated outdoor air systems, including provisions for optional representations of energy efficiency when the equipment is installed in applications where inlet water conditions are expected to deviate substantially from standard conditions. *See* 10 CFR part 431, subpart F, appendix B, section 2.2.3(d) as established by that final rule. 87 FR 45164, 45201 (July 27, 2022).

2022 SNOPR, depending on the installation location (*e.g.,* whether the water heater is installed in an unconditioned space such as a garage or attic), the ambient conditions may vary significantly from the conditions in the DOE test method, thereby resulting in significantly different performance for heat pump water heater products. Thus, DOE reversed its position and tentatively determined to allow for certain optional representations for additional ambient conditions. 87 FR 42270, 42275–42276 (July 14, 2022).

AWHS v8.0 was published by NEEA on March 1, 2022. Though early editions of the AWHS focused primarily on providing more representative performance metrics for heat pump water heaters in cold climates, the latest editions are now more broadly focused on providing representative performance metrics for heat pump water heaters across all climates. Performance metrics in the AWHS are generally calculated by measuring energy efficiency at multiple (two or more) ambient test conditions, linearly interpolating between the test results, and finally calculating an ambient temperature-weighted efficiency metric using temperature bin data. The metric is a cold climate efficiency (CCE) rating for integrated heat pump water heaters installed in semi-conditioned spaces (*i.e.,* garage, basement) and a seasonal coefficient of performance (SCOP) for split-system heat pump water heaters (where the heat pump is separated from the storage tank and located outdoors). DOE tentatively determined in the July 2022 SNOPR that adopting the test conditions in AWHS v8.0 would not significantly increase test burden for manufacturers who choose to provide these ratings, because manufacturers are already providing representations of CCE and SCOP to NEEA's Qualified Products List.[54] The test conditions in AWHS v8.0 differ from the standard conditions in appendix E in terms of inlet water temperature, ambient dry-bulb temperatures, and ambient relative humidity. A detailed discussion of these conditions was provided in the July 2022 SNOPR. 87 FR 42270, 42276 (July 14, 2022).

In the July 2022 SNOPR, DOE proposed to allow voluntary representations of a new metric, E_X, analogous to UEF, at optional test conditions for heat pump water heaters. The subscript ''X'' would be used to denote the set of conditions being used, and these voluntary representations of E_X would not be integrated together to form a seasonal efficiency metric—in contrast to the methodology in AWHS v8.0. DOE's proposal intended to eliminate any reduction in representativeness caused by assumptions in climate weighting factors. Without substantial additional data, DOE tentatively determined that it would not be able to evaluate whether or not the weighting factors in AWHS v8.0 (used to create a weighted average of the results at various test conditions together into one metric, CCE or SCOP) are representative of climates in the United States, and, thus, DOE proposed to allow for the use of standalone E_X representations only in a way that it is clear to a consumer what test conditions were used in determining the rating. 87 FR 42270, 42276–42277 (July 14, 2022).

In response to the July 2022 SNOPR, ASAP, ACEEE, and NRDC expressed support for DOE's proposal to adopt optional test conditions needed for calculating climate-specific efficiencies. (ASAP, ACEEE, and NRDC, No. 54 at p. 2) A.O. Smith acknowledged that optional efficiency ratings may have consumer utility and stated that additional measures of efficiency may assist with increasing market adoption of heat pump water heaters. (A.O. Smith, No. 51 at pp. 3–4) The CA IOUs supported DOE's tentative determination to allow optional efficiency representations at multiple test conditions for heat pump water heaters, stating that this change will help consumers choose the heat pump water heater that best suits their needs and will aid in the maturation and expansion of the heat pump water heater market. (CA IOUs, No. 52 at pp. 1–2)

NEEA also supported DOE's proposal to allow for optional efficiency representations at alternative ambient conditions for heat pump water heaters but encouraged DOE not to limit condition representations based on the specific type of heat pump. NEEA stated that both split-system water heaters and heat pump-only water heaters can be designed for any combination of indoor, outdoor, and semi-conditioned space operation of the heat pump component. Therefore, NEEA suggested that DOE should not specify which metrics may be reported on the basis of heat pump type, as these additional representations would not add any burden to manufacturers because they are optional. (NEEA, No. 56 at pp. 1–2)

A.O. Smith requested that DOE clarify whether manufacturers may represent optional metrics as consistent with appendix E. (A.O. Smith, No. 51 at pp. 3–4)

In response to NEEA's comment, DOE acknowledges that split-system and heat pump-only water heaters may be installed in a variety of configurations which can vary the location of components. For example, a heat pump module (comprised of the compressor, evaporator, and expansion devices) could be installed either outdoors or in a separate room indoors. Therefore, DOE has updated the table of optional test conditions in section 2.8 of appendix E to reflect this fact by allowing split-system and heat pump-only water heaters to be tested at the conditions specified for any E_X. In response to NEEA and A.O. Smith, DOE notes that manufacturers will be able to represent optional metrics as specified in the amended appendix E.

Rheem stated that the Code of Federal Regulations only allows voluntary ratings for distribution transformers and commercial prerinse spray valves. Rheem also stated that the 24-hour simulated-use test for water heaters is more complex and very different from those specified for these other types of equipment which, according to Rheem, have test procedures that easily handle testing at alternate conditions. (Rheem, No. 47 at pp. 2–3)

In response to Rheem's comment, DOE notes that optional additional test conditions are being adopted in appendix E because industry has already demonstrated its desire for them through testing at specific conditions in compliance with NEEA Advanced Water Heating Specification v8.0. By amending appendix E to include these conditions, DOE is simply standardizing current industry practices. Because ratings at such conditions are voluntary, DOE anticipates that there would be no undue burden associated with adoption of such provisions in this final rule.

DOE also notes that water heaters are used in a variety of conditions and are expected to operate at all times despite them. This sets water heaters apart as compared to what is expected of other products (*e.g.,* air conditioners), which are only active and operate in response to specific conditions. Test procedures for these products already include a range of conditions, and, therefore, they do not require optional representations of performance. For these other types of products, the range of conditions experienced would be narrower and more predictable than the range of conditions experienced by heat pump water heaters,[55] and, therefore, it is not

[54] Available at: *neea.org/img/documents/residential-unitary-HPWH-qualified-products-list.pdf* (Last accessed on May 11, 2022).

[55] For example, Table 11 in section 3.6.1 of appendix M1 to subpart B of 10 CFR part 430 provides the heating mode test conditions for central (space-conditioning) heat pumps having a

unduly burdensome to require testing at multiple conditions for these other types of products. The narrower range of air conditions also ensures that the results of testing are highly representative of the product's average performance. This is not the case for heat pump water heaters because of the many different installation configurations which are applicable to heat pump water heaters—for instance, some are located indoors, and some are located outdoors. Allowing testing at these conditions to be optional avoids burdening manufacturers with test conditions that may not apply to their products. Using a different metric (E_X) for these conditions also ensures that these representations are not read as being valid for all consumer applications; instead, the representation is specific to the condition at which the water heater is being tested.

AHRI, BWC, and Rheem suggested that allowing optional ambient test conditions may increase manufacturer burden, arguing that they may eventually be driven by the market to conduct such testing. (AHRI, No. 55 at p. 3; BWC, No. 48 at p. 2; Rheem, No. 47 at p. 3) BWC also stated that not all manufacturers are currently conducting testing per NEEA Advanced Water Heating Specification v8.0, and that DOE allowing optional testing based on its test conditions would cause significant burden. (BWC, No. 48 at p. 2) Rheem requested that DOE either adopt the position from the last test procedure rulemaking that requiring additional testing at alternate conditions is unduly burdensome or provide justification for why it is not. (Rheem, No. 47 at p. 3) AHRI indicated that third-party laboratories may not be equipped to perform the optional tests at additional ambient conditions because of how the test set-up differs from that used in the standard test and that large capital burdens would need to be incurred in order to comply. AHRI also expressed concern that DOE did not adequately solicit manufacturer and laboratory feedback on increased test burden due to the proposed optional additional ambient test conditions. (AHRI, No. 55 at p. 4) Rheem also stated that optional tests currently performed by manufacturers are not necessarily done to be in accordance with AWHS and that NEEA, an entity which is not a manufacturer, distributor, retailer, or private labeler, was not restricted from making representations of products based on testing which did not use the DOE test procedure. (Rheem, No. 47 at pp. 2–3)

In response to these comments, DOE disagrees that optional testing will increase manufacturer burden for a number of reasons. First, as previously discussed in the July 2022 SNOPR, DOE is currently aware of 17 water heater brands represented in the Qualified Products List for AWHS v8.0. Participation in NEEA's program using Advanced Water Heating Specification v8.0 requires manufacturers to submit their own test results at the prescribed test conditions; NEEA does not appear to perform testing on behalf of manufacturers, per its own documentation.[56] Most importantly, DOE reiterates that this testing is ultimately optional, so a manufacturer may decline to undertake any additional testing. Consequently, DOE has concluded that allowing optional additional testing conditions will not increase burden for manufacturers.

BWC claimed that DOE is not authorized under EPCA to allow manufacturers to have additional optional representations of performance and requested that DOE clarify its statutory authority. (BWC, No. 48 at p. 2) Rheem claimed that justifications for other products allowing optional additional ratings do not apply to consumer water heaters and stated that EPCA [57] can be interpreted as prohibiting optional additional test conditions that are not in the test procedure.

In response to these comments, DOE finds BWC's and Rheem's interpretations of 42 U.S.C. 6293(c) to be misguided. The statute requires appliance efficiency testing and representations to be done in accordance with the DOE test procedure. DOE routinely incorporates by reference private sector testing methods into Federal test procedures, and nothing in the statute would prohibit adoption of optional test conditions as these commenters suggest. DOE notes that the optional conditions at which manufacturers may choose to test their products are specified as part of the AWHS v8.0 test procedure and are not left up to manufacturers to determine individually. Precisely by including these optional conditions and metrics in the appendix E test procedure, DOE is permitting manufacturers and other parties to make such representations to the public in the manner which the statute contemplates. EPCA requires that a uniform efficiency metric (*i.e.,* UEF) be used to rate all water heaters; however, the addition of optional representations does not prevent manufacturers from making its mandatory UEF rating under the required conditions. By virtue of the new heat pump water heater testing and metric being optional, DOE would not enforce the required energy conservation standard based upon results of testing at optional test conditions. Permitting testing under the specified optional conditions may also serve another purpose. In a future rulemaking considering further amendments to the appendix E test procedure, DOE may consider adopting multiple ambient test conditions for certain types of water heaters, if data from testing at these additional conditions proves that this methodology yields results more representative of energy consumption over an average use cycle. Hence, allowing manufacturers to test and rate these optional conditions would allow more data to be collected for potential future amendments.

AHRI requested that DOE provide any data justifying the proposal to include optional ambient test conditions to stakeholders. (AHRI, No. 55 at pp. 2–3) BWC requested that DOE readopt its position that there is insufficient data to support optional additional ambient test conditions and to provide the data that caused DOE to make this proposal in the SNOPR. (BWC, No. 48 at p. 2)

In response, DOE notes that NEEA's Qualified Products List [58] indicates the climate-weighted average performance of heat pump water heaters as tested by manufacturers to the various conditions in AWHS v8.0. (This performance metric, ''cool climate efficiency,'' is a result of testing under the optional conditions which DOE is adopting in this final rule.) From the data points in NEEA's Qualified Products List, manufacturers demonstrate that heat pump water heaters are less energy-efficient at these additional conditions. For example, Tier 4 products, which

single-speed compressor and a fixed-speed indoor blower. The range of temperatures at which the outdoor evaporator coil can be tested is from 5 °F at the lowest to 47 °F at the highest. Because a heat pump water heater would also be active during the summer months, DOE has determined that the representative range of outdoor ambient temperatures for a split-system heat pump water heater's outdoor evaporator coil could be from 5 °F at the lowest to 95 °F at the highest.

[56] Steps in the process flow for NEEA's AWHS Qualified Products List can be found online at: *neea.org/img/documents/qualified-products-process-flow.pdf* (Last accessed on Sept. 10, 2022).

[57] The commenter cited 42 U.S.C. 6293(c), ''Restriction on Certain Representations,'' of which subsection (1) prohibits representations not made in accordance with the currently applicable test procedure and subsection (2) prohibits representations not made in accordance with a new or amended test procedure 180 days after the adoption of that test procedure.

[58] Available at: *www.neea.org/img/documents/residential-unitary-HPWH-qualified-products-list.pdf* (Last accessed on Sept. 18, 2022).

range in UEF from 3.45 to 4.02 at DOE's required test conditions, have cool climate efficiencies ranging from 3.1 to 3.5. These ratings have been provided to NEEA by manufacturers conducting their own testing. While DOE is not adopting the cool climate efficiency metric (because it requires testing at *all* of the additional ambient conditions, and that would significantly increase burden for a manufacturer wanting to provide consumers with additional ratings), these cool climate efficiency ratings are an objective indication of how performance can be impacted by varying climatic conditions. By adopting E_X optional ratings in appendix E, DOE expects to facilitate manufacturer testing and the generation of relevant data related to water heater performance at these additional conditions. Again, the standardized voluntary ratings could be considered in a future rulemaking to determine the representativeness of the current mandatory ambient conditions in appendix E.

AHRI also stated that DOE has not provided evidence that NEEA's AWHS test conditions ensure repeatability and reproducibility and suggested that these requirements still apply even if the procedure is optional. (AHRI, No. 55 at p. 4)

Repeatability refers to the quality of a test method which allows a laboratory to achieve the same results when a product is tested on more than one occasion. Reproducibility refers to the quality of a test method which allows one laboratory to reproduce the results obtained by another laboratory. Test tolerances and set-up requirements are essential to these parameters. As proposed in the July 2022 SNOPR and adopted in this final rule, the optional test conditions would be tested per the same tolerances and set-up requirements as the current UEF test procedure—simply at different temperatures. Utilization of this Federal testing framework makes it possible for DOE to ensure that the voluntary ratings of E_X are repeatable and reproducible.

AHRI stated that DOE has not provided references to other occasions when it has adopted optional metrics for voluntary representations for other products or equipment. (AHRI, No. 55 at p. 4) AHRI requested that DOE remove the proposal concerning optional additional ambient test conditions from this rulemaking and instead address it in a subsequent rulemaking for these products. (AHRI, No. 55 at p. 4)

In response and as discussed earlier in this section, DOE has previously adopted optional metrics for voluntary representations where there was a clear industry precedent for these metrics and a consumer utility for having the additional performance information. Most recently, this was done for dedicated outdoor air systems (DOASes). For heat pump water heaters, there is a clear indication that industry wishes to provide consumers with these additional ratings because numerous product representations have been submitted by several manufacturers to NEEA for its Qualified Products List. DOE's amendment to officially adopt these supplemental test conditions into the appendix E test procedure ensures that when these representations are provided, they are done so based on a consistent test method.

Rheem stated that it has not had enough time to evaluate DOE's proposal to allow optional additional test conditions. (Rheem, No. 47 at p. 2) Rheem requested that DOE clarify the sampling, certification, and enforcement provisions for heat pump water heaters with alternate representations. (Rheem, No. 47 at p. 3)

In response, DOE notes that it provided a three-week comment period on the limited set of issues presented in the July 2022 SNOPR, and other commenters were able to assess DOE's latest proposal and provide substantive comments during the time allotted. By virtue of E_X being an optional metric for voluntary representations, DOE will not require certification of E_X representations. Manufacturers who opt to determine Ex must apply the sampling requirements for determining UEF in order to ensure consistency in values provided to consumers.

Rheem recommended that DOE fully evaluate the alternate conditions specified in AWHS before adopting them. (Rheem, No. 47 at p. 4) Rheem stated that it has not had time to fully evaluate the alternate test conditions and questions whether they adequately represent the entire Nation, or only represent the Northwest, as these test conditions were developed by NEEA. (Rheem, No. 47 at p. 4)

To clarify, by allowing manufacturers to make separate E_X representations for each set of test conditions, the voluntary representations, individually, are not designed to be representative of the entire United States. To do so would require these test conditions to be averaged together based on prevalence of climate conditions at a given location, and this aspect of NEEA's AWHS v8.0 is not being used in the appendix E optional representations. Instead, it is DOE's mandatory testing scenario—the determination of UEF through the standard rating conditions—that is intended to reflect average conditions for the Nation as a whole. DOE has evaluated the full set of test conditions NEEA specifies in AWHS v8.0 and has determined that these conditions are meant to cover the full range of operating conditions (temperature and humidity) possible across the United States. They are not meant to only represent the range of conditions possible in the Northwestern United States. The purpose of E_X representations, as employed by DOE at appendix E, is to indicate performance at individual rating points, which, along with UEF, will provide additional information to consumers. Manufacturers will be permitted to make voluntary representations at any of the optional test conditions specified in appendix E.

BWC stated that DOE's proposal to allow optional additional test conditions would confuse consumers and installers because they may not have the means to sufficiently assess environmental conditions where they live. (BWC, No. 48 at p. 3) In addition, BWC commented that allowing optional additional test conditions may cause scarcity of testing resources, thereby significantly increasing manufacturer burden. (BWC, No. 48 at p. 3)

DOE disagrees with BWC's presumption that consumers and installers cannot assess environmental conditions. These parties may easily access a variety of sources of freely available weather data, such as information generated by the National Oceanic and Atmospheric Administration (NOAA) and the National Weather Service (NWS).[59] [60] In addition, installers of central air conditioning, central heat pump, and cool-climate heat pump units already have sufficient access to local environmental data required to install them. These data are the same data required for the installation of water heaters. Although DOE understands BWC's concern regarding limited testing resources, DOE once again reiterates that this testing is ultimately optional; manufacturers are not obligated to make capital investments or dedicate testing resources if it is not feasible. To the extent that optional testing would

[59] The National Weather Service (NWS) maintains a Climate page on their website which provides past weather records and climate information for regions of the United States and its territories. This page is available at: *www.weather.gov/wrh/climate.* (Last accessed Sept. 28, 2022)

[60] The National Centers for Environmental Information (NCEI) maintains a Past Weather page with past weather data from weather stations around the world. This data is available for download in various file formats. This page is available at: *www.ncei.noaa.gov/access/past-weather/.* (Last accessed Sept. 28, 2022)

utilize resources that would otherwise be used for mandatory testing, DOE notes that manufacturers would have the option of foregoing or delaying optional testing to accommodate mandatory testing since DOE is not requiring use of any of the optional test conditions. Furthermore, as manufacturers have already provided ratings to NEEA at these alternate conditions, DOE does not believe that officially adopting these test conditions would change overall available laboratory capacity, especially as manufacturers may opt to test these optional conditions in-house.

ASAP, ACEEE, and NRDC requested that DOE clarify which optional test conditions would apply to split-system water heaters with an indoor heat pump component. (ASAP, ACEEE, and NRDC, No. 54 at p. 2) In response, DOE notes that the included optional test conditions are intended to be used at the discretion of the manufacturer. Manufacturers are free to use the conditions specified by the test points they believe are most similar to what their product may experience during operation. For example, a manufacturer of a split-system heat pump water heater whose compressor and storage tank are located outdoors and indoors, respectively, may decide it would be beneficial to evaluate the product's performance at an outdoor ambient temperature of 34.0 °F. In this case, the manufacturer would test the product using the conditions specified by the E_{34} metric: outdoor dry-bulb temperature and relative humidity of 34.0 °F and 72 percent, respectively, indoor dry-bulb temperature and relative humidity of 67.5 °F and 50 percent, respectively, and supply water temperature of 47.0 °F.

Rheem requested that DOE evaluate wider tolerance ranges for the alternate test conditions. Rheem also asked that DOE clarify whether relative humidity control is required for storage tanks during split-system water heater tests, in which case, the commenter argued that two psychrometric chambers would be required. (Rheem, No. 47 at pp. 3–4)

In response, DOE notes that the amendments being adopted for ambient condition tolerances during UEF testing would also apply to E_X testing, hence allowing a similarly wider tolerance range to apply at all conditions. When testing a split-system heat pump water heater or heat pump water heater requiring a separate storage tank, the heat pump portion of the system shall be tested at the relative humidity conditions specified, and the storage tank can be tested at either the same conditions or the conditions specified in section 2.2.1 of appendix E. Thus, the relative humidity control is not required for the storage tank during split-system water heater tests. This is discussed further in section III.D.1 of this document.

Rheem requested that DOE remove ''heat pump only'' from the table of alternate test conditions because they are the same as the outdoor portion of a split-system water heater. (Rheem, No. 47 at p. 4)

In response, DOE wishes to make clear that circulating heat pump water heaters (heat pump-only water heaters) and split-system water heaters are not identical. Circulating heat pump water heaters are instantaneous-type units, whereas split-system heat pump water heaters have a storage tank and are, overall, storage-type units. Both types of products may have the heat pump module located remotely from the storage tank, but still indoors. In light of this comment, DOE has modified the table of alternate test conditions to explicitly allow split-system and circulating heat pump water heaters to be tested at any of the conditions specified.

D. Test Set-Up and Installation

1. Split-System Heat Pump Water Heaters

In section III.A.2 of this document, DOE discussed a new definition for this subset of heat pump water heaters. As established by this final rule, a ''split-system heat pump water heater'' means a heat pump-type water heater with an indoor storage tank and outdoor heat pump component. In considering such products, DOE had found that in a split-system heat pump, the heat pump part of the system is typically installed outdoors and, as a result, does not use the indoor ambient air for water heating directly. In the current appendix E test procedure, different ambient conditions are specified in appendix E for heat pump water heaters and non-heat pump water heaters, but there are no specific conditions for split-system heat pump water heaters.

In the January 2022 NOPR, DOE proposed to specify that the heat pump part of the system shall be tested using the heat pump water heater dry-bulb temperature and relative humidity requirements, while the storage tank part of the system shall be tested using the non-heat pump water heater ambient temperature and relative humidity requirements. DOE noted that the required non-heat pump water heater ambient conditions can be met by keeping the entire system within the dry-bulb temperature and relative humidity requirements for heat pump water heaters (*i.e.,* both parts of the system can be tested in the same psychrometric chamber). 87 FR 1554, 1583 (Jan. 11, 2022).

On this topic, AHRI requested that DOE clarify whether the proposed testing requirements for split-system heat pump water heaters would mean testing would have to be carried out with the heat pump and storage tank in separate rooms. (AHRI, Jan, 27, 2022 Public Meeting Transcript, No. 27 at p. 42) NYSERDA indicated that DOE should collaborate with manufacturers to ensure that test conditions and set-up for split-system heat pump water heaters are consistent, repeatable, and not burdensome. (NYSERDA, No. 32 at p. 4) BWC suggested that DOE should permit manufacturers and testing laboratories as much flexibility as possible when determining the testing locations of separate system components and not prevent test set-ups that can meet the specified conditions for both systems in the same room or area, if a manufacturer or test laboratory so chooses. (BWC, No. 33 at p. 9) Rheem requested clarification that the storage tank can be tested at the heat pump test conditions and still meet the requirements of appendix E. (Rheem, No. 31 at p. 3)

To reiterate DOE's explanation in the January 2022 NOPR, if a single room, chamber, or area is capable of meeting the dry-bulb temperature and relative humidity requirements for heat pump water heaters, then, like integrated heat pump water heaters, split-system heat pump water heaters can be tested with both indoor and outdoor components in the same space. In response to NYSERDA, by adopting this approach, DOE is aligning with the methodology used already by industry when testing heat pump water heater products for other representations (such as the Qualified Products List for NEEA's AWHS v8.0), so consequently, DOE expects the results generated to be consistent, repeatable, and not unduly burdensome.

2. Mixing Valves

As discussed in section III.E.1 of this final rule, there are certain water heater designs which raise the temperature of water stored in the tank significantly above the outlet water temperature, and these products are meant to be used with a mixing valve (which may or may not be provided with or built-in to the unit) so that the hot stored water can be tempered down to a more typical delivery temperature. The January 2022 NOPR noted that the installation instructions in section 4 of appendix E do not address cases when a separate

mixing valve should be installed. 87 FR 1554, 1580 (Jan. 11, 2022).

The January 2022 NOPR proposed to incorporate instructions for separate mixing valve installations based on those found in the ENERGY STAR Test Method to Validate Demand Response for Connected Residential Water Heaters (ENERGY STAR Connected Test Method) (published on April 5, 2021). This set-up requires installing the mixing valve in accordance with the water heater and mixing valve manufacturer's instructions. Absent instruction from the water heater or mixing valve manufacturer, the mixing valve is to be installed in the outlet water line, upstream of the outlet water temperature measurement location, with the cold water supplied from a tee installed in the inlet water line, downstream of the inlet water temperature measurement location (*i.e.,* the mixing valve and cold water tee are installed within the inlet and outlet water temperature measurement locations). Section 4.1 of the ENERGY STAR Connected Test Method further clarifies that if the liquid flow rate and/or mass measuring instrumentation is installed on the outlet side of the water heater, that it shall be installed after the mixing valve. 87 FR 1554, 1580 (Jan. 11, 2022).

On July 18, 2022, EPA published the ENERGY STAR Connected Residential Water Heaters Test Method to Validate Demand Response, Version 1.2.[61] The updated test method retains the same instructions for setting up mixing valves in section 4.1.

In response to the January 2022 NOPR, ASAP, ACEEE, and NCLC; AET; A.O. Smith; and the CA IOUs supported DOE's proposal to include instructions for the installation of a mixing valve. (ASAP, ACEEE, and NCLC, No. 34 at pp. 1–2; AET, No. 29 at p. 2; A.O. Smith, No. 37 at p. 4; CA IOUs, No. 36 at p. 4) A.O. Smith also commented that, depending on the design, there may be additional steps that are required (*e.g.,* independently adjusting the tank thermostat and the mixing valve settings to remain in default mode per the manufacturer's instructions), and, therefore, DOE should clarify the details of this procedure. (A.O. Smith, No. 37 at p. 4)

In this final rule, DOE is adopting the proposed installation instructions for mixing valves as discussed in the January 2022 NOPR. To the extent that there may be additional steps required to maintain normal operation with the mixing valve installed per the manufacturer's specifications, these instructions would be heeded in accordance with section 4.3 of the amended appendix E test procedure. As described in section III.E.1 of this document, DOE is also providing an optional test method for high storage tank temperature operation, and this test method involves the installation of mixing valves for products which do not come so equipped.

3. Flow Meter Location

The current test procedure does not specify where in the flow path the flow volume and density of water must be measured, and this allows for laboratory test set-ups to perform these measurements either on the cold/inlet side of the water heater or on the hot/outlet side. As discussed in this rulemaking, water mass calculations can account for the difference in the density of water at the inlet vs. the outlet (colder water at the inlet has a higher density); however, there could be cases when a measurement based on the inlet location could result in inaccurate mass calculations. Specifically, some of the mass of inlet water could, after being heated, expand out of the water heater into the expansion tank and be purged prior to a draw. Any ''expanded'' volume of water that is lost through the bypass (purge) line could be included in a volume measurement taken at the inlet, but not be included in a volume measurement taken at the outlet. 87 FR 1554, 1581 (Jan. 11, 2022). The Department requested information and data regarding the issue of flow meter location (inlet vs. outlet) in the April 2020 RFI and the January 2022 NOPR. 85 FR 21104, 21113 (April 16, 2020); 87 FR 1554, 1581 (Jan. 11, 2022).

In response to the April 2020 RFI, four commenters either disagreed with requiring the flow meter to be located at the outlet or requested that DOE continue to allow facilities to choose the location, whereas two commenters stated that the flow rate should be measured at the outlet of the water heater, expressing concern that measuring at the inlet may be inaccurate. 87 FR 1554, 1581 (Jan. 11, 2022). The January 2022 NOPR presented DOE's exploratory test data evaluating the effect of flow meter location on the water mass measurement (see Table III.2 of the January 2022 NOPR). DOE's testing using Coriolis flow meters on both the inlet and outlet water lines indicated that more accurate measurements of the mass of water delivered are obtained when the flow meter is located in the outlet water line than when located on the inlet line, when both results were compared to a mass scale.[62] In particular, the error in the UEF resulting from a mass measurement from a flow meter at the outlet ranged between 0.002 and 0.016, whereas the error in the UEF resulting from a mass measurement from a flow meter at the inlet ranged between 0.023 and 0.029, depending on the type of water heater (with DOE testing both gas-fired storage and gas-fired instantaneous water heaters). DOE also acknowledged that third party laboratories typically install a flow meter on the inlet side. However, DOE did not propose a change based on this limited set of test results, which only included one gas-fired storage water heater sample and one gas-fired instantaneous water heater sample, and stated that more test data are required. *Id.* at 87 FR1581–1582.

In response to the NOPR's request for information on this issue, AHRI stated that having the flow meter at the inlet of the water heater avoids having debris damage the flow meters (*e.g.,* Teflon tape debris from the test rig can end up in the flow meter and cause damage). In addition, AHRI commented that placing the flow meter at the outlet may cause water mass calculation problems, because the temperature variation is greater at the outlet, and flow meters may not be designed to withstand these higher outlet water temperatures. Therefore, AHRI indicated it would support the option of installing a flow meter at the inlet. (AHRI, No. 40 at p. 2) Rheem once again noted that major third-party testing laboratories have flow meters installed at the inlet of the water heater and that it is likely that all certified models have been tested with such a set-up. (Rheem, No. 31 at pp. 4–5) BWC commented that manufacturers should still have the option to install flow meters at the inlet to ensure accurate results and longevity of testing equipment, as well as to avoid manufacturer burden. Specifically, BWC indicated that manufacturers may have sophisticated set-ups with flow meters installed at the inlet, and there could be substantial burden with overhauling these set-ups. (BWC, No. 33 at p. 8)

Based on these comments, DOE has determined that a requirement for flow meters to be installed at the outlet may not only require re-testing a large number of basic models but also

[61] Available at: *www.energystar.gov/products/spec/residential_water_heaters_specification_version_5_0_pd* (Last accessed on July 25, 2022).

[62] Mass of water drawn from the water heater can either be directly measured using a mass scale, or it can be calculated by using a flow meter to measure the volume of water moved (and converted to mass using the density of the water). The mass scale approach represents the actual value of the mass of water drawn, against which the flow meter results can be compared.

potentially degrade the reliability of the testing rig due to debris flowing downstream. Because there is a generally consensus among stakeholders who commented on this issue that it is necessary to retain the ability to install the flow meter at the inlet side, DOE is not amending appendix E to require measurement at the outlet side. Instead, DOE is maintaining its current provisions in sections 3 and 4 of appendix E, which allow for the flow meter to be installed on either the inlet or outlet side.

4. Separate Storage Tanks

Some water heaters on the market require a volume of water, typically contained in either a storage tank (or tanks) or in a piping distribution system of sufficient volume, to operate. These products operate by circulating water stored either in the piping system or from a separate tank (or multiple separate tanks) to the water heater to be heated then back to the piping system or tank until hot water is needed. As discussed in section III.A.4.a of this document, DOE is adopting a definition for these products, which are termed ''circulating water heaters.'' In the January 2022 NOPR, DOE identified two types of circulating water heater products that require a volume of water to operate—heat pump-only water heaters that require installation with a separate storage tank and circulating gas-fired instantaneous water heaters that require installation with a separate storage tank or a piping system of sufficient volume. 87 FR 1554, 1583–1585 (Jan. 11, 2022). Circulating gas-fired instantaneous water heaters are distinct from other types of gas-fired instantaneous water heaters in that they are not designed to operate independent of a storage tank or hot water system, as other gas-fired instantaneous water heaters are. This applies generally to circulating water heaters; however, DOE has determined that there are no electric resistance or oil-fired circulating water heaters on the market today.

The currently applicable appendix E test procedure does not have procedures in place to appropriately test circulating water heaters. In the January 2022 NOPR, DOE proposed to require that circulating water heaters be tested using an 80 gallon (±1 gallon) unfired hot water storage tank (UFHWST) that meets the energy conservation standards for an unfired hot water storage tank at 10 CFR 431.110(a). 87 FR 1554, 1583–1585 (Jan. 11, 2022).

In response to the January 2022 NOPR, DOE received a number of comments regarding the separate storage tank requirements, primarily related to the ±1 gallon tolerance, the representativeness of an 80-gallon unfired hot water storage tank, and the lack of a specification of an upper bound on thermal insulation for the unfired hot water storage tank. These comments were discussed in detail and addressed in the July 2022 SNOPR. Some commenters specifically recommended that DOE specify electric storage water heaters to be paired with heat pump-only water heaters. Commenters also raised questions as to whether or not the separate tanks to be used during testing may have back-up heating. For gas-fired circulating water heaters, commenters urged DOE to consider allowing multiple tank sizes to be used for testing rather than just the 80-gallon tank proposed in the January 2022 NOPR. 87 FR 42270, 42281–42283 (July 14, 2022).

After considering the issues raised by commenters responding to the January 2022 NOPR, in the July 2022 SNOPR, DOE proposed several updates to its earlier proposals (in section 4.10 of appendix E) for testing circulating water heaters as initially presented in the January 2022 NOPR. 87 FR 42270, 42282–42283 (July 14, 2022). These proposed modifications to DOE's initial proposal are set forth in the paragraphs that follow.

After re-evaluating the market for heat-pump-only water heaters, DOE tentatively determined that testing such products with a conventional electric storage water (*i.e.,* an electric water heater that uses only electric resistance heating elements) would be more representative than testing with an UFHWST. Therefore, DOE proposed that heat-pump-only water heaters be tested in the medium draw pattern using a 40-gallon traditional electric storage tank (*i.e.,* that provides heat only with electric resistance heating elements) that has a UEF rating at the minimum required at 10 CFR 430.32(d). DOE chose a 40-gallon tank in the medium draw pattern because that size and draw pattern combination has the highest number of models currently available on the market.[63] DOE also proposed that, for heat pump-only water heaters, the test be carried out using a tank that does not ''over-heat'' the stored water (*i.e.,* $T_{max,1}$ (maximum measured mean tank temperature after cut-out following the first draw of the 24-hour simulated-use test) must be less than or equal to $T_{del,2}$ (average outlet water temperature during the 2nd draw of the 24-hour simulated-use test); see section III.E.1 of this document for more discussion of water heater ''over-heating''). This would ensure that the electric storage tanks are not overheating during the test, thereby ensuring consistency across tests. 87 FR 42270, 42282 (July 14, 2022).

By contrast, DOE maintained its earlier proposal that a UFHWST be used for testing of circulating gas-fired water heaters, as those products are more likely to be installed with a UFHWST in the field. Therefore, DOE tentatively concluded that testing with an UFHWST would be representative for such units. 87 FR 42270, 42282 (July 14, 2022).

In response to the January 2022 NOPR, some commenters suggested that DOE allow manufacturers to specify the storage tank used for testing. DOE noted that this approach could lead to additional test burden for third-party testing laboratories, which may need to acquire more than one storage tank if they are performing tests for multiple manufacturers, each of whom may specify a different storage tank for testing. In order to avoid creating the potential for additional test burden, DOE tentatively determined not to allow manufacturers to specify the electric storage water heater or unfired hot water storage tank used respectively for testing the heat pump-only or gas-fired instantaneous circulating water heaters. Additionally, DOE stated it would consider relevant amendments to certification and reporting requirements in a separate rulemaking. 87 FR 42270, 42282 (July 14, 2022).

After considering the comments regarding the tolerance on the storage tank initially proposed in the January 2022 NOPR, DOE tentatively determined in the July 2022 SNOPR that a wider tolerance would reduce potential testing burden while still providing representative and reproducible results. Specifically, DOE tentatively concluded that a 10-percent tolerance would increase flexibility for manufacturers by increasing the number of tanks that could be used for testing, while not materially impacting the UEF test results. Therefore, consistent with the recommendations provided by commenters, DOE proposed to adopt a 10 percent tolerance (±10 percent, allowing products with rated storage volumes between 36 gallons and 44 gallons) for the electric storage water heater used for testing heat-pump-only water heaters. 87 FR 42270, 42282 (July 14, 2022).

Additionally, after further review of the market for circulating gas-fired instantaneous water heaters and unfired

[63] *See* Figure 3A.2.8 of the Preliminary Analysis Technical Support Document for consumer water heaters (Docket No. EERE–2017–BT–STD–0019–0018).

hot water storage tanks, DOE proposed in the July 2022 SNOPR to allow testing with a tank at any storage volume between 80- and 120-gallons. Based on further analysis, DOE tentatively determined that variations in the tank size should not significantly impact the result of the test. During a water draw, the internal tank temperature decreases as hot water exits the tank and is replenished by colder water entering the tank. Generally, different tank sizes will result in different rates of internal temperature decrease during a water draw (*e.g.,* during a specified water draw, a smaller tank will generally experience a faster decrease in temperature compared to a larger tank). During a test, any potential differences in the tank water temperature due to the use of different size tanks would be accompanied by a corresponding proportional difference in burner on-time, such that the impact on measured efficiency (*i.e.,* the ratio of energy output to energy input) would be negligible. DOE noted its recognition that a larger tank would likely have more standby losses than a smaller tank; however, DOE tentatively determined that the impact this would have on measure efficiency would also not be significant. 87 FR 42270, 42282–42283 (July 14, 2022).

DOE noted that providing a range of allowable tank volumes would reduce potential burden by providing manufacturers with more tank options, thereby allowing them to pair their circulating gas-fired instantaneous water heaters with an existing UFHWST model. This approach is also likely to be more representative of how the units would be installed in the field as opposed to testing with a custom-made tank for testing or a competitor's tank that meets a specific volume requirement. 87 FR 42270, 42283 (July 14, 2022).

In addition, after considering comments in response to the January 2022 NOPR, DOE tentatively determined in the July 2022 SNOPR that the lack of an upper bound on the thermal insulation value for the UFHWST could lead to differences in measured efficiency that reflect differences in tank performance, rather than reflecting differences in water heater performance. Therefore, DOE tentatively determined that more specific constraints on tank performance are warranted to ensure more comparable test results across the subject water heater models. DOE proposed to require that UFHWSTs used for testing circulating gas-fired instantaneous water heaters exactly meet the baseline energy conservation standard for UFHWSTs.[64] 87 FR 42270, 42283 (July 14, 2022). However, DOE did not include commenters' suggested specifications for other tank characteristics (such as the inlet and outlet connection locations, internal tank baffling, and inlet tube designs) for the UFHWST because, as explained in the July 2022 SNOPR, DOE tentatively determined that over-specifying the design of the UFHWST—given the impacts on the UEF rating are minimal—could result in a very narrow range of UFHWST models which could be used for testing circulating water heaters, thereby potentially introducing significant barriers to testing these products at third-party laboratories. In addition, DOE tentatively concluded that it lacked sufficient information regarding these specifications to do so. 87 FR 42270, 42283 (July 14, 2022).

Similarly, DOE proposed that the electric storage water heater used for testing heat-pump-only water heaters have a rated UEF corresponding to the minimum standard found at 10 CFR 430.32(d), thereby helping to ensure more comparable results.

In summary, in the July 2022 SNOPR, DOE proposed to further amend the separate storage tank requirements proposed in the January 2022 NOPR for heat pump-only and gas-fired circulating water heaters. DOE proposed that heat pump-only water heaters be tested with a 40-gallon (±4 gallons) electric storage water heater that has a UEF value corresponding to the minimum standard for such products and that does not ''over-heat''; and that gas-fired circulating water heaters be tested with an 80-gallon to 120-gallon unfired hot water storage tank that is rated equal to the energy conservation standard for such equipment.

In response to the July 2022 SNOPR, NEEA indicated support for DOE's revisions to the proposed test procedure for circulating water heaters. (NEEA, No. 56 at p. 2) A.O. Smith and the CA IOUs supported DOE's proposal requiring gas-fired circulating water heaters to be tested using a UFHWST with a storage volume between 80 and 120 gallons and an R-value exactly at the minimum R-value required at 10 CFR 431.110(a). (A.O. Smith, No. 51 at p. 8; CA IOUs, No. 52 at p. 6) The CA IOUs also indicated support for the revision to require heat pump circulating water heaters to use a 40-gallon electric resistance water heater meeting the minimum UEF requirements. (CA IOUs, No. 52 at p. 6)

AHRI stated that allowing manufacturers to specify the storage tank used for testing circulating water heaters would not increase test burden for third-party laboratories because manufacturers would provide both the water heater and the storage tank it was designed to be used with to the laboratories. (AHRI, No. 55 at pp. 5–6) BWC suggested that the capacity range of 80 to 120 gallons for UFHWSTs used to test circulating water heaters is too wide to ensure consistent results, so, therefore, the commenter requested that DOE complete further testing to validate it. (BWC, No. 48 at p. 4)

After considering these comments, DOE has concluded that providing a range of allowable tank volumes for use with circulating gas-fired instantaneous water heaters as described in the July 2022 SNOPR would reduce potential burden by providing manufacturers with more tank options, thereby allowing them to pair their circulating gas-fired instantaneous water heaters with an existing UFHWST model. This approach balances manufacturer burden (by allowing flexibility in the tank size) with ensuring reproducibility of test results (by limiting the options to a fixed range of sizes). In response to AHRI's comments, DOE notes that it is not adopting changes to the certification requirements in this final rule, and whether or not manufacturers may specify a specific model of UFHWST is an issue out of the scope of this test procedure rulemaking and will be addressed in a future rulemaking addressing certification requirements for consumer water heaters.

As such, in this final rule, DOE is adopting the separate storage tank requirements for circulating gas-fired instantaneous water heaters as proposed in the July 2022 SNOPR. In response to BWC's comment, DOE understands that the choice of tank size may result in slightly different ratings for these products, and BWC seeks to determine how much variability in results there would be if testing were to be conducted with an 80-gallon UFHWST versus a 120-gallon UFHWST. However, the Department's approach is instead to permit manufacturers some flexibility in testing options so as to be able to tailor the tank pairing to the design or application intent of the circulating water heater, and to then subsequently account for the variation in ratings when setting amended standards for circulating water heaters by having the required UEF be a function of the effective volume. As discussed in section III.I of this document, compliance with the separate storage tank test method will not be required

[64] Currently, baseline energy conservation standards for UFHWSTs require a thermal insulation of R–12.5. 10 CFR 431.110(a).

until compliance with amended energy conservation standards is mandatory, if such standards are adopted. Additionally, section III.F.2.b of this document describes the use of the effective storage volume metric to be able to associate efficiency ratings to the storage tank size for circulating water heaters. This matter is discussed further in this section in response to other comments. In taking these steps, DOE can, in the ongoing standards rulemaking for consumer water heaters, propose and request comment on new energy conservation standards for circulating water heaters that are functions of the effective storage volume.

SMTI requested that DOE widen the accepted volume range for electric storage tanks used to test separate heat pump-only water heaters based on the performance requirements of each product instead of requiring that all products be tested with a 40-gallon tank. (SMTI, No. 49 at p. 1) SMTI suggested that heat pump-only water heaters be tested with manufacturer-specified storage tanks, which the manufacturer would provide to third-party laboratories, and that a 40-gallon tank be used if a specific storage tank is not specified. (SMTI, No. 49 at p. 2) A.O. Smith stated that there is insufficient data to conclude that the 40-gallon electric resistance water heater should be used for testing heat-pump-only or split-system water heaters and that a 50-gallon electric resistance water heater may be more representative based on manufacturer data. (A.O. Smith, No. 51 at p. 9) However, A.O. Smith did not provide any manufacturer data to support its claim that a 50-gallon electric resistance water heater would be more representative.

As described in the July 2022 SNOPR, DOE selected a 40-gallon tank in the medium draw pattern because that size and draw pattern combination has the highest number of models currently available on the market as observed in models currently certified to DOE's Compliance Certification Database (see Figure 3A.2.8 of Preliminary Analysis TSD). 87 FR 42270, 42282 (July 14, 2022). This finding has not changed since the publication of the July 2022 SNOPR, and on this basis (because additional data were not provided by stakeholders), DOE has concluded that this tank size and draw pattern are the most representative choice to be paired with a heat pump-only water heater. In response to SMTI's request to widen the volume range, DOE has determined to adopt a volume tolerance of ±5 gallons, as opposed to ±10% (4 gallons) which was proposed in the July 2022 SNOPR. This change is based on further inspection of the rated storage volumes of electric storage water heaters which have a nominal capacity of ''40 gallons'' as observed in models certified to DOE's Compliance Certification Database. As such, DOE does not expect the difference to be substantial in impacting energy efficiency results for circulating heat pump water heaters because the volume range covers products of the same nominal volume. As previously stated in response to a comment made by AHRI, DOE is allowing manufacturers to specify an effective storage volume for the tank rather than a specific model because any characteristics of the tank that would affect the efficiency rating of the circulating water heater during a test are accounted for in the volume and efficiency rating (in this case, UEF) of the tank.

AHRI and BWC indicated that DOE's primary TSD for energy conservation standards for consumer water heaters suggests that the 40-gallon electric resistance water heaters used to test heat-pump-only water heaters may be phased out by future DOE regulations. (AHRI, No. 55 at p. 5; BWC, No. 48 at pp. 4–5) Rheem supported AHRI's comment on this issue. (Rheem, No. 47 at p. 5)

In response, DOE notes that the current energy conservation standards rulemaking for consumer water heaters is still ongoing, and any preliminary results published as part of that rulemaking are neither final nor binding in any way. Consequently, it is not confirmed that electric resistance storage water heaters will be phased out. Nevertheless, to ensure there will be no confusion in the event such regulatory changes were to occur, DOE is removing the requirement that the storage tank use only electric resistance heating elements. Accordingly, the associated portion of section 4.10 of appendix E has been updated to read as follows:

''When testing a heat pump circulating water heater, the tank to be used for testing shall be an electric storage water heater that has a measured volume of 40 gallons (±5 gallons), has a First-Hour Rating greater than or equal to 51 gallons and less than 75 gallons resulting in classification under the medium draw pattern, and has a rated UEF equal to the minimum UEF standard specified at 10 CFR 430.32(d), rounded to the nearest 0.01. The operational mode of the heat pump circulating water heater and storage water heater paired system shall be set in accordance with section 5.1.1 of this appendix.''

In its comments on the July 2022 SNOPR, A.O. Smith supported ensuring that non-unitary heat pump water heaters [65] intended for use in a single-family home or an individual dwelling unit that need to be paired with a separate storage tank are tested and certified to the Department consistent with appendix E. (A.O. Smith, No. 51 at pp. 8–9) A.O. Smith also requested that DOE clearly define the test apparatus for heat pump circulating water heaters. (A.O. Smith, No. 51 at p. 9)

In response to concern from certain stakeholders, DOE will allow manufacturers of gas-fired circulating water heaters to represent thermal efficiency test results measured according to the commercial water heaters test procedure outlined at 10 CFR part 431, subpart G, in addition to the required UEF test results. DOE also notes that this final rule clearly defines the test apparatus for circulating heat pump water heaters in section 4.10 of the amended appendix E.

Rheem reiterated its request for clarification as to whether a system (*i.e.,* a heat pump and storage tank designed to be used together) can be certified independent of the proposed method to use a specific storage tank or electric resistance water heater. (Rheem, No. 47 at p. 5) Rheem also requested that DOE address whether a split-system water heater, designed to be used with an 80-gallon tank, can have a storage tank with electric resistance elements and whether a replacement tank can be sold. (Rheem, No. 47 at p. 5)

In response to Rheem, DOE would clarify that a product which consists of a heat pump and a storage tank designed to be used together and are sold together would constitute a ''split-system heat pump water heater.'' Such a system would be certified altogether as an electric storage water heater, and there would be no need to use the test procedure provisions for a separate storage tank. If the heat pump module were sold separately and independent of the tank, then it would constitute a ''circulating heat pump water heater,'' and the test procedure provisions for a 40-gallon ±5 gallon separate storage water heater would then apply. In Rheem's example of a product with an 80-gallon storage tank, that configuration would constitute a ''split-

[65] DOE understands ''non-unitary heat pump water heaters'' to refer to products which consist of a heat pump system to heat water but are not packaged with the rest of the components used in domestic hot water production (*i.e.,* a hot water storage tank). These products are considered circulating heat pump water heaters in this rulemaking.

system heat pump water heater''—an electric storage water heater with a storage volume of 80 gallons. The separate storage tank provisions do not apply to such a product. The 80-gallon storage tank component of the split-system heat pump water heater may have electric resistance back-up elements. Replacement storage tanks sold on a separate basis—essentially an electric resistance water heater with a storage volume of 80-gallons—would not be permitted, because electric resistance heating elements would not be able to achieve the UEF energy conservation standard levels mandatory for electric storage water heaters greater than 55 gallons for which compliance is currently required (*see* 10 CFR 430.32(d)).

In response to the January 2022 NOPR, A.O. Smith also commented that the energy from a circulating pump should be used in the UEF calculations and that the flow rates between the circulating heat pump water heater and the storage tank should be specified by the manufacturer. (A.O. Smith, No. 37 at p. 3) DOE agrees that including the energy use of the circulating pump is appropriate and consistent with the currently applicable appendix E test procedure, which requires measurement of power consumption of auxiliary electricity-using components. In this final rule, for water heaters which require separate storage tanks, the power consumption of the circulating pump shall be directly metered if the pump is integrated into the water heater. Section 4.10 of the amended appendix E test procedure will require that if the water heater is supplied with a separate, non-integrated circulating pump, it is to be installed as per the manufacturer's installation instructions, and its power consumption will similarly be accounted for in the energy measurements to determine UEF.

In conclusion, after considering comments received in response to the January 2022 NOPR and the July 2022 SNOPR, DOE is adopting the requirements for separate storage tanks as discussed in this final rule.

DOE's previous proposals involving the use of separate storage tanks did not specify a test procedure by which the storage volume of unfired hot water storage tanks paired with circulating water heaters to determine efficiency is to be measured. It is important to obtain a precise measurement of the storage volume of the UFHWST because its physical size affects the measured efficiency of the water heater due to standby losses of heat from the stored water to the air surrounding the storage tank; these standby losses increase as the size of the tank increases.

To ensure the accuracy and repeatability of test results, DOE is amending sections 4.10 and 5.2.1 of appendix E so that the method for determining storage tank volume specified in section 5.2.1 must also be conducted to verify the volume of unfired hot water storage tanks used to test circulating water heaters. In this method, storage volume is determined in gallons by subtracting the tare weight, measured while the tank is dry and empty, from the weight of the system when filled with water and dividing the resulting net weight of water by the density of water at the measured water temperature. This method is consistent with how the volume of unfired hot water storage tanks is currently rated. It is also the method specified for storage-type and storage-type instantaneous commercial water heaters under subpart G to 10 CFR part 431.

Additionally, as discussed in section III.F.2.b of this document, DOE is establishing that the effective storage volume of a circulating water heater is equivalent to the measured storage volume of the separate storage tank which was used during testing of the circulating water heater. This alleviates the manufacturers' concerns by ensuring that the standby losses reflected in the UEF rating of the circulating water heater can be mapped to the volume of the separate storage tank which was used during testing without having to specify a particular model of tank, for example. DOE would consider this tank volume in the development of energy conservation standards for circulating water heaters.

E. Test Conduct

As discussed throughout this rulemaking, EPCA requires that any test procedures prescribed or amended under this section shall be reasonably designed to produce test results which measure energy efficiency, energy use, or estimated annual operating cost of a covered product during a representative average use cycle (as determined by the Secretary) or period of use and shall not be unduly burdensome to conduct. (42 U.S.C. 6293(b)(3)) The proposed changes to test conduct, along with specific stakeholder comments received and DOE's responses, are discussed further in the subsections that immediately follow.

1. High Temperature Testing

Certain electric storage water heaters on the market are capable of raising the temperature of the stored water significantly above the outlet water temperature requirements specified in section 2.4 of appendix E, while still delivering water at a lower temperature that is at or near the temperature specified in appendix E. The storage tank is heated to a temperature which is still within the normal operating range of the water heater, but a mixing valve is typically installed with these products (either integrated into the water heater by the manufacturer at the factory, or added to the water heater in the field by the installer) to temper the outlet water to a more typical delivery temperature. (Set-up requirements for mixing valves that are to be used during testing are discussed in section III.D.2 of this final rule.) When the outlet water is tempered like this, a smaller amount of the hot water from the tank is required to meet demand (because the water in the tank is hotter than desired). Because less water needs to be removed from the tank, the effect of a mixing valve is to increase the amount of hot water that can be delivered overall by the water heater. In addition to determining the set-up considerations to test these products in a representative manner, DOE must consider the impact of raising the storage tank temperature significantly above the setpoint outlet temperature (*i.e.,* ''storage tank overheating'') on the efficiency of a water heater since this represents how the water heater will be used in the field.

As discussed in the July 2022 SNOPR, storage tank overheating increases the amount of hot water that a given size water heater can deliver. 87 FR 42270, 42277–42278 (July 14, 2022).

Historically, it has not been uncommon for water heaters to come with the capability to adjust the settings to increase the temperature of the water being stored in the tank, although, it is DOE's understanding that in the past, consumers rarely modified the preconfigured settings on their storage tanks. However, DOE has recently become aware of products that are being marketed to consumers with ''capacity boosting'' capabilities so as to avoid the need to install a larger storage-type water heater. The products (that DOE addressed in the July 2022 SNOPR) are equipped with user-operable modes which set the water heater to boost the storage tank temperature and use a built-in mixing valve (or one installed at the point of manufacture) to automatically maintain the delivery temperature. For example, one manufacturer produces 30-, 40-, and 50-gallon water heaters with an ''X-High Setting'' claiming to provide the same amount of hot water (''Effective Capacity,'' as the manufacturer refers to

it) as significantly larger water heaters with a more typical storage tank temperature of 125 °F—such as an 80-gallon capacity for the 50-gallon model, 64-gallon capacity for the 40-gallon model, and 48-gallon capacity for the 30-gallon model.[66] DOE notes that the 40-gallon model and the 50-gallon model are capable of providing effective capacities greater than 55 gallons, which, based on effective capacity, would put these models into a different product class. (*see* 10 CFR 430.32(d)). Another manufacturer produces a 55-gallon water heater with a variety of settings allowing the user to get ''performance equivalency'' of a 65-, 80-, or 100-gallon tank, stating that the tank raises the temperature safely up to 170 °F.[67] Again, these increased capacities would put this model into a different product class.

As stated in the July 2022 SNOPR, consumers would be expected to use the over-heated mode as part of the regular operation of their water heater. Accordingly, for such products, DOE expects that a representative average use cycle would include some portion of time in over-heated mode. 87 FR 42270, 42279 (July 14, 2022). For these water heaters, DOE believes that a representative average use cycle in the test procedure must encompass the ''capacity boosting'' capability, as this is the mode that DOE believes the consumer will likely be using once installed in the field, because such purchases are likely predicated on this capacity-boosting capability.

The operational mode selection instructions in section 5.1 of appendix E do not specifically address the situation when a water heater has this type of operational mode that boosts the capacity. In response to the January 2022 NOPR, several commenters requested that DOE consider amendments to the appendix E test procedure to provide more representative efficiency results (including ways to account for the increased effective capacity) for these products that ''overheat'' the stored water beyond the delivery temperature. After considering these comments in the July 2022 SNOPR, DOE proposed to establish additional requirements for the testing of water heaters which have these operational modes. 87 FR 42270, 42278 (July 14, 2022).

In order to further examine the potential impacts of storing water at temperatures higher than the delivery temperature, DOE performed testing on one 50-gallon electric resistance storage water heater that includes a built-in mixing valve and multiple user-selectable modes to boost the delivery capacity through storage tank overheating. As described in the July 2022 SNOPR, DOE collected data at three different storage tank temperatures, each of which provided an outlet water temperature at 125 °F ±5 °F through the use of the built-in mixing valve. DOE compared the maximum measured mean tank temperature after cut-out following the first draw of the 24-hour simulated-use test ($\overline{T}_{max,1}$) to the average outlet water temperature during the second draw ($\overline{T}_{del,2}$) as an indicator of the degree of ''overheating.'' DOE's test data is provided in Table III.3 of the July 2022 SNOPR. 87 FR 42270, 42278–42279 (July 14, 2022).

The test results indicated that storage tank overheating clearly leads to an increase in the measured FHR value. The test configuration corresponding to the current DOE test procedure produced an FHR value of 77 gallons. The overheated configurations with mean tank temperatures of 144.5 and 159.6 produced FHR values of 81 and 95 gallons, respectively. DOE notes that an FHR of 95 gallons is comparable to that of a 100-gallon electric storage water heater.[68] However, increasing the temperature of the stored water can reduce energy efficiency because the hotter tank undergoes substantially higher standby energy losses. As shown in Table III.3 of the July 2022 SNOPR, DOE's test data show that at a tank temperature of 124.3 °F, the measured UEF is 0.94, which is compliant with the current standards. When the temperature is increased to 144.5 °F, the UEF decreases to 0.90. Further increasing the temperature to 159.6 °F decreases the UEF to 0.88. 87 FR 42270, 42279 (July 14, 2022).

All of the tested temperatures correspond to normal operational modes for the water heater, and a review of publicly-available product literature indicates that products that utilize storage tank overheating generally offer user-selectable operational modes that result in stored water temperatures ranging from 100 °F to 170 °F. Consumers who choose to use a high-capacity (*i.e.,* ''overheated'') mode will experience the water heater performing significantly worse in terms of its energy efficiency rating than if the rating were determined based on testing without storage tank overheating. In other words, the rated efficiency at the rated delivery capacity would not be representative of an average use cycle or period of use when operated in a high-capacity mode. 87 FR 42270, 42279 (July 14, 2022).

In the July 2022 SNOPR, DOE surmised that consumers who purchase a water heater that provides overheating capability would do so with the intent to use such capability; as such, these consumers would be expected to use the over-heated mode some portion of the time, ranging from occasional use (*e.g.,* switching between the normal mode and the overheated mode depending on the hot water capacity needed at any particular time) to regular use. Accordingly, for such products, DOE expects that a representative average use cycle would include some portion of time in overheated mode. For this reason, DOE tentatively determined that testing storage-type water heaters that offer user-selectable overheated modes in the overheated mode would provide a more representative result than testing in the default mode. Therefore, DOE proposed to amend section 5.1 of appendix E to require that for water heaters that offer a user-selected operational mode(s) in which the storage tank is maintained at a temperature higher than the delivery temperature, the operational mode shall be that which results in the highest mean tank temperature while maintaining an outlet temperature of 125 °F ±5 °F. Because this amendment would change the measured energy efficiency, DOE proposed that compliance with this requirement would not be necessary until the compliance date for amended energy conservation standards. 87 FR 42270, 42279 (July 14, 2022).

As explained in the July 2022 SNOPR, demand-response water heaters with the capability to undergo utility-initiated overheating would not be expected to increase the capacity of the water heater over a typical average use cycle in the same way that a water heater with user-initiated overheating would, so DOE had tentatively concluded that testing demand-response water heaters in the default/normal would be the most representative method for those products. Therefore, DOE proposed to define ''demand-response water heater'' (see section III.A.1 of this document) and exclude such products from the requirement to test in the operational mode that results in the highest mean tank temperature while maintaining an

[66] See, for example: *www.geappliances.com/appliance/GE-Smart-50-Gallon-Electric-Water-Heater-with-Flexible-Capacity-GE50S10BMM* (Last accessed April 14, 2023).

[67] For example, DOE's Compliance Certification Database includes a 107-gallon electric storage water heater with an FHR of 94 gallons.

[68] For example, DOE's Compliance Certification Database includes a 107-gallon electric storage water heater with an FHR of 94 gallons.

outlet temperature of 125 °F ±5 °F, even if they are capable of overheating the stored water. 87 FR 42270, 42280 (July 14, 2022).

In response to the July 2022 SNOPR, BWC stated that the phrase ''storage tank overheating'' may be confusing to consumers and suggested that DOE find an alternate phrase to describe this concept (*i.e.,* ''water heaters with high heat modes''). (BWC, No. 48 at p. 3) GEA also disagreed with DOE's use of the term ''over-heating'' to refer to water heaters that can deliver water at lower temperature than that at which it is stored, suggesting ''delivery-control'' as an alternative, given that these products heat in the manner intended. (GEA, No. 53 at p. 2) In response to these comments and acknowledging the sensitivity around the potentially negative connotation of the term ''overheating,'' as noted earlier in this document, DOE's use of the term ''overheating'' does not denote performance outside of the normal operating range of the water heater, but rather refers to raising the tank temperature above the outlet water setpoint. To avoid any potential confusion, DOE will hereinafter refer to water heaters with overheating capability as water heaters with ''high heat modes.''

The following subsections summarize the remaining comments received in response to the provisions proposed in the July 2022 SNOPR for water heaters with high heat modes and include DOE's additional assessments of the impact on UEF ratings, representativeness of the test method, and implications for compliance with standards associated with high temperature testing.[69] As discussed in the following subsections, DOE has concluded that including test conduct provisions for determining the ratings of water heaters tested using the high temperature testing method would be justified. Therefore, in this final rule, DOE is establishing the methodology for determining ratings for electric resistance storage water heater using high temperature testing in appendix E, but DOE is allowing voluntary representations at this point. Specifically, manufacturers may opt to use the high temperature test method in addition to the regular temperature setting test method if they desire to make voluntary representations of the efficiency when tested in high temperature mode. DOE will consider establishing requirements for which electric resistance storage water heaters must be tested and represented according to the method for high temperature testing in its ongoing energy conservation standards rulemaking for consumer water heaters. Until such time, the regular test method is mandatory for compliance with the current Federal energy conservation standards.

a. Impact on UEF Ratings

In response to the July 2022 SNOPR, ASAP, ACEEE, and NRDC expressed support for DOE's proposal for addressing storage-type water heaters that heat the stored water beyond the delivery temperature. (ASAP, ACEEE, and NRDC, No. 54 at p. 2)

NEEA supported DOE's proposal to test water heaters in a user-selectable ''overheat'' mode when such a mode is available, as well as DOE's proposed methodology for identifying ''overheat'' modes. NEEA also indicated that it had performed testing on two 120-volt heat pump water heater models which had these modes available, and its test results showed a significant reduction in efficiency when the water heater was set to store water at an elevated temperature of 140 °F.[70] Thus, NEEA stated that requiring testing in the ''overheat'' mode would help realize the energy and cost savings intended with efficiency standards. (NEEA, No. 56 at p. 2)

BWC disagreed that water heaters with high heat modes should have separate testing requirements and expressed concern that tests to examine the potential effects of heating stored water above the delivery temperature setpoint were conducted on a single 50-gallon electric resistance storage water heater. BWC urged DOE to conduct further testing before finalizing this proposal. (BWC, No. 48 at p. 3) In response, DOE notes that the UEF ratings of products which store water at higher temperatures will be lower due to the higher standby losses incurred as a result of this high temperature storage. DOE did, however, conduct additional testing (see section III.F.2 of this document) to determine that the method of determining effective storage volume from the high temperature testing will only affect products which significantly increase capacity by increasing storage temperature.

Additionally, DOE reviewed the heat pump water heater test data referenced in NEEA's comment. NEEA tested two 50-gallon 120-volt heat pump water heaters at two storage setpoint temperatures (*i.e.,* 125 °F and 140 °F), with mixing valves installed to temper the delivery to 120 °F. NEEA's report concludes that the recovery efficiency can decrease by a factor of 3 to 8 percent when the setpoint temperature is increased from 125 °F to 140 °F. The higher setpoint temperature resulted in an increase in FHR of approximately 13 gallons. NEEA's report also states that at 67.5 °F ambient air, an increase in the setpoint temperature could increase standby losses by 25 percent, although NEEA stated that standby losses contribute less to the overall energy consumption of a heat pump water heater compared to recovery periods. DOE notes that NEEA did not conduct standby loss testing or present the UEF results of these water heaters in each mode. DOE expects that the standby loss from having a higher setpoint temperature would have a more significant impact on electric resistance water heaters because the recovery efficiency of electric resistance heating is not affected by the water temperature.[71] However, in conjunction with DOE's own test data (which was obtained through full 24-hour simulated use test measurements of an electric resistance storage water heater), DOE has determined that high temperature testing would result in significantly lower UEF results compared to setting the tank temperature close to the delivery setpoint of 125 °F.

Given the significant difference in UEF performance that have been observed based on the temperature of the water stored in the tank, DOE has concluded it is appropriate to provide a method to conduct high temperature testing. Section III.E.1.d of this document describes how DOE is establishing the requirements for high temperature testing. Due to the expected impacts of high temperature testing on UEF, DOE will not require compliance with this test method until compliance with amended energy conservation standards accounting for such water heaters is also required.

[69] DOE is establishing a method for testing water heaters at an elevated tank temperature, including water heaters without ''high heat modes.'' Therefore, DOE refers to water heaters with a built-in mixing valve and operational mode for overheating the water in the tank as water heaters with ''high heat modes'' but refers to the testing of water heaters at elevated storage water temperatures as ''high temperature testing.''

[70] An August 30, 2022 report by NEEA containing test data for these water heaters can be found online at: *neea.org/resources/plug-in-heat-pump-water-heaters-an-early-look-to-120-volt-products* (Last accessed on Nov. 22, 2022).

[71] Section 6.3.2 of the currently applicable appendix E test procedure (which will be re-located to section 6.3.3 upon the effective date of this final rule) states that the recovery efficiency for electric water heaters with immersed heating elements, not including heat pump water heaters with immersed heating elements, is assumed to be 98 percent.

b. Demand-Response Water Heaters

As discussed previously, in the July 2022 SNOPR, DOE proposed to define ''demand-response water heater'' and exclude such products from the proposed requirement to test in the operational mode that results in the highest mean tank temperature while maintaining an outlet temperature of 125 °F ±5 °F, even if they are capable of heating the stored water above the delivery temperature. 87 FR 42270, 42280 (July 14, 2022).

In response to the July 2022 SNOPR, NYSERDA indicated that water heaters with demand-response functionality should be excluded from testing at the highest tank temperature available. (NYSERDA, No. 50 at p. 3) A.O. Smith agreed with DOE's assessment that demand-response water heaters need the operational capability to ''over-heat'' the stored water in the tank above the intended outlet water temperature in response to a signal or command from a utility or third-party aggregator. The commenter stated that these load-up events are typically short in duration and do not keep the stored water in an over-heated state continuously or permanently. However, A.O. Smith raised concerns about the impact of this proposed amendment on the availability of the high heat mode feature on non-demand-response products. A.O. Smith urged DOE to continue to allow non-demand-response heat pump water heaters with selectable high heat modes to retain this functionality for customer utility. (A.O. Smith, No. 51 at pp. 5–6)

In contrast, the CA IOUs suggested that demand-response capable water heaters should be subject to the same test procedure as other water heaters capable of operating in high heat modes. (CA IOUs, No. 52 at p. 6)

As noted in section III.A.1 of this document, DOE is not establishing a definition for ''demand-response water heater'' in this final rule in order to prevent potential industry confusion from arising due to any differences in the features requirements specified in such definition. However, DOE has found it appropriate to still consider factors which would help to determine whether it is most representative to require demand-response water heaters to test at the highest tank temperature setting.

As described in the July 2022 SNOPR and discussed in section III.A.1 of this document, high-temperature water storage occurring in demand-response water heaters and initiated by the electric utility serves an important purpose for energy storage and grid flexibility. 87 FR 44270, 42279–42280 (July 14, 2022). Additionally, DOE noted that demand-response water heaters do not perform this action to increase the overall daily capacity of the water heater. Instead, the capacity is only temporarily boosted to counteract the deactivation of the heating elements for extended periods of time when demand curtailment is occurring. As such, demand-response water heaters with the capability to undergo only utility-initiated high heat modes would not be expected to increase the capacity of the water heater over a typical average use cycle in the same way that a water heater with the ability to have the user increase the storage tank temperature would. *Id.*

To reiterate, EPCA requires that any test procedures prescribed or amended shall be reasonably designed to product test results which measure energy efficiency, energy use, or estimated annual operating cost of a covered product or equipment during a representative average use cycle or period of use and not be unduly burdensome to conduct. (42 U.S.C. 6293(b)(3); 42 U.S.C. 6314(a)(2)). Thus, DOE must determine whether testing at the highest tank temperature setting during the delivery capacity test and the 24-hour simulated-use test is representative of an average use cycle for a demand-response water heater. Based on information collected during this rulemaking, including the comment from NYSERDA, demand-response water heaters do not typically remain in a high-temperature storage state for the entirety of a 24-hour average use cycle. The additional energy used and stored when this type of water heater increases the tank temperature is offset by significant periods of low energy usage such that, over a 24-hour average use cycle, the total energy stored and consumed by the water heater is similar to that for a product which maintains a normal storage tank temperature throughout the day.

In response to A.O. Smith's concern about non-demand-response water heaters, as discussed in further detail in sections III.E.1.c and III.E.1.d of this document, DOE notes that the provisions finalized in this rulemaking do not require high temperature testing for any water heaters in particular at this time and, therefore, would not preclude the possibility of non-demand-response heat pump water heaters having user-selectable high heat modes. DOE will consider these concerns further at such time as it proposes to require high temperature testing for certain types of water heaters in a future rulemaking.

c. Representativeness of Field Use

AHRI indicated that additional operational modes to heat water above 125 °F are not meant to be the primary mode of operation and should not be used continuously. AHRI stated that the proposal in the July 2022 SNOPR to test water heaters with these modes at the settings providing the highest internal tank temperature does not reflect the purpose of these modes, and that proposal would require more test data than provided in the NOPR to understand its consequences. For these reasons, AHRI requested that DOE retract this proposal from the current rulemaking and address it at a later time. (AHRI, No. 55 at p. 6) Similarly, Rheem requested that DOE not consider water heaters with a temporary, non-default high heat mode as being water heaters with high heat modes and that DOE not include any changes related to high heat modes in the final rule. (Rheem, No. 47 at p. 6)

GEA argued that the essential function of ''delivery-control'' water heaters is no different than a consumer who sets their standard storage water heater to a higher temperature and regulates water temperature at the tap by mixing in cold water. GEA added that ''delivery-control'' water heaters provide practical energy savings benefits not captured by the consumer water heater test procedure, and that these energy savings benefits mitigate against requiring testing at the maximum tank storage temperature. Specifically, GEA described a use case where a consumer may use a ''delivery-control'' water heater in a high heat mode on occasion when more guests are in the home, which they suggested would, on balance, use less energy as compared to full time use of a water heater with an oversized storage capacity. (GEA, No. 53 at p. 3)

GEA suggested that many consumers already set their storage water heater to temperatures above 140 °F and that ''delivery-control'' water heaters simply allow consumers to do so in a safer way by premixing to a lower temperature, adding that such water heaters should not be penalized through efficiency ratings for providing a safety feature to prevent scalding. (GEA, No. 53 at p. 3)

GEA stated that DOE has provided no evidence that setting ''delivery-control'' water heaters at their maximum storage temperature is a ''representative average use cycle or period of use'' as required by EPCA at 42 U.S.C. 6293(b)(3). GEA also noted that many other products regulated under EPCA have modes that allow for increased or decreased energy consumption relative to their default

setting but that these modes are not included in their respective DOE test procedures because they have not been deemed representative of an average use cycle. (GEA, No. 53 at p. 4)

NYSERDA recommended that all water heaters with the option to elevate the tank temperature, except those with demand-response functionality, should be tested at the highest tank temperature available, as thermostatic mixing valves are regularly installed in the field. (NYSERDA, No. 50 at p. 3) The CA IOUs also commented that external mixing valves are readily available to consumers, and in at least one State (Vermont), they are required for all residential water heater installations. Therefore, the CA IOUs urged DOE to consider changes to its regulations that would further incentivize installers and consumers to minimize installation costs at the expense of energy efficiency. (CA IOUs, No. 52 at p. 5) GEA stated that thermostatic mixing valves can be integrated into a product at the factory or added as an accessory at a consumer's home and suggested that if manufacturers are required to make ''inaccurate'' representations of energy consumption for mixing valves integrated at factories, more mixing valves will be sold as accessories, because consumer demand for flexibility and safety will not change. (GEA, No. 53 at p. 4)

As previously discussed in the July 2022 SNOPR and in response to the comments of AHRI and Rheem, DOE expects that consumers who purchase a water heater with high heat modes intend to use it in order to meet hot water demands; therefore, testing these water heaters using only the default operational mode would not be representative of the product's energy consumption over an average use cycle. 87 FR 42270, 42279 (July 14, 2022). From its review of product literature, DOE has found that manufacturers of water heaters with high heat modes market these products as smaller storage water heaters which provide the delivery capacities of larger storage water heaters, and consumers may opt to install a smaller water heater with high heat mode in lieu of a larger water heater as a result (*e.g.,* if a larger water heater does not fit in the installation space). As such, in order to yield efficiency results that would be most representative of the product's enhanced delivery capabilities, DOE has concluded that it would be necessary to include a high temperature testing method.

In light of these comments, DOE has determined that the ability to operate with an elevated tank temperature is not limited to products with built-in mixing valves and user-selectable capacity boosting settings. DOE agrees with commenters that a product with a field-installed mixing valve and the storage tank manually set to a higher temperature could operate in much the same way, and that this practice may be prevalent given how readily available separate mixing valves are to consumers. As a result of these considerations, DOE concludes that it is possible such testing could be appropriate for models capable of heating and storing water above the delivery temperature specified in the test method while still delivering water at the setpoint temperature of 125 ± 5 °F. Thus, DOE is not limiting the high temperature testing method only to products with a specific capacity boosting mode. In other words, manufacturers may optionally apply the high temperature test method to electric resistance storage water heaters with the capability to heat and store water above the delivery setpoint temperature of 125 ± 5 °F, including products that would require a field-installed mixing valve to do so.

The provisions for high temperature testing adopted by this final rule complement the existing operational mode selection requirements, which, generally, would require water heaters to be set to a ''normal'' storage tank temperature close to the delivery setpoint of 125 °F (see section 5.2.1 of the currently applicable appendix E test procedure). Specifically, the high temperature testing provisions require setting the water heater to the highest storage tank temperature and installing a separate mixing valve to temper the delivery water to the outlet water requirements for products that do not already have a mixing valve installed. If the product is equipped with a built-in mixing valve, then the water heater's storage tank temperature shall be set to the highest temperature which allows the built-in mixing valve to deliver water in accordance with the outlet water requirements.

d. Use of High Temperature Testing

In response to the July 2022 SNOPR, NEEA agreed with DOE's proposal to implement this testing requirement only upon adoption of new standards. (NEEA, No. 56 at p. 2) A.O. Smith supported the Department's position that the effective date of the proposed changes to the test procedure covering user-selectable over-heat modes for non-demand-response water heaters should coincide with the compliance date of any amendments to the energy conservation standards for consumer water heaters. (A.O. Smith, No. 51 at p. 6)

Rheem stated that DOE's proposal to delay testing until amended standards are required may not align with EPCA at 42 U.S.C 6293(c)(2) [72] and requested clarification on DOE's interpretation of this statutory provision. (Rheem, No. 47 at p. 5) Rheem also requested DOE's interpretation of the 42 U.S.C. 6293(e)(2) requirement to ''amend the applicable energy conservation standard during the rulemaking carried out with respect to such test procedure'' with respect to water heaters with high heat modes because the amended test procedure will alter their measured efficiency. (Rheem, No. 47 at p. 5)

In response to Rheem's questions regarding the relevant statutory provisions at 42 U.S.C. 6293(c)(2) and (e)(2), DOE has concluded that the Department's approach comports with both of these EPCA provisions. To recap, as discussed in section III.I of this document, DOE is not requiring compliance with the high temperature testing provisions until compliance with amended energy conservation standards that address water heaters with such capabilities, if finalized, because DOE has determined that this change to the test procedure will impact the measured efficiency of such water heaters. Under 42 U.S.C. 6293(c)(2), effective 180 days after an amended or new test procedure is prescribed or established for a covered product, no regulated party (*i.e.,* manufacturer, distributor, retailer, or private labeler) may make any representations about the energy use or efficiency of such product unless it has been tested according to the new or amended test procedure and such representations fairly disclose the results of such testing. In the present case, DOE is making clear that its test procedure provisions related to high temperature testing are not required to be used until the compliance date of any amended standards that address such water heaters.

Under 42 U.S.C. 6293(e)(1), DOE must determine whether any test procedure amendments would alter the measured energy efficiency, energy use, or

[72] Under 42 U.S.C. 6293(c)(2), the statute provides that effective 180 days after an amended or new test procedure applicable to a covered product is prescribed or established under paragraph (b) of this section, no manufacturer, distributor, retailer, or private labeler may make any representation—(A) in writing (including a representation on a label); or (B) in any broadcast advertisement, with respect to energy use or efficiency or, in the case of showerheads, faucets, water closets, and urinals, water use of such product or cost of energy consumed by such product, unless such product has been tested in accordance with such amended or new test procedure and such representation fairly discloses the results of such testing.

measured water use of any covered products as determined under the existing test procedure. As explained elsewhere, DOE has determined that the provisions for high temperature testing would alter measured efficiency, so this statutory provision is likewise satisfied.

Finally, under 42 U.S.C. 6293(e)(2), if DOE determines that its amended test procedure will alter the measured energy efficiency or energy use of a covered product, the Department shall amend the applicable energy conservation standard during the rulemaking carried out with respect to such test procedure. This provision applies to the currently applicable energy conservation standard. As noted previously, the high temperature testing provisions that would alter the measured energy efficiency of certain water heaters are not required for determining compliance with the currently applicable standard. These provisions would only be required on the compliance date of any amended standards that address such water heaters. As such, there is no need to amend the current standards under 42 U.S.C. 6293(e)(2).

DOE has determined that the high temperature test method should apply to electric resistance storage water heaters for the reasons discussed in section III.E.1 of this document. Specifically, based on information from stakeholders regarding the operation of demand-response water heaters (see section III.E.1.b of this document) and the Department's own testing and calculations (see section III.F.2.a of this document), DOE has determined that the high temperature test method would apply to electric resistance storage water heaters that are capable of raising their internal tank temperature significantly above their delivery temperature, without utility initiation, to boost hot water delivery capacity in order to meet daily household needs. Products which raise the internal tank temperature only as part of demand-response operation should not use this method.

In this rulemaking, commenters have urged DOE to provide better clarity and specificity regarding which water heaters may be ''exempt'' from high temperature testing (for example, see NYSERDA's comments discussed in section III.A.1 of this document). In the concurrent the energy conservation standards rulemaking, DOE may consider and propose additional criteria to further specify the subset of water heaters which would have to comply with potential amended standards using the high temperature test method. This is because there could be specific cases when a water heater would reach a higher storage tank temperature in a way that does not necessarily increase the delivery capacity over the course of an average use cycle. For example, a user may choose to use an elevated setpoint for storage temperature, but with a delivery temperature equal to this setpoint. In such a case where a higher delivery temperature is actually desired, because no cold water mixing is occurring at the outlet, there is no increase in the volume of hot water that can be provided to the home. Therefore, in its accompanying energy conservation standards rulemaking for consumer water heaters, DOE will consider specifying what user-controllable tank temperature settings might actually constitute ''delivery capacity boosting.'' Additionally, DOE will also consider the length of time these settings may be in use to determine which types of temperature settings would result in capacity boosting over an average daily use cycle.

Once again, because high temperature testing may cause ratings for certain electric resistance storage water heaters to decrease, DOE is not requiring the use of these test provisions until the compliance date of any new energy conservation standards addressing such water heaters (*i.e.,* as part of the separate rulemakings for consumer water heaters). After the effective date of this final rule and before the compliance date of an amended standards final rule, manufacturers of certain electric resistance storage water heaters will be allowed to use the high temperature test method voluntarily to make additional representations of performance in high-temperature mode.

2. Very Small Draw Pattern Flow Rate

Section 5.4.1 of appendix E states that if the Max GPM is less than 1.7 gpm (6.4 L/min), then the very small draw pattern must be used during the 24-hour simulated-use test. Section 5.5 of appendix E states that, for the very small draw pattern, if the water heater has a Max GPM rating less than 1 gpm (3.8 L/min), then all draws shall be implemented at a flow rate equal to the rated Max GPM.

As discussed in the January 2022 NOPR, DOE has identified flow-activated water heaters that are designed to deliver water at the set point temperature of 125 °F ±5 °F (51.7 °C ±2.8 °C) that is required by section 2.5 of appendix E at a flow rate well below 1 gpm (3.8 L/min). For these products, the second draw of the very small draw pattern requires 1 gallon to be removed at the rated Max GPM, and the pattern requires the third draw to start five minutes after the initiation of the second draw. However, any rated Max GPM less than or equal to 0.2 gpm (0.76 L/min) will result in the second draw lasting more than five minutes and past the start time of the third draw. To clarify the appropriate method of testing these products, DOE proposed to amend the very small draw pattern description to state that when a draw extends beyond the start time of a subsequent draw, that the subsequent draw will start after the required volume of the previous draw has been delivered. 87 FR 1554, 1582 (Jan. 11, 2022).

DOE did not receive any comments in response to this proposal, so, therefore, in this final rule, DOE is adopting the amendment to appendix E as proposed in the January 2022 NOPR for the reasons previously stated.

3. Low-Temperature Water Heaters

Low-temperature water heaters (discussed further in section III.A.4.b of this document) are flow-activated products that do not deliver temperatures within the required set point temperature range of 125 °F ±5 °F when tested according to the supply water temperature and flow rate requirements of appendix E. These products are typically suited for point-of-use (POU) applications where the outlet water is minimally tempered prior to delivery through the faucet (typically marketed as ''handwashing'' or ''POU water heaters''). However, because these products cannot meet the outlet temperature requirements in appendix E, DOE is establishing new provisions to address these products.

One primary concern identified in this rulemaking is that these units typically have low heating rates, which currently requires the testing agency to reduce the flow rate in order to be able to achieve the outlet temperature within the set point temperature range. However, these units have a minimum activation flow rate below which the unit shuts off. To the extent that a unit would stop heating water when the flow rate is too low, there may be no flow rate at which the unit would operate and deliver water at the outlet temperature required under section 2.5 of appendix E. In response to the April 2020 RFI, commenters generally indicated that DOE should adopt provisions to use a lower setpoint temperature for low-temperature water heaters. 87 FR 1554, 1582 (Jan. 11, 2022).

For the reasons explained in further detail in the January 2022 NOPR, DOE proposed that low-temperature water heaters be tested at the maximum delivery temperature when using the flow rate requirements already

established in appendix E. Specifically, lowering the flow rate in order to establish a delivery temperature of 125 °F may not be feasible for these products because the flow rate may be so low that the water heater does not activate. DOE tentatively determined that lowering the set point temperature for low-temperature water heaters to their maximum possible delivery temperature would permit these water heaters to be tested appropriately and in a manner that would produce representative test results. 87 FR 1554, 1582–1583 (Jan. 11, 2022).

In commenting on this issue, BWC requested that DOE further assess differences in testing and ratings between electric instantaneous water heaters and low-temperature water heaters. (BWC, No. 33 at p. 8)

In response, DOE will continue to assess the impact of the test procedure provision in section 5.2.2 of appendix E on ratings for low-temperature water heaters as more of these products enter the market and are certified, but at this time, DOE is adopting these provisions in order to set forth a repeatable, representative approach to testing such products. Currently, there is no appendix E test method to test low-temperature water heaters, and, therefore, ratings for low-temperature water heaters are not possible until the effective date of this final rule. DOE is distinguishing low-temperature water heaters from other electric instantaneous water heaters mainly on the inability to reach the standardized outlet water temperatures under the appendix E test procedure. DOE will consider potential impacts on UEF ratings in its concurrent energy conservation standards rulemaking (*see* Docket No. EERE–2017–BT–STD–0019).

4. Delivery Temperature for Flow-Activated Water Heaters

In providing comments in response to the January 2022 NOPR, AET introduced a new topic for DOE to consider when amending the test procedure for consumer water heaters and residential-duty commercial water heaters. AET indicated that the test procedure needs to further clarify the process for setting the delivery temperature for flow-activated water heaters. The commenter argued that such clarification is necessary because the DOE test procedure simply says to initiate normal operation of the water heater at the design power rating. AET stated that, when operating flow-activated water heaters at their maximum heating rate, outlet temperature can be controlled two different ways: (1) adjust some thermostat, and/or (2) adjust flow rate; since the instructions do not specify a flow rate at which to set the thermostat, it is theoretically possible to set the thermostat to a very high temperature, and then adjust the flow rate so that the unit only delivers the desired 125 °F outlet temperature. AET claimed that this would allow the water heater to deliver much hotter temperatures when the flow rate is less than the flow rate needed to deliver 125 °F when operating at maximum heating rate. AET recommended to amend the test procedure so as to provide instructions that the flow rate for draws should be 90 percent of the theoretically calculated maximum flow rate that could be achieved when operating at a full heating rate and delivering the required 125 °F outlet temperature in order to ensure that this temperature is consistent. (AET, No. 29 at p. 11)

On this issue, DOE notes that section 5.2.2.1 of appendix E, ''*Flow-Activated Water Heaters, including certain instantaneous water heaters and certain storage-type water heaters,*'' instructs the test agency to first initiate normal operation of the water heater at the full input rating for electric water heaters and at the maximum firing rate specified by the manufacturer for gas or oil water heaters. Section 5.2.2.1 then states that the test agency must monitor the discharge water temperature and set to a value of 125 °F ±5 °F (51.7 °C ±2.8 °C) in accordance with the manufacturer's instructions. If the water heater is not capable of providing this discharge temperature when the flow rate is 1.7 gallons ±0.25 gallons per minute (6.4 liters ±0.95 liters per minute), then the flow rate is adjusted as necessary to achieve the specified discharge water temperature. Once the proper temperature control setting is achieved, the setting must remain fixed for the duration of the maximum GPM test and the simulated-use test.

In response to AET's comment, DOE notes that the current appendix E test instructions specify that the flow rate for setting the discharge water temperature is 1.7 gallons ±0.25 gallons per minute (6.4 liters ±0.95 liters per minute). If a discharge temperature of 125 °F ±5 °F is not possible at that flow rate, the test method allows for the flow rate to be varied only to the extent necessary to achieve a discharge temperature of 125 °F ±5 °F. Therefore, DOE has determined that the current instruction is explicit enough for the delivery temperature setting to be conducted in a repeatable and reproducible manner.

5. Heat Pump Water Heaters

In this rulemaking, DOE has sought to address multiple test procedure provisions related to heat pump water heaters. In section III.A.2 of this final rule, DOE discusses the scope of applicability of the appendix E test procedure to heat pump water heaters designed for residential applications. Section III.C.7 of this document describes the new optional test conditions being allowed for heat pump water heaters for voluntary representations of E_X based on NEEA's Advanced Water Heating Specification. Additionally, DOE is amending ambient air condition tolerances for heat pump water heater testing because air-source heat pumps exchange latent and sensible heat [73] with the surrounding air, and, thus, the water heater's normal operation will have a tangible impact on air temperature and moisture content (*see* section III.C.4 of this document). Furthermore, there are other requirements being established for the test set-up and installation of split-system heat pump water heaters and circulating heat pump water heaters (*see* sections III.D.1 and III.D.4 of this document).

In addition to these topics, DOE has evaluated the draw patterns for conducting the 24-hour simulated-use test on heat pump water heaters with back-up electric resistance heating elements. In the present market, consumer heat pump water heaters are typically ''integrated,'' with the air-source heat pump and storage tank built together into one assembly. This ''typical'' consumer heat pump water heater uses electricity and has back-up electric resistance elements within the storage tank. Heating water with the heat pump components is more efficient than heating water with the back-up resistance elements. Therefore, water heaters with controls that prioritize heat pump water heating over resistance element water heating will operate more efficiently than water heaters that do not prioritize heat pump water heating or that do not prioritize heat pump water heating to the same extent.

In response to the April 2020 RFI, the Joint Commenters suggested modifying the test procedure to reflect the effectiveness of controls in minimizing use of the resistance element in heat pump water heaters, stating this modification would improve the

[73] ''Sensible heat'' refers to heat that is exchanged with surrounding air that is detectable by measuring the change in temperature of the air, as it does not change the moisture content of the air. ''Latent heat'' refers to heat that is exchanged when moisture in the air is condensed into liquid water (*i.e.,* at the evaporator of a heat pump water heater).

representativeness of the test procedure and create new incentives for manufacturers to develop products that provide increased savings for consumers. As noted in the January 2022 NOPR, no suggestion was provided on how to better reflect the use of controls to minimize element usage. 87 FR 1554, 1583 (Jan. 11, 2022).

In the January 2022 NOPR, DOE noted that its test data indicate that most (or possibly all) heat pump water heater models available on the market currently operate without activating the electric elements during the 24-hour simulated-use test under the current appendix E test procedure. DOE argued that although element usage during the test could be forced through a more aggressive draw pattern (*i.e.,* longer or more frequent draws designed to deplete the water heater and require more hot water than the heat pump alone could keep up with), the draw patterns are required to be representative of actual use. Therefore, designing the draw pattern with the goal of forcing resistance element use would not be representative of typical use. 87 FR 1554, 1583 (Jan. 11, 2022).

In commenting on this issue in response to the January 2022 NOPR, the ASAP, ACEEE and NCLC once again encouraged DOE to evaluate whether current draw patterns are representative of real-world conditions for heat pump water heaters. The ASAP, ACEEE and NCLC noted that investigations conducted by NEEA [74] indicate that electric resistance elements are activated more frequently in heat pump water heaters than DOE observed in its testing. Specifically, ASAP, ACEEE and NCLC pointed to the finding in the NEEA study that the average annual proportion of total input energy that was provided by resistance heat ranged from 4 to 45 percent, depending on the water heater model and location of installation. (ASAP, ACEEE, and NCLC, No. 34 at p. 2) However, DOE did not receive any additional comments in this rulemaking providing any specific approach to testing heat pump water heaters with back-up electric resistance elements in a more representative manner.

In response, DOE notes that the 2015 study by NEEA relies on data collected in a limited geographical area within the U.S.—namely, the Pacific Northwest—and the results may not be representative of installations across the U.S, which is the requisite benchmark for a Federal test procedure. For example, one condition for electric resistance back-up is when the ambient air temperature is below the low-temperature cut-out of the compressor (*e.g.,* 45 °F), and this is more likely to occur in northern climates than it is to occur across the country as a whole. Nevertheless, the study finding demonstrated a substantial range of electric resistance contribution, such that it remains unclear whether an amended draw pattern would be more representative.

The CA IOUs did, however, suggest that DOE should consider any distinguishing characteristics of 120-volt heat pump water heaters that might require changes to the test procedure to represent their real-world performance accurately. (CA IOUs, No. 36 at p. 4) In response to the CA IOUs, within the context of back-up element usage, early indications suggest that not all 120-volt heat pump water heaters will employ back-up electric resistance heating elements due to limitations on a 120-volt circuit, but this market is still evolving. As of this final rule, there are only a limited number of commercially-available 120-volt heat pump water heaters, so DOE has determined that it is premature to establish specific testing requirements for 120-volt heat pump water heaters at this time. Without adequate test data from these products, there is uncertainty as to what, if any, specific requirements for 120-volt heat pump water heaters would be appropriate.

Therefore, after considering these comments and the lack of available data on this topic, DOE has decided to maintain the current language in section 5.1 of appendix E and is not adopting draw patterns specific to any type of heat pump water heater. Accordingly, the draw patterns for electric water heaters generally will continue to apply to these products. DOE will continue to collect information on this topic to inform a future test procedure rulemaking.

6. Draw Pattern for Commercial Applications

In response to the April 2020 RFI and as discussed in the January 2022 NOPR, EEI suggested DOE consider a test procedure for consumer water heaters used in commercial applications that includes a draw pattern more demanding than the ''high'' draw pattern, which is currently the draw pattern with the largest amount of delivered water in the appendix E test procedure. 87 FR 1554, 1575–1576 (Jan. 11, 2022).

In the January 2022 NOPR, DOE stated that 42 U.S.C. 6293(b)(3), in relevant part, requires that any test procedures prescribed or amended shall be reasonably designed to produce test results which measure energy efficiency of a covered product during a representative average use cycle or period of use. Consumer water heaters are designed for use in residential applications, and as such, a draw pattern representative of a commercial installation would not be representative of the product's average use cycle or period of use. For these reasons, DOE declined to propose a draw pattern with a delivered volume greater than the high draw pattern in appendix E. 87 FR 1554, 1576 (Jan. 11, 2022).

BWC agreed that there is no need for a draw pattern above ''high draw,'' since the high draw pattern adequately addresses products that have high hot water deliverability within the scope of the test procedure. (BWC, No. 33 at p. 6)

As such, DOE is not adding another draw pattern to the appendix E test procedure in this final rule for the reasons previously stated.

7. Method for Determining Internal Tank Temperature for Certain Water Heaters

Section 4.5 of appendix E provides the procedure for measuring the internal storage tank temperature for water heaters with a rated storage volume at or above 2 gallons. Section 4.5 of appendix E specifies that the thermocouples be inserted into the storage tank of a water heater through either the anodic device opening, the temperature and pressure relief valve, or the outlet water line. However, DOE has identified consumer water heaters with physical attributes that make measuring internal storage tank temperature difficult, such as water heaters that have a built-in mixing valve and no anodic device, or that have a large heat exchanger that does not accommodate insertion of a thermocouple tree. In this rulemaking, DOE sought suggestions from stakeholders on how the internal storage tank temperature should be measured for these types of designs. After considering the comments received, DOE is amending the appendix E test procedure to specify a method for determining the internal mean tank temperature for such products, as discussed in detail later in this section.

In response to the April 2020 RFI and as discussed in the January 2022 NOPR, BWC recommended a ''drain-down'' approach to address water heaters that cannot have their internal storage tank

[74] ASAP, ACEEE and NCLC cited NEEA's 2015 Heat Pump Water Heater Model Validation Study, (Report #E15–306), found online at: *ecotopewebstorage.s3.amazonaws.com/2015_001_1_HPWHModelVal.pdf* (Last accessed on Sept. 13, 2022).

temperatures measured directly (a position echoed by Rheem). More specifically, BWC's suggested approach consisted of the following: (1) After the FHR test, purging the water heater with inlet water at 58 °F ± 2 °F to establish the mean tank temperature at the beginning of the 24-hour simulated-use test; (2) allowing the water heater to heat up to the original thermostat setting and recording the energy used to do so; (3) running the appropriate draw pattern, then fully draining the water heater by gravity, while measuring the mass and temperature of the water; and (4) calculating the energy change as: energy change = mass × specific heat × the difference between the average end temperature and the beginning temperature just after the 58 °F purge. Rheem also supported a drain-down method, whereby the entire volume would be removed and the temperature measured at the end of the 24-hour test. 87 FR 1554, 1586 (Jan. 11, 2022).

However, DOE's primary concern with the suggested drain-down approach was that it cannot be conducted at every stage during the 24-hour simulated-use test when the mean tank temperature measurement is required. As discussed in the January 2022 NOPR, the procedures recommended by BWC and Rheem could provide an estimate of the mean tank temperature at the start and end of the 24-hour simulated-use test but would not provide an estimate at the end of the first recovery period, the start and end of the standby period, or an average over the standby period, all of which are required for determining UEF. Instead of BWC's drain-down approach, DOE initially proposed a methodology with a modified approach, wherein the mean tank temperature would be estimated as the average of the inlet water temperature and the outlet water temperature each time a mean tank temperature measurement was required. This method assumes that the stored water gradually (*i.e.,* linearly) increases in temperature either from the bottom of the tank to the top, or the further the water is into the heat exchanger from the water inlet, depending on the design of the water heater being tested. As the exact internal dimensions of the storage tank or heat exchanger cannot be known for every water heater, DOE reasoned that the linear assumption is the most representative of the water heater market as a whole. 87 FR 1554, 1586–1587 (Jan. 11, 2022).

In response to DOE's proposal, AHRI, A.O. Smith, and BWC indicated that the linear temperature gradient assumption inherent to the proposed methodology in the January 2022 NOPR is incorrect, based on the companies' own test results. (AHRI, No. 40 at p. 5; A.O. Smith, No. 37 at pp. 5–6; BWC, No. 33 at p. 10) In contrast, Rheem supported DOE's proposed linear temperature gradient assumption. (Rheem, No. 31 at p. 4) None of the comments received in response to the January 2022 NOPR suggested an alternative approach, so in the July 2022 SNOPR, DOE revised its proposal to incorporate aspects of BWC's method but included additional methods to estimate the intermediate temperatures required for efficiency calculations. 87 FR 42270, 42283–42284 (July 14, 2022).

In the July 2022 SNOPR, DOE proposed the following methodology for water heaters with rated storage volumes greater than or equal to 2 gallons that are unable to have their internal tank temperatures measured using thermocouples:

(1) After the FHR test (for non-flow-activated products) or Max GPM test (for flow-activated products), allow the water heater to fully recover.

(2) When cut-out occurs, deactivate the burner, compressor, and/or electrical heating elements.

(3) Remove the hot water from the tank by performing a continuous draw, while measuring the outlet water temperature at 3-second intervals, until the outlet water temperature is within 2 °F of the inlet water temperature for five consecutive readings. Perform the draw at a flow rate of 3.0 gallons per minute (±0.25 gallons per minute). Compute the mean tank temperature, $\overline{T}$st, as follows and assign this value as $\overline{T}$0, $\overline{T}$su,0, and $\overline{T}$max,1:

$$\bar{T}_{st} = T_p - \frac{v_{out,p}}{V_{st}} \times \tau_p(\bar{T}_{in,p} - \bar{T}_{out,p})$$

Where:

$\overline{T}_{st}$ = the estimated average internal storage tank temperature.

T_p = the average of the inlet and the outlet water temperatures at the end of the period defined by τ_p.

$v_{out,p}$ = the average flow rate during the period.

V_{st} = the rated storage volume of the water heater.

τ_p = the duration of the period, determined by the length of time taken for the outlet water temperature to be within 2 °F of the inlet water temperature for 15 consecutive seconds. The duration of the period shall include the 15-second stabilization period.

$\overline{T}_{in,p}$ = the average of the inlet water temperatures during the period.

$\overline{T}_{out,p}$ = the average of the outlet water temperatures during the period.

(4) Re-activate the burner, compressor, and/or electrical elements and perform the 24-hour simulated use test as instructed in section 5.4 of appendix E.

(5) The standby period will start at five minutes after the end of the first recovery period after the last draw of the simulated-use test. The standby period shall last eight hours, so testing will extend beyond the 24-hour duration of the simulated-use test. At the end of the final standby measurement, remove water from the tank once again as in step #3, including computing the value of mean tank temperature. This calculated mean tank temperature is then assigned as $\overline{T}$su,f and $\overline{T}$24.

(6) Determine $\overline{T}$t,stby,1 as the average of $\overline{T}$su,0 and $\overline{T}$su,f.

The revised proposal relied on a different assumption—supported by DOE's test data—that, for typical storage-type water heaters, $\overline{T}_0$, $\overline{T}_{su,0}$, and $\overline{T}_{max,1}$ are similar in that they represent temperatures near the cut-out control temperature. Furthermore, the mean tank temperature at the end of the standby period, $\overline{T}_{su,f}$, can also be measured by removing water and measuring its temperature at the end of a sufficiently long standby period at the end of the test, and this value could also approximate $\overline{T}_{24}$. 87 FR 42270, 42284–42285 (July 14, 2022).

In response to the July 2022 SNOPR, AHRI stated that manufacturers would need additional time to complete testing to verify the proposed equations and requested that DOE provide additional data and evidence that the method is appropriate before adopting it. Further, AHRI asked that DOE specify the correct procedure if the initial recovery period extends beyond the start of the second draw. (AHRI, No. 55 at p. 8) A.O. Smith expressed support for the revised proposal in the SNOPR, but the commenter added that manufacturers will need to work with the Department as additional testing on the identified products ensues, should this proposed change become part of any final rule.

(A.O. Smith, No. 51 at p. 9) BWC stated that the equation presented in the SNOPR is an improvement over the January 2022 NOPR proposal that will more effectively measure internal tank temperatures. However, BWC also commented that it has insufficient data to support or reject some elements of the proposal, and the company provided as an example the DOE's assumption made in the SNOPR proposal that $\overline{T}_{max}$ and $\overline{T}_{su}$ are similar. BWC explained that it would like to conduct additional testing before commenting further. (BWC, No. 48 at p. 5)

Rheem noted that the procedure as proposed in section 5.4.2.2 of the proposed appendix E does not align with steps 1 and 2 of the preamble. Specifically, Rheem argued that the preamble states that after the FHR or Max GPM test, the unit should be allowed to fully recover, and then, one would deactivate the burner, compressor, and/or elements, and remove the hot water from the tank, which would result in a comparatively ''hot'' water temperature that is representative of a $\overline{T}_{max,1}$ or $\overline{T}_{su,0}$ value, both of which are measured after a draw and that is normally followed by a recovery; however, section 5.4.2.2 of the proposed appendix E states that a 1-hour idle period is to be performed prior to draining the tank, which would result in a comparatively ''low'' water temperature that is representative of $\overline{T}_0$, a measurement taken after an idle period where no energy was added to the tank. Rheem requested DOE clarify which method should be used. (Rheem, No. 47 at p. 8) Rheem also requested DOE clarify when a soak-in period is required when testing a water heater that cannot have the internal storage tank temperature directly measured, and specifically, the commenter asked whether a soak-in period is required between draining the tank after FHR testing and starting the 24-hour simulated use portion of the test. (Rheem, No. 47 at p. 8)

Rheem stated that the proposed procedure drains water from the unit at a flow rate of 3 gpm until the inlet and outlet temperatures match, which means all energy in the water and tank/heat exchanger has been removed from the unit under test. Rheem requested that DOE clarify that this is the intent of the procedure and suggested that as an alternative, since the storage volume is known, the test could simply remove the stored water and estimate the internal tank temperature using the proposed equation. (Rheem, No. 47 at p. 8) Rheem also recommended that the flow rate used for draining the tank be the flow rate of draw 1 of the 24-hour simulated-use test and that the temperatures be measured throughout the draw, not just after the first 15 seconds, stating that the flow rate of 3 gpm may be too fast for some water heaters or would not account for the true energy content of the internal water. (Rheem, No. 47 at p. 8) Lastly, Rheem requested that DOE provide the derivation of the $\overline{T}_{st}$ equation, stating that the derivation and assumptions are not immediately apparent. (Rheem, No. 47 at, p. 9)

In response, DOE provides the following clarifications. With respect to AHRI's request for clarification of the test procedure in terms of whether the initial recovery period extends beyond the start of the second draw, DOE notes that the tank would only be drained of hot water twice regardless of when the initial recovery period ends—once after recovery after the FHR or max GPM test, and once at the end of the standby period at the end of the test. The mean tank temperature determined during the first draining would be used to approximate $\overline{T}_{max,1}$ regardless of when that actually occurs during the test, as DOE expects that $\overline{T}_{max,1,}$ which occurs after the first recovery period ends, would not vary significantly depending on whether it occurs after the second draw. Regarding Rheem's request for a clarification of whether a 1-hour idle period is required before the first time drawing off all of the hot water in the tank, DOE clarifies that the 1-hour idle period is required, as was presented in the regulatory text in the SNOPR. As shown in Table III.3 which follows, $\overline{T}_0$ measurements taken after the 1-hour idle period are comparable to $\overline{T}_{max,1}$ and $\overline{T}_{su,f}$ measurements. In addition, for tanks for which the internal tank temperature cannot be directly measured, the same soak-in provisions apply as those that apply generally as described in sections 5.2.4 and 5.4.2 of appendix E.

Regarding Rheem's suggestion to remove volume of stored water in the tank and use the average temperature of that water to represent the measured mean tank temperature, DOE notes that when drawing off hot water through the hot water outlet, cold water is introduced into the tank which could mix with the stored water. Removing only the stored volume in the tank could result in an artificially low mean tank temperature due to the cold inlet water mixing with the stored water, whereas the proposed approach accounts for all of the thermal energy contained in the tank to estimate the temperature of the stored water prior to removing the hot water from the tank. A valid estimate of the tank temperature could be obtained by shutting off the supply (inlet) water line and draining the tank by gravity using the drain at the bottom. However, such an approach would likely require additional equipment for the test set-up, such as an additional temperature sensor, a flowmeter to measure the water leaving through the drain, and a flow control valve to manage the water exiting the drain, equipment not currently included in the typical test set-up. In addition, DOE has found that for some water heaters, even after draining by gravity, a small volume of water remains in the bottom of the tank, which would be difficult to account for under such an approach. After considering these comments, DOE has concluded that the methodology proposed in the SNOPR would not require changes to the test set-up and, therefore, would be less burdensome.

DOE agrees with Rheem that a flow rate of 3.0 gpm may not be appropriate for all water heaters, and in particular it may be too high for temperature sampling rates to accurately estimate the mean tank temperature of smaller water heaters. Thus, DOE is adopting Rheem's suggestion to withdraw water at a flow rate equal to the flow rate of the first draw in the applicable draw pattern. DOE also agrees with Rheem that starting the measurements immediately, rather than after 15 seconds, would provide a more accurate representation of tank temperature, and, therefore, the Department is adopting that recommendation as well.

In response to these comments, DOE re-evaluated its own test data in order to further validate the method for determining internal tank temperature outlined above. Underpinning this method is an assumption that during a simulated use test, the mean tank temperatures that occur after the tank has been in standby for some time, $\overline{T}_{su,f}$ and $\overline{T}_{24}$, are typically very similar to each other, and that the tank temperatures measured soon after a recovery and subsequent ''cut-out'', $\overline{T}_{su,0}$, $\overline{T}_0$, and $\overline{T}_{max,1}$, are also typically very similar to each other. This is because water heaters with thermostats have a control band near the setpoint which directs the cut-in and cut-out to occur once the setpoint is reached. Table III.2 and Table III.3 below show the mean tank temperatures for a sample of 29 consumer water heaters.

TABLE III.2—$\overline{T}_{su,f}$ AND $\overline{T}_{24}$ VALUES FOR WATER HEATERS TESTED BY DOE

Test No.	Product type *	Draw pattern	$\overline{T}_{su,f}$ (°F)	$\overline{T}_{24}$ (°F)	Difference between $\overline{T}_{su,f}$ and $\overline{T}_{24}$ (°F)
1	ES	Low	125.2	127.9	2.72

* **Note:** "ES" denotes an electric storage water heater, and "GS" denotes a gas-fired storage water heater.

On average, across multiple product classes, the temperatures $\overline{T}_{su,f}$ and $\overline{T}_{24}$ vary about 3 °F from each other. Similarly, the temperatures $\overline{T}_0$, $\overline{T}_{max,1}$, and $\overline{T}_{su,0}$ vary about 4 °F from for each other. In both cases, the range of variability between the mean tank temperatures of the water heaters in the sample was from less than 1 °F up to 9 °F. Based on these data, DOE has concluded that both the temperatures are similar enough among each other that grouping them together for determining internal storage tank temperature, as proposed in the July 2022 SNOPR, is reasonably valid when there is no direct alternative of measuring these temperatures. As such, in this final rule, DOE is adopting the method for determining internal storage tank temperature as proposed in the July 2022 SNOPR with the modifications discussed in the preceding paragraphs.

In response to Rheem's request for a derivation of the $\overline{T}_{st}$ equation, DOE notes that it was derived based on the assumption that the withdrawn water has the same amount of energy as the water stored in the tank, since there would be no energy input (*i.e.,* the burner, compressor, and/or electrical heating elements are deactivated) and assuming minimal losses over the course of the draw. Specifically, DOE sought to determine the initial mean tank temperature of the water, denoted by $\overline{T}_{st}$. The energy in the withdrawn water can be calculated based on its mass, specific heat, and the temperature difference between the water and the ambient air, which are all parameters that can be measured or determined directly as the water is being withdrawn from the tank. As noted previously, this value can then be assumed to be equal to the energy that would have been stored in the tank before withdrawing the water, which can also be determined based on its mass, specific heat, and temperature difference. The mass of water in the tank can be determined based on the stored volume and density; the specific heat can be assumed as 1 Btu/lb°F, and the temperature difference can be calculated as $\overline{T}_{st.}$ minus the ambient temperature. As $\overline{T}_{st}$ is the only unknown, the equation can be rearranged to solve for $\overline{T}_{st}$ to provide an estimate of the mean tank temperature prior to withdrawing water.

In response to requests made by AHRI, A.O. Smith, and BWC for additional time to conduct testing, DOE reiterates that test procedures must be established for all products within the scope of this rulemaking. DOE is finalizing this method for determining internal tank temperature based on an evaluation of its own test data, and the Department does not believe it is necessary to delay publication of this final rule for additional data to be collected on this topic. Water heaters with rated storage volumes greater than or equal to 2 gallons whose internal tank temperatures cannot be measured using thermocouples meet the definition of ''consumer water heater'' as codified at 10 CFR 430.2; therefore, they are covered products and must have applicable test procedures. In this case, based on information from its own testing, DOE is establishing these test procedures in this final rule.

8. Alternate Order 24-Hour Simulated-Use Test

As discussed in the January 2022 NOPR, DOE received comments at the RFI stage from SMTI recommending that DOE move the standby loss period of the test to the beginning of the 24-hour simulated-use test and to start the first draw at the 6-hour mark, based on claims that water heaters with large storage volumes but low input rates (*e.g.,* storage-type heat pump water heaters) may receive artificially low recovery efficiency results from the current test method with the standby loss period occurring in the middle of the test. 87 FR 1554, 1587 (Jan. 11, 2022).

In the January 2022 NOPR, DOE noted that as a general matter, the result of the standby period has a negligible effect on UEF, so moving the standby period to the start of the rest would likewise have a negligible effect on UEF in terms of improving the accuracy of the standby loss calculations for most water heaters. However, DOE agreed that moving the standby period to the start of the test may affect the recovery efficiency of the large-volume/low-input-rate water heaters described by SMTI, and a large change in recovery efficiency can have a significant effect on UEF. DOE tentatively determined that the first recovery is rarely delayed past the first draw (based on DOE's own test data), but if the order of the 24-hour simulated-use test were to be changed (*i.e.,* placing the standby loss period at the beginning), all water heaters on the market would need to be retested. Therefore, DOE declined to propose such a change, as the associated burden on manufacturers to retest would result in a potential increase in accuracy for only a small subset of the consumer water heaters available on the market. 87 FR 1554, 1587 (Jan. 11, 2022).

DOE did not receive further comments on this topic. Therefore, DOE has decided not to move the standby period to the start of the 24-hour simulated-use test because such amendment would be unduly burdensome on all manufacturers, as they would be required to retest all of their products, even though the representativeness of the efficiency results would be improved for only a small subset of water heaters.

F. Computations

1. Mass Calculations

In sections 6.3.5 and 6.4.2 of appendix E, the mass withdrawn during

each draw (M_i) is used to calculate the daily energy consumption of the heated water at the measured average temperature rise across the water heater (Q_{HW}). However, neither section includes a description of how to calculate the mass withdrawn for tests in which the mass is indirectly determined using density and volume measurements. In the April 2020 RFI, DOE requested feedback on whether to update the consumer water heater test procedure to include a description of how to calculate the mass withdrawn from each draw in cases where mass is indirectly determined using density and volume measurements. 85 FR 21104, 21113 (April 16, 2020). Stakeholders generally supported including an equation in the computations of appendix E, with many suggesting that DOE adopt the calculations in the AHRI Operations Manual for Residential Water Heater Certification Program. 87 FR 1554, 1582 (Jan. 11, 2022).

In the January 2022 NOPR, DOE proposed that the volume at the outlet would be multiplied by the density, which would be based on the average outlet temperature measured during the draw. DOE also proposed to add procedures similar to those in the AHRI Operations Manual for Residential Water Heater Certification Program; in particular, DOE proposed to add a method of converting inlet water volume to outlet water volume using the ratio of the water densities at the inlet and outlet.[75] *Id.*

In response to the January 2022 NOPR, BWC supported DOE's proposed clarifications for calculating water mass from indirect measurements. (BWC, No. 33 at p. 8)

After carefully considering the comments, in this final rule, DOE is adopting the computations for determining water mass from indirect measurements that were proposed in the January 2022 NOPR for the reasons previously discussed.

2. Effective Storage Volume

In this final rule, DOE is establishing provisions to calculate the effective storage volume to account for: (1) water heaters which may increase storage tank temperature to increase delivery capacity, and (2) circulating water heaters. As discussed throughout section III.E.1 of this document, raising the temperature of the water stored in the tank can increase the effective storage capacity of the water heater. Additionally, circulating water heaters are instantaneous-type water heaters that operate with a separate stored volume of water such that the actual amount of hot water that can be provided immediately (without additional heat input) is related to the volume of water stored in the circulation pipes or in the separate tank—and not the rated storage volume of the circulating water heater itself. The following subsections describe the approach used for each case.

a. Storage Water Heaters With Elevated Stored Water Temperature

In the July 2022 SNOPR, DOE addressed multiple comments regarding water heaters which boost the tank temperature in order to increase effective storage volume. (Operation in high heat mode and high temperature testing are discussed in detail in section III.E.1 of this final rule.) In particular, DOE noted there are certain consumer activities, such as filling a bathtub, for which the FHR metric and the rated storage volume metric alone do not sufficiently describe the water heater's ability to provide a large amount of hot water immediately. 87 FR 42270, 42280–42281 (July 14, 2022).

For activities such as filling a bathtub, consumers would benefit more from knowing the effective storage volume (*i.e.,* the volume of immediately available hot water) of a water heater, whereas for activities such as taking a shower, consumers could benefit more from knowing the FHR (*i.e.,* ability to deliver hot water for an extended period of time). In particular, FHR represents one full hour of delivery and does not necessarily describe immediate hot water availability, as FHR is also impacted by the rate of recovery. In the past, rated storage volume has served as an indication of the amount of hot water immediately available. However, given the emergence of new water heater designs that allow operation in high heat mode, and the option that has existed to increase the tank temperature and install an external mixing valve, to provide additional capacity, this is no longer the case for all water heaters. Hence, in addition to FHR, DOE tentatively determined in the July 2022 SNOPR that effective storage volume would be a meaningful performance metric for consumers. *Id.*

Therefore, in the July 2022 SNOPR, DOE proposed a method to determine effective storage volume, V_{eff} (expressed in gallons or liters), at section 6.3.1.1 of appendix E. For water heaters capable of operating in high heat mode (which DOE proposed be determined by $\overline{T}_{max,1}$ being greater than $\overline{T}_{del,2}$ during the 24-hour simulated use test), DOE proposed to calculate the effective storage volume based on a volume scaling factor and data already collected during the appendix E test. *Id.* at 87 FR 42281.

DOE proposed that the volume scaling factor would be determined as follows, which is derived by comparing the thermal energy stored by the water heater when the water is heated to 125 °F to the thermal energy stored at its maximum tank temperature, using temperature data collected during the test:

$$k_V = \frac{\rho(\bar{T}_{max,1}) \times C_p(\bar{T}_{max,1}) \times (\bar{T}_{max,1} - 67.5°\text{F})}{\rho(125°\text{F}) \times C_p(125°\text{F}) \times (125°\text{F} - 67.5°\text{F})}$$

Where:

k_V is the dimensionless volume scaling factor;

$\rho(T)$ is the density of water evaluated at temperature T;

$C_P(T)$ is the heat capacity of water evaluated at temperature T;

$\overline{T}_{max,1}$ is the maximum measured mean tank temperature after the first recovery period of the 24-hour simulated-use test, and

67.5 °F is the average ambient temperature.

87 FR 42270, 42281 (July 14, 2022).

DOE proposed to determine the effective storage volume by multiplying the measured storage volume by k_V. *Id.*

In response to DOE's effective storage volume proposal, ASAP, ACEEE, and NRDC expressed support for DOE's proposal to use effective storage volume as a metric for water heaters with high heat modes. (ASAP, ACEEE, and NRDC, No. 54 at pp. 2–3)

AHRI requested that DOE provide additional data and evidence supporting the proposed equations for calculating effective storage volume and stated that manufacturers would also need

[75] The AHRI Operations Manual for Residential Water Heater Certification Program specifies that the outlet water volume is equal to the inlet water volume times the inlet water density divided by the outlet water density.

additional time to complete testing to verify their accuracy, representativeness, and repeatability. AHRI requested that DOE specify the correct procedure to evaluate this metric where the initial recovery period extends beyond the start of the second draw in this test. (AHRI, No. 55 at pp. 7–8)

BWC requested that DOE conduct further testing for the method to determine effective storage volume, stating that manufacturers have not had enough time to conduct their own testing for this proposal. (BWC, No. 48 at pp. 3–4)

Rheem suggested that DOE may not have enough information to incorporate effective storage volume into its energy conservation standards rulemaking without amending certification criteria because DOE is not requiring it to be reported. (Rheem, No. 47 at p. 8) Additionally, Rheem stated that models without ''high heat modes'' may still meet the conditions to be affected by the effective storage volume calculation, and the commenter requested that DOE clarify how to calculate effective storage volume when the first recovery period extends beyond the second draw, raising the concern that the delivery temperature can be too low as a result of this condition. (Rheem, No. 47 at p. 7)

In order to address these comments, DOE has re-evaluated its own test data to further examine the implications of the effective storage volume calculation as proposed in the July 2022 SNOPR. In particular, DOE sought to address Rheem's concern that the criteria which triggers effective storage volume calculation ($T_{max,1} > T_{del,2}$) may lead more models to be impacted than just those operating with an elevated tank temperature and the request for clarification on how to calculate effective storage volume in the instance that the first recovery period extends beyond the second draw. Table III.3 lists the anonymized test data DOE evaluated to address the first of these two concerns. These tests were conducted in accordance with the currently applicable appendix E test procedure, with a nominal setpoint temperature of 125 °F and no mixing valve installed.

TABLE III.3—$T_{max,1}$ AND $T_{del,2}$ VALUES FOR A SAMPLE OF WATER HEATERS

Test No.	Product type *	Draw pattern	$T_{max,1}$ (°F)	$T_{del,2}$ (°F)	$T_{max,1} - T_{del,2}$ (°F) **	$k_v > 1$ †

* **Note:** ''ES'' denotes an electric storage water heater, and ''GS'' denotes a gas-fired storage water heater.
** A value of +5 °F or more in this column would satisfy one of the two criteria for determining k_V to be greater than 1.
† Per the effective storage volume calculation provisions established in this final rule.

Upon further evaluation of the test data presented in Table III.3 and based on comments received, in this final rule, DOE is modifying the approach in its earlier proposal to ensure that k_V values greater than 1 are only calculated for water heaters operating with a significantly elevated tank temperature—as determined by *both* the difference between the storage tank temperature and the delivery temperature, as well as the storage tank temperature itself. Specifically, due to the fact that for some of the water heaters in Table III.3 $T_{max,1}$ is only slightly less than $T_{del,2,}$ DOE has amended the criteria for determining k_V such that a water heater must have both $T_{max,1} > 130$ °F *and* $T_{max,1} > T_{del,2} + 5$ °F in order to have a k_V factor greater than 1. If these two criteria are not met, then the water heater will be assigned a k_V factor of 1 and will have an effective storage volume equal to its rated storage volume. This update to DOE's proposed approach will ensure that effective storage volume is only calculated to be greater than the rated storage volume for water heaters operating with a mean tank temperature that is both significantly above 125 °F and significantly above the delivered water temperature. The data show that for tests conducted at a nominal 125 °F tank temperature setpoint, a k_V greater than 1.0 is not expected. For additional reference, DOE conducted one test on a water heater set to its maximum storage tank temperature, resulting in a $T_{max,1}$ of 159.6 °F and a $T_{del,2}$ of 124.3 °F, which would cause the k_V to be equal to 1.59.

Additionally, in order to address Rheem's concern about models for which the first recovery period extends beyond the start of the second draw, DOE has examined its own test data for water heaters exhibiting this behavior. Table III.4 lists anonymized data from 21 tests for which the first recovery period extended beyond the start of the second draw. Similar to the previous dataset, these tests were conducted at a tank temperature setpoint of 125 °F and no mixing valve installed.

DOE agrees that it would not be appropriate to base the effective storage volume calculation criteria on $T_{del,2}$ if the tank is still recovering during the second draw, because $T_{del,2}$ may be lower than it would be had the tank fully recovered. Therefore, for such cases, DOE has determined that T_0 will take the place of $T_{max,1}$, and $T_{del,1}$ will take the place of $T_{del,2}$ in the criteria specified previously. DOE has specified T_0 and $T_{del,1}$ as substitutes in this instance because they are unaffected by the timing of the first recovery period. $T_{del,1}$ is measured during the first draw of the test, which will begin prior to the start of a recovery. T_0 is measured immediately before the first draw (during which $T_{del,1}$ is measured) and before the first recovery period, and it is, therefore, more representative of internal tank temperature as a point of comparison with $T_{del,1}$ to determine whether the storage tank temperature is elevated relative to the delivery temperature. In reviewing its data for tests whose first recovery period

extended into the second draw, as shown in Table III.4, DOE found that the results using T_0 and $T_{del,1}$ are very comparable to those using $T_{max,1}$ and $T_{del,2}$, as shown in Table III.3. However, DOE is not making T_0 and $T_{del,1}$ the default variables because when T_0 is paired with $T_{del,1}$, the delta between the two is a slightly less reliable indicator of when elevated tank temperatures actually occur, compared to the default pair of $T_{max,1}$ and $T_{del,2}$. This is evidenced by the fact that the standard deviation of the delta, $T_0 - T_{del,1}$, is slightly higher at 3.6, than that of the default variables, $T_{max,1} - T_{del,2}$, which is 3.0. These standard deviations, along with other statistics for the test data are shown in Table III.3 and Table III.4.

TABLE III.4—T_0 AND $T_{del,1}$ VALUES FOR A SAMPLE OF WATER HEATERS WHOSE FIRST RECOVERY PERIOD EXTENDS INTO THE SECOND DRAW

† Per the effective storage volume calculation provisions established in this final rule.

AHRI, A.O. Smith, and Rheem expressed concern that because FHR is used as a metric for other activities such as building codes, plumbing codes, and incentive programs, DOE's proposal may cause misalignment with those requirements, as well as increased burden if manufacturers were to be required to comply with metrics for both FHR and effective storage volume. (AHRI, No. 55 at p. 7; A.O. Smith, No. 51 at pp. 7–8; Rheem, No. 47 at pp. 7–8) Rheem suggested that effective storage volume is not more appropriate than FHR as a metric of thermal energy storage. (Rheem, No. 47 at p. 7) A.O. Smith and Rheem also suggested that FHR is a more meaningful metric for consumers and that effective storage volume would be confusing. (A.O. Smith, No. 51 at pp. 7–8; Rheem, No. 47 at p. 7)

In response to these comments, the Department confirms that FHR is not being phased out or fully replaced by effective storage volume in the DOE test procedure, and, therefore, this additional metric will not cause misalignment with other programs and regulations based on FHR. As stated previously, these metrics provide different information: effective storage volume indicates the amount of hot water that can be delivered immediately without need for heat input and is correlated to the standby losses of the tank, whereas the FHR metric is determined by a test which allows the heat input to remain on and for the water heater to initiate a recovery. Additionally, manufacturer burden would be minimal because the effective storage volume can be determined based on measurements already taken during the 24-hour simulated use test.

DOE notes that in contrast to FHR, effective storage volume is capable of accounting for the increase in thermal energy associated with heating water above the intended delivery temperature in comparison with larger units storing water at conventional temperatures. It also allows consumers to compare water heaters with similar delivery capabilities but different sizes, information which DOE considers meaningful, while avoiding the risk of backsliding for units with lower-than-normal FHRs, should FHR be used as the metric. Contrary to what these commenters suggest, DOE finds that providing a measure of effective storage volume is more likely to prevent consumer confusion due to the increased transparency it promotes by reflecting the immediate hot water capacity of the water heater for certain uses such as filling a bathtub. Combined with the high temperature test method, consumers would have a way to directly compare the performance of water heaters of different sizes that can meet the same user needs.

In response to DOE's request for comment regarding its proposed equations and approach to calculate effective storage volume, Rheem agreed that DOE's derivation from an energy balance was appropriate for calculating a scaling factor. (Rheem, No. 47 at p. 7) NEEA commented that that the

proposed method appears to contain an error in the calculation of the dimensionless volume scaling factor (k_v,) by using 67.5 °F, the standard test condition ambient air temperature, instead of 58 °F, the standard test condition water inlet temperature. Otherwise, NEEA indicated support of DOE's proposed method for calculating the effective storage volume metric. (NEEA, No. 56 at p. 3)

DOE's volume scaling factor is derived by comparing the thermal energy stored by the water heater when the water is heated to 125 °F to the thermal energy stored at its maximum tank temperature. In response to NEEA's comment, DOE notes that the method to calculate the dimensionless volume scaling factor k_v uses ambient air temperature because as the water in the storage tank cools, heat is lost to the surrounding air. Thus, the water approaches the temperature of the surrounding air, not the 58 °F inlet water temperature. Therefore, DOE has maintained this calculation method as originally proposed.

Rheem suggested that an effective volume scaled to 125 °F is not useful for customers because a typical bath temperature is around 100 °F. (Rheem, No. 47 at p. 7) In response, DOE notes that the effective storage volume calculation is to show how much additional thermal energy is stored in the tank compared to a water heater which is not raising the internal tank temperature beyond the delivery temperature. Because 125 °F is the delivery setpoint temperature used in the appendix E test procedure as being representative of typical water heater setpoint temperatures, DOE has concluded that it is appropriate for the tank temperature has to be compared to 125 °F.

The CA IOUs supported DOE's proposed effective storage volume metric as being more representative of a storage water heater's hot water delivery capacity than rated storage volume. However, the CA IOUs asserted that effective storage volume does not account for differences in recovery rate between water heaters, a factor which also affects hot water delivery capacity and specifically FHR. The CA IOUs pointed out that large discrepancies in FHR exist within a given rated storage volume for both gas and electric storage water heaters. Therefore, the CA IOUs suggested DOE should revise its proposed algorithm for the effective storage volume to produce a metric incorporating the volume and temperature of the stored water and the water heater recovery rate. (CA IOUs, No. 52 at pp. 2–4)

In response, effective storage volume is intended to measure the maximum thermal energy a water heater can store and to indicate the amount of hot water that is immediately available. Effective storage volume is not intended to measure how fast the unit is able to heat water. This is in contrast with FHR, which accounts for the water heater's recovery rate as previously described. Accounting for water heater recovery rate in the effective storage volume calculation would make the effective storage volume metric duplicative of the existing FHR metric; DOE reiterates that effective storage volume will not replace FHR, which will remain a part of the test procedure. A.O. Smith stated that the effective storage volume metric may become obsolete if DOE's proposed energy conservation standards effectively limit the availability of non-demand response water heaters with user-selectable high heat modes. (A.O. Smith, No. 51 at p. 7) In response to A.O. Smith's comment, DOE notes that the scope of this comment falls within that of the energy conservation standards rulemaking, so it will be properly considered in the concurrent standards rulemaking for consumer water heaters. Additionally, DOE would again mention that certification and representations of effective storage volume will not be required as a result of this final rule, but instead may be required at the time of any energy conservation standards that specifically address which water heaters may be required to carry out high temperature testing.

Finally, when proposing the calculation of estimated mean tank temperature in the July 2022 SNOPR, DOE inadvertently omitted the calculation of annual electrical energy consumption from the test procedure. DOE has once again included this calculation as originally proposed in the January 2022 NOPR at section 6.3.10 of appendix E.

b. Circulating Water Heaters

As discussed in section III.D.4 of this document, DOE is amending the test procedure to require that circulating water heaters must be tested with a separate storage tank. Specifically, gas-fired and oil-fired circulating water heaters and electric resistance circulating water heaters must be tested with an UFHWST, and heat pump-type circulating water heaters must be tested with an electric storage water heater.

For circulating water heaters, effective storage volume calculations will be carried out in a slightly different manner than for storage water heaters. The methodology established in this final rule takes into consideration the concerns raised by stakeholders and discussed in section III.D.4 of this document. In summary, while commenters expressed that it would be beneficial to be able to use a range of UFHWST volumes for testing non-heat-pump-type circulating water heaters, commenters were also concerned that the results of testing may not be reproducible without certifying the specific model of UFHWST to be used. Regarding the volume, DOE understands that circulating water heater designs may be optimized to operate with specific storage volumes; thus, in this final rule, DOE is allowing a range of volumes to be used. However, manufacturers may represent the volume of the UFHWST in terms of the effective storage volume of the circulating water heater as follows.

Because circulating water heaters are to be tested with a separate storage tank, they operate, as a system, in a similar manner to storage-type water heaters. Although the volume stored by the circulating water heater itself may be small, these water heaters require a separate volume of water to operate properly. Therefore, DOE has determined that it is appropriate for the effective storage volume calculation for circulating water heaters to account for the separate storage tank, as the volume of the stored water is representative of the effective volume that would be available for such a water heater in the field, since it is necessary to install a circulating water heater with a storage tank or other stored volume of water. The procedure for calculating effective storage volume of separate storage tanks paired with circulating water heaters is outlined in section 6.3.1.1 of appendix E. This procedure will prescribe the value of the measured storage volume of the separate storage tank to be the effective storage volume of the circulating water heater, and the measured storage volume of the separate storage tank shall be determined in accordance with section 5.2.1 of the amended appendix E (Determination of Storage Tank Volume). This allows the same method of volume measurement to be applied to UFHWSTs and separate electric resistance storage tanks. DOE has determined that this approach allows for manufacturers to have the flexibility to use the appropriate size of UFHWST for the circulating water heater while still ensuring that testing can be done in a reproducible manner.

In a separate rulemaking pertaining to certification requirements for consumer water heaters and residential-duty commercial water heaters, DOE will address any potential amendments

which would need to be made in order to certify the effective storage volume of a product. DOE would consider establishing product-specific enforcement provisions for circulating water heaters at such a time when energy conservation standards for these products are evaluated.

G. Untested Provisions (Alternative Efficiency Determination Methods)

At 10 CFR 429.70, DOE specifies alternative methods for determining energy efficiency and energy use for certain covered products and equipment, including consumer water heaters.[76] In general, these provisions allow a manufacturer to determine the energy efficiency or energy use of a basic model using an alternative efficiency determination method (AEDM) in lieu of actually testing the basic model. Specific to each product or equipment type covered by these AEDM provisions, DOE defines the criteria for using an AEDM and, for some products and equipment, procedures to be used to validate an AEDM and to perform verification testing on units certified using an AEDM.

The provisions at 10 CFR 429.70(g) provide alternative methods for determining ratings for ''untested'' basic models of residential water heaters and residential-duty commercial water heaters. For models of water heaters that differ only in fuel type or power input, these provisions allow manufacturers to establish ratings for untested basic models based on the ratings of tested basic models if certain prescribed requirements are met. (Simulations or other modeling predictions or ratings of UEF, volume, first-hour rating, or maximum gallons per minute are not permitted (10 CFR 429.70(g)).)

Specifically, for gas water heaters, the provisions at 10 CFR 429.70(g)(1) specify that for untested basic models of gas-fired water heaters that differ from tested basic models only in whether the basic models use natural gas or propane gas, the represented value of UEF, FHR, and maximum gallons per minute for an untested basic model can be the same as those for a tested basic model, as long as the input ratings of the tested and untested basic models are within ±10 percent.

For electric storage water heaters, the provisions at 10 CFR 429.70(g)(2) specify rating an untested basic model using the FHR and the UEF obtained from a tested basic model as a basis for ratings of basic models with other input ratings, provided that certain conditions are met: (1) each heating element of the untested basic model is rated at or above the input rating for the corresponding heating element of the tested basic model; and (2) for an untested basic model having any heating element with an input rating that is lower than that of the corresponding heating element in the tested basic model, the FHR for the untested basic model must result in the same draw pattern specified in Table I of appendix E for the simulated-use test as was applied to the tested basic model.[77] 10 CFR 429.70(g)(2)(i)–(ii).

In commenting on this topic in response to the January 2022 NOPR, Rheem suggested expanding the AEDM provisions for consumer water heaters to address circulating water heaters. Specifically, Rheem identified three possible AEDM approaches: (1) test the thermal efficiency or COP using the commercial water heater test procedure and use the result to calculate an estimated UEF for various storage capacities; (2) open the commercial HVAC AEDM provisions at 10 CFR 429.70(c) to circulating consumer water heaters; or (3) add provisions similar to the current electric storage water heater AEDM, where a change in draw pattern would necessitate a new test. (Rheem, No. 31 at pp. 3–4)

Further, DOE notes that although manufacturers of consumer water heaters are not authorized to use an AEDM under 10 CFR 429.70(c) to determine ratings for consumer water heaters, as discussed, manufacturers may determine UEF for certain models using the methods specified under 10 CFR 429.70(g). These models include: (1) gas-fired basic models differing only in whether the basic models use natural gas or propane and with an input rating within 10 percent and (2) electric storage water heater basic models differing only in heating element input rating (in addition, for untested basic models with a heating element with an input rating that is lower than the input rating of the corresponding element in the tested basic model, the FHR for the untested basic model must also result in the same draw pattern as was applied to the tested basic model). These provisions already provide manufacturers with some measure of an alternative method of rating consumer water heaters without testing every model, and this alternative method reduces manufacturer test burden. Further, DOE explained in a 2013 final rule pertaining to AEDMs that the AEDM provisions extend to those products or equipment which have ''expensive or highly-customized basic models.'' 78 FR 79579, 79580 (Dec. 31, 2013). The current AEDM provisions for commercial HVAC equipment (including commercial water heaters, for example) were in part the result of a negotiated rulemaking effort by the Appliance Standards and Rulemaking Federal Advisory Committee (ASRAC) in 2013. *Id.* Consumer water heaters were not considered at the time.[78] *Id* In this rulemaking, DOE did not receive comments indicating that these conditions would apply for consumer water heaters or residential-duty commercial water heaters, and, hence, DOE has determined that modeling-based AEDMs are not required at this time. Additionally, the test method adopted in this final rule has been determined to be representative of energy use over an average use cycle without being unduly burdensome.

Given these factors, DOE is not considering further expansion of the AEDM provisions for water heaters within the scope of this test procedure, aside from applying the untested model provisions to electric instantaneous water heaters, as discussed in section III.G.2 of this document. The following sections discuss representations of the FHR value of certain untested models and the extension of the alternative rating method to electric instantaneous-type water heaters.

1. Representations of First-Hour Ratings for Untested Basic Models

The provisions at 10 CFR 429.70(g) allow for an untested electric storage water heater basic model with element wattages less than a tested basic model to use the FHR of the tested basic model, provided that the untested basic model's FHR is in the same draw pattern as the tested basic model. For an untested basic model with an element wattage that is lower than the tested basic model's, the tested FHR of the untested basic model will generally be less than the FHR of the tested basic model. In such cases, using the tested basic model's FHR to represent the untested model's FHR may not be as

[76] Section 429.71 uses the term ''residential,'', which is synonymous with the use of the term ''consumer'' in this document.

[77] To establish whether this condition is met, the provisions at 10 CFR 429.70(g)(2)(ii) specify determining the FHR for the tested and the untested basic models in accordance with the procedure described in section 5.3.3 of 10 CFR part 430, subpart B, appendix E, and then comparing the appropriate draw pattern specified in Table I of appendix E for the FHR of the tested basic model with that for the untested basic model. If this condition is not met, then the untested basic model must be tested and the appropriate sampling provisions applied to determine its UEF in accordance with appendix E.

[78] Working group meeting transcripts can be found at *www.regulations.gov* under Docket No. EERE–2013–BT–NOC–0023.

representative as using the FHR value directly determined from the untested model (the FHR of the untested basic model is determined pursuant to the procedures in appendix E specifically for the purpose of allowing use of the tested basic model's UEF rating). Instead, using the untested basic model's measured FHR for representation purposes, rather than the tested model's FHR (as currently required), could increase the representativeness of the certified FHR, while potentially not increasing burden on the manufacturer.

The January 2022 NOPR requested comment on the potential to revise the existing provisions at 10 CFR 429.70(g)(2)(ii) for electric storage water heaters with element wattages less than the tested basic model to require that the represented FHR of the untested model be the untested basic model's FHR as determined according to the procedures at appendix E. Specifically, DOE sought information on whether manufacturers collect sufficient data to establish a rated value of FHR based on FHR testing for untested basic models, subject to the sampling plan requirements at 10 CFR 429.17 (*i.e.,* whether manufacturers currently measure the FHR of at least two units of an untested basic model to ensure it is in the same draw pattern bin as the tested model). 87 FR 1554, 1587–1588 (Jan. 11, 2022).

In commenting on this issue, ASAP, ACEEE, and NCLC supported revising the untested provisions for storage water heaters so that the first-hour ratings for untested models are used for ratings. Likewise, ASAP, ACEEE, and NCLC also supported requiring that the represented value of max GPM for untested electric instantaneous water heaters be the actual value determined for the untested model. (ASAP, ACEEE, and NCLC, No. 34 at p. 3)

BWC offered a different view, commenting that the current AEDM provisions yield accurate results for untested electric storage water heaters with element wattages less than the tested basic models. The company stated that changing these provisions would result in significant burden for manufacturers without producing significantly different results. BWC also urged DOE to not apply the more stringent AEDM requirements for electric storage water heaters to electric instantaneous water heaters. (BWC, No. 33 at pp. 10–11)

Similarly, AHRI raised concerns about the increased burden associated with the proposed additional requirements for alternate electric storage water heater input ratings. (AHRI, No. 40 at p. 3) AHRI indicated that, because the sampling plan provisions at 10 CFR 429.17 are not currently required when certifying untested models, manufacturers would have to retest and recertify untested models if DOE were to adopt such requirements. (AHRI, No. 40 at pp. 5–6) A.O. Smith requested additional clarity on exactly which untested models would need to be tested to confirm FHR ratings under the proposed untested provisions. (A.O. Smith, Jan. 27, 2022 Public Meeting Transcript, No. 27 at pp. 48–49) A.O. Smith claimed that the established practice has been to evaluate untested electric storage water heater tank inputs to confirm that these models would perform in the same draw pattern as the tested model. A.O. Smith also stated that certifying data for untested models would be an extra testing burden for manufacturers which have relied on the procedures pursuant to alternative methods for determining energy efficiency and energy use to establish the ratings, and, therefore, the commenter recommended against the Department changing the relevant data collection methodology. (A.O. Smith, No. 37 at pp. 4–5)

After consideration of the comments and the additional burden that an amendment relating to the FHR representations for certain untested water heaters would impose, DOE has decided not to amend these provisions at this time. However, DOE reiterates that, per the current AEDM requirements, manufacturers are required to test the FHR of an untested model prior to making a determination as to whether or not the untested model will fall under the same draw pattern as the tested model. This determination should not be made on the basis of input rates alone. Manufacturers should consult 10 CFR 429.70(g), which states, ''simulations or other modeling predictions for ratings of the uniform energy factor, volume, first-hour rating, or maximum gallons per minute (GPM) are not permitted.'' Furthermore, as a clarification of the existing reporting requirements, manufacturers using the untested provisions to certify certain water heater models to DOE must identify these models as being tested to an AEDM (*see* 10 CFR 429.17(b)(1), which references 10 CFR 429.12).

2. Alternative Rating Method for Electric Instantaneous Water Heaters

In the January 2022 NOPR, in response to earlier stakeholder comments, DOE proposed to expand the untested provisions (described in detail in section III.G.1 of this document) so as to apply similar provisions to electric instantaneous water heaters. The proposed expansion would allow electric instantaneous water heaters and electric storage water heaters to have similar AEDM requirements. 87 FR 1554, 1588 (Jan. 11, 2022).

As discussed in further detail in the January 2022 NOPR, because electric instantaneous water heaters exhibit the same trends in performance that justify the use of an alternative rating determination method for electric storage water heaters, DOE tentatively determined that extending the use of the untested provisions to electric instantaneous water heaters in 10 CFR 429.70(g) would maintain a representative rating of these products' energy efficiency, while reducing manufacturer burden. Therefore, DOE proposed to permit use of the untested provisions for electric instantaneous water heaters through newly proposed provisions at 10 CFR 429.70(g)(3). Specifically, the January 2022 NOPR proposed that the criteria that currently apply to electric storage water heaters at 10 CFR 429.70(g)(2) would apply to electric instantaneous type water heaters at 10 CFR 429.70(g)(3), with the exceptions that: (1) The criteria for electric instantaneous water heaters would reference the maximum GPM rather than the FHR, as FHR applies only to storage water heaters; and (2) the criteria for electric instantaneous water heaters would reference the ''input rate'' rather than the ''heating element'' or ''input rating for the corresponding heating element.''. 87 FR 1554, 1588 (Jan. 11, 2022).

On this topic, AHRI and A.O. Smith expressed support for the inclusion of electric instantaneous water heaters in the untested provisions. (AHRI, No. 40 at pp. 5–6; A.O. Smith, No. 37 at p. 2) Based upon its previous reasoning and after considering the relevant comments, DOE is adopting the untested provisions for electric instantaneous water heaters as proposed in the January 2022 NOPR, with only a minor modification.

Section III.H.1 of this document discusses terminology used with respect to storage vs. instantaneous and flow-activated vs. non-flow-activated water heaters. Specifically, DOE has determined that not all instantaneous water heaters are flow-activated, and also that storage water heaters do not necessarily have to be non-flow-activated, either. As such, in this final rule, DOE is amending the language in all of the untested provisions (those which currently exist and those which are being newly established) such that the delivery capacity metric may be either FHR or Max GPM. This correction

will harmonize the requirements at 10 CFR 429.70(g) with the test procedure, which specifies that the Max GPM metric is for flow-activated water heaters, and the FHR metric is for all others, regardless of the water heater's classification as storage-type or instantaneous-type (see section 5.3 of appendix E).

H. Corrections and Clarifications

DOE is adopting certain corrections and clarifications to the appendix E test procedure that are intended to improve the repeatability and reproducibility of the test procedure. These changes are described in more detail in the subsections that follow.

1. Flow-Activated Terminology

In sections 5.3.3.1 and 5.3.3.2 of appendix E, which describe general requirements and draw initiation criteria, respectively, for the FHR test, the term ''storage-type water heaters'' is used. However, the FHR test applies to all water heaters that are not flow-activated, which includes non-flow-activated instantaneous water heaters. In this rulemaking, DOE sought feedback on updating the phrase ''storage-type water heaters'' in section 5.3.3 to ''non-flow-activated water heaters.'' 85 FR 21104, 21112 (April 16, 2020). Multiple stakeholders provided comments on the use of ''flow-activated'' and ''non-flow-activated'' in response to the April 2020 RFI and the January 2022 NOPR.

Initially, commenters such as AHRI and some manufacturers stated that there is no need to change the phrase ''storage-type water heaters'' in section 5.3.3 of appendix E. However, when DOE submitted a comment to the ASHRAE 118.2 drafting committee suggesting the change from ''storage-type'' to ''non-flow activated'' in the corresponding sections of ASHRAE 118.2, this change was accepted by the committee and used in ASHRAE 118.2–2022. Thus, DOE proposed to update the terminology in the January 2022 NOPR in an effort to align terminology with that recognized by industry. 87 FR 1554, 1576 (Jan. 11, 2022).

Specifically, section 7.3.3.1 of ASHRAE 118.2–2022 uses the term ''non-flow-activated'' water heaters, whereas section 5.3.3.1 of the current appendix E test procedure uses the term ''storage-type'' water heaters. Yet section 7.3.3.2 of ASHRAE 118.2–2022 still uses the ''storage-type'' term that is present in section 5.3.3.2 of appendix E. By contrast, DOE's proposal, as delineated in the January 2022 NOPR, would effectively ensure that language related to the FHR test did not inadvertently narrow the scope of that test to only storage-type water heaters whenever the term ''storage-type'' was used in this context.

On this topic, Rheem supported the proposed amendments to the language throughout appendix E to use ''non-flow activated'' and ''flow-activated,'' and to refer to water heaters with or without storage volumes greater than 2 gallons as such. Rheem stated that these changes eliminate the storage or instantaneous type language except where helpful to navigate the appendix. (Rheem, No. 31 at p. 2)

Many commenters expressed confusion regarding DOE's proposed changes in terminology in appendix E, however. At the public meeting webinar for the January 2022 NOPR, AHRI requested further explanation of the intent behind the proposed terminology update changing ''storage-type'' and ''instantaneous-type'' to ''non-flow-activated'' and ''flow-activated,'' especially since the proposed terms are not used in EPCA. AHRI requested that DOE clarify whether or not the terminology change would have any impact on testing. (AHRI, Jan. 27, 2022 Public Meeting Transcript, No. 27 at pp. 41–42) In its written comments, AHRI stated that replacing the ''instantaneous-type'' and ''storage-type'' terminology with ''flow-activated'' and ''non-flow activated'' may cause confusion for the test methods relevant to water heaters larger than 20 gallons in rated storage volume. AHRI suggested that DOE should consider adding steps to the test procedure to determine: (1) if a unit is ''storage-type'' or ''instantaneous-type'' and (2) if a unit is ''flow-activated'' or ''non-flow activated.'' (AHRI, No. 40 at p. 4) BWC did not support a change from the terms ''storage-type'' and ''instantaneous-type'' to ''non-flow-activated'' and ''flow-activated'' for water heaters above 20 gallons, stating that it would create confusion for manufacturers and testing laboratories. (BWC, No. 33 at p. 6)

AET commented that a flow-activated electric instantaneous water heater will need to be able to heat its stored volume of water to the 67 °F temperature rise in appendix E in no more than about 30 seconds based on a calculation of recovery efficiency and flow rate. (AET, No. 29 at pp. 3–5) However, DOE notes that this calculation is only possible because the recovery efficiency of an electric resistance water heater is defined as 98 percent in the appendix E test procedure; the time criterion would vary for other types of water heaters.

Furthermore, AET commented that DOE should be careful in its use of the term ''instantaneous'' water heater to ensure the test procedure for these products applies to all products which have more than 4,000 Btu/h of input per gallon of storage, adding that there are instantaneous water heaters have several gallons of storage capacity or are thermostatically-activated (which should be tested under a non-flow-activated test method). The commenter stressed that water heaters should be tested per the flow-activated or non-flow-activated test method based on whether or not they are indeed flow-activated, and not whether they are instantaneous-type or storage-type. AET commented that a thermostatically-activated unit does not necessarily mean that stored water is kept fully heated, but rather that the rate of change of temperature of stored water can be used to indicate whether a flow is occurring, and, therefore, the distinction between flow-activation and non-flow-activation (*i.e.,* thermostatic activation) may be difficult to make for water heaters with very small volumes. AET claimed that hybrid instantaneous water heaters activated by both flow and water temperature are under development, and such appliances should be addressed in the test procedure. AET also noted that the largest possible instantaneous-type gas-fired unit may have up to 50 gallons of storage volume per the codified definitions, and the largest possible instantaneous-type oil-fired unit may have up to 52.5 gallons of storage volume. Additionally, AET provided detailed comments indicating that not all instantaneous water heaters are flow-activated within the scope of the standards of consumer water heaters, so DOE should not use the terms interchangeably. (AET, No. 29 at pp. 2–6)

To clarify the intent of the January 2022 NOPR's proposal: DOE agrees with AET that the distinction between storage-type water heaters and instantaneous-type water heaters is different from the distinction between flow-activated water heaters and water heaters with other activation schemes. Comments from manufacturers seem to indicate that there could be a misconception that ''instantaneous-type water heater'' and ''flow-activated water heater'' are interchangeable, because these comments opposed DOE's correction to remove the ''storage-type'' term from the description of the FHR test and replace it with the ''non-flow-activated'' term; however, these terms are *not* interchangeable. When a water heater is referred to as ''storage-type'' or ''instantaneous-type,'' those terms specifically refer to the ratio between

the storage volume and the input rate. These terms are defined in EPCA (*see* 42 U.S.C. 6291(27)(A) and (B)) and at 10 CFR 430.2. For example, DOE's energy conservation standards at 10 CFR 430.32(d) distinguish between storage-type and instantaneous-type water heaters. Section 1.6 of appendix E defines ''flow-activated'' as an operational scheme in which a water heater initiates and terminates heating based on sensing flow in order to determine which method of testing is most appropriate for the water heater's operational scheme. Therefore, whether a water heater is storage-type or instantaneous-type has no bearing on whether it is determined to be ''flow-activated.'' There. can be flow-activated storage water heaters or even non-flow-activated instantaneous water heaters. In fact, circulating water heaters are defined as non-flow-activated instantaneous water heaters (*see* section III.A.4.a of this final rule).

Section 5.3.1 of appendix E states, ''For flow-activated water heaters, conduct the maximum GPM test, as described in section 5.3.2, *Maximum GPM Rating Test for Flow-Activated Water Heaters,* of this appendix. For all other water heaters, conduct the first-hour rating test as described in section 5.3.3 of this appendix.'' In this final rule, the Department is maintaining this requirement in the revised appendix E test procedure.

With respect to comments related to how to determine whether a water heater is flow activated, DOE has concluded that the definition of ''flow-activated'' in proposed section 1.6 of appendix E is sufficient for manufacturers and testing laboratories to determine whether a product meets that definition. Specifically, if a water heater initiates or terminates heating as a result of sensing flow—regardless of what type of sensor is used to determine whether a flow is occurring—then the water heater is flow-activated. If a water heater has two activation schemes, one of which is based on sensing flow (*e.g.,* heating can also be initiated due to the tank temperature crossing below a certain thermostat limit), then it still meets the description of a flow-activated water heater, and, therefore, must be tested as such. This is a clarification of the current test procedure and not an amendment, and, thus, DOE is maintaining the language in the definition of ''flow-activated'' in appendix E (which will now appear at section 1.7).

DOE understands that the term ''non-flow-activated,'' which was used in the January 2022 NOPR's proposal, could be a source of confusion, because, as AET states, there are products which are dually activated. Hence, in this final rule, DOE is not introducing this term into the appendix E test procedure. Instead, DOE is striking out the references to storage-type water heaters in provisions related to water heaters which require the FHR test and striking out the reference to instantaneous-type water heaters in provisions related to water heaters which require the Max GPM test. Because section 5.3.1 already instructs which test is required, these instances of the terms ''storage-type'' and ''instantaneous-type'' are inaccurate and extraneous. DOE has determined that these corrections and clarifications do not change the way in which the appendix E test procedure is conducted.

2. Second Identical 24-Hour Simulated-Use Test

For water heaters that are not flow-activated, the water heaters test procedure in section 5.2.2.2 of the currently applicable appendix E includes directions for setting the temperature controllers such that the test method is repeatable and reproducible.

A.O. Smith requested DOE to clarify that, when testing water heaters larger than or equal to 20 gallons, the second identical simulated-use test is not a requirement of the procedure but only a means by which to validate the stability of the setting, if it is deemed necessary to perform. (A.O. Smith, No. 37 at p. 7)

In response, the Department notes that there is no requirement for a second identical 24-hour simulated-use test in appendix E. Sections 5.2.2.2.1.1 and 5.2.2.2.1.2 of the currently applicable test procedure states that once the proper temperature control setting is achieved, the setting must remain fixed for the duration of the first-hour rating test and the simulated-use test such that a second identical simulated-use test run immediately following the one specified in section 5.4 would result in average delivered water temperatures that are within the bounds specified in section 2.4 of this appendix. This language was included to explain the intent of the temperature control. However, for units which have an integrated mixing valve or that are intended for use with a mixing valve, the language describing the second identical 24-hour simulated-use test may be misleading, as there may be individual draws where the outlet temperature is outside the bounds specified in section 2.4 of appendix E. As a result, the Department is amending the language to remove reference to a second 24-hour simulated-use test. The procedure to ensure the stability of the temperature control as described in sections 5.2.2.2.1.1 and 5.2.2.2.1.2 remains unchanged.

3. Connected Products

Section 5.1 of appendix E currently specifies the operational mode selection for water heaters but does not explicitly address ''smart'' or ''connected'' modes of operation. For water heaters that allow for multiple user-selected operational modes, all procedures specified in appendix E must be carried out with the water heater in the same operational mode (*i.e.,* only one mode). This operational mode must be the default mode (or similarly named, suggested mode for normal operation) as defined by the manufacturer in its product literature for giving selection guidance to the consumer.

On September 17, 2018, DOE published an RFI seeking information on the emerging smart technology appliance and equipment market. 83 FR 46886 (September 2018 RFI). In the September 2018 RFI, DOE sought information to better understand market trends and issues in the emerging market for appliances and commercial equipment that incorporate smart technology. *Id.* at 83 FR 46887. DOE's intent in issuing the September 2018 RFI was to ensure that DOE did not inadvertently impede such innovation when fulfilling its statutory obligations to set efficiency standards for covered products and equipment. *Id.* In the April 2020 RFI, DOE sought comment on the same issues presented in the September 2018 RFI as they may be specifically applicable to consumer water heaters. 85 FR 21104, 21114 (April 16, 2020).

Responding to the April 2020 RFI, commenters urged DOE to update the test procedure to better capture the performance differences between traditional and connected products, provided some recommended definitions delineating the types of connected products, and suggested that DOE adopt additional and/or optional performance metrics related to grid connectivity. These comments are discussed in detail in the January 2022 NOPR. 87 FR 1554, 1585 (Jan. 11, 2022). In the January 2022 NOPR, DOE proposed to explicitly state that any connection to an external network or control would be disconnected during testing. DOE proposed this given that there were insufficient data on consumer usage of connected features for the Department to develop a representative test configuration for assessing the energy consumption of connected functionality for water

heaters. 87 FR 1554, 1585–1586 (Jan. 11, 2022).

On this topic, BWC agreed with DOE's tentative determinations and clarifications regarding the testing of connected water heaters. (BWC, No. 33 at p. 9) NYSERDA recommended that DOE ensure the test procedure supports grid-enabled water heaters specifically, as well as connected water heaters generally. To this point, NYSERDA recommended that DOE should specify how manufacturers can demonstrate their products are ''connected'' and include this as an item for reporting to the agency. NYSERDA encouraged DOE to consider the power usage for connectedness, as this would be informative for utilities planning for decarbonization. Additionally, NYSERDA stated that including the power usage for connected functions would encourage the load to be minimal and better inform consumers regarding anticipated operating costs. (NYSERDA, No. 32 at pp. 2–3)

In response, while DOE acknowledges the potential benefits that could be provided by connected capability, such as providing energy saving benefits to consumers and enabling peak load shifting on the grid, the Department has concluded that requiring measurement and reporting of the energy consumed by connected features at this time may prematurely hinder the development and incorporation of such features in water heaters. As such, DOE is clarifying that connected features on water heaters should remain on but disconnected from any external network or control for the duration of the appendix E test. This approach will allow some baseline energy consumption to be accounted for without imposing any specific network connection test requirements.

4. Heating Value of Gas

In this rulemaking, DOE considered the need for a clarification regarding the correction of the heating value to a standard temperature and pressure. Section 3.7 of appendix E states that the heating values of natural gas and propane must be corrected from those reported at standard temperature and pressure conditions to provide the heating value at the temperature and pressure measured at the fuel meter, but does not specify standard temperature and pressure conditions. Without a specified standard temperature and pressure, the heating values used in calculations may not be consistent from laboratory to laboratory.

As discussed in the January 2022 NOPR, there are several sources which do specify the standard temperature and pressure conditions for natural gas calculations. 87 FR 1554, 1578 (Jan. 11, 2022). For example, AHRI maintains an Operations Manual for Residential Water Heater Certification Program (AHRI Operations Manual), which includes an equation that corrects the measured heating value, when using a dry gas and a wet test meter, to the heating value at the standard temperature and pressure of 60 °F (15.6 °C) and 30 inches of mercury column (101.6 kPa), respectively. Annex B of the March 2019 ASHRAE Draft 118.2 also provides a method for correcting the heating value from measured to standard conditions, which allows for the use of either dry or saturated gas and either a dry or wet test meter—and this calculation was finalized in ASHRAE 118.2–2022 with an example provided for 60 °F (15.6 °C) and 30 inches of mercury column (101.6 kPa). Lastly, sections 2.4.1 and 3.1.1 of appendix O to subpart B of 10 CFR part 430 (Uniform Test Method for Measuring the Energy Consumption of Vented Home Heating Equipment) correct the input rate to the standard conditions of 60 °F (15.6 °C) and 30 inches of mercury column (101.6 kPa). Therefore, to align with the AHRI Operations Manual and the current practice in other appendices within part 430 of the CFR, DOE proposed in the January 2022 NOPR to establish the standard temperature and pressure conditions for gas measurements as 60 °F (15.6 °C) and 30 inches of mercury column (101.6 kPa), respectively. Further, DOE proposed to adopt the method used in Annex B of a finalized ASHRAE 118.2–2022 to correct the heating value of gas to standard conditions. 87 FR 1554, 1578 (Jan. 11, 2022).

DOE did not receive comments from stakeholders regarding this proposal. Accordingly, DOE is adopting these proposals in this final rule for the reasons previously discussed.

I. Effective and Compliance Dates

The effective date for the adopted test procedure amendments will be 30 days after publication of this final rule in the **Federal Register**.

As to the compliance date, EPCA prescribes that all representations of energy efficiency and energy use for consumer products (including consumer water heaters),), including those made on marketing materials and product labels, must be made in accordance with an amended test procedure, beginning 180 days after publication of the final rule in the **Federal Register**. (42 U.S.C. 6293(c)(2)) For residential-duty commercial water heaters, this requirement is beginning 360 days after publication of the final rule in the **Federal Register**. (42 U.S.C. 6314(d)(1)) For consumer products, EPCA provides an allowance for individual manufacturers to petition DOE for an extension of the 180-day period if the manufacturer may experience undue hardship in meeting the deadline. (42 U.S.C. 6293(c)(3)) To receive such an extension, petitions must be filed with DOE no later than 60 days before the end of the 180-day period and must detail how the manufacturer will experience undue hardship. (*Id.*)

With the exception of two test method provisions (*i.e.,* high temperature testing and separate storage tank testing), compliance with the modified test procedure adopted in this final rule is required for consumer water heaters beginning 180 days after the date of publication of this final rule in the **Federal Register**. Similarly, with the exception of the separate storage tank testing requirement, compliance with the modified test procedure is required for residential-duty commercial water heaters beginning 360 days after the date of publication of this final rule in the **Federal Register**.

Beginning on the effective date of this final rule, the use of the high temperature test method (section 5.1.2 of the amended appendix E test procedure) will be allowed for voluntary additional representations until the compliance date of amended energy conservation standards for consumer water heaters that address high temperature operation, should such standards be adopted. Until such a time, the normal temperature test method (section 5.1.1 of the amended appendix E test procedure) is required as the basis for ratings used to determine compliance with energy conservation standards. During this voluntary usage period, manufacturers who choose to publish two sets of ratings must clearly indicate which values correspond to the high temperature test method. In the standards rulemaking, DOE plans to clarify which type(s) of water heaters would be required to utilize the high temperature test method when determining compliance with potential amended standards.

The use of the separate storage tank test method for circulating water heaters (section 4.10 of the amended appendix E test procedure) will be allowed for voluntary representations and compliance with standards beginning on the effective date of this final rule. This test method will become mandatory when compliance with amended energy conservation standards for consumer water heaters and

residential-duty commercial water heaters is required, should such standards addressing circulating water heaters be adopted.

Upon the compliance date of test procedure provisions in this final rule, any waivers that had been previously issued and are in effect that pertain to issues addressed by such provisions are terminated. 10 CFR 430.27(h)(3) and 431.401(h)(3). Recipients of any such waivers are required to test the products subject to the waiver according to the amended test procedure as of the compliance date of the amended test procedure. The amendments adopted in this document pertain to issues addressed by a waiver granted to Bradford White Corporation (Case No. 2019–006). *See* 85 FR 5648 (Jan. 31, 2020). On January 31, 2020, DOE published a Notice of Decision and Order in the **Federal Register** granting Bradford White Corporation a waiver for a specified basic model that experiences the first cut-out of the 24-hour simulated-use test during a draw. 85 FR 5648. The Decision and Order requires Bradford White Corporation to use an alternate test procedure that DOE determined more accurately calculates the recovery efficiency when the first cut-out occurs during a draw. *Id.* at 85 FR 5651. As described in section III.B.2.b of this document, DOE is adopting the alternate test procedure prescribed in the Decision and Order granted to Bradford White Corporation into the test procedure at appendix E.

J. Test Procedure Costs

EPCA requires that test procedures proposed by DOE not be unduly burdensome to conduct. (42 U.S.C. 6293(b)(3)) The following sections discuss DOE's evaluation of estimated costs associated with the proposed amendments for consumer water heaters and residential-duty commercial water heaters.

1. Separate Storage Tanks

In the January 2022 NOPR, DOE tentatively concluded that the cost of running the test procedure using an 80-gallon unfired hot water storage tank should be the same as testing a water heater with an integrated tank with a comparable storage volume. The Department estimated that testing a fossil fuel-fired or electric storage water heater would cost approximately $3,000 and that testing an electric storage water heater which uses heat pump technology would cost approximately $4,500. In addition to the testing cost, the manufacturer or third-party testing facility would incur a one-time cost to purchase an unfired hot water storage tank which are commercially available for approximately $900. 87 FR 1554, 1589 (Jan. 11, 2022).

In the July 2022 SNOPR, DOE revised its proposal. DOE estimated that, for gas-fired circulating water heaters, these proposed changes could require a one-time purchase of an 80- to 120-gallon unfired hot water storage tank, which are readily commercially available for approximately $2,000. For heat pump-only water heaters, the proposed changes could result in a one-time purchase of a 40-gallon (±4 gallons) electric storage water heater readily available for approximately $500. 87 FR 42270, 42283 (July 14, 2022).

DOE evaluated stakeholder feedback regarding this testing requirement and further revised its amended provision. This final rule adopts the following changes concerning the testing of circulating water heaters:

(1) Gas-fired circulating water heaters be tested using an unfired hot water storage tank with a storage volume between 80 and 120 gallons and an R-value exactly at the minimum R-value required at 10 CFR 431.110(a).

(2) Heat pump circulating water heaters be tested using a 40-gallon (±5 gallons) electric storage water heater at the minimum UEF standard required at 10 CFR 430.32(d).

AHRI generally agreed with the estimated costs presented in the January 2022 NOPR, with the exception that $900 may be an underestimate of the cost of purchasing an unfired hot water storage tank. (AHRI, No. 40 at p. 3) No further comments on test costs were received in response to the July 2022 SNOPR. Based upon its subsequent review in light of AHRI's comment, DOE notes that its estimate for the retail price of an unfired hot water storage tank has been raised from $900 to $2,000.

In response, DOE recognizes that these amendments will require manufacturers to make one-time purchases of the necessary storage tanks for each testing facility. DOE's research indicates that the tanks required for testing gas-fired circulating water heaters and heat pump circulating water heaters are commercially available at retail prices of $2,000 and $500, respectively, thereby reflecting third-party laboratory testing costs.

These amendments to appendix E regarding storage tank requirements will allow affected models to be certified for the first time. Manufacturers will not be able to rely on data generated under test procedures in effect prior to this final rule.

2. Method for Determining Internal Tank Temperature for Certain Water Heaters

This final rule amends section 5.4 of appendix E by the addition of section 5.4.2.2, which allows internal tank temperature to be estimated by removing water from the water heater for models with rated storage volumes greater than or equal to 2 gallons whose internal tank temperatures are unable to be measured using thermocouples.

DOE estimates that this testing method may extend test duration by up to 8 hours as part of the final standby period of the 24-hour simulated use test. This additional duration is estimated to increase testing costs by up to $1,000 for affected fossil-fuel-fired and electric water heaters and $1,500 for affected heat pump water heaters.

The addition of section 5.4.2.2 to appendix E will allow affected models to be certified for the first time. Because these water heaters could not previously be accurately tested, manufacturers will not be able to rely on data generated under test procedures in effect prior to this final rule.

3. High Temperature Testing

DOE recognizes that the amendment specifying the high temperature testing method would likely cause UEF ratings for any products that would become subject to this test method (*i.e.,* a subset of electric resistance storage water heaters) to decrease if they are currently certified using a default temperature setting. In order to limit potential retesting and recertification burden for manufacturers, any requirement to test certain products using the high temperature testing method will be established only once DOE completes its ongoing reviews of potential amended energy conservation standards for consumer water heaters, should such standards be adopted. The cost to test per this amended method would not be different from the cost to test per the method in the currently applicable appendix E test procedure (*i.e.,* testing an electric storage water heater would cost approximately $3,000).

4. Additional Amendments

The remainder of the test procedure amendments adopted in this final rule will not impact test costs.

DOE is amending section 2.5 of appendix E, ''Set Point Temperature,'' to allow low-temperature water heaters to deliver water at the maximum outlet temperature that they are capable of producing. This aligns with how these products are tested currently. Manufacturers already should have

requested a waiver for these products, as the current test procedure cannot be used as written to test low-temperature water heaters. As these products are currently tested and rated to the procedures which DOE is adopting, there should be no additional cost associated with this change.

DOE is also amending the existing test procedure for consumer and residential-duty commercial water heaters by modifying the flow rate requirements during the FHR test for water heaters with a rated storage volume less than 20 gallons. This change does not significantly affect the test results of the FHR test, and, thus, DOE expects that manufacturers may rely on existing test data where available. Further, storage-type water heaters (which comprise the majority of water heaters that need to be tested for an FHR rating) with less than 20 gallons of rated storage volume currently do not have energy conservation standards codified at 10 CFR 430.32(d) and are, therefore, not rated and certified to DOE. Instantaneous-type water heaters that will require an FHR rating are expected to be circulating water heaters, and this final rule amends the appendix E test procedure in such a way that allows these products to be tested and rated for the first time (test costs for water heaters requiring separate storage tanks are discussed in section III.J.1 of this document). Therefore, the update to the FHR test method does not change the expected testing costs for products which have been tested per appendix E previously.

DOE is also amending the timing of the first measurement in each draw of the 24-hour simulated-use test and the test condition specifications and tolerances, including electric supply voltage tolerance, ambient temperature, ambient dry-bulb temperature, ambient relative humidity, standard temperature and pressure definition, gas supply pressure, and manifold pressure. These changes are intended to reduce retesting associated with having a single measurement out of tolerance, while maintaining the current representativeness of the test conditions and the stringency of the tolerances for the test conditions. DOE also has determined that the amendment to the flow rate tolerances for water heaters less than 2 gallons in rated storage volume would not alter the measured efficiency of consumer water heaters and residential-duty commercial water heaters, nor require retesting or recertification. In the absence of an explicit instruction for the flow rate tolerance applicable to water heaters with rated storage volume under 2 gallons, DOE expects that general industry best practice is to apply the flow rate tolerances being adopted for section 5.4.3 of appendix E for water heaters with rated storage volume less than 2 gallons (based on DOE's review of third-party laboratory test data), such that this proposal is expected to be consistent with current methodology.

Manufacturers will be able to rely on data generated under the current water heaters test procedure for the remainder of the amendments set forth in this final rule, so accordingly, such changes should result in no associated increase in costs.

IV. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866, 13563, and 14094

Executive Order (E.O.) 12866, ''Regulatory Planning and Review,'' 58 FR 51735 (Oct. 4, 1993), as supplemented and reaffirmed by E.O. 13563, ''Improving Regulation and Regulatory Review,'' 76 FR 3821 (Jan. 21, 2011) and E.O. 14094, ''Modernizing Regulatory Review,'' 88 FR 21879 (April 11, 2023), requires agencies, to the extent permitted by law, to: (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public. DOE emphasizes as well that E.O. 13563 requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. In its guidance, the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget (OMB) has emphasized that such techniques may include identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes. For the reasons stated in the preamble, this final regulatory action is consistent with these principles.

Section 6(a) of E.O. 12866 also requires agencies to submit ''significant regulatory actions'' to OIRA for review. OIRA has determined that this final regulatory action does not constitute a ''significant regulatory action'' under section 3(f) of E.O. 12866. Accordingly, this action was not submitted to OIRA for review under E.O. 12866.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of a final regulatory flexibility analysis (FRFA) for any final rule where the agency was first required by law to publish a proposed rule for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. As required by Executive Order 13272, ''Proper Consideration of Small Entities in Agency Rulemaking,'' 67 FR 53461 (August 16, 2002), DOE published procedures and policies on February 19, 2003 to ensure that the potential impacts of its rules on small entities are properly considered during the DOE rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General Counsel's website: *www.energy.gov/gc/office-general-counsel.* DOE reviewed this final rule under the provisions of the Regulatory Flexibility Act and the procedures and policies published on February 19, 2003.

DOE is amending test procedures for consumer water heaters and residential-duty commercial water heaters. DOE is publishing this final rule in satisfaction of the 7-year-lookback review requirement specified in EPCA. (42 U.S.C. 6293(b)(1)(A); 6314(a)(1)) Further, amending test procedures for consumer and residential-duty commercial water heaters assists DOE in fulfilling its statutory deadline for amending energy conservation standards for products and equipment that achieve the maximum improvement in energy efficiency that is technologically feasible and economically justified. (42 U.S.C. 6295(o)(2)(A); 42 U.S.C. 6313(a)(6)) Additionally, amending test procedures for consumer and residential-duty commercial water heaters allows manufacturers to produce measurements of energy efficiency that

are representative of an average use cycle and uniform for all manufacturers.

On January 11, 2022, DOE published a test procedure NOPR (January 2022 NOPR) in the **Federal Register** proposing to amend the test procedure for consumer water heaters and residential-duty commercial gas water heaters. *See* 87 FR 1554. DOE published a supplemental test procedure NOPR on July 14, 2022 (July 2022 SNOPR) in the **Federal Register**, proposing certain modifications to the January 2022 NOPR. *See* 87 FR 42270.

DOE conducted an initial regulatory flexibility analysis (IRFA) as part of the January 2022 NOPR and July 2022 SNOPR. *See* 87 FR 1554, 1590–1592 (Jan. 11, 2022); 87 FR 42270, 42285–42287 (July 14, 2022). The following sections outline DOE's determination that this final rule does not have a ''significant economic impact on a substantial number of small entities,'' and that the preparation of a FRFA is not warranted. DOE did not receive comment specific to the impacts on small business manufacturers as part of the above-referenced IRFAs.

For manufacturers of consumer water heaters and residential-duty commercial water heaters, the Small Business Administration (SBA) has set a size threshold, which defines those entities classified as ''small businesses'' for the purposes of the statute. DOE used the SBA's small business size standards to determine whether any small entities would be subject to the requirements of the rule. (*See* 13 CFR part 121.) The size standards are listed by North American Industry Classification System (NAICS) code and industry description and are available at: *www.sba.gov/document/support—table-size-standards.* Manufacturing of consumer water heaters and residential-duty commercial water heaters is classified under NAICS 335220, ''Major Household Appliance Manufacturing.'' The SBA sets a threshold of 1,500 employees or fewer for an entity to be considered as a small business for this category. DOE used available public information to identify potential small manufacturers. DOE accessed CCMS,[79] the certified product directory of the AHRI,[80] company websites, and manufacturer literature to identify companies that import, private label, or produce the consumer water heaters and residential-duty commercial water heaters covered by this rulemaking. Using these sources, DOE has identified a total of 27 manufacturers of consumer water heaters and residential-duty commercial water heaters.[81] Of these 27 manufacturers, DOE identified one domestic small business that manufactures products covered by the test procedure amendments.

More specifically, in the January 2022 NOPR IRFA, DOE evaluated a range of potential test procedure amendments, with one amendment that could lead to additional testing costs for small business. The existing DOE test procedure does not accommodate testing of circulating water heaters that require a separately sold hot water storage tank to properly operate. In the January 2022 NOPR, DOE proposed to add procedures to test such circulating water heaters to improve the representativeness of the test procedure. The January 2022 NOPR proposed testing be based on a commonly available 80-gallon unfired hot water storage tank which minimally meets the energy conservation standard requirements at 10 CFR 431.110(a). DOE estimated that the cost of running the amended test procedure should be the same as testing a comparable water heater with storage volume (*i.e.,* third-party testing of a fossil fuel-fired or electric storage water heater would cost approximately $3,000; third-party testing of an electric storage water heater which uses heat pump technology would cost approximately $4,500). If a manufacturer chose to perform in-house testing rather than use a third-party, the unfired hot water storage tank was stated to be commercially available for approximately $900. The January 2022 IRFA identified one small manufacturer and estimated compliance costs to be $4,500. 87 FR 1554, 1591 (Jan. 11, 2022).

The July 2022 SNOPR further updated DOE's proposal for testing circulating water heaters that require a separately-sold hot water storage tank to properly operate. Specifically, the July 2022 SNOPR differentiated the test requirements for gas-fired circulating water heaters and heat pump circulating water heaters. The July 2022 SNOPR proposed that heat pump circulating water heaters be tested using an electric storage water heaters that have a rated storage volume of 40 gallons ± 4 gallons, have an FHR that results in classification at the medium draw pattern, and be rated at exactly the minimum required UEF. Compared to the January 2022 NOPR, DOE revised the requirements for circulating heat pump water heaters to better reflect how heat pump water heaters may be installed in the field. To determine cost of testing, DOE utilized a third-party test estimate of $4,500. The July 2022 IRFA identified one small manufacturer and estimated compliance costs to be $4,500. The proposal for heat pump circulating water heaters was the only amendment in the July 2022 SNOPR that could cause the small manufacturer to incur additional costs. 87 FR 42270, 42286–42287 (July 14, 2022).

In this final rule, DOE is establishing testing requirements consistent with the proposal for heat pump circulating water heaters in the July 2022 SNOPR, except that the acceptable volume range for the separate tank has been expanded to 40 gallons ± 5 gallons. For this final rule, DOE is aware of one domestic small manufacturer. The small manufacturers has a single model (a circulating heat pump water heater that requires a separately-sold hot water tank) that would be affected by the amendments being adopted and that would need to be re-tested. DOE estimates that testing would cost $4,500. If the manufacturer conducts two rounds of physical testing, DOE expects the cost impact on the small manufacturer to be $9,000, which is less than 0.01% of company revenue.

DOE has determined the cost impact to small businesses as result of the amendments in this final rule to be minimal. DOE did not receive any comments specifically pertaining to small business impacts. Therefore, on the basis of the *de minimis* compliance burden, DOE certifies that this test procedure final rule does not have a ''significant economic impact on a substantial number of small entities,'' and that the preparation of a FRFA is not warranted. DOE has submitted a certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act of 1995

Manufacturers of consumer water heaters and manufacturers of residential-duty commercial water heaters must certify to DOE that their products comply with any applicable energy conservation standards. To certify compliance, manufacturers must first obtain test data for their products according to the DOE test procedures, including any amendments adopted for

[79] U.S. Department of Energy Compliance Certification Management System, available at: *www.regulations.doe.gov/ccms*. (Last accessed July 19, 2022).

[80] AHRI Directory of Certified Product Performance is available at: *www.ahridirectory.org/Search/SearchHome* (Last accessed July 19, 2022).

[81] The January 2022 NOPR identified 31 manufacturers. 87 FR 1554, 1591 (Jan. 11, 2022). The July 2022 SNOPR identified 27 manufacturers. The changes reflect revisions based on manufacturer feedback and additional public information.

those test procedures. DOE has established regulations for the certification and recordkeeping requirements for all covered consumer products and commercial equipment, including consumer water heaters and residential-duty commercial water heaters. (*See generally* 10 CFR part 429.) The collection-of-information requirement for the certification and recordkeeping is subject to review and approval by OMB under the Paperwork Reduction Act (PRA). This requirement has been approved by OMB under OMB control number 1910–1400. Public reporting burden for the certification is estimated to average 35 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

DOE is not amending the certification or reporting requirements for consumer water heaters and residential-duty commercial water heaters in this final rule. Instead, DOE may consider proposals to amend the certification requirements and reporting for these products and equipment under a separate rulemaking regarding appliance and equipment certification. DOE will address changes to OMB Control Number 1910–1400 at that time, as necessary.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

D. Review Under the National Environmental Policy Act of 1969

In this final rule, DOE amends the test procedure for consumer water heaters and residential-duty commercial water heaters, amendments which it expects will be used to develop and implement future energy conservation standards for such products and equipment. DOE has determined that this rule falls into a class of actions that are categorically excluded from review under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*) and DOE's implementing regulations at 10 CFR part 1021. Specifically, DOE has determined that adopting test procedures for measuring energy efficiency of consumer products and industrial equipment is consistent with activities identified in 10 CFR part 1021, subpart D, appendix A, sections A5 and A6. Accordingly, neither an environmental assessment nor an environmental impact statement is required.

E. Review Under Executive Order 13132

Executive Order 13132, ''Federalism,'' 64 FR 43255 (August 1010, 1999), imposes certain requirements on agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE examined this final rule and determined that it will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. EPCA governs and prescribes Federal preemption of State regulations as to energy conservation for the products and equipment that are the subject of this final rule. States can petition DOE for exemption from such preemption to the extent, and based on criteria, set forth in EPCA. (42 U.S.C. 6297(d)) No further action is required by Executive Order 13132.

F. Review Under Executive Order 12988

Regarding the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, ''Civil Justice Reform,'' 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires executive agencies to review regulations in light of applicable standards in sections 3(a) and 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of Executive Order 12988.

G. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action resulting in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a proposed ''significant intergovernmental mandate,'' and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect small governments. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820; also available at *www.energy.gov/gc/office-general-counsel*. DOE examined this final rule according to UMRA and its statement of policy and determined that the rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure of $100 million or more in any year, so these requirements do not apply.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations

Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This final rule will not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

DOE has determined, under Executive Order 12630, ''Governmental Actions and Interference with Constitutionally Protected Property Rights,'' 53 FR 8859 (March 18, 1988), that this regulation will not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note) provides for agencies to review most disseminations of information to the public under guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE's guidelines were published at 67 FR 62446 (Oct. 7, 2002). Pursuant to OMB Memorandum M–19–15, Improving Implementation of the Information Quality Act (April 24, 2019), DOE published updated guidelines which are available at: *www.energy.gov/sites/prod/files/2019/12/f70/DOE%20Final%20Updated%20IQA%20Guidelines%20Dec%202019.pdf*. DOE has reviewed this final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13211

Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to OMB, a Statement of Energy Effects for any significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgated or is expected to lead to promulgation of a final rule, and that: (1) is a significant regulatory action under Executive Order 12866, or any successor order; and (2) is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (3) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use if the regulation is implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use.

This regulatory action is not a significant regulatory action under Executive Order 12866. Moreover, it would not have a significant adverse effect on the supply, distribution, or use of energy, nor has it been designated as a significant energy action by the Administrator of OIRA. Therefore, it is not a significant energy action, and, accordingly, DOE has not prepared a Statement of Energy Effects.

L. Review Under Section 32 of the Federal Energy Administration Act of 1974

Under section 301 of the Department of Energy Organization Act (Pub. L. 95–91; 42 U.S.C. 7101), DOE must comply with section 32 of the Federal Energy Administration Act of 1974, as amended by the Federal Energy Administration Authorization Act of 1977. (15 U.S.C. 788; ''FEAA'') Section 32 essentially provides in relevant part that, where a proposed rule authorizes or requires use of commercial standards, the notice of proposed rulemaking must inform the public of the use and background of such standards. In addition, section 32(c) requires DOE to consult with the Attorney General and the Chairman of the Federal Trade Commission (FTC) concerning the impact of the commercial or industry standards on competition.

The modifications to the Federal test procedure for consumer water heaters and residential-duty commercial water heaters adopted in this final rule incorporate testing methods contained in certain sections of the following applicable commercial test standards: ASHRAE 41.1–2020, ASTM D2156–09 (RA 2018), and ASHRAE 118.2–2022. DOE has evaluated these standards and is unable to conclude whether they fully comply with the requirements of section 32(b) of the FEAA (*i.e.,* whether it was developed in a manner that fully provides for public participation, comment, and review.) DOE has consulted with both the Attorney General and the Chairman of the FTC about the impact on competition of using the methods contained in these standards and has received no comments objecting to their use.

M. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule before its effective date. The report will state that it has been determined that the final rule is not a ''major rule'' as defined by 5 U.S.C. 804(2).

N. Description of Materials Incorporated by Reference

In this final rule, DOE incorporates by reference the following test standards:

ASHRAE 41.1–2020 prescribes methods for measuring temperature under laboratory and field conditions which are required for system performance tests and for testing heating, ventilating, air-conditioning, and refrigerating components.

ASHRAE 41.6–2014 prescribes methods for measuring the humidity of moist air with instruments.

ASHRAE 118.2–2022 provides test procedures for rating the efficiency and hot water delivery capabilities of directly heated residential water heaters and residential-duty commercial water heaters.

ASTM D2156–09 (RA 2018) provides a test method to evaluate the density of smoke in the flue gases from burning distillate fuels, which is intended primarily for use with home heating equipment burning kerosene or heating oils, and can be used in the laboratory or in the field to compare fuels for clean burning or to compare heating equipment.

ASTM E97–1987 (W1991) provides a method to determine the 45-deg, 0-deg directional reflectance factor of nonfluorescent opaque specimens by means of filter photometers.

Copies of ASHRAE 41.1–2020, ASHRAE 41.6–2014, and ASHRAE 118.2–2022 are reasonably available from the American Society of Heating, Refrigerating, and Air-Conditioning Engineers, Inc., 180 Technology Parkway NW, Peachtree Corners, GA 30092, (800) 527–4723 or (404) 636–8400, or online at: *www.ashrae.org.*

Copies of ASTM D2156–09 (RA 2018) are reasonably available from ASTM International, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA 19428–2959 or online at: *www.astm.org.*

Copies of ASTM E97–1987 (W1991) are reasonably available from standards resellers including GlobalSpec's Engineering 360 (*https://standards.globalspec.com/std/3801495/astm-e97-82-1987*) and IHS Markit (*https://global.ihs.com/doc_detail.cfm?document_name=ASTM%20E97&item_s_key=00020483*).

V. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects

10 CFR Part 429

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Intergovernmental relations, Reporting and recordkeeping requirements, Small businesses.

10 CFR Part 430

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Incorporation by reference, Intergovernmental relations, Reporting and recordkeeping requirements, Small businesses.

10 CFR Part 431

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Intergovernmental relations, Laboratories, Reporting and recordkeeping requirements, Small businesses.

Signing Authority

This document of the Department of Energy was signed on May 22, 2023, by Francisco Alejandro Moreno, Acting Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE **Federal Register** Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on May 24, 2023.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

For the reasons stated in the preamble, DOE amends parts 429, 430, and 431 of Chapter II of Title 10, Code of Federal Regulations, as set forth below:

PART 429—CERTIFICATION, COMPLIANCE, AND ENFORCEMENT FOR CONSUMER PRODUCTS AND COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 1. The authority citation for part 429 continues to read as follows:

Authority: 42 U.S.C. 6291–6317; 28 U.S.C. 2461 note.

■ 2. Amend § 429.70 by revising paragraph (g)(2) and adding paragraph (g)(3) to read as follows:

§ 429.70 Alternative methods for determining energy efficiency and energy use.

* * * * *

(g) * * *

(2) *Electric Storage Water Heaters.* Rate an untested basic model of an electric storage-type water heater using the first-hour rating or maximum GPM (whichever is applicable under section 5.3.1 of appendix E to subpart B of this part) and uniform energy factor obtained from a tested basic model as the basis for ratings of basic models with other input ratings, provided that certain conditions are met:

(i) For an untested basic model, the represented value of the first-hour rating or maximum GPM and the uniform energy factor is the same as that of a tested basic model, provided that each heating element of the untested basic model is rated at or above the input rating for the corresponding heating element of the tested basic model.

(ii) For an untested basic model having any heating element with an input rating that is lower than that of the corresponding heating element in the tested basic model, the represented value of the first-hour rating or maximum GPM and the uniform energy factor is the same as that of a tested basic model, provided that the first-hour rating for the untested basic model results in the same draw pattern specified in Table I of appendix E for the simulated-use test as was applied to the tested basic model. To establish whether this condition is met, determine the first-hour ratings or maximum GPMs for the tested and the untested basic models in accordance with the procedure described in section 5.3 of 10 CFR part 430, subpart B, appendix E, then compare the appropriate draw pattern specified in Table I of appendix E for the first-hour rating of the tested basic model with that for the untested basic model. If this condition is not met, then the untested basic model must be tested, and the appropriate sampling provisions must be applied to determine its uniform energy factor in accordance with appendix E and this part.

(3) *Electric Instantaneous Water Heaters.* Rate an untested basic model of an electric instantaneous-type water heater using the first-hour rating or maximum GPM and the uniform energy factor obtained from a tested basic model as a basis for ratings of basic models with other input ratings, provided that certain conditions are met:

(i) For an untested basic model, the represented value of the first-hour rating or maximum GPM and the uniform energy factor is the same as that of a tested basic model, provided that the untested basic model's input is rated at or above the input rating for the corresponding tested basic model.

(ii) For an untested basic model having an input rating that is lower than that of the corresponding tested basic model, the represented value of the first-hour rating or maximum GPM and the uniform energy factor is the same as that of a tested basic model, provided that the first-hour rating or maximum GPM for the untested basic model results in the same draw pattern specified in Table II of appendix E for the 24-hour simulated-use test as was applied to the tested basic model. To establish whether this condition is met, determine the first-hour rating or maximum GPM for the tested and the untested basic models in accordance with the procedure described in section 5.3 of 10 CFR part 430, subpart B, appendix E, then compare the appropriate draw pattern specified in Table II of appendix E for the first-hour rating or maximum GPM of the tested basic model with that for the untested basic model. If this condition is not met, then the untested basic model must be tested, and the appropriate sampling provisions must be applied to determine its uniform energy factor in accordance with appendix E and this part.

* * * * *

■ 3. Amend § 429.134 by adding paragraph (d)(3) to read as follows:

§ 429.134 Product-specific enforcement provisions.

* * * * *

(d) * * *

(3) *Verification of fuel input rate.* The fuel input rate of each tested unit of the basic model will be measured pursuant to the test requirements of section 5.2.3 of 10 CFR part 430, subpart B, appendix E. The measured fuel input rate (either the measured fuel input rate for a single unit sample or the average of the measured fuel input rates for a multiple unit sample) will be compared to the rated input certified by the

manufacturer. The certified rated input will be considered valid only if the measured fuel input rate is within ±2 percent of the certified rated input.

(i) If the certified rated input is found to be valid, then the certified rated input will be used to determine compliance with the associated energy conservation standard.

(ii) If the measured fuel input rate for gas-fired or oil-fired water heating products is not within ±2 percent of the certified rated input, the measured fuel input rate will be used to determine compliance with the associated energy conservation standard.

* * * * *

PART 430—ENERGY CONSERVATION PROGRAM FOR CONSUMER PRODUCTS

■ 4. The authority citation for part 430 continues to read as follows:

Authority: 42 U.S.C. 6291–6309; 28 U.S.C. 2461 note.

■ 5. Amend § 430.2 by adding in alphabetical order definitions for ''Circulating water heater'', ''Low-temperature water heater'', and ''Tabletop water heater'' to read as follows:

§ 430.2 Definitions.

* * * * *

Circulating water heater means an instantaneous or heat pump-type water heater that does not have an operational scheme in which the burner, heating element, or compressor initiates and/or terminates heating based on sensing flow; has a water temperature sensor located at the inlet or the outlet of the water heater or in a separate storage tank that is the primary means of initiating and terminating heating; and must be used in combination with a recirculating pump and either a separate storage tank or water circulation loop in order to achieve the water flow and temperature conditions recommended in the manufacturer's installation and operation instructions.

* * * * *

Low-temperature water heater means an electric instantaneous water heater that is not a circulating water heater and cannot deliver water at a temperature greater than or equal to the set point temperature specified in section 2.5 of appendix E to subpart B of this part when supplied with water at the supply water temperature specified in section 2.3 of appendix E to subpart B of this part and the flow rate specified in section 5.2.2.1 of appendix E to subpart B of this part.

* * * * *

Tabletop water heater means a heater in a rectangular box enclosure designed to slide into a kitchen countertop space with typical dimensions of 36 inches high, 25 inches deep, and 24 inches wide.

* * * * *

■ 6. Section 430.3 is amended by:

■ a. In paragraph (g)(5), removing the text ''appendices E, AA'' and adding, in its place, the text ''appendices AA'';

■ b. Redesignating paragraph (g)(20) as paragraph (g)(22);

■ c. Redesignating paragraph (g)(8) through (19) as paragraphs (g)(9) through (20);

■ d. Adding new paragraph (g)(8);

■ e. In newly redesignated paragraph (g)(13), removing the text ''F and EE'' and adding, in its place, the text ''E, F, and EE'';

■ f. Adding new paragraph (g)(21);

■ g. Revising paragraph (j).

The revisions and additions read as follows:

§ 430.3 Materials incorporated by reference.

* * * * *

■ 7. Appendix E to subpart B of part 430 is revised to read as follows:

Appendix E to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Water Heaters

Note: Prior to December 18, 2023, representations with respect to the energy use or efficiency of consumer water heaters covered by this test method, including compliance certifications, must be based on testing conducted in accordance with either this appendix as it now appears or appendix E as it appeared at 10 CFR part 430, subpart B revised as of January 1, 2021.

On and after December 18, 2023, representations with respect to energy use or efficiency of consumer water heaters covered by this test method, including compliance certifications, must be based on testing conducted in accordance with this appendix, except as outlined in the following paragraphs.

Prior to June 17, 2024, representations with respect to the energy use or efficiency of residential-duty commercial water heaters covered by this test method, including compliance certifications, must be based on testing conducted in accordance with either this appendix as it now appears or appendix E as it appeared at 10 CFR part 430, subpart B revised as of January 1, 2021.

On and after June 17, 2024, representations with respect to energy use or efficiency of residential-duty commercial water heaters covered by this test method, including compliance certifications, must be based on testing conducted in accordance with this appendix.

Water heaters subject to section 4.10 of this appendix may optionally apply the requirements in section 4.10 of this appendix prior to the compliance date of a final rule reviewing potential amended energy conservation standards for these products and equipment published after June 21, 2023. After the compliance date of such standards final rule, the requirements of section 4.10 are mandatory.

In addition, certain electric resistance storage water heaters may optionally apply the requirements in section 5.1.2 of this appendix in lieu of the requirements in section 5.1.1 of this appendix for additional

voluntary representations only. Water heaters must certify according to the requirements in section 5.1.1 until the publication of a final rule reviewing potential amended energy conservation standards and specifying the required use of section 5.1.2 for these products published after June 21, 2023.

0. Incorporation by Reference.

DOE incorporated by reference in § 430.3 the entire standard for: ASHRAE 41.1–2020; ASHRAE 41.6–2014; ASHRAE 118.2–2022; ASTM D2156–09 (R2018); and ASTM E97–1987. However, only enumerated provisions of ASHRAE 118.2–2022 are applicable to this appendix, as follows:

0.1 ASHRAE 118.2–2022

(a) Annex B—Gas Heating Value Correction Factor;

(b) [Reserved]

0.2 [Reserved]

1. *Definitions.*

1.1. *Cut-in* means the time when or water temperature at which a water heater control or thermostat acts to increase the energy or fuel input to the heating elements, compressor, or burner.

1.2. *Cut-out* means the time when or water temperature at which a water heater control or thermostat acts to reduce to a minimum the energy or fuel input to the heating elements, compressor, or burner.

1.3. *Design Power Rating* means the power rating or input rate that a water heater manufacturer assigns to a particular design of water heater and that is included on the nameplate of the water heater, expressed in kilowatts or Btu (kJ) per hour as appropriate. For modulating water heaters, the design power rating is the maximum power rating or input rate that is specified by the manufacturer on the nameplate of the water heater.

1.4. *Draw Cluster* means a collection of water draws initiated during the 24-hour simulated-use test during which no successive draws are separated by more than 2 hours.

1.5. *First-Hour Rating* means an estimate of the maximum volume of ''hot'' water that a non-flow activated water heater can supply within an hour that begins with the water heater fully heated (*i.e.,* with all thermostats satisfied).

1.6. *Flow-Activated* describes an operational scheme in which a water heater initiates and terminates heating based on sensing flow.

1.7. *Heat Trap* means a device that can be integrally connected or independently attached to the hot and/or cold water pipe connections of a water heater such that the device will develop a thermal or mechanical seal to minimize the recirculation of water due to thermal convection between the water heater tank and its connecting pipes.

1.8. *Maximum GPM (L/min) Rating* means the maximum gallons per minute (liters per minute) of hot water that can be supplied by a flow-activated water heater when tested in accordance with section 5.3.2 of this appendix.

1.9. *Modulating Water Heater* means a water heater that can automatically vary its power or input rate from the minimum to the maximum power or input rate specified on the nameplate of the water heater by the manufacturer.

1.10. *Rated Storage Volume* means the water storage capacity of a water heater, in gallons (liters), as certified by the manufacturer pursuant to 10 CFR part 429.

1.11. *Recovery Efficiency* means the ratio of energy delivered to the water to the energy content of the fuel consumed by the water heater.

1.12. *Recovery Period* means the time when the main burner of a water heater with a rated storage volume greater than or equal to 2 gallons is raising the temperature of the stored water.

1.13. *Split-system heat pump water heater* means a heat pump-type water heater in which at least the compressor, which may be installed outdoors, is separate from the storage tank.

1.14. *Standby* means the time, in hours, during which water is not being withdrawn from the water heater.

1.15. *Symbol Usage.* The following identity relationships are provided to help clarify the symbology used throughout this procedure:

C_p—specific heat of water

E_{annual}—annual energy consumption of a water heater

$E_{annual,e}$—annual electrical energy consumption of a water heater

$E_{annual,f}$—annual fossil-fuel energy consumption of a water heater

E_X—energy efficiency of a heat pump-type water heater when the 24-hour simulated use test is optionally conducted at any of the additional air temperature conditions as specified in section 2.8 of this appendix, where the subscript ''X'' corresponds to the dry-bulb temperature at which the test is conducted.

F_{hr}—first-hour rating of a non-flow activated water heater

F_{max}—maximum GPM (L/min) rating of a flow-activated water heater

i—a subscript to indicate the draw number during a test

k_V—storage tank volume scaling ratio for water heaters with a rated storage volume greater than or equal to 2 gallons

$M_{del,i}$—mass of water removed during the ith draw of the 24-hour simulated-use test

$M_{in,i}$—mass of water entering the water heater during the ith draw of the 24-hour simulated-use test

$M^*_{del,i}$—for non-flow activated water heaters, mass of water removed during the ith draw during the first-hour rating test

$M^*_{in,i}$—for non-flow activated water heaters, mass of water entering the water heater during the ith draw during the first-hour rating test

$M_{del,10m}$—for flow-activated water heaters, mass of water removed continuously during the maximum GPM (L/min) rating test

$M_{in,10m}$—for flow-activated water heaters, mass of water entering the water heater continuously during the maximum GPM (L/min) rating test

n—for non-flow activated water heaters, total number of draws during the first-hour rating test

N—total number of draws during the 24-hour simulated-use test

N_r—number of draws from the start of the 24-hour simulated-use test to the end to the first recovery period as described in section 5.4.2 of this appendix

Q—total fossil fuel and/or electric energy consumed during the entire 24-hour simulated-use test

Q_d—daily water heating energy consumption adjusted for net change in internal energy

Q_{da}—Q_d with adjustment for variation of tank to ambient air temperature difference from nominal value

Q_{dm}—overall adjusted daily water heating energy consumption including Q_{da} and Q_{HWD}

Q_e—total electrical energy used during the 24-hour simulated-use test

Q_f—total fossil fuel energy used by the water heater during the 24-hour simulated-use test

Q_{hr}—hourly standby losses of a water heater with a rated storage volume greater than or equal to 2 gallons

Q_{HW}—daily energy consumption to heat water at the measured average temperature rise across the water heater

$Q_{HW,67\,°F}$—daily energy consumption to heat quantity of water removed during test over a temperature rise of 67 °F (37.3 °C)

Q_{HWD}—adjustment to daily energy consumption, Q_{HW}, due to variation of the temperature rise across the water heater not equal to the nominal value of 67 °F (37.3 °C)

Q_r—energy consumption of water heater from the beginning of the test to the end of the first recovery period

Q_{stby}—total energy consumed during the standby time interval $\tau_{stby,1}$, as determined in section 5.4.2 of this appendix

$Q_{su,0}$—cumulative energy consumption, including all fossil fuel and electrical energy use, of the water heater from the start of the 24-hour simulated-use test to the start of the standby period as determined in section 5.4.2 of this appendix

$Q_{su,f}$—cumulative energy consumption, including all fossil fuel and electrical energy use, of the water heater from the start of the 24-hour simulated-use test to the end of the standby period as determined in section 5.4.2 of this appendix

$\overline{T}_0$—mean tank temperature at the beginning of the 24-hour simulated-use test as determined in section 5.4.2 of this appendix

$\overline{T}_{24}$—mean tank temperature at the end of the 24-hour simulated-use test as determined in section 5.4.2 of this appendix

$\overline{T}_{a,stby}$—average ambient air temperature during all standby periods of the 24-hour simulated-use test as determined in section 5.4.2 of this appendix

$\overline{T}_{a,stby,1}$—overall average ambient temperature between the start and end of the standby period as determined in section 5.4.2 of this appendix

$\overline{T}_{t,stby,1}$— overall average mean tank temperature between the start and end of the standby period as determined in section 5.4.2 of this appendix

$\overline{T}_{del}$—for flow-activated water heaters, average outlet water temperature during the maximum GPM (L/min) rating test

$\overline{T}_{del,i}$—average outlet water temperature during the ith draw of the 24-hour simulated-use test

$\overline{T}_{in}$—for flow-activated water heaters, average inlet water temperature during the maximum GPM (L/min) rating test

$\overline{T}_{st}$—for water heaters which cannot have internal tank temperature directly measured, estimated average internal storage tank temperature

T_p—for water heaters which cannot have internal tank temperature directly measured, average of the inlet and the outlet water temperatures at the end of the period defined by τ_p

$\overline{T}_{in,p}$—for water heaters which cannot have internal tank temperature directly measured, average of the inlet water temperatures

$\overline{T}_{out,p}$—for water heaters which cannot have internal tank temperature directly measured, average of the outlet water temperatures

$\overline{T}_{in,i}$—average inlet water temperature during the *i*th draw of the 24-hour simulated-use test

$\overline{T}_{max,1}$—maximum measured mean tank temperature after the first recovery period of the 24-hour simulated-use test as determined in section 5.4.2 of this appendix

$\overline{T}_{su,0}$—maximum measured mean tank temperature at the beginning of the standby period as determined in section 5.4.2 of this appendix

$\overline{T}_{su,f}$—measured mean tank temperature at the end of the standby period as determined in section 5.4.2 of this appendix

$\overline{T}^*_{del,i}$—for non-flow activated water heaters, average outlet water temperature during the *i*th draw (i = 1 to n) of the first-hour rating test

$\overline{T}^*_{max,i}$—for non-flow activated water heaters, maximum outlet water temperature observed during the *i*th draw (i = 1 to n) of the first-hour rating test

$\overline{T}^*_{min,i}$—for non-flow activated water heaters, minimum outlet water temperature to terminate the *i*th draw (i = 1 to n) of the first-hour rating test

UA—standby loss coefficient of a water heater with a rated storage volume greater than or equal to 2 gallons

UEF—uniform energy factor of a water heater

V—the volume of hot water drawn during the applicable draw pattern

$V_{del,i}$—volume of water removed during the *i*th draw (i = 1 to N) of the 24-hour simulated-use test

$V_{in,i}$—volume of water entering the water heater during the *i*th draw (i = 1 to N) of the 24-hour simulated-use test

$V^*_{del,i}$—for non-flow activated water heaters, volume of water removed during the *i*th draw (i = 1 to n) of the first-hour rating test

$V^*_{in,i}$—for non-flow activated water heaters, volume of water entering the water heater during the *i*th draw (i = 1 to n) of the first-hour rating test

$V_{del,10m}$—for flow-activated water heaters, volume of water removed during the maximum GPM (L/min) rating test

$V_{in,10m}$—for flow-activated water heaters, volume of water entering the water heater during the maximum GPM (L/min) rating test

V_{st}—measured storage volume of the storage tank for water heaters with a rated storage volume greater than or equal to 2 gallons

V_{eff}—effective storage volume

$v_{out,p}$—for water heaters which cannot have internal tank temperature directly measured, average flow rate

W_f—weight of storage tank when completely filled with water for water heaters with a rated storage volume greater than or equal to 2 gallons

W_t—tare weight of storage tank when completely empty of water for water heaters with a rated storage volume greater than or equal to 2 gallons

η_r—recovery efficiency

ρ—density of water

τ_p—for water heaters which cannot have internal tank temperature directly measured, duration of the temperature measurement period, determined by the length of time taken for the outlet water temperature to be within 2 °F of the inlet water temperature for 15 consecutive seconds (including the 15-second stabilization period)

$\tau_{stby,1}$—elapsed time between the start and end of the standby period as determined in section 5.4.2 of this appendix

$\tau_{stby,2}$—overall time of standby periods when no water is withdrawn during the 24-hour simulated-use test as determined in section 5.4.2 of this appendix

1.16. *Temperature Controller* means a device that is available to the user to adjust the temperature of the water inside a water heater that stores heated water or the outlet water temperature.

1.17. *Thermal break* means a thermally non-conductive material that can withstand a pressure of 150 psi (1.034 MPa) at a temperature greater than the maximum temperature the water heater is designed to produce and is utilized to insulate a bypass loop, if one is used in the test set-up, from the inlet piping.

1.18. *Uniform Energy Factor* means the measure of water heater overall efficiency.

1.19. *Water Heater Requiring a Storage Tank* means a water heater without a storage tank specified or supplied by the manufacturer that cannot meet the requirements of sections 2 and 5 of this appendix without the use of a storage water heater or unfired hot water storage tank.

2. *Test Conditions.*

2.1 *Installation Requirements.* Tests shall be performed with the water heater and instrumentation installed in accordance with section 4 of this appendix.

2.2 *Ambient Air Temperature and Relative Humidity.*

2.2.1 *Non-Heat Pump Water Heaters.* The ambient air temperature shall be maintained between 65.0 °F and 70.0 °F (18.3 °C and 21.1 °C) on a continuous basis.

2.2.2 *Heat Pump Water Heaters.* The dry-bulb temperature shall be maintained at an average of 67.5 °F ± 1 °F (19.7 °C ± 0.6 °C) after a cut-in and before the next cut-out, an average of 67.5 °F ± 2.5 °F (19.7 °C ± 1.4 °C) after a cut-out and before the next cut-in, and at 67.5 °F ± 5 °F (19.7 °C ± 2.8 °C) on a continuous basis throughout the test. The relative humidity shall be maintained within a range of 50% ± 5% throughout the test, and at an average of 50% ± 2% after a cut-in and before the next cut-out.

When testing a split-system heat pump water heater or heat pump water heater requiring a separate storage tank, the heat pump portion of the system shall be tested at the conditions within this section and the separate water heater or unfired hot water storage tank shall be tested at either the conditions within this section or the conditions specified in section 2.2.1 of this appendix.

2.3 *Supply Water Temperature.* The temperature of the water being supplied to the water heater shall be maintained at 58 °F ± 2 °F (14.4 °C ± 1.1 °C) throughout the test.

2.4 *Outlet Water Temperature.* The temperature controllers of a non-flow activated water heater shall be set so that water is delivered at a temperature of 125 °F ± 5 °F (51.7 °C ± 2.8 °C).

2.5 *Set Point Temperature.* The temperature controller of a flow-activated water heater shall be set to deliver water at a temperature of 125 °F ± 5 °F (51.7 °C ± 2.8 °C). If the flow-activated water heater is not capable of delivering water at a temperature of 125 °F ± 5 °F (51.7 °C ± 2.8 °C) when supplied with water at the supply water temperature specified in section 2.3 of this appendix, then the flow-activated water heater shall be set to deliver water at its maximum water temperature.

2.6 *Supply Water Pressure.* During the test when water is not being withdrawn, the supply pressure shall be maintained between 40 psig (275 kPa) and the maximum allowable pressure specified by the water heater manufacturer.

2.7 *Electrical and/or Fossil Fuel Supply.*

2.7.1 *Electrical.* Maintain the electrical supply voltage to within ±2% of the center of the voltage range specified on the nameplate of the water heater by the water heater and/or heat pump manufacturer, from 5 seconds after a cut-in to 5 seconds before next cut-out.

2.7.2 *Natural Gas.* Maintain the supply pressure in accordance with the supply pressure specified on the nameplate of the water heater by the manufacturer. If the supply pressure is not specified, maintain a supply pressure of 7–10 inches of water column (1.7–2.5 kPa). If the water heater is equipped with a gas appliance pressure regulator and the gas appliance pressure regulator can be adjusted, the regulator outlet pressure shall be within the greater of ±10% of the manufacturer's specified manifold pressure, found on the nameplate of the water heater, or ±0.2 inches water column (0.05 kPa). Maintain the gas supply pressure and manifold pressure only when operating at the design power rating. For all tests, use natural gas having a heating value of approximately 1,025 Btu per standard cubic foot (38,190 kJ per standard cubic meter).

2.7.3 *Propane Gas.* Maintain the supply pressure in accordance with the supply pressure specified on the nameplate of the water heater by the manufacturer. If the supply pressure is not specified, maintain a supply pressure of 11–13 inches of water column (2.7–3.2 kPa). If the water heater is equipped with a gas appliance pressure regulator and the gas appliance pressure regulator can be adjusted, the regulator outlet pressure shall be within the greater of ±10% of the manufacturer's specified manifold pressure, found on the nameplate of the

water heater, or ±0.2 inches water column (0.05 kPa). Maintain the gas supply pressure and manifold pressure only when operating at the design power rating. For all tests, use propane gas with a heating value of approximately 2,500 Btu per standard cubic foot (93,147 kJ per standard cubic meter).

2.7.4 *Fuel Oil Supply.* Maintain an uninterrupted supply of fuel oil. The fuel pump pressure shall be within ±10% of the pump pressure specified on the nameplate of the water heater or the installation and operations (I&O) manual by the manufacturer. Use fuel oil having a heating value of approximately 138,700 Btu per gallon (38,660 kJ per liter).

2.8 *Optional Test Conditions (Heat Pump-Type Water Heaters).* The following test conditions may be used for optional representations of E_X for heat pump-type water heaters. When conducting a 24-hour simulated use test to determine E_X, the test conditions in section 2.1 and sections 2.4 through 2.7 apply. The ambient air temperature and humidity conditions in section 2.2 and the supply water temperature in section 2.3 are replaced with the air temperature, humidity, and supply water temperature conditions as shown in the following table. Testing may optionally be performed at any or all of the conditions in the table, and the sampling plan found at 10 CFR 429.17(a) may be applied for voluntary representations.

Heat pump type	Metric	Outdoor air conditions		Indoor air conditions		Supply water temperature (°F)
		Dry-bulb temperature (°F)	Relative humidity (%)	Dry-bulb temperature (°F)	Relative humidity (%)	
Split-System or Circulating	E_5	5.0	30	67.5	50	42.0
	E_{34}	34.0	72	.....	.....	47.0
	E_{95}	95.0	25	.....	.....	67.0
Integrated, Split-System, or Circulating	E_{50}	N/A	N/A	50.0	58	50.0
	E_{95}	N/A	N/A	95.0	40	67.0

3. *Instrumentation.*

3.1 *Pressure Measurements.* Pressure-measuring instruments shall have an error no greater than the following values:

Item measured	Instrument accuracy	Instrument precision
Gas pressure	±0.1 inch of water column (±0.025 kPa)	±0.05 inch of water column (±0.012 kPa).
Atmospheric pressure	±0.1 inch of mercury column (±0.34 kPa)	±0.05 inch of mercury column (±0.17 kPa).
Water pressure	±1.0 pounds per square inch (±6.9 kPa)	±0.50 pounds per square inch (±3.45 kPa).

3.2 *Temperature Measurement*

3.2.1 *Measurement.* Temperature measurements shall be made in accordance with the Standard Method for Temperature Measurement, ASHRAE 41.1–2020, including the conditions as specified in ASHRAE 41.6–2014 as referenced in ASHRAE 41.1–2020, and excluding the steady-state temperature criteria in section 5.5 of ASHRAE 41.1–2020.

3.2.2 *Accuracy and Precision.* The accuracy and precision of the instruments, including their associated readout devices, shall be within the following limits:

Item measured	Instrument accuracy	Instrument precision
Air dry-bulb temperature	±0.2 °F (±0.1 °C)	±0.1 °F (±0.06 °C).
Air wet-bulb temperature	±0.2 °F (±0.1 °C)	±0.1 °F (±0.06 °C).
Inlet and outlet water temperatures	±0.2 °F (±0.1 °C)	±0.1 °F (±0.06 °C).
Storage tank temperatures	±0.5 °F (±0.3 °C)	±0.25 °F (±0.14 °C).

3.2.3 *Scale Division.* In no case shall the smallest scale division of the instrument or instrument system exceed 2 times the specified precision.

3.2.4 *Temperature Difference.* Temperature difference between the entering and leaving water may be measured with any of the following:

(a) A thermopile
(b) Calibrated resistance thermometers
(c) Precision thermometers
(d) Calibrated thermistors
(e) Calibrated thermocouples
(f) Quartz thermometers

3.2.5 *Thermopile Construction.* If a thermopile is used, it shall be made from calibrated thermocouple wire taken from a single spool. Extension wires to the recording device shall also be made from that same spool.

3.2.6 *Time Constant.* The time constant of the instruments used to measure the inlet and outlet water temperatures shall be no greater than 2 seconds.

3.3 *Liquid Flow Rate Measurement.* The accuracy of the liquid flow rate measurement, using the calibration if furnished, shall be equal to or less than ±1% of the measured value in mass units per unit time.

3.4 *Electrical Energy.* The electrical energy used shall be measured with an instrument and associated readout device that is accurate within ±0.5% of the reading.

3.5 *Fossil Fuels.* The quantity of fuel used by the water heater shall be measured with an instrument and associated readout device that is accurate within ±1% of the reading.

3.6 *Mass Measurements.* For mass measurements greater than or equal to 10 pounds (4.5 kg), a scale that is accurate within ±0.5% of the reading shall be used to make the measurement. For mass measurements less than 10 pounds (4.5 kg), the scale shall provide a measurement that is accurate within ±0.1 pound (0.045 kg).

3.7 *Heating Value.* The higher heating value of the natural gas, propane, or fuel oil shall be measured with an instrument and associated readout device that is accurate within ±1% of the reading. The heating values of natural gas and propane must be corrected from those measured to the standard temperature of 60.0 °F (15.6 °C) and standard pressure of 30 inches of mercury column (101.6 kPa) using the method described in Annex B of ASHRAE 118.2–2022.

3.8 *Time.* The elapsed time measurements shall be measured with an instrument that is accurate within ±0.5 seconds per hour.

3.9 *Volume.* Volume measurements shall be measured with an accuracy of ±2% of the total volume.

3.10 *Relative Humidity.* If a relative humidity (RH) transducer is used to measure the relative humidity of the surrounding air while testing heat pump water heaters, the

relative humidity shall be measured with an accuracy of ±1.5% RH.

4. *Installation.*

4.1 *Water Heater Mounting.* A water heater designed to be freestanding shall be placed on a ¾ inch (2 cm) thick plywood platform supported by three 2x4 inch (5 cm x 10 cm) runners. If the water heater is not approved for installation on combustible flooring, suitable non-combustible material shall be placed between the water heater and the platform. Water heaters designed to be installed into a kitchen countertop space shall be placed against a simulated wall section. Wall-mounted water heaters shall be supported on a simulated wall in accordance with the manufacturer-published installation instructions. When a simulated wall is used, the construction shall be 2x4 inch (5 cm x 10 cm) studs, faced with ¾ inch (2 cm) plywood. For heat pump water heaters not delivered as a single package, the units shall be connected in accordance with the manufacturer-published installation instructions, and the overall system shall be placed on the above-described plywood platform. If installation instructions are not provided by the heat pump manufacturer, uninsulated 8 foot (2.4 m) long connecting hoses having an inside diameter of ⅝ inch (1.6 cm) shall be used to connect the storage tank and the heat pump water heater. With the exception of using the storage tank described in section 4.10 of this appendix, the same requirements shall apply for water heaters requiring a storage tank. The testing of the water heater shall occur in an area that is protected from drafts of more than 50 ft/min (0.25 m/s) from room ventilation registers, windows, or other external sources of air movement.

4.2 *Water Supply.* Connect the water heater to a water supply capable of delivering water at conditions as specified in sections 2.3 and 2.6 of this appendix.

4.3 *Water Inlet and Outlet Configuration.* For freestanding water heaters that are taller than 36 inches (91.4 cm), inlet and outlet piping connections shall be configured in a manner consistent with Figures 1 and 2 of section 7 of this appendix. Inlet and outlet piping connections for wall-mounted water heaters shall be consistent with Figure 3 of section 7 of this appendix. For freestanding water heaters that are 36 inches or less in height and not supplied as part of a counter-top enclosure (commonly referred to as an under-the-counter model), inlet and outlet piping shall be installed in a manner consistent with Figures 4, 5, or 6 of section 7 of this appendix. For water heaters that are supplied with a counter-top enclosure, inlet and outlet piping shall be made in a manner consistent with Figures 7a and 7b of section 7 of this appendix, respectively. The vertical piping noted in Figures 7a and 7b shall be located (whether inside the enclosure or along the outside in a recessed channel) in accordance with the manufacturer-published installation instructions.

All dimensions noted in Figures 1 through 7 of section 7 of this appendix must be achieved. All piping between the water heater and inlet and outlet temperature sensors, noted as T_{IN} and T_{OUT} in the figures, shall be Type ''L'' hard copper having the same diameter as the connections on the water heater. Unions may be used to facilitate installation and removal of the piping arrangements. Install a pressure gauge and diaphragm expansion tank in the supply water piping at a location upstream of the inlet temperature sensor. Install an appropriately rated pressure and temperature relief valve on all water heaters at the port specified by the manufacturer. Discharge piping for the relief valve must be non-metallic. If heat traps, piping insulation, or pressure relief valve insulation are supplied with the water heater, they must be installed for testing. Except when using a simulated wall, provide sufficient clearance such that none of the piping contacts other surfaces in the test room.

At the discretion of the test laboratory, the mass or water delivered may be measured on either the inlet or outlet of the water heater.

For water heaters designed to be used with a mixing valve and that do not have a self-contained mixing valve, a mixing valve shall be installed according to the water heater and/or mixing valve manufacturer's installation instructions. If permitted by the water heater and mixing valve manufacturer's instructions, the mixing valve and cold water junction may be installed where the elbows are located in the outlet and inlet line, respectively. If there are no installation instructions for the mixing valve in the water heater or mixing valve manufacturer's instructions, then the mixing valve shall be installed on the outlet line and the cold water shall be supplied from the inlet line from a junction installed downstream from the location where the inlet water temperature is measured. The outlet water temperature, water flow rate, and/or mass measuring instrumentation, if installed on the outlet side of the water heater, shall be installed downstream from the mixing valve.

4.4 *Fuel and/or Electrical Power and Energy Consumption.* Install one or more instruments that measure, as appropriate, the quantity and rate of electrical energy and/or fossil fuel consumption in accordance with section 3 of this appendix.

4.5 *Internal Storage Tank Temperature Measurements.* For water heaters with rated storage volumes greater than or equal to 20 gallons, install six temperature measurement sensors inside the water heater tank with a vertical distance of at least 4 inches (100 mm) between successive sensors. For water heaters with rated storage volumes between 2 and 20 gallons, install three temperature measurement sensors inside the water heater tank. Position a temperature sensor at the vertical midpoint of each of the six equal volume nodes within a tank larger than 20 gallons or the three equal volume nodes within a tank between 2 and 20 gallons. Nodes designate the equal volumes used to evenly partition the total volume of the tank. As much as is possible, the temperature sensor should be positioned away from any heating elements, anodic protective devices, tank walls, and flue pipe walls. If the tank cannot accommodate six temperature sensors and meet the installation requirements specified in this section, install the maximum number of sensors that comply with the installation requirements. Install the temperature sensors through:

(a) The anodic device opening;

(b) The relief valve opening; or

(c) The hot water outlet.

If installed through the relief valve opening or the hot water outlet, a tee fitting or outlet piping, as applicable, must be installed as close as possible to its original location. If the relief valve temperature sensor is relocated, and it no longer extends into the top of the tank, install a substitute relief valve that has a sensing element that can reach into the tank. If the hot water outlet includes a heat trap, install the heat trap on top of the tee fitting. Cover any added fittings with thermal insulation having an R value between 4 and 8 $h \cdot ft^2 \cdot °F/Btu$ (0.7 and 1.4 $m^2 \cdot °C/W$). If temperature measurement sensors cannot be installed within the water heater, follow the alternate procedures in section 5.4.2.2 of this appendix.

4.6 *Ambient Air Temperature Measurement.* Install an ambient air temperature sensor at the vertical midpoint of the water heater and approximately 2 feet (610 mm) from the surface of the water heater. Shield the sensor against radiation.

4.7 *Inlet and Outlet Water Temperature Measurements.* Install temperature sensors in the cold-water inlet pipe and hot-water outlet pipe as shown in Figures 1, 2, 3, 4, 5, 6, 7a, and 7b of section 7 of this appendix, as applicable.

4.8 *Flow Control.* Install a valve or valves to provide flow as specified in sections 5.3 and 5.4 of this appendix.

4.9 *Flue Requirements.*

4.9.1 *Gas-Fired Water Heaters.* Establish a natural draft in the following manner. For gas-fired water heaters with a vertically discharging draft hood outlet, connect to the draft hood outlet a 5-foot (1.5-meter) vertical vent pipe extension with a diameter equal to the largest flue collar size of the draft hood. For gas-fired water heaters with a horizontally discharging draft hood outlet, connect to the draft hood outlet a 90-degree elbow with a diameter equal to the largest flue collar size of the draft hood, connect a 5-foot (1.5-meter) length of vent pipe to that elbow, and orient the vent pipe to discharge vertically upward. Install direct-vent gas-fired water heaters with venting equipment specified by the manufacturer in the I&O manual using the minimum vertical and horizontal lengths of vent pipe recommended by the manufacturer.

4.9.2 *Oil-Fired Water Heaters.* Establish a draft at the flue collar at the value specified by the manufacturer in the I&O manual. Establish the draft by using a sufficient length of vent pipe connected to the water heater flue outlet, and directed vertically upward. For an oil-fired water heater with a horizontally discharging draft hood outlet, connect to the draft hood outlet a 90-degree elbow with a diameter equal to the largest flue collar size of the draft hood, connect to the elbow fitting a length of vent pipe sufficient to establish the draft, and orient the vent pipe to discharge vertically upward. Direct-vent oil-fired water heaters should be installed with venting equipment as specified by the manufacturer in the I&O manual, using the minimum vertical and horizontal

lengths of vent pipe recommended by the manufacturer.

4.10 *Storage Tank Requirement for Circulating Water Heaters.* On or after the compliance date of a final rule reviewing potential amended energy conservation standards for these products published after June 21, 2023,when testing a gas-fired, oil-fired, or electric resistance circulating water heater (*i.e.,* any circulating water heater that does not use a heat pump), the tank to be used for testing shall be an unfired hot water storage tank having volume between 80 and 120 gallons (364–546 liters) determined using the method specified in section 5.2.1 that meets but does not exceed the minimum energy conservation standards required according to 10 CFR 431.110. When testing a heat pump circulating water heater, the tank to be used for testing shall be an electric storage water heater that has a measured volume of 40 gallons (±5 gallons), has a First-Hour Rating greater than or equal to 51 gallons and less than 75 gallons resulting in classification under the medium draw pattern, and has a rated UEF equal to the minimum UEF standard specified at § 430.32(d), rounded to the nearest 0.01. The operational mode of the heat pump circulating water heater and storage water heater paired system shall be set in accordance with section 5.1.1 of this appendix. If the circulating water heater is supplied with a separate non-integrated circulating pump, install this pump as per the manufacturer's installation instructions and include its power consumption in energy use measurements.

4.11 *External Communication.* If the water heater can connect to an external network or controller, any external communication or connection shall be disabled for the duration of testing; however, the communication module shall remain in an ''on'' state.

5. *Test Procedures.*

5.1 *Operational Mode Selection.* For water heaters that allow for multiple user-selected operational modes, all procedures specified in this appendix shall be carried out with the water heater in the same operational mode (*i.e.,* only one mode).

5.1.1 *Testing at Normal Setpoint.* The operational mode shall be the default mode (or similarly named, suggested mode for normal operation) as defined by the manufacturer in the I&O manual for giving selection guidance to the consumer. For heat pump water heaters, if a default mode is not defined in the product literature, each test shall be conducted under an operational mode in which both the heat pump and any electric resistance back-up heating element(s) are activated by the unit's control scheme, and which can achieve the internal storage tank temperature specified in this test procedure; if multiple operational modes meet these criteria, the water heater shall be tested under the most energy-intensive mode. If no default mode is specified and the unit does not offer an operational mode that utilizes both the heat pump and the electric resistance back-up heating element(s), the first-hour rating test and the 24-hour simulated-use test shall be tested in heat-pump-only mode. For other types of water heaters where a default mode is not specified, test the unit in all modes and rate the unit using the results of the most energy-intensive mode.

5.1.2 *High Temperature Testing.* This paragraph applies to electric storage water heaters that are capable of heating their stored water above the target delivery temperature without initiation from a utility or third-party demand-response program, except for those that meet the definition of ''heat pump-type'' water heater at 10 CFR 430.2.

For those equipped with factory-installed or built-in mixing valves, set the unit to maintain the highest mean tank temperature possible while delivering water at 125 °F ± 5 °F. For those not so equipped, install an ASSE 1017-certified mixing valve in accordance with the provisions in section 4.3 and adjust the valve to deliver water at 125 °F ± 5 °F when the water heater is operating at its highest storage tank temperature setpoint. Maintain this setting throughout the entirety of the test.

5.2 *Water Heater Preparation.*

5.2.1 *Determination of Storage Tank Volume.* For water heaters with a rated storage volume greater than or equal to 2 gallons and for separate storage tanks used for testing circulating water heaters, determine the storage capacity, $V_{st,}$ of the water heater or separate storage tank under test, in gallons (liters), by subtracting the tare weight, W_t, (measured while the tank is empty) from the gross weight of the storage tank when completely filled with water at the supply water temperature specified in section 2.3 of this appendix, W_f, (with all air eliminated and line pressure applied as described in section 2.6 of this appendix) and dividing the resulting net weight by the density of water at the measured temperature.

5.2.2 *Setting the Outlet Discharge Temperature.*

5.2.2.1 *Flow-Activated Water Heaters, including certain instantaneous water heaters and certain storage-type water heaters.* Initiate normal operation of the water heater at the design power rating. Monitor the discharge water temperature and set to the value specified in section 2.5 of this appendix in accordance with the manufacturer's I&O manual. If the water heater is not capable of providing this discharge temperature when the flow rate is 1.7 gallons ± 0.25 gallons per minute (6.4 liters ± 0.95 liters per minute), then adjust the flow rate as necessary to achieve the specified discharge water temperature. Once the proper temperature control setting is achieved, the setting must remain fixed for the duration of the maximum GPM test and the 24-hour simulated-use test.

5.2.2.2 *All Other Water Heaters.*

5.2.2.2.1 *Water Heaters with a Single Temperature Controller.*

5.2.2.2.1.1 *Water Heaters with Rated Volumes Less than 20 Gallons.* Starting with a tank at the supply water temperature as specified in section 2.3 of this appendix, initiate normal operation of the water heater. After cut-out, initiate a draw from the water heater at a flow rate of 1.0 gallon ± 0.25 gallons per minute (3.8 liters ± 0.95 liters per minute) for 2 minutes. Starting 15 seconds after commencement of the draw, record the outlet temperature at 15-second intervals until the end of the 2-minute period. Determine whether the maximum outlet temperature is within the range specified in section 2.4 of this appendix. If not, turn off the water heater, adjust the temperature controller, and then drain and refill the tank with supply water at the temperature specified in section 2.3 of this appendix. Then, once again, initiate normal operation of the water heater, and repeat the 2-minute outlet temperature test following cut-out. Repeat this sequence until the maximum outlet temperature during the 2-minute test is within the range specified in section 2.4 of this appendix. Once the proper temperature control setting is achieved, the setting must remain fixed for the duration of the first-hour rating test and the 24-hour simulated-use test.

5.2.2.2.1.2 *Water Heaters with Rated Volumes Greater than or Equal to 20 Gallons.* Starting with a tank at the supply water temperature specified in section 2.3 of this appendix, initiate normal operation of the water heater. After cut-out, initiate a draw from the water heater at a flow rate of 1.7 gallons ± 0.25 gallons per minute (6.4 liters ± 0.95 liters per minute) for 5 minutes. Starting 15 seconds after commencement of the draw, record the outlet temperature at 15-second intervals until the end of the 5-minute period. Determine whether the maximum outlet temperature is within the range specified in section 2.4 of this appendix. If not, turn off the water heater, adjust the temperature controller, and then drain and refill the tank with supply water at the temperature specified in section 2.3 of this appendix. Then, once again, initiate normal operation of the water heater, and repeat the 5-minute outlet temperature test following cut-out. Repeat this sequence until the maximum outlet temperature during the 5-minute test is within the range specified in section 2.4 of this appendix. Once the proper temperature control setting is achieved, the setting must remain fixed for the duration of the first-hour rating test and the 24-hour simulated-use test.

5.2.2.2.2 *Water Heaters with Two or More Temperature Controllers.* Verify the temperature controller set-point while removing water in accordance with the procedure set forth for the first-hour rating test in section 5.3.3 of this appendix. The following criteria must be met to ensure that all temperature controllers are set to deliver water in the range specified in section 2.4 of this appendix:

(a) At least 50 percent of the water drawn during the first draw of the first-hour rating test procedure shall be delivered at a temperature within the range specified in section 2.4 of this appendix.

(b) No water is delivered above the range specified in section 2.4 of this appendix during first-hour rating test.

(c) The delivery temperature measured 15 seconds after commencement of each draw begun prior to an elapsed time of 60 minutes from the start of the test shall be within the range specified in section 2.4 of this appendix.

If these conditions are not met, turn off the water heater, adjust the temperature controllers, and then drain and refill the tank with supply water at the temperature specified in section 2.3 of this appendix. Repeat the procedure described at the start of section 5.2.2.2.2 of this appendix until the criteria for setting the temperature controllers is met.

If the conditions stated above are met, the data obtained during the process of verifying the temperature control set-points may be used in determining the first-hour rating provided that all other conditions and methods required in sections 2 and 5.2.4 of this appendix in preparing the water heater were followed.

5.2.3 *Power Input Determination.* For all water heaters except electric types, initiate normal operation (as described in section 5.1 of this appendix) and determine the power input, P, to the main burners (including pilot light power, if any) after 15 minutes of operation. Adjust all burners to achieve an hourly Btu (kJ) rating that is within ±2% of the maximum input rate value specified by the manufacturer. For an oil-fired water heater, adjust the burner to give a CO_2 reading recommended by the manufacturer and an hourly Btu (kJ) rating that is within ±2% of the maximum input rate specified by the manufacturer. Smoke in the flue may not exceed No. 1 smoke as measured by the procedure in ASTM D2156 (R2018), including the conditions as specified in ASTM E97–1987 as referenced in ASTM D2156 (R2018). If the input rating is not within ±2%, first increase or decrease the fuel pressure within the tolerances specified in section 2.7.2, 2.7.3 or 2.7.4 (as applicable) of this appendix until it is ±2% of the maximum input rate value specified by the manufacturer. If, after adjusting the fuel pressure, the fuel input rate cannot be achieved within ±2 percent of the maximum input rate value specified by the manufacturer, for gas-fired models increase or decrease the gas supply pressure within the range specified by the manufacturer. Finally, if the measured fuel input rate is still not within ±2 percent of the maximum input rate value specified by the manufacturer, modify the gas inlet orifice, if so equipped, as necessary to achieve a fuel input rate that is within ±2 percent of the maximum input rate value specified by the manufacturer.

5.2.4 *Soak-In Period for Water Heaters with Rated Storage Volumes Greater than or Equal to 2 Gallons.* For water heaters with a rated storage volume greater than or equal to 2 gallons (7.6 liters), the water heater must sit filled with water, connected to a power source, and without any draws taking place for at least 12 hours after initially being energized so as to achieve the nominal temperature set-point within the tank and with the unit connected to a power source.

5.3 *Delivery Capacity Tests.*

5.3.1 *General.* For flow-activated water heaters, conduct the maximum GPM test, as described in section 5.3.2, Maximum GPM Rating Test for Flow-Activated Water Heaters, of this appendix. For all other water heaters, conduct the first-hour rating test as described in section 5.3.3 of this appendix.

5.3.2 *Maximum GPM Rating Test for Flow-Activated Water Heaters.* Establish normal water heater operation at the design power rating with the discharge water temperature set in accordance with section 5.2.2.1 of this appendix.

For this 10-minute test, either collect the withdrawn water for later measurement of the total mass removed or use a water meter to directly measure the water mass of volume removed. Initiate water flow through the water heater and record the inlet and outlet water temperatures beginning 15 seconds after the start of the test and at subsequent 5-second intervals throughout the duration of the test. At the end of 10 minutes, turn off the water. Determine and record the mass of water collected, M_{10m}, in pounds (kilograms), or the volume of water, V_{10m}, in gallons (liters).

5.3.3 *First-Hour Rating Test.*

5.3.3.1 *General.* During hot water draws for water heaters with rated storage volumes greater than or equal to 20 gallons, remove water at a rate of 3.0 ± 0.25 gallons per minute (11.4 ± 0.95 liters per minute). During hot water draws for water heaters with rated storage volumes below 20 gallons, remove water at a rate of 1.5 ± 0.25 gallon per minute (5.7 ± 0.95 liters per minute). Collect the water in a container that is large enough to hold the volume removed during an individual draw and is suitable for weighing at the termination of each draw to determine the total volume of water withdrawn. As an alternative to collecting the water, a water meter may be used to directly measure the water mass or volume withdrawn during each draw.

5.3.3.2 *Draw Initiation Criteria.* Begin the first-hour rating test by starting a draw on the water heater. After completion of this first draw, initiate successive draws based on the following criteria. For gas-fired and oil-fired water heaters, initiate successive draws when the temperature controller acts to reduce the supply of fuel to the main burner. For electric water heaters having a single element or multiple elements that all operate simultaneously, initiate successive draws when the temperature controller acts to reduce the electrical input supplied to the element(s). For electric water heaters having two or more elements that do not operate simultaneously, initiate successive draws when the applicable temperature controller acts to reduce the electrical input to the energized element located vertically highest in the storage tank. For heat pump water heaters that do not use supplemental, resistive heating, initiate successive draws immediately after the electrical input to the compressor is reduced by the action of the water heater's temperature controller. For heat pump water heaters that use supplemental resistive heating, initiate successive draws immediately after the electrical input to the first of either the compressor or the vertically highest resistive element is reduced by the action of the applicable water heater temperature controller. This draw initiation criterion for heat pump water heaters that use supplemental resistive heating, however, shall only apply when the water located above the thermostat at cut-out is heated to within the range specified in section 2.4 of this appendix. If this criterion is not met, then the next draw should be initiated once the heat pump compressor cuts out.

5.3.3.3 *Test Sequence.* Establish normal water heater operation. If the water heater is not presently operating, initiate a draw. The draw may be terminated any time after cut-in occurs. After cut-out occurs (*i.e.,* all temperature controllers are satisfied), if the water heater can have its internal tank temperatures measured, record the internal storage tank temperature at each sensor described in section 4.5 of this appendix every one minute, and determine the mean tank temperature by averaging the values from these sensors.

Initiate a draw after a maximum mean tank temperature (the maximum of the mean temperatures of the individual sensors) has been observed following a cut-out. If the water heater cannot have its internal tank temperatures measured, wait 5 minutes after cut-out. Record the time when the draw is initiated and designate it as an elapsed time of zero ($\tau^* = 0$). (The superscript * is used to denote variables pertaining to the first-hour rating test). Record the outlet water temperature beginning 15 seconds after the draw is initiated and at 5-second intervals thereafter until the draw is terminated. Determine the maximum outlet temperature that occurs during this first draw and record it as $T^*_{max,1}$. For the duration of this first draw and all successive draws, in addition, monitor the inlet temperature to the water heater to ensure that the required supply water temperature test condition specified in section 2.3 of this appendix is met. Terminate the hot water draw when the outlet temperature decreases to $T^*_{max,1} - 15$ °F ($T^*_{max,1} - 8.3$ °C). (Note, if the outlet temperature does not decrease to $T^*_{max,1} - 15$ °F ($T^*_{max,1} - 8.3$ °C) during the draw, then hot water would be drawn continuously for the duration of the test. In this instance, the test would end when the temperature decreases to $T^*_{max,1} - 15$ °F ($T^*_{max,1} - 8.3$ °C) after the electrical power and/or fuel supplied to the water heater is shut off, as described in the following paragraphs.) Record this temperature as $T^*_{min,1}$. Following draw termination, determine the average outlet water temperature and the mass or volume removed during this first draw and record them as $\overline{T}^*_{del,i}$ and M^*_1 or V^*_1, respectively.

Initiate a second and, if applicable, successive draw(s) each time the applicable draw initiation criteria described in section 5.3.3.2 of this appendix are satisfied. As required for the first draw, record the outlet water temperature 15 seconds after initiating each draw and at 5-second intervals thereafter until the draw is terminated. Determine the maximum outlet temperature that occurs during each draw and record it as $T^*_{max,i}$, where the subscript i refers to the draw number. Terminate each hot water draw when the outlet temperature decreases to $T^*_{max,i} - 15$ °F ($T^*_{max,i} - 8.3$ °C). Record this temperature as $T^*_{min,i}$. Calculate and record the average outlet temperature and the mass or volume removed during each draw ($\overline{T}^*_{del,i}$ and M^*_i or V^*_i, respectively). Continue this sequence of draw and recovery until one hour after the start of the test, then shut off the electrical power and/or fuel supplied to the water heater.

If a draw is occurring at one hour from the start of the test, continue this draw until the outlet temperature decreases to $T^*_{max,n} - 15$ °F ($T^*_{max,n} - 8.3$ °C), at which time the draw shall be immediately terminated. (The subscript n shall be used to denote measurements associated with the final draw.) If a draw is not occurring one hour after the start of the test, initiate a final draw at one hour, regardless of whether the criteria described in section 5.3.3.2 of this appendix are satisfied. This draw shall proceed for a minimum of 30 seconds and shall terminate when the outlet temperature first indicates a value less than or equal to the cut-off temperature used for the previous draw ($T^*_{min,n-1}$). If an outlet temperature greater than $T^*_{min,n-1}$ is not measured within 30 seconds of initiation of the draw, zero additional credit shall be given towards first-hour rating (*i.e.,* $M^*_n = 0$ or $V^*_n = 0$) based on the final draw. After the final draw is terminated, calculate and record the average outlet temperature and the mass or volume removed during the final draw ($\overline{T}^*_{del,n}$ and M^*_n or V^*_n, respectively).

5.4 *24-Hour Simulated-Use Test.*

5.4.1 *Selection of Draw Pattern.* The water heater will be tested under a draw profile that depends upon the first-hour rating obtained following the test prescribed in section 5.3.3 of this appendix, or the maximum GPM rating obtained following the test prescribed in section 5.3.2 of this appendix, whichever is applicable. For water heaters that have been tested according to the first-hour rating procedure, one of four different patterns shall be applied based on the measured first-hour rating, as shown in Table I of this section. For water heater that have been tested according to the maximum GPM rating procedure, one of four different patterns shall be applied based on the maximum GPM, as shown in Table II of this section.

TABLE I—DRAW PATTERN TO BE USED BASED ON FIRST-HOUR RATING

First-hour rating greater than or equal to:	. . . and first-hour rating less than:	Draw pattern to be used in the 24-hour simulated-use test
0 gallons	18 gallons	Very-Small-Usage (Table III.1).
18 gallons	51 gallons	Low-Usage (Table III.2).
51 gallons	75 gallons	Medium-Usage (Table III.3).
75 gallons	No upper limit	High-Usage (Table III.4).

TABLE II—DRAW PATTERN TO BE USED BASED ON MAXIMUM GPM RATING

Maximum GPM rating greater than or equal to:	and maximum GPM rating less than:	Draw pattern to be used in the 24-hour simulated-use test
0 gallons/minute	1.7 gallons/minute	Very-Small-Usage (Table III.1).
1.7 gallons/minute	2.8 gallons/minute	Low-Usage (Table III.2).
2.8 gallons/minute	4 gallons/minute	Medium-Usage (Table III.3).
4 gallons/minute	No upper limit	High-Usage (Table III.4).

The draw patterns are provided in Tables III.1 through III.4 in section 5.5 of this appendix. Use the appropriate draw pattern when conducting the test sequence provided in section 5.4.2 of this appendix for water heaters with rated storage volumes greater than or equal to 2 gallons or section 5.4.3 of this appendix for water heaters with rated storage volumes less than 2 gallons.

5.4.2 *Test Sequence for Water Heater With Rated Storage Volume Greater Than or Equal to 2 Gallons.*

If the water heater is turned off, fill the water heater with supply water at the temperature specified in section 2.3 of this appendix and maintain supply water pressure as described in section 2.6 of this appendix. Turn on the water heater and associated heat pump unit, if present. If turned on in this fashion, the soak-in period described in section 5.2.4 of this appendix shall be implemented. If the water heater has undergone a first-hour rating test prior to conduct of the 24-hour simulated-use test, allow the water heater to fully recover after completion of that test such that the main burner, heating elements, or heat pump compressor of the water heater are no longer raising the temperature of the stored water. In all cases, the water heater shall sit idle for 1 hour prior to the start of the 24-hour test; during which time no water is drawn from the unit, and there is no energy input to the main heating elements, heat pump compressor, and/or burners.

For water heaters that can have their internal storage tank temperature measured directly, perform testing in accordance with the instructions in section 5.4.2.1 of this appendix. For water heaters that cannot have their internal tank temperatures measured, perform testing in accordance with the instructions in section 5.4.2.2. of this appendix.

5.4.2.1 *Water Heaters Which Can Have Internal Storage Tank Temperature Measured Directly.*

After the 1-hour period specified in section 5.4.2 of this appendix, the 24-hour simulated-use test will begin. One minute prior to the start of the 24-hour simulated-use test, record the mean tank temperature (T_0).

At the start of the 24-hour simulated-use test, record the electrical and/or fuel measurement readings, as appropriate. Begin the 24-hour simulated-use test by withdrawing the volume specified in the appropriate table in section 5.5 of this appendix (*i.e.,* Table III.1, Table III.2, Table III.3, or Table III.4, depending on the first-hour rating or maximum GPM rating) for the first draw at the flow rate specified in the applicable table. Record the time when this first draw is initiated and assign it as the test elapsed time (τ) of zero (0). Record the average storage tank and ambient temperature every minute throughout the 24-hour simulated-use test. At the elapsed times specified in the applicable draw pattern table in section 5.5 of this appendix for a particular draw pattern, initiate additional draws pursuant to the draw pattern, removing the volume of hot water at the prescribed flow rate specified by the table. The maximum allowable deviation from the specified volume of water removed for any single draw taken at a nominal flow rate of 1.0 GPM or 1.7 GPM is ±0.1 gallons (±0.4 liters). The maximum allowable deviation from the specified volume of water removed for any single draw taken at a nominal flow rate of 3.0 GPM is ±0.25 gallons (0.9 liters). The quantity of water withdrawn during the last draw shall be increased or decreased as necessary such that the total volume of water withdrawn equals the prescribed daily amount for that draw pattern ±1.0 gallon (±3.8 liters). If this adjustment to the volume drawn during the last draw results in no draw taking place, the test is considered invalid.

All draws during the 24-hour simulated-use test shall be made at the flow rates specified in the applicable draw pattern table in section 5.5 of this appendix, within a tolerance of ±0.25 gallons per minute (±0.9 liters per minute). Measurements of the inlet and outlet temperatures shall be made 15 seconds after the draw is initiated and at every subsequent 3-second interval throughout the duration of each draw. Calculate and record the mean of the hot water discharge temperature and the cold water inlet temperature for each draw $T_{del,i}$ and $T_{in,i}$). Determine and record the net mass or volume removed (M_i or V_i), as appropriate, after each draw.

The first recovery period is the time from the start of the 24-hour simulated-use test and continues during the temperature rise of the stored water until the first cut-out; if the cut-out occurs during a subsequent draw, the first recovery period includes the time until the draw of water from the tank stops. If, after the first cut-out occurs but during a subsequent draw, a subsequent cut-in occurs prior to the draw completion, the first

recovery period includes the time until the subsequent cut-out occurs, prior to another draw. The first recovery period may continue until a cut-out occurs when water is not being removed from the water heater or a cut-out occurs during a draw and the water heater does not cut-in prior to the end of the draw.

At the end of the first recovery period, record the maximum mean tank temperature observed after cut-out ($T_{max,1}$). At the end of the first recovery period, record the total energy consumed by the water heater from the beginning of the test (Q_r), including all fossil fuel and/or electrical energy use, from the main heat source and auxiliary equipment including, but not limited to, burner(s), resistive elements(s), compressor, fan, controls, pump, *etc.,* as applicable.

The start of the portion of the test during which the standby loss coefficient is determined depends upon whether the unit has fully recovered from the first draw cluster. If a recovery is occurring at or within five minutes after the end of the final draw in the first draw cluster, as identified in the applicable draw pattern table in section 5.5 of this appendix, then the standby period starts when a maximum mean tank temperature is observed starting five minutes after the end of the recovery period that follows that draw. If a recovery does not occur at or within five minutes after the end of the final draw in the first draw cluster, as identified in the applicable draw pattern table in section 5.5 of this appendix, then the standby period starts five minutes after the end of that draw. Determine and record the total electrical energy and/or fossil fuel consumed from the beginning of the test to the start of the standby period ($Q_{su,0}$).

In preparation for determining the energy consumed during standby, record the reading given on the electrical energy (watt-hour) meter, the gas meter, and/or the scale used to determine oil consumption, as appropriate. Record the mean tank temperature at the start of the standby period ($T_{su,0}$). At 1-minute intervals, record ambient temperature, the electric and/or fuel instrument readings, and the mean tank temperature until the next draw is initiated. The end of the standby period is when the final mean tank temperature is recorded, as described. Just prior to initiation of the next draw, record the mean tank temperature ($T_{su,f}$). If the water heater is undergoing recovery when the next draw is initiated, record the mean tank temperature ($T_{su,f}$) at the minute prior to the start of the recovery. Determine the total electrical energy and/or fossil fuel energy consumption from the beginning of the test to the end of the standby period ($Q_{su,f}$). Record the time interval between the start of the standby period and the end of the standby period ($\tau_{stby,1}$).

Following the final draw of the prescribed draw pattern and subsequent recovery, allow the water heater to remain in the standby mode until exactly 24 hours have elapsed since the start of the 24-hour simulated-use test (*i.e.,* since $\tau = 0$). During the last hour of the 24-hour simulated-use test (*i.e.,* hour 23 of the 24-hour simulated-use test), power to the main burner, heating element, or compressor shall be disabled. At 24 hours, record the reading given by the gas meter, oil meter, and/or the electrical energy meter as appropriate. Determine the fossil fuel and/or electrical energy consumed during the entire 24-hour simulated-use test and designate the quantity as Q.

In the event that the recovery period continues from the end of the last draw of the first draw cluster until the subsequent draw, the standby period will start after the end of the first recovery period after the last draw of the 24-hour simulated-use test, when the temperature reaches the maximum mean tank temperature, though no sooner than five minutes after the end of this recovery period. The standby period shall last eight hours, so testing may extend beyond the 24-hour duration of the 24-hour simulated-use test. Determine and record the total electrical energy and/or fossil fuel consumed from the beginning of the 24-hour simulated-use test to the start of the 8-hour standby period ($Q_{su,0}$). In preparation for determining the energy consumed during standby, record the reading(s) given on the electrical energy (watt-hour) meter, the gas meter, and/or the scale used to determine oil consumption, as appropriate. Record the mean tank temperature at the start of the standby period ($T_{su,0}$). Record the mean tank temperature, the ambient temperature, and the electric and/or fuel instrument readings at 1-minute intervals until the end of the 8-hour period. Record the mean tank temperature at the end of the 8-hour standby period ($T_{su,f}$). If the water heater is undergoing recovery at the end of the standby period, record the mean tank temperature ($T_{su,f}$) at the minute prior to the start of the recovery, which will mark the end of the standby period. Determine the total electrical energy and/or fossil fuel energy consumption from the beginning of the test to the end of the standby period ($Q_{su,f}$). Record the time interval between the start of the standby period and the end of the standby period as $\tau_{stby,1}$. Record the average ambient temperature from the start of the standby period to the end of the standby period ($T_{a,stby,1}$). Record the average mean tank temperature from the start of the standby period to the end of the standby period ($T_{t,stby,1}$).

If the standby period occurred at the end of the first recovery period after the last draw of the 24-hour simulated-use test, allow the water heater to remain in the standby mode until exactly 24 hours have elapsed since the start of the 24-hour simulated-use test (*i.e.,* since $\tau = 0$) or the end of the standby period, whichever is longer. At 24 hours, record the mean tank temperature (T_{24}) and the reading given by the gas meter, oil meter, and/or the electrical energy meter as appropriate. If the water heater is undergoing a recovery at 24 hours, record the reading given by the gas meter, oil meter, and/or electrical energy meter, as appropriate, and the mean tank temperature (T_{24}) at the minute prior to the start of the recovery. Determine the fossil fuel and/or electrical energy consumed during the 24 hours and designate the quantity as Q.

Record the time during which water is not being withdrawn from the water heater during the entire 24-hour period ($\tau_{stby,2}$). When the standby period occurs after the last draw of the 24-hour simulated-use test, the test may extend past hour 24. When this occurs, the measurements taken after hour 24 apply only to the calculations of the standby loss coefficient. All other measurements during the time between hour 23 and hour 24 remain the same.

5.4.2.2 *Water Heaters Which Cannot Have Internal Storage Tank Temperature Measured Directly.*

After the water heater has undergone a 1-hour idle period (as described in section 5.4.2 of this appendix), deactivate the burner, compressor, or heating element(s).

Remove water from the storage tank by performing a continuous draw at the flow rate specified for the first draw of applicable draw pattern for the 24-hour simulated use test in section 5.5 of this appendix within a tolerance of ±0.25 gallons per minute (±0.9 liters per minute). While removing the hot water, measure the inlet and outlet temperature after initiating the draw at 3-second intervals. Remove water until the outlet water temperature is within ±2 °F (±1.1 °C) of the inlet water temperature for 15 consecutive seconds. Determine the mean tank temperature using section 6.3.77 of this appendix and assign this value of $\overline{T}_{st}$ for $\overline{T}_0$, $\overline{T}_{max,1}$, and $\overline{T}_{su,0}$.

After completing the draw, reactivate the burner, compressor, or heating elements(s) and allow the unit to fully recover such that the main burner, heating elements, or heat pump compressor is no longer raising the temperature of the stored water. Let the water heater sit idle again for 1 hour prior to beginning the 24-hour test, during which time no water shall be drawn from the unit, and there shall be no energy input to the main heating elements. After the 1-hour period, the 24-hour simulated-use test will begin.

At the start of the 24-hour simulated-use test, record the electrical and/or fuel measurement readings, as appropriate. Begin the 24-hour simulated-use test by withdrawing the volume specified in the appropriate table in section 5.5 of this appendix (*i.e.,* Table III.1, Table III.2, Table III.3, or Table III.4, depending on the first-hour rating or maximum GPM rating) for the first draw at the flow rate specified in the applicable table. Record the time when this first draw is initiated and assign it as the test elapsed time (τ) of zero (0). Record the average ambient temperature every minute throughout the 24-hour simulated-use test. At the elapsed times specified in the applicable draw pattern table in section 5.5 of this appendix for a particular draw pattern, initiate additional draws pursuant to the draw pattern, removing the volume of hot water at the prescribed flow rate specified by the table. The maximum allowable deviation from the specified volume of water removed for any single draw taken at a nominal flow rate of 1.0 GPM or 1.7 GPM is ± 0.1 gallons (± 0.4 liters). The maximum allowable deviation from the specified volume of water removed for any single draw taken at a nominal flow rate of 3.0 GPM is ± 0.25 gallons (0.9 liters). The quantity of water withdrawn during the last draw shall be increased or decreased as necessary such that the total volume of water withdrawn equals the prescribed daily amount for that draw

pattern ± 1.0 gallon (± 3.8 liters). If this adjustment to the volume drawn during the last draw results in no draw taking place, the test is considered invalid.

All draws during the 24-hour simulated-use test shall be made at the flow rates specified in the applicable draw pattern table in section 5.5 of this appendix, within a tolerance of ±0.25 gallons per minute (±0.9 liters per minute). Measurements of the inlet and outlet temperatures shall be made 15 seconds after the draw is initiated and at every subsequent 3-second interval throughout the duration of each draw. Calculate and record the mean of the hot water discharge temperature and the cold water inlet temperature for each draw $T_{del,i}$ and $T_{in,i}$). Determine and record the net mass or volume removed (M_i or V_i), as appropriate, after each draw.

The first recovery period is the time from the start of the 24-hour simulated-use test and continues until the first cut-out; if the cut-out occurs during a subsequent draw, the first recovery period includes the time until the draw of water from the tank stops. If, after the first cut-out occurs but during a subsequent draw, a subsequent cut-in occurs prior to the draw completion, the first recovery period includes the time until the subsequent cut-out occurs, prior to another draw. The first recovery period may continue until a cut-out occurs when water is not being removed from the water heater or a cut-out occurs during a draw and the water heater does not cut-in prior to the end of the draw.

At the end of the first recovery period, record the total energy consumed by the water heater from the beginning of the test (Q_r), including all fossil fuel and/or electrical energy use, from the main heat source and auxiliary equipment including, but not limited to, burner(s), resistive elements(s), compressor, fan, controls, pump, etc., as applicable.

The standby period begins at five minutes after the first time a recovery ends following last draw of the simulated-use test and shall continue for 8 hours. At the end of the 8-hour standby period, record the total amount of time elapsed since the start of the 24-hour simulated-use test (*i.e.,* since $\tau = 0$).

Determine and record the total electrical energy and/or fossil fuel consumed from the beginning of the 24-hour simulated-use test to the start of the 8-hour standby period ($Q_{su,0}$). In preparation for determining the energy consumed during standby, record the reading(s) given on the electrical energy (watt-hour) meter, the gas meter, and/or the scale used to determine oil consumption, as appropriate. Record the ambient temperature and the electric and/or fuel instrument readings at 1-minute intervals until the end of the 8-hour period. At the 8-hour mark, deactivate the water heater before drawing water from the tank. Remove water from the storage tank by performing a continuous draw atthe flow rate specified for the first draw of applicable draw pattern for the 24-hour simulated use test in section 5.5 of this appendix within a tolerance of ±0.25 gallons per minute (±0.9 liters per minute). While removing the hot water, measure the inlet and outlet temperature after initiating the draw at 3-second intervals. Remove water until the outlet water temperature is within ±2 °F (±1.1 °C) of the inlet water temperature for 15 consecutive seconds. Determine the mean tank temperature using section 6.3.77 of this appendix and assign this value of $\overline{T}_{st}$ for $\overline{T}_{su,f}$ and $\overline{T}_{24}$.

Determine the total electrical energy and/or fossil fuel energy consumption from the beginning of the test to the end of the standby period ($Q_{su,f}$). Record the time interval between the start of the standby period and the end of the standby period as $\tau_{stby,1}$. Record the average ambient temperature from the start of the standby period to the end of the standby period ($T_{a,stby,1}$). The average mean tank temperature from the start of the standby period to the end of the standby period ($T_{t,stby,1}$) shall be the average of $T_{su,0}$ and $T_{su,f.}$

5.4.3 *Test Sequence for Water Heaters With Rated Storage Volume Less Than 2 Gallons.*

Establish normal operation with the discharge water temperature at 125 °F ± 5 °F (51.7 °C ± 2.8 °C) and set the flow rate as determined in section 5.2 of this appendix. Prior to commencement of the 24-hour simulated-use test, the unit shall remain in an idle state in which controls are active but no water is drawn through the unit for a period of one hour. With no draw occurring, record the reading given by the gas meter and/or the electrical energy meter as appropriate. Begin the 24-hour simulated-use test by withdrawing the volume specified in Tables III.1 through III.4 of section 5.5 of this appendix for the first draw at the flow rate specified. Record the time when this first draw is initiated and designate it as an elapsed time, τ, of 0. At the elapsed times specified in Tables III.1 through III.4 for a particular draw pattern, initiate additional draws, removing the volume of hot water at the prescribed flow rate specified in Tables III.1 through III.4. The maximum allowable deviation from the specified volume of water removed for any single draw taken at a nominal flow rate less than or equal to 1.7 GPM (6.4 L/min) is ±0.1 gallons (±0.4 liters). The maximum allowable deviation from the specified volume of water removed for any single draw taken at a nominal flow rate of 3.0 GPM (11.4 L/min) is ±0.25 gallons (0.9 liters). The quantity of water drawn during the final draw shall be increased or decreased as necessary such that the total volume of water withdrawn equals the prescribed daily amount for that draw pattern ±1.0 gallon (±3.8 liters). If this adjustment to the volume drawn in the last draw results in no draw taking place, the test is considered invalid.

All draws during the 24-hour simulated-use test shall be made at the flow rates specified in the applicable draw pattern table in section 5.5 of this appendix within a tolerance of ±0.25 gallons per minute (±0.9 liters per minute) unless the unit being tested is flow-activated and has a rated Max GPM of less than 1 gallon per minute, in which case the tolerance shall be ±25% of the rated Max GPM. Measurements of the inlet and outlet water temperatures shall be made 15 seconds after the draw is initiated and at every 3-second interval thereafter throughout the duration of the draw. Calculate the mean of the hot water discharge temperature and the cold-water inlet temperature for each draw. Record the mass of the withdrawn water or the water meter reading, as appropriate, after each draw. At the end of the first recovery period following the first draw, determine and record the fossil fuel and/or electrical energy consumed, Q_r. Following the final draw and subsequent recovery, allow the water heater to remain in the standby mode until exactly 24 hours have elapsed since the start of the test (*i.e.,* since $\tau = 0$). At 24 hours, record the reading given by the gas meter, oil meter, and/or the electrical energy meter, as appropriate. Determine the fossil fuel and/or electrical energy consumed during the entire 24-hour simulated-use test and designate the quantity as Q.

5.5 *Draw Patterns.*

The draw patterns to be imposed during 24-hour simulated-use tests are provided in Tables III.1 through III.4. Subject each water heater under test to one of these draw patterns based on its first-hour rating or maximum GPM rating, as discussed in section 5.4.1 of this appendix. Each draw pattern specifies the elapsed time in hours and minutes during the 24-hour test when a draw is to commence, the total volume of water in gallons (liters) that is to be removed during each draw, and the flow rate at which each draw is to be taken, in gallons (liters) per minute.

TABLE III.1—VERY-SMALL-USAGE DRAW PATTERN

Draw No.	Time during test ** [hh:mm]	Volume [gallons (L)]	Flow rate *** [GPM (L/min)]
1 *	0:00	2.0 (7.6)	1 (3.8)
2 *	1:00	1.0 (3.8)	1 (3.8)
3 *	1:05	0.5 (1.9)	1 (3.8)
4 *	1:10	0.5 (1.9)	1 (3.8)
5 *	1:15	0.5 (1.9)	1 (3.8)
6	8:00	1.0 (3.8)	1 (3.8)
7	8:15	2.0 (7.6)	1 (3.8)

TABLE III.1—VERY-SMALL-USAGE DRAW PATTERN—Continued

Draw No.	Time during test ** [hh:mm]	Volume [gallons (L)]	Flow rate *** [GPM (L/min)]
8	9:00	1.5 (5.7)	1 (3.8)
9	9:15	1.0 (3.8)	1 (3.8)
Total Volume Drawn Per Day: 10 gallons (38 L)			

* Denotes draws in first draw cluster.
** If a draw extends to the start of the subsequent draw, then the subsequent draw shall start when the required volume of the previous draw has been delivered.
*** Should the water heater have a maximum GPM rating less than 1 GPM (3.8 L/min), then all draws shall be implemented at a flow rate equal to the rated maximum GPM.

TABLE III.2—LOW-USAGE DRAW PATTERN

Draw No.	Time during test [hh:mm]	Volume [gallons (L)]	Flow rate [GPM (L/min)]
1 *	0:00	15.0 (56.8)	1.7 (6.4)
2 *	0:30	2.0 (7.6)	1 (3.8)
3 *	1:00	1.0 (3.8)	1 (3.8)
4	10:30	6.0 (22.7)	1.7 (6.4)
5	11:30	4.0 (15.1)	1.7 (6.4)
6	12:00	1.0 (3.8)	1 (3.8)
7	12:45	1.0 (3.8)	1 (3.8)
8	12:50	1.0 (3.8)	1 (3.8)
9	16:15	2.0 (7.6)	1 (3.8)
10	16:45	2.0 (7.6)	1.7 (6.4)
11	17:00	3.0 (11.4)	1.7 (6.4)
Total Volume Drawn Per Day: 38 gallons (144 L)			

*Denotes draws in first draw cluster.

TABLE III.3—MEDIUM-USAGE DRAW PATTERN

Draw No.	Time during test [hh:mm]	Volume [gallons (L)]	Flow Rate [GPM (L/min)]
1 *	0:00	15.0 (56.8)	1.7 (6.4)
2 *	0:30	2.0 (7.6)	1 (3.8)
3 *	1:40	9.0 (34.1)	1.7 (6.4)
4	10:30	9.0 (34.1)	1.7 (6.4)
5	11:30	5.0 (18.9)	1.7 (6.4)
6	12:00	1.0 (3.8)	1 (3.8)
7	12:45	1.0 (3.8)	1 (3.8)
8	12:50	1.0 (3.8)	1 (3.8)
9	16:00	1.0 (3.8)	1 (3.8)
10	16:15	2.0 (7.6)	1 (3.8)
11	16:45	2.0 (7.6)	1.7 (6.4)
12	17:00	7.0 (26.5)	1.7 (6.4)
Total Volume Drawn Per Day: 55 gallons (208 L)			

* Denotes draws in first draw cluster.

TABLE III.4—HIGH-USAGE DRAW PATTERN

Draw No.	Time during test [hh:mm]	Volume [gallons (L)]	Flow rate [GPM (L/min)]
1 *	0:00	27.0 (102)	3 (11.4)
2 *	0:30	2.0 (7.6)	1 (3.8)
3 *	0:40	1.0 (3.8)	1 (3.8)
4 *	1:40	9.0 (34.1)	1.7 (6.4)
5	10:30	15.0 (56.8)	3 (11.4)
6	11:30	5.0 (18.9)	1.7 (6.4)
7	12:00	1.0 (3.8)	1 (3.8)
8	12:45	1.0 (3.8)	1 (3.8)
9	12:50	1.0 (3.8)	1 (3.8)
10	16:00	2.0 (7.6)	1 (3.8)

TABLE III.4—HIGH-USAGE DRAW PATTERN—Continued

Draw No.	Time during test [hh:mm]	Volume [gallons (L)]	Flow rate [GPM (L/min)]
11	16:15	2.0 (7.6)	1 (3.8)
12	16:30	2.0 (7.6)	1.7 (6.4)
13	16:45	2.0 (7.6)	1.7 (6.4)
14	17:00	14.0 (53.0)	3 (11.4)
Total Volume Drawn Per Day: 84 gallons (318 L)			

* Denotes draws in first draw cluster.

5.6 *Optional Tests (Heat Pump-Type Water Heaters).* Optional testing may be conducted on heat pump-type water heaters to determine E_X. If optional testing is performed, conduct the additional 24-hour simulated use test(s) at one or multiple of the test conditions specified in section 2.8 of this appendix. Prior to conducting a 24-hour simulated use test at an optional condition, confirm the air and water conditions specified in section 2.8 are met and re-set the outlet discharge temperature in accordance with section 5.2.2 of this appendix. Perform the optional 24-hour simulated use test(s) in accordance with section 5.4 of this appendix using the same draw pattern used for the determination of UEF.

6. *Computations.*

6.1 *First-Hour Rating Computation.* For the case in which the final draw is initiated at or prior to one hour from the start of the test, the first-hour rating, F_{hr}, shall be computed using,

$$F_{hr} = \sum_{i=1}^{n} V^*_{del,i}$$

Where:

n = the number of draws that are completed during the first-hour rating test.

$V^*_{del,i}$ = the volume of water removed during the *i*th draw of the first-hour rating test, gal (L) or, if the mass of water removed is being measured,

$$V^*_{del,i} = \frac{M^*_{del,i}}{\rho_{del,i}}$$

Where:

$M^*_{del,i}$ = the mass of water removed during the *i*th draw of the first-hour rating test, lb (kg).

$\rho_{del,i}$ = the density of water removed, evaluated at the average outlet water temperature measured during the *i*th draw of the first-hour rating test, ($\overline{T}^*_{del,i}$), lb/gal (kg/L).

or, if the volume of the water entering the water heater is being measured,

$$V^*_{del,i} = V^*_{in,i}\frac{\rho_{in,i}}{\rho_{del,i}}$$

Where:

$V^*_{in,i}$ = the volume of water entering the water heater during the *i*th draw of the first-hour rating test, gal (L).

$\rho_{in,i}$ = the density of water entering the water heater, evaluated at the average inlet water temperature measured during the *i*th draw of the first-hour rating test, ($\overline{T}^*_{in,i}$), lb/gal (kg/L).

or, if the mass of water entering the water heater is being measured,

$$V^*_{del,i} = \frac{M^*_{in,i}}{\rho_{del,i}}$$

Where:

$M^*_{in,i}$ = the mass of water entering the water heater during the *i*th draw of the first-hour rating test, lb (kg).

For the case in which a draw is not in progress at one hour from the start of the test and a final draw is imposed at the elapsed time of one hour, the first-hour rating shall be calculated using,

$$F_{hr} = V^*_{del,n}\left(\frac{\overline{T}^*_{del,n} - \overline{T}^*_{min,n-1}}{\overline{T}^*_{del,n-1} - \overline{T}^*_{min,n-1}}\right) + \sum_{i=1}^{n-1} V^*_{del,i}$$

where n and $V^*_{del,i}$ are the same quantities as defined above, and

$V^*_{del,n}$ = the volume of water removed during the *n*th (final) draw of the first-hour rating test, gal (L).

$\overline{T}^*_{del,n-1}$ = the average water outlet temperature measured during the *(n − 1)*th draw of the first-hour rating test, °F (°C).

$\overline{T}^*_{del,n}$ = the average water outlet temperature measured during the *n*th (final) draw of the first-hour rating test, °F (°C).

$T^*_{min,n-1}$ = the minimum water outlet temperature measured during the *(n − 1)*th draw of the first-hour rating test, °F (°C).

6.2 *Maximum GPM (L/min) Rating Computation.* Compute the maximum GPM (L/min) rating, F_{max}, as:

$$F_{max} = \frac{V_{del,10m}(\overline{T}_{del} - \overline{T}_{in})}{10(125°F - 58°F)}$$

or,

$$F_{max} = \frac{V_{del,10m}(\overline{T}_{del} - \overline{T}_{in})}{10(51.7°C - 14.4°C)}$$

Where:

$V_{del,10m}$ = the volume of water removed during the maximum GPM (L/min) rating test, gal (L).

$\overline{T}_{del}$ = the average delivery temperature, °F (°C).

$\overline{T}_{in}$ = the average inlet temperature, °F (°C).

10 = the number of minutes in the maximum GPM (L/min) rating test, min.

or, if the mass of water removed is measured,

$$V_{del,10m} = \frac{M_{del,10m}}{\rho_{del}}$$

Where:

$M_{del,10m}$ = the mass of water removed during the maximum GPM (L/min) rating test, lb (kg).

ρ_{del} = the density of water removed, evaluated at the average delivery water temperature of the maximum GPM (L/min) rating test ($\overline{T}_{del}$), lb/gal (kg/L).

or, if the volume of water entering the water heater is measured,

$$V_{del,10m} = V_{in,10m}\frac{\rho_{in}}{\rho_{del}}$$

Where:

$V_{in,10m}$ = the volume of water entering the water heater during the maximum GPM (L/min) rating test, gal (L).

ρ_{in} = the density of water entering the water heater, evaluated at the average inlet

water temperature of the maximum GPM (L/min) rating test ($\overline{T}_{del}$), lb/gal (kg/L).

or, if the mass of water entering the water heater is measured,

$$V_{del,10m} = \frac{M_{in,10m}}{\rho_{del}}$$

Where:

$M_{in,10m}$ = the mass of water entering the water heater during the maximum GPM (L/min) rating test, lb (kg).

6.3 *Computations for Water Heaters with a Rated Storage Volume Greater Than or Equal to 2 Gallons and Circulating Water Heaters.*

6.3.1 *Storage Tank Capacity.* The storage tank capacity, V_{st}, is computed as follows:

$$V_{st} = \frac{(W_f - W_t)}{\rho}$$

Where:

V_{st} = the storage capacity of the water heater, or, for circulating water heaters, the storage capacity of the separate storage tank used in accordance with section 4.10, gal (L).

W_f = the weight of the storage tank when completely filled with water, lb (kg).

W_t = the (tare) weight of the storage tank when completely empty, lb (kg).

ρ = the density of water used to fill the tank measured at the temperature of the water, lb/gal (kg/L).

6.3.1.1 *Effective Storage Volume.* The effective storage tank capacity, V_{eff}, is computed as follows:

For water heaters requiring a separate storage tank, V_{eff} is the storage tank capacity of the separate storage tank as determined per section 6.3.1.

For all other water heaters:

$V_{eff} = k_V V_{st}$

Where:

V_{st} = as defined in section 6.3.1 and

k_V = a dimensionless volume scaling factor determined as follows:

If the first recovery period extends into the second draw of the 24-hour simulated use test, and

If $\overline{T}_0 > (\overline{T}_{del,1} + 5\ °F)$ and $\overline{T}_0 \geq 130\ °F$,

(if $\overline{T}_0 > (\overline{T}_{del,1} + 2.8\ °C)$ and $\overline{T}_0 \geq 54.4\ °C$),

$$k_V = \frac{\rho(\overline{T}_0) \times C_p(\overline{T}_0) \times (\overline{T}_0 - 67.5°F)}{\rho(125°F) \times C_p(125°F) \times (125°F - 67.5°F)}$$

$$\left(k_V = \frac{\rho(\overline{T}_0) \times C_p(\overline{T}_0) \times (\overline{T}_0 - 19.7℃)}{\rho(51.7℃) \times C_p(51.7℃) \times (51.7℃ - 19.7℃)}\right);$$

If the first recovery period does not extend into the second draw of the 24-hour simulated use test, and

If $\overline{T}_{max,1} > (\overline{T}_{del,2} + 5\ °F)$ and $\overline{T}_{max,1} \geq 130\ °F$,

(if $\overline{T}_{max,1} > (\overline{T}_{del,2} + 2.8\ °C)$ and $\overline{T}_{max,1} \geq 54.4\ °C$),

$$k_V = \frac{\rho(\overline{T}_{max,1}) \times C_p(\overline{T}_{max,1}) \times (\overline{T}_{max,1} - 67.5°F)}{\rho(125°F) \times C_p(125°F) \times (125°F - 67.5°F)}$$

$$\left(k_V = \frac{\rho(\overline{T}_{max,1}) \times C_p(\overline{T}_{max,1}) \times (\overline{T}_{max,1} - 19.7℃)}{\rho(51.7℃) \times C_p(51.7℃) \times (51.7℃ - 19.7℃)}\right);$$

Otherwise, $k_V = 1$.

Where:

$\overline{T}_0$= the mean tank temperature at the beginning of the 24-hour simulated-use test, °F(°C).

$\overline{T}_{del,1}$= the average outlet water temperature during the first draw of the 24-hour simulated-use test, °F(°C).

$\rho(\overline{T}_0)$ = the density of the stored hot water evaluated at the mean tank temperature at the beginning of the 24-hour simulated-use test ($\overline{T}_0$), lb/gal (kg/L).

$C_p(\overline{T}_0)$ = the specific heat of the stored hot water, evaluated at $\overline{T}_0$, Btu/(lb·°F) (kJ/(kg·°C)).

$\overline{T}_{max,1}$ = the maximum measured mean tank temperature after cut-out following the first draw of the 24-hour simulated-use test, °F(°C).

$\overline{T}_{del,2}$= the average outlet water temperature during the second draw of the 24-hour simulated-use test, °F(°C).

$\rho(\overline{T}_{max,1})$ = the density of the stored hot water evaluated at the maximum measured mean tank temperature after cut-out following the first draw of the 24-hour simulated-use test ($\overline{T}_{max,1}$), lb/gal (kg/L).

$C_p(\overline{T}_{max,1})$ = the specific heat of the stored hot water, evaluated at $\overline{T}_{max,1}$, Btu/(lb·°F) (kJ/(kg·°C)).

ρ(125 °F) = the density of the stored hot water at 125 °F, lb/gal (kg/L).

C_p(125 °F) = the specific heat of the stored hot water at 125 °F, Btu/(lb·°F) (kJ/(kg·°C)).

125 °F (51.7 °C) = the nominal maximum mean tank temperature for a storage tank that does not utilize a mixing valve to achieve a 125 °F delivery temperature.

67.5 °F (19.7 °C) = the nominal average ambient air temperature.

6.3.2 *Mass of Water Removed.* Determine the mass of water removed during each draw of the 24-hour simulated-use test ($M_{del,i}$) as:

If the mass of water removed is measured, use the measured value, or, if the volume of water removed is being measured,

$M_{del,i} = V_{del,i} * P_{del,i}$

Where:

$V_{del,i}$ = volume of water removed during the *i*th draw of the 24-hour simulated-use test, gal (L).

$\rho_{del,i}$ = density of the water removed, evaluated at the average outlet water temperature measured during the *i*th draw of the 24-hour simulated-use test, ($\overline{T}_{del,i}$), lb/gal (kg/L).

or, if the volume of water entering the water heater is measured,

$M_{del,i} = V_{in,i} * \rho_{in,i}$

Where:

$V_{in,i}$ = volume of water entering the water heater during draw *i*th draw of the 24-hour simulated-use test, gal (L).

$\rho_{in,i}$ = density of the water entering the water heater, evaluated at the average inlet water temperature measured during the *i*th draw of the 24-hour simulated-use test, ($\overline{T}_{in,i}$), lb/gal (kg/L).

or, if the mass of water entering the water heater is measured,

$M_{del,i} = M_{in,i}$

Where:

$M_{in,i}$ = mass of water entering the water heater during draw *i*th draw of the 24-hour simulated-use test, lb (kg).

6.3.3 *Recovery Efficiency.* The recovery efficiency for gas, oil, and heat pump water heaters with a rated storage volume greater than or equal to 2 gallons, η_r, is computed as:

$$\eta_r = \frac{V_{st}\,\rho_1\,C_{p1}\left(\overline{T}_{max,1} - \overline{T}_0\right)}{Q_r} + \sum_{i=1}^{N_r} \frac{M_{del,i}\,C_{pi}\left(\overline{T}_{del,i} - \overline{T}_{in,i}\right)}{Q_r}$$

Where:

V_{st} = as defined in section 6.3.1 of this appendix.

ρ_1 = density of stored hot water evaluated at $(\overline{T}_{max,1} + \overline{T}_0)/2$, lb/gal (kg/L).

C_{p1} = specific heat of the stored hot water, evaluated at $(\overline{T}_{max,1} + \overline{T}_0)/2$, Btu/(lb·°F) (kJ/(kg·°C).

$\overline{T}_{max,1}$ = maximum mean tank temperature recorded after the first recovery period as defined in section 5.4.2 of this appendix, °F (°C).

$\overline{T}_0$ = mean tank temperature recorded at the beginning of the 24-hour simulated-use test as determined in section 5.4.2 of this appendix, °F (°C).

Q_r = the total energy used by the water heater during the first recovery period as defined in section 5.4.2 of this appendix, including auxiliary energy such as pilot lights, pumps, fans, *etc.,* Btu (kJ). (Electrical auxiliary energy shall be converted to thermal energy using the following conversion: 1 kWh = 3412 Btu).

N_r = number of draws from the start of the 24-hour simulated-use test to the end to the first recovery period as described in section 5.4.2.

$M_{del,i}$ = mass of water removed as calculated in section 6.3.2 of this appendix during the *i*th draw of the first recovery period as described in section 5.4.2, lb (kg).

C_{pi} = specific heat of the withdrawn water during the *i*th draw of the first recovery period as described in section 5.4.2, evaluated at $(\overline{T}_{del,i} + \overline{T}_{in,i})/2$, Btu/(lb· °F) (kJ/(kg· °C)).

$\overline{T}_{del,i}$ = average water outlet temperature measured during the *i*th draw of the first recovery period as described in section 5.4.2, °F (°C).

$\overline{T}_{in,i}$ = average water inlet temperature measured during the *i*th draw of the first recovery period as described in section 5.4.2, °F (°C).

The recovery efficiency for electric water heaters with immersed heating elements, not including heat pump water heaters with immersed heating elements, is assumed to be 98 percent.

6.3.4 *Hourly Standby Losses.* The energy consumed as part of the standby loss test of the 24-hour simulated-use test, $Q_{stby,}$ is computed as:

$Q_{stby} = Q_{su,f} - Q_{su,o}$

Where:

$Q_{su,0}$ = cumulative energy consumption, including all fossil fuel and electrical energy use, of the water heater from the start of the 24-hour simulated-use test to the start of the standby period as determined in section 5.4.2 of this appendix, Btu (kJ).

$Q_{su,f}$ = cumulative energy consumption, including all fossil fuel and electrical energy use, of the water heater from the start of the 24-hour simulated-use test to the end of the standby period as determined in section 5.4.2 of this appendix, Btu (kJ).

The hourly standby energy losses are computed as:

$$Q_{hr} = \frac{Q_{stby} - \dfrac{V_{st}\,\rho\,C_p\left(\overline{T}_{su,f} - \overline{T}_{su.0}\right)}{\eta_r}}{\tau_{stby,1}}$$

Where:

Q_{hr} = the hourly standby energy losses of the water heater, Btu/h (kJ/h).

V_{st} = as defined in section 6.3.1 of this appendix.

ρ = density of the stored hot water, evaluated at $(\overline{T}_{su,f} + \overline{T}_{su,0})/2$, lb/gal (kg/L).

C_p = specific heat of the stored water, evaluated at $(\overline{T}_{su,f} + \overline{T}_{su,0})/2$, Btu/(lb·°F), (kJ/(kg·K)).

$\overline{T}_{su,f}$ = the mean tank temperature measured at the end of the standby period as determined in section 5.4.2 of this appendix, °F (°C).

$\overline{T}_{su,0}$ = the maximum mean tank temperature measured at the beginning of the standby period as determined in section 5.4.2 of this appendix, °F (°C).

η_r = as defined in section 6.3.3 of this appendix.

$\tau_{stby,1}$ = elapsed time between the start and end of the standby period as determined in section 5.4.2 of this appendix, h.

The standby heat loss coefficient for the tank is computed as:

$$UA = \frac{Q_{hr}}{\overline{T}_{t,stby,1} - \overline{T}_{a,stby,1}}$$

Where:

UA = standby heat loss coefficient of the storage tank, Btu/(h· °F), (kJ/(h· °C).

$\overline{T}_{t,stby,1}$ = overall average mean tank temperature between the start and end of the standby period as determined in section 5.4.2 of this appendix, °F (°C).

$\overline{T}_{a,stby,1}$ = overall average ambient temperature between the start and end of the standby period as determined in section 5.4.2 of this appendix, °F (°C).

6.3.5 *Daily Water Heating Energy Consumption.* The total energy used by the water heater during the 24-hour simulated-use test (Q) is as measured in section 5.4.2 of this appendix, or,

$Q = Q_f + Q_e$ = total energy used by the water heater during the 24-hour simulated-use test, including auxiliary energy such as pilot lights, pumps, fans, etc., Btu (kJ).

Q_f = total fossil fuel energy used by the water heater during the 24-hour simulated-use test, Btu (kJ).

Q_e = total electrical energy used during the 24-hour simulated-use test, Btu (kJ). (Electrical energy shall be converted to thermal energy using the following conversion: 1kWh = 3412 Btu.)

The daily water heating energy consumption, Q_d, is computed as:

$$Q_d = Q - \frac{V_{st}\,\rho\,C_p\,(\overline{T}_{24} - \overline{T}_0)}{\eta_r}$$

Where:

V_{st} = as defined in section 6.3.1 of this appendix.

ρ = density of the stored hot water, evaluated at $(\overline{T}_{24} + \overline{T}_0)/2$, lb/gal (kg/L).

C_p = specific heat of the stored water, evaluated at $(\overline{T}_{24} + \overline{T}_0)/2$, Btu/(lb·°F), (kJ/(kg·K)).

$\overline{T}_{24}$ = mean tank temperature at the end of the 24-hour simulated-use test as determined in section 5.4.2 of this appendix, °F (°C).

$\overline{T}_0$ = mean tank temperature recorded at the beginning of the 24-hour simulated-use test as determined in section 5.4.2 of this appendix, °F (°C).

η_r = as defined in section 6.3.3 of this appendix.

6.3.6 *Adjusted Daily Water Heating Energy Consumption.* The adjusted daily water

heating energy consumption, $Q_{da,}$ takes into account that the ambient temperature may differ from the nominal value of 67.5 °F (19.7 °C) due to the allowable variation in surrounding ambient temperature of 65 °F (18.3 °C) to 70 °C (21.1 °C). The adjusted daily water heating energy consumption is computed as:

$Q_{da} = Q_d - (67.5°C - \overline{T}_{a,stby,2})\ UA\ \tau_{stby,2}$

or,

$Q_{da} = Q_d - (19.7°C - \overline{T}_{a,stby,2})\ UA\ \tau_{stby,2}$

Where:

Q_{da} = the adjusted daily water heating energy consumption, Btu (kJ).

Q_d = as defined in section 6.3.4 of this appendix.

$\overline{T}_{a,stby,2}$ = the average ambient temperature during the total standby portion, $\tau_{stby,2}$, of the 24-hour simulated-use test, °F (°C).

UA = as defined in section 6.3.4 of this appendix.

$\tau_{stby,2}$ = the number of hours during the 24-hour simulated-use test when water is not being withdrawn from the water heater.

A modification is also needed to take into account that the temperature difference between the outlet water temperature and supply water temperature may not be equivalent to the nominal value of 67 °F (125 °F–58 °F) or 37.3 °C (51.7 °C–14.4 °C). The following equations adjust the experimental data to a nominal 67 °F (37.3 °C) temperature rise.

The energy used to heat water, Btu/day (kJ/day), may be computed as:

$$Q_{HW} = \sum_{i=1}^{N} \frac{M_{del,i}\ C_{pi}\left(\overline{T}_{del,i} - \overline{T}_{in,i}\right)}{\eta_r}$$

Where:

N = total number of draws in the 24-hour simulated-use test.

$M_{del,i}$ = the mass of water removed during the *i*th draw (i = 1 to N) as calculated in section 6.3.2 of this appendix, lb (kg).

C_{pi} = the specific heat of the water withdrawn during the *i*th draw of the 24-hour simulated-use test, evaluated at ($\overline{T}_{del,i}$ + $\overline{T}_{in,i}$)/2, Btu/(lb· °F) (kJ/(kg·°C)).

$\overline{T}_{del,i}$ = the average water outlet temperature measured during the *i*th draw (i = 1 to N), °F (°C).

$\overline{T}_{in,i}$ = the average water inlet temperature measured during the *i*th draw (i = 1 to N), °F (°C).

η_r = as defined in section 6.3.3 of this appendix.

The energy required to heat the same quantity of water over a 67 °F (37.3 °C) temperature rise, Btu/day (kJ/day), is:

$$Q_{HW,67°F} = \sum_{i=1}^{N} \frac{M_{del,i}\ C_{pi}(125°F - 58°F)}{\eta_r}$$

or,

$$Q_{HW,37.3°C} = \sum_{i=1}^{N} \frac{M_{del,i}\ C_{pi}(51.7°C - 14.4°C)}{\eta_r}$$

The difference between these two values is:

$Q_{HWD} = Q_{HW,67.°F} - Q_{HW}$

or,

$Q_{HWD} = Q_{HW,37.3°C} - Q_{HW}$

This difference (Q_{HWD}) must be added to the adjusted daily water heating energy consumption value. Thus, the daily energy consumption value, which takes into account that the ambient temperature may not be 67.5 °F (19.7 °C) and that the temperature rise across the storage tank may not be 67 °F (37.3 °C) is:

$Q_{dm} = Q_{da} - Q_{HWD}$

6.3.7 *Estimated Mean Tank Temperature for Water Heaters with Rated Storage Volumes Greater Than or Equal to 2 Gallons.* If testing is conducted in accordance with section 5.4.2.2 of this appendix, calculate the mean tank temperature immediately prior to the internal tank temperature determination draw using the following equation:

$$\overline{T}_{st} = T_p - \frac{v_{out,p}}{V_{st}} \times \tau_p(\overline{T}_{in,p} - \overline{T}_{out,p})$$

Where:

$\overline{T}_{st}$ = the estimated average internal storage tank temperature, °F (°C).

T_p = the average of the inlet and the outlet water temperatures at the end of the period defined by τ_p, °F (°C).

$v_{out,p}$ = the average flow rate during the period, gal/min (L/min).

V_{st} = the rated storage volume of the water heater, gal (L).

τ_p = the number of minutes in the duration of the period, determined by the length of time taken for the outlet water temperature to be within 2 °F of the inlet water temperature for 15 consecutive seconds and including the 15-second stabilization period.

$\overline{T}_{in,p}$ = the average of the inlet water temperatures during the period, °F (°C).

$\overline{T}_{out,p}$ = the average of the outlet water temperatures during the period, °F (°C).

6.3.8 *Uniform Energy Factor.* The uniform energy factor, UEF, is computed as:

$$UEF = \sum_{i=1}^{N} \frac{M_{del,i}\ C_{pi}\ (125°F - 58°F)}{Q_{dm}}$$

or,

$$UEF = \sum_{i=1}^{N} \frac{M_{del,i}\ C_{pi}\ (51.7°C - 14.4°C)}{Q_{dm}}$$

Where:

N = total number of draws in the 24-hour simulated-use test.

Q_{dm} = the modified daily water heating energy consumption as computed in accordance with section 6.3.6 of this appendix, Btu (kJ).

$M_{del,i}$ = the mass of water removed during the *i*th draw (i = 1 to N) as calculated in section 6.3.2 of this appendix, lb (kg).

C_{pi} = the specific heat of the water withdrawn during the *i*th draw of the 24-hour simulated-use test, evaluated at (125 °F + 58 °F)/2 = 91.5 °F ((51.7 °C + 14.4 °C)/2 = 33 °C), Btu/(lb·°F) (kJ/(kg·°C)).

6.3.9 *Annual Energy Consumption.* The annual energy consumption for water heaters with rated storage volumes greater than or equal to 2 gallons is computed as:

$$E_{annual} = 365 * \frac{(V)(\rho)(C_p)(67)}{UEF}$$

Where:

UEF = the uniform energy factor as computed in accordance with section 6.3.88 of this appendix.

365 = the number of days in a year.

V = the volume of hot water drawn during the applicable draw pattern, gallons.

= 10 for the very-small-usage draw pattern.

= 38 for the low-usage draw pattern.

= 55 for the medium-usage draw pattern.

= 84 for high-usage draw pattern.

ρ = 8.24 lb/gallon, the density of water at 125 °F.

C_p = 1.00 Btu/(lb °F), the specific heat of water at 91.5 °F.

67 = the nominal temperature difference between inlet and outlet water

6.3.10 *Annual Electrical Energy Consumption.* The annual electrical energy consumption in kilowatt-hours for water heaters with rated storage volumes greater than or equal to 2 gallons, $E_{annual,e,}$ is computed as:

$$E_{annual,e} = \frac{E_{annual}}{3412} * \left(\frac{Q_e}{Q}\right)$$

Where:

E_{annual} = the annual energy consumption as determined in accordance with section 6.3.99 of this appendix, Btu (kJ).

Q_e = the daily electrical energy consumption as defined in section 6.3.5 of this appendix, Btu (kJ).

Q = total energy used by the water heater during the 24-hour simulated-use test in accordance with section 6.3.5 of this appendix, Btu (kJ).

3412 = conversion factor from Btu to kWh.

6.3.11 *Annual Fossil Fuel Energy Consumption.* The annual fossil fuel energy consumption for water heaters with rated storage volumes greater than or equal to 2 gallons, $E_{annual,f,}$ is computed as:

$E_{annual,f} = E_{annual} - (E_{annual,e} * 3412)$

Where:

E_{annual} = the annual energy consumption as determined in accordance with section 6.3.9 of this appendix, Btu (kJ).

$E_{annual,e}$ = the annual electrical energy consumption as determined in accordance with section 6.3.10 of this appendix, kWh.

3412 = conversion factor from kWh to Btu.

6.4 *Computations for Water Heaters with a Rated Storage Volume Less Than 2 Gallons.*

6.4.1 *Mass of Water Removed*

Calculate the mass of water removed using the calculations in section 6.3.2 of this appendix.

6.4.2 *Recovery Efficiency.* The recovery efficiency, $\eta_{r,}$ is computed as:

$$\eta_r = \frac{M_1\ C_{p1}\ \left(\overline{T}_{del,1} - \overline{T}_{in,1}\right)}{Q_r}$$

Where:

M_1 = mass of water removed during the first draw of the 24-hour simulated-use test, lb (kg).

C_{p1} = specific heat of the withdrawn water during the first draw of the 24-hour simulated-use test, evaluated at $(\overline{T}_{del,1} + \overline{T}_{in,1})/2$, Btu/(lb·°F) (kJ/(kg·°C)).

$\overline{T}_{del,1}$ = average water outlet temperature measured during the first draw of the 24-hour simulated-use test, °F (°C).

$\overline{T}_{in,1}$ = average water inlet temperature measured during the first draw of the 24-hour simulated-use test, °F (°C).

Q_r = the total energy used by the water heater during the first recovery period as defined in section 5.4.3 of this appendix, including auxiliary energy such as pilot lights, pumps, fans, etc., Btu (kJ). (Electrical auxiliary energy shall be converted to thermal energy using the following conversion: 1 kWh = 3412 Btu.)

6.4.3 *Daily Water Heating Energy Consumption.* The daily water heating energy consumption, $Q_{d,}$ is computed as:

$Q_d = Q$

Where:

$Q = Q_f + Q_e$ = the energy used by the water heater during the 24-hour simulated-use test.

Q_f = total fossil fuel energy used by the water heater during the 24-hour simulated-use test, Btu (kJ).

Q_e = total electrical energy used during the 24-hour simulated-use test, Btu (kJ).

(Electrical auxiliary energy shall be converted to thermal energy using the following conversion: 1 kWh = 3412 Btu.)

A modification is needed to take into account that the temperature difference between the outlet water temperature and supply water temperature may not be equivalent to the nominal value of 67 °F (125 °F − 58 °F) or 37.3 °C (51.7 °C − 14.4 °C). The following equations adjust the experimental data to a nominal 67 °F (37.3 °C) temperature rise.

The energy used to heat water may be computed as:

$$Q_{HW} = \sum_{i=1}^{N} \frac{M_{del,i}\, C_{pi}\left(\bar{T}_{del,i} - \bar{T}_{in,i}\right)}{\eta_r}$$

Where:

N = total number of draws in the 24-hour simulated-use test.

$M_{del,i}$ = the mass of water removed during the *i*th draw (i = 1 to N) as calculated in section 6.4.1 of this appendix, lb (kg).

C_{pi} = the specific heat of the water withdrawn during the *i*th draw of the 24-hour simulated-use test, evaluated at ($\bar{T}_{del,i}$ + $\bar{T}_{in,i}$)/2, Btu/(lb·°F) (kJ/(kg·°C)).

$\bar{T}_{del,i}$ = the average water outlet temperature measured during the *i*th draw (i = 1 to N), °F (°C).

$\bar{T}_{in,i}$ = the average water inlet temperature measured during the *i*th draw (i = 1 to N), °F (°C).

η_r = as defined in section 6.4.2 of this appendix.

The energy required to heat the same quantity of water over a 67 °F (37.3 °C) temperature rise is:

$$Q_{HW,67°F} = \sum_{i=1}^{N} \frac{M_{del,i}\, C_{pi}(125°F - 58°F)}{\eta_r}$$

or,

$$Q_{HW,37.3°C} = \sum_{i=1}^{N} \frac{M_{del,i}\, C_{pi}(51.7°C - 14.4°C)}{\eta_r}$$

Where:

N = total number of draws in the 24-hour simulated-use test.

$M_{del,i}$ = the mass of water removed during the *i*th draw (i = 1 to N) as calculated in section 6.4.1 of this appendix, lb (kg).

C_{pi} = the specific heat of the water withdrawn during the *i*th draw of the 24-hour simulated-use test, evaluated at ($\bar{T}_{del,i}$ + $\bar{T}_{in,i}$)/2, Btu/(lb·°F) (kJ/(kg·°C)).

η_r = as defined in section 6.4.2 of this appendix.

The difference between these two values is:

$Q_{HWD} = Q_{HW,67°F} - Q_{HW}$

or,

$Q_{HWD} = Q_{HW,37.3°C} - Q_{HW}$

This difference (Q_{HWD}) must be added to the daily water heating energy consumption value. Thus, the daily energy consumption value, which takes into account that the temperature rise across the water heater may not be 67 °F (37.3 °C), is:

$Q_{dm} = Q_{da} + Q_{HWD}$

6.4.4 *Uniform Energy Factor.* The uniform energy factor, UEF, is computed as:

$$UEF = \sum_{i=1}^{N} \frac{M_{del,i}\, C_{pi}\, (125°F - 58°F)}{Q_{dm}}$$

or,

$$UEF = \sum_{i=1}^{N} \frac{M_{del,i}\, C_{pi}\, (51.7°C - 14.4°C)}{Q_{dm}}$$

Where:

N = total number of draws in the 24-hour simulated-use test.

Q_{dm} = the modified daily water heating energy consumption as computed in accordance with section 6.4.3 of this appendix, Btu (kJ).

$M_{del,i}$ = the mass of water removed during the *i*th draw (i = 1 to N) as calculated in section 6.4.1 of this appendix, lb (kg).

C_{pi} = the specific heat of the water withdrawn during the *i*th draw of the 24-hour simulated-use test, evaluated at (125 °F + 58 °F)/2 = 91.5 °F ((51.7 °C + 14.4 °C)/2 = 33.1 °C), Btu/(lb·°F) (kJ/(kg·°C)).

6.4.5 *Annual Energy Consumption.* The annual energy consumption for water heaters with rated storage volumes less than 2 gallons, $E_{annual,}$ is computed as:

$$E_{annual} = 365 * \frac{(V)(\rho)(C_p)(67)}{UEF}$$

Where:

UEF = the uniform energy factor as computed in accordance with section 6.4.4 of this appendix.

365 = the number of days in a year.

V = the volume of hot water drawn during the applicable draw pattern, gallons.

= 10 for the very-small-usage draw pattern.

= 38 for the low-usage draw pattern.

= 55 for the medium-usage draw pattern.

= 84 for high-usage draw pattern.

ρ = 8.24 lb/gallon, the density of water at 125 °F.

C_p = 1.00 Btu/(lb °F), the specific heat of water at 91.5 °F.

67 = the nominal temperature difference between inlet and outlet water.

6.4.6 *Annual Electrical Energy Consumption.* The annual electrical energy consumption in kilowatt-hours for water heaters with rated storage volumes less than 2 gallons, $E_{annual,e,}$ is computed as:

$$E_{annual,e} = \frac{E_{annual}}{3412} * \left(\frac{Q_e}{Q}\right)$$

Where:

Q_e = the daily electrical energy consumption as defined in section 6.4.3 of this appendix, Btu (kJ).

E_{annual} = the annual energy consumption as determined in accordance with section 6.4.5 of this appendix, Btu (kJ).

Q = total energy used by the water heater during the 24-hour simulated-use test in accordance with section 6.4.3 of this appendix, Btu (kJ).

Q_{dm} = the modified daily water heating energy consumption as computed in accordance with section 6.4.3 of this appendix, Btu (kJ).

3412 = conversion factor from Btu to kWh.

6.4.7 *Annual Fossil Fuel Energy Consumption.* The annual fossil fuel energy consumption for water heaters with rated storage volumes less than 2 gallons, $E_{annual,f,}$ is computed as:

Where:

E_{annual} = the annual energy consumption as defined in section 6.4.5 of this appendix, Btu (kJ).

$E_{annual,e}$ = the annual electrical energy consumption as defined in section 6.4.6 of this appendix, kWh.

3412 = conversion factor from kWh to Btu.

6.5 *Energy Efficiency at Optional Test Conditions.* If testing is conducted at optional test conditions in accordance with section 5.6 of this appendix, calculate the energy efficiency at the test condition, $E_{X,}$ using the formulas in sections 6.3 or 6.4 of this appendix (as applicable), except substituting the applicable ambient temperature and supply water temperature used for testing (as specified in section 2.8 of this appendix) for the nominal ambient temperature and supply water temperature conditions used in the equations for determining UEF (*i.e.,* 67.5 °F and 58 °F).

PART 431—ENERGY EFFICIENCY PROGRAM FOR CERTAIN COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 8. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 6291–6317; 28 U.S.C. 2461 note.

■ 9. Amend § 431.102 by revising the definition for ''Commercial heat pump water heater (CHPWH)'' to read as follows:

§ 431.102 Definitions concerning commercial water heaters, hot water supply boilers, unfired hot water storage tanks, and commercial heat pump water heaters.

* * * * *

Commercial heat pump water heater (CHPWH) means a water heater (including all ancillary equipment such as fans, blowers, pumps, storage tanks, piping, and controls, as applicable) that uses a refrigeration cycle, such as vapor compression, to transfer heat from a low-temperature source to a higher-temperature sink for the purpose of heating potable water, and operates with a current rating greater than 24 amperes or a voltage greater than 250 volts. Such equipment includes, but is not limited to, air-source heat pump water heaters, water-source heat pump water heaters, and direct geo-exchange heat pump water heaters.

26 CFR Part 1

Section 6418 Transfer of Certain Credits; Proposed Rule

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[REG–101610–23]

RIN 1545–BQ64

Section 6418 Transfer of Certain Credits

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking and notice of public hearing.

SUMMARY: This document contains proposed regulations concerning the election under the Inflation Reduction Act of 2022 to transfer certain Federal income tax credits. The proposed regulations describe the proposed rules for the election to transfer eligible credits in a taxable year, including definitions and special rules applicable to partnerships and S corporations and regarding excessive credit transfer or recapture events. In addition, the proposed regulations describe rules related to an IRS pre-filing registration process that would be required. These proposed regulations affect eligible taxpayers that elect to transfer eligible credits in a taxable year and the transferee taxpayers to which eligible credits are transferred.

DATES: Written or electronic comments must be received by August 14, 2023. The public hearing on these proposed regulations is scheduled to be held on August 23, 2023, at 10 a.m. ET. Requests to speak and outlines of topics to be discussed at the public hearing must be received by August 14, 2023. If no outlines are received by August 14, 2023, the public hearing will be cancelled. Requests to attend the public hearing must be received by 5 p.m. ET on August 21, 2023. The public hearing will be made accessible to people with disabilities. Requests for special assistance during the hearing must be received by August 18, 2023.

ADDRESSES: Commenters are strongly encouraged to submit public comments electronically. Submit electronic submissions via the Federal eRulemaking Portal at *https://www.regulations.gov* (indicate IRS and REG–101610–23) by following the online instructions for submitting comments. Once submitted to the Federal eRulemaking Portal, comments cannot be edited or withdrawn. The Department of Treasury (Treasury Department) and the IRS will publish for public availability any comments submitted, whether electronically or on paper, to the IRS's public docket. Send paper submissions to: CC:PA:LPD:PR (REG–101610–23), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044.

FOR FURTHER INFORMATION CONTACT: Concerning these proposed regulations, Jeremy Milton at (202) 317–5665 and James Holmes at (202) 317–5114 (not a toll-free number); concerning submissions of comments and requests for a public hearing, Vivian Hayes at (202) 317–6901 (not a toll-free number) or by email to *publichearings@irs.gov* (preferred).

SUPPLEMENTARY INFORMATION:

Background

Section 6418 was added to the Internal Revenue Code (Code) on August 16, 2022, by section 13801(b) of Public Law 117–169, 136 Stat. 1818, 2009, commonly referred to as the Inflation Reduction Act of 2022 (IRA). Section 6418 allows ''eligible taxpayers'' to elect to transfer certain credits to unrelated taxpayers rather than using the credits against their Federal income tax liabilities. Section 6418 also provides special rules relating to partnerships and S corporations and directs the Secretary of the Treasury or her delegate (Secretary) to provide rules for making elections under section 6418 and to require information or registration necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under section 6418. Section 13801(g) of the IRA provides that section 6418 applies to taxable years beginning after December 31, 2022. This document contains proposed regulations that would amend the Income Tax Regulations (26 CFR part 1) to implement the statutory provisions of section 6418.

In the Rules and Regulations section of this issue of the **Federal Register**, the Treasury Department and the IRS are issuing temporary regulations under § 1.6418–4T that implement the pre-filing registration process described in § 1.6418–4 of the proposed regulations. The temporary regulations require eligible taxpayers that want to elect to transfer eligible credits under section 6418 to register with the IRS through an IRS electronic portal in advance of the eligible taxpayer filing the return on which the election under section 6418 is made.

I. Overview of Section 6418

Section 6418(a) provides that, in the case of an eligible taxpayer that elects to transfer to an unrelated transferee taxpayer all (or any portion specified in the election) of an eligible credit determined with respect to the eligible taxpayer for any taxable year, the transferee taxpayer specified in such election (and not the eligible taxpayer) is treated as the taxpayer for purposes of the Code with respect to such credit (or such portion thereof). Under section 6418(b), any amount of consideration paid by the transferee taxpayer to the eligible taxpayer for the transfer of such credit (or such portion thereof) is (1) required to be paid in cash, (2) not included in the eligible taxpayer's gross income, and (3) not allowed as a deduction to the transferee taxpayer under any provision of the Code.

Section 6418(f)(2) defines the term ''eligible taxpayer'' to mean any taxpayer that is not described in section 6417(d)(1)(A).

Section 6418(f)(1)(A) defines the term ''eligible credit'' to mean each of the following 11 credits:

(1) So much of the credit for alternative fuel vehicle refueling property allowed under section 30C of the Code that, pursuant to section 30C(d)(1), is treated as a credit listed in section 38(b) of the Code (section 30C credit);

(2) The renewable electricity production credit determined under section 45(a) of the Code (section 45 credit);

(3) The credit for carbon oxide sequestration determined under section 45Q(a) of the Code (section 45Q credit);

(4) The zero-emission nuclear power production credit determined under section 45U(a) of the Code (section 45U credit);

(5) The clean hydrogen production credit determined under section 45V(a) of the Code (section 45V credit);

(6) The advanced manufacturing production credit determined under section 45X(a) of the Code (section 45X credit);

(7) The clean electricity production credit determined under section 45Y(a) of the Code (section 45Y credit);

(8) The clean fuel production credit determined under section 45Z(a) of the Code (section 45Z credit);

(9) The energy credit determined under section 48 of the Code (section 48 credit);

(10) The qualifying advanced energy project credit determined under section 48C of the Code (section 48C credit); and

(11) The clean electricity investment credit determined under section 48E of the Code (section 48E credit).

Under section 6418(f)(1)(B), an election to transfer a section 45 credit, section 45Q credit, section 45V credit,

or section 45Y credit is made separately with respect to each facility and for each taxable year during the credit period of the respective credit. Pursuant to section 6418(f)(1)(C) an eligible credit does not include any business credit carryforward or business credit carryback. Section 6418(g)(4) provides that an eligible taxpayer may not make an election to transfer credits for progress expenditures.

Pursuant to section 6418(e)(1), an eligible taxpayer must make an election to transfer any portion of an eligible credit on its original tax return for the taxable year for which the credit is determined by the due date of such return (including extensions of time) but such an election cannot be made earlier than 180 days after the date of the enactment of section 6418 by section 13801(b) of the IRA (that is, in no event earlier than 180 days after August 16, 2022, which is February 13, 2023). An eligible taxpayer may not revoke an election to transfer any portion of a credit. Pursuant to section 6418(d), a transferee taxpayer takes the transferred eligible credit into account in its first tax year ending with, or after, the eligible taxpayer's tax year with respect to which the transferred eligible credit was determined. Section 6418(e)(2) provides that a transferee taxpayer may not make any additional transfers of a transferred eligible credit under section 6418.

II. Section 6418 Rules for Partnerships and S Corporations

Pursuant to section 6418(c), in the case of a partnership or an S corporation that directly holds a facility or property for which an eligible credit is determined: the election to transfer an eligible credit is made at the entity level and no election by any partner or shareholder is allowed with respect to such facility or property; any amount received as consideration for a transferred eligible credit is treated as tax exempt income for purposes of sections 705 and 1366 of the Code; and a partner's distributive share of the tax exempt income is based on the partner's distributive share of the transferred eligible credit.

III. Special Rules

Section 6418(g) provides special rules regarding the elective transfer of certain credits. Section 6418(g)(1) provides that, as a condition of, and prior to, any transfer of any portion of an eligible credit pursuant to section 6418(a), the Secretary may require such information (including, in such form or manner as is determined appropriate by the Secretary, such information returns) or registration as the Secretary deems necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under section 6418.

Pursuant to section 6418(g)(2), if the Secretary determines that there is an excessive credit transfer to a transferee taxpayer, then the tax imposed on the transferee taxpayer by chapter 1 of the Code (chapter 1) (regardless of whether such entity would otherwise be subject to tax under chapter 1) is increased in the year of such determination by the amount of the excessive credit transfer plus 20 percent of such excessive credit transfer. The additional amount of 20 percent of the excessive credit transfer does not apply if the transferee taxpayer demonstrates to the satisfaction of the Secretary that the excessive credit transfer resulted from reasonable cause. An excessive credit transfer is defined in section 6418(g)(2)(C) as, with respect to a facility or property for which an election is made under section 6418(a) for any taxable year, an amount equal to the excess of (i) the amount of the eligible credit claimed by the transferee taxpayer with respect to such facility or property for such taxable year; over (ii) the amount of the eligible credit that, without application of section 6418, would be otherwise allowable under the Code with respect to such facility or property for such taxable year.

Pursuant to section 6418(g)(3), if a section 48 credit, section 48C credit, or section 48E credit is transferred, the basis reduction rules of section 50(c) apply to the applicable investment credit property as if the transferred eligible credit was allowed to the eligible taxpayer. Further, if applicable investment credit property is disposed of, or otherwise ceases to be investment credit property with respect to the eligible taxpayer, before the close of the recapture period as described in section 50(a)(1), then certain notification requirements apply. The eligible taxpayer must notify the transferee taxpayer of a recapture event in such form and manner as the Secretary may provide. In addition, the transferee taxpayer must notify the eligible taxpayer of the recapture amount, if any, in such form and manner as the Secretary may provide.

Section 6418(h) directs the Secretary to issue regulations or other guidance as may be necessary to carry out the purposes of section 6418, including guidance providing rules for determining a partner's distributive share of the tax exempt income described in section 6418(c)(1).

IV. Notice 2022–50

On October 24, 2022, the Treasury Department and the IRS published Notice 2022–50, 2022–43 I.R.B. 325, to, among other things, request feedback from the public at large on potential issues with respect to the transfer election provisions under section 6418 that may require guidance. Over 200 comment letters were received in response to Notice 2022–50. Based in part on the feedback received, the Treasury Department and the IRS are issuing these proposed regulations regarding the transfer election provisions under section 6418. The major areas with respect to which public stakeholders provided letters are discussed in the following Explanation of Provisions.

Explanation of Provisions

I. Transfers of Eligible Credits

Proposed § 1.6418–1(a) would provide generally that an eligible taxpayer may make a transfer election under proposed § 1.6418–2 to transfer any specified portion of an eligible credit determined with respect to any eligible credit property of such eligible taxpayer for any taxable year to a transferee taxpayer in accordance with section 6418 of the Code and §§ 1.6418–1 through 1.6418–5 (''the section 6418 regulations''). The remainder of proposed § 1.6418–1 would then provide definitions for terms used throughout the section 6418 regulations, including definitions of eligible taxpayer, eligible credit, eligible credit property, paid in cash, specified credit portion, transferred specified credit portion, transfer election, transferee taxpayer, transferee partnership, transferee S corporation, transferor partnership, and transferor S corporation.

Proposed § 1.6418–1(b) would define the term ''eligible taxpayer'' to mean any taxpayer (as defined in section 7701(a)(14) of the Code), other than one described in section 6417(d)(1)(A) and proposed § 1.6417–1(b). The term ''taxpayer'' in section 7701(a)(14) means ''any person subject to any internal revenue tax'' and generally, includes entities that have a United States employment tax or excise tax obligation even if they do not have a United States income tax obligation.

Proposed § 1.6418–1(c) would define the term ''eligible credit'' consistent with section 6418(f)(1)(A), and include all 11 of the credits listed in such section. Further, the definition would include a rule that an eligible credit does not include any business credit carryforward or business credit carryback determined under section 39

of the Code, which is consistent with section 6418(f)(1)(C). The regulations also would clarify that the entire amount of any eligible credit is separately determined with respect to each single eligible credit property of the eligible taxpayer and includes any bonus credit amounts (described in proposed § 1.6418–2(c)(3)) determined with respect to that single eligible credit property.

Consistent with the proposed rules described later in this Explanation of Provisions related to the manner of making the transfer election, proposed § 1.6418–1(d) would generally define the term ''eligible credit property'' as the unit of property of an eligible taxpayer with respect to which the amount of an eligible credit is determined. While the proposed regulations reference the statutory rules for each eligible credit to determine the appropriate unit of measurement for section 6418 registrations and election, the following additional information is relevant for each of the 11 eligible credits:

(1) For the section 30C credit, a taxpayer would be required to register and make an election on a property-by-property basis. For this purpose, a property means a ''qualified alternative fuel vehicle refueling property'' as defined in section 30C(c).[1]

(2) For the section 45 credit, a taxpayer would be required to register and make an election on a facility-by-facility basis. For this purpose, a facility means a ''qualified facility'' as defined in section 45(d).

(3) For the section 45Q credit, a taxpayer would be required to register and make an election on the basis of a unit of carbon capture equipment. The regulations under § 1.45Q–2(c)(3) state that all components that make up an independently functioning process train capable of capturing, processing, and preparing carbon oxide for transport (single process train) will be treated as a single ''unit of carbon capture equipment.''

(4) For the section 45U credit, a taxpayer would be required to register and make an election on a facility-by-facility basis. For this purpose, a facility means a ''qualified nuclear power facility'' as defined in section 45U(b)(1).

(5) For the section 45V credit, a taxpayer would be required to register and make an election on a facility-by-facility basis. For this purpose, a facility means a ''qualified clean hydrogen production facility'' as defined in section 45V(c)(3).

(6) For the section 45X credit, a taxpayer would be required to register and make an election on a facility-by-facility basis. For this purpose, a facility means one that produces eligible components, as described in guidance under sections 48C and 45X.

(7) For the section 45Y credit, a taxpayer would be required to register and make an election on a facility-by-facility basis. For this purpose, a facility means a ''qualified facility'' as defined in section 45Y(b)(1).

(8) For the section 45Z credit, a taxpayer would be required to register and make an election on a facility-by-facility basis. For this purpose, a facility means a ''qualified facility'' as defined in section 45Z(d)(4).

(9) For the section 48 credit, a taxpayer would be required to register and make an election on a property-by-property basis. For this purpose, a property means an energy property, which generally includes all components of property that are functionally interdependent (unless such equipment is an addition or modification to an energy property). See Notice 2018–59, 2018–28 I.R.B. 196. Components of property are functionally interdependent if the placing in service of each component is dependent upon the placing in service of each of the other components in order to generate electricity. Functionally-interdependent components of property that can be operated and metered together and can begin producing electricity separately from other components of property within a larger energy project will be considered an energy property. See *Id.* (Section 7.01 of Notice 2018–59 describes energy property generally and also cites Rev. Rul. 94–31, 1994–1 C.B. 16.) Energy property is comprised of all components of property necessary to generate electricity up to the point of transmission or distribution. However, an eligible taxpayer would have the option, to the extent consistently applied for purposes of the pre-filing registration requirements of proposed § 1.6418–4 and the election requirements of proposed §§ 1.6418–2 through 1.6418–3, to make the section 6418 registrations and election for an energy project, as defined in forthcoming guidance. See section 48(a)(9)(A)(ii).

(10) For the section 48C credit, a taxpayer would be required to register and make an election on a property-by-property basis. For this purpose, a property means an ''eligible property'' as defined in section 48C(c)(2).

(11) For the section 48E credit, a taxpayer would be required to register and make an election on a facility-by-facility basis if the credit relates to a qualified investment with respect to a qualified facility. For this purpose, a facility means a ''qualified facility'' as defined in section 48E(b)(3). However, a taxpayer would be required to register and make an election with respect to the section 48E credit on a property-by-property basis if the credit relates to a qualified investment with respect to energy storage technology. For this purpose, a property means a unit of ''energy storage technology'' as defined in section 48E(c)(2).

Proposed § 1.6418–1(j) would define the term ''transfer election'' as an election under section 6418(a) of the Code to transfer to a transferee taxpayer a specified portion of an eligible credit determined with respect to an eligible credit property in accordance with the section 6418 regulations. This term would be consistent with the references in section 6418(a) to a taxpayer ''elect[ing] to transfer'' and transferring ''all (or any specified portion in the election)'' of an eligible credit.

Also consistent with the language in section 6418(a) requiring the portion of the credit transferred to be specified, proposed § 1.6418–1(h) would define a ''specified credit portion'' to mean a proportionate share (including all) of an entire eligible credit determined with respect to an eligible credit property of the eligible taxpayer that is specified in a transfer election. A specified credit portion of an eligible credit would be required to reflect a proportionate share of each bonus credit amount that is taken into account in calculating the entire amount of the eligible credit determined with respect to a single eligible credit property. In defining this term, the Treasury Department and the IRS considered questions from stakeholders asking whether it is possible to transfer bonus credit amounts related to an eligible credit separately from the ''base'' eligible credit determined with respect to the relevant eligible credit property. As section 6418 does not contemplate such a transfer, the proposed regulations would not permit this type of transfer. Thus, an eligible taxpayer would not be permitted to divide an eligible credit from a single eligible credit property into the portion from the qualified activity or investment credit property and one or more bonus amounts of the eligible credit. Instead, an eligible taxpayer would be permitted to transfer the entire eligible credit (or portion of the entire eligible credit, which would include a proportionate amount of any

[1] These proposed regulations under section 6418 do not impact the ability of tax-exempt entities to transfer a section 30C credit to the seller of the qualified alternative fuel vehicle refueling property under section 30C(e)(2).

component part of the entire eligible credit) determined with respect to a single eligible credit property.

Proposed § 1.6418–1(p) would define the term ''transferred specified credit portion'' to mean the specified credit portion that is transferred from an eligible taxpayer to a transferee taxpayer pursuant to a transfer election.

Section 6418(b)(1) and proposed § 1.6418–2(a)(4)(ii) (disallowing transfer elections for non-cash consideration) and proposed § 1.6418–2(e)(1) (treatment of payments made in connection with a transfer election) would require that any amounts paid by a transferee taxpayer in connection with the transfer of a specified credit portion be paid in cash. Proposed § 1.6418–1(f) would define ''paid in cash'' as a payment made in United States dollars. The definition of ''paid in cash'' contemplates limiting the manner in which United States dollars may be transferred in connection with a transfer election to payments by cash, check, cashier's check, money order, wire transfer, ACH transfer, or other bank transfer of immediately available funds. The proposed regulations also would provide a safe harbor timing rule to allow for certainty as to the treatment of such payments of United States dollars made during a prescribed time period. The proposed regulations would provide that a payment does not violate the paid in cash requirement if the cash payment is made within the period beginning on the first day of the eligible taxpayer's taxable year during which a specified credit portion is determined and ending on the due date for completing a transfer election statement (as provided in proposed § 1.6418–2(b)(5)(iii)). The proposed regulations also address an issue raised by stakeholders regarding advanced commitments and would provide that a contractual commitment to purchase eligible credits in advance of the date a specified credit portion is transferred satisfies the paid in cash requirement, so long as all cash payments are made during the time period described in proposed § 1.6418–1(f)(1)(ii).

Proposed § 1.6418–1(m) would define the term ''transferee taxpayer'' by incorporating the requirement in section 6418(a) that an eligible taxpayer only transfer eligible credits to a taxpayer that is not related (within the meaning of section 267(b) or 707(b)(1)) to the eligible taxpayer. Thus, the proposed regulations would define a transferee taxpayer as any taxpayer that is not related (within the meaning of section 267(b) or 707(b)(1) of the Code) to the eligible taxpayer making the transfer election to which the eligible taxpayer transfers a specified credit portion of an eligible credit. Further, consistent with the proposed definitions of transferee taxpayer and eligible taxpayer, proposed § 1.6418–1(k), (l), (n), and (o) would define the terms ''transferee partnership,'' ''transferee S corporation,'' ''transferor partnership,'' and ''transferor S corporation,'' respectively.

II. Rules for Making Transfer Elections

The rules in proposed § 1.6418–2 would describe the general requirements for making a transfer election, including clarifying when a transfer election can be made in certain ownership situations, situations where no transfer election may be made, the manner and due date for the election, limitations related to a transfer election, the determination of an eligible credit, the treatment of payments related to a transfer of eligible credits, and the treatment of a transferred specified credit portion by a transferee taxpayer.

A. Transfer Elections in General

Proposed § 1.6418–2(a) would provide rules generally applicable to a transfer election. Consistent with the language in section 6418(a), the proposed rules would provide that if a valid transfer election is made by an eligible taxpayer for any taxable year, the transferee taxpayer specified in such election (and not the eligible taxpayer) is treated as the taxpayer for purposes of the Code with respect to the specified credit portion.

Proposed § 1.6418–2(a)(2) would clarify the rule related to multiple transfer elections. Stakeholders requested clarification on whether an eligible taxpayer can make multiple elections to transfer an eligible credit to multiple transferees. Proposed § 1.6418–2(a)(2) would provide that an eligible taxpayer may make multiple transfer elections to transfer one or more specified credit portion(s) to multiple transferee taxpayers, provided that the aggregate amount of specified credit portions transferred with respect to a single eligible credit property does not exceed the amount of the eligible credit determined with respect to the eligible credit property. In other words, section 6418 does not, and therefore these proposed regulations would not, limit the number of transfer elections or number of transferee taxpayers for which an eligible taxpayer can make a transfer election, unless the transfer of a specified credit portion would exceed the available eligible credit to be transferred.

Proposed § 1.6418–2(a)(3) would address when eligible taxpayers are permitted to make a transfer election in certain ownership situations. The situations addressed are based on requests from stakeholders for clarification. Rules are proposed for disregarded entities, undivided ownership interests, members of a consolidated group, and partnerships and S corporations. For a disregarded entity wholly owned (directly or indirectly) by an eligible taxpayer, the eligible taxpayer makes a transfer election. For undivided ownership interests, if eligible credit property is directly owned through an arrangement properly treated as a tenancy-in-common for Federal income tax purposes, or through an organization that has made a valid election under section 761(a) of the Code, each co-owner's or member's undivided ownership share of the eligible credit property will be treated for purposes of section 6418 as a separate eligible credit property owned by such co-owner or member, and each makes a separate transfer election. For members of a consolidated group, a member is required to make a transfer election. Finally, for a partnership or S corporation, with respect to any eligible credit property held directly by such partnership or S corporation, the partnership or S corporation makes a transfer election, not the partners or shareholders.

Proposed § 1.6418–2(a)(4) would describe three circumstances where no transfer election can be made.

First, consistent with section 6418(g)(4), the proposed regulations preclude any election with respect to any amount of an eligible credit determined based on progress expenditures that is allowed pursuant to rules similar to the rules of section 46(c)(4) and (d) (as in effect on the day before the date of the enactment of the Revenue Reconciliation Act of 1990).

Second, the proposed rules would preclude a transfer election when an eligible taxpayer receives any amount not paid in cash (as defined in § 1.6418–1(f)) as consideration in connection with the transfer of a specified credit portion. Section 6418(b)(1) requires that ''any'' consideration paid in connection with a transfer be paid in cash. Thus, if any consideration is other than cash, the transfer election is disallowed.

Third, no election is allowed when eligible credits are not determined with respect to an eligible taxpayer. As further explained later in this preamble, an eligible credit is determined with respect to an eligible taxpayer in cases where the eligible taxpayer owns the underlying eligible credit property or, if ownership is not required, otherwise

conducts the activities giving rise to the underlying eligible credit. As examples, the proposed regulations describe two situations where a credit is allowable to an eligible taxpayer, but the eligible taxpayer is not permitted to transfer the credit under section 6418. First, the proposed regulations provide that a section 45Q credit allowable to a person that disposes of qualified carbon oxide, utilizes qualified carbon oxide, or uses qualified carbon oxide as a tertiary injectant due to an election made under section 45Q(f)(3)(B) is not transferable under section 6418. Second, the proposed regulations provide that a section 48 credit allowable to a lessee of property under section 50(d)(5) and an election under § 1.48–4 is not transferable under section 6418. In both cases, the taxpayer is only allowed to claim the credit as a result of an election by another taxpayer, and does not own the eligible credit property to which the credit was determined. These situations can be contrasted with a sale-leaseback transaction under section 50(d)(4) where a purchaser/lessor of investment credit property owns the underlying property to which an eligible credit is determined. In that case, provided all of the rules are met, because the eligible credit is determined with respect to eligible credit property owned and treated as originally placed in service by the purchaser/lessor, the purchaser/lessor can elect to transfer eligible credits determined with respect to the property under section 6418.

B. Manner and Due Date of Making a Transfer Election

Section 6418(a) allows an eligible taxpayer to transfer an eligible credit (or portion thereof) determined with respect to such taxpayer to a transferee taxpayer. Generally, section 6418 does not expressly provide for the relevant unit of measurement for an election to transfer eligible credits. Proposed § 1.6418–2(b) would provide generally that an eligible taxpayer is required to make a transfer election to transfer a specified credit portion on the basis of a single eligible credit property. For example, an eligible taxpayer that determines eligible credits with respect to two eligible credit properties would need to make a separate transfer election with respect to any specified credit portion determined with respect to each eligible credit property. This approach would provide eligible taxpayers with flexibility in determining the credit to transfer and aligns with how an excessive credit transfer is defined in section 6418(g)(2)(C).

In requiring the election to be made on the basis of a single eligible credit property, the Treasury Department and the IRS request comments on two issues. First, whether more specific guidance with respect to any eligible credit property is needed to allow eligible taxpayers to make the election as required. If such guidance is needed, suggestions for further defining the relevant eligible credit property are requested. Second, whether to adopt a grouping rule that allows taxpayers to make an election with respect to certain groups of eligible credit properties. If such a rule is recommended, discussion of the eligible credits that a rule should apply to, the appropriate circumstances for grouping, as well as specific rules for determining a group with respect to an eligible credit is requested.

Consistent with section 6418(f)(1)(B)(i), proposed § 1.6418–2(b)(2) would provide specific rules in the case of any section 45 credit, section 45Q credit, section 45V credit, or section 45Y credit that is an eligible credit. The proposed rules would provide that a transfer election is made with respect to each eligible credit property for which an eligible credit is determined. Consistent with section 6418(f)(1)(B)(ii), the proposed rules also would provide that a transfer election would be required to be made for each taxable year an eligible taxpayer elects to transfer a specified credit portion with respect to such eligible credit property during the 10-year period beginning on the date such eligible credit property was originally placed in service (or, in the case of a section 45Q credit, for each taxable year during the 12-year period beginning on the date the eligible credit property was originally placed in service).

Proposed § 1.6418–2(b)(3) would provide the manner of making a valid transfer election. Stakeholders asked for clarity regarding the manner of making a valid election and provided suggestions for how an election should be effectuated and potential information to be included. Proposed § 1.6418–2(b)(3) outlines the requirements for making a transfer election for eligible taxpayers other than partnerships or S corporations (those rules are in proposed § 1.6418–3(d)). While described in more detail in the proposed regulations, to make a valid transfer election, an eligible taxpayer as part of filing a return (or a return for a short year within the meaning of section 443 of the Code (short year return)), generally would be required to include the following—(A) a properly completed relevant source credit form for the eligible credit; (B) a properly completed Form 3800, *General Business Credit* (or its successor), including reporting the registration number received during the required pre-filing registration (as described in proposed § 1.6418–4); (C) a schedule attached to the Form 3800 (or its successor) showing the amount of eligible credit transferred for each eligible credit property; (D) a transfer election statement as described later in this preamble; and (E) any other information related to the election specified in guidance (as defined in proposed § 1.6418–1(e)).

A transfer election statement is described in proposed § 1.6418–2(b)(5) and would be generally defined as a written document that describes the transfer of a specified credit portion between an eligible taxpayer and transferee taxpayer. Election statements are used in similar situations to a transfer election under section 6418 (for example, an election under section 50(d)(5) and § 1.48–4, section 45G, or section 45J all require a written document between the parties). A transfer election statement that is completed by both the eligible taxpayer and the transferee taxpayer would be necessary to allow the transferee taxpayer the opportunity to file a return without needing to wait for the eligible taxpayer to file. A transfer election statement, which is described in more detail in the proposed regulations, would be required to generally include (1) information related to the transferee taxpayer and the eligible taxpayer; (2) a statement that provides the necessary information and amounts to allow the transferee taxpayer to take into account the specified credit portion with respect to the eligible credit property; (3) a statement that the parties are not related (within the meaning of section 267(b) or 707(b)(1)); (4) a representation from the eligible taxpayer that it has complied with all relevant requirements to make a transfer election; (5) a statement from the eligible taxpayer and the transferee taxpayer acknowledging the notification of recapture requirements under section 6418(g)(3) and the section 6418 regulations (if applicable); and (6) a statement or representation from the eligible taxpayer that the eligible taxpayer has provided the required minimum documentation to the transferee taxpayer. Required minimum documentation is specified in proposed § 1.6418–2(b)(3)(iv). Required minimum documentation would be the minimum documentation that the eligible taxpayer is required to provide to a transferee taxpayer, and is more fully described in the proposed regulations, but is generally documentation to validate the existence of the eligible credit property, any bonus credits amounts, and the

evidence of credit qualification. This requirement is consistent with a stakeholder suggestion that such information should be required to be provided by the eligible taxpayer. Proposed § 1.6418–2(b)(5)(v) would specify that a transferee taxpayer, consistent with § 1.6001–1(e), would be required to retain the requirement minimum documentation provided by the eligible taxpayer so long as the contents thereof may become material in the administration of any internal revenue law.

Proposed § 1.6418–2(b)(5)(iii) would provide a rule on the timing of the transfer election statement. The proposed rule generally allows a transfer election statement to be completed any time after the eligible taxpayer and transferee taxpayer have sufficient information to prepare a transfer election statement. However, a transfer election statement cannot be completed for any taxable year after the earlier of (A) the filing of the eligible taxpayer's return for the taxable year for which the specified credit portion is determined with respect to the eligible taxpayer, or (B) the filing of the return of the transferee taxpayer for the year in which the specified credit portion is taken into account. This proposed rule is intended to provide flexibility but places an outer limit on the timing of the transfer election statement because both the eligible taxpayer and the transferee taxpayer would be required to include a transfer election statement as part of filing a return, and therefore, the transfer election statement would need to be completed before a return is filed by either party.

Consistent with section 6418(e)(1), proposed § 1.6418–2(b)(4) would provide that an election to transfer any specified credit portion would need to be made not later than the due date (including extensions) for the tax return for the taxable year for which the eligible credit is determined. The proposed regulations would also clarify that an election would need to be filed on an original return and may not be made or revised on an amended return or by filing a request for an administrative adjustment under section 6227 of the Code. An original return includes a superseding return filed on or before the due date (including extensions). The proposed regulations would also provide that there is no relief available under §§ 301.9100–1 through 301.9100–3 for a late transfer election.

C. Limitations on the Election

Proposed § 1.6418–2(c) would include rules that describe certain limitations with respect to making an election under section 6418. First, consistent with section 6418(e)(1), the proposed regulations would provide that once made, an election to transfer an eligible credit is irrevocable. Second, consistent with section 6418(e)(2), the proposed regulations would prohibit a transferee taxpayer of any specified credit portion from making a second transfer under section 6418 with respect to any amount of such transferred credit.

Stakeholders asked whether a passthrough transferee taxpayer that allocates purchased eligible credits to its direct or indirect owners violates the no second transfer rule in section 6418(e)(2). An allocation of a transferred specified credit portion to a direct or indirect owner of a passthrough entity would not be considered a transfer under section 6418. As a result, an allocation of a transferred specified credit portion to a direct or indirect owner of a passthrough transferee taxpayer does not violate the no second transfer rule in section 6418(e)(2). However, certain rules would apply to allocations of a transferred specified credit portion from passthrough entities as further described in proposed § 1.6418–3.

Stakeholders also inquired whether eligible credits can be transferred through dealer arrangements. Any arrangement where the Federal income tax ownership of a specified credit portion transfers first, from an eligible taxpayer to a dealer or intermediary and then, ultimately, to a transferee taxpayer is in violation of the no second transfer rule in section 6418(e)(2). In contrast, an arrangement using a broker to match eligible taxpayers and transferee taxpayers should not violate the no second transfer rule, assuming the arrangement at no point transfers the Federal income tax ownership of a specified credit portion to the broker or any taxpayer other than the transferee taxpayer.

D. Determining the Eligible Credit

Proposed § 1.6418–2(d) would provide rules to clarify how to determine the amount of an eligible credit that is transferable. Any rules that relate to the determination of an eligible credit, such as rules in sections 49 and 50(b), would apply to the eligible taxpayer and therefore can limit the amount of transferable eligible credits determined with respect to a single eligible credit property owned by the eligible taxpayer. Section 6418(a) states that an eligible taxpayer can elect to transfer all (or any portion specified in the election) of an eligible credit determined with respect to such eligible taxpayer. The inclusion of the word ''determined'' is instructive, and the proposed regulations would draw a distinction between rules that impact the amount of credit determined or the credit base (and thus, the amount of eligible credit that can be transferred) versus rules that impact a taxpayer's ability to claim a particular eligible credit against its tax liability. Rules that impact the ability of a taxpayer to claim a particular eligible credit against its tax liability do not limit the amount of an eligible credit that an eligible taxpayer can transfer. Providing a limitation based on an eligible taxpayer's ability to claim an eligible credit would undercut one of the purposes of section 6418, which is to provide an alternative monetization mechanism to eligible taxpayers that would be unable to utilize credits in the current taxable year.

As previously stated, section 49 generally impacts the amount of a credit determined with respect to an investment credit property that an eligible taxpayer can transfer. The proposed regulations would provide rules for the application of section 49 to a partnership or S corporation that is an eligible taxpayer and elects under section 6418 to transfer an eligible credit (a transferor partnership or transferor S corporation). The proposed regulations would provide that any amount of eligible credit determined with respect to investment credit property held directly by a transferor partnership or transferor S corporation (or held directly by an entity disregarded as separate from such transferor partnership or transferor S corporation) is determined by the transferor partnership or transferor S corporation by taking into account the section 49 at-risk rules at the partner or shareholder level as of the close of the taxable year in which the investment credit property is placed in service. Thus, if the credit base of the investment credit property is limited to a partner or shareholder by section 49, then the amount of the eligible credit determined by the transferor partnership or transferor S corporation is also limited. The proposed regulations would provide that a transferor partnership or transferor S corporation that transfers any specified credit portion with respect to an investment credit property must request from each of its partners or shareholders, respectively, that is subject to section 49, the amount of such partner's or shareholder's nonqualified nonrecourse financing with respect to the investment credit

property as of the close of the taxable year in which the property is placed in service. Additionally, the transferor partnership or transferor S corporation would attach to its tax return for the taxable year in which the property is placed in service, the amount of each partner's or shareholder's section 49 limitation with respect to any specified credit portion transferred with respect to the investment credit property. The Treasury Department and the IRS request comments as to whether (1) any information or reporting requirements are needed for transferor partnerships or transferor S corporations to apply these rules when determining the amount of an eligible credit that can be transferred or (2) any additional clarifications are needed regarding how the at-risk rules apply to the determination of an eligible credit by an eligible taxpayer.

E. Treatment of Payments Made in Connection With Transfer

Proposed § 1.6418–2(e) would include rules to clarify the treatment of payments made by a transferee taxpayer to an eligible taxpayer in connection with the transfer of an eligible credit. The proposed regulations relate to the rules provided in section 6418(b)(1) through (3) and include a rule clarifying when a payment is considered to be made in connection with a transfer election.

Proposed § 1.6418–2(e)(1) would provide that an amount paid by a transferee taxpayer to an eligible taxpayer is consideration for a transfer of a specified credit portion only if it is paid in cash (as defined in § 1.6418–1(f)), directly relates to the specified credit portion, and is not described in § 1.6418–5(a)(3) (describing payments related to an excessive credit transfer). These proposed rules would provide objective criteria for eligible taxpayers and transferee taxpayers that seek certainty as to the timing of payments and acceptable forms of payment. General tax rules apply to any payments made or received outside of the requirements described in proposed § 1.6418–2(e)(1). Additionally, the requirements of proposed § 1.6418–2(e)(1) would not be satisfied where a specified credit portion is not ultimately transferred to a transferee taxpayer.

Pursuant to section 6418(b), the proposed regulations also include rules that would clarify that amounts paid in connection with a transfer election by a transferee taxpayer are not includible in the gross income of an eligible taxpayer and are not deductible by the transferee taxpayer.

In addition to these rules, the proposed regulations would include an anti-abuse provision. The intent of the anti-abuse provision is to disallow the election and transfer of an eligible credit under section 6418, or otherwise recharacterize a transaction's income tax consequences, in circumstances where the parties to the transaction have engaged in the transaction or a series of transactions with the principal purpose of avoiding tax liability beyond the intent of section 6418. This could include transactions that are intended to decrease the eligible taxpayer's gross income or increase a transferee taxpayer's deductions. For example, a transaction where an eligible taxpayer undercharges or overcharges for services to a customer who is also purchasing credits from the eligible taxpayer as a transferee taxpayer may violate the anti-abuse rule. The proposed regulations include two examples to illustrate application of the anti-abuse rule.

The proposed regulations do not address (1) the Federal income tax treatment of transaction costs, either for the eligible taxpayer or the transferee taxpayer, and (2) whether a transferee taxpayer is permitted to deduct a loss if the amount paid to an eligible taxpayer exceeds the amount of the eligible credit that the transferee taxpayer can ultimately claim. The Treasury Department and the IRS are currently developing rules on these general issues and seek comments as part of that process. Any comments should also consider the specific matters described in the following paragraphs.

Generally, gain or loss is recognized on the sale or other disposition of property. See section 1001 of the Code. If a seller incurs costs to facilitate the sale of property, such costs are generally required to be capitalized and reduce the amount realized from the sale. See § 1.263(a)–1(e). If a buyer incurs costs to facilitate the acquisition of property (for example, legal fees to draft the purchase agreement), such costs are generally required to be capitalized and included in the basis of property acquired. See, for example, §§ 1.263(a)–2(f)(1) and 1.263(a)–4(b)(1)(v).

It is a longstanding principle that courts should construe Federal tax laws in harmony with the legislative intent and seek to carry out the legislative purpose. *Foster* v. *U.S.*, 303 U.S. 118 (1938). Furthermore, it is a well-established principle of statutory interpretation that a tax law should not be interpreted to allow the practical equivalent of a double benefit absent a clear declaration of intent by Congress (no double benefit principle). *See generally U.S.* v. *Skelly Oil Co.* 394 U.S. 678, 684 (1969); *cf. Hillsboro Nat. Bank* v. *Commissioner,* 460 U.S. 370 (1983). A double tax benefit could arise in situations of a double deduction, a deduction and a credit, a credit or a deduction from amounts that are excluded from gross income, or credits from expenditures made to generate other credits. *Cf. Hintz* v. *Commissioner,* 712 F2d 281 (7th Cir. 1983); section 265, Expenses and Interest Relating to Tax-Exempt Income; *S/V Drilling Partners* v. *Commissioner,* 114 T.C. 83 (2000).

Section 6418 provides specific rules that explicitly or implicitly supersede certain general Federal income tax rules in whole or in part. Accordingly, the Treasury Department and the IRS must consider not only the application of specific provisions of section 6418 but also other applicable provisions of the Code when developing rules on the general issues described previously.

With respect to an eligible taxpayer, section 6418(b)(2) provides that any consideration received from a transferee taxpayer for the transfer of an eligible credit (or portion thereof) is not includible in gross income of the eligible taxpayer. Section 6418(c)(1)(A) provides that in the case of any eligible credit determined with respect to any facility or property held directly by a partnership or S corporation, any amount received as consideration for the transfer of such credit is treated as tax exempt income for purposes of sections 705 and 1366. In developing the rules applicable to transaction costs of an eligible taxpayer, it will be necessary to determine, among other things, whether (1) the no double benefit principle applies and, if so, how it should apply, and (2) the capitalization rules of section 263 and the regulations thereunder apply and, if so, how they interact with the rules under section 6418(b)(2) and (c)(1)(A).

With respect to a transferee taxpayer, as described herein, the proposed regulations would provide that there is no gross income to a transferee taxpayer when claiming an eligible credit if the amount paid for the eligible credit is less than the amount of the eligible credit transferred and claimed (transferee gross income exclusion rule). Similar to the development of rules for transaction costs of an eligible taxpayer, in developing the rules applicable to transaction costs of a transferee taxpayer, it will be necessary to determine, among other things, whether (1) the no double benefit principle applies and, if so, how it should apply, and (2) the capitalization rules of section 263 and the regulations thereunder apply and, if so, how they interact with the transferee gross income exclusion rule in the proposed regulations.

Also, with respect to a transferee taxpayer, section 6418(b)(3) provides that any consideration paid to the eligible taxpayer for an eligible credit is not deductible under any provision of the Code. However, it is not clear whether the ''not deductible'' language in section 6418(b)(3) should be read to preclude capitalization of the consideration paid to the eligible taxpayer (for example, under section 263). Therefore, it will be necessary for the Treasury Department and the IRS to determine whether the capitalization rules of section 263 and the regulations thereunder apply to a transferee taxpayer and, if so, how they should apply. It will also be necessary to interpret the scope of section 6418(b)(3) and resolve whether it precludes a deduction for any amount of consideration paid that is otherwise deductible as a loss under section 165 (for example, where the amount of consideration paid exceeds the amount of the credit the transferee taxpayer can ultimately claim).

F. Transferee Taxpayer's Treatment of an Eligible Credit

Proposed § 1.6418–2(f) would provide rules describing the transferee taxpayer's treatment of a transferred specified credit portion. Stakeholders sought clarification of whether a transferee taxpayer has a choice of which year to take an eligible credit into account. Section 6418(d) provides that in the case of any eligible credit transferred to a transferee taxpayer pursuant to a transfer election, the eligible credit is taken into account in the first taxable year of the transferee taxpayer ending with, or after, the taxable year of the eligible taxpayer with respect to which the credit was determined. This language prescribes the specific year the transferee taxpayer takes the transferred eligible credit into account. Therefore, no clarification is needed. To the extent the taxable years of an eligible taxpayer and a transferee taxpayer end on the same date, the transferee taxpayer will take the specified credit portion into account in that taxable year. To the extent the taxable years of an eligible taxpayer and a transferee taxpayer end on different dates, the transferee taxpayer will take the specified credit portion into account in the transferee taxpayer's first taxable year that ends after the taxable year of the eligible taxpayer. Consistent with this rule, the transferee taxpayer may claim a specified credit portion on an amended return or, if applicable, a request for administrative adjustment. A transferee taxpayer may also take into account a specified credit portion that it has purchased, or intends to purchase, when calculating its estimated tax payments, though the transferee taxpayer remains liable for any additions to tax in accordance with sections 6654 and 6655 to the extent the transferee taxpayer has an underpayment of estimated tax.

Stakeholders also asked whether there are any income tax consequences to a transferee taxpayer if the amount paid for an eligible credit is less than the amount of the eligible credit transferred and claimed. As described earlier, the proposed regulations would clarify this issue by providing that there is no gross income to a transferee taxpayer when claiming an eligible credit if the amount paid for the eligible credit is less than the amount of the eligible credit transferred and claimed. Under section 6418(a), a transferee taxpayer is treated as the eligible taxpayer for other purposes of the Code with respect to a transferred eligible credit. An eligible taxpayer would not have gross income as a result of claiming an eligible credit. As such, a transferee taxpayer also should not have gross income as a result of claiming a transferred eligible credit.

The proposed regulations would also describe the effect of the language in section 6418(a), which provides that the transferee taxpayer specified in an election (and not the eligible taxpayer) is treated as the taxpayer for purposes of the Code with respect to such credit (or such portion thereof). Consistent with an eligible credit being determined based on ownership of the underlying eligible credit property by an eligible taxpayer, or, if ownership is not required, based on conducting the activities giving rise to the eligible credit, the proposed regulations would provide that a transferee taxpayer does not also apply rules that relate to the determination of an eligible credit, such as rules in section 49 or 50(b) as described in proposed § 1.6418–2(d)(1). However, a transferee taxpayer would apply rules that relate to the amount of a transferred eligible credit that is allowed to be claimed in the taxable year based on a transferee's particular circumstances, such as the rules in section 38 or 469.

Consistent with applying credit utilization rules to transferee taxpayers, the proposed regulations would provide a rule that a transferred specified credit portion is treated as earned in connection with the conduct of a trade or business, and, if applicable, such transferred specified credit portion is subject to the passive activity limitation rules in section 469. However, a transferee taxpayer (or a direct or indirect owner of a transferee taxpayer that claims a transferred specified credit portion) that is subject to section 469 is not, as a result of a transfer election, considered to have owned an interest in the eligible taxpayer's business at the time the work was done (as required for material participation in § 1.469–5(f)(1)) and cannot change the characterization of the transferee taxpayer's participation with respect to generation of the transferred specified credit portion by using any of the grouping rules in § 1.469–4(c). This proposed rule would be consistent with the result that the transferee taxpayer does not apply rules that relate to the determination of an eligible credit because the transferee does not own the underlying eligible credit property to which the credit is determined or conduct the activity directly. Further, allowing a transferee taxpayer to try to change the characterization of an eligible credit based on grouping with its own activities under § 1.469–4(c) would conflict with the conclusion that the eligible credit has already been determined. In contrast, an eligible credit generated through the conduct of a trade or business does not lose such attribute through a transfer under section 6418 for purposes of determining whether a transferee taxpayer is allowed the credit. Likewise, a section 38 business credit does not become an individual (non-business) credit if transferred to an individual. If such attributes did not transfer under section 6418, eligible credits earned and used by eligible taxpayers would be subject to different limitations than transferred eligible credits used by transferee taxpayers. The impact of this rule for a transferee taxpayer that is subject to section 469 is that such transferee taxpayer will be considered to earn eligible credits through the conduct of a trade or business related to the eligible credit but will not materially participate in such business for purposes of section 469. Thus, a transferee taxpayer subject to section 469 would be required to treat the credits making up the specified credit portion as passive activity credits (as defined in section 469(d)(2)) to the extent the specified credit portion exceeds passive tax liability. The Treasury Department and the IRS request comments on whether there are circumstances in which it would be appropriate to not apply the passive activity rules under section 469 to a transferee taxpayer or to attribute the participation of an eligible taxpayer to a transferee taxpayer.

Lastly, proposed § 1.6418–2(f)(4) would provide rules for how a

transferee taxpayer can take into account a transferred specified credit portion. Section 6418(d) provides the taxable year that a transferee taxpayer takes a transferred eligible credit into account but does not provide further procedures applicable to a transferee taxpayer. In determining the proposed procedures, consideration was given to the requirements for any taxpayer when taking into account a general business credit, with additional information required that is necessary for tracking the transfer of specified credit portions. The proposed rules would provide that in order for a transferee taxpayer to take into account a specified credit portion, the transferee taxpayer would be required to include certain information as part of filing a return (or short year return). The proposed regulations would require (A) a properly completed Form 3800, *General Business Credit* (or its successor), taking into account a transferred eligible credit as a current general business credit, including all registration number(s) related to the transferred eligible credit; (B) the transfer election statement described earlier in this preamble attached to the return; and (C) any other information related to the transfer election specified in guidance.

III. Partnerships and S Corporations

A. Overview

The proposed regulations would provide general rules related to transfers of eligible credits by transferor partnerships and transferor S corporations and purchases of eligible credits by transferee partnerships and transferee S corporations. As a preliminary matter, the proposed regulations would clarify that a partnership or an S corporation may qualify as an eligible taxpayer or a transferee taxpayer, assuming all other relevant requirements in section 6418 are met. The proposed regulations would also clarify that the language in section 6418(c) requiring an eligible credit property to be ''held directly'' by a transferor partnership or transferor S corporation allows for such eligible credit property to be owned by an entity disregarded as separate from the transferor partnership or transferor S corporation for Federal income tax purposes.

In addition, the proposed regulations would clarify that any tax exempt income resulting from the receipt of consideration for the transfer of a specified credit portion by a transferor partnership or transferor S corporation is treated as arising from an investment activity and not from the conduct of a trade or business within the meaning of section 469(c)(1)(A). As a result, such tax exempt income is not treated as passive income to any partners or shareholders who do not materially participate within the meaning of section 469(c)(1)(B). Because a transfer of a specified credit portion does not involve the transfer of any assets used in a trade or business, it is more appropriate to treat any tax exempt income resulting from the transfer as arising from an investment activity.

B. Special Recapture Rules for Transferor Partnerships and S Corporations

Stakeholders requested clarification on whether indirect disposition events result in recapture of transferred investment tax credits to a transferee taxpayer under section 6418(g)(3)(B). Section 1.47–4(a)(2) provides that if an S corporation shareholder's interest in an S corporation is reduced as a result of certain events during the recapture period by a certain percentage of the shareholder's interest for the taxable year of the S corporation in which the investment credit property is placed in service, recapture can occur to such S corporation shareholder. Likewise, § 1.47–6(a)(2) provides that if a partner's interest in the general profits of a partnership is reduced as a result of certain events during the recapture period by a certain percentage of the partner's interest in general profits for the taxable year of the partnership in which the investment credit property is placed in service, recapture can occur to such partner. As explained later in part V of this Explanation of Provisions, the proposed regulations would provide generally that if an applicable investment credit property is disposed of, or otherwise ceases to be investment credit property *with respect to the eligible taxpayer,* a transferee taxpayer bears the recapture tax associated with any transferred eligible investment tax credit transferred to such transferee taxpayer.

The recapture events described in §§ 1.47–4(a)(2) and 1.47–6(a)(2) are applicable with respect to the specific shareholder or partner to which the recapture event occurs and not with respect to the transferor S corporation or transferor partnership. As a result, such recapture events should not result in recapture of a transferred eligible investment tax credit to a transferee taxpayer under section 6418(g)(3)(B). Instead, the recapture tax liability resulting from the reduction of an S corporation shareholder's interest or a partner's interest in general profits should continue to result in recapture to the applicable disposing shareholder or partner. The proposed regulations would clarify that ''indirect'' dispositions under §§ 1.47–4(a)(2) and 1.47–6(a)(2) do not result in recapture tax liability to a transferee taxpayer under section 6418. Instead, these rules continue to apply to a disposing partner or shareholder in a transferor partnership or transferor S corporation, respectively. Any recapture to a disposing partner is calculated based on the partner's share of the basis (or cost) of the section 38 property to which the eligible credits were determined in accordance with § 1.46–3(f). Any recapture to a disposing shareholder is calculated based on the shareholder's pro rata share of the basis (or cost) of the section 38 property to which the eligible credits were determined in accordance with § 1.48–5.

The Treasury Department and the IRS request comments on whether additional rules or clarifications are needed with respect to how the indirect disposition recapture rules under §§ 1.47–6(a)(2) and 1.47–4(a)(2) apply to partners or shareholders in transferor partnerships or transferor S corporations, respectively.

As previously stated, the proposed regulations would provide that any amount of eligible credit determined with respect to investment credit property held directly by a partnership or S corporation would be required to be determined by the partnership or S corporation taking into account the section 49 at-risk rules at the partner or shareholder level as of the close of the taxable year in which the investment credit property is placed in service. The proposed regulations also would provide that any net increase in the amount of nonqualified nonrecourse financing during the recapture period for a partner or shareholder in a transferor partnership or transferor S corporation with respect to such partner's or shareholder's credit base for a transferred eligible investment tax credit does not result in recapture to a transferee taxpayer under section 6418(g)(3). Similar to the indirect disposition recapture rules described above, the recapture rules under section 49(b) for partners or shareholders in a transferor partnership or transferor S corporation apply with respect to a disposition or change in financing at the partner or shareholder level and not at the eligible taxpayer (*i.e.,* the partnership or S corporation) level. As such, these rules would continue to apply to partners or shareholders in transferor partnerships or transferor S corporations that increase their nonqualified nonrecourse financing

amount during the recapture period. Any recapture to a disposing partner is calculated based on the partner's share of the basis (or cost) of the section 38 property to which the eligible credits were determined in accordance with § 1.46–3(f). Any recapture to a disposing shareholder is calculated based on the shareholder's pro rata share of the basis (or cost) of the section 38 property to which the eligible credits were determined in accordance with § 1.48–5.

The Treasury Department and the IRS request comments on whether additional rules or clarifications are needed with respect to how the recapture rules under section 49(b) apply to partners or shareholders in transferor partnerships or transferor S corporations. As a clarification, recapture under section 49(b) applicable directly to an eligible taxpayer (for example, to an eligible taxpayer that is an individual) results in recapture to a transferee taxpayer under section 6418(g)(3).

The proposed regulations would also provide that any net decrease in the amount of nonqualified nonrecourse financing during the recapture period with respect to a partner's or shareholder's credit base for a transferred specified credit portion determined with respect to investment credit property does not result in additional eligible credit that can be transferred by the applicable partner, shareholder or transferor partnership or transferor S corporation. Instead, any net decrease in the amount of nonqualified nonrecourse financing and resulting increase in the credit base to a partner or shareholder results in additional investment tax credit that can be used by the applicable partner or shareholder. The Treasury Department and the IRS request comments on whether additional rules or clarifications are needed with respect to how decreases in nonqualified nonrecourse amounts under section 49(a)(2) that increase the credit base for which eligible credits have previously been transferred apply to partners or shareholders in a transferor partnership or transferor S corporation, respectively.

C. Rules Solely Applicable to Transferor and Transferee Partnerships

The proposed regulations include special rules applicable to transferor and transferee partnerships and their direct and indirect partners. Section 6418(c)(1)(A) provides that any amount received as consideration for a transfer of eligible credits by a transferor partnership is treated as tax exempt income for purposes of section 705. Section 6418(c)(1)(B) provides that a partner's distributive share of such tax exempt income is based on such partner's distributive share of the otherwise eligible credit for each taxable year. Stakeholders asked for clarity as to how this determination should be made.

The proposed regulations would provide generally that a partner's distributive share of tax exempt income resulting from the receipt of cash by a transferor partnership for a transferred specified credit portion is based on the partner's proportionate distributive share of the otherwise eligible credit as determined under §§ 1.46–3(f) and 1.704–1(b)(4)(ii). The proposed regulations further clarify that any tax exempt income resulting from the receipt of cash by a transferor partnership for a transferred specified credit portion is treated as received or accrued, including for purposes of section 705, as of the date the specified credit portion is determined with respect to the transferor partnership. In effect, this means that tax exempt income resulting from the receipt of cash by a transferor partnership in exchange for a transferred specified credit portion should be allocated to the same partners and in the same proportionate amount, as the specified credit portion would have been allocated if not transferred.

The proposed regulations would provide a special rule for allocations of tax exempt income resulting from a transfer of a specified credit portion of less than all eligible credit(s) determined with respect to an eligible credit property held by a transferor partnership. This special rule permits tax exempt income resulting from the receipt of cash for a transfer of one or more specified credit portion(s) of less than all eligible credits from an eligible credit property to, generally, be allocated to those partners that desired to transfer their distributive share of the underlying credits. To take advantage of this special rule, a transferor partnership would first determine each partner's distributive share of the otherwise eligible credits determined with respect to such eligible credit property in accordance with §§ 1.46–3(f) and 1.704–1(b)(4)(ii). This amount is referred to as a ''partner's eligible credit amount.'' Thereafter, the transferor partnership may determine, either in a manner described in the partnership agreement or as the partners may agree, the portion of each partner's eligible credit amount to be transferred and the portion of each partner's eligible credit amount to be retained and allocated to such partner. Following the transfer of the specified credit portion(s), the transferor partnership may allocate to each partner its agreed upon share of eligible credits, tax exempt income resulting from the receipt of consideration for the transferred specified credit portion(s), or both, as the case may be; provided that, the amount of eligible credits allocated to each partner may not exceed such partner's eligible credit amount and the amount of tax exempt income allocated to each partner would equal such partner's proportionate share of tax exempt income resulting from the transfer(s). Each partner's proportionate share of tax exempt income resulting from the transfer(s) is equal to the total tax exempt income resulting from the transfer(s) of the specified credit portion(s) multiplied by a fraction, (i) the numerator of which is a partner's total eligible credit amount minus the amount of eligible credits actually allocated to the partner with respect to the eligible credit property for the taxable year, and (ii) the denominator of which is the total amount of the specified credit portion(s) transferred by the partnership with respect to the eligible credit property for the taxable year. The proposed regulations provide examples of this rule.

The Treasury Department and the IRS request comments on whether additional rules or clarifications are needed with respect to when allocations of tax exempt income and eligible credits under section 6418 will be respected under section 704(b).

The proposed regulations would clarify that a partnership that is an indirect or direct partner of a transferor partnership (an upper-tier partnership) is not an eligible taxpayer with respect to an eligible credit allocated by a transferor partnership. The proposed regulations also would clarify that for any tax exempt income allocated to an upper-tier partnership as a result of the receipt of consideration for a transfer of a specified credit portion by a transferor partnership, the upper-tier partnership would determine its partners' distributive shares of the tax exempt income in proportion to the partners' distributive shares of the otherwise eligible credit. In effect, this means that the upper-tier partnership would allocate any tax exempt income resulting from a transfer of a specified credit portion by a lower-tier partnership among its partners as of the same time, and in the same proportionate amount, as the eligible credit would have been allocated if not transferred by the transferor partnership.

Stakeholders asked for confirmation that cash payments received by a

transferor partnership as consideration for a transfer of eligible credits can be distributed in a manner different from the partners' distributive shares of the tax exempt income resulting from the receipt of the cash payment. A transferor partnership that receives a cash payment from a transfer of a specified credit portion is under no restriction on how it can use such cash payment (including on how it makes distributions to its partners). Such cash payment is treated in the same manner as the transferor partnership's other cash flows.

The proposed regulations would provide rules for transferee partnerships and clarify that allocations of a transferred specified credit portion by a transferee partnership are not a violation of the no additional transfer rule in § 1.6418–2(c)(2). The proposed regulations also would provide that cash payments by a transferee partnership for a transferred specified credit portion are treated as a section 705(a)(2)(B) expenditure. Each partner's distributive share of any transferred specified credit portion is based on such partner's distributive share of the section 705(a)(2)(B) expenditures used to fund the purchase of such transferred specified credit portion. Each partner's distributive share of the section 705(a)(2)(B) expenditures used to fund the purchase of any transferred specified credit portion is determined by the partnership agreement. Or, if the partnership agreement does not provide for the allocation of such nondeductible expenditures, then each partner's distributive share is based on the transferee partnership's general allocation of nondeductible expenditures.

To prevent avoidance of the no additional transfer rule in proposed § 1.6418–2(c)(2) through transfers of interests in transferee partnerships, the proposed regulations in proposed § 1.6418–3(b)(4)(iv) would provide that a transferred specified credit portion purchased by a transferee partnership is treated as an extraordinary item under § 1.706–4(e) (including also a proposed addition to § 1.706–4(e) confirming a transferred specified portion is an extraordinary item). The proposed regulations further provide that if the transferee partnership and eligible taxpayer have the same taxable years, such extraordinary item is deemed to occur on the date the transferee partnership first makes a cash payment to an eligible taxpayer for any transferred specified credit portion. If the transferee partnership and eligible taxpayer have different taxable years, the extraordinary item is deemed to occur on the later of the first date the transferee partnership takes the transferred specified credit portion into account under section 6418(d), or the first date that the transferee partnership made a cash payment to the eligible taxpayer for the transferred specified credit portion. For example, if an eligible taxpayer is a calendar year taxpayer and a transferee partnership is a fiscal year taxpayer with its tax year beginning on June 1st, and the transferee partnership makes its first cash payment before June 1st for a transferred specified credit portion determined with respect to the eligible taxpayer during year 1, then the transferred specified credit portion is deemed to occur to the transferee partnership on June 1st. However, if the transferee partnership makes its first cash payment at any point from June 1st to December 31st, the transferred specified credit portion is deemed to occur on the cash payment date. The Treasury Department and the IRS continue to study whether additional rules are required under section 6418 to prevent avoidance of the no additional transfer rule through transfers of interests in transferee partnerships.

Finally, for transferee partnerships, the proposed regulations would clarify that an upper-tier partnership that is a direct or indirect partner in a transferee partnership and that is allocated a transferred specified credit portion is not an eligible taxpayer with respect to such transferred specified credit portion. The upper-tier partnership would determine each partner's distributive share of the transferred specified credit portion in accordance with the same rules the transferee partnership determines its partners' distributive shares of the transferred specified credit portion.

The Treasury Department and the IRS request comments on whether additional rules or clarifications are needed with respect to when allocations of a transferred specified credit portion will be respected under section 704(b). The Treasury Department and the IRS also request comments on whether additional rules or clarifications are needed with respect to transfers of partnership interests that are made after the transferring partner has contributed capital to a transferee partnership for the purpose of purchasing eligible credits, but before the transferee partnership has made any cash payments to an eligible taxpayer.

D. Rules Solely Applicable to Transferor and Transferee S Corporations

The proposed regulations would include special rules applicable to transferor and transferee S corporations and their shareholders. Section 6418(c)(1)(A) provides that any amount received as consideration for a transfer of eligible credits by a transferor S corporation is treated as tax exempt income for purposes of section 1366. The proposed regulations would provide that each shareholder would take into account such shareholder's pro rata share (as determined under section 1377(a) of the Code) of any tax exempt income resulting from the receipt of cash for the transfer of a specified credit portion by a transferor S corporation. The proposed regulations would further clarify that any tax exempt income resulting from the receipt of cash for the transfer of a specified credit portion by a transferor S corporation is treated as received or accrued, including for purposes of section 1366, as of the date the transferred specified credit portion is determined with respect to the transferor S corporation. In effect, this means that any tax exempt income resulting from the receipt of cash by a transferor S corporation for a transferred specified credit portion should be allocated to the same shareholders and in the same proportionate amount as the specified credit portion would have been allocated if not transferred.

The proposed regulations would also provide rules for transferee S corporations and indicate that allocations of a transferred specified credit portion by a transferee S corporation are not a violation of the no additional transfer rule in § 1.6418–2(d)(2).

The proposed regulations would clarify that cash payments by a transferee S corporation for a transferred specified credit portion are treated as an expenditure under section 1367(a)(2)(D) of the Code since such payments are nondeductible. The proposed regulations would also provide rules for how shareholders of a transferee S corporation account for a transferred specified credit portion. Each shareholder of a transferee S corporation would take into account its pro rata share (as determined under section 1377(a)) of any transferred specified credit portion. If the transferee S corporation and eligible taxpayer have the same taxable years, the transfer of a specified credit portion is treated as occurring to a transferee S corporation during the transferee S corporation's permitted year (as defined under sections 444 and 1378(b)) that the transferee S corporation first makes a cash payment as consideration to an eligible taxpayer for the transferred specified credit portion. If the transferee S corporation and eligible taxpayer have

different taxable years, then the transfer of a specified credit portion is treated as occurring to a transferee S corporation during the transferee S corporation's first permitted year (as defined under sections 444 and 1378(b)) ending with, or after, the taxable year of the eligible taxpayer to which the transferred specified credit portion was determined.

E. Elections for Transferor Partnerships and Transferor S Corporations

Finally, the proposed regulations would provide specific rules relating to elections for transferor partnerships or transferor S corporations. Consistent with the rules for other eligible taxpayers, partnerships and S corporations would generally make a transfer election for a specified credit portion in the manner provided in proposed § 1.6418–2(b)(1) through (3) described earlier in this preamble. The proposed regulations would also clarify that all documents required in § 1.6418–2(b)(1) through (3) would need to be attached to the partnership or S corporation return for the taxable year during which the transferred specific credit portion was determined. For the transfer election to be valid, the return would need to be filed not later than the time prescribed by §§ 1.6031(a)–1(e) and 1.6037–1(b) (including extensions of time) for filing the return for such taxable year.

IV. Registration Under Section 6418(g)(1)

Section 6418(g)(1) provides that as a condition of, and prior to, any transfer of any portion of an eligible credit under section 6418, the Secretary may require such information (including, in such form or manner as is determined appropriate by the Secretary, such information returns) or registration as the Secretary deems necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under this section.

In general, consistent with section 6417, stakeholders requested additional information about this provision and requested that the regulations balance the need to prevent fraud and abuse with the burden on taxpayers. Stakeholders recommended a registration system that assigns a transfer number to an eligible taxpayer that can be used by transferee taxpayers to claim transferred credits and allows the IRS to track transfers of eligible credits. Stakeholders also recommended that information or registration requirements should be as consistent as possible across sections 48D(d)(1), 6417(d)(5), and 6418(g)(1). In order to meet the purpose of section 6418(g)(1), the Treasury Department and the IRS believe that it is necessary to establish a mandatory registration process that is in place before the end of the 2023 calendar year, which is the first full taxable year during which a transfer election under section 6418 is available.

Proposed § 1.6418–4 generally provides rules requiring that eligible taxpayers register before filing the return on which a transfer election is made and provide information related to each eligible credit property for which the eligible taxpayer intends to transfer a specified credit portion. Proposed § 1.6418–4(a), consistent with section 6418(g)(1), requires that, as a condition of, and prior to, making an election to transfer a specified credit portion, an eligible taxpayer satisfy the pre-filing registration requirements in proposed § 1.6418–4(b). After the required pre-filing registration process is successfully completed, an eligible taxpayer will receive a unique registration number from the IRS for each registered eligible credit property for which the eligible taxpayer intends to transfer a specified credit portion. The Treasury Department and the IRS intend for this pre-filling registration process to occur through an IRS electronic portal (unless otherwise allowed in guidance). An eligible taxpayer that does not obtain a registration number and report the registration number on its return with respect to an eligible credit property is ineligible to make a transfer election. However, completion of the pre-filing registration requirements and receipt of a registration number does not, by itself, mean the eligible taxpayer is eligible to transfer any specified credit portion determined with respect to the eligible credit property. The registration number also must be reported on the eligible taxpayer's return.

Proposed § 1.6418–4(b) provides the following pre-filing registration requirements.

First, an eligible taxpayer must complete the pre-filing registration process electronically through an IRS electronic portal in accordance with the instructions provided therein, unless otherwise provided in guidance. If the election is by a member of a consolidated group, the member must complete the pre-filing registration process as a condition of, and prior to, making an elective payment election. See § 1.1502–77 (providing rules regarding the status of the common parent as agent for its members).

Second, an eligible taxpayer must satisfy the registration requirements and receive a registration number prior to making a transfer election for a specified credit portion on the eligible taxpayer's return for the taxable year at issue.

Third, an eligible taxpayer is required to obtain a registration number for each eligible credit property with respect to which a transfer election of a specified credit portion is made.

Finally, an eligible taxpayer must provide the specific information required to be provided as part of the pre-filing registration process. The provision of such information, which includes information about the taxpayer, about the eligible credits, and about the eligible credit property, will allow the IRS to prevent duplication, fraud, improper payments, or excessive transfers under section 6418. For example, verifying information about the taxpayer will allow the IRS to mitigate the risk of fraud or improper transfers. Information about eligible credit properties, including their address and coordinates (longitude and latitude), supporting documentation, beginning of construction date, and placed in service date will allow the IRS to mitigate the risk of duplication, fraud, and improper transfers for properties that are not eligible credit properties.

Proposed § 1.6418–4(c) provides rules related to the registration number that is obtained after the IRS has reviewed and approved the taxpayer's submitted information. First, these rules provide that a registration number is valid for an eligible taxpayer only for the taxable year for which it is obtained, and for a transferee taxpayer's taxable year in which the specified credit portion is taken into account. Second, proposed § 1.6418–4(c) provides rules for the renewal of a registration number that has been previously obtained. The eligible taxpayer is required to renew the registration with respect to an eligible credit property each year in accordance with guidance, including attesting that all the facts are still correct or updating any facts. Third, the proposed regulations provide that, if facts change with respect to an eligible credit property for which a registration number has been previously obtained, an eligible taxpayer is required to amend the registration to reflect these new facts. Lastly, the proposed regulations provide that an eligible taxpayer is required to include the registration number of the eligible credit property on the eligible taxpayer's return for the taxable year, as provided in proposed § 1.6418–2(b), for an election to be effective with respect to any eligible credit determined with respect to any eligible credit property. The IRS will treat a transfer election as ineffective with respect to an eligible credit determined with respect to an

eligible credit property for which the eligible taxpayer does not include a valid registration number on its return.

A transferee taxpayer is also required to report the registration number received from an eligible taxpayer on its return for the taxable year that the transferee taxpayer takes the transferred eligible credit into account.

V. Special Rules

The proposed regulations would provide special rules relating to the determination of an excessive credit transfer, reasonable cause for a transferee taxpayer, the difference between an excessive credit transfer and recapture under section 50(a) or 45Q(f)(4), the mechanics for basis reduction and recapture notification, and rules for ineffective elections. The proposed regulations also would provide special rules relating to the carryback and carryforward of transferred eligible credits.

The proposed regulations describe the rules related to an excessive credit transfer consistent with section 6418(g)(2)(A). Section 6418(g)(2)(A) provides in the case of any specified credit portion that is transferred to a transferee taxpayer pursuant to section 6418(a) that the Secretary determines constitutes an excessive credit transfer, the tax imposed on the transferee taxpayer by chapter 1, regardless of whether such entity would otherwise be subject to chapter 1 tax, for the taxable year in which such determination is made will be increased by an amount equal to the sum of (i) the amount of such excessive credit transfer, plus (ii) an amount equal to 20 percent of such excessive credit transfer.

Consistent with section 6418(g)(2)(B), the proposed regulations would provide that the 20 percent penalty related to an excessive credit transfer does not apply if the transferee taxpayer demonstrates to the satisfaction of the IRS that the excessive credit transfer resulted from reasonable cause. Under the proposed regulations, reasonable cause would be generally determined based on the relevant facts and circumstances of a transaction. The proposed regulations would further provide that the determination of reasonable cause includes an evaluation of a transferee taxpayer's efforts to determine that the amount of eligible credit transferred by the eligible taxpayer to the transferee taxpayer is not more than the eligible credit that was determined with respect to the eligible credit property for the taxable year in which the eligible credit was determined and has not been transferred to any other taxpayer. Further, based on a review of suggestions by stakeholders, the proposed regulations would provide a list of factors that a transferee taxpayer could show to demonstrate reasonable cause. The list of factors is not exhaustive and is also not intended as a list of required actions in all transfers. Instead, the list of factors, which includes a review of the eligible taxpayer's records with respect to the determination of the eligible credit (including documentation evidencing eligibility for bonus credit amounts), would be intended to provide more clarity with respect to reasonable cause in these circumstances for eligible taxpayers, transferee taxpayers and the IRS in administration of the provision.

The proposed regulations also would define the term ''excessive credit transfer'' consistent with section 6418(g)(2)(C) to mean, with respect to an eligible credit property for which an election is made under proposed § 1.6418–2 or § 1.6418–3 for any taxable year, an amount equal to the excess of—(i) the amount of the specified credit portion claimed by the transferee taxpayer with respect to such eligible credit property for such taxable year; over (ii) the amount of the eligible credit that, without the application of section 6418, would be otherwise allowable under the Code with respect to such eligible credit property for such taxable year. In the second part of the definition of the term, the Treasury Department and the IRS are interpreting the phrase ''amount of such credit . . . which would be otherwise allowable'' with respect to such eligible credit property for the taxable year to have the same meaning as the amount of the eligible credit properly determined with respect to such eligible credit property for such taxable year in the hands of the eligible taxpayer. See Joint Committee on Taxation, *Description Of Energy Tax Changes Made By Public Law 117–169,* JCX–5–23, 98 (April 17, 2023).

The proposed regulations would also provide a rule for determining an excessive credit transfer when there are multiple transferees. The proposed regulations would provide that all transferee taxpayers are considered one transferee for calculating whether there was an excessive credit transfer and the amount of the excessive credit transfer. If there was an excessive credit transfer, then the amount of excessive credit transferred to a specific transferee taxpayer is equal to the total excessive credit transferred multiplied by the transferee's portion of the total credit transferred to all transferees. This rule is applied on an eligible credit property basis.

Finally, with respect to excessive credit transfers, the proposed regulations provide three examples to illustrate when there is no excessive credit transfer, when there is an excessive credit transfer, and when there is an excessive credit transfer as to multiple transferees.

Stakeholders asked whether a recapture event under section 50(a) would be treated as an excessive credit transfer under section 6418(g)(2). The excessive credit transfer rules operate separately from the recapture rules. The excessive credit transfer rules apply where the credit amount reported on the original credit source form by the eligible taxpayer and transferred to a transferee taxpayer was excessive. Recapture of a tax credit occurs when the original tax credit reported would have been correct without the occurrence of a subsequent recapture event. The proposed regulations therefore would provide a rule that recapture events under section 45Q(f)(4) or 50(a) do not result in an excessive credit transfer.

Stakeholders asked for clarification whether the recapture tax under section 50(a) is imposed on the eligible taxpayer or the transferee taxpayer. Section 6418(g)(3)(B) provides that if, during any taxable year, the applicable investment credit property (as defined in section 50(a)(5)) is disposed of, or otherwise ceases to be investment credit property with respect to the eligible taxpayer, before the close of the recapture period (as described in section 50(a)(1))—(i) such eligible taxpayer must provide notice of such occurrence to the transferee taxpayer (in such form and manner as the Secretary prescribes), and (ii) the transferee taxpayer must provide notice of the recapture amount (as defined in section 50(c)(2)), if any, to the eligible taxpayer (in such form and manner as the Secretary prescribes). The proposed regulations include a rule that the recapture amount is calculated and taken into account by the transferee taxpayer. This interpretation is consistent with the statutory framework for recapture tax under section 50, which generally imposes recapture tax on the taxpayer who claimed the credit, regardless of whether such taxpayer owns the underlying property to which the credit is determined. This interpretation is also consistent with section 6418(a), which treats the transferee taxpayer (and not the eligible taxpayer) as the taxpayer for purposes of the Code with respect to a specified credit portion, and with section 6418(g)(3)(B)(ii), which requires the transferee taxpayer to provide notice of

the recapture amount, if any, to the eligible taxpayer.

Consistent with recapture tax liability being imposed on the transferee taxpayer, as a requested clarification, there is no prohibition under section 6418 for an eligible taxpayer and a transferee taxpayer to contract between themselves for indemnification of the transferee taxpayer in the event of a recapture event.

The proposed regulations would also provide guidance on the notifications that are required by the eligible taxpayer and the transferee taxpayer after a recapture event, as described in section 6418(g)(3)(B)(i) and (ii). The proposed regulations would provide that an eligible taxpayer would be required to provide notification of a recapture event to a transferee taxpayer, with such notification including all of the information necessary for the transferee taxpayer to calculate the recapture amount (as defined under section 50(c)(2)). This notification would need to be provided in a timely manner so that a transferee taxpayer can calculate the recapture amount by the due date of the transferee taxpayer's return (without extensions). Beyond these requirements, the parties can contract as to the form the notice must take and to any additional time periods for providing the notice, provided the terms of the contract do not otherwise conflict with the terms of the proposed regulations. The IRS would also be permitted to provide further information requirements or more specific time periods if required through instructions to forms or further guidance. The proposed regulations contain similar requirements as to the notification required by the transferee taxpayer of the recapture amount, with the difference being the type of information that is provided. Together, these notification rules seek to inform parties of the minimum information required in a notice and the outer limits on time periods, but still allow for parties to agree to other terms as needed.

Section 6418(g)(3) does not specifically address recapture under section 45Q(f)(4). Instead, section 6418(g)(3) only addresses recapture under section 50(a), which occurs when an investment credit property for which an eligible credit was determined is disposed of, or otherwise ceases to be investment credit property with respect to the eligible taxpayer before the end of the recapture period. However, applying rules consistent with section 6418(g)(3) to eligible section 45Q credits is appropriate. Section 45Q has similar requirements in that carbon oxide that has been sequestered, utilized, or used and to which a section 45Q credit has been determined is generally intended to remain sequestered, utilized or used for the entire recapture period. Addressing this issue is also consistent with the authority granted in section 6418(h) to issue regulations necessary to carry out the purposes of section 6418. As such, the proposed regulations would clarify that the rules under proposed §§ 1.6418–5(d) and 1.45Q–5 apply to a transferee taxpayer to the extent any eligible section 45Q is transferred under section 6418. The proposed regulations would also clarify that an eligible taxpayer would be required to provide notice to a transferee taxpayer of a recapture event, the amount of leaked qualified carbon oxide, the amount of qualified carbon oxide subject to recapture and the recapture amount in accordance with § 1.45Q–5(c) through (e). Such notice would be required to be provided in a timely manner so that a transferee taxpayer can calculate the recapture amount by the due date of the transferee taxpayer's tax return (without extensions).

The proposed regulations would also provide a clarification that an ineffective election is not considered an excessive credit transfer to the transferee taxpayer. An ineffective election to transfer an eligible credit means that no transfer has occurred for purposes of section 6418. This means that section 6418 would not apply to the transaction, and the tax consequences are determined under any other relevant provisions of the Code. For example, an ineffective election results if an eligible taxpayer tries to elect to transfer an eligible credit, but the eligible taxpayer did not complete or receive a registration number with respect to the eligible credit property to which the credit is determined or if an eligible taxpayer attempts to transfer an eligible credit to a related party.

Stakeholders asked whether eligible credits are subject to new section 39(a)(4), regarding additional carryback and carryforward years. The proposed regulations would provide that a transferee taxpayer can use section 39(a)(4) to the extent an eligible credit is also listed in section 6417(b). Section 39(a)(4) generally allows a 3-year carryback period (as opposed to a 1-year) in the case of any applicable credit (as defined in section 6417(b)). This issue has two parts, the first of which is broader than these proposed regulations. The first issue is whether the reference in section 39(a)(4) to applicable credit is only referring to an applicable credit determined by an applicable entity under section 6417(a), or, if the reference is only referring to the list of credits in section 6417(b). The proposed regulations would provide that the language in section 39(a)(4) is referring to the list of credits in section 6417(b). Regardless of the taxpayer determining the credit, if the credit is listed in section 6417(b), then the credit is an applicable credit. The second issue is whether there is any prohibition against a transferee taxpayer using section 39(a)(4). No statutory language prohibits a transferee taxpayer from using the rule in section 39(a)(4) with respect to an eligible credit. All of the eligible credits would meet the definition in section 6417(b), although there are placed in service dates under section 6417(b)(2), (3), and (5) that may impact application of section 39(a)(4), which must be taken into consideration.

With respect to real estate investment trusts (REITs), stakeholders requested that the proposed regulations clarify that eligible credits that have not yet been transferred are treated as a real estate asset, cash, or cash item and thus, will not potentially cause a REIT to fail the asset test for REITs under section 856(c)(4). The proposed regulations do not directly adopt this comment; however, the Treasury Department and the IRS believe that the proposed regulations, particularly with respect to the paid in cash and timing of sale requirements, will assist REITs in managing issues with the REIT asset test. Further comments are requested with respect to whether the proposed regulations provide sufficient guidance to enable REITs to manage the potential REIT asset test issues.

Stakeholders also requested that the proposed regulations clarify that the transfer of an eligible credit pursuant to section 6418 is not considered a dealer sale under the REIT prohibited transactions rules of section 857(b)(6). The proposed regulations do not include a rule addressing this question. The Treasury Department and the IRS do not believe that a prohibited transaction tax issue arises from the transfer of eligible tax credits. Section 6418 provides that the cash amount received as consideration for the transfer of an eligible credit from an eligible taxpayer to a transferee taxpayer is not includible in the eligible taxpayer's gross income. Section 857(b)(6) imposes a tax equal to 100% of the net income derived from a REIT's prohibited transactions. Since cash received by an eligible REIT as consideration for the transfer of an eligible tax credit would not be includible in any calculation of the eligible taxpayer's gross income, the transaction cannot result in any net

income and, consequently, there is no prohibited transaction tax issue regarding the transfer of an eligible credit.

Stakeholders also requested confirmation that receipt of (or the right to receive) an eligible credit does not result in income to an eligible taxpayer that is also a REIT. Generally, Federal income tax rules do not treat as gross income a person's becoming entitled under the Code to a credit against Federal income tax. This general principle equally applies to an eligible taxpayer—including a REIT—becoming entitled to an eligible credit that it may transfer under section 6418. Accordingly, the proposed regulations do not include the requested rule specifically addressing REITs.

Lastly, stakeholders sought confirmation that the sale of energy under sections 45 and 45Y is not a dealer sale under the REIT prohibited transactions rules of section 857(b)(6). The proposed regulations do not address this issue. However, in the preamble to TD 9784 (81 FR 59849, 59856 (August 31, 2016)), the Treasury Department and the IRS noted that until additional guidance is published in the Internal Revenue Bulletin, in any taxable year in which (1) the quantity of excess electricity transferred to the utility company during the taxable year from energy producing distinct assets that serve an inherently permanent structure does not exceed (2) the quantity of electricity purchased from the utility company during the taxable year to serve the inherently permanent structure, the IRS will not treat any net income resulting from the transfer of such excess electricity as constituting net income derived from a prohibited transaction under section 857(b)(6). The Treasury Department and the IRS believe that any sale of electricity that is not within the scope of the statement in the 2016 preamble should be analyzed on a facts and circumstances basis to determine whether the sale is subject to the prohibited transaction rules of section 857(d)(6).

Proposed Applicability Dates

These regulations are proposed to apply to taxable years ending on or after the date the final regulations are published in the **Federal Register** Taxpayers may rely on these proposed regulations for taxable years beginning after December 31, 2022, and before the date the final regulations are published in the **Federal Register**, provided the taxpayers follow the proposed regulations in their entirety and in a consistent manner.

Special Analyses

I. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) (''PRA'') generally requires that a Federal agency obtain the approval of the Office of Management and Budget (OMB) before collecting information from the public, whether such collection of information is mandatory, voluntary, or required to obtain or retain a benefit. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number.

The collections of information in these proposed regulations contain reporting and recordkeeping requirements. The recordkeeping requirements mentioned within these proposed regulations are considered general tax records under § 1.6001–1(e). These records are required for the IRS to validate that transferee taxpayers have met the regulatory requirements and are entitled to the transferred specified credit portions. For PRA purposes, general tax records are already approved by OMB under 1545–0074 for individuals and under 1545–0123 for business entities.

These proposed regulations also mention reporting requirements related to making transfer elections as detailed in proposed §§ 1.6418–2 and 1.6418–3. These transfer elections will be made by eligible taxpayers as part of filing a return (such as the appropriate Form 1040, Form 1120, Form 1120–S, or Form 1065), including filling out the relevant source credit form and completing the Form 3800. The proposed regulation in proposed § 1.6418–2(b)(5) describes third-party disclosures, which require eligible taxpayers and transferee taxpayers to complete transfer election statements and also require eligible taxpayers to provide required minimum documentation to transferee taxpayers as part of making a transfer election. These forms and third-party disclosures are approved under 1545–0074 for individuals and 1545–0123 for business entities.

These proposed regulations also describe recapture procedures as detailed in proposed § 1.6418–5 that are required by section 6418(g)(3). The reporting of a recapture event will still be required to be reported using Form 4255, Recapture of Investment Credit. This form is approved under 1545–0074 for individuals and 1545–0123 for business entities. The proposed regulation is not changing or creating new collection requirements not already approved by OMB.

These proposed regulations mention the reporting requirement to complete pre-filing registration with IRS to be able to transfer eligible credits to a transferee taxpayer as detailed in proposed § 1.6418–4. For further information concerning the registration and where to submit comments on the collection of information and the accuracy of the estimated burden, and suggestions for reducing this burden, please refer to the preamble to the corresponding temporary regulations (T.D. 9975) published in the Rules and Regulations section of this issue of the **Federal Register**. For burden estimates associated with the pre-filing registration requirement as detailed in proposed § 1.6418–4, see the preamble to the corresponding temporary regulations. This proposed regulation is not changing or creating new collection requirements beyond the requirements that are being reviewed and approved by OMB under the temporary regulations.

II. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) imposes certain requirements with respect to Federal rules that are subject to the notice and comment requirements of section 553(b) of the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and that are likely to have a significant economic impact on a substantial number of small entities. Unless an agency determines that a proposal is not likely to have a significant economic impact on a substantial number of small entities, section 603 of the RFA requires the agency to present an initial regulatory flexibility analysis (IRFA) of the proposed rule. The Treasury Department and the IRS have not determined whether the proposed rule, when finalized, will likely have a significant economic impact on a substantial number of small entities. This determination requires further study. However, because there is a possibility of significant economic impact on a substantial number of small entities, an IRFA is provided in these proposed regulations. The Treasury Department and the IRS invite comments on both the number of entities affected and the economic impact on small entities. Pursuant to section 7805(f), this notice of proposed rulemaking has been submitted to the Chief Counsel of Advocacy of the Small Business Administration for comment on its impact on small business.

1. Need for and Objectives of the Rule

The proposed regulations would provide guidance to taxpayers that

intend to make an election under section 6418 to transfer eligible credits. The proposed regulations would also provide guidance to transferee taxpayers as to the treatment of transferred eligible credits under section 6418. The proposed rules would include needed definitions, the time and manner to make a transfer election, and information about the pre-filing registration process, among other items. The Treasury Department and the IRS intend and expect that providing taxpayers guidance that allows them to effectively use section 6418 to transfer eligible credits will beneficially impact various industries, deliver benefits across the economy, and reduce economy wide greenhouse gas emissions.

In particular, section 6418 allows eligible taxpayers to transfer an eligible credit (or portion thereof) to a transferee taxpayer. Allowing eligible taxpayers without sufficient Federal income tax liability to use a business tax credit to instead transfer the tax credit to a taxpayer that has sufficient tax liability to use the credit will increase the incentive for taxpayers to invest in clean energy projects that generate eligible credits. It will also increase the amount of cash available to such taxpayers, thereby reducing the amount of financing needed for clean energy projects.

2. Affected Small Entities

The RFA directs agencies to provide a description of, and where feasible, an estimate of, the number of small entities that may be affected by the proposed rules, if adopted. The Small Business Administration's Office of Advocacy estimates in its 2023 Frequently Asked Questions that 99.9 percent of American businesses meet its definition of a small business. The applicability of these proposed regulations does not depend on the size of the business, as defined by the Small Business Administration. As described more fully in the preamble to this proposed regulation and in this IRFA, section 6418 and these proposed regulations may affect a variety of different entities across several different industries as there are 11 different eligible credits that may be transferred pursuant to a transfer election. Although there is uncertainty as to the exact number of small businesses within this group, the current estimated number of respondents to these proposed rules is 50,000 taxpayers as described in the Paperwork Reduction Act section of the preamble. The Treasury Department and the IRS expect to receive more information on the impact on small businesses through comments on this proposed rule and again when taxpayers start to make the transfer election using the guidance and procedures provided in these proposed regulations.

3. Impact of the Rules

The proposed regulations provide rules for how taxpayers can take advantage of the section 6418 credit monetization regime. Taxpayers that elect to take advantage of transferability will have administrative costs related to reading and understanding the rules in addition to recordkeeping and reporting requirements because of the pre-filing registration and tax return requirements. The costs will vary across different-sized taxpayers and across the type of project(s) in which such taxpayers are engaged.

The pre-filing registration process requires a taxpayer to register itself as intending to make a transfer election, to list all eligible credits it intends to transfer, and to list each eligible credit property that contributed to the determination of such credits. This process must be completed to receive a registration number for each eligible credit property with respect to which the eligible taxpayer intends to transfer an eligible credit. On filing the return, to make a valid transfer election, the eligible taxpayer and transferee taxpayer would be required to complete and attach a transfer election statement. The transfer election statement is generally a written document that describes the transfer of a specified credit portion between an eligible taxpayer and transferee taxpayer. Further, the eligible taxpayer is required to provide certain required minimum documentation to the transferee taxpayer, and the transferee taxpayer is required to retain the documentation for as long as it may be relevant. Many of the other requirements, such as completing the relevant source credit form and completing the Form 3800 would be required for any taxpayer that is claiming a general business credit, regardless of whether the taxpayer was transferring the credit under section 6418. Although the Treasury Department and the IRS do not have sufficient data to determine precisely the likely extent of the increased costs of compliance, the estimated burden of complying with the recordkeeping and reporting requirements are described in the Paperwork Reduction Act section of the preamble.

4. Alternatives Considered

The Treasury Department and the IRS considered alternatives to the proposed regulations. The proposed regulations requirements of pre-filing registration and the additional requirements to make a valid transfer election were designed to minimize burden while also minimizing the opportunity for duplication, fraud, improper payments, or excessive payments under section 6418. For example, in adopting these requirements, the Treasury Department and the IRS considered whether such information could be obtained strictly at filing of the relevant return. However, the Treasury Department and IRS decided that such an option would increase the opportunity for duplication, fraud, improper payments or excessive payments under section 6418. Section 6418(g)(1) specifically authorizes the IRS to require such information or registration as the Secretary deems necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under section 6418 as a condition of, and prior to, any transfer of any portion of an eligible credit. As described in the preamble to these proposed regulations, these proposed rules carry out that Congressional intent as pre-filing registration allows for the IRS to verify certain information in a timely manner and then process the annual tax return of the eligible taxpayer and the transferee taxpayer with minimal delays. Having a distinction between eligible taxpayers that are small businesses versus others making a transfer election would create a scenario where a subset of taxpayers seeking to transfer eligible credits would not have been verified or received registration numbers, potentially delaying return processing for both eligible taxpayers and transferee taxpayers.

Another example is the proposed requirement that eligible taxpayers and transferee taxpayers complete a transfer election statement. In determining to adopt this proposal, the Treasury Department and the IRS considered that such a statement would again minimize opportunity for fraud and decrease the chance of duplication but would also benefit a transferee taxpayer by allowing the filing of its return without having to wait for an eligible taxpayer to file in all cases. Further, the contents of the transfer election statement were intended to be available to eligible taxpayers, such that the size of the business should not impact greatly the time needed to prepare such statements. The Treasury Department and the IRS also considered whether any required documentation was needed to be provided by eligible taxpayers to transferee taxpayers, which the transferee taxpayers are then required to

keep for so long as the contents thereof may become material in the administration of any internal revenue law. Again, this requirement was considered consistent with the goal of minimizing fraud, as the information is generally documentation to validate the existence of the eligible credit property, any bonus credits amounts, and the evidence of credit qualification. Any size business generating an eligible credit should have access to such information. Further the recordkeeping duration is consistent with general recordkeeping rules under § 1.6001–1(e). This proposed requirement also will benefit small businesses that are transferee taxpayers as it provides a mechanism to receive such information from the eligible taxpayer. Comments are requested on the requirements in the proposed regulations, including specifically, whether there are less burdensome alternatives that do not increase the risk of duplication, fraud, improper payments, or excessive payments under section 6418.

5. Duplicative, Overlapping, or Conflicting Federal Rules

The proposed rule would not duplicate, overlap, or conflict with any relevant Federal rules. As discussed above, the proposed rule would merely provide procedures and definitions to allow taxpayers to take advantage of the ability to transfer eligible credits. The Treasury Department and the IRS invite input from interested members of the public about identifying and avoiding overlapping, duplicative, or conflicting requirements.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandate Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a state, local, or tribal government, in the aggregate, or by the private sector, of $100 million (updated annually for inflation). These proposed regulations do not include any Federal mandate that may result in expenditures by state, local, or tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (Federalism) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on state and local governments, and is not required by statute, or preempts state law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. These proposed regulations do not have federalism implications and do not impose substantial, direct compliance costs on state and local governments or preempt state law within the meaning of the Executive order.

VI. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments) prohibits an agency from publishing any rule that has tribal implications if the rule either imposes substantial, direct compliance costs on Indian tribal governments, and is not required by statute, or preempts tribal law, unless the agency meets the consultation and funding requirements of section 5 of the Executive order. This proposed rule does not have substantial direct effects on one or more federally recognized Indian tribes and does not impose substantial direct compliance costs on Indian tribal governments within the meaning of the Executive order.

VII. Regulatory Planning and Review

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

Comments and Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to comments that are submitted timely to the IRS as prescribed in the preamble under the **ADDRESSES** section. The Treasury Department and the IRS request comments on all aspects of the proposed regulations. Any electronic comments submitted, and any paper comments submitted, will be made available at *https://www.regulations.gov* or upon request.

Announcement 2023–16, 2023–20 I.R.B. 854 (May 15, 2023), provides that public hearings will be conducted in person, although the IRS will continue to provide a telephonic option for individuals who wish to attend or testify at a hearing by telephone. Any telephonic hearing will be made accessible to people with disabilities.

A public hearing has been scheduled for August 23, 2023, beginning at 10:00 a.m. ET, in the Auditorium at the Internal Revenue Building, 1111 Constitution Avenue NW, Washington, DC, unless no outlines are received by August 14, 2023. Due to building security procedures, visitors must enter at the Constitution Avenue entrance. In addition, all visitors must present photo identification to enter the building. Because of access restrictions, visitors will not be admitted beyond the immediate entrance area more than 30 minutes before the hearing starts.

The rules of 26 CFR 601.601(a)(3) apply to the hearing. Persons who wish to comment by telephone at the hearing must submit written or electronic comments and an outline of the topics to be discussed as well as the time to be devoted to each topic by August 14, 2023, as prescribed in the preamble under the **ADDRESSES** section.

A period of ten minutes will be allocated to each person for making comments. After the deadline for receiving outlines has passed, the IRS will prepare an agenda containing the schedule of speakers. Copies of the agenda will be made available at *https://www.regulations.gov,* search IRS and REG–101610–23. Copies of the agenda will also be available by emailing a request to *publichearings@irs.gov.* Please put ''REG–101610–23 Agenda Request'' in the subject line of the email.

Individuals who want to testify in person at the public hearing must send an email to *publichearings@irs.gov* to have your name added to the building access list. The subject line of the email must contain the regulation number REG–101610–23 and the language TESTIFY In Person. For example, the subject line may say: Request to TESTIFY In Person at Hearing for REG–101610–23.

Individuals who want to testify by telephone at the public hearing must send an email to *publichearings@irs.gov* to receive the telephone number and access code for the hearing. The subject line of the email must contain the regulation number REG–101610–23 and the language TESTIFY Telephonically. For example, the subject line may say: Request to TESTIFY Telephonically at Hearing for REG–101610–23.

Individuals who want to attend the public hearing in person without testifying must also send an email to *publichearings@irs.gov* to have your name added to the building access list. The subject line of the email must contain the regulation number REG–101610–23 and the language ATTEND In Person. For example, the subject line may say: Request to ATTEND Hearing In Person for REG–101610–23. Requests to attend the public hearing must be received by 5:00 p.m. EST on August 21,

2023. Individuals who want to attend the public hearing by telephone without testifying must also send an email to *publichearings@irs.gov* to receive the telephone number and access code for the hearing. The subject line of the email must contain the regulation number REG–101610–23 and the language ATTEND Hearing Telephonically. For example, the subject line may say: Request to ATTEND Hearing Telephonically for REG–101610–23. Requests to attend the public hearing must be received by 5:00 p.m. EST on August 21, 2023.

Hearings will be made accessible to people with disabilities. To request special assistance during a hearing please contact the Publications and Regulations Branch of the Office of Associate Chief Counsel (Procedure and Administration) by sending an email to *publichearings@irs.gov* (preferred) or by telephone at (202) 317–6901 (not a toll-free number) at least August 18, 2023.

Statement of Availability of IRS Documents

IRS notices and other guidance cited in this preamble are published in the Internal Revenue Bulletin (or Cumulative Bulletin) and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *https://www.irs.gov.*

Drafting Information

The principal authors of these proposed regulations are James Holmes and Jeremy Milton, Office of the Associate Chief Counsel (Passthroughs and Special Industries), IRS. However, other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, the Treasury Department and the IRS propose to amend 26 CFR part 1 as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by adding an entry in numerical order for §§ 1.6418–0 through 1.6418–5 to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

Sections 1.6418–0 through 1.6418–5 also issued under 26 U.S.C. 6418(g)(1) and (h).

* * * * *

■ **Par. 2.** Section 1.706–4 is amended as follows:

■ 1. Redesignate paragraphs (e)(2)(ix) through (xi) as paragraphs (e)(2)(x) through (xii).

■ 2. Add new paragraph (e)(2)(ix).

■ 3. Revise the heading of paragraph (g).

■ 4. Redesignate the text of paragraph (g) as paragraph (g)(1).

■ 5. Add paragraph (g)(2).

The addition and revisions read as follows:

§ 1.706–4 Determination of distributive share when a partner's interest varies.

* * * * *

(e) * * *

(2) * * *

(ix) Any specified credit portion transferred pursuant to section 6418 and §§ 1.6418–1 through 1.6418–5;

* * * * *

(g) *Applicability date.* * * *

(2) Paragraph (e)(2)(ix) of this section applies to taxable years ending on or after [DATE OF PUBLICATION OF FINAL RULE].

■ **Par. 3.** Sections 1.6418–0 through 1.6418–5 are added to read as follows:

Sec.

* * * * *

* * * * *

§ 1.6418–0 Table of contents.

This section lists the captions contained in §§ 1.6418–1 through 1.6418–5.

§ 1.6418–1 Transfer of eligible credits.

(a) *Transfer of eligible credits.* An eligible taxpayer may make a transfer election under § 1.6418–2(a) to transfer any specified portion of an eligible credit determined with respect to any eligible credit property of such eligible taxpayer for any taxable year to a transferee taxpayer in accordance with section 6418 of the Code and the section 6418 regulations (defined in paragraph (g) of this section). Paragraphs (b) through (q) of this section provide definitions. See § 1.6418–2 for rules and procedures under which all transfer elections must be made, limitations to making transfer elections, the treatment of payments made in connection with transfer elections, and the treatment of eligible credits transferred to transferee taxpayers. See § 1.6418–3 for special rules pertaining to transfer elections made by partnerships or S corporations. See § 1.6418–4 for pre-filing registration requirements and other information required to make any transfer election effective. See § 1.6418–5 for special rules related to the imposition of tax on excessive credit transfers, basis reductions, required notifications and impacts of the recapture of transferred credits, and rules regarding carrybacks and carryforwards.

(b) *Eligible taxpayer.* The term *eligible taxpayer* means any taxpayer (as defined in section 7701(a)(14) of the

Code), other than one described in section 6417(d)(1)(A) and § 1.6417–1(b).

(c) *Eligible credit*—(1) *In general.* The term *eligible credit* is a credit described in paragraph (c)(2) of this section determined for a taxable year with respect to a single eligible credit property of an eligible taxpayer but does not include any business credit carryforward or business credit carryback determined under section 39 of the Code.

(2) *Separately determined credit amounts.* The amount of any credit described in this paragraph (c)(2) is the entire amount of the credit separately determined with respect to each single eligible credit property of the eligible taxpayer and includes any bonus credit amounts described in paragraph (c)(3) of this section determined with respect to that single eligible credit property. The eligible credits described in this paragraph (c)(2) are:

(i) *Alternative fuel vehicle refueling property.* So much of the credit for alternative fuel vehicle refueling property allowed under section 30C of the Code that, pursuant to section 30C(d)(1), is treated as a credit listed in section 38(b) of the Code (section 30C credit).

(ii) *Renewable electricity production.* The renewable electricity production credit determined under section 45(a) of the Code (section 45 credit).

(iii) *Carbon oxide sequestration.* The credit for carbon oxide sequestration determined under section 45Q(a) of the Code (section 45Q credit).

(iv) *Zero-emission nuclear power production.* The zero-emission nuclear power production credit determined under section 45U(a) of the Code (section 45U credit).

(v) *Clean hydrogen production.* The clean hydrogen production credit determined under section 45V(a) of the Code (section 45V credit).

(vi) *Advanced manufacturing production.* The advanced manufacturing production credit determined under section 45X(a) of the Code (section 45X credit).

(vii) *Clean electricity production.* The clean electricity production credit determined under section 45Y(a) of the Code (section 45Y credit).

(viii) *Clean fuel production.* The clean fuel production credit determined under section 45Z(a) of the Code (section 45Z credit).

(ix) *Energy.* The energy credit determined under section 48 of the Code (section 48 credit).

(x) *Qualifying advance energy project.* The qualifying advanced energy project credit determined under section 48C of the Code (section 48C credit).

(xi) *Clean electricity.* The clean electricity investment credit determined under section 48E of the Code (section 48E credit).

(3) *Bonus credit amounts.* The bonus credit amounts described in this paragraph (c)(3) are:

(i) In the case of a section 30C credit, the increased credit amounts for which the requirements under section 30C(g)(2)(A) and (3) are satisfied.

(ii) In the case of a section 45 credit, the increased credit amounts for which the requirements under section 45(b)(7)(A)(8), (9), and (11) are satisfied.

(iii) In the case of a section 45Q credit, the increased credit amounts for which the requirements under section 45Q(h)(3) and (4) are satisfied.

(iv) In the case of a section 45U credit, the increased credit amount for which the requirements under section 45U(d)(2) are satisfied.

(v) In the case of a section 45V credit, the increased credit amounts for which the requirements under section 45V(e)(3) and (4) are satisfied.

(vi) In the case of a section 45Y credit, the increased credit amounts for which the requirements under section 45Y(g)(7), (9), (10), and (11) are satisfied.

(vii) In the case of a section 45Z credit, the increased credit amounts for which the requirements under section 45Z(f)(6) and (7) are satisfied.

(viii) In the case of a section 48 credit, the increased credit amounts for which the requirements under section 48(a)(10), (11), (12), (14), and (e) are satisfied.

(ix) In the case of a section 48C credit, the increased credit amounts for which the requirements under section 48C(e)(5) and (6) are satisfied.

(x) In the case of a section 48E credit, the increased credit amounts for which the requirements under section 48E(a)(3)(A), (B), (d)(3), (d)(4), and (h) are satisfied.

(d) *Eligible credit property.* The term *eligible credit property* means each of the units of property of an eligible taxpayer described in paragraphs (d)(1) through (11) of this section with respect to which the amount of an eligible credit is determined:

(1) In the case of a section 30C credit, a *qualified alternative fuel vehicle refueling property* described in section 30C(c).

(2) In the case of a section 45 credit, a *qualified facility* described in section 45(d).

(3) In the case of a section 45Q credit, a *single process train of carbon capture equipment* described in § 1.45Q–2(c)(3).

(4) In the case of a section 45U credit, a *qualified nuclear power facility* described in section 45U(b)(1).

(5) In the case of a section 45V credit, a *qualified clean hydrogen production facility* described in section 45V(c)(3).

(6) In the case of a section 45X credit, a *facility* that produces eligible components, as described in guidance under sections 48C and 45X.

(7) In the case of a section 45Y credit, a *qualified facility* described in section 45Y(b)(1).

(8) In the case of a section 45Z credit, a *qualified facility* described in section 45Z(d)(4).

(9)(i) *In general.* In the case of a section 48 credit and except as provided in paragraph (d)(9)(ii) of this section, an *energy property* described in section 48.

(ii) *Pre-filing registration and elections.* At the option of an eligible taxpayer, and to the extent consistently applied for purposes of the pre-filing registration requirements of § 1.6418–4 and the election requirements of §§ 1.6418–2 through 1.6418–3, an *energy project* as described in section 48(a)(9)(A)(ii) and defined in guidance.

(10) In the case of a section 48C credit, an *eligible property* described in section 48C(c)(2).

(11) In the case of a section 48E credit, a *qualified facility* as defined in section 48E(b)(3) or, in the case of a section 48E credit relating to a qualified investment with respect to energy storage technology, an *energy storage technology* described in section 48E(c)(2).

(e) *Guidance.* The term *guidance* means guidance published in the **Federal Register** or Internal Revenue Bulletin, as well as administrative guidance such as forms, instructions, publications, or other guidance on the IRS.gov website. See §§ 601.601 and 601.602 of this chapter.

(f) *Paid in cash.* The term *paid in cash* means a payment in United States dollars that—

(1) Is made by cash, check, cashier's check, money order, wire transfer, automated clearing house (ACH) transfer, or other bank transfer of immediately available funds;

(2) Is made within the period beginning on the first day of the eligible taxpayer's taxable year during which a specified credit portion is determined and ending on the due date for completing a transfer election statement (as provided in § 1.6418–2(b)(5)(iii)); and

(3) May include a transferee taxpayer's contractual commitment to purchase eligible credits with United States dollars in advance of the date a specified credit portion is transferred to such transferee taxpayer if all payments of United States dollars are made in a manner described in paragraph (f)(1) of

this section during the time period described in paragraph (f)(2) of this section.

(g) *Section 6418 regulations.* The term *section 6418 regulations* means this section and §§ 1.6418–2 through 1.6418–5.

(h) *Specified credit portion.* The term *specified credit portion* means a proportionate share (including all) of an eligible credit determined with respect to a single eligible credit property of the eligible taxpayer that is specified in a transfer election. A specified credit portion of an eligible credit must reflect a proportionate share of each bonus credit amount that is taken into account in calculating the entire amount of eligible credit determined with respect to a single eligible credit property.

(i) *Statutory references*—(1) *Chapter 1.* The term *chapter 1* means chapter 1 of the Code.

(2) *Code.* The term *Code* means the Internal Revenue Code.

(3) *Subchapter K.* The term *subchapter K* means subchapter K of chapter 1.

(4) *Subtitle A.* The term *subtitle A* means subtitle A of the Code.

(j) *Transfer election.* The term *transfer election* means an election under section 6418(a) of the Code to transfer to a transferee taxpayer a specified portion of an eligible credit determined with respect to an eligible credit property in accordance with the section 6418 regulations.

(k) *Transferee partnership.* The term *transferee partnership* means a partnership for Federal income tax purposes that is a transferee taxpayer.

(l) *Transferee S corporation.* The term *transferee S corporation* means an S corporation within the meaning of section 1361(a) that is a transferee taxpayer.

(m) *Transferee taxpayer.* The term *transferee taxpayer* means any taxpayer that is not related (within the meaning of section 267(b) or 707(b)(1) of the Code) to the eligible taxpayer making the transfer election to which an eligible taxpayer transfers a specified credit portion of an eligible credit.

(n) *Transferor partnership.* The term *transferor partnership* means a partnership for Federal income tax purposes that is an eligible taxpayer that makes a transfer election.

(o) *Transferor S corporation.* The term *transferor S corporation* means an S corporation within the meaning of section 1361(a) that is an eligible taxpayer that makes a transfer election.

(p) *Transferred specified credit portion.* The term *transferred specified credit portion* means the specified credit portion that is transferred from an eligible taxpayer to a transferee taxpayer pursuant to a transfer election.

(q) *U.S. territory.* The term *U.S. territory* means the Commonwealth of Puerto Rico, Guam, the U.S. Virgin Islands, American Samoa, and the Commonwealth of the Northern Mariana Islands.

(r) *Applicability date.* This section applies to taxable years ending on or after [DATE OF PUBLICATION OF FINAL RULE].

§ 1.6418–2 Rules for making transfer elections.

(a) *Transfer election*—(1) *In general.* An eligible taxpayer can make a transfer election as provided in this section. If a valid transfer election is made by an eligible taxpayer for any taxable year, the transferee taxpayer specified in such election (and not the eligible taxpayer) is treated as the taxpayer for purposes of the Code with respect to the specified credit portion. This paragraph (a) provides rules on the number of transfers permitted, rules for determining the eligible taxpayer in certain ownership situations, and rules describing circumstances where no transfer election is allowed. Paragraph (b) of this section provides specific rules regarding the scope, manner, and timing of a transfer election. Paragraph (c) of this section provides rules regarding limitations applicable to transfer elections. Paragraph (d) of this section provides rules regarding an eligible taxpayer's determination of an eligible credit. Paragraph (e) of this section provides the treatment of payments in connection with a transfer election. Paragraph (f) of this section provides rules regarding a transferee taxpayer's treatment of an eligible credit following a transfer.

(2) *Multiple transfer elections permitted.* An eligible taxpayer may make multiple transfer elections to transfer one or more specified credit portion(s) to multiple transferee taxpayers, provided that the aggregate amount of specified credit portions transferred with respect to any single eligible credit property does not exceed the amount of the eligible credit determined with respect to the eligible credit property.

(3) *Transfer election in certain ownership situations*—(i) *Disregarded entities.* If an eligible taxpayer is the sole owner (directly or indirectly) of an entity that is disregarded as separate from such eligible taxpayer for Federal income tax purposes and such entity directly holds an eligible credit property, the eligible taxpayer may make a transfer election in the manner provided in this section with respect to any eligible credit determined with respect to such eligible credit property.

(ii) *Undivided ownership interests.* If an eligible taxpayer is a co-owner of an eligible credit property through an arrangement properly treated as a tenancy-in-common for Federal income tax purposes, or through an organization that has made a valid election under section 761(a) of the Code, then the eligible taxpayer's undivided ownership share of the eligible credit property will be treated for purposes of section 6418 as a separate eligible credit property owned by such eligible taxpayer, and the eligible taxpayer may make a transfer election in the manner provided in this section for any eligible credit(s) determined with respect to such eligible credit property.

(iii) *Members of a consolidated group.* A member of a consolidated group is required to make a transfer election in the manner provided in this section to transfer any eligible credit determined with respect to the member. See § 1.1502–77 (providing rules regarding the status of the common parent as agent for its members).

(iv) *Partnerships and S corporations.* A partnership or S corporation that determines an eligible credit with respect to any eligible credit property held directly by such partnership or S corporation may make a transfer election in the manner provided in § 1.6418–3(d) with respect to eligible credits determined with respect to such eligible credit property.

(4) *Circumstances where no transfer election can be made*—(i) *Prohibition on election or transfer with respect to progress expenditures.* No transfer election can be made with respect to any amount of an eligible credit that is allowed for progress expenditures pursuant to rules similar to the rules of section 46(c)(4) and (d) (as in effect on the day before the enactment of the Revenue Reconciliation Act of 1990).

(ii) *No election allowed when non-cash consideration.* No transfer election is allowed when an eligible taxpayer receives any consideration other than cash (as defined in § 1.6418–1(f)) in connection with the transfer of a specified credit portion.

(iii) *No election allowed when eligible credits not determined with respect to taxpayer.* No transfer election is allowed for eligible credits that are not determined with respect to an eligible taxpayer as described in paragraph (d) of this section. For example, a section 45Q credit allowable to an eligible taxpayer because of an election made under section 45Q(f)(3)(B), or a section 48 credit allowable to an eligible taxpayer because of an election made

under section 50(d)(5) and § 1.48–4, although described in § 1.6418–1(c)(2), is not an eligible credit that can be transferred by the taxpayer because such credit is not determined with respect to the eligible taxpayer.

(b) *Manner and due date of making a transfer election*—(1) *In general.* An eligible taxpayer must make a transfer election to transfer a specified credit portion of an eligible credit on the basis of a single eligible credit property. For example, an eligible taxpayer that determines eligible credits with respect to two eligible credit properties would need to make a separate transfer election with respect to any specified credit portion of the eligible credit determined with respect to each eligible credit property. Any transfer election must be consistent with the eligible taxpayer's pre-filing registration under § 1.6418–4.

(2) *Specific rules for certain eligible credits.* In the case of any section 45 credit, section 45Q credit, section 45V credit, or section 45Y credit that is an eligible credit, the rules in paragraphs (b)(2)(i) and (ii) of this section apply.

(i) *Separate eligible credit property.* A transfer election must be made separately with respect to each eligible credit property described in § 1.6418–1(d)(2), (3), (5), and (7), as applicable, for which an eligible credit is determined.

(ii) *Time period.* A transfer election must be made for each taxable year an eligible taxpayer elects to transfer specified credit portions with respect to such an eligible credit property during the 10-year period beginning on the date such eligible credit property was originally placed in service (or, in the case of a section 45Q credit, for each taxable year during the 12-year period beginning on the date the single process train of carbon capture equipment was originally placed in service).

(3) *Manner of making a valid transfer election.* A transfer election is made by an eligible taxpayer on the basis of each specified credit portion with respect to a single eligible credit property that is transferred to a transferee taxpayer. To make a valid transfer election, an eligible taxpayer as part of filing a return (or a return for a short year within the meaning of section 443 of the Code (short year return)), must include the following—

(i) A properly completed relevant source credit form for the eligible credit (such as Form 7207, *Advanced Manufacturing Production Credit,* if making a transfer election for a section 45X credit) for the taxable year that the eligible credit was determined;

(ii) A properly completed Form 3800, *General Business Credit* (or its successor), including reductions necessary because of the transferred eligible credit as required by the form and instructions and the registration number received during the required pre-filing registration (as described in § 1.6418–4) related to the eligible credit property with respect to which a transferred eligible credit was determined;

(iii) A schedule attached to the Form 3800 (or its successor) showing the amount of eligible credit transferred for each eligible credit property (such as for a section 45X election, the relevant lines that include the eligible credit property reported on Form 7207), except as otherwise provided in guidance;

(iv) A transfer election statement as described in paragraph (b)(5) of this section; and

(v) Any other information related to the election specified in guidance.

(4) *Due date and original return requirement of a transfer election.* A transfer election by an eligible taxpayer with respect to a specified portion of an eligible credit must be made on an original return not later than the due date (including extensions of time) for the original return of the eligible taxpayer for the taxable year for which the eligible credit is determined. No transfer election may be made or revised on an amended return or by filing an administrative adjustment request under section 6227 of the Code. There is no late-election relief available under §§ 301.9100–1 through 301.9100–3 of this chapter for a transfer election that is not timely filed.

(5) *Transfer election statement*—(i) *In general.* A transfer election statement is a written document that describes the transfer of a specified credit portion between an eligible taxpayer and transferee taxpayer. An eligible taxpayer and transferee taxpayer must each attach a transfer election statement to their respective return as required under paragraphs (b)(3)(iv) and (f)(4)(ii) of this section, unless otherwise provided in guidance. An eligible taxpayer and transferee taxpayer can use any document (such as a purchase and sale agreement) that meets the conditions in paragraph (b)(5)(ii) of this section but must label the document a ''Transfer Election Statement'' when attaching to a return. The information required in paragraph (b)(5)(ii) of this section does not otherwise limit any other information that the eligible taxpayer and transferee taxpayer may agree to provide in connection with the transfer of any specified credit portion. The statement must be signed under penalties of perjury by an individual with authority to legally bind the eligible taxpayer. The statement must also include the written consent of an individual with authority to legally bind the transferee taxpayer.

(ii) *Information required in transfer election statement.* A transfer election statement must, at a minimum, include each of the following:

(A) Name, address, and taxpayer identification number of the transferee taxpayer and the eligible taxpayer. If the transferee taxpayer or eligible taxpayer is a member of a consolidated group (as defined in § 1.1502–1), then only include information for the group member that is the transferee taxpayer or eligible taxpayer (if different from the return filer).

(B) A statement that provides the necessary information and amounts to allow the transferee taxpayer to take into account the specified credit portion with respect to the eligible credit property, including—

(*1*) A description of the eligible credit (for example, advanced manufacturing production credit for a section 45X transfer election), the total amount of the credit determined with respect to the eligible credit property, and the amount of the specified credit portion;

(*2*) The taxable year of the eligible taxpayer and the first taxable year in which the specified credit portion will be taken into account by the transferee taxpayer;

(*3*) The amount(s) of the cash consideration and date(s) on which paid by the transferee taxpayer; and

(*4*) The registration number related to the eligible credit property.

(C) Attestation that the eligible taxpayer (or any member of its consolidated group) is not related to the transferee taxpayer (or any member of its consolidated group) within the meaning of section 267(b) or 707(b)(1)).

(D) A statement or representation from the eligible taxpayer that it has or will comply with all requirements of section 6418, the section 6418 regulations, and the provisions of the Code applicable to the eligible credit, including, for example, any requirements for bonus credit amounts described in § 1.6418–1(c)(3) (if applicable).

(E) A statement or representation from the eligible taxpayer and the transferee taxpayer acknowledging the notification of recapture requirements under section 6418(g)(3) and the section 6418 regulations (if applicable).

(F) A statement or representation from the eligible taxpayer that the eligible taxpayer has provided the required minimum documentation (as described in paragraph (b)(5)(iv) of this section) to the transferee taxpayer.

(iii) *Timing of transfer election statement.* A transfer election statement can be completed at any time after the eligible taxpayer and transferee taxpayer have sufficient information to meet the requirements of paragraph (b)(5)(ii) of this section, but the transfer election statement cannot be completed for any year after the earlier of:

(A) The filing of the eligible taxpayer's return for the taxable year for which the specified credit portion is determined with respect to the eligible taxpayer; or

(B) The filing of the return of the transferee taxpayer for the year in which the specified credit portion is taken into account.

(iv) *Required minimum documentation.* Required minimum documentation is the minimum documentation that the eligible taxpayer is required to provide to a transferee taxpayer. This documentation consists of—

(A) Information that validates the existence of the eligible credit property, which could include evidence prepared by a third party (such as a county board or other governmental entity, a utility, or an insurance provider);

(B) If applicable, documentation substantiating that the eligible taxpayer has satisfied the requirements to include any bonus credit amounts (as defined in § 1.6418–1(c)(3)) in the eligible credit that was part of the transferred specified credit portion; and

(C) Evidence of the eligible taxpayer's qualifying costs in the case of a transfer of an eligible credit that is part of the investment credit or the amount of qualifying production activities and sales amounts, as relevant, in the case of a transfer of an eligible credit that is a production credit.

(v) *Transferee recordkeeping requirement.* Consistent with § 1.6001–1(e), the transferee taxpayer must retain the required minimum documentation provided by the eligible taxpayer as long as the contents thereof may become material in the administration of any internal revenue law.

(c) *Limitations after a transfer election is made*—(1) *Irrevocable.* A transfer election with respect to a specified credit portion is irrevocable.

(2) *No additional transfers.* A specified credit portion may only be transferred pursuant to a transfer election once. A transferee taxpayer may not make a transfer election of any specified credit portion transferred to the transferee taxpayer.

(d) *Determining the eligible credit*—(1) *In general.* An eligible taxpayer may only transfer eligible credits determined with respect to the eligible taxpayer (paragraph (a)(4) of this section disallows transfer elections in other situations). For an eligible credit to be determined with respect to an eligible taxpayer, the eligible taxpayer must own the underlying eligible credit property or, if ownership is not required, otherwise conduct the activities giving rise to the underlying eligible credit. All rules that relate to the determination of the eligible credit, such as the rules in sections 49 and 50(b) of the Code, apply to the eligible taxpayer and therefore can limit the amount of eligible credit determined with respect to an eligible credit property that can be transferred. Rules relating to the amount of an eligible credit that is allowed to be claimed by an eligible taxpayer, such as the rules in section 38(c) or 469 of the Code, do not limit the eligible credit determined, but do apply to a transferee taxpayer as described in paragraph (f)(3) of this section.

(2) *Application of section 49 at-risk rules to determination of eligible credits for partnerships and S corporations.* Any amount of eligible credit determined with respect to investment credit property held directly by a transferor partnership or transferor S corporation that is eligible credit property (eligible investment credit property) must be determined by the partnership or S corporation taking into account the section 49 at-risk rules at the partner or shareholder level as of the close of the taxable year in which the eligible investment credit property is placed in service. Thus, if the credit base of an eligible investment credit property is limited to a partner or S corporation shareholder by section 49, then the amount of the eligible credit determined by the transferor partnership or transferor S corporation is also limited. A transferor partnership or transferor S corporation that transfers any specified credit portion with respect to an eligible investment credit property must request from each of its partners or shareholders, respectively, that is subject to section 49, the amount of such partner's or shareholder's nonqualified nonrecourse financing with respect to the eligible investment credit property as of the close of the taxable year in which the property is placed in service. Additionally, the transferor partnership or transferor S corporation must attach to its tax return for the taxable year in which the eligible investment credit property is placed in service, the amount of each partner's or shareholder's section 49 limitation with respect to any specified credit portion transferred with respect to the eligible investment credit property. Changes to at-risk amounts under section 49 for partners or S corporation shareholders after the close of the taxable year in which the eligible investment credit property is placed in service do not impact the eligible credit determined by the transferor partnership or transferor S corporation, but do impact the partner(s) or S corporation shareholder(s) as described in § 1.6418–3(a)(6)(ii).

(e) *Treatment of payments made in connection with a transfer election*—(1) *In general.* An amount paid by a transferee taxpayer to an eligible taxpayer is in connection with a transfer election with respect to a specified credit portion only if it is paid in cash (as defined in § 1.6418–1(f)), directly relates to the specified credit portion, and is not described in § 1.6418–5(a)(3) (describing payments related to an excessive credit transfer).

(2) *Not includible in gross income.* Any amount paid to an eligible taxpayer that is described in paragraph (e)(1) of this section is not includible in the gross income of the eligible taxpayer.

(3) *Not deductible.* No deduction is allowed under any provision of the Code with respect to any amount paid by a transferee taxpayer that is described in paragraph (e)(1) of this section.

(4) *Anti-abuse rule*—(i) *In general.* A transfer election of any specified credit portion, and therefore the transfer of that specified credit portion to a transferee taxpayer, may be disallowed, or the Federal income tax consequences of any transaction(s) effecting such a transfer may be recharacterized, in circumstances where the parties to the transaction have engaged in the transaction or a series of transactions with the principal purpose of avoiding any Federal tax liability beyond the intent of section 6418. An amount of cash paid by a transferee taxpayer will not be considered as paid in connection with the transfer of a specified credit portion under paragraph (e)(1) of this section if a principal purpose of a transaction or series of transactions is to allow an eligible taxpayer to avoid gross income. Conversely, an amount of cash paid by a transferee taxpayer will be considered paid in connection with the transfer of a specified credit portion under paragraph (e)(1) of this section if a principal purpose of a transaction or series of transactions is to increase a Federal income tax deduction of a transferee taxpayer.

(ii) *Example 1.* Taxpayer A, an eligible taxpayer, generates $100 of an eligible credit with respect to an eligible credit property in the course of its trade or business. Taxpayer A also provides

services to customers. Taxpayer A offers Customer B, a transferee taxpayer that cannot deduct the cost of the services, the opportunity to be transferred $100 of eligible credit for $100 while receiving Taxpayer A's services for free. Taxpayer A normally charges $20 for the same services without the purchase of the eligible credit, and the average transfer price of the eligible credit between unrelated parties is $80 paid in cash for $100 of the eligible credit. Taxpayer A is engaged in a transaction where it is undercharging for services to Customer B to avoid recognizing $20 of gross income. This transaction is subject to recharacterization under the anti-abuse rule in paragraph (e)(4) of this section, and Taxpayer A will be treated as transferring $100 of the eligible credit for $80, and have $20 of gross income from the services provided to Customer B.

(iii) *Example 2.* Taxpayer C, an eligible taxpayer, generates $100 of an eligible credit with respect to an eligible credit property in the course of its trade or business. Taxpayer C also sells property to customers. Taxpayer C offers Customer D, a transferee taxpayer that can deduct the purchase of property, the opportunity to receive the $100 of eligible credit for $20 while purchasing Taxpayer C's property for $80. Taxpayer C normally charges $20 for the same property without the transfer of the eligible credit, and the average transfer price of the eligible credit between unrelated parties is $80 paid in cash for $100 of the eligible credit. Taxpayer C is willing to accept the higher price for the property because Taxpayer C has a net operating loss carryover to offset any taxable income from the transaction. This transaction is subject to recharacterization under the anti-abuse rule under paragraph (e)(4) of this section, and Taxpayer C will be treated as selling the property for $20 and transferring $100 of the eligible credit for $80, and Customer D will have a $20 deduction related to the purchase of the property instead of $80.

(f) *Transferee taxpayer's treatment of eligible credit*—(1) *Taxable year in which credit taken into account.* In the case of any specified credit portion transferred to a transferee taxpayer pursuant to a transfer election under this section, the transferee taxpayer takes the specified credit portion into account in the transferee taxpayer's first taxable year ending with or ending after the taxable year of the eligible taxpayer with respect to which the eligible credit was determined. Thus, to the extent the taxable years of an eligible taxpayer and a transferee taxpayer end on the same date, the transferee taxpayer will take the specified credit portion into account in that taxable year. To the extent the taxable years of an eligible taxpayer and a transferee taxpayer end on different dates, the transferee taxpayer will take the specified credit portion into account in the transferee taxpayer's first taxable year that ends after the taxable year of the eligible taxpayer.

(2) *No gross income for a transferee taxpayer when claiming a transferred specified credit portion.* A transferee taxpayer does not have gross income when claiming a transferred specified credit portion even if the amount of cash paid to the eligible taxpayer was less than the amount of the transferred specified credit portion, assuming all other requirements of section 6418 are met. For example, a transferee taxpayer who paid $9X for $10X of a specified credit portion that the transferee taxpayer then claims on its return does not result in the $1X difference being included in the gross income of the transferee taxpayer.

(3) *Transferee treated as the eligible taxpayer*—(i) *In general.* A transferee taxpayer (and not the eligible taxpayer) is treated as the taxpayer for purposes of the Code with respect to the transferred specified credit portion. An eligible taxpayer must apply the rules necessary to determine the amount of an eligible credit prior to making the transfer election for a specified credit portion, and therefore a transferee taxpayer does not re-apply rules that relate to a determination of an eligible credit, such as the rules in section 49 or 50(b). However, a transferee taxpayer must apply rules that relate to computing the amount of the specified credit portion that is allowed to be claimed in the taxable year by the transferee taxpayer, such as the rules in section 38 or 469, as applicable.

(ii) *Application of section 469.* A specified credit portion transferred to a transferee taxpayer is treated as determined in connection with the conduct of a trade or business and, if applicable, such transferred specified credit portion is subject to the rules in section 469. In applying section 469, a transferee taxpayer is not considered to own an interest in the eligible taxpayer's trade or business at the time the work was done (as required for material participation under § 1.469–5(f)(1)) and cannot change the characterization of the transferee taxpayer's participation (or lack thereof) in the eligible taxpayer's trade or business by using any of the grouping rules under § 1.469–4(c).

(4) *Transferee taxpayer requirements to take into account a transferred specified credit portion.* In order for a transferee taxpayer to take into account in a taxable year (as described in paragraph (f)(1) of this section) a specified credit portion that was transferred by an eligible taxpayer, as part of filing a return (or short year return), an amended return, or a request for an administrative adjustment under section 6227 of the Code, the transferee taxpayer must include the following—

(i) A properly completed Form 3800, *General Business Credit* (or its successor), to take into account the transferred specified credit portion as a current general business credit, and including all registration number(s) related to the transferred specified credit portion;

(ii) The transfer election statement described in paragraph (b)(5) of this section attached to the return; and

(iii) Any other information related to the transfer election specified in guidance.

(g) *Applicability date.* This section applies to taxable years ending on or after [DATE OF PUBLICATION OF FINAL RULE].

§ 1.6418–3 Additional rules for partnerships and S corporations.

(a) *Rules applicable to both partnerships and S corporations*—(1) *Partnerships and S corporations as eligible taxpayers and transferee taxpayers.* Under section 6418, a partnership or an S corporation may qualify as a transferor partnership or a transferor S corporation and may elect to make a transfer election to transfer a specified credit portion to a transferee taxpayer. A partnership or S corporation may also qualify as a transferee partnership or a transferee S corporation. This section provides rules applicable to transferor partnerships and transferor S corporations and transferee partnerships and transferee S corporations. Paragraph (b) of this section provides rules applicable solely to partnerships. Paragraph (c) of this section provides rules applicable solely to S corporations. Paragraph (d) of this section provides guidelines for the manner and due date for which a partnership or S corporation makes an election under section 6418(a). Paragraph (e) of this section contains examples illustrating the operation of the provisions of this section. Except as provided in this section, the general rules under section 6418 and the section 6418 regulations apply to partnerships and S corporations.

(2) *Treatment of cash received for a specified credit portion.* In the case of any specified credit portion determined with respect to any eligible credit property held directly by a partnership

or S corporation, if such partnership or S corporation makes a transfer election with respect to such specified credit portion—

(i) Any amount of cash payment received as consideration for the transferred specified credit portion will be treated as tax exempt income for purposes of sections 705 and 1366 of the Code; and

(ii) A partner's distributive share of such tax exempt income will be as described in paragraphs (b)(1) and (2) of this section.

(3) *No partner or shareholder level transfers.* In the case of an eligible credit property held directly by a partnership or S corporation, no transfer election by any partner or S corporation shareholder is allowed under § 1.6418–2 or this section with respect to any specified credit portion determined with respect to such eligible credit property.

(4) *Disregarded entity ownership.* In the case of an eligible credit property held directly by an entity disregarded as separate from a partnership or S corporation for Federal income tax purposes, such eligible credit property will be treated as held directly by the partnership or S corporation for purposes of making a transfer election.

(5) *Treatment of tax exempt income.* Tax exempt income resulting from the receipt of consideration for the transfer of a specified credit portion by a transferor partnership or transferor S corporation is treated as arising from an investment activity and not from the conduct of a trade or business within the meaning of section 469(c)(1)(A). As such, any tax exempt income is not treated as passive income to any direct or indirect partners or shareholders who do not materially participate within the meaning of section 469(c)(1)(B).

(6) *Certain recapture events not requiring notice*—(i) *Indirect dispositions under section 50*—(A) *Treatment of transferor partnership or transferor S corporation and transferee taxpayer.* For purposes of section 6418(g)(3)(B) only, the disposition of a partner's interest under § 1.47–6(a)(2) or an S corporation shareholder's interest under § 1.47–4(a)(2) in an eligible taxpayer that is treated as a transferor partnership or transferor S corporation is disregarded. As such, provided the investment credit property that is eligible credit property owned by the transferor partnership or transferor S corporation is not disposed of, and continues to be investment credit property with respect to such transferor partnership or transferor S corporation, a transferor partnership or transferor S corporation should not provide notice to a transferee taxpayer of an interest disposition by the partner or shareholder because the disposition does not result in recapture under section 6418(g)(3)(B) to which the transferee taxpayer is liable, and thus, the transferee taxpayer does not have to calculate a recapture amount.

(B) *Treatment of partner or shareholder.* A partner or S corporation shareholder that has disposed of an interest in a transferor partnership or transferor S corporation is subject to the rules relating to such disposition under § 1.47–6(a)(2) or § 1.47–4(a)(2), respectively. Any recapture to a disposing partner is calculated based on the partner's share of the basis (or cost) of the section 38 property to which the specified credit portion was determined in accordance with § 1.46–3(f). Any recapture to a disposing shareholder is calculated based on the shareholder's pro rata share of the basis (or cost) of the section 38 property to which the specified credit portion was determined in accordance with § 1.48–5.

(ii) *Changes in at-risk amounts under section 49*—(A) *Treatment of transferor partnership or transferor S corporation and transferee taxpayer.* For purposes of section 6418 only, a change in the nonqualified nonrecourse financing (as defined in section 49(a)(1)(D)) amount of any partner or shareholder of a transferor partnership or transferor S corporation, respectively, after the close of the taxable year in which the investment credit property is placed in service and the specified credit portion is determined, is disregarded. A transferor partnership or transferor S corporation should not provide notice to a transferee taxpayer of the change because the change does not cause recapture under section 6418(g)(3)(B) to which the transferee taxpayer is liable, and thus, the transferee taxpayer does not have to calculate a recapture amount.

(B) *Treatment of partner or shareholder.* A partner or shareholder in a transferor partnership or transferor S corporation, respectively, must apply the rules under section 49 at the partner or shareholder level if there is a change in nonqualified nonrecourse financing with respect to the partner or shareholder after the close of the taxable year in which the investment credit property is placed in service and the specified credit portion is determined. If there is an increase in nonqualified nonrecourse financing to a partner, any adjustment under the rules of section 49(b) is calculated based on the partner's share of the basis (or cost) of the section 38 property to which the specified credit portion was determined in accordance with § 1.46–3(f). If there is an increase in nonqualified nonrecourse financing to a shareholder, any adjustment under the rules of section 49(b) is calculated based on the shareholder's pro rata share of the basis (or cost) of the section 38 property to which the specified credit portion was determined in accordance with § 1.48–5. If there is a decrease in nonqualified nonrecourse financing, any increase in the credit base is taken into account by the partner or shareholder as provided under section 49, and any resulting credit is not eligible for transfer under section 6418.

(b) *Rules applicable to partnerships*—(1) *Allocations of tax exempt income amounts generally.* A transferor partnership must generally determine a partner's distributive share of any tax exempt income resulting from the receipt of consideration for the transfer based on such partner's proportionate distributive share of the eligible credit that would otherwise have been allocated to such partner absent the transfer of the specified credit portion (otherwise eligible credit). A partner's distributive share of an otherwise eligible credit is determined under §§ 1.46–3(f) and 1.704–1(b)(4)(ii). Tax exempt income resulting from the receipt of consideration for the transfer of a specified credit portion by a transferor partnership is treated as received or accrued, including for purposes of section 705 of the Code, as of the date the specified credit portion is determined with respect to the transferor partnership (such as, for investment credit property, the date the property is placed in service).

(2) *Special rule for allocations of tax exempt income amounts and eligible credits for an election to transfer less than all eligible credits determined with respect to an eligible credit property.* In the event a transferor partnership elects to transfer one or more specified credit portions of less than all eligible credits determined with respect to an eligible credit property held directly by the partnership, the partnership may allocate any tax exempt income resulting from the receipt of consideration for the specified credit portion(s) in accordance with the rules in this paragraph (b)(2).

(i) First, the partnership must determine each partner's distributive share of the otherwise eligible credits with respect to such eligible credit property in accordance with paragraph (b)(1) of this section (partner's eligible credit amount).

(ii) Thereafter, the transferor partnership may determine, in any manner described in the partnership

agreement, or as the partners may agree, the portion of each partner's eligible credit amount to be transferred, and the portion of each partner's eligible credit amount to be retained and allocated to such partner. The partnership may allocate to each partner its agreed upon share of eligible credits, tax exempt income resulting from the receipt of consideration for the specified credit portion(s), or both, as the case may be, provided that—

(A) The amount of eligible credits allocated to each partner may not exceed such partner's eligible credit amount; and

(B) Each partner is allocated its proportionate share of tax exempt income resulting from the transfer(s).

(iii) Each partner's proportionate share of tax exempt income resulting from the transfer(s) is equal to the total amount of tax exempt income resulting from the transfer(s) of the specified credit portion(s) by the partnership multiplied by a fraction—

(A) The numerator of which is such partner's eligible credit amount minus the amount of eligible credits actually allocated to such partner with respect to the eligible credit property for the taxable year; and

(B) The denominator of which is the specified credit portion(s) transferred by the partnership with respect to the eligible credit property for the taxable year.

(3) *Transferor partnerships in tiered structures.* If a partnership (upper-tier partnership) is a direct or indirect partner of a transferor partnership and directly or indirectly receives—

(i) An allocation of an eligible credit, the upper-tier partnership is not an eligible taxpayer under section 6418 with respect to any eligible credit allocated by a transferor partnership; or

(ii) An allocation of tax exempt income resulting from the receipt of consideration for the transfer of a specified credit portion by a transferor partnership, the upper-tier partnership must determine its partners' distributive shares of such tax exempt income in proportion to the partners' distributive shares of the otherwise eligible credit as provided in paragraph (b)(1) of this section.

(4) *Partnership as a transferee taxpayer*—(i) *Eligibility under section 6418.* A partnership may qualify as a transferee partnership to the extent it is not related (within the meaning of section 267(b) or 707(b)(1)) to an eligible taxpayer. A transferee partnership is subject to the no additional transfer rule in § 1.6418–2(c)(2), however, an allocation of a transferred specified credit portion to a direct or indirect partner of a transferee partnership under section 704(b) is not a transfer for purposes of section 6418.

(ii) *Treatment of a cash payment for a transferred specified credit portion.* A cash payment by a transferee partnership as consideration for a transferred specified credit portion is treated as an expenditure described in section 705(a)(2)(B).

(iii) *Allocations of transferred specified credit portions.* A transferee partnership must determine each partner's distributive share of any transferred specified credit portion based on such partner's distributive share of the nondeductible expenses for the taxable year used to fund the purchase of such transferred specified credit portion. Each partner's distributive share of the nondeductible expenses used to fund the purchase of any transferred specified credit portion is determined by the partnership agreement, or, if the partnership agreement does not provide for the allocation of nondeductible expenses paid pursuant to section 6418, then the allocation of the specified credit portion is based on the transferee partnership's general allocation of nondeductible expenses.

(iv) *Transferred specified credit portion treated as an extraordinary item.* A transferred specified credit portion is treated as an extraordinary item and must be allocated among the partners of a transferee partnership as of the time the transfer of the specified credit portion to the transferee partnership is treated as occurring in accordance with this paragraph (b)(4)(iv) and § 1.706–4(e)(1) and (e)(2)(ix). If the transferee partnership and eligible taxpayer have the same taxable years, the transfer of a specified credit portion to a transferee partnership is treated as occurring on the first date that the transferee partnership makes a cash payment to the eligible taxpayer as consideration for the specified credit portion. If the transferee partnership and eligible taxpayer have different taxable years, the transfer of a specified credit portion to a transferee partnership is treated as occurring on the later of—

(A) The first date of the taxable year that the transferee partnership takes the specified credit portion into account under section 6418(d); or

(B) The first date that the transferee partnership makes a cash payment to the eligible taxpayer for the specified credit portion.

(v) *Transferee partnerships in tiered structures.* If an upper-tier partnership is a direct or indirect partner of a transferee partnership and directly or indirectly receives an allocation of a transferred specified credit portion, the upper-tier partnership is not an eligible taxpayer under section 6418 with respect to the transferred specified credit portion. The upper-tier partnership must determine each partner's distributive share of the transferred specified credit portion in accordance with paragraphs (b)(4)(iii) and (iv) of this section and must report the credits to its partners in accordance with guidance.

(c) *Rules applicable to S corporations*—(1) *Pro rata shares of tax exempt income amounts.* Each shareholder of a transferor S corporation must take into account such shareholder's pro rata share (as determined under section 1377(a) of the Code) of any tax exempt income resulting from the receipt of consideration for the transfer. Tax exempt income resulting from the receipt of consideration for the transfer of a specified credit portion by a transferor S corporation is treated as received or accrued, including for purposes of section 1366, as of the date the specified credit portion is determined with respect to the transferor S corporation (such as, for investment credit property, the date the property is placed in service).

(2) *S corporation as a transferee taxpayer*—(i) *Eligibility under section 6418.* An S corporation may qualify as a transferee taxpayer to the extent it is not related (within the meaning of section 267(b) or 707(b)(1)) to an eligible taxpayer (transferee S corporation). A transferee S corporation is subject to the no additional transfer rule in § 1.6418–2(c)(2), however, an allocation of a transferred specified credit portion to a direct or indirect shareholder of a transferee S corporation is not a transfer for purposes of section 6418.

(ii) *Treatment of a cash payment for a transferred specified credit portion.* A cash payment by a transferee S corporation as consideration for a transferred specified credit portion is treated as an expenditure described in section 1367(a)(2)(D) of the Code.

(iii) *Pro rata shares of transferred specified credit portions.* Each shareholder of a transferee S corporation must take into account such shareholder's pro rata share (as determined under section 1377(a)) of any transferred specified credit portion. If the transferee S corporation and eligible taxpayer have the same taxable years, the transfer of a specified credit portion is treated as occurring to a transferee S corporation during the transferee S corporation's permitted year (as defined under sections 444 and 1378(b)) that the transferee S

corporation first makes a cash payment as consideration to the eligible taxpayer for the specified credit portion. If the transferee S corporation and eligible taxpayer have different taxable years, then the transfer of a specified credit portion is treated as occurring to a transferee S corporation during the transferee S corporation's first permitted year (as defined under sections 444 and 1378(b)) ending with or after, the taxable year of the eligible taxpayer to which the transferred specified credit portion was determined.

(d) *Transfer election by a partnership or S corporation*—(1) *In general.* A partnership or S corporation may make a transfer election to transfer a specified credit portion under section 6418 if it files an election in accordance with the rules set forth in this paragraph (d). A transfer election is made on the basis of an eligible credit property and only applies to the specified credit portion identified in the transfer election by such partnership or S corporation in the taxable year for which the election is made.

(2) *Manner and due date of making a transfer election.* A transfer election for a specified credit portion must be made in the manner provided in § 1.6418–2(b)(1) through (3). All documents required in § 1.6418–2(b)(1) through (3) must be attached to the partnership or S corporation return for the taxable year during which the transferred specific credit portion was determined. For the transfer election to be valid, the return must be filed not later than the time prescribed by §§ 1.6031(a)–1(e) and 1.6037–1(b) (including extensions of time) for filing the return for such taxable year. No transfer election may be made or revised on an amended return or by filing an administrative adjustment request under section 6227 of the Code. There is no late-election relief available under §§ 301.9100–1 through 301.9100–3 of this chapter for a transfer election that is not timely filed.

(3) *Irrevocable election.* A transfer election by a partnership or S corporation is irrevocable.

(e) *Examples.* The examples in this paragraph (e) illustrate the application of paragraphs (a)(6), (b), and (c) of this section.

(1) *Example 1. Transfer of all eligible credits by a transferor partnership*—(i) *Facts.* A and B each contributed $150X of cash to AB partnership for the purpose of investing in energy property. The partnership agreement provides that A and B share equally in all items of income, gain, loss, deduction, and credit of AB partnership. AB partnership invests $300X in an energy property in accordance with section 48 and places the energy property in service on date X in year 1. As of the end of year 1, AB partnership has $90X of eligible credits under section 48 with respect to the energy property. Before AB partnership files its tax return for year 1, AB partnership transfers the $90X of eligible credits to an unrelated transferee taxpayer, Transferee Taxpayer X for $80X and executes a transfer election statement with Transferee Taxpayer X.

(ii) *Analysis.* Under § 1.6418–3(b)(1), AB partnership allocates the tax exempt income resulting from the transfer of the specified credit portion proportionately among the partners based on each partner's distributive share of the otherwise eligible section 48 credit as determined under §§ 1.46–3(f) and 1.704–1(b)(4)(ii). Under § 1.46–3(f)(2), each partner's share of the basis of the energy property is determined in accordance with the ratio in which the partners divide the general profits (or taxable income) of the partnership. Under the AB partnership agreement, A and B share partnership profits equally. Thus, each partner's share of the basis of the energy property under § 1.46–3(f) and distributive share of the otherwise eligible credits under § 1.704–1(b)(4)(ii) is 50 percent. The transfer made pursuant to section 6418(a) causes AB partnership's eligible credits under section 48 with respect to the energy property to be reduced to zero, and the consideration of $80X received by AB partnership for the transferred specified credit portion is treated as tax exempt income. Because the tax exempt income is allocated in the same proportion as the otherwise eligible credit would have been allocated, A and B will each be allocated $40X of tax exempt income. Each of partner A's and partner B's basis in its partnership interest and capital account will be increased by $40X. Also in year 1, the basis in the energy property held by AB partnership and with respect to which the credit is calculated is reduced under section 50(c)(3) by 50 percent of the amount of the credit so determined, or $45. A's and B's basis in their partnership interests and capital accounts will be appropriately adjusted to take into account adjustments made to the energy property under section 50(c)(5) and § 1.704–1(b)(2)(iv)(*j*). The tax exempt income received or accrued by AB partnership as a result of the transferred specified credit portion is treated as received or accrued, including for purposes of section 705, as of date X in year 1, which is the date the transferred specified credit portion was determined with respect to AB partnership.

(2) *Example 2. Recapture to a transferor partnership*—(i) *Facts.* Assume the same facts as in paragraph (e)(1)(i) of this section (*Example 1*), except in year 3, within the recapture period related to the energy property, A reduces its proportionate interest in the general profits of the partnership by 50 percent causing a recapture event to A under § 1.47–6(a)(2). The energy property is not disposed of by AB partnership and continues to be energy property with respect to AB partnership.

(ii) *Analysis.* AB partnership should not provide notice of recapture to Transferee Taxpayer X as a result of the recapture event under § 1.47–6(a)(2) with respect to A. Transferee Taxpayer X is not liable for any recapture amount. A, however, is subject to recapture as provided in § 1.47–6(a)(2) and based on its share of the basis (or cost) of the energy property to which the eligible credits were determined under § 1.46–3(f)(2).

(3) *Example 3. Transfer of a portion of eligible credits by a transferor partnership*—(i) *Facts.* C and D each contributed cash to CD partnership for the purpose of investing in a qualified wind facility. The partnership agreement provides that until a flip point, C is allocated 99 percent of all items of income, gain, loss, deduction and credit of CD partnership and D is allocated the remaining 1 percent of such items. After the flip point, C is allocated 5 percent of all items of income, gain, loss, deduction and credit of CD Partnership and D is allocated 95 percent of such items. CD partnership invests in a qualified wind facility and places the facility in service in year 1. CD partnership generates $100X of credit under section 45(a) for year 1. Before the due date for CD partnership's year 1 tax return (with extension), C and D agree that D's share of the eligible credit will be transferred, and C will be allocated its share of eligible credit. CD partnership transfers $1X of the eligible credit to an unrelated transferee taxpayer for $1X. The flip point has not been reached by the end of year 1.

(ii) *Analysis.* Under paragraph (b)(2) of this section, CD partnership must first determine each partner's eligible credit amount, which is equal to such partner's distributive share of the otherwise eligible section 45(a) credit as determined under § 1.704–1(b)(4)(ii). Under § 1.704–1(b)(4)(ii), for an eligible credit that is not an investment tax credit, allocations of credit are deemed to be in accordance with the partner's interest in the partnership if the credit is allocated in the same proportion as

the partners' distributive share of the receipts that give rise to the credit. The CD partnership agreement provides that until the flip point, C is allocated 99 percent of all items of income, gain, loss, deduction and credit of CD partnership and D is allocated the remaining 1 percent of such items. Assuming all requirements of the safe harbor provided for in Revenue Procedure 2007–65, 2007–2 CB 967 are met, CD partnership's allocations of the otherwise eligible credits would be respected as in accordance with section 704(b). Thus, partner C's and partner D's distributive share of the otherwise eligible credit is 99 percent and 1 percent, respectively. C and D have agreed to sell D's eligible credit amount of $1X for full value and to allocate to C its eligible credit amount of $99X. The transfer made pursuant to section 6418(a) causes CD partnership's eligible credits under section 45(a) with respect to the wind facility to be reduced to $99X, and the consideration of $1X received by CD partnership is treated as tax exempt income. D is allocated $1X of tax exempt income from the transfer of the eligible credits, and C is allocated $99X of eligible credits under section 45(a) with respect to the wind facility. Neither C nor D is allocated more eligible credits than its eligible credit amount. Additionally, D is allocated an amount of tax exempt income equal to $\$1X \times (1-0)/1$ and C is allocated none of the tax exempt income. The allocations of eligible credits and tax exempt income are permissible allocations under paragraph (b)(2) of this section.

(4) *Example 4. Upper-tier partnership of a transferor partnership*—(i) *Facts.* E, F, and G each contributed $100X of cash to EFG partnership for the purpose of investing in an energy property. E, F, and G are partnerships for Federal income tax purposes. The partnership agreement provides that E, F and G share equally in all items of income, gain, loss, and deduction of EFG partnership. EFG partnership invests $300X in an energy property in accordance with section 48 and places the energy property in service in year 1. As of the end of year 1, EFG partnership has $90X of eligible credits under section 48 with respect to the energy property. Before the due date for EFG partnership's year 1 tax return (with extension), E, F and G agree that E's share of the eligible credits will be transferred, and F and G will each be allocated their shares of eligible credits (or basis). EFG partnership transfers $30X of the eligible credits to an unrelated transferee taxpayer for $25X. Assuming the allocations to E, F and G of the eligible credits and tax exempt income resulting from the receipt of cash for the transferred specified credit portion are permissible allocations under paragraph (b)(2) of this section, E is allocated $25X of tax exempt income from the transfer of the eligible credits and F and G are each allocated $30X of basis with respect to the energy property.

(ii) *Analysis.* E must allocate the $25X of tax exempt income to its partners as if it had retained its share of the eligible credits. Under § 1.46–3(f)(2), each partner's share of the basis of the section 48 energy property is determined in accordance with the ratio in which the partners divide the general profits (or taxable income) of the partnership. The E partnership agreement provides for equal allocations of income, gain, deduction, and loss to its partners, and thus, E partnership must allocate the otherwise eligible credits in the same manner. Therefore, E partnership must allocate the $25X of tax exempt income equally among its partners. In accordance with paragraph (b)(3)(i) of this section, F and G do not qualify as an eligible taxpayer for purposes of section 6418 and thus, are not permitted to make a transfer election for any portion of the $30X of eligible credit allocated to them by EFG partnership. Under § 1.46–3(f)(2), each partner's share of the basis of the section 48 energy property is determined in accordance with the ratio in which the partners divide the general profits (or taxable income) of the partnership. The F and G partnership agreements provide for equal allocations of income, gain, deduction, and loss to its partners, and F and G must allocate the basis from the energy property to their partners in the same manner.

(5) *Example 5. Transferee partnership*—(i) *Facts.* Y and Z each contributed $50X of cash to YZ partnership for the purpose of purchasing eligible section 45 credits under section 6418. The partnership agreement provides that all items of income, gain, loss, deduction, and credit are shared equally among Y and Z. The partnership agreement also provides that any nondeductible expenses used to fund the purchase of any transferred specified credit portion will be shared equally among Y and Z. On date X in year 1, YZ partnership qualifies as a transferee taxpayer and makes a cash payment of $80X to an eligible taxpayer for $100X of a transferred specified credit portion. The eligible credits will be determined with respect to the eligible taxpayer as of the end of year 1. Both YZ partnership and the eligible taxpayer are calendar year taxpayers.

(ii) *Analysis.* The cash payment of $80X made by YZ partnership for the transferred specified credit portion is treated as a nondeductible expenditure under section 705(a)(2)(B). Under paragraph (b)(4)(iii) of this section, YZ partnership must determine each partner's distributive share of the transferred specified credit portion based on such partner's distributive share of the nondeductible expenses for the taxable year used to fund the purchase of such transferred specified credit portion. The YZ partnership agreement provides that nondeductible expenses used to fund the purchase of any transferred specified credit portion will be shared equally among Y and Z and thus, the transferred specified credit portion is also shared equally among Y and Z. The transferred specified credit portion is treated as an extraordinary item under § 1.706–4(e)(2)(ix) that is deemed to occur on date X in year 1. As of date X in year 1, each of Y and Z are allocated $40X of a section 705(a)(2)(B) expenditure with respect to the cash payment for the transferred specified credit portion and $50X of transferred section 45 credits.

(6) *Example 6. Upper-tier partnership of a transferee partnership*—(i) *Facts.* Assume the same facts as in paragraph (e)(5)(i) of this section (*Example 5*), except Y is a partnership for Federal tax purposes, and Z is a corporation for Federal tax purposes.

(ii) *Analysis.* In accordance with paragraph (b)(4)(v) of this section, Y does not qualify as an eligible taxpayer for purposes of section 6418 for that portion of the transferred specified credit portion allocated to it by YZ partnership. Under paragraph (b)(4)(iii) of this section, Y must determine each partner's distributive share of the transferred specified credit portion based on such partner's distributive share of the nondeductible expenses for the taxable year used to fund the purchase of such transferred specified credit portion. The Y partnership agreement provides that all items of income, gain, loss, deduction, and credit are shared equally. The partnership agreement also provides that any nondeductible expenses used to fund the purchase of any specified credit portion are shared equally. Thus, the transferred specified credit portion must be shared equally among the partners of Y.

(7) *Example 7. Transferor S corporation*—(i) *Facts.* V and W each contributed $150X of cash to an S corporation for the purpose of investing in energy property. The S corporation

invests $300X in an energy property in accordance with section 48 and places the energy property in service on date X in year 1. As of the end of year 1, the S corporation has $90X of eligible credits under section 48 with respect to the energy property. Before the due date for S corporation's year 1 tax return (with extension), S corporation transfers the $90X of eligible credits to an unrelated transferee taxpayer for $80X.

(ii) *Analysis.* The transfer made pursuant to section 6418(a) causes the S corporation's eligible credits under section 48 with respect to the energy property to be reduced to zero, and the consideration of $80X received by the S corporation for the transferred specified credit portion is treated as tax exempt income. Under paragraph (c)(1) of this section, each of V and W must take into account its pro rata share (as determined under section 1377(a)) of any tax exempt income resulting from the receipt of consideration for the transfer of the eligible credit, or $40X. Under section 1367(a)(1)(A), each of the shareholder's basis in its stock will be increased by $40X. Also in year 1, the basis in the energy property with respect to which the credit is calculated is reduced under section 50(c)(3) by 50 percent of the amount of the credit so determined, or $45. The tax exempt income received or accrued by S corporation as a result of the transfer of the specified credit portion is treated as received or accrued, including for purposes of section 1366, as of date X in year 1, which is the date the transferred specified credit portion was determined with respect to the transferor S corporation.

(8) *Example 8. Transferee S corporation*—(i) *Facts.* J and K each contributed $50X of cash to S corporation for the purpose of purchasing eligible section 48 credits under section 6418. At the beginning of year 2, S corporation qualifies as a transferee taxpayer and makes a cash payment of $80X to an eligible taxpayer for $100X of a transferred specified credit portion. The transferred specified credit portion was determined with respect to the eligible taxpayer for energy property placed in service in year 1. Both S corporation and the eligible taxpayer are calendar year taxpayers.

(ii) *Analysis.* The cash payment of $80X made by the S corporation for the transferred specified credit portion is treated as an expenditure described in section 1367(a)(2)(D). Each of J and K must take into account its pro rata share (as determined under section 1377(a)) of the transferred specified credit portion. The transferred specified credit portion is deemed to arise for purposes of sections 1366 and 1377 during year 2 of the S corporation. For year 2, each of J and K take into account $40X of a section 1367(a)(2)(D) expenditure with respect to the cash payment for the transferred specified credit portion and $50X of transferred section 48 credits.

(f) *Applicability date.* This section applies to taxable years ending on or after [DATE OF PUBLICATION OF FINAL RULE].

§ 1.6418–4 Additional information and registration.

(a) *Pre-filing registration and election.* As a condition of, and prior to, any specified credit portion being transferred by an eligible taxpayer to a transferee taxpayer pursuant to an election under § 1.6418–2, or a specified credit portion being transferred by a partnership or S corporation pursuant to § 1.6418–3, the eligible taxpayer is required to satisfy the pre-filing registration requirements in paragraph (b) of this section. An eligible taxpayer that does not obtain a registration number under paragraph (c)(1) of this section, and report the registration number on its return pursuant to paragraph (c)(5) of this section, is ineligible to make a transfer election for a specified credit portion under § 1.6418–2 or § 1.6418–3, with respect to the eligible credit determined with respect to the specific eligible credit property for which the eligible taxpayer has failed to obtain and report a registration number. However, completion of the pre-filing registration requirements and receipt of a registration number does not, by itself, mean the eligible taxpayer is eligible to transfer any specified credit portion determined with respect to the eligible credit property.

(b) *Pre-filing registration requirements*—(1) *Manner of pre-filing registration.* Unless otherwise provided in guidance, eligible taxpayers must complete the pre-filing registration process electronically through an IRS electronic portal and in accordance with the instructions provided therein.

(2) *Pre-filing registration and election for members of a consolidated group.* A member of a consolidated group is required to complete pre-filing registration to transfer any eligible credit determined with respect to the member. See § 1.1502–77 (providing rules regarding the status of the common parent as agent for its members).

(3) *Timing of pre-filing registration.* An eligible taxpayer must satisfy the pre-filing registration requirements of this paragraph (b) and receive a registration number under paragraph (c) of this section prior to making a transfer election under § 1.6418–2 or § 1.6418–3 for a specified credit portion on the taxpayer's return for the taxable year at issue.

(4) *Each eligible credit property must have its own registration number.* An eligible taxpayer must obtain a registration number for each eligible credit property with respect to which a transfer election of a specified credit portion is made.

(5) *Information required to complete the pre-filing registration process.* Unless modified in future guidance, an eligible taxpayer is required to provide the following information to the IRS to complete the pre-filing registration process:

(i) The eligible taxpayer's general information, including its name, address, taxpayer identification number, and type of legal entity;

(ii) Any additional information required by the IRS electronic portal, such as information establishing that the entity is an eligible taxpayer;

(iii) The taxpayer's taxable year, as determined under section 441;

(iv) The type of annual tax return(s) normally filed by the eligible taxpayer, or that the eligible taxpayer does not normally file an annual tax return with the IRS;

(v) The type of eligible credit(s) for which the eligible taxpayer intends to make a transfer election;

(vi) Each eligible credit property that the eligible taxpayer intends to use to determine a specified credit portion for which the eligible taxpayer intends to make a transfer election;

(vii) For each eligible credit property listed in paragraph (b)(5)(vi) of this section, any further information required by the IRS electronic portal, such as—

(A) The type of eligible credit property;

(B) Physical location (that is, address and coordinates (longitude and latitude) of the eligible credit property);

(C) Any supporting documentation relating to the construction or acquisition of the eligible credit property (such as State, Indian Tribal, or local government permits to operate the eligible credit property, certifications, evidence of ownership that ties to a land deed, lease, or other documented right to use and access any land or facility upon which the eligible credit property is constructed or housed, and U.S. Coast Guard registration numbers for offshore wind vessels);

(D) The beginning of construction date, and the placed in service date of the eligible credit property; and

(E) Any other information that the eligible taxpayer believes will help the IRS evaluate the registration request;

(viii) The name of a contact person for the eligible taxpayer. The contact person is the person whom the IRS may contact if there is an issue with the registration. The contact person must either:

(A) Possess legal authority to bind the eligible taxpayer; or

(B) Must provide a properly executed power of attorney on Form 2848, *Power of Attorney and Declaration of Representative;*

(ix) A penalties of perjury statement, effective for all information submitted as a complete application, and signed by a person with personal knowledge of the relevant facts that is authorized to bind the registrant; and

(x) Any other information the IRS deems necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under this section that is provided in guidance.

(c) *Registration number*—(1) *In general.* The IRS will review the registration information provided and will issue a separate registration number for each eligible credit property for which the eligible taxpayer provided sufficient verifiable information.

(2) *Registration number is only valid for one taxable year.* A registration number is valid to an eligible taxpayer only for the taxable year in which the credit is determined for the eligible credit property for which the registration is completed, and for a transferee taxpayer's taxable year in which the eligible credit is taken into account under § 1.6418–2(f).

(3) *Renewing registration numbers.* If an election to transfer an eligible credit will be made with respect to an eligible credit property for a taxable year after a registration number under this section has been obtained, the eligible taxpayer must renew the registration for that subsequent taxable year in accordance with applicable guidance, including attesting that all the facts previously provided are still correct or updating any facts.

(4) *Amendment of previously submitted registration information if a change occurs before the registration number is used.* As provided in instructions to the pre-filing registration portal, if specified changes occur with respect to one or more applicable credit properties for which a registration number has been previously obtained, but not yet used, an eligible taxpayer must amend the registration (or may need to submit a new registration) to reflect these new facts. For example, if the owner of a facility previously registered for a transfer election under § 1.6418–2 or § 1.6418–3 for eligible credits determined with respect to that facility and the facility undergoes a change of ownership (incident to a corporate reorganization or an asset sale) such that the new owner has a different employer identification number (EIN) than the owner who obtained the original registration, the original owner of the facility must amend the original registration to disassociate its EIN from the eligible credit property and the new owner must submit separately an original registration (or if the new owner previously registered other credit properties, must amend its original registration) to associate the new owner's EIN with the previously registered eligible credit property.

(5) *Reporting of registration number by an eligible taxpayer and a transferee taxpayer*—(i) *Eligible taxpayer reporting.* As part of making a valid transfer election under § 1.6418–2 or § 1.6418–3, an eligible taxpayer must include the registration number of the eligible credit property on the eligible taxpayer's return (as provided in § 1.6418–2(b) or § 1.6418–3(d)) for the taxable year the specified credit portion was determined. The IRS will treat an election as ineffective if the eligible taxpayer does not include a valid registration number on the return.

(ii) *Transferee taxpayer reporting.* A transferee taxpayer must report the registration number received (as part of the transfer election statement as described in § 1.6418–2(b) or otherwise) from a transferor taxpayer on the Form 3800, *General Business Credit,* as part of the return for the taxable year that the transferee taxpayer takes the transferred specified credit portion into account. The specified credit portion will be disallowed to the transferee taxpayer if the transferee taxpayer does not include the registration number on the return.

(d) *Applicability date.* This section applies to taxable years ending on or after [DATE OF PUBLICATION OF FINAL RULE].

§ 1.6418–5 Special rules.

(a) *Excessive credit transfer tax imposed*—(1) *In general.* If any specified credit portion that is transferred to a transferee taxpayer pursuant to an election in § 1.6418–2(a) or § 1.6418–3 is determined to be an excessive credit transfer (as defined in paragraph (b) of this section), the tax imposed on the transferee taxpayer by chapter 1 (regardless of whether such entity would otherwise be subject to chapter 1 tax) for the taxable year in which such determination is made will be increased by an amount equal to the sum of—

(i) The amount of such excessive credit transfer; and

(ii) An amount equal to 20 percent of such excessive credit transfer.

(2) *Taxable year of the determination.* The taxable year of the determination for purposes of paragraph (a)(1) of this section is the taxable year that includes the determination and not the taxable year when the eligible credit was originally determined by the eligible taxpayer, unless those are the same taxable years.

(3) *Payments related to excessive credit transfer.* Any payments made by a transferee taxpayer to an eligible taxpayer that directly relate to the excessive credit transfer (as defined in paragraph (b) of this section) are not subject to section 6418(b)(2) or § 1.6418–2(e).

(4) *Reasonable cause.* Paragraph (a)(1)(ii) of this section does not apply if the transferee taxpayer demonstrates to the satisfaction of the IRS that the excessive credit transfer resulted from reasonable cause. Determination of reasonable cause will be made based on the relevant facts and circumstances. Generally, the most important factor is the extent of the transferee taxpayer's efforts to determine that the amount of specified credit portion transferred by the eligible taxpayer to the transferee taxpayer is not more than the amount of the eligible credit determined with respect to the eligible credit property for the taxable year in which the eligible credit was determined and has not been transferred to any other taxpayer. Circumstances that may indicate reasonable cause can include, but are not limited to, review of the eligible taxpayer's records with respect to the determination of the eligible credit (including documentation evidencing eligibility for bonus credit amounts), reasonable reliance on third party expert reports, reasonable reliance on representations from the eligible taxpayer that the total specified credit portion transferred (including portions transferred to other transferee taxpayers when an eligible taxpayer makes multiple transfer elections with respect to a single credit property) does not exceed the total eligible credit determined with respect to the eligible credit property for the taxable year, and review of audited financial statements provided to the Securities and Exchange Commission (and underlying information), if applicable.

(5) *Recapture events.* A recapture event under section 45Q(f)(4) or 50(a) is not an excessive credit transfer.

(b) *Excessive credit transfer defined*—(1) *In general.* The term *excessive credit transfer* means, with respect to an eligible credit property for which a transfer election is made under § 1.6418–2 or § 1.6418–3 for any taxable year, an amount equal to the excess of—

(i) The amount of the transferred specified credit portion claimed by the transferee taxpayer with respect to such eligible credit property for such taxable year; over

(ii) The amount of the eligible credit that, without the application of section 6418, would be otherwise allowable under the Code with respect to such eligible credit property for such taxable year.

(2) *Multiple transferees treated as one.* All transferee taxpayers are considered as one transferee for calculating whether there was an excessive credit transfer and the amount of the excess credit transfer. If there was an excessive credit transfer, then the amount of excessive credit transferred to a specific transferee taxpayer is equal to the total excessive credit transferred multiplied by the transferee taxpayer's portion of the total specified credit portions transferred to all transferees. The rule in this paragraph (b)(2) is applied on an eligible credit property basis, as applicable.

(3) *Examples.* The following examples illustrate the rules of this paragraph (b):

(i) *Example I—No excessive credit transfer.* Taxpayer A claims $50 of an eligible credit and transfers $50 of an eligible credit to Transferee Taxpayer B related to a single facility that was expected to generate $100 of such eligible credit. In a later year it is determined that the facility only generated $50 of such eligible credit. There is no excessive credit transfer in this case because the amount of the eligible credit claimed by Transferee Taxpayer B of $50 is equal to the amount of the credit that would be otherwise allowable with respect to such facility for the taxable year the transfer occurred. Taxpayer A is disallowed the $50 of the eligible credit claimed.

(ii) *Example II—Excessive credit transfer.* Same facts as in paragraph (b)(3)(i) of this section (*Example I*) except that Taxpayer A transfers $80 of the $100 of eligible credit to Transferee Taxpayer B. Taxpayer A claims $20 of the eligible credit and Transferee Taxpayer B claims $80 of the eligible credit. In this situation, there is a $30 excessive credit transfer because the amount of the credit claimed by Transferee Taxpayer B ($80) exceeds the amount of credit otherwise allowable with respect to the facility ($50) by $30. Therefore, Transferee Taxpayer B's tax is increased in the later year by $36, which is equal to the amount of the excessive credit transfer plus 20 percent of the excessive credit transfer as provided in paragraph (a) of this section and section 6418(g)(2)(A). If Transferee Taxpayer B can show reasonable cause as provided in paragraph (a)(4) of this section and section 6418(g)(2)(B), then Transferee Taxpayer B will only have a tax increase of $30. Taxpayer A is disallowed the $20 of the eligible credit claimed, and pursuant to paragraph (a)(3) of this section the payments made to Taxpayer A from Transferee Taxpayer B that directly relate to the excessive credit transfer are not subject to section 6418(b)(2) or § 1.6418–2(e).

(iii) *Example III—Excessive credit with multiple transferees.* Same facts as in paragraph (b)(3)(i) of this section (*Example I*) except that Taxpayer A transfers $45 of the eligible credit to Transferee Taxpayer B and $35 of the eligible credit to Transferee Taxpayer C. Taxpayer A claims $20 of the eligible credit, Transferee Taxpayer B claims $45 of the eligible credit, and Transferee Taxpayer C claims $35 of the eligible credit. In this situation, because there are multiple transferees, all transferees are treated as one transferee for determining the excessive credit transfer amount under paragraph (b)(2) of this section. There is a total excessive credit transfer of $30 because the amount of the credit claimed by the transferees in total ($80) exceeds the amount of credit otherwise allowable with respect to the facility ($50) by $30. The excessive credit transfer to Taxpayer B is equal to ($45/$80 * $30) = $16.88, and the excessive credit transfer to Taxpayer C is equal to ($35/$80 * $30) = $13.12. Therefore, Transferee Taxpayer B and Transferee Taxpayer C are subject to the provisions in paragraph (a) of this section. Transferee Taxpayer B's and Transferee Taxpayer C's tax is increased in the later year by the respective excessive credit transfer amount and 20 percent of the excessive credit transfer amount ($20.26 for Transferee Taxpayer B and $15.74 for Transferee Taxpayer C) as provided in paragraph (a) of this section and section 6418(g)(2)(A). If Transferee Taxpayer B or Transferee Taxpayer C can show reasonable cause as provided in paragraph (a)(4) of this section and section 6418(g)(2)(B), then the tax increase will only be $16.88 or $13.12, respectively. Taxpayer A is disallowed the $20 of eligible credit claimed and pursuant to paragraph (a)(3) of this section the payments made to Taxpayer A that directly relate to the excessive credit transfer are not subject to section 6418(b)(2) or § 1.6418–2(e).

(c) *Basis reduction under section 50(c).* In the case of any transfer election under § 1.6418–2 or § 1.6418–3 with respect to any specified credit portion described in § 1.6418–1(c)(2)(ix) through (xi), section 50(c) will apply to the applicable investment credit property (as defined in section 50(a)(6)(A)) as if such credit was allowed to the eligible taxpayer.

(d) *Notification and impact of recapture under section 50(a) or 49(b)*—(1) *In general.* In the case of any election under § 1.6418–2 or § 1.6418–3 with respect to any specified credit portion described in § 1.6418–1(c)(2)(ix) through (xi), if, during any taxable year, the applicable investment credit property (as defined in section 50(a)(6)(A)) is disposed of, or otherwise ceases to be investment credit property with respect to the eligible taxpayer, before the close of the recapture period (as described in section 50(a)(1)(A)), other than as described in § 1.6418–3(a)(6), or has a reduction in credit base causing recapture under section 49, other than as described in § 1.6418–3(a)(6), such eligible taxpayer and the transferee taxpayer must follow the notification process in paragraph (d)(2) of this section, with recapture impacting the transferee taxpayer and eligible taxpayer as described in paragraph (d)(3) of this section.

(2) *Notification requirements*—(i) *Eligible taxpayer.* The eligible taxpayer must provide notice of the occurrence of recapture to the transferee taxpayer. This notice must provide all information necessary for a transferee taxpayer to correctly compute the recapture amount (as defined under section 50(c)(2)), and the notification must occur in sufficient time to allow the transferee taxpayer to compute the recapture amount by the due date of the transferee taxpayer's return (without extensions) for the taxable year in which the recapture event occurs. The eligible taxpayer and transferee taxpayer can contract with respect to the form of the notice and any specific time periods that must be met, so long as the terms of the contractual arrangement do not conflict with the requirements of this paragraph (d)(2)(i). Any additional information that is required or other specific time periods that must be met may be prescribed by the IRS in guidance issued with respect to this notification requirement.

(ii) *Transferee taxpayer.* The transferee taxpayer must provide notice of the recapture amount (as defined in section 50(c)(2)), if any, to the eligible taxpayer. This must occur in sufficient time to allow the eligible taxpayer to calculate any basis adjustment with

respect to the investment credit property by the due date of the eligible taxpayer's return (without extensions) for the taxable year in which the recapture event occurs. The eligible taxpayer and transferee taxpayer can contract with respect to the form of the notice and any specific time periods that must be met, so long as the terms of the contractual arrangement do not conflict with the requirements of this paragraph (d)(2)(ii). Any additional information that is required or other specific time periods that must be met may be provided in guidance prescribed by the IRS issued with respect to this notification requirement.

(3) *Impact of recapture*—(i) *Impact of recapture on transferee.* The transferee taxpayer is responsible for any amount of tax increase under section 50(a) upon the occurrence of a recapture event.

(ii) *Impact on eligible taxpayer.* The eligible taxpayer must increase the basis of the investment credit property (immediately before the event resulting in such recapture) by an amount equal to the recapture amount provided to the eligible taxpayer by the transferee taxpayer under paragraph (d)(2)(ii) of this section and in accordance with section 50.

(e) *Notification and impact of recapture under section 45Q(f)(4)*—(1) *In general.* In the case of any election under § 1.6418–2 or § 1.6418–3 with respect to any specified credit portion described in § 1.6418–1(c)(2)(iii), if, during any taxable year, there is recapture of any section 45Q credit allowable with respect to any qualified carbon oxide that ceases to be captured, disposed of, or used as a tertiary injectant in a manner consistent with section 45Q, before the close of the recapture period (as described in § 1.45Q–5(f)), such eligible taxpayer and the transferee taxpayer must follow the notification process in paragraph (e)(2) of this section with recapture impacting the transferee taxpayer as described in paragraph (e)(3) of this section.

(2) *Notification requirements.* The notification requirements for the eligible taxpayer are the same as for an eligible taxpayer that must report a recapture event as described in paragraph (d)(2)(i) of this section, except that the recapture amount that must be computed is defined in § 1.45Q–5(e).

(3) *Impact of recapture.* The transferee taxpayer is responsible for any amount of tax increase under section 45Q(f)(4) and § 1.45Q–5 upon the occurrence of a recapture event.

(f) *Impact of an ineffective transfer election by an eligible taxpayer.* An ineffective transfer election means that no transfer of an eligible credit has occurred for purposes of section 6418, including section 6418(b). Section 6418 does not apply to the transaction and the tax consequences are determined under any other relevant provisions of the Code. For example, an ineffective election results if an eligible taxpayer tries to elect to transfer a specified credit portion, but the eligible taxpayer did not register and receive a registration number with respect to the eligible credit property (or otherwise satisfy the requirements for making a transfer election under the section 6418 regulations) with respect to which the specified credit portion was determined.

(g) *Carryback and carryforward.* A transferee taxpayer can apply the rules in section 39(a)(4) (regarding a 3-year carryback period for unused current year business credits) to a specified credit portion to the extent the specified credit portion is described in section 6417(b) (list of applicable credits, taking into account any placed in service requirements in section 6417(b)(2), (3), and (5)).

(h) *Applicability date.* This section applies to taxable years ending on or after [DATE OF PUBLICATION OF FINAL RULE].

Douglas W. O'Donnell,

Deputy Commissioner for Services and Enforcement.

Section 6417 Elective Payment of Applicable Credits

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking and notice of public hearing.

SUMMARY: This document contains proposed regulations concerning the election under the Inflation Reduction Act of 2022 to treat the amount of certain tax credits as a payment of Federal income tax. The proposed regulations describe rules for the elective payment of these credit amounts in a taxable year, including definitions and special rules applicable to partnerships and S corporations and regarding repayment of excessive payments. In addition, the proposed regulations describe rules related to an IRS pre-filing registration process that would be required. These proposed regulations affect tax-exempt organizations, State and local governments, Indian tribal governments, Alaska Native Corporations, the Tennessee Valley Authority, rural electric cooperatives, and, in the case of three of these credits, certain taxpayers eligible to elect the elective payment of credit amounts in a taxable year. This document also provides notice of a public hearing on the proposed regulations.

DATES: Written or electronic comments must be received by August 14, 2023. The public hearing on these proposed regulations is scheduled to be held on August 21, 2023, at 10 a.m. ET. Requests to speak and outlines of topics to be discussed at the public hearing must be received by August 14, 2023. If no outlines are received by August 14, 2023, the public hearing will be cancelled. Requests to attend the public hearing must be received by 5 p.m. ET on August 17, 2023. The public hearing will be made accessible to people with disabilities. Requests for special assistance during the hearing must be received by August 16, 2023.

ADDRESSES: Stakeholders are strongly encouraged to submit public comments electronically. Submit electronic submissions via the Federal eRulemaking Portal at *https://www.regulations.gov* (indicate IRS and REG–101607–23) by following the online instructions for submitting comments. Once submitted to the Federal eRulemaking Portal, comments cannot be edited or withdrawn. The Department of the Treasury (Treasury Department) and the IRS will publish for public availability any comments submitted, whether electronically or on paper, to the IRS's public docket. Send paper submissions to: CC:PA:LPD:PR (REG–101607–23), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044.

FOR FURTHER INFORMATION CONTACT: Concerning the proposed regulations, Jeremy Milton at (202) 317–5665 and James Holmes at (202) 317–5114 (not toll-free numbers); concerning submissions of comments or the public hearing, Vivian Hayes at (202) 317–6901 (not a toll-free number) or by email to *publichearings@irs.gov* (preferred).

SUPPLEMENTARY INFORMATION:

Background

Section 6417 was added to the Internal Revenue Code (Code) on August 16, 2022, by section 13801(a) of Public Law 117–169, 136 Stat. 1818, 2003, commonly referred to as the Inflation Reduction Act of 2022 (IRA). Section 6417 allows ''applicable entities'' (including tax-exempt organizations, State and local governments, Indian tribal governments, Alaska Native Corporations, the Tennessee Valley Authority, and rural electric cooperatives) to make an election to treat an applicable credit determined with respect to such entity as making a payment against the tax imposed by subtitle A of the Code (subtitle A), for the taxable year with respect to which such credit was determined, equal to the amount of such credit. Section 6417 also allows certain taxpayers to elect to be treated as applicable entities for limited purposes, as described in part III of this background section. Section 6417 also provides special rules relating to partnerships and S corporations and directs the Secretary of the Treasury or her delegate (Secretary) to provide rules for making elections under section 6417 and to require information or registration necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under section 6417. Section 13801(g) of the IRA provides that section 6417 applies to taxable years beginning after December 31, 2022. This document contains proposed regulations that would amend the Income Tax Regulations (26 CFR part 1) and the Procedure and Administration Regulations (part 301) to implement the statutory provisions of section 6417.

In the Rules and Regulations section of this issue of the **Federal Register**, the Treasury Department and the IRS are issuing temporary regulations under § 1.6417–5T that implement the pre-filing registration process described in proposed § 1.6417–5 of the proposed regulations. The temporary regulations require applicable entities that want to elect the elective payment of applicable credit amounts to register with the IRS through an IRS electronic portal in advance of the applicable entity filing the return on which the election under section 6417 is made.

I. Overview of Section 6417

Section 6417(a) provides that, in the case of an applicable entity that makes an elective payment election under section 6417 with respect to any applicable credit determined with respect to the applicable entity for the taxable year, the applicable entity is treated as making a payment against the tax imposed by subtitle A, that is, Federal income taxes, for the taxable year with respect to which such credit was determined that is equal to the amount of such credit (elective payment amount). An election under section 6417 must be made at such time and in such manner as provided by the Secretary.

Section 6417(b) defines the term ''applicable credit'' to mean each of the following 12 credits:

(1) So much of the credit for alternative fuel vehicle refueling property allowed under section 30C of the Code that, pursuant to section 30C(d)(1), is treated as a credit listed in section 38(b) of the Code (section 30C credit);

(2) So much of the renewable electricity production credit determined under section 45(a) of the Code as is attributable to qualified facilities that are originally placed in service after December 31, 2022 (section 45 credit);

(3) So much of the credit for carbon oxide sequestration determined under section 45Q(a) of the Code as is attributable to carbon capture equipment that is originally placed in service after December 31, 2022 (section 45Q credit);

(4) The zero-emission nuclear power production credit determined under section 45U(a) of the Code (section 45U credit);

(5) So much of the credit for production of clean hydrogen determined under section 45V(a) of the Code as is attributable to qualified clean hydrogen production facilities that are

originally placed in service after December 31, 2012 (section 45V credit);

(6) In the case of a ''tax-exempt entity'' described in section 168(h)(2)(A)(i), (ii), or (iv) of the Code, the credit for qualified commercial vehicles determined under section 45W of the Code by reason of section 45W(d)(3) [1] (section 45W credit);

(7) The credit for advanced manufacturing production under section 45X(a) of the Code (section 45X credit);

(8) The clean electricity production credit determined under section 45Y(a) of the Code (section 45Y credit);

(9) The clean fuel production credit determined under section 45Z(a) of the Code (section 45Z credit);

(10) The energy credit determined under section 48 of the Code (section 48 credit);

(11) The qualifying advanced energy project credit determined under section 48C of the Code (section 48C credit); and

(12) The clean electricity investment credit determined under section 48E of the Code (section 48E credit).

As described in part II of this Background section, section 6417(d) defines an ''applicable entity'' and provides generally applicable rules for making elective payment elections. Sections 6417(e) through (h) provide special rules applicable under section 6417 that are described in part II of this Background section. As described in parts III and IV of this Background section, section 6417(c), (d)(1)(B), (C), and (D), and (d)(3) also contain special rules allowing a taxpayer, including for this purpose a partnership or S corporation, that is not an applicable entity (electing taxpayer) to elect to be treated as an applicable entity for the limited purpose of making an elective payment election under section 6417, but only with respect to section 45Q credits, section 45V credits, and section 45X credits. Part V of this Background section describes Notice 2022–50, 2022–43 I.R.B. 325, which, in part, requested feedback from the public on potential issues with respect to the elective payment election provisions under section 6417.

II. Applicable Entities and General Elective Payment Election Rules

Section 6417(d)(1)(A) defines the term ''applicable entity'' to mean:

(1) Any organization exempt from tax imposed by subtitle A;

(2) Any State or political subdivision thereof;

(3) The Tennessee Valley Authority;

(4) An Indian tribal government (as defined in section 30D(g)(9) of the Code);

(5) Any Alaska Native Corporation (as defined in section 3 of the Alaska Native Claims Settlement Act (43 U.S.C. 1602(m)); or

(6) Any corporation operating on a cooperative basis that is engaged in furnishing electric energy to persons in rural areas.

Section 6417(d)(2) provides that, in the case of any applicable entity that makes the election described in section 6417(a), any applicable credit amount is determined (1) without regard to section 50(b)(3) and (4)(A)(i) of the Code (that is, restrictions on property used by tax-exempt organizations and governmental units), and (2) by treating any property with respect to which such credit is determined as used in a trade or business of the applicable entity.

Section 6417(d)(3)(A)(i) provides rules regarding the due date for making any elective payment election. In the case of any government (such as a State, the District of Columbia, an Indian Tribal government, any U.S. territory, or any agency or instrumentality of the foregoing), or political subdivision, described in section 6417(d)(1) and for which no Federal income tax return is required under sections 6011 or 6033(a) of the Code, any election under section 6417(a) cannot be made later than the date as is determined appropriate by the Secretary. In any other case, any election under section 6417(a) cannot be made later than the due date (including extensions of time) for the tax return for the taxable year for which the election is made, but in no event earlier than 180 days after the date of the enactment of section 6417 (that is, in no event earlier than 180 days after August 16, 2022, which is February 13, 2023).

Section 6417(d)(3)(A)(ii) provides that any election under section 6417(a), once made, is irrevocable, and applies (except as otherwise provided in section 6417(d)(3)) with respect to any credit for the taxable year for which the election is made.

Section 6417(d)(3)(B) provides that, in the case of section 45 credits, any election under section 6417(a): (1) applies separately with respect to each qualified facility; (2) must be made for the taxable year in which such qualified facility is originally placed in service; and (3) applies to such taxable year and to any subsequent taxable year that is within the 10-year credit period described in section 45(a)(2)(A)(ii) with respect to such qualified facility.

Section 6417(d)(3)(C) provides that, in the case of section 45Q credits, any election under section 6417(a): (1) applies separately with respect to the carbon capture equipment originally placed in service by the applicable entity during a taxable year; and (2) applies to such taxable year and to any subsequent taxable year that is within the 12-year credit period described in section 45Q(a)(3)(A) or (4)(A) with respect to such equipment. Section 6417(d)(3)(C)(i)(II)(aa), (d)(3)(C)(ii), and (d)(3)(C)(iii) provides special rules for a taxpayer making the election to be treated as an applicable entity for purposes of section 6417 with respect to the 45Q credit (see part III of this Background section).

Section 6417(d)(3)(D) provides that, in the case of section 45V credits, any election under section 6417(a): (1) applies separately with respect to each qualified clean hydrogen production facility; (2) must be made for the taxable year in which such facility is placed in service (or within the 1-year period subsequent to the date of enactment of section 6417 in the case of facilities placed in service before December 31, 2022); and (3) applies to the taxable year and all subsequent taxable years with respect to such facility. Section 6417(d)(3)(D)(i)(III)(aa), (d)(3)(D)(ii), and (d)(3)(D)(iii) provide special rules for a taxpayer making the election to be treated as an applicable entity for purposes of section 6417 with respect to the 45V credit (see part III of this Background section).

Section 6417(d)(3)(E) provides that, in the case of section 45Y credits, any election under section 6417(a): (1) applies separately with respect to each qualified facility; (2) must be made for the taxable year in which such facility is placed in service; and (3) applies to such taxable year and to any subsequent taxable year that is within the 10-year credit period described in section 45Y(b)(1)(B) with respect to such facility.

Section 6417(d)(4) provides rules regarding when the elective payment is treated as made. Section 6417(d)(4)(A) provides that in the case of any government or political subdivision described in section 6417(d)(1), and for which no return is required under section 6011 or section 6033(a), the payment described in section 6417(a) is treated as made on the later of the date that a return would be due under section 6033(a) if such government or subdivision were described in section 6033 or the date on which such government or subdivision submits a claim for credit or refund (at such time and in such manner as the Secretary provides). Section 6417(d)(4)(B) provides that, in any other case, the payment described in section 6417(a) is

[1] The reference should be to 45W(d)(2). This has been corrected in the proposed regulations.

treated as made on the later of the due date (determined without regard to extensions) of the return of tax for the taxable year or the date on which such return is filed with the IRS.

Section 6417(d)(5) provides that, as a condition of, and prior to, any amount being treated as a payment that is made by an applicable entity under section 6417(a), the Secretary may require such information or registration as the Secretary deems necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under section 6417.

Section 6417(d)(6) provides rules relating to excessive payments. In the case of any amount treated as a payment that is made by the applicable entity under section 6417(a), or the amount of the payment made pursuant to section 6417(c), that is determined to constitute an excessive payment, the tax imposed on such entity by chapter 1 of the Code (chapter 1), regardless of whether such entity would otherwise be subject to chapter 1 tax, for the taxable year in which such determination is made is increased by an amount equal to the sum of (1) the amount of such excessive payment, plus (2) an amount equal to 20 percent of such excessive payment. The increase equal to 20 percent of the excessive payment does not apply if the applicable entity can demonstrate that the excessive payment resulted from reasonable cause.

An excessive payment is defined as, with respect to a facility or property for which an election is made under section 6417 for any taxable year, an amount equal to the excess of (1) the amount treated as a payment that is made by the applicable entity under section 6417(a), or the amount of the payment made pursuant to section 6417(c), with respect to such facility or property for such taxable year, over (2) the amount of the credit that, without application of section 6417, would be otherwise allowable (as determined pursuant to section 6417(d)(2) and without regard to section 38(c)) with respect to such facility or property for such taxable year.

Section 6417(e) provides a denial of double benefit rule providing that, in the case of an applicable entity making an election under section 6417 with respect to an applicable credit, such credit is reduced to zero and, for any other purpose under the Code, is deemed to have been allowed to such entity for such taxable year.

Section 6417(f) provides a special rule relating to any territory [2] of the United States with a mirror code tax system (as defined in section 24(k) of the Code). Under this rule, section 6417 will not be treated as part of the income tax laws of the United States for purposes of determining the income tax law of any such U.S. territory unless such U.S. territory elects to have section 6417 be so treated. Currently, the U.S. Virgin Islands, Guam, and the Commonwealth of the Northern Mariana Islands have mirror code tax systems.

Section 6417(g) provides basis reduction and recapture rules. It states that, except as otherwise provided in section 6417(d)(2)(A),[3] rules similar to the rules of section 50 apply for purposes of section 6417.

Section 6417(h) authorizes the Secretary to issue regulations or other guidance as may be necessary to carry out the purposes of section 6417, including guidance to ensure that the amount of the payment or deemed payment made under section 6417 is commensurate with the amount of the credit that would be otherwise allowable (determined without regard to section 38(c)).

III. Special Rules Relating to Certain Taxpayers Making an Election Under Section 6417(d)(1)(B), (C), or (D) (Electing Taxpayers)

A taxpayer other than an applicable entity under section 6417(d)(1)(A) may make an election under section 6417(d)(1)(B), (C), or (D) at such time and in such manner as the Secretary provides (but no election may be made with respect to any taxable year beginning after December 31, 2032). The election allows the electing taxpayer to be treated as an applicable entity for the limited purpose of making an elective payment election under section 6417 with respect to a section 45V credit, a section 45Q credit, or a section 45X credit, respectively. The special rules for such an election are described in paragraphs III.A, III.B, and III.C of this background section.

A. Electing Taxpayers Making an Election With Respect to Section 45V Credits

Section 6417(d)(1)(B) allows an electing taxpayer to make an elective payment election for any taxable year in which such taxpayer has placed in service a qualified clean hydrogen production facility (as defined in section 45V(c)(3)), but only with respect to a section 45V credit determined in such year with respect to the electing taxpayer. Pursuant to section 6417(d)(3)(D)(i)(III), such electing taxpayer is treated as having made such election for the taxable year with respect to which the election is made and each of the four subsequent taxable years ending before January 1, 2033. Under section 6417(d)(3)(D)(iii), an electing taxpayer may elect to revoke the application of such election, but any such election to revoke, if made, applies to the applicable year specified in such election (but not any prior taxable year) and each subsequent taxable year within the 5-year period and cannot be revoked.

Section 6417(d)(3)(D)(ii) prohibits an electing taxpayer from making a transfer election under section 6418(a) with respect to a section 45V credit for any year for which the electing taxpayer's election under section 6417(d)(1)(B) is in effect.

B. Electing Taxpayers Making an Election With Respect to Section 45Q Credits

Section 6417(d)(1)(C) allows an electing taxpayer to make an elective payment election for any taxable year in which the electing taxpayer has, after December 31, 2022, placed in service carbon capture equipment at a qualified facility (as defined in section 45Q(d)), but only with respect to a section 45Q credit determined in such year with respect to such taxpayer. Pursuant to section 6417(d)(3)(C)(i)(II)(aa), such electing taxpayer is treated as having made such election for the taxable year with respect to which the election is made and each of the four subsequent taxable years ending before January 1, 2033. Under section 6417(d)(3)(C)(iii), an electing taxpayer may elect to revoke the application of such election, but any such election to revoke, if made, applies to the applicable year specified in such election (but not any prior taxable year) and each subsequent taxable year within the 5-year period and cannot be revoked.

Section 6417(d)(3)(C)(ii) prohibits an electing taxpayer from making a transfer election under section 6418(a) with respect to a section 45Q credit for any year for which the electing taxpayer's election under section 6417(d)(1)(C) is in effect.

[2] Section 6417(f) uses the term ''possession,'' but this proposed regulation uses the alternative term ''territory.''

[3] Section 6417(g) actually states ''subsection (c)(2)(A),'' but there is no section 6417(c)(2)(A); thus, the proposed regulations correct the reference to state''(d)(2)(A).''

C. Electing Taxpayers Making an Election With Respect to Section 45X Credits

Section 6417(d)(1)(D) allows an electing taxpayer to make an elective payment election for any taxable year in which the electing taxpayer has, after December 31, 2022, produced eligible components (as defined in section 45X(c)(1)), but only with respect to a section 45X credit determined in such year with respect to such taxpayer. Pursuant to section 6417(d)(1)(D)(ii)(I), such electing taxpayer is treated as having made such election for the taxable year with respect to which the election is made and each of the four subsequent taxable years ending before January 1, 2033. Under section 6417(d)(1)(D)(ii)(II), an electing taxpayer may elect to revoke the application of such election, but any such election to revoke, if made, applies to the applicable year specified in such election (but not any prior taxable year) and each subsequent taxable year remaining within the 5-year period and cannot be revoked.

Section 6417(d)(1)(D)(iii) prohibits an electing taxpayer from making a transfer election under section 6418(a) with respect to a section 45X credit for any year for which the electing taxpayer's election under section 6417(d)(1)(D) is in effect.

IV. Section 6417 Rules for Partnerships and S Corporations

Section 6417(c) provides special rules for partnerships and S corporations that hold directly (as determined for Federal income tax purposes) a facility or property for which an applicable credit is determined. Section 6417(c)(1) provides that, in the case of any applicable credit determined with respect to any facility or property held directly by a partnership or S corporation, any elective payment election must be made by such partnership or S corporation in the manner provided by the Secretary. If such a partnership or S corporation makes an elective payment election with respect to any applicable credit, (1) a payment is made to such partnership or S corporation equal to the applicable credit amount, (2) section 6417(e) is applied with respect to the applicable credit before determining any partner's distributive share, or S corporation shareholder's pro rata share, of such applicable credit, (3) any applicable credit amount with respect to which the election in section 6417(a) is made is treated as tax exempt income for purposes of sections 705 and 1366 of the Code, and (4) a partner's distributive share of such tax exempt income is based on such partner's distributive share of the otherwise applicable credit for each taxable year (an S corporation shareholder's share of tax exempt income is based on the shareholder's pro rata share).

Section 6417(c)(2) provides that, in the case of any facility or property held directly by a partnership or S corporation, no election by any partner or shareholder is allowed under section 6417(a) with respect to any applicable credit determined with respect to such facility or property.

V. Notice 2022–50

On October 24, 2022, the Treasury Department and the IRS published Notice 2022–50, 2022–43 I.R.B. 325, to, among other things, request feedback from the public on potential issues with respect to the elective payment election provisions under section 6417 that may require guidance. Over 200 comment letters were received in response to Notice 2022–50. Based in part on the feedback received, the Treasury Department and the IRS are issuing these proposed regulations regarding the elective payment election provisions under section 6417. The major areas with respect to which public stakeholders provided letters are discussed in the following Explanation of Provisions.

Explanation of Provisions

I. General Rules and Definitions

A. Applicable Entity

Section 6417(d)(1) defines ''applicable entity'' as (1) any organization exempt from the tax imposed by subtitle A, (2) any State or political subdivision thereof, (3) the Tennessee Valley Authority, (4) an Indian tribal government (as defined in section 30D(g)(9)), (5) any Alaska Native Corporation (as defined in section 3 of the Alaska Native Claims Settlement Act (43 U.S.C. 1602(m)), or (6) any corporation operating on a cooperative basis that is engaged in furnishing electric energy to persons in rural areas. Proposed § 1.6417–1(c) would clarify these statutory definitions pursuant to the Secretary's authority under section 6417(h) to issue regulations necessary to carry out the purposes of section 6417, as discussed below.

1. Any Organization Exempt From the Tax Imposed by Subtitle A

Stakeholders asked for clarification on the scope of the phrase ''any organization exempt from the tax imposed by subtitle A'' for purposes of determining whether a taxpayer is an applicable entity. Entities may be exempt from tax or have their income exempt from tax under various authorities. For example, an organization could be exempt from taxation by section 501(a) of the Code or by other provisions of the Code. An organization could also have its income excluded from taxation by section 115.

The Treasury Department and the IRS propose to define the term ''any organization exempt from the tax imposed by subtitle A'' to include all organizations exempt from the tax imposed by subtitle A by section 501(a) of the Code, commonly referred to as ''tax-exempt organizations.''

Several stakeholders requested clarification that tax-exempt entities in the U.S. territories are eligible to make an election under section 6417. Under these proposed regulations, such entities would be considered organizations exempt from the tax imposed by subtitle A as long as they are exempt from taxation by section 501(a) and as long as they meet the requirements to claim an applicable credit (such as being an appropriate owner of an investment credit property under sections 50(b)(1)(B) and 168(g)(4)(G)).[4]

Stakeholders also asked whether an entity classified as a nonprofit under State law but that does not have Federal tax-exempt status would be described in section 6417(d)(1)(A). Such an entity would not be described in section 6417(d)(1)(A) because it is not exempt from the tax imposed by subtitle A (unless it met the requirements of another type of applicable entity discussed below, such as a state instrumentality).

Stakeholders also specifically sought clarification as to whether governments of U.S. territories would be treated as applicable entities, based on their unique status and the importance of their energy security. These stakeholders noted that the renewable energy credits generally may be claimed for activities in the U.S. territories provided the underlying requirements are met, including the specific ownership requirements for investment tax credits.[5] In response, the proposed regulations would interpret the term ''organization exempt from the tax

[4] Section 50(b)(1) provides that no investment tax credit can be determined with respect to property used predominantly outside of the United States, but section 50(b)(1)(B) provides an exception for property described in section 168(g)(4). In the case of entities, section 168(g)(4)(G) describes property which is owned by a domestic corporation and which is used predominantly in a U.S. territory by such a corporation, or by a corporation created or organized in, or under the law of, a U.S. territory.

[5] See footnote 2.

imposed by subtitle A'' as used in section 6417(d)(1)(A) to include the governments of the U.S. territories. Since section 115(2) excludes the income accruing to the government of any territory of the United States, or any political subdivision thereof, from gross income, it effectively exempts these governments from the tax imposed by subtitle A. In addition, these governments may properly be viewed as organizations.[6] Accordingly, proposed § 1.6417–1(c)(1)(ii) would provide that the government of any U.S. territory, or a political subdivision thereof, is an applicable entity for purposes of section 6417 or provisions of law referencing section 6417(d)(1)(A).

The Treasury Department and the IRS request comments on this definition of any organization exempt from the tax imposed by subtitle A, including as to whether the term should encompass the United States, federal agencies, or other organizations beyond those listed in these proposed rules.

2. Any State or Political Subdivision Thereof

Section 6417(d)(1)(A)(ii) states that ''any State or political subdivision thereof'' is an applicable entity for purposes of section 6417.

The Treasury Department and the IRS note that section 7701(a)(10) provides that the term ''State'' must be construed to include the District of Columbia where such construction is necessary to carry out provisions of Title 26, and thus propose that the definition of State would include the District of Columbia. The Treasury Department and the IRS request comments on whether additional clarification is needed.

3. Indian Tribal Governments

Section 6417(d)(1)(A)(iv) states that an applicable entity includes an Indian tribal government (as defined in section 30D(g)(9)). To provide Indian tribal governments parity with state governments, proposed § 1.6417–1(c)(3) would include subdivisions of Indian tribal governments in this definition.

Section 30D(g)(9) provides that ''the term ''Indian tribal government'' means the recognized governing body of any Indian or Alaska Native tribe, band, nation, pueblo, village, community, component band, or component reservation, individually identified (including parenthetically) in the list published most recently as of the date of enactment of this subsection pursuant to section 104 of the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 5131). Thus, proposed § 1.6417–1(k) would incorporate this definition into the 6417 regulations. See Rev. Proc. 2008–55, 2008–39 I.R.B. 768 (generally providing that an Indian tribal entity that appears on the most recent list published by the Department of the Interior in the **Federal Register** pursuant to the requirements of the List Act is designated an Indian tribal government for purposes of section 7701(a)(40)).

The Treasury Department and the IRS request comments regarding the definitions in proposed § 1.6417–1(c)(3) and (k), including as to whether any further clarification would be warranted. The Treasury Department and the IRS further request comments on whether the proposed definitions encompass the entity structures that Indian tribal governments employ in activities that would give rise to elective payments, including entities with partial Indian tribal government ownership.

4. Alaska Native Corporations

Section 6417(d)(1)(A)(v) provides that an applicable entity for purposes of section 6417(a) includes ''any Alaska Native Corporation (as defined in section 3 of the Alaska Native Claims Settlement Act (43 U.S.C. 1602(m)).'' A ''Native Corporation'' is defined in 43 U.S.C. 1602(m) to mean ''any Regional Corporation, any Village Corporation, any Urban Corporation, and any Group Corporation,'' which are organized under the laws of the State of Alaska. Although 43 U.S.C. 1606(d) provides that a Regional Corporation is incorporated to conduct business for profit, each of a Village Corporation, Urban Corporation, and Group Corporation may be organized as a business for profit or nonprofit corporation to hold rights and assets for Native villages, urban communities of Natives, or members of a Native group.

A few stakeholders requested that a Settlement Trust (within the meaning of 43 U.S.C. 1602(t)) that is established by an Alaska Native Corporation (ANC) for the benefit of its shareholders also be treated as an applicable entity. The stakeholders stated that an ANC is a separate legal entity that is required to be a C corporation for Federal income tax purposes, and as such, it is an entity different from the Settlement Trust established by the ANC. However, the beneficiaries of the ANC Settlement Trust are typically the same Native individuals as the shareholders of the ANC. the stakeholders thus asked that an ANC Settlement Trust be added as an applicable entity in cases in which the Settlement Trust is directly affiliated with an applicable ANC.

Unlike the case of the statutory definitions of ''Indian Tribal government,'' the statutory definition of ANC is not ambiguous. Accordingly, the proposed regulations would not treat Settlement Trusts as ANCs. However, Settlement Trusts could themselves be applicable entities not based on their relationship with an ANC if they qualified for exempt status under section 501(a) and applied for and received a determination letter from the IRS recognizing any such tax-exempt status.

Separately, an ANC may be the common parent of a consolidated group of corporations (ANC-parented group) that, in many ways, is treated similarly to a single taxpayer for Federal income tax purposes by the consolidated return regulations (§§ 1.1502–1, *et seq.*). For example, the members of a consolidated group report their consolidated taxable income on a single Federal income tax return that the common parent files with the IRS as the agent for the group under § 1.1502–77. In this regard, some stakeholders have inquired whether non-ANC members of an ANC-parented group may separately make an elective payment election with respect to a section 45V credit, a section 45Q credit, or section 45X credit determined with respect to such member. The concern appears to be that, by reason of their affiliation with an ANC common parent, the non-ANC members might be prevented from making an election under section 6417(d)(1)(B), (C), or (D).

The proposed regulations would clarify that a non-ANC member of an ANC-parented group may qualify as an electing taxpayer eligible to make elections under section 6417(d)(1)(B), (C), or (D), based on its own corporate status. See § 1.1502–80(a). As with any other electing taxpayer, a non-ANC member of an ANC-parented group would be required to complete pre-filing registration (as would be required under proposed § 1.6417–5) and must make its elective payment election under section 6417(d)(1)(B), (C), or (D) with respect to an applicable section 45V credit, section 45Q credit, or section 45X credit determined with respect to the member. See § 1.1502–77 (providing rules regarding the status of the common parent as agent for its members).

The Treasury Department and the IRS request comments regarding the definition in proposed § 1.6417–1(c)(4) and whether additional guidance is

[6] The Code and the regulations under 26 CFR part 1 occasionally refer to governmental entities as organizations. For example, section 509(a)(1) refers to ''an organization described in section 170(b)(1)(A),'' which includes a governmental unit described in sections 170(b)(1)(A)(v) and 170(c)(1). See corresponding rules in § 1.170A–9(a) and (e).

necessary regarding consolidated groups with ANC common parents.

5. Tennessee Valley Authority

As per section 6417(d)(1)(A)(iii), the Tennessee Valley Authority would be an applicable entity under proposed § 1.6417–1(c)(5).

6. Rural Electrical Co-Ops

Section 6417(d)(1)(A)(vi) provides that ''any corporation operating on a cooperative basis which is engaged in furnishing electric energy to persons in rural areas'' is an applicable entity. These proposed regulations do not elaborate on this definition, but request comments on whether further clarification of the definition in proposed § 1.6417–1(c)(6) is necessary.

Stakeholders asked that any payment under section 6417(a) not be considered income for purposes of the 85-percent income test under section 501(c)(12) for electric cooperatives. Because the section 6417(a) election results in a credit being treated as a payment against the tax imposed by subtitle A for the taxable year with respect to which such credit was determined, any such payment that results in a refund being issued by the IRS to an electric cooperative under section 6417(a) will not affect the application of the 85-percent income test determined with respect to the electric cooperative.

The Treasury Department and the IRS request comments on whether additional guidance is necessary to address any uncertainty that may exist regarding the application of section 6417 in the context of a consolidated group with members that are cooperatives subject to the rules of subchapter T of chapter 1.

7. Agencies and Instrumentalities

Based on feedback from stakeholders, the Treasury Department and the IRS believe that, in many instances, States, Indian tribal governments, U.S. territories, or political subdivisions thereof are likely to make investments or engage in activities that qualify for applicable credits through their agencies and instrumentalities. Multiple stakeholders requested that State and local government agencies and instrumentalities be included as applicable entities under a variety of theories, including cross-references to sections 50(b)(4)(A)(i) and 168(h)(2)(A)(i) in section 6417, the fact that the income of an instrumentality is generally excluded from tax by section 115 of the Code, and the authority provided by section 6417(h) to issue regulations necessary to carry out the purposes of section 6417. In particular, stakeholders stated that the term ''Indian tribal government'' should be defined to include, in part, economic subdivisions of a tribe (such as a utility, housing authority, energy division or authority, or other enterprise) regardless of how the entity is formed (whether by Federal, Tribal or State law).

It would be administratively burdensome, both for stakeholders and for the IRS, to determine what is part of a State, Indian tribal government, U.S. territory, or political subdivision, on the one hand, and what is an agency or instrumentality thereof on the other hand.[7] For example, stakeholders expressed uncertainty about whether certain entities, such as school districts, public utility districts, and special purpose entities established by governments (such as joint action agencies, economic development corporations, and joint powers authorities) would qualify as political subdivisions or would be viewed as agencies or instrumentalities. Stakeholders also noted that the status of such entities as political subdivisions may turn on differences in state law, such as whether a school district has taxing authority.

In addition, different States may structure ownership of relevant property differently (for example, a school district or the county of the school district may own the electric school buses), and it would be inequitable for entities to be eligible or ineligible for elective payment on the basis of such differences in ownership structures. Furthermore, if agencies and instrumentalities were not specifically listed as applicable entities, States and political subdivisions may decide to create new entities or reorganize the administration of their activities to perform applicable credit eligible activities directly, which would be administratively burdensome without a commensurate public benefit. For these reasons, and to promote uniform treatment throughout the United Sates, proposed § 1.6417–1(c)(7) would provide that applicable entities include any agency or instrumentality of any State, the District of Columbia, Indian tribal government, U.S. territory, or political subdivision thereof.

The Treasury Department and the IRS request comments on this approach to defining applicable entities and on whether further guidance is necessary.

[7] The definitions of political subdivision under § 1.103–1(b) and of instrumentality under Rev. Rul. 57–128, 1957–1 C.B. 311, are frequently cited for Federal tax purposes.

8. Electing Taxpayers

Certain taxpayers may make an election to be treated as an applicable entity with respect to applicable credit property giving rise to the section 45Q credit, section 45V credit, or section 45X credit, as described in part III of this Explanation of Provisions. Proposed § 1.6417–1(g) defines an ''electing taxpayer'' as any taxpayer that is not an applicable entity, but makes an election in accordance with proposed §§ 1.6417–2(b), 1.6417–3, and, if applicable, 1.6417–4, to be treated as an applicable entity for a taxable year with respect to applicable credits determined with respect to an applicable credit property described in proposed § 1.6417–1(e)(3), (5), or (7). Section 7701(a)(14) defines a ''taxpayer'' as any person subject to any internal revenue tax, including income taxes, employment taxes, and excise taxes.

Members of a consolidated group that is not an ANC-parented group also may make an election to be treated as an applicable entity with respect to the section 45Q credit, section 45V credit, or section 45X credit. A member of the consolidated group would be required to complete pre-filing registration (as would be required under proposed § 1.6417–5) and must make its elective payment election with respect to an applicable section 45V credit, section 45Q credit, or section 45X credit determined with respect to the member. See § 1.1502–77 (providing rules regarding the status of the common parent as agent for its members). The Treasury Department and the IRS request comments regarding the application of section 6417 to consolidated groups with electing taxpayers (for example, whether special rules are necessary for consolidated groups under proposed § 1.6417–2(e)(2) (the *denial of double benefit* rule).

B. Entities Formed by an Applicable Entity or by an Electing Taxpayer

1. Disregarded Entities

Several stakeholders asked whether an entity disregarded as separate from its owner (disregarded entity) is described in section 6417(d)(1)(A) if its owner is described in section 6417(d)(1)(A). Since a disregarded entity is disregarded for Federal income tax purposes and its attributes are attributed to the owner regarded for Federal income tax purposes, the disregarded entity's activities would be attributed to the owner and the owner could claim the credit as long as the owner is described in section 6417(d)(1)(A). This would also include property that an electing taxpayer that is a partnership or

S corporation holds through a disregarded entity or multiple disregarded entities, including tiers of multiple disregarded entities owned though chains of ownership. Thus, proposed §§ 1.6417–2(a)(1)(ii) and –2(a)(2)(iv) would provide that, if an applicable entity or electing taxpayer is the owner (directly or indirectly) of a disregarded entity that directly holds an applicable credit property, the applicable entity may make an elective payment election for applicable credits determined with respect to the applicable credit property held directly by the disregarded entity.

2. Taxable C Corporations

Stakeholders also asked whether an entity described in section 6417(d)(1)(A) could create an entity that is a taxable C corporation to perform the applicable credit activity and still qualify for the section 6417 election. Because a taxable C corporation is an entity separate from its owner, proposed § 1.6417–1(c)(1) would not include a C corporation that is not itself an applicable entity described in proposed § 1.6417–1(c)(1), even if its owner is an applicable entity described in proposed § 1.6417–1(c)(1). However, an electing taxpayer may include a taxable C corporation (including a member of a consolidated group).

3. Undivided Ownership Interests

Stakeholders also asked whether entities such as unincorporated joint ventures could provide applicable entities access to earning applicable credits available for an elective payment election, including by partnering with other applicable entities or with for-profit entities. Proposed § 1.6417–2(a)(1)(iii) would provide that, if an applicable entity is a co-owner of an applicable credit property through an ownership arrangement treated as a tenancy-in-common or pursuant to a joint operating arrangement that has properly elected out of subchapter K of chapter 1 of the Code (subchapter K) under section 761, then each owner is considered to own an undivided interest in or share of the underlying applicable credit property and thus, any applicable credits are determined separately with respect to each owner. As a result, an applicable entity may make an elective payment election under section 6417(a) in the manner provided in paragraph (b) with respect to its share of the applicable credits determined with respect to its undivided ownership interest in or share of the underlying applicable credit property.

4. Partnerships

Many stakeholders questioned whether a partnership that contains partners described in section 6417(d)(1)(A) could make an elective payment election under section 6417 with respect to those partners, pointing to the ''determined with respect to such entity'' language in section 6417(a). Stakeholders stated that clarity around the treatment of these partnerships is of particular importance as many applicable entities choose to partner with non-applicable entities in investment and development of credit generating projects, that applicable entities may not have the expertise or resources to own such projects outright, and that the ability to partner is key to their meaningful participation in the energy transition.

The Treasury Department and the IRS believe that the better interpretation of the ''determined with respect to such entity'' language in section 6417(a), as well as the rules in sections 6417(c), is to apply entity-specific rules under section 6417. Section 6417(c) refers to a credit determined with respect to any facility or property ''held directly by a partnership or S corporation,'' meaning that the partnership or S corporation, not its owners, is the relevant entity for these purposes. Additionally, section 6417(c) provides that the partnership or S corporation, not the partners or shareholders, makes the section 6417 election. Furthermore, because section 6417 elections are made for a particular applicable credit property, allowing a section 6417 election for a portion of an applicable credit property would be contrary to section 6417(a) and, if permitted, would be difficult to administer, particularly in tiered partnership structures.

Thus, proposed § 1.6417–2(a)(1)(iv) would provide that partnerships and S corporations are not applicable entities described in section 6417(d)(1)(A) and proposed § 1.6417–1(c). This proposed rule would apply no matter how many of the partners or shareholders are described in section 6417(d)(1)(A) and proposed § 1.6417–1(c), including if all partners or shareholders are described in section 6417(d)(1)(A) and proposed § 1.6417–1(c). However, because section 6418(f)(2) defines ''eligible taxpayer'' as any taxpayer that is not described in section 6417(d)(1)(A) (and thus not in proposed § 1.6417–1(c)), such a partnership would be an eligible taxpayer described in section 6418(f)(2).

In addition, as described in part I.B.3. of this Explanation of Provision, an applicable entity may engage with other entities, including with for-profit partners, in an ownership arrangement that has properly elected out of subchapter K and make an elective payment election under section 6417(a) with respect to its share of the applicable credits determined with respect to its share of the underlying applicable credit property. This type of arrangement provides some flexibility for tax-exempt and government entities to participate in section 6417 with other entities. The Treasury Department and the IRS request comments on whether any additional rules are needed. Comments are also requested regarding whether any entity described in section 6417(d)(1)(A)(i)–(vi) or proposed § 1.6417–1(c) could include an entity organized as a partnership for Federal tax purposes.

As described in part IV of this Explanation of Provisions, an electing taxpayer may include a partnership or S corporation.

C. Applicable Credit

Section 6417(b) lists the applicable credits for which a section 6417(a) election is available. Proposed § 1.6417–1(d) lists those credits, with minor changes to account for erroneous cross-references in the statute.

Stakeholders asked for clarification on the scope of the credit for qualified commercial vehicles. Section 6417(b)(6) states that the term ''applicable credit'' includes the credit for qualified commercial vehicles determined under section 45W by reason of subsection (d)(2)[8] thereof, ''in the case of a tax-exempt entity described in clause (i), (ii), or (iv) of section 168(h)(2)(A).'' In order to qualify for elective pay for the section 45W credit, an entity would need to be both be an applicable entity, as defined in proposed § 1.6417–1(c), and a tax-exempt entity described in clause (i), (ii), or (iv) of section 168(h)(2)(A) (in other words, an organization exempt from the tax imposed by subtitle A by reason of section 501(a) of the Code; a State, the District of Columbia, a political subdivision thereof, or any agency or instrumentality of any of the foregoing; a U.S. territory, a political subdivision thereof, or any agency or instrumentality of any of the foregoing; or an Indian tribal government, a subdivision thereof, or any agency or instrumentality of any of the foregoing), and would also need to otherwise qualify for the section 45W credit.

One stakeholder asked whether the elective payment election applies to

[8] While section 6417(b)(6) refers to section 45W(d)(3), the reference should be to section 45W(d)(2). This has been corrected in the proposed regulations.

both the applicable credit and any eligible bonus credit amounts. The amount of applicable credit is determined, in part, under the Code by including any eligible bonus credit amounts. The entire amount of any applicable credit is eligible under the Code for the elective payment election, assuming all the relevant requirements are met.

Several stakeholders asked whether the applicable entity could treat the applicable credits arising during a quarter as a payment against quarterly estimated tax (assuming such an amount was due). These proposed regulations do not contain a special rule because taxpayers can determine, based on their projected tax liability, the correct amount of estimated tax to pay in order to avoid a section 6654 or section 6655 estimated tax penalty at the end of the year.

Because registration must be made with respect to each facility or property giving rise to an applicable credit, proposed § 1.6417–1(e) defines ''applicable credit property'' for purposes of each of the applicable credits, and the section 6417 regulations use the term ''applicable credit property'' throughout for clarity.

D. Definitions Pertaining to the Election

Proposed § 1.6417–1(i) would provide that the ''elective payment election'' is the election provided in proposed § 1.6417–2(b). Proposed § 1.6417–1(h) would provide that the ''elective payment amount'' means, with respect to an applicable entity or an electing taxpayer that is not a partnership or an S corporation, the applicable credit(s) for which an applicable entity or electing taxpayer makes an elective payment election to be treated as making a payment against the tax imposed by subtitle A for the taxable year, which would be equal to the sum of (1) the amount (if any) of the current year applicable credit(s) allowed as a general business credit (GBC) under section 38 for the taxable year, and (2) the amount (if any) of unused current year applicable credits which would otherwise be carried back or carried forward from the unused credit year under section 39 and that are treated as a payment against tax. With respect to an electing taxpayer that is a partnership or an S corporation, the term ''elective payment amount'' would mean the sum of the applicable credit(s) for which the partnership or S corporation makes an elective payment election and results in a payment to such partnership or S corporation equal to the amount of such credit(s) (unless the partnership or S corporation owes a Federal tax liability, in which case the payment may be reduced by such tax liability).

E. Guidance

Interpretations and procedures pertaining to section 6417 and the section 6417 regulations may be issued through guidance, as appropriate. Proposed § 1.6417–1(j) would define ''guidance'' for purposes of these regulations as guidance published in the **Federal Register** or Internal Revenue Bulletin, as well as administrative guidance such as forms, instructions, publications, or other guidance on the *IRS.gov* website.

F. Annual Tax Return

To avoid any confusion about where the elective payment election should be made, proposed § 1.6417–1(b) would define ''annual tax return,'' for purposes of the section 6417 regulations, as follows: (1) for any taxpayer normally required to file an annual tax return with the IRS, such annual return (including the Form 1065, ''U.S. Return of Partnership Income,'' for partnerships and the Form 990–T for organizations with unrelated business income tax or a proxy tax under section 6033(e)); (2) for any taxpayer that is not normally required to file an annual tax return with the IRS (such as taxpayers located in the U.S. territories), the return they would be required to file if they were located in the United States, or, if no such return is required (such as for State, District of Columbia, local, or Indian tribal governmental entities), the Form 990–T; and (3) for short tax year filers, the short year tax return. For example, an individual in a U.S. territory would file a Form 1040, ''U.S. Individual Income Tax Return,'' a corporation in a U.S. territory would file a Form 1120, ''U.S. Corporation Income Tax Return,'' and the U.S. territory itself would file Form 990–T, ''Exempt Organization Business Income Tax Return (and proxy tax under section 6033(e).'' Similarly, a tax-exempt entity would file the Form 990–T even if not otherwise required to file the Form 990–T.

II. Rules for Making Elective Payment Elections

A. In General

Proposed § 1.6417–2 would provide general rules for an applicable entity or electing taxpayer to make an elective payment election under section 6417 in accordance with the rules of proposed § 1.6417–2(b) with respect to any applicable credit determined with respect to such entity.

Proposed § 1.6417–2(a)(1) would provide the rules for applicable entities making elective payment elections. An applicable entity that makes an elective payment election in the manner described in Part II.B. of this Explanation of Provisions would be treated as making a payment against the Federal income taxes imposed by subtitle A, for the taxable year with respect to which an applicable credit was determined, in the amount of such credit as determined under the rules discussed in Part II.C. of this Explanation of Provisions. Proposed § 1.6417–2(d)(1) would provide that the payment described in proposed § 1.6417–2(a)(1) is treated as made (1) in the case of an entity for which no return is required under sections 6011 or 6033(a), on the later of the date that a return would be due under section 6033(a) (determined without regard to extensions) if such entity were described in that section, or the date on which such entity submits a claim for credit or refund, and (2) in any other case, on the later of the due date (determined without regard to extensions) of the return of tax for the taxable year, or the date on which such return is filed.

Special rules are provided in proposed § 1.6417–2(a)(1)(ii) through (v) that would apply for applicable entities if the election is made for applicable credit property held by a disregarded entity; if the applicable entity is a co-owner in an applicable credit property through an ownership arrangement properly treated as a tenancy-in-common, or pursuant to a joint operating arrangement that has properly elected out of subchapter K under section 761; and for members of a consolidated group of which an Alaska Native Corporation is the common parent.

As discussed in Part I.B.4 of this Explanation of Provisions, partnerships and S corporations would not be applicable entities described in proposed § 1.6417–1(c)(1), and thus would not be eligible to make an elective payment election unless the partnership or S corporation is an electing taxpayer.

Proposed § 1.6417–2(a)(2) would provide the rules for electing taxpayers making an elective payment election. An electing taxpayer other than a partnership or an S corporation that has made an elective payment election in accordance with proposed §§ 1.6417–3 and § 1.6417–2(b) would be treated as making a payment against the Federal income taxes imposed by subtitle A for the taxable year with respect to which the applicable credit is determined in

the amount determined under proposed § 1.6417–2(c). Proposed § 1.6417–2(d)(1) would provide that the payment described in proposed § 1.6417–2(a)(2) is treated as made at the same time as made by an applicable entity. However, in the case of an electing taxpayer that is a partnership or S corporation that has made an elective payment election in accordance with proposed §§ 1.6417–3, 1.6417–4, and 1.6417–2(b), the IRS will make a payment to such partnership or S corporation equal to the amount of such credit determined under proposed §§ 1.6417–2(b) and 1.6417–4(d)(3) (unless the partnership or S corporation owes any Federal income tax liability, in which case the payment may be reduced by such tax liability).

Proposed § 1.6417–2(a)(2) also provides special rules for electing taxpayers that would apply if the election is made for applicable credit property held by a disregarded entity; if the applicable entity is a co-owner in an applicable credit property through an ownership arrangement properly treated as a tenancy-in-common, or pursuant to a joint operating arrangement that has properly elected out of subchapter K under section 761; and for members of a consolidated group.

Proposed § 1.6417–2(a)(3)(i)–(iv) would address the special rules with regard to the election for credits under section 45, 45V, 45Q, or 45Y, as provided in section 6417(d)(3). However, the special rules in section 6417(d)(3) that relate to electing taxpayers are set forth in proposed § 1.6417–3, for clarity.

Consistent with the special rule for electing taxpayers that may elect to be treated as an applicable entity for purposes of section 6417 for up to five years with respect to a facility placed in service that produces eligible components (as defined in section 45X(c)(1)), proposed § 1.6417–2(a)(3)(v) would clarify that a section 45X election is made, for purposes of section 6417, with respect to a facility (whether the facility existed on or before, or after, December 31, 2022) at which a taxpayer produces, after December 31, 2022, eligible components as defined in section 45X(c)(1) during the taxable year.

B. Manner of Making the Election

Section 6417(a) provides that the elective payment election is made ''at such time and in such manner as the Secretary may provide,'' and proposed § 1.6417–2(b) would provide those rules. First, proposed § 1.6417–2(b)(1) provides that an applicable entity or electing taxpayer would make an elective payment election on the applicable entity's or electing taxpayer's annual tax return, as defined in § 1.6417–1(b), in the manner prescribed by the IRS in guidance, along with any required completed source credit form(s) with respect to the applicable credit property, a completed Form 3800, *General Business Credit,* (or its successor), and any additional information, including supporting calculations, required in instructions to the relevant forms.

Proposed § 1.6417–2(b)(1)(iv) would provide that an elective payment election may only be made on an original return (including any revisions on a superseding return) filed not later than the due date (including extensions of time) for the original return for the taxable year for which the applicable credit is determined. No elective payment election may be made or revised on an amended return or by filing an administrative adjustment request under section 6227 of the Code. There also would be no relief available under §§ 301.9100–1 through 301.9100–3 of the Procedure and Administration Regulations (26 CFR part 301) for an elective payment election that is not timely filed.

Second, proposed § 1.6417–2(b)(2) would specify that pre-filing registration (as would be required under proposed § 1.6417–5) is a condition of any amount being treated as a payment that is made by an applicable entity under section 6417(a). An elective payment election will not be effective with respect to applicable credits determined with respect to an applicable credit property unless the applicable entity or electing taxpayer received a valid registration number for the applicable credit property and provided the registration number for each applicable credit property on its Form 3800 (or its successor) attached to the tax return in accordance with guidance.

Third, proposed § 1.6417–2(b)(3) would provide the due date for the election under section 6417(a). In the case of any entity for which no Federal income tax return is required under sections 6011 or 6033(a) of the Code (such as a governmental entity), the elective payment election must be made no later than the due date (including an extension of time) for the original return that would be due under section 6033(a) if such applicable entity were described in that section. Under section 6072(e), that date is the 15th day of the fifth month after the taxable year determined by section 441 of the Code. Subject to issuance of guidance that specifies the manner in which an entity for which no Federal income tax return is required under sections 6011 or 6033(a) of the Code could request an extension of time to file, an automatic paperless six-month extension from the original due date is deemed to be allowed.

In the case of any taxpayer that is not normally required to file an annual tax return with the IRS (such as those located in the U.S. territories), the elective payment election must be made no later than the due date (including extensions of time) that would apply if the taxpayer was located in the United States (such as the 15th day of the fourth month after the end of the year for individuals filling Form 1040 or for corporations filling Form 1120). For example, an individual in a U.S. territory would be required to make the elective payment election on or before the 15th day of April following the close of the calendar year, or, if they filed an extension, on or before the 15th day of October following the close of the calendar year.

In any other case, the elective payment election must be made no later than the due date (including extensions of time) for the original return for the taxable year for which the election is made, but in no event earlier than February 13, 2023.

Fourth, proposed § 1.6417–2(b)(4) would provide that any election under section 6417(a), once made, is irrevocable and applies with respect to any applicable credit for the taxable year for which the election is made.

Under section 6417, the election period applies for a period of years with respect to certain applicable credits. Specifically, for the section 45 credit or section 45Y credit, the election applies to the 10-year period beginning on the date the facility was originally placed in service. For the section 45Q credit, the election applies to the 12-year period beginning on the date the equipment was originally placed in service. For the section 45V credit, the election applies to all subsequent taxable years with respect to the facility.

Electing taxpayers make the election for one five-year period per applicable credit property, but are allowed one revocation per applicable credit property, as provided in section 6417(d)(1)(D) and (d)(3)(C) and (D), and would be provided in proposed § 1.6417–3 (as described in part III of this Explanation of Provisions).

Fifth, proposed § 1.6417–2(b)(5) would provide that an elective payment election applies to the entire amount of applicable credit(s) determined with respect to each applicable credit property that was properly registered for the taxable year, resulting in an elective payment amount that is the entire

amount of applicable credit(s) determined with respect to the applicable entity or electing taxpayer for a taxable year.

C. Determination of Applicable Credit

Proposed § 1.6417–2(c) would provide three rules relating to the determination of any applicable credit.

1. Special Rules for Tax-Exempt Organizations and Government Entities

In accordance with section 6417(d)(2), proposed § 1.6417–2(c)(1) would provide that, in the case of any applicable entity that makes the election described in section 6417(a), any applicable credit is determined (1) without regard to the restrictions regarding use of property by tax-exempt organizations and government entities found in sections 50(b)(3) and (4)(A)(i), and (2) by treating any property with respect to which such credit is determined as used in a trade or business of the applicable entity.

Proposed § 1.6417–2(c)(2) elaborates on the effect of the ''trade or business'' rule in section 6417(d)(2) and proposed § 1.6417–2(c)(1)(ii). First, the rule would allow tax-exempt and government entities to take advantage of applicable credits even outside of the unrelated business taxable income context (provided other requirements are met) by allowing the entity to treat an item of property as if it is of a character subject to an allowance of depreciation (such as under sections 30C and 45W); to produce items ''in the ordinary course of a trade or business of the taxpayer'' (such as in sections 45V and 45X); and to state that an item of property is one for which depreciation (or amortization in lieu of depreciation) is allowable (such as in sections 48, 48C, and 48E).

Second, the rule allows the entity to apply the capitalization and accelerated depreciation rules (such as sections 167, 168, 263 and 263A) that apply to determining the basis and the depreciation allowance for property used in a trade or business.

Third, the rule makes applicable general limitations on the use of credits by those persons engaged in the conduct of a trade or business, such as section 49 in the context of investment tax credits, and section 469 for all applicable credits. For section 49 to apply for purposes of section 6417, the property must be placed in service by an applicable entity or electing taxpayer described in section 465(a)(1) (that is, an individual or a C corporation with respect to which the stock ownership requirements of section 542(a)(2) are met). For section 469 to apply for purposes of section 6417, the applicable entity or electing taxpayer would need to be described in section 469(a)(2) (that is, an individual, estate or trust, a closely held C corporation, or a personal service corporation). Thus, for any applicable entity or electing taxpayer for which section 49 or 469 generally applies, those sections apply with respect to the determination of applicable credits under section 6417. The Treasury Department and the IRS request comments on whether any additional clarification is needed regarding the application of sections 49 and 469 to applicable entities or electing taxpayers determining the amount of an applicable credit.

Lastly, the rule does not create any presumption that the trade or business is related (or unrelated) to a tax-exempt entity's exempt purpose.

2. Special Rule for Investment-Related Credit Property Acquired With Income, Including Income From Certain Grants and Forgivable Loans, That Is Exempt From Taxation Under Subtitle A

Multiple stakeholders asked that regulations clarify whether an applicable entity that funded the purchase of an investment credit property with income, including income from certain grants and forgivable loans, that is exempt from taxation under subtitle A (Tax-Exempt Amounts [9]) can include those amounts in the basis of the property for purposes of calculating the amount of the investment tax credit. Stakeholders also noted that in some cases the full cost of the investment credit property can be paid through Tax-Exempt Amounts.

Generally, the basis of property is the cost of such property. See section 1012 of the Code. However, for a taxable entity, cost basis in property may need to be reduced if Tax-Exempt Amounts are used for the purpose of purchasing, constructing, or otherwise acquiring such property. See for example, sections 118(a) and 362(c)(2) of the Code. However, grants and forgivable loans received by taxable entities are generally taxable, and thus generally do not result in a reduction in basis. See generally section 61 of the Code.

For tax-exempt and government entities, for which grants, forgivable loans, and other amounts are generally exempt from taxation under subtitle A, the treatment of such Tax-Exempt Amounts with respect to basis in property is less clear. Because these entities may acquire investment credit properties eligible for the section 6417(a) election, in whole or in part, with Tax-Exempt Amounts, if such amounts were not included in the basis of the investment credit property (that is, they resulted in a reduction in the basis of the investment credit property), the applicable entity may have little or no basis with respect to which to calculate the credit, which would frustrate Congressional intent to provide the section 6417(a) election for investment credit properties owned by such entities. However, as stakeholders noted, allowing an elective payment for an applicable tax credit when the investment credit property was fully purchased with Tax-Exempt Amounts subject to donor restrictions for that purpose would result in an aggregate benefit to the applicable entity in excess of the cost of the property. As a result, a few stakeholders suggested that local, State, and Federal government grants received as Tax-Exempt Amounts by applicable entities specifically for acquisition of investment credit property should not be included in the basis of such property for purposes of calculating the applicable credit for the elective payment under section 6417.

Proposed § 1.6417–2(c)(3) would provide a special rule for investment credit property acquired with Tax-Exempt Amounts and would expand the rule to other credits that are determined on the basis of property. The rule states that, for purposes of 6417, any Tax-Exempt Amounts used to purchase, construct, reconstruct, erect, or otherwise acquire an applicable credit property described in sections 30C, 45W, 48, 48C, or 48E (investment-related credit property) are included in basis for purposes of computing the applicable credit amount determined with respect to the investment-related credit property, regardless of whether basis is required to be reduced (in whole or in part) by such amounts under other provisions of the Code.

However, to prevent an excessive benefit, proposed § 1.6417–2(c)(3) would provide that, if an applicable entity receives Tax Exempt Amounts for the specific purpose of purchasing, constructing, reconstructing, erecting, or otherwise acquiring an investment credit property (Restricted Tax Exempt Amount), and the Restricted Tax-Exempt Amount plus the applicable credit otherwise determined with respect to that investment-related credit property exceeds the cost of the investment-related credit property, then the amount of the applicable credit is reduced so that the total amount of applicable credit plus the amount of any

[9] For this purpose, ''Tax-Exempt Amounts'' do not include the proceeds of loans, which are not included in income as long as they need to be repaid.

Restricted Tax Exempt Amount equals the cost of investment credit property.

Proposed § 1.6417–2(c)(5) contains three examples illustrating these rules.

3. Credits Must Be Determined With Respect to the Applicable Entity or Electing Taxpayer

Multiple stakeholders asked that regulations clarify whether applicable entities may ''chain'' an election under section 6417(a) for credits obtained from other sources. For example, stakeholders questioned whether an applicable entity may make an elective payment election under section 6417(a) with respect to purchased credits under section 6418(a) or credits allowable to the applicable entity because of an election under section 45Q(f)(3)(B) or former section 48(d) (pursuant to section 50(d)(5)). Stakeholders also asked whether an applicable entity may make an elective payment election in the case of a third-party ownership arrangement, such as an energy project owned by a for-profit developer but developed by a government entity.

The Treasury Department and the IRS propose that such chaining will not be permissible and seek further comment on the issue. Proposed § 1.6417–2(c)(4) would state that any credits for which an election is made under section 6417(a) must have been determined with respect to the applicable entity or electing taxpayer, meaning that the applicable entity or electing taxpayer owns the underlying eligible credit property or, if ownership is not required, otherwise conducts the activities giving rise to the underlying eligible credit.[10] This proposed rule, which is consistent with the proposed regulations under section 6418, would mean that no election may be made under section 6417(a) for credits purchased pursuant to section 6418, transferred pursuant to section 45Q(f)(3), acquired by a lessee from a lessor by means of an election to pass through the credit to a lessee under former section 48(d) (pursuant to section 50(d)(5)), owned by a third party, or otherwise not determined directly with respect to the applicable entity or electing taxpayer.

Stakeholders noted several administrative and practical reasons why making an elective payment election with respect to credits transferred under section 6418 would present challenges. For example, stakeholders noted that businesses electing to be treated as applicable entities with respect to applicable credit property giving rise to section 45V, 45Q, or 45X credits must do so in the taxable year in which such taxpayer has placed in service such property, and the election generally lasts through the following four taxable years, whereas the duration of the section 6418 transfer election is limited to the tax year. In addition, any credit determined with respect to an electing taxpayer that is a partnership or S corporation must be determined with respect to only applicable credit property held directly by the partnership or S corporation. Allowing a partnership or S corporation to make an elective payment election with respect to transferred credits would conflict with this rule. Furthermore, the elective payment election under section 6417 with respect to a section 45 credit or section 45Q credit only applies to applicable credit property that is originally placed in service after December 31, 2022, and the elective payment election under section 6417 with respect to a section 45V credit only applies to clean hydrogen attributable to applicable credit property that is originally placed in service after December 31, 2012, whereas there are no such restrictions under section 6418. In addition, stakeholders contended that section 6417(d)(3)(ii)'s requirement that a section 6417(a) election be ''irrevocable'' would seem to prohibit an applicable entity from making a section 6417(a) election with respect to any transferred credit for which the 6417(a) election spans more than one year (such as credits determined under sections 45, 45Q, 45V, 45Y, and, for electing taxpayers only, under section 45X), because elections to transfer all or a portion of eligible credits under section 6418(a) are annual and the transferee does not own the property or engage in the activities that originally gave rise to the eligible credits. Finally, stakeholders noted that a transferee may purchase only a portion of a credit determined with respect to an eligible credit property pursuant to section 6418(a), which they argued is inconsistent with the requirement under section 6417(a) that the elective payment election be with respect to the entire applicable credit determined with respect to applicable credit property for a taxable year.

These administrative and practical reasons have informed the proposed conclusion of the Treasury Department and the IRS that sections 6417 and 6418 are best interpreted to not allow an applicable entity under section 6417 to make an elective payment election for a transferred credit under section 6418. Furthermore, the pre-filing registration process contemplated by section 6417(d)(5) and by section 6418(g)(1) is not currently designed to allow an applicable entity purchasing eligible credits under section 6418 to make an elective payment election under section 6417.

Other stakeholders have suggested that the Code may allow a transferee taxpayer under section 6418 to make an elective payment election under section 6417 for a transferred credit because section 6418(a) provides that ''the transferee taxpayer specified in such election (and not the eligible taxpayer) shall be treated as the taxpayer for purposes of this title with respect to such credit.'' These stakeholders argue the transferee taxpayer steps into the shoes of the eligible taxpayer transferring the credit, such that a transferee taxpayer may be viewed as the taxpayer earning the credit for purposes of section 6417 and therefore is able to make an elective payment election with respect to such credit. They further noted that section 6417 does not expressly prohibit an applicable entity from making an elective payment election with respect to a transferred credit and that allowing applicable entities to make an elective payment election with respect to a transferred credit may further the policy goals of the IRA by expanding the financing methods available to renewable energy projects.

The Treasury Department and the IRS agree with stakeholders who noted that there is no restriction on who can be a transferee under section 6418, other than that the transferee cannot be related (within the meaning of section 267(b) or 707(b)(1) of the Code) to the eligible taxpayer transferring the credit. Thus, an applicable entity could be transferred credits under 6418, at least to offset any Federal income tax liability. However, the statute does not address whether an applicable entity can make an elective payment election under section 6417 with respect to transferred credits. Based on the reasons previously discussed in this part II.C.3. of this Explanation of Provisions, the Treasury Department and the IRS believe that a transferred credit is not properly interpreted as an applicable credit that is ''determined with respect to'' an applicable entity or electing taxpayer under section 6417(a) because the credit is not determined with respect to underlying applicable credit property owned by the applicable entity or electing taxpayer, or, if ownership is not required, activities otherwise conducted by the applicable entity or

[10] The section 45X credit requires that the taxpayer produce eligible components. Thus, an applicable entity or electing taxpayer must produce eligible components to claim the credit.

electing taxpayer. Section 6418(a) and the proposed regulations under section 6418 provide that a transferred credit is determined with respect to the eligible taxpayer transferring the credit. Although the transferee taxpayer uses the credit, the proposed regulations under section 6418 provide that the transferee taxpayer is not considered to have owned an interest in the underlying eligible credit property or have otherwise conducted any of the activities that give rise to the credit.

The Treasury Department and the IRS seek comments on limited situations where exceptions to this proposed rule may be appropriate because it is consistent with the text, design, and intent of the IRA, while also ensuring that such exceptions are not subject to fraud or abuse. Stakeholders could consider appropriate limitations such as (1) the type of applicable entity that may be allowed to make an elective payment election with respect to credits transferred under section 6418, such as a government entity; (2) the involvement of the transferee taxpayer in the project's development; (3) the level of due diligence conducted by the transferee taxpayer regarding whether the project qualifies for the applicable credit and any bonus credits and whether the amount of transferred credits was properly determined with respect to the eligible taxpayer transferring the credit; (4) the fact that the transferee taxpayer is paying close to the face value of the credit (and what minimum percentage of face value should be required); and (5) there are no other special financial arrangements between the parties. Stakeholders should address legal considerations, as well as practical and administrative challenges, to any such exception to the proposed rule.

D. Denial of Double Benefit

Section 6417(a) allows an applicable entity or electing taxpayer other than a partnership or S corporation to be treated as making a payment against the tax imposed by subtitle A for the taxable year with respect to which such credit was determined equal to the amount of such credit. Section 6417(c)(1)(A) provides that, for an electing taxpayer that is a partnership or S corporation, the Secretary will make a payment to such partnership or S corporation with respect to a credit determined with respect to applicable credit property held directly by the partnership or S corporation equal to the amount of such credit. Sections 6417(e) and 6417(c)(1)(B) each provide that such credit is reduced to zero and, for any other purposes of the Code, is deemed to have been allowed to such entity for such taxable year. Section 6417(h) provides that the Secretary must issue guidance necessary to carry out the purposes of section 6417, including guidance to ensure that the amount of the payment (in the case of an electing taxpayer that is a partnership or S corporation) or deemed payment (in the case of all other electing taxpayers and applicable entities) made under section 6417 is commensurate with the amount of the credit that would be otherwise allowable (determined without regard to section 38(c)).

Proposed § 1.6417–2(e)(2) and (3) would address the methodology for determining the amount of the elective payment election, reducing the elective payment election amount to zero, and treating the applicable credit as a credit allowed for the taxable year for all other purposes of the Code with respect to applicable entities and electing taxpayers other than partnerships or S corporations. The methodology with respect to a payment made to a partnership or S corporation is provided in proposed § 1.6417–4(c), as described in part IV of this Explanation of Provisions.

An applicable entity or electing taxpayer (other than an electing taxpayer that is a partnership or S corporation) making an elective payment election applies section 6417(e) by taking the following steps. First, the taxpayer would compute the amount of the Federal income tax liability (if any) for the taxable year, without regard to the GBC, that is payable on the due date of the return (without regard to extensions), and the amount of the Federal income tax liability that may be offset by GBCs pursuant to the limitation based on amount of tax under section 38. Second, the taxpayer would compute the allowed amount of GBC carryforwards carried to the taxable year plus the amount of current year GBCs (including current applicable credits) allowed for the taxable year under section 38 (that is, in accordance with all the rules in section 38, including the ordering rules provided in section 38(d)). Since the election would be required to be made on an original return, any business credit carrybacks would not be considered when determining the elective payment amount for the taxable year. Third, the taxpayer would apply the GBCs allowed for the taxable year as computed in step 2, including those attributable to applicable credits as GBCs, against the tax liability computed in step 1. Fourth, the taxpayer would identify the amount of any excess or unused current year business credit, as defined under section 39, attributable to current year applicable credit(s) for which the applicable entity is making an elective payment election. The amount of such unused applicable credits would be treated as a payment against the tax imposed by subtitle A for the taxable year with respect to which such credits are determined (rather than having them available for carryback or carryover) (net elective payment amount). Fifth, the taxpayer would reduce the applicable credits for which an elective payment election is made by the amount (if any) allowed as a GBC under section 38 for the taxable year, as provided in step 3, and by the net elective payment amount (if any) that is treated as a payment against tax, as provided in step 4, which results in the applicable credits being reduced to zero.

The proposed regulations would provide, consistent with section 6417(e), that the full amount of the applicable credits for which an elective payment election is made is deemed to have been allowed for all other purposes of the Code, including, but not limited to, the basis reduction and recapture rules imposed by section 50 and calculation of any underpayment of estimated tax under sections 6654 and 6655 of the Code. The proposed regulations would give several examples illustrating these rules.

The Treasury Department and the IRS request comments on whether future guidance should expand or clarify the methodology that an applicable entity follows to compute the amount of its elective payment. Comments are also requested on additional Code sections under which it may be necessary to consider the applicable credit to have been deemed to have been allowed for the taxable year in which an elective payment election is made.

III. Elective Payment Election by Electing Taxpayers

Section 6417(d)(1)(B), (C), and (D) provides that a taxpayer that is not an applicable entity described in section 6417(d)(1)(A) and that, with respect to any taxable year, places in service applicable credit property that qualifies for the section 45V credit or the section 45Q credit, or, with respect to any taxable year in which such taxpayer has, after December 31, 2022, produced eligible components (as defined in section 45X(c)(1)), respectively, may elect to be treated as an applicable entity for purposes of section 6417 for such taxable year, but only with respect to the applicable credit property and only with respect to the credit under section 45V(a), 45Q(a), or 45X(a), respectively. Proposed § 1.6417–1(g)

would define such a taxpayer as an ''electing taxpayer.''

The special rules for electing taxpayers are found in section 6417(d)(1) and (d)(3). Proposed § 1.6417–3 would combine these rules for clarity.

Proposed § 1.6417–3(b), (c), and (d) would provide the specific rules regarding the election under section 6417(d)(1)(B), (C), or (D). Proposed § 1.6417–3(e) would provide the rules relating to the election for electing taxpayers. Proposed § 1.6417–4 would provide additional rules for electing taxpayers that are partnerships or S corporations.

Proposed § 1.6417–3(b) would provide that an electing taxpayer that has placed in service a qualified clean hydrogen production facility as defined in section 45V(c)(3) during the taxable year may make an elective payment election for such taxable year (or by August 16, 2023, in the case of facilities placed in service before December 31, 2022), but only with respect to the qualified clean hydrogen production facility, only with respect to the section 45V credit, and only if the pre-filing registration process that would be required by proposed § 1.6417–5 was properly completed. An electing taxpayer that elects to treat qualified property that is part of a specified clean hydrogen production facility as energy property under section 48(a)(15) would not be able to make an elective payment election with respect to such facility.

Proposed § 1.6417–3(c) would provide that an electing taxpayer that has, after December 31, 2022, placed in service a single process train described in § 1.45Q–2(c)(3) at a qualified facility (as defined in section 45Q(d)) during the taxable year may make an elective payment election for such taxable year, but only with respect to the single process train, only with respect to the section 45Q credit, and only if the pre-filing registration process that would be required by proposed § 1.6417–5 was properly completed.

Proposed § 1.6417–2(a)(3)(v) and –3(d) would provide that an electing taxpayer that produces, after December 31, 2022, eligible components (as defined in section 45X(c)(1)) at a facility during the taxable year may make an elective payment election for such taxable year, but only with respect to the facility at which the eligible components are produced by the electing taxpayer in that year, only with respect to the section 45X credit, and only if the pre-filing registration process that would be required by proposed § 1.6417–5 was properly completed.

Proposed § 1.6417–3(e) would provide rules on how the electing taxpayer makes the elective payment election. First, if an electing taxpayer makes an elective payment election under proposed § 1.6417–2(b) with respect to any taxable year in which the electing taxpayer places in service a qualified clean hydrogen production facility for which a section 45V credit is determined, places in service a single process train at a qualified facility for which a section 45Q credit is determined, or produces, after December 31, 2022, eligible components (as defined in section 45X(c)(1)) at a facility, respectively, the electing taxpayer will be treated as an applicable entity for purposes of making an elective payment election for such taxable year and during the election period described in proposed § 1.6417–3(e)(3), but only with respect to the applicable credit property described in proposed § 1.6417–1(e)(3), (5), or (7), respectively, that is the subject of the election. The taxpayer would be required to otherwise meet all requirements to earn the credit in the electing year and in each succeeding year during the election period described in proposed § 1.6417–3(e)(3).

Second, the election would be made separately for each applicable credit property, which is, respectively, a qualified clean hydrogen production facility placed in service for which a section 45V credit is determined, a single process train placed in service at a qualified facility for which a section 45Q credit is determined, or a facility in which eligible components are produced for which a section 45X credit is determined. Only one election may be made with respect to any specific applicable credit property.

Third, the elective payment election generally would apply for an election period consisting of the taxable year in which the election is made and each of the four subsequent taxable years that end before January 1, 2033. The election period would not be able to be less than a taxable year but may be made for a taxable period of less than 12 months within the meaning of section 443 of the Code.

However, an electing taxpayer may, during a subsequent year of the election period, revoke the elective payment election with respect to an applicable credit property described in proposed § 1.6417–1(e)(3), (5), or (7) in accordance with forms and instructions. Any such revocation, if made, applies to the taxable year in which the revocation is made (which cannot be less than a taxable year but may be made for a taxable period of less than 12 months within the meaning of section 443 of the Code) and each subsequent taxable year within the election period. Any such revocation may not be subsequently revoked.

An electing taxpayer would not be able to make a transfer election under section 6418(a) with respect to any applicable credit under proposed § 1.6417–1(d)(3), (5), or (7) determined with respect to applicable credit property described in proposed § 1.6417–1(e)(3), (5), or (7) during the election period for that applicable credit property. However, if the election period is no longer in effect with respect to an applicable credit property, any credit determined with respect to such applicable credit property would be able to be transferred pursuant to a transfer election under section 6418(a), as long as the taxpayer meets the requirements of section 6418 and the 6418 regulations.

IV. Elective Payment Election for Partnerships and S Corporations

A. Overview

Section 6417(c)(1) provides that, in the case of any applicable credit determined with respect to any applicable credit property held directly by a partnership or S corporation, any election under section 6417(a) is made by such partnership or S corporation. These proposed regulations would clarify that partnerships or S corporations are not applicable entities described in section 6417(d)(1)(A); thus, any partnership or S corporation making an elective payment election must be an electing taxpayer, and as such, the only applicable credits with respect to which the partnership or S corporation can make an elective payment election are a section 45V credit, a section 45Q credit, and a section 45X credit.

If a partnership or S corporation makes an election under section 6417(a) and proposed § 1.6417–2(b), the special rules of section 6417(c)(1)(A) through (D) apply. In that regard, proposed § 1.6417–4(c) would provide that (1) the IRS will make a payment to such partnership or S corporation equal to the amount of such credit; (2) before determining any partner's distributive share, or shareholder's pro rata share, of such credit, such credit is reduced to zero and is, for any other purposes under this title, deemed to have been allowed solely to such entity (and not allocated by such entity, or otherwise allowed, to any partner or shareholder) for such taxable year (for example, if a partnership pays a Federal tax liability to the IRS in a year for which an elective payment election is made and cash is

received, it treats the payment to the IRS as if it paid the liability with the same amount of underlying credit for which the elective payment election is made); (3) any amount with respect to which the election under section 6417(a) is made is treated as tax exempt income for purposes of sections 705 and 1366; and (4) a partner's distributive share of such tax exempt income is equal to such partner's distributive share of the otherwise applicable credit for each taxable year as determined under § 1.704–1(b)(4)(ii). The tax exempt income would be taken into account by the partnership or S corporation at the same time as the underlying credit would have been taken into account by the partnership or S corporation absent an elective payment election. The proposed regulations provide an example illustrating this rule. Because it is the applicable credits, and not the tax exempt income, that arise from the conduct of the trade or business, the proposed regulations would treat the tax exempt income resulting from an elective payment election by a partnership or an S corporation as arising from an investment activity and not from the conduct of a trade or business within the meaning of section 469(c)(1)(A). As such, the tax exempt income would not be treated as passive income to any partners or shareholders who do not materially participate within the meaning of section 469(c)(1)(B).

As requested by stakeholders, the Treasury Department and the IRS clarify here that there are no restrictions imposed under section 6417 or the section 6417 regulations on how a partnership or S corporation that receives a payment from the IRS pursuant to an elective payment election may use the cash payments in its operations (including on when it makes distributions to its partners or shareholders).

Section 6417(h) requires that the Secretary issue regulations or other guidance to ensure that the amount of the payment to a partnership or S corporation is commensurate with the amount of the credit that would otherwise be allowable (without regard to section 38(c)). Therefore, proposed § 1.6417–4(d)(1) would provide that, in determining the applicable credit amount that will result in a payment to a partnership or S corporation, the partnership or S corporation must compute the amount of the applicable credit allowable (without regard to section 38(c)) as if an elective payment election were not made. Because a partnership or S corporation is not subject to section 469 (that is, section 469 applies at the partner or shareholder level), the amount of an applicable credit determined with respect to an applicable credit property held directly by a partnership or S corporation is not subject to limitation by section 469. In addition, because the credits to which a partnership or S corporation may make the elective payment election (that is, section 45V, 45Q, and 45X) are not investment tax credits under section 46, sections 49 and 50 do not apply to limit the amount of the credits.

B. BBA Partnerships

Many partnerships are subject to the centralized partnership audit regime found in subchapter C of chapter 63 of the Code as amended by the Bipartisan Budget Act of 2015 (BBA).[11] In connection with the implementation of section 6417, the Treasury Department and the IRS identified several areas of the BBA regulations that require updates to administer section 6417 in the case of a partnership subject to the BBA (BBA Partnership). Section 6221 of the Code provides that any adjustment to a partnership-related item with respect to a BBA Partnership, and any tax attributable thereto, is assessed and collected at the partnership-level except to the extent provided under the BBA. The BBA outlines centralized audit procedures which generally must be followed before the IRS can adjust a partnership-related item (as defined in § 301.6241–1). In order to implement section 6417, the Treasury Department and the IRS propose updates to the regulations under §§ 301.6241–1 and 301.6241–7.

1. Partnership-Related Items

Under § 301.6241–1(a)(6)(ii), a partnership-related item is any item or amount that is, with respect to the BBA Partnership, relevant in determining the tax liability of any person under chapter 1. Because the partnership-related item definition is based on relevance to the chapter 1 liability of any person, the liability could belong to the BBA Partnership or its partners. While partnerships do not typically pay chapter 1 tax pursuant to section 701 of the Code, a BBA Partnership is eligible to be an electing taxpayer under section 6417 and is thus subject to the excessive payment rule under section 6417(d)(6), which could result in a chapter 1 tax liability to the BBA Partnership. In addition, if a partnership makes an election under section 6417, the partnership must reduce its applicable credit under section 6417(e), which would impact the amount of credit and tax exempt income that the partners would be allocated, thereby affecting the partners' chapter 1 liability. Because the application of section 6417 may be relevant in determining the chapter 1 liabilities of a BBA Partnership and its partners, any item or amount relevant to section 6417 that is ''with respect to the partnership'' would be a partnership-related item as defined under § 301.6241–1(a)(6)(ii).

Section 301.6241–1(a)(6)(iii) provides than an item or amount is ''with respect to the partnership'' if the item or amount is shown or reflected, or required to be shown or reflected, on a return of the partnership under section 6031 of the Code or is required to be maintained in the partnership's books and records. Because the definition of a partnership-related item is based on the item's relevance to the chapter 1 tax liability of any person, this definition ensures that the definition of a partnership-related item is not so broad as to include items that are wholly unrelated to a BBA Partnership, such as a partner's unrelated income. While the limitation in this definition works well to ensure partner-level items are not inadvertently swept into the definition of a partnership related item, this definition may inadvertently exclude a chapter 1 liability of a BBA Partnership if, for instance, the liability is not required to be shown or reflected on the BBA Partnership's return. The BBA Partnership's own chapter 1 tax liability, in contrast with a partner's liability, is undoubtedly ''with respect to the partnership'' and a partnership-related item.

Accordingly, these proposed regulations propose to add a sentence to § 301.6241–1(a)(6)(iii) (regarding items or amounts with respect to a BBA Partnership) to provide that any chapter 1 tax that is the liability of the BBA Partnership is an item with respect to the BBA Partnership regardless of whether that chapter 1 tax is required to be reflected or shown on the partnership return or required to be maintained in the BBA Partnership's books and records.

2. Special Enforcement Rule for the Elective Payment Election

As noted in part IV.B.1. of this Explanation of Provisions, the BBA's centralized partnership audit regime requires the IRS to follow certain procedures before adjusting partnership-related items of a BBA Partnership.

[11] See section 1101 of the BBA, Public Law 114–74, 129 Stat. 584, 625–638 (2015), as amended by section 411 of the Protecting Americans from Tax Hikes Act of 2015, Public Law 114–113, 129 Stat. 2242, 3121 (2015), and sections 201 through 207 of the Tax Technical Corrections Act of 2018, Public Law 115–141, 132 Stat. 348, 1171–1183 (2018).

Under section 6241(11), in the case of partnership-related items that the Secretary determines involve a special enforcement matter, the Secretary is authorized to prescribe regulations pursuant to which the BBA audit procedures do not apply, and such partnership-related items are subject to special rules (including rules related to assessment and collection) as the Secretary determines necessary for the effective and efficient enforcement of the Code. Section 6241(11)(A). Section 6241(11)(B) provides a list of certain ''special enforcement matters,'' including the failure to comply with information reporting obligations of tiered partnerships, jeopardy assessments of tax in exigent circumstances, and matters involving foreign partners and partnerships. Sections 6241(11)(B)(i), (ii), and (v). Section 6241(11)(B)(vi) also provides a grant of authority to the Secretary for ''other matters that the Secretary determines by regulation present special enforcement considerations.''

Proposed § 1.6417–2(b) would provide that the elective payment election must be made on an original return and that the election may not be made on an amended return or administrative adjustment request. Under the existing BBA regulations, a BBA Partnership's elective payment election under section 6417 is a partnership-related item because the existence of the election is relevant in determining chapter 1 tax and because the election is required to be made on the BBA Partnership's return. Because the elective payment election is a partnership-related item, the only way for the IRS to make an adjustment upon the determination of an ineffective election would be to follow the audit procedures of the centralized partnership audit regime. To prevent duplication, fraud, improper payments, or excessive payments in an effective manner, the IRS must be able to determine whether a BBA Partnership's elective payment election is ineffective in an expeditious manner. The procedural requirements of the BBA would require the IRS to treat BBA Partnerships that have made an ineffective election payment election differently from other electing taxpayers that are not subject to the centralized partnership audit regime but that are otherwise similarly situated. The Treasury Department and the IRS are proposing that, due to the unique nature of the section 6417 election, which, pursuant to proposed § 1.6417–2(d), would result in a payment treated as having been made on the later of the due date of the return or the date the return was filed, the special enforcement matters described in section 6241(11) would apply, and the BBA centralized partnership audit regime should not apply to adjustments with respect to partnership-related items that affect the amount or existence of a payment to the BBA Partnership, or credit or refund of a payment to the BBA Partnership under section 6417. Accordingly, these proposed regulations would add new paragraph (j) to § 301.6241–7 to provide that an election by a BBA Partnership under section 6417 can be adjusted outside of the BBA audit rules. These proposed regulations also would redesignate existing paragraph (j) (regarding applicability dates) to a new paragraph (k) and update that paragraph (k) to reflect an applicability date for these proposed regulations.

V. Pre-Filing Registration Requirements and Additional Information

Section 6417(d)(5) provides that as a condition of, and prior to, any amount being treated as a payment that is made by the taxpayer under section 6417(a) or any payment being made pursuant to section 6417(c), the Secretary may require such information or registration as the Secretary deems necessary or appropriate for purposes of preventing duplication, fraud, improper payments, or excessive payments.

In general, stakeholders requested additional information about this provision and requested that the regulations balance the need to prevent fraud and abuse with the burden on taxpayers. Stakeholders recommended that the information required to be provided to the IRS should be provided in a manner that facilitates automated procedures to help catch potential fraud, discourages abusive or otherwise illegitimate claims, and allows efficient and prompt review (both before payment and through audits). Stakeholders recommended that all required documents and information should be able to be submitted easily via an online portal. Stakeholders recommended that information or registration should be as consistent as possible across sections 48D(d)(1), 6417(d)(5), and 6418(g)(1).

Proposed § 1.6417–5 would provide the mandatory pre-filing registration process that, except as provided in guidance, an applicable entity or electing taxpayer would be required to complete as a condition of, and prior to (1) any amount being treated as a payment against the tax imposed by subtitle A that is made by an applicable entity or electing taxpayer (other than a partnership of S corporation) under proposed §§ 1.6417–2(a)(1)(i) or –2(a)(2)(i), or (2) any amount being paid to a partnership or S corporation pursuant to proposed § 1.6417–2(a)(2)(ii).

Proposed § 1.6417–5(a) provides an overview of this process and would require an applicable entity or electing taxpayer to satisfy the pre-filing registration requirements as a condition of, and prior to, making an elective payment election. An applicable entity or electing taxpayer would be required to use the pre-filing registration process to register itself as intending to make the elective payment election, to list all applicable credits it intends to claim, and to list each applicable credit property that contributed to the determination of such credits as part of the pre-filing submission (or amended submission). An applicable entity or electing taxpayer that does not obtain a registration number and report the registration number on its annual tax return with respect to an applicable credit property would be ineligible to make an elective payment election to treat any credit determined with respect to that applicable credit property as a payment of tax. However, completion of the pre-filing registration requirements and receipt of a registration number would not, by itself, mean that the applicable entity or electing taxpayer would receive a payment with respect to the applicable credits determined with respect to the applicable credit property.

Proposed § 1.6417–5(b) would provide the following pre-filing registration requirements.

First, an applicable entity or electing taxpayer must complete the pre-filing registration process electronically through an IRS electronic portal in accordance with the instructions provided therein, unless otherwise provided in guidance. If the election is by a member of a consolidated group, the member must complete the pre-filing registration process as a condition of, and prior to, making an elective payment election. See § 1.1502–77 (providing rules regarding the status of the common parent as agent for its members).

Second, an applicable entity or electing taxpayer must satisfy the registration requirements and receive a registration number prior to making an elective payment election on the applicable entity's tax return for the taxable year at issue.

Third, an applicable entity or electing taxpayer is required to obtain a registration number for each applicable credit property with respect to which an applicable credit will be determined

and for which the applicable entity or electing taxpayer intends to make an elective payment election.

Finally, an applicable entity or electing taxpayer must provide the specific information required to be provided as part of the pre-filing registration process. The provision of such information, which includes information about the taxpayer, about the applicable credits, and about the applicable credit property, would allow the IRS to prevent duplication, fraud, improper payments, or excessive payments under section 6417. For example, verifying information about the taxpayer would allow the IRS to mitigate the risk of fraud or improper payments to entities that are not applicable entities or electing taxpayers. Information about the taxpayer's taxable year would allow the IRS to ensure that an elective payment election is timely made on the entity's annual tax return. Information about applicable credit properties, including their address and coordinates (longitude and latitude), supporting documentation, beginning of construction date, and placed in service date would allow the IRS to mitigate the risk of duplication, fraud, and improper payments for properties that are not applicable credit properties. Information about whether an investment tax credit property was acquired using any Restricted Tax Exempt Amounts would allow the IRS to prevent improper payments.

Proposed § 1.6417–5(c) would provide information about the required registration number. Proposed § 1.6417–5(c)(1) would provide that, after an applicable entity or electing taxpayer completes the pre-filing registration process as provided in proposed § 1.6417–5(b) for the applicable credit properties with respect to which the entity intends to make an elective payment election in the taxable year, the IRS will review the information provided and will issue a separate registration number for each applicable credit property for which the applicable entity or electing taxpayer provided sufficient verifiable information, as provided in guidance.

Proposed § 1.6417–5(c)(2) would provide that a registration number is valid only for the taxable year for which it is obtained. Proposed § 1.6417–5(c)(3) would provide that, if an elective payment election will be made with respect to an applicable credit property for which a registration number under proposed § 1.6417–5 has been previously obtained, the applicable entity or electing taxpayer would be required to renew the registration each year in accordance with applicable guidance, including attesting that all the facts previously provided are still correct or updating any facts. Proposed § 1.6417–5(c)(4) would provide that, if specified changes occur with respect to one or more applicable credit properties for which a registration number has been previously obtained but not yet used, an applicable entity or electing taxpayer would be required to amend the registration (or may need to submit a new registration) to reflect these new facts. For example, one stakeholder asked that, if a taxpayer becomes a party to an internal reorganization under section 368(a) (such as a merger or distribution in a nonrecognition transaction) during the election period, the elective payment election should carry over to the successor entity. The proposed regulations would provide that if a facility previously registered for an elective payment election undergoes a change of ownership (incident to a corporate reorganization or an asset sale) such that the new owner has a different employer identification number (EIN) than the owner who obtained the original registration, the original owner would be required to amend the original registration to disassociate its EIN from the credit property and the new owner must submit an original registration (or if the new owner previously registered other credit properties, must amend its original registration) to associate the new owner's EIN with the previously registered credit property.

Lastly, proposed § 1.6417–5(c)(5) would provide that the applicable entity or electing taxpayer would be required to include the registration number of the applicable credit property on their annual tax return for the taxable year. The IRS will treat an elective payment election as ineffective with respect to the portion of a credit determined with respect to an applicable credit property for which the applicable entity or electing taxpayer does not include a valid registration number on the annual tax return.

The corresponding temporary regulations under § 1.6417–5T published in the Rules and Regulations section of this edition of the **Federal Register** apply rules to taxable years ending on or after June 21, 2023, that are identical to those that would apply under proposed § 1.6417–5. The temporary regulations under § 1.6417–5T expire on June 12, 2026.

VI. Special Rules

Proposed § 1.6417–6 would provide special rules relating to excessive payment as well as basis reduction and recapture.

A. Excessive Payment

Pursuant to 6417(d)(6), proposed § 1.6417–6 would provide that the IRS may determine that an amount treated as a payment made by an applicable entity under proposed § 1.6417–2(a)(1)(i) or an electing taxpayer under proposed § 1.6417–2(a)(2)(i), or the amount of the payment made pursuant to proposed § 1.6417–2(a)(2)(ii), constitutes an excessive payment. Proposed § 1.6417–6(a) would provide that in the case of an excessive payment determined by the IRS, the amount of chapter 1 tax imposed on the applicable entity or electing taxpayer for the taxable year in which the excessive payment determination is made will be increased by an amount equal to the sum of (1) the amount of such excessive payment, plus (2) an amount equal to 20 percent of such excessive payment (additional 20-percent chapter 1 tax). This would be the case even if the applicable entity or electing taxpayer is otherwise not subject to chapter 1 tax. The additional 20-percent chapter 1 tax amount would not apply if the applicable entity or electing taxpayer demonstrates to the satisfaction of the IRS that the excessive payment resulted from reasonable cause. If the additional 20-percent chapter 1 tax is applicable, it would apply in addition to any penalties, additions to tax, or other amounts applicable under the Code. The Treasury Department and the IRS anticipate that existing standards of reasonable cause will inform the determination by the IRS of whether reasonable cause has been demonstrated for this purpose.

The term ''excessive payment'' is proposed to be defined as an amount equal to the excess of (1) the amount treated as a payment under proposed § 1.6417–2(a)(1)(i) or –2(a)(2)(i), or the amount of the payment made pursuant to proposed § 1.6417–2(a)(2)(ii), with respect to such facility or property for such taxable year, over (2) the amount of the credit that, without application of section 6417, would be otherwise allowable (as described in part II.C and II.D. or IV. of this Explanation of Provisions and without regard to section 38(c)) under the Code with respect to such facility or property for such taxable year.

Several stakeholders asked that the term ''excessive payment'' be determined without any tax credit utilization rules, such as those found in sections 38, 49, and 469. Because the statute provides that the amount of the credit should not exceed the amount ''otherwise allowable'' (without application of sections 38(c), without

regard to sections 50(b)(3) and (4)(A)(i), and by treating any property with respect to which such credit is determined as used in a trade or business of the applicable entity), the Treasury Department and the IRS are proposing that all other relevant code sections, including sections 38 (but not 38(c)), 49, and 469, would apply to the amount treated as a payment that is made by the applicable entity or electing taxpayer as described in part II of this Explanation of Provisions. Thus, if an applicable entity or electing taxpayer is an individual, trust, closely held corporation, or other taxpayer subject to the rules of section 469, or if an applicable credit is an investment tax credit that is determined including the rules of section 49, then those rules would apply. However, proposed § 1.6417–2(c) would provide additional rules relating to the determination of applicable credits, such as the special rule for investment credit property acquired by a tax-exempt or government entity using nontaxable grants or other nontaxable proceeds, as described in part II.C. of this Explanation of Provisions.

In contrast, the amount of the payment to partnerships and S corporations described in part IV of this Explanation of Provisions has different proposed rules. As discussed in part IV of this Explanation of Provisions, in determining the applicable credit amount that will result in a payment to a partnership or S corporation, the partnership or S corporation would be required to compute the amount of the applicable credit allowable (without regard to section 38(c)) as if an elective payment election were not made. However, because a partnership or S corporation is not subject to section 469 (that is, section 469 applies at the partner or shareholder level), the amount of the credit determined by a partnership or S corporation would not be subject to limitation by section 469. In addition, because the only applicable credits for which a partnership or S corporation may make the elective payment election are the section 45V credit, section 45Q credit, and section 45X credit, which are production tax credits, sections 49 and 50 (applicable to investment tax credits) would not apply to limit these applicable credit amounts.

Stakeholders asked for clarification on how the excessive payment would be determined and in which year the adjustment applies. The Treasury Department and the IRS anticipate that excessive payments may arise in a variety of situations, such as an improperly claimed bonus credit amount, an error in calculating a credit, inflated basis, failure to apply the section 38(d) ordering rules, or a misapplication of the credit utilization rules, among other things. The statute provides that the tax is imposed on the applicable entity in the year the determination of the excessive payment is made, despite the fact that this is a later year than the year in which the credit was allowable. The Treasury Department and the IRS request comments on whether additional guidance on excessive payments is needed.

B. Basis Reduction and Recapture

Proposed § 1.6417–6(b) would provide rules similar to the rules of section 50 (without regard to section 50(b)(3) and (4)(A)(i)) apply for purposes of section 6417. (Section 6417(g) erroneously refers to section 6417(c)(2)(A), a provision that does not exist, and it is evident that such reference was intended to be to section 6417(d)(2)(A). That error is accounted for in these proposed regulations.)

One stakeholder asked how entities that don't normally file tax returns should report recapture events. The stakeholder asked that the reporting and payment of the recapture amount should be consistent with the rules applicable to taxable entities (that is, no reporting or payment due until a tax return would be due for the related calendar year). Proposed § 1.6417–6(b)(2) would clarify that any reporting of recapture is made on the taxpayer's annual tax return in the manner prescribed by the IRS in future guidance, along with supplemental forms such as Form 4255, *Recapture of Investment Credit*.

Stakeholders asked whether recapture is considered an excessive payment event. The excessive payment rules operate separately from the recapture rules. The excessive payment rules apply where the credit amount reported on the original credit source form by the applicable entity or electing taxpayer was excessive. Recapture of a tax credit occurs when the original tax credit reported would have been correct without the occurrence of a subsequent recapture event. Thus, recapture events, including recapture events under sections 45Q(f)(4) or 50(a), do not result in an excessive payment.

Stakeholders asked that the proposed regulations clarify that basis reduction and recapture applies only to the investment tax credits. The section 50 rules, including basis reduction and recapture, only apply to investment tax credits so no clarification on this point is required.

Stakeholders also asked that guidance be provided in the form of examples that illustrate the manner in which section 50 will be applied for purposes of basis reduction and recapture. Proposed § 1.6417–6(b)(3) would provide an example.

Proposed Applicability Dates

Each of proposed §§ 1.6417–1 through 1.6417–6 is proposed to apply to taxable years ending on or after the date the Treasury decision adopting these regulations as final regulations is published in the **Federal Register**. Entities may rely on these proposed regulations for elective payments of applicable credit amounts after December 31, 2022, in taxable years ending before the date the Treasury decision adopting these regulations as final regulations is published in the **Federal Register**, provided the entities follow the proposed regulations in their entirety and in a consistent manner with respect to all elections made under section 6417. Sections 301.6241–1 and 301.6241–7 are proposed to apply to taxable years ending on or after the date these proposed regulations are published in the **Federal Register**.

Special Analyses

I. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) (''PRA'') generally requires that a federal agency obtain the approval of the Office of Management and Budget (OMB) before collecting information from the public, whether such collection of information is mandatory, voluntary, or required to obtain or retain a benefit. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number.

The collections of information in these proposed regulations contain reporting and recordkeeping requirements. The recordkeeping requirements mentioned within these proposed regulations are considered general tax records under Section 1.6001–1(e). These records are required for the IRS to validate that taxpayers have met the regulatory requirements and are entitled to make an elective payment election. For PRA purposes, general tax records are already approved by OMB under 1545–0047 for tax-exempt organizations and government entities; 1545–0074 for individuals; and under 1545–0123 for business entities.

These proposed regulations also mention reporting requirements related to making elections as detailed in

§§ 1.6417–2 and 1.6417–3 and calculating the claim amounts as detailed in §§ 1.6417–2 and 1.6417–4. These elections will be made by taxpayers on Forms 990–T, 1040, 1120–S, 1065, and 1120; and credit calculations will be made on Form 3800 and supporting forms. These forms are approved under 1545–0047 for tax-exempt organizations and governmental entities; 1545–0074 for individuals; and 1545–0123 for business entities.

These proposed regulations also mention recapture procedures as detailed in § 1.6417–6. These recaptures are performed using Form 4255. This form is approved under 1545–0047 for tax-exempt organizations and governmental entities; 1545–0074 for individuals; and 1545–0123 for business entities. These proposed regulations are not changing or creating new collection requirements not already approved by OMB.

These proposed regulations mention a requirement to register with the IRS to be able to elect payments as detailed in § 1.6417–5. For further information concerning the registration, where to submit comments on the collection of information and the accuracy of the estimated burden, and suggestions for reducing this burden, please refer to the preamble to the corresponding temporary regulations (T.D. 9975) published in the Rules and Regulations section of this issue of the **Federal Register**. These proposed regulations are not changing or creating new collection requirements beyond the requirements that are being reviewed and approved by OMB under the temporary regulations.

II. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) imposes certain requirements with respect to Federal rules that are subject to the notice and comment requirements of section 553(b) of the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and that are likely to have a significant economic impact on a substantial number of small entities. Unless an agency determines that a proposal is not likely to have a significant economic impact on a substantial number of small entities, section 603 of the RFA requires the agency to present an initial regulatory flexibility analysis (IRFA) of the proposed rule. The Treasury Department and the IRS have not determined whether the proposed rule, when finalized, will likely have a significant economic impact on a substantial number of small entities. This determination requires further study. However, because there is a possibility of significant economic impact on a substantial number of small entities, an IRFA is provided in these proposed regulations. The Treasury Department and the IRS invite comments on both the number of entities affected and the economic impact on small entities.

Pursuant to section 7805(f), this notice of proposed rulemaking has been submitted to the Chief Counsel of Advocacy of the Small Business Administration for comment on its impact on small business.

1. Need for and Objectives of the Rule

The proposed regulations would provide greater clarity to taxpayers that intend to take advantage of section 6417's credit monetization mechanism. It provides needed definitions, the time and manner to make the election, and information about the pre-filing registration process, among other items. The Treasury Department and the IRS intend and expect that giving taxpayers guidance that allows them to use section 6417 will beneficially impact various industries, delivering benefits across the economy, and reduce economy-wide greenhouse gas emissions.

In particular, section 6417 allows applicable entities to treat an applicable credit as a payment against Federal income taxes and defines applicable entities to include many entities that may not have any tax liability. Allowing entities without sufficient federal income tax liability to use a business tax credit to instead make an election to receive a refund of any overpayment of taxes created by the elective payment election will increase the incentive for taxpayers to invest in clean energy projects that generate eligible credits because it will increase the amount of cash available to those entities, thereby reducing the amount of financing needed for clean energy projects.

2. Affected Small Entities

The RFA directs agencies to provide a description of, and where feasible, an estimate of, the number of small entities that may be affected by the proposed rules, if adopted. The Small Business Administration's Office of Advocacy estimates in its 2023 Frequently Asked Questions that 99.9 percent of American businesses meet its definition of a small business. The applicability of these proposed regulations does not depend on the size of the business, as defined by the Small Business Administration. As described more fully in the preamble to this proposed regulation and in this IRFA, section 6417 and these proposed regulations may affect a variety of different entities across several different industries as there are 12 different applicable credits for which an elective payment election may be made. Further, the elective payment election for 3 of the applicable credits may be made both by applicable entities and by taxpayers other than applicable entities. Although there is uncertainty as to the exact number of small businesses within this group, the current estimated number of respondents to these proposed rules is 20,000 taxpayers, as described in the Paperwork Reduction Act section of the preamble.

The Treasury Department and the IRS expect to receive more information on the impact on small businesses through comments on this proposed rule and again when taxpayers start to make the elective payment election using the guidance and procedures provided in these proposed regulations.

3. Impact of the Rules

The proposed regulations provide rules for how taxpayers can take advantage of the section 6417 credit monetization regime. Taxpayers that elect to take advantage of section 6417 will have administrative costs related to reading and understanding the rules as well as recordkeeping and reporting requirements because of the pre-filing registration and tax return requirements. The costs will vary across different-sized entities and across the type of project(s) in which such entities are engaged.

The pre-filing registration process requires a taxpayer to register itself as intending to make the elective payment election, to list all applicable credits it intends to claim, and to list each applicable credit property that contributed to the determination of such credits. This process must be completed to receive a registration number for each applicable credit property with respect to which the applicable taxpayer intends to make an elective payment election. To make the elective payment election and claim the credit, the taxpayer must file an annual tax return. The reporting and recordkeeping requirements for that return would be required for any taxpayer that is claiming a general business credit, regardless of whether the taxpayer was making an elective payment election under section 6417.

Although the Treasury Department and the IRS do not have sufficient data to determine precisely the likely extent of the increased costs of compliance, the estimated burden of complying with the recordkeeping and reporting requirements are described in the Paperwork Reduction Act section of the preamble.

4. Alternatives Considered

The Treasury Department and the IRS considered alternatives to the proposed regulations. For example, in adopting the pre-filing registration requirements, the Treasury Department and the IRS considered whether such information could be obtained at the filing of the relevant annual tax return. However, the Treasury Department and the IRS decided that such an option would increase the opportunity for duplication fraud, improper payments, or excessive payments under section 6417 as well as potentially delaying payments to qualifying taxpayers. Section 6417(d)(5) specifically authorizes the IRS to require such information or registration as the Secretary deems necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under section 6417 as a condition of, and prior to, any amount being treated as a payment which is made by an applicable entity under section 6417. As described in the preamble to these proposed regulations, these proposed rules carry out that Congressional intent as pre-filing registration allows for the IRS to verify certain information in a timely manner and then process the annual tax return with minimal delays. Having a distinction between applicable entities or electing entities that are small businesses versus others making an elective payment election would create a scenario where a subset of taxpayers seeking to make an elective payment election would not have been verified or received registration numbers, potentially delaying payment not only to them but to other taxpayers seeking to use section 6417.

Additionally, when considering how taxpayers should claim the credits and make the elective payment election, the Treasury Department and the IRS considered creating an election system outside of the tax return filing system. However, it was determined that such a process would not be an efficient use of resources, especially given the statutory due date to make an election, which is the return filing date for the taxpayers with a filing obligation (which would include small business taxpayers). The Treasury Department and the IRS decided that the most efficient and reliable method is to use the existing method for claiming business tax credits; that is, the filing of the annual tax return. To create a different method for small businesses making an elective payment election than for a small business claiming the credit (or a larger business making an elective payment election or claiming the credit) would create an additional burden for both small businesses and the IRS, without any commensurate benefit.

Comments are requested on the requirements in the proposed regulations, including specifically whether there are less burdensome alternatives that do not increase the risk of duplication, fraud, improper payments, or excessive payments under section 6417.

5. Duplicative, Overlapping, or Conflicting Federal Rules

The proposed rule would not duplicate, overlap, or conflict with any relevant Federal rules. As discussed above, the proposed rule would merely provide procedures and definitions to allow taxpayers to take advantage of the ability to make an elective payment election. The Treasury Department and the IRS invite input from interested members of the public about identifying and avoiding overlapping, duplicative, or conflicting requirements.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Indian tribal government, in the aggregate, or by the private sector, of $100 million (updated annually for inflation). This proposed rule does not include any Federal mandate that may result in expenditures by State, local, or Indian tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (Federalism) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive Order. This proposed rule does not have federalism implications and does not impose substantial direct compliance costs on State and local governments or preempt State law within the meaning of the Executive Order.

VI. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments) prohibits an agency from publishing any rule that has Tribal implications if the rule either imposes substantial, direct compliance costs on Indian tribal governments, and is not required by statute, or preempts Tribal law, unless the agency meets the consultation and funding requirements of section 5 of the Executive Order. This proposed rule does not have substantial direct effects on one or more federally recognized Indian tribes and does not impose substantial direct compliance costs on Indian tribal governments within the meaning of the Executive Order.

Nevertheless, on November 28, 2022, and November 29, 2022, the Treasury Department and the IRS held consultations with Tribal leaders requesting assistance in addressing questions related to the elective payment election under section 6417. Consultation was also held with Alaska Native Corporations on December 2, 2022. These consultations informed the development of these proposed regulations.

The Treasury Department and the IRS will hold additional consultations with Tribal leaders and Alaska Native Corporations after providing an opportunity for review of the proposed regulations and early in the process of publishing final regulations under section 6417.

VII. Regulatory Planning and Review

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

Comments and Public Hearing

Before these proposed amendments to the regulations are adopted as final regulations, consideration will be given to comments that are submitted timely to the IRS as prescribed in this preamble under the **ADDRESSES** section. The Treasury Department and the IRS request comments on all aspects of the proposed regulations. Any electronic comments submitted, and any paper comments submitted, will be made available at *https://www.regulations.gov* or upon request.

Announcement 2023–16, 2023–20 I.R.B. 854 (May 15, 2023), provides that public hearings will be conducted in person, although the IRS will continue to provide a telephonic option for individuals who wish to attend or testify at a hearing by telephone. Any

telephonic hearing will be made accessible to people with disabilities.

A public hearing is scheduled to be held in person on August 21, 2023, beginning at 10:00 a.m. ET, unless no outlines are received by August 14, 2023. Due to building security procedures, visitors must enter at the Constitution Avenue entrance. In addition, all visitors must present photo identification to enter the building. Because of access restrictions, visitors will not be admitted beyond the immediate entrance area more than 30 minutes before the hearing starts.

The rules of 26 CFR 601.601(a)(3) apply to the hearing. Persons who wish to comment by telephone at the hearing must submit written or electronic comments and an outline of the topics to be discussed as well as the time to be devoted to each topic by August 14, 2023, as prescribed in the preamble under the **ADDRESSES** section.

A period of ten minutes will be allocated to each person for making comments. After the deadline for receiving outlines has passed, the IRS will prepare an agenda containing the schedule of speakers. Copies of the agenda will be made available at *https://www.regulations.gov,* search IRS and REG–101607–23. Copies of the agenda will also be available by emailing a request to *publichearings@irs.gov.* Please put ''REG–101607–23 Agenda Request'' in the subject line of the email.

Individuals who want to testify in person at the public hearing must send an email to *publichearings@irs.gov* to have your name added to the building access list. The subject line of the email must contain the regulation number REG–101607–23 and the language TESTIFY In Person. For example, the subject line may say: Request to TESTIFY In Person at Hearing for REG–101607–23.

Individuals who want to testify by telephone at the public hearing must send an email to *publichearings@irs.gov* to receive the telephone number and access code for the hearing. The subject line of the email must contain the regulation number REG–101607–23 and the language TESTIFY Telephonically. For example, the subject line may say: Request to TESTIFY Telephonically at Hearing for REG–101607–23.

Individuals who want to attend the public hearing in person without testifying must also send an email to *publichearings@irs.gov* to have your name added to the building access list. The subject line of the email must contain the regulation number REG–101607–23 and the language ATTEND In Person. For example, the subject line may say: Request to ATTEND Hearing In Person for REG–101607–23. Requests to attend the public hearing must be received by 5:00 p.m. EST on August 17, 2023.

Individuals who want to attend the public hearing by telephone without testifying must also send an email to *publichearings@irs.gov* to receive the telephone number and access code for the hearing. The subject line of the email must contain the regulation number REG–101607–23 and the language ATTEND Hearing Telephonically. For example, the subject line may say: Request to ATTEND Hearing Telephonically for REG–101607–23. Requests to attend the public hearing must be received by 5:00 p.m. EST on August 17, 2023.

Hearings will be made accessible to people with disabilities. To request special assistance during a hearing please contact the Publications and Regulations Branch of the Office of Associate Chief Counsel (Procedure and Administration) by sending an email to *publichearings@irs.gov* (preferred) or by telephone at (202) 317–6901 (not a toll-free number) at least August 16, 2023.

Statement of Availability of IRS Documents

Guidance cited in this preamble is published in the Internal Revenue Bulletin and is available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *https://www.irs.gov.*

Drafting Information

The principal authors of theses proposed regulations are Jeremy Milton and James Holmes, Office of the Associate Chief Counsel (Passthroughs and Special Industries), IRS. However, other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects

26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

26 CFR Part 301

Employment taxes, Estate taxes, Excise taxes, Gift taxes, Income taxes, Penalties, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, the Treasury Department and the IRS propose to amend 26 CFR parts 1 and 301 as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

* * * * *

■ **Par. 2.** Sections 1.6417–0 through 1.6417–6 are added under the undesignated heading ''Abatements, Credits, and Refunds'' to read as follows:

§ 1.6417–0 Table of contents

This section lists the table of contents for §§ 1.6417–1 through 1.6417–6.

(a) Excessive payment.
(b) Basis reduction and recapture.
(c) Mirror code territories.
(d) Partnerships subject to subchapter C of chapter 63 of the Code.
(e) Applicability date.

§ 1.6417–1 Elective payment election of applicable credits.

(a) *In general.* An applicable entity may make an elective payment election with respect to any applicable credit determined with respect to such applicable entity in accordance with section 6417 of the Code and the section 6417 regulations. Paragraphs (b) through (p) of this section provide definitions. See § 1.6417–2 for rules and procedures under which all elective payment elections must be made, rules for determining the amount and the timing of payments, and statutory rules denying double benefits. See § 1.6417–3 for special rules pertaining to electing taxpayers. See § 1.6417–4 for special rules pertaining to electing taxpayers that are partnerships or S corporations. See § 1.6417–5 for pre-filing registration requirements and other information required to make any elective payment election effective. See § 1.6417–6 for special rules related to excessive payments, basis reduction and recapture, any U.S. territory with a mirror code tax system, and payments made to partnerships subject to subchapter C of chapter 63 of the Code.

(b) *Annual Tax Return.* The term *annual tax return* means, for purposes of section 6417 and the section 6417 regulations, the following returns (and for each, any successor return)—

(1) For any taxpayer normally required to file an annual tax return with the IRS, such annual return (including the Form 1065 for partnerships and the Form 990–T for organizations with unrelated business income tax or a proxy tax under section 6033(e));

(2) For any taxpayer that is not normally required to file an annual tax return with the IRS (such as taxpayers located in the U.S. territories), the return they would be required to file if they were located in the United States, or, if no such return is required (such as for governmental entities), the Form 990–T; and

(3) For short tax year filers, the short year tax return.

(c) *Applicable entity.* The term *applicable entity* means—

(1) Any organization exempt from the tax imposed by subtitle A—

(i) By reason of section 501(a) of the Code; or

(ii) Because it is the government of any U.S. territory or a political subdivision thereof;

(2) Any State, the District of Columbia, or political subdivision thereof;

(3) An Indian tribal government or a subdivision thereof;

(4) Any Alaska Native Corporation (as defined in section 3 of the Alaska Native Claims Settlement Act, 43 U.S.C. 1602(m));

(5) The Tennessee Valley Authority;

(6) Any corporation operating on a cooperative basis that is engaged in furnishing electric energy to persons in rural areas; and

(7) An agency or instrumentality of any applicable entity described in paragraphs (1)(ii), (2), or (3).

(d) *Applicable credit.* The term *applicable credit* means each of the following:

(1) So much of the credit for alternative fuel vehicle refueling property determined under section 30C of the Code that, pursuant to section 30C(d)(1), is treated as a credit listed in section 38(b) of the Code (section 30C credit);

(2) So much of the renewable electricity production credit determined under section 45(a) as is attributable to qualified facilities that are originally placed in service after December 31, 2022 (section 45 credit);

(3) So much of the credit for carbon oxide sequestration determined under section 45Q(a) as is attributable to carbon capture equipment that is originally placed in service after December 31, 2022 (section 45Q credit);

(4) The zero-emission nuclear power production credit determined under section 45U(a) (section 45U credit);

(5) So much of the credit for production of clean hydrogen determined under section 45V(a) as is attributable to qualified clean hydrogen production facilities that are originally placed in service after December 31, 2012 (section 45V credit);

(6) In the case of a tax-exempt entity described in section 168(h)(2)(A)(i), (ii), or (iv) of the Code, the credit for qualified commercial vehicles determined under section 45W by reason of section 45W(d)(2) (section 45W credit);

(7) The credit for advanced manufacturing production determined under section 45X(a) (section 45X credit);

(8) The clean electricity production credit determined under section 45Y(a) (section 45Y credit);

(9) The clean fuel production credit determined under section 45Z(a) (section 45Z credit);

(10) The energy credit determined under section 48 (section 48 credit);

(11) The qualifying advanced energy project credit determined under section 48C (section 48C credit); and

(12) The clean electricity investment credit determined under section 48E (section 48E credit).

(e) *Applicable credit property.* The term *applicable credit property* means each of the following units of property with respect to which the amount of an applicable credit is determined:

(1) In the case of a section 30C credit, a *qualified alternative fuel vehicle refueling property* described in section 30C(c).

(2) In the case of a section 45 credit, a *qualified facility* described in section 45(d).

(3) In the case of a section 45Q credit, a *single process train* described in § 1.45Q–2(c)(3).

(4) In the case of a section 45U credit, a *qualified nuclear power facility* described in section 45U(b)(1).

(5) In the case of a section 45V credit, a *qualified clean hydrogen production facility* described in section 45V(c)(3).

(6) In the case of a section 45W credit, a *qualified commercial clean vehicle* described in section 45W(c).

(7) In the case of a section 45X credit, a facility that produces eligible components, as described in guidance under sections 48C and 45X.

(8) In the case of a section 45Y credit, a *qualified facility* described in section 45Y(b)(1).

(9) In the case of a section 45Z credit, a *qualified facility* described in section 45Z(d)(4).

(10) *Section 48 credit property*—(i) *In general.* In the case of a section 48 credit and except as provided in paragraph (d)(10)(ii) of this section, an *energy property* described in section 48.

(ii) *Pre-filing registration and elections.* At the option of an applicable entity or electing taxpayer, and to the extent consistently applied for purposes of the pre-filing registration requirements of § 1.6417–5 and the elective payment election requirements of §§ 1.6417–2 through 1.6417–4, an *energy project* as described in section 48(a)(9)(A)(ii) and defined in guidance.

(11) In the case of a section 48C credit, an *eligible property* described in section 48C(c)(2).

(12) In the case of a section 48E credit, a *qualified facility* described in section 48E(b)(3) or, in the case of a section 48E credit relating to a qualified investment with respect to energy storage technology, an *energy storage technology* described in section 48E(c)(2).

(f) *Disregarded entity.* The term *disregarded entity* means an entity that is disregarded as an entity separate from

its owner for Federal income tax purposes.

(g) *Electing taxpayer.* The term e*lecting taxpayer* means any taxpayer that is not an applicable entity described in paragraph (b) of this section but makes an election in accordance with §§ 1.6417–2(b), 1.6417–3, and, if applicable, 1.6417–4, to be treated as an applicable entity for a taxable year with respect to applicable credits determined with respect to an applicable credit property described in § 1.6417–1(e)(3), (5), or (7).

(h) *Elective payment amount*—(1) *In general.* The term *elective payment amount* means, with respect to an applicable entity or an electing taxpayer that is not a partnership or an S corporation, the applicable credit(s) for which an applicable entity or electing taxpayer makes an elective payment election to be treated as making a payment against the tax imposed by subtitle A for the taxable year, which is equal to the sum of—

(i) The amount (if any) of the current year applicable credit(s) allowed as a general business credit under section 38 for the taxable year, as provided in § 1.6417–2(e)(2)(iii), and

(ii) The amount (if any) of unused current year applicable credits which would otherwise be carried back or carried forward from the unused credit year under section 39 and that are treated as a payment against tax, as provided in § 1.6417–2(e)(2)(iv).

(2) *Elective payment amount with respect to partnerships and S corporations.* With respect to an electing taxpayer that is a partnership or an S corporation, the term *elective payment amount* means the sum of the applicable credit(s) for which the partnership or S corporation makes an elective payment election and that results in a payment to such partnership or S corporation equal to the amount of such credit(s) (unless the partnership owes a Federal tax liability, in which case the payment may be reduced by such tax liability).

(i) *Elective payment election.* The term *elective payment election* means an election made in accordance with § 1.6417–2(b) for applicable credit(s) determined with respect to an applicable entity or electing taxpayer.

(j) *Guidance.* The term *guidance* means guidance published in the **Federal Register** or Internal Revenue Bulletin, as well as administrative guidance such as forms, instructions, publications, or other guidance on the *IRS.gov* website. See §§ 601.601 and 601.602 of this chapter.

(k) *Indian tribal government.* The term *Indian tribal government* means the recognized governing body of any Indian or Alaska Native tribe, band, nation, pueblo, village, community, component band, or component reservation, individually identified (including parenthetically) in the most recent list published by the Department of the Interior in the **Federal Register** pursuant to section 104 of the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 5131).

(l) *Partnership.* The term *partnership* has the meaning provided in section 761 of the Code.

(m) *S corporation.* The term *S corporation* has the meaning provided in section 1361(a)(1) of the Code.

(n) *Section 6417 regulations.* The term *section 6417 regulations* means §§ 1.6417–1 through 1.6417–6.

(o) *Statutory references*—(1) *Chapter 1.* The term *chapter 1* means chapter 1 of the Code.

(2) *Code.* The term *Code* means the Internal Revenue Code.

(3) *Subchapter K.* The term *subchapter K* means subchapter K of chapter 1.

(4) *Subtitle A.* The term *subtitle A* means subtitle A of the Code.

(p) *U.S. territory.* The term *U.S. territory* means the Commonwealth of Puerto Rico, Guam, the U.S. Virgin Islands, American Samoa, and the Commonwealth of the Northern Mariana Islands.

(q) *Applicability date.* This section applies to taxable years ending on or after date of publication of final rule.

§ 1.6417–2 Rules for making elective payment elections.

(a) *Elective payment elections*—(1) *Elections by applicable entities*—(i) *In general.* An applicable entity that makes an elective payment election in the manner provided in paragraph (b) of this section will be treated as making a payment against the Federal income taxes imposed by subtitle A for the taxable year with respect to which an applicable credit is determined in the amount determined under paragraph (c) of this section.

(ii) *Disregarded entities.* If an applicable entity is the owner (directly or indirectly) of a disregarded entity that directly holds an applicable credit property, the applicable entity may make an elective payment election in the manner provided in paragraph (b) of this section for applicable credits determined with respect to the applicable credit property held directly by the disregarded entity.

(iii) *Undivided ownership interests.* If an applicable entity is a co-owner in an applicable credit property through an arrangement properly treated as a tenancy-in-common for Federal income tax purposes, or through an organization that has made a valid election under section 761(a) of the Code to be excluded from the application of subchapter K, then the applicable entity's undivided ownership share of the applicable credit property will be treated as a separate applicable credit property owned by such applicable entity, and the applicable entity may make an elective payment election in the manner provided in paragraph (b) of this section for the applicable credits determined with respect such applicable credit property.

(iv) *Partnerships and S corporations not applicable entities.* Partnerships and S corporations are not applicable entities described in § 1.6417–1(c), and thus are not eligible to make any election under paragraph (b) of this section, unless the partnership or S corporation is an electing taxpayer. This is the case no matter how many of the partners of a partnership are described in § 1.6417–1(c)(1), including if all of a partnership's partners are so described.

(v) *Members of a consolidated group of which an Alaska Native Corporation is the common parent.* In the case of a consolidated group (as defined in § 1.1502–1) the common parent of which is an Alaska Native Corporation, any member that is an electing taxpayer may make an elective payment election with respect to applicable credits determined with respect to the member. See § 1.1502–77 (providing rules regarding the status of the common parent as agent for its members).

(2) *Electing taxpayers*—(i) *Electing taxpayers that are not partnerships or S corporations.* An electing taxpayer other than a partnership or an S corporation that has made an elective payment election in accordance with § 1.6417–3 and paragraph (b) of this section will be treated as making a payment against the Federal income taxes imposed by subtitle A for the taxable year with respect to which the applicable credit is determined in the amount determined under paragraph (c) of this section.

(ii) *Electing taxpayers that are partnerships or S corporations.* In the case of an electing taxpayer that is a partnership or S corporation that has made an elective payment election in accordance with §§ 1.6417–3 and 1.6417–4 and paragraph (b) of this section, the Internal Revenue Service will make a payment to such partnership or S corporation equal to the amount of such credit determined under paragraph (c) of this section and § 1.6417–4(d) (unless the partnership owes any Federal income tax liability, in which case the payment may be reduced by such tax liability).

(iii) *Partners and S corporation shareholders prohibited from making any elective payment election.* Under section 6417(c)(1) of the Code, any elective payment election with respect to applicable credit property held directly by a partnership or S corporation must be made by the partnership or S corporation. As provided under section 6417(c)(2) of the Code, no partner in a partnership, or shareholder of an S corporation, may make an elective payment election with respect to any applicable credit determined with respect to such applicable credit property.

(iv) *Disregarded entities.* If an electing taxpayer is the owner (directly or indirectly) of a disregarded entity that directly holds any applicable credit property, the electing taxpayer may make an elective payment election in the manner provided in paragraph (b) of this section for applicable credits determined with respect to the applicable credit property held directly by the disregarded entity.

(v) *Undivided ownership interests.* If an electing taxpayer is a co-owner in an applicable credit property through an arrangement properly treated as a tenancy-in-common for Federal income tax purposes, or through an organization that has made a valid election under section 761(a) of the Code to be excluded from the application of subchapter K, then the electing taxpayer's undivided ownership interest in or share of the applicable credit property will be treated as a separate applicable credit property owned by such electing taxpayer, and the electing taxpayer may make an elective payment election in the manner provided in paragraph (b) of this section for the applicable credits determined with respect to such applicable credit property.

(vi) *Members of a consolidated group.* A member of a consolidated group may make an elective payment election with respect to applicable credits determined with respect to the member. See § 1.1502–77 (providing rules regarding the status of the common parent as agent for its members).

(3) *Special rules for certain credits*—(i) *Renewable electricity production credit.* Any election under this paragraph (a) with respect to a section 45 credit—

(A) Applies separately with respect to each qualified facility;

(B) Must be made in the manner provided in paragraph (b) of this section for the taxable year in which such qualified facility is originally placed in service; and

(C) Applies to such taxable year and to any subsequent taxable year that is within the period described in section 45(a)(2)(A)(ii) with respect to such qualified facility.

(ii) *Credit for carbon oxide sequestration.* Except as provided in § 1.6417–3(c), which provides a special rule for electing taxpayers, any election under this paragraph (a) with respect to a section 45Q credit—

(A) Applies separately with respect to the carbon capture equipment originally placed in service by the applicable entity during a taxable year;

(B) Must be made in the manner provided in paragraph (b) of this section for the taxable year in which such qualified facility is originally placed in service; and

(C) Applies to such taxable year and to any subsequent taxable year that is within the period described in section 45Q(3)(A) or (4)(A) with respect to such equipment.

(iii) *Credit for production of clean hydrogen.* Except as provided in § 1.6417–3(b), which provides a special rule for electing taxpayers, any election under this paragraph (a) with respect to a section 45V credit—

(A) Applies separately with respect to each qualified clean hydrogen production facility;

(B) Must be made in the manner provided in paragraph (b) of this section for the taxable year in which such facility is placed in service (or within the 1-year period after August 16, 2022, for facilities placed in service before December 31, 2022); and

(C) Applies to such taxable year and all subsequent taxable years with respect to such facility.

(iv) *Clean electricity production credit.* Any elective payment election with respect to a section 45Y credit—

(A) Applies separately with respect to each qualified facility;

(B) Must be made in the manner provided in paragraph (b) of this section for the taxable year in which such facility is placed in service; and

(C) Applies to such taxable year and to any subsequent taxable year which is within the period described in section 45Y(b)(1)(B) with respect to such facility.

(v) A*dvanced manufacturing production credit.* Any elective payment election with respect to a section 45X credit applies separately with respect to each facility (whether the facility existed on or before, or after, December 31, 2022) at which a taxpayer produces, after December 31, 2022, eligible components (as defined in section 45X(c)(1)) during the taxable year.

(b) *Manner of making election*—(1) *In general*—(i) *Election is made on the annual tax return.* An elective payment election is made on the annual tax return, as defined in § 1.6417–1(b), in the manner prescribed by the IRS in guidance, along with any required completed source credit form(s) with respect to the applicable credit property, a completed Form 3800, *General Business Credit,* (or its successor), and any additional information, including supporting calculations, required in instructions.

(ii) *Election must be made on original return.* An election must be made on an original return (including any revisions on a superseding return) filed not later than the due date (including extensions of time) for the original return for the taxable year for which the applicable credit is determined. No elective payment election may be made or revised on an amended return or by filing an administrative adjustment request under section 6227 of the Code. There is no relief available under §§ 301.9100–1 through 301.9100–3 of this chapter for an elective payment election that is not timely filed.

(2) *Pre-filing registration required.* Pre-filing registration in accordance with § 1.6417–5 is a condition for making an elective payment election. An elective payment election will not be effective with respect to credits determined with respect to an applicable credit property unless the applicable entity or electing taxpayer received a valid registration number for the applicable credit property in accordance with § 1.6417–5(c) and provided the registration number for each applicable credit property on its Form 3800 (or its successor) attached to the tax return, in accordance with guidance.

(3) *Due date for making the election.* To be effective, an elective payment election must be made no later than:

(i) In the case of any taxpayer for which no Federal income tax return is required under sections 6011 or 6033(a) of the Code, the due date (including an extension of time) for the original return that would be due under section 6033(a) if such applicable entity were described in that section. Under section 6072(e), that date is the 15th day of the fifth month after the taxable year determined by section 441 of the Code. Subject to issuance of guidance that specifies the manner in which an entity for which no Federal income tax return is required under sections 6011 or 6033(a) of the Code could request an extension of time to file, an automatic paperless six-month extension from the original due date is deemed to be allowed.

(ii) In the case of any taxpayer that is not normally required to file an annual tax return with the IRS (such as taxpayers located in the U.S. territories), the due date (including extensions of time) that would apply if the taxpayer was located in the United States.

(iii) In any other case, the due date (including extensions of time) for the original return for the taxable year for which the election is made, but in no event earlier than February 13, 2023.

(4) *Election is not revocable*—(i) *In general.* Except as provided in subparagraphs (ii) and (iii) of this paragraph, any elective payment election, once made, is irrevocable and applies with respect to any applicable credit for the taxable year for which the election is made.

(ii) *Election lasts for a period of years for certain credits.* For elective payment elections with respect to section 45 credits described in § 1.6417–1(d)(2) or section 45Y credits described in § 1.6417–1(d)(8), the election applies to each taxable year in the 10-year period provided in section 45(a)(2)(A)(ii) or 45Y(b)(1)(B), respectively, beginning on the date the facility was originally placed in service. For elective payment elections with respect to section 45Q credits described in § 1.6417–1(d)(3), the election applies to each taxable year in the 12-year period provided in section 45Q(a)(3)(A) or (4)(A) beginning on the date the carbon capture equipment was originally placed in service. For elective payment elections with respect to section 45V credits described in § 1.6417–1(d)(5), the election applies to the taxable year in which the qualified clean hydrogen production facility was originally placed in service and all subsequent taxable years.

(iii) *Electing taxpayers.* For electing taxpayers who make an elective payment election, the election applies for one five-year period per applicable credit property, but such election may be revoked once per applicable credit property, as provided in § 1.6417–3.

(5) *Scope of election.* An elective payment election applies to the entire amount of applicable credit(s) determined with respect to each applicable credit property that was properly registered for the taxable year, resulting in an elective payment amount that is the entire amount of applicable credit(s) determined with respect to the applicable entity or electing taxpayer for a taxable year.

(c) *Determination of applicable credit*—(1) *In general.* In the case of any applicable entity making an elective payment election, any applicable credit is determined—

(i) Without regard to section 50(b)(3) and (4)(A)(i) of the Code, and

(ii) By treating any property with respect to which such credit is determined as used in a trade or business of the applicable entity.

(2) *Effect of trade or business rule.* The trade or business rule in paragraph (c)(1)(ii) of this section—

(i) Allows the applicable entity to treat an item of property as if it is of a character subject to an allowance of depreciation (such as under sections 30C and 45W); to produce items in the ordinary course of a trade or business of the taxpayer (such as in sections 45V and 45X); and to state that an item of property is one for which depreciation (or amortization in lieu of depreciation) is allowable (such as in sections 48, 48C, and 48E);

(ii) Allows the applicable entity to apply the capitalization and accelerated depreciation rules (such as sections 167, 168, 263, and 263A of the Code) that apply to determining the basis and the depreciation allowance for property used in a trade or business;

(iii) Makes applicable general credit limitations by those persons engaged in the conduct of a trade or business and to which such limitations apply, such as section 49 in the context of investment tax credits and section 469 for all applicable credits; and

(iv) Does not create any presumption that the trade or business is related (or unrelated) to a tax-exempt entity's exempt purpose.

(3) *Special rule for investment-related credit property acquired with income, including income from certain grants and forgivable loans, that is exempt from taxation.* For purposes of section 6417, income, including income from certain grants and forgivable loans, that is exempt from taxation under subtitle A and used to purchase, construct, reconstruct, erect, or otherwise acquire an applicable credit property described in sections 30C, 45W, 48, 48C, or 48E (investment-related credit property) are included in basis for purposes of computing the applicable credit amount determined with respect to the applicable credit property, regardless of whether basis is required to be reduced (in whole or in part) by such amounts under general tax principles. However, if an applicable entity receives a grant, forgivable loan, or other income exempt from taxation under subtitle A for the specific purpose of purchasing, constructing, reconstructing, erecting, or otherwise acquiring an investment-related credit property (Restricted Tax Exempt Amount), and the Restricted Tax Exempt Amount plus the applicable credit otherwise determined with respect to that investment-related credit property exceeds the cost of the investment-related credit property, then the amount of the applicable credit is reduced so that the total amount of applicable credit plus the amount of any Restricted Tax Exempt Amount equals the cost of investment-related credit property.

(4) *Credits must be determined with respect to the applicable entity or electing taxpayer.* Any credits for which an elective payment election is made must have been determined with respect to the applicable entity or electing taxpayer. An applicable credit is determined with respect to an applicable entity or electing taxpayer in cases where the applicable entity or electing taxpayer owns the underlying eligible credit property or, if ownership is not required, otherwise conducts the activities giving rise to the underlying eligible credit. Thus, no election may be made under this section for any credits purchased pursuant to section 6418, transferred pursuant to section 45Q(f)(3), acquired by a lessee from a lessor by means of an election to pass through the credit to a lessee under former section 48(d) (pursuant to section 50(d)(5)), owned by a third party, or otherwise not determined with respect to the applicable entity or electing taxpayer.

(5) *Examples.* The following examples illustrate the rules of this paragraph (c).

(i) *Example 1.* School district A receives a tax exempt grant in the amount of $400,000 from the Environmental Protection Agency to purchase electric school bus B. A purchases B for $400,000. A's basis in B is $400,000. B qualifies for the maximum section 45W credit, $40,000. However, because the amount of the restricted tax exempt grant plus the amount of the section 45W credit exceeds the cost of B, A's section 45W credit is reduced by the amount necessary so that the total amount of the section 45W credit plus the restricted tax exempt amount equals the cost of B. A's section 45W credit is therefore reduced by $40,000 to zero.

(ii) *Example 2.* Assume the same facts as in paragraph (c)(5)(i) of this section (Example 1), except that the grant is in the amount of $300,000. A purchases B using the grant and $100,000 of A's unrestricted funds. A's basis in B is $400,000 and A's section 45W credit is $40,000. Since the amount of the restricted tax exempt grant plus the amount of the section 45W credit ($340,000) is less than the cost of B, A's 45W credit under section 6417(b)(6) is not reduced.

(iii) *Example 3.* Public charity B receives a $60,000 grant from a private foundation to build energy property, P, a qualified investment credit property that costs $80,000. B uses $20,000 of its own funds plus the $60,000 grant to build P. B's basis in P is $80,000. Based upon acquisition cost, B can earn a section 48 investment credit (with bonus credit amounts) of $40,000 (50% of basis). However, because the amount of the restricted tax exempt grant ($60,000) plus the section 48 credit ($40,000) exceeds P's cost by $20,000, B's section 48 applicable credit is reduced by $20,000 so that the total amount of the section 48 investment credit plus the restricted tax exempt grant equals the cost of P.

(iv) *Example 4.* Taxpayer Q is engaged in the business of capturing carbon oxide. Q properly elects to be treated as an applicable entity with respect to the section 45Q credit determined with respect to single process trains A, B, and C for 2024. In the same year, Q also purchases section 45Q credits under section 6418 from an unrelated taxpayer and has section 45Q credits transferred to itself pursuant to section 45Q(f)(3). Q can make an elective payment election only with respect to section 45Q applicable credits determined with respect to A, B, and C. Q cannot make an elective payment election with respect to any credits transferred to Q pursuant to sections 6418 and 45Q(f)(3).

(d) *Timing of payment.* Except as provided in § 1.6417–4(d) (relating to payments to partnerships and S corporations), the elective payment amount will be treated as made—

(1) In the case of any taxpayer for which no return is required under sections 6011 or 6033(a), on the later of—

(i) The date that a return would be due under section 6033(a) (determined without regard to extensions) if the taxpayer were described in that section, or

(ii) The date on which such taxpayer submits a claim for credit or refund in accordance with paragraph (b) of this section.

(2) In any other case, on the later of—

(i) The due date (determined without regard to extensions) of the return for the taxable year, or

(ii) The date on which such return is filed.

(e) *Denial of double benefit*—(1) *In general.* Under section 6417(e), in the case of an applicable entity or electing taxpayer making an elective payment election with respect to an applicable credit, such credit is reduced to zero and is, for any other purposes of the Code, deemed to have been allowed as a credit to such entity or taxpayer for such taxable year. Paragraphs (e)(2) and (e)(3) of this section explain the application of the section 6417(e) denial of double benefit rule to an applicable entity or electing taxpayer (other than a partnership or S corporation). The application of section 6417(e) for an electing taxpayer that is a partnership or S corporation is provided in § 1.6417–4(c)(1)(ii).

(2) *Application of the Denial of Double Benefit Rule.* An applicable entity or electing taxpayer (other than an electing taxpayer that is a partnership or S corporation) making an elective payment election applies section 6417(e) by taking the following steps:

(i) Compute the amount of the Federal income tax liability (if any) for the taxable year, without regard to the GBC, that is payable on the due date of the return (without regard to extensions), and the amount of the Federal income tax liability that may be offset by GBCs pursuant to the limitation based on amount of tax under section 38.

(ii) Compute the allowed amount of GBC carryforwards carried to the taxable year plus the amount of current year GBCs (including current applicable credits) allowed for the taxable year under section 38 (including, for clarity purposes, the ordering rules in section 38(d)). Because the election is made on an original return for the taxable year for which the applicable credit is determined, any business credit carrybacks are not considered when determining the elective payment amount for the taxable year.

(iii) Apply the GBCs allowed for the taxable year as computed under paragraph (e)(2)(ii) of this section, including those attributable to applicable credits as GBCs, against the tax liability computed in paragraph (e)(2)(i) of this section.

(iv) Identify the amount of any excess or unused current year GBC, as defined under section 39, attributable to current year applicable credit(s) for which the applicable entity is making an elective payment election. Treat the amount of such unused applicable credits as a payment against the tax imposed by subtitle A for the taxable year with respect to which such credits are determined (rather than having them available for carryback or carryover) (net elective payment amount).

(v) Reduce the applicable credits for which an elective payment election is made by the amount (if any) allowed as a GBC under section 38 for the taxable year, as provided in paragraph (e)(2)(iii) of this section, and by the net elective payment amount (if any) that is treated as a payment against tax, as provided in paragraph (e)(2)(iv) of this section, which results in the applicable credits being reduced to zero.

(3) *Use of applicable credit for other purposes.* The full amount of the applicable credits for which an elective payment election is made is deemed to have been allowed for all other purposes of the Code, including, but not limited to, the basis reduction and recapture rules imposed by section 50 and calculation of any underpayment of estimated tax under sections 6654 and 6655 of the Code.

(4) *Examples.* The following examples illustrate the rules of this paragraph (e).

(i) *Example 1.* U is a tax-exempt university described in section 501(c)(3) whose fiscal year runs from July 1 to June 30. U places in service P, energy property eligible for a section 48 credit, in June 2024. P is an asset used in connection with its unrelated business. U completes the pre-filing registration in accordance with § 1.6417–5 as an applicable entity that has placed P into service and intends to make an elective payment election with respect to section 48 credits determined with respect to P. U timely files its 2024 Form 990–T on November 15, 2024. On its return, U properly determines that it has $500,000 of Unrelated Business Income Tax (UBIT) under section 512. On its Form 3800 attached to its return, U calculates its limitation of GBC under section 38(c) (simplified) is $375,000 (paragraph (e)(2)(i) of this section). U attaches Form 3468 to claim a section 48 credit of $100,000 with respect to P (its GBC for the taxable year) (paragraph (e)(2)(ii) of this section). Under paragraph (e)(2)(iii) of this section, the section 48 credit reduces U's UBIT liability to $400,000. U pays its $400,000 tax liability on November 15, 2024. Because there is no unused current year applicable credit, paragraph (e)(2)(iv) of this section does not apply. Under paragraph (e)(2)(v) of this section, the $100,000 of section 48 credit is reduced by the $100,000 of applicable credits claimed as GBCs for the taxable year, which results in the applicable credits being reduced to zero. However, the $100,000 of current year section 48 credit is deemed to have been allowed to U for 2024 for all other purposes of the Code (paragraph (e)(3) of this section).

(ii) *Example 2.* Assume the same facts as in paragraph (e)(4)(i) of this section (*Example 1),* except that U has $80,000 of Unrelated Business Income Tax (UBIT) under section 512, and calculates its limitation of GBC under section 38(c) (simplified) is $60,000 (paragraph (e)(2)(i) of this section). U uses $60,000 of its $100,000 of section

48 credit against its tax liability (paragraph (e)(2)(iii) of this section). U's net elective payment amount is $40,000 (paragraph (e)(2)(iv) of this section). U reduces its applicable credit by the $60,000 claimed against tax in paragraph (e)(2)(iii) of this section and by the $40,000 net elective payment amount determined in paragraph (e)(2)(iv) of this section, resulting in the applicable credit being reduced to zero (paragraph (e)(2)(v) of this section). When the IRS processes U's 2024 Form 990–T, the net elective payment amount results in a $40,000 refund to U. However, for other purposes of the Code, the $100,000 section 48 credit is deemed to have been allowed to U for 2024 (paragraph (e)(3) of this section).

(iii) *Example 3.* V is a city located in the United States that never has Federal income tax liability, so paragraph (e)(2)(i) of this section does not apply. V timely completes pre-filing registration in accordance with § 1.6417–5 as an applicable entity that will be eligible to make an elective payment election, with regard to its annual accounting period ending in 2024, for the credit determined under section 30C(a) from properties A, B, and C; the credit determined under section 45(a) for facility D; the credit determined under section 45U(a) for facility E; the credit determined under section 45W(a) with respect to vehicles F, G, and H; and the credit determined under section 48(a) with respect to property I and J. V timely files its 2024 Form 990–T. V properly completes and attaches the relevant source credit forms and Form 3800 with registration numbers and all required information in the instructions, properly making the elective payment election for all of the credits, and properly determining that the amount of applicable credits determined with respect to A, B, C, D, E, F, G, H, I, and J is $500,000 (its GBC for the taxable year) (paragraph (e)(2)(ii) of this section). Paragraph (e)(2)(iii) of this section does not apply. Under paragraph (e)(2)(iv) of this section, the entire $500,000 is a net elective payment amount. When the IRS processes V's 2024 Form 990–T, the net elective payment amount results in a $500,000 refund to V. V's elective payment amount is reduced by the net elective payment amount, so all applicable credits for 2024 are reduced to zero. However, for other purposes of the Code, the $500,000 of applicable credits are deemed to have been allowed to V for its annual accounting period ending in 2024 (paragraph (e)(3) of this section).

(iv) *Example 4.* W is a business taxpayer engaged in the manufacturing of components, including eligible components as defined in section 45X(c)(1) at facility F. W completes pre-filing registration in accordance with § 1.6417–5 stating that it intends to elect to be treated as an applicable entity with respect to eligible components produced at F in 2024. In 2024, W timely files its 2024 return electing to be treated as an applicable entity, calculating its federal income tax before GBCs of $125,000 and that its limitation of GBC under section 38(c) (simplified) is $100,000 (paragraph (e)(2)(i) of this section). W attaches Form 7207 to claim a current section 45X credit of $50,000 with respect to eligible components produced at F (its applicable credits). W also attaches Form 5884 to claim a current work opportunity tax credit (WOTC) of $50,000 (WOTC is not an applicable credit). W also completes and attaches Form 3800 which shows the amount of each current credit, including current section 45X credit with registration number, and business credit carryforwards of $25,000 (its GBC for the taxable year) (paragraph (e)(2)(ii) of this section). Using the ordering rules in sections 38(d), W is allowed $25,000 of the carryforwards, $50,000 of WOTC plus only $25,000 of section 45X credit against net income tax, as defined under section 38(c)(1)(B), leaving $25,000 of tax liability (paragraph (e)(2)(iii) of this section). The $25,000 of unused section 45X credit is the net elective payment amount that results in a $25,000 payment against tax by W (paragraph (e)(2)(iv) of this section). On its return, W shows net tax liability of $25,000 ($125,000 − $100,000 allowed GBC) and the net elective payment of $25,000 which W applied to net tax liability, resulting in zero tax owed on the return. Under paragraph (e)(2)(v) of this section, W's applicable credit is reduced by the $25,000 of section 45X credit claimed as a GBC for the taxable year, as provided in paragraph (e)(2)(iii) of this section, as well as by the $25,000 net elective payment amount determined in paragraph (e)(2)(iv) of this section, resulting in the $50,000 of applicable credit being reduced to zero. However, for all other purposes of the Code, the $50,000 of 45X applicable credits are deemed to have been allowed to W for 2024 (paragraph (e)(3) of this section).

(v) *Example 5.* Assume the same facts as in paragraph (e)(4)(iv) of this section (*Example 4),* except W filed the return on a timely filed extension after the due date of the return (without extensions). Even though W did not owe tax after applying the net elective payment amount against its net tax liability, W may be subject to the section 6655 penalty for failure to pay estimated income tax. The net elective payment is not an estimated tax installment, rather, it is treated as a payment made at the filing of the return.

(f) *Applicability date.* This section applies to taxable years ending on or after date of publication of final rule.

§ 1.6417–3 Special rules for electing taxpayers.

(a) *In general.* This section relates to the election available to electing taxpayers. An electing taxpayer that makes an elective payment election in accordance with this section is treated as an applicable entity for the duration of the election period, but only with respect to the applicable credit property described in proposed § 1.6417–1(e)(3), (5), or (7), respectively, that is the subject of the election. See paragraphs (b), (c), and (d) of this section for the specific rules regarding taxpayers making an election under section 6417(d)(1)(B), (C), or (D), respectively. See paragraph (e) for rules relating to the making the election. See § 1.6417–4 for special rules related to electing taxpayers that are partnerships or S corporations.

(b) *Elections with respect to the credit for production of clean hydrogen.* An electing taxpayer that has placed in service applicable credit property described in § 1.6417–1(e)(5) (in other words, a qualified clean hydrogen production facility as defined in section 45V(c)(3)) during the taxable year may make an elective payment election for such taxable year (or by August 16, 2023, in the case of facilities placed in service before December 31, 2022), but only with respect to the qualified clean hydrogen production facility, only with respect to the applicable credit described in § 1.6417–1(d)(5) (in other words, the section 45V credit), and only if the pre-filing registration required by § 1.6417–5 was properly completed. An electing taxpayer that elects to treat qualified property that is part of a specified clean hydrogen production facility as energy property under section 48(a)(15) may not make an elective payment election with respect to such facility.

(c) *Election with respect to the credit for carbon oxide sequestration.* An electing taxpayer that has, after December 31, 2022, placed in service applicable credit property described in § 1.6417–1(e)(3) (in other words, a single process train described in § 1.45Q–2(c)(3) at a qualified facility (as defined in section 45Q(d)) during the taxable year may make an elective payment election for such taxable year, but only with respect to the single process train,

only with respect to the applicable credit described in § 1.6417–1(d)(3) (in other words, the section 45Q credit), and only if the pre-filing registration required by § 1.6417–5 was properly completed.

(d) *Election with respect to the advanced manufacturing production credit.* An electing taxpayer that produces, after December 31, 2022, eligible components (as defined in section 45X(c)(1)) at an applicable credit property described in § 1.6417–1(e)(7) during the taxable year (whether the facility existed on or before, or after, December 31, 2022) may make an elective payment election for such taxable year, but only with respect to the facility at which the eligible components are produced by the electing taxpayer in that year, only with respect to the applicable credit described in § 1.6417–1(d)(7) (in other words, the section 45X credit), and only if the pre-filing registration required by § 1.6417–5 was properly completed.

(e) *Election for electing taxpayers*—(1) *In general.* If an electing taxpayer makes an elective payment election under 1.6417–2(b) with respect to any taxable year in which the electing taxpayer places in service a qualified clean hydrogen production facility for which a section 45V credit is determined, places in service a single process train at a qualified facility for which a section 45Q credit is determined, or produces, after December 31, 2022, eligible components (as defined in section 45X(c)(1)) at a facility, respectively, the electing taxpayer will be treated as an applicable entity for purposes of making an elective payment election for such taxable year and during the election period described in paragraph (e)(3) of this section, but only with respect to the applicable credit property described in § 1.6417–1(e)(3), (5), or (7), as applicable, that is the subject of the election. The taxpayer must otherwise meet all requirements to earn the credit in the electing year and in each succeeding year during the election period described in paragraph (e)(3) of this section.

(2) *Election is per applicable credit property.* An elective payment election under § 1.6417–2(b) is made separately for each applicable credit property, which is, respectively, a qualified clean hydrogen production facility placed in service for which a section 45V credit is determined, a single process train placed in service at a qualified facility for which a section 45Q credit is determined, or a facility at which eligible components are produced for which a section 45X credit is determined. Only one election may be made with respect to any specific applicable credit property.

(3) *Election period*—(i) *In general.* Except as provided in paragraph (e)(3)(ii) of this section, if an electing taxpayer makes an elective payment election under § 1.6417–2(b) with respect to applicable credit property described in § 1.6417–1(e)(3), (5), or (7) for which an applicable credit is determined under § 1.6417–1(d)(3), (5), or (7), the election period during which such election applies includes the taxable year in which the election is made and each of the four subsequent taxable years that end before January 1, 2033. The election period cannot be less than a taxable year but may be made for a taxable period of less than 12 months within the meaning of section 443 of the Code.

(ii) *Revocation of election.* An electing taxpayer may, during a subsequent year of the election period described in paragraph (e)(3)(i) of this section, revoke the elective payment election with respect to an applicable credit property described in § 1.6417–1(e)(3), (5), or (7), in accordance with forms and instructions. See § 601.602 of this chapter. Any such revocation, if made, applies to the taxable year in which the revocation is made (which cannot be less than a taxable year but may be made for a taxable period of less than 12 months as described in section 443 of the Code) and each subsequent taxable year within the election period. Any such revocation may not be subsequently revoked.

(4) *No transfer election under section 6418(a) permitted while an elective payment election is in effect.* No transfer election under section 6418(a) may be made by an electing taxpayer with respect to any applicable credit under § 1.6417–1(d)(3), (5), or (7) determined with respect to applicable credit property described in § 1.6417–1(e)(3), (5), or (7) during the election period for that applicable credit property. However, if the election period is no longer in effect with respect to an applicable credit property, any credit determined with respect to such applicable credit property can be transferred pursuant to a transfer election under section 6418(a), as long as the taxpayer meets the requirements of section 6418 and the 6418 regulations.

(f) *Applicability date.* This section applies to taxable years ending on or after date of publication of final rule.

§ 1.6417–4 Elective payment election for electing taxpayers that are partnerships or S corporations.

(a) *In general.* In the case of any applicable credit determined with respect to any applicable credit property described in § 1.6417–1(e)(3), (5), or (7) that is held directly (or treated as held directly because it is held by a disregarded entity) by an electing taxpayer that is a partnership or S corporation, any elective payment election under § 1.6417–2(b) must be made by the partnership or S corporation.

(b) *Elections.* If an electing taxpayer that is a partnership or S corporation makes an elective payment election under § 1.6417–2(b) with respect to any taxable year in which the electing taxpayer places in service applicable credit property described in § 1.6417–1(e)(3) or (5), or produces, after December 31, 2022, eligible components (as defined in section 45X(c)(1)) at an applicable credit property described in § 1.6417–1(e)(7), the electing taxpayer will be treated as an applicable entity for purposes of making an elective payment election for such taxable year and during the election period described in § 1.6417–3(e)(3), but only with respect to the applicable credit property described in § 1.6417–1(e)(3), (5), or (7), respectively, that is the subject of the election. In addition, the taxpayer must otherwise meet all requirements to earn the credit in the electing year and in each succeeding year during the election period described in § 1.6417–3(e)(3).

(c) *Effect of election*—(1) *In general.* If a partnership or S corporation electing taxpayer makes an elective payment election, with respect to the section 45V, 45Q, or 45X credit—

(i) The Internal Revenue Service will make a payment to such partnership or S corporation equal to the amount of such credit, determined in accordance with paragraph (d) of this section (unless the partnership or S corporation owes a Federal tax liability, in which case the payment may be reduced by such tax liability);

(ii) Before determining any partner's distributive share, or S corporation shareholder's pro rata share, of such credit, such credit is reduced to zero and is, for any other purposes under the Code, deemed to have been allowed solely to such entity (and not allocated or otherwise allowed to its partners or shareholders) for such taxable year;

(iii) Any amount with respect to which such election is made is treated as tax exempt income for purposes of sections 705 and 1366 of the Code;

(iv) A partner's distributive share of such tax exempt income is equal to such partner's distributive share of the otherwise applicable credit for each taxable year, as determined under § 1.704–1(b)(4)(ii);

(v) An S corporation shareholder's pro rata share (as determined under section 1377(a) of the Code) of such tax exempt income for each taxable year (as determined under sections 444 and 1378(b) of the Code) is equal to the S corporation shareholder's pro rata share (as determined under section 1377(a)) of the otherwise applicable credit for each taxable year; and

(vi) Such tax exempt income resulting from such election is treated as received or accrued, including for purposes of sections 705 and 1366 of the Code, as of the date the applicable credit is determined with respect to the partnership or S corporation. (such as, for investment credit property, the date the property is placed in service).

(2) *Electing partnerships in tiered structures.* If a partnership (upper-tier partnership) is a direct or indirect partner of a partnership that makes an elective payment election (electing partnership) and directly or indirectly receives an allocation of tax exempt income resulting from the elective payment election made by the electing partnership, the upper-tier partnership must determine its partners' distributive shares of such tax exempt income in proportion to the partners' distributive shares of the otherwise applicable credit as provided in paragraph (c)(1)(iv) of this section.

(3) *Character of tax exempt income.* Tax exempt income resulting from an elective payment election by an S corporation or a partnership is treated as arising from an investment activity and not from the conduct of a trade or business within the meaning of section 469(c)(1)(A). As such, the tax exempt income is not treated as passive income to any partners or shareholders who do not materially participate within the meaning of section 469(c)(1)(B).

(d) *Determination of amount of the credit*—(1) *In general.* In determining the amount of an applicable credit that will result in a payment under paragraph (c)(1)(i) of this section, the partnership or S corporation must compute the amount of the applicable credit allowable as if an elective payment election were not made. Because a partnership or S corporation is not subject to sections 38(b) and (c) and 469 (that is, those sections apply at the partner or S corporation shareholder level), the amount of applicable credit determined by a partnership or S corporation is not subject to limitation by those sections. In addition, because the only applicable credits with respect to which a partnership or S corporation may make an elective payment election are not investment credits under section 46, sections 49 and 50 do not apply to limit the amount of the applicable credits.

(2) *Example.* The rules of this paragraph (d) are illustrated in the following example. A and B each contributed cash to P, a calendar-year partnership, for the purpose of manufacturing clean hydrogen at V, a qualified clean hydrogen facility that meets the definition of section 45V(c)(3). The partnership agreement provides that A and B share equally in all items of income, gain, loss, deduction and credit of P. P completes the pre-filing registration process with respect to the section 45V credit at V for 2023 in accordance § 1.6417–5. P places V in service in 2023. P timely files its 2023 Form 1065 and properly makes the elective payment election in accordance with §§ 1.6417–2(b),1.6417–3, and 1.6417–4. On its Form 1065, P properly determined that the amount of the section 45V credit with respect to the clean hydrogen produced at V for 2023 is $100,000. The IRS processes P's return and makes a $100,000 payment to P. Before determining A's and B's distributive shares, P reduces the credit to zero. While the $100,000 section 45V credit is deemed to have been allowed to P for 2023 for any other purpose under this title, the credit is not allocated or otherwise allowed to its partners. The $100,000 is treated as tax exempt income for purposes of section 705, and is treated as arising from an investment activity and not from the conduct of a trade or business within the meaning of section 469(c)(1)(A). P allocates the tax exempt income from the elective payment election proportionately among the partners based on each partner's distributive share of the otherwise eligible section 45V credit as determined under § 1.704–1(b)(4)(ii). Under that section, if partnership receipts or expenditures give rise to a credit, the partner's interest in the partnership with respect to such credit is in the same proportion as such partners' distributive shares of such receipt, loss, or deduction. Section 45V credits arise based on the amount of clean hydrogen produced at a facility. Under the partnership agreement, A and B share all items equally. Thus, A and B will each be allocated $50,000 of tax exempt income for 2023. P will continue to be treated as an applicable entity with respect to V for taxable years 2024–2027 unless P revokes its election in accordance with § 1.6417–3(e)(3)(ii). At the end of 2023, A and B increase their respective tax bases in their partnership interest and capital accounts by $50,000 each (that is, their share of the $100,000 of tax exempt income).

(e) *Partnerships subject to subchapter C of chapter 63.* For the application of subchapter C of chapter 63 of the Code to section 6417, see § 301.6241–7 of this chapter.

(f) *Applicability date.* This section applies to taxable years ending on or after date of publication of final rule.

§ 1.6417–5 Additional information and registration.

(a) *Pre-filing registration and election.* An applicable entity or electing taxpayer is required to satisfy the pre-filing registration requirements in paragraph (b) of this section as a condition of, and prior to, making an elective payment election. An applicable entity or electing taxpayer must use the pre-filing registration process to register itself as intending to make the elective payment election, to list all applicable credits it intends to claim, and to list each applicable credit property that contributed to the determination of such credits as part of the pre-filing submission (or amended submission). An applicable entity or electing taxpayer that does not obtain a registration number under paragraph (c)(1) of this section or report the registration number on its annual tax return, as defined in § 1.6417–1(b), pursuant to paragraph (c)(5) of this section with respect to an otherwise applicable credit property, is ineligible to receive any elective payment amount with respect to the amount of any credit determined with respect to that applicable credit property. However, completion of the pre-filing registration requirements and receipt of a registration number does not, by itself, mean the applicable entity or electing taxpayer is eligible to receive a payment with respect to the applicable credits determined with respect to the applicable credit property.

(b) *Pre-filing registration requirements*—(1) *Manner of pre-filing registration.* Unless otherwise provided in guidance, an applicable entity or electing taxpayer must complete the pre-filing registration process electronically through the IRS electronic portal and in accordance with the instructions provided therein.

(2) *Pre-filing registration and election for members of a consolidated group.* A member of a consolidated group is required to complete pre-filing registration as a condition of, and prior

to, making an elective payment election. See § 1.1502–77 (providing rules regarding the status of the common parent as agent for its members).

(3) *Timing of pre-filing registration.* An applicable entity or electing taxpayer must satisfy the pre-filing registration requirements of this paragraph (b) and receive a registration number under paragraph (c) of this section prior to making an elective payment election under § 1.6417–2(b) on the applicable entity's or electing taxpayer's annual tax return for the taxable year at issue.

(4) *Each applicable credit property must have its own registration number.* An applicable entity or electing taxpayer must obtain a registration number for each applicable credit property with respect to which it intends to make an elective payment election.

(5) *Information required to complete the pre-filing registration process.* Unless modified in future guidance, an applicable entity or electing taxpayer must provide the following information to the IRS to complete the pre-filing registration process:

(i) The applicable entity's or electing taxpayer's general information, including its name, address, taxpayer identification number, and type of legal entity.

(ii) Any additional information required by the IRS electronic portal, such as information regarding the taxpayer's exempt status under section 501(a) of the Code; that the applicable entity is a political subdivision of a State, the District of Columbia, an Indian Tribal government, or a U.S. territory; or that the applicable entity is an agency or instrumentality of a State, the District of Columbia, an Indian Tribal government, or a U.S. territory.

(iii) The taxpayer's taxable year, as determined under section 441 of the Code.

(iv) The type of annual tax return(s) normally filed by the applicable entity or electing taxpayer, or that the applicable entity or electing taxpayer does not normally file an annual tax return with the IRS.

(v) The type of applicable credit(s) for which the applicable entity or electing taxpayer intends to make an elective payment election.

(vi) For each applicable credit, each applicable credit property that the applicable entity or electing taxpayer intends to use to determine the credit for which the applicable entity or electing taxpayer intends to make an elective payment election.

(vii) For each applicable credit property listed in paragraph (b)(4)(vi) of this section, any further information required by the IRS electronic portal, such as—

(A) The type of applicable credit property;

(B) Physical location (that is, address and coordinates (longitude and latitude) of the applicable credit property);

(C) Any supporting documentation relating to the construction or acquisition of the applicable credit property (such as State, District of Columbia, Indian Tribal, U.S. territorial, or local government permits to operate the applicable credit property; certifications; evidence of ownership that ties to a land deed, lease, or other documented right to use and access any land or facility upon which the applicable credit property is constructed or housed; U.S. Coast Guard registration numbers for offshore wind vessels; and the vehicle identification number of an eligible clean vehicle with respect to which a section 45W credit is determined);

(D) The beginning of construction date and the placed in service date of the applicable credit property.

(E) If an investment-related credit property (as defined § 1.6417–2(c)(3)), the source of funds the taxpayer used to acquire the property; and

(F) Any other information that the applicable entity or electing taxpayer believes will help the IRS evaluate the registration request.

(viii) The name of a contact person for the applicable entity or electing taxpayer. The contact person is the person whom the IRS may contact if there is an issue with the registration. The contact person must either (1) possess legal authority to bind the applicable entity or electing taxpayer or (2) must provide a properly executed power of attorney on Form 2848, *Power of Attorney and Declaration of Representative.*

(ix) A penalties of perjury statement, effective for all information submitted as a complete application, and signed by a person with personal knowledge of the relevant facts that is authorized to bind the registrant.

(x) Any other information the IRS deems necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under this section that is provided in guidance.

(c) *Registration number*—(1) *In general.* The IRS will review the information provided and will issue a separate registration number for each applicable credit property for which the applicable entity or electing taxpayer provided sufficient verifiable information.

(2) *Registration number is only valid for one taxable year.* A registration number is valid only with respect to the applicable entity or electing taxpayer that obtained the registration number under this section and only for the taxable year for which it is obtained.

(3) *Renewing registration numbers.* If an elective payment election will be made with respect to an applicable credit property for a taxable year after a registration number under this section has been obtained, the applicable entity or electing taxpayer must renew the registration for that subsequent taxable year in accordance with applicable guidance, including attesting that all the facts previously provided are still correct or updating any facts.

(4) *Amendment of previously submitted registration information if a change occurs before the registration number is used.* As provided in instructions to the pre-filing registration portal, if specified changes occur with respect to one or more applicable credit properties for which a registration number has been previously obtained but not yet used, an applicable entity or electing taxpayer must amend the registration (or may need to submit a new registration) to reflect these new facts. For example, if the owner of a facility previously registered for an elective payment election for applicable credits determined with respect to that facility and the facility undergoes a change of ownership (incident to a corporate reorganization or an asset sale) such that the new owner has a different employer identification number (EIN) than the owner who obtained the original registration, the original owner of the facility must amend the original registration to disassociate its EIN from the applicable credit property and the new owner must submit separately an original registration (or if the new owner previously registered other credit properties, must amend its original registration) to associate the new owner's EIN with the previously registered applicable credit property.

(5) *Registration number is required to be reported on the return for the taxable year of the elective payment election.* The applicable entity or electing taxpayer must include the registration number of the applicable credit property on its annual tax return as provided in § 1.6417–2(b) for the taxable year. The IRS will treat an elective payment election as ineffective with respect to an applicable credit determined with respect to an applicable credit property for which the applicable entity or electing taxpayer does not include a

valid registration number on the annual tax return.

(d) *Applicability date.* This section applies to taxable years ending on or after date of publication of final rule.

§ 1.6417–6 Special rules.

(a) *Excessive payment*—(1) *In general.* In the case of any elective payment amount which the IRS determines constitutes an excessive payment, the tax imposed on such entity by chapter 1, regardless of whether such entity or taxpayer would otherwise be subject to chapter 1 tax, for the taxable year in which such determination is made will be increased by an amount equal to the sum of—

(i) The amount of such excessive payment, plus

(ii) An amount equal to 20 percent of such excessive payment.

(2) *Reasonable cause.* The amount described in paragraph (a)(1)(ii) of this section will not apply to an applicable entity or electing taxpayer if the applicable entity or electing taxpayer demonstrates to the satisfaction of the IRS that the excessive payment resulted from reasonable cause.

(3) *Excessive payment defined.* For purposes of this section, the term *excessive payment* means, with respect to an applicable credit property for which an elective payment election is made under § 1.6417–2(b) for any taxable year, an amount equal to the excess of—

(i) The amount treated as a payment under § 1.6417–2(a)(1)(i) or (a)(2)(i), or the amount of the payment made pursuant to § 1.6417–2(a)(2)(ii), with respect to such applicable credit property for such taxable year, over

(ii) The amount of the credit which, without application of this section, would be otherwise allowable under the Code (as determined pursuant to § 1.6417–2(c) and (e) or § 1.6417–4(d)(1) and (3), and without regard to the limitation based on tax in section 38(c)) with respect to such applicable credit property for such taxable year.

(4) *Example.* This example illustrates the principles of this paragraph (a). B, an instrumentality of state M, places in service in 2023 facility F, which is eligible for the energy credit determined under section 48. B properly completes the pre-filing registration as an applicable entity that will earn the energy credit from F in accordance with § 1.6417–5, and receives a registration number for F. B timely files its 2023 Form 990–T, properly providing the registration number for F and otherwise complying with § 1.6417–2(b). On its Form 990–T, B calculates that the amount of energy credit determined with respect to F is $100,000 and that the net elective payment amount is $100,000. B receives a refund in the amount of $100,000. In 2025, the IRS determines that the amount of energy credit properly allowable to B in 2023 with respect to F (as determined pursuant to § 1.6417–2(c) and (e) and without regard to the limitation based on tax in section 38(c)) was $60,000. B is unable to show reasonable cause for the difference. The excessive payment amount is $40,000 ($100,000 treated as a payment—$60,000 allowable amount). In 2025, the tax imposed under chapter 1 on B is increased in the amount of $48,000 ($40,000 + (20% * $40,000).)

(b) *Basis reduction and recapture*—(1) *In general.* Rules similar to the rules of section 50 (without regard to section 50(b)(3) and (4)(A)(i)) apply for purposes of this section.

(2) *Reporting recapture.* Any reporting of recapture is made on the annual tax return of the applicable entity or electing taxpayer in the manner prescribed by the IRS in any guidance, along with supplemental forms such as Form 4255, *Recapture of Investment Credit.*

(3) *Example.* This example illustrates the principles of this paragraph (b). In December 2023, G, a government entity, places in service P, which is energy property eligible for the energy credit determined under section 48 (section 48 credit). G properly completes the pre-filing registration in accordance with § 1.6417–5 as an applicable entity to make an election under section 6417 for 2023. G timely files its 2023 Form 990–T in 2024, properly making the elective payment election in accordance with § 1.6417–2 for a section 48 energy credit determined with respect to P. On its Form 990–T, G properly determines that the amount of section 48 credit determined with respect P is $100,000 and that its net elective payment amount is $100,000. The IRS sends G a $100,000 refund. Pursuant to section 50(c), G reduces its basis in P by $50,000. In July 2025, P ceases to be investment credit property with respect to G. Because this occurs before the close of the recapture period set forth in section 50, section 50(a)(1)(A) provides that the tax under chapter 1 for 2025 is increased by the recapture percentage of the aggregate decrease in the credits allowed under section 38 for all prior taxable years which would have resulted solely from reducing to zero any credit determined under subpart E of part IV of subchapter A of chapter 1 with respect to such property. Because P ceased to be investment credit property within 2 full years after P was placed in service, section 50(a)(1)(B) provides that the recapture percentage is 80%. G must properly report the recapture event in 2025, paying an $80,000 tax. Because G is a government entity, G reports the recapture event on a Form 990–T or any Form provided in further guidance, along with supplemental forms such as Form 4255, *Recapture of Investment Credit.* G's basis in P is increased by $40,000.

(c) *Mirror code territories.* Pursuant to section 6417(f) of the Code, section 6417 and the section 6417 regulations are not treated as part of the income tax laws of the United States for purposes of determining the income tax law of any U.S. territory with a mirror code tax system (as defined in section 24(k) of the Code), unless such U.S. territory elects to have section 6417 and the section 6417 regulations be so treated. The applicable territory tax authority for a U.S. territory determines whether such an election has been made.

(d) *Partnerships subject to subchapter C of chapter 63 of the Code.* See § 301.6241–7(j) of this chapter for rules applicable to payments made to partnerships subject to subchapter C of chapter 63 of the Code for a partnership taxable year.

(e) *Applicability date.* This section applies to taxable years ending on or after date of publication of final rule.

PART 301—PROCEDURE AND ADMINISTRATION

■ **Par. 3.** The authority citation for part 301 is amended by adding entries in numerical order for §§ 301.6241–1 and 301.6241–7 to read in part as follows:

Authority: 26 U.S.C. 7805.

* * * * *

Section 301.6241–1 also issued under sections 48D(d), 6241, and 6417.

* * * * *

Section 301.6241–7 also issued under sections 48D(d), 6241, and 6417.

* * * * *

■ **Par. 4.** Section 301.6241–1 is amended by:

■ 1. Adding a sentence after the second sentence of paragraph (a)(6)(iii); and

■ 2. Adding a sentence to the end to the end of paragraph (b)(1).

The additions and revisions read as follows:

§ 301.6241–1 Definitions

(a) * * *

(6) * * *

(iii) * * * Notwithstanding the previous two sentences, any tax, penalty, addition to tax, or additional amount imposed on the partnership under chapter 1 is an item or amount with respect to the partnership. * * *

(b) * * *

(1) * * * The third sentence of paragraph (a)(6)(iii) applies to partnership taxable years ending on or after June 21, 2023. * * *

* * * * *

■ **Par. 5.** Section 6241–7 is amended by:
■ 1. Redesignating paragraph (j) as paragraph (k);
■ 2. Adding new paragraph (j);
■ 3. Revising the first sentence of newly redesignated paragraph (k)(1); and
■ 4. Adding paragraph (k)(3).

The additions and revisions read as follows:

§ 301.6241–7 Treatment of special enforcement matters

* * * * *

(j) *Elections resulting in payments to a partnership.* The IRS may adjust any election that results or could result in a payment to the partnership in lieu of a Federal tax credit or deduction without regard to subchapter C of chapter 63. The IRS may also make determinations, without regard to subchapter C of chapter 63, about the payment itself as well as any partnership-related item relevant to adjusting the election or the payment.

* * * * *

(k) *Applicability date*—(1) *In general.* Except as provided in paragraph (k)(2) (relating to paragraph (b) of this section) and paragraph (k)(3) of this section (relating to paragraph (j) of this section), this section applies to partnership taxable years ending on or after November 20, 2020. * * *

* * * * *

(3) *Elections resulting in payments to a partnership.* Paragraph (j) of this section applies to taxable years ending on or after June 21, 2023.

Douglas W. O'Donnell,

Deputy Commissioner for Services and Enforcement.

[HSAR Case 2015–001; DHS Docket No. DHS–2017–0006]

RIN 1601–AA76

Homeland Security Acquisition Regulation; Safeguarding of Controlled Unclassified Information

AGENCY: Office of the Chief Procurement Officer, Department of Homeland Security (DHS).

ACTION: Final rule.

SUMMARY: DHS is issuing a final rule to amend the Homeland Security Acquisition Regulation (HSAR) to modify a subpart, remove an existing clause and reserve the clause number, update an existing clause, and add two new contract clauses to address requirements for the safeguarding of Controlled Unclassified Information (CUI). This final rule implements security and privacy measures to safeguard CUI and facilitate improved incident reporting to DHS. These measures are necessary because of the urgent need to protect CUI and respond appropriately when DHS contractors experience incidents with DHS information.

DATES: This final rule is effective July 21, 2023.

FOR FURTHER INFORMATION CONTACT: Shaundra Ford, Procurement Analyst, DHS, Office of the Chief Procurement Officer, Acquisition Policy and Legislation, (202) 447–0056, or email *HSAR@hq.dhs.gov.* When using email, include HSAR Case 2015–001 in the subject line.

I. Executive Summary

A. Purpose of the Regulatory Action

The purpose of this final rule is to implement security and privacy measures to safeguard CUI and facilitate improved incident reporting to DHS. This final rule does not apply to classified information. These measures are necessary because of the urgent need to protect CUI and respond appropriately when DHS contractors experience incidents with DHS information. Persistent and pervasive high-profile breaches of Federal information continue to demonstrate the need to ensure that information security protections are clearly, effectively, and

consistently addressed in contracts. This final rule strengthens and expands existing HSAR language to ensure adequate security when: (1) contractor and/or subcontractor employees will have access to CUI; (2) CUI will be collected or maintained on behalf of the agency; or (3) Federal information systems, which include contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI. Specifically, the final rule:

- Identifies CUI handling requirements and security processes and procedures applicable to Federal information systems, which include contractor information systems operated on behalf of the agency;
- Identifies incident reporting requirements, including timelines and required data elements, inspection provisions, and post-incident activities;
- Requires certification of sanitization of government and government-activity-related files and information; and
- Requires contractors to have in place procedures and the capability to notify and provide credit monitoring services to any individual whose Personally Identifiable Information (PII) or Sensitive PII (SPII) was under the control of the contractor or resided in the information system at the time of the incident.

B. Legal Authority

This rule addresses the safeguarding requirements specified in the Federal Information Security Modernization Act of 2014 (FISMA) (44 U.S.C. 3551, *et seq.*); Office of Management and Budget (OMB) Circular A–130, *Managing Information as a Strategic Resource;* relevant National Institute of Standards and Technology (NIST) guidance; Executive Order (E.O.) 13556, *Controlled Unclassified Information* (75 FR 68675, Nov. 9, 2010), and its implementing regulation at 32 CFR part 2002; and the following OMB memoranda: M–17–12, *Preparing for and Responding to a Breach of Personally Identifiable Information;* M–14–03, *Enhancing the Security of Federal Information and Information Systems;* and Reporting Instructions for FISMA and Agency Privacy Management as identified in various OMB memoranda.

C. Costs and Benefits

The final rule will apply to DHS contractors that require access to CUI, collect or maintain CUI on behalf of the Government, or operate Federal information systems, which include contractor information systems operating on behalf of the agency, that collect, process, store, or transmit CUI. DHS estimates the final rule will have an annualized cost that ranges from $15.32 million to $17.28 million at a discount rate of 7 percent and a total 10-year cost that ranges from $107.62 million to $121.37 million at a discount rate of 7 percent. The primary contributors to these costs are the independent assessment requirement and reporting and recordkeeping requirements. There are additional small, quantified costs from rule familiarization and security review processes. DHS was unable to quantify costs associated with incident reporting requirements, PII and SPII notification requirements, credit monitoring requirements and they are therefore discussed qualitatively. DHS was unable to quantify the cost savings or benefits associated with the rule. However, the final rule is expected to produce cost savings by reducing the time required to grant an ATO, reducing DHS time reviewing and reissuing proposals because contractors are better qualified, and reducing the time to identify a data breach. The final rule also produces benefits by better notifying the public when their data are compromised, requiring the provision of credit monitoring services so that the public can better monitor and avoid costly consequences of data breaches, and reducing the severity of incidents through timely incident reporting.

II. Background

DHS published a notice of proposed rulemaking (NPRM) in the **Federal Register** at 82 FR 6429 on January 19, 2017, to implement adequate security and privacy measures to safeguard CUI from unauthorized access and disclosure and facilitate improved incident reporting to DHS. Fourteen respondents submitted public comments in response to the proposed rule. This final rule incorporates the reasoning of the proposed rule except as reflected elsewhere in this preamble.

III. Discussion and Analysis

DHS reviewed the public comments in the development of the final rule. A certain number of the comments received were outside the scope of the rule. A discussion of the comments within the scope of the rule and the changes made to the rule as a result of those comments is provided, as follows:

A. Significant Changes From Proposed Rule

1. HSAR 3052.204–71, *Contractor Employee Access,* is revised as follows:

- Revised paragraph (a) to remove the definition of ''sensitive information'' and replace it with the definition of ''CUI'';
- Revised paragraph (b) to remove the definition of ''information technology resources'' and replace it with the definition of ''information resources'';
- Replaced all references to ''sensitive information'' with ''CUI'' and all references to ''information technology resources'' with ''information resources'';
- Revised paragraph (e) to clarify that both initial and refresher training concerning the protection and disclosure of CUI is required;
- Revised paragraph (g) of Alternate I to make clear that additional training on certain CUI categories may be required if identified in the contract; and
- Replaced the reference to ''statement of work'' in paragraph (h) of Alternate I with ''contract.''

2. Restructured clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* as follows:

- Made the requirements of paragraph (c), *Authority to Operate,* into Alternate I to the basic clause; and
- Made the requirements of paragraphs (f), *PII and SPII Notification Requirements,* and (g), *Credit Monitoring Requirements,* into a separate clause at 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents.* This includes clarifying updates to the *PII and SPII Notification Requirements* section.

3. Revised requirements of restructured clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* as follows:

- Made clear that both contractors and subcontractors are responsible for reporting known or suspected incidents to the Department;
- Made clear that subcontractors are required to notify the prime contractor that they have reported a known or suspected incident to the Department;
- Increased the amount of time a vendor must retain monitoring/packet capture data from 90 days to 180 days; and
- Revised the requirements for when prime contractors must include clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* in subcontracts.

4. Made clarifying edits to the definitions of the following terms: *Controlled Unclassified Information, Sensitive Security Information, Homeland Security Agreement Information, Information Systems Vulnerability Information, Personnel Security Information, Privacy Information,* and *Sensitive Personally Identifiable Information.*

5. Made additional amendments to paragraph (b) of clause 3052.212–70 to add clause 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents.*

B. Discussion of Public Comments and Responses

1. General

Comment: Two comments requested that the Department withdraw the proposed rule. One of the comments requested that DHS grant an extension of the comment period if the rule was not going to be withdrawn. The other comment stated that the rule was ill-considered and was not properly coordinated with other agencies that follow and support the principles in 32 CFR part 2002. The comment also stated the rulemaking adds burdens to DHS and its contractors that differ from what is required or expected by others and requested that DHS delay implementation of the entire rule or suspend the rulemaking process altogether pending further progress with the expected general Federal Acquisition Regulation (FAR) CUI rule.[1]

Response: Given the nature of this rule, and the prevalent and persistent nature of cyber-attacks impacting both public and private networks, DHS declines the respondents' request to withdraw this rule. Failure to proceed with this rule places at risk both the Department's CUI and the information systems where CUI resides, which would be in contravention to the Department's mission and to the public interest. In addition, DHS will neither delay nor suspend this rulemaking pending progress on the FAR CUI rule. A 30-day extension of the comment period from March 20, 2017, to April 19, 2017, was granted. Additionally, DHS conducted extensive interagency coordination while developing this rule, including coordination with NARA. Also, the FAR CUI rule does not eliminate the need for DHS to proceed with this rulemaking. DHS is a participant on the FAR team responsible for drafting the FAR language that will implement the CUI Program and has determined that the issuance of a FAR CUI rule does not eliminate the need for DHS to identify its agency-specific requirements for CUI and the methodology it uses to ensure that Federal information systems, which includes contractor information systems operated on behalf of the agency, that collect, process, store, or transmit CUI are adequately protected. Also, DHS does not agree that this rulemaking adds burdens to DHS and its contractors that differ substantively from what is required or expected by other agencies as the requirements for Federal information systems are largely based in statute, *i.e.,* FISMA (44 U.S.C. 3551, *et seq.*), and implementing policies promulgated by OMB and NIST. Agency specific requirements such as an independent assessment and security review are not in conflict with these requirements. They are at the discretion of the agency, considered industry best practices, and are actually becoming more pervasive Governmentwide. Notwithstanding this, DHS has determined that information security is of paramount importance and is prepared to accept the cost impacts stemming from vendor compliance with these requirements.

Comment: One respondent stated that the rule does not clearly articulate how requirements would be applied to professional service providers, what safeguards they would be obligated to provide, or how they would be assessed by DHS.

Response: Clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* clearly identifies the requirements applicable to contractors that access or develop CUI under DHS contracts, as well as the information security requirements applicable to Federal information systems, which include contractor information systems operated on behalf of the agency. The applicability of these requirements does not change depending on the type of contractor. As such, there is no need to identify requirements applicable to the subset of contractors that fall within the professional services community.

Comment: One respondent proposed that DHS use a server that requires verification from a higher ranking official so that the information does not enter the wrong hands, such as an extremist group. The respondent also recommended that there should be logins for each official that could be listed on public servers, as long as the server was American, and that citizens trying to access the information should pass a background check to make sure they are not a threat.

Response: The commenter has oversimplified the process by which DHS should ensure CUI is adequately protected, and DHS has made no corresponding changes to the rule. While DHS and its contractors routinely use servers, logins, and passwords to control access on networks and information systems, this is only a subset of the actions required to ensure CUI and the information systems where CUI resides are adequately protected. Making login information publicly available is a violation of information security policy. Also, limiting servers used by the Department and its contractors to those manufactured only in the United States does not ensure the security of the server and violates statutory requirements that govern Federal procurements. DHS, like other Departments and agencies, adheres to FAR part 25, *Foreign Acquisition,* when purchasing supplies. FAR part 25 details the application of the Buy American Act (BAA) and the Trade Agreements Act (TAA), including the dollar thresholds at which the TAA supersedes the BAA and nondomestic trading partners receive equal treatment with domestic sources. Additionally, the Department already has in place background investigation requirements for Federal employees and contractors that have access to CUI. Where the Department has determined access to CUI must be limited to U.S. citizens and lawful permanent residents, DHS policies and regulations already reflect those requirements.

Comment: One respondent stated that the proposed rule is very important considering how open information is in this day and age, adding that this rule will help secure important information about the U.S. Government.

Response: DHS agrees that this rule is important and that its requirements will help ensure the security of important government information.

Comment: One respondent stated that small businesses should be concerned by this rule, citing that DHS acknowledged that the rule is a ''significant'' regulatory action that will impact small business. The respondent stated that there is nothing specific in the rule to assure the small business community that it will be able to comply.

Response: This rule is a ''significant'' regulatory action that will have an impact on small business; however, this comment implies that all small businesses will be impacted equally, which is not the case. Small businesses that routinely provide services to the Government that rely on Federal information systems, which include contractor information systems operated on behalf of an agency, already are positioned to implement these requirements and always have been required to do so under DHS contracts. Information security and information security requirements applicable to Federal information systems are not based on the size of a particular business but rather on the sensitivity of

[1] Rulemaking to implement the National Archives and Records Administration (NARA) CUI program (*see* E.O. 13556 and 32 CFR part 2002).

the information and the impact(s) of unauthorized access to such information. Applying a lesser standard because a business voluntarily operating in this space is considered small would be untenable and in contravention to the mission of the Department. Additionally, it is important to note that DHS's commitment to small business participation is unparalleled, as evidenced by the Department's 12 consecutive ratings of ''A'' or higher on the Small Business Administration's (SBA) Small Business Procurement Scorecard (*see https://www.sba.gov/document/support-department-homeland-security-contracting-scorecard*). The Department expressed in the proposed rule its interest in receiving comments from small business concerns related to this rule and has thoroughly considered and adjudicated all comments received.

Comment: One respondent stated that guidance on DHS CUI requirements for cleared facilities should be consistent with Department of Defense (DoD) cleared facility requirements.

Response: The protection of classified information at contractor locations, whether cleared by DoD or another government agency, is outside the scope of this regulation. CUI is protected according to the underlying law, regulation, or Governmentwide policy. DHS does not have the broad authority to waive CUI safeguarding or dissemination requirements that differ from those of classified information.

Comment: One respondent questioned if the proposed rule covers sharing of information on software vulnerabilities with Information Sharing and Analysis Organizations (ISAOs) or Information Sharing and Analysis Centers (ISACs). The respondent also questioned if the ISAOs or ISACs require flow-down of the clauses to ensure that their members provide adequate protection in accordance with the DHS proposed rule. The respondent stated such a requirement would impose a significant barrier for private sector entities to participate in information sharing.

Response: DHS shares information with ISAOs and ISACs through information sharing agreements between the Government and the ISAO/ISAC, not through contracts. Generally, information sharing agreements do not include the clauses.

2. Alignment With FISMA, E.O. 13556 (Controlled Unclassified Information), and Its Implementing Regulation at 32 CFR Part 2002 (Controlled Unclassified Information)

Comment: Several respondents stated that the proposed rule is not consistent with FISMA, E.O. 13356, and 32 CFR part 2002.

Response: (a) Alignment with FISMA: The rule is fully consistent with FISMA. FISMA and its predecessor, the Federal Information Security Management Act of 2002, require that agency heads provide ''information security protections commensurate with the risk and magnitude of the harm resulting from unauthorized access, use, disclosure, disruption, modification, or destruction of—(i) information collected or maintained by or on behalf of the agency; and (ii) information systems used or operated by an agency or by a contractor of an agency or other organization on behalf of an agency . . . .'' *See, e.g.,* 44 U.S.C. 3554(a)(1)(A). The rule is consistent with these requirements by requiring that information collected or maintained on behalf of the Department and information systems used or operated by an agency or by a contractor of an agency or other organization on behalf of an agency are adequately protected. The rule does this in two ways by identifying: (1) requirements and DHS policies and procedures for handling and protecting CUI collected and maintained on behalf of the Department; and (2) security requirements and procedures for information systems used or operated by a contractor on behalf of an agency.

(b) Alignment with E.O. 13556 and 32 CFR part 2002: The rule is fully consistent with E.O. 13556 and 32 CFR part 2002 (81 FR 63324, Sept. 14, 2016). The NARA CUI rule requires Departments and agencies to develop internal policies and procedures to implement the requirements of the CUI Program.[2] These policies and procedures are subject to review and approval by the CUI Executive Agent (EA) before they are finalized. In addition, the NARA CUI rule establishes baseline information security requirements necessary to protect CUI Basic[3] on nonfederal information systems by mandating the use of NIST Special Publication (SP) 800–171, *Protecting Controlled Unclassified Information in Nonfederal Information Systems and Organizations,* when establishing security requirements to protect CUI's confidentiality on nonfederal information systems. However, consistent with 32 CFR 2002.14(a)(3) and (g), ''[a]gencies may increase CUI Basic's confidentiality impact level above moderate only internally, or by means of agreements with agencies or non-executive branch entities (including agreements for the operation of an information system on behalf of the agencies).'' Relatedly, 32 CFR 2002.4(c) states that agreements ''include, but are not limited to, contracts, grants, licenses, certificates, memoranda of agreement/arrangement or understanding, and information-sharing agreements or arrangements.'' Therefore, DHS can require a confidentiality impact level above moderate through agreements with non-executive branch entities. Nonetheless, the information system security requirements of this rule are focused on those applicable to Federal information systems.

Comment: One respondent stated that the revisions to the HSAR must be coordinated as part of the DHS implementation of the CUI Program, per the milestones established by CUI Notice 2016–01, *Implementation Guidance for the Controlled Unclassified Information Program.*

Response: CUI Notice 2016–01, *Implementation Guidance for the Controlled Unclassified Information Program,* was superseded by CUI Notice 2020–01, *CUI Program Implementation Guidelines,* issued May 14, 2020. Neither of the CUI Notices provide guidance on coordination of rulemakings. Nonetheless, DHS conducted extensive interagency coordination while developing this rule, including coordination with NARA.

Comment: One respondent stated that the proposed rule federalizes contractor systems that are not used in an

[2] The NARA CUI rule is implemented at 32 CFR part 2002 (81 FR 63324). That regulation describes the executive branch's CUI Program and establishes policy for designating, handling, and decontrolling information that qualifies as CUI. The CUI Program standardizes the way the executive branch handles information that requires protection under laws, regulations, or Governmentwide policies but that does not qualify as classified under E.O. 13526, *Classified National Security Information* (Dec. 29, 2009), or any predecessor or successor order, or the Atomic Energy Act of 1954 (42 U.S.C. 2011, *et seq.*), as amended.

[3] *CUI Basic* is the subset of CUI for which the authorizing law, regulation, or Governmentwide policy does not set out specific handling or dissemination controls. Agencies handle CUI Basic according to the uniform set of controls set forth in 32 CFR part 2002 and the CUI Registry. CUI Basic controls apply whenever CUI Specified ones do not cover the involved CUI. *CUI Specified* is the subset of CUI in which the authorizing law, regulation, or Governmentwide policy contains specific handling controls that it requires or permits agencies to use that differ from those for CUI Basic. The CUI Registry indicates which laws, regulations, and Governmentwide policies include such specific requirements. CUI Specified controls may be more stringent than, or may simply differ from, those required by CUI Basic; the distinction is that the underlying authority spells out specific controls for CUI Specified information and does not for CUI Basic information. CUI Basic controls apply to those aspects of CUI Specified where the authorizing laws, regulations, and Governmentwide policies do not provide specific guidance.

operational capacity on behalf of the Government.

Response: The rule does not federalize contractor systems that are not used in an operational capacity on behalf of the Government. Conversely, it recognizes that there are circumstances when contractor information systems are operated on behalf of an agency. When this is the case, the contractor information system is considered a Federal information system and is subject to the same information system security requirements required for Federal information systems. The rule identifies the security requirements and processes such systems must meet before they are able to operate on behalf of the agency. These requirements are now provided as Alternate I to the basic clause. The rulemaking does not identify any information system security requirements or processes for information systems that are not categorized as Federal information systems. The applicability of the basic clause is not predicated on the type of information system, *i.e.,* Federal or nonfederal. The basic clause is limited to definitions, DHS CUI handling requirements, incident reporting and response requirements, and sanitization requirements. These requirements exist whenever CUI will be accessed or developed under a contract regardless of the type of information system involved in contract performance. This is the reason why the basic clause is more broadly applicable. DHS was intentionally silent in this rule on the requirements applicable to nonfederal information systems as that was never the purpose of this rulemaking, and the FAR CUI rule is intended to address the requirements for these information systems.

Comment: One respondent requested that DHS revise the scope of its rule to clarify or remove the language related to accessing CUI.

Response: Contractors and subcontractors that have access to CUI are responsible for ensuring the information is handled and safeguarded appropriately and reporting any known or suspected incidents regarding the information for which they have access. As such, DHS declines to revise the scope of the rule to clarify or remove language related to accessing CUI.

Comment: One respondent expressed concern that clause 3004.470–3 requires that ''CUI be safeguarded wherever such information resides,'' including on both ''contractor-owned and/or operated information systems operating on behalf of the agency'' as well as ''any situation where contractor and/or subcontractor employees may have access to CUI.'' The respondent also expressed concern that contracting officers are required to insert clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* in all solicitations and contracts where contractor and/or subcontractor employees will have access to CUI and that the clause requires contractors provide ''adequate security to protect CUI,'' which ''includes compliance with DHS policies and procedures in effect at the time of contract award. These policies and procedures are accessible at *https://www.dhs.gov/dhs-security-and-training-requirements-contractors.*'' Another respondent similarly stated that inclusion of these statements improperly subjects all contractors and all contractor information systems to DHS agency-specific standards.

Response: Some of the policies and procedures currently posted to the DHS publicly facing website predate the CUI E.O. and the NARA CUI rule. DHS, like many other Departments and agencies, is still in the process of implementing the CUI Program. This process includes an update to internal policies and procedures related to CUI. Once these policies and procedures have been drafted and finalized, they will replace the policies and procedures currently listed on the publicly facing website. These policies and procedures are required to address all elements of the CUI Program and extend beyond the protection of CUI in information systems. For example, the new policies and procedures also will address training, handling, transmission, marking requirements, incident reporting, etc. The current DHS-specific policies and procedures on the publicly facing website address these requirements and the new policies and procedures will as well. As such, compliance with these policies and procedures is mandatory.

It appears that the respondents have focused on the information system security policies that are incorporated into the rule without also considering the other policies and procedures identified, all of which have varying applicability depending on the specifics of the contract. For example, one of the policies referenced governs the Department's background investigation process and security requirements applicable to individuals who have access to the Department's sensitive but unclassified information, now known as CUI. It is both necessary and appropriate that DHS mandate that its contractors comply with these requirements. Anything less is inconsistent with the mission of the Department, has the potential to place important government information at risk, and is contrary to the public interest. Like many of the other DHS policies referenced, the need to comply with this requirement is based on access to the information, not whether a Federal information system or nonfederal information system will process, store, or transmit the data. Also, the applicability of the information system security policies is specifically defined in the text of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* Specifically, Alternate I, *Authority to Operate,* documents the applicability of *DHS Sensitive Systems Policy Directive 4300A* and *DHS 4300A Sensitive Systems Handbook.* The prescription for Alternate I is clear that these requirements are applicable when Federal information systems, which include contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI. In addition, the first sentence of proposed paragraph (c), *Authority to Operate,* of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* specifically stated that its requirements are ''applicable only to Federal information systems, which include[ ] contractor information systems operating on behalf of the agency.'' As such, it is clear that it is not the intent of the Department to levy the requirements in these policies and procedures on contractor information systems that are not operated on its behalf. Lastly, the basic clause is limited to definitions, DHS CUI handling requirements, incident reporting and response requirements, and sanitization requirements. These requirements exist whenever CUI will be accessed or developed under a contract regardless of the type of information system involved in contract performance. This is the reason why the basic clause is more broadly applicable.

Also, the statements in paragraph (a) of clause 3004.470–3, *Policy,* are levied on DHS contractors through the inclusion of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* in the solicitation and resultant contract. Absent inclusion of the clause in the contract, the requirements are not applicable.

Comment: One respondent stated that the proposed rule fails to reflect the information systems safeguarding requirements of the CUI Federal regulation (32 CFR part 2002) and allows DHS full discretion on what electronic safeguarding controls to apply to contractors for any category of CUI. The respondent asserted that the

rule makes no distinction operationally in the way nonfederal contractor information systems and DHS agency information systems are treated, a distinction made in the CUI regulation (32 CFR part 2002) and in FISMA.

Response: The respondent is incorrect that the rule: (1) allows DHS full discretion on what electronic safeguarding controls to apply to contractors for any category of CUI; and (2) makes no distinction between nonfederal contractor information systems and the Federal information systems. DHS understands that the information security requirements applicable to Federal information systems differ from the requirements applicable to nonfederal information systems, as referenced in footnote 5 of the proposed rule, which advised that DHS is aware NIST Special Publication 800–171, Protecting Controlled Unclassified Information in Nonfederal Information Systems and Organizations, was released in June 2015 to provide federal agencies with recommended requirements for protecting the confidentiality of Controlled Unclassified Information on non-Federal information systems. However, the information system security requirements in this proposed rulemaking are focused on Federal information systems, which include contractor information systems operating on behalf of an agency, and consistent with 32 CFR part 2002, these information systems are not subject to the requirements of NIST Special Publication 800–171.

DHS also makes this distinction in the prescription for Alternate I, *Authority to Operate,* to clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* It specifies that these requirements are applicable when Federal information systems, which include contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI. Additionally, the first sentence of paragraph (c), *Authority to Operate,* of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* in the proposed rule stated ''[t]his subsection is applicable only to Federal information systems, which include[ ] contractor information systems operating on behalf of the agency.'' As such, the Department has made clear it understands there are differing requirements for nonfederal information systems and has not, through the rule, retained full discretion on what electronic safeguarding controls to apply to contractors for any category of CUI.

Comment: One respondent expressed concerns regarding clause 3004.470–4(a), which states ''subcontractor employee access to CUI or government facilities must be limited to U.S. citizens and lawful permanent residents.'' The respondent stated that this limitation is not a legal requirement and recommended that access to government facilities be treated as a separate and distinct issue from the issue of access to CUI and that access limitations for CUI be based on the associated legal requirement as outlined in the NARA CUI rule.

Response: This recommendation is outside the scope of this regulation. DHS notes that although CUI Basic does not inherently convey citizenship or residency requirements, some of the limited dissemination caveats that can be appended to CUI Basic do. While 32 CFR part 2002 does standardize the safeguarding and dissemination requirements that can be imposed on those with whom CUI is shared, the determination and decision to share CUI information remains subject to agency policy and discretion.

3. Applicability of NIST SP 800–171

Comment: Several respondents raised concerns regarding the applicability of NIST SP 800–171. Some of the respondents correctly recognized that the information system security requirements in the proposed rule are specific to Federal information systems, which include contractor information systems operated on behalf of the Government. These respondents expressed concern that the rule did not address the information system security requirements applicable to nonfederal information systems and requested that DHS identify the information system security requirements applicable to nonfederal information systems either through this rulemaking or another one.

Response: DHS does not accept the suggestion to identify the information system security requirements applicable to nonfederal information systems. The rule is intentionally silent on the security requirements applicable to nonfederal information systems because NARA is working with the FAR Councils, in which DHS is a participant, to develop a FAR CUI rule that addresses the requirements nonfederal information systems must meet before processing, storing, or transmitting CUI. As such, there is no need for the Department to identify requirements applicable to nonfederal information systems in this rulemaking, as inclusion would be duplicative and redundant to the work of the FAR Councils.

Comment: Several respondents did not recognize that the scope of the information system security requirements in the proposed rule were specific to Federal information systems and believed that the Department either conflated the two different categories of information systems (*i.e.,* Federal and nonfederal) or was incorrectly applying requirements for Federal information systems to nonfederal information systems (*i.e.,* contractor information systems that are not operated on behalf of the Department). These respondents either requested that DHS refine the scope of the rule to exclude contractor information systems or explicitly identify NIST SP 800–171 as the applicable security standard for contractor information systems. One respondent stated that the proposed rule requires contracting officers to insert proposed clause 305.204–7X, *Safeguarding of Controlled Unclassified Information,* too often (*i.e.,* any time the contractor or subcontractor will have access to CUI regardless of the type of information system being used).

Response: DHS does not accept the recommendation to modify the scope of the rule to exclude contractor information systems or explicitly identify NIST SP 800–171 as the applicable security standard for such systems. There is a misconception among industry actors that NIST SP 800–171 is the only policy that must be followed when CUI is provided or accessed under a contract. This is not correct. As discussed in the preamble of the proposed rule, OMB Circular A–130, *Managing Information as a Strategic Resource,* makes clear that a contractor information system can be considered a Federal information system if it operates on behalf of an agency. Specifically, Circular A–130 defines a Federal information system as an information system used or operated by an agency or by a contractor of an agency or by another organization on behalf of an agency. In accordance with FISMA, Departments and agencies are responsible for determining when a contractor information system is operated on its behalf. As such, a blanket exclusion of contractor information systems absent a determination of the type of system (*i.e.,* Federal or nonfederal) is not appropriate.

When the Government determines that a contractor information system is being operated on its behalf, that information system is considered a Federal information system and subject to the requirements of NIST SP 800–53, *Security and Privacy Controls for Information Systems and Organizations.*

Alternatively, NIST SP 800–171 is applicable ''(1) when the CUI is resident in a nonfederal system and organization; (2) when the nonfederal organization is *not* collecting or maintaining information on behalf of a federal agency or using or operating a system on behalf of an agency; and (3) where there are no specific safeguarding requirements for protecting the confidentiality of CUI prescribed by the authorizing law, regulation, or governmentwide policy for the CUI category listed in the CUI Registry'' (emphasis original; footnote omitted).

Generally speaking, should the Government determine that a contractor information system is not operated on its behalf, NIST SP 800–171 is applicable. However, consistent with 32 CFR 2002.14(a)(3) and (g), ''[a]gencies may increase CUI Basic's confidentiality impact level above moderate only internally, or by means of agreements with agencies or non-executive branch entities (including agreements for the operation of an information system on behalf of the agencies).'' Relatedly, 32 CFR 2002.4(c) states that agreements ''include, but are not limited to, contracts, grants, licenses, certificates, memoranda of agreement/arrangement or understanding, and information-sharing agreements or arrangements.'' Therefore, Departments and agencies can require a confidentiality impact level above moderate for nonfederal information systems through agreements with non-executive branch entities. Nonetheless, the information system security requirements of this rule, including those in *DHS Sensitive Systems Policy Directive 4300A* and *DHS 4300A Sensitive Systems Handbook,* are specific to Federal information systems.

As stated in the preamble of the proposed rule, the Government believed that requirements of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* were written in such a way that they would be self-deleting when they are not applicable to a solicitation or contract. For example, the first sentence of paragraph (c), *Authority to Operate,* of the proposed clause stated ''[t]his subsection is applicable only to Federal information systems, which include[ ] contractor information systems operating on behalf of the agency.'' This section of the clause also defined the applicability of *DHS Sensitive Systems Policy Directive 4300A* and *DHS 4300A Sensitive Systems Handbook,* making clear these policies are applicable only to Federal information systems. Additional examples include language for the notification and credit monitoring requirements stating that the applicability is limited to incidents involving PII or SPII. The remaining requirements of the proposed clause did not include any caveats on their applicability because compliance with them is mandatory regardless of the type of information system (*i.e.,* Federal information system or nonfederal information system).

However, DHS believes the concerns raised regarding proper understanding of the applicability of the requirements of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* are legitimate. In response, DHS has: (1) made the requirements of paragraph (c), *Authority to Operate,* Alternate I to the basic clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information;* and (2) made the requirements of paragraphs (f), *PII and SPII Notification Requirements,* and (g), *Credit Monitoring Requirements,* a separate clause at 3052.204–7Y titled *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents.* As a result of these changes, basic clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* is limited to the following provisions: paragraphs (a), *Definitions;* (b), *Handling of Controlled Unclassified Information;* (c), *Incident Reporting Requirements;* (d), *Incident Response Requirements;* (e), *Certification of Sanitization of Government and Government-Activity-Related Files and Information;* (f), *Other Reporting Requirements;* and (g), *Subcontracts.* Compliance with these requirements is mandatory regardless of the information system type (*i.e.,* Federal information system or nonfederal information system). Alternate I to the basic clause is applicable when Federal information systems, which include contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI. New clause 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents,* is applicable to solicitations and contracts where a contractor will have access to PII. These changes were made to: (1) ensure that DHS contractors clearly understand the scope and applicability of the various requirements contained in proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information;* (2) make clear that the Authority to Operate (ATO) requirements of the clause are only applicable to Federal information systems, which include contractor information systems operated on behalf of the agency; and (3) ensure that DHS contractors understand credit monitoring and notification requirements are only applicable when the solicitation and contract require contractor access to PII.

Comment: Several respondents raised concerns about footnote 5 in the proposed rule. The footnote advised that DHS is aware NIST Special Publication 800–171, Protecting Controlled Unclassified Information in Nonfederal Information Systems and Organizations, was released in June 2015 to provide federal agencies with recommended requirements for protecting the confidentiality of Controlled Unclassified Information on non-Federal information systems. However, the information system security requirements in this proposed rulemaking are focused on Federal information systems, which include contractor information systems operating on behalf of an agency, and consistent with 32 CFR part 2002, these information systems are not subject to the requirements of NIST Special Publication 800–171.

One respondent interpreted the footnote to mean that DHS believes NIST SP 800–171 is applicable to nonfederal entities that handle, process, use, share, or receive CUI. One respondent raised concerns that the proposed rule was not consistent with the footnote because the rule requires in clause 3004.470–3(a) that CUI be safeguarded in ''any situation where contractor and/or subcontractor employees may have access to CUI.'' Another respondent stated that the footnote downplays the applicability of NIST SP 800–171 and implies that the guidance is for the more limited set of systems covered by NIST SP 800–53. The same respondent advised that in other parts of the rule, contractors' internal business systems that do fall under the provisions of NIST SP 800–171 are specifically called out. Specific actions requested include:

- Moving the content of footnote 5 to the *Background* section to improve the clarity of the scope of the rule and avoid unnecessary misinterpretations and misunderstandings;
- Making clear that the proposed rule does not apply to contractor information systems;
- Clarifying that the ''adequate security'' requirements of the rule do not apply to internal contractor information systems that are not operated on behalf of an agency, and stressing that the use of sanitization procedures for CUI spills onto internal contractor information systems, instead of requiring ''adequate security''

implementation on systems ''regardless of where'' the CUI may reside; and

• Clarifying that contractors are not responsible for implementing the ''adequate security'' requirements on government-furnished equipment (GFE) that contractors operate in their own internal contractor environment, unless specifically agreed between the DHS procuring activity (*i.e.,* contracting office) and the contractor.

Response: There appears to be a misunderstanding within industry regarding the applicability of NIST SP 800–171. Categorization as a nonfederal entity does not mean the security requirements for information systems used by a nonfederal entity default to those provided for in NIST SP 800–171. The Government must first determine if the contactor information system is operated on its behalf, thus making the information a Federal information system. If the Government determines the contractor information system is operated on its behalf, then the system is required to comply with NIST SP 800–53. Generally speaking, if the Government determines that the contractor information system is not operated on its behalf, NIST SP 800–171 is applicable. The Government's determination of the type of system, Federal versus nonfederal, must be made before any decision can be made on the security requirements applicable to the information system.

Commenters are incorrect in stating that the proposed rule is not consistent with the footnote by requiring that CUI be safeguarded in ''any situation where contractor and/or subcontractor employees may have access to CUI.'' CUI is required to be handled properly and adequately safeguarded at all times. As previously stated, it appears that the respondents have focused on the information system security policies that are incorporated into the rule with no regard for the other policies and procedures identified, all of which have varying applicability depending on the specifics of the contract. The only requirement in proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* applicable to information systems was paragraph (c), *Authority to Operate.* The remaining requirements of the proposed clause, namely paragraphs (b), *Handling of Controlled Unclassified Information,* (d), *Incident Reporting Requirements,* (e), *Incident Response Requirements,* (f), *PII and SPII Notification Requirements,* (g), *Credit Monitoring Requirements,* (h), *Certificate of Sanitization of Government and Government-Activity-Related Files and Information,* (i), *Other Reporting Requirements,* and (j), *Subcontracts,* are applicable regardless of the type of information system (*i.e.,* Federal or nonfederal), as well as when information systems are not used and only paper documents are available under the contract. *DHS Sensitive Systems Policy Directive 4300A* and *DHS 4300A Sensitive Systems Handbook* are only applicable to Federal information systems. The prescription for Alternate I is clear that the ATO requirements are applicable only when Federal information systems, which include contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI. Additionally, the proposed rule made clear this point by specifically stating in the first sentence of paragraph (c), *Authority to Operate,* of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* that the ''subsection is applicable only to Federal information systems, which include[ ] contractor information systems operating on behalf of the agency.''

The footnote is no longer included in the rule and DHS has provided significant information regarding the applicability of NIST SP 800–171 throughout the *Discussion and Analysis* section of the rule. These statements not only address the applicability of the publication to nonfederal information systems, but they also address the ability of Departments and agencies to increase CUI Basic's confidentiality impact level above moderate on nonfederal systems (*i.e.,* beyond the requirements of NIST SP 800–171), pursuant to the terms of an agreement as provided for in 32 CFR part 2002.

DHS declines the recommendation to clarify that the rule is not applicable to contractor information systems. As previously stated, the only requirement in the proposed rule specific to information systems was paragraph (c), *Authority to Operate,* in clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information;* in this final rule, the requirements of that paragraph have been made into Alternate I to the basic clause. All the other requirements are applicable regardless of the type of information system (*i.e.,* Federal or nonfederal), as well as when information systems are not used, making the requirements applicable to contractors that access or develop CUI under DHS contracts. Also, absent a determination of the status of the contractor information system as Federal or nonfederal, it would be inappropriate for DHS to state that the rule is not applicable to contractor information systems.

DHS declines the recommendation to clarify that the ''adequate security'' requirements of the rule do not apply to internal contractor information systems that are not operated on behalf of an agency, and stress that the use of sanitization procedures for CUI spills onto internal contractor information systems, instead of requiring ''adequate security'' implementation on systems ''regardless of where'' the CUI may reside. The requirement for adequate security is not solely specific to information systems. Adequate security includes ensuring security protections are applied commensurate with the risk resulting from unauthorized access, use, disclosure, disruption, modification or destruction of the information. It also includes ensuring information contractors and subcontractors host on information systems on behalf of the agency, as well as information systems and applications used by the agency, operate effectively and provide appropriate protections related to confidentiality, integrity, and availability.

Additionally, paragraph (b)(1) of clause 305.204–7X, *Safeguarding of Controlled Unclassified Information,* requires contractors and subcontractors to provide adequate security to protect CUI from unauthorized access and disclosure. This includes complying with DHS policies and procedures, accessible at *https://www.dhs.gov/dhs-security-and-training-requirements-contractors,* in effect when the contract is awarded.

A review of the policies and procedures on the referenced website would demonstrate that the applicability of the various policies and procedures depends on the requirements of each contract, including the type(s) of CUI accessed or developed under the contract. In addition, the clause makes clear that the information system security policies and procedures on the website are only applicable to Federal information systems. Also, the respondent is incorrect that internal contractor information systems that are not operated on behalf of the agency should not be required to have adequate security. If such a system includes the Department's CUI, it is imperative that adequate security of the system be maintained. Nonetheless, the information system security requirements of this rule are limited to Federal information systems. The purpose of this rule is the safeguarding of CUI, so it would be inappropriate to assert that DHS was attempting to apply security standards to contractor information systems that do not contain CUI. Also, ''CUI spills onto internal

contractor information systems'' are considered incidents and are subject to the incident reporting and response requirements of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.*

DHS declines the recommendation to clarify that contractors are not responsible for implementing the ''adequate security'' requirements on GFE that contractors operate in their own internal contractor environment, unless specifically agreed between the DHS procuring activity and the contractor. Clause 3052.204–7X *Safeguarding of Controlled Unclassified Information,* is clear on the applicability of the information system security requirements and, as such, there is no need to state within the text of the clause that the requirements are not applicable to GFE.

4. ATO Requirements

Comment: One respondent stated that it appears as if the requirements of paragraph (c)(1)(i) of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* would apply only to an information system that is in development and the security authorization (SA) package must be submitted before the system goes operational.

Response: The respondent is partially correct. The SA package must be submitted and ATO granted before a Federal information system, which includes a contractor information system operated on behalf of the agency, can be used to collect, process, store, or transmit CUI. However, the requirement for submission of a SA package is not limited to information systems that are under development. Whether the Federal information system is under development or already in existence, before it can be used to collect, process, store, or transmit CUI it must receive an ATO from DHS and the requirements for submission of the SA package must be met.

Comment: The same respondent questioned if the ATO requirements are applicable to nonfederal information systems. If so, the respondent stated that the clause should state when the SA package for these systems must be submitted as well as clarify the applicability of the independent assessment and which standard (*i.e.,* NIST SP 800–53 or NIST SP 800–171) will be used to determine compliance.

Response: The prescription for Alternate I identifies that these requirements are applicable when Federal information systems, which include contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI. Additionally, the first sentence of paragraph (c), *Authority to Operate,* in proposed clause 3052.204–7X, *Safeguarding Controlled Unclassified Information,* stated ''[t]his subsection is applicable only to Federal information systems, which include[ ] contractor information systems operating on behalf of the agency.'' As such, the information system security requirements of the clause are applicable only to Federal information systems. As previously stated, DHS is intentionally silent on the requirements applicable to nonfederal information systems as the FAR CUI rule is intended to address the requirements for these information systems. Inclusion of such requirements in this rule would be duplicative and redundant to the work of the FAR Councils.

Comment: One respondent stated that the proposed clause could be interpreted to require that contractors meet the security requirements of NIST SP 800–53 when safeguarding CUI at DHS prior to collecting, processing, storing, or transmitting CUI. The respondent also stated that a contractor will need to have gone through the DHS ATO process and demonstrated its capabilities to meet the requirements of the proposed clause. The respondent raised concerns that such a process thwarts the ''do once, use many'' efficiencies established under the Federal Risk and Authorization Management Program (FedRAMP). Additionally, the respondent stated that absent definitive guidance on the timing of the ATO, unnecessary expenses may be incurred by potential offerors, or competition may be needlessly stifled, precluding access to best commercial solutions and innovative new technology.

Response: Consistent with FISMA and its implementing Governmentwide policies, Federal information systems, which include contractor information systems operated on behalf of the Government, are required to receive an ATO before they can collect, process, store, or transmit Federal information. This requirement does not mean that a contractor's information system must have received an ATO from the Department before a contractor responds to a DHS solicitation. To require a contractor to obtain an ATO before contract award is costly and unnecessarily burdensome, and it could potentially place contractors in the position to incur costs that they would have no possibility to recoup. Clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* documents the timeline and process contractors must comply with to receive an ATO from the Department and it is clear that this process takes place after a contract award is made.

Comment: One respondent asserted that DHS should tie new regulatory requirements on cybersecurity controls to FedRAMP. Another respondent stated that the rule does not recognize or accommodate the use of cloud services.

Response: FedRAMP addresses requirements for cloud computing. To the extent a contractor is proposing a cloud solution to the Department, DHS would comply with FedRAMP policies and procedures. This includes the expectation that contractors would rely on the documents the cloud service provider used to obtain its provisional ATO under FedRAMP and modify them to reflect any additional requirements necessary to provide the specific services required by the Department.

Comment: One respondent stated that the proposed process will impose significant responsibilities on DHS, will require a great expense to the contractor, and will end up limiting competition.

Response: DHS recognizes there are significant costs associated with these requirements; however, the persistent and prevalent nature of cyber-attacks on both government and private sector networks has shown that this is a necessary expense. DHS fully expects its contractors to reflect these costs in the price and cost proposals they submit to the Department.

Comment: Two respondents raised concerns regarding the applicability of the rule to contracts awarded using the procedures of FAR part 12, *Acquisition of Commercial Items.* The respondents stated that applying the requirements of the rule to contracts awarded under the procedures of this FAR part impact the Department's access to innovative technology and increase the number of obstacles to market entry to the DHS supply chain for these companies as well as new start-ups with innovative technical ideas. The respondents recommended that DHS exclude commercial items from the requirements of the rule.

Response: DHS relies extensively on commercial contractors to provide services that include access to and the processing, storing, and transmitting of CUI. Eliminating this large pool of contractors from compliance with these requirements is untenable. It is not only inconsistent with the mission of the Department, but it is also contrary to the public interest. DHS has determined that the costs associated with compliance with the security requirements of this rule are a necessary

expense to ensure DHS CUI is adequately protected.

Comment: One respondent recommended that DHS specify if the Department will be the arbiter of compliance or if contractor self-assessments will suffice, the latter of which is the preference of the respondent.

Response: Clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* is clear that a contractor operating a Federal information system, which includes a contractor information system operated on behalf of the agency, must receive an independent assessment. Specifically, the clause requires contractors have an independent third party validate the security and privacy controls in place for the information system(s). Validation includes reviewing and analyzing the SA package and reporting on technical, operational and other deficiencies as outlined in NIST Special Publication 800–53, Security and Privacy Controls for Information Systems and Organizations. Deficiencies must be addressed before the SA package is submitted to the COR for review. DHS will review the independent assessment and, in conjunction with its own analysis, determine if an ATO should be granted.

Comment: One respondent recommended if DHS will be responsible for determining if a contractor has implemented adequate security that the rule clarify how any determination of adequacy will be made. The respondent requested that the authority be placed at a level higher than the contracting officer, such as the Chief Information Officer (CIO), to ensure a more uniform application across DHS. The respondent also recommended that DHS include further guidance on this subject on the cited website to explain to contractors how this standard will be applied.

Response: Clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* consistently has identified that the Component or Headquarters CIO, or designee, is responsible. Alternate I, which incorporates paragraph (c) of the proposed clause, states that ''[t]he Contractor shall not collect, process, store, or transmit CUI within a Federal information system until an ATO has been granted by the Component or Headquarters CIO, or designee.'' Alternate I makes clear that these requirements are only applicable to Federal information systems and the Component or Headquarters CIO, or designee, is responsible for determining if a contractor has implemented adequate security.

DHS declines the recommendation to add further guidance on this topic on the publicly facing website. Adequate security means ensuring security protections are applied commensurate with the risk resulting from unauthorized access, use, disclosure, disruption, modification or destruction of the information. It also includes ensuring information contractors and subcontractors host on information systems on behalf of the agency, as well as information systems and applications used by the agency, operate effectively and provide appropriate protections related to confidentiality, integrity, and availability.

Additionally, paragraph (b)(1) of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* requires contractors and subcontractors to provide adequate security to protect CUI from unauthorized access and disclosure. This includes complying with DHS policies and procedures, accessible at *https://www.dhs.gov/dhs-security-and-training-requirements-contractors,* in effect when the contract is awarded.

As it relates to the information system security portion of the adequate security requirements, the process to obtain an ATO is clearly described in the text of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* The remaining adequate security requirements are documented in the policies and procedures on the publicly facing website. As such, no additional guidance on adequate security is required.

Comment: One respondent recommended that DHS establish mechanisms through which contractors can obtain sufficient clarity during the proposal stage both to determine whether CUI will be processed under the contract and, if yes, to assess whether they can comply with such safeguarding obligations.

Response: DHS shared this concern when developing the proposed rule and indicated as such in the preamble of the proposed rule by stating that feedback from industry consistently has indicated the need for transparency and clear and concise requirements as it relates to information security. This concern led DHS to establish in the proposed rule a process by which DHS contractors will be aware of the security requirements they must meet when responding to DHS solicitations that require a contractor to collect, process, store, or transmit CUI. Previously, information security requirements were either embedded in a requirements document (*i.e.,* Statement of Work, Statement of Objectives, or Performance Work Statement) or identified through existing clause 3052.204–70, *Security Requirements for Unclassified Information Technology Requirements.* This approach: (1) created inconsistencies in the identification of information security requirements for applicable contracts; (2) required the identification and communication of security controls for which compliance was necessary after contract award had been made; and (3) resulted in delays in contract performance. Clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* substantially mitigates the concerns with DHS's previous approach. Through the government-provided Security Requirements Traceability Matrix (SRTM), contractors will know at the solicitation level the security requirements with which they must comply. The SRTM identifies the security controls that must be implemented on an information system that collects, processes, stores, or transmits CUI and that are necessary for the contractor to prepare its SA package. Clear identification of these requirements at the solicitation level affords contractors the ability to: (1) assess their qualifications and ability to fully meet the Government's requirements; (2) make informed business decisions when deciding to compete on the Government's requirements; and (3) engage subcontractors, if needed, early in the process to enable them to be fully responsive to the Government's requirements. The rule states that ''[t]he SA package shall be developed using the government-provided Security Requirements Traceability Matrix and SA templates.'' Any concerns regarding the SRTM can be raised and resolved using traditional solicitation processes.

Comment: One respondent recommended that DHS consider implementing a review process for ensuring that contractors can propose alternative, but equally effective, controls, an approach used by DoD in its information safeguarding rulemaking. The respondent recommended that the process also include a procedure through which contractors can obtain confirmation that a particular control is unnecessary. The respondent also recommended that DHS clarify the process for making such determinations and that contractors be permitted to make such determinations on an individual basis.

Response: DHS declines these recommendations given that the ability for a contractor to engage on security measures included in the SRTM, which includes the applicability of the control

and implementation method, is inherent in the Department's SA process. In addition, because the SRTM will be included in all applicable solicitations, any concerns regarding the SRTM can be raised and resolved using traditional solicitation processes. As such, there is no need to add language to the clause to identify this capability.

Comment: One respondent stated that the government-supplied SRTM has the potential to be a useful tool to help ensure its members' ability to be responsive to the Government's security requirements. The respondent was unclear whether an SRTM will be provided with each solicitation or only in cases where a contractor will be operating an information technology (IT) system on behalf of the Government. The respondent requested that all DHS solicitations include: (1) a description of whether CUI Basic and/or CUI Specified information will be collected, processed, stored, or transmitted by the contractor on behalf of DHS during the course of the project; and (2) a list of applicable security requirements, including any requirements for CUI Specified information that must be protected on nonfederal information systems at higher than the CUI Basic ''moderate'' confidentiality level of the NIST SP 800–171 standards.

Response: The information system security requirements in this rule are focused on those applicable to Federal information systems, which include contractor information systems operated on behalf of the agency. As previously stated, the requirements applicable to nonfederal information systems will be addressed in the FAR CUI rule, and as such, they are not addressed in this rulemaking. For the purposes of the information systems subject to this rulemaking, an SRTM will be included in all applicable solicitations using the controls from NIST SP 800–53. The type(s) of CUI provided and/or developed under the contract also will be identified in the solicitation. Apart from using NIST SP 800–171 as a baseline for the security controls, DHS does not anticipate a change to the process of providing an SRTM and identifying the type(s) of CUI provided or developed under a contract where nonfederal information systems are used. However, this process cannot be fully defined until the FAR CUI rule is finalized.

Comment: One respondent raised concerns regarding the security review requirements of paragraph (c)(3) of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* The respondent stated that proper control of information is already outlined in the applicable law, regulation, and Governmentwide policy that applies to that information and that compliance with contract terms is already included in agreement terms. The commenter requested that DHS take an approach similar to DoD and either use existing FAR processes and procedures to facilitate these requirements or identify them at the contract level in lieu of specifying the requirements in the clause.

Response: The ability to perform periodic security reviews is an important mechanism for the Department to consistently ensure contractors are and remain compliant with the security requirements contained in their contracts. This is borne out by the prevalent and persistent nature of cyber-attacks against both public and private networks and information systems. Although the Department is reserving the right to perform random security reviews, the Department will be judicious in its use and will coordinate appropriately with contractors to ensure operations are not unduly impacted. It is also important to note that reciprocity among agency regulations is outside the scope of this rule.

5. CUI Registry

Comment: Several respondents raised concerns that the rule proposed included categories of CUI that are not included in the CUI Registry maintained by NARA. In support of these concerns, respondents cited various sections of 32 CFR part 2002, such as ''[a]gencies may use only those categories or subcategories approved by the CUI EA [established by E.O. 13556 as NARA] and published in the CUI Registry to designate information as CUI.'' 32 CFR 2002.12(b).

Response: Based on the number of comments related to DHS's inclusion of new categories and subcategories of CUI in the proposed rule, it appears there is: (1) a misperception among our industry partners that the CUI Registry cannot change; and (2) a misunderstanding of the process by which agencies can add new categories to the CUI Registry. The categories and subcategories of information in the CUI Registry are not static. E.O. 13556, *Controlled Unclassified Information,* establishes a process to add new categories and subcategories of CUI. DHS's addition of new CUI categories and subcategories is in line with the procedures established by E.O. that require that the category or subcategory of information be in a law, regulation, or Governmentwide policy. DHS proposed the new categories and subcategories of CUI through the regulatory process (*i.e.,* its NPRM) and received provisional approval from NARA for the proposed categories. As a result of this approval, these categories now appear in the CUI registry.

Comment: One respondent advised that restating CUI categories increases administrative burdens. The same respondent also raised concerns that paragraph (b), *Handling of Controlled Unclassified Information,* of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* refers contractors back to DHS policies and procedures and advised that DHS should instead refer contractors to the CUI Registry and avoid duplicative descriptions of CUI. The respondent also stated that DHS defined Operations Security Information too broadly and that it could be interpreted to include almost any information. Multiple respondents raised the same concern about the Department's definition of Homeland Security Agreement Information. One respondent stated that the definition is vague and overly broad and does not comport with either the definition of CUI set forth in 32 CFR part 2002 or the categories or subcategories of CUI included in the CUI Registry, while other respondents stated that the definition allows DHS to determine what Homeland Security Agreement Information is on a case-by-case basis in individual contracts. Another stated that the parameters for Homeland Security Agreement Information are very uncertain and seemingly could apply to any information included in such agreements.

Response: The CUI Registry does not describe safeguarding and dissemination requirements in sufficient detail to allow for general users to properly protect information without supplemental guidance. In most instances, it is only a citation of a law, regulation, or Governmentwide policy. With regard to Operations Security Information, the definition used in this regulation has been updated and is derived from the definition ''Operations Security (OPSEC)'' from National Security Presidential Memorandum 28, which was issued in January 2021. While agreeing that the category is broad, DHS also believes it necessary, much like other similarly broad categories, such as privacy and law enforcement information. DHS is unable to address it solely in specific contracts or project guidance as such a practice would by definition be an ad-hoc agency practice existing outside of a law, regulation, or Governmentwide policy and, thus, contrary to E.O. 13556.

Instead, DHS opted to define this protection within the scope of this regulation.

With regard to Homeland Security Agreement Information, in furtherance of the Department's core missions of (1) preventing terrorism and enhancing security, (2) securing and managing the borders, (3) ~~Homeland Security Agreement Information~~ enforcing and administering immigration laws, (4) safeguarding and securing cyberspace, and (5) ensuring resilience to disasters, DHS enters into thousands of information sharing agreements with State, local, and private sector entities. The information being shared is often sensitive, thus requiring protections from public disclosure, but does not easily fall into one of the other CUI categories. DHS has historically protected this information as For Official Use Only, the DHS precursor to the CUI regime. While the definition of Homeland Security Agreement Information is admittedly broad, fulfilling core DHS missions while protecting sensitive information shared with DHS by our nonfederal partners requires such flexibility. DHS finalizes the CUI categories as proposed and declines to make changes in response to public comments.

Comment: One respondent stated the rule does not discuss who has the responsibility to identify or designate DHS CUI; whether any safeguarding obligations also apply to other categories or subcategories of CUI as listed in the CUI Registry; what relationship must exist between the presence of information that could be CUI and a contractual obligation to DHS; or how the agency will respond, advise, or adjudicate any questions as to application, administration, implementation, or enforcement of the safeguarding obligation.

Response: The purpose of this rulemaking is to clearly identify contractor responsibilities with respect to safeguarding CUI and identify security requirements and processes applicable to Federal information systems, which include contractor information systems operated on behalf of the Government. Identification of individuals/organizations within the Department responsible for designating CUI and safeguards applicable to CUI does not achieve this end. Also, a specific process on how the agency will respond, advise, or adjudicate any questions as to application, administration, implementation, or enforcement of the safeguarding obligation is also unnecessary. Should an issue or concern arise, it can be handled through traditional contract administration practices.

6. DHS Internal Policies and Procedures

Comment: One respondent expressed concern that the ''adequate security'' requirements in paragraph (b), *Handling of Controlled Unclassified Information,* in clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* refer to security standards in DHS-specific documents (as opposed to security standards designed for use across the executive branch) that are hosted on a DHS website. The respondent expressed concern that DHS may unilaterally change these security standards from time to time, causing significant adverse effects to contractors without giving them a meaningful opportunity to comment on these changes. Based on this concern, the respondent proposed the following revision (revision in bold type):

> Adequate security includes compliance with DHS policies and procedures in effect at the time of contract award. These policies and procedures are accessible at *https://www.dhs.gov/dhs-security-and-training-requirements-contractors.* **Changes to policies and procedures will be identified by version controls and implementations of these new versions will only occur after the contractors affected by the change are allowed time to comment on changes that will affect a contract's cost and/or schedule.**

Response: DHS does not accept the recommendation to add language to clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* documenting how and when updates to the Department's policies and procedures will be handled after a contract has been awarded. DHS employs version control on all internal policies and procedures. Contractors are not afforded the opportunity to comment on internal policies and procedures of Federal agencies when they are developed or when they are updated. Any impacts to DHS contractors as a result of updates to policies and procedures will be handled through the normal contract administration process, which already allows a contractor to assess the impact of the change and request consideration from the Government prior to implementation of the change. As such, there is no need to add specific language in the clause allowing a contractor to review and assess impacts to contract schedules and costs.

7. Definitions

Comment: Multiple respondents requested that DHS include the definition of ''on behalf of an agency'' consistent with 32 CFR part 2002. Another respondent stated that the rule does not clearly define the term ''nonfederal information system'' as storing or handling CUI only incidental to providing a service or product to the Government, nor does it apply ''on behalf of an agency'' in a manner consistent with 32 CFR part 2002.

Response: DHS intentionally excluded the ''on behalf of an agency'' definition provided in the NARA CUI rule from this rulemaking. The phrase ''on behalf of an agency'' is already rooted in statute and is used extensively in FISMA. FISMA designates the Director of the OMB as being responsible for ''developing and overseeing the implementation of policies, principles, standards, and guidelines on information security. . . .'' 44 U.S.C. 3553(a)(1). As such, any definition of the phrase ''on behalf of an agency'' must be provided in FISMA policy and guidance issued by OMB after going through the appropriate interagency coordination process to assess the wide-ranging implications of defining this term. In the case of the NARA CUI rule, that has not happened. In addition, the NARA CUI rule addresses a small subset of the issues covered by FISMA. For example, FISMA applies to all information, not just CUI. In addition, FISMA requires agencies to provide information security protections related to the integrity, confidentiality, and availability of all information (including CUI). The NARA CUI rule relates only to a subset of these concerns, specifically confidentiality of CUI.

The rule defines a Federal information system as ''an information system used or operated by an agency or by a Contractor of an agency or by another organization on behalf of an agency.'' This definition was taken directly from OMB Circular A–130. Defining a Federal information system is sufficient for the purposes of this rulemaking as an information system, in the context of this rule, is either Federal or nonfederal. Including a definition of a nonfederal information system is not necessary as it logically follows that a nonfederal information system is the opposite of a Federal information system. Also, ''nonfederal information system'' is not defined in Governmentwide policy. Lastly, the information system security requirements of this rule are limited to Federal information systems.

8. Reciprocity in Interagency Regulations and Information Security Requirements

Comment: Multiple respondents raised concerns that the requirements of the rule are not the same as other rules related to CUI issued by other Departments and agencies, such as DoD,

and requested that DHS revise this rule to be consistent with those rules. Respondents also stated that there is a lack of consistency between DHS and DoD incident reporting requirements on what constitutes timely reporting of breaches. Because companies often do work for multiple Federal agencies, the respondent stated that it is important to have a consistent approach Governmentwide so that companies can set up a single compliant system and process.

Response: Reciprocity in information security policies and regulations and incident reporting requirements among Departments and agencies is outside the scope of this regulation. The purpose of this rulemaking is to ensure that DHS contractors adequately protect CUI received under DHS contracts. As such, the focus of this rule is properly limited to the interests and mission needs of the Department. Additionally, this rule is fully consistent with all applicable statutes, regulations, and Governmentwide policies applicable to CUI and information systems. With regard to reciprocity in information security policies, DHS finalizes the rule as proposed and declines to make changes in response to public comments.

Comment: One respondent expressed concern that the rule fails to emphasize the need for reciprocity across Federal agencies and the requirement to rely upon provisional authorizations and ATOs already obtained through other Federal agencies.

Response: The focus of this rule is properly limited to the interests and requirements of DHS. As such, reciprocity across the Federal government and the requirement to rely upon provisional authorizations and ATOs obtained from other Departments and agencies is beyond the scope of this rule. However, nothing in the rule prevents a contractor from submitting a SA package that was previously approved by another Department, agency, or DHS Component. DHS will consider existing SA packages and test results, as appropriate. It is quite possible that such a submission would expedite the approval process to obtain an ATO from DHS.

9. Incident Reporting and Response

Comment: Several respondents stated that the DHS requirement to report incidents involving PII or SPII within 1 hour of discovery, and all other incidents within 8 hours of discovery, is unreasonably short and inconsistent with other government requirements. One respondent stated that it is important to have a consistent approach Governmentwide so that companies can set up a single compliant system and process. One respondent recommended DHS extend the reporting timeframes to 8 hours for known incidents and 72 hours for suspected incidents involving contractors' internal information systems. One respondent suggested DHS extend the timeframe for reporting known or suspected incidents on contractor information systems not operated on behalf of the Department to 72 hours. Another respondent requested that DHS revise its incident reporting requirement to exclude reporting when the contractor information system is not operated on behalf of the Department.

Response: The requirement to report incidents impacting PII within 1 hour of discovery is documented in OMB memorandum M–18–02, *Fiscal Year 2017–2018 Guidance on Federal Information Security and Privacy Management Requirements,* and in United States Computer Emergency Readiness Team (US–CERT) Federal Incident Notification Guidelines. The 8-hour reporting timeline for incidents impacting all other categories of CUI came from the Department's review of its internal policies and procedures for other categories of CUI. Specifically, the Department reviewed its policies for chemical-terrorism vulnerability information (CVI), protected critical infrastructure information (PCII), and sensitive security information (SSI) (categories of information for which the Department is statutorily responsible) and determined that the existing reporting timeline for incidents impacting these information categories is 8 hours. The Department considered creating a separate reporting timeline for PII, CVI, PCII, and SSI and establishing a different reporting timeline for the remaining categories of CUI and determined that having multiple reporting timelines would create confusion and could potentially result in incidents not being timely reported to the Department. It is also important to note that Departments and agencies must report information security incidents where the confidentiality, integrity, or availability of a Federal information system is potentially compromised to US–CERT within 1 hour of being identified by the agency's top-level Computer Security Incident Response Team, Security Operations Center (SOC), or IT department. As it relates to the incident reporting timelines required by DoD, reciprocity among agency regulations is outside the scope of this rule.

DHS does not accept the recommendation to extend the reporting requirement for known or suspected incidents on contractor information systems that are not operated on behalf of the Department (*i.e.,* a nonfederal information system). The importance of CUI is not changed by being on a nonfederal information system. As such, DHS will not hold nonfederal information systems that contain the Department's CUI to a lower standard than Federal information systems that contain the same information.

DHS also does not accept the recommendation that incidents impacting CUI on a contractor's internal information systems should not be reported to the Department. A suspected or known incident impacting the Department's CUI should always be reported. To require anything less would be contrary to the public interest and the mission of the Department.

Comment: One respondent asked DHS to clarify that if a subcontractor experiences an incident, the subcontractor is required to submit the incident report to DHS, but the subcontractor also must notify the prime contractor (or next higher tier contractor) that it submitted the report.

Response: DHS accepts this recommendation. DHS included paragraph (j), *Subcontracts,* in proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* to make clear that the requirements of the clause must be included in the terms and conditions of subcontract agreements, making subcontractors responsible for complying with the requirements of the clause. However, to make clear the Department's intent to require that subcontractors report incidents that occur in their facilities and information systems, DHS has revised proposed paragraph (d) (now paragraph (c)), *Incident Reporting Requirements,* to add subcontractor reporting responsibilities.

Comment: One respondent raised concerns that the incident response requirements in paragraphs (e)(3) and (5) of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* state the following: ''(3) Incident response activities determined to be required by the Government may include, but are not limited to, the following: (i) Inspections, (ii) Investigations . . .'' and ''(5) The Government, at its sole discretion, may obtain assistance from other Federal agencies and/or third-party firms to aid in incident response activities.'' The respondent recommended that the clause clarify how a contractor's confidential and privileged information will be protected in a case where the Government elects to conduct such inspections and investigations,

particularly with the assistance of third-party firms.

Response: DHS does not accept the recommendation to identify in the text of the clause how a contractor's confidential and privileged information will be protected when third-party firms assist with the Department's incident response activities. However, DHS's current processes account for the protection of this information when third-party firms are used. DHS will continue to protect against the unauthorized use or disclosure of information received or obtained from contractors under clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* Contractors from third-party firms that assist in the Government's incident response activities are required to sign nondisclosure agreements. Additionally, both DHS and its contractors that report suspected or known incidents are required to complete a formal Rules of Engagement before incident response activities begin. The Rules of Engagement documents the security mechanisms that will be used to ensure the protection of information received during the Department's incident response activities.

Comment: One respondent stated that the incident reporting obligation does not limit the scope of reportable incidents to Federal information systems or even contractor information systems that contain Federal information. Because this distinction is not made, the respondent asserted that the rule could be read to require a contractor to report to DHS any incident impacting its own internal information systems, regardless of whether the incident has any likelihood of impacting the DHS CUI resident on that information system. The respondent recommended that DHS harmonize its reporting obligations with any reporting obligations currently under consideration by the FAR Councils in conjunction with its work on the FAR CUI rule.

Response: DHS disagrees that incidents should be reported to the Department only after the contractor determines it is likely the incident will impact/has impacted the DHS CUI resident on the information system. If DHS CUI is resident on an information system where a suspected or known incident occurs, contractors are required to report that incident to the Department. Additionally, it is clear from the title and substance of this rule that the focus is ensuring the adequate security of CUI, in general and when resident on an information system. To imply that this rule is requiring that suspected or known incidents must be reported on any and all information systems, including those that do not include the Department's CUI, is unreasonable and false. DHS is a participant on the FAR team responsible for drafting the FAR CUI rule and has not identified any conflicts between this rule and the work taking place with the FAR team.

Comment: One respondent stated that the requirement to report all known and suspected incidents may result in a substantial number of false positives that would be unduly burdensome for both DHS and its contractors.

Response: The respondent is correct that the incident reporting requirements of the clause may result in a number of ''false positives'' being reported to the Department. DHS expects that this may be the case and is structured to receive and resolve the anticipated number of incidents to be reported under this clause. Given the persistent and prevalent nature of cyber-attacks against both public and private networks and information systems, it is increasingly imperative that the Department is timely notified of any suspected or known incidents impacting information systems where the Department's CUI resides.

Comment: One respondent stated that paragraphs (e), *Incident Response Requirements,* and (f), *PII and SPII Notification Requirements,* of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* should be revised to be consistent with the current OMB directive. The *Discussion and Analysis* section of the proposed rule stated that ''[t]he timing for reporting incidents involving PII or SPII is consistent with OMB Memorandum M–07–16, Safeguarding Against and Responding to the Breach of Personally Identifiable Information.'' The respondent advised that the OMB memorandum cited was superseded on January 3, 2017, by OMB Memorandum M–17–12, *Preparing for and Responding to a Breach of Personally Identifiable Information.* The respondent recommended that DHS update the rule and proposed clause to reflect the current OMB memorandum.

Response: DHS accepts the recommendation and has updated the relevant portions of the rule to ensure consistency with OMB M–17–12, *Preparing for and Responding to a Breach of Personally Identifiable Information.*

10. Privacy Requirements

Comment: One respondent raised a concern regarding paragraph (b)(3) of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* which prohibits a contractor from maintaining SPII in its invoicing, billing, and other recordkeeping systems. The respondent stated that some recordkeeping systems may have appropriate protections in place for safeguarding SPII while other systems may not. Because of this gap, the respondent recommended that contractors be required to protect SPII as required by law and be permitted to choose how best to meet that obligation given the nature of their information systems. The contractor also stated that the requirement would be prohibitive for an institution of higher education accepting a contract.

Response: DHS does not accept the respondent's recommendation. DHS has made a business decision based on previous incident response activities that DHS contractors are not authorized to maintain the Department's SPII in their invoicing, billing, and other recordkeeping systems.

Comment: One respondent raised concerns with paragraph (f)(1) of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* which states that ''[t]he Contractor shall not proceed with notification unless directed in writing by the Contracting Officer.'' The respondent expressed concern that the SPII or PII also might fall under the Health Insurance Portability and Accountability Act (HIPAA) or other Federal breach reporting requirements. If so, the respondent said, the language may present a conflict as to when and how to notify someone of the breach of their personal information. The respondent also stated that while it is unlikely that an institution would be notifying individuals of breaches within 5 days of the incident, an institution may choose to notify another government official, such as the Secretary of Health and Human Services, if the incident also constitutes a breach under HIPAA. Because there is no other section of the clause clearly delineating the process to notify other governmental bodies, as may be required by State or Federal law, the respondent recommends revising the language as follows (revision in bold type):

The Contractor may notify other state or federal government agencies as required by law, but must copy the Contracting Officer on any reports made to other federal or state agencies. The Contractor shall not proceed with notification to **individuals or entities outside of the government** unless directed in writing by the Contracting Officer.

Response: DHS partially accepts the recommendation. Proposed clause

3052.204–7X, *Safeguarding of Controlled Unclassified Information,* identifies requirements for reporting suspected or confirmed PII incidents as required by internal DHS policy and OMB memorandum M–17–12, *Preparing for and Responding to a Breach of Personally Identifiable Information.* Such requirements are identified in the DHS Incident Handling Guidance and are implemented in proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* Nonetheless, this clause was not intended to preempt contractors from reporting PII incidents under any applicable law. To ensure this point is clear, the statement was amended to add language allowing for compliance with applicable laws. Also, it is important to note the Department's timeline for notifying individuals pertains to when a contractor receives a notification request from the contracting officer; it is not related to the date the incident is reported.

Comment: One respondent recommended DHS consider extending the 5-day notification requirement to affected individuals to enable contractors to dedicate resources to remediation and investigation activities in the initial days after a breach. The respondent stated that the 5-day notification period is substantially shorter than most State reporting obligations (30–45 days in many States). The respondent asserted that many companies reflect these State time periods for providing notifications to affected individuals and raised concerns that the notification timeline will detract from a contractor's ability to meaningfully respond to the incident.

Response: DHS does not accept the recommendation. The Department is requiring that contractors *notify the individual* whose PII and/or SPII was under the control of the contractor or resided in its systems at the time of the incident *not later than 5 business days after being directed to notify individuals, unless otherwise approved by the Contracting Officer* (emphasis added). The 5-business day notification period is only to address the time period in which the contractor must prepare and mail the notification to the individual, after being directed to do so by the Contracting Officer. It is completely unrelated to the timing of incident notification.

Comment: One respondent raised concerns with paragraph (g), *Credit Monitoring Requirements,* of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* The section requires the contractor to provide credit monitoring services, including call center services, if directed by the Contracting Officer, to any individual whose PII or SPII was under the control of the contractor, or resided in the information system, at the time of the incident for a period beginning the date of the incident and extending not less than 18 months from the date the individual is notified. The respondent recommends that contractor's internal information systems be excepted from this requirement.

Response: DHS does not accept the recommendation to exclude contractor information systems from the credit monitoring requirements in clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* The respondent is attempting to draw a distinction where there is none. Unauthorized access to or disclosure of the Department's PII on a contractor's internal information system has the same level of importance and potential impact as it would on a Federal information system. To the extent a contractor's internal information system contains PII provided by the Government or generates PII on behalf of the Government and is subject to a known or suspected incident that impacts the PII, the contractor is responsible for providing notification and credit monitoring if the Government determines it is appropriate to do so. Any stance to the contrary is inconsistent with the public interest and the mission of the Department.

Comment: One respondent stated that the HSAR should include a requirement that the DHS procuring activity and the contractor explicitly agree on whether and to what extent the contractor has credit monitoring and call center obligations as part of a specific contract. The respondent stated that the agreement should specifically clarify whether these obligations extend to the contractor in relation to GFE that the contractor operates in its own internal contractor environment.

Response: Paragraphs (f), *PII and SPII Notification Requirements,* and (g), *Credit Monitoring Requirements,* of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* state that those requirements are only applicable when an incident involves PII or SPII. To ensure that contractors understand when these requirements are applicable, DHS is making these requirements a separate clause at 3052.204–7Y titled *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents.* The applicability of new clause 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents,* is limited to solicitations and contracts where a contractor will have access to PII. This change ensures DHS contractors understand credit monitoring and notification requirements are only applicable when the solicitation and contract require contractor access to PII.

The decision to provide notification and credit monitoring services is specific to each incident. As such, a blanket determination cannot be made that these services will be required each time a known or suspected incident is reported that impacts PII. The intent of the clause is to ensure that the Government can timely notify individuals impacted by an incident and provide them with credit monitoring services if and when the Government determines it is appropriate to do so. Paragraph (b)(2) of clause 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents,* states that ''[a]ll determinations by the Department related to notifications to affected individuals and/or Federal agencies and related services (*e.g.,* credit monitoring) will be made in writing by the Contracting Officer.'' Therefore, the Contracting Officer will advise contractors of their requirements depending on the incident on a case-by-case basis. Depending on the severity of the incident, credit monitoring may not be necessary in one instance, but may be in another.

11. Sanitization of Government and Government-Activity-Related Files and Information

Comment: One respondent questioned the implementation of paragraph (h), *Certificate of Sanitization of Government and Government-Activity-Related Files and Information,* of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* The clause states ''the Contractor shall return all CUI to DHS and/or destroy it physically and/or logically as identified in the contract.'' The respondent asked where such information would be identified in the contract, specifically whether the information would be identified in the clause, the Statement of Work, or some other attachment. The respondent also stated that it would be helpful to see the DHS language that identifies how a contractor is to destroy CUI physically and/or logically.

Response: DHS will identify in the Statement of Work, Statement of Objectives, Performance Work Statement, or specification if and when CUI is required to be returned,

physically and/or logically destroyed, or both. Clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* states that destruction of the CUI ''shall conform to the guidelines for media sanitization contained in NIST SP 800–88, *Guidelines for Media Sanitization*.'' As such, no additional instruction on how to physically or logically destroy CUI is necessary.

Comment: One respondent noted that the sanitization requirement is contrary to data use rights typical for an institution of higher education environment. The respondent stated that it is very common for higher education institutions to maintain files and data associated with research under U.S. Government contracts and grants that will be used for follow-on research and that CUI may be resident on contractor information systems. The respondent recommended that the language be revised to indicate that the contractor must return or destroy the CUI when it is specified by the individual contract. The respondent also recommended DHS use the requirements under NIST SP 800–171, which includes a media sanitization protocol.

Response: Proposed paragraph (h), *Certificate of Sanitization of Government and Government-Activity-Related Files and Information,* requires contractors to return all CUI to DHS and/or destroy it physically and/or logically using the guidelines in NIST SP 800–88, Guidelines for Media Sanitization. Contractors must also certify and confirm sanitization and submit the certification to the COR and contracting officer.

However, to ensure that media is returned and destroyed only when the Government has determined it to be appropriate to do so, the language is revised to state that CUI must be returned and/or destroyed *unless* the contract states that return or destruction of CUI is not required. Also, the media sanitization requirements in the clause do not conflict with the media sanitization protocols in NIST SP 800–171 as the sanitization requirements in this publication are taken from NIST SP 800–88.

12. Subcontractor Flow-Down Requirements

Comment: Multiple respondents expressed concern that paragraph (j), *Subcontracts,* of proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* requires contractors to ''insert this clause in all subcontracts and require subcontractors to include this clause in all lower-tier subcontracts.'' The respondent stated that this language appears to require contractors to flow down the clause to subcontractors that have no role in receiving or creating CUI in performance of the contract. The respondent stated that this is inconsistent with the applicability described in the preamble to the proposed rule and recommended that the language be updated accordingly.

Response: DHS agrees with the recommendation. Proposed paragraph (j) (now paragraph (g)), *Subcontracts,* has been revised to require contractors flow down the clause only to subcontracts involving CUI.

13. Requirements Applicable to Educational Institutions

Comment: One respondent noted that paragraph (a) of proposed clause 3004.470–4 states that ''[n]either the basic clause nor its alternates should ordinarily be used in contracts with educational institutions.'' The respondent stated that it would be helpful for DHS to indicate what specific contract clauses they expect to use with educational institutions, and what controls (such as, for example, those described in NIST SP 800–171) would be required to be in place to protect CUI information received pursuant to those clauses. The respondent recommended that, in the case of contracts requiring an institution of higher education to have access to CUI, or to collect or maintain CUI on behalf of the agency, DHS use the baseline requirement of ''moderate'' security controls for CUI Basic information, as described in NIST SP 800–171. The respondent stated that protections required in addition to those present under CUI Basic should be implemented through the CUI Registry's CUI Specified mechanisms to reflect the requirements of applicable law, regulations, or Governmentwide policy requiring supplemental controls, and should be specifically identified in the governing contract. The respondent also requested that information that does not meet the definition of CUI, such as vendor proprietary information, be specifically identified in the contract, along with the level of protection that must be afforded to such information. The respondent stated that this approach would reduce the substantial administrative and financial burdens to the institutions, funding agencies, and their external partners and will allow institutions of higher education to adopt the compliance solutions that work best with their existing information systems and practices.

Response: The statement that ''[n]either the basic clause nor its alternates should ordinarily be used in contracts with educational institutions'' is only applicable to clause 3052.204–71, *Contractor Employee Access.* It is also important to note that this statement does not prohibit the Department from including the clause or its alternates in contracts with educational institutions when it is determined to be necessary. The recommendation that DHS should indicate what specific contract clauses it expects to use and security controls required to be in place to protect CUI when contracting with educational institutions implies the Department should use a lesser information security standard when contracting with these organizations. This is not the case. The security requirements required are those discussed in this rule. Additionally, information that is neither CUI nor classified is not required to be protected.

As previously stated, Federal information systems, which include contractor information systems operated on behalf of the agency, are subject to the requirements of NIST SP 800–53. Generally speaking, should the Government determine that a contractor information system is not operated on its behalf, NIST SP 800–171 is applicable instead of NIST SP 800–53. However, consistent with 32 CFR 2002.14(a)(3) and (g), ''[a]gencies may increase CUI Basic's confidentiality impact level above moderate only internally, or by means of agreements with agencies or non-executive branch entities (including agreements for the operation of an information system on behalf of the agencies).'' Relatedly, 32 CFR 2002.4(c) states that agreements ''include, but are not limited to, contracts, grants, licenses, certificates, memoranda of agreement/arrangement or understanding, and information-sharing agreements or arrangements.'' Therefore, DHS can require a confidentiality impact level above moderate through agreements with non-executive branch entities and does not need an update to the CUI Registry to do so. DHS will determine if an information system is Federal or nonfederal, perform the necessary risk assessment consistent with Departmental policy, and identify the security controls contractors must meet through an SRTM. The SRTM will be included in the solicitation to ensure contractors clearly understand the security requirements they must meet before responding to the solicitation. Apart from using NIST SP 800–171 as a baseline for the security controls, DHS does not anticipate a change to the

process of providing an SRTM and identifying the type(s) of CUI provided or developed under a contract where nonfederal information systems are used. However, this process cannot be fully defined until the FAR CUI rule is finalized.

14. Self-Deleting Requirements

Comment: DHS invited comments on the self-deleting requirements in proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* One respondent raised concerns with the use of self-deleting requirements and requested that DHS consider the use of alternates to help parties achieve certainty about their responsibilities to implement the requirements of the clause.

Response: DHS agrees with the commenter that the use of alternates will increase certainty among DHS contractors on their responsibilities to comply with the requirements of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.* As such, DHS has: (1) made the requirements of paragraph (c), *Authority to Operate,* Alternate I to the basic clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information;* and (2) made the requirements of paragraphs (f), *PII and SPII Notification Requirements,* and (g), *Credit Monitoring Requirements,* a separate clause at 3052.204–7Y titled *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents.*

As a result of these changes, basic clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* is limited to the following provisions: paragraphs (a), *Definitions;* (b), *Handling of Controlled Unclassified Information;* (c), *Incident Reporting Requirements;* (d), *Incident Response Requirements;* (e), *Certification of Sanitization of Government and Government-Activity-Related Files and Information;* (f), *Other Reporting Requirements;* and (g), *Subcontracts.* Compliance with these requirements is mandatory regardless of the information system type (*i.e.,* Federal information system or nonfederal information system). Alternate I to the basic clause is applicable when Federal information systems, which include contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI. New clause 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents,* is applicable to solicitations and contracts where a contractor will have access to PII. These changes were made to: (1) ensure DHS contractors clearly understand the scope and applicability of the various requirements contained in clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information;* (2) make clear that the ATO requirements of the clause are only applicable to Federal information systems, which include contractor information systems operated on behalf of the agency; and (3) ensure DHS contractors understand credit monitoring and notification requirements are only applicable when the solicitation and contract require contractor access to PII.

15. Applicability to Service Contracts

Comment: The proposed rule requested comments on making proposed clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* applicable to all service contracts with the understanding that the clause would be self-deleting if it does not apply. One respondent stated that it would be preferable for DHS to include the clause only in those contracts where the clause is required, saying there is no realistic self-deleting function.

Response: DHS agrees with the commenter and will not make the requirements of the proposed rule applicable to all service contracts. Clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* will be included only in contracts where its requirements are applicable.

16. Costs

Comment: One respondent noted that the cost data provided in the proposed rule are based on the assumption of a contractor having a centralized system base (for example, one information system, one accounting system, a limited number of individuals with access, a controlled physical environment). The respondent stated that institutions of higher education are highly decentralized entities and that costs increase significantly when implementing these requirements over multiple systems, on a case-by-case basis, as would generally be required in the decentralized higher education environment. The respondent said the problem only is magnified when each agency adopts separate and distinct requirements for the safeguarding of CUI, making it imperative to have one standard to operate by, such as that proposed under the NARA CUI rule.

Response: The information system security requirements of this rule are focused on the requirements applicable to Federal information systems. Requirements for Federal information systems are governed by Federal Information Processing Standards (FIPS) Publication 199, *Standards for Security Categorization of Federal Information and Information Systems;* FIPS Publication 200, *Minimum Security Requirements for Federal Information and Information Systems;* and NIST SP 800–53, *Security and Privacy Controls for Information Systems and Organizations.* These publications define the process by which the Government categorizes a Federal information system as requiring low, moderate, or high security controls to protect the confidentiality, integrity, and availability of information that is processed, stored, and transmitted by those systems/organizations and to satisfy a set of defined security requirements. The commenter's approach displaces compliance with these publications and requests that the Government identify a single security standard for Federal information systems without the benefit of the methodical and deliberate processes required by each of these publications. This approach is unacceptable because it is inconsistent with FISMA and NIST policy for Federal information systems. Alternatively, the NARA CUI rule establishes baseline information security requirements necessary to protect CUI Basic on nonfederal information systems by mandating the use of NIST SP 800–171, *Protecting Controlled Unclassified Information in Nonfederal Information Systems and Organizations,* when establishing security requirements to protect CUI's confidentiality on nonfederal information systems. However, consistent with 32 CFR 2002.14(a)(3) and (g), ''[a]gencies may increase CUI Basic's confidentiality impact level above moderate only internally, or by means of agreements with agencies or non-executive branch entities (including agreements for the operation of an information system on behalf of the agencies).''

The Department has not updated cost estimates to account for institutions with multiple systems because, based on Federal Procurement Data System (FPDS) data on unique vendors awarded contracts under the most likely applicable Product and Service Codes (PSCs) in Fiscal Year (FY) 2019 and FY

2020, fewer than 1 percent of affected entities are educational institutions that could have multiple systems. Based on the estimated population of affected entities (171), only one entity would be an educational institution that might have multiple systems on average.[4] In addition, DHS has no data on how many systems these entities use. Other types of entities could have multiple systems. However, multiple variables dictate the cost of an independent assessment (*e.g.,* governance, decentralization of information systems, number of information systems (*i.e.,* size), complexity, categorization, and documentation). As such, the number of information systems impacted by the ATO is not the sole factor to consider when determining if there will be increases to the cost of an independent assessment. While there may be increases to the cost of an independent assessment when multiple information systems are involved, such increases are largely dependent upon the level of decentralization of the systems and variances in the governance structure of each system. If the information systems have the same or similar governance structures, the cost of the independent assessment may not see significant cost impacts. Conversely, if there is significant decentralization and variances in governance structures, the cost of an independent assessment could increase. Such determinations must be made on a case-by-case basis and take into consideration all relevant factors that dictate the cost of an independent assessment.

Therefore, DHS maintains the cost estimates from the proposed rule but recognizes that these costs may be underestimates because FPDS data do not indicate subcontractors that may have multiple systems, and there is uncertainty on the prevalence of multiple systems for affected entities beyond educational institutions and uncertainty related to the cost implications to independent assessment of multiple systems.

IV. Statutory and Regulatory Requirements

A. Executive Orders 12866 and 13563

E.O. 12866 (Regulatory Planning and Review) and E.O. 13563 (Improving Regulation and Regulatory Review) direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, and safety effects; distributive impacts; and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has been designated a ''significant regulatory action,'' although not economically significant, under section 3(f) of E.O. 12866. Accordingly, the rule has been reviewed by OMB.

1. Outline of the Analysis

Section IV.A.2.a describes the need for the final rule, and section IV.A.2.b describes the process used to estimate the costs of the rule and the general inputs used, such as the number of affected entities. Section IV.A.3 explains how the provisions of the final rule will result in quantifiable costs and presents the calculations DHS used to estimate them. In addition, section IV.A.3 describes the qualitative costs, cost savings, and benefits of the final rule. Section IV.A.4 summarizes the estimated first year and 10-year total and annualized costs of the final rule. Finally, section IV.A.5 presents the regulatory alternatives considered.

2. Summary of the Analysis

DHS expects that the final rule will result in costs, cost savings, and benefits. As shown in Exhibit 1, DHS estimates a range of costs to capture uncertainty in cost data and, therefore, presents the estimated impacts using a lower bound, upper bound, and primary estimate. The primary estimate is calculated by taking the average of the upper bound and lower bound estimates. DHS estimates the final rule will have an annualized cost ranging from $15.32 million to $17.28 million at a discount rate of 7 percent and a total 10-year cost that ranges from $107.62 million to $121.37 million at a discount rate of 7 percent. DHS was unable to quantify the cost savings or benefits associated with the rule. However, the final rule is expected to produce cost savings by reducing the time required to grant an ATO, reducing DHS time reviewing and reissuing proposals because contractors are better qualified, and reducing the time to identify a data breach. The final rule also produces benefits by better notifying the public when their data are compromised, requiring the provision of credit monitoring services so that the public can better monitor and avoid costly consequences of data breaches, and reducing the severity of incidents through timely incident reporting.

EXHIBIT 1—ESTIMATED MONETIZED COSTS OF THE FINAL RULE

[$2020 millions]

	Costs		
	Low	Primary	High
Undiscounted 10-Year Total	$152.60	$162.32	$172.04
10-Year Total with Discount Rate of 3%	130.28	138.58	146.889
10-Year Total with Discount Rate of 7%	107.62	114.49	121.37
Annualized with Discount Rate of 3%	15.27	16.25	17.22
Annualized with Discount Rate of 7%	15.32	16.30	17.28

Exhibit 2 below provides a detailed summary of the final rule provisions and their impacts. *See* the costs and cost savings subsections of section IV.A.3 (Subject-by-Subject Analysis) below for more detailed explanations.

[4] Calculation: 171 ATO vendors * 0.72 percent of educational institutions in the population = 1.2 ATO vendors with multiple systems.

EXHIBIT 2—SUMMARY OF PROVISIONS AND ECONOMIC IMPACTS OF THE FINAL RULE

3052.204–7X, Safeguarding of controlled unclassified information	Requirement(s)	Expressly required by statute, regulation, or governmentwide policy?	Statute, regulation, or governmentwide policy	Costs	Benefits
(a) Definitions	Defines terms applicable to the clause.	N/A	Definitions for adequate security, Homeland Security Agreement Information, Homeland Security Enforcement Information, Operations Security Information, Personnel Security Information, and Sensitive Personally Identifiable Information are the only terms that are not defined in a statute, regulation, or Governmentwide policy.	No costs associated with definitions.	
(b) Handling of Controlled Unclassified Information.	(a) Requires contractors to comply with DHS policies and procedures for the handling of CUI. (b) Limits contractors' use or redistribution of CUI to only those activities specified in the contract.	(a) Yes ..... (b) No	(a) 32 CFR part 2002, *Controlled Unclassified Information (CUI)*. (b) N/A—Internal DHS requirement.	(a) No new costs, is currently a regulatory requirement. (b) Imposes no new cost	Unquantified cost savings to DHS from clarified system requirements, which reduce time to grant ATOs, identify better qualified bidders for DHS contracts, and prevent DHS from putting contracts on hold to reissue requests for proposals and alternate contractors.
	(c) Ensures CUI transmitted via email is protected by encryption or transmitted within secure communications systems.	(c) No	(c) N/A—Internal DHS requirement.	(c) Imposes no new cost.	
(c) Incident Reporting Requirements.	Contractors and subcontractors must: (a) Report all known or suspected incidents involving PII or SPII within 1 hour of discovery.	(a) Yes	(a) OMB Memorandum M–17–12 PRIV, *Preparing for and Responding to a Breach of Personally Identifiable Information,* requires each agency to have a breach response plan that includes timely reporting. The DHS Senior Agency Official for Privacy determined that to meet the timeliness requirements of M–17–12, the initial report must occur within 1 hour of discovery.	(a, b) The primary estimate of reporting an incident to DHS is $1,075 per incident. DHS cannot quantify the aggregate total of these costs because DHS does not track the origin of security event notices and is therefore unable to determine how many security event notices external contractors reported to their respective Component SOC or the DHS Network Operations Security Center.	(a, b, c) Timely reporting of incidents is critical to prevent the impact of an incident from expanding, ensure incident response and mitigation activities are undertaken quickly, and ensure individuals are timely notified of the possible or actual compromise of their PII. Reducing the time to identify a breach improves the effectiveness of incident management, reduces false positives, improves triage by lowering the cost of trivial true positives, minimizes mission disruption and the resulting impact on revenue and performance, and reduces the cost of investigation.
	(b) Report all other incidents within 8 hours of discovery.	(b) No, internal policy requirement.	(b) N/A.		
	(c) Ensure CUI transmitted via email is protected by encryption or transmitted within secure communications systems.	(c) No	(c) 32 CFR 2002.14, *Safeguarding,* paragraphs (c), *Protecting CUI under the control of an authorized holder,* and (g), *Information systems that process, store, or transmit CUI*.	(c) No new costs, is currently a regulatory requirement.	
(d) Incident Response Requirements.	(a) Requires contractors and subcontractors to provide full access and cooperation for all activities determined by the Government to be required to ensure an effective incident response.	(a) Yes	(a) Federal Information Security Modernization Act of 2014 (44 U.S.C. 3551), OMB A–130, *Managing Information as a Strategic Resource*.	(a) DHS components have included differing language in contracts for incident response, while this provision creates consistency across DHS components in language without change to requirements. Since DHS already conducts this practice, these costs are part of the existing baseline costs of business.	Standardizing incident reporting leads to more proactive incident response, potentially faster incident resolution, and potential reduction in the scope and impact of the incident depending on the nature of the attack (*i.e.,* fewer records breached).

EXHIBIT 2—SUMMARY OF PROVISIONS AND ECONOMIC IMPACTS OF THE FINAL RULE—Continued

3052.204–7X, Safeguarding of controlled unclassified information	Requirement(s)	Expressly required by statute, regulation, or governmentwide policy?	Statute, regulation, or governmentwide policy	Costs	Benefits
	(b) Allows the Government to obtain outside assistance to assist in incident response activities.	(b) No	(b) N/A—Internal DHS requirement.	(b) N/A—The Government bears the costs related to obtaining assistance from external parties for incident response activities (*e.g.,* existing DHS contracts, interagency agreements). This cost is not new because incident response is a longstanding practice and DHS has existing pre-position contracts that allow it to tap services for incident response.	
(e) Certificate of Sanitization of Government and Government-Activity-Related Files and Information.	Requires the contractor to return all CUI to DHS and/or destroy it physically and/or logically. Destruction must conform to the guidelines for media sanitization contained in NIST SP 800–88, *Guidelines for Media Sanitization*.	Yes	Paragraph (d) of HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Resources*.	No new costs are anticipated as this requirement simply replaces the pre-existing requirement in paragraph (d) of HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Resources.* Additionally, any costs associated with this requirement are covered under the initial regulation for HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Resources*.	
(f) Other Reporting Requirements.	Informs contractors that the incident reporting required by this clause does not rescind the contractor's responsibility for other incident reporting pertaining to its unclassified information systems under other clauses that may apply to its contract(s), or as a result of other applicable statutory or regulatory requirements, or other U.S. Government requirements.	No	N/A	No costs related to DHS are anticipated with this requirement as those costs would be covered under the ''other applicable statutory or regulatory requirements, or other U.S. Government requirements''.	
(g) Subcontracts	Requires the contractor to insert this clause in all subcontracts and require subcontractors to include this clause in all lower tier subcontracts when subcontractor employees will have access to CUI; CUI will be collected or maintained on behalf of the agency by a subcontractor; or a subcontractor information system(s) will be used to process, store, or transmit CUI.	In part. Prime contractors are required to flow down the text of this clause to applicable subcontracts. Many of the clause requirements stem from a statute, regulation, or Governmentwide policy as indicated above and below.	See above and below.		

EXHIBIT 2—SUMMARY OF PROVISIONS AND ECONOMIC IMPACTS OF THE FINAL RULE—Continued

3052.204–7X, Safeguarding of controlled unclassified information	Requirement(s)	Expressly required by statute, regulation, or governmentwide policy?	Statute, regulation, or governmentwide policy	Costs	Benefits
(h) Authority to Operate.	(a) Security Authorization	(a) Yes	(a) Federal Information Security Modernization Act of 2014 (44 U.S.C. 3551), OMB A–130, *Managing Information as a Strategic Resource,* OMB Memorandum M–22–01, *Improving Detection of Cybersecurity Vulnerabilities and Incidents on Federal Government Systems through Endpoint Detection and Response,* NIST SP 800–53, Revisions 4 and 5, *Security and Privacy Controls for Information Systems and Organizations,* and paragraphs (a) and (e) of HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Resources.*	(a) No new costs are anticipated as this requirement simply replaces the pre-existing requirement in paragraphs (a), (b), and (e) of HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Resources.* As part of the existing paragraphs (a) and (e) of HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Resources,* vendors are required to maintain full-time equivalent (FTE) oversight that is estimated to cost $209,008 per vendor.	
	(b) Independent Assessment	(b) No	(b) N/A	(b) $71.28 million at a 7% discount rate associated with the cost of an independent third party validating the security and privacy controls in place for the information system(s); reviewing and analyzing the SA package; and reporting on technical, operational, and management level deficiencies.	Independent assessment provides an objective measure of compliance with security and privacy controls. Benefits of using a third party to perform an independent assessment extend to contractor because they can use results to demonstrate cybersecurity excellence for customers.
	(c) ATO Renewal	(c) Yes	(c) See response at paragraph (a).	(c) No new costs are anticipated as this requirement simply replaces the pre-existing requirement in paragraphs (a), (b), and (e) of HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Resources.* Additionally, any costs associated with this requirement are covered under the initial regulation for HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Resources.*	
	(d) Security Review	(d) No	(d) N/A	(d) $159,924 at a 7% discount rate from a new cost to the government to conduct the security reviews and to the contractor for any interruptions to normal operations caused by the security review.	(d) Security review is an important mechanism for the Department to consistently ensure contractors are and remain compliant with the security requirements contained in their contracts.
	(e) Federal Reporting and Continuous Monitoring Requirements.	(e) Yes	(e) Federal Information Security Modernization Act of 2014 (44 U.S.C. 3551), OMB A–130, *Managing Information as a Strategic Resource,* OMB Memorandum M–14–03, *Enhancing the Security of Federal Information and Information Systems,* and NIST SP 800–53, Revisions 4 and 5, *Security and Privacy Controls for Information Systems and Organizations.*	(e) No new costs are anticipated as this requirement simply replaces the pre-existing requirement in paragraphs (a) and (e) of HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Resources.* Additionally, any costs associated with this requirement are covered under the initial regulation for HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Resources.*	

3052.204–7Y, Safeguarding of controlled unclassified information	Requirement(s)	Expressly required by statute, regulation, or governmentwide policy?	Statute, regulation, or governmentwide policy	Costs	Benefits
(a) Definitions	Defines terms applicable to the clause.	No	Definition for Sensitive Personally Identifiable Information is not defined in a statute, regulation, or Governmentwide policy.	No costs associated with definition.	
(b) PII and SPII Notification Requirements.	Requires the contractor, when directed, to notify any individual whose PII or SPII was either under the control of the contractor or resided in an information system under control of the contractor at the time the incident occurred.	Yes	OMB Memorandum M–17–12, *Preparing for and Responding to a Breach of Personally Identifiable Information*.	Estimated costs of notification are $2.72 per year per individual. DHS cannot quantify an aggregate total of this cost due to the rule because DHS does not track at the Department level the number of notifications required on either an annual or per-incident basis. *Note:* These costs are discretionary as the Government may or may not choose to have the contractor perform these services.	Benefit of improved notification to the public regarding breaches of their data, allowing better self-monitoring for identity theft. Such notification affords individuals the opportunity to take steps to minimize any harm associated with unauthorized or fraudulent activity.
(c) Credit Monitoring Requirements.	Requires the contractor, when directed, to provide credit monitoring services to individuals whose PII or SPII was under the control of the contractor, or resided in the information system at the time of the incident, for a period beginning the date of the incident and extending not less than 18 months from the date the individual is notified.	Yes	OMB Memorandum M–17–12, *Preparing for and Responding to a Breach of Personally Identifiable Information*.	Credit monitoring is estimated to cost $6.53 per year per individual. DHS cannot quantify these costs because it does not have estimates for the population of individuals affected. *Note:* These costs are discretionary as the Government may or may not choose to have the contractor perform these services.	Credit monitoring services can be particularly beneficial to the affected public as they can assist individuals in the early detection of identity theft as well as notify individuals of changes that appear in their credit report, such as creation of new accounts, changes to their existing accounts or personal information, or new inquiries for credit. Such notification affords individuals the opportunity to take steps to minimize any harm associated with unauthorized or fraudulent activity.

3052.204–71, Contractor employee access	Requirement(s)	Expressly required by statute, regulation, or governmentwide policy?	Statute, regulation, or governmentwide policy	Costs	Benefits
(a) Controlled Unclassified Information.	Provides definition of CUI	N/A	Definitions for Homeland Security Agreement Information, Homeland Security Enforcement Information, Operations Security Information, Personnel Security Information, and Sensitive Personally Identifiable Information are the only terms that are not defined in a statute, regulation, or Governmentwide policy.	N/A—No new costs are anticipated with the changes to this clause as the changes are merely updates to terminology and clarifying edits to ensure complete understanding of pre-existing requirements. Additionally, the costs associated with this clause are covered under the initial regulation for HSAR 3052.204–71, *Contractor Employee Access*.	
(b) Information Resources.	Provides definition of information resources.	N/A	Definition is taken from statute.	No costs associated with definitions.	
(c) Background Investigation Requirements.	Identifies background investigation requirements.	Yes	Paragraph (c) of HSAR 3052.204–71, *Contractor Employee Access. Note:* Paragraph was updated in final rule to replace the term ''IT resources'' with ''information resources''.	No new costs, is currently a regulatory requirement.	
(d) Prohibition	Identifies circumstances where the contracting officer can prohibit individuals from working under a contract.	Yes	Paragraph (d) of HSAR 3052.204–71, *Contractor Employee Access. Note:* No change from original text.	No new costs, is currently a regulatory requirement.	

3052.204–71, Contractor employee access	Requirement(s)	Expressly required by statute, regulation, or governmentwide policy?	Statute, regulation, or governmentwide policy	Costs	Benefits
(e) CUI Disclosure and Training Requirements.	Identifies limitation on disclosure of CUI and training requirements.	Yes	Paragraph (e) of HSAR 3052.204–71, *Contractor Employee Access. Note:* Replaced references to ''sensitive information'' with ''CUI'' and clarified the timing for completion of training discussed in the original clause.	No new costs, is currently a regulatory requirement.	
(f) Subcontract Requirements.	Identifies when clause must be included in subcontracts.	Yes	Paragraph (f) of HSAR 3052.204–71, *Contractor Employee Access. Note:* Replaced reference to ''sensitive information'' with ''CUI'' and ''resources'' with ''information resources''.	No new costs, is currently a regulatory requirement. *Note:* The change in terminology from ''sensitive information'' to ''CUI'' does not change the requirement for safeguarding. This change was made solely to comply with E.O. 13556, *Controlled Unclassified Information,* and its implementing regulation at 32 CFR part 2002. The type(s) of information DHS protected under ''sensitive information'' and now under ''CUI'' is not changed. Additionally, cost impacts associated with Governmentwide implementation of the CUI Program will be captured under the Federal Acquisition Regulation rulemaking that is currently in progress.	
(g) Training and Non-Disclosure Agreement Requirements.	Identifies that contractors must complete a security briefing, additional training for specific categories of CUI (if identified in the contract), and sign a non-disclosure agreement before receiving access to information resources under the contract.	Yes	Paragraph (g) of HSAR 3052.204–71, *Contractor Employee Access. Note:* Added language to clarify that additional training for specific categories of CUI from paragraph (e) will be identified in the contract.	No new costs, is currently a regulatory requirement.	
(h) Contractor Access to Information Resources.	Identifies restrictions on access to DHS information resources and consequences for attempting to access information resources that are not authorized under the contract.	Yes	Paragraph (h) of HSAR 3052.204–71, *Contractor Employee Access. Note:* Replaced reference to ''information technology resources'' with ''information resources''.	No new costs, already a regulatory requirement.	
(i), (j), (k), and (l)	No change from original clause text.	Yes	Paragraphs (i), (j), (k), and (l) of HSAR 3052.204–71, *Contractor Employee Access. Note:* No change from original clause text.	No new costs, is currently a regulatory requirement.	

a. Need for Regulation

DHS has determined that rulemaking is needed to implement security and privacy measures to safeguard CUI and facilitate improved incident reporting to DHS. The final rule enables DHS to identify, remediate, mitigate, and resolve incidents when they occur, not necessarily completely prevent them. DHS understands that there is no ''true'' way to completely prevent an incident from occurring. However, these measures are intended to decrease the likelihood of occurrence with full knowledge that there is no such thing as an ''unhackable'' system.

The final rule adds a new clause at 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* that ensures adequate protection of CUI. That new clause (1) identifies CUI handling requirements and security processes and procedures applicable to Federal information systems, which include contractor information systems operated on behalf of the agency; (2) identifies incident reporting requirements, including timelines and required data elements, inspection provisions, and post-incident activities; and (3) requires certification of sanitization of government and government-activity-related files and information. Additionally, new clause 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents,* requires contractors to have in place procedures and the capability to notify and provide credit monitoring services to any individual whose PII or SPII was under the control of the contractor or resided in the information system at the time of the incident.

These measures are necessary because of the urgent need to protect CUI and

respond appropriately when DHS contractors experience incidents with DHS information. Persistent and pervasive high-profile breaches of Federal information continue to demonstrate the need to ensure that information security protections are clearly, effectively, and consistently addressed in contracts. This final rule strengthens and expands existing HSAR language to ensure adequate security when contractor and/or subcontractor employees will have access to CUI; CUI will be collected or maintained on behalf of the agency; or Federal information systems, which include contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI.

b. Analysis Considerations

In accordance with the regulatory analysis guidance articulated in OMB's Circular A–4 and consistent with DHS's practices in previous rulemakings, this regulatory analysis focuses on the likely consequences of the final rule (*i.e.,* costs and cost savings that accrue to entities affected) relative to the baseline (existing regulations, statutes, and guidance).

This analysis covers 10 years (2023 through 2032) to ensure it captures major costs and cost savings that accrue over time. DHS expresses all quantifiable impacts in 2020 dollars and uses discount rates of 3 and 7 percent, pursuant to Circular A–4.[5] The impacts of this final rule are estimated relative to the existing baseline (*i.e.,* current requirements for security and training for contractors). DHS estimates impacts using a range of potential costs and cost savings to account for uncertainty and, therefore, presents the estimated impacts using a lower bound, upper bound, and primary estimate. The primary estimate is calculated by taking the average of the upper bound and lower bound estimates. DHS was unable to quantify some costs, cost savings, and benefits of the final rule. DHS describes them qualitatively in section IV.A.3 (Subject-by-Subject Analysis).

(1) Analysis Baseline

The final rule primarily codifies and updates the HSAR regulation to clarify, streamline, and include requirements from existing regulations, including those required by:

- Existing HSAR 3052.204–70, *Security Requirements for Unclassified Information Technology Requirements*
- 32 CFR part 2002, *Controlled Unclassified Information (CUI)*
- Federal Information Security Modernization Act of 2014 (44 U.S.C. 3551)
- NIST SP 800–53, *Recommended Security and Privacy Controls for Federal Information Systems and Organizations,* and NIST SP 800–88, *Guidelines for Media Sanitization* (Appendix G)

A more comprehensive discussion of existing requirements is in section IV.A.3 (Subject-by-Subject Analysis). In addition, the prior Exhibit 2 maps provisions of the final rule to relevant existing requirements.

The analysis of this final rule estimates impacts relative to a baseline assuming no regulatory action. The baseline represents the agency's best assessment of what the world would be like absent this action. A key difference in the impacts estimated in this final rule compared to the proposed rule is that the proposed rule did not perform an analysis incremental to a baseline of existing regulations. Instead, the proposed rule presented estimates of the costs of activities covered by provisions, regardless of whether those activities were new requirements from the rulemaking. In particular, two of the larger cost estimates (FTE oversight and continuous monitoring) presented in the proposed rule were for activities already required by existing regulations and are discussed below.

(a) Baseline Cost of Continuous Monitoring

Alternate I to clause 3052.204–7X, *Authority to Operate,* mandates that contractors operating Federal information systems comply with information system continuous monitoring requirements. FISMA regulations (44 U.S.C. 3551, *et seq.*) already require continuous monitoring and vendors therefore historically have incurred costs associated with continuous monitoring equipment and labor costs for setup, maintenance, and operation of continuous monitoring.[6] Consistent with the proposed rule analysis, internal DHS data and cost information from vendors indicate the cost for vendors complying with continuous monitoring requirements to acquire continuous monitoring equipment ranges from a lower bound of $82,034 to an upper bound of $376,107, with a primary estimate of $229,071.[7] ATO vendors already are required by FISMA to incur this one-time cost.

ATO vendors that are complying with continuous monitoring requirements also have labor in place to operate information systems and perform continuous monitoring. Internal DHS historical data and cost information from vendors indicate that labor costs for initial setup and operation of information systems to perform continuous monitoring range from a lower bound of $50,506 to an upper bound of $69,848 per year, with a primary estimate of $59,827.[8] This labor cost occurs every 3 years when there is ATO renewal and systems need to be initialized. ATO vendors complying with existing continuous monitoring requirements also have an annual cost to maintain systems that assist with continuous monitoring. DHS estimates this cost ranges from a lower bound of $6,448 to an upper bound of $19,343, with a primary estimate of $12,895.[9]

(b) Baseline Cost of FTE Oversight

Meeting the requirements of the final rule requires overseeing compliance of individuals who have received security authorization, as already required by FISMA. The final rule maintains this requirement in Alternate I to clause 3052.204–7X, *Authority to Operate.* The costs associated with this FTE oversight stem directly from a vendor's pre-existing information security posture. Vendors, particularly those operating in the IT space, have been complying with these requirements for years. In these instances, the vendors have the existing infrastructure (*i.e.,* hardware, software, and personnel) to implement these requirements and implementation costs are lower. The same is also true for many vendors that provide professional services to the Government and use IT to provide those services. Alternatively, vendors with less experience and capability in this area procure the hardware and software necessary to implement these requirements, as well as the labor costs associated with

[5] All present value calculations assume a base year of 2022.

[6] *See* 44 U.S.C. 3551.

[7] The final rule estimates of obtaining continuous monitoring equipment are consistent with the proposed rule (Safeguarding of Controlled Unclassified Information (HSAR Case 2015–001) [Docket No. DHS–2017–0006]) estimates and adjusted to 2020 dollars from 2016 dollars using the GDP deflator (Bureau of Economic Analysis (BEA) NAIPA Table 1.1.9 Implicit Price Deflators for Gross Domestic Product: *https://apps.bea.gov/iTable/iTable.cfm?reqid=19&step=2#reqid=19&step=2&isuri=1&1921=survey*).

[8] Estimates were developed using cost information from multiple vendors whose contracts with DHS include similar continuous monitoring requirements. The final rule estimates of labor cost to perform continuous monitoring are consistent with the proposed rule estimates and adjusted to 2020 dollars using the GDP deflator.

[9] The final rule estimates of labor cost to maintain systems that assist with continuous monitoring are consistent with the proposed rule estimates and adjusted to 2020 dollars using the GDP deflator.

personnel needed to implement and oversee these requirements. Costs vary depending on the hardware and software selected and the skill set each contractor requires in its employee(s) responsible for ensuring compliance with these requirements.

DHS determined the costs associated with FTE oversight of the final rule requirements by requesting cost information from multiple vendors. These data indicated that the cost of FTE oversight ranges from a lower bound of $69,848 to an upper bound of $348,168, with a primary estimate of $209,008.[10] These costs decline as vendors become more sophisticated and efficient.

(2) Estimated Number of Vendors Impacted by the Final Rule

The final rule will apply to DHS contractors that require access to CUI, collect or maintain CUI on behalf of the Government, or operate Federal information systems, which include contractor information systems operated on behalf of the agency that collect, process, store, or transmit CUI. DHS estimated the number of vendors subject to the final rule using FY 2019 and FY 2020 Federal Procurement Data System (FPDS) data on unique vendors awarded contracts under the most likely applicable Product and Service Codes (PSCs) in FY 2019 and FY 2020. FPDS data indicated that 3,030 unique vendors were awarded contracts under the most likely applicable PSCs in FY 2019 and 3,203 in FY 2020, including small business. However, not all contractors will be subject to clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.*

(a) Population of Alternate I to Clause 3052.204–7X, Safeguarding of Controlled Unclassified Information

DHS estimated that approximately 5.5 percent of the unique vendors identified as being awarded contracts under the most likely applicable PSCs in FY 2019 and FY 2020 would be subject to the requirements of Alternate I to clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* and will be required to respond to ATO requirements and submit SA documentation.[11] DHS calculated the number of vendors subject to Alternate I to clause 3052.204–7X, *Authority to Operate,* by multiplying the number of unique vendors awarded contracts under the most likely applicable PSCs in FY 2019 (3,030 unique vendors) and FY 2020 (3,203 unique vendors) by 5.5 percent. DHS estimated that in FY 2019, 167 vendors would be subject to Alternate I to clause 3052.204–7X,[12] and in FY 2020, 176 vendors would be subject to Alternate I to clause 3052.204–7X.[13] DHS then took a 2-year average of the 167 and 176 figures to estimate that approximately 171 vendors will be subject to Alternate I to clause 3052.204–7X.[14] DHS presents the ATO population estimate in Exhibit 3 along with the population estimate used in the NPRM.

EXHIBIT 3—CHANGE TO ATO POPULATION COMPARED TO NPRM

Component	NPRM	Final rule
ATO vendors subject to the rule	137	171

(b) Population of Paragraphs (b), (c), (d), (e), and (f) of Clause 3052.204–7X, Safeguarding of Controlled Unclassified Information

Based on FY 2019 and FY 2020 data, DHS estimated that approximately 11 percent of the unique vendors identified as being awarded contracts under the most likely applicable PSCs in FY 2019 and FY 2020 would be subject to the requirements of paragraphs (b), (c), (d), (e), and (f) of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information.*[15] DHS calculated the number of vendors subject to paragraphs (b), (c), (d), (e), and (f) by multiplying the number of unique vendors awarded contracts under the most likely applicable PSCs in FY 2019 (3,030 unique vendors) and FY 2020 (3,203 unique vendors) by 11 percent. DHS estimated that in FY 2019, 333 vendors would be subject to paragraphs (b), (c), (d), (e), and (f),[16] and in FY 2020, 352 vendors would be subject to paragraphs (b), (c), (d), (e), and (f).[17] DHS then took a 2-year average of the 333 and 352 figures to estimate that approximately 343 vendors will be subject to paragraphs (b), (c), (d), (e), and (f).[18] DHS presents the non-ATO population estimates in Exhibit 4 along with the non-ATO population estimates used in the NPRM.

[10] The final rule estimates of FTE oversight are consistent with the proposed rule estimates and adjusted to 2020 dollars using the GDP deflator.

[11] The estimate of the number of entities to which the rule will apply was established by reviewing FPDS data for FY 2019 and FY 2020, internal DHS contract data, experience with similar safeguarding requirements used in certain DHS contracts, and the most likely applicable PSCs. Additionally, the estimate was reviewed and validated by the cognizant departmental subject-matter experts (SMEs) for information security, information system security, and privacy. These SMEs have extensive experience in the requirements of these clauses and their applicability and current implementation in DHS contracts. The data review identified 3,030 unique contractors that were awarded contracts under the most likely applicable PSCs in FY 2019 and 3,203 in FY 2020, including small and large businesses. However, not all contractors awarded contracts under the most likely applicable PSCs are subject to clauses 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* and 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents.* A number of factors determine the applicability of the clauses, and a case-by-case analysis of each action is required to determine the applicability of the clauses. Further, the clauses are delineated by those entities that are granted access to CUI but information systems will not be used to process, store, or transmit CUI, and those that are required to meet the ATO requirements because Federal information systems will be used to process, store, or transmit CUI.

[12] Calculation: 3,030 unique vendors subject to Alternate I to clause 3052.204–7X in FY 2019 * 5.5 percent of PSCs affected by the rule = 166.65 vendors.

[13] Calculation: 3,203 unique vendors subject to Alternate I to clause 3052.204–7X in FY 2020 * 5.5 percent of PSCs affected by the rule = 176.16 vendors.

[14] Calculation: (166.65 vendors subject to Alternate I to clause 3052.204–7X in FY 2019 + 176.16 vendors subject to Alternate I to clause 3052.204–7X in FY 2020)/2 = 171.4 vendors (the 2-year average number of vendors subject to Alternate I to clause 3052.204–7X).

[15] The estimate of the number of entities to which the rule will apply was established by reviewing FPDS data for FY 2019 and FY 2020, internal DHS contract data, experience with similar safeguarding requirements used in certain DHS contracts, and the most likely applicable PSCs. Additionally, the estimate was reviewed and validated by the cognizant departmental SMEs for information security, information system security, and privacy. See footnote 11 for more detail.

[16] Calculation: 3,030 unique vendors subject to paragraphs (b), (c), (d), (e), and (f) in FY 2019 * 11 percent of PSCs affected by the rule = 333.3 vendors.

[17] Calculation: 3,203 unique vendors subject to paragraphs (b), (c), (d), (e), and (f) in FY 2019 * 11 percent of PSCs affected by the rule = 352.33 vendors.

[18] Calculation: (333.30 vendors subject to paragraphs (b), (c), (d), (e), and (f) in FY 2019 + 352.33 vendors subject to paragraphs (b), (c), (d), (e), and (f) in FY 2020)/2 = 342.82 vendors (the 2-year average number of vendors subject to paragraphs (b), (c), (d), (e), and (f)).

EXHIBIT 4—CHANGES TO NON-ATO POPULATION COMPARED TO NPRM

Component	NPRM	Final rule
Non-ATO prime contractors subject to the rule	274	343
Non-ATO subcontractors subject to the rule	411	514

(3) Changes to Component Costs Relative to NPRM

Under the proposed rule, DHS requested cost information from vendors whose contracts with DHS include requirements similar to this final rule; obtained cost input from FedRAMP, for which DHS is a participant; reviewed the Congressional Budget Office Cost Estimate for the Personal Data Protection and Breach Accountability Act of 2011; reviewed pricing from the Identity Protection Services (IPS) blanket purchase agreements recently awarded by the General Services Administration (GSA); and reviewed internal price data from DHS's Managed Compliance Services and notification and credit monitoring services contracts. DHS determined that the majority of these costs are unchanged from the proposed rule and, therefore, adjusts them to 2020 dollars.[19] For two costs, DHS obtained updated estimates: the cost of notification of incidents to individuals whose PII was compromised and the cost of credit monitoring services. These costs are discussed in more detail in the subject-by-subject analysis. For this final rule analysis, DHS presents a low, high, and primary estimate to capture uncertainty in the costs to affected entities. Exhibit 5 summarizes the costs in the NPRM and this final rule.

EXHIBIT 5—SUMMARY OF CHANGES TO COMPONENT COSTS [T]

Component cost	NPRM **		Final rule		
	Low	High	Low	Primary	High
Independent assessment ($ per entity)	$123,615	$150,000	*$132,836	*$147,012	*$161,189
Equipment to set up continuous monitoring system ($ per entity)	76,340	350,000	*82,034	*229,071	*376,107
Labor to perform continuous monitoring ($ per entity)	47,000	65,000	*50,506	*59,827	*69,848
Maintain continuous monitoring equipment ($ per entity)	6,000	18,000	*6,448	*12,895	*19,343
FTE oversight ($ per entity)	65,000	324,000	*69,848	*209,008	*348,168
Reporting an incident to DHS ($ per incident)	500	1,500	*537	*1,075	*1,612
Notification of incident to individuals ($ per impacted individual)	1.03	4.60	0.84	2.72	4.60
Credit monitoring services ($ per impacted individual)	60	260	4.16	6.53	8.90

[t] The table includes costs that were presented in the proposed rule that are considered baseline costs in the final rule, including continuous monitoring and FTE oversight.
* Value is unchanged but is inflated to 2020 dollars.
** The proposed rule did not use a primary estimate.

3. Subject-by-Subject Analysis

DHS's analysis below covers the estimated costs and cost savings of the final rule relative to the existing baseline. DHS emphasizes that many of the provisions in the final rule are existing requirements in the statute, regulations, or regulatory guidance and presents existing requirements related to each provision in the previous Exhibit 2. The final rule codifies these practices under one set of rules; therefore, they are not considered ''new'' burdens resulting from the final rule. This rule addresses the safeguarding requirements specified in:

• FISMA, which (1) provides a comprehensive framework for ensuring the effectiveness of information security controls over information resources that support Federal operations and assets; (2) recognizes the highly networked nature of the current Federal computing environment and provides effective governmentwide management and oversight of the related information security risks, including coordination of information security efforts throughout the civilian, national security, and law enforcement communities; (3) provides for development and maintenance of minimum controls required to protect Federal information and information systems; and (4) provides a mechanism for improved oversight of Federal agency information security programs, including through automated security tools to continuously diagnose and improve security.

• NIST SP 800–53, *Recommended Security and Privacy Controls for Federal Information Systems and Organizations,* and NIST SP 800–88, *Guidelines for Media Sanitization* (Appendix G). Pursuant to FISMA, NIST is responsible for developing information security standards and guidelines, including minimum requirements for Federal information systems (Note: Such standards and guidelines do not apply to national security systems without the express approval of appropriate Federal officials exercising policy authority over such systems.). NIST SP 800–53 sets forth information security requirements contractors operating a Federal information system must meet prior to collecting, processing, storing, or transmitting CUI in that information system. NIST SP 800–88 assists organizations and system owners in making practical sanitization decisions based on the categorization of confidentiality of their information.

• OMB Circular A–130, *Managing Information as a Strategic Resource,* which establishes general policy for the planning, budgeting, governance, acquisition, and management of Federal information, personnel, equipment, funds, IT resources, and supporting infrastructure and services. The Circular's appendices include responsibilities for protecting Federal information resources and managing PII.

[19] The values used in the NPRM adjusted to 2020 dollars using a GDP deflator of 105.736 for 2016 and a GDP deflator of 113.623 for 2020. Bureau of Economic Analysis: Table 1.1.4. Price Indexes for GDP. *https://apps.bea.gov/iTable/iTable.cfm?reqid=19&step=2#reqid=19&step=2&isuri=1&1921=survey.*

• OMB Memorandum M–17–12, *Preparing for and Responding to a Breach of Personally Identifiable Information,* which sets forth the policy for Federal agencies to prepare for and respond to a breach of PII, including a framework for assessing and mitigating the risk of harm to individuals potentially affected by a breach, as well as guidance on whether and how to provide notification and services to those individuals.

• OMB Memorandum M–20–04, *Fiscal Year 2019–2020 Guidance on Federal Information Security and Privacy Management Requirements,* which in accordance with FISMA provides agencies with FY 2020 reporting guidance and deadlines.

• E.O. 13556, *Controlled Unclassified Information,* and its implementing regulation at 32 CFR part 2002, which defines the executive branch's CUI Program and establishes policy for designating, handling, and decontrolling information that qualifies as CUI and standardizes the way the executive branch handles information that requires protection under laws, regulations, or Governmentwide policies but that does not qualify as classified information.

DHS considered both the costs and benefits associated with the requirements of clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* and clause 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents,* specifically those requirements believed to be of most import to industry, such as the requirements to: obtain an independent assessment, perform continuous monitoring, report all known and suspected incidents, provide notification and credit monitoring services in the event an incident impacts PII, document sanitization of Government and Government-activity-related files and information, as well as ensure overall compliance with the requirements of the clauses. Accordingly, the regulatory analysis focuses on the costs and cost savings that can be attributed exclusively to the new requirements in the final rule.

The analysis assumes that not all efforts (*e.g.,* retrieving and retaining records) are attributed solely to this new rule; only those actions resulting from this rule that are not customary to normal business practices are attributed to this estimate. There are several instances of requirements of the final rule that are not new requirements; for example, the analysis does not include revisions to clause 3052.204–71, *Contractor Employee Access,* as the revisions to this clause are primarily clarifying in nature (*i.e.,* updates to terminology). Regarding the training requirements discussed in the revisions to this clause, specifically additional training that may be required due to the CUI Specified status of the information, this requirement is not new for DHS contractors. CUI Basic and CUI Specified categories of information previously were considered sensitive but unclassified information under prior Departmental policy. When additional training is required for CUI Specified information, it is because the statute or regulation for that specific category requires certain training. DHS and its contractors always complied with the additional training requirements when they were applicable under its sensitive but unclassified information policy. As such, these requirements are covered by the existing information collection that covers this clause (*i.e.,* OMB Control Number 1600–0003). Another example is clause 3052.204–7X(c)(3), specifying contractors and subcontractors should not include CUI in the body of any email but instead include such information in encrypted attachments, with passwords to these files sent via separate emails. The cost of this requirement (*i.e.,* the time to compose two emails, rather than one email) is not quantified because it is an existing requirement. Other requirements are required by existing regulations. For example, FISMA requires continuous monitoring and vendors therefore historically have incurred costs associated with continuous monitoring equipment and labor costs for setup, maintenance, and operation of continuous monitoring. The previous Exhibit 2 lays out which provisions have requirements that already exist under FISMA, existing HSAR, and other regulations.

a. Costs

This section quantifies the costs associated with the final rule changes, including costs associated with rule familiarization, reporting and recordkeeping requirements, conducting an independent assessment, and security review. DHS presents each cost with an associated lower bound estimate, upper bound estimate, and primary estimate.

(1) Quantitative Costs

(a) Rule Familiarization

When the final rule takes effect, ATO vendors will need to familiarize themselves with the new regulations. Consequently, this imposes a one-time cost on ATO vendors in the first year of the rule. DHS estimates the time to review the rule is 1 hour. Therefore, DHS estimated the one-time cost of rule familiarization to be $12,590.[20] DHS estimated the total cost of rule familiarization over the 10-year period is $12,223 and $11,766 at discount rates of 3 percent and 7 percent, respectively. The annualized cost over the 10-year period is $1,433 and $1,675 at discount rates of 3 percent and 7 percent, respectively.

(b) Reporting and Recordkeeping

DHS has determined that 343 non-ATO vendors and 514 non-ATO subcontractors, for a total of 857 entities (Exhibit 4), are subject to reporting requirements associated with notification and credit monitoring. DHS estimates that each non-ATO vendor will require 36 hours to meet the reporting requirements. Therefore, DHS estimated the cost of reporting for non-ATO vendors to be $2.27 million annually.[21] DHS has determined that 171 ATO vendors are subject to reporting requirements associated with notification and credit monitoring. DHS estimated that each ATO vendor will require 120 hours to meet the reporting requirements. Therefore, DHS estimated that the cost of reporting for ATO vendors is $1.51 million annually.[22]

It is estimated that the number of recordkeepers associated with these clauses (ATO and non-ATO vendors) is 1,028. Both ATO and non-ATO vendors will require the same preparation time and maintenance per response, which is estimated to average 16 hours per year, meaning that the total annual recordkeeping burden is 16,455.20 hours.[23] DHS estimates the cost of recordkeeping requirements to be $1.21 million annually.[24]

[20] Calculation: 171.41 ATO vendors * $73.45 loaded hourly wage rate of Information Security Analysts = $12,589.95 one-time, undiscounted cost of rule familiarization to ATO vendors.

[21] Calculation: 857.04 total annual responses * 36 estimated hours per response = 30,852.44 total estimated burden hours. Calculation: 30,852.44 total estimated hours * ($51.72/hour * 1.42 loaded wage rate factor) = $2,266,191. The average hourly salary is based on the hourly wage of private sector information security analysts (*https://www.bls.gov/oes/current/oes151212.htm*). The loaded wage rate factor is based on BLS' estimates for private industry workers by occupational and industry group (*https://www.bls.gov/news.release/ecec.t04.htm*).

[22] Calculation: 171.41 total annual responses * 120 estimated hours per response = 20,569.20 total estimated burden hours. Calculation: 20,569.20 total estimated hours * ($51.72/hour * 1.42 loaded wage rate factor) = $1,510,794.

[23] Calculation: 1,028.45 recordkeepers * 16 hours per recordkeeper per year = 16,455.20 hours.

[24] Calculation: 16,455.20 annual reporting hours * ($51.72/hour * 1.42 loaded wage rate factor) hourly wage plus overhead = $1,208,635.

Finally, the Government will face costs to receive, review, and take action on reporting and recordkeeping submissions. To estimate the cost of receiving, reviewing, and taking action on reporting and recordkeeping submissions, the Department assumed an Information Security Analyst reviews submissions.[25] [26] DHS estimated that the Government's cost of receiving, reviewing, and taking action from incident reporting, incident response activities, PII and SPII notification requirements, credit monitoring, and receipt of certification of sanitization of government and government-activity-related files and information from non-ATO vendors is $452,516 annually.[27] The Government's cost of these activities from ATO vendors is $678,774 annually.[28]

Reporting and recordkeeping requirements impose costs on ATO vendors, non-ATO vendors, and the Government. The total cost of reporting and recordkeeping associated with the final rule is $6.12 million.[29] DHS estimates the total cost of reporting and recordkeeping over the 10-year period is $52.18 million and $42.96 million at discount rates of 3 percent and 7 percent, respectively. The annualized cost estimate over the 10-year period is $6.30 million and $6.55 million at discount rates of 3 percent and 7 percent, respectively.

(c) Independent Assessment

According to the changes in Alternate I to clause 3052.204–7X, *Authority to Operate,* contractors must have an independent third party validate the security and privacy controls in place for the information system(s); review and analyze the SA package; and report on technical, operational, and management level deficiencies.[30] The contractor must address all deficiencies before submitting the SA package to the COR for review.

Alternate I to clause 3052.204–7X, *Authority to Operate,* requires ATO vendors to acquire an independent assessment. The independent assessment is used to validate the security and privacy controls in place for the information system prior to submission of the SA package to the Government for review and acceptance. DHS estimated the cost of an independent assessment to ATO vendors by first determining the price of an independent assessment. DHS estimated that the cost of an independent assessment ranges from a lower bound of $132,836 to an upper bound of $161,189, with a primary estimate of $147,012.[31] Once an ATO is accepted and signed by the Government, it is valid for 3 years and must be renewed at that time unless otherwise specified in the ATO letter. As a result, ATO vendors will incur the cost of obtaining an independent assessment in the first year of the study period and in 3-year increments following the initial independent assessment. DHS then determined that 171 ATO vendors are subject to the provision. DHS estimates the total cost of independent assessments over the 10-year period, using the primary estimate, is $71.28 million and $86.09 million at discount rates of 3 percent and 7 percent, respectively. The primary annualized cost estimate over the 10-year period is $10.09 million and $10.15 million at discount rates of 3 percent and 7 percent, respectively. Exhibit 6 summarizes the range of cost estimates of independent assessments.

EXHIBIT 6—ESTIMATED MONETIZED COSTS OF INDEPENDENT ASSESSMENTS

[$2020 Millions]

	Cost (low estimate)	Cost (primary estimate)	Cost (high estimate)
10-Year Total (Undiscounted)	$91.08	$100.80	$110.52
10-Year Total (3% Discounted)	77.79	86.09	94.40
10-Year Total (7% Discounted)	64.40	71.28	78.15
Annualized (3% Discounted)	9.12	10.09	11.07
Annualized (7% Discounted)	9.17	10.15	11.13

(d) Security Review

The Government may elect to conduct periodic reviews to ensure that the security requirements contained in contracts are being implemented and enforced. The Government, at its sole discretion, may obtain assistance from other Federal agencies and/or third-party firms to aid in security review activities. Under this requirement, the contractor must afford DHS, the Office of the Inspector General, other government organizations, and contractors working in support of the Government access to the contractor's facilities, installations, operations, documentation, databases, networks, systems, and personnel used in the performance of the contract. The contractor must, through the Contracting Officer and COR, contact the Component or Headquarters CIO, or designee, to coordinate and participate in review and inspection activity by government organizations external to DHS. Access must be provided, to the extent necessary as determined by the Government (including providing all requested images), for the Government to carry out a program of inspection,

[25] Calculation: $36.64 Private Industry Workers' Total Compensation/$25.80 Private Industry Workers' Wages and Salaries = 1.42 Loaded Wage Factor. Employer Costs for Employee Compensation for private industry workers by occupational and industry group. *https://www.bls.gov/news.release/ecec.t04.htm.*

[26] Loaded hourly wage is $73.45. Calculation: $51.72 * Loaded Wage Factor (1.42). Occupational Employment and Wages, May 2020, Information Security Analyst, *https://www.bls.gov/oes/2020/may/oes151212.htm.*

[27] Calculation: 857.04 non-ATO vendors * 8 hours of review time * $66 hourly wage plus overhead = $452,516. The average hourly salary is based on the OPM GS–13/Step 4 salary ($48.09 an hour) plus a 36.25 percent fringe and overhead burden rate, the one mandated by OMB Memorandum M–08–13 for use in public-private competition, rounded to the nearest dollar, or $66 an hour. Reference Salary Table 2020–RUS, Effective January 2020, found at *https://www.opm.gov.*

[28] Calculation: 171.41 ATO vendors * 60 hours of review time * $66 hourly wage plus overhead = $678,774.

[29] Calculation: $3,776,986 total reporting cost + $1,208,635 recordkeeping cost + $1,131,290 cost to the Government = $6,116,911.

[30] These standards are outlined in NIST SP 800–53, *Security and Privacy Controls for Information Systems and Organizations,* or successor publication, accessible at *https://csrc.nist.gov/publications/sp.*

[31] The $132,836 estimate of an independent assessment is consistent with the proposed rule estimate of $123,615 and adjusted to 2020 dollars using the GDP deflator. The $123,615 estimate of an independent assessment was sourced from cost information requested from multiple vendors whose contracts with DHS require an independent assessment as part of the SA process. The $161,189 estimate of an independent assessment is consistent with the proposed rule estimate of $150,000, which was sourced from FedRAMP data and adjusted to 2020 dollars.

investigation, and audit to safeguard against threats and hazards to the integrity, availability, and confidentiality of government data or the function of computer systems used in performance of the contract and to preserve evidence of computer crime.

These requirements impose a cost to the contractor to perform the security review and to DHS to review and assist the security review. DHS has determined that it will conduct 50 self-assessment surveys and 4 full assessments annually, which take 3 and 40 hours, respectively. To estimate the cost of receiving, reviewing, and taking action on reporting and recordkeeping submissions, the Department assumed an Information Security Analyst reviews submissions.[32] [33] After completing security reviews, DHS has a GS–13 level analyst review 20 self-assessments and 2 full assessments annually. The total cost to contractors over 10 years to conduct self-assessments and full assessments is $227,696.[34] The total cost to DHS to review self-assessments and full assessments over 10 years is $118,800.[35] The total cost of security review associated with the final rule is $346,496.[36] DHS estimates the total cost of security reviews over the 10-year period—both the self-assessments and full assessments as well as their review—using the primary estimate, is $295,568 and $243,365 at discount rates of 3 percent and 7 percent, respectively. The primary annualized cost estimate over the 10-year period is $34,650 at discount rates of both 3 percent and 7 percent.

(2) Qualitative Costs

DHS is unable to quantify some costs related to clause 3052.204–7X paragraph (c), *Incident Reporting Requirements,* and clause 3052.204–7Y paragraphs (b), *PII and SPII Notification Requirements,* and (c), *Credit Monitoring Requirements.* Monetization is not possible for clause 3052.204–7Y paragraphs (b) and (c) because DHS does not track data on the number of individuals whose data are compromised under a data breach. Without this estimate, DHS is unable to determine the average number of individuals whom vendors would have to notify and who will require credit monitoring services. DHS anticipates a cost to vendors that are subject to the requirements of clause 3052.204–7Y paragraphs (b) and (c) and experience a data breach.

(a) Costs Related to Clause 3052.204–7X, Safeguarding of Controlled Unclassified Information, Paragraph (c), Incident Reporting Requirements

Clause 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* paragraph (c), *Incident Reporting Requirements,* requires contractors to report known or suspected incidents that involve PII or SPII within 1 hour of discovery as well as all other incidents (such as those impacting any other category of CUI) within 8 hours of discovery. Contractors must also provide as many of the following data elements that are available at the time the incident is reported, with any remaining data elements provided within 24 hours of submission of the initial incident report:

(i) Unique Entity Identifier (UEI);

(ii) Contract numbers affected unless all contracts by the company are affected;

(iii) Facility CAGE code if the location of the event is different than the prime contractor location;

(iv) Point of contact (POC) if different than the POC recorded in the System for Award Management (address, position, telephone, and email);

(v) Contracting Officer POC (address, telephone, and email);

(vi) Contract clearance level;

(vii) Name of subcontractor and CAGE code if this was an incident on a subcontractor network;

(viii) Government programs, platforms, or systems involved;

(ix) Location(s) of incident;

(x) Date and time the incident was discovered;

(xi) Server names where CUI resided at the time of the incident, both at the contractor and subcontractor level;

(xii) Description of the Government PII or SPII contained within the system; and

(xiii) Any additional information relevant to the incident.

DHS determined the cost of reporting an incident by requesting cost information from multiple vendors whose contracts with DHS include similar incident reporting requirements and reviewing internal historical data. These data indicated that the cost of reporting an incident to DHS ranges from a lower bound of $537 per incident to an upper bound of $1,612 per incident, with a primary estimate of $1,075 per incident.[37] DHS cannot quantify the aggregate total of these costs because DHS does not track the origin of security event notices and is therefore unable to determine how many security event notices external contractors reported to their respective Component SOC or the DHS Network Operations Security Center.

(b) Costs Related to Clause 3052.204–7Y, Safeguarding of Controlled Unclassified Information, Paragraph (b), PII and SPII Notification Requirements

Clause 3052.204–7Y, *Safeguarding of Controlled Unclassified Information,* paragraph (b), *PII and SPII Notification Requirements,* sets forth the notification procedures and capability requirements for contractors when notifying any individual whose PII and/or SPII was under the control of the contractor or resided in the information system at the time of the incident. The provision requires that, when appropriate, vendors must provide notification to individuals affected by the incident.

In response to compromised PII/SPII, the Government determines whether notification is appropriate, thereby adding another cost to both non-ATO and ATO vendors. DHS obtained values for the cost of providing notification to individuals via the GSA Data Breach Response and Identity Protection Services web page.[38] The Department assumed that vendors will purchase the ''Per Impacted Individual'' package (as opposed to the ''Per Enrollee'' package) when obtaining notification services.[39] The Department collected per impacted individual data from Experian, Identity Theft Guards, and Sontiq and then determined the lowest value and highest value for each service to create the following estimates. DHS estimated that the cost of notifying each individual ranges from $0.84 ($0.29 plus $0.55 for a standard-sized letter stamp) to $4.60

[32] Calculation: $36.64 Private Industry Workers' Total Compensation/$25.80 Private Industry Workers' Wages and Salaries = 1.42 Loaded Wage Factor. Employer Costs for Employee Compensation for private industry workers by occupational and industry group. *https://www.bls.gov/news.release/ecec.t04.htm.*

[33] Loaded hourly wage is $73.45. Calculation: $51.72 * Loaded Wage Factor (1.42). Occupational Employment and Wages, May 2020, Information Security Analyst, *https://www.bls.gov/oes/2020/may/oes151212.htm.*

[34] Calculation: ($73.45 loaded hourly wage * 50 self-assessments * 3 hours per self-assessment) + ($73.45 loaded hourly wage * 4 full assessments * 40 hours per full assessment) = $227,696.

[35] Calculation: ($66 loaded hourly wage * 50 self-assessments * 2 hours review per self-assessment) + ($66 loaded hourly wage * 4 full assessments * 20 hours review per full assessment) = $118,800.

[36] Calculation: $227,696 cost of self-assessments and full assessments + $118,800 cost of reviewing self-assessments and full assessments = $346,496.

[37] The final rule estimates of incident reporting are consistent with the proposed rule and adjusted to 2020 dollars using the GDP deflator.

[38] GSA eLibrary Data Breach and Identity Protection: *https://www.gsaelibrary.gsa.gov/ElibMain/sinDetails.do?scheduleNumber=MAS&specialItemNumber=541990IPS&executeQuery=YES.*

[39] Per Impacted Individual pricing is used when the enrollment rate of a breach is unknown and services are therefore provided to the entire impacted population regardless of enrollment status.

per year per individual, or $2.72 on average, depending on the level of security, features, and data included in each plan by the companies providing these services.

DHS cannot quantify an aggregate total of this cost due to the rule because DHS does not track at the Department level the number of notifications required on either an annual or per-incident basis. Additionally, the number of individuals requiring notification varies from incident to incident. Because DHS cannot estimate the number of individuals who require notification on an annual or per-incident basis, the Department cannot quantify an aggregate total of this cost due to the rule. Finally, there are existing State or local laws requiring notification and DHS does not collect data on where breaches are occurring. Therefore, DHS does not collect data on the baseline notification costs that already exist. The bearer of the notification cost—the government or the contractor—is determined on a case-by-case basis based on DHS's discretion.

(c) Costs Related to Clause 3052.204–7Y, Safeguarding of Controlled Unclassified Information, Paragraph (c), Credit Monitoring Requirements

Clause 3052.204–7Y, *Safeguarding of Controlled Unclassified Information,* paragraph (c), *Credit Monitoring Requirements,* requires that contractors, in the event of an incident, provide credit monitoring services, including call center services, if directed by the Contracting Officer, to any individual whose PII or SPII was under the control of the contractor, or resided in the information system, at the time of the incident for a period beginning the date of the incident and extending not less than 18 months from the date the individual is notified.

This rule requires contractors to provide credit monitoring services (including call center services) to any individual whose PII or SPII resided in a compromised information system. DHS updated costs estimated in the proposed rule by obtaining values for the cost of providing credit monitoring services to individuals from data on the GSA Data Breach Response and Identity Protection Services web page.[40] The Department assumed that vendors will purchase the ''Per Impacted Individual'' package (as opposed to the ''Per Enrollee'' packages) when obtaining credit monitoring services. The Department collected per impacted individual data from Experian, Identity Theft Guards, and Sontiq and then determined the lowest value and highest value for each service to create the following estimates. The Department estimates that the cost of private credit monitoring services ranges from $4.16 to $8.90 per year per individual, or $6.53 on average, depending on the level of security, features, and data included in each plan by the companies providing these services. The Department assumes that vendors will have the capabilities to obtain favorable credit monitoring prices. DHS cannot quantify these costs because it does not have estimates for the population of individuals affected.

(3) Summary of Costs

The changes in the final rule are expected to incur a cost to vendors that are subject to the final rule requirements. DHS estimates the 10-year costs to range from an undiscounted lower bound of $152.60 million to an undiscounted upper bound of $172.04 million. Over the 10-year analysis period, DHS estimates that the final rule will incur a total lower bound cost to vendors of $130.28 million at a 3-percent discount rate and $107.62 million at a 7-percent discount rate. DHS estimates that over the 10-year analysis period, the final rule will incur a total upper bound cost to vendors of $146.88 million at a 3-percent discount rate and $121.376 million at a 7-percent discount rate. Exhibit 7 provides a summary of the total estimated costs due to the final rule by provision.

EXHIBIT 7—ESTIMATED 10-YEAR MONETIZED COSTS THE FINAL RULE BY PROVISION

[$2020 Millions]

Provision	Cost (low estimate)	Cost (primary estimate)	Cost (high estimate)
Independent assessment	$91.08	$100.80	$110.52
Rule familiarization	0.01	0.01	0.01
Reporting and Recordkeeping	61.17	61.17	61.17
Security Review	0.35	0.35	0.35
10-Year Undiscounted Total	152.60	162.32	172.04
10-Year Total with a Discount Rate of 3%	130.28	138.58	146.889
10-Year Total with a Discount Rate of 7%	107.62	114.49	121.37

b. Qualitative Cost Savings

This section describes the cost savings associated with the final rule changes, including cost savings associated with clause 3052.204–7X paragraph (b), *Handling of Controlled Unclassified Information,* and Alternate I to clause 3052.204–7X, *Authority to Operate.*

The final rule will result in multiple cost savings associated with the transparency and consistency provided to contractors considering doing business with DHS. One cost saving is associated with the reduced time for DHS to grant an ATO. If a system is presented to DHS without the correct SRTM and/or with a poorly developed SA package, it can take up to 6 months to correct the issues and rewrite the SA package. In addition, post-assessment activities can be greatly reduced, as the number and severity of those corrections through POA&Ms required would be significantly reduced. DHS is unable to quantify reductions in time required for the ATO process, but lowering the risk of delays has the potential to produce significant time savings to DHS and impacted contractors.

Another cost savings to DHS results from time saved reviewing and reissuing requests for proposals and finding new contractors when they are unable to implement the SRTM. Under the final rule, contractors are more clearly notified of the system requirements of the contract up front, resulting in more bids from contractors capable of meeting DHS standards. Previously, embedding requirements in separate documents (*i.e.,* Statement of Work, Statement of Objectives, or Performance Work Statement) or through existing clause 3052.204–70, *Security Requirements for*

[40] GSA eLibrary Data Breach and Identity Protection: *https://www.gsaelibrary.gsa.gov/ElibMain/sinDetails.do?scheduleNumber=MAS&specialItemNumber=541990IPS&executeQuery=YES.*

Unclassified Information Technology Requirements, had the following impacts: (1) created inconsistencies in the identification of information security requirements for applicable contracts; (2) required the identification and communication of security controls for which compliance was necessary after contract award had been made; and (3) resulted in delays in contract performance. Under this final rule, DHS is less likely to have to put the project on hold to reissue a request for proposal or look for an alternate contractor, which reduces the reissuance of solicitations in situations where contractors are unable to implement the SRTM. Avoiding the reissuance of proposals also results in cost savings associated with avoiding background investigations for IT contractors, which can range in cost from approximately $425 to $1,000 per investigation. DHS is unable to quantify the cost savings associated with more bids from contractors capable of meeting DHS standards because we are unable to estimate the number of avoided reissuances that will occur.

The final rule will reduce the response time when incidents do occur, resulting in quicker identification of breaches and reducing the severity of incidents, thereby producing significant cost savings. The timely reporting of incidents is critical to prevent the impact of the incident from expanding, ensure incident response and mitigation activities are undertaken quickly, and ensure individuals are timely notified of the possible or actual compromise of their PII and offered credit monitoring services when applicable. Contractors were previously not consistently provided with specific incident reporting timelines, leaving the timeliness of incident reporting to the contractor. Standardizing incident reporting leads to more proactive incident response, potentially faster incident resolution, and potential reduction in the scope and impact of the incident depending on the nature of the attack (*i.e.,* fewer records breached). According to Cyentia Institute's 2020 Information Risk Insights Study report, the median cost of a data breach in the public sector was approximately $132,000, with higher cost cases (95th percentile) reaching approximately $13 million per incident.[41] An alternative source, the most recent (2021) Verizon Data Breach Investigations Report (DBIR), indicates that while 76 percent of the reported data breaches did not result in a loss, the losses for the remaining 24 percent ranged between $148 and $1.6 million, with a median breach cost of $30,000 for 95 percent of the cases with losses.[42] Based on an analysis of 79,000 breaches, the 2021 Verizon DBIR shows that approximately 60 percent of the incidents are discovered in days, while 20 percent could take months or longer to discover.[43] Early detection of the incidents is critical in preventing data loss, data encryption, and other damage.[44] Reducing the time to identify the breach results in immediate short-term benefits, such as improving the effectiveness of incident management, reducing false positives, improving triage by lowering the cost of trivial true positives,[45] minimizing mission disruption and the resulting impact on revenue and performance, and reducing the cost of investigation.[46] There are also significant long-term benefits of early discovery. Specifically, decreasing time to detection enables streamlined incident data collection and reporting, which allows for the generation of actionable insights and advice to the broader Federal Civilian Executive Branch, State-Local-Tribal-Territorial Government, and Critical Infrastructure communities on the proactive measures that reduce the potential for large-scale service disruptions. Cumulatively, short- and long-term benefits increase costs to the adversary, thus reducing the effectiveness of adversary campaigns. However, lacking an authoritative source that establishes a defensible estimate of the difference in a breach cost in the public sector based on the mean time to detection, DHS is unable to estimate the reduction in time to identify a breach under the final rule and, therefore, does not quantify these cost savings and other benefits.

c. Qualitative Benefits

This section describes the benefits associated with the final rule changes, including cost savings associated with clause 3052.204–7X paragraph (d), *Incident Response Requirements,* and clause 3052.204–7Y paragraphs (b), *PII and SPII Notification Requirements,* and (c), *Credit Monitoring Requirements.*

There are several nonquantifiable benefits of the final rule in addition to the cost savings discussed above. One of the main benefits is reducing the severity of a data breach to individuals and businesses that would have data compromised by a data breach. There are four cost categories that contribute to the total cost of a data breach: detection and escalation, lost business, notification, and ex-post response (including credit monitoring, identity protection services, and more). While some costs, such as the cost of lost business due to lowered trust, are not relevant to DHS, DHS expects this rule to reduce other costs, such as notification and ex-post response (credit monitoring and identity protection services). Although there is no way to eliminate the risk of breach completely, the purpose of this rule is to mitigate the negative effects of breaches, which include identity theft.

The public will be better notified of breaches in their data, allowing for better self-monitoring for identity theft. In particular, the rule requires contractors to have in place procedures and capability to notify any individual whose PII and/or SPII was under the control of the contractor or resided in the information system at the time of an incident. At a minimum, this notification must include: a brief description of the incident; a description of the types of PII or SPII involved; a statement as to whether the PII or SPII was encrypted or protected by other means; steps individuals may take to protect themselves; what the contractor and/or the Government are doing to investigate the incident, to mitigate the incident, and to protect against any future incidents; and information identifying who individuals may contact for additional information. DHS is unable to monetize the benefit associated with notifying individuals that their data may be compromised because it is difficult to estimate the number of individuals who may have their data compromised and to monetize the benefit of notification. DHS is unable to monetize the benefit associated with notification because DHS cannot estimate the number of

[46] Michael Paye, ''Poor incident detection can cost your organization a fortune'' (Sept. 24, 2020), Security Magazine, *https://www.securitymagazine.com/articles/93173-poor-incident-detection-can-cost-your-organization-a-fortune* and AlertOps, ''MTTR vs MTBF vs MTTD vs MTTF'' (2021) *https://alertops.com/mttd-vs-mttf-vs-mtbf-vs-mttr/.*

individuals who require notification on an annual or per-incident basis. DHS does not track at the Department level the number of notifications required on either an annual or per-incident basis. Additionally, the number of individuals requiring notification varies from incident to incident. Because DHS cannot estimate the number of individuals who require notification on either an annual or per-incident basis, the Department cannot monetize the benefit of notification.

The final rule also will produce a benefit to individuals associated with providing credit monitoring services. Under the final rule, when directed by the contracting officer, contractors are required to provide credit monitoring services, including call center services, to any individual whose PII or SPII was under the control of the contractor, or resided in the information system, at the time of the incident for a period beginning on the date of the incident and extending not less than 18 months from the date the individual is notified. Credit monitoring services can be particularly beneficial to the affected public, as they can assist individuals in the early detection of identity theft as well as notify individuals of changes that appear in their credit report, such as creation of new accounts, changes to their existing accounts or personal information, or new inquiries for credit. Such notification affords individuals the opportunity to take steps to minimize any harm associated with unauthorized or fraudulent activity. DHS is unable to quantify the benefit associated with providing credit monitoring services because it is difficult to estimate the number of individuals who may require credit monitoring services.

Another benefit of the *Safeguarding of Controlled Unclassified Information* clause is expedited reporting timelines. Incident reporting requires a contractor to report all known or suspected incidents to the Component SOC, or the DHS Enterprise SOC if the Component SOC is not available, in accordance with *4300A Sensitive Systems Handbook,* Attachment F, *Incident Response.* All known or suspected incidents involving PII or SPII must be reported within 1 hour of discovery. All other incidents must be reported within 8 hours of discovery. Timely reporting of incidents is critical for proactive incident response and potentially faster incident resolution. Also, timely reporting prevents the impact of the incident from expanding, ensures incident response and mitigation activities are undertaken quickly, and ensures that individuals are timely notified of the possible or actual compromise of their PII and offered credit monitoring services when applicable. DHS is unable to quantify this benefit because it is difficult to quantify the impact of timely reporting on the severity of an incident.

4. Summary

DHS presents the estimated range of costs under the final rule in Exhibit 8. DHS estimates the final rule will have an annualized cost that ranges from $15.32 million to $17.28 million at a discount rate of 7 percent and a total 10-year cost that ranges from $107.62 million to $121.37 million at a discount rate of 7 percent. DHS was unable to quantify the cost savings or benefits associated with the rule. However, the final rule is expected to produce cost savings by reducing the time required to grant an ATO, reducing DHS time reviewing and reissuing proposals because contractors are better qualified, and reducing the time to identify a data breach. The final rule also produces benefits by better notifying the public when their data are compromised, requiring the provision of credit monitoring services so that the public can better monitor and avoid costly consequences of data breaches, and reducing the severity of incidents through timely incident reporting.

EXHIBIT 8—ESTIMATED MONETIZED COSTS OF THE FINAL RULE

[$2020 Millions]

	Costs		
	Low	Primary	High
2023	$28.93	$31.63	$33.79
2024	6.15	6.15	6.15
2025	6.15	6.15	6.15
2026	28.92	31.35	33.78
2027	6.15	6.15	6.15

10-Year Total with Discount Rate of 3%	130.28	138.58	146.89
10-Year Total with Discount Rate of 7%	107.62	114.49	121.37
Annualized with Discount Rate of 3%	15.27	16.25	17.22
Annualized with Discount Rate of 7%	15.32	16.30	17.28

5. Regulatory Alternatives

DHS evaluated two alternatives to the chosen approach of independent assessment, which requires vendors to obtain an independent assessment from a third party to validate the security and privacy controls in place for an information system prior to submission of the security authorization package to the Government for review and acceptance. In general, when assessing compliance with a standard or set of requirements, there are three alternatives: (1) first-party attestation or self-certification; (2) second-party attestation (*i.e.,* internal independent); or (3) third-party attestation. While the first two options may be considered the least economically burdensome, third-party attestation is an accepted best practice in commercial industry as objectivity increases with independence. DHS has selected the chosen approach of requiring vendors to obtain an independent assessment from a third party to ensure a truly objective measure of an entity's compliance with the requisite security and privacy controls. Recent high-profile breaches of Federal information demonstrate the need for Departments, agencies, and industry to ensure that information

security protections are clearly, effectively, and consistently addressed and appropriately implemented in contracts. The benefits of using a third party to perform an independent assessment extends to the contractor, as the contractor can use the results of the independent assessment to demonstrate its cybersecurity excellence for customers other than DHS.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601 *et seq.,* as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, Public Law 104–121 (Mar. 29, 1996), hereafter jointly referred to as the ''RFA,'' requires Federal agencies engaged in rulemaking to assess the impact of regulations that will have a significant economic impact on a substantial number of small entities. The agency also is required to respond to public comments on the NPRM.[47] The Chief Counsel for Advocacy of the SBA did not submit public comments on the NPRM.

The Department believes that this final rule may have a significant economic impact on a substantial number of small entities. Therefore, the Department publishes this final regulatory flexibility analysis (FRFA) that builds on the assessment provided in the initial regulatory flexibility analysis (IRFA) published as part of the NPRM. The Department invited interested persons to submit comments on impacts to small entities during the proposed rule phase.

1. A Statement of the Need for, and Objectives of, the Rule

DHS has determined that the new rulemaking is needed to implement security and privacy measures to safeguard CUI and facilitate improved incident reporting to DHS. The final rule enables DHS more efficiently to identify, remediate, mitigate, and resolve incidents when they occur, not necessarily completely prevent them. DHS understands that there is no ''true'' way to completely prevent an incident from occurring. However, these measures are intended to decrease the likelihood of occurrence with full knowledge that there is no such thing as an ''unhackable'' system.

The final rule adds a new clause at 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* that ensures adequate protection of CUI. That new clause: (1) identifies CUI handling requirements and security processes and procedures applicable to Federal information systems, which include contractor information systems operated on behalf of the agency; (2) identifies incident reporting requirements, including timelines and required data elements, inspection provisions, and post-incident activities; and (3) requires certification of sanitization of government and government-activity-related files and information. Additionally, new clause 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents,* requires contractors to have in place procedures and the capability to notify and provide credit monitoring services to any individual whose PII or SPII was under the control of the contractor or resided in the information system at the time of the incident.

These measures are necessary because of the urgent need to protect CUI and respond appropriately when DHS contractors experience incidents with DHS information. Persistent and pervasive high-profile breaches of Federal information continue to demonstrate the need to ensure that information security protections are addressed clearly, effectively, and consistently in contracts. This final rule strengthens and expands existing HSAR language to ensure adequate security when contractor and/or subcontractor employees will have access to CUI; CUI will be collected or maintained on behalf of the agency; or Federal information systems, which include contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI.

2. A Statement of the Significant Issues Raised by the Public Comments in Response to the IRFA, a Statement of the Assessment of the Agency of Such Issues, and a Statement of Any Changes Made to the Proposed Rule as a Result of Such Comments

The Department did not receive public comments on the IRFA.

3. The Response of the Agency to Any Comments Filed by the Chief Counsel for Advocacy of the SBA in Response to the Proposed Rule, and a Detailed Statement of Any Change Made to the Proposed Rule as a Result of the Comments

The Department did not receive comments from the Chief Counsel for Advocacy of the SBA.

4. A Description of and an Estimate of the Number of Small Entities to Which the Rule Will Apply or an Explanation of Why No Such Estimate is Available

a. Definition of Small Entity

The RFA defines a ''small entity'' as a (1) small not-for-profit organization; (2) small governmental jurisdiction; or (3) small business. The Department used the entity size standards defined by SBA, in effect as of August 19, 2019, to classify businesses as small.[48] SBA establishes separate standards for individual 6-digit North American Industry Classification System (NAICS) codes, and standard cutoffs typically are based on either the average number of employees or the average annual receipts. For example, small businesses generally are defined as having fewer than 500, 1,000, or 1,250 employees in manufacturing industries and less than $7.5 million in average annual receipts for nonmanufacturing industries. However, some exceptions do exist, the most notable being that depository institutions (including credit unions, commercial banks, and noncommercial banks) are classified by total assets (small defined as less than $550 million in assets). Small governmental jurisdictions are another noteworthy exception. They are defined as the governments of cities, counties, towns, townships, villages, school districts, or special districts with populations of less than 50,000 people.[49]

b. Number of Small Entities

The Department collected employment and annual revenue data from the business information provider Data Axle and merged those data into FY 2020 Federal FPDS data. The FPDS data contained PSC information for each vendor identifying the type of service being provided to DHS. This dataset allowed the Department to identify the number and type of small entities in the FPDS data, and their PSC information, as well as their annual revenues. DHS identified 2,218 unique vendors with PSCs for FY 2020 that may be impacted by the final rule. Of those 2,218 vendors, the Department was able to obtain data matches of revenue or employees for 366 vendors in FY 2020. Duplicate vendors that appeared multiple times within the dataset were removed (*i.e.,* the same vendor appearing multiple times). The Department was unable to obtain data

[47] *See* 5 U.S.C. 604.

[48] SBA *Table of Small Business Size Standards Matched to North American Industry Classification System Codes* (Aug. 2019), *https://www.sba.gov/document/support-table-size-standards.*

[49] *See https://advocacy.sba.gov/resources/the-regulatory-flexibility-act* for details.

matches for 184 vendors in FY 2020. In order to prevent underestimating the number of small entities the final rule would affect, DHS conservatively considers all the nonmatched vendors as small entities for the purpose of this analysis. Of the 366 vendors with employee or revenue matches, the Department identified 265 unique vendors (or 48 percent of the sample) as small.[50] Within the 265 matched small vendors, the Department was unable to obtain revenue data for four vendors. These data points are displayed in Exhibit 9 below.

EXHIBIT 9—NUMBER OF SMALL ENTITIES

Parameter	Quantity	Proportion of sample (percent)
Population	3,203	
Population (unique entities)	2,218	
Minimum Required Sample	328	
Selected Sample	550	100
Nonmatched Sample Segment	184	33
Matched Sample Segment	366	67
Matched Small Entities	265	48
Sub-Sample Missing Revenue Data	4	2
Matched Non-Small Entities	101	18
Number of Small Entities Discovered in Research	449	82

In sum, the Department classified 449 vendors as small.[51] Of these unique small entities, 261 of them had revenue data available from Data Axle. The Department's analysis of the financial impact of this final rule on small entities is based on the number of small unique entities with revenue data (261).

To provide clarity on the industries impacted by this regulation, Exhibit 10 shows the number of unique small entities (265) in FY 2020 within each NAICS code at the 6-digit and 4-digit level.

EXHIBIT 10—NUMBER OF SMALL ENTITIES BY NAICS CODE

6-Digit NAICS	Description	Number of small employers	Percent of small employers
541511	Custom Computer Programming Services	21	8
443142	Electronics Stores	16	6
541618	Other Management Consulting Services	11	4
423610	Electrical Apparatus and Equipment, Wiring Supplies, and Related Equipment Merchant Wholesalers.	10	4
511210	Software Publishers20	10	4
541614	Process, Physical Distribution and Logistics Consulting Services	8	3
541330	Engineering Services	7	3
561990	All Other Support Services	7	3
238990	All Other Specialty Trade Contractors	6	2
561621	Security Systems Services (except Locksmiths)	6	2
Other NAICS		163	61
4-Digit NAICS	**Description**	**Number of small employers**	**Percent of small employers**
5416	Management, Scientific, and Technical Consulting Services	27	10
5415	Computer Systems Design and Related Services	26	10
4431	Electronics and Appliance Stores	16	6
4236	Household Appliances and Electrical and Electronic Goods Merchant Wholesalers	11	4
5413	Architectural, Engineering, and Related Services	10	4
5616	Investigation and Security Services	10	4
5112	Software Publishers	10	4
2389	Other Specialty Trade Contractors	7	3
5619	Other Support Services	7	3
5419	Other Professional, Scientific, and Technical Services	7	3
Other NAICS		134	49

A small percentage of entities in the sample segment are educational institutions or not-for-profit entities.[52] Using data with the profit/non-profit status of each vendor in the sample segment, we count the number of for-

[50] SBA *Table of Small Business Size Standards Matched to North American Industry Classification System Codes.* (Aug. 2019), *https://www.sba.gov/document/support-table-size-standards.*

[51] Calculation: 184 nonmatched entities + 265 matched entities = 449 small entities.

[52] Educational institutions include HBCUs, private universities or colleges, State-controlled institutions of higher learning, Tribal colleges, veterinary colleges, or other educational institutions.

profit and not-for-profit entities and the number of small and non-small entities.[53] We assume that all unspecified entities—those marked as neither educational institutions, non-profit organizations, or for-profit organizations—are for-profit businesses. Table 11 includes these data for both entities we were able to match and non-matched entities.

EXHIBIT 11—NUMBER OF SMALL ENTITIES

Parameter	Quantity	Proportion of sample (percent)
Selected Sample	550	100.0
Profit	496	90.2
Non-Profit	19	3.4
Educational Institution	6	1.1
Other	29	5.3

c. Projected Impacts to Affected Small Entities

The Department has estimated the incremental costs for small entities from the baseline (*i.e.,* the 2017 proposed rule) to this final rule. We estimated the costs of obtaining an independent assessment and rule familiarization. Although the sample population of small entities identified in this analysis is 449, DHS does not anticipate the actual number of small entities impacted by the final rule to be of this magnitude. As discussed in the E.O. 12866 section, DHS expects 171 entities to be impacted by cost provisions annually. The Department anticipates these 171 entities would have a distribution of large and small entities, and impacts to the small entities, that follow the sample population's distribution of size and costs presented in this FRFA.

Small entities in the IT field will be subject to only the independent assessment, ongoing maintenance of continuous monitoring, and rule familiarization costs. DHS classified an entity as being in the IT field if their PSC began with a ''7'' or ''D,'' or if the PSC matched any of the following codes: 5810, 6350, AJ11, AJ21, AJ23, AJ43, R423, R430, R431, R611, and R615. Additionally, entities classified as non-ATO will be subject to only rule familiarization costs. DHS classified an entity as being non-ATO if their PSC and description was as follows: (1) S201—Housekeeping—Custodial Janitorial; (2) 6515—Medical and Surgical Instruments, Equipment, and Supplies; (3) S216—Housekeeping—Facilities Operations Support; (4) R614—Support—Administrative: Paper Shredding; or (5) U008—Education/Training—Training/Curriculum Development. The estimates included in this analysis are consistent with those presented in the E.O. 12866 section and include costs of rule familiarization, reporting and recordkeeping, and independent assessment.

The Department presents the impacts of the final rule on small entities as a percent of revenue in Exhibit 12 below.

EXHIBIT 12—SUMMARY OF SMALL ENTITY COSTS AS A PERCENT OF REVENUE

Impacts	50 Percent			75 Percent			90 Percent		
	Number of small entities	% of small entities	Cumulative %	Number of small entities	% of small entities	Cumulative %	Number of small entities	% of small entities	Cumulative %
<1%	39	15	15	34	13	13	29	1	11
1–5%	83	31	46	82	31	44	86	33	44
5–10%	48	18	64	47	18	62	42	16	59
10–25%	58	22	86	59	22	84	59	22	82
25–50%	23	9	95	27	10	94	26	10	92
>50%	13	5	100	15	6	100	22	8	100
Total	264			264			264		

DHS expects its contractors may choose to reflect these costs in the price and cost proposals they submit to the Department. Therefore, the Department conducted a sensitivity analysis with varying levels of passthrough assumed for small businesses. DHS does not assume a specific percentage of costs that vendors will pass on since some vendors may choose to pass on fewer costs in pursuance of a competitive advantage on their price. Therefore, the Department presents three scenarios using the primary estimates of the rule costs: (1) vendors pass on 50 percent of rule costs to the Department; (2) vendors pass on 75 percent of rule costs to the Department; and (3) vendors pass on 90 percent of rule costs to the Department. The results of the sensitivity analysis are displayed in Exhibit 13 below.

[53] The SBA's Office of Advocacy defines small organizations as not-for-profit entities that are independently owned and operated and not dominant in their field. For more information, visit *https://www.sba.gov/sites/default/files/advocacy/How-to-Comply-with-the-RFA-WEB.pdf.*

EXHIBIT 13—SENSITIVITY OF SMALL ENTITY COSTS ASSUMING DIFFERENT PASSTHROUGHS

Impacts	50 Percent			75 Percent			90 Percent		
	Number of small entities	% of small entities	Cumulative %	Number of small entities	% of small entities	Cumulative %	Number of small entities	% of small entities	Cumulative %
<1%	70	27	27	109	41	41	157	59	59
1–5%	100	38	64	99	38	79	85	32	92
5–10%	43	16	81	32	12	91	14	5	97
10–25%	38	14	95	19	7	98	8	3	100
25–50%	8	3	98	5	2	100	0	0	100
>50%	5	2	100	0	0	100	0	0	100
Total	264			264			264		

5. A Description of the Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Rule, Including an Estimate of the Classes of Small Entities That Will Be Subject to the Requirement and the Type of Professional Skills Necessary for Preparation of the Report or Record

The final rule has reporting and recordkeeping requirements impacting small entities. DHS needs information required by clauses 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* and 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents,* to implement the requirements for safeguarding against unauthorized contractor/subcontractor disclosure and inappropriate use of CUI that contractors and subcontractors may have access to during the course of contract performance. Reporting and recordkeeping for the SA package consists of the following: Security Plan, Contingency Plan, Contingency Plan Test Results, Configuration Management Plan, Security Assessment Plan, Security Assessment Report, and Authorization to Operate Letter. Additional documents that may be required include a Plan(s) of Action and Milestones and Interconnection Security Agreement(s). Additional requirements include an independent assessment, security review, renewal of the ATO (required every 3 years unless stated otherwise), and Federal reporting and continuous monitoring requirements.

6. A Description of the Steps the Agency Has Taken To Minimize the Significant Economic Impact on Small Entities Consistent With the Stated Objectives of Applicable Statutes, Including a Statement of the Factual, Policy, and Legal Reasons for Selecting the Alternative Adopted in the Final Rule and Why Each of the Other Significant Alternatives to the Rule Considered by the Agency That Affects the Impact on Small Entities Was Rejected

The Department considered alternative requirements for independent assessment that would be less burdensome on small entities. In general, when assessing compliance with a standard or set of requirements, there are three alternatives: (1) first-party attestation or self-certification; (2) second-party attestation (*i.e.,* internal independent); or (3) third-party attestation. While the first two options may be considered the least economically burdensome, third-party attestation is an accepted best practice in commercial industry as objectivity increases with independence. DHS has selected the chosen approach of requiring vendors to obtain an independent assessment from a third party to ensure a truly objective measure of an entity's compliance with the requisite security and privacy controls. Recent high-profile breaches of Federal information demonstrate the need for departments, agencies, and industry to ensure that information security protections are clearly, effectively, and consistently addressed and appropriately implemented in contracts. The benefits of using a third party to perform an independent assessment extends to the contractor, as the contractor can use the results of the independent assessment to demonstrate its cybersecurity excellence for customers other than DHS.

The information security requirements associated with this rule are not geared toward a type of contractor; the requirements are based on the sensitivity of the information and the impact on the program, the Government, and security in the event CUI is breached. That standard would not vary based on the size of the entity. DHS has determined that the costs associated with compliance with the security requirements of this rule are a necessary expense to ensure DHS CUI is adequately protected and to produce the resulting benefits and cost savings that accrue to DHS, vendors, and the public from the provisions of the final rule, as discussed in the E.O. 12866 section.

C. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. ch. 35) applies. The rule contains information collection requirements. Accordingly, DHS will be submitting a request for approval of a new information collection requirement concerning this rule to OMB under 44 U.S.C. 3501, *et seq.*

The collection requirements for this rule are based on two new clauses, 3052.204–7X, *Safeguarding of Controlled Unclassified Information,* and 3052.204–7Y, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents.*

Overview of Information Collection:

(1) *Type of Information Collection:* New Collection.

(2) *Title of the Form/Collection:* Homeland Security Acquisition Regulation: Safeguarding of Controlled Unclassified Information.

(3) *Agency form number, if any, and the applicable component of DHS sponsoring the collection:* No form; OCPO.

(4) *Affected public who will be asked or required to respond; as well as a brief abstract:* The affected public is business or other for-profit institutions. DHS needs the information required by clauses 3052.204–7X and 3052.204–7Y to implement the requirements for safeguarding against unauthorized

contractor/subcontractor disclosure and inappropriate use of CUI that contractors and subcontractors may have access to during the course of contract performance. Responses are required for respondents to obtain or retain benefits.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated number of respondents for reporting is 1,028. The weighted average public reporting burden for this collection of information is estimated to be approximately 50 hours per response to comply with the requirements, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. This weighted average is based on an estimated 36 hours per response to comply with the requirements when an ATO is not required and an estimated 120 hours to comply with the requirements when an ATO is required (*i.e.,* when a contractor is required to submit an SA package).[54] The SA package consists of the following: Security Plan, Contingency Plan, Contingency Plan Test Results, Configuration Management Plan, Security Assessment Plan, Security Assessment Report, and Authorization to Operate Letter. Additional documents that may be required include a Plan(s) of Action and Milestones and Interconnection Security Agreement(s). Additional requirements include an independent assessment, security review, renewal of the ATO (required every 3 years unless stated otherwise), and Federal reporting and continuous monitoring requirements. It is estimated that the number of recordkeepers associated with these clauses will be 1,028 and the estimated burden per response is 16 hours.

(6) *An estimate of the total public burden (in hours) associated with the information collection:* The total estimated annual hour burden associated with this collection is 67,820.

(7) *An estimate of the total public burden (in cost) associated with the information collection:* The estimated total annual cost burden associated with this collection of information is $4,476,120.

List of Subjects in 48 CFR Parts 3001, 3002, 3004 and 3052

Government procurement.

For reasons set out in the preamble, DHS amends chapter 30 of title 48 of the Code of Federal Regulations as set forth below.

■ 1. The authority citation for 48 CFR parts 3001, 3002, 3004, and 3052 is revised to read as follows:

Authority: 5 U.S.C. 301–302, 41 U.S.C. 1707, 41 U.S.C. 1702, 41 U.S.C. 1303(a)(2), 48 CFR part 1, subpart 1.3, and DHS Delegation Number 0702.

PART 3001—FEDERAL ACQUISITION REGULATIONS SYSTEM

■ 2. In section 3001.106 amend paragraph (a) by adding a new OMB control number at the end of the list to read as follows:

3001.106 OMB Approval Under the Paperwork Reduction Act.

(a) * * *

OMB Control No. 1601–0023 (Safeguarding of Controlled Unclassified Information)

* * * * *

PART 3002—DEFINITIONS OF WORDS AND TERMS

■ 3. Amend section 3002.101 by adding the definitions ''Adequate security'', ''Controlled unclassified information (CUI)'', ''Federal information'', ''Federal information system'', ''Handling'', ''Information resources'', ''Information security'', and ''Information systems'' to read as follows:

Adequate security means security protections commensurate with the risk resulting from the unauthorized access, use, disclosure, disruption, modification, or destruction of information. This includes ensuring that information hosted on behalf of an agency and information systems and applications used by the agency operate effectively and provide appropriate confidentiality, integrity, and availability protections through the application of cost-effective security controls.

* * * * *

Controlled unclassified information (CUI) is any information the Government creates or possesses, or an entity creates or possesses for or on behalf of the Government (other than classified information) that a law, regulation, or Governmentwide policy requires or permits an agency to handle using safeguarding or dissemination controls. This definition includes the following CUI categories and subcategories of information:

(1) Chemical-terrorism Vulnerability Information (CVI) as defined in 6 CFR part 27, ''Chemical Facility Anti-Terrorism Standards,'' and as further described in supplementary guidance issued by an authorized official of the Department of Homeland Security (including the Revised Procedural Manual ''Safeguarding Information Designated as Chemical-Terrorism Vulnerability Information'' dated September 2008);

(2) Protected Critical Infrastructure Information (PCII) as set out in the Critical Infrastructure Information Act of 2002 (title XXII, subtitle B of the Homeland Security Act of 2002 as amended through Pub. L. 116–283), PCII's implementing regulations (6 CFR part 29), the PCII Program Procedures Manual, and any supplementary guidance officially communicated by an authorized official of the Department of Homeland Security, the PCII Program Manager, or a PCII Program Manager Designee;

(3) Sensitive Security Information (SSI) as defined in 49 CFR part 1520, ''Protection of Sensitive Security Information,'' as amended, and any supplementary guidance officially communicated by an authorized official of the Department of Homeland Security (including the Assistant Secretary for the Transportation Security Administration or designee), including Department of Homeland Security MD 11056.1, ''Sensitive Security Information (SSI)'' and, within the Transportation Security Administration, TSA MD 2810.1, ''SSI Program'';

(4) Homeland Security Agreement Information means information the Department of Homeland Security receives pursuant to an agreement with State, local, Tribal, territorial, or private sector partners that is required to be protected by that agreement. The Department receives this information in furtherance of the missions of the Department, including, but not limited to, support of the Fusion Center Initiative and activities for cyber information sharing consistent with the Cybersecurity Information Sharing Act of 2015;

(5) Homeland Security Enforcement Information means unclassified information of a sensitive nature lawfully created, possessed, or transmitted by the Department of Homeland Security in furtherance of its immigration, customs, and other civil and criminal enforcement missions, the unauthorized disclosure of which could adversely impact the mission of the Department;

(6) International Agreement Information means information the Department of Homeland Security receives that is required to be protected by an information sharing agreement or arrangement with a foreign government,

[54] Estimated hours weighted by 171 ATO vendors and 857 non-ATO vendors.

an international organization of governments or any element thereof, an international or foreign public or judicial body, or an international or foreign private or non-governmental organization;

(7) Information Systems Vulnerability Information (ISVI) means:

(i) Department of Homeland Security information technology (IT) systems data revealing infrastructure used for servers, desktops, and networks; applications name, version, and release; switching, router, and gateway information; interconnections and access methods; and mission or business use/need. Examples of ISVI are systems inventories and enterprise architecture models. Information pertaining to national security systems and eligible for classification under Executive Order 13526 will be classified as appropriate; and/or

(ii) Information regarding developing or current technology, the release of which could hinder the objectives of the Department, compromise a technological advantage or countermeasure, cause a denial of service, or provide an adversary with sufficient information to clone, counterfeit, or circumvent a process or system;

(8) Operations Security Information means Department of Homeland Security information that could be collected, analyzed, and exploited by a foreign adversary to identify intentions, capabilities, operations, and vulnerabilities that threaten operational security for the missions of the Department;

(9) Personnel Security Information means information that could result in physical risk to Department of Homeland Security personnel or other individuals whom the Department is responsible for protecting;

(10) Physical Security Information means reviews or reports illustrating or disclosing facility infrastructure or security vulnerabilities related to the protection of Federal buildings, grounds, or property. For example, threat assessments, system security plans, contingency plans, risk management plans, business impact analysis studies, and certification and accreditation documentation;

(11) Privacy Information includes both Personally Identifiable Information (PII) and Sensitive Personally Identifiable Information (SPII). PII refers to information that can be used to distinguish or trace an individual's identity, either alone or when combined with other information that is linked or linkable to a specific individual; and SPII is a subset of PII that if lost, compromised, or disclosed without authorization could result in substantial harm, embarrassment, inconvenience, or unfairness to an individual. To determine whether information is PII, DHS will perform an assessment of the specific risk that an individual can be identified using the information with other information that is linked or linkable to the individual. In performing this assessment, it is important to recognize that information that is not PII can become PII whenever additional information becomes available, in any medium or from any source, that would make it possible to identify an individual. Certain data elements are particularly sensitive and may alone present an increased risk of harm to the individual.

(i) Examples of stand-alone PII that are particularly sensitive include: Social Security numbers (SSNs), driver's license or State identification numbers, Alien Registration Numbers (A-numbers), financial account numbers, and biometric identifiers.

(ii) Multiple pieces of information may present an increased risk of harm to the individual when combined, posing an increased risk of harm to the individual. SPII may also consist of any grouping of information that contains an individual's name or other unique identifier plus one or more of the following elements:

(A) Truncated SSN (such as last 4 digits);

(B) Date of birth (month, day, and year);

(C) Citizenship or immigration status;

(D) Ethnic or religious affiliation;

(E) Sexual orientation;

(F) Criminal history;

(G) Medical information; and

(H) System authentication information, such as mother's birth name, account passwords, or personal identification numbers (PINs).

(iii) Other PII that may present an increased risk of harm to the individual depending on its context, such as a list of employees and their performance ratings or an unlisted home address or phone number. The context includes the purpose for which the PII was collected, maintained, and used. This assessment is critical because the same information in different contexts can reveal additional information about the impacted individual.

* * * * *

Federal information means information created, collected, processed, maintained, disseminated, disclosed, or disposed of by or for the Federal Government, in any medium or form.

Federal information system means an information system used or operated by an agency or by a contractor of an agency or by another organization on behalf of an agency.

Handling means any use of controlled unclassified information, including but not limited to marking, safeguarding, transporting, disseminating, re-using, and disposing of the information.

* * * * *

Information resources means information and related resources, such as personnel, equipment, funds, and information technology.

Information security means protecting information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction in order to provide—

(1) Integrity, which means guarding against improper information modification or destruction, and includes ensuring information nonrepudiation and authenticity;

(2) Confidentiality, which means preserving authorized restrictions on access and disclosure, including means for protecting personal privacy and proprietary information; and

(3) Availability, which means ensuring timely and reliable access to and use of information.

Information system means a discrete set of information resources organized for the collection, processing, maintenance, use, sharing, dissemination, or disposition of information.

* * * * *

PART 3004—ADMINISTRATIVE MATTERS

■ 4. Revise subpart 3004.4 to read as follows:

Subpart 3004.4—Safeguarding Classified and Controlled Unclassified Information Within Industry

3004.470–1 Scope.

This section implements DHS policies for assuring adequate security of unclassified facilities, information resources, and controlled unclassified information (CUI) during the acquisition lifecycle.

3004.470–2 Definitions.

As used in this subpart—

Incident means an occurrence that—

(1) Actually or imminently jeopardizes, without lawful authority, the integrity, confidentiality, or availability of information or an information system; or

(2) Constitutes a violation or imminent threat of violation of law, security policies, security procedures, or acceptable use policies.

3004.470–3 Policy.

(a) DHS requires that CUI be safeguarded when it resides on DHS-owned and operated information systems, DHS-owned and contractor-operated information systems, contractor-owned and/or operated information systems operating on behalf of the Department, and any situation where contractor and/or subcontractor employees may have access to CUI because of their relationship with DHS. There are several Department policies and procedures (accessible at *https://www.dhs.gov/dhs-security-and-training-requirements-contractors*) that also address the safeguarding of CUI. Compliance with these policies and procedures, as amended, is required.

(b) DHS requires contractor employees that require recurring access to government facilities or access to CUI to complete such forms as may be necessary for security or other reasons, including the conduct of background investigations to determine fitness. Department policies and procedures that address contractor employee fitness are contained in Instruction Handbook Number 121–01–007, *The Department of Homeland Security Personnel Suitability and Security Program.* Compliance with these policies and procedures, as amended, is required.

3004.470–4 Contract Clauses.

(a) Contracting officers shall insert the basic clause at (HSAR) 48 CFR 3052.204–71, *Contractor Employee Access,* in solicitations and contracts when contractor and/or subcontractor employees require recurring access to government facilities or access to CUI. Contracting officers shall insert the basic clause with its Alternate I for acquisitions requiring contractor access to government information resources. For acquisitions in which contractor and/or subcontractor employees will not have access to government information resources, but the department has determined contractor and/or subcontractor employee access to CUI or government facilities must be limited to U.S. citizens and lawful permanent residents, the contracting officer shall insert the clause with its Alternate II. Neither the basic clause nor its alternates shall be used unless contractor and/or subcontractor employees will require recurring access to government facilities or access to CUI. Neither the basic clause nor its alternates should ordinarily be used in contracts with educational institutions.

(b)(1) Contracting officers shall insert the clause at (HSAR) 48 CFR 3052.204–72, *Safeguarding of Controlled Unclassified Information,* in solicitations and contracts where:

(i) Contractor and/or subcontractor employees will have access to CUI; or

(ii) CUI will be collected or maintained on behalf of the agency.

(2) Contracting officers shall insert the basic clause with its alternate when Federal information systems, which include contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI.

(c) Contracting officers shall insert the clause at (HSAR) 48 CFR 3052.204–73, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents,* in solicitations and contracts where contractor and/or subcontractor employees have access to PII.

PART 3052—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 5. Remove and reserve clause 3052.204–70.

■ 6. Revise clause 3052.204–71 to read as follows:

3052.204–71 Contractor employee access.

As prescribed in (HSAR) 48 CFR 3004.470–4(a), insert the following clause with appropriate alternates:

Contractor Employee Access (July 2023)

(a) *Controlled Unclassified Information (CUI)* is any information the Government creates or possesses, or an entity creates or possesses for or on behalf of the Government (other than classified information) that a law, regulation, or Governmentwide policy requires or permits an agency to handle using safeguarding or dissemination controls. This definition includes the following CUI categories and subcategories of information:

(1) Chemical-terrorism Vulnerability Information (CVI) as defined in 6 CFR part 27, ''Chemical Facility Anti-Terrorism Standards,'' and as further described in supplementary guidance issued by an authorized official of the Department of Homeland Security (including the Revised Procedural Manual ''Safeguarding Information Designated as Chemical-Terrorism Vulnerability Information'' dated September 2008);

(2) Protected Critical Infrastructure Information (PCII) as set out in the Critical Infrastructure Information Act of 2002 (title XXII, subtitle B of the Homeland Security Act of 2002 as amended through Pub. L. 116–283), PCII's implementing regulations (6 CFR part 29), the PCII Program Procedures Manual, and any supplementary guidance officially communicated by an authorized official of the Department of Homeland Security, the PCII Program Manager, or a PCII Program Manager Designee;

(3) Sensitive Security Information (SSI) as defined in 49 CFR part 1520, ''Protection of Sensitive Security Information,'' as amended, and any supplementary guidance officially communicated by an authorized official of the Department of Homeland Security (including the Assistant Secretary for the Transportation Security Administration or designee), including Department of Homeland Security MD 11056.1, ''Sensitive Security Information (SSI)'' and, within the Transportation Security Administration, TSA MD 2810.1, ''SSI Program'';

(4) Homeland Security Agreement Information means information the Department of Homeland Security receives pursuant to an agreement with State, local, Tribal, territorial, or private sector partners that is required to be protected by that agreement. The Department receives this information in furtherance of the missions of the Department, including, but not limited to, support of the Fusion Center Initiative and activities for cyber information sharing consistent with the Cybersecurity Information Sharing Act of 2015;

(5) Homeland Security Enforcement Information means unclassified information of a sensitive nature lawfully created, possessed, or transmitted by the Department of Homeland Security in furtherance of its immigration, customs, and other civil and criminal enforcement missions, the unauthorized disclosure of which could adversely impact the mission of the Department;

(6) International Agreement Information means information the Department of Homeland Security receives that is required to be protected by an information sharing agreement or arrangement with a foreign government, an international organization of governments or any element thereof, an international or foreign public or judicial body, or an international or foreign private or non-governmental organization;

(7) Information Systems Vulnerability Information (ISVI) means:

(i) Department of Homeland Security information technology (IT) systems data revealing infrastructure used for servers, desktops, and networks; applications name, version, and release; switching, router, and gateway information; interconnections and access methods; and mission or business use/need. Examples of ISVI are systems inventories and enterprise architecture models. Information pertaining to national security systems and eligible for classification under Executive Order 13526 will be classified as appropriate; and/or

(ii) Information regarding developing or current technology, the release of which could hinder the objectives of the Department, compromise a technological advantage or countermeasure, cause a denial of service, or provide an adversary with sufficient information to clone, counterfeit, or circumvent a process or system;

(8) Operations Security Information means Department of Homeland Security information that could be collected, analyzed, and exploited by a foreign adversary to identify intentions, capabilities, operations, and vulnerabilities that threaten operational security for the missions of the Department;

(9) Personnel Security Information means information that could result in physical risk to Department of Homeland Security personnel or other individuals whom the Department is responsible for protecting;

(10) Physical Security Information means reviews or reports illustrating or disclosing facility infrastructure or security vulnerabilities related to the protection of Federal buildings, grounds, or property. For example, threat assessments, system security plans, contingency plans, risk management plans, business impact analysis studies, and certification and accreditation documentation;

(11) Privacy Information includes both Personally Identifiable Information (PII) and Sensitive Personally Identifiable Information (SPII). PII refers to information that can be used to distinguish or trace an individual's identity, either alone, or when combined with other information that is linked or linkable to a specific individual; and SPII is a subset of PII that if lost, compromised, or disclosed without authorization could result in substantial harm, embarrassment, inconvenience, or unfairness to an individual. To determine whether information is PII, DHS will perform an assessment of the specific risk that an individual can be identified using the information with other information that is linked or linkable to the individual. In performing this assessment, it is important to recognize that information that is not PII can become PII whenever additional information becomes available, in any medium or from any source, that would make it possible to identify an individual. Certain data elements are particularly sensitive and may alone present an increased risk of harm to the individual.

(i) Examples of stand-alone PII that are particularly sensitive include: Social Security numbers (SSNs), driver's license or State identification numbers, Alien Registration Numbers (A-numbers), financial account numbers, and biometric identifiers.

(ii) Multiple pieces of information may present an increased risk of harm to the individual when combined, posing an increased risk of harm to the individual. SPII may also consist of any grouping of information that contains an individual's name or other unique identifier plus one or more of the following elements:

(A) Truncated SSN (such as last 4 digits);

(B) Date of birth (month, day, and year);

(C) Citizenship or immigration status;

(D) Ethnic or religious affiliation;

(E) Sexual orientation;

(F) Criminal history;

(G) Medical information; and

(H) System authentication information, such as mother's birth name, account passwords, or personal identification numbers (PINs).

(iii) Other PII that may present an increased risk of harm to the individual depending on its context, such as a list of employees and their performance ratings or an unlisted home address or phone number. The context includes the purpose for which the PII was collected, maintained, and used. This assessment is critical because the same information in different contexts can reveal additional information about the impacted individual.

(b) *Information Resources* means information and related resources, such as personnel, equipment, funds, and information technology.

(c) Contractor employees working on this contract must complete such forms as may be necessary for security or other reasons, including the conduct of background investigations to determine suitability. Completed forms shall be submitted as directed by the Contracting Officer. Upon the Contracting Officer's request, the Contractor's employees shall be fingerprinted or subject to other investigations as required. All Contractor employees requiring recurring access to government facilities or access to CUI or information resources are required to have a favorably adjudicated background investigation prior to commencing work on this contract unless this requirement is waived under departmental procedures.

(d) The Contracting Officer may require the Contractor to prohibit individuals from working on the contract if the Government deems their initial or continued employment contrary to the public interest for any reason, including, but not limited to, carelessness, insubordination, incompetence, or security concerns.

(e) Work under this contract may involve access to CUI. The Contractor shall access and use CUI only for the purpose of furnishing advice or assistance directly to the Government in support of the Government's activities, and shall not disclose, orally or in writing, CUI for any other purpose to any person unless authorized in writing by the Contracting Officer. For those Contractor employees authorized to access CUI, the Contractor shall ensure that these persons receive initial and refresher training concerning the protection and disclosure of CUI. Initial training shall be completed within 60 days of contract award and refresher training shall be completed every 2 years thereafter.

(f) The Contractor shall include this clause in all subcontracts at any tier where the subcontractor may have access to government facilities, CUI, or information resources.

(End of clause)

Alternate I (July 2023)

When the contract will require Contractor employees to have access to information resources, add the following paragraphs:

(g) Before receiving access to information resources under this contract, the individual must complete a security briefing; additional training for specific categories of CUI, if identified in the contract; and any nondisclosure agreement furnished by DHS. The Contracting Officer's Representative (COR) will arrange the security briefing and any additional training required for specific categories of CUI.

(h) The Contractor shall have access only to those areas of DHS information resources explicitly stated in this contract or approved by the COR in writing as necessary for performance of the work under this contract. Any attempts by Contractor personnel to gain access to any information resources not expressly authorized by the terms and conditions in this contract, or as approved in writing by the COR, are strictly prohibited. In the event of violation of this provision, DHS will take appropriate actions with regard to the contract and the individual(s) involved.

(i) Contractor access to DHS networks from a remote location is a temporary privilege for mutual convenience while the Contractor performs business for DHS. It is not a right, a guarantee of access, a condition of the contract, or government-furnished equipment (GFE).

(j) Contractor access will be terminated for unauthorized use. The Contractor agrees to hold and save DHS harmless from any unauthorized use and agrees not to request additional time or money under the contract for any delays resulting from unauthorized use or access.

(k) Non-U.S. citizens shall not be authorized to access or assist in the development, operation, management, or maintenance of Department IT systems under the contract, unless a waiver has been granted by the Head of the Component or designee, with the concurrence of both the Department's Chief Security Officer (CSO) and the Chief Information Officer (CIO) or their designees. Within DHS Headquarters, the waiver may be granted only with the approval of both the CSO and the CIO or their designees. In order for a waiver to be granted:

(1) There must be a compelling reason for using this individual as opposed to a U.S. citizen; and

(2) The waiver must be in the best interest of the Government.

(l) Contractors shall identify in their proposals the names and citizenship of all non-U.S. citizens proposed to work under the contract. Any additions or deletions of non-U.S. citizens after contract award shall also be reported to the Contracting Officer.

(End of clause)

Alternate II (June 2006)

* * * * *

(End of clause)

* * * * *

■ 7. Add section 3052.204–72 to read as follows:

3052.204–72 Safeguarding of Controlled Unclassified Information.

As prescribed in (HSAR) 48 CFR 3004.470–4(b), insert the following clause:

Safeguarding of Controlled Unclassified Information (July 2023)

(a) *Definitions.* As used in this clause—

Adequate Security means security protections commensurate with the risk resulting from the unauthorized access, use, disclosure, disruption, modification, or

destruction of information. This includes ensuring that information hosted on behalf of an agency and information systems and applications used by the agency operate effectively and provide appropriate confidentiality, integrity, and availability protections through the application of cost-effective security controls.

Controlled Unclassified Information (CUI) is any information the Government creates or possesses, or an entity creates or possesses for or on behalf of the Government (other than classified information) that a law, regulation, or Governmentwide policy requires or permits an agency to handle using safeguarding or dissemination controls. This definition includes the following CUI categories and subcategories of information:

(1) Chemical-terrorism Vulnerability Information (CVI) as defined in 6 CFR part 27, ''Chemical Facility Anti-Terrorism Standards,'' and as further described in supplementary guidance issued by an authorized official of the Department of Homeland Security (including the Revised Procedural Manual ''Safeguarding Information Designated as Chemical-Terrorism Vulnerability Information'' dated September 2008);

(2) Protected Critical Infrastructure Information (PCII) as set out in the Critical Infrastructure Information Act of 2002 (title XXII, subtitle B of the Homeland Security Act of 2002 as amended through Public Law 116–283), PCII's implementing regulations (6 CFR part 29), the PCII Program Procedures Manual, and any supplementary guidance officially communicated by an authorized official of the Department of Homeland Security, the PCII Program Manager, or a PCII Program Manager Designee;

(3) Sensitive Security Information (SSI) as defined in 49 CFR part 1520, ''Protection of Sensitive Security Information,'' as amended, and any supplementary guidance officially communicated by an authorized official of the Department of Homeland Security (including the Assistant Secretary for the Transportation Security Administration or designee), including Department of Homeland Security MD 11056.1, ''Sensitive Security Information (SSI)'' and, within the Transportation Security Administration, TSA MD 2810.1, ''SSI Program'';

(4) Homeland Security Agreement Information means information the Department of Homeland Security receives pursuant to an agreement with State, local, Tribal, territorial, or private sector partners that is required to be protected by that agreement. The Department receives this information in furtherance of the missions of the Department, including, but not limited to, support of the Fusion Center Initiative and activities for cyber information sharing consistent with the Cybersecurity Information Sharing Act of 2015;

(5) Homeland Security Enforcement Information means unclassified information of a sensitive nature lawfully created, possessed, or transmitted by the Department of Homeland Security in furtherance of its immigration, customs, and other civil and criminal enforcement missions, the unauthorized disclosure of which could adversely impact the mission of the Department;

(6) International Agreement Information means information the Department of Homeland Security receives that is required to be protected by an information sharing agreement or arrangement with a foreign government, an international organization of governments or any element thereof, an international or foreign public or judicial body, or an international or foreign private or non-governmental organization;

(7) Information Systems Vulnerability Information (ISVI) means:

(i) Department of Homeland Security information technology (IT) systems data revealing infrastructure used for servers, desktops, and networks; applications name, version, and release; switching, router, and gateway information; interconnections and access methods; and mission or business use/need. Examples of ISVI are systems inventories and enterprise architecture models. Information pertaining to national security systems and eligible for classification under Executive Order 13526 will be classified as appropriate; and/or

(ii) Information regarding developing or current technology, the release of which could hinder the objectives of the Department, compromise a technological advantage or countermeasure, cause a denial of service, or provide an adversary with sufficient information to clone, counterfeit, or circumvent a process or system;

(8) Operations Security Information means Department of Homeland Security information that could be collected, analyzed, and exploited by a foreign adversary to identify intentions, capabilities, operations, and vulnerabilities that threaten operational security for the missions of the Department;

(9) Personnel Security Information means information that could result in physical risk to Department of Homeland Security personnel or other individuals whom the Department is responsible for protecting;

(10) Physical Security Information means reviews or reports illustrating or disclosing facility infrastructure or security vulnerabilities related to the protection of Federal buildings, grounds, or property. For example, threat assessments, system security plans, contingency plans, risk management plans, business impact analysis studies, and certification and accreditation documentation;

(11) Privacy Information includes both Personally Identifiable Information (PII) and Sensitive Personally Identifiable Information (SPII). PII refers to information that can be used to distinguish or trace an individual's identity, either alone, or when combined with other information that is linked or linkable to a specific individual; and SPII is a subset of PII that if lost, compromised, or disclosed without authorization could result in substantial harm, embarrassment, inconvenience, or unfairness to an individual. To determine whether information is PII, the DHS will perform an assessment of the specific risk that an individual can be identified using the information with other information that is linked or linkable to the individual. In performing this assessment, it is important to recognize that information that is not PII can become PII whenever additional information becomes available, in any medium or from any source, that would make it possible to identify an individual. Certain data elements are particularly sensitive and may alone present an increased risk of harm to the individual.

(i) Examples of stand-alone PII that are particularly sensitive include: Social Security numbers (SSNs), driver's license or State identification numbers, Alien Registration Numbers (A-numbers), financial account numbers, and biometric identifiers.

(ii) Multiple pieces of information may present an increased risk of harm to the individual when combined, posing an increased risk of harm to the individual. SPII may also consist of any grouping of information that contains an individual's name or other unique identifier plus one or more of the following elements:

(A) Truncated SSN (such as last 4 digits);

(B) Date of birth (month, day, and year);

(C) Citizenship or immigration status;

(D) Ethnic or religious affiliation;

(E) Sexual orientation;

(F) Criminal history;

(G) Medical information; and

(H) System authentication information, such as mother's birth name, account passwords, or personal identification numbers (PINs).

(iii) Other PII that may present an increased risk of harm to the individual depending on its context, such as a list of employees and their performance ratings or an unlisted home address or phone number. The context includes the purpose for which the PII was collected, maintained, and used. This assessment is critical because the same information in different contexts can reveal additional information about the impacted individual.

Federal information means information created, collected, processed, maintained, disseminated, disclosed, or disposed of by or for the Federal Government, in any medium or form.

Federal information system means an information system used or operated by an agency or by a Contractor of an agency or by another organization on behalf of an agency.

Handling means any use of controlled unclassified information, including but not limited to marking, safeguarding, transporting, disseminating, re-using, storing, capturing, and disposing of the information.

Incident means an occurrence that—

(1) Actually or imminently jeopardizes, without lawful authority, the integrity, confidentiality, or availability of information or an information system; or

(2) Constitutes a violation or imminent threat of violation of law, security policies, security procedures, or acceptable use policies.

Information Resources means information and related resources, such as personnel, equipment, funds, and information technology.

Information Security means protecting information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction in order to provide—

(1) Integrity, which means guarding against improper information modification or

destruction, and includes ensuring information nonrepudiation and authenticity;

(2) Confidentiality, which means preserving authorized restrictions on access and disclosure, including means for protecting personal privacy and proprietary information; and

(3) Availability, which means ensuring timely and reliable access to and use of information.

Information System means a discrete set of information resources organized for the collection, processing, maintenance, use, sharing, dissemination, or disposition of information.

(b) *Handling of Controlled Unclassified Information.* (1) Contractors and subcontractors must provide adequate security to protect CUI from unauthorized access and disclosure. Adequate security includes compliance with DHS policies and procedures in effect at the time of contract award. These policies and procedures are accessible at *https://www.dhs.gov/dhs-security-and-training-requirements-contractors.*

(2) The Contractor shall not use or redistribute any CUI handled, collected, processed, stored, or transmitted by the Contractor except as specified in the contract.

(3) The Contractor shall not maintain SPII in its invoicing, billing, and other recordkeeping systems maintained to support financial or other administrative functions. It is acceptable to maintain in these systems the names, titles, and contact information for the Contracting Officer's Representative (COR) or other government personnel associated with the administration of the contract, as needed.

(4) Any government data provided, developed, or obtained under the contract, or otherwise under the control of the Contractor, shall not become part of the bankruptcy estate in the event a Contractor and/or subcontractor enters bankruptcy proceedings.

(c) *Incident Reporting Requirements.* (1) Contractors and subcontractors shall report all known or suspected incidents to the Component Security Operations Center (SOC) in accordance with Attachment F, *Incident Response,* to DHS Policy Directive 4300A *Information Technology System Security Program, Sensitive Systems.* If the Component SOC is not available, the Contractor shall report to the DHS Enterprise SOC. Contact information for the DHS Enterprise SOC is accessible at *https://www.dhs.gov/dhs-security-and-training-requirements-contractors.* Subcontractors are required to notify the prime Contractor that it has reported a known or suspected incident to the Department. Lower tier subcontractors are required to likewise notify their higher tier subcontractor, until the prime contractor is reached. The Contractor shall also notify the Contracting Officer and COR using the contact information identified in the contract. If the report is made by phone, or the email address for the Contracting Officer or COR is not immediately available, the Contractor shall contact the Contracting Officer and COR immediately after reporting to the Component or DHS Enterprise SOC.

(2) All known or suspected incidents involving PII or SPII shall be reported within 1 hour of discovery. All other incidents shall be reported within 8 hours of discovery.

(3) CUI transmitted via email shall be protected by encryption or transmitted within secure communications systems. CUI shall be transmitted using a *FIPS 140–2/140–3 Security Requirements for Cryptographic Modules* validated cryptographic module identified on *https://csrc.nist.gov/projects/cryptographic-module-validation-program/validated-modules.* When this is impractical or unavailable, for Federal information systems only, CUI may be transmitted over regular email channels. When using regular email channels, Contractors and subcontractors shall not include any CUI in the subject or body of any email. The CUI shall be included as a password-protected attachment with the password provided under separate cover, including as a separate email. Recipients of CUI information will comply with any email restrictions imposed by the originator.

(4) An incident shall not, by itself, be interpreted as evidence that the Contractor or Subcontractor has failed to provide adequate information security safeguards for CUI or has otherwise failed to meet the requirements of the contract.

(5) If an incident involves PII or SPII, in addition to the incident reporting guidelines in Attachment F, *Incident Response,* to DHS Policy Directive 4300A *Information Technology System Security Program, Sensitive Systems,* Contractors shall also provide as many of the following data elements that are available at the time the incident is reported, with any remaining data elements provided within 24 hours of submission of the initial incident report:

(i) Unique Entity Identifier (UEI);

(ii) Contract numbers affected unless all contracts by the company are affected;

(iii) Facility CAGE code if the location of the event is different than the prime Contractor location;

(iv) Point of contact (POC) if different than the POC recorded in the System for Award Management (address, position, telephone, and email);

(v) Contracting Officer POC (address, telephone, and email);

(vi) Contract clearance level;

(vii) Name of subcontractor and CAGE code if this was an incident on a subcontractor network;

(viii) Government programs, platforms, or systems involved;

(ix) Location(s) of incident;

(x) Date and time the incident was discovered;

(xi) Server names where CUI resided at the time of the incident, both at the Contractor and subcontractor level;

(xii) Description of the government PII or SPII contained within the system; and

(xiii) Any additional information relevant to the incident.

(d) *Incident Response Requirements.*

(1) All determinations by the Department related to incidents, including response activities, will be made in writing by the Contracting Officer.

(2) The Contractor shall provide full access and cooperation for all activities determined by the Government to be required to ensure an effective incident response, including providing all requested images, log files, and event information to facilitate rapid resolution of incidents.

(3) Incident response activities determined to be required by the Government may include, but are not limited to, the following:

(i) Inspections;

(ii) Investigations;

(iii) Forensic reviews;

(iv) Data analyses and processing; and

(v) Revocation of the Authority to Operate (ATO), if applicable.

(4) The Contractor shall immediately preserve and protect images of known affected information systems and all available monitoring/packet capture data. The monitoring/packet capture data shall be retained for at least 180 days from submission of the incident report to allow DHS to request the media or decline interest.

(5) The Government, at its sole discretion, may obtain assistance from other Federal agencies and/or third-party firms to aid in incident response activities.

(e) *Certificate of Sanitization of Government and Government-Activity-Related Files and Information.* Upon the conclusion of the contract by expiration, termination, cancellation, or as otherwise indicated in the contract, the Contractor shall return all CUI to DHS and/or destroy it physically and/or logically as identified in the contract unless the contract states that return and/or destruction of CUI is not required. Destruction shall conform to the guidelines for media sanitization contained in NIST SP 800–88, *Guidelines for Media Sanitization.* The Contractor shall certify and confirm the sanitization of all government and government-activity related files and information. The Contractor shall submit the certification to the COR and Contracting Officer following the template provided in NIST SP 800–88, *Guidelines for Media Sanitization,* Appendix G.

(f) *Other Reporting Requirements.* Incident reporting required by this clause in no way rescinds the Contractor's responsibility for other incident reporting pertaining to its unclassified information systems under other clauses that may apply to its contract(s), or as a result of other applicable statutory or regulatory requirements, or other U.S. Government requirements.

(g) *Subcontracts.* The Contractor shall insert this clause in all subcontracts and require subcontractors to include this clause in all lower tier subcontracts when subcontractor employees will have access to CUI; CUI will be collected or maintained on behalf of the agency by a subcontractor; or a subcontractor information system(s) will be used to process, store, or transmit CUI.

(End of clause)

Alternate I (July 2023)

When Federal information systems, which include Contractor information systems operated on behalf of the agency, are used to collect, process, store, or transmit CUI, add the following paragraphs:

(h) *Authority to Operate.* The Contractor shall not collect, process, store, or transmit CUI within a Federal information system until an ATO has been granted by the

Component or Headquarters CIO, or designee. Once the ATO has been granted by the Government, the Contracting Officer shall incorporate the ATO into the contract as a compliance document. Unless otherwise specified in the ATO letter, the ATO is valid for 3 years. An ATO is granted at the sole discretion of the Government and can be revoked at any time. Contractor receipt of an ATO does not create any contractual right of access or entitlement. The Government's grant of an ATO does not alleviate the Contractor's responsibility to ensure the information system controls are implemented and operating effectively.

(1) *Complete the Security Authorization process.* The Security Authorization (SA) process shall proceed according to DHS Policy Directive 4300A *Information Technology System Security Program, Sensitive Systems* (Version 13.3, February 13, 2023), or any successor publication; and the *Security Authorization Process Guide,* including templates. These policies and templates are accessible at *https://www.dhs.gov/dhs-security-and-training-requirements-contractors.*

(i) *Security Authorization Package.* The SA package shall be developed using the government-provided Security Requirements Traceability Matrix and SA templates. The SA package consists of the following: Security Plan, Contingency Plan, Contingency Plan Test Results, Configuration Management Plan, Security Assessment Plan, Security Assessment Report, and Authorization to Operate Letter. Additional documents that may be required include a Plan(s) of Action and Milestones and Interconnection Security Agreement(s). The Contractor shall submit a signed copy of the SA package, validated by an independent third party, to the COR for review and approval by the Component or Headquarters CIO, or designee, at least 30 days prior to the date of operation of the information system. The Government is the final authority on the compliance of the SA package and may limit the number of resubmissions of modified documents.

(ii) *Independent Assessment.* Contractors shall have an independent third party validate the security and privacy controls in place for the information system(s). The independent third party shall review and analyze the SA package, and report on technical, operational, and management level deficiencies as outlined in NIST SP 800–53, *Security and Privacy Controls for Information Systems and Organizations,* or successor publication, accessible at *https://csrc.nist.gov/publications/sp.* The Contractor shall address all deficiencies before submitting the SA package to the COR for review.

(2) *Renewal of ATO.* Unless otherwise specified in the ATO letter, the Contractor shall renew the ATO every 3 years. The Contractor is required to update its SA package as part of the ATO renewal process for review and verification of security controls. Review and verification of security controls is independent of the system production date and may include onsite visits that involve physical or logical inspection of the Contractor environment to ensure controls are in place. The updated SA package shall be submitted for review and approval by the Component or Headquarters CIO, or designee, at least 90 days before the ATO expiration date. The Contractor shall update its SA package by one of the following methods:

(i) Updating the SA package in the DHS Information Assurance Compliance System; or

(ii) Submitting the updated SA package directly to the COR.

(3) *Security Review.* The Government may elect to conduct periodic reviews to ensure that the security requirements contained in the contract are being implemented and enforced. The Government, at its sole discretion, may obtain assistance from other Federal agencies and/or third-party firms to aid in security review activities. The Contractor shall afford DHS, the Office of the Inspector General, other government organizations, and Contractors working in support of the Government access to the Contractor's facilities, installations, operations, documentation, databases, networks, systems, and personnel used in the performance of this contract. The Contractor shall, through the Contracting Officer and COR, contact the Component or Headquarters CIO, or designee, to coordinate and participate in review and inspection activity by government organizations external to DHS. Access shall be provided, to the extent necessary as determined by the Government (including providing all requested images), for the Government to carry out a program of inspection, investigation, and audit to safeguard against threats and hazards to the integrity, availability, and confidentiality of government data or the function of computer systems used in performance of this contract and to preserve evidence of computer crime.

(4) *Federal Reporting and Continuous Monitoring Requirements.* Contractors operating information systems on behalf of the Government shall comply with Federal reporting and information system continuous monitoring requirements. Reporting requirements are determined by the Government and are defined in the Fiscal Year 2015 DHS Information Security Performance Plan, or successor publication, accessible at *https://www.dhs.gov/dhs-security-and-training-requirements-contractors.* The plan is updated on an annual basis. Annual, quarterly, and monthly data collection will be coordinated by the Government. The Contractor shall provide the Government with all information to fully satisfy Federal reporting requirements for information systems. The Contractor shall provide the COR with requested information within 3 business days of receipt of the request. Unless otherwise specified in the contract, monthly continuous monitoring data shall be stored at the Contractor's location for a period not less than 1 year from the date the data are created. The Government may elect to perform information system continuous monitoring and IT security scanning of information systems from government tools and infrastructure.

(End of clause)

■ 8. Add section 3052.204–73 to read as follows:

3052.204–73 Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents.

As prescribed in (HSAR) 48 CFR 3004.470–4(c), insert the following clause:

3052.204–73 Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents (July 2023)

(a) *Definitions.* Privacy Information includes both Personally Identifiable Information (PII) and Sensitive Personally Identifiable Information (SPII). PII refers to information that can be used to distinguish or trace an individual's identity, either alone, or when combined with other information that is linked or linkable to a specific individual; and SPII is a subset of PII that if lost, compromised, or disclosed without authorization could result in substantial harm, embarrassment, inconvenience, or unfairness to an individual. To determine whether information is PII, the DHS will perform an assessment of the specific risk that an individual can be identified using the information with other information that is linked or linkable to the individual. In performing this assessment, it is important to recognize that information that is not PII can become PII whenever additional information becomes available, in any medium or from any source, that would make it possible to identify an individual. Certain data elements are particularly sensitive and may alone present an increased risk of harm to the individual.

(1) Examples of stand-alone PII that are particularly sensitive include: Social Security numbers (SSNs), driver's license or State identification numbers, Alien Registration Numbers (A-numbers), financial account numbers, and biometric identifiers.

(2) Multiple pieces of information may present an increased risk of harm to the individual when combined, posing an increased risk of harm to the individual. SPII may also consist of any grouping of information that contains an individual's name or other unique identifier plus one or more of the following elements:

(i) Truncated SSN (such as last 4 digits);

(ii) Date of birth (month, day, and year);

(iii) Citizenship or immigration status;

(iv) Ethnic or religious affiliation;

(v) Sexual orientation;

(vi) Criminal history;

(vii) Medical information; and

(viii) System authentication information, such as mother's birth name, account passwords, or personal identification numbers (PINs).

(3) Other PII that may present an increased risk of harm to the individual depending on its context, such as a list of employees and their performance ratings or an unlisted home address or phone number. The context includes the purpose for which the PII was collected, maintained, and used. This assessment is critical because the same

information in different contexts can reveal additional information about the impacted individual.

(b) *PII and SPII Notification Requirements.* (1) No later than 5 business days after being directed by the Contracting Officer, or as otherwise required by applicable law, the Contractor shall notify any individual whose PII or SPII was either under the control of the Contractor or resided in an information system under control of the Contractor at the time the incident occurred. The method and content of any notification by the Contractor shall be coordinated with, and subject to prior written approval by, the Contracting Officer. The Contractor shall not proceed with notification unless directed in writing by the Contracting Officer.

(2) All determinations by the Department related to notifications to affected individuals and/or Federal agencies and related services (*e.g.,* credit monitoring) will be made in writing by the Contracting Officer.

(3) Subject to government analysis of the incident and direction to the Contractor regarding any resulting notification, the notification method may consist of letters to affected individuals sent by first-class mail, electronic means, or general public notice, as approved by the Government. Notification may require the Contractor's use of address verification and/or address location services. At a minimum, the notification shall include:

(i) A brief description of the incident;

(ii) A description of the types of PII or SPII involved;

(iii) A statement as to whether the PII or SPII was encrypted or protected by other means;

(iv) Steps individuals may take to protect themselves;

(v) What the Contractor and/or the Government are doing to investigate the incident, mitigate the incident, and protect against any future incidents; and

(vi) Information identifying who individuals may contact for additional information.

(c) *Credit Monitoring Requirements.* The Contracting Officer may direct the Contractor to:

(1) Provide notification to affected individuals as described in paragraph (b).

(2) Provide credit monitoring services to individuals whose PII or SPII was under the control of the Contractor or resided in the information system at the time of the incident for a period beginning the date of the incident and extending not less than 18 months from the date the individual is notified. Credit monitoring services shall be provided from a company with which the Contractor has no affiliation. At a minimum, credit monitoring services shall include:

(i) Triple credit bureau monitoring;

(ii) Daily customer service;

(iii) Alerts provided to the individual for changes and fraud; and

(iv) Assistance to the individual with enrollment in the services and the use of fraud alerts.

(3) Establish a dedicated call center. Call center services shall include:

(i) A dedicated telephone number to contact customer service within a fixed period;

(ii) Information necessary for registrants/enrollees to access credit reports and credit scores;

(iii) Weekly reports on call center volume, issue escalation (*i.e.,* those calls that cannot be handled by call center staff and must be resolved by call center management or DHS, as appropriate), and other key metrics;

(iv) Escalation of calls that cannot be handled by call center staff to call center management or DHS, as appropriate;

(v) Customized Frequently Asked Questions, approved in writing by the Contracting Officer in coordination with the Component or Headquarters Privacy Officer; and

(vi) Information for registrants to contact customer service representatives and fraud resolution representatives for credit monitoring assistance.

(End of clause)

■ 9. In section 3052.212–70 amend paragraph (b) of the clause by:

■ a. Removing ''__3052.204–70, *Security Requirements for Unclassified Information Technology Resources*''

■ b. Revising the entry for 3052.204–71, *Contractor Employee Access,* and

■ c. Adding 3052.204–72, *Safeguarding of Controlled Unclassified Information* and 3052.204–73, *Notification and Credit Monitoring Requirements for Personally Identifiable Information Incidents.*

The revision reads as follows:

3052.212–70 Contract terms and conditions applicable to DHS acquisition of commercial items.

Contract Terms and Conditions Applicable to DHS Acquisition of Commercial Items (July 2023)

[FR Doc. 2023–11270 Filed 6–20–23; 8:45 am]

BILLING CODE 9110–9B–P

FEDERAL REGISTER

Vol. 88 Wednesday,
No. 118 June 21, 2023

Part VI

Federal Communications Commission

47 CFR Part 10
Emergency Alert System; Wireless Emergency Alerts; Proposed Rule

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 10

[PS Docket No. 15–94; PS Docket No. 15–91; FCC 23–30; FR ID 146184]

Emergency Alert System; Wireless Emergency Alerts

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Federal Communications Commission (Commission) proposes requirements for commercial mobile service providers (CMS Providers) that have elected to participate in the Wireless Emergency Alert system (WEA) to make WEA more accessible, including to people who primarily speak a language other than English or Spanish and people with disabilities who cannot access messages displayed in conventional formats. Additionally, the document proposes to weave WEA more seamlessly into people's lives through increased flexibility in whether an attention signal or vibration is triggered when a WEA is triggered. The document also proposes performance measures for WEA to satisfy and greater transparency for alerting stakeholders regarding where and on what devices they offer WEA as well as information about WEA performance. These requirements would assist the millions of people who do not speak English or Spanish, as well as those with disabilities, understand and respond to WEA messages, and result in a more precise and tailored use of WEA through increased flexibility and options for consumers and alerting authorities. With this *Further Notice of Proposed Rulemaking (Further Notice),* the Commission seeks comment on the proposed rules and any suitable alternatives.

DATES: Comments are due on or before July 21, 2023 and reply comments are due on or before August 21, 2023. Written comments on the Paperwork Reduction Act proposed information collection requirements must be submitted by the public, Office of Management and Budget (OMB), and other interested parties on or before August 21, 2023.

ADDRESSES: You may submit comments, identified by PS Docket No. 15–94; and PS Docket No. 15–91, by any of the following methods:

- *Federal Communications Commission's website: https://www.apps.fcc.gov/ecfs/.* Follow the instructions for submitting comments.
- *Mail:* Parties who choose to file by paper must file an original and one copy of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number. Filings can be sent by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission. Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701. U.S. Postal Service first-class, Express, and Priority mail must be addressed to 45 L Street NE, Washington, DC 20554.

Effective March 19, 2020, and until further notice, the Commission no longer accepts any hand or messenger delivered filings. This is a temporary measure taken to help protect the health and safety of individuals, and to mitigate the transmission of COVID–19. *See FCC Announces Closure of FCC Headquarters Open Window and Change in Hand-Delivery Policy,* Public Notice, DA 20–304 (March 19, 2020). *https://www.fcc.gov/document/fcc-closes-headquarters-open-window-and-changes-hand-delivery-policy.*

- *People With Disabilities.* To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

FOR FURTHER INFORMATION CONTACT: For further information regarding this Further Notice, please contact Michael Antonino, Cybersecurity and Communications Reliability Division, Public Safety and Homeland Security Bureau, (202) 418–7965, or by email to *michael.antonino@fcc.gov.*

For additional information concerning the Paperwork Reduction Act information collection requirements contained in this document, send an email to *PRA@fcc.gov* or contact Nicole Ongele, Office of Managing Director, Performance and Program Management, 202–418–2991, or by email to *PRA@fcc.gov.*

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Further Notice of Proposed Rulemaking (NPRM), FCC 23–30, adopted April 20, 2023, and released April 21, 2023. This FNPRM addresses Wireless Emergency Alerts (WEA). Though we are not specifically proposing changes to our Part 11 rules regarding the Emergency Alert System (EAS), this FNPRM references both the EAS and WEA dockets and we have historically sought comment on WEA in both dockets, including the underlying NPRM to which this further notice connects. The full text of this document is available by downloading the text from the Commission's website at: *https://docs.fcc.gov/public/attachments/FCC-23-30A1.pdf.*

Synopsis

Introduction and Background

1. It is essential that the public be able to receive WEA messages in their native language and that alerting authorities better understand WEA performance. Accordingly, we propose to require CMS Providers that have elected to participate in WEA (Participating CMS Providers) take measures to:

- Make WEA more accessible, including to people who primarily speak a language other than English or Spanish and people with disabilities who cannot access messages displayed in conventional formats;
- Integrate WEA more seamlessly into people's lives through increased flexibility in whether the attention signal and/or vibration is triggered;
- Satisfy performance measures for WEA; and
- Provide alerting stakeholders with greater transparency regarding where and on what devices they offer WEA, as well as information about WEA performance.

Through these proposals, we intend to help the millions of people who primarily speak languages other than English or Spanish, as well as those with disabilities, better understand and take protective actions in response to WEA messages; facilitate the more tailored use of WEA through increased flexibility and options for the alerting authority and consumer; and provide alerting authorities with the information they need to use WEA with confidence.

2. WEA is a tool for authorized federal, state, and local government entities to geographically target alerts and warnings to WEA-capable mobile devices of Participating CMS Providers' subscribers. The Warning Alert and Response Network (WARN) Act establishes WEA as a voluntary system in which CMS providers may elect to participate and gives the Commission authority to adopt ''relevant technical standards, protocols, procedures and other technical requirements . . . necessary to enable commercial mobile service alerting capability for

commercial mobile service providers that voluntarily elect to transmit emergency alerts.'' Pursuant to this authority, the Commission has adopted requirements to prescribe WEA capabilities, WEA testing, and WEA election procedures. While participation by wireless providers is voluntary, those that offer the service must adhere to the technical and operational requirements established by the Commission. The Commission requires each CMS Provider to file an election with the Commission indicating whether it intends to transmit emergency alerts ''in whole or in part.'' Twenty one of the 76 wireless providers that elect to transmit alert messages, including the three nationwide service providers AT&T, Verizon Wireless, and T-Mobile, have elected to transmit emergency alert messages ''in part.'' A CMS Provider that elects, in whole or in part, not to transmit emergency alerts is also required to make that election in writing to the Commission, provide conspicuous notice at the point of sale of any devices that will not transmit emergency alerts, and notify its existing subscribers of this election. While Participating CMS Providers, including the three nationwide providers, serve the majority of wireless consumers, hundreds of wireless providers (over 450 of them) have elected not to transmit WEA alert messages.

3. Federal, state, local, tribal, and territorial emergency management agencies apply to the Federal Emergency Management Agency's (FEMA's) Integrated Public Alert and Warning System (IPAWS) Program Management Office to become authorized as alerting authorities. FEMA authorizes alerting authorities to issue WEA and other alerts through IPAWS either individually or as part of a Collaborative Operating Group (COGs) after they enter into a Memorandum of Agreement (MOA) with FEMA agreeing to certain rules of behavior.

4. The Commission does not currently require Participating CMS Providers to measure the performance of their WEA service. In 2016, the Commission proposed to require Participating CMS Providers to annually report on the performance of their WEA systems, and sought comment on whether Participating CMS Providers should log additional information about the WEA alert messages that they transmit to enable performance measurements, including at the mobile device where WEA alert messages are received. In 2018, the Commission sought additional comment on how WEA's performance should be measured and reported, and how the Commission should address inconsistent WEA delivery. In 2022, the Commission sought to refresh the issue of developing metrics for WEA performance and reporting standards to assist stakeholders with understanding the effectiveness of WEA in their alerting areas, and identify areas for improvement. We proposed that Participating CMS Providers report on reliability, speed, and accuracy to help stakeholders develop an understanding of the WEA system's end-to-end performance. We also sought comment on how these metrics should be defined and how the data should be logged and reported to the Commission.

5. In 2020, the Government Accountability Office (GAO) reviewed the federal response to natural disasters, and examined the Commission's oversight of WEA in particular. GAO observed that WEA usage has increased and now serves as the nation's primary alerting method. GAO noted that while the FCC collects test data from Emergency Alert System (EAS) tests, a similar mechanism does not exist for WEA. GAO found that, while the FCC has required Participating CMS Providers to implement new WEA capabilities, it ''has not developed goals and performance measures to help monitor how well the new capabilities perform during emergencies.'' GAO observed that ''because [the] FCC does not have specific goals and performance measures to monitor WEA improvements, [the] FCC will have difficulty assuring that these improvements are working as intended during emergencies and identifying areas where performance is lacking, which could undermine authorities' confidence in using IPAWS.'' Accordingly, GAO recommended that the FCC should develop measurable goals and performance measures for WEA. In response, the Commission stated it would ''complete geo-targeting pilot testing with selected local jurisdiction partner(s)'' and ''complete associated rulemaking to adopt performance measures for enhanced WEA capabilities, as appropriate.''

6. Over the years, the Communications Security, Reliability and Interoperability Council (CSRIC) has studied and reported on various aspects of the WEA system. In 2014, CSRIC IV discussed the possibility of including maps and other graphic information in WEA alert messages, concluding that more study was necessary. More recently, in 2022, CSRIC VIII examined the issue of WEA performance reporting and developed technical requirements for an application programming interface (API) that would allow WEA firmware to leverage native mobile device capabilities. CSRIC VIII recommended automated performance data reporting via email and discussed alternative ways to implement WEA performance reporting, including through the use of staged devices. CSRIC VII also recommended enhancements to WEA messages such as support for machine-based translation, location aware maps, and other multimedia content.

Discussion

A. Making WEA More Accessible

7. People with native languages other than English or Spanish, or people with disabilities, may be excluded during emergencies if they are not notified in a manner that they can understand. We tentatively conclude that WEA needs to do more to deliver essential warnings in languages and in a format that is most likely to reach those communities who need this information most. Accordingly, we propose to require Participating CMS Providers to ensure that the WEA-capable mobile devices they sell have the capacity to translate alert messages into most subscribers' alert language preferences and support multimedia content. We seek comment on these proposals as well as on any other actions that the Commission can take to empower alerting authorities to deliver emergency alerts in an accessible manner to everyone in their communities.

Enhancing WEA's Language Support

8. We propose to require Participating CMS Providers to take steps, described below, to ensure that their subscribers' WEA-capable mobile devices have the capacity to translate English-language alert messages that they receive into the default language preferences of most subscribers by taking advantage of machine translation technologies. This proposal would address alerting authorities' need to be able to communicate with people in their communities in languages other than English or Spanish, irrespective of the alerting authorities' in-house language translation capabilities.

9. We seek comment on the technical feasibility of this proposal. Based on recent feedback from industry participants, we believe machine translation technologies have matured sufficiently to support such a requirement. Just last month, for example, AT&T posited that ''software translation technologies are sufficiently mature to effectively support the translation of WEA alerts into the most commonly spoken languages'' and recommended that ''translation beyond

English and Spanish use the software translation capabilities provided by mobile device operating systems.'' CSRIC VIII also reports that ''[w]ith improvements in language translation technology, there is an opportunity to provide WEAs in the user-preferred language via language translation.'' Machine translation technologies such as Google Cloud Translation and Apple Translate are pre-installed on many WEA-capable mobile devices. A device-level API to leverage these applications could make WEA messages accessible to every major language group in the U.S. A machine translation application could access an English-language WEA message before it is presented to the subscriber by using this API, translate the English-language alert into the device's preferred language, and then present the translated alert instead of or in addition to the English-language version. Improvements in the accuracy and reliability of machine-based automatic translation technology also may have implications for expanding the distribution of emergency information over the Emergency Alert System (EAS) in languages other than English, as the Commission has noted in the past. We seek comment on the technical feasibility of this approach and on any other considerations for implementing machine translation technology, including its use in distributing information over EAS. Currently, Participating CMS Providers transmit Spanish-language versions of WEA messages created by alerting authorities so that they may be presented in addition to the English language version. As CSRIC VIII explained, ''[i]f multiple additional languages are included in the WEA broadcast, capacity limits may not allow for the expected behavior of the WEA system in the case of a crisis scenario with multiple live alerts in three or more languages.'' Should WEA messages presented in other languages also be presented in addition to, rather than instead of, the English-language version?

10. We propose to require the WEA-capable mobile devices that Participating CMS Providers sell to support the presentation of emergency alerts in the 13 most commonly spoken languages in the United States, in addition to English: Spanish, Chinese, Tagalog, Vietnamese, Arabic, French, Korean, Russian, Haitian Creole, German, Hindi, Portuguese, and Italian. Best Buy Health/Lively suggests that the Commission should ''identify a specific group of commonly spoken languages to which WEAs will be expanded.'' We seek comment on whether we have identified the right set of languages for WEA to support.

11. We seek comment on the accuracy of machine translation technologies for these languages. Are there languages that, due to the accuracy and ease of machine translation, should be added to the list above? For which languages does machine translation perform most accurately and reliably? We invite commenters to submit information identifying the languages for which sufficiently accurate machine translation technology is currently available and estimating the number of years until the technology for machine translation of other languages will be sufficiently mature for this purpose. What metric(s) are commonly used to describe the accuracy of machine translation technologies? How accurate must machine translation be to effectively convey emergency information?

12. We also seek comment on whether existing mobile devices in the marketplace today have the capacity to support machine translation software. Would subscribers need to purchase new devices to benefit from machine translation for WEA? We seek comment on steps that we can take to eliminate obstacles to consumer access to machine translation for WEA messages. In addition to (or in lieu of) installing machine translation software on consumers' devices, could such software or functionality be deployed in Participating CMS Providers' networks or elsewhere in the framework for generating and distributing WEA messages?

13. *Template-based alerts.* We seek comment on alternative approaches to promoting multilingual WEA. We observe that the New York City Emergency Management Department supports multilingual alerting in 13 different languages in addition to English through its Notify NYC application. This application presents an English-language message, along with a link to 13 other pre-scripted translations. These alert message translations have been written by people fluent in the languages and vetted with native speakers from language communities. This allows alerts to reach communities of people who otherwise may not understand the alerts they receive. We seek comment on whether this approach could be supported by Participating CMS Providers and/or handset vendors in a modified manner that would eliminate the need to click on a URL. Instead, the pre-scripted translations for the most common alerts could be pre-installed and stored in the mobile device itself. These templates would be ''activated'' by a data element included in alert message metadata, which would prompt the mobile device to display the relevant template alert message in the mobile device's default language chosen by the consumer. We seek comment on which messages should be translated and pre-loaded into WEA firmware, and into which languages they should be translated. Could devices offered by Participating CMS Providers support the presentation of the most common alert messages in the 13 most commonly spoken languages in the United States in this manner? Could this be achieved by translating the most common alerts into these 13 languages and storing those translations at the device? In the event that a mobile device is configured with a default language preference other than one for which a translation exists, could the device default to displaying the alert in English?

14. We observe that Google and the United States Geological Survey (USGS) have partnered to deliver ShakeAlert earthquake early warning system messages to Android Mobile devices by supporting communication that triggers Android mobile devices to display alert content pre-installed on the mobile device. We seek comment on whether this approach would enable multilingual alerting and simultaneously alleviate industry concerns about bandwidth limitations. We seek comment on whether a data element would be able to be transmitted with a relatively small bandwidth.

15. We also observe that Dr. Jeanette Sutton, University of Albany, has been funded by the Department of Homeland Security to create a Message Design Dashboard that enables alerting authorities to quickly craft template alerts from prefabricated message elements. If the message elements that the Message Design Dashboard uses to create alert and warning messages were translated into languages other than English and stored at the mobile device, could mobile devices automatically translate this prefabricated alert message content? We also seek comment on whether there any other technological or practical approaches that would enable alerting authorities to deliver alert messages in languages that they do not, themselves, speak.

16. *American Sign Language.* We note that ASL is not derived from English, nor any spoken language. It is an independent linguistic system with morphological and grammatical complexity comparable to or exceeding that of spoken languages. Against this backdrop, we seek comment on whether

and how WEA might be improved to provide support for American Sign Language (ASL). Would a significant number of deaf and hard-of-hearing people benefit from having WEA messages presented in ASL format on their mobile devices in lieu of the conventional text format used for WEA messages? Could a pre-scripted, template-based approach work for ASL? Can video content be compressed for storage on the mobile device? Are there any other feasible solutions for ASL?

17. *Text-to-speech*. Many people with vision disabilities, including elderly people, rely on text-to-speech functionality to make text more accessible. While the WEA system does not incorporate text-to-speech functionality at present, many blind and low-vision subscribers may already have screen reading (text-to-speech) functionality installed on their mobile devices. We seek comment on the extent to which such applications are in use and on whether they can generate audible versions of WEA messages. CSRIC VIII recommends that WEA be enhanced to speak the name of the type of hazard to which a WEA message pertains in English and/or the user preferred language when the WEA message is presented on the device. We seek comment on whether Participating CMS Providers could support a text-to-speech functionality for the name of the hazard to which a WEA message pertains. Would this limited text-to-speech capability provide equal access to emergency information for those that rely upon it? Could Participating CMS Providers support text-to-speech for other alert message elements, like the geographic area to which the alert message applies or the entire WEA message? Could Participating CMS Providers support this text-to-speech functionality in English, Spanish, and other languages? We seek comment on the accuracy and reliability of such text-to-speech technologies and on whether the resulting audible information is comprehensible to most listeners. We invite commenters to identify the languages for which acceptable text-to-speech applications are currently available and those for which they are not. Can such technologies be tailored to generate information that can be understood by people who speak languages in different regional dialects or accents? For example, speakers of Cantonese Chinese may not be able to understand a spoken sentence in the Mandarin dialect or vice versa, even though all use the same written form of the language. Similarly, Spanish speakers accustomed to Mexican or Central American accents may find it difficult to follow Spanish spoken in an Argentinian or Castilian accent, and vice versa. Would text-to-speech enable people with vision disabilities to understand and act on the alerts they receive more readily? How should the risk that relying on text-to-speech functionality for WEA alert messages might yield confusing mispronunciations be weighed against the public benefits of vulnerable populations receiving alert messages? Would a template-based approach to supporting multilingual alerting facilitate the use of text-to-speech technologies because it would allow stakeholders an opportunity to verify the audio conversion of pre-fabricated messages for accuracy and accessibility?

Improving WEA's Effectiveness With Multimedia Content

18. We propose to require support for certain multimedia content in WEA messages and to sunset aspects of our existing WEA message requirements to free up bandwidth to support this capability. Alerting authorities currently do not have the ability to send multimedia content through WEA, despite a robust record demonstrating their desire to do so. Alerting authorities state that the ability to send multimedia content would improve emergency planning and response, provide additional information during emergencies, personalize threats, improve message comprehension for people with disabilities, and function as a way to reach people who do not speak English. In response, industry has expressed concerns about bandwidth limitations of cellular networks, possible delay of receipt of the alert message, and costs. Since the last time the Commission sought comment on these issues, CSRIC VIII issued a report that recommends WEA messages include a link to access ''location-aware'' maps. A location-aware map would depict the alert's target geographic area and the alert recipient's position in relation to the target area. CSRIC VIII suggests that this enhancement is feasible leveraging current technology and would promote public safety.

19. We propose to require Participating CMS Providers to support the sending of thumbnail-sized images in WEA messages over the air. ATIS' Feasibility Study for WEA Supplemental Text finds that Participating CMS Providers could support the transmission of an appropriately formatted, thumbnail-sized image using 0.013 megabytes of data. We seek comment on whether the image format contemplated by ATIS would minimize the burden that transmission of such data would impose on Participating CMS Providers while providing sufficient resolution to be accessible on modern mobile device displays. The National Center for Missing and Exploited Children (NCMEC) has long advocated for the Commission to enable them to transmit a thumbnail-sized image of a missing child within the body of a WEA alert, noting that ''in those cases in which AMBER Alert is credited for the safe rescue of a child 89% included a picture and/or vehicle and license plate information.'' Other alerting authorities support this proposal because of its ''obvious helpful implications.'' The Commission has received complaints indicating that the public may be finding that AMBER Alerts that do not contain an image of a missing child do not meaningfully enable the public to assist in the search for that child. Industry commenters generally oppose this proposal because of concerns about incompatibility with the cell broadcast method used for WEA and latency. Microsoft recommends that transmission of thumbnail-sized photos ''should be permitted only after applicable standards have been developed and only for AMBER Alerts which, while time sensitive, are better positioned than other types of emergency warnings to tolerate a 60-second latency.'' We seek comment on how long the delay caused by including a thumbnail-sized photo would be. Alerting authorities often use embedded references in WEA messages to direct the public to a website that contains information about a missing child, but the additional effort needed to click through a link to learn more about a child abduction and possible concerns over the legitimacy of embedded links may prevent many people from rendering assistance. Moreover, the web servers on which alerting authorities host emergency information often become congested, rendering their information unavailable. We tentatively conclude that including a picture of a missing child in the body of an AMBER Alert will make WEA AMBER Alerts significantly more attention-grabbing and, as a result, motivate more people to more effectively render assistance to law enforcement to search for a missing child. We seek comment on this view.

20. Such multimedia displays might yield benefits for WEAs concerning a broad range of emergencies beyond AMBER alerts. APCO states that, more broadly ''providing more detailed information about an emergency

through embedded multimedia would help reduce milling behavior and duplicative 9–1–1 calls.'' We seek comment on use cases other than AMBER Alerts where alerting authorities could improve the public's response to alerts and warnings by including thumbnail-sized images in their WEA messages, and whether the tradeoffs for bandwidth, latency, and other considerations would support this use.

21. We propose to free up bandwidth on the cell broadcast channel over which Participating CMS Providers have chosen to transmit alert messages. Are there any steps that can be taken to continue to provide active mobile devices that are incapable of receiving 360-character maximum alert messages with access to WEA while still freeing up bandwidth? For example, should we sunset the requirement to transmit a 90-character-maximum version of alerts in addition to the 360-character-maximum version? If adopted, by the time this rule becomes effective, we believe that the percentage of active mobile devices that are incapable of receiving 360-character alert messages is likely to be negligible. We seek comment on this proposal and on this view. Would this reduce the total number of bits needed to transmit an alert message? Could those bits be reallocated to other WEA functionalities, such as the transmission of thumbnail-sized images? We also seek comment on any other bandwidth saving measures that could be implemented to more effectively allocate available bandwidth.

22. We also propose to require Participating CMS Providers to support the presentation of ''location-aware maps'' in WEA messages. When the Commission last sought comment on this issue in 2016, alerting authorities were in favor of including location-aware maps in WEA messages to personalize alerts and bolster awareness. Industry commenters did not oppose. CSRIC VIII observes that ''maps are commonly used to depict alert location across a variety of alert dissemination methods (*e.g.,* TV, social media)'' and states that presenting WEA alert messages via mapping applications on the device ''could help the recipient better understand the boundaries of the Alert Area and the device's location relative to the Alert Area.'' CSRIC VIII concludes that location-aware maps should be incorporated into WEA such that alert message ''text is immediately displayed and an additional option to display a WEA map is provided.'' The map displayed by the native application would be enhanced by the target area information already included in WEA messages so that consumers could more easily comprehend that the alert message is intended for them and that they should promptly take responsive action. There would be no need for Participating CMS Providers to transmit additional information over the air to support this functionality. Would this approach of providing consumers with a link allowing them access to a location-aware map alleviate industry's concerns about bandwidth limitations? We seek comment on the benefits of including location-aware maps in WEA messages without having to transmit map data over the air. Are there any other technological approaches that could be taken to achieve this result?

23. In our discussion of multilingual alerting above, we seek comment on whether it is feasible for Participating CMS Providers to support the transmission of a data element that triggers mobile devices to display pre-installed, translated alert content. Could this same technological approach be leveraged to prompt mobile devices upon receipt of a WEA alert to display other media content pre-installed on the mobile device, such as infographics? Alerting authorities ask the Commission to enable them to send infographics that, for example, show alert recipients how to shelter in place. We note that the National Weather Service has created many potentially beneficial infographics relating to weather-based emergencies, such as guidelines to be followed before and during tornados, hurricanes, and floods. We seek comment on whether support for infographics would increase WEA's ability to prompt people to take protective actions during emergencies more quickly and effectively. What other media could be pre-installed on mobile devices and presented upon a receipt of a WEA message or signal that would improve public safety outcomes when events threaten life and property?

24. We seek to refresh the record on whether Participating CMS Providers could enable WEA messages to include a symbol set designed for emergency communications, such as that developed by the National Alliance for Public Safety GIS (NAPSG) Foundation and endorsed by FEMA IPAWS. When the Commission sought comment on these issues in 2016 and 2018, alerting authorities favored this proposal, stating that hazard symbols would ''allow for quicker comprehension and therefore increase accessibility, including for individuals who are deaf, hard of hearing, deafblind, and deaf with mobility issues.'' FEMA IPAWS states that ''symbols can help make public alerts and warnings more effective for people with disabilities, those with limited English proficiency, and the whole community.'' Industry commenters have historically opposed this proposal because of concerns about incompatibility with the cell broadcast technology used for WEA, questions about the utility of symbols, and the need for consumer education, but CSRIC VIII recommends that ''WEA message presentation include a standardized symbol representative of the event,'' and recommends that ATIS, public warning risk communications experts, and social scientists should develop standards and best practices and choose a symbol set to use. If we do require Participating CMS Providers to support the inclusion of symbols in WEA messages, should we require them to support a specific symbol set? If so, which one? As a technical matter, would Participating CMS Providers support symbols by transmitting them over the air or by pre-installing them on mobile devices? As a practical matter, what steps could alerting authorities or federal, state, local, tribal, and territorial government agencies take to educate the public about emergency communications symbols so that their receipt results in rapid comprehension and action? Would it be possible to ensure that graphics and links to images are readable by screen readers for persons who are blind or have low vision?

B. Integrating WEA More Seamlessly Into People's Lives

25. In the decade since WEA launched, alerting authorities have leveraged WEA for new and different types of circumstances. The incidence of active shooter incidents in the United States has risen precipitously. Climate conditions have resulted in wildfires grow more intense and destructive, and hurricanes cause more rainfall and increased coastal flooding. Alerting authorities have turned to WEA to help them to keep their communities safe in the face of these threats. We believe that WEA can and must improve to meet the challenge that evolving threats pose. Accordingly, we propose to allow alerting authorities more flexibility in how WEA messages are presented to accommodate different emergencies, while ensuring that people with disabilities are afforded access to information. We also propose measures to prevent unnecessary consumer opt-out and facilitate more effective public awareness testing. We seek comment on these proposals and on any additional measures that the Commission can take to ensure that WEA is a suitable tool to mitigate loss of life and property damage during today's most serious emergencies.

1. Allow Alerting Authorities More Flexibility in How WEA Messages Are Presented

26. The Commission's WEA rules do not give alerting authorities control over how mobile devices present the WEA audio attention signal or the vibration cadence. The mandatory presentation of the WEA audio attention signal and vibration cadence could prevent the use of WEA during an active shooter scenario, where the attention signal and vibration could draw the attacker's attention to those who need to stay hidden to stay safe. The mandatory presentation of these signals might also result in user annoyance and WEA opt-out, particularly where WEA is used in connection with a public health crisis such as the COVID–19 pandemic. Accordingly, we propose to require that Participating CMS Providers be able to send WEA messages, at the alerting authority's option, without triggering the audio attention signal and the vibration cadence. We seek comment on the relative benefits and burdens of this proposal, if adopted. Would providing alerting authorities the ability to customize how WEA messages are sent (*e.g.,* with or without the WEA audio attention signal and/or vibration cadence) make WEA safer to use during active shooter events and less intrusive (and thus more versatile) to use during public health emergencies or other less emergent but nevertheless important public safety situations? We seek comment on whether an alert received without the attention signal and/or vibration cadence could fail to grab alert recipients' attention during time-sensitive active shooter situations.

27. We seek comment on steps that the Commission can take to balance the need for alerting authorities to be able to suppress the presentation of the WEA attention signal with the need to present accessible alert messages to people with access and functional needs. In addition to the suppression of the WEA audio attention signal, should alerting authorities be able to suppress the vibration cadence? The WEA vibration cadence may result in a sound that gives away the location of a person in hiding or cause annoyance. It also may be necessary for consumers who are deaf or hard of hearing to know that they have received an emergency alert. Should we limit the suppression of the attention signal and/or the vibration cadence to specific circumstances (*e.g.,* active shooter) situations only, and if so, what should those situations be? Or, should we defer to the alerting authority to best accommodate and balance competing considerations without limitation? If we adopt requirements that WEA support text-to-speech, should alerting authorities also have discretion to suppress this capability? Finally, we ask commenters to identify whether and which standards and/or device-level software or firmware would need to be modified to enable this capability for alerting authorities. We seek comment on whether the 12 months that the Commission has previously allocated for the development of WEA standards would be sufficient for this purpose. If not, why not? We also seek comment on any other technical issues that may arise in implementing this functionality at the mobile device.

2. Prevent Unnecessary Consumer Opt-Out

28. We are concerned that members of the public might experience alert fatigue and might be annoyed by WEA's audio attention signal and vibration cadence, leading them to opt out of receiving WEA alert messages entirely. Consumers who have opted out of receiving WEA alert messages have no chance of receiving potentially life-saving emergency instructions through WEA. To remedy this, we propose to require Participating CMS Providers to provide their subscribers with the option to durably turn off WEA's audio attention signal and vibration cadence for all alerts. The Commission's rules allow for consumers to be able to mute the audio attention signal and vibration cadence. In 2016, we sought comment on whether the Commission should require Participating CMS Providers to support consumer choice by allowing consumers to receive WEAs with the audio attention signal and vibration cadence turned off by default as an alternative to opting out of WEA entirely. Microsoft Corporation, California Governor's Office of Emergency Services, and the New York City Emergency Management Department support allowing consumers to change their WEA delivery preferences, including by allowing them to receive WEAs without the attendant audio attention signal and vibration cadence. We seek to refresh the record on this issue. How do mobile device manufacturers operationalize silencing the WEA audio attention signal and vibration cadence when users set their devices to ''do not disturb'' mode? What other options do consumers have to personalize the audio attention signal and vibration cadence? We tentatively conclude that Participating CMS Providers should work with mobile device manufacturers to present this option to subscribers in the mobile device's WEA notification settings in addition to the current, binary choice to opt in or opt out. We seek comment on this approach.

29. We seek comment on whether giving consumers the option to suppress the presentation of the WEA audio attention signal and vibration cadence promotes consumer choice and would make it more likely that people interested in receiving alert messages—but not interested in being interrupted by them—can continue to receive potentially life-saving instructions intended for them. Given that most Americans check their cellphones frequently, we do not anticipate a lengthy delay in the time it takes for a consumer to view an alert. What other public safety and consumer benefits would attend this proposal, if adopted? We note, however, that if the rule is adopted, consumers who have already opted out of receiving alert messages may not be aware that the option to receive alert messages without being interrupted by them is available. How might this information be best shared with the public? Should Participating CMS Providers re-set WEA-capable mobile devices to their default opt-in status as part of their implementation of this proposal? Would they have the technical ability to do so? To what extent would CMS Providers require support from device manufacturers to support such a re-set and update? Could such a re-set take place without affecting other settings on a user's device (*e.g.,* location)? Should the customer be made aware of the attempted re-set, and if so, how? We seek comment on any alternatives that would help to ensure that the public is able to yield the public safety benefits of this proposal.

30. We seek comment on whether there are additional reasons why consumers commonly opt out of receiving WEA messages. Currently, when consumers receive an alert, some mobile device operating systems present the alert together with an option for the consumer to go to their WEA notification settings, where the only option presented is opt-out. Does this operating system functionality promote unnecessary WEA opt-out? We seek comment on alternative ways in which unnecessary consumer opt-out can be mitigated or prevented.

3. Facilitate More Effective WEA Public Awareness Exercises

31. We seek comment on whether our current rules governing State/Local WEA tests are impeding the ability of emergency managers to fully understand how WEA operates within their unique jurisdictions and circumstances and to

engage in important public awareness exercises. At present, our rules authorize Participating CMS Providers to transmit a State/Local WEA Test message, which consumers must affirmatively opt in to receive. Alerting authorities thus cannot conduct an end-to-end WEA test, where members of the public receive the test message by default, without receiving a waiver of the Commission's rules. In contrast, the Commission's rules allow EAS Participants to participate in two Live Code Tests per calendar year, provided that the entity conducting the test takes specified actions to make clear that the alert being sent is only a test. We continue to believe that State/Local WEA Tests are valuable tools for system readiness testing and proficiency training. To the extent State/Local WEA Tests are used for proficiency training and alerting authorities' system checks alone, the fact that the public does not receive State/Local WEA Tests by default is beneficial. This same attribute, however, prevents State/Local WEA Tests from being useful tools for raising public awareness about how to respond to emergencies that are likely to occur. Over the years, the Commission has granted waivers in certain circumstances to enable alerting authorities to test WEA using alerts that the public receives by default. In assessing these waivers, the Commission has balanced raising awareness about emergencies with protecting against alert fatigue.

32. Based on the experience we have gained from evaluating these waiver requests, we believe we can identify circumstances where it is beneficial for consumers to receive WEA test messages by default without conducting a case-by-case evaluation of waiver requests, going forward. Thus, we propose to authorize Participating CMS Providers to support up to two end-to-end WEA tests (in which consumers receive test messages by default) per alerting authority each year, provided that the alerting authority: (1) conducts outreach and notifies the public in advance of the planned WEA test and that no emergency is, in fact, occurring; (2) includes in its test message that the alert is only a test; (3) coordinates the test among Participating CMS Providers, state and local emergency authorities, relevant State Emergency Communications Committees (SECCs), and first responder organizations; and (4) provides notification to the public in widely accessible formats that the test is only a test. We note these conditions are the same conditions that attend alerting authorities' conduct of EAS Live Code Tests and the Commission has routinely conditioned waiver its rules to conduct public awareness exercises on these criteria. We seek comment on whether we should condition authorization on alerting authorities conducting certain types of outreach or on the outreach being completed a certain period of time before transmitting the test. We also seek comment on whether, as an additional condition to conduct public awareness exercises, alerting authorities should have to keep records on how they comply with the above-mentioned four conditions, and produce these records if requested by a Participating CMS Provider or the Commission. We believe that, by authorizing Participating CMS Providers to support up to two tests per alerting authority each year without filing waiver requests or obtaining our permission in advance, we can reduce unnecessary administrative burdens on alerting authorities, CMS Providers, and ourselves, and thereby eliminate a potential obstacle to conducting end-to-end WEA tests that advance several public interest goals. We seek comment on this proposal and on whether the same conditions that are appropriate for EAS tests are also relevant for such WEA system tests. We further propose that alerting authorities issue these WEA tests as ''Public Awareness Tests'' to make clear that the test messages will be sent to the public by default.

33. We seek comment on the benefits and costs of this proposal. Would this amendment of our rules facilitate more seamless joint exercises of EAS and the WEA system? Would they make the WEA system a more powerful tool for proactively warning the public in advance of emergencies, ultimately preparing them to take more effective protective actions in the event that an emergency actually occurs? We also seek comment on how this amendment of the rules may affect alert fatigue. Are the proposed rules restrictive enough to mitigate potential alert fatigue? Recognizing that alerting authorities may have overlapping jurisdictions (*e.g.,* a city, within a county, within a state), should we limit the number of tests to two per county (or other geographic area) per year, to ensure that alerting authorities coordinate with one another to prevent alert fatigue for their citizens? Are there any additional conditions or alternatives that could make WEA a more effective tool for raising public awareness about emergency situations likely to occur while mitigating the risk of alert fatigue?

C. Establishing a WEA Database To Promote Transparency About WEA Availability and Benchmark WEA Performance

34. We propose to modernize the WEA election process and facilitate access to WEA availability and performance information through the development of a Commission-hosted WEA Database. At present, to access information about WEA's availability in their jurisdictions, alerting authorities and the public must review all of the WEA election letters filed with the Commission. Even then, those letters are often unclear about whether a Participating CMS Provider participates in whole or in part and their level of support for WEA geographically and on different types of mobile devices. We anticipate that the WEA Database would be an interactive portal where CMS Providers submit information about the availability and performance of WEA on their networks, and where such information could be readily accessible to both alerting authorities and the public.

1. Reporting Information About WEA Availability

35. We propose to require all CMS Providers, irrespective of whether they elect to transmit WEA messages, to report their level of WEA participation in a WEA Database. In order for the WEA Database to be effective in providing a full understanding of WEA coverage, we propose the database should identify which CMS Providers offer WEA, in what geographic areas, and on which devices. In addition, this information must be current.

36. *Identify which wireless providers offer WEA.* We propose to require that CMS Providers identify whether they elect to participate in WEA in whole or in part, or whether they elect not to participate. If a CMS Provider elects to participate in part or not to participate at all, we propose that they provide an explanation or basis for this decision using free form text. CMS Providers should submit their election in the WEA Database regardless of whether they have previously filed in the docket. We propose that CMS Providers should also identify the entities on behalf of which they are filing. We seek comment on this proposal. It is often difficult for the Commission and alerting authorities to know which service providers are participating in WEA because CMS Providers take inconsistent approaches to disclosing the names of subsidiary companies on behalf of which their election is filed, any ''doing business as'' names under which they are offering

services that support WEA, and the names of Mobile Virtual Network Operators (MVNOs) and wireless resellers through which their network supports WEA. Should this responsibility be limited to entities with which CMS Providers have a contractual relationship? Are there any other relationships a CMS Provider's WEA election should capture to better identify wireless providers' WEA participation status? This proposed requirement would make WEA elections more uniform and provide a more complete picture of WEA's availability nationwide. To ease the burden of this proposal, the WEA Database would leverage any relevant information that is available through existing Commission systems like the Commission Registration System (CORES). We seek comment on the burdens such proposals would impose upon CMS Providers and on any alternative approaches that the Commission could take to accurately identify the universe of the entities that participate in WEA.

37. *Identify where WEA is Offered.* We propose to require CMS Providers to disclose the extent to which they offer WEA in the entirety of their geographic service area. We seek comment on this proposal. When CMS Providers elect to transmit WEA messages ''in part'' today, those elections often provide little information about what ''in part'' means as a practical matter. For example, they rarely specify whether there are geographic areas excluded from their WEA coverage. This could lead to confusion about the extent to which the public receives WEA messages. This is problematic from the standpoint of an alerting authority trying to plan for how it will reliably communicate with the public during an emergency. For example, during this past wildfire season, alerting authorities and the Commission struggled to identify whether the non-delivery of WEA alert messages in New Mexico was due to service degradation or the Participating CMS Providers' choice not to transmit WEA alert messages in the affected counties. Would information about the geographic areas where CMS Providers support WEA be helpful to alerting authorities during situations like the New Mexico wildfires?

38. For CMS Providers that report in the WEA Database that they are participating in WEA in whole, we propose to represent their geographic service area using the voice geographical information system (GIS) coverage area, which CMS Providers submit to the Commission as their mobile voice coverage area in the biannual Broadband Data Collection (BDC). We believe that the voice channel coverage area is a conservative estimate of the control channel which is used to deliver the WEA coverage. The estimate is conservative because voice communication has a higher bandwidth requirement than data transferred over the control channel, resulting in a smaller coverage area than the control channel. We believe that this conservative estimate may be appropriate to avoid misleading consumers into thinking they will receive a WEA where they will not. We seek comment on this approach. For those CMS Providers that do not support WEA through their entire geographic service area, we propose to require them to submit a GIS polygon coverage area that most accurately represents their WEA coverage area. We seek comment on whether these proposals would represent a cost-effective and accurate approach to reporting WEA availability, in a manner that would be readily understood by other stakeholders. Do the cost savings for Participating CMS Providers attendant to using a voice coverage shapefile already on file with the Commission outweigh the potential public safety benefit of a more precise representation of a WEA coverage area? Would a source of geospatial data other than shapefile be either less burdensome to produce or more beneficial to alerting authorities? We seek comment on any alternative ways of reporting this information and their associated benefits and costs.

39. Does information about the geographic availability of WEA need to be supplemented with additional information about WEA delivery to be useful to alerting authorities? For example, because our WEA rules require Participating CMS Providers to support WEA for roaming subscribers, would it be a more helpful representation of a WEA coverage area if Participating CMS Providers submitted a shapefile describing their WEA coverage area and any additional areas where they have a roaming agreement with another Participating CMS Provider? Do Participating CMS Providers have access to such information from roaming partners in the first instance? If not, we seek comment on whether to require Participating CMS Providers to provide a list of their roaming partners via the WEA database to allow the database to compile that coverage area information. Further, it is unclear from the record whether mobile assets (*e.g.,* cells on wheels (COWs), cells on light trucks (COLTs)) deployed to compensate for cell site outages were provisioned into providers' WEA systems. During emergencies, cell facilities that normally would be capable of transmitting WEA messages to a certain geographic area might not be available to do so. Should CMS Providers who file reports in the Disaster Information Reporting System (DIRS) regarding a particular emergency also include information about whether any COWs and COLTs deployed support WEA? We seek comment on the benefit to alerting authorities of knowing whether COWS/COLTS deployed in their area support WEA. Would the value of this information be enhanced if Participating CMS Providers also disclosed the location of those deployable assets? Should CMS Providers report if they do not support WEA when using certain network technologies (*e.g.,* a CMS Provider sends WEA messages on its 5G network, but not its 3G network)? Are there other kinds of information about WEA availability that CMS providers should be required to report, and if so, how would that information assist alerting authorities in protecting the public? We also seek comment on how this information, if required, should be reported to ease burdens and promote uniformity in reporting. For example, for network technology information, should CMS Providers be presented with simple checkboxes to indicate whether they offer WEA on all deployed generations of wireless network technology or on all available deployable mobile assets? Should the Commission use Participating CMS Providers' technology specific shapefiles submitted as part of the BDC for this purpose?

40. *Identify which devices support WEA.* Like geographic area, ''in part'' WEA elections rarely share information about the mobile devices that are capable of receiving WEA messages. While this information is provided by CMS Providers at the point of sale, it is prohibitively difficult for alerting authorities to aggregate that information from all possible points of sale, including by third-party retailers. For this reason, we propose to require Participating CMS Providers to report in the WEA Database all mobile devices that the Participating CMS Provider currently offers for sale that are WEA-capable. We seek comment on this proposal. By collecting this information in a uniform way in a single database, we believe that alerting authorities will be better able to understand how WEA messages will be received by individuals in their jurisdiction and better able to determine if WEA is an appropriate tool for their emergency

communications needs. For example, would this information help alerting authorities to understand the deployment status of new WEA capabilities, the availability of which may be dependent on Participating CMS Providers' and equipment manufacturers' decisions about whether to support deployed mobile devices with software updates? Most Participating CMS Providers do, though, maintain public online information relating to device WEA capabilities. How can we avoid creating confusion in light of the already existing public information? We note that our proposal, if adopted, would not shed light on the WEA capabilities of the installed base of mobile devices that connect to the Participating CMS Provider's network but are not sold by the Participating CMS Provider at the time of reporting. Does this create a predictable gap in alerting authorities' and the Commission's understanding of WEA's availability? How could Participating CMS Providers provide alerting authorities and the Commission with visibility into WEA capabilities of the mobile devices operating on the Participating CMS Provider's network but that they do not sell? Do all versions of a given make and model of mobile device have the same WEA capabilities, irrespective of where they are sold? Or, does a mobile device's WEA capabilities depend on firmware specific to Participating CMS Providers? We seek comment on any alternative approaches that might further reduce reporting burdens. We particularly encourage commenters to address other ways the Commission may leverage data CMS Providers already submit to the Commission to alleviate any burden attendant to reporting this information.

41. To modernize our rules and better support this proposed reporting requirement, we propose to update the definition of what constitutes a ''WEA-capable mobile device.'' We observe that as WEA's capabilities have evolved over the last several years, the definition of what is considered a WEA-capable mobile device has not evolved with it. As a result, mobile devices have continued to be considered ''WEA-capable'' even if they do not support the capabilities that have become central to WEA's effectiveness, such as supporting a 360-character message length or the inclusion of URLs. We are concerned that if the term ''WEA-capable'' continues to include any mobile device with at least partial WEA functionality, consumers might be confused and mistakenly believe that all ''WEA-capable'' mobile devices offer all WEA capabilities. Accordingly, we propose to amend our rules to define a ''WEA-capable mobile device'' as a mobile device that is compliant with the Part 10, Subpart E equipment requirements, and to make explicit that WEA-capable mobile devices must support the alert message requirements in Part 10, Subpart D (*e.g.,* support for the alert message classifications, national alert prioritization, WEA message elements, the 360-maximum character limit, geo-targeting, roaming, and support for both English- and Spanish-language alerts). We seek comment on this proposal. We also seek comment on any alternative approaches.

42. The Commission's rules currently define a ''mobile device'' for the purpose of WEA as ''[t]he subscriber equipment generally offered by CMS providers that supports the distribution of WEA Alert Messages.'' We observe that this definition does not account for mobile devices that do not support WEA messages. Accordingly, we propose to update the definition of a ''mobile device'' for the purpose of WEA as ''any customer equipment used to receive commercial mobile service.'' We seek comment on this proposal. We believe that this amended definition appropriately acknowledges the possibility that a mobile device does not support WEA, while also being broad enough to potentially include devices that are commonly considered to be mobile devices, such as tablets, wearables, or other non-smartphone devices. This amended definition may also increase access to WEA messages by individuals with disabilities who frequently rely on these devices for connecting to wireless services. Individuals with mobility or dexterity disabilities may find smaller devices too difficult to use; thus, these devices may accommodate those with such disabilities. We seek comment on whether these devices are capable of receiving WEAs. Would providing WEA to data-plan-enabled tablets and other devices that receive commercial mobile service allow individuals with disabilities (*e.g.,* individuals that lack the manual dexterity required to manipulate a smaller device) to receive WEA messages for the first time?

43. *Provide current information.* We propose to require that CMS Providers update the WEA Database within 30 days of a change in their WEA participation. Currently, our rules do not require CMS Providers to update their WEA election status when the nature of their WEA service profile changes and, in fact, most CMS Providers have not updated their election to transmit alert messages since filing their initial election in 2008. As a result, we are concerned that many WEA elections could now be outdated and do not accurately reflect WEA's current availability. We propose that a 30-day timeframe reflects an appropriate balance between affording CMS Providers adequate time to submit an update and providing stakeholders current information on WEA availability. We seek comment on this proposal. Rather than requiring that CMS Providers update their WEA elections within 30 days of a change in their participation, should updates be required periodically, irrespective of updates based on a change in their participation? If so, how often should those updates be required? The BDC requires filers to update their filings biannually (*i.e.,* twice each year). Would this biannual update approach work for WEA or would this result in alerting authorities frequently accessing outdated information in the WEA Database that undermines their emergency communication efforts? Alternatively, if changes to WEA availability are made infrequently, would a biannual filing be unnecessary?

2. Improving WEA's Performance To Make It a More Effective Life-Saving Tool

44. To improve the effectiveness of WEA, and consistent with the recommendations of the GAO, we propose to establish WEA performance minimums that Participating CMS Providers must satisfy for every WEA message they send. Press reports indicate that, due to deficiencies in Participating CMS Providers' implementation of WEA, many people are not receiving critical, timely information during life-threatening and time-sensitive emergencies, such as earthquakes or wildfires, while others are receiving information that is irrelevant to them, which degrades the value of the WEA system as a whole. When people receive alert messages not relevant to their geographic area, they may learn to ignore the WEA messages they receive or they may opt out of receiving WEA messages entirely. It is our understanding that inconsistent WEA performance may have led some emergency management agencies to delay becoming authorized as alerting authorities and may have caused others to limit their use of WEA. Are there other reasons why emergency management agencies may delay becoming authorized as alerting authorities or otherwise limit their use of WEA, such as the costs of establishing and maintaining alerting

capabilities with third party vendors? We seek comment on these issues.

45. *WEA Reliability.* To ensure that all WEA-capable mobile devices within a target area receive alerts intended for them, we propose to require Participating CMS Providers to meet a minimum requirement for the reliability with which they deliver WEA messages to their subscribers. We note that our rules already require WEA messages to be delivered to 100 percent of the target area. We are concerned that this requirement is not sufficient to ensure that the public can rely on their Participating CMS Provider to deliver to them promptly the WEA messages intended for them every time, including when they enter the alert's target area after the alert's initial transmission. We seek comment on an improvement to our existing minimum reliability requirement that is technically feasible and generally achievable across circumstances. For example, we seek comment on whether Participating CMS Providers should deliver WEA messages to all WEA-capable mobile devices that are within an alert message's target area at the time the Participating CMS Provider initially transmits the message. We also seek comment on whether Participating CMS Providers should deliver WEA messages to all WEA-capable mobile devices that enter the alert message's target area after the initial transmission, while the alert message is active. This approach would go one step further than our existing requirement by ensuring that the messages delivered to that area to be presented to the subscriber, regardless of whether the subscriber is in the target area at the time the alert is transmitted or enter the target area later, provided the alert remains active. Are there any technical challenges that may prevent all devices from receiving and presenting alerts? How can those challenges be addressed.

46. *WEA Accuracy.* The Commission's WEA rules require Participating CMS Providers to deliver WEA messages with no more than 0.1 of a mile overshoot unless, for example, mobile devices have location services disabled or legacy networks and devices could not be updated to support geofencing, in which case Participating CMS Providers are permitted to send an alert to their best approximation of the target area. We seek comment on whether these exceptions to the Commission's existing accuracy requirement remain necessary and, if not, we propose to sunset them. For example, we seek comment on whether WEA-capable mobile devices located more than 0.1 miles outside of a targeted area should suppress alerts for that area, regardless of whether its location services are enabled. We are concerned that this exception may be resulting in considerable WEA overshoot. We seek comment on the extent to which this exception is still necessary for modern WEA-capable mobile devices. Since the Commission adopted its enhanced WEA geo-targeting requirement, industry WEA stakeholders have changed the WEA functionality of mobile devices from being enabled by software to being enabled by firmware. As we have seen in other public safety contexts, even when a consumer disables location services, a CMS Provider may still access that data when necessary (*e.g.,* to support 9–1–1 calling). We seek comment on whether we should require location services to always be enabled for WEA on WEA-capable mobile devices, even if they are disabled for other uses.

47. We also seek on whether to eliminate the exception to those same geotargeting rules that exempts legacy networks and mobile devices that cannot be updated. Under this approach, mobile devices could not be considered ''WEA-capable'' unless they can comply with the geotargeting requirements. We believe this would be consistent with our proposal, discussed in greater detail above, to update the definition of ''WEA-capable mobile device'' to only include devices that support the alert message requirements in part 10, subpart D. We seek comment on this approach, and the likely effect of churn. We seek comment on whether any legacy CMS network facilities cannot be updated to support geofencing. If so, why? On what timeframe do Participating CMS Providers intend to remove these legacy network elements from their facilities?

48. We seek comment on other reasons why WEA-capable mobile devices may be falling short of meeting our existing geo-targeting requirements. Are these shortfalls related to the amount of time mobile devices are allowed to calculate their location before displaying the alert? Why might a mobile device be unable to calculate its location for the purposes of WEA within the permissible period, even when the device's location services are turned on and available to the WEA firmware? Is there another issue or problem with the geofencing solution being used in WEA-capable mobile devices? Alternatively, we invite industry stakeholders to submit test results or studies demonstrating that their devices strike the correct balance between presenting WEA messages in a timely and accurate manner.

49. *WEA Speed.* We propose to require Participating CMS Providers to satisfy minimum speed requirements, to ensure WEA messages are displayed as swiftly as possible during emergencies where every second counts. We seek comment on a minimum speed requirement that is technically feasible and generally achievable across circumstances. For example, we seek comment on whether Participating CMS Providers should present alerts within five minutes on 99% of WEA-capable mobile devices that have not opted out from receiving the alert and are within the target area? For devices that enter a targeted geographic area after the initial transmission of the alert, we propose that the five minutes be measured from the time that they entered the target area. Should we measure 5 minutes as the amount of time between receipt of the alert message at the Participating CMS Provider alert gateway and presentation of the alert on the device? We note that the ATIS WEA geofencing standard allows mobile devices to take up to four minutes and fifteen seconds to determine their location before defaulting to displaying the alert. To the extent that some devices may need additional time to confirm their locations, we believe that a requirement of five minutes provides sufficient time to do so. We believe that this approach would acknowledge that there may be localized complexities in the radio frequency environment that may prevent some devices from receiving the first transmission of an alert. Is five minutes the appropriate speed requirement for WEA, and if not, what should that requirement be? Are there any circumstances that may result in significant delay in the time between the transmission of an alert by a Participating CMS Provider and presentation by a WEA-capable mobile device? If so, how should we adjust our WEA speed metric to compensate? On the other hand, should we require more than 99% of opted-in WEA 3.0-capable devices to present WEA alerts within five minutes, and if so, why? Alternatively, we seek comment on the percentage of mobile devices that may be able to display an alert within one second. Would one second from receipt at the Participating CMS Provider alert gateway be an appropriate benchmark for the percentage of mobile devices that already have a location determination at the time they receive a WEA and therefore need to engage in limited additional processing before presenting the alert message? How else could we benchmark WEA's speed to reflect

latencies between receipt between Participating CMS Providers.

50. We seek comment on the public safety benefits of requiring Participating CMS Providers to optimize their network's performance to satisfy these performance minimums. Would these performance minimums make WEA a much more effective and dependable emergency communication tool? Would the adoption of these performance minimums cause more alerting authorities to use WEA, or motivate more emergency management agencies to become alerting authorities? If these performance metrics are not the right minimum benchmarks for WEA's performance, how should the Commission benchmark WEA's reliability, accuracy, and speed? We seek comment on any additional WEA performance data regarding how the public is currently receiving alerts and how that data should affect the adoption of minimum WEA performance minimums.

51. *Other WEA Performance Improvements.* As an alternative, or in addition to ensuring WEA's minimum performance as described above, we seek comment on whether to require Participating CMS Providers to take specific measures to improve WEA's reliability. Should we require Participating CMS Providers to retransmit alert messages at one-minute intervals throughout an alert's active period, as AT&T currently does? Other major Participating CMS Providers only broadcast an alert message a single time or a limited number of times after a delay of at least several minutes. We are concerned that this means that people entering the target area after the initial transmission may not receive the alert in a timely manner. We seek comment on whether this requirement would improve WEA's reliability, particularly among people that enter an alert's target area during an alert's active period, but after Participating CMS Providers' initial transmission of the alert. We also seek comment in the alternative on whether to require Participating CMS Providers to take specific measures to improve WEA's accuracy. Pursuant to WEA standards, receipt of a WEA message does not necessarily prompt geofencing-capable mobile devices to obtain a fresh location fix. Receipt of a WEA message prompts a geofencing-capable mobile device to determine its location, but if the mobile device has a stored record of its location, the mobile device may use that record rather than obtain a fresh location fix from the network, even if the location information stored on the mobile device is old and inaccurate. We seek comment on whether this is a deficiency in the standard that predictably leads the location information available to WEA to be less accurate than our 0.1 of a mile requirement. Should the message that Participating CMS Providers send to mobile devices to trigger them to obtain a location fix for the purpose of WEA geofencing prompt mobile devices to obtain a fresh location if the location fix that it has is not sufficiently accurate or fresh to comply with our existing WEA accuracy requirement? From where should mobile devices seek to retrieve this location fix (*e.g.,* GPS, A–GPS, device-based hybrid location) to best balance potentially competing concerns about accuracy and network impacts? What other potential technical measures could Participating CMS Providers implement to optimize the WEA system's reliability, accuracy, or speed?

3. Reporting Information About WEA's Performance

52. To help measure and enforce compliance with our proposed performance requirements, as well as to help public safety stakeholders understand how WEA works in their respective areas, we propose that Participating CMS Providers submit data to the Commission regarding WEA's reliability, accuracy and speed using the WEA Database. In doing so, we also address and build on the record developed in our *2022 Further Notice of Proposed Rulemaking* (*2022 FNPRM*), where public safety commenters argue that performance reporting would directly assist them in using WEA effectively, and that reliability, speed, and accuracy are the most important performance metrics on which Participating CMS Providers should report.

53. For each of the performance areas (reliability, accuracy, and speed), we seek comment on the data set that should be submitted to the Commission, as well as the source of data from which the data set should be derived. In each instance, data submitted should be sufficient to demonstrate compliance with the Commission's performance requirements across a variety of circumstances that reflect real-world conditions. We seek comment on whether this necessitates collecting raw data representing performance on individual mobile devices, or whether there are alternative viable ways to capture WEA performance as experienced by subscribers. What measures would handset manufacturers and OS vendors need to take to capture, store, and provide such information? What are the privacy implications of this proposal for users? Does this proposal raise implications for device manufacturers' security and privacy policies or for device costs? Can CMS Providers access or collect raw data at the device level? Does current technology allow for device manufacturers and Participating CMS Providers to connect location data to a customer's decision to opt-in to WEA participation? We seek comment on whether Participating CMS Providers should submit aggregated data and percentages on the performance of mobile devices as a whole for all alerts, or whether it is feasible to collect performance information from a sample, such as a randomized portion of all mobile devices or data about certain specified alerts. If commenters favor reporting performance information expressed as a percentage, we seek comment on the proposed equations by which Participating CMS Providers would calculate WEA's reliability, accuracy, and speed, as it would be important to adopt uniform equations across all providers.

54. We anticipate that data can be gathered at the device level that is derived from data elements that Participating CMS Providers can potentially log, such as unique alert message identifiers, the geographic target area, and the opt-in status of the device. We seek comment on the following Figure 2, which depicts our assessment of where data elements relevant to WEA performance could be available for logging by Participating CMS Providers and WEA-capable mobile devices.

BILLING CODE 6712–01–P

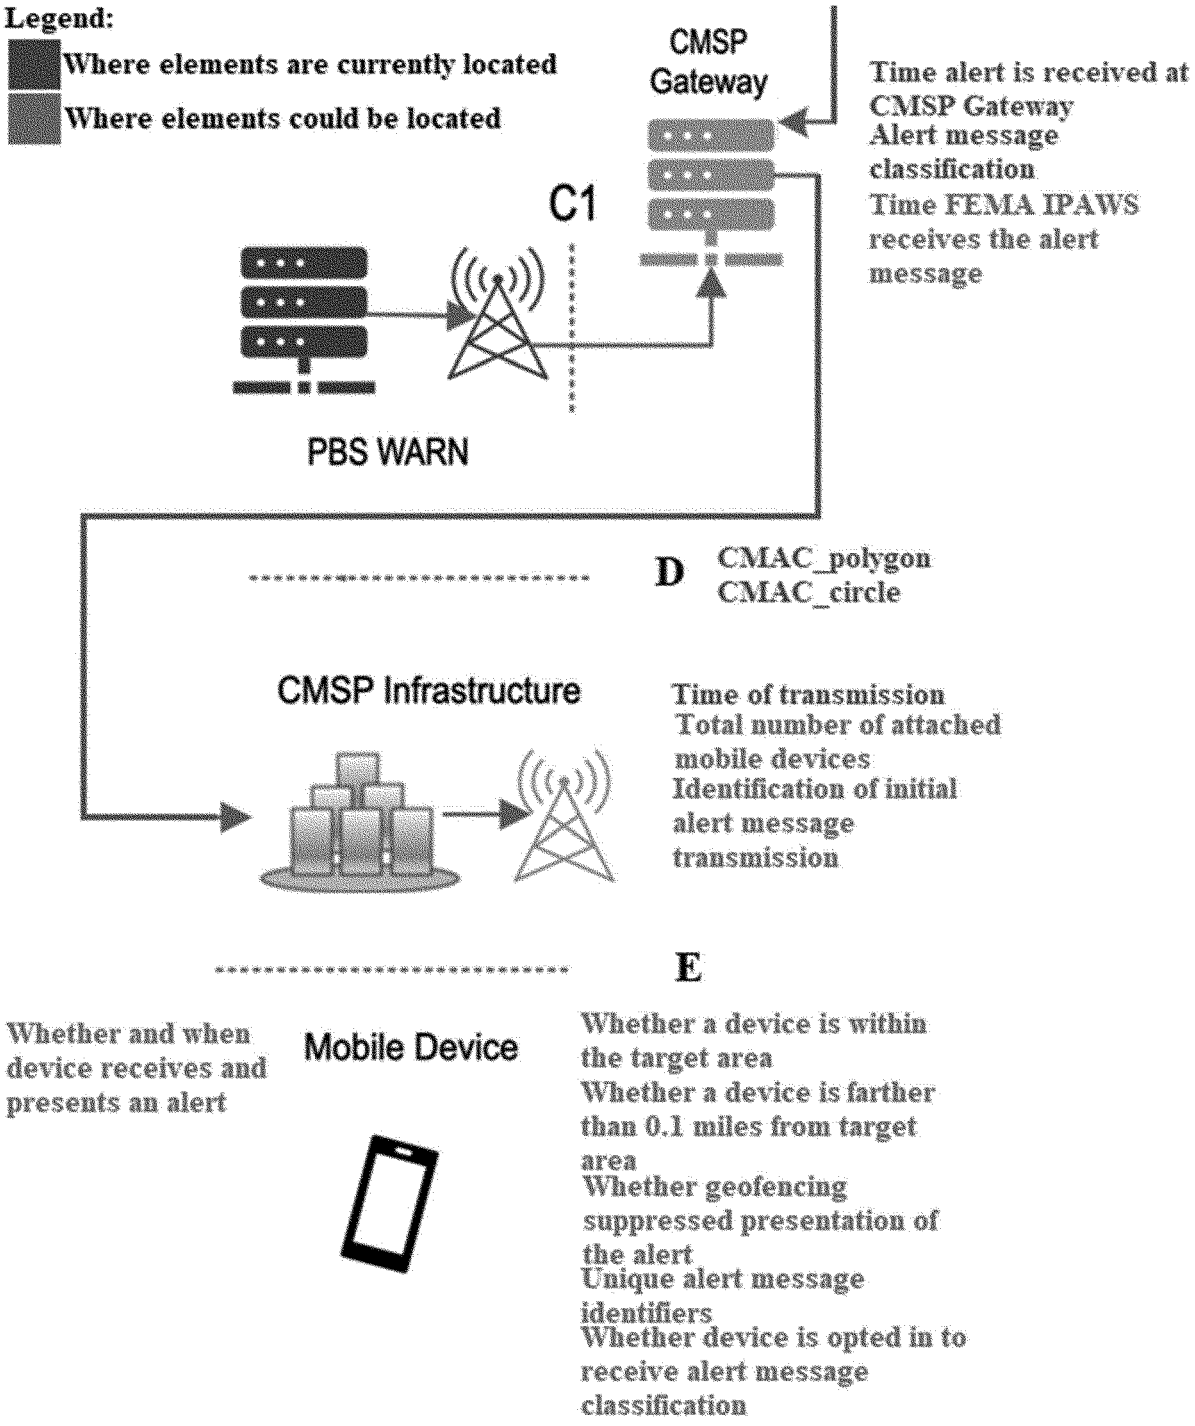

Figure 2: WEA Performance Reporting Architecture and WEA Data Elements

BILLING CODE 6712–01–C

Does Figure 2 accurately capture the data elements and their respective locations where Participating CMS Providers could potentially log them to measure WEA's performance? Is it technically feasible for Participating CMS Providers to log each of the data elements that currently reside in their network during WEA transmission, because Participating CMS Providers already log many such data elements under our rules. Is it technically feasible for WEA-capable mobile devices to receive a firmware update to enable them to log those data elements described above that are uniquely available at the mobile device, because mobile devices already log data about the tasks they perform as part of routine device processes? We seek comment on potential changes to standards and software that Participating CMS Providers, handset manufacturers, and handset OS vendors would need to complete to comply with this proposal, if adopted. We seek comment on any refinements that would make the collection of WEA performance data less burdensome and/or more effective.

55. We seek comment on how these data elements, as well as other information available to Participating CMS Providers, can be used to demonstrate WEA's performance. One approach would be for Participating CMS Providers to submit data to the Commission's WEA Database regarding the number of WEA-capable mobile devices located inside an alert message's geographic target area that are capable of receiving an alert and opted into sharing WEA performance information; the number of WEA-capable mobile devices located outside an alert message's geographic target area that are capable of receiving an alert (*e.g.,* mobile devices that meet the foregoing criteria and are connected to the cell facility that initially transmits the WEA message); the number of such devices located inside and outside the area that are opted into presenting the alert; and the number of those devices inside and outside of the area that presented the alert. Could the Commission use this data to calculate the percentage of devices in the target area that succeeded at displaying or suppressing an alert? For measuring WEA's speed, one approach would be for Participating CMS Providers to also submit to the Commission's WEA Database the times at which mobile devices received and presented an alert, as well as the time when the alert was received at a Participating CMS Provider's alert gateway. Could the Commission use this data to calculate WEA's speed? Are there any other ways the Commission should use these or other data elements to measure WEA performance?

56. Would Participating CMS Providers face technical challenges in collecting or reporting this information? While CSRIC VIII states that the total number of devices in the alert area is unknown and ''cannot be obtained without a complete redesign of existing cellular technology,'' we observe that a cell site can generate a record, at any given time, of how many mobile devices are attached to it. We seek comment on this assessment. We also seek comment on CSRIC VIII's view that it is not possible for Participating CMS Providers to know the number of devices in a targeted area that have opted into sharing WEA performance data. Is CSRIC VIII correct? What steps could be taken to improve the ability to Participating CMS Providers to obtain this information? CSRIC VIII finds that WEA-capable mobile devices currently do not know whether they are receiving the first WEA broadcast or a later WEA broadcast. Could Participating CMS Providers take measures to enable devices to identify the initial transmission?

57. We seek comment on the feasibility of measuring WEA's performance using staged devices, as contemplated by CSRIC VIII. Specifically, could Participating CMS Providers capture actionable information about WEA's performance by conducting regular testing using devices positioned in and around the target area of a Required Monthly Test (RMT)? Could such a testing and performance measurement requirement also leverage State/Local WEA Tests or leverage alerting authority and Participating CMS Provider volunteers? How would the resulting data differ in quality from data derived at the device level from real WEA activations? Would there be any limitations to the public safety benefits of measuring performance using staged devices? We seek comment on whether there would be any cost or time savings attendant to this approach if Participating CMS Providers had to update network and mobile device firmware to measure WEA's performance using staged devices.

58. We also seek comment on any privacy implications if information is collected at the mobile device level. In response to the 2022 FNPRM, some commenters raise consumer privacy concerns about the nature of the data that Participating CMS Providers would collect from mobile devices to support a reporting requirement, especially location data. We believe that Participating CMS Providers would not need to collect any personally identifiable information (PII) or customer proprietary network information (CPNI) to provide device-level data. Specifically, Participating CMS Providers would not have to collect precise location information. Rather, each WEA-capable mobile device would potentially have to log and provide to the Participating CMS Provider only whether the device was located inside the target area or farther than 0.1 miles from the target area. We seek comment on this view. We also note that CMS Providers already have access to location information about their customers' mobile devices by virtue of their provision of service. If, contrary to our expectations, CMS providers were required to collect precise location information to satisfy WEA reporting obligations, we would require CMS providers to protect that information subject to the same statutory and regulatory duties that apply to the most sensitive CPNI. We seek comment on this approach. We also seek comment on the other specific data elements that CMS Providers would need to collect to satisfy their reporting obligations and the extent to which the information types collected could be minimized to protect consumer privacy.

59. To further safeguard consumer privacy, in the event we were to proceed with a device-level approach, we propose that Participating CMS Provider should offer subscribers the ability to opt out of participating in the collection of information necessary to measure WEA's performance. We believe that Participating CMS Providers could enable this consumer choice by adding a simple, binary toggle switch to the existing WEA settings menu. We note that, by comparison, CSRIC VIII examines a method of automatically collecting WEA performance data from mobile devices whose users have opted in to share WEA performance analytic data with their wireless provider. Should we affirmatively prohibit Participating CMS Providers from collecting or using precise mobile device location information or any PII or CPNI for purposes of reporting this information to the Commission? Should we require Participating CMS Providers to timely and securely destroy any data gathered solely for the purpose of this collection? Should the mobile devices, Participating CMS Providers, or the WEA Database perform functions to further anonymize the data collected? We seek comment on other potential privacy impact mitigations. Our intent is to ensure that any approach to collecting performance data would not change wireless providers' existing access to mobile device location data or change the compliance status of their existing information collections under applicable privacy laws and regulations. We seek comment on any refinements to our proposals that would further this goal.

60. We seek comment on any alternative approaches to WEA performance reporting. For example, CSRIC VIII also recommends that the FCC consider a requirement for an automated email to convey WEA performance reporting information from Participating CMS Providers to an alerting authority or a centralized reporting location for each sent WEA. We seek comment on the utility of WEA performance information communicated by email directly to alerting authorities, either in addition or as an alternative to a WEA database. CSRIC VIII recommends that the details of this approach be worked out between alerting authorities, PBS, and Participating CMS Providers. We encourage WEA stakeholders to submit

a detailed proposals of how this alternative approach could work in practice.

61. *Reporting timeframe.* In what timeframe should Participating CMS Providers collect and submit WEA performance data to the WEA Database? To reduce the risk of wireless service performance degradation during an emergency, should Participating CMS Providers collect and report WEA performance data sufficiently outside of any actual activation of WEA? For example, Participating CMS Providers could submit data to the WEA Database within 24 hours of the issuance of the WEA message or State/Local WEA Test to which the performance data pertains. Would it be feasible for Participating CMS Providers to delay collecting WEA performance information until off-peak network hours? CSRIC VIII raises concerns, however, that ''[e]ven delayed automated reporting, triggered at a later time, carries that possibility of localized congestion during the reporting period.'' What timeframe would strike the right balance between timely performance reporting that provides relevant, actionable information, and the need to protect networks from congestion during actual emergencies?

4. Establishing a WEA Database

62. *Data submission.* We seek comment on the most cost-effective mechanism for CMS Providers to submit WEA elections and performance information into the WEA Database, while minimizing burdens on CMS Providers. We propose that WEA elections and WEA performance data be filed electronically using a web-based interface and, if feasible, an application programming interface (API). In addition to an API, what other tools or features should we consider when designing the data submission elements of the WEA Database to ease reporting burdens and improve efficiency? For example, would Participating CMS Providers prefer to submit information regarding the WEA-capable mobile devices they support either through a file upload or through a form, or should both options be available?

63. *Promote stakeholder understanding.* To promote transparency and address alert originators' need to better understand WEA performance in their respective areas, we propose to enable the WEA Database to provide information about WEA availability and performance. With respect to WEA availability information, we seek to ensure that the public has access to information about which service providers offer WEA, in which locations, and on what devices, so they are empowered to make the right decisions for their unique needs when they choose a mobile device and service plan. We seek comment on this proposal, and on whether the use of the WEA database is the most effective manner to convey this information.

64. We also seek comment on how the WEA Database can best meet consumers' and alerting authorities' need for information about WEA's performance. To maximize relevance for alert originators, we propose to provide performance data expressed as percentages of mobile devices satisfying our reliability, accuracy, and speed performance standards, and to provide this information on a per provider and per geographic area basis. We seek comment on this approach. For example, with respect to reliability, we propose to provide the percentages of devices that succeeded and failed at presenting the alert. We expect this would help alerting authorities better understand how many people within their jurisdictions would receive an alert, which would inform their decisions about how to use WEA in conjunction with other emergency communication tools. For accuracy, we propose to provide the percentages of devices outside of the geographic target area that failed to suppress the alert. We expect this would help alerting authorities better understand the extent of WEA message overshoot, which we expect would inform their future decisions about how to best target their alerts. For speed, we propose to provide the percentiles of time that CMS Providers take to both ensure an alert's receipt as well as the alert's presentation on mobile devices, following the CMS Provider's receipt of the alert at their alerting gateway (*i.e.,* the 10th, 25th, 50th, 90th, and 99th percentile time figures). We expect this would help alerting authorities better understand how quickly their alerts reach the public, which would inform their future decisions about the optimal times to send alerts and whether delays in the delivery of those alerts warrant the supplementary use of other emergency communication tools. We propose that alerting authorities be able to use the WEA Database to see WEA's performance both for their own activations and nationwide so that they can better contextualize any performance issues they may experience. We believe this approach would provide up-to-date information about WEA and thereby greatly improve alerting authorities' visibility into WEA. The database would allow alerting authorities to better understand WEA's reach when planning whether and how to use WEA during emergencies, thus increasing its value as a tool to protect life and property.

65. To avoid disclosing information that Participating CMS Providers may consider to be competitively sensitive, we do not propose to use the WEA Database to disclose the number of WEA-capable mobile devices that are located within the alert message's geographic target area at the time the Participating CMS Provider initially transmits the message or the number of WEA-capable mobile devices connected to cell facilities transmitting the alert message that are located farther than 0.1 miles outside of the message's geographic target area at the time the Participating CMS Provider initially transmits the alert message. We seek comment on this approach. We anticipate that using a dedicated database would be more efficient than the current practice of searching for WEA elections that have been filed directly in a docket one-by-one and downloading individual election letters, which are unlikely to be uniform in how they make their elections. We seek comments on our views. What alternative steps could we take to make WEA election information more accessible to relevant stakeholders?

66. *Public Access.* We propose that the contents of the WEA Database be available to the general public. We believe the general public has an interest in knowing whether and to what extent the WEA system is available in their local area, as well as whether the WEA system performs reliably in their local area. We also believe the public should have an informed expectation about the likelihood that they will receive alert messages that do not apply to them. We seek comment on these views. Will making WEA availability and performance information more readily available in the WEA database influence consumer purchasing decisions related to CMS service and mobile devices? Will this foster increased market competition around WEA performance? We seek comment on the extent to which emergency management agencies accessing the publicly available WEA Database that are not currently authorized by FEMA to issue alerts through IPAWS, might be encouraged to become authorized and, as a result, increase the availability of alert messages to unserved areas.

67. We observe that the WEA availability information that Participating CMS Providers would submit to the WEA Database is already publicly available, although not

aggregated with other WEA information. The information that Participating CMS Providers would supply to the WEA Database about their WEA coverage area is already publicly available through the National Broadband Map, which makes available for download the mobile voice coverage areas collected through the Broadband Data Collection. Similarly, many Participating CMS Providers already make publicly available information about the WEA-capable mobile devices that they offer at the point of sale. If we were to require Participating CMS Providers to disclose whether they make WEA available using currently deployed public cellular network technologies, that would likely require them to disclose information that is not currently public, but we do not believe that this disclosure would warrant confidential treatment either. The Commission grants the presumption of confidentiality to outage information submitted in NORS for reasons related to national security and competitive sensitivity, but we do not believe those same concerns exist here. We seek comment on our views.

68. We also do not believe that WEA performance information submitted in the WEA Database would warrant confidential treatment. We do not believe that the public availability of this information raises any concerns about national security or competitive sensitivity, and it would not include any PII or CPNI. Data submitted to the WEA Database under this proposal would already be aggregated and anonymized with other mobile device data by CMS Providers and could not be deanonymized to obtain any information about an individual mobile device's receipt of an alert message. Because of this aggregated, anonymized approach to data collection, the Commission does not anticipate that it will receive any CPNI or PII. Accordingly, we seek comment on whether WEA performance information requires confidential treatment or other data privacy protection and, if so, why. We note that since FEMA and the Commission began testing WEA on nationwide and regional bases in 2018, the Commission has regularly made publicly available after-action reports that describe WEA's performance during the exercise. Similarly, the WEA Database would make after-action performance analysis available to alerting authorities. We seek comment on why information about Participating CMS Providers' performance in the WEA Database should be treated confidentially when information about WEA's performance is already publicly available.

69. *Emergency management agency access.* Section 10.450(b) of the Commission's rules provides that ''[u]pon request from an emergency management agency, a Participating CMS Provider will disclose information regarding their capabilities for geo-targeting alert messages. A Participating CMS Provider is only required to disclose this information to an emergency management agency insofar as it would pertain to alert messages initiated by that emergency management agency, and only so long as the emergency management agency offers confidentiality protection at least equal to that provided by the Federal FOIA.'' Notwithstanding the fact that nationwide Participating CMS Providers have established contact information purposefully identified for WEA geo-targeting inquiries, alerting authorities have had difficulty obtaining this information. Accordingly, if the WEA performance reporting proposal we offer today is adopted, we propose to have it replace the existing requirement that Participating CMS Providers share information about WEA's reliability and accuracy upon request from emergency management agencies. We seek comment on this approach. What, if any, harms could arise from granting alerting authorities access to WEA data outside of their local area, alert and warning jurisdictions, or territory? Would public safety be better served if alerting authorities had visibility into the WEA system's availability and performance beyond their jurisdictional boundaries? For example, would it be beneficial for a state agency to have access to data showing the alert messages that its neighboring state transmits would likely overshoot into their state? Would access to additional WEA data beyond an alerting authority's jurisdiction provide a more complete picture of WEA system availability and performance, particularly for alerting authorities that have not yet used the WEA system, or have used it infrequently?

70. If any information in the WEA Database is determined to require confidential treatment, we seek comment on how to protect it. Should we adopt procedures for alerting authority eligibility, user account access, certification requirements, data security, and information sharing similar to those that we adopted for providing federal, state, Tribal, and territorial agencies with direct access to NORS and DIRS? Should any aspects of those procedures differ for the WEA database?

71. If we require credentialed access to the WEA Database, we propose that the WEA Database also include a public-facing portal that would allow the public to query if WEA is available on the mobile wireless network to which they may subscribe, at a specified address where they may live or work, and on specific mobile devices that they may have. If the query indicates WEA is not available, we propose that the WEA Database present the consumer with a description of Participating CMS Providers that offer WEA at their specified location and mobile device. We seek comment on this proposal.

D. Promoting Digital Equality

72. The Commission, as part of its continuing effort to advance digital equity for all, including people of color, persons with disabilities, persons who live in rural or Tribal areas, and others who are or have been historically underserved, marginalized, or adversely affected by persistent poverty or inequality, invites comment on any equity-related considerations and benefits (if any) that may be associated with the proposals and issues discussed herein. Specifically, we seek comment on how our proposals may promote or inhibit advances in diversity, equity, inclusion, and accessibility, as well the scope of the Commission's relevant legal authority.

E. Compliance Timeframes

73. In this Section, we propose compliance timeframes for the proposals in this *Further Notice* that aim to strike an appropriate balance between the urgent public safety need for the contemplated improvements to WEA and wireless industry's need to develop standards, software, practices, and procedures to effectively comply. We note that, similar to the geotargeting rule, because the new capabilities would be dependent on device-level software, firmware, or hardware changes, they necessarily would not be available to alerting authorities and consumers on a ''flash cut'' basis. For each of these proposals, we seek comment on whether it would be appropriate to allow CMS Providers that are small- or medium-sized businesses additional time to comply. We seek comment on how we should define small- and medium-sized businesses in this context and whether we should make a distinction between nationwide and non-nationwide CMS Providers in this regard. We also seek comment on how much additional time, if any, small- or medium-sized businesses would reasonably need for compliance

with the proposals in this *Further Notice.*

74. *Enhancing WEA's Language Support.* For the rules we propose today requiring Participating CMS Providers' WEA-capable mobile devices to translate English-language alert messages that they receive into the subscriber's default language preference, we propose to set a compliance date of 30 months after the publication of final rules in the **Federal Register**. Depending on the approach used by Participating CMS Providers to satisfy this requirement, compliance with this proposal would necessitate updates to standards and firmware. We also note that CSRIC VIII directed ATIS to conduct a study to determine a feasible, accurate, and effective method for enhancing language support. The Commission has previously reasoned that it takes industry 30 months to comply with rules that implicate the need for updates to WEA standards and firmware—*i.e.,* 12 months to work through appropriate industry bodies to publish relevant standards; another 12 months for Participating CMS Providers and mobile device manufacturers to develop, test, and integrate firmware upgrades consistent with those standards; and 6 more months to deploy the new technology to the field during normal technology refresh cycles. We seek comment on the applicability of this approach and timeframe to these proposals. We believe that a machine-based translation approach to increasing WEA's language support, as contemplated by this Further Notice, is likely to only require updates to mobile devices, not to the CMS network, which potentially means less standards and firmware development would be needed. If the record supports the feasibility of that approach to compliance, should we require a shorter compliance deadline, and if so, what should that deadline be?

75. *Improving WEA's Effectiveness with Multimedia Content.* Our proposals to make WEA more accessible by requiring Participating CMS Providers to support sending thumbnail-sized images in WEA alerts and the integration of location-aware maps would implicate updates to standards and firmware in both the CMS network and at mobile devices. To give Participating CMS Providers sufficient time to complete the updates to standard and software necessary, we propose to set a compliance date for these requirements of 36 months from the publication of the rules in the **Federal Register**. We seek comment on this proposal. Would 36 months be sufficient time for all mobile devices that are still technically incompatible with the receipt of 360-character-maximum alerts to churn out of use by subscribers?

76. *Integrate WEA More Seamlessly into People's Lives.* For the rules we propose today that require Participating CMS Providers to be able to send WEA messages without triggering the audio attention signal and the vibration cadence and provide their subscribers with the option to turn off attention signal and vibration cadence, we propose to require Participating CMS Providers and mobile device manufacturers to comply within 30 months of the rules' publication in the **Federal Register**. We believe this compliance deadline is consistent with deadlines for past requirements that have necessitated updates to standards and firmware, as discussed above. We seek comment on this proposal. Can compliance with our proposal to allow subscribers to turn off the attention signal and vibration cadence be achievable only with updates to WEA standards and software at the mobile device? If so, can compliance be achieved in less time than 30 months?

77. *Facilitate More Effective WEA Public Awareness Exercises.* We propose that Participating CMS Providers would be authorized to support up to two annual end-to-end WEA tests per alerting authority 30 days after the Public Safety and Homeland Security Bureau issues a Public Notice announcing OMB approval of any new information collection requirements associated with this rule change. We do not believe that Participating CMS Providers would need to make any changes to support such public awareness testing because such tests would present to a Participating CMS Provider in a manner indistinguishable from any other WEA message. We seek comment on this proposals and our views.

78. *Establishing a WEA Database to Promote Transparency About WEA Availability and Benchmark WEA Performance.* We propose to set a compliance date of 30 months after the publication of final rules in the **Federal Register** or within 30 days of the Public Safety and Homeland Security Bureau's publication of a public notice announcing that the WEA Database is ready to accept filings, whichever is later, for the proposed rules requiring Participating CMS Providers to satisfy WEA performance minimums and submit reports measuring WEA's performance. We believe 30 months is appropriate because Participating CMS Providers will have to update standards and firmware to comply with the performance reporting requirements, and we believe that it is sensible for the performance minimums to go into effect at the same time that the Commission receives the performance measurement data that can assist with enforcing them. We seek comment on this approach. We also seek specific comment on whether to offer an extended compliance timeframe for Participating CMS Providers that are small- and medium-sized businesses, which may have different network resource constraints than the nationwide CMS Providers.

79. We propose to require CMS Providers to refresh their elections to participate in WEA using the WEA Database within 30 days of the Public Safety and Homeland Security Bureau's publication of a public notice announcing (1) OMB approval of any new information collection requirements and (2) that the WEA Database is ready to accept filings. We seek comment on this proposal. We note that the Commission gave wireless industry 30 days within to comply with the Commission's initial requirement to elect whether to participate in WEA. We anticipate that CMS providers would need to undertake the same measures as they did in their first WEA election to refresh their WEA election in compliance with this proposal, if adopted: assessing the extent to which they can agree to offer WEA in the entirety of their geographic service area, assessing the extent to which all mobile devices that they offer at the point of sale are WEA capable, and assessing their ability to comply with the Commission's technical and procedural WEA rules. To the extent that the requirements we propose to adopt would require additional data entry than was required in CMS Providers' first WEA elections, we believe that using the WEA Database's electronic interface would make the entry of that data achievable within 30 days. We seek comment on these views. We also seek comment on the extent to which pre-populating relevant information that the Commission already has available to it in the WEA Database can further ease the burden of compliance and make it easier for CMS Providers to comply with this requirement within 30 days. We seek comment on any other measures that we can take to facilitate timely compliance with this proposal by all CMS Providers. We do not believe that compliance with this proposal would present unique or heightened burdens to CMS Providers that are small- or medium-sized businesses. We seek comment on this view.

F. Benefit-Cost Analysis

80. In this section, we seek comment on whether we can reasonably expect the minimum benefit resulting from the improvements to WEA we propose today to exceed their maximum cost. We estimate that the proposed rules, both separately and jointly, would improve the effectiveness of WEA and bring benefits through improved public safety outcomes. We estimate the maximum, aggregated cost of compliance with the proposals in this Further Notice would be $39.9 million as a one-time cost and $422,500 as an annually recurring cost. Although most of the benefits are difficult to quantify, we believe they outweigh the overall costs of the proposed rules.

1. Benefits

81. We seek comment on the benefits of the proposals in this Further Notice taken together. We are cognizant of the fact that, as a general matter, it is impossible to assign precise dollar values to changes to WEA that improve the public's safety, life, and health. We also believe that these proposals will result in benefits measurable in terms of lives saved and injuries and property damage prevented. We seek comment on developments in social science that add support to or refute the premise that effective alerts and warnings help to move people more effectively to take protective actions during emergencies. We seek comment on how to quantify the value of the improvements to public safety outcomes that result from faster and more effective protective actions during disasters. Are there situations where, had the Commission implemented the improvements to WEA on which we seek comment today, deaths and injuries could have been prevented or mitigated? We seek comment on the extent to which the improved alert message accessibility and personalization features that we propose in this Further Notice would improve the effectiveness of WEA alert messages and reduce ''milling'' behavior. We seek comment on whether our proposals to integrate WEA more seamlessly into people's lives will increase the rate of consumer opt-in to WEA or otherwise result in more people receiving and effectively responding to potentially life-saving instructions from alerting authorities during emergencies. We also seek comment on any enhancements to our proposals that would make WEA more likely to save lives, prevent injuries, and protect properties. Would the adoption of our proposed rules, such as WEA alert tests and accessible WEA Database, also provide additional benefits to alerting authorities, for instance, reducing costs of analyzing alerts' performance? We seek further comment on the benefits of our proposals taken individually and jointly.

82. *Enhancing WEA's Language Support.* We tentatively conclude that the benefit of the proposed WEA language support is likely to be significant. Currently, the 76 CMS Providers participating in WEA send alerts to 75% of mobile phones in the country. Among the 26 million people who do not primarily speak English or Spanish, nearly 15.4 million speak primarily one of the 12 languages that we propose to integrate into the WEA system in addition to English and Spanish. Assuming 75% of these individuals are covered by the WEA system, approximately 10 million people who have been receiving WEA alerts in languages they cannot comprehend would understand the content of WEA alerts under the proposed WEA language support. Even if alerts reach just 1% of this population per year (*i.e.,* nearly 100,000 people) the potential of WEA to prevent property damage, injuries, and deaths could be enormous.

83. *Improving WEA's Effectiveness with Multimedia Content.* We tentatively conclude that the proposed requirement of support for multimedia content in WEA messages, including ''location-aware maps'' and thumbnail-sized images, will result in enhanced effectiveness of the messages. Images can strengthen communications by stimulating attention, conveying large amount of information in a short amount of time, and promoting information retention. Therefore, requiring support for multimedia content is likely to raise receivers' attention and situational awareness and lead to improved public safety. Although the benefit is difficult to quantify, it is likely to dwarf the small costs associated with the inclusion of multimedia content in WEA messages. Given the small size of such content (*e.g.,* thumbnail-sized image using 0.013 megabytes of data), we anticipate the additional cost to transmit it to be negligible. We seek comment and data on this assessment. We also anticipate that transmitting location-aware maps and thumbnail-sized images in WEA alert messages would not cause significant delays in alert transmission. We seek comment on this assessment.

84. *Allow Alerting Authorities More Flexibility in how WEA Messages are Presented.* We believe that allowing alerting authorities more flexibility in deciding how WEA messages are presented, such as suppressing the audio attention signal and vibration cadence in an active shooter scenario, could help reduce casualties. According to the FBI, there were 61 active shooter incidents in 2021, resulting in 243 casualties—including 103 deaths and 140 injuries, excluding to the shooters. It is reasonable to assume that suppressing the audio attention signal and vibration cadence during an active-shooting scenario could reduce casualties by discretely warning the public, yielding substantial benefits to public safety. We seek comment on statistics and data related to the benefits through the reduction of casualties resulting from the messaging flexibility. Although suppressing the audio attention signal and vibration cadence may not be warranted in all situations, we believe that alerting authorities would be in the best position in determining whether a specific situation warrants the adjustment in how messages are presented so the adverse impact of inattention would be minimized. We also believe allowing alerting authorities this flexibility would be technically feasible at a minimal expense, and hence the proposed rule would likely result in net benefits. We seek comment on our assessment.

85. *Prevent Unnecessary Consumer Opt-out.* We believe that offering an alternative in addition to the binary choices between opt-out and opt-in may help retain consumers on the WEA system. The Commission's rules already allow for consumers to mute the audio attention signal and vibration cadence when users set their devices to ''do not disturb'' mode. Outside of these ''do not disturb'' windows, consumers would find ''opt-out'' to be the only option to avoid the distraction of WEA alerts. Without the third option that allows consumers to silently receive all WEA alerts, consumers are likely to opt out from WEA if they still find the audio attention signal and vibration cadence interrupting. For those who already opted out from WEA, adding this muting option does not make them any worse off and may even cause some of them to opt in again. Therefore, we believe this proposed rule can prevent unnecessary consumer opt-out and result in improvement in public safety outcomes. Although this proposal would require collaboration between wireless providers and device manufacturers, we believe the technical difficulties and costs should be small. As a result, we tentatively conclude that the proposed rule would enhance public safety at a minimal cost. We seek

comment on this assessment and any believe that CMS Providers would incur any cost to comply with our proposal to allow evidence and data to support or correct our assessment.

86. *Facilitate More Effective WEA Public Awareness Exercises.* We propose to authorize Participating CMS Providers to support up to two annual end-to-end WEA tests per alerting authority, consistent with EAS test rules. We believe harmonizing WEA and EAS test rules would improve the effectiveness of public awareness exercises and reduce consumer alert fatigue when such tests are better coordinated than tested separately. We do not alerting authorities to conduct two public awareness tests per year. Therefore, we believe this proposal will bring net benefits to the public. We seek comment on these assessments.

87. *Establishing a WEA Database to Promote Transparency about WEA Availability and Benchmark WEA Performance.* We believe that establishing measurable goals and performance measures for WEA will improve the speed, accuracy and reliability of WEA messages. The public will benefit from improved and targeted usage of WEA alert messages. Greater accuracy in sending alert messages will result in less overshoot, which in turn will mean that fewer people will receive alert messages not intended for them and will be less likely to take unnecessary action or opt out of receiving alert messages. We seek comment on the benefits of establishing benchmarks that will make WEA faster, more accurate, and more reliable. We seek comment on whether improving WEA performance would encourage greater and more effective usage of WEA. Would alerting authorities be more likely to issue an alert message if they knew it would be received by the people for whom it was intended while not being received by people for whom it was not intended? Will improving WEA also result in more emergency management agencies investing the time, effort, and resources necessary to become authorized as alerting authorities? We seek comment on the benefit of emergency management agencies using alert messages both more often and more effectively. Will improved performance cause current alerting authorities to use WEA in circumstances they might have hesitated to use them previously? We seek comment on these benefits.

88. The proposed WEA Database would provide a nationwide WEA availability and performance dataset. We believe that giving the Commission, FEMA, alerting authorities, and consumers access to this dataset through a graphical user interface and data visualization tool will significantly improve their understanding of how WEA works in practice. We believe that understanding how WEA works in practice will help alerting authorities to use WEA more effectively, enable consumers to use their mobile devices as preparedness tools, and enable the Commission and FEMA to more effectively discharge their responsibilities as stewards of the nation's alert and warning capability. We seek comment on this view. As discussed above, emergency management agencies may be declining to use the WEA system in situations where it could save lives because they lack information about, and confidence in, how WEA works in practice. We seek comment on our tentative conclusion that implementing a WEA Database will increase alerting authorities' confidence in and use of the WEA system by providing visibility and assurances. We seek comment on whether the WEA Database would also promote the public interest by providing alerting authorities with information as to where their alerts will not reach intended recipients and their need to employ alternate methods of notifying the public of emergency situations. We also seek comment on whether WEA availability and performance information would promote public confidence in WEA and influence consumer choice when deciding from which CMS provider to purchase service. As a result, would market forces be more likely to incentivize additional CMS Providers to elect to transmit emergency alerts or to improve the availability of the WEA service that they offer? How would Participating CMS Providers, emergency managers, and the public benefit if some among the over 450 CMS Providers that have elected not to participate in WEA started transmitting WEA alert messages? We seek comment on whether greater knowledge of WEA's coverage, in terms of geographic areas and network technologies, would encourage providers to increase their support for WEA. We seek additional comment on other benefits that can be gleaned from WEA availability and performance reporting.

2. Costs

89. We seek comment on the costs that Participating CMS Providers would expect to incur as a result of their compliance with the rule changes we propose in this Further Notice. We anticipate that these rules will lead Participating CMS Providers to incur costs associated with modifying standards and software, and recordkeeping and reporting costs. We seek comment on whether adopting all these proposals as a package may result in a cost savings as opposed to having to modify standards and software in response to several, incremental policy changes.

90. We estimate that Participating CMS Providers would incur a $39.9 million one-time cost to update the WEA standards and software necessary to comply the proposals in this Further Notice. This figure consists of approximately a $814,000 cost to update applicable WEA standards and approximately a $39.1 million cost to update applicable software. We quantify the cost of modifying standards as the annual compensation for 30 network engineers compensated at the national average for their field ($120,650/year; $58/hour), plus annual benefits ($60,325/year; 29/hour) working for the amount of time that it takes to develop a standard (one hour every other week for one year, 26 hours) for 12 distinct standards. We quantify the cost of modifying software as the annual compensation for a software developer compensated at the national average for their field ($120,990/year), plus annual benefits ($60,495/year) working for the amount of time that it takes to develop software (ten months) at each of the 76 CMS Providers that participate in WEA. We quantify the cost of testing these modifications (including integration testing, unit testing and failure testing) to require 12 software developer compensated at the national average for their field working for two months at each of the 76 CMS Providers that participate in WEA. In quantifying costs for software development, we have used the same framework since 2016 for changes to software ranging from developing new standards to enhanced geo-targeting. Does this remain an appropriate framework to describe the costs of software or firmware updates needed to comply with the proposals in this Further Notice? We seek comment on these cost estimates and the underlying cost methodology we are using.

91. We also seek comment on specific costs of reporting and recordkeeping related to reporting information about WEA's availability and performance in the WEA Database. We expect costs associated with our proposals related to WEA availability reporting to be negligible for Participating CMS Providers that participate in WEA in whole or that otherwise offer WEA in the entirety of their geographic service area because such Participating CMS

Providers have already provided the Commission with the shapefile data needed to fulfill a significant aspect of their reporting obligation in furtherance of their obligations to support the Commission's Broadband Data Collection. We seek comment on this view. For CMS Providers participating in WEA in part that may need to tailor shapefiles to reflect the extent of its WEA coverage, what, if any, costs would they incur to recreate or reformat shapefiles to depict the extent of its WEA coverage? In the Supporting Document of Study Area Boundary Data Reporting in Esri Shapefile Format, the Office of Information and Regulatory Affairs estimates that it takes an average of 26 hours for a data scientist to modify a shapefile. We believe submitting WEA availability information in shapefile format should require less time than modifying a shapefile. Therefore, we believe 26 hours would be an upper bound of the time required for a Participating CMS Provider to report its WEA availability in shapefile format. Given that the median wage rate is $48.52/hour for data scientists, with a 45% markup for benefits, we arrive at $70.40 as the hourly compensation rate for a data scientist. We estimate an aggregate cost of WEA availability reporting to be approximately $139,000 (≈ $70.40 per hour × 26 hours × 76 providers), which may be recurring on an annual basis since availability may change and need to be updated over time. We seek comment on our estimates of the time and costs Participating CMS Providers have to spend on gathering and submitting WEA's availability information in GIS shapefile format in the WEA Database?

92. We acknowledge that our proposed rules on collecting the data necessary to measure WEA's reliability, accuracy, and speed for each alert in a WEA Database would incur some operating costs for Participating CMS Providers. However, we believe that once Participating CMS Providers upgrade the standards and software necessary to automate WEA performance reporting, we expect that the process of data collection and data submission would require minimal human intervention. Although we anticipate such performance reporting would be largely automated once it is set up, we estimate a routine administrative monitoring cost that Participating CMS Providers may still incur when they file the performance report for each alert incident. We estimate that, for each alert, a provider will need an office administrator, who is compensated at $27 hour, to spend 0.5 hours in monitoring each data transmission. At the aggregate level, we believe there will be 21,000 performance reports transmitted to the WEA database, resulting in a $283,500 annual recurring cost at the aggregate level. We seek comment on our estimates and alternative approaches to assess recordkeeping and reporting costs for WEA performance reporting.

93. Because CMS Providers' participation in WEA is voluntary, Participating CMS Providers may opt out of participating in WEA if they decide the costs of the proposed rules are too burdensome. Despite the voluntary nature of the program and potential Participating CMS Providers' opt-out, it is our belief that they have incurred significant good will from their voluntary Participation in WEA over the last decade that justifies their continued participation. Therefore, we anticipate that existing Participating CMS Providers are very unlikely to withdraw their participation in the WEA system if the performance standards and reporting requirements are adopted. We seek comment on this assessment and any forecast and data to support or refute our assessment. We seek comment on whether there are any other types of costs that we should consider as relevant to our analysis. Are there alternative methods of achieving our goals in these areas that would present Participating CMS Providers with lesser burdens? If so, we seek comment on costs associated with these alternative methods. We also seek costs on any modifications that we could implement to our proposed rules to limit the burden of compliance on entities considered to be small- or medium-sized businesses.

Procedural Matters

94. *Paperwork Reduction Act.* This document contains proposed new and modified information collection requirements. The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public and the Office of Management and Budget (OMB) to comment on the information collection requirements contained in this document, as required by the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4), we seek specific comment on how we might further reduce the information collection burden for small business concerns with fewer than 25 employees.

95. *Ex Parte Rules—Permit-But-Disclose.* This proceeding this Notice initiates shall be treated as a ''permit-but-disclose'' proceeding in accordance with the Commission's *ex parte* rules. Persons making *ex parte* presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must (1) list all persons attending or otherwise participating in the meeting at which the *ex parte* presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during *ex parte* meetings are deemed to be written *ex parte* presentations and must be filed consistent with Rule 1.1206(b). In proceedings governed by Rule 1.49(f) or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (*e.g.,* .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission's *ex parte* rules.

96. *Regulatory Flexibility Act.* The Regulatory Flexibility Act of 1980, as amended (RFA), requires that an agency prepare a regulatory flexibility analysis for notice and comment rulemakings, unless the agency certifies that ''the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities.'' Accordingly, the Commission has prepared an Initial Regulatory Flexibility Analysis (IRFA) concerning the possible impact of the rule and policy changes contained in this Further Notice of Proposed Rulemaking. The IRFA is set forth in Appendix B.

97. *Filing Requirements—Comments and Replies.* Pursuant to sections 1.415 and 1.419 of the Commission's rules, 47

CFR 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document. Comments may be filed using the Commission's Electronic Comment Filing System (ECFS). See Electronic Filing of Documents in Rulemaking Proceedings, 63 FR 24121 (1998).

- *Electronic Filers:* Comments may be filed electronically using the internet by accessing the ECFS: *https://www.fcc.gov/ecfs/.*
- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing.
- Filings can be sent by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.
- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.
- Postal Service first-class, Express, and Priority mail must be addressed to 45 L Street NE, Washington, DC 20554.
- Effective March 19, 2020, and until further notice, the Commission no longer accepts any hand or messenger delivered filings. This is a temporary measure taken to help protect the health and safety of individuals, and to mitigate the transmission of COVID–19.
- During the time the Commission's building is closed to the general public and until further notice, if more than one docket or rulemaking number appears in the caption of a proceeding, paper filers need not submit two additional copies for each additional docket or rulemaking number; an original and one copy are sufficient.

98. *People with Disabilities.* To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice).

99. *Additional Information.* For further information regarding Notice, please contact *WEA@fcc.gov,* or Michael Antonino, Cybersecurity and Communications Reliability Division, Public Safety and Homeland Security Bureau, (202) 418–0695, or by email to *michael.antonino@fcc.gov.*

Initial Paperwork Reduction Act of 1995 Analysis

This *Further Notice of Proposed Rulemaking* seeks comment on potential new or revised proposed information collection requirements. If the Commission adopts any new or revised final information collection requirements when the final rules are adopted, the Commission will publish a notice in the **Federal Register** inviting further comments from the public on the final information collection requirements, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3501–3520). The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public and OMB to comment on the information collection requirements contained in this document, as required by the PRA. Public and agency comments on the PRA proposed information collection requirements are due August 21, 2023. Comments should address: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimates; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and (e) way to further reduce the information collection burden on small business concerns with fewer than 25 employees. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Pubic Law 107–198, see 44 U.S.C. 3506(c)(4), we seek specific comment on how we might further reduce the information collection burden for small business concerns with fewer than 25 employees.

Initial Regulatory Flexibility Analysis

1. As required by the Regulatory Flexibility Act of 1980, as amended (RFA), the Commission has prepared this Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on a substantial number of small entities by the policies and rules proposed in the *Further Notice of Proposed Rulemaking* (*Further Notice*). Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments on the *Further Notice.* The Commission will send a copy of the *Further Notice,* including this IRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA). In addition, the *Further Notice* and IRFA (or summaries thereof) will be published in the **Federal Register**.

A. Need for, and Objectives of, the Proposed Rules

2. In the *Further Notice,* the Commission acts to (1) develop measurable goals and performance measures for WEA by proposing the adoption of WEA performance metrics and establishing the WEA Database and performance requirements, (2) make WEA more accessible by enhancing WEA's language support and effectiveness with multimedia content, and (3) integrate WEA more seamlessly into people's lives by improving active shooter and public health alerts, preventing unnecessary consumer opt-out, and facilitating more effective WEA public awareness exercises

3. The *Further Notice* contains specific proposals upon which the Commission seeks comment including: proposing definitions for reliability, accuracy, and speed, and setting benchmarks based on these definitions that Participating CMS Providers would be required to meet; requiring Participating CMS Providers to submit data regarding WEA availability and performance into a WEA Database to be shared with FEMA and authorized alerting authorities; translating alerts into the thirteen most commonly spoken languages in the United States and storing them at the mobile device to be displayed when an alerting authority deems relevant; sending thumbnail-sized images in alerts over the air; incorporating location-aware maps into WEA by utilizing an API; allowing alerting authorities to send alerts without the associated attention signal and vibration cadence; allowing consumers to cache their receipt of WEA; and proposing to authorize two annual end-to-end WEA tests per alerting authority.

B. Legal Basis

4. The proposed action is authorized pursuant to sections 1, 2, 4(i), 4(n), 301, 303(b), 303(e), 303(g), 303(j), 303(r), 307, 309, 316, 403, and 706 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 152, 154(i), 154(n), 301, 303(b), 303(e), 303(g), 303(j), 303(r), 307, 309, 316, 403, 544(g), and 606; The Warning, Alert and Response Network (WARN) Act, WARN Act §§ 602(a), (b), (c), (f), 603, 604, and 606, 47 U.S.C. 1201(a),(b),(c), (f), 1203, 1204 and 1206.

C. Description and Estimate of the Number of Small Entities to Which the Proposed Rules Will Apply

5. The RFA directs agencies to provide a description of and, where feasible, an estimate of, the number of

small entities that may be affected by the proposed rules, if adopted. The RFA generally defines the term ''small entity'' as having the same meaning as the terms ''small business,'' ''small organization,'' and ''small governmental jurisdiction.'' In addition, the term ''small business'' has the same meaning as the term ''small business concern'' under the Small Business Act. A ''small business concern'' is one which: (1) is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA).

6. *Small Businesses, Small Organizations, Small Governmental Jurisdictions.* Our actions, over time, may affect small entities that are not easily categorized at present. We therefore describe here, at the outset, three broad groups of small entities that could be directly affected herein. First, while there are industry specific size standards for small businesses that are used in the regulatory flexibility analysis, according to data from the SBA's Office of Advocacy, in general a small business is an independent business having fewer than 500 employees. These types of small businesses represent 99.9% of all businesses in the United States, which translates to 32.5 million businesses.

7. Next, the type of small entity described as a ''small organization'' is generally ''any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.'' The Internal Revenue Service (IRS) uses a revenue benchmark of $50,000 or less to delineate its annual electronic filing requirements for small exempt organizations. Nationwide, for tax year 2020, there were approximately 447,689 small exempt organizations in the U.S. reporting revenues of $50,000 or less according to the registration and tax data for exempt organizations available from the IRS.

8. Finally, the small entity described as a ''small governmental jurisdiction'' is defined generally as ''governments of cities, counties, towns, townships, villages, school districts, or special districts, with a population of less than fifty thousand.'' U.S. Census Bureau data from the 2017 Census of Governments indicate that there were 90,075 local governmental jurisdictions consisting of general purpose governments and special purpose governments in the United States. Of this number there were 36,931 general purpose governments (county, municipal and town or township) with populations of less than 50,000 and 12,040 special purpose governments—independent school districts with enrollment populations of less than 50,000. Accordingly, based on the 2017 U.S. Census of Governments data, we estimate that at least 48,971 entities fall into the category of ''small governmental jurisdictions.''

9. *Wireless Telecommunications Carriers (except Satellite).* This industry comprises establishments engaged in operating and maintaining switching and transmission facilities to provide communications via the airwaves. Establishments in this industry have spectrum licenses and provide services using that spectrum, such as cellular services, paging services, wireless internet access, and wireless video services. The SBA size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms in this industry that operated for the entire year. Of that number, 2,837 firms employed fewer than 250 employees. Additionally, based on Commission data in the 2021 Universal Service Monitoring Report, as of December 31, 2020, there were 797 providers that reported they were engaged in the provision of wireless services. Of these providers, the Commission estimates that 715 providers have 1,500 or fewer employees. Consequently, using the SBA's small business size standard, most of these providers can be considered small entities.

10. *Broadband Personal Communications Service.* The broadband personal communications services (PCS) spectrum encompasses services in the 1850–1910 and 1930–1990 MHz bands. The closest industry with a SBA small business size standard applicable to these services is Wireless Telecommunications Carriers (except Satellite). The SBA small business size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms that operated in this industry for the entire year. Of this number, 2,837 firms employed fewer than 250 employees. Thus under the SBA size standard, the Commission estimates that a majority of licensees in this industry can be considered small.

11. Based on Commission data as of November 2021, there were approximately 5,060 active licenses in the Broadband PCS service. The Commission's small business size standards with respect to Broadband PCS involve eligibility for bidding credits and installment payments in the auction of licenses for these services. In auctions for these licenses, the Commission defined ''small business'' as an entity that, together with its affiliates and controlling interests, has average gross revenues not exceeding $40 million for the preceding three years, and a ''very small business'' as an entity that, together with its affiliates and controlling interests, has had average annual gross revenues not exceeding $15 million for the preceding three years. Winning bidders claiming small business credits won Broadband PCS licenses in C, D, E, and F Blocks.

12. In frequency bands where licenses were subject to auction, the Commission notes that as a general matter, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. Further, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated. Additionally, since the Commission does not collect data on the number of employees for licensees providing these, at this time we are not able to estimate the number of licensees with active licenses that would qualify as small under the SBA's small business size standard.

13. *Narrowband Personal Communications Services.* Narrowband Personal Communications Services *(Narrowband PCS)* are PCS services operating in the 901–902 MHz, 930–931 MHz, and 940–941 MHz bands. PCS services are radio communications that encompass mobile and ancillary fixed communication that provide services to individuals and businesses and can be integrated with a variety of competing networks. Wireless Telecommunications Carriers (*except* Satellite) is the closest industry with a SBA small business size standard applicable to these services. The SBA small business size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms that operated in this industry for the entire year. Of this number, 2,837 firms employed fewer than 250 employees. Thus under the SBA size standard, the Commission estimates that a majority of licensees in this industry can be considered small.

14. According to Commission data as of December 2021, there were approximately 4,211 active *Narrowband PCS* licenses. The Commission's small business size standards with respect to *Narrowband PCS* involve eligibility for bidding credits and installment payments in the auction of licenses for these services. For the auction of these licenses, the Commission defined a

''small business'' as an entity that, together with affiliates and controlling interests, has average gross revenues for the three preceding years of not more than $40 million. A ''very small business'' is defined as an entity that, together with affiliates and controlling interests, has average gross revenues for the three preceding years of not more than $15 million. Pursuant to these definitions, 7 winning bidders claiming small and very small bidding credits won approximately 359 licenses. One of the winning bidders claiming a small business status classification in these *Narrowband PCS* license auctions had an active license as of December 2021.

15. In frequency bands where licenses were subject to auction, the Commission notes that as a general matter, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. Further, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated. Additionally, since the Commission does not collect data on the number of employees for licensees providing these services, at this time we are not able to estimate the number of licensees with active licenses that would qualify as small under the SBA's small business size standard.

16. *Wireless Communications Services.* Wireless Communications Services (WCS) can be used for a variety of fixed, mobile, radiolocation, and digital audio broadcasting satellite services. Wireless spectrum is made available and licensed for the provision of wireless communications services in several frequency bands subject to Part 27 of the Commission's rules. Wireless Telecommunications Carriers (except satellite) is the closest industry with a SBA small business size standard applicable to these services. The SBA small business size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms that operated in this industry for the entire year. Of this number, 2,837 firms employed fewer than 250 employees. Thus under the SBA size standard, the Commission estimates that a majority of licensees in this industry can be considered small.

17. The Commission's small business size standards with respect to WCS involve eligibility for bidding credits and installment payments in the auction of licenses for the various frequency bands included in WCS. When bidding credits are adopted for the auction of licenses in WCS frequency bands, such credits may be available to several types of small businesses based average gross revenues (small, very small and entrepreneur) pursuant to the competitive bidding rules adopted in conjunction with the requirements for the auction and/or as identified in the designated entities section in part 27 of the Commission's rules for the specific WCS frequency bands.

18. In frequency bands where licenses were subject to auction, the Commission notes that as a general matter, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. Further, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated. Additionally, since the Commission does not collect data on the number of employees for licensees providing these services, at this time we are not able to estimate the number of licensees with active licenses that would qualify as small under the SBA's small business size standard.

19. *700 MHz Guard Band Licensees.* The 700 MHz Guard Band encompasses spectrum in 746–747/776–777 MHz and 762–764/792–794 MHz frequency bands. Wireless Telecommunications Carriers (*except* Satellite) is the closest industry with a SBA small business size standard applicable to licenses providing services in these bands. The SBA small business size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms that operated in this industry for the entire year. Of this number, 2,837 firms employed fewer than 250 employees. Thus under the SBA size standard, the Commission estimates that a majority of licensees in this industry can be considered small.

20. According to Commission data as of December 2021, there were approximately 224 active 700 MHz Guard Band licenses. The Commission's small business size standards with respect to 700 MHz Guard Band licensees involve eligibility for bidding credits and installment payments in the auction of licenses. For the auction of these licenses, the Commission defined a ''small business'' as an entity that, together with its affiliates and controlling principals, has average gross revenues not exceeding $40 million for the preceding three years, and a ''very small business'' an entity that, together with its affiliates and controlling principals, has average gross revenues that are not more than $15 million for the preceding three years. Pursuant to these definitions, five winning bidders claiming one of the small business status classifications won 26 licenses, and one winning bidder claiming small business won two licenses. None of the winning bidders claiming a small business status classification in these 700 MHz Guard Band license auctions had an active license as of December 2021.

21. In frequency bands where licenses were subject to auction, the Commission notes that as a general matter, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. Further, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated. Additionally, since the Commission does not collect data on the number of employees for licensees providing these services, at this time we are not able to estimate the number of licensees with active licenses that would qualify as small under the SBA's small business size standard.

22. *Lower 700 MHz Band Licenses.* The lower 700 MHz band encompasses spectrum in the 698–746 MHz frequency bands. Permissible operations in these bands include flexible fixed, mobile, and broadcast uses, including mobile and other digital new broadcast operation; fixed and mobile wireless commercial services (including FDD- and TDD-based services); as well as fixed and mobile wireless uses for private, internal radio needs, two-way interactive, cellular, and mobile television broadcasting services. Wireless Telecommunications Carriers (*except* Satellite) is the closest industry with a SBA small business size standard applicable to licenses providing services in these bands. The SBA small business size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms that operated in this industry for the entire year. Of this number, 2,837 firms employed fewer than 250 employees. Thus under the SBA size standard, the Commission estimates that a majority of licensees in this industry can be considered small.

23. According to Commission data as of December 2021, there were approximately 2,824 active Lower 700 MHz Band licenses. The Commission's small business size standards with respect to Lower 700 MHz Band licensees involve eligibility for bidding

credits and installment payments in the auction of licenses. For auctions of Lower 700 MHz Band licenses the Commission adopted criteria for three groups of small businesses. A very small business was defined as an entity that, together with its affiliates and controlling interests, has average annual gross revenues not exceeding $15 million for the preceding three years, a small business was defined as an entity that, together with its affiliates and controlling interests, has average gross revenues not exceeding $40 million for the preceding three years, and an entrepreneur was defined as an entity that, together with its affiliates and controlling interests, has average gross revenues not exceeding $3 million for the preceding three years. In auctions for Lower 700 MHz Band licenses seventy-two winning bidders claiming a small business classification won 329 licenses, twenty-six winning bidders claiming a small business classification won 214 licenses, and three winning bidders claiming a small business classification won all five auctioned licenses.

24. In frequency bands where licenses were subject to auction, the Commission notes that as a general matter, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. Further, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated. Additionally, since the Commission does not collect data on the number of employees for licensees providing these services, at this time we are not able to estimate the number of licensees with active licenses that would qualify as small under the SBA's small business size standard.

25. *Upper 700 MHz Band Licenses.* The upper 700 MHz band encompasses spectrum in the 746–806 MHz bands. Upper 700 MHz D Block licenses are nationwide licenses associated with the 758–763 MHz and 788–793 MHz bands. Permissible operations in these bands include flexible fixed, mobile, and broadcast uses, including mobile and other digital new broadcast operation; fixed and mobile wireless commercial services (including FDD- and TDD-based services); as well as fixed and mobile wireless uses for private, internal radio needs, two-way interactive, cellular, and mobile television broadcasting services. Wireless Telecommunications Carriers (*except* Satellite) is the closest industry with a SBA small business size standard applicable to licenses providing services in these bands. The SBA small business size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms that operated in this industry for the entire year. Of that number, 2,837 firms employed fewer than 250 employees. Thus, under the SBA size standard, the Commission estimates that a majority of licensees in this industry can be considered small.

26. According to Commission data as of December 2021, there were approximately 152 active Upper 700 MHz Band licenses. The Commission's small business size standards with respect to Upper 700 MHz Band licensees involve eligibility for bidding credits and installment payments in the auction of licenses. For the auction of these licenses, the Commission defined a ''small business'' as an entity that, together with its affiliates and controlling principals, has average gross revenues not exceeding $40 million for the preceding three years, and a ''very small business'' an entity that, together with its affiliates and controlling principals, has average gross revenues that are not more than $15 million for the preceding three years. Pursuant to these definitions, three winning bidders claiming very small business status won five of the twelve available licenses.

27. In frequency bands where licenses were subject to auction, the Commission notes that as a general matter, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. Further, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated. Additionally, since the Commission does not collect data on the number of employees for licensees providing these services, at this time we are not able to estimate the number of licensees with active licenses that would qualify as small under the SBA's small business size standard.

28. *Advanced Wireless Services (AWS)—(1710–1755 MHz and 2110–2155 MHz bands (AWS–1); 1915–1920 MHz, 1995–2000 MHz, 2020–2025 MHz and 2175–2180 MHz bands (AWS–2); 2155–2175 MHz band (AWS–3*); 2000–2020 MHz and 2180–2200 MHz (AWS–4). Spectrum is made available and licensed in these bands for the provision of various wireless communications services. Wireless Telecommunications Carriers (*except* Satellite) is the closest industry with a SBA small business size standard applicable to these services. The SBA small business size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms that operated in this industry for the entire year. Of this number, 2,837 firms employed fewer than 250 employees. Thus, under the SBA size standard, the Commission estimates that a majority of licensees in this industry can be considered small.

29. According to Commission data as December 2021, there were approximately 4,472 active AWS licenses. The Commission's small business size standards with respect to AWS involve eligibility for bidding credits and installment payments in the auction of licenses for these services. For the auction of AWS licenses, the Commission defined a ''small business'' as an entity with average annual gross revenues for the preceding three years not exceeding $40 million, and a ''very small business'' as an entity with average annual gross revenues for the preceding three years not exceeding $15 million. Pursuant to these definitions, 57 winning bidders claiming status as small or very small businesses won 215 of 1,087 licenses. In the most recent auction of AWS licenses 15 of 37 bidders qualifying for status as small or very small businesses won licenses.

30. In frequency bands where licenses were subject to auction, the Commission notes that as a general matter, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. Further, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated. Additionally, since the Commission does not collect data on the number of employees for licensees providing these services, at this time we are not able to estimate the number of licensees with active licenses that would qualify as small under the SBA's small business size standard.

31. *Broadband Radio Service and Educational Broadband Service.* Broadband Radio Service systems, previously referred to as Multipoint Distribution Service (MDS) and Multichannel Multipoint Distribution Service (MMDS) systems, and ''wireless cable,'' transmit video programming to subscribers and provide two-way high speed data operations using the microwave frequencies of the Broadband Radio Service (BRS) and Educational Broadband Service (EBS) (previously referred to as the

Instructional Television Fixed Service (ITFS)). Wireless cable operators that use spectrum in the BRS often supplemented with leased channels from the EBS, provide a competitive alternative to wired cable and other multichannel video programming distributors. Wireless cable programming to subscribers resembles cable television, but instead of coaxial cable, wireless cable uses microwave channels.

32. In light of the use of wireless frequencies by BRS and EBS services, the closest industry with a SBA small business size standard applicable to these services is Wireless Telecommunications Carriers (*except* Satellite). The SBA small business size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms that operated in this industry for the entire year. Of this number, 2,837 firms employed fewer than 250 employees. Thus under the SBA size standard, the Commission estimates that a majority of licensees in this industry can be considered small.

33. According to Commission data as December 2021, there were approximately 5,869 active BRS and EBS licenses. The Commission's small business size standards with respect to BRS involves eligibility for bidding credits and installment payments in the auction of licenses for these services. For the auction of BRS licenses, the Commission adopted criteria for three groups of small businesses. A very small business is an entity that, together with its affiliates and controlling interests, has average annual gross revenues exceed $3 million and did not exceed $15 million for the preceding three years, a small business is an entity that, together with its affiliates and controlling interests, has average gross revenues exceed $15 million and did not exceed $40 million for the preceding three years, and an entrepreneur is an entity that, together with its affiliates and controlling interests, has average gross revenues not exceeding $3 million for the preceding three years. Of the ten winning bidders for BRS licenses, two bidders claiming the small business status won 4 licenses, one bidder claiming the very small business status won three licenses and two bidders claiming entrepreneur status won six licenses. One of the winning bidders claiming a small business status classification in the BRS license auction has an active licenses as of December 2021.

34. The Commission's small business size standards for EBS define a small business as an entity that, together with its affiliates, its controlling interests and the affiliates of its controlling interests, has average gross revenues that are not more than $55 million for the preceding five (5) years, and a very small business is an entity that, together with its affiliates, its controlling interests and the affiliates of its controlling interests, has average gross revenues that are not more than $20 million for the preceding five (5) years. In frequency bands where licenses were subject to auction, the Commission notes that as a general matter, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. Further, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated. Additionally, since the Commission does not collect data on the number of employees for licensees providing these services, at this time we are not able to estimate the number of licensees with active licenses that would qualify as small under the SBA's small business size standard.

35. *The Educational Broadcasting Services.* Cable-based educational broadcasting services fall under the broad category of the Wired Telecommunications Carriers industry. The Wired Telecommunications Carriers industry comprises establishments primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired telecommunications networks. Transmission facilities may be based on a single technology or a combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including VoIP services; wired (cable) audio and video programming distribution; and wired broadband internet services.

36. The SBA small business size standard for this industry classifies businesses having 1,500 or fewer employees as small. U.S. Census Bureau data for 2017 show that there were 3,054 firms in this industry that operated for the entire year. Of this total, 2,964 firms operated with fewer than 250 employees. Thus, under this size standard, the majority of firms in this industry can be considered small. Additionally, according to Commission data as of December 2021, there were 4,477 active EBS licenses. The Commission estimates that the majority of these licenses are held by non-profit educational institutions and school districts and are likely small entities.

37. *Radio and Television Broadcasting and Wireless Communications Equipment Manufacturing.* This industry comprises establishments primarily engaged in manufacturing radio and television broadcast and wireless communications equipment. Examples of products made by these establishments are: transmitting and receiving antennas, cable television equipment, GPS equipment, pagers, cellular phones, mobile communications equipment, and radio and television studio and broadcasting equipment. The SBA small business size standard for this industry classifies businesses having 1,250 employees or less as small. U.S. Census Bureau data for 2017 show that there were 656 firms in this industry that operated for the entire year. Of this number, 624 firms had fewer than 250 employees. Thus, under the SBA size standard, the majority of firms in this industry can be considered small.

38. *Software Publishers.* This industry comprises establishments primarily engaged in computer software publishing or publishing and reproduction. Establishments in this industry carry out operations necessary for producing and distributing computer software, such as designing, providing documentation, assisting in installation, and providing support services to software purchasers. These establishments may design, develop, and publish, or publish only. The SBA small business size standard for this industry classifies businesses having annual receipts of $41.5 million or less as small. U.S. Census Bureau data for 2017 indicate that 7,842 firms in this industry operated for the entire year. Of this number 7,226 firms had revenue of less than $25 million. Based on this data, we conclude that a majority of firms in this industry are small.

39. *Noncommercial Educational (NCE) and Public Broadcast Stations.* Noncommercial educational broadcast stations and public broadcast stations are television or radio broadcast stations which under the Commission's rules are eligible to be licensed by the Commission as a noncommercial educational radio or television broadcast station and are owned and operated by a public agency or nonprofit private foundation, corporation, or association; or are owned and operated by a municipality which transmits only noncommercial programs for education purposes.

40. The SBA small business size standards and U.S. Census Bureau data classify radio stations and television broadcasting separately and both categories may include both noncommercial and commercial stations. The SBA small business size standard for both radio stations and television broadcasting classify firms having $41.5 million or less in annual receipts as small. For Radio Stations, U.S. Census Bureau data for 2017 show that 1,879 of the 2,963 firms that operated during that year had revenue of less than $25 million per year. For Television Broadcasting, U.S. Census Bureau data for 2017 show that 657 of the 744 firms that operated for the entire year had revenue of less than $25,000,000. While the U.S. Census Bureau data does not indicate the number of non-commercial stations, we estimate that under the applicable SBA size standard the majority of noncommercial educational broadcast stations and public broadcast stations are small entities.

41. According to Commission data as of December 31, 2022, there were 4,590 licensed noncommercial educational radio and television stations. In addition, the Commission estimates as of December 31, 2022, there were 383 licensed noncommercial educational (NCE) television stations, 383 Class A TV stations, 1,912 LPTV stations and 3,122 TV translator stations. The Commission does not compile and otherwise does not have access to financial information for these stations that permit it to determine how many stations qualify as small entities under the SBA small business size standards. However, given the nature of these services, we will presume that all noncommercial educational and public broadcast stations qualify as small entities under the above SBA small business size standards.

42. *Radio Stations.* This industry is comprised of establishments primarily engaged in broadcasting aural programs by radio to the public. Programming may originate in their own studio, from an affiliated network, or from external sources. The SBA small business size standard for this industry classifies firms having $41.5 million or less in annual receipts as small. U.S. Census Bureau data for 2017 show that 2,963 firms operated in this industry during that year. Of this number, 1,879 firms operated with revenue of less than $25 million per year. Based on this data and the SBA's small business size standard, we estimate a majority of such entities are small entities.

43. The Commission estimates that as of December 31, 2022, there were 4,484 licensed commercial AM radio stations and 6,686 licensed commercial FM radio stations, for a combined total of 11,170 commercial radio stations. Of this total, 11,168 stations (or 99.98%) had revenues of $41.5 million or less in 2021, according to Commission staff review of the BIAKelsey Media Access Pro Online Database (MAPro) on January 13, 2023, and therefore these licensees qualify as small entities under the SBA definition. In addition, the Commission estimates that as of December 31, 2022, there were 4,207 licensed noncommercial (NCE) FM radio stations, 2,015 low power FM (LPFM) stations, and 8,950 FM translators and boosters. The Commission however does not compile, and otherwise does not have access to financial information for these radio stations that would permit it to determine how many of these stations qualify as small entities under the SBA small business size standard. Nevertheless, given the SBA's large annual receipts threshold for this industry and the nature of these radio station licensees, we presume that all of these entities qualify as small entities under the above SBA small business size standard.

44. We note, however, that in assessing whether a business concern qualifies as ''small'' under the above definition, business (control) affiliations must be included. Our estimate, therefore, likely overstates the number of small entities that might be affected by our action, because the revenue figure on which it is based does not include or aggregate revenues from affiliated companies. In addition, another element of the definition of ''small business'' requires that an entity not be dominant in its field of operation. We are unable at this time to define or quantify the criteria that would establish whether a specific radio or television broadcast station is dominant in its field of operation. Accordingly, the estimate of small businesses to which the rules may apply does not exclude any radio or television station from the definition of a small business on this basis and is therefore possibly over-inclusive. An additional element of the definition of ''small business'' is that the entity must be independently owned and operated. Because it is difficult to assess these criteria in the context of media entities, the estimate of small businesses to which the rules may apply does not exclude any radio or television station from the definition of a small business on this basis and similarly may be over-inclusive.

45. *FM Translator Stations and Low-Power FM Stations.* FM translators and Low Power FM Stations are classified in the industry for Radio Stations. The Radio Stations industry comprises establishments primarily engaged in broadcasting aural programs by radio to the public. Programming may originate in their own studio, from an affiliated network, or from external sources. The SBA small business size standard for this industry classifies firms having $41.5 million or less in annual receipts as small. U.S. Census Bureau data for 2017 show that 2,963 firms operated during that year. Of that number, 1,879 firms operated with revenue of less than $25 million per year. Therefore, based on the SBA's size standard we conclude that the majority of FM Translator stations and Low Power FM Stations are small. Additionally, according to Commission data, as of December 31, 2022, there were 8,950 FM Translator Stations and 2,015 Low Power FM licensed broadcast stations. The Commission however does not compile and otherwise does not have access to information on the revenue of these stations that would permit it to determine how many of the stations would qualify as small entities. For purposes of this regulatory flexibility analysis, we presume the majority of these stations are small entities.

46. *Television Broadcasting.* This industry is comprised of ''establishments primarily engaged in broadcasting images together with sound.'' These establishments operate television broadcast studios and facilities for the programming and transmission of programs to the public. These establishments also produce or transmit visual programming to affiliated broadcast television stations, which in turn broadcast the programs to the public on a predetermined schedule. Programming may originate in their own studio, from an affiliated network, or from external sources. The SBA small business size standard for this industry classifies businesses having $41.5 million or less in annual receipts as small. 2017 U.S. Census Bureau data indicate that 744 firms in this industry operated for the entire year. Of that number, 657 firms had revenue of less than $25,000,000. Based on this data we estimate that the majority of television broadcasters are small entities under the SBA small business size standard.

47. As of December 31, 2022, there were 1,375 licensed commercial television stations. Of this total, 1,282 stations (or 93.2%) had revenues of $41.5 million or less in 2021, according to Commission staff review of the BIAKelsey Inc. Media Access Pro Online Television Database (MAPro) on January 13, 2023, and therefore these

licensees qualify as small entities under the SBA definition. In addition, the Commission estimates as of December 31, 2022, there were 383 licensed noncommercial educational (NCE) television stations, 383 Class A TV stations, 1,912 LPTV stations and 3,122 TV translator stations. The Commission however does not compile, and otherwise does not have access to financial information for these television broadcast stations that would permit it to determine how many of these stations qualify as small entities under the SBA small business size standard. Nevertheless, given the SBA's large annual receipts threshold for this industry and the nature of these television station licensees, we presume that all of these entities qualify as small entities under the above SBA small business size standard.

48. *Cable and Other Subscription Programming.* The U.S. Census Bureau defines this industry as establishments primarily engaged in operating studios and facilities for the broadcasting of programs on a subscription or fee basis. The broadcast programming is typically narrowcast in nature (*e.g.,* limited format, such as news, sports, education, or youth-oriented). These establishments produce programming in their own facilities or acquire programming from external sources. The programming material is usually delivered to a third party, such as cable systems or direct-to-home satellite systems, for transmission to viewers. The SBA small business size standard for this industry classifies firms with annual receipts less than $41.5 million as small. Based on U.S. Census Bureau data for 2017, 378 firms operated in this industry during that year. Of that number, 149 firms operated with revenue of less than $25 million a year and 44 firms operated with revenue of $25 million or more. Based on this data, the Commission estimates that the majority of firms operating in this industry are small.

49. *Cable System Operators (Rate Regulation Standard).* The Commission has developed its own small business size standard for the purpose of cable rate regulation. Under the Commission's rules, a ''small cable company'' is one serving 400,000 or fewer subscribers nationwide. Based on industry data, there are about 420 cable companies in the U.S. Of these, only seven have more than 400,000 subscribers. In addition, under the Commission's rules, a ''small system'' is a cable system serving 15,000 or fewer subscribers. Based on industry data, there are about 4,139 cable systems (headends) in the U.S. Of these, about 639 have more than 15,000 subscribers. Accordingly, the Commission estimates that the majority of cable companies and cable systems are small.

50. *Cable System Operators (Telecom Act Standard).* The Communications Act of 1934, as amended, contains a size standard for a ''small cable operator,'' which is ''a cable operator that, directly or through an affiliate, serves in the aggregate fewer than one percent of all subscribers in the United States and is not affiliated with any entity or entities whose gross annual revenues in the aggregate exceed $250,000,000.'' For purposes of the Telecom Act Standard, the Commission determined that a cable system operator that serves fewer than 677,000 subscribers, either directly or through affiliates, will meet the definition of a small cable operator based on the cable subscriber count established in a 2001 Public Notice. Based on industry data, only six cable system operators have more than 677,000 subscribers. Accordingly, the Commission estimates that the majority of cable system operators are small under this size standard. We note however, that the Commission neither requests nor collects information on whether cable system operators are affiliated with entities whose gross annual revenues exceed $250 million. Therefore, we are unable at this time to estimate with greater precision the number of cable system operators that would qualify as small cable operators under the definition in the Communications Act.

51. *Satellite Telecommunications.* This industry comprises firms ''primarily engaged in providing telecommunications services to other establishments in the telecommunications and broadcasting industries by forwarding and receiving communications signals via a system of satellites or reselling satellite telecommunications.'' Satellite telecommunications service providers include satellite and earth station operators. The SBA small business size standard for this industry classifies a business with $35 million or less in annual receipts as small. U.S. Census Bureau data for 2017 show that 275 firms in this industry operated for the entire year. Of this number, 242 firms had revenue of less than $25 million. Additionally, based on Commission data in the 2021 Universal Service Monitoring Report, as of December 31, 2020, there were 71 providers that reported they were engaged in the provision of satellite telecommunications services. Of these providers, the Commission estimates that approximately 48 providers have 1,500 or fewer employees. Consequently using the SBA's small business size standard, a little more than one-half of these providers can be considered small entities.

52. *All Other Telecommunications.* This industry is comprised of establishments primarily engaged in providing specialized telecommunications services, such as satellite tracking, communications telemetry, and radar station operation. This industry also includes establishments primarily engaged in providing satellite terminal stations and associated facilities connected with one or more terrestrial systems and capable of transmitting telecommunications to, and receiving telecommunications from, satellite systems. Providers of internet services (*e.g.* dial-up ISPs) or voice over internet protocol (VoIP) services, via client-supplied telecommunications connections are also included in this industry. The SBA small business size standard for this industry classifies firms with annual receipts of $35 million or less as small. U.S. Census Bureau data for 2017 show that there were 1,079 firms in this industry that operated for the entire year. Of those firms, 1,039 had revenue of less than $25 million. Based on this data, the Commission estimates that the majority of ''All Other Telecommunications'' firms can be considered small.

53. *Direct Broadcast Satellite (''DBS'') Service.* DBS service is a nationally distributed subscription service that delivers video and audio programming via satellite to a small parabolic ''dish'' antenna at the subscriber's location. DBS is included in the Wired Telecommunications Carriers industry which comprises establishments primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired telecommunications networks. Transmission facilities may be based on a single technology or combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including VoIP services, wired (cable) audio and video programming distribution; and wired broadband internet services. By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry.

54. The SBA small business size standard for Wired Telecommunications Carriers classifies firms having 1,500 or fewer employees as small. U.S. Census

Bureau data for 2017 show that 3,054 firms operated in this industry for the entire year. Of this number, 2,964 firms operated with fewer than 250 employees. Based on this data, the majority of firms in this industry can be considered small under the SBA small business size standard. According to Commission data however, only two entities provide DBS service—DIRECTV (owned by AT&T) and DISH Network, which require a great deal of capital for operation. DIRECTV and DISH Network both exceed the SBA size standard for classification as a small business. Therefore, we must conclude based on internally developed Commission data, in general DBS service is provided only by large firms.

D. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities

55. We expect the actions proposed in the *Further Notice,* if adopted, will impose additional reporting, recordkeeping and other compliance obligations on small as well as other entities who are Participating CMS Providers voluntarily participating in WEA.

56. At this time the Commission cannot quantify the cost of compliance for small entities to comply with the proposals and all of the matters that we seek comment on in the *Further Notice.* However, we have conducted an analysis estimating the total costs that would be incurred by all Participating CMS providers as a group. We anticipate that the proposed rules will result in costs associated with modifying standards and software, and recordkeeping and reporting costs for Participating CMS Providers. In the *Further Notice,* we seek comment whether adopting all these proposals as a package may result in a cost savings as opposed to having to modify standards and software in response to several, incremental policy changes. Based on our analysis, it is likely that small entities will have to hire professionals to comply with our proposals, if adopted. Below we discuss some anticipated reporting, recordkeeping and other compliance obligations and our cost analysis estimating certain costs.

57. *WEA Database.* The Commission proposes the creation of a Commission-hosted WEA Database that would contain WEA availability and performance information. All small and other Participating CMS Providers would be required to report their level of WEA participation in the WEA Database regardless of whether they elect to transmit WEA messages. Participating CMS Providers that elect to transmit WEA alert messages will be required to elect to participate and electronically file the participation election in the WEA Database. Participating CMS Providers' WEA election should state whether they elect to participate in WEA in whole, in part, or whether they elect not to participate. Their filings would also be required to identify the entities on behalf of which they are filing (including the subsidiary companies on behalf of which their election is filed, the ''doing business as'' names under which the Participating CMS Provider offers WEA, and the Mobile Virtual Network Operators (MVNOs) and wireless resellers through which the Participating CMS Provider offers WEA), specify the geographic locations in which they do and do not offer WEA, and identify the mobile devices that the Participating CMS Provider offers that are WEA-capable. We also propose to require that Participating CMS Providers' WEA Database filing include the names of all wireless service providers that use their network to deliver WEA messages to the public (or do not deliver WEA messages at all, in the case of entities electing not to participate in WEA) and identify all mobile devices that the Participating CMS Provider offers that are WEA-capable. Additionally, we propose to require small and other Participating CMS Providers to update the WEA Database within 30 days of any change in their participation in WEA.

58. *Performance Measures Reporting.* In the *Further Notice,* we propose performance measures for reliability, accuracy, and speed that small and other Participating CMS Providers will be required to meet for each WEA message it sends and to provide performance data to the Commission.

59. *Language and Multimedia Support.* To make WEA messages more accessible and to expand their reach, in the *Further Notice* we propose to require small and other Participating CMS Providers' WEA-capable mobile devices to translate English-language alert messages that they receive into the subscriber's default language preference. If adopted, compliance with this obligation will require small and other Participating CMS providers to support Chinese, Tagalog, Vietnamese, Arabic, French, Korean, Russian, Haitian Creole, German, Hindi, Portuguese, and Italian, in addition to English and Spanish alerts. Our proposed requirements that Participating CMS Providers transmit ''thumbnail-sized'' images in WEA alert messages could also improve accessibility for individuals with disabilities and individuals that do not speak English. To comply with our proposed multimedia support requirement small and other Participating CMS Providers would also be required support mobile devices' presentation of maps that include at least the following elements: shape of the target area; user location relative to the target area and a graphical representation of the geographic area in which both the targeted area and user are located.

60. *Cost Estimates.* The Commission estimates a $39.9 million one-time cost for all Participating CMS Providers to update the WEA standards and software necessary to comply with our proposed WEA availability reporting, automated WEA performance reporting, support for template alerting in the twelve most common languages in addition to English and Spanish, support for multimedia infographic alerting, support for incorporating location-aware maps into WEA through an API, enabling of alerting authorities to send alerts without the associated attention signal, allowing of consumers to cache their receipt of WEA, and support for additional testing. This figure consists of approximately $814,000 to update the applicable WEA standards and approximately $39.1 million to update the applicable software. The Commission estimates a $422,500 annually recurring cost for all Participating CMS Providers to report WEA availability and performance information to the WEA Database. This figure consists of approximately $139,000 to report information about the availability of WEA and $285,500 to report information about WEA's performance.

61. We derived the one-time $39.9 million cost estimate based on several calculations. Our estimate to update the applicable WEA standards is based on the cost of modifying standards using annual compensation for 30 network engineers compensated at the national average for their field ($120,650/year or $58/hour), plus annual benefits ($60,325/year or 29/hour) working for the amount of time that it takes to develop a standard (one hour every other week for one year, 26 hours) for 12 distinct standards. This is calculated as follows: 30 network engineers × ($58 + $29) per hour per network engineer × 26 hours per standard × 12 standards = $814,320, a figure that we round to $814,000 to avoid the false appearance of precision in our estimate. Our cost estimate to implement the necessary software changes calculated the cost of modifying software as the annual compensation for a software developer compensated at the national average for

their field ($120,990/year), plus annual benefits ($60,495/year) working for the amount of time that it takes to develop software (ten months) at each of the 76 CMS Providers that participate in WEA.

62. In the Supporting Document of Study Area Boundary Data Reporting in Esri Shapefile Format, the Office of Information and Regulatory Affairs estimates that it takes an average of 26 hours for a data scientist to modify a shapefile. We believe submitting WEA availability information in shapefile format should require less time than modifying a shapefile. Therefore, we believe 26 hours would be an upper bound of the time required for a Participating CMS Provider to report its WEA availability in shapefile format. Given that the median wage rate is $48.52/hour for data scientists, with a 45% markup for benefits, we arrive at $70.40 as the hourly compensation rate for a data scientist. We estimate an aggregate cost of WEA availability reporting to be approximately $139,000 (≈ $70.40 per hour × 26 hours × 76 providers), which may be recurring on an annual basis since availability may change and need to be updated over time.

63. We expect that the process of data collection and data submission would require minimal human intervention. Although we anticipate such performance reporting would be largely automated once it is set up, we estimate a routine administrative monitoring cost that Participating CMS Providers may still incur when they file the performance report for each alert incident. We estimate that, for each alert, a provider will need an office administrator, who is compensated at $27 hour, to spend 0.5 hours in monitoring each data transmission. At the aggregate level, we believe there will be 21,000 performance reports transmitted to the WEA database, resulting in a $283,500 annual recurring cost at the aggregate level. Given that WEA was used 70,000 times over the last decade, we estimate that 7,000 alerts (= 70,000/10 years) were issued per year. According to 2022 Communications Marketplace Report, nearly 95% of consumers have at least three wireless provider options in their areas. Therefore, we estimate that the total number of performance reports that need to be filed would be 21,000 (= 7,000 alerts × 3 providers per alert). Assuming each alert take an additional 0.5 hours for an office administrator to process for Participating CMS Provider at a compensation rate of $27 per hour, the total additional recurring cost is $283,500 (= $27/hour × 0.5 hours × 21,000 reports) per year.

64. To help the Commission more fully evaluate the cost of compliance for small entities should our proposals be adopted, in the *Further Notice,* we request comments on the cost implications of our proposals and ask whether there are more efficient and less burdensome alternatives (including cost estimates) for the Commission to consider. We expect the information we received in comments including cost and benefit analyses, to help the Commission identify and evaluate relevant matters for small entities, including compliance costs and other burdens that may result from the proposals and inquiries we make in the *Further Notice.*

E. Steps Taken To Minimize the Significant Economic Impact on Small Entities, and Significant Alternatives Considered

65. The RFA requires an agency to describe any significant, specifically small business alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): ''(1) the establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for such small entities; (3) the use of performance, rather than design, standards; and (4) and exemption from coverage of the rule, or any part thereof, for such small entities.

66. The Commission has taken steps to minimize the impact of the proposals in the *Further Notice* as a general matter, and specifically targeting small entities, has sought comment on the extent to which we can limit the overall economic impact of these proposed requirements if we provide increased flexibility for small entities. We believe that the proposals to improve and enhance WEA in the *Further Notice,* are the most efficient and least burdensome approach. Below we discuss some specific actions taken and alternatives considered by the Commission in the *Further Notice.*

67. *Making WEA More Accessible.* Our proposals to make WEA more accessible considered feedback and information from industry participants and the Communications Security, Reliability and Interoperability Council VIII (CSRIC VIII) which provided real-world insight to better inform the Commission on currently available technologies that could be leveraged to accomplish our objectives in a cost-effective manner. Requiring small and other Participating CMS providers to support the most common languages spoken in the U.S. is based on our belief that machine language translation technologies have matured sufficient to support such a requirement. Industry information supports our belief and CSRIC VIII reports Participating CMS Providers may be able to leverage machine translation technologies such as Google Cloud Translation and Apple Translate that is pre-installed on many WEA-capable mobile devices using an application programming interface (API) to make WEA messages accessible to every major language group in the U.S. Our proposal of the expanded language support requirement with an approach that gives small Participating CMS Providers the potential to leverage existing technologies that are already pre-installed in many of their WEA capable handsets should reduce the economic impact for small Participating CMS Providers.

68. To support multilingual WEA, we also considered template-based alerts which are being utilized by the New York City Emergency Management Department through its Notify NYC application to support multilingual alerting in 14 different languages. This application presents an English-language message, along with a link to 13 other pre-scripted translations. The alert message translations have been written by people fluent in the languages and vetted with native speakers from language communities. In the *Further Notice* we seek comment on our proposed requirement and on alternative approaches to promoting multilingual WEA.

69. *More Seamless Integration of WEA.* To integrate WEA more seamlessly into people's lives we took actions to facilitate more effective WEA public awareness exercises. We propose allowing small and other Participating CMS Providers to support up to two annual end-to-end WEA tests per alerting authority that the consumers receive by default, provided that the alerting authority: (1) conducts outreach and notifies the public in advance of the planned WEA test and that no emergency is, in fact, occurring; (2) include in its test message that the alert is only a test; (3) coordinates the test among Participating CMS Providers, state and local emergency authorities, relevant State Emergency Communications Committees (SECCs), and first responder organizations, and (4) provides notification to the public in widely accessible formats that the test is only a test. If adopted, this proposal would remove the requirement for small and other alerting authorities to request

waiver for up to two annual end-to-end WEA tests and the associated costs of making such a request. Moreover, the proposed conditions are the same conditions applicable for alerting authorities to conduct EAS Live Code Tests.

70. *Establishing a WEA Database to Promote Transparency about WEA Availability and Benchmark WEA Performance.* In the *Further Notice* we propose to adopt reliability, accuracy and speed benchmarks for WEA, and performance minimums that small and other Participating CMS Providers must satisfy to improve the effectiveness of WEA, and that are consistent with the recommendations in the Government Accountability Office (GAO) Report. We also propose to require small and other Participating CMS Providers to submit performance reliability, accuracy, and speed data for all WEA alert messages and for State/Local WEA Tests.

71. Further, as an alternative, or in addition to, the requirements proposed above to ensure WEA's minimum performance, we considered and seek comment on whether to require small and other Participating CMS Providers to take measures to improve WEA's reliability and accuracy, and on what other potential technical measures we could require to optimize the reliability, accuracy, or speed of the WEA system.

72. We also considered in the alternative, and in the *Further Notice* seek comment on, the feasibility of measuring WEA's performance using staged devices as proposed by CSRIC VIII. Regarding this alternative we inquire, (1) whether small and other Participating CMS Providers could capture actionable information about WEA's performance by conducting regular testing using devices positioned in and around the target area of a Required Monthly Test (RMT); (2) could such a testing and performance measurement requirement also leverage State/Local WEA Tests or leverage alerting authority volunteers to supplement their own; (3) whether small and other Participating CMS Providers could use staged devices to annually measure WEA's performance on a representative sample of handsets and in representative environments, including dense urban, urban, suburban, and rural areas; (4) whether, and if so, how the resulting data collected would differ in quality from the data that we propose to collect today and (5) whether there would be any limitations to the public safety benefits of measuring performance using staged devices. We seek comment these inquiries, and on whether there would be any cost or time savings associated with this approach if small and other Participating CMS Providers had to update network and mobile device firmware to measure WEA's performance using staged devices.

73. *WEA Database.* In the preceding section we discussed our proposal in the *Further Notice* to create a Commission-hosted WEA database containing information filed by small and other Participating CMS Providers that would allow alerting authorities to access and review information about WEA's availability and performance in their jurisdictions. We anticipate that the WEA Database would be an interactive portal where small and other Participating CMS Providers submit information about the availability and performance of WEA on their networks, and where such information could be readily accessible to Participating CMS Providers, alerting authorities, and the public. Our decision to propose the creation of a WEA Database contemplated what would be the most cost-effective mechanism for small and other Participating CMS Providers to submit WEA elections and performance information into the WEA Database. Consistent with this objective, in the *Further Notice* we propose to support electronic filings for WEA elections that leverage GIS shapefiles, drop-down menus, and freeform text where appropriate. We envision that WEA performance data that only requires entry of specific numbers or times would be simpler and less costly to submit. We also recognize however, that our proposal may require filings to be made frequently, particularly as updated lists of WEA-capable mobile devices or new performance data on new alerts need to be submitted. Thus, we considered how to best approach data collection for the WEA Database while minimizing costs and other burdens for small and other Participating CMS Providers, such as whether to utilize an application programming interface (API) that would facilitate the automated filing of data. We seek comment on these matters in the *Further Notice,* as well as input on other factors the Commission should consider when designing the data submission elements of the WEA database.

74. There may be alternative approaches to our WEA Database for performance reporting that might strike a better balance between the need that the Commission has identified to provide alerting authorities with access to WEA performance information, while limiting the impact of countervailing considerations, such as costs, development time, or privacy concerns. An alternative recommended by CSRIC VIII proposes a requirement that would use an automated email to convey WEA performance reporting information from Participating CMS Providers to an alerting authority or a centralized reporting location for each sent WEA. CSRIC VIII recommends that the details of this approach should be worked out between alerting authorities, PBS, and Participating CMS Providers. In the *Further Notice,* we seek comment on the utility of WEA performance information communicated by email directly to alerting authorities, either in addition or as an alternative to a WEA database, and encourage WEA stakeholders to file detailed proposals of how this alternative approach could work in practice.

75. *Compliance Timeframe.* To minimize any significant impact our proposed rules may have on small entities, as an alternative to the compliance timeframes we propose in the *Further Notice* we inquire and seek comment on whether it is appropriate to allow Participating CMS Providers that are small- or medium-sized businesses additional time to comply. The compliance deadline in the *Further Notice* for the proposed rules to enhance WEA's language support and integrate WEA more seamlessly into people's lives is 30 months after the publication of final rules in the **Federal Register**. The compliance deadline in the *Further Notice* for the proposed rules to improve WEA's effectiveness with multimedia content is 36 months after the publication of final rules in the **Federal Register**. To facilitate more effective WEA public awareness exercises, Participating CMS Providers would be authorized to support up to two annual end-to-end WEA tests per alerting authority 30 days after the Public Safety and Homeland Security Bureau issues a Public Notice announcing OMB approval of any new information collection requirements associated with this rule change.

76. The compliance deadline in the *Further Notice* for the proposed rules associated with developing measurable goals and performance measures for WEA is 30 months after the publication of final rules in the **Federal Register** or within 30 days of the Public Safety and Homeland Security Bureau's publication of a public notice announcing that the WEA Database is ready to accept filings, whichever is later. This includes the proposed rules requiring small and other Participating CMS Providers to satisfy WEA performance minimums and submit reports measuring WEA's performance. Further, we seek specific comment on

whether to offer an extended compliance timeframe for Participating CMS Providers that are small- and medium-sized businesses, which may have different network resource constraints than the nationwide Participating CMS Providers. Additionally, we propose to require Participating CMS Providers to refresh their elections to participate in WEA using the WEA Database within 30 days of the Public Safety and Homeland Security Bureau's publication of a public notice announcing, (1) OMB approval of any new information collection requirements and (2) that the WEA Database is ready to accept filings and seek comment on this proposal.

77. The Commission expects to more fully consider the economic impact and alternatives for small entities following the review of comments filed in response to the *Further Notice,* including costs and benefits analyses. Having data on the costs and economic impact of proposals and approaches will 'allow the Commission to better evaluate options and alternatives to minimize any significant economic impact on small entities that may result from the proposals and approaches raised in the *Further Notice.* The Commission's evaluation of this information will shape the final alternatives it considers to minimize any significant economic impact that may occur on small entities, the final conclusions it reaches and any final rules it promulgates in this proceeding.

Proposed Rules

For the reasons set forth above, Part 10 of title 47 of the Code of Federal Regulations is amended as follows:

PART 10—WIRELESS EMERGENCY ALERTS

■ 1. The authority citation for part 10 is revised to read as follows:

Authority: 47 U.S.C §§ 151, 152, 154(i), 154(n), 301, 303(b), 303(e), 303(g), 303(j), 303(r), 307, 309, 316, 403, 544(g), 6061201(a), (b), (c), (f), 1203, 1204, 1206.

■ 2. Amend § 10.10 by revising paragraph (j), redesignating paragraphs (k) and (l) as paragraphs (l) and (m), and adding paragraph (k) to read as follows:

§ 10.10 Definitions.

* * * * *

(j) *Mobile Devices.* Any customer equipment used to receive commercial mobile service.

(k) *WEA-Capable Mobile Devices.* Mobile devices, as defined paragraph (j) of this section, that support the Subpart E Equipment Requirements.

* * * * *

■ 3. Revise § 10.210 to read as follows:

§ 10.210 WEA participation election procedures.

(a) A CMS provider that elects to transmit WEA Alert Messages must elect to participate in part or in whole, as defined by § 10.10(l) and (m), and shall electronically file in the Commission's WEA Database attesting that the Provider:

(1) Agrees to transmit such alerts in a manner consistent with the technical standards, protocols, procedures, and other technical requirements implemented by the Commission; and

(2) Commits to support the development and deployment of technology for the ''C'' interface, the CMS provider Gateway, the CMS provider infrastructure, and mobile devices with WEA functionality and support of the CMS provider selected technology.

(b) A CMS Provider that elects to participate in WEA must disclose the following information in their election filed in the Commission's WEA Database:

(1) The entities on behalf of which the Participating CMS Provider files its election, including the subsidiary companies on behalf of which their election is filed, the ''doing business as'' names under which a Participating CMS Provider offers WEA, and the Mobile Virtual Network Operators (MVNOs) and wireless resellers through which the Participating CMS Provider offers WEA;

(2) The extent to which the Participating CMS Provider offers WEA in the entirety of their geographic service area, as demonstrated by the following:

(i) a map of their wireless coverage area in shapefile format;

(ii) to the extent that it differs from their wireless coverage area specified in response to paragraph (b)(2)(i) of this section, a map of the geographic areas to which they elect to transmit WEA alert messages in shapefile format.

(3) The extent to which all WEA-capable mobile devices that the Participating CMS Provider offers at the point of sale are WEA-capable, as demonstrated by the following:

(i) the mobile devices, as defined in § 10.10(j), that the Participating CMS Provider offers at their point of sale;

(ii) the WEA-capable mobile devices, as defined in § 10.10(k), that the Participating CMS Provider offers at their point of sale.

(c) If the terms of a CMS Provider's WEA participation change in any manner described by paragraph (b) of this section, it must update the information about its WEA participation disclosed pursuant to that paragraph within 30 days such that the information in the WEA Database accurately reflects the terms of their WEA participation.

(d) A CMS Provider that elects not to transmit WEA Alert Messages shall file electronically in the Commission's WEA Database attesting to that fact, and include the subsidiary companies, the CMS Provider's ''doing business as'' names, MVNOs, and wireless resellers on behalf of which the election is filed.

(e) CMS Providers shall file their elections electronically into the WEA Database.

■ 4. Revise § 10.280 to read as follows:

§ 10.280 Subscribers' right to opt out of WEA notifications.

(a) CMS providers may provide their subscribers with the option to opt out of the ''Child Abduction Emergency/ AMBER Alert,'' ''Imminent Threat Alert'' and ''Public Safety Message'' classes of Alert Messages.

(b) CMS providers shall provide their subscribers with a distinct option to durably turn off WEA's audio attention signal and vibration cadence for all alerts received.

(c) CMS providers shall provide their subscribers with the option to opt out of the collection of WEA performance analytic information described by § 10.500(i).

(d) CMS providers shall provide their subscribers with a clear indication of what each option means, and provide examples of the types of messages the customer may not receive as a result of opting out.

■ 5. Amend § 10.330 by adding paragraph (d) to read as follows

§ 10.330 Provider infrastructure requirements.

* * * * *

(d) Collecting the data elements necessary to measure WEA's performance, as defined in section 10.360.

■ 6. Amend § 10.350 by adding paragraph (d) to read as follows:

§ 10.350 WEA testing and proficiency training requirements.

* * * * *

(d) *Public Awareness Tests.* Participating CMS Providers may participate in no more than two (2) WEA System tests per calendar year that the public receives by default to raise public awareness, provided that the entity conducting the test:

(i) Conducts outreach and notifies the public before the test that live event codes will be used, but that no emergency is, in fact, occurring;

(ii) To the extent technically feasible, states in the test message that the event is only a test;

(iii) Coordinates the test among Participating CMS Providers and with state and local emergency authorities, the relevant SECC (or SECCs, if the test could affect multiple states), and first responder organizations, such as PSAPs, police, and fire agencies); and,

(iv) Provides in widely accessible formats the notification to the public required by this paragraph that the test is only a test and is not a warning about an actual emergency.

■ 7. Add § 10.360 to subpart C to read as follows:

§ 10.360 Performance Reporting.

Participating CMS Providers are required to transmit performance data to the Commission's WEA Database regarding WEA's reliability, accuracy and speed.

■ 8. Revise § 10.450 to read as follows:

§ 10.450 Geographic targeting.

(a) This section establishes minimum requirements for the geographic targeting of Alert Messages. A Participating CMS Provider will determine which of its network facilities, elements, and locations will be used to geographically target Alert Messages. A Participating CMS Provider must deliver any Alert Message that is specified by a circle or polygon to an area that matches the specified circle or polygon.

(b) A Participating CMS Provider is considered to have matched the target area they meet both of the following conditions:

(1) *Reliability.* Deliver an Alert Message to 100 percent of WEA-capable Mobile Devices that are located within a Participating CMS Provider's WEA coverage area and are located within an Alert Message's geographic target area during an Alert Message's active period.

(2) *Accuracy.* Do not present an Alert Message on mobile devices located farther than 0.1 miles outside the Alert Message's target area.

■ 9. Revise § 10.460 to read as follows:

§ 10.460 WEA Transmission Speed.

No more than 5 minutes shall elapse for 99% of mobile devices from the time that a Participating CMS Provider receives an alert message at the CMS Alert Gateway and the time that mobile devices present the alert message based on aggregated, annualized data submitted to the WEA Database.

■ 10. Add § 10.490 to subpart D to read as follows:

§ 10.490 Multimedia support.

(a) Participating CMS Providers are required to transmit ''thumbnail-sized'' images in WEA alert messages. A thumbnail sized image meets or exceeds each of the following parameters: 1.5″ x 1.5″ in size with a resolution of 72 dots per inch consisting of 120 x 120 pixels in 8 bit color scale.

(b) Participating CMS Providers are required support mobile devices' presentation of maps that include at least the following elements:

1. Shape of the target area

2. User location relative to the target area

3. A graphical representation of the geographic area in which both the targeted area and user are located.

■ 11. Amend § 10.500 by revising paragraph (e) and adding paragraphs (i) and (j) to read as follows:

§ 10.500 General requirements.

* * * * *

(e) Extraction of alert content in English or translation of alert content into the subscriber's preferred language;

* * * * *

(i) Logging and making available to the CMS network the data elements necessary to measure WEA's performance, as defined in § 10.360;

(j) Any additional functions necessary to support the Subpart D Alert Message Requirements

■ 12. Amend § 10.520 by adding paragraph (f) to read as follows:

§ 10.520 Common audio attention signal.

* * * * *

(f) Participating CMS Providers and mobile device manufacturers must provide alerting authorities with the option to send WEA Alert Messages without triggering the audio attention signal.

■ 13. Amend § 10.530 by adding paragraph (d) to read as follows:

§ 10.530 Common vibration cadence.

* * * * *

(d) Participating CMS Providers and mobile device manufacturers must provide alerting authorities with the option to send WEA Alert Messages without triggering the common vibration cadence.

Quality Control Standards for Automated Valuation Models

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury; Board of Governors of the Federal Reserve System (Board); Federal Deposit Insurance Corporation (FDIC); National Credit Union Administration (NCUA); Consumer Financial Protection Bureau (CFPB); and Federal Housing Finance Agency (FHFA).

ACTION: Notice of proposed rulemaking and request for comment.

SUMMARY: The OCC, Board, FDIC, NCUA, CFPB, and FHFA (collectively, the agencies) invite comment on a proposed rule to implement the quality control standards mandated by the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) for the use of automated valuation models (AVMs) by mortgage originators and secondary market issuers in determining the collateral worth of a mortgage secured by a consumer's principal dwelling. Under the proposal, the agencies would require institutions that engage in certain credit decisions or securitization determinations to adopt policies, practices, procedures, and control systems to ensure that AVMs used in these transactions to determine the value of mortgage collateral adhere to quality control standards designed to ensure a high level of confidence in the estimates produced by AVMs; protect against the manipulation of data; seek to avoid conflicts of interest; require random sample testing and reviews; and comply with applicable nondiscrimination laws.

DATES: Comments must be received by August 21, 2023.

ADDRESSES: Interested parties are encouraged to submit written comments jointly to all of the agencies. Commenters should use the title ''Quality Control Standards for Automated Valuation Models'' to facilitate the organization and distribution of comments among the agencies. The agencies invite interested parties to submit written comments to:

OCC: Commenters are encouraged to submit comments through the Federal eRulemaking Portal. Please use the title ''Quality Control Standards for Automated Valuation Models'' to facilitate the organization and distribution of the comments. You may submit comments by any of the following methods:

- *Federal eRulemaking Portal—Regulations.gov:* Go to *https://regulations.gov/.*

Enter ''Docket ID OCC–2023–0002'' in the Search Box and click ''Search.'' Public comments can be submitted via the ''Comment'' box below the displayed document information or by clicking on the document title and then clicking the ''Comment'' box on the top-left side of the screen. For help with submitting effective comments, please click on ''Commenter's Checklist.'' For assistance with the *Regulations.gov* site, please call 1–866–498–2945 (toll free) Monday–Friday, 9 a.m.–5 p.m. ET, or email *regulationshelpdesk@gsa.gov.*

- *Mail:* Chief Counsel's Office, Attention: Comment Processing, Office of the Comptroller of the Currency, 400 7th Street SW, Suite 3E–218, Washington, DC 20219.
- *Hand Delivery/Courier:* 400 7th Street SW, Suite 3E–218, Washington, DC 20219.

Instructions: You must include ''OCC'' as the agency name and ''Docket ID OCC–2023–0002'' in your comment. In general, the OCC will enter all comments received into the docket and publish the comments on the *Regulations.gov* website without change, including any business or personal information provided such as name and address information, email addresses, or phone numbers. Comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

You may review comments and other related materials that pertain to this action by the following method:

- *Viewing Comments Electronically—Regulations.gov:* Go to *https://regulations.gov/.*

Enter ''Docket ID OCC–2023–0002'' in the Search Box and click ''Search.'' Click on the ''Dockets'' tab and then the document's title. After clicking the document's title, click the ''Browse All Comments'' tab. Comments can be viewed and filtered by clicking on the ''Sort By'' drop-down on the right side of the screen or the ''Refine Comments Results'' options on the left side of the screen. Supporting materials can be viewed by clicking on the ''Browse Documents'' tab. Click on the ''Sort By'' drop-down on the right side of the screen or the ''Refine Results'' options on the left side of the screen checking the ''Supporting & Related Material'' checkbox. For assistance with the *Regulations.gov* site, please call 1–866–498–2945 (toll free) Monday–Friday, 9 a.m.–5 p.m. ET, or email *regulationshelpdesk@gsa.gov.*

The docket may be viewed after the close of the comment period in the same manner as during the comment period.

Board: You may submit comments, identified by Docket No. R–1807 and RIN No. 7100 AG60, by any of the following methods:

- *Agency Website: http://www.federalreserve.gov.* Follow the instructions for submitting comments at *http://www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm.*
- *Email: regs.comments@federalreserve.gov.* Include the docket number in the subject line of the message.
- *Fax:* (202) 452–3819 or (202) 452–3102.
- *Mail:* Ann Misback, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551.

In general, all public comments will be made available on the Board's website at *www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm* as submitted, and will not be modified to remove confidential, contact or any identifiable information. Public comments may also be viewed electronically or in paper in Room M–4365A, 2001 C St. NW, Washington, DC 20551, between 9:00 a.m. and 5:00 p.m. during Federal business weekdays. Please call (202) 452–3684 to make an appointment to visit the Board and inspect comments.

FDIC: The FDIC encourages interested parties to submit written comments. Please include your name, affiliation, address, email address, and telephone number(s) in your comment. You may submit comments to FDIC, identified by RIN 3064–AE68, by any of the following methods:

- *FDIC Website: https://www.fdic.gov/resources/regulations/federal-register-publications/.* Follow the instructions for submitting comments on the FDIC's website.
- *Mail:* James P. Sheesley, Assistant Executive Secretary, Attention: Comments/Legal OES (RIN 3064–AE68), Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.
- *Hand Delivery/Courier:* Comments may be hand delivered to the guard station at the rear of the 550 17th Street NW building (located on F Street NW) on business days between 7:00 a.m. and 5:00 p.m.
- *Email: comments@fdic.gov.* Comments submitted must include ''RIN 3064–AE68'' in the subject line of the message.

Public Inspection: Comments received, including any personal information provided, may be posted without change to *https://www.fdic.gov/resources/regulations/federal-register-publications/.* Commenters should submit only information that the commenter wishes to make available publicly. The FDIC may review, redact, or refrain from posting all or any portion of any comment that it may deem to be inappropriate for publication, such as irrelevant or obscene material. The FDIC may post only a single representative example of identical or substantially identical comments, and in such cases will generally identify the number of identical or substantially identical comments represented by the posted example. All comments that have been redacted, as well as those that have not been posted, that contain comments on the merits of this notice will be retained in the public comment file and will be considered as required under all applicable laws. All comments may be accessible under the Freedom of Information Act.

NCUA: You may submit written comments, identified by RIN 3133–AE23, by any of the following methods (Please send comments by one method only):

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments for Docket Number NCUA–2023–0019.
- *Mail:* Address to Melane Conyers-Ausbrooks, Secretary of the Board, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428.

You may view all public comments on the Federal eRulemaking Portal at *http://www.regulations.gov* as submitted, except for those we cannot post for technical reasons. The NCUA will not edit or remove any identifying or contact information from the public comments submitted. If you are unable to access public comments on the internet, you may contact NCUA for alternative access by calling (703) 518–6540 or emailing *OGCMail@ncua.gov.*

CFPB: You may submit comments, identified by Docket No. CFPB–2023–0025 by any of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Email: 2023AVMQualityControl@cfpb.gov.* Include Docket No. CFPB–2023–0025 in the subject line of the message.
- *Mail/Hand Delivery/Courier:* Comment Intake—CFPB–2023–0025, Consumer Financial Protection Bureau, c/o Legal Division Docket Manager, 1700 G Street NW, Washington, DC 20552.

Instructions: The CFPB encourages the early submission of comments. All submissions should include the agency name and docket number for this rulemaking. Because paper mail in the Washington, DC, area and at the CFPB is subject to delay commenters are encouraged to submit comments electronically. In general, the CFPB will post all comments received without change to *https://www.regulations.gov.*

The CFPB will make all comments, including attachments and other supporting materials, part of the public record and subject to public disclosure. You should not include proprietary information or sensitive personal information, such as account numbers or Social Security numbers, or names of other individuals. The CFPB will not edit comments to remove any identifying or contact information.

FHFA: You may submit your comments, identified by regulatory identification number (RIN) 2590–AA62, by any of the following methods:

- *Agency website: www.fhfa.gov/open-for-comment-or-input.*
- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments. If you submit your comment to the Federal eRulemaking Portal, please also send it by email to FHFA at *RegComments@fhfa.gov* to ensure timely receipt by the agency. Please include ''RIN 2590–AA62'' in the subject line of the message.
- *Hand Delivered/Courier:* The hand delivery address is: Clinton Jones, General Counsel, Attention: Comments/RIN 2590–AA62, Federal Housing Finance Agency, Fourth Floor, 400 Seventh Street SW, Washington, DC 20219. Deliver the package to the Seventh Street entrance Guard's Desk, First Floor, on business days between 9 a.m. and 5 p.m.
- *U.S. Mail, United Parcel Service, Federal Express, or Other Mail Service:* The mailing address for comments is: Clinton Jones, General Counsel, Attention: Comments/RIN 2590–AA62, Federal Housing Finance Agency, Fourth Floor, 400 Seventh Street SW, Washington, DC 20219. Please note that all mail sent to FHFA via U.S. Mail is routed through a national irradiation facility, a process that may delay delivery by approximately two weeks.

FHFA invites comment on all aspects of the proposed amendments and will take all comments into consideration before adopting amendments through a final rule. FHFA will post copies of all comments received without change on the FHFA website at *http://www.fhfa.gov,* and will include any personal information you provide, such as your name, address, email address, and telephone number. In addition, the FHFA will make copies of all comments received available for examination by the public through the electronic rulemaking docket for this proposed rule also located on the FHFA website.

SUPPLEMENTARY INFORMATION:

I. Background

Section 1473(q) of the Dodd-Frank Act amended title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (title XI) [1] to add a new section 1125 relating to the use of automated valuation models (AVMs) in valuing real estate collateral securing mortgage loans (section 1125).[2] The term ''automated valuation model'' is commonly used to describe computerized real estate valuation models used for a variety of purposes, including loan underwriting and portfolio monitoring.[3] Section 1125 defines an AVM as ''any computerized model used by mortgage originators and secondary market issuers to determine the collateral worth of a mortgage secured by a consumer's principal dwelling.'' [4] The quality control standards proposed in this rule are applicable only to AVMs used in connection with making credit decisions or covered securitization determinations regarding a mortgage (covered AVMs), as defined in this proposed rule.

Section 1125 directs the agencies to promulgate regulations to implement quality control standards regarding AVMs.[5] Section 1125 requires that AVMs, as defined in the statute, adhere to quality control standards designed to ''(1) ensure a high level of confidence in the estimates produced by AVMs; (2) protect against the manipulation of data; (3) seek to avoid conflicts of interest; (4) require random sample testing and reviews; and (5) account for any other such factor that the agencies determine to be appropriate.'' [6] As required by section 1125, the agencies consulted with the staff of the Appraisal Subcommittee (ASC) and the Appraisal Standards Board of the Appraisal Foundation (ASB) as part of promulgating this rule.

Driven in part by advances in database and modeling technology and the availability of larger property datasets, the mortgage industry has begun to use AVMs with increasing frequency as part of the real estate valuation process. For example, the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac) (collectively, the GSEs) may use proprietary AVMs in their collateral valuation processes. While advances in AVM technology and data availability have the potential to contribute to lower costs and shorter turnaround times in the performance of property valuations, it is important that institutions using such tools take appropriate steps to ensure the credibility and integrity of the valuations produced by AVMs.[7]

A. Existing Guidance Relating to the Use of AVMs

Since 2010, the OCC, Board, FDIC, and NCUA have provided supervisory guidance on the use of AVMs by their regulated institutions in Appendix B to the Interagency Appraisal and Evaluation Guidelines (Guidelines).[8] The Guidelines recognize that an institution may use a variety of analytical methods and technological tools in developing real estate valuations, provided the institution can demonstrate that the valuation method is consistent with safe and sound banking practices. The Guidelines recognize that the establishment of policies and procedures governing the selection, use, and validation of AVMs, including steps to ensure the accuracy, reliability, and independence of an AVM, is a sound banking practice.[9] In addition to Appendix B of the Guidelines, the OCC, Board, and FDIC have issued guidance on model risk management practices (Model Risk Management Guidance) that provides supervisory guidance on validation and testing of models.[10]

The NCUA is not a party to the Model Risk Management Guidance. The NCUA monitors the model risk efforts of federally insured credit unions through its supervisory approach by confirming that the governance and controls for an AVM are appropriate based on the size and complexity of the transaction; the risk the transaction poses to the credit union; and the capabilities and resources of the credit union.

The CFPB and FHFA are not parties to the Guidelines or the Model Risk Management Guidance. The FHFA has separately issued model risk management guidance that provides the FHFA's supervisory expectations for its regulated entities in the development, validation, and use of models.[11]

The agencies have also provided guidance on managing the risk inherent in the use of third-party service providers, such as outside entities that provide AVMs and AVM services.[12] Institutions that make use of third parties are reminded that they remain responsible for ensuring that third parties, in performing their activities, comply with applicable laws and regulations, including the safety and soundness requirements established by the OCC, Board, FDIC, and NCUA. These guidance documents address the characteristics, governance, and operational effectiveness of a financial institution's risk management program for outsourced activities.

II. The Proposed Rule

The agencies are inviting comment on a proposed rule to implement quality control standards for the use of AVMs that are covered by this proposal. The agencies' proposed rule would require that mortgage originators and secondary market issuers adopt policies, practices, procedures, and control systems to ensure that AVMs used in certain credit decisions or covered securitization determinations adhere to quality control standards designed to meet specific quality control factors. The proposed rule would not set specific requirements for how institutions are to structure these policies, practices, procedures, and control systems. This approach would provide institutions the flexibility to set quality controls for AVMs as appropriate based on the size of the institution and the risk and complexity of transactions for which they will use AVMs covered by this proposed rule. As modeling technology continues to evolve, this flexible approach would allow institutions to refine their policies, practices, procedures, and control systems as appropriate. The agencies' existing guidance related to AVMs would remain applicable.

A. Scope of the Proposed Rule

The quality control standards in section 1125 of title XI apply to AVMs ''used by mortgage originators and secondary market issuers to determine the collateral worth of a mortgage secured by a consumer's principal dwelling.'' [13] The proposed rule would implement the statute by applying the quality control standards when an AVM is being used to make a determination of collateral value, as opposed to other uses such as monitoring value over time or validating an already completed valuation. Determinations of collateral value are generally made in connection with credit decisions or covered securitization determinations as defined in this proposed rulemaking, for example when determining a new value before originating a purchase-money mortgage or placing a loan in a securitization pool.

Other uses of AVMs, such as for portfolio monitoring, do not involve making a determination of collateral value, and thus are not within the scope of the proposed rule. The agencies are further proposing that the rule would not cover the use of AVMs in the development of an appraisal by a certified or licensed appraiser, nor in the review of the quality of already completed determinations of collateral value (completed determinations). The proposed rule would cover the use of AVMs in preparing evaluations required for certain real estate transactions that are exempt from the appraisal requirements under the appraisal regulations issued by the OCC, Board, FDIC, and NCUA, such as transactions that have a value below the exemption thresholds in the appraisal regulations.[14]

Section 1125(c)(1) provides that compliance with regulations issued under section 1125 shall be enforced by, ''with respect to a financial institution, or subsidiary owned and controlled by a financial institution and regulated by a Federal financial institution regulatory agency, the Federal financial institution regulatory agency that acts as the primary Federal supervisor of such financial institution or subsidiary.'' [15] Section 1125(c)(1) applies to a subsidiary of a financial institution only if the subsidiary is (1) owned and controlled by a financial institution, and (2) regulated by a Federal financial institution regulatory agency. Section 1125(c)(2) provides that compliance with regulations issued under section 1125 shall be enforced by, ''with respect to other participants in the market for appraisals of 1-to-4 unit single family residential real estate, the Federal Trade Commission, the Bureau of Consumer Financial Protection, and a State attorney general.'' [16]

The NCUA has long acknowledged that subsidiaries of federally insured credit unions—also referred to as credit union service organizations (CUSOs)—and their employees are not subject to regulation by the NCUA as contemplated by Congress under statutory provisions similar to section 1125(c).[17] This proposal would not alter that position. The NCUA, unlike the Federal banking agencies that do have supervisory and regulatory authority over subsidiaries of their regulated institutions, does not have authority to supervise or examine subsidiaries owned and controlled by federally insured credit unions.[18] Rather, the NCUA's regulations only indirectly affect CUSOs. For example, part 712 and § 741.222 of the NCUA's regulations permit federally insured credit unions to invest only in CUSOs that conform to

[15] 12 U.S.C. 3354(c)(1) (emphasis added). The term ''Federal financial institutions regulatory agencies'' means the Board, the FDIC, the OCC, the former OTS, and the NCUA. 12 U.S.C. 3350(6). Title III of the Dodd-Frank Act provides that the OCC is now the Federal financial institutions regulatory agency for Federal savings associations. Title III of the Dodd-Frank Act also provides that the FDIC is the Federal financial institutions regulatory agency for State savings associations. Finally, the Dodd-Frank Act provides that the Board is responsible for regulation of savings and loan holding companies. The term ''financial institution'' means an insured depository institution as defined in 12 U.S.C. 1813 or an insured credit union as defined in 12 U.S.C. 1752. *See* 12 U.S.C. 3350(7).

[16] 12 U.S.C. 3354(c)(2).

[17] *See Registration of Mortgage Loan Originators,* 75 FR 51623, 51626 (Aug. 23, 2010) (applying similar reasoning to the licensing of mortgage loan originators who were employees of CUSOs under the Secure and Fair Enforcement for Mortgage Licensing Act of 2008); and *Minimum Requirements for Appraisal Management Companies,* 80 FR 32657, 32665 (Aug. 10, 2015) (applying similar reasoning to the registration and regulation of appraisal management company CUSOs under 12 U.S.C. 3353).

[18] *See, e.g.,* Bank Service Company Act, 12 U.S.C. 1861–1867; NCUA, Third-Party Vendor Authority 7–10 (March 2022) *available at https://ncua.gov/files/publications/regulation-supervision/third-party-vendor-authority.pdf;* and Financial Stability Oversight Council, 2021 Annual Report 125 (2021) *available at https://home.treasury.gov/system/files/261/FSOC2021AnnualReport.pdf.*

certain specified requirements.[19] Given that the authority under section 1125(c)(1), in the context of federally insured credit unions, applies to subsidiaries owned and controlled by a federally insured credit union [20] and regulated by the NCUA,[21] the NCUA would not take action to enforce the requirements of this rule under section 1125(c)(1), if the rule is made final, with respect to CUSOs. Rather, under section 1125(c)(2), the Federal Trade Commission, the CFPB, and State attorneys general would have enforcement authority over CUSOs, whether owned by a State or federally chartered credit union, in connection with a final AVM rule.[22] Accordingly, the second sentence in proposed § 722.201(b)(1) would provide that subpart B of part 722 of the NCUA's regulations applies to credit unions insured by the NCUA that are mortgage originators or secondary market issuers.

The NCUA is also proposing to amend § 741.203(b) to clearly include the proposed AVM regulations in the NCUA's list of regulatory provisions applicable to federally insured, state-chartered credit unions. Accordingly, proposed § 741.203(b) would provide that insured credit unions must adhere to the requirements stated in part 722 of this chapter.

1. AVMs Used in Connection With Making Credit Decisions

The proposed rule would apply to AVMs used in connection with making a credit decision. The proposed rule would define ''credit decision,'' in part, to include a decision regarding whether and under what terms to originate, modify, terminate, or make other changes to a mortgage. The scope provision of the proposed regulatory text would expressly exclude the use of AVMs in monitoring the quality or performance of mortgages or mortgage-backed securities. The use of AVMs solely to monitor a creditor's mortgage portfolio would not be a credit decision under the proposed rule because the lending institution has already made the credit decision. The scope of the proposed rule would include, for example, decisions regarding originating a mortgage, modifying the terms of an existing loan, or renewing, increasing, or terminating a line of credit. The proposed rule uses the term ''credit decision'' to help clarify that the proposed rule would cover these various types of decisions.

The proposal to limit the scope of the rule to credit decisions and covered securitization determinations reflects the statutory definition of AVM, which focuses on the use of an AVM ''by mortgage originators and secondary market issuers to *determine* the collateral worth of a mortgage secured by a consumer's principal dwelling.'' [23] The proposed rule would distinguish between using AVMs to determine the value of collateral securing a mortgage and using AVMs to monitor, verify, or validate a previous determination of value (*e.g.,* the proposed rule would not cover a computerized tax assessment used to verify the valuation made during the origination process).[24] The proposed rule focuses on those aspects of mortgage and securitization transactions where the value of collateral is typically determined.

Loan modifications and other changes to existing loans. The proposed rule would cover the use of AVMs in deciding whether to change the terms of an existing mortgage even if the change does not result in a new mortgage origination, as long as a ''mortgage originator'' or ''secondary market issuer,'' or servicers that work on the originator's or secondary market issuer's behalf, uses the AVM to determine the value of a mortgage secured by a consumer's principal dwelling. For example, the proposed rule would cover AVMs used in making decisions to deny a loan modification or to confirm collateral values, such as when there is a request to change or release collateral. In relevant part, section 1125 provides that an AVM is ''any computerized model used by mortgage originators and secondary market issuers *to determine the collateral worth* of a mortgage. . . . '' [25] The agencies' view is that the phrase ''determine the collateral worth'' broadly covers instances where mortgage originators and secondary market issuers use AVMs in connection with making credit decisions. Under the proposal, the agencies consider mortgage originators and secondary market issuers or servicers that work on their behalf to be using AVMs in connection with making a credit decision when they use AVMs to modify or to change the terms of existing loans.

Question 1. How, if at all, could the agencies' proposal to cover loan modifications and other changes to existing loans be made clearer?

Home equity line of credit (HELOC) reductions or suspensions. The proposed rule would cover AVMs used in deciding whether or to what extent to reduce or suspend a HELOC. The proposed rule would apply to AVMs used in connection with making credit decisions. The agencies consider mortgage originators and secondary market issuers to be using AVMs in connection with making a credit decision when they use AVMs to decide whether or to what extent to reduce or suspend a HELOC.

Question 2. Part II.B of this **SUPPLEMENTARY INFORMATION** *discusses the proposed definitions of mortgage originator and secondary market issuer. To what extent do financial institutions purchase or service HELOCs without engaging in mortgage originator or secondary market issuer activities as defined by the proposed rule?*

Question 3. How might a rule covering only AVM usage by mortgage originators and secondary market issuers disadvantage those entities vis-à-vis their competitors?

2. AVMs Used by Secondary Market Issuers

The language of section 1125 includes not only mortgage originators, but also secondary market issuers. Given that the statute refers to secondary market issuers and the primary business of secondary market issuers is to securitize mortgage loans and to sell those mortgage-backed securities to investors, the proposed rule would cover AVMs used in securitization determinations. In addition, covering AVMs used in securitizations could potentially protect the safety and soundness of institutions and protect consumers and investors by reducing the risk that secondary market issuers will misvalue homes. For example, misvaluation by secondary market issuers could in turn incentivize mortgage originators to originate misvalued loans when making lending decisions.[26] Such misvaluations could

[19] 12 CFR part 712.

[20] The term ''financial institution'' means an insured depository institution as defined in 12 U.S.C. 1813 or an insured credit union as defined in 12 U.S.C. 1752. *See* 12 U.S.C. 3350(7).

[21] 12 U.S.C. 3354(c)(1).

[22] 12 U.S.C. 3354(c)(2).

[23] 12 U.S.C. 3354(d) (emphasis added).

[24] Many secondary market transactions by regulated entities require an appraisal unless an appraisal consistent with regulatory standards was obtained at the time of origination. *See* 12 CFR 43.43(a)(8) (OCC); 12 CFR 225.63(a)(8) (Board); 12 CFR 323.3(a)(8) (FDIC); 12 CFR 722.3(a)(5) (NCUA).

[25] 12 U.S.C. 3354(d) (emphasis added).

[26] For example, the 2008 financial crisis was precipitated in part by secondary market issuers that ''lowered the credit quality standards of the mortgages they securitized'' and mortgage originators that ''took advantage of these lower credit quality securitization standards . . . to relax the underwriting discipline in the loans they issued'' because, ''[a]s long as they could resell a mortgage to the secondary market, they didn't care about its quality.'' Financial Crisis Inquiry Commission, *The Financial Crisis Inquiry Report,* at 425 (2011), *available at https://www.gpo.gov/fdsys/pkg/GPO-FCIC/pdf/GPO-FCIC.pdf.*

pose a risk of insufficient collateral for financial institutions and secondary market participants and could limit consumers' refinancing and selling opportunities.[27]

Appraisal waivers. The proposed rule would define ''covered securitization determination'' to include determinations regarding, among other things, whether to waive an appraisal requirement for a mortgage origination (appraisal waiver decisions).[28] Under the proposal, a secondary market issuer that uses AVMs in connection with making appraisal waiver decisions would be required to have policies, practices, procedures, and control systems in place to ensure that the AVM supporting those appraisal waiver decisions adheres to the rule's quality control standards. In contrast, a mortgage originator that requests an appraisal waiver decision from a secondary market issuer would not need to ensure that the AVM used to support the waiver meets the rule's quality control standards because the secondary market issuer would be using the AVM to make the appraisal waiver decision in this context, not the mortgage originator.

For example, both GSEs have appraisal waiver programs and are the predominant issuers of appraisal waivers in the current mortgage market.[29] To determine whether a loan qualifies for an appraisal waiver under either GSE program, a mortgage originator submits the loan casefile to the GSE's automated underwriting system with an estimated value of the property (for a refinance transaction) or the contract price (for a purchase transaction). The GSE then processes that information through its internal model, which may include use of an AVM, to determine the acceptability of the estimated value or the contract price for the property. If the GSE's analysis determines, among other eligibility parameters, that the estimated value or contract price meets its risk thresholds, the GSE offers the lender an appraisal waiver.[30]

In this example, when the GSEs use AVMs to determine whether the mortgage originator's estimated collateral value or the contract price meets acceptable thresholds for issuing an appraisal waiver offer, the GSEs would be making a ''covered securitization determination'' under the proposed rule. As a result, the proposed rule would require the GSEs, as secondary market issuers, to maintain policies, practices, procedures, and control systems designed to ensure that their use of such AVMs adheres to the rule's quality control standards. On the other hand, when a mortgage originator submits a loan to determine whether a GSE will offer an appraisal waiver, the mortgage originator would not be making a ''covered securitization determination'' under the proposed rule because the GSE would be using its AVM to make the appraisal waiver decision in this context. As a result, the mortgage originator would not be responsible for ensuring that the GSEs' AVMs comply with the proposed rule's quality control standards.

Question 4. To what extent do secondary market issuers other than the GSEs issue appraisal waivers?

Question 5. Please address the feasibility of mortgage originators performing quality control reviews of the AVMs that secondary market issuers use to evaluate appraisal waiver requests. What, if any, consequences would such an approach have for mortgage originators' use of appraisal waiver programs?

Other uses by secondary market issuers. The proposed rule would define ''covered securitization determination'' to include determinations regarding, among other things, structuring, preparing disclosures for, or marketing initial offerings of mortgage-backed securitizations.[31] Monitoring collateral value in mortgage-backed securitizations after the securities have already been issued would not be a covered securitization determination.

The proposed rule would cover AVM usage if and when a secondary market issuer uses an AVM as part of a new or revised value determination in connection with covered securitization determinations. For example, the GSEs use the origination appraised value or the estimated value in appraisal waivers when issuing mortgage-backed securities. Hence, AVMs are not used by the GSEs to make a new or revised value determination in connection with MBS issuances. However, because the GSEs provide guarantees of timely payment of principal and interest on loans that are included in an MBS, they are obligated to purchase loans that are in default from MBS loan pools. The GSEs may modify such loans and subsequently re-securitize them as new MBS offerings. In these instances, the GSEs may use an AVM to estimate collateral value for investor transparency and disclosure. AVMs used in this manner by the GSEs would be considered covered securitization determinations because there are new or revised value determinations.

As discussed in part II.A.3 of this **SUPPLEMENTARY INFORMATION**, the proposed rule distinguishes between secondary market issuers using AVMs to determine the value of collateral securing a mortgage versus using AVMs solely to review completed value determinations. For example, AVMs used solely to review appraisals obtained during mortgage origination would not be covered by the proposed rule.

Question 6. The agencies are proposing to include securitizations within the scope of the proposed rule where the AVM is being used to determine collateral value for loans being considered for inclusion in pools collateralizing mortgage-backed securities. To what extent do secondary market issuers use AVMs to determine collateral value in securitizations?

Question 7. Would covering uses of AVMs for securitizations hinder small entities' access to secondary market liquidity and, if so, how might such impacts be mitigated?

Question 8. What would be the advantages and disadvantages of exempting federally backed securitizations from the AVM quality control standards?

Question 9. Are the compliance obligations of lenders and securitizers clear under this proposed rule?

3. AVM Uses Not Covered by the Proposed Rule

Uses of AVMs by appraisers. The proposed rule would not cover use of an AVM by a certified or licensed appraiser

[27] *See, e.g., Appraisals for Higher-Priced Mortgage Loans,* 78 FR 10367, 10418 (Feb. 13, 2013).

[28] On March 1, 2023, Fannie Mae began a transition in terminology away from ''appraisal waivers'' and to ''value acceptance.'' As stated in the March 1 announcement, ''value acceptance is being used in conjunction with the term 'appraisal waiver' to better reflect the actual process of using data and technology to accept the lender-provided value. We are moving away from implying that an appraisal is a default requirement.'' *See Fannie Mae Provides Updates Regarding Valuation Modernization | Fannie Mae.*

[29] *See* Fannie Mae, *Appraisal Waivers, available at https://singlefamily.fanniemae.com/originating-underwriting/appraisal-waivers* (last visited January 26, 2023); Freddie *Mac, Automated Collateral Evaluation* (ACE), *available at https://sf.freddiemac.com/tools-learning/loan-advisor/our-solutions/ace-automated-collateral-evaluation.*

[30] *See* Fannie Mae, *Appraisal Waivers, available at https://singlefamily.fanniemae.com/originating-underwriting/appraisal-waivers;* Freddie Mac, *Automated Collateral Evaluation (ACE), available at https://sf.freddiemac.com/tools-learning/loan-advisor/our-solutions/ace-automated-collateral-evaluation.*

[31] *See, e.g., Asset Backed Securities,* 70 FR 1505, 1544 (Jan. 7, 2005) (examples of asset characteristics that are ''material'' include LTV ratios); *Appraisals for Higher-Priced Mortgage Loans,* 78 FR 78519, 78533 (Dec. 26, 2013) (''[t]he credit risk holder of the existing obligation might obtain a valuation . . . to estimate LTV for determining the appropriate securitization pool for the loan.'').

in developing an appraisal.[32] This approach reflects the fact that, while appraisers may use AVMs in preparing appraisals, they must achieve credible results in preparing an appraisal under the Uniform Standards of Professional Appraisal Practice (USPAP) and its interpreting opinions.[33] As such, an appraiser must make a valuation conclusion that is supportable independently and does not rely on an AVM to determine the value of the underlying collateral. The agencies also note that it may be impractical for mortgage originators and secondary market issuers to adopt policies, procedures, practices, and control systems to ensure quality controls for AVMs used by the numerous independent appraisers with which they work.

Question 10. How often are AVMs used by certified or licensed appraisers to develop appraisals?

Question 11. What would be the advantages and disadvantages of excluding AVMs used by certified or licensed appraisers in developing appraisal valuations?

Under the appraisal regulations issued by the OCC, FRB, and FDIC, lenders regulated by those agencies are required to obtain ''evaluations'' for certain transactions that fall within exceptions in the appraisal regulations.[34] Evaluations must be consistent with safe and sound banking practices.

The proposed rule would cover AVMs used in the process of preparing evaluations. This distinction between appraisals and evaluations reflects that USPAP standards and appraiser credentialing are not required for individuals who prepare evaluations. The proposed rule's coverage of AVMs used in the process of preparing evaluations also reflects the more extensive use of, and reliance on, AVMs within the evaluation function.

Reviews of completed collateral valuation determinations. The proposed rule would not cover AVMs used in reviews of completed collateral value determinations, given that the underlying appraisal or evaluation determines the value of the collateral, rather than the review of the appraisal or evaluation. The appraisal or evaluation review serves as a separate and independent quality control function.[35] The agencies note that the proposed rule does not make distinctions based on the amount of time between the completed collateral valuation determination and the subsequent review; if an AVM is solely being used to review the completed determination, such AVM use is not covered by the proposed rule regardless of how soon the AVM is used after that determination.

Question 12. What would be the advantages and disadvantages of including AVMs that are used in reviews of completed determinations within the scope of the proposed rule? To what extent do institutions use AVMs in reviewing completed determinations?

Question 13. What, if any, additional clarifications would be helpful for situations where an AVM would or would not be covered by the proposed rule?

B. Definitions

1. Automated Valuation Model

The Dodd-Frank Act defines an AVM, for purposes of section 1125, as ''any computerized model used by mortgage originators and secondary market issuers to determine the collateral worth of a mortgage secured by a consumer's principal dwelling.'' [36] The proposed rule would define an AVM as any computerized model used by mortgage originators and secondary market issuers to determine the value of a consumer's principal dwelling collateralizing a mortgage. The proposed definition is substantively identical to the definition in section 1125 but reflects common terminology and clarifies that the determination of value relates to the dwelling.

Question 14. What, if any, other definitions of AVM would better reflect current practice with respect to the use of AVMs to determine the value of residential real estate securing a mortgage?

2. Control Systems

The proposal would define control systems as the functions (such as internal and external audits, risk review, quality control, and quality assurance) and information systems that institutions use to measure performance, make decisions about risk, and assess the effectiveness of processes and personnel, including with respect to compliance with statutes and regulations. The agencies intend for institutions to use control systems that are appropriate for the size and complexity of their mortgage origination and securitization businesses.

Question 15. What, if any, alternate definitions would be more suitable than the proposed definition of control systems? What challenges, if any, would be involved in integrating control systems for AVMs into existing control systems?

3. Covered Securitization Determination

The proposed rule would define ''covered securitization determination'' to mean a determination regarding (1) whether to waive an appraisal requirement for a mortgage origination in connection with its potential sale or transfer to a secondary market issuer, or (2) structuring, preparing disclosures for, or marketing initial offerings of mortgage-backed securitizations. Monitoring collateral value in mortgage-backed securitizations after they have already been issued would not be covered securitization determinations.

Question 16. Would the proposed definition of a covered securitization determination hinder small entities' access to secondary market liquidity and, if so, how might such impacts be mitigated?

Question 17. Other than the uses discussed in the proposed rule, are there other ways that AVMs are used in the securitization process? Is the scope of the proposed definition of ''covered securitization determination'' appropriate and, if not, how should the agencies expand or narrow the definition?

---

[32] The appraisal regulations issued by the OCC, Board, FDIC, and NCUA set forth, among other requirements, minimum standards for the performance of real estate appraisals in connection with federally related transactions. *See* 12 CFR part 34, subpart C (OCC); 12 CFR part 208, subpart E, and 12 CFR part 225, subpart G (Board); 12 CFR part 323 (FDIC); and 12 CFR part 722 (NCUA). The CFPB proposes to codify the AVM requirements in Regulation Z, 12 CFR part 1026, and to cross-reference Regulation Z § 1026.35(c)(1)(i), which defines ''certified or licensed appraiser'' as a person who is certified or licensed by the State agency in the State in which the property that secures the transaction is located, and who performs the appraisal in conformity with USPAP and the requirements applicable to appraisers in title XI, and any implementing regulations in effect at the time the appraiser signs the appraiser's certification.

[33] *See* USPAP STANDARDS RULE 1–1, GENERAL DEVELOPMENT REQUIREMENTS (''In developing a real property appraisal, an appraiser must . . . be aware of, understand, and correctly employ those recognized methods and techniques that are necessary to produce a credible appraisal''); *see also* Advisory Opinion 37 (AO–37) on Computer Assisted Valuation Tools.

[34] *See* 12 CFR 34.43(b) (OCC); 12 CFR 225.62(c) (Board); and 12 CFR 323.3(b) (FDIC); *see also Interagency Appraisal and Evaluation Guidelines,* 75 FR at 77460 (discussing transactions that require evaluations under the appraisal rules and providing recommendations for evaluation development).

[35] Appraisals are subject to appropriate review under the appraisal regulations. *See* 12 CFR 34.44(c); (OCC); 12 CFR 225.64(c) (Board); 12 CFR 323.4(c) (FDIC); 12 CFR 722.4(c) (NCUA). While these reviews are independent of, and subsequent to, the underlying appraisals and evaluations, the reviews generally take place before the final approval of a mortgage loan.

[36] 12 U.S.C. 3354(d).

4. Credit Decision

The proposal would define credit decision to mean a decision regarding whether and under what terms to originate, modify, terminate, or make other changes to a mortgage. The proposed definition of credit decision would include a decision whether to extend new or additional credit or change the credit limit on a line of credit. Monitoring the value of the underlying real estate collateral in their mortgage originators' loan portfolios would not be a credit decision for the purposes of this proposed rule. This reflects the fact that the collateral worth of a mortgage is generally determined in connection with credit decisions or covered securitizations rather than when the value of the collateral supporting a mortgage is monitored or verified.

Question 18. What, if any, clarifications are needed for the definition of the term ''credit decision''?

Question 19. What, if any, other decisions should the agencies include within the definition of credit decision?

5. Dwelling

The section 1125 definition of AVM refers to a mortgage secured by a ''consumer's principal dwelling.'' [37] The OCC, Board, FDIC, NCUA, and FHFA would define dwelling to mean a residential structure that contains one to four units, whether or not that structure is attached to real property. The term would include an individual condominium unit, cooperative unit, factory-built housing, or manufactured home, if any of these are used as a residence. The proposed definition of dwelling also would provide that a consumer can have only one principal dwelling at a time. Thus, a vacation or other second home would not be a principal dwelling. However, if a consumer buys or builds a new dwelling that will become the consumer's principal dwelling within a year or upon the completion of construction, the new dwelling would be considered the principal dwelling.[38]

The CFPB proposes to codify the AVM requirements in Regulation Z, 12 CFR part 1026, which generally implements the Truth in Lending Act (TILA). The definition of dwelling proposed by the other agencies is consistent with the CFPB's existing Regulation Z.[39] Unlike TILA, title XI generally does not limit its coverage to credit transactions that are primarily for personal, family, or household purposes.[40] Because this rulemaking is conducted pursuant to title XI rather than TILA, the CFPB proposes to revise Regulation Z §§ 1026.1, .2, .3, and .42, and related commentary, to clarify that this rule would apply when a mortgage is secured by a consumer's principal dwelling, even if the mortgage is primarily for business, commercial, agricultural, or organizational purposes.[41]

Question 20. What, if any, alternate definitions would be more suitable than the proposed definition of dwelling and the approach to what is a principal dwelling?

Question 21. Should the rule define the meaning of ''consumer'' or is that term commonly understood?

Question 22. Because the CFPB proposes to apply its existing Regulation Z definitions of ''dwelling'' and ''consumer,'' the CFPB invites comment on whether, for purposes of the AVM requirements, it should amend its definitions and associated commentary to address particular circumstances, consistent with the objectives of section 1125. Should the rule exclude from coverage AVMs used only in making determinations of the worth of particular residential structures or AVMs used only in extending credit to a trust where a non-obligor individual uses the residence as their principal dwelling? Should the rule include language to address special circumstances, such as dwellings purchased by active-duty military personnel for their future permanent residence while assigned temporarily to a different duty station? Please provide any supporting explanation and data.

6. Mortgage

Section 1125(d) defines an AVM with reference to determining ''the collateral worth of a mortgage secured by a consumer's principal dwelling.'' [42] Section 1125 does not define ''mortgage.'' Because the statute does not refer to ''mortgage loans'' or ''mortgage credit,'' but rather uses the word ''mortgage,'' the proposal would define ''mortgage'' to broadly cover the mortgage market as fully as the statute appears to envision, in the language of section 1125(d) and throughout section 1125. Consequently, for this purpose, the agencies would adopt in part the Regulation Z definition of ''residential mortgage transaction,'' [43] which existed at the time the statute was passed. The proposal would define the term mortgage to mean a transaction in which a mortgage, deed of trust, purchase money security interest arising under an installment sales contract, or equivalent consensual security interest is created or retained in a consumer's principal dwelling.

Question 23. What, if any, alternate definitions would be more suitable than the proposed definition of mortgage?

Question 24. What are the benefits and disadvantages of including purchase money security interests arising under installment land contracts in the definition of mortgage? Please provide any data or information you have about the use of AVMs in this market segment.

7. Mortgage Originator

For purposes of this proposal, the agencies would adopt the definition of mortgage originator contained in TILA.[44] Although section 1125 of title XI does not define the term mortgage originator, a recent amendment to title XI (section 1127) adopted the TILA definition of mortgage originator by cross reference.[45] The OCC, Board, and FDIC implemented the same definition in their appraisal regulations.[46] Implementing the same definition in this proposal would maintain consistency in the usage of this term

[37] 12 U.S.C. 3354(d).

[38] The NCUA notes that under its regulations, a Federal credit union may make a mortgage loan to a member for a maturity of up to 40 years if the loan is secured by a one-to-four family dwelling that is or will be the principal residence of the member-borrower, among other requirements. 12 CFR 701.21(g). The use of the term ''principal residence'' in § 701.21(g) of the NCUA's regulations is distinct from the term ''principal dwelling'' used in this proposed rule. The proposed definition of ''dwelling'' and the condition that the dwelling is or will be a principal dwelling within one year for purposes of this proposed AVM rule would not change what type of dwelling is considered to be a principal residence under the NCUA's regulations, the parameters of which are drawn directly from the Federal Credit Union Act. 12 U.S.C. 1757(5)(A)(i). If this proposed rule is adopted as a final rule, the NCUA would issue a clarifying statement to assist Federal credit unions in distinguishing the two requirements.

[39] *See* 12 CFR 1026.2(a)(19) (definition of ''dwelling'') and 1026.2(a)(24) (definition of ''residential mortgage transaction''). The phrase ''consumer's principal dwelling'' is used in the Regulation Z provisions on valuation independence. 12 CFR 1026.42. Regulation Z generally defines ''consumer'' as a natural person to whom consumer credit is offered or extended. 12 CFR 1026.2(a)(11). The CFPB notes that pursuant to Regulation Z comments 2(a)(11)–3 and 3(a)–10, consumer credit includes credit extended to trusts for tax or estate planning purposes and to land trusts.

[40] *See* 12 CFR 1026.2(a)(12) (definition of ''consumer credit'').

[41] Therefore, the exemptions in 12 CFR 1026.3 would not apply to the requirements established by the CFPB under this rule.

[42] 12 U.S.C. 3354(d).

[43] 12 CFR 1026.2(a)(24).

[44] 15 U.S.C. 1602(dd)(2).

[45] 12 U.S.C. 3356(a)(1).

[46] *See* 12 CFR 34.43(a)(14) (OCC), 225.63(a)(15) (Board), and 323.3(a)(14) (FDIC).

with other sections of title XI and the agencies' appraisal regulations.

As proposed, the term mortgage originator generally would include creditors as defined by 15 U.S.C. 1602(g), notwithstanding that the definition of mortgage originator at 15 U.S.C. 1602(dd)(2) excludes creditors for certain other purposes.[47] While the term mortgage originator is broad enough to include mortgage brokers, in practice, brokers generally would not be covered by the proposed rule when they do not engage in the type of credit or securitization decisions covered under the proposal.

Based on the exception provided at 15 U.S.C. 1602(dd)(2)(G), the term mortgage originator would generally exclude servicers as defined by 15 U.S.C. 1602(dd)(7) as well as their employees, agents, and contractors. Consistent with the interpretation published in the CFPB's 2013 Loan Originator Compensation Rule, a person is a servicer with respect to a particular transaction only after it is consummated and that person retains or obtains its servicing rights.[48] In addition, whether a person is a servicer under the mortgage originator definition depends on the type of activities the person performs.

An entity that otherwise meets the definition of servicer at 15 U.S.C. 1602(dd)(7) is a ''mortgage originator'' for purposes of 15 U.S.C. 1602(dd)(2) only if it performs any of the activities listed in 15 U.S.C. 1602(dd)(2)(A) for a transaction that constitutes a new extension of credit, including a refinancing or an assumption. As a result, the proposed rule would apply to servicers and their employees, agents, and contractors if, in connection with new extensions of credit, they both use covered AVMs to engage in credit decisions and perform any of the activities listed in 15 U.S.C. 1602(dd)(2)(A). Once a servicer meets this definition of mortgage originator, the servicer would be required to comply with the requirements of this proposed rule any time it uses an AVM to determine the collateral worth of a mortgage secured by a consumer's principal dwelling, including those instances where the use of an AVM does not involve a new extension of credit such as a loan modification or a reduction of a home equity line of credit.

Question 25. What, if any, alternate definitions would be more suitable than the definition of mortgage originator proposed?

Question 26. Would the proposed definition of mortgage originator disadvantage any covered entities vis-à-vis their market competitors?

8. Secondary Market Issuer

The agencies are proposing to define secondary market issuer as any party that creates, structures, or organizes a mortgage-backed securities transaction. The agencies propose to define secondary market issuer in this manner due to the statutory focus in section 1125 on ''issuers'' and ''determin[ing] the collateral worth'' of a mortgage. This type of determination, as opposed to verification or monitoring of such determination, would typically take place in the secondary market in connection with the creation, structuring, and organization of a mortgage-backed security.

A number of parties may be involved in the securitization process and this proposed definition is designed to ensure coverage of entities responsible for the core decisions required for the issuance of mortgage-backed securities, including making determinations of the value of collateral securing the loans in the securitization transaction.

Question 27. What, if any, alternate definitions would be more suitable than the proposed definition of secondary market issuer? What, if any, additional types of entities should the agencies include in the definition? Should the definition cover fewer types of entities and, if so, which entities should not be covered?

Question 28. Would the proposed definition of secondary market issuer hinder small entities' access to secondary market liquidity and, if so, how might the agencies mitigate such impacts?

Question 29. What, if any, other terms should be defined in the proposed rule?

C. Quality Control Standards

1. Proposed Requirements for the First Four Quality Control Factors

The proposed rule would require mortgage originators and secondary market issuers that engage in credit decisions or covered securitization determinations themselves, or through or in cooperation with a third party or affiliate, to adopt and maintain policies, practices, procedures, and control systems to ensure that AVMs used in these transactions adhere to quality control standards designed to ensure a high level of confidence in the estimates produced; protect against the manipulation of data; seek to avoid conflicts of interest; and require random sample testing and reviews. This approach would allow mortgage originators and secondary market issuers the flexibility to set their quality control standards for covered AVMs as appropriate based on the size of their institution and the risk and complexity of transactions for which they will use covered AVMs.

These quality control factors are consistent with practices that many participants in the mortgage lending market already follow and with the guidance described in part I.A of this **SUPPLEMENTARY INFORMATION** that applies to many regulated institutions that would be subject to this rule. For example, Appendix B of the Guidelines contains detailed guidance for institutions seeking to establish policies, practices, procedures, and control systems to ensure the accuracy, reliability, and independence of AVMs. The requirement for quality control standards in the proposed rule is also consistent with model risk guidance, as discussed earlier. In line with the agencies' service provider guidance, regardless of whether mortgage originators and secondary market issuers use their own AVMs or make use of third-party AVMs, the proposed rule would require the mortgage originators and secondary market issuers to adopt and maintain policies, practices, procedures, and control systems to ensure that AVMs adhere to the rule's requisite quality control standards.

The agencies considered whether to propose more prescriptive requirements for the use of AVMs and decided not to do so. Different policies, practices, procedures, and control systems may be appropriate for institutions with different business models and risk profiles, and a more prescriptive rule could unduly restrict institutions' efforts to set their risk management practices accordingly. In addition, as noted earlier, guidance is already in place to assist regulated institutions in using AVMs in a safe and sound manner, and institutions that are not regulated by the agency or agencies providing the guidance may still look to the guidance for assistance with compliance. The agencies also considered that the statute does not require the agencies to set prescriptive standards for AVMs. For these reasons, a rule requiring institutions to develop policies, practices, procedures, and control systems designed to satisfy the requirement for quality control standards may more effectively carry

[47] 15 U.S.C. 1602(dd)(2).

[48] *Loan Originator Compensation Requirements Under the Truth in Lending Act (Regulation Z),* 78 FR 11280, 11306 (Feb. 15, 2013).

out the purposes of section 1125 than a more prescriptive rule.[49]

Question 30. Is additional guidance needed on how to implement the quality control standards to protect the safety and soundness of financial institutions and protect consumers beyond the existing supervisory guidance described in part I.A of this **SUPPLEMENTARY INFORMATION***? Should such additional guidance explain how a regulated entity would implement quality control for an AVM used or provided by a third party?*

Question 31. In what ways, if any, would a more prescriptive approach to quality control for AVMs be a more effective means of carrying out the purposes of section 1125 relative to allowing institutions to develop tailored policies, practices, procedures, and control systems designed to satisfy the requirement for quality control standards? If so, what would be the key elements of such an alternative approach?

2. Specifying a Nondiscrimination Quality Control Factor

Section 1125 provides the agencies with the authority to ''account for any other such factor'' that the agencies ''determine to be appropriate.'' [50] Based on this authority, the agencies propose to include a fifth factor that would require mortgage originators and secondary market issuers to adopt policies, practices, procedures, and control systems to ensure that AVMs used in connection with making credit decisions or covered securitization determinations adhere to quality control standards designed to comply with applicable nondiscrimination laws.

Existing nondiscrimination laws apply to appraisals and AVMs and institutions have a preexisting obligation to comply with all Federal laws, including Federal nondiscrimination laws. For example, the Equal Credit Opportunity Act (ECOA) and its implementing Regulation B bar discrimination on a prohibited basis in any aspect of a credit transaction.[51] The agencies have long recognized that this prohibition extends to using different standards to evaluate collateral,[52] which would include the design or use of an AVM in any aspect of a credit transaction in a way that would treat an applicant differently on a prohibited basis or result in unlawful discrimination against an applicant on a prohibited basis. Similarly, the Fair Housing Act prohibits unlawful discrimination in all aspects of residential real estate-related transactions, including appraisals of residential real estate.[53]

As with models more generally, there are increasing concerns about the potential for AVMs to produce property estimates that reflect discriminatory bias, such as by replicating systemic inaccuracies and historical patterns of discrimination. Models could discriminate because of the data used or other aspects of a model's development, design, implementation, or use.[54] Attention to data is particularly important to ensure that AVMs do not rely on data that incorporate potential bias and create discrimination risks. Because AVMs arguably involve less human discretion than appraisals, AVMs have the potential to reduce human biases. Yet without adequate attention to ensuring compliance with Federal nondiscrimination laws, AVMs also have the potential to introduce discrimination risks. Moreover, if models such as AVMs are biased, the resulting harm could be widespread because of the high volume of valuations that even a single AVM can process. These concerns have led to an increased focus by the public and the agencies on the connection between nondiscrimination laws and AVMs.

While existing nondiscrimination law applies to an institution's use of AVMs, the agencies propose to include a fifth quality control factor relating to nondiscrimination to heighten awareness among lenders of the applicability of nondiscrimination laws to AVMs. Specifying a fifth factor on nondiscrimination would create an independent requirement for institutions to establish policies, practices, procedures, and control systems to specifically address nondiscrimination, thereby further mitigating discrimination risk in their use of AVMs. Specifying a nondiscrimination factor may also increase confidence in AVM estimates and support well-functioning AVMs. In addition, specifying a nondiscrimination factor could help protect against potential safety and soundness risks, such as operational, legal, and compliance risks, associated

[49] The agencies have, in other contexts, allowed institutions to adjust their compliance programs in a way that reflects institution-specific factors, such as an institution's size and complexity and the nature and scope of its lending activities. *See, e.g., Interagency Guidelines Establishing Standards for Safety and Soundness,* 12 CFR part 30, Appendix A (OCC); 12 CFR part 208, Appendix D–1 (Board); 12 CFR part 364, Appendix A (FDIC) (requiring institutions to have internal controls and information systems for implementing operational and managerial standards that are appropriate to their size and the nature, scope and risk of their activities); 12 CFR 34.62 (OCC); 12 CFR 208.51 (Board); 12 CFR 365.2 (FDIC) (requiring institutions to adopt policies that establish appropriate limits and standards for extensions of credit that are secured by liens on or interests in real estate): *Interagency Guidelines Establishing Information Security Standards,*12 CFR part 30, Appendix B, (OCC); 12 CFR part 208, Appendix D–2 (Board); 12 CFR part 364, Appendix B (FDIC); 12 CFR part 748, Appendix A (NCUA) (requiring institutions to implement a comprehensive written information security program that is appropriate to the size and complexity of the institution and the nature and scope of its activities); and 12 CFR 41.90 (OCC); 12 CFR 222.90 (Board); 12 CFR 334.90 (FDIC) (requiring that banks establish policies and procedures for the detection, prevention, and mitigation of identity theft). *See also Guidelines Establishing Standards for Residential Mortgage Lending Practices,*12 CFR part 30, Appendix C (OCC) (providing that residential mortgage lending activities should reflect standards and practices appropriate for the size and complexity of the bank and the nature and scope of its lending activities); 12 CFR 1007.104 (CFPB) (requiring policies and procedures regarding the registration of mortgage loan originators that are appropriate to the nature, size, complexity, and scope of the financial institution's mortgage lending activities); and 12 CFR 1026.36(j) (CFPB) (requiring policies and procedures regarding mortgage loan origination that are appropriate to the nature, size, complexity, and scope of the mortgage lending activities of the depository institution and its subsidiaries).

[50] 12 U.S.C. 3354(a)(5).

[51] 15 U.S.C. 1691(a) (prohibiting discrimination on the basis of race, color, religion, national origin, sex (including sexual orientation and gender identity) or marital status, age (provided the applicant has the capacity to contract), because all or part of the applicant's income derives from any public assistance program), or because the applicant has in good faith exercised any right under the Consumer Credit Protection Act); *see also* 12 CFR part 1002. This prohibition includes discrimination on the prohibited basis characteristics of ''the neighborhood where the property offered as collateral is located.'' 12 CFR part 1002, supp. I, para. 2(z)–1.

[52] *See* Interagency Task Force on Fair Lending, *Policy Statement on Discrimination in Lending,* 59 FR 18266, 18268 (Apr. 15, 1994) (noting that under both ECOA and the Fair Housing Act, a lender may not, because of a prohibited factor, use different standards to evaluate collateral).

[53] 42 U.S.C. 3605 (prohibiting discrimination because of race, color, religion, national origin, sex, handicap, or familial status in residential real estate-related transactions); 42 U.S.C. 3605(b)(2) (defining ''real estate-related transactions'' to include the ''selling, brokering, or appraising of residential real property.''); *see also* 24 CFR part 100; note 50, *supra.*

[54] In other contexts, models and data have the potential to be a source of bias and may cause consumer harm if not designed, implemented, and used properly. *See generally,* Federal Trade Commission, *Big Data: A Tool for Inclusion or Exclusion? Understanding the Issues* (Jan. 2016), *available at https://www.ftc.gov/system/files/documents/reports/big-data-tool-inclusion-or-exclusion-understanding-issues/160106big-data-rpt.pdf;* Reva Schwartz et al., *A Proposal for Identifying and Managing Bias in Artificial Intelligence,* Nat'l Inst. of Standards & Tech., U.S. Department of Commerce (June 2021), *available at https://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.1270-draft.pdf. The Effects of Machine Learning on Credit Markets,* 77 J. of Fin. 5 (Feb. 2022), *available at https://doi.org/10.1111/jofi.13090;* Emily Bembeneck, et al., *To Stop Algorithmic Bias, We First Have to Define It,* Brookings Inst. (Oct. 21, 2021), *available at http://brookings.edu/research/to-stop-algorithmic-bias-wefirst-have-to-define-it/.*

with failure to comply with nondiscrimination laws.

In proposing to add a fifth quality control factor on nondiscrimination, the agencies note that compliance with applicable nondiscrimination laws with respect to AVMs may be indirectly reflected within and related to three of the first four statutory quality control factors. For example, the first factor requires quality control standards designed to ensure a high level of confidence in the estimates produced by AVMs. AVMs that reflect discriminatory bias in the data or discriminatory assumptions could affect confidence in AVM outputs and may also result in a form of data manipulation, particularly with respect to model assumptions and in the interactions among variables in a model, which bears on the second quality control factor in section 1125. The fourth quality control factor requires random sample testing and reviews of AVMs. The proposed fifth factor on nondiscrimination may include an array of tests and reviews, including fair lending reviews, which would support the general requirement for random sampling testing and review in section 1125. The first four factors do not, however, expressly address quality control measures relating to compliance with nondiscrimination laws.

Requiring institutions using AVMs covered by this proposed rule to adopt fair lending compliance policies and practices would be consistent not only with current law but also with well-established fair lending guidance. The OCC, Board, FDIC, NCUA, CFPB, and FHFA have issued statements and other materials setting forth principles the agencies will consider to identify discrimination.[55] The OCC, Board, FDIC, NCUA, and CFPB have further underscored the importance of robust consumer compliance management to prevent consumer harm in the Interagency Policy Statement on the Use of Alternative Data in Credit Underwriting (Alternative Data Policy Statement). In the Alternative Data Policy Statement, the agencies emphasized that ''[r]obust compliance management includes appropriate testing, monitoring and controls to ensure consumer protection risks are understood and addressed.'' [56] In addition, the CFPB has published procedures for CFPB examiners to assess an institution's fair lending related risks and controls related to the use of models—including, potentially, AVMs—in the credit decision process.[57]

The agencies propose that institutions would have the flexibility to design fair lending policies, procedures, practices, and control systems that are in compliance with fair lending laws and take into account their business models, as discussed in part II.C.1 of this **SUPPLEMENTARY INFORMATION** regarding the first four quality control factors.

The agencies seek comment on the proposal to specify a nondiscrimination quality control factor, including ways they could facilitate compliance for smaller financial institutions and whether additional clarity should be provided to assist institutions in complying with the proposed fifth factor.

Question 32. What are the advantages and disadvantages of specifying a fifth quality control factor on nondiscrimination? What, if any, alternative approaches should the agencies consider?

Question 33. To what extent is compliance with nondiscrimination laws with respect to covered AVMs already encompassed by the statutory quality control factors requiring a high level of confidence in the estimates produced by covered AVMs, protection against the manipulation of data, and random sampling and reviews? Should the agencies incorporate nondiscrimination into those factors rather than adopt the fifth factor as proposed? Would specifying a nondiscrimination quality control factor in the rule be useful in preventing market-distorting discrimination in the use of AVMs?

Question 34. What are the advantages and disadvantages of a flexible versus prescriptive approach to the nondiscrimination quality control factor?

Question 35. Are lenders' existing compliance management systems and fair lending monitoring programs able to assess whether a covered AVM, including the AVM's underlying artificial intelligence or machine learning, applies different standards or produces disparate valuations on a prohibited basis? If not, what additional guidance or resources would be useful or necessary for compliance?

Question 36. What, if any, other approaches should the agencies consider for incorporating nondiscrimination requirements in this proposed rule?

D. Request for Comments

The agencies invite comments on all other aspects of the proposed rulemaking.

E. Proposed Implementation Period

The agencies propose an effective date of the first day of a calendar quarter following the 12 months after publication in the **Federal Register** of any final rule based on this proposal. This extended effective date would give institutions time to come into compliance with the rule. The agencies seek comment on this extended implementation period.

Question 37. In addition to providing time for implementation, in what other ways should the agencies facilitate implementation for small entities?

III. CFPB Small Business Review Panel

While Federal agencies generally must consider the impact that their proposed rules could have on small entities, the Regulatory Flexibility Act (RFA),[58] as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA) [59] and the Dodd-Frank Act, imposes on the CFPB additional requirements with respect to small entities.

Specifically, the CFPB must convene and chair a Small Business Review Panel (Panel) whenever it is considering a proposed rule that could have a significant economic impact on a substantial number of small entities.[60]

[59] Public Law 104–121, 110 Stat. 857 (1996) (5 U.S.C. 609) (amended by Dodd-Frank Act section 1100G).

[60] 5 U.S.C. 609(b).

This Panel must consist of the Chief Counsel for Advocacy of the Small Business Administration (Advocacy) [61] and full-time employees from both the CFPB and the Office of Information and Regulatory Affairs (OIRA) within the Office of Management and Budget (OMB).[62] Additionally, the Panel must collect feedback regarding the proposed rule under consideration from a group of small entity representatives (SERs) that the rule likely would cover if it were implemented.[63] Within 60 days of convening, the Panel must issue a report that documents the SERs' feedback and presents the Panel's recommendations.[64]

In preparation for convening a Panel for this rulemaking and to help facilitate the Panel's outreach to SERs, the CFPB issued an Outline of Proposals and Alternatives under Consideration (SBREFA Outline) on February 23, 2022.[65] The CFPB then convened a Panel for this rulemaking on March 14, 2022, and held two Panel outreach meetings during March 15–16, 2022, conducted online via video conference.[66] Sixteen SERs participated in this process through written and/or oral feedback. The SERs included representatives from community banks, credit unions, non-depository mortgage lenders, and mortgage brokers.

On May 13, 2022, the CFPB released the Final Report of the Panel on the CFPB's Proposals and Alternatives Under Consideration for the AVM Rulemaking (SBREFA Panel Report).[67] The SBREFA Panel Report includes the following:

- A description of the proposals that are being considered by the CFPB and that were reviewed by the Panel;
- Background information on small entities that would likely be subject to those proposals and on the particular SERs selected to advise the Panel;
- A discussion of the feedback from and recommendations made by the SERs; [68] and
- A discussion of the findings and recommendations of the Panel.[69]

The CFPB also invited other stakeholders to submit feedback on the SBREFA Outline. Feedback from these other stakeholders on the SBREFA Outline was not considered by the Panel and is not reflected in the SBREFA Panel Report but will be placed on the public docket for this notice. The CFPB received 11 submissions from a variety of other stakeholders, including trade associations, a coalition of consumer and civil rights groups, AVM developers and testers, a research center, and a not-for-profit corporation responsible for setting appraiser standards and qualifications.

As it prepared this proposed rule with the other agencies, the CFPB considered the feedback it received from SERs and other stakeholders (collectively, SBREFA feedback) and the findings and recommendations of the Panel. The CFPB has summarized the feedback, findings, and recommendations that it received during the SBREFA process in part III.A of this **SUPPLEMENTARY INFORMATION**.[70]

A. Summary of SBREFA Feedback and Panel Findings and Recommendations

In their feedback on the SBREFA Outline, SERs and other stakeholders (collectively, SBREFA commenters) generally expressed support for the rulemaking's goal of ensuring AVM accuracy. Many SBREFA commenters noted that AVMs potentially save time and money but also cautioned that they would need to have greater confidence in AVMs before broadly expanding their usage of them. While acknowledging that AVM developers are entitled to maintain trade secrets and protect their intellectual property rights, several SBREFA commenters expressed concern that AVM developers do not provide sufficient transparency regarding how they calculate AVM values.

SBREFA commenters expressed some support for greater standardization of AVM testing and reporting but cautioned that prescriptive regulations could threaten innovation and increase costs. The SBREFA Panel recommended that the CFPB continue to explore ways to minimize the burden to small entities of the AVM rule in light of SERs' concerns about compliance costs generally and their feedback regarding the potential additional costs and delays that could result if the industry substituted current AVM usage with appraisals.

While acknowledging that Congress has required the rulemaking agencies to issue a rule, SBREFA commenters generally expressed a preference for the less prescriptive, principles-based option presented in the SBREFA Outline, along with nonbinding guidance to aid in compliance with that rule. The not-for-profit corporation responsible for setting appraiser standards and qualifications recommended its USPAP as a starting point for flexible AVM regulations. A coalition of consumer and civil rights groups also provided various examples for a principles-based framework in an appendix to their submission.

SBREFA commenters generally supported aligning definitions in the AVM rule with definitions in existing financial regulations to simplify compliance. Some SERs and a trade association recommended that the AVM rule incorporate a transaction-based exemption threshold, such as not covering portfolio loans under $400,000. Other SERs asked the CFPB to consider an asset-size threshold to exempt small entities from the rule. However, a coalition of consumer and civil rights groups advocated for the rule's coverage to be as broad as possible.

Several SBREFA commenters stated that it would be beneficial to have a governmental or not-for-profit accrediting body for AVMs, so that AVM users could rely on such accreditation for complying with the AVM rule. Several SERs and other stakeholders also advocated for greater information sharing regarding the GSEs' AVMs.

1. Defining ''Consumer's Principal Dwelling''

The section 1125 definition of AVM refers to a mortgage secured by a

[66] In advance of the Panel outreach meetings, the CFPB, Advocacy, and OIRA also held six online conferences with the SERs to describe the small business review process, obtain important background information about each SER's current business practices, and familiarize the SERs with selected portions of the SBREFA Outline.

[67] CFPB, *Final Report of the Small Business Review Panel on the CFPB's Proposals and Alternatives Under Consideration for the Automated Valuation Model (AVM) Rulemaking* (May 13, 2022), *available at https://files.consumerfinance.gov/f/documents/cfpb_avm_final-report_2022-05.pdf.* The CFPB's SBREFA Outline and related materials, as well as the CFPB's presentation slides framing the discussion during the Panel outreach meetings, are appended to the SBREFA Panel Report. *See* SBREFA Panel Report at app. D through F.

[68] In addition to oral feedback, ten of the 16 SERs provided written feedback, which is appended to the SBREFA Panel Report at Appendix B.

[69] As required by the RFA, the CFPB considers the Panel's findings in its initial regulatory flexibility analysis, as set out in part V of this **SUPPLEMENTARY INFORMATION**.

[70] The SBREFA Panel Report provides a more complete summary of feedback from the SERs and the findings and recommendations of the Panel. The CFPB's documents and content from its SBREFA process for this rulemaking should not be construed to represent the views or recommendations of the Board, OCC, FDIC, NCUA, or FHFA.

consumer's principal dwelling. The terms ''consumer,'' ''dwelling,'' and ''principal dwelling'' are not defined in title XI, although the Dodd-Frank Act also added the phrase ''consumer's principal dwelling'' into provisions of title XI that address appraisal management company requirements and broker price opinions.[71] During the SBREFA process, the CFPB presented to the SERs an approach that would base the scope of ''consumer's principal dwelling'' on how that phrase is used in the Regulation Z § 1026.42 provisions on valuation independence.[72]

Coverage of ''consumers.'' For most purposes Regulation Z defines ''consumer'' as a natural person to whom consumer credit is offered or extended.[73] The SBREFA Outline noted that, for certain purposes, the scope of the Regulation Z term ''consumer'' may apply to additional persons.[74] The SBREFA Outline noted further that, unlike TILA, section 1125 does not limit its coverage to credit transactions that are primarily for personal, family, or household purposes.[75] Therefore, the SBREFA Outline advised the SERs that the CFPB was considering proposing language to clarify that its implementation of AVM standards in Regulation Z does not exclude from section 1125 coverage any mortgage for which the proceeds are used for other purposes, as long as the mortgage is secured by a consumer's principal dwelling.[76]

The SERs provided a variety of observations about extending the AVM requirements to business-purpose loans and defining the term ''consumer'' to include persons other than a natural person. In addition to addressing the scope of coverage generally and consistency with existing definitions, the SERs discussed valuation costs, processing times, and business practices.[77] The SBREFA Panel recommended that the CFPB leverage existing definitions in Regulation Z but consider whether adjustments should be made to apply the AVM standards to business-purpose loans and loans to trusts and limited liability companies.

Coverage of ''dwelling'' and limiting coverage to ''principal'' dwelling. The section 1125 definition of AVM refers to determining the collateral worth of a mortgage secured by a consumer's principal dwelling. During the SBREFA process, the CFPB indicated it was considering definitions of dwelling and principal dwelling that are very similar to their treatment in the proposed rule, but the CFPB also addressed the possibility of limiting the definitions' scope to transactions in which the mortgage is secured by a lien on real property. The SBREFA Outline cited to the CFPB's appraisal independence requirements in Regulation Z § 1026.42 as an approach under consideration for clarifying whether second and vacation homes and new construction would be considered principal dwellings.

Regarding the definition of ''dwelling,'' SERs discussed considerations relevant to limiting application of the AVM quality control standards to mortgages secured by real property, including alternative valuation guides and sampling challenges.[78] A coalition of consumer and civil rights groups urged adoption of a broad definition of dwelling and suggested considering adopting the Fair Housing Act definition of dwelling.[79]

Regarding what would be a ''principal'' dwelling, the SERs discussed considerations for applying the AVM standards to second homes, vacation homes, and new construction.[80] One SER commented on the importance of considering how coverage might apply to active military personnel who are purchasing a home for their future permanent residence while assigned temporarily to a different duty station. One trade association supported leveraging existing definitions for key terms in the AVM rule, including dwelling and consumer's principal dwelling. The SBREFA Panel recommended that the CFPB (i) consider whether limiting coverage to dwellings secured by liens on real property, and extending coverage to second homes and vacation homes, would be consistent with the purposes of section 1125; and (ii) clarify whether mortgages secured by undeveloped land, manufactured homes, and other structures used as dwellings would be covered by the quality control standards. The SBREFA Panel also recommended that the CFPB assess whether any adjustment or clarification of the AVM rule would be appropriate to accommodate the special circumstances of active-duty military personnel. Finally, the SBREFA Panel recommended that the CFPB seek comment on whether coverage of the AVM rule should vary from the definition of principal dwelling used in other statutes and CFPB regulations, including as applied to new construction.

2. Defining ''Mortgage''

Section 1125 defines an AVM by reference to determining ''the collateral worth of a mortgage,'' [81] but does not define the term ''mortgage.'' In the SBREFA process, the CFPB was considering proposing two alternative definitions of ''mortgage.'' The first alternative would define ''mortgage'' as an extension of credit secured by a dwelling. The second alternative would define it as a transaction in which a mortgage, deed of trust, purchase money security interest arising under an installment sales contract, or equivalent consensual security interest is created or retained in a dwelling.

Most SERs did not express a preference for one definition over the other, but some did request further clarity on what types of transactions would be covered, and others asked that the definition be coordinated with existing regulatory definitions. Two SERs preferred the first mortgage definition. One of those SERs suggested that the first definition of mortgage was easier to understand, and the other SER preferred the first definition because it did not appear to include installment sales contracts, which it said could be understood to include consumer purchases for improvements to a home (for example, financing an HVAC system).[82]

A coalition of consumer and civil rights groups commenting on the definition of mortgage preferred the second definition because it was

[71] *See* Dodd-Frank Act section 1473(f)(4), adding section 1121(11) to title XI, codified at 12 U.S.C. 3350(11)): and Dodd-Frank Act section 1473(r), adding section 1126(a) to title XI, codified at 12 U.S.C. 3355(a), respectively.

[72] The appraisal management company provisions in title XI include a requirement that appraisal management companies apply valuation independence standards established under TILA. 12 U.S.C. 3353(a)(4). TILA is implemented in the CFPB's Regulation Z, 12 CFR part 1026 (Regulation Z). The CFPB implemented the valuation independence standards in Regulation Z § 1026.42 and is proposing to also implement its AVM standards in § 1026.42.

[81] 12 U.S.C. 3354(d). Section 1125 focuses on mortgages ''secured by a consumer's principal dwelling.'' *Id.*

[82] The CFPB notes that the second definition, which the agencies are proposing today, limits the ''installment sales contract'' reference to ''purchase money'' transactions.

broader and would protect consumers using installment sales contracts, who the stakeholder said are often Black homebuyers. A trade association did not think that installment land contracts should be included.

The SBREFA Panel recommended that the CFPB attempt to coordinate a definition of ''mortgage'' with preexisting regulations, to the extent feasible.

3. Defining ''Mortgage Originator''

Section 1125 covers AVMs used by ''mortgage originators,'' but does not define the term.[83] In the SBREFA Outline, the CFPB indicated that it was considering a definition of ''mortgage originator'' that potentially could cover persons who are loan originators, creditors, and/or, under limited circumstances, servicers for purposes of Regulation Z.[84] Four SERs, a trade association, and a coalition of consumer and civil right groups expressed support for a definition of ''mortgage originator'' that relies on definitions from existing consumer financial laws because they believe that would simplify implementation of any future final rule and/or minimize the compliance burden on small businesses. The SBREFA Panel also endorsed this approach in its recommendations.[85]

Although there was support among SERs and other stakeholders for defining ''mortgage originator'' based on definitions in existing consumer financial laws, six SERs and a coalition of consumer and civil rights groups indicated that the CFPB should consider alternative existing definitions for the term. These alternative definitions included defining ''mortgage originator'' (i) by reference to the term's use in other consumer financial laws, such as SAFE Act, Regulation G, or Regulation X, (ii) by reference to a person's current licensure status, or (iii) by reference to a person's function, such as covering lenders but not mortgage brokers or servicers. One SER in particular expressed concern that the definition of ''mortgage originator'' should not apply to mortgage brokers because, even though mortgage brokers commonly are considered ''loan originators,'' they rarely use AVMs and have no control over the valuation methods or vendors used in mortgage transactions.

In addition to receiving requests from SERs asking it to consider alternative definitions for the term ''mortgage originator,'' the CFPB also received comments from three SERs regarding the scope of the definition of the term ''mortgage originator.'' Two SERs asked the CFPB to consider applying a transaction-based or asset-based threshold that would exclude small entities from the scope of the definition of the term ''mortgage originator.'' Another SER asked the CFPB to ensure that any definition of the term ''mortgage originator'' it ultimately adopts will apply equally to both traditional market participants and financial technology firms.

4. Defining ''Secondary Market Issuer''

Section 1125 uses, but does not define, the term ''secondary market issuers''; specifically, the statute defines an AVM by reference to computerized models ''used by mortgage originators and secondary market issuers to determine the collateral worth'' of certain mortgages.[86] In the SBREFA Outline, the CFPB discussed two alternative definitions of the term ''secondary market issuer.'' The first alternative would define the term to include only entities that issue asset-backed securities collateralized by mortgages (mortgage securities). The second alternative would define the term more broadly to mean an issuer, guarantor, insurer, or underwriter of mortgage securities. Most SERs and other stakeholders providing feedback on the SBREFA Outline did not express specific views regarding these alternatives, but a coalition of consumer and civil rights groups as well as one SER supported the broader definition. The SBREFA Panel recommended that the CFPB continue to explore the extent to which a broader or narrower definition of ''secondary market issuer'' would further the statutory purposes of section 1125, along with the benefits and costs of such approach.

5. Types of AVM Uses

Section 1125 defines an AVM as any computerized model ''used by mortgage originators and secondary market issuers to determine the collateral worth'' of certain mortgages.[87] In the SBREFA Outline, the CFPB noted that, depending on how that phrase in the statute is implemented, the rule's quality control requirements might cover a variety of AVM uses by mortgage originators and secondary market issuers.

Underwriting versus non-underwriting AVM uses. Section 1125 focuses on AVMs used to ''determine'' the collateral worth. In the SBREFA Outline, the CFPB discussed focusing the rule on AVMs used in making underwriting decisions. Some SERs and trade associations providing feedback on the SBREFA Outline supported that approach. However, a coalition of consumer and civil rights groups advocated for the rule to broadly cover uses of AVMs to produce any valuation estimate whatsoever. The SBREFA Panel recommended that the CFPB continue to explore the extent to which limiting the rule's coverage to uses of AVMs for underwriting decisions would sufficiently further the statutory purposes of section 1125, along with the benefits and costs of such an approach. The SBREFA Panel also recommended that the CFPB consider clarifying whether, and to what extent, the proposed rule distinguishes between AVMs used before and after the origination of a mortgage.

Loan modifications and other changes to existing loans. Section 1125 focuses on AVMs used to ''determine'' the collateral worth. Among specific types of AVM uses, the CFPB's SBREFA Outline explored whether the rule should apply in instances where a mortgage originator, secondary market issuer, or service provider for a mortgage originator or secondary market issuer uses an AVM to determine the value of collateral in order to support a decision to modify or to change the terms of an existing loan. Specifically, the SBREFA Outline presented two alternatives. Under the first alternative, the rule would cover AVMs used in transactions that result in a consumer receiving a new mortgage origination. Under this alternative, the rule would cover a transaction like a refinancing, but not a transaction like a loan modification that would not result in a new mortgage origination. Under the second alternative, the rule would cover any AVM used to decide whether to change the terms of an existing mortgage even if the change does not result in a new mortgage origination, so long as a ''mortgage originator'' or ''secondary market issuer,'' or a service provider acting on behalf of a mortgage originator or a secondary market issuer, uses the AVM to determine the collateral worth of a mortgage secured by a consumer's principal dwelling.

[87] 12 U.S.C. 3354(d). Section 1125 focuses on mortgages ''secured by a consumer's principal dwelling.'' *Id.*

With respect to the two alternatives, SERs generally expressed a preference for the CFPB's first alternative over the second. One SER stated that they preferred a rule that did not cover loan modifications and other changes to existing loans, even if it ultimately covered refinancing transactions, because such a rule would have lower implementation costs. That SER further explained that consolidating the AVM quality control processes in their institution's origination functions (including refinancings) would be less burdensome than building processes for multiple use cases. Several SERs expressed concern that the second alternative could negatively impact consumers who are pursuing loss mitigation options. Specifically, those SERs stated that AVMs are quicker and less costly than appraisals, but that the second alternative could discourage use of AVMs in favor of appraisals during the loss mitigation process, which, in turn, would harm consumers by increasing both property valuation costs and application processing times. One SER also asked the CFPB to clarify whether the first alternative would apply to transactions that are withdrawn or denied in addition to transactions that are consummated.

The CFPB also received feedback on these alternatives from a trade association. That trade association stated that their members supported the first alternative because they wanted to exclude AVMs used in loan modifications from the scope of the rule. The trade association further stated that their members did not support the second alternative presented in the SBREFA Outline because, in their view, it both was inconsistent with title XI's directive to apply quality control standards to mortgage originators and would place additional burdens on the processing of loan workouts for distressed borrowers.

Credit line reductions or suspensions. Section 1125 focuses on AVMs used to ''determine'' the collateral worth of a mortgage secured by a consumer's principal dwelling. Among specific types of AVM uses, in the SBREFA Outline, the CFPB was considering whether or not the rule would cover AVMs used in deciding whether or to what extent to reduce or suspend a home equity line of credit. SERs discussed balancing the consumer protections of covering credit line reductions or suspensions against the burdens of such regulation. One SER noted that AVMs used in determining credit line reductions or suspensions ought to be covered from a consumer protection standpoint. Another SER noted that such decisions occur only a couple times a year at their institution, and the burden of additional regulations could cause servicers like them to abandon the use of AVMs for such purposes. The SBREFA Panel recommended that the CFPB continue to explore the extent to which a rule not covering uses of AVMs for credit line reductions and suspensions would sufficiently further the statutory purposes of section 1125, along with the benefits and costs of such approach. The Panel also recommended that the CFPB consider whether covering such uses only for mortgage originators and secondary market issuers disadvantages entities vis-à-vis competitors that acquire mortgages but are not mortgage originators or secondary market issuers.

Uses of AVMs by appraisers. Section 1125 applies to AVMs used by ''mortgage originators'' and ''secondary market issuers,'' respectively.[88] Third-party appraisers generally would not be mortgage originators or secondary market issuers; thus, appraisers themselves generally would not be covered by the eventual rule. But, as discussed in part I.A of this **SUPPLEMENTARY INFORMATION**, regulated entities—including mortgage originators and secondary market issuers—are responsible for managing risk inherent in the use of third-party service providers, such as appraisers.[89]

In the SBREFA Outline, the CFPB indicated that it was considering whether or not the rule would cover an AVM when a mortgage originator (or secondary market issuer) relies on an appraisal developed by a certified or licensed appraiser (appraiser), notwithstanding that the appraiser used the AVM in developing an appraisal. Several SERs and a trade association advocated for not covering such AVMs uses; they explained that mortgage originators and secondary market issuers should not be responsible for appraisers' AVM usage because appraisers are already subject to other Federal and State regulation and supervision. The SERs further stated that, given other Federal laws requiring valuation independence,[90] mortgage originators have limited ability to oversee appraisers' use of AVMs. A coalition of consumer and civil rights groups urged that the rule should cover AVMs used by appraisers and stated that there are gaps in the training and licensing of appraisers. The SBREFA Panel recommended that the CFPB continue to assess the extent to which a rule not covering appraisers' uses of AVMs would sufficiently further the statutory purposes of section 1125.

Securitization. Section 1125 focuses on AVMs used to ''determine'' the collateral worth of a mortgage secured by a consumer's principal dwelling. Among specific types of AVM uses, in the SBREFA Outline, the CFPB was considering whether or not the rule would cover a secondary market issuer's use of an AVM in the offer and sale of mortgage securities. Most SERs and other stakeholders providing feedback on the SBREFA Outline did not express specific views regarding whether to cover AVMs used in securitization, but one SER expressly advocated for not covering such uses because, otherwise, the rule would create a cost burden and hinder access to the secondary market, particularly for small mortgage originators. Another SER stated that most small entities do not securitize loans and that they would be discouraged from doing so if the eventual rule covered AVMs used in securitization. A coalition of consumer and civil rights groups advocated for the rule's coverage to be as broad as possible. The not-for-profit corporation responsible for setting appraiser standards and qualifications expressed concern regarding securitization creating moral hazard for mortgage origination because securitizers often provide funding to originators in exchange for loans with weak representations and warranties that may result in originators having little to no incentive for accurate valuations. The SBREFA Panel recommended that the CFPB continue to explore the extent to which a rule not covering uses of AVMs in securitizations would sufficiently further the statutory purposes of section 1125, along with the benefits and costs of such an approach.

Reviews of completed determinations. Section 1125 focuses on AVMs used to ''determine'' the collateral worth of a mortgage secured by a consumer's principal dwelling. Among specific types of AVM uses, in the SBREFA Outline, the CFPB considered whether or not the rule would cover AVMs used in a subsequent review of a completed

[88] 12 U.S.C. 3354(d).

[89] *See supra* note 12.

[90] For consumer credit transactions secured by a consumer's principal dwelling, TILA section 129E, 15 U.S.C. 1639e, and its implementing regulations require valuation independence by, for example, prohibiting material misrepresentation of property value and conflicts of interest for persons preparing valuations or performing valuation management functions. CFPB: 12 CFR 1026.42; Board: 12 CFR 226.42; *see Truth in Lending,* 75 FR 66554 (Oct. 28, 2010) (interim final rule); *see also Truth in Lending,* 75 FR 80675 (Dec. 23, 2010) (correction). TILA section 129E(g)(2) directed the Board to issue an interim final rule. 15 U.S.C. 1639e(g)(2).

appraisal or other completed determination of collateral value (completed determination). Several SERs and a trade association expressly advocated for not covering such AVM uses, including a SER that stated requiring quality control of AVMs when they are, in turn, being used to quality control already completed determinations would be an excessive amount of quality control and would not provide additional benefit—but would increase the cost of credit for consumers. A coalition of consumer and civil rights groups advocated for the rule's coverage to be as broad as possible.

The SBREFA Panel recommended that the CFPB continue to explore the extent to which a rule not covering uses of AVMs for subsequent reviews of completed determinations would sufficiently further the statutory purposes of section 1125, along with the benefits and costs of such an approach. The SBREFA Panel also recommended that the CFPB consider clarifying in the proposed rule whether, and to what extent, the proposed rule makes distinctions based on the amount of time between the completed determination and the subsequent review.

Appraisal waivers. Section 1125 focuses on AVMs used to ''determine'' the collateral worth of certain mortgages. In the SBREFA Outline, the CFPB indicated that it was considering a rule that would exclude a mortgage originator's use of AVMs for appraisal waiver programs where the secondary market issuer's use of an AVM is covered instead. Specifically, the CFPB indicated that it was considering two potential options. One option was to exclude the mortgage originator's use of the secondary market issuer's AVM for appraisal waiver programs. The second option was to exclude the mortgage originator's use of any AVM used exclusively to determine whether a loan qualifies for an appraisal waiver program or to generate a value estimate exclusively for an appraisal waiver program. SERs were supportive of a proposed rule not covering a mortgage originator's use of AVMs for appraisal waiver programs where the secondary market issuer's use of an AVM is covered instead. One SER appreciated that such an approach did not increase compliance burden on mortgage originators, while another SER indicated that secondary market issuers, especially the GSEs, were in a better position to perform quality control reviews of their AVMs than the mortgage originators requesting the appraisal waiver evaluations.

6. Options for the First Four Quality Control Standards

Section 1125 requires that AVMs adhere to quality control standards designed to: (1) ensure a high level of confidence in the estimates produced; (2) protect against the manipulation of data; (3) seek to avoid conflicts of interest; (4) require random sample testing and reviews; and (5) account for any other such factor that the agencies determine to be appropriate. Section 1125(b) requires the agencies to promulgate regulations to implement these quality control standards.

In the SBREFA process, the CFPB was considering proposing two alternative methods for compliance in regard to the first four AVM quality control factors. In the first alternative (principles-based option), the CFPB was considering proposing to require regulated institutions to adopt and maintain their own policies, practices, procedures, and control systems to ensure that AVMs used for covered transactions adhere to quality control standards designed to meet those factors, but not proposing specific requirements for those policies, practices, procedures, and control systems. For the second alternative regarding the quality control factors (prescriptive option), the CFPB was considering proposing a prescriptive rule with more detailed and specific requirements in regard to the quality control factors.

SERs overwhelmingly expressed support for the first option the CFPB presented, which would require covered entities to develop policies and procedures that would achieve the quality control standards but would not set specific requirements for those policies and procedures. For example, one SER explained that their institution focuses on the risk assessed, especially the dollar amount of the loan, and the first option would allow them to maintain that focus. That SER further stated that a more prescribed approach would increase their costs and affect their ability to offer services that utilize AVMs, and that the CFPB should allow AVM use to evolve rather than shut down useful innovation with specific controls. Another SER said that low-risk home equity loans for relatively small amounts should not have to meet the same requirements as half-million-dollar loans and that, otherwise, the small-dollar mortgages would become unaffordable. One SER stated that a prescriptive rule would result in a complex and expansive regulation because it would need to address risk factors across many aspects of the market, including product type, geographic area, loan purpose and loan size.[91]

Almost all other stakeholders who commented on the quality control options in the SBREFA Outline preferred the principles-based approach, largely for the same reasons that the SERs did. Some of these stakeholders, particularly those involved in the appraisal and valuation market, suggested that the CFPB should try to foster standardization in the market, while also allowing flexibility. Several of these commenters suggested that the market would benefit from some form of credential or certification for AVM providers.

The SBREFA Panel recommended that the CFPB consider providing additional clarity in the notice of proposed rulemaking (NPRM) on what the rule would require of small entities in order to comply with the quality control standards and seek comment on improving that clarity. In addition, the Panel recommended that the CFPB consider seeking comment in the NPRM on potential methods to facilitate compliance targeted on small financial institutions. The Panel further suggested that such methods considered could include clear instruction on how a small entity can monitor compliance regarding use of third-party AVM vendors. The CFPB notes that the proposed rule requests comment on the possible use of additional guidance.

7. Specifying a Nondiscrimination Quality Control Standard

Section 1125 provides the agencies the authority to account for any other such factor that the agencies determine to be appropriate.[92] In the SBREFA process, the CFPB was considering proposing that it exercise its authority under section 1125 to specify a fifth quality control factor designed to ensure that AVMs used for covered transactions comply with applicable nondiscrimination laws. The CFPB was considering proposing two alternative methods—a principles-based option or a prescriptive option—for compliance with the nondiscrimination factor,

[91] The SERs also discussed other topics besides the direct question of whether the CFPB should adopt the policies and procedures or the prescriptive rule options, such as their current policies and procedures and their concerns about lacking the expertise to effectively monitor AVM vendor compliance with the rule. *See* CFPB, *Final Report of the Small Business Review Panel on the CFPB's Proposals and Alternatives Under Consideration for the Automated Valuation Model (AVM) Rulemaking* 24–30 (May 13, 2022), *available at https://files.consumerfinance.gov/f/documents/cfpb_avm_final-report_2022-05.pdf.*

[92] 12 U.S.C. 3354(a)(5).

consistent with the first four quality control factors.

During the SBREFA process, SERs uniformly voiced concern regarding how they can assess AVM compliance with applicable nondiscrimination law or know that they are in violation of the law. SERs stated that it is impractical for them to assess AVM fair lending performance because they are not equipped to validate the algorithms that AVM providers use. SERs commented that, as small institutions, they do not have the staff, the data, or the scale to assess AVM model results meaningfully. In addition, SERs stated that lenders do not have access to the data or methodology used by the AVM because the data is proprietary.

SERs expressed that it is important to ensure fairness in AVM development and application, including ensuring that AVMs do not rely on data that results in inadvertent discrimination. However, SERs stated that the burden should be on AVM providers to comply with nondiscrimination requirements, and the providers should be regulated.

In addition, SERs expressed that there is sufficient fair lending regulatory infrastructure already in place and that adding a fair lending requirement to the quality control standards for AVMs would be duplicative and, therefore, unnecessary. SERs further stated that the other four quality control standards required by statute already account for fair lending compliance.

A number of other stakeholders, including several trade associations, echoed many of the SERs' concerns about specifying a nondiscrimination quality control standard. A coalition of consumer and civil rights groups stated that while they fully support the addition of nondiscrimination as a fifth quality control standard, the agencies should incorporate nondiscrimination into each of the quality control standards, asserting that fair lending risk should not be separated from safety and soundness risk.

The SBREFA Panel recommended that the CFPB consider providing additional clarity in the NPRM on what the rule would require of institutions in order to comply with a nondiscrimination quality control factor and seek comment on improving that clarity. In addition, the Panel recommended that the CFPB consider seeking comment in the NPRM on potential methods to facilitate compliance targeted on small financial institutions, such as providing clear and simple instructions, allowing some form of safe harbor, or some other method or methods. Such methods considered could include clear instruction on how a small entity can monitor compliance regarding use of third-party AVM vendors.

8. Implementation Period

Title XIV of the Dodd-Frank Act requires an implementation period within 12 months after issuance of the interagency final rule.[93] Many SERs and an AVM testing company providing feedback on the SBREFA Outline stated that small entities would need more than the statutory 12-month period to comply with the eventual rule. Those stakeholders highlighted the potential nondiscrimination quality control factor as an aspect of the potential rule that would be particularly time consuming to implement. One SER and a trade association stated that the implementation period should be at least 12 months while a research center estimated only six months would be necessary. The SBREFA Panel recommended that the CFPB continue to explore the appropriateness of an implementation period longer than 12 months.

IV. Paperwork Reduction Act

Certain provisions of the proposed rule contain ''collection of information'' requirements within the meaning of the Paperwork Reduction Act (PRA) of 1995.[94] In accordance with the requirements of the PRA, the agencies may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a current Office of Management and Budget (OMB) control number.

The proposed rule would establish quality control standards mandated by the Dodd-Frank Act for the use of AVMs by mortgage originators and secondary market issuers in determining the collateral worth of a mortgage secured by a consumer's principal dwelling. Section 1473(q) of the Dodd-Frank Act amended title XI to add section 1125 relating to the use of AVMs in valuing real estate collateral securing mortgage loans. Section 1125 directs the agencies to promulgate regulations to implement quality control standards regarding AVMs.

The proposed rule would require supervised mortgage originators and secondary market issuers that engage in credit decisions or covered securitization determinations themselves, or through or in cooperation with a third-party or affiliate, to adopt and maintain policies, practices, procedures, and control systems to ensure that AVMs used in these transactions adhere to quality control standards designed to:

(a) Ensure a high level of confidence in the estimates produced;

(b) Protect against the manipulation of data;

(c) Avoid conflicts of interest;

(d) Require random sample testing and reviews; and

(e) Comply with applicable nondiscrimination laws.

The quality control standards in the proposed rule are applicable only to covered AVMs, which are AVMs as defined in the proposed rule. The proposed rule would require the regulated mortgage originators and secondary market issuers to adopt policies, practices, procedures, and control systems to ensure that AVMs adhere to the specified quality control standards whenever they use covered AVMs while engaging in certain credit decisions or covered securitization determinations.

As a result, the proposed rule creates new recordkeeping requirements. The agencies are revising their current information collections related to real estate appraisals and evaluations. The OMB control number for the OCC is 1557–0190, the Board is 7100–0250, the FDIC is 3064–0103, and the NCUA is 3133–0125. These information collections will be extended for three years, with revision. In addition to accounting for the PRA burden incurred as a result of this proposed rule, the agencies are also updating and aligning their information collections with respect to the hourly burden associated with the Guidelines.

The information collection requirements contained in this proposed rule have been submitted by the OCC, the FDIC, and the NCUA to the OMB for review and approval under section 3507(d) of the PRA [95] and section 1320.11 of the OMB's implementing regulations.[96] The Board reviewed the proposed rule under the authority delegated to the Board by OMB.

Comments are invited on:

(a) Whether the collections of information are necessary for the proper performance of the agencies' functions, including whether the information has practical utility;

(b) The accuracy of the estimate of the burden of the information collections, including the validity of the methodology and assumptions used;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the information collections on

[93] 12 U.S.C. 1400(c)(1)(B).

[94] 44 U.S.C. 3501–3521.

[95] 44 U.S.C. 3507(d).

[96] 5 CFR 1320.

respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

All comments will become a matter of public record. Comments on the collections of information should be sent to the address listed in the **ADDRESSES** section of this document. A copy of the comments may also be submitted to the OMB desk officer by mail to U.S. Office of Management and Budget, 725 17th Street NW, #10235, Washington, DC 20503, or by facsimile to 202–395–6974; or email to *oira_submission@omb.eop.gov,* Attention, Federal Banking Agency Desk Officer.

Proposed Information Collection

Title of Information Collection: Recordkeeping and Disclosure Requirements and Provisions Associated with Real Estate Appraisals and Evaluations.

Frequency of Response: Annual and event generated.

Affected Public: Businesses, other for-profit institutions, and other not-for-profit institutions.

Respondents:

OCC: National banks, Federal savings associations.

Board: State member banks (SMBs), bank holding companies (BHCs), nonbank subsidiaries of BHCs, savings and loan holding companies (SLHCs), nondepository subsidiaries of SLHCs, Edge and agreement corporations, U.S. branches and agencies of foreign banks, and any nonbank financial company designated by FSOC to be supervised by the Board.

FDIC: Insured state nonmember banks and state savings associations, insured state branches of foreign banks.

NCUA: Private Sector: Not-for-profit institutions.

General Description of Report:

For federally related transactions, title XI requires regulated institutions [97] to obtain appraisals prepared in accordance with USPAP promulgated by the Appraisal Standards Board of the Appraisal Foundation. Generally, these standards include the methods and techniques used to estimate the market value of a property as well as the requirements for reporting such analysis and a market value conclusion in the appraisal. Regulated institutions are expected to maintain records that demonstrate that appraisals used in their real estate-related lending activities comply with these regulatory requirements.

The proposed rule would require supervised mortgage originators and secondary market issuers that engage in credit decisions or covered securitization determinations themselves, or through or in cooperation with a third-party or affiliate, to adopt and maintain policies, practices, procedures, and control systems to ensure that AVMs used in these transactions adhere to quality control standards designed to:

(a) Ensure a high level of confidence in the estimates produced;

(b) Protect against the manipulation of data;

(c) Avoid conflicts of interest;

(d) Require random sample testing and reviews; and

(e) Comply with applicable nondiscrimination laws.

Current Action: The proposed rule creates new recordkeeping requirements in connection with adopting and maintaining policies, practices, procedures, and control systems. The agencies estimate that the new recordkeeping burden associated with the proposed rule would result in an implementation burden of 13.33 hours per respondent and an annual ongoing burden of 5 hours per respondent. In addition to accounting for the PRA burden incurred as a result of this proposed rule, the agencies are also updating and aligning their information collections (IC) with respect to the hourly burden associated with the Guidelines. This would result in an annual ongoing burden of 10 hours per respondent for recordkeeping and an annual ongoing burden of 5 hours per respondent for disclosure.

OCC Burden

The CFPB, in consultation with OMB, and the FHFA do not believe that they have any supervised entities that will incur burden as a result of this proposed rule and therefore will not be making a submission to OMB. Comments are invited on this determination by the CFPB and the FHFA.

V. Regulatory Flexibility Act Analysis

A. OCC

The RFA requires an agency, in connection with a proposed rule, to prepare an Initial Regulatory Flexibility Analysis describing the impact of the rule on small entities (defined by the Small Business Administration (SBA) for purposes of the RFA to include commercial banks and savings institutions with total assets of $850 million or less and trust companies with total revenue of $47.5 million or less) or to certify that the proposed rule would not have a significant economic impact on a substantial number of small entities.

The OCC has assessed the burden of the proposed rule and has determined that the costs associated with the proposed rule would be limited to reviewing the rule; ensuring that existing practices, procedures, and control systems adequately address the four statutory quality control standards; and adopting policies, practices, procedures, and control systems to ensure that AVMs adhere to quality control standards designed to comply with applicable nondiscrimination laws. To estimate expenditures, the OCC reviewed the costs associated with the activities necessary to comply with the proposed rule. These include an estimate of the total time required to implement the proposed rule and the estimated hourly wage of bank employees who may be responsible for the tasks associated with achieving compliance with the proposed rule. The OCC used a bank employee compensation rate of $120 per hour.[98]

The OCC currently supervises approximately 661 small entities.[99] The proposed rule would impact approximately 614 of these small entities. The OCC estimates the annual cost for small entities to comply with the proposed rule would be approximately $21,600 per bank (180 hours × $120 per hour). In general, the OCC classifies the economic impact on a small entity as significant if the total estimated impact in one year is greater than 5 percent of the small entity's total annual salaries and benefits or greater than 2.5 percent of the small entity's total non-interest expense. Based on these thresholds, the OCC estimates that the proposed rule would have a significant economic impact on 26 small entities, which is not a substantial number. In general, for RFA purposes, the OCC classifies substantial as 5 percent or more of OCC-supervised small entities. Therefore, the OCC concludes that the proposed rule would not have a significant economic impact on a substantial number of small entities.

B. Board

The Board is providing an initial regulatory flexibility analysis with respect to this proposal. The RFA requires an agency to consider whether the rules it proposes will have a significant economic impact on a substantial number of small entities. In connection with a proposed rule, the RFA requires an agency to prepare an Initial Regulatory Flexibility Analysis describing the impact of the rule on small entities or to certify that the proposed rule would not have a significant economic impact on a substantial number of small entities. An initial regulatory flexibility analysis must contain (1) a description of the reasons why action by the agency is being considered; (2) a succinct statement of the objectives of, and legal basis for, the proposed rule; (3) a description of, and, where feasible, an estimate of the number of small entities to which the proposed rule will apply; (4) a description of the projected reporting, recordkeeping, and other compliance requirements of the proposed rule, including an estimate of the classes of small entities that will be subject to the requirement and the type of professional skills necessary for preparation of the report or record; (5) an identification, to the extent practicable, of all relevant Federal rules

[98] To estimate wages the OCC reviewed May 2021 data for wages (by industry and occupation) from the U.S. Bureau of Labor Statistics (BLS) for credit intermediation and related activities (NAICS 5220A1). To estimate compensation costs associated with the rule, the OCC uses $119.63 per hour, which is based on the average of the 90th percentile for six occupations adjusted for inflation (6.1 percent as of Q1 2022), plus an additional 32.8 percent for benefits (based on the percent of total compensation allocated to benefits as of Q4 2021 for NAICS 522: credit intermediation and related activities).

[99] The OCC bases its estimate of the number of small entities on the SBA's size thresholds for commercial banks and savings institutions, and trust companies, which are $850 million and $47.5 million, respectively. Consistent with the General Principles of Affiliation in 13 CFR 121.103(a), the OCC counts the assets of affiliated financial institutions when determining whether to classify an OCC-supervised institution as a small entity. The OCC uses December 31, 2022, to determine size because a ''financial institution's assets are determined by averaging the assets reported on its four quarterly financial statements for the preceding year.'' *See* footnote 8 of the SBA's *Table of Size Standards.*

which may duplicate, overlap with, or conflict with the proposed rule; and (6) a description of any significant alternatives to the proposed rule which accomplish its stated objectives.

The Board has considered the potential impact of the proposal on small entities in accordance with the RFA. Based on its analysis and for the reasons stated below, the proposal is not expected to have a significant economic impact on a substantial number of small entities. Nevertheless, the Board is publishing and inviting comment on this initial regulatory flexibility analysis. The Board will consider whether to conduct a final regulatory flexibility analysis after any comments received during the public comment period have been considered.

1. Reasons Why Action Is Being Considered by the Board

As discussed above, the Dodd-Frank Act amended title XI to add a new section governing the use of AVMs in mortgage lending and directing the agencies to promulgate regulations to implement specified quality control standards. The proposal serves to implement this statutory mandate.

2. The Objectives of, and Legal Basis for, the Proposal

The proposed rule would implement statutorily mandated quality control standards for the use of AVMs. The Board would adopt the proposal pursuant to section 1125 of title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.[100]

3. Estimate of the Number of Small Entities

The proposal would apply to Board-regulated small entities that are mortgage originators or secondary market issuers. There are approximately 472 state member banks and approximately 2,799 bank holding companies and savings and loan holding companies that qualify as small entities for purposes of the RFA.[101]

4. Description of the Compliance Requirements of the Proposal

The proposal would require Board-regulated small entities that are mortgage originators or secondary market issuers to adopt and maintain policies, practices, procedures, and control systems to ensure that AVMs used in credit decisions or covered securitization determinations adhere to specified quality control standards. These quality control standards must ensure a high level of confidence in the estimates produced, protect against the manipulation of data, avoid conflicts of interest, and require random sample testing and reviews and comply with applicable nondiscrimination laws. To the extent that small entities do not already maintain adequate policies, practices, procedures, and control systems, they could incur administrative costs to do so. It is likely that the majority of Board-regulated small entities that are mortgage originators or secondary market issuers either do not use AVMs in credit decisions or covered securitization determinations would already be in compliance with the proposed specified standards or could become compliant with relatively minor modifications to their current practices.[102]

Board staff estimates that impacted Board-supervised small entities would spend 160 hours establishing or modifying policies, practices, procedures, and control systems, at an hourly cost of $99.32.[103] The estimated aggregate initial administrative costs of the proposal to Board-supervised small entities amount to $7,500,646 or $15,891.00 per bank[104] and ongoing costs are expected to be small when measured by small entities' annual expenses.

5. Consideration of Duplicative, Overlapping, or Conflicting Rules and Significant Alternatives to the Proposal

The Board has not identified any Federal statutes or regulations that would duplicate, overlap, or conflict with the proposal. The Board is required by statute to promulgate regulations to implement the quality control standards required under section 1125 of title XI, and thus no significant alternatives are available.[105]

Question 38. How frequently do bank holding companies and savings and loan holding companies that meet the definition of small entity use AVMs to engage in making credit decisions or securitization determinations?

Question 39. Is the number of hours estimated to establish policies, procedures and control systems to comply with the rule realistic for small institutions. If not, what number is hours would be more appropriate?

C. FDIC

The RFA generally requires an agency, in connection with a proposed rule, to prepare and make available for public comment an initial regulatory flexibility analysis that describes the impact of the proposed rule on small entities.[106] However, an initial regulatory flexibility analysis is not required if the agency certifies that the proposed rule will not, if promulgated, have a significant economic impact on a substantial number of small entities. The SBA has defined ''small entities'' to include banking organizations with total assets of less than or equal to $850 million.[107] Generally, the FDIC considers a significant economic impact

[100] 12 U.S.C. 3354.

[101] Under regulations issued by the SBA, a small entity includes a depository institution, bank holding company, or savings and loan holding company with total assets of $850 million or less. *See Small Business Size Standards: Adjustment of Monetary-Based Size Standards, Disadvantage Thresholds, and 8(a) Eligibility Thresholds for Inflation,* 87 FR 69118 (Nov. 17, 2022). Consistent with the General Principles of Affiliation in 13 CFR 121.103, the Board counts the assets of all domestic and foreign affiliates when determining if the Board should classify a Board-supervised institution as a small entity. Small entity information for state member banks is based on Reports of Condition and Income average assets from September 30, 2022. Small entity information for bank holding companies and savings holding companies is based on average assets reflected in June 30, 2022 *Parent Company Only Financial Statements for Small Holding Companies* (FR Y–9SP) data.

[102] For example, the Board has provided guidance to most such entities on use of AVMs. *See Interagency Appraisal and Evaluation Guidelines,* 75 FR 77450, 77468 (Dec. 10, 2010).

[103] To estimate wages, the Federal Reserve reviewed May 2021 estimates for wages (by industry and occupation) from the BLS for credit intermediation and related activities (NAICS 5220A1). To estimate compensation costs associated with the rule. the Federal Reserve uses $99.32 per hour, which is based on the average of the 90th percentile for six occupations adjusted for inflation (2 percent as of Q1 2021), plus an additional 33.4 percent for benefits (based on the percent of total compensation allocated to benefits as of Q4 2020 for NAICS 522: credit intermediation and related activities). The number of hours, 160, to establish policies, procedures and control systems is an estimate based on supervisory experience.

[104] This analysis assumes that the majority of credit decision and securitization determinations are performed at depository institutions. Therefore, only the number of State member depository institutions that are small entities, 472, are included in the calculation of administrative costs. The impact on the majority of small bank holding companies and savings and loan holding companies is expected to be minimal.

[105] 12 U.S.C. 3354.

[106] 5 U.S.C. 601 *et seq.*

[107] The SBA defines a small banking organization as having $850 million or less in assets, where an organization's ''assets are determined by averaging the assets reported on its four quarterly financial statements for the preceding year.'' *See* 13 CFR 121.201 (as amended by the SBA on Nov. 17, 2022, *Small Business Size Standards: Adjustment of Monetary-Based Size Standards, Disadvantage Thresholds, and 8(a) Eligibility Thresholds for Inflation,* published at 87 FR 69118, effective December 19, 2022). In its determination, the ''SBA counts the receipts, employees, or other measure of size of the concern whose size is at issue and all of its domestic and foreign affiliates.'' *See* 13 CFR 121.103. Following these regulations, the FDIC uses an insured depository institution's affiliated and acquired assets, averaged over the preceding four quarters, to determine whether the insured depository institution is ''small'' for the purposes of RFA.

to be a quantified effect in excess of 5 percent of total annual salaries and benefits or 2.5 percent of total noninterest expenses. The FDIC believes that effects in excess of one or more of these thresholds typically represents a significant economic impact for an FDIC-supervised institution.

The FDIC does not believe that the proposed rule, if adopted, would have a significant economic effect on a substantial number of small institutions. However, since some expected effects of the proposed rule are difficult to assess or accurately quantify given current information, the FDIC has included an Initial RFA Analysis in this section.

1. Why Action Is Being Considered

This action would fulfill the statutory mandate in the Dodd-Frank Act that the agencies promulgate regulations to implement quality control standards for AVMs used by mortgage originators and secondary market issuers to determine the collateral worth of a mortgage secured by a consumer's principal dwelling.[108]

2. Policy Objectives of, and Legal Basis for, the Proposed Rule

Policy objectives. The overarching policy objectives of this proposed rule are to promote credibility and integrity in the use of AVMs for the purpose of residential mortgage lending valuation, thereby supporting safe and sound banking practices as well as helping ensure compliance with applicable nondiscrimination laws. If adopted, the proposed rule would achieve these objectives by, among other things, incorporating the principles stated in existing guidance [109] through requiring regulated financial institutions to adopt and maintain policies, practices, procedures, and control systems to ensure that AVMs adhere to a set of quality control standards, and by directly linking nondiscrimination law to institutions' AVM policies, practices, procedures, and controls. Further, as discussed above in Section II of the **SUPPLEMENTARY INFORMATION**, the proposal provides institutions the flexibility to tailor their quality control standards for AVMs as appropriate based on the size of the institutions and the risk and complexity of transactions for which they will use covered AVMs.

Legal basis. The Dodd-Frank Act amended title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 by adding a new section 1125 requiring AVMs to adhere to certain quality control standards. Section 1125 directs the FDIC, OCC, FRB, NCUA, CFPB, and FHFA in consultation with the staff of the Appraisal Subcommittee and the Appraisal Standards Board of the Appraisal Foundation, to promulgate regulations to implement quality control standards regarding covered AVMs.[110] The proposed rule would require institutions that engage in certain credit decisions or securitization determinations to adopt policies, practices, procedures, and control systems designed to ensure that AVMs used in determining the value of mortgage collateral secured by a consumer's principal dwelling to adhere to quality control standards designed to: ensure a high level of confidence in the estimates produced by AVMs; protect against the manipulation of data; seek to avoid conflicts of interest; require random sample testing and reviews; and account for any other such factor that the agencies determine to be appropriate. The agencies exercised their statutory authority to propose a fifth quality control standard that would require institutions to adopt policies, practices, procedures, and control systems to ensure that AVMs adhere to quality control standards designed to assure compliance with applicable nondiscrimination laws.

3. Initial Regulatory Flexibility Act Analysis

A description and an estimate of the number of small institutions to which the proposed rule will apply. As of December 31, 2022, there were 3,038 FDIC-supervised institutions, and 2,356 of them were small institutions for the purposes of the RFA.[111] Of these, 2,284 FDIC-supervised small institutions reported a non-zero value for mortgagees on their books.[112] Therefore, the FDIC estimates that 2,284 small institutions could be subject to the proposed rule. The FDIC lacks data on the number of small FDIC-supervised institutions that use AVMs for their mortgage originations. Subject matter experts believe that up to approximately 10 percent of all FDIC-supervised institutions currently use an AVM for mortgage origination decisions, loan modification decisions, and securitization decisions covered by the proposed rule. However, based on supervisory experience, these experts believe a smaller percentage of small FDIC-supervised institutions use AVMs because they believe AVM use is strongly positively correlated with institution size.

Expected Effects. The costs and benefits discussed in this section apply to any small FDIC-supervised institution that would be directly subject to the proposed rule, in particular the 2,284 FDIC-supervised small institutions estimated to be affected by the proposed rule.

Costs. The proposed rule would, if adopted, generally reflect existing Guidelines, supervisory expectations, and statutory obligations regarding the use of AVMs by supervised institutions. As mentioned, since 2010, the FDIC has provided supervisory Guidelines on the use of AVMs by its regulated institutions.[113] The FDIC believes the covered institutions [114] using AVMs, including small institutions, have considered the Guidelines in developing policies, procedures, practices, and control systems, and therefore should also be consistent with the proposed rule's quality control standards 1 through 4. This belief is supported by a review of ten years of FDIC bank examination reports, which revealed that just 0.2 percent of the examinations flagged shortcomings in AVM management practices.[115] This suggests that the labor hours required to implement the four quality control standards would be relatively modest.

The fifth quality control standard is consistent with existing applicable nondiscrimination laws. For example, the ECOA and its implementing Regulation B, bar discrimination on a prohibited basis in any aspect of a credit

[108] The legal basis is described in item (2) below.

[109] The guidance is discussed below. It consists of FDIC guidance on appraisals and evaluation and FDIC guidance on model risk.

[110] 12 U.S.C. 3354(a) through (b).

[111] Based on Call Reports data as of December 31, 2022.

[112] Based on Call Reports data as of December 31, 2022. The variable LNRERES represents balances for 1–4 family residential real estate loans.

[113] The FDIC provides guidance on the use of AVMs by their regulated institutions in Appendix B to the Interagency Appraisal and Evaluation Guidelines (''Guidelines'') (75 FR 77450, Dec. 10, 2010). The Guidelines advise that institutions should establish policies, practices, and procedures governing the selection, use, and validation of AVMs, including steps to ensure the accuracy, reliability, and independence of an AVM. In addition, the FDIC has issued guidance on model risk management practices (Model Risk Guidance) that provides supervisory guidance on validation and testing of computer-based financial models (FDIC FIL–22–2017, dated June 7, 2017). *See generally* Section I.A. of **SUPPLEMENTARY INFORMATION**.

[114] The term ''covered institutions'' refers to financial institutions that would be subject to the proposed rule.

[115] The search of nearly 22,000 FDIC Reports of Examination from June 2011 to June 2021 revealed just 44 instances of a flag indicating an institution's AVM use or management practices needed to improve. Therefore, 99.8 percent of the examination reports do not mention AVM practices and imply satisfactory practices (or no AVM use).

transaction.[116] Similarly, the Fair Housing Act [117] prohibits unlawful discrimination in all aspects of residential real estate-related transactions, including valuations of residential real estate. However, the FDIC has not previously issued guidance or regulations that directly address nondiscrimination laws as it relates to expected or required AVM policies, procedures, practices, and controls. As a result, some covered institutions may not have fully integrated nondiscrimination laws directly into their AVM policies and risk management practices.

As mentioned, the FDIC lacks information on the labor hours and costs that would be incurred by covered institutions to comply with the proposed rule. Therefore, it assumes that small FDIC-supervised institutions would expend 120 labor hours, on average, to comply with the proposed rule during the first year of implementation, and 40 labor hours, on average, in each successive year. This estimate assumes that in the first year, institutions would need to review and understand the implications of the newly enacted rule, conduct a review of their own policies, practices, procedures, and controls for their consistency with the rule, identify any deficiencies, and take corrective actions as needed. In the second year, the institutions' expected costs would be lower on average, as they limit their actions to primarily reviewing and maintaining their compliance.

This analysis subdivides the assumed compliance-related average labor hours spent by covered institutions into two types: (1) burdens under the Paperwork Reduction Act (PRA), and (2) those for non-PRA compliance activities. For PRA burdens, based on supervisory experience the agency assumes that on average, covered FDIC-supervised small institutions using AVMs for originations or modifications would spend 40 hours in the first year and 5 hours in each subsequent year to meet the recordkeeping requirements.

The FDIC believes non-PRA requirements may impose additional burdens on small institutions. For the first four quality control standards, these requirements may include, for example, back-testing of AVM outputs relative to property sale prices to understand the degree of confidence they merit, and the development and implementation of safeguards against data manipulation. The agency believes covered small institutions' additional non-PRA compliance activities that are attributable to the proposed rule would be relatively modest for the first four quality control standards, largely because the 2010 Guidelines already encourage them to conduct such activities. Covered small institutions may initially expend greater levels of effort to comply with the fifth quality control standard. The FDIC lacks data on the time required by the institutions to develop and implement the nondiscrimination quality control standard.

Based on supervisory experience and subject matter expertise, the FDIC assumes that all non-PRA compliance activities would average 80 hours per institution in the first year of the proposed rule's adoption and 35 hours in subsequent years. Summing assumed burden hours for both PRA (recordkeeping) activities and non-PRA activities associated with the proposed rule, the FDIC estimates that average first year compliance labor hours per covered institution would equal 120 (40 PRA + 80 non-PRA), and second year compliance labor hours would equal 40 (5 PRA + 35 non-PRA). These combined compliance labor hours represent total estimated regulatory burden hours attributable to the proposed rule.

This method multiplies the assumed average number of hours per year required to comply with the proposed rule by the weighted average estimated total compensation rate for each labor category expected to be involved in associated activities.[118] The resulting product represents the cost estimate.

The FDIC lacks access to data on the number of small FDIC-supervised institutions that use AVMs for mortgage originations or loan modifications for owner-occupied residential real estate, making it difficult to estimate reliably the AVM use rates by covered small institutions. Therefore, this illustrative exercise presents three sets of potential cost figures. An upper-bound estimate assumes that all small FDIC-supervised institutions that have residential real estate loan balances use an AVM. A second estimate assumes that 10 percent of small FDIC-supervised institutions with mortgage balances use an AVM (an intermediate estimate is also presented). These assumed AVM use rates exceed the expected rates for small institutions, according to subject matter experts who suggest that only a small fraction use them in practice. Therefore, the FDIC believes that the resulting range of cost estimates likely tends to overestimate potential compliance costs.

The analysis assumes the current number of FDIC-supervised small institutions with residential mortgage lending activity (2,284) is representative of the number of covered institutions in the year of implementation and in successive years. The aggregate estimated compliance costs would span the range from (assuming a 10 percent AVM use rate) $2.6 million in the first year and $0.9 million [119] in the second, to $26.4 million in the first year and $8.8 million [120] in successive years (assuming 100 percent AVM adoption). An intermediate assumed 35 percent AVM use rate would generate estimated first-year costs of $9.2 million and subsequent year costs of $3.0 million.[121]

Further analysis shows that the estimated costs described above would not impose a significant economic impact on a substantial number of small institutions. The method estimates the average cost per institution by multiplying the assumed number of labor hours in each year by the estimated weighted average hourly labor cost rate. This yields the average costs per institution in year 1 (approximately

[116] 15 U.S.C. 1691(a) (prohibiting discrimination on the basis of race, color, religion, national origin, sex or marital status, age (provided the applicant has the capacity to contract), because all or part of the applicant's income derives from any public assistance program, or because the applicant has in good faith exercised any right under the Consumer Credit Protection Act); *see also* 12 CFR part 1002.

[117] 42 U.S.C. 3605 (prohibiting discrimination because of race, color, religion, national origin, sex, handicap, or familial status in residential real estate-related transactions); 42 U.S.C. 3605(b)(2) (defining ''real estate-related transactions'' to include the ''selling, brokering, or appraising of residential real property''); *see also* 24 CFR part 100.

[118] The assumed distribution of occupation groups involved in the actions taken by institutions in response to the proposed rule in year 1 include Financial Analysts (40 percent of hours), Compliance Officers (40 percent), Lawyers (15 percent), and Executives and Managers (5 percent). In year 2 and beyond, the assumed distribution is Financial Analysts (50 percent of hours), Compliance Officers (40 percent), Lawyers (5 percent), and Executives and Managers (5 percent). These combinations of occupations results in an overall estimated hourly total compensation rate of $96.57. This average rate is derived from the BLS' Specific Occupational Employment and Wage Estimates, and BLS' Cost of Employee Compensation data.

[119] Calculations are as follows. Lower estimate: Year 1: $2.6 million = 274,080 hours × $96.57 per hour × 10% AVM use rate. Year 2: $0.9 million = 91,360 hours × $96.57 per hour × 10% use rate.

[120] Upper-bound estimate: Year 1: $26.4 million = 274,080 hours × $96.57 per hour × 100% AVM use rate. Year 2: $8.8 million = 91,360 hours × $96.57 per hour × 100% use rate.

[121] Year 1: $9.2 million = 274,080 hours × $96.57 × 35% use rate. Year 2: $3.0 million = 91,360 hours × $96.57 × 35% use rate. The 35 percent assumed AVM use rate is based on internal analysis of 2021–22 Y–14M data by the FRB and applies to large institutions not regulated by the FDIC. Under the assumption that AVM use rates are strongly positively correlated with institution size, this analysis expects this use figure substantially exceeds the actual rate applicable to FDIC-supervised small institutions.

$11,600) and year 2 (approximately $3,900).[122] The method compares these average costs to each covered institution's annual labor costs and annual non-interest expenses to ascertain whether they may face substantial economic impacts. Year 1 estimated average costs exceed the 5 percent threshold of annual salaries and benefits for 11 (0.48 percent) of the institutions, and year 2 average costs do not surpass the threshold for any of the institutions. Similarly, year 1 estimated average costs top the 2.5 percent threshold of annual noninterest expenses for 11 (0.48 percent) of the institutions, and year 2 average costs do not exceed the threshold for any of the institutions.

The compliance costs incurred by any one covered institution is likely to vary with the volume of covered AVM activity, the degree to which current AVM compliance activities differ from the robust quality control standards in the proposed rule, or the usage of in-house or third-party AVM service providers.

Benefits. If adopted, the proposed rule would confer public benefits by promoting the credibility and integrity of residential real estate valuations used by covered institutions, thereby supporting their safe and sound operations, and helping ensure that the use of AVMs by institutions is consistent with nondiscrimination laws. These benefits cannot be reliably quantified by the FDIC.

These benefits are predicated on the premise that some institutions would enhance their AVM policies, practices, procedures, and controls in response to the proposal's first four quality control standards, despite most institutions already generally following the principles in existing Guidelines. At the same time, the fifth standard may be more likely to generate changes in institutions' policies and procedures and potential associated benefits, than their responses to the first four standards. Generally, to the extent the proposal drives actions that result in more accurate and credible AVM valuations of residential real estate, it may contribute to more efficient underwriting, lending decisions, and risk management among covered institutions. Such effects may be derived through multiple channels, for example:

—*Improved risk information and its impacts:* Improved valuation accuracy would be expected to result in more precise residential property credit risk assessment and pricing. Generally, valuation error, whether generated by an AVM or appraiser, may reduce the precision of risk measurement and pricing, for instance, by distorting loan-to-value (LTV) ratios. This misvaluation affects both the immediate transaction and the downstream users of valuation data to inform loan decisions, valuations of comparable properties, and default risk estimation.[123] More accurate risk information would be expected to enhance loan performance [124] and reduce loss-given-default [125] by more tightly matching loan decisions and terms to actual risk exposures. In the aggregate, more accurate risk information may promote the safety and soundness of the financial system by reducing the likelihood of large negative asset valuation shocks and by enhancing economy-wide mortgage default estimates.[126] For example, research identifies flawed home appraisals as a contributor to the 2008 financial crisis.[127]

—*Potentially more equitable mortgage lending outcomes.* Despite statutory obligations requiring nondiscrimination in all aspects of residential real estate transactions, including property valuations, preliminary research continues to find evidence of disparities in residential property values along racial and ethnic lines,[128] mortgage approval rates, and lending terms.[129] Additionally, research suggests that appraised values that more frequently result in valuations below sales contract prices in minority neighborhoods may play a role in disparities for housing-related outcomes.[130]

Imprecision in AVM results may contribute to the propagation of racial and ethnic disparities through two channels. First, AVMs using comparable sales as inputs may include sale prices

[122] The estimated average cost per institution is the same for all assumed AVM use rates.

[128] The average value of single-family homes in majority White communities ($424,810) in the U.S. was more than double that of single-family homes in majority Black ones ($169,855) in 2018. Neal, Michael, Sarah Strochak, Linna Zhu, and Caitlin Young, 2020, ''How Automated Valuation Models Can Disproportionately Affect Majority Black Neighborhoods.'' Urban Institute Housing Finance Policy Center.

[129] Analysis of data from the Federal Housing Administration and from the GSEs shows that mortgage loan interest rates for home purchases charged by lenders to equivalent-risk minority borrowers have been persistently elevated relative to rates for non-minority borrowers, especially in high minority share neighborhoods. Bartlett, Robert, Adair Morse, Richard Stanton, and Nancy Wallace, 2022, ''Consumer Lending Discrimination in the Fintech Era.'' *Journal of Financial Economics* 143: 30–56. Research suggests that elevated loan denial rates among Black borrowers is largely explained by differences in applicant risk characteristics and other underwriting factors but still estimates a 2 percentage point greater denial rate for Black applicants after controlling for them. Bhutta, Neil, Aurel Hizmo, and Daniel Ringo, 2022, ''How Much Does Racial Bias Affect Mortgage Lending? Evidence from Human and Algorithmic Credit Decisions.'' Finance and Economics Discussion Series 2022–067. Federal Reserve Board.

[130] Research by Freddie Mac found that 7 percent of appraisals in majority White census tracts had appraisal values below sales contract prices, while majority Black tracts had 12 percent, and majority Latino tracts had 15 percent of appraisal values below contract prices. At the individual borrower level, it showed that 6 percent of White applicants' appraisal values fell below their sales contract prices, while this occurred for 8 percent of Black applicants, and 9 percent of Latino applicants. Freddie Mac, 2021, ''Racial and Ethnic Valuation Gaps in Home Purchase Appraisals.'' Economic and Housing Research Note. Studies of appraisal valuation differences by race for home refinancing find smaller gaps. Controlling for unobserved factors across groups, Pinto and Peter (2022) estimate that appraised values for refinancing for Black homeowners is 0.5 percent lower than for Whites for comparable properties within the same Census tract. Using their preferred valuation metric, Ambrose, et al. (2023) find that appraisals for refinancings discount the value of Black-owned homes by 4 percent and the value of Hispanic-owned homes by 2 percent, relative to the valuations of White-owned homes. Pinto, Edward and Tobias Peter, 2022, ''How Common is Appraiser Racial Bias—An Update.'' American Enterprise Institute Housing Center. Ambrose, Brent, James Conklin, N. Edward Coulson, Moussa Diop, and Luis Lopez, 2023, ''Do Appraiser and Borrower Race Affect Mortgage Collateral Valuation?'' SSRN working paper. Research by Fout and Yao (2016) shows that low appraisals substantially increase the likelihood of lower sales prices (from 8 percent for all other appraisals to 51 percent for significantly low appraisals) and delayed/cancelled home sales (from 25 percent to 32 percent). Fout, Hamilton and Vincent Yao, 2016, ''Housing Market Effects of Appraising Below Contract.'' Fannie Mae white paper.

that were below original contract prices due in part to prior appraisals that more commonly undervalue homes in minority communities. Second, less precise AVM valuations in these communities may influence institutions' credit decisions and lending terms to account for the associated risk, potentially making it more difficult for borrowers to obtain financing. Publicly available research on AVM valuation results in minority communities is limited. This preliminary research demonstrates that AVM home valuations in predominantly Black neighborhoods have persistently exhibited substantially greater percentage error rates than AVM valuations in predominantly White neighborhoods.[131] To the extent that the proposed rule fosters actions by covered small institutions that result in more accurate AVM home valuations, this may help to mitigate the potential role of AVMs in persistent disparities in home valuations and their associated impacts.

Overall, the FDIC expects the benefits outlined above, if realized, to contribute to the safety and soundness of the financial system, the institutions, and to the well-being of their customers.

4. An Identification, to the Extent Practicable, of all Relevant Federal Rules Which May Duplicate, Overlap With, or Conflict With the Proposed Rule

The FDIC has not identified any likely duplication, overlap, and/or potential conflict with this proposed rule and any other Federal rule.

5. A Description of Any Significant Alternatives to the Proposed Rule That Accomplish its Stated Objectives.

The FDIC considered the alternative of not including the nondiscrimination element of the proposed rule. However, the FDIC considers the proposed rule to be a more appropriate alternative because research continues to find evidence of disparities in residential property values along racial and ethnic lines, mortgage approval rates and lending terms, despite existing statutory obligations that prohibit discrimination.[132] The ECOA and its implementing Regulation B, bar discrimination on a prohibited basis in any aspect of a credit transaction. Similarly, the Fair Housing Act prohibits unlawful discrimination in all aspects of residential real estate-related transactions, including appraisals of residential real estate. However, preliminary research has demonstrated that AVM home valuations in predominantly Black neighborhoods have persistently exhibited substantially greater percentage error rates than those in predominantly White neighborhoods.[133] Therefore, the FDIC considers the proposed rule to be an appropriate alternative because it establishes a required quality control standard that may foster ongoing and consistent review of AVMs and their output for imprecision or bias.

The FDIC invites comments on all aspects of the supporting information provided in this RFA section. In particular, would this proposed rule have any significant effects on small institutions that the FDIC has not identified?

D. NCUA

The RFA generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment, unless the agency certifies it will not have a *significant* economic impact on a *substantial* number of small entities.[134]

The RFA establishes terms for various subgroups that potentially qualify as a ''small entity''—including ''small business,'' ''small organization,'' and ''small governmental jurisdiction.'' [135] Federally insured credit unions (FICUs), as not-for-profit enterprises, are ''small organizations,'' within the broader meaning of ''small entity.'' Moreover, the RFA permits a regulator (such as the NCUA) to sharpen the definition of ''small organization'' as appropriate for agency activities—provided that definition is subjected to public comment and published in the **Federal Register**.[136] The NCUA's Interpretive Ruling and Policy Statement (IRPS) 15–1 defined ''small entity'' as any FICU with less than $100 million in assets.[137] IRPS 15–1 (with this definition) was published in the **Federal Register**, and the NCUA solicited and reviewed public comments on this definition.[138]

As of December 31, 2022, there were 4,760 FICUs, of which 2,981 (62.6 percent) qualified as ''small entities'' by holding fewer than $100 million in assets.[139] For reasons noted below, the NCUA does not believe the proposed regulatory amendments will have a *significant* economic impact on a *substantial* number of small entities. That said, because most FICUs are small entities and some rule effects are difficult to assess *ex ante,* the NCUA opted to conduct an Initial Regulatory Flexibility Act Analysis.

1. Why Action Is Being Considered

The proposed rule would fulfill the statutory mandate in the Dodd-Frank Act requiring agencies to promulgate quality-control standards for AVMs used by mortgage originators and secondary-market issuers to value principal dwellings used as collateral.

2. Policy Objectives of, and Legal Basis for, the Proposed Rule

The NCUA is proposing the rulemaking to: (1) promote credit union safety and soundness by enhancing the integrity of collateral valuation for residential mortgage lending; and (2) help ensure credit unions comply with all applicable nondiscrimination laws. The legal basis for this rule is section 1125 of Title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, as added by the Dodd-Frank Act—which directs covered agencies (in consultation with the staff of the Appraisal Subcommittee and Appraisal Standards Board of the Appraisal Foundation) to promulgate regulations with AVM quality-control standards.[140] The statute charges the NCUA with enforcing the regulations with respect to financial institutions, defined in Title XI to include Federally

[131] Neal, et al. (2020) and Zhu, Linna, Michael Neal, and Caitlyn Young, 2022, ''*Revisiting Automated Valuation Model Disparities in Majority-Black Neighborhoods, New Evidence Using Property Condition and Artificial Intelligence.*'' Urban Institute Housing Finance Policy Center. However, the studies find the absolute error magnitudes are generally similar across neighborhoods of different racial and ethnic makeups.

[135] 5 U.S.C. 601.

[136] 5 U.S.C. 601(4).

[137] 80 FR 57512 (Sept. 24, 2015).

[138] IRPS 15–1 was preceded by IRPS 81–4, which defined ''small entity'' as any FICU with fewer than $1 million in assets (46 FR 29248 (June 1, 1981)). The NCUA Board updated the definition in 2003 to include FICUs holding fewer than $10 million in assets with IRPS 03–2 (68 FR 31949 (May 29, 2003)). In 2013, IRPS 13–1 increased the threshold to under $50 million in assets (78 FR 4032 (Jan. 18, 2013)). In addition, the Board pledged to review the RFA threshold after two years and thereafter on a three-year cycle, as part of its routine cycle of regulatory review.

[139] These figures come from the *Quarterly Credit Union Data Summary 2022 Q4,* pages i-iii, available at: *https://ncua.gov/files/publications/analysis/quarterly-data-summary-2022-Q4.pdf.* The *Data Summary,* in turn, is compiled using mandatory quarterly 5300 (*i.e.,* call report) and Profile submissions from supervised credit unions.

[140] 12 U.S.C. 3354.

insured credit unions, for which the NCUA is the primary Federal supervisor.[141]

3. Description and Estimate of the Number of Small Institutions Subject to Proposed Rule

The proposed rule would apply to FICUs relying on AVMs in their residential mortgage-lending decisions. Year-end 2022 data indicate 1,876 small-entity FICUs held residential real estate loans (1st or junior liens).[142]

The NCUA does not currently require supervised credit unions to note in their quarterly data submissions whether AVMs are used in mortgage originations/modifications for owner-occupied residential real estate. In its Initial Regulatory Flexibility Analysis elsewhere in this **SUPPLEMENTARY INFORMATION**, the FDIC notes ''subject matter experts believe that up to approximately 10 percent of all FDIC-supervised institutions currently use an AVM for mortgage origination decisions, loan modification decisions, and securitization decisions covered by the proposed rule.'' Applying this 10-percent estimate suggests the proposed rule could apply to up to 188 ''small entity'' credit unions. The FDIC notes that AVM use is likely strongly positively correlated with institution size. Given the small size of most FICUs, it is likely far fewer than 10 percent use AVMs in residential-mortgage underwriting.[143] To be conservative, the 10-percent is used as an upper bound in the following analysis.

4. Projected Reporting, Recordkeeping and Other Compliance Requirements of the Proposed Rule, Including an Estimate of the Classes of Small Entities Which Will Be Subject to the Requirement and the Type of Professional Skills Necessary for Preparation of the Report or Record

As noted, since 2010, the OCC, Board, FDIC, and NCUA have provided supervisory guidance on AVM use to regulated institutions in Appendix B to the Interagency Appraisal and Evaluation Guidelines (Guidelines).[144] The Guidelines recommend that institutions establish policies, practices, and procedures governing the selection, use, and validation of AVMs—including steps to ensure accuracy, reliability, and independence.[145] The quality-control standards in the proposed rule are consistent with those in the Guidelines, existing supervisory expectations, and statutory nondiscrimination requirements. The NCUA believes the proposed rule would largely serve to make explicit standards that have been communicated through less formal, more varied means for over ten years. Accordingly, the NCUA anticipates compliance costs for ''small'' credit unions would likely be minimal.

Based on interviews with examiners and supervisors (about experience with rules largely codifying existing practice as well as the specifics of the AVM rule), the NCUA estimates the upper-bound for compliance burden is 33 labor hours annually. The upper-bound estimate for AVM usage of 188 credit unions implies the aggregate compliance burden should not exceed 6,204 hours. To put this figure in context, the 1,876 credit unions under $100 million with residential mortgages on their books paid their employees an average of $32.56 per hours in salary and benefits.[146] The upper-bound compliance estimate of 6,204 hours, therefore, implies an upper bound on aggregate cost of $202,002.[147] Viewed another way, this aggregate cost is only 0.008 percent of total 2022 non-interest expense for ''small'' credit unions.[148] These figures suggest the compliance cost of the proposed rule would not impose a significant burden on a substantial number of ''small entities.'' [149]

5. An Identification, to the Extent Practicable, of All Relevant Federal Rules Which May Duplicate, Overlap With, or Conflict With the Proposed Rule

The NCUA has not identified any likely duplication, overlap, or potential conflict with this proposed rule and any other Federal rule.

6. Any Significant Alternatives to the Proposed Rule That Accomplish its Stated Objectives

As noted, the proposed rule implements a statutory mandate, thereby limiting the ability of covered agencies to consider alternatives. That said, agencies did exercise authority provided by section 1125 to include the nondiscrimination quality-control factor (given continued evidence of disparities in residential property lending terms along racial and ethnic lines). Further, covered agencies determined this factor should impose little additional burden, given that institutions have a preexisting obligation to comply with all Federal law, including Federal nondiscrimination laws.[150]

The NCUA invites comments on all aspects of the supporting information provided in this RFA section. The NCUA is particularly interested in comments on any significant effects on small entities that the agency has not identified.

E. CFPB

The RFA [151] generally requires an agency to conduct an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) of any rule subject to notice-and-comment rulemaking requirements. These analyses must ''describe the impact of

[141] *See* 12 U.S.C. 3350(7).

[142] At year-end 2022, median asset size for commercial banks was $324.7 million—compared with $53.6 million for credit unions. Moreover, as noted, 62.6 percent of credit unions held fewer than $100 million in assets; the comparable year-end 2022 figure for commercial banks was 16.2 percent.

[143] Discussions with NCUA examiners and supervisors supported the notion 10 percent is an extreme upper bound.

[144] *See supra,* note 3. The Guidelines were adopted after notice and comment.

[145] Because such a small percentage of credit unions actively relied on AVMs at the time, written NCUA guidance was not as detailed as that provided by the banking agencies. Nonetheless, expectations for safe-and-sound use have been conveyed through the supervisory process to FICUs employing AVMs in residential mortgage lending.

[146] This figure was obtained by dividing 2022 total compensation expense for the 1,876 credit unions by the product of full-time equivalent employees (17,115), 52 weeks per years, and 40 hours per week.

[147] There are other good reasons to believe 6,204 hours in an upper bound. The proposed rule should, for example, ease compliance with existing supervisory guidance/expectations by making the exact ''rules of the game'' more explicit. In theory, this applies to all covered institutions. But, given the small size of credit unions—the median number full-time equivalent employees for the 1,876 ''small entities'' with residential mortgages at year-end 2022 was *seven*—time savings from any reduction in supervisory ambiguity are particularly valuable. Moreover, following the now explicit guidance should result in fewer safety-and-soundness and fair-lending issues (which are particularly burdensome for small credit unions to address because of thin staff).

[148] Viewed still another way, $202,002 is less than one-third of the standard deviation of total non-interest expense for the 1,876 small credit unions.

[149] Of course, estimates of a modest impact based on central tendency do not exclude the possibility the compliance costs will prove meaningful for some small credit unions. The NCUA believes, however, additional costs in these cases will mostly reflect the need to correct safety-and-soundness or compliance deficiencies now in sharper relief because of increased supervisory focus on AVMs—not the rule *per se.*

[151] 5 U.S.C. 601 *et seq.*

[152] 5 U.S.C. 603(a). For purposes of assessing the impacts of the proposed rule on small entities, ''small entities'' is defined in the RFA to include small businesses, small not-for-profit organizations, and small government jurisdictions. 5 U.S.C. 601(6). A ''small business'' is determined by application of SBA regulations and reference to the NAICS classifications and size standards. 5 U.S.C. 601(3). A ''small organization'' is any ''not-for-profit enterprise which is independently owned and operated and is not dominant in its field.'' 5 U.S.C. 601(4). A ''small governmental jurisdiction'' is the government of a city, county, town, township, village, school district, or special district with a population of less than 50,000. 5 U.S.C. 601(5).

the proposed rule on small entities.'' [152] An IRFA or FRFA is not required if the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities.[153] If it will have such an impact, the CFPB is subject to certain additional procedures under the RFA involving the convening of a panel to consult with small business representatives prior to proposing a rule for which an IRFA is required.[154] The CFPB has not certified that the proposed rule would not have a significant economic impact on a substantial number of small entities within the meaning of the RFA. Accordingly, the CFPB convened and chaired a SBREFA Panel to consider the impact of the proposed rule on small entities that would be subject to that rule and to obtain feedback from representatives of such small entities. The SBREFA Panel for this rulemaking is discussed in part III of the **SUPPLEMENTARY INFORMATION**. The CFPB is also publishing an IRFA. Among other things, the IRFA estimates the number of small entities that will be subject to the proposed rule and describes the impact and regulatory burden of that rule on those entities. The IRFA for this rulemaking follows this discussion.

Section 603(b) of the RFA sets forth the required elements of the IRFA. Section 603(b)(1) requires the IRFA to contain a description of the reasons that the agency is considering action.[155] Section 603(b)(2) requires a succinct statement of the objectives of, and the legal basis for, the proposed rule.[156] The IRFA further must contain a description of and, where feasible, an estimate of the number of small entities to which the proposed rule will apply.[157] Section 603(b)(4) requires a description of the projected reporting, recordkeeping, and other compliance requirements of the proposed rule, including an estimate of the classes of small entities that will be subject to the requirement and the types of professional skills necessary for the preparation of the report or record.[158] In addition, the CFPB must identify, to the extent practicable, all relevant Federal rules which may duplicate, overlap, or conflict with the proposed rule.[159] Furthermore, the CFPB must describe any significant alternatives to the proposed rule which accomplish the stated objectives of applicable statutes and which minimize any significant economic impact of the proposed rule on small entities.[160] Finally, as amended by the Dodd-Frank Act, RFA section 603(d) requires that the IRFA include a description of any projected increase in the cost of credit for small entities, a description of any significant alternatives to the proposed rule which accomplish the stated objectives of applicable statutes and which minimize any increase in the cost of credit for small entities (if such an increase in the cost of credit is projected), and a description of the advice and recommendations of representatives of small entities relating to the cost of credit issues.[161]

1. Description of the Reasons Agency Action Is Being Considered

As discussed in part I of the **SUPPLEMENTARY INFORMATION**, section 1473(q) of the Dodd-Frank Act amended title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 to add a new section 1125. Section 1125 directs the agencies to promulgate regulations for quality control standards for AVMs, which are ''any computerized model used by mortgage originators and secondary market issuers to determine the collateral worth of a mortgage secured by a consumer's principal dwelling.'' [162] Specifically, section 1125 requires that AVMs meet quality control standards designed to ensure a high level of confidence in the estimates produced by AVMs; protect against the manipulation of data; seek to avoid conflicts of interest; require random sample testing and reviews; and account for any other such factor that the agencies determine to be appropriate.

The proposed rule effectuates Congress's mandate to the agencies to adopt rules to implement quality control standards for AVMs. For a further description of the reasons agency action is being considered, see the background discussion for the proposed rule in part I of the **SUPPLEMENTARY INFORMATION**.

2. Succinct Statement of the Objectives of, and Legal Basis for, the Proposed Rule

The objectives of the proposed rule include protecting consumers and protecting Federal financial and public policy interests in real estate related transactions. To achieve these objectives, the proposed rule would require mortgage originators and secondary market issuers to adopt policies, practices, procedures, and control systems to ensure that covered AVMs adhere to quality control standards designed to meet specific quality control factors. The legal basis for the proposed rule is section 1125 of title XI; section 1125 was established by section 1473(q) of the Dodd-Frank Act.[163]

In addition to the first four statutory factors, section 1125 provides the agencies with the authority to account for any other such factor that the agencies determine to be appropriate.[164] Based on this authority, the agencies propose to include a fifth factor that would require mortgage originators and secondary market issuers to adopt policies, practices, procedures, and control systems to ensure that covered AVMs adhere to quality control standards designed to comply with applicable nondiscrimination laws.

The objectives of, and legal basis for, the proposed rule are further discussed in parts I and II of the **SUPPLEMENTARY INFORMATION**.

3. Description of and, Where Feasible, Provision of an Estimate of the Number of Small Entities to Which the Proposed Rule Will Apply

A ''small business'' is determined by application of SBA regulations in reference to the North American Industry Classification System (NAICS) classification and size standards.[165] Under such standards, the CFPB identified three categories of small nondepository entities that may be subject to the proposed provisions: (1) real estate credit companies; (2) secondary market financing companies; and (3) other activities related to credit intermediation (which includes mortgage loan servicers).

The following table summarizes the CFPB's estimate of the number and industry of entities that may be affected by the proposed rule:

TABLE A—ESTIMATED NUMBER OF SMALL ENTITIES BY INDUSTRY

NAICS	Industry	SBA small entity threshold	Estimate total entities in 2017	Estimate number of small entities in 2017	Estimate number of small entities in 2022
522292	Real Estate Credit	$41.5m	3,289	2,904	3,672
522294	Secondary Market Financing	41.5m	115	106	134
522390	Other Activities Related to Credit Intermediation	22.0m	566	566	716
Column Total			3,970	3,576	4,521

Note: *See* footnote 148 for methodology to extrapolate 2017 numbers to 2022.
Source: 2017 County Business Patterns and Economic Census (Release Date: 5/28/2021).

In developing these estimates, the CFPB chose assumptions that would likely overcount the number of small entities and explains this reasoning in detail herein. Thus, the true number of small entities is likely to be less than the estimates reported. The following paragraphs describe the categories of entities that the CFPB expects would be affected by the proposed rule.

Real Estate Credit companies (NAICS 522292). This industry encompasses establishments primarily engaged in lending funds with real estate as collateral, including mortgage companies and real estate credit lenders. Economic Census data states that there were 3,289 nondepository institutions (nondepositories) in 2017 that engaged in real estate credit and whose use of AVMs might be covered by the proposed rule. The SBA established a revenue threshold for small entities of average annual receipts of less than $41.5 million. The Economic Census provides data for the number of small entities with less than $40 million and less than $50 million in revenue, but not less than $41.5 million in revenue. Using the conservative threshold of $50 million, the CFPB estimates that about 2,904 of these 3,289 institutions were small entities in 2017. This estimate is most likely an overcount because this NAICS industry also includes firms involved in construction lending, farm mortgages, and Federal land banks, which might not be covered by the proposed rule. Lastly, due to a lack of more recent data in the Economic Census, the CFPB scales up the 2017 estimate by a factor of 1.2643 to obtain a 2022 estimate of 3,672 small entities.[166]

Secondary market financing companies (NAICS 522294). This industry encompasses establishments primarily engaged in buying, pooling, and repackaging loans for sale to others on the secondary market, including collateralized mortgage obligation issuers and real estate mortgage investment conduits. Economic Census data states that there were 115 nondepository secondary market financing companies in 2017 whose use of AVMs might be covered by the proposed rule. This industry has a size standard threshold of less than $41.5 million in average annual receipts. However, the Economic Census only reports breakdowns in number of firms with less than $15 million and less than $100 million in revenue. Using the more conservative threshold of less than $100 million, the CFPB estimates that 106 secondary market financing companies were small entities in 2017. This estimate is most likely an overcount because this NAICS industry also includes firms involved in secondary market financing of student loans and other debt products, which might not be covered by the AVM rule. Lastly, due to a lack of more recent data in the Economic Census, the CFPB scales up the 2017 estimate by a factor of 1.2643 (same as before) to obtain a 2022 estimate of 134 small entities.

Other Activities Related to Credit Intermediation (NAICS 522390). This industry encompasses establishments primarily engaged in facilitating credit intermediation (except mortgage and loan brokerage; and financial transactions processing, reserve, and clearinghouse activities), and includes loan servicing firms. NAICS 522390 is a broader category than the previous two categories discussed in this section. Some examples of business activity in this NAICS industry are check cashing services, loan servicing, money transmission services, payday lending services, and traveler's check issuance services, but only loan servicing would fall under the proposed rule. To account for this broader categorization, using Economic Census data on number of establishments in this NAICS industry broken down by the North American Product Classification System (NAPCS), the CFPB filtered NAICS 522390 by the relevant NAPCS collection codes: (a) Residential Mortgage Loans and (b) Other Secured or Guaranteed Home Loans to Consumers. The filtered count of the number of establishments is 566. However, these data do not provide the number of firms, each of which may consist of one or more establishments. Thus, the CFPB uses the most conservative assumption—that each firm has only one establishment—to estimate the number of firms covered by the proposed rule to be (at most) 566 in 2017. Furthermore, data broken down by firm/establishment size are unavailable, so the CFPB assumes the most conservative extreme that all 566 of these firms are small entities. Lastly, due to a lack of more recent data in the Economic Census, the CFPB scales up the 2017 estimate by a factor of 1.2643 (same as before) to obtain a 2022 estimate of 716 small entities.

Finally, only small entities that themselves, or through or in cooperation with a third-party or affiliate, utilize AVMs in credit decisions or covered securitization determinations would be covered by the rule if finalized as proposed. The remaining small entities might opt for alternative valuation methods not involving AVMs. Due to the lack of data on the usage of AVMs by small entities in credit decisions or covered securitization determinations, the CFPB follows the FDIC and makes the following assumption: the range of AVM usage lies between 10% (lower bound) and 100% (upper bound). Applying this assumption to the estimated total number of small entities results in the estimated range of covered

[166] According to U.S. Bureau of Economic Analysis, ''Gross Output by Industry'' (*https://apps.bea.gov/iTable/?reqid=150&step=2&isuri=1&categories=gdpxind,* accessed 3/8/2023), from 2017Q3 to 2022Q3 (the latest available data at the time of writing), the finance sector (NAICS 52) gross output expanded from $2,836.7 billion to $ 3,586.5 billion, a 26.43 percent increase. Thus, the CFPB scales up the number of entities in 2017 by a factor of 1.2643 and rounds to the nearest whole number.

small entities shown in the following table:

TABLE B—ESTIMATED LOWER AND UPPER BOUNDS OF COVERED SMALL ENTITIES IN 2022

	Lower bound	Upper bound
Est. Number of Covered Small Entities	452	4,521
Assumed Proportion of Small Entities Using AVMs	10%	100%

In summary, the CFPB estimates that between 452 and 4,521 small entities would be covered by the rule if finalized as proposed.

In this analysis, the CFPB also considered including other NAICS categories, most notably ''Mortgage and Nonmortgage Loan Brokers'' (NAICS 522310). This industry includes establishments primarily engaged in arranging loans by bringing borrowers and lenders together on a commission or fee basis. Based on this definition, the CFPB believes that this industry is generally not involved in credit decisions or covered securitization determinations and would not likely be covered by the rule if finalized as proposed.

4. Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Proposed Rule, Including an Estimate of the Classes of Small Entities Which Would Be Subject to the Requirement and the Type of Professional Skills Necessary for the Preparation of the Report

The proposed rule would not impose new reporting or recordkeeping requirements for CFPB respondents but would impose new compliance requirements on small entities subject to the proposal. The proposed requirements and the costs associated with them are discussed herein.

Entities will likely have to spend time and resources reading and understanding the regulation and developing the required policies, practices, procedures, and control systems for their employees to follow to ensure compliance, in addition to engaging a legal team to review their draft policies, practices, procedures, and control systems. Costs associated with drafting compliance policies, practices, procedures, and control systems are likely to be higher for institutions who use AVMs for a more diverse set of circumstances. Such entities would likely need to tailor guidance for each specific use case. Small entities would also likely have to implement training of staff that utilize AVM output for covered purposes.

Costs to small entities. The CFPB expects that if finalized as proposed, the rule might impose one-time and ongoing costs on small nondepository entities who use AVMs in valuing real estate collateral securing mortgage loans. The CFPB has preliminarily identified three categories of costs that make up the components necessary for a nondepository institution to comply with the proposed rule. Those categories are drafting and developing policies, practices, procedures, and control systems; verifying compliance; and training staff and third parties. Nondepositories would incur the bulk of these costs in the first year. However, the CFPB anticipates that nondepositories would incur some ongoing costs in subsequent years, such as updating policies, practices, procedures, and control systems, continuing review for compliance, and training new staff. Following the FDIC, the CFPB assumes that the ongoing annual costs would be one-third of the one-time first-year costs.

Using the cost methodology outlined in the SBREFA Panel Report, the CFPB estimates that the one-time costs in the first year for each covered small nondepository entity would be the following: $7000 for drafting and developing policies, practices, procedures, and control systems, $10,000 for verifying compliance, and $6000 for training. Thus, the total costs per entity would be $23,000 in the first year and $7667 for each subsequent year.

The CFPB calculates the overall market impact of the proposed rule on small entities by multiplying the costs per entity by the estimated number of covered small entities. The CFPB estimates that the overall market impact of one-time costs in the first year for covered small nondepositories would be between $10,396,000 and $103,983,000. The CFPB estimates that the overall market impact of ongoing costs in each subsequent year for covered small nondepositories would be between $3,465,333 and $34,661,000 per year. The ranges in estimated impact are wide due to uncertainty surrounding the percentage of small entities using AVMs in credit decisions or covered securitization determinations.

5. Identification, to the Extent Practicable, of All Relevant Federal Rules Which May Duplicate, Overlap, or Conflict With the Proposed Rule

As discussed in the SBREFA Panel Report, the CFPB as well as SERs identified other title XI, TILA, and ECOA laws and implementing regulations related to determining the collateral worth of a mortgage that have potentially duplicative, overlapping, or conflicting requirements with section 1125.[167] Title XI and the prudential agencies' implementing regulations require a licensed or certified appraiser for certain transactions.[168] TILA section 129H [169] and its implementing regulations require lenders to obtain an appraisal by a certified or licensed appraiser—and in some cases two appraisals—for certain higher-risk transactions (termed ''higher-priced mortgage loans'' or ''HPMLs'' in the regulations).[170]

In addition to these Federal laws and regulations requiring a licensed or certified appraiser for various transactions, other Federal laws and regulations broadly address determining the collateral worth of a mortgage, whether using an appraisal, AVM, or other method. For consumer credit transactions secured by a consumer's principal dwelling, TILA section 129E [171] and its implementing regulations require valuation independence by, for example, prohibiting material misrepresentation of property value and conflicts of

[168] *See, e.g.,* 12 U.S.C. 3331; 75 FR 77450, 77465 (Dec. 10, 2010); 12 CFR 34.43(a)(1) through (14) (OCC); 12 CFR 225.63(a)(1) through (15) (Board); 12 CFR 323.3(a)(1) through (14) (FDIC); 12 CFR 722.3(a)(1) through (6) (NCUA).

[169] 15 U.S.C. 1639h (added by Dodd-Frank Act section 1471).

[170] CFPB: 12 CFR 1026.35(a) and (c); OCC: 12 CFR part 34, subpart G and 12 CFR part 164, subpart B; Board: 12 CFR 226.43; NCUA: 12 CFR 722.3(a); FHFA: 12 CFR part 1222, subpart A. The FDIC adopted the CFPB's version of the regulations. *See* 78 FR 10368, 10370 (Feb. 13, 2013).

[171] 15 U.S.C. 1639e (added by Dodd-Frank Act section 1472).

interest for persons preparing valuations or performing valuation management functions.[172] Title XI, as amended by the Dodd-Frank Act, provides in part that, ''[i]n conjunction with the purchase of a consumer's principal dwelling, broker price opinions may not be used as the primary basis to determine the value of a piece of property for the purpose of a loan origination of a residential mortgage loan secured by such piece of property.'' [173] ECOA section 701(e) [174] and its implementing regulation, Regulation B, generally require creditors to provide applicants for first-lien loans on a dwelling with copies of written valuations developed in connection with an application.[175]

Moreover, in the SBREFA Outline the CFPB discussed how valuations are subject to other provisions of ECOA and other Federal nondiscrimination laws.[176] For example, ECOA and Regulation B bar discrimination on a prohibited basis in any aspect of a credit transaction.[177] This prohibition extends to using different standards to evaluate collateral,[178] which would include the design or use of an AVM in any aspect of a credit transaction in a way that would treat an applicant differently on a prohibited basis or result in unlawful discrimination against an applicant on a prohibited basis. Similarly, the Fair Housing Act prohibits unlawful discrimination in all aspects of residential real estate-related transactions, including appraisals of residential real estate.[179]

SERs also provided suggestions of other potentially related Federal statutes and regulations. A SER expressly highlighted that the prudential agencies' title XI regulations for residential mortgages set a dollar-based threshold for requiring an appraisal. Another SER stated that many of the prudential agencies' safety and soundness regulations, including liquidity and interest rate risk management regulations, have potential intersections with section 1125. Some SERs also identified other statutes they believe have some potential intersections with section 1125, including the Fair Credit Reporting Act (FCRA),[180] the Gramm-Leach-Bliley Act (GLBA),[181] and HMDA.[182]

The CFPB is evaluating these suggestions and requests comment on them and the extent to which other Federal statutes or regulations might impose duplicative, overlapping, or conflicting requirements with this proposed rule implementing section 1125. The CFPB further requests comment on methods to minimize such conflicts to the extent they might exist.

6. Description of Any Significant Alternatives to the Proposed Rule That Accomplish the Stated Objectives of Applicable Statutes and Minimize Any Significant Economic Impact of the Proposed Rule on Small Entities

In drafting this proposed rule, the CFPB considered a number of alternatives, including those considered as part of the SBREFA process. Many of the alternatives considered would result in greater costs to small entities than would the proposal. For example, the CFPB considered proposing a prescriptive rule with more detailed and specific requirements, and the CFPB considered proposing a rule that would also cover the use of AVMs solely to review completed value determinations (*e.g.,* to review appraisals). Since such alternatives would result in a greater economic impact on small entities than the proposal, they are not discussed here.

The CFPB also considered alternatives that might have resulted in a smaller economic impact on small entities than does the proposal. Some of these alternatives are briefly described and their impacts relative to the proposed provisions are discussed herein.

Coverage of loan modifications and other changes to existing loans. The CFPB considered proposing a rule that would exclude AVMs used in loan modifications not resulting in new mortgage originations. As discussed in part III of the **SUPPLEMENTARY INFORMATION**, during the SBREFA process SERs generally favored that approach. The CFPB understands that the proposed rule's coverage of loan modifications and other changes to existing loans would introduce additional burden to small entities. However, the CFPB has preliminarily determined that this coverage would aid in fulfilling the consumer protection objective of section 1125. For consumers seeking loss mitigation, obtaining an AVM valuation that adheres to the quality control standards in the proposed rule during the loan modification process would be particularly important for their financial decision-making and outcomes, given they are already in financial distress. The CFPB seeks comment on the likely impact of this coverage aspect of the proposed rule on the compliance costs of small entities.

Coverage of credit line reductions or suspensions. The CFPB considered proposing a rule that would not cover AVMs used solely in deciding whether or to what extent to reduce or suspend a home equity line of credit. As discussed in part III of the **SUPPLEMENTARY INFORMATION**, during the SBREFA process SERs discussed balancing the consumer protections of covering credit line reductions or suspensions against the burdens of such regulation. The CFPB understands that the proposed rule's coverage of credit line reductions and suspensions would introduce additional burden to small entities. However, the CFPB has preliminarily determined that this coverage would aid in fulfilling the consumer protection objective of section 1125. Credit line reductions and suspensions impose hardship on consumers, who now face greater credit constraints and reduced financial options. Obtaining an AVM valuation that adheres to the quality control standards in the proposed rule during the credit decision process is particularly important for these consumers, given the potential for improving consumer financial outcomes. The CFPB seeks comment on

[172] CFPB: 12 CFR 1026.42; Board: 12 CFR 226.42; *see* 75 FR 66554 (Oct. 28, 2010) (interim final rule); 75 FR 80675 (Dec. 23, 2010) (correction). TILA section 129E(g)(2) directed the Board to issue an interim final rule. 15 U.S.C. 1639e(g)(2).

[182] 12 U.S.C. 2801 *et seq.*

the likely impact of this coverage aspect of the proposed rule on the compliance costs of small entities.

Nondiscrimination quality control factor. The CFPB considered proposing a rule that would not specify a nondiscrimination quality control factor. As discussed in part III of the **SUPPLEMENTARY INFORMATION**, during the SBREFA process, SERs expressed concern regarding the nondiscrimination quality control factor. In particular, SERs noted the impracticality of having small entities assess fair lending performance of AVMs provided by third parties, as well as noting concerns that this nondiscrimination quality control factor potentially duplicates other fair lending regulatory infrastructure. The CFPB understands that the proposed rule's nondiscrimination quality control factor would introduce additional burden to small entities. However, the CFPB has preliminarily determined that this factor would aid in fulfilling the consumer protection objective of section 1125. There is a long history of housing market discrimination in the United States, including misvaluation of property owned by minority consumers, as observed in biases in the appraisal process.[183] Misvaluations limit credit access for minority consumers, potentially leading to worse financial outcomes by hampering home ownership and wealth accumulation among minority consumers.

The CFPB acknowledges that for small entities with a limited volume of AVM valuation observations, detecting discrimination in AVMs may not be feasible. Nevertheless, there are other steps small entities could take towards satisfying the nondiscrimination quality control factor. For example, the SBREFA process described various points in the valuation process where humans interact with AVMs and make decisions regarding AVM usage and application of AVM outputs; having policies, practices, procedures, and control systems in place that ensure such human interactions and decision-making comply with applicable nondiscrimination laws would be feasible for small entities. As another example, in choosing third-party AVM providers, small entities can do research into how providers assess and account for discrimination in their AVMs and opt for providers who have taken such factors into consideration.

The CFPB seeks comment on the likely impact of the nondiscrimination quality control factor of the rule if finalized as proposed on the compliance costs of small entities.

7. Discussion of Impact on Cost of Credit for Small Entities

The CFPB believes that there will be little to no impact on the cost of credit incurred by small entities covered by the proposed rule. Should a covered small entity apply for a business loan, the lender is unlikely to consider that covered small entity's use of AVMs or their compliance with the proposed rule in their credit pricing or credit extension decisions.

During the SBREFA process, the CFPB asked SERs about this possible impact, but they did not provide feedback on how their credit or their lending to small businesses would be affected by the rule. This lack of feedback is consistent with the above assertions.

F. FHFA

The RFA requires that a regulation that has a significant economic impact on a substantial number of small entities, small businesses, or small organizations must include an initial regulatory flexibility analysis describing the regulation's impact on small entities. FHFA need not undertake such an analysis if the Agency has certified that the regulation will not have a significant economic impact on a substantial number of small entities (5 U.S.C 605(b)). FHFA has considered the impact of the proposed rule under the RFA and FHFA certifies that the proposed rule, if adopted as a final rule, will not have a significant economic impact on a substantial number of small entities because the regulation only applies to Fannie Mae and Freddie Mac, which are not small entities for purposes of the RFA.

VI. Use of Plain Language

Section 722 of the Gramm-Leach-Bliley Act requires the Federal banking agencies to use plain language in all proposed and final rules published after January 1, 2000. The agencies have sought to present the proposed rule in a simple and straightforward manner and invite comment on the use of plain language. For example:

- Have the agencies organized the material to suit your needs? If not, how could they present the rule more clearly?
- Are the requirements in the rule clearly stated? If not, how could the rule be more clearly stated?
- Do the regulations contain technical language or jargon that is not clear? If so, which language requires clarification?
- Would a different format (grouping and order of sections, use of headings, paragraphing) make the regulation easier to understand? If so, what changes would achieve that?
- Is this section format adequate? If not, which of the sections should be changed and how?
- What other changes can the agencies incorporate to make the regulation easier to understand?

VII. Riegle Community Development and Regulatory Improvement Act of 1994

Pursuant to section 302(a) of the Riegle Community Development and Regulatory Improvement Act (RCDRIA),[184] in determining the effective date and administrative compliance requirements for new regulations that impose additional reporting, disclosure, or other requirements on insured depository institutions (IDIs), each Federal banking agency must consider, consistent with principles of safety and soundness and the public interest, any administrative burdens that such regulations would place on depository institutions, including small depository institutions, and customers of depository institutions, as well as the benefits of such regulations. In addition, section 302(b) of RCDRIA requires new regulations and amendments to regulations that impose additional reporting, disclosures, or other new requirements on IDIs generally to take effect on the first day of a calendar quarter that begins on or after the date on which the regulations are published in final form.[185]

The Federal banking agencies note that comment on these matters has been solicited in other sections of this **SUPPLEMENTARY INFORMATION** section and that the requirements of RCDRIA will be considered as part of the overall rulemaking process. The Federal banking agencies invite comments that will further inform the Federal banking agencies' consideration of RCDRIA.

VIII. OCC Unfunded Mandates Reform Act of 1995 Determination

The OCC analyzed the proposed rule under the factors set forth in the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1532). Under this analysis, the OCC considered whether the proposed rule includes a Federal

[183] Interagency Task Force on Property Appraisal and Valuation Equity (PAVE), *Action Plan to Advance Property Appraisal and Valuation Equity: Closing the Racial Wealth Gap by Addressing Mis-valuations for Families and Communities of Color* 2–4 (Mar. 2022), *available at https://pave.hud.gov/sites/pave.hud.gov/files/documents/PAVEActionPlan.pdf.*

[184] 12 U.S.C. 4802(a).

[185] 12 U.S.C. 4802.

mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $182 million or more in any one year.[186]

The burden associated with the proposed rule would be limited to reviewing the rule, ensuring that existing practices, procedures, and control systems adequately address the four statutory quality control standards, and adopting policies, practices, procedures, and control systems to ensure that AVMs adhere to quality control standards designed to comply with applicable nondiscrimination laws. The OCC estimates that expenditures to comply with the proposed rule's mandates would be approximately $20.1 million (180 hours × $120 per hour × 931 banks = $20.1 million). For this reason, the OCC has determined that this proposed rule would not result in expenditures by State, local, and Tribal governments, or the private sector, of $182 million or more in any one year. Accordingly, the OCC has not prepared a written statement to accompany this proposal.

IX. NCUA Executive Order 13132 on Federalism

Executive Order 13132 encourages independent regulatory agencies to consider the impact of their actions on State and local interests. The NCUA, an independent regulatory agency as defined in 44 U.S.C. 3502(5), voluntarily complies with the executive order to adhere to fundamental federalism principles. This proposed rule would not have substantial direct effects on the states, on the relationship between the National Government and the states, or on the distribution of power and responsibilities among the various levels of government. Although the AVM statute and the proposed rule apply to federally insured, state-chartered credit unions, the NCUA does not believe that the rule would change the relationship between the NCUA and State regulatory agencies. The NCUA would anticipate coordinating with State regulatory agencies to implement and enforce the rule after it is adopted as part of its ongoing coordination with these agencies. Accordingly, the NCUA believes that the effect of this change on the states would be limited. The NCUA has therefore determined that this rule does not constitute a policy that has federalism implications for purposes of the executive order.

X. NCUA Assessment of Federal Regulations and Policies on Families

The NCUA has determined that this proposed rule would not affect family well-being within the meaning of section 654 of the Treasury and General Government Appropriations Act, 1999.[187]

XI. Severability

Each of the agencies preliminarily intend that, if any provision of the proposed rule, if adopted as final, or any application of a provision, is stayed or determined to be invalid, the remaining provisions or applications are severable and shall continue in effect.

[186] The OCC estimates the UMRA inflation adjustment using the change in the annual U.S. GDP Implicit Price Deflator between 1995 and 2022, which are the most recent annual data available. The deflator was 71.300 in 1995 and 129.511 in 2022, resulting in an inflation adjustment factor of 1.82 (129.511/71.300 = 1.816 and $100 million × 1.82 = $182 million).

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

12 CFR Chapter I

Authority and Issuance

For reasons set out in the joint preamble, the Office of the Comptroller of the Currency proposes to amend part 34 of chapter I of title 12 of the Code of Federal Regulations to read as follows:

PART 34—REAL ESTATE LENDING AND APPRAISALS

■ 1. The authority citation for part 34 is revised to read as follows:

Authority: 12 U.S.C. 1 *et seq.,* 25b, 29, 93a, 371, 1465, 1701j–3, 1828(o), 3331 *et seq.,* 5101 *et seq.,* and 5412(b)(2)(B).

■ 2. Subpart I is added to part 34 to read as follows:

Subpart I—Quality Control Standards for Automated Valuation Models Used for Mortgage Lending Purposes

Sec.

§ 34.220 Authority, purpose, and scope.

(a) *Authority.* This subpart is issued pursuant to section 1125 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, 12 U.S.C. 3354, as added by section 1473(q) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Pub. L. 111–203, 124 Stat. 1376, 2198 (2010)).

(b) *Purpose and scope.* (1) The purpose of this subpart is to implement the quality control standards in section 3354 of title 12 for the use of automated valuation models in determining the value of collateral in connection with making a credit decision or covered securitization determination regarding a mortgage or mortgage-backed security. This subpart applies to entities regulated by the OCC that are mortgage originators or secondary market issuers.

(2) This subpart does not apply to the use of automated valuation models in:

(i) Monitoring of the quality or performance of mortgages or mortgage-backed securities;

(ii) Reviews of the quality of already completed determinations of the value of collateral; or

(iii) The development of an appraisal by a certified or licensed appraiser.

§ 34.221 Definitions.

As used in this subpart:

(a) *Automated valuation model* means any computerized model used by

mortgage originators and secondary market issuers to determine the value of a consumer's principal dwelling collateralizing a mortgage.

(b) *Control systems* means the functions (such as internal and external audits, risk review, quality control, and quality assurance) and information systems that are used to measure performance, make decisions about risk, and assess the effectiveness of processes and personnel, including with respect to compliance with statutes and regulations.

(c) *Covered securitization determination* means a determination regarding:

(1) Whether to waive an appraisal requirement for a mortgage origination in connection with its potential sale or transfer to a secondary market issuer; or

(2) Structuring, preparing disclosures for, or marketing initial offerings of mortgage-backed securitizations.

(d) *Credit decision* means a decision regarding whether and under what terms to originate, modify, terminate, or make other changes to a mortgage, including a decision whether to extend new or additional credit or change the credit limit on a line of credit.

(e) *Dwelling* means a residential structure that contains one to four units, whether or not that structure is attached to real property. The term includes an individual condominium unit, cooperative unit, factory-built housing, or manufactured home, if it is used as a residence. A consumer can have only one ''principal'' dwelling at a time. Thus, a vacation or other second home would not be a principal dwelling. However, if a consumer buys or builds a new dwelling that will become the consumer's principal dwelling within a year or upon the completion of construction, the new dwelling is considered the principal dwelling for purposes of this subpart.

(f) *Mortgage* means a transaction in which a mortgage, deed of trust, purchase money security interest arising under an installment sales contract, or equivalent consensual security interest is created or retained in a consumer's principal dwelling.

(g) *Mortgage originator* has the meaning given in section 103 of the Truth in Lending Act (15 U.S.C. 1602).

(h) *Secondary market issuer* means any party that creates, structures, or organizes a mortgage-backed securities transaction.

§ 34.222 Quality control standards.

Mortgage originators and secondary market issuers that engage in credit decisions or covered securitization determinations themselves, or through or in cooperation with a third-party or affiliate, must adopt and maintain policies, practices, procedures, and control systems to ensure that automated valuation models used in these transactions adhere to quality control standards designed to:

(a) Ensure a high level of confidence in the estimates produced;

(b) Protect against the manipulation of data;

(c) Avoid conflicts of interest;

(d) Require random sample testing and reviews; and

(e) Comply with applicable nondiscrimination laws.

FEDERAL RESERVE SYSTEM

12 CFR Chapter II

Authority and Issuance

For the reasons set forth in the joint preamble, the Board proposes to amend part 225 of chapter II of title 12 of the Code of Federal Regulations, as follows:

PART 225—BANK HOLDING COMPANIES AND CHANGE IN BANK CONTROL (REGULATION Y)

■ 3. The authority citation for part 225 is revised to read as follows:

Authority: 12 U.S.C. 1817(j)(13), 1818, 1828(o), 1831i, 1831p–1, 1843(c)(8), 1844(b), 1972(1), 3106, 3108, 3310, 3331–3351, 3354, 3906, 3907, and 3909; 15 U.S.C. 1681s, 1681w, 6801 and 6805.

■ 4. Add subpart O to part 225 as follows:

Subpart O—Quality Control Standards for Automated Valuation Models Used for Mortgage Lending Purposes

Sec.

Subpart O—Quality Control Standards for Automated Valuation Models Used for Mortgage Lending Purposes

§ 225.350 Authority, purpose and scope.

(a) *Authority.* (1) *In general.* This subpart is issued pursuant to section 1125 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, 12 U.S.C. 3354, as added by section 1473(q) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Pub. L. 111–203, 124 Stat. 1376, 2198 (2010)), as well as under the Federal Reserve Act, as amended (12 U.S.C. 221 *et seq.*); the Bank Holding Company Act of 1956, as amended (12 U.S.C. 1841 *et seq.*); the Home Owners' Loan Act of 1933 (12 U.S.C. 1461 *et seq.*); section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5365); and the International Banking Act of 1978, as amended (12 U.S.C. 3101 *et seq.*).

(2) Nothing in this part shall be read to limit the authority of the Board to take action under provisions of law other than 12 U.S.C. 3354, including but not limited to action to address unsafe or unsound practices or conditions, or violations of law or regulation, under section 8 of the Federal Deposit Insurance Act, as amended (12 U.S.C. 1818).

(b) *Purpose and scope.* (1) The purpose of this subpart is to implement the quality control standards in section 3354 of title 12 for the use of automated valuation models in determining the value of collateral in connection with making a credit decision or covered securitization determination regarding a mortgage or a mortgage-backed security. This subpart applies to entities and institutions regulated by the Board (Board-regulated institutions) that are mortgage originators or secondary market issuers.

(2) This subpart does not apply to the use of automated valuation models in:

(i) Monitoring of the quality or performance of mortgages or mortgage-backed securities;

(ii) Reviews of the quality of already completed determinations of the value of collateral; or

(iii) The development of an appraisal by a certified or licensed appraiser.

§ 225.351 Definitions.

As used in this subpart:

Automated valuation model means any computerized model used by mortgage originators and secondary market issuers to determine the value of a consumer's principal dwelling collateralizing a mortgage.

Control systems means the functions (such as internal and external audits, risk review, quality control, and quality assurance) and information systems that are used to measure performance, make decisions about risk, and assess the effectiveness of processes and personnel, including with respect to compliance with statutes and regulations.

Covered securitization determination means a determination regarding:

(1) Whether to waive an appraisal requirement for a mortgage origination in connection with its potential sale or transfer to a secondary market issuer; or

(2) Structuring, preparing disclosures for, or marketing initial offerings of mortgage-backed securitizations.

Credit decision means a decision regarding whether and under what terms to originate, modify, terminate, or make other changes to a mortgage, including a decision whether to extend

new or additional credit or change the credit limit on a line of credit.

Dwelling means a residential structure that contains one to four units, whether or not that structure is attached to real property. The term includes an individual condominium unit, cooperative unit, factory-built housing, or manufactured home, if it is used as a residence. A consumer can have only one ''principal'' dwelling at a time. Thus, a vacation or other second home would not be a principal dwelling. However, if a consumer buys or builds a new dwelling that will become the consumer's principal dwelling within a year or upon the completion of construction, the new dwelling is considered the principal dwelling for purposes of this subpart.

Mortgage means a transaction in which a mortgage, deed of trust, purchase money security interest arising under an installment sales contract, or equivalent consensual security interest is created or retained in a consumer's principal dwelling.

Mortgage originator has the meaning given in section 103 of the Truth in Lending Act (15 U.S.C. 1602).

Secondary market issuer means any party that creates, structures, or organizes a mortgage-backed securities transaction.

§ 225.352 Quality control standards.

Mortgage originators and secondary market issuers that engage in credit decisions or covered securitization determinations themselves, or through or in cooperation with a third-party or affiliate, must adopt and maintain policies, practices, procedures, and control systems to ensure that automated valuation models used in these transactions adhere to quality control standards designed to:

(a) Ensure a high level of confidence in the estimates produced;

(b) Protect against the manipulation of data;

(c) Avoid conflicts of interest;

(d) Require random sample testing and reviews; and

(e) Comply with applicable nondiscrimination laws.

Federal Deposit Insurance Corporation

12 CFR Chapter III

Authority and Issuance

For the reasons set forth in the joint preamble, the FDIC proposes to amend part 323 of chapter III of title 12 of the Code of Federal Regulations as follows:

PART 323—APPRAISALS

■ 5. The authority citation for part 323 continues to read as follows:

Authority: 12 U.S.C. 1818, 1819(a) (''Seventh'' and ''Tenth''), 1831p–1 and 3331 *et seq.*

■ 6. Add subpart C to part 323 to read as follows:

Subpart C—Quality Control Standards for Automated Valuation Models Used for Mortgage Lending Purposes

Sec.

§ 323.15 Authority, purpose, and scope.

(a) *Authority.* This subpart is issued pursuant to section 1125 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, 12 U.S.C. 3354, as added by section 1473(q) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Pub. L. 111–203, 124 Stat. 1376, 2198 (2010)).

(b) *Purpose and scope.* (1) The purpose of this subpart is to implement the quality control standards in section 3354 of title 12 for the use of automated valuation models in determining the value of collateral in connection with making a credit decision or covered securitization determination regarding a mortgage or mortgage-backed security. This subpart applies to entities regulated by the FDIC that are mortgage originators or secondary market issuers.

(2) This subpart does not apply to the use of automated valuation models in:

(i) Monitoring of the quality or performance of mortgages- or mortgage-backed securities;

(ii) Reviews of the quality of already completed determinations of the value of collateral; or

(iii) The development of an appraisal by a certified or licensed appraiser.

§ 323.16 Definitions.

As used in this subpart:

Automated valuation model means any computerized model used by mortgage originators and secondary market issuers to determine the value of a consumer's principal dwelling collateralizing a mortgage.

Control systems means the functions (such as internal and external audits, risk review, quality control, and quality assurance) and information systems that are used to measure performance, make decisions about risk, and assess the effectiveness of processes and personnel, including with respect to compliance with statutes and regulations.

Covered securitization determination means a determination regarding:

(1) Whether to waive an appraisal requirement for a mortgage origination in connection with its potential sale or transfer to a secondary market issuer; or

(2) Structuring, preparing disclosures for, or marketing initial offerings of mortgage-backed securitizations.

Credit decision means a decision regarding whether and under what terms to originate, modify, terminate, or make other changes to a mortgage, including a decision whether to extend new or additional credit or change the credit limit on a line of credit.

Dwelling means a residential structure that contains one to four units, whether or not that structure is attached to real property. The term includes an individual condominium unit, cooperative unit, factory-built housing, or manufactured home, if it is used as a residence. A consumer can have only one ''principal'' dwelling at a time. Thus, a vacation or other second home would not be a principal dwelling. However, if a consumer buys or builds a new dwelling that will become the consumer's principal dwelling within a year or upon the completion of construction, the new dwelling is considered the principal dwelling for purposes of this subpart.

Mortgage means a transaction in which a mortgage, deed of trust, purchase money security interest arising under an installment sales contract, or equivalent consensual security interest is created or retained in a consumer's principal dwelling.

Mortgage originator has the meaning given in section 103 of the Truth in Lending Act (15 U.S.C. 1602).

Secondary market issuer means any party that creates, structures, or organizes a mortgage-backed securities transaction.

§ 323.17 Quality control standards.

Mortgage originators and secondary market issuers that engage in credit decisions or covered securitization determinations themselves, or through or in cooperation with a third-party or affiliate, must adopt and maintain policies, practices, procedures, and control systems to ensure that automated valuation models used in these transactions adhere to quality control standards designed to:

(a) Ensure a high level of confidence in the estimates produced;

(b) Protect against the manipulation of data;

(c) Avoid conflicts of interest;

(d) Require random sample testing and reviews; and

(e) Comply with applicable nondiscrimination laws.

NATIONAL CREDIT UNION ADMINISTRATION

12 CFR Part 722 and Part 741

Authority and Issuance

For the reasons discussed above in the joint preamble, the NCUA Board proposes to amend 12 CFR parts 722 and 741 as follows:

PART 722—APPRAISALS

■ 7. The authority citation for part 722 continues to read as follows:

Authority: 12 U.S.C. 1766, 1789, and 3331 *et seq.* Section 722.3(a) is also issued under 15 U.S.C. 1639h.

■ 8. Redesignate §§ 722.1 through 722.7 as §§ 722.101 through 722.107 under the following subpart A heading:

Subpart A—Appraisals Generally

Sec.

■ 9. Add subpart B to read as follows:

Subpart B—Quality Control Standards for Automated Valuation Models Used for Mortgage Lending Purposes

Sec.

Subpart B—Quality Control Standards for Automated Valuation Models Used for Mortgage Lending Purposes

§ 722.201 Authority, purpose, and scope.

(a) *Authority.* This subpart is issued pursuant to section 1125 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, 12 U.S.C. 3354, as added by section 1473(q) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Pub. L. 111–203, 124 Stat. 1375, 2198 (2010)).

(b) *Purpose and scope.* (1) The purpose of this subpart is to implement the quality control standards in section 3354 of title 12 for the use of automated valuation models in determining the value of collateral in connection with making a credit decision or covered securitization determination regarding a mortgage or mortgage-backed security. This subpart applies to credit unions insured by the NCUA that are mortgage originators or secondary market issuers.

(2) This subpart does not apply to the use of automated valuation models in:

(i) Monitoring of the quality or performance of mortgages or mortgage-backed securities;

(ii) Reviews of the quality of already completed determinations of the value of collateral; or

(iii) The development of an appraisal by a certified or licensed appraiser.

§ 722.202 Definitions.

As used in this subpart:

Automated valuation model means any computerized model used by mortgage originators and secondary market issuers to determine the value of a consumer's principal dwelling collateralizing a mortgage.

Control systems means the functions (such as internal and external audits, risk review, quality control, and quality assurance) and information systems that are used to measure performance, make decisions about risk, and assess the effectiveness of processes and personnel, including with respect to compliance with statutes and regulations.

Covered securitization determination means a determination regarding:

(1) Whether to waive an appraisal requirement for a mortgage origination in connection with its potential sale or transfer to a secondary market issuer; or

(2) Structuring, preparing disclosures for, or marketing initial offerings of mortgage-backed securitizations.

Credit decision means a decision regarding whether and under what terms to originate, modify, terminate, or make other changes to a mortgage, including a decision whether to extend new or additional credit or change the credit limit on a line of credit.

Dwelling means a residential structure that contains one to four units, whether or not that structure is attached to real property. The term includes an individual condominium unit, cooperative unit, factory-built housing, or manufactured home, if it is used as a residence. A consumer can have only one ''principal'' dwelling at a time. Thus, a vacation or other second home would not be a principal dwelling. However, if a consumer buys or builds a new dwelling that will become the consumer's principal dwelling within a year or upon the completion of construction, the new dwelling is considered the principal dwelling for purposes of this subpart.

Mortgage means a transaction in which a mortgage, deed of trust, purchase money security interest arising under an installment sales contract, or equivalent consensual security interest is created or retained in a consumer's principal dwelling.

Mortgage originator has the meaning given in section 103 of the Truth in Lending Act (15 U.S.C. 1602).

Secondary market issuer means any party that creates, structures, or organizes a mortgage-backed securities transaction.

§ 722.203 Quality control standards.

Mortgage originators and secondary market issuers that engage in credit decisions or covered securitization determinations themselves, or through or in cooperation with a third-party or affiliate, must adopt and maintain policies, practices, procedures, and control systems to ensure that automated valuation models used in these transactions adhere to quality control standards designed to:

(a) Ensure a high level of confidence in the estimates produced;

(b) Protect against the manipulation of data;

(c) Avoid conflicts of interest;

(d) Require random sample testing and reviews; and

(e) Comply with applicable nondiscrimination laws.

PART 741—Requirements for Insurance

■ 10. The authority citation for part 741 is revised to read as follows:

Authority: 12 U.S.C. 1757, 1766(a), 1781–1790, 1790d, 3331 *et seq;* 31 U.S.C. 3717.

■ 11. Revise § 741.203(b) to read as follows:

§ 741.203 Minimum loan policy requirements.

* * * * *

(b) Adhere to the requirements stated in part 722 of this chapter.

* * * * *

CONSUMER FINANCIAL PROTECTION BUREAU

Authority and Issuance

For reasons set out in the joint preamble, the CFPB proposes to amend Regulation Z, 12 CFR part 1026, as follows:

PART 1026—TRUTH IN LENDING (REGULATION Z)

■ 12. The authority citation for part 1026 is revised to read as follows:

Authority: 12 U.S.C. 2601, 2603–2605, 2607, 2609, 2617, 3353, 3354, 5511, 5512, 5532, 5581; 15 U.S.C. 1601 *et seq.*

Subpart A—General

■ 13. Amend § 1026.1 by adding paragraph (c)(6) to read as follows:

§ 1026.1 Authority, purpose, coverage, organization, enforcement, and liability.

* * * * *

(c) * * *

(6) The requirements of § 1026.42(i) apply to certain persons regardless of whether they are creditors and even if the mortgage, as defined in § 1026.42(i)(2)(v), is primarily for business, commercial, agricultural, or organizational purposes.

* * * * *

■ 14. Amend § 1026.2 by revising paragraph (a)(11) to read as follows:

§ 1026.2 Definitions and rules of construction.

(a) * * *

(11) *Consumer* means a cardholder or natural person to whom consumer credit is offered or extended. However, for purposes of rescission under §§ 1026.15 and 1026.23, the term also includes a natural person in whose principal dwelling a security interest is or will be retained or acquired, if that person's ownership interest in the dwelling is or will be subject to the security interest. For purposes of § 1026.42(i), the term means a natural person to whom credit is offered or extended, even if the credit is primarily for business, commercial, agricultural, or organizational purposes. For purposes of §§ 1026.20(c) through (e), 1026.36(c), 1026.39, and 1026.41, the term includes a confirmed successor in interest.

* * * * *

■ 15. Amend § 1026.3 by adding paragraph (i) to read as follows:

§ 1026.3 Exempt transactions.

* * * * *

(i) The exemptions in this section are not applicable to § 1026.42(i) (Quality Control Standards for Automated Valuation Models).

Subpart E—Special Rules for Certain Home Mortgage Transactions

■ 16. Amend § 1026.42 by revising paragraph (a) and adding paragraph (i) to read as follows:

§ 1026.42 Valuation independence.

(a) *Scope.* Except for paragraph (i) of this section, this section applies to any consumer credit transaction secured by the consumer's principal dwelling. Paragraph (i) of this section applies to any mortgage, as defined in paragraph (i)(2)(v), secured by the consumer's principal dwelling, even if the mortgage is primarily for business, commercial, agricultural, or organizational purposes.

* * * * *

(i) *Quality Control Standards for Automated Valuation Models*—(1) *Scope.* The purpose of this paragraph (i) is to implement quality control standards for the use of automated valuation models in determining the value of collateral in connection with making a credit decision or covered securitization determination regarding a mortgage or mortgage-backed security. This paragraph (i) applies to the use of automated valuation models by any mortgage originator or secondary market issuer, other than either a financial institution as defined in 12 U.S.C. 3350(7), or a subsidiary owned and controlled by such a financial institution and regulated by one of the Federal financial institutions regulatory agencies as defined in 12 U.S.C. 3350(6). This paragraph (i) does not apply to the use of automated valuation models in:

(i) Monitoring of the quality or performance of mortgages or mortgage-backed securities;

(ii) Reviews of the quality of already completed determinations of the value of collateral; or

(iii) The development of an appraisal by a certified or licensed appraiser as defined in § 1026.35(c)(1)(i).

(2) *Definitions.* As used in this paragraph (i):

(i) *Automated valuation model* means any computerized model used by mortgage originators and secondary market issuers to determine the value of a consumer's principal dwelling collateralizing a mortgage.

(ii) *Control systems* means the functions (such as internal and external audits, risk review, quality control, and quality assurance) and information systems that are used to measure performance, make decisions about risk, and assess the effectiveness of processes and personnel, including with respect to compliance with statutes and regulations.

(iii) *Covered securitization determination* means a determination regarding:

(A) Whether to waive an appraisal requirement for a mortgage origination in connection with its potential sale or transfer to a secondary market issuer; or

(B) Structuring, preparing disclosures for, or marketing initial offerings of mortgage-backed securitizations.

(iv) *Credit decision* means a decision regarding whether and under what terms to originate, modify, terminate, or make other changes to a mortgage, including a decision whether to extend new or additional credit or change the credit limit on a line of credit.

(v) *Mortgage* means a transaction in which a mortgage, deed of trust, purchase money security interest arising under an installment sales contract, or equivalent consensual security interest is created or retained in a consumer's principal dwelling.

(vi) *Mortgage originator* has the meaning given in section 103 of the Truth in Lending Act (15 U.S.C. 1602).

(vii) *Secondary market issuer* means any party that creates, structures, or organizes a mortgage-backed securities transaction.

(3) *Quality control standards.* Mortgage originators and secondary market issuers that engage in credit decisions or covered securitization determinations themselves, or through or in cooperation with a third-party or affiliate, must adopt and maintain policies, practices, procedures, and control systems to ensure that automated valuation models used in these transactions adhere to quality control standards designed to:

(i) Ensure a high level of confidence in the estimates produced;

(ii) Protect against the manipulation of data;

(iii) Avoid conflicts of interest;

(iv) Require random sample testing and reviews; and

(v) Comply with applicable nondiscrimination laws.

■ 17. Amend Supplement I to Part 1026 by:

■ a. Under Section 1026.2—Definitions and Rules of Construction, in 2(a)(19)—Dwelling, revise paragraph 1 and add paragraph 4;

■ b. Under Section 1026.3—Exempt Transactions, add paragraph 2; and

■ c. Under Section 1026.42—Valuation Independence:

■ i. Under 42(a) Scope, revise paragraph 2;

■ ii. Under Paragraph 42(b)(2), revise paragraph 1.

■ iii. Add heading section 42(i) Quality Control Standards for Automated Valuation Models.

The revisions and additions read as follows:

Supplement I to Part 1026—Official Interpretations

* * * * *

Section 1026.2—Definitions and Rules of Construction

* * * * *

2(a)(19) Dwelling

1. *Scope.* A dwelling need not be the consumer's *principal* residence to fit the definition, and thus a vacation or second home could be a dwelling. However, for purposes of the definition of residential mortgage transaction, the right to rescind, and the application of automated valuation model requirements, a dwelling must be the principal residence of the consumer. (*See* the commentary to §§ 1026.2(a)(24), 1026.15, 1026.23, and 1026.42).

* * * * *

4. *Automated valuation models.* For purposes of the application of the automated

valuation model requirements in § 1026.42(i), a consumer can have only one principal dwelling at a time. Thus, a vacation or other second home would not be a principal dwelling. However, if a consumer buys or builds a new dwelling that will become the consumer's principal dwelling within a year or upon the completion of construction, the new dwelling is considered the principal dwelling for purposes of applying this definition to a particular transaction. (*See* the commentary to § 1026.2(a)(24)).

* * * * *

Section 1026.3—Exempt Transactions

* * * * *

2. *Relationship to § 1026.42(i).* As provided in § 1026.3(i), the provisions in § 1026.42(i) governing the use of automated valuation models apply even if the transactions in which automated valuation models are used would otherwise be exempt under this section.

* * * * *

Section 1026.42—Valuation Independence

42(a) Scope

* * * * *

2. *Consumer's principal dwelling.* Except for section 1026.42(i), section 1026.42 applies only if the dwelling that will secure a consumer credit transaction is the principal dwelling of the consumer who obtains credit. Section 1026.42(i) applies if the dwelling that will secure a mortgage, as defined in § 1026.42(i)(2)(v), is the principal dwelling of the consumer who obtains credit, even if the mortgage is primarily for business, commercial, agricultural, or organizational purposes. The term ''dwelling'' is defined in § 1026.2(a)(19). Comments 2(a)(19)–4 and 42(b)(2)–1 discuss the term ''principal dwelling.''

42(b) Definitions

* * * * *

Paragraph 42(b)(2)

1. *Principal dwelling.* The term ''principal dwelling'' has the same meaning under § 1026.42(b) and (i) as under §§ 1026.2(a)(24), 1026.15(a), and 1026.23(a). *See* comments 2(a)(19)–4, 2(a)(24)–3, 15(a)(1)–5, and 23(a)–3. The term ''dwelling'' is defined in § 1026.2(a)(19).

* * * * *

42(i) Quality Control Standards for Automated Valuation Models

Paragraph 42(i)(2)(vi)

1. *Creditors.* The term mortgage originator includes creditors, notwithstanding that the definition of mortgage originator at 15 U.S.C. 1602(dd)(2) excludes creditors for certain other purposes.

2. *Servicers.* The term mortgage originator generally excludes servicers and their employees, agents, and contractors. However, a person is a servicer with respect to a particular transaction only after it is consummated, and that person retains or obtains its servicing rights. Therefore, the term mortgage originator includes a servicer and its employees, agents, or contractors when they perform mortgage originator activities for purposes of 15 U.S.C. 1602(dd)(2) with respect to any transaction that constitutes a new extension of credit, including a refinancing or a transaction that obligates a different consumer on an existing debt.

* * * * *

CHAPTER XII—FEDERAL HOUSING FINANCE AGENCY

Authority and Issuance

For the reasons discussed in the joint preamble, the Federal Housing Finance Agency proposes to amend 12 CFR part 1222 as set forth below:

PART 1222—APPRAISALS

■ 18. The authority citation for part 1222 is revised to read as follows:

Authority: 12 U.S.C. 3354(b); 12 U.S.C. 4501 *et seq.;* 12 U.S.C. 4526; and 15 U.S.C. 1639h.

■ 19. Add subpart C to part 1222 to read as follows:

Subpart C—Quality Control Standards For Automated Valuation Models

Sec.

§ 1222. 27 Authority, purpose, and scope.

(a) *Authority.* This subpart is issued by the Federal Housing Finance Agency pursuant to 12 U.S.C. 4501 *et seq.,* 12 U.S.C. 4526, section 1125 of FIRREA, 12 U.S.C. 3354, as added by section 1473(q) of the Dodd-Frank Act.

(b) *Purpose and scope.* (1) The purpose of this subpart is to implement the quality control standards in section 3354 of title 12 for the use of automated valuation models in determining the value of collateral in connection with making a credit decision or covered securitization determination regarding a mortgage or mortgage-backed security. This subpart applies to entities regulated by the Federal Housing Finance Agency.

(2) This subpart does not apply to the use of automated valuation models in:

(i) Monitoring of the quality or performance of mortgages or mortgage-backed securities;

(ii) Reviews of the quality of already completed determinations of the value of collateral; or

(iii) The development of an appraisal by a certified or licensed appraiser.

§ 1222.28 Definitions.

As used in this subpart:

Automated valuation model means any computerized model used by mortgage originators and secondary market issuers to determine the value of a consumer's principal dwelling collateralizing a mortgage.

Control systems means the functions (such as internal and external audits, risk review, quality control, and quality assurance) and information systems that are used to measure performance, make decisions about risk, and assess the effectiveness of processes and personnel, including with respect to compliance with statutes and regulations.

Covered securitization determination means a determination regarding:

(1) Whether to waive an appraisal requirement for a mortgage origination in connection with its potential sale or transfer to a secondary market issuer, or

(2) Structuring, preparing disclosures for, or marketing initial offerings of mortgage-backed securitizations.

Credit decision means a decision regarding whether and under what terms to originate, modify, terminate, or make other changes to a mortgage, including a decision whether to extend new or additional credit or change the credit limit on a line of credit.

Dwelling means a residential structure that contains one to four units, whether or not that structure is attached to real property. The term includes an individual condominium unit, cooperative unit, factory-built housing, or manufactured home, if it is used as a residence. A consumer can have only one ''principal'' dwelling at a time. Thus, a vacation or other second home would not be a principal dwelling. However, if a consumer buys or builds a new dwelling that will become the consumer's principal dwelling within a year or upon the completion of construction, the new dwelling is considered the principal dwelling for purposes of this subpart.

Mortgage means a transaction in which a mortgage, deed of trust, purchase money security interest arising under an installment sales contract, or equivalent consensual security interest is created or retained in a consumer's principal dwelling.

Mortgage originator has the meaning given in section 103 of the Truth in Lending Act (15 U.S.C. 1602).

Secondary market issuer means any party that creates, structures, or organizes a mortgage-backed securities transaction.

§ 1222.29 Quality control standards.

Mortgage originators and secondary market issuers that engage in credit decisions or covered securitization determinations themselves, or through or in cooperation with a third-party or affiliate, must adopt and maintain policies, practices, procedures, and control systems to ensure that automated valuation models used in these transactions adhere to quality control standards designed to:

(a) Ensure a high level of confidence in the estimates produced;

(b) Protect against the manipulation of data;

(c) Avoid conflicts of interest;

(d) Require random sample testing and reviews; and

(e) Comply with applicable nondiscrimination laws.

Michael J. Hsu,

Acting Comptroller of the Currency.

By order of the Board Governors of the Federal Reserve System.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

Federal Deposit Insurance Corporation.

By order of the Board of Directors.

Dated at Washington, DC, on May 31, 2023.

James P. Sheesley,

Assistant Executive Secretary.

Rohit Chopra,

Director, Consumer Financial Protection Bureau.

Sandra L. Thompson,

Director, Federal Housing Finance Agency.

Melane Conyers-Ausbrooks,

Secretary of the Board, National Credit Union Administration.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List June 16, 2023

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/—layouts/PG/register.aspx*.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
