

The Decree required that PRASA begin reporting the amount of wet weather and dry weather discharges from combined sewer (sewers conveying both wastewater and stormwater) outfalls by September 15, 2018, including estimated flow, and that, if PRASA determined that it could not estimate flow by that date, explain why such reporting was not feasible and provide a date by which such reporting would be feasible. The Modification provides that, by May 31, 2025, PRASA have a calibrated and validated model for the Puerto Nuevo Sewer System that will enable PRASA to estimate, based on combined sewer outfall level monitoring and sewer system modeling, the volume of each Combined Sewer Overflow (“CSO”) discharge and that PRASA begin to report the location, time, and estimated volume of each CSO discharge.

The Decree required PRASA to include in its Spill Response and Clean-up Plan criteria and strategies for public notification of SSOs/CSOs. The Modification requires PRASA to post to its website a table providing information concerning SSOs and CSOs. The Modification also requires PRASA to provide information on its website concerning where CSOs occur, the dangers posed by CSOs, methods for reporting CSOs, and its efforts to control CSOs.

In addition to the changes to the Decree discussed above, the Modification also requires PRASA to implement 17 new wastewater projects, at a total estimated cost of about \$530 million. The deadlines for completion of these projects range from December 31, 2024, to December 31, 2030.
