

of the non-project irrigation canal adjacent to the dam; (4) an intake integral with the powerhouse and covered by two inclined trashracks, each 20 feet wide and 40 feet high, with a clear bar spacing of 3 inches; (5) a 160-foot-long, 46-foot-wide, 64-foot high powerhouse containing a single Kaplan turbine with a rated capacity of 9.66 megawatts; (6) a 100-kilovolt, 2.8-mile-long transmission line; and (6) appurtenant facilities.

The project is operated in a run-of-river mode and generates an estimated average of 40,669 megawatt-hours per year.

Montana DNRC proposes to remove the jetty that separates the hydropower intake and the irrigation canal intake and install two parallel 100-foot-long, 10-foot-wide by 10-foot-high box culverts within the irrigation intake canal and a bulkhead near the current irrigation headworks. Once these facilities are installed, any water diverted for irrigation would first pass through a new angled screen with 6-inch spacing between the bars and then pass through the two new box culverts before entering the existing irrigation intake at the dam. The existing irrigation intake and facilities at the dam conveying water to the Broadwater-Missouri irrigation canal system would remain in place. Montana DNRC proposes to include the new tilted screen and box culverts as licensed project facilities.

Montana DNRC also proposes to modernize the project trash rake (*i.e.*, replace and recalibrate sensors on the rake) to minimize debris buildup on the dam intake and to upgrade its SCADA monitoring system (*i.e.*, improving connectivity to the substation, protective relaying, and automation upgrades).

Montana DNRC proposes to continue to operate the project in an automated run-of-river mode throughout the year where outflow from the project approximates inflow (minus flows diverted for irrigation). Montana DNRC proposes to modify its procedures for responding to an unplanned unit trip to reduce the potential for fish stranding downstream of the project.

SUPPLEMENTARY INFORMATION:

Title: FERC-510, Application for Surrender of a Hydropower License.

OMB Control No.: 1902-0068.

Type of Request: Three-year extension of the FERC-510 information collection requirements with no changes to the current reporting and recordkeeping requirements.

Abstract: The purpose of FERC-510 is to implement information collections pursuant to sections 4(e), 6, and 13 of the Federal Power Act (FPA) (16 U.S.C. 797(e), 799 and 806). Section 4(e) gives the Commission authority to issue licenses for the purposes of constructing, operating and maintaining dams, water conduits, reservoirs, powerhouses, transmission lines or other power project works necessary or convenient for developing and improving navigation, transmission and utilization of power using bodies of water over which Congress has jurisdiction. Section 6 gives the Commission the authority to prescribe the conditions of licenses including the revocation or surrender of the license. Section 13 defines the Commission's authority to delegate time periods for when a license must be terminated if project construction has not begun. Surrender of a license may be desired by a licensee when a licensed project is retired or not constructed or natural catastrophes have damaged or destroyed the project facilities.

FERC-510 is the application for the surrender of a hydropower license.¹ The information is used by Commission staff to determine the broad impact of such surrender. The Commission will issue a notice soliciting comments from the public and other agencies and conduct a review of the application before
