

compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 240 (Qualification and Certification of Locomotive Engineers) and part 242 (Qualification and Certification of Conductors). FRA assigned the petition Docket Number FRA–2023–0051.

Specifically, TASI requests relief required to participate in FRA’s Confidential Close Call Reporting System (C³RS) Program. TASI seeks to shield reporting employees from mandatory punitive sanctions that would otherwise arise as provided in §§ 240.117(e)(1)–(4); 240.305(a)(1)–(4) and (a)(6); 240.307; 242.403(b), (c), (e)(1)–(4), (e)(6)–(11), (f)(1)–(2); and 242.407. The C³RS Program encourages certified operating crew members to report close calls and protects the employees and the railroad from discipline or sanctions arising from the incidents reported per the C³RS Implementing Memorandum of Understanding.

Notice of Application for Approval of Discontinuance or Modification of a Railroad Signal System

Under part 235 of title 49 Code of Federal Regulations (CFR) and 49 U.S.C. 20502(a), this document provides the public notice that by letters received on May 10, 2023, and June 8, 2023, the Buffalo & Pittsburgh Railroad, Inc. (BPRR) petitioned the Federal Railroad Administration (FRA) seeking approval to discontinue or modify a signal system. FRA assigned the petition Docket Number FRA–2022–0056.

Specifically, BPRR requests to discontinue the centralized traffic control (CTC) system on the BPRR mainline in three locations: (1) between the insulated joints at mileposts (MPs) 141.9 and 149.00, (2) between MP 162.10 and 169.80, and (3) between MP 199.9 and 206.28. Several block signals, power switches, and approach signals would be removed from service, and “power switches will be replaced with powered DTMF switches with simulated OS locking circuits.” In support of its application, BPRR states that “the CTC system is no longer essential for the safe movement of traffic as current train activity is reduced,” and removal of the CTC system will improve “efficient operations.” BPRR also states that “there are no opposing train movements or fleeted trains with following moves.”
